Action:
Ensure a valid Logical Schema is assigned for the Model.

ODI-20192
ODI-20192: Error while replacing versioned object

Category:
Other

Cause:
An unexpected error occurred while replacing a versioned object.

Action:
Review the error details for further information.

ODI-20193
ODI-20193: An error occurred during the versioning operation.

Category:
Other

Cause:
An unexpected error occurred during versioning.

Action:
Review the error details for further information.

ODI-20194
ODI-20194: Your license does not allow Versioning operations.

Category:
Other

Cause:
The license does not include versioning.

Action:
Upgrade the license.

ODI-20195
ODI-20195: Unable to unlock this object

Category:
Other

Cause:
An unexpected error occurred while unlocking an object.

Action:
Review the error details for further information.

ODI-20196
ODI-20196: You must select an object version

Category:
Other

Cause:
No version selected for checkout.

Action:
Select version for checkout.

ODI-20197
ODI-20197: Your license does not allow Versioning operations.

Category:
Other

Cause:
The current license does not inlude versioning.

Action:
Upgrade the license to include versioning.

ODI-20198
ODI-20198: Error while creating the version.

Category:
Other

Cause:
An unexpected error occurred while creating a version.

Action:
Review the error details for further information.

ODI-20199
ODI-20199: Your license does not allow Versioning operations.

Category:
Other

Cause:
The license does not include versioning.

Action:
Upgrade your license.

ODI-20200
ODI-20200: An error happened while comparing the versions

Category:
Other

Cause:
An unexpected error occurred while comparing versions.

Action:
Review the error details for further information.

ODI-20201
ODI-20201: Error while refreshing.

Category:
Other

Cause:
An unexpected error occurred while refreshing.

Action:
Review the error details for further information.

ODI-20202
ODI-20202: Synchronisation was stopped by the user.

Category:
Other

Cause:
Synchronization was stopped by the user.

Action:
No action is required.

ODI-20203
ODI-20203: The current version for this object no longer exists. Please create a new version for this object.

Category:
Other

Cause:
The current version for this object was not found in the repository.

Action:
Create a new version for this object.

ODI-20205
ODI-20205: Could not delete object. This object is being used.

Category:
Other

Cause:
The object deletion failed because it was already in use.

Action:
Remove the usage of the selected object before retrying the deletion.

ODI-20206
ODI-20206: Could not delete object. This object is being displayed.

Category:
Other

Cause:
The object deletion failed because it was being displayed.

Action:
Close object before retrying the deletion.

ODI-20208
ODI-20208: A code was duplicated:

Category:
Other

Cause:
A Flex field with the same code already existed.

Action:
Enter another Flex field code.

ODI-20209
ODI-20209: An error occurred.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Review the error details for further information.

ODI-20210
ODI-20210: Error When Printing...

ODI-20222
ODI-20222: Error during scenario creation ...

Category:
Other

Cause:
An unexpected error occurred during scenario generation.

Action:
Review the error details for further information.

ODI-20223
ODI-20223: Error When Purging Log

Category:
Other

Cause:
An unexpected error occurred while purging the log.

Action:
Review the error details for further information.

ODI-20224
ODI-20224: An interface with the same name already exists in this folder. Please change the name of the new interface.

Category:
Other

Cause:
An interface with the same name already existed in this folder.

Action:
Specify another name for the interface.

ODI-20225
ODI-20225: Error while creating the popup menu

Category:
Other

Cause:
An unexpected error occurred while creating a popup menu.

Action:
Review the error details for further information.

ODI-20226
ODI-20226: Error while applying the changes

Category:
Other

Cause:
An unexpected error occurred while saving changes.

Action:
Review the error details for further information.

ODI-20227
ODI-20227: You cannot copy this attribute. Attribute name already in use.

Category:
Other

Cause:
Attribute copy failed because the Datastore already contained an attribute with the same name.

Action:
Select another attribute to drop to datastore.

ODI-20228
ODI-20228: Error while creating the popup menu

Category:
Other

Cause:
Retrieval of the Available Methods for the column failed.

Action:
Ensure the repository database connection is not broken and the ODI Security permissions are correct.

ODI-20229
ODI-20229: Unable to create condition.

Category:
Other

Cause:
The editor for the Condition could not be opened.

Action:
Ensure the repository database connection is not broken and the ODI Security permissions are correct.

ODI-20230
ODI-20230: Error while creating the popup menu

Category:
Other

Cause:
Retrieval of the Available Methods for the Condition failed.

Action:
Ensure the repository database connection is not broken and the ODI Security permissions are correct.

ODI-20231
ODI-20231: Unable to create a synonym for this table.

Category:
Other

Cause:
An unexpected error occurred while creating a synonym.

Action:
Review the error details for further information.

ODI-20232
ODI-20232: Error while deleting attributes

Category:
Other

Cause:
An unexpected error occurred while deleting attributes.

Action:
Review the error details for further information.

ODI-20233
ODI-20233: Error during the drag-and-drop operation

Category:
Other

Cause:
An unexpected error occurred during a drag and drop operation.

Action:
Review the error details for further information.

ODI-20234
ODI-20234: You do not have the sufficient privileges to add this object.

Category:
Other

Cause:
The operation failed due to insufficient ODI security on Attribute.

Action:
Ensure the ODI user security permissions are correct specifically the Attribute Duplication setting.

ODI-20235
ODI-20235: Error during the drag-and-drop operation

Category:
Other

Cause:
An unexpected error occurred during a drag and drop operation

Action:
Review the error details for further information.

ODI-20236
ODI-20236: You do not have the sufficient privileges to add this object.

Category:
Other

Cause:
The operation failed due to insufficient ODI security on Datastore.

Action:
Ensure the ODI user security permissions are correct.

ODI-20237
ODI-20237: Unable to duplicate the attribute.

Category:
Other

Cause:
An unexpected error occurred while duplicating an attribute.

Action:
Review the error details for further information. Ensure that the repository connection is still valid.

ODI-20238
ODI-20238: Unable to duplicate the table.

Category:
Other

Cause:
An unexpected error occurred while duplicating a table.

Action:
Review the error details for further information. Ensure that the repository connection is still valid.

ODI-20239
Error during the action

Category:
Other

Cause:
An unexpected error occurred during a user action.

Action:
Review the error details for further information.

ODI-20240
ODI-20240: Error while deleting

Category:
Other

Cause:
An unexpected error occurred during a delete operation.

Action:
Review the error details for further information. Ensure that the repository connection is valid.

ODI-20241
ODI-20241: Unable to apply changes.

Category:
Other

Cause:
The changes to the filter could not be applied.

Action:
Save the object before retrying to apply the filter.

ODI-20242
ODI-20242: Error while creating the popup menu

Category:
Other

Cause:
Retrieval of the Available Methods for the filter failed.

Action:
Ensure the repository database connection is not broken and the ODI Security permissions are correct.

ODI-20243
ODI-20243: Unable to add an attribute.

Category:
Other

Cause:
An unexpected error occurred while adding an attribute.

Action:
Review the error details for further information. Ensure that the repository connection is open.

ODI-20244
ODI-20244: Unable to add reference

Category:
Other

Cause:
An unexpected error occurred while adding a reference.

Action:
Review the error details for further information. Ensure that the repository connection is open.

ODI-20245
ODI-20245: Unable to add table

Category:
Other

Cause:
An unexpected error occurred while adding a table.

Action:
Review the error details for further information. Ensure that the repository connection is open.

ODI-20246
ODI-20246: Error while applying the changes

Category:
Other

Cause:
The reference to the Model could not be created.

Action:
Ensure the repository database connection is not broken and the ODI Security permissions are correct.

ODI-20247
ODI-20247: Unable to add key.

Category:
Other

Cause:
An unexpected error occurred while adding a key.

Action:
Review the error details for further information.

ODI-20248
ODI-20248: Error while opening window

Category:
Other

Cause:
The editor could not be opened.

Action:
Save the object before retrying the edit.

ODI-20249
ODI-20249: Error while creating the popup menu

Category:
Other

Cause:
An unexpected error occurred while creating a popup menu.

Action:
Review the error details for further information.

ODI-20250
ODI-20250: Error while

Category:
Other

Cause:
Internal error.

Action:
Review the error details for further information.

ODI-20251
ODI-20251: An unexpected error has occurred

Category:
Other

Cause:
Unable to acess the Security Authorization settings.

Action:
Ensure the repository database connection is not broken and the ODI Security permissions are correct.

ODI-20252
ODI-20252: Unable to apply changes.

Category:
Other

Cause:
Saving the model condition failed.

Action:
Ensure the repository database connection is not broken and the ODI Security permissions are correct.

ODI-20253
ODI-20253: The object was deleted by another user

Category:
Other

Cause:
The operation could not be performed because the specified object could not found.

Action:
Refresh the view and retry the operation.

ODI-20254
ODI-20254: The marker was deleted by another user

Category:
Other

Cause:
The operation could not be performed because the specified Marker object was in an Inconsistent state.

Action:
Refresh the view and retry the operation.

ODI-20255
ODI-20255: Marker name is mandatory

Category:
Other

Cause:
Marker could not be saved because the mandatory Name field was not entered.

Action:
Enter a value in the Marker name field.

ODI-20256
ODI-20256: You do not have the sufficient privileges to change the marker

Category:
Other

Cause:
Modification of the Marker failed due to insufficient ODI security privileges.

Action:
Ensure the ODI user security permissions are correct.

ODI-20257
ODI-20257: The Where text is mandatory when the Filter is active for a static control.

Category:
Other

Cause:
The WHERE clause was null or empty.

Action:
Ensure the WHERE clause is valid.

ODI-20258
ODI-20258: It is not possible to check the expression due to DBMS connection failure

Category:
Other

Cause:
Connection to the DBMS failed.

Action:
Ensure the DBMS is available and the connection information to it is correctly specified.

ODI-20259
ODI-20259: cannot show the data since the join points to different connections

Category:
Other

Cause:
Unable to retrieve data due to a conflict between the physical schemas involved.

Action:
Ensure the Topology or Context settings are correct and multiple data stores in the same Source Set are not connected using different Physical Schemas.

ODI-20260
ODI-20260: Name and Code columns of the FlexField cannot be empty.

Category:
Other

Cause:
FlexField name or code were found to be empty or null.

Action:
Enter a name and a code for the FlexField.

ODI-20261
ODI-20261: The "Procedure Name" is mandatory.

Category:
Other

Cause:
The "Procedure Name" field value was not specified.

Action:
Enter a value for the "Procedure Name" field.

ODI-20262
ODI-20262: Logical Schema is not selected.

Category:
Other

Cause:
There is no Logical Schema selected for this variable.

Action:
Select a Logical Schema.

ODI-20263
ODI-20263: Please enter the duration in a format such as 5s (seconds), 10m (minutes), 1d (days), 1y (years).

Category:
Other

Cause:
Duration is specified in an invalid format

Action:
Please change duration such that it comprises an integer followed by a time indicator, for example 10s, 30d, 1y

ODI-20300
ODI-20300: Error while printing the diagram

Category:
Other

Cause:
An unexpected condition has occurred in the print system.

Action:
Check the printer settings and physical printer.

ODI-20301
ODI-20301: Error while saving the diagram

Category:
Other

Cause:
The save file could not be created.

Action:
Check the destination folder is writable and that their is sufficient disk space.

ODI-20310
Unsupported Flavor

Category:
Other

Cause:
An attempt was made to drag and drop an object into an unsupported area of the canvas.

Action:
Drag a different object type or drop the object into a valid area.

ODI-20311
ODI-20311: An unexpected exception occurred while reading or writing a text in a business object.

Category:
Other

Cause:
An unexpected exception occurred while reading or writing text.

Action:
Review the console output or logs for additional information.

ODI-20312
ODI-20312: An error occurred while printing.

Category:
Other

Cause:
An error occurred while printing.

Action:
Ensure that the printer is configured properly.

ODI-20313
ODI-20313: Could not double click

Category:
Other

Cause:
An unexpected error has occured.

Action:
Contact Oracle Support Services.

ODI-20315
ODI-20315: Invalid Password

Category:
Other

Cause:
The Password is incorrect.

Action:
Correct the password and try again.

ODI-20316
ODI-20316: A timeout occurred while trying to establish a connection.

Category:
Other

Cause:
A timeout error occurred while connecting to the database.

Action:
Verify that the Database Connection details are correct and the database is available.

ODI-20317
ODI-20317: The field "{0}" is mandatory.

Category:
Other

Cause:
A value has not been provided for a required field.

Action:
Enter a value for the named field.

ODI-20318
ODI-20318: The icon {0} cannot be found.

Category:
Other

Cause:
An unexpected error has occured.

Action:
Contact Oracle Support Services.

ODI-20319
ODI-20319: {0} is not a valid date for field {1}. The format is: {2}

Category:
Other

Cause:
The format of the date does not match the required format.

Action:
Enter a valid date using the correct date format.

ODI-20320
ODI-20320: Error when applying changes.

Category:
Other

Cause:
An unexpected error has occurred.

Action:
Contact Oracle Support Services.

ODI-20321
ODI-20321: Error when initializing the panel.

Category:
Other

Cause:
An unexpected error has occurred.

Action:
Contact Oracle Support Services.

ODI-20322
ODI-20322: Unable to add a Step.

Category:
Other

Cause:
An unexpected error has occurred.

Action:
Contact Oracle Support Services.

ODI-20323
ODI-20323: Unable to execute the step

Category:
Other

Cause:
An unexpected error has occurred.

Action:
Contact Oracle Support Services.

ODI-20324
ODI-20324: Cannot execute the Package

Category:
Other

Cause:
An unexpected error has occurred.

Action:
Contact Oracle Support Services.

ODI-20325
ODI-20325: Unable to open the linked object.

Category:
Other

Cause:
An unexpected error has occurred.

Action:
Contact Oracle Support Services.

ODI-20326
ODI-20326: Unable to edit the text

Category:
Other

Cause:
An unexpected error has occurred.

Action:
Contact Oracle Support Services.

ODI-20327
ODI-20327: Unable to modify the value.

Category:
Other

Cause:
An unexpected error has occurred.

Action:
Contact Oracle Support Services.

ODI-20328
ODI-20328: Unable to define the next Step.

Category:
Other

Cause:
An unexpected error has occurred.

Action:
Contact Oracle Support Services.

ODI-20329
ODI-20329: Unable to delete Steps(s). You do not have Edit privileges.

Category:
Other

Cause:
An error occurred while attempting to delete one or more package steps.

Action:
Update security settings to allow step editing privileges.

ODI-20330
ODI-20330: Unable to delete Link(s). You do not have Edit privileges.

Category:
Other

Cause:
You must have Edit privilege on each steps of the link.

Action:
Review the Security settings for the steps and ensure that you have the correct permissions.

ODI-20331
ODI-20331: The Step diagram is not be accessible.

Category:
Other

Cause:
You do not have permission to access this step.

Action:
Check the diagram security settings and verify that you have permission to access the diagram.

ODI-20332
ODI-20332: Cannot change the position of this object

Category:
Other

Cause:
An unexpected error has occurred.

Action:
Contact Oracle Support Services.

ODI-20333
ODI-20333: Cannot view this Step because the Package is being edited

Category:
Other

Cause:
A package step cannot be viewed while the parent package is being edited.

Action:
Close the package editor.

ODI-20335
ODI-20335: Printing Options not accessible.

Category:
Other

Cause:
An unexpected error occurred while printing a package.

Action:
Review the log file for additional info about the exception.

ODI-20336
ODI-20336: Unknown event sent to the Package event manager.

Category:
Other

Cause:
An unexpected error has occurred.

Action:
Contact Oracle Support Services.

ODI-20337
ODI-20337: A Knowledge Module cannot be added as a Step.

Category:
Other

Cause:
Only a DataStore,Model,Sub Model,Interface,Procedure or Variable can be added as a Step.

Action:
Use a valid object type for your step creation.

ODI-20338
ODI-20338: A starting Step must be defined.

Category:
Other

Cause:
A Starting step has been defined.

Action:
Select the first step in the package and mark is the starting step.

ODI-20339
ODI-20339: One or more Steps are not linked.

Category:
Other

Cause:
All steps must be linked.

Action:
Ensure that all steps are linked .

ODI-20340
ODI-20340: Only one starting Step can be defined.

Category:
Other

Cause:
A package must have one and only one starting steps.

Action:
Ensure that you have only one starting step defined .

ODI-20341
ODI-20341: You do not have the appropriate privileges to edit a package step.

Category:
Other

Cause:
An attempt was made to edit or view a package step, but the user does not have privileges to access the step.

Action:
Update security settings for the user to allow package and step access.

ODI-20342
ODI-20342: Cannot open the Expression Editor

Category:
Other

Cause:
An unexpected error has occured.

Action:
Contact Oracle Support Services.

ODI-20343
ODI-20343: There are errors in your diagram

Category:
Other

Cause:
The diagram may contain objects that are not connected, or objects that are not completely defined.

Action:
Check the diagram and ensure that all objects are connected and fully defined.

ODI-20344
ODI-20344: Cannot launch the editor for this expression

Category:
Other

Cause:
An error occured while retrieving the language for the expression. This may be due to an unexpected exception, or the language may not be available for the schema's technology.

Action:
Review the message log for additional errors. Ensure that the schema has a valid technology for which the language is set.

ODI-20345
ODI-20345: Cannot change the clause position

Category:
Other

Cause:
An unexpected internal exception has occured.

Action:
Contact Oracle Support Services.

ODI-20346
ODI-20346: Cannot get the boolean value of an option

Category:
Other

Cause:
The boolean value of the option could not be retrieved due to a security error.

Action:
Review the message log and contact Oracle Support Services for further assistance.

ODI-20347
ODI-20347: Error during data transfer for drag and drop

Category:
Other

Cause:
An internal error occured while dropping the object into the diagram.

Action:
Review the message log for additional information and contact Oracle Support Services for further assistance.

ODI-20348
ODI-20348: An interface with the same name already exists in this folder. Please change the name of the new interface.

Category:
Other

Cause:
An interface with the specified name exists in the folder. The interface name must be unique within a folder.

Action:
Enter a new interface name that is unique within the folder.

ODI-20349
ODI-20349: Unknown event detected by the event manager. Please contact Oracle Support Services.

Category:
Other

Cause:
The Package Event Manager was called to action an unknown event.

Action:
Contact Oracle Support Services for further assistance.

ODI-20350
ODI-20350: Your diagram contains one or more FATAL/CRITICAL errors preventing display of the Flow Editor

Category:
Other

Cause:
The diagram is incomplete or contains errors that prevent the Flow Editor being displayed.

Action:
Return to the diagram tab and review the error messages using the errors and warnings button in the toolbar. Fix the errors in order to access the Flow Editor.

ODI-20351
ODI-20351: Error adding source to Quick Edit source table.

Category:
Other

Cause:
An internal error occured which prevented the source being added.

Action:
Contact Oracle Support Services for further assistance.

ODI-20352
ODI-20352: Error adding target datastore to Quick Edit mapping table.

Category:
Other

Cause:
An internal error occured which prevented the target being added.

Action:
Contact Oracle Support Services for further assistance.

ODI-20353
ODI-20353: Only a single column may be pasted into a Quick Edit table.

Category:
Other

Cause:
The clipboard contains multiple columns. Quick Edit only supports pasting a single cell into a table.

Action:
Select the cells to be copied and paste them one at a time.

ODI-20354
ODI-20354: Paste targets must be in the same column as the previous copy. This does not apply to Expression columns (Lookup Expression, Join Expression, Filter Expression, and Mapping Expression).

Category:
Other

Cause:
You have selected a value from one column, and tried to paste it into a different column. This is only supported for Expression Columns.

Action:
Please enter the values into the cell manually.

ODI-20355
ODI-20355: Duplicate value is not supported on this column.

Category:
Other

Cause:
The paste operation is not permitted in the Alias and Target Column Name fields as these fields must contain a unique value.

Action:
Please enter the Alias or Name field manually.

ODI-20356
ODI-20356: Can not perform paste into a read-only column.

Category:
Other

Cause:
The Paste operation is not permitted on read-only columns.

Action:
You may not update this value in the table.

ODI-20357
ODI-20357: Can not perform deletion because the target datastore is not temporary.

Category:
Other

Cause:
An attempt was made to delete a row in the target, but the target datastore is not a temporary table. Only rows in a temporary target table may be deleted.

Action:
You cannot delete the row.

ODI-20358
ODI-20358: Interface cannot be saved because it has a fatal error: {0}.

Category:
Other

Cause:
The Interface could not be saved because it contains a fatal error which must be resolved.

Action:
Review the errors in the Diagram tab and resolve the fatal errors.

ODI-20359
ODI-20359: Only one cell can be copied one at a time.

Category:
Other

Cause:
More than one cell was selected. Quick Edit only supports copying a single cell.

Action:
Select and copy a single cell.

ODI-20360
ODI-20360: Only Expression columns support Copy and Paste from other applications. For all other columns, please perform a copy first on that column before pasting.

Category:
Other

Cause:
Only values from other applications may be copied into Expression columns.

Action:
For all other columns, perform a copy first on that column before pasting.

ODI-20361
ODI-20361: Can not perform Copy and Paste across tables, except for Expression columns (Lookup Expression, Join Expression, Filter Expression, and Mapping Expression).

Category:
Other

Cause:
Values may not be copied between tables in Quick Edit, apart from between Expression columns.

Action:
Please enter the values manually.

ODI-20362
ODI-20362: Couldn't connect to Web Service

Category:
Other

Cause:
An error occured while creating a connection to the Web Service.

Action:
Ensure that the Web Service is accessible and WSDL URL is correct.

ODI-20363
ODI-20363: Error while exporting request

Category:
Other

Cause:
The request could not be exported

Action:
Check that there is sufficient disk space and that the target directory is accessible.

ODI-20364
ODI-20364: Error while parsing the XML file

Category:
Other

Cause:
An error occured while parsing the XML file

Action:
Ensure that the correct XML file is specified and that it is correctly structured

ODI-20365
ODI-20365: There is no port with SOAP binding defined on this service

Category:
Other

Cause:
The referenced service does not support the specified port

Action:
Specify a valid port for the service

ODI-20366
ODI-20366: The timeout must be an integer value.

Category:
Other

Cause:
The value entered for the timeout is not a valid integer

Action:
Enter a valid integer value

ODI-20367
ODI-20367: Export directory {0} does not exist.

Category:
Other

Cause:
The specified directory does not exist

Action:
Create the directory and repeat the operation

ODI-20368
ODI-20368: WSDL URL is null or empty, ODI can not initialize the current request.

Category:
Other

Cause:
WSDL URL is null

Action:
Set the WSDL URL or remove the soap request.

ODI-20370
ODI-20370 : Shortcuts within a project can only refer to objects that belong to that same project

Category:
Other

Cause:
Shortcuts within a project can only refer to objects that belong to that same project

Action:
=Try another folder destination

ODI-20371
ODI-20371 : No two shortcut objects within a folder may refer to the same base object

Category:
Other

Cause:
No two shortcut objects within a folder may refer to the same base object

Action:
Try another folder destination or fix folder contents

ODI-20372
ODI-20372 : The source and destination models must be defined with the same Technology

Category:
Other

Cause:
The source and destination models must be defined with the same Technology

Action:
Try another model destination or fix model properties.

ODI-20373
ODI-20373 : No two shortcuts within a model may contain the same base object

Category:
Other

Cause:
No two shortcuts within a model may contain the same base object

Action:
Try another folder destination or fix model contents.

ODI-20374
ODI-20374 : A model cannot contain a datastore and a datastore shortcut to another datastore with the same datastore name

Category:
Other

Cause:
A model cannot contain a datastore and a shortcut to another datastore with the same datastore name

Action:
Try another folder destination or fix model contents.

ODI-20701
ODI-20701: The Name field is mandatory.

Category:
Other

Cause:
The Name field was not entered.

Action:
Enter a name for the Load Plan.

ODI-20702
ODI-20702: The name given for the Load Plan is already used by another load plan. Please provide another name.

Category:
Other

Cause:
The name provided for the Load Plan was not unique.

Action:
Enter a unique name for the Load Plan.

ODI-20703
ODI-20703: Variable "{0}" is not found.

Category:
Other

Cause:
The variable could not be found.

Action:
Provide another name for the variable.

ODI-20704
ODI-20704: Datatype of variable "{0}" has been changed.

Category:
Other

Cause:
The datatype of the original variable is different to the datatype of the load plan variable.

Action:
Verify the datatype of the variable and ensure that the types of the original and load plan variables match.

ODI-20705
ODI-20705: This variable is used in one or more case steps. Removing it will trigger deletion of those case steps, and all of their child steps. Do you want to continue?

Category:
Other

Cause:
An attempt was made to remove a variable which is used in one or more case steps.

Action:
To remove the variable and its associated case steps, click Yes. Otherwise, click No, and nothing will be removed.

ODI-20706
ODI-20706: The Step Name is mandatory.

Category:
Other

Cause:
The Step Name field was not entered.

Action:
Enter a name for the Step.

ODI-20707
ODI-20707: The Variable is mandatory.

Category:
Other

Cause:
A Variable was not selected.

Action:
Select a variable.

ODI-20708
ODI-20708: The Scenario is mandatory.

Category:
Other

Cause:
A Scenario was not selected.

Action:
Select a Scenario.

ODI-20709
ODI-20709: The Value is mandatory.

Category:
Other

Cause:
A Value was not provided.

Action:
Enter a Value.

ODI-20710
ODI-20710: The Value format is not valid.

Category:
Other

Cause:
An incorrect format was given for the Value.

Action:
Check the format of the Value and correct it.

ODI-20711
ODI-20711: The Step Name is mandatory.

Category:
Other

Cause:
The Step Name field was not entered.

Action:
Provide the name of the Step.

ODI-20712
ODI-20712: The Variable is mandatory.

Category:
Other

Cause:
A Variable was not selected.

Action:
Select a Variable.

ODI-20713
ODI-20713: The Scenario is mandatory.

Category:
Other

Cause:
A Scenario was not selected.

Action:
Select a Scenario.

ODI-20714
ODI-20714: The Context is mandatory.

Category:
Other

Cause:
A Context was not selected for execution.

Action:
Select an execution Context.

ODI-20715
ODI-20715: The Logical Agent is mandatory.

Category:
Other

Cause:
A Logical Agent was not selected for execution.

Action:
Select a Logical Agent.

ODI-20716
ODI-20716: No Physical Agent is defined for the selected Logical Agent and Context. Edit Logical Agent "{0}", and define a Physical Agent for Context "{1}".

Category:
Other

Cause:
There was no Physical Agent associated with this Logical Agent in the specified context.

Action:
Associate a Physical Agent with the Logical Agent in the selected context.

ODI-20717
ODI-20717: No Physical Agents are running. A Physical Agent must be running in order to Restart a Load Plan.

Category:
Other

Cause:
There were no Physical Agents running.

Action:
Start a Physical Agent before restarting the Load Plan.

ODI-20718
ODI-20718: No Physical Agents are running. A Physical Agent must be running in order to Stop a Load Plan.

Category:
Other

Cause:
There were no Physical Agents running.

Action:
Start the Agent before executing the Load Plan.

ODI-20719
ODI-20719: Scenario "{0}" is not found.

Category:
Other

Cause:
The scenario was not found.

Action:
Specify an existing scenario.

ODI-20720
ODI-20720: Physical Agent "{0}" - which is defined in Logical Agent "{1}" to be used for Context "{2}" - is not responding. Verify that Physical Agent "{0}" has been started.

Category:
Other

Cause:
The Physical Agent was not reachable.

Action:
Check the Physical Agent and start it.

ODI-20721
ODI-20721: Interface contains one or more errors. You should correct the errors before attempting to execute it

Category:
Other

Cause:
The interface contains errors which prevent it from being executed.

Action:
Review the errors shown in the interface editor and update the interface to fix the problems.

ODI-20722
ODI-20722: Cannot display data. Source alias is {0} characters long which is longer than allowed by the technology ({1}). Please review the technology settings in Topology.

Category:
Other

Cause:
Source alias exceeded the limit allowed by its technology.

Action:
Ensure the maximum table name length setting in the corresponding technology is correct. Consider changing source alias to comply.

ODI-20723
ODI-20723: There is no any version of scenario {0} found. A scenario of the step {1} cannot be refreshed.

Category:
Other

Cause:
The scenario of step was not found.

Action:
Check if specified scenario for this step is correct.

ODI-20724
ODI-20724: Journalized data not found. Journal data view: {0}

Category:
Other

Cause:
Journal is not started or is stopped.

Action:
Ensure the journal is started: select Changed Data Capture > Journal Data.

ODI-20726
ODI-20726: The Step Name is mandatory.

Category:
Other

Cause:
The Step Name field was not entered.

Action:
Enter a name for the Step.

ODI-20727
ODI-20727: Scenario "{0}" parent is not found.

Category:
Other

Cause:
The Scenario source object does not exist.

Action:
Check if the source object, from which the Scenario was generated, does exist.

ODI-20728
ODI-20728: The attribute name is mandatory

Category:
Other

Cause:
The datastore attribute could not be saved because the mandatory Name field was not entered.

Action:
Enter a value in the attribute name field.

ODI-20729
ODI-20729: {0} is a dependant object of the following object(s) {1} and cannot be removed

Category:
Other

Cause:
Selected object for removal is a dependent object.

Action:
Remove the dependent object first.

ODI-20731
ODI-20731: The parent from which this scenario is generated does not exist anymore so the editor couldn't show the parent related information.

Category:
Other

Cause:
The editor couldn't show the parent related information because the scenario parent does not exist anymore. This could happen, for example, if you imported the scenario, but didn't import it's parent object.

Action:
Try to figure out, why the scenario parent object does not exist. Try to restore the parent.

ODI-20732
ODI-20732: You cannot move a submodel into another model.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Submodels cannot be moved into hierarchy of another models.

ODI-20733
ODI-20733: You cannot copy a submodel into another model.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Submodels cannot be copied into hierarchy of another models.

ODI-20734
ODI-20734: Changing the name of a user function only impacts the user function itself; Users need to manually change object(s) which reference the old user function name.

Category:
Other

Cause:
The user function name has been updated

Action:
It is the user's responsibility to determine where the user function is referenced and to manually change the name of the user function in those places

ODI-20735
ODI-20735: The name given for the Physical Agent is already used by another agent. Please provide another name

Category:
Other

Cause:
The name provided for the Physical Agent was not unique.

Action:
Enter a unique name for the Physical Agent.

ODI-20736
ODI-20736: The Name field is mandatory.

Category:
Other

Cause:
The value for the Name field was not specified.

Action:
Enter a name for the Object.

ODI-20737
Could not build WSDL Model.

Category:
Other

Cause:
An unexpected error occurred while building a WSDL model.

Action:
Review the error details for further information.

ODI-20741
ODI-20741: This is not a valid Cobol Copybook.

Category:
Other

Cause:
The file chosen in the Reverse Engineering Cobol Copybook process is not a valid Cobol Copybook.

Action:
Ensure the file is a valid Cobol Copybook.

ODI-20742
ODI-20742: You cannot copy a mapping into a folder belonging to another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Mappings cannot be copied into hierarchy of another projects.

ODI-20743
ODI-20743: You cannot copy a reusable mapping into a folder belonging to another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Reusable mappings cannot be copied into hierarchy of another projects.

ODI-20744
ODI-20744: You cannot move a mapping into a folder belonging to another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Mappings cannot be moved into hierarchy of another projects.

ODI-20745
ODI-20745: You cannot move a reusable mapping into a folder belonging to another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Reusable mappings cannot be moved into hierarchy of another projects.

ODI-20746
ODI-20746: You cannot move a global reusable mapping into a folder.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Global Reusable mappings cannot be moved into a folder.

ODI-20747
ODI-20747: You cannot copy a global reusable mapping into a folder.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Global Reusable mappings cannot be copied into a folder.

ODI-20748
ODI-20748: Open is not valid for this node.

Category:
Other

Cause:
The editor is not applicable for this node.

Action:
Editor cannot be opened for this node.

ODI-20749
ODI-20749: Selected Capture/Initial Load Capture process is associated with another model. This may cause conflicts during 'Start Journal' action, if the logical process instance selected uses the same physical process instance.

Category:
Other

Cause:
Selected Goldengate Capture/Initial Load Capture process is used in a different model.

Action:
Select a different set of process instances for this model.

ODI-20750
ODI-20750: Selected Delivery/Initial Load Delivery process is associated with another model. This may cause conflicts during 'Start Journal' action, if the logical process instance selected uses the same physical process instance.

Category:
Other

Cause:
Selected Goldengate Delivery/Initial Load Delivery process is used in a different model.

Action:
Select a different set of process instances for this model.

ODI-20751
ODI-20751: Load Plan Debugging is not supported: {0}.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Load Plan can't be debug.

ODI-20752
ODI-20752: Format can not be empty for File datastore's Date type column

Category:
Other

Cause:
Column added for the File datastore has Date as type but Format is not given

Action:
Ensure the Format is entered for File datatsore's column of type Date.

ODI-20753
ODI-20753 : Shortcuts in a Model can not be moved

Category:
Other

Cause:
Shortcuts in a Model can not be moved to another Model

Action:
Please get the base object of the shortcut first and then try to move

ODI-20754
ODI-20754 : Driver name cannot be empty

Category:
Other

Cause:
Driver is not assigned for the Data Server

Action:
Please choose the appropriate driver for the datastore.

ODI-20755
ODI-20755: A Data Server with the name {0} already exists. Please provide another name.

Category:
Other

Cause:
The name provided for the Data Server is not unique.

Action:
Enter a unique name for the Data Server.

ODI-20756
ODI-20756: A Logical Schema with the name {0} already exists. Please provide another name.

Category:
Other

Cause:
The name provided for the Logical Schema is not unique.

Action:
Enter a unique name for the Data Server.

ODI-20757
ODI-20757: If logical schema is specified, WSDL URL can not differ from physical schema's WSDL URL.

Category:
Other

Cause:
You have specified different WSDL URL compared to physical schema WSDL URL.

Action:
WSDL URL and physical schema WSDL URL should be same when logical schema is specified.

ODI-20758
ODI-20758: If logical schema is specified, HTTP User can not differ from physical schema's/ data server's HTTP User.

Category:
Other

Cause:
You have specified different user compared to physical schema/data server HTTP user.

Action:
User and physical schema/data server HTTP user should be same when logical schema is specified.

ODI-20759
ODI-20759: If logical schema is specified, Port Type can not differ from physical schema's port type.

Category:
Other

Cause:
You have specified different port type compared to physical schema port type.

Action:
Port type and physical schema port type should be same when logical schema is specified.

ODI-20760
ODI-20760: Choice names should be unique.

Category:
Other

Cause:
You have added duplicate choice names.

Action:
Ensure only unique choice names are used.

ODI-20761
ODI-20761: An Option Group with the name {0} already exists. Please provide another name.

Category:
Other

Cause:
The name provided for the Option Group is not unique.

Action:
Enter a unique name for the Option Group.

ODI-20763
ODI-20763: Maximum number of login attempts reached. ODI User will be locked.

Category:
Other

Cause:
You have exceeded the maximum number of login attempts.

Action:
A Supervisor user must unlock this user.

ODI-20764
ODI-20764: Error occurred while creating version for regenerated Scenario.

Category:
Other

Cause:
Auto versioning failed for the regenerated Scenario

Action:
Please check log for more information

ODI-20765
ODI-20765: Agent Invocation Failed.

Category:
Other

Cause:
ODI Agent request invocation failed.

Action:
Ensure Agent is in correct state.

ODI-20766
ODI-20766: ODI does not support View Data for Non-JDBC datastore

Category:
Other

Cause:
ODI does not support View Data for Non-JDBC datastore

Action:
View Data for Non-JDBC datastore is not supported

ODI-23001
ODI-23001: The import process failed

Category:
Other

Cause:
The work repository export file specified could not be imported.

Action:
Ensure the specified file is readable and is a valid work repository export file.

ODI-23006
ODI-23006: Agent Test failed

Category:
Other

Cause:
Agent could not be contacted using the specified connection details.

Action:
Ensure the Agent connection details are correct and the Agent is running.

ODI-23007
ODI-23007: Data Source already exists for "{0}".

Category:
Other

Cause:
The Data Source has already been associated with this Agent.

Action:
No action is necessary as the Data Source is already associated with this Agent. Consider removing the Data Source from this Agent and retrying this action.

ODI-23010
ODI-23010: Please enter first a name, an expression and a help text for this language element.

Category:
Other

Cause:
The Name, Expression or Help Text parameter values for this Language Element were not entered in the Definition panel. These are mandatory parameters.

Action:
Return to the Definition panel and ensure the Name, Expression and Help Text parameters have valid values.

ODI-23011
ODI-23011: Name is empty

Category:
Other

Cause:
A value for the Name parameter of the Language Element Implementation was not entered. This is a mandatory parameter.

Action:
Enter a valid value for the Name parameter before saving this Language Element.

ODI-23012
ODI-23012: Expression is empty

Category:
Other

Cause:
A value for the Expression parameter of the Language Element Implementation was not entered. This is a mandatory parameter.

Action:
Enter a valid value for the Expression parameter before saving this Language Element.

ODI-23013
ODI-23013: Help is undefined

Category:
Other

Cause:
A value for the Help Text parameter of the Language Element Implementation was not entered. This is a mandatory parameter.

Action:
Enter a value for the Help Text parameter before saving this Language Element.

ODI-23014
ODI-23014: Technology is undefined

Category:
Other

Cause:
A value for the Technology parameter of the Language Element Implementation was not entered. This is a mandatory parameter.

Action:
Enter a value for the Technology parameter before saving this Language Element.

ODI-23015
ODI-23015: Logical Schema {0} is already linked to a physical schema in context {1}.

Category:
Other

Cause:
A Physical Schema has already been defined for this Context and Logical Schema combination.

Action:
Remove the Context and Logical Schema combination from the Context editor, then retry saving the Physical Schema.

ODI-23016
ODI-23016: The context is either invalid or no longer exists in the database.

Category:
Other

Cause:
One of the Contexts used by the Physical Schema is invalid or no longer exists in the Master Repository.

Action:
Ensure the Context for the Physical Schema is correct by either selecting a valid Context for the Physical Schema or recreating the missing Context.

ODI-23017
ODI-23017: This Physical Schema already exists for this data server.

Category:
Other

Cause:
A Physical Schema referencing this Data Server has already been defined in the Master Repository.

Action:
Specify the correct Physical Schema for this Data Server to use.

ODI-23018
ODI-23018: Unable to connect to Work Repository.Repository host or database is not available.

Category:
Other

Cause:
The Work Repository could not be accessed using the connection details defined for it. This may be due to the database or host not being available, or the password could have changed.

Action:
Ensure the Work Repository host and database are active. Using the Work Repository editor, ensure the connection details for it are correct.

ODI-23019
ODI-23019: Error Detected during Repository Installation. Invalid connection parameters.

Category:
Other

Cause:
The repository installation process was unable to connect to the repository database.

Action:
Correct any errors identified in the installation log and retry the installation. If this is caused by an external application, then fix the related code; otherwise, contact My Oracle Support.

ODI-23020
ODI-23020: Error Detected during Repository Installation. Invalid External Authentication credentials.

Category:
Other

Cause:
The ODI Supervisor credentials supplied did not match the credentials held in the External Password Store.

Action:
Retry the installation, ensuring the Supervisor user name and password match those held in the external store.

ODI-23021
ODI-23021: Error Detected during Repository Installation. Invalid External Authentication configuration.

Category:
Other

Cause:
A connection to the External Authentication Store could not be established.

Action:
Ensure the External Authentication Store is available and the connection details specified in the JPS configuration file are valid.

ODI-23022
ODI-23022: An error occurred during the generation of the Data Service.

Category:
Other

Cause:
An unexpected error occurred while generating data services.

Action:
Review the error details for further information.

ODI-23023
ODI-23023: The Schema path ({0}) is not supported

Category:
Other

Cause:
The Model's Physical Schema attempted to define the Schema path using an unsupported protocol (ftp, http or file).

Action:
Change the Physical Schema to not use ftp, http or file protocol to reference the file.

ODI-23024
ODI-23024: The URL is mandatory.

Category:
Other

Cause:
The URL field has not been entered and is a mandatory parameter.

Action:
Enter the URL parameter. A template chosen from the drop down list may help to ensure the syntax is correct.

ODI-23025
ODI-23025: The ID is mandatory.

Category:
Other

Cause:
The Repository ID parameter has not been entered and is a mandatory parameter.

Action:
Enter an integer value for the Repository ID parameter.

ODI-23026
ODI-23026: The ID must be an integer value.

Category:
Other

Cause:
The value entered for the Repository ID is not a valid integer.

Action:
Enter an integer value for the Repository ID parameter.

ODI-23027
ODI-23027: The driver is mandatory.

Category:
Other

Cause:
A JDBC Driver was not specified and is a mandatory parameter.

Action:
Select a JDBC Driver from the list of values.

ODI-23028
ODI-23028: The password is mandatory.

Category:
Other

Cause:
The Supervisor user's Password parameter was not specified.

Action:
Enter the Supervisor password.

ODI-23029
ODI-23029: The confirm password is mandatory.

Category:
Other

Cause:
The Supervisor user's Confirm Password parameter was not specified.

Action:
Enter the Supervisor user's password in the Confirm Password parameter.

ODI-23030
ODI-23030: Password and Confirm Password are different

Category:
Other

Cause:
The Password and Confirm Password parameters are not the same.

Action:
Ensure the same value is entered for both the Password and Confirm Password parameters.

ODI-23031
ODI-23031: The Supervisor username is mandatory.

Category:
Other

Cause:
The Supervisor User parameter was not entered.

Action:
Enter a value for the Supervisor User parameter ensuring it matches a user in the external enterprise identify store, or switch to ODI Authentication.

ODI-23032
ODI-23032: Maximum number of sessions cannot be less or equal to 0.

Category:
Other

Cause:
The Maximum Number of Sessions parameter value was specified as 0.

Action:
Change the Maximum Number of Sessions parameter in the Agent Definition tab to a value greater than 0.

ODI-23033
ODI-23033: The file reverse-engineering is only possible for delimited files.

Category:
Other

Cause:
The file format for the specified file was not delimited.

Action:
Select a delimited format file and retry the reverse-engineering action.

ODI-23035
ODI-23035: Can not update the scheduling - This agent may not be running

Category:
Other

Cause:
The Update Scheduling action could not be performed because the ODI Client could not connect to the Agent.

Action:
Check that the Agent connection details are correct and that the agent is running. Use the Agent Test button to check the connection details.

ODI-23036
ODI-23036: Logical Schema not set for Context

Category:
Other

Cause:
A Logical Schema entry in the Physical Schema's Context was specified as <Undefined>.

Action:
Ensure none of the Logical Schemas on the Physical Schema's Context tab are set to <Undefined>.

ODI-23037
ODI-23037: To use scheduling please associate a Logical Agent to a Physical Agent via the Logical Architecture Accordion in the Topology Navigator

Category:
Other

Cause:
There are no logical agents available to use for scheduling.

Action:
Associate a logical agent with a physical agent using the Topology Navigator and then resubmit your schedule request.

ODI-23038
ODI-23038: Cannot resolve the table name. Check the masks defined for this physical schema.

Category:
Other

Cause:
The table and schema format could not be calculated. This is because the object mask has not been set for the Physical Schema that contains this table.

Action:
From the Topology Navigator edit the Physical Schema containing this table and ensure the Masks parameter value is valid for the schema based on its technology (for example "%SCHEMA.%OBJECT").

ODI-23039
ODI-23039: You cannot carry out this type of export.

Category:
Other

Cause:
The export type specified is not supported.

Action:
Retry the export. If the problem persists then contact Oracle Support Services.

ODI-23040
ODI-23040: Import file "{0}" error

Category:
Other

Cause:
An error occured during the import file process.

Action:
Correct any errors identified in the error log and retry the import process. If the problem persists then contact Oracle Support Services.

ODI-23042
ODI-23042: An error occurred while changing the repository number.

Category:
Other

Cause:
An error occured while changing the repository number.

Action:
Correct any errors identified in the message log and retry the action. If the problem persists then contact Oracle Support Services.

ODI-23043
ODI-23043: The Repository ID must be numeric.

Category:
Other

Cause:
The value specified for the Repository ID parameter was not a valid numeric value.

Action:
Enter a valid numeric value for the Repository ID parameter.

ODI-23044
ODI-23044: The new ID you have chosen is already in use as a table "{0}" primary key. The renumbering has been aborted. No changes have been made.

Category:
Other

Cause:
The Repository ID specified is already used by an existing object.

Action:
Enter a different value for the Repository ID parameter ensuring it is unique within the repository.

ODI-23045
ODI-23045: You may not renumber a repository before version 11. Please upgrade your repository first.

Category:
Other

Cause:
The renumber functionality is not supported for ODI Repository versions prior to version 11.

Action:
Upgrade the repository to version 11 (or higher) and then renumber it.

ODI-23046
ODI-23046: An error was encountered during the test.

Category:
Other

Cause:
An attempt to connect a Work Repository failed.

Action:
Correct any errors identified in the message log. Ensure the Work Repositories are available and the connection information is correctly specified in the Master Repository. Retry the test.

ODI-23047
ODI-23047: Could not connect to the work repository. The renumbering process has been aborted. No changes have been made.

Category:
Other

Cause:
An attempt to connect a Work Repository failed.

Action:
Correct any errors identified in the message log. Ensure the Work Repositories are available and the connection information is correctly specified in the Master Repository. Retry the test.

ODI-23048
ODI-23048: Import report generation error

Category:
Other

Cause:
The import was performed, but there was an unexpected error while opening the Import Report.

Action:
Contact Oracle Support Services.

ODI-23049
ODI-23049: Error Detected during Repository Installation

Category:
Other

Cause:
An error occured during the creation or import of the Master Repository.

Action:
Correct any errors described in the message log and retry the installation process. If this is caused by an external application, then fix the related code; otherwise, contact My Oracle Support.

ODI-23050
ODI-23050: The password you entered doesn't match the actual password

Category:
Other

Cause:
The password you entered doesn't match the actual password

Action:
Ensure that the password entered matches the actual password

ODI-23051
ODI-23051: Maximum number of threads must be greater than zero.

Category:
Other

Cause:
Values for maximum number of threads is not valid

Action:
Enter valid value for maximum number of threads

ODI-23052
ODI-23052: Maximum number of thread per session cannot be less than 0.

Category:
Other

Cause:
Values for maximum number of thread per session is not valid

Action:
Enter valid value for maximum number of threads per session

ODI-23053
ODI-23053: Maximum number of threads cannot be less than maximum number of threads per session.

Category:
Other

Cause:
Maximum number of threads less than maximum number of threads per session

Action:
Enter valid values for maximum number of threads and maximum number of threads per session

ODI-23054
ODI-23054: Maximum number of cache entries cannot be less than zero.

Category:
Other

Cause:
Values for maximum number of cache entries is not valid

Action:
Enter valid values for maximum number of cache entries

ODI-23055
ODI-23055: Session Blueprint Lifetime cannot be less than zero.

Category:
Other

Cause:
Value for session blueprint lifetime is not valid

Action:
Enter valid values forsession blueprint lifetime

ODI-23056
ODI-23056: Syntax of condition "{0}" is not valid.

Category:
Other

Cause:
The entered condition has invalid syntax.

Action:
Specify the valid condition expression.

ODI-23057
ODI-23057: The Registry Database is mandatory for MySQL Technology.

Category:
Other

Cause:
The Registry Database was not specified for MySQL Technology.

Action:
Enter the Registry Database for MySQL Technology.

ODI-23058
ODI-23058: This Technology does not support multiple schemas.

Category:
Other

Cause:
Attempt to create multiple Physical Schemas for Technologies that support only one Schema.

Action:
The solution for Technologies that do not support multiple Physical Schemas is to create separate Data Dervers from the Physical Schemas.

ODI-23059
ODI-23059: No Agent selected

Category:
Other

Cause:
No Agent has been selected for the selected DataSource.

Action:
Make sure an Agent is selected for the DataSource.

ODI-23060
ODI-23060: Update Import Modes are not valid for Interfaces

Category:
Other

Cause:
An invalid import mode of Update is selected for an Interface export file.

Action:
Use an import mode other than Update or alternatively only import Mapping export files

ODI-23061
ODI-23061: Syntax of expression "{0}" is not valid.

Category:
Other

Cause:
The entered expression has invalid syntax.

Action:
Specify the valid expression.

ODI-23062
ODI-23062: Maximum number of threads cannot be less then the maximum number of sessions.

Category:
Other

Cause:
Value for maximum number of threads is less than the maximum number of sessions

Action:
Ensure that maximum number of threads is equal to or greater than the maximum number of sessions

ODI-23064
ODI-23064 Language Name must be specified

Category:
Other

Cause:
Language name is not specified.

Action:
Enter Language name on the Languages table.

ODI-23065
ODI-23065 Parameter Key names not unique

Category:
Other

Cause:
Invalid values.

Action:
Parameter values need to be valid including uniquenames for keys.

ODI-23066
ODI-23066: Letter used in the icon input "{0}" is not valid. No Special Characters are allowed to be entered.

Category:
Other

Cause:
The entered input is invalid.

Action:
Enter the valid value.

ODI-23068
ODI-23068 : Degree Of Parallelism For Target has to be in the range of 1 to 99.

Category:
Other

Cause:
Value entered for Degree Of Parallelism is not in the range 1-99.

Action:
Please choose the appropriate Degree Of Parallelism For Target.

ODI-23069
ODI-23069 : Web Application Context must be provided

Category:
Other

Cause:
No value entered for the Web Application Context.

Action:
Please enter value for the Web Application Context.

ODI-23070
ODI-23070: Port number must be an integer between 0 and 65535.

Category:
Other

Cause:
The value for the Port Number was not valid.

Action:
Enter a valid integer value between 0 and 65535 for the Port Number.

ODI-23071
ODI-23071: Invalid Override Endpoint URL.

Category:
Other

Cause:
Override Endpoint URL enterred is invalid.

Action:
Please enter a valid Override Endpoint URL.

ODI-23072
ODI-23072: Invalid WSDL URL.

Category:
Other

Cause:
WSDL URL enterred is invalid.

Action:
Please enter a valid WSDL URL.

ODI-23073
ODI-23073: Duplicate Operation Names exist.

Category:
Other

Cause:
Duplicate Operation Names exist

Action:
Please ensure that operation names are unique.

ODI-23074
ODI-23074: The JNDI driver is mandatory.

Category:
Other

Cause:
A JNDI Driver was not specified and is a mandatory parameter.

Action:
A JNDI Protocol chosen from the drop down list may help to ensure the syntax is correct.

ODI-23075
ODI-23075: The JNDI URL is mandatory.

Category:
Other

Cause:
The JNDI URL field has not been entered and is a mandatory parameter.

Action:
Enter the URL parameter. A template chosen from the drop down list may help to ensure the syntax is correct.

ODI-23076
ODI-23076: The JNDI Resource is mandatory.

Category:
Other

Cause:
The JNDI Resource field has not been entered and is a mandatory parameter.

Action:
Enter the Resource parameter.

ODI-23077
ODI-23077: Please enter Credential file password.

Category:
Other

Cause:
Credential file password is a mandatory parameter for ewallet.p12.

Action:
Enter the credential file password.

ODI-23078
ODI-23078: Could not fetch details from Credential file. Please check logs for further details.

Category:
Other

Cause:
Error occurred while fetching details from Credential file.

Action:
Please check logs.

ODI-23079
ODI-23079: Invalid Credential file.

Category:
Other

Cause:
Valid credential file not found.

Action:
Please provide valid credential file path.

ODI-23080
ODI-23080: Credential file is not accessible.

Category:
Other

Cause:
Credential file does not have required permissions.

Action:
Please provide required permissions to Credential file.

ODI-23081
ODI-23081: Credential file could not be found at given path.

Category:
Other

Cause:
Credential file is not found in given path.

Action:
Please provide correct Credential file path.

ODI-23082
ODI-23082: Unable to retrieve credentials, the connection information does not match with any of the entries in Credential file.

Category:
Other

Cause:
Connection information does not match with any of the entries in Credential file.

Action:
Verify Credential file.

ODI-23083
ODI-23083: No connection information found in Credential file.

Category:
Other

Cause:
Credential file is empty.

Action:
Verify Credential file.

ODI-23084
ODI-23084: Please select an Oracle database connection.

Category:
Other

Cause:
No selection made.

Action:
Select Oracle database connection.

ODI-23085
ODI-23085: Entered password does not match Credential file password.

Category:
Other

Cause:
Credential file password is not valid.

Action:
Please try again.

ODI-24004
ODI-24004: There are no supervisor accounts in the ODI repository with matching entries in the identity store. Please provide a suitable supervisor account. Or you may also want to double check your JPS configuration file e.g. jps-config-jse.xml regarding the identity store configuration on properties such as {0}.

Category:
Other

Cause:
The ODI repository does not have any supervisor account that matches the entries in the identity store based on the identity store configuration from JPS configuration file.

Action:
Create a supervisor account in the ODI repository that matches an entry in the identify store. Or you may also want to double check your JPS configuration file e.g. jps-config-jse.xml file regarding the identity store configuration on properties such as username.attr, groupname.attr, user.search.bases, group.search.bases.

ODI-24005
ODI-24005: An error occurred while checking the status of the master repository.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Check the exception to see if it gives details about the error and contact Oracle Support Services for further assistance.

ODI-24006
ODI-24006: An error occurred while switching the authentication mode for the master repository.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Check the exception to see if it gives details about the error and contact Oracle Support Services for further assistance.

ODI-24007
ODI-24007: Rules should not have empty conditions.

Category:
Other

Cause:
Rules associated with policy have empty conditions.

Action:
Create rules with conditions associated with them.

ODI-25001
ODI-25001: Unable to input a larger element

Category:
Other

Cause:
The total length of all keywords exceeds the maximum length.

Action:
Remove one or more of the keywords, or decrease their lengths.

ODI-25002
ODI-25002: The end date cannot be before the start date.

Category:
Other

Cause:
The end date is before the start date.

Action:
Set the end date to be after the start date.

ODI-25003
ODI-25003: Error while starting session

Category:
Other

Cause:
An unexpected error occured while starting the session.

Action:
Check the error details for further information and contact Oracle Support Services for further assistance.

ODI-25004
ODI-25004: Date Format Not Valid

Category:
Other

Cause:
One of the Date fields is invalid. This may be the From or To Date.

Action:
Click the button to the right of the field to invoke a dialog for entering a valid Time and Date.

ODI-25005
ODI-25005: Incorrect date format . The format is {0}.

Category:
Other

Cause:
The date format is incorrect.

Action:
Use the format that is presented in the error message.

ODI-25006
ODI-25006: At least one agent must be selected.

Category:
Other

Cause:
Agent selection is mandatory.

Action:
Select at least one agent to clean stale sessions.

ODI-25007
ODI-25007: At least one work repository must be selected.

Category:
Other

Cause:
Work repository selection is mandatory.

Action:
Select at least one work repository to clean stale sessions.

ODI-25008
ODI-25008: You are not allowed to delete session variable.

Category:
Other

Cause:
User attempt to delete session variable.

Action:
Cancel deleting session variable.

ODI-25009
ODI-25009: You are not allowed to delete scenario variable.

Category:
Other

Cause:
User attempt to delete scenario variable.

Action:
Cancel deleting scenario variable.

ODI-26001
ODI-26001: Boolean does not correspond to the Field Update Object Layer.

Category:
Other

Cause:
The repository contained an invalid value of the Field Update property for a checkbox or radio group.

Action:
Ensure the repository value is a boolean for checkbox or a valid action command for a radio group.

ODI-26002
ODI-26002: This object is referenced by another object. View the details for more information. You may also see where this object is used in the hierarchy.

Category:
Other

Cause:
The specified object could not be used because it is referenced by another object.

Action:
Remove references to this object. The "Uses" hierarchy may be useful in finding objects references.

ODI-26003
ODI-26003: This object cannot be removed: it is referenced by another object.

Category:
Other

Cause:
The specified object could not be deleted because it is referenced by another object.

Action:
Remove references to this object before deleting it. The "Uses" hierarchy may be useful in finding objects references.

ODI-26004
ODI-26004: Action denied:

Category:
Other

Cause:
The current license may not allow use of the designer.

Action:
Review the error details for further information.

ODI-26005
ODI-26005: You are importing an object from another repository with the same identifier. It is forbidden.

Category:
Other

Cause:
An object in the import file has an identifier which already exists in the repository.

Action:
Consider manually changing the "com.sunopsis.dwg.dwgobj.SnpImportRep" object section of the import XML file to use a unique identifier.

ODI-26006
ODI-26006: The specified encryption key is invalid.

Category:
Other

Cause:
The encryption key specified was found to be invalid during the decrypting phase.

Action:
Ensure a valid encryption key is utilized.

ODI-26007
ODI-26007: KM or Procedure not encrypted. No decryption was performed.

Category:
Other

Cause:
Decryption was requested for a non-encypted KM or Procedure.

Action:
Do not attempt to decrypt a non-encrypted KM or Procedure.

ODI-26008
ODI-26008: Scenario not encrypted. No decryption was performed.

Category:
Other

Cause:
Decryption was requested for a non-encypted Scenario.

Action:
Do not attempt to decrypt a non-encrypted Scenario.

ODI-26009
ODI-26009: Action not encrypted. No decryption was performed.

Category:
Other

Cause:
Decryption was requested for a non-encypted Action.

Action:
Do not attempt to decrypt a non-encrypted Action.

ODI-26010
ODI-26010: Decryption failed due to incompatible key.

Category:
Other

Cause:
The key provided to decrypt was an invalid key.

Action:
Ensure the decryption key is correctly specified.

ODI-26011
ODI-26011: unable to find specified encryption API

Category:
Other

Cause:
The specified cryptographic algorithm requested was not available in the environment.

Action:
Ensure the environment can access the DES/ECB/PKCS5Padding algorithms and padding.

ODI-26012
ODI-26012: invalid encrypted data.

Category:
Other

Cause:
The BASE64 content may be invalid or the zip file contents may be corrupted.

Action:
Ensure the encrypted data is correct and the decryption key is correctly specified.

ODI-26013
ODI-26013: Your security parameters are insufficient to perform this action.

Category:
Other

Cause:
The ODI user security parameters do not specifically permit the user to perform this particular action.

Action:
Ensure this ODI user is granted the security access to perform this action.

ODI-26014
ODI-26014: The code of your {0} is already used by another {1}. Please give another code to save this {2}.

Category:
Other

Cause:
The value entered for code must be unique for the entire work repository.

Action:
Ensure the a unique value is entered.

ODI-26015
ODI-26015: You do not have sufficient privileges to perform this operation.

Category:
Security

Cause:
The ODI user security parameters do not specifically permit the user to perform this particular operation.

Action:
Ensure this ODI user is granted the security access to perform this operation.

ODI-26016
ODI-26016: The requested operation cannot succeed. The object no longer exists.

Category:
Other

Cause:
The specified ODI object cannot be accessed because it no longer exists in the repository (it may have been deleted by another ODI user).

Action:
Recreate the specified ODI object. Consider importing the object from a backup.

ODI-26017
ODI-26017: Error.

Category:
Other

Cause:
Internal error.

Action:
Review the error details for further information.

ODI-26018
ODI-26018: Key Error.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Review the error details for further information.

ODI-26019
ODI-26019: Action Denied.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Review the error details for further information.

ODI-26020
ODI-26020: Retrieve method incorrect.

Category:
Other

Cause:
Retrieve method is incorrect. Must be "set" or "get".

Action:
Please change the retrieve method to "set" or "get".

ODI-26021
ODI-26021: Object initialization denied.

Category:
Other

Cause:
A component could not be initialized.

Action:
Ensure that the user has security permissions to create the object.

ODI-26022
ODI-26022: Unrecoverable error during object saving.

Category:
Other

Cause:
The object could not be saved. This is possibly due to a repository connection error, or inconsistent data values supplied. It's also possible that the object was modified by another user.

Action:
Ensure the repository database is available and the data values supplied are valid. Try to save changed data, then refresh edited object and apply changed data again.

ODI-26023
ODI-26023: Cannot create object.

Category:
Other

Cause:
An unexpected error occured during the object creation process.

Action:
Contact Oracle Support Services.

ODI-26024
ODI-26024: Cannot stop update operation.

Category:
Other

Cause:
An unexpected error occured during the update operation.

Action:
Contact Oracle Support Services.

ODI-26025
ODI-26025: Display Initialization denied.

Category:
Other

Cause:
An unexpected error occured during the display initialization process.

Action:
Contact Oracle Support Services.

ODI-26026
ODI-26026: Cannot refresh.

Category:
Other

Cause:
An unexpected error occured during the refresh process.

Action:
Contact Oracle Support Services.

ODI-26027
ODI-26027: Security not set for the instance. The instance will not be added to the tree.

Category:
Security

Cause:
Instance security permissions "By repository" were choosen but a concrete repository is not specified.

Action:
Ensure a repository is specified.

ODI-26028
ODI-26028: Cannot save your modifications.

Category:
Other

Cause:
Internal error.

Action:
No action required.

ODI-26029
ODI-26029: Could not deploy the datasource automatically.

Category:
Other

Cause:
Weblogic Administration server is not up and running, the server connection parameters are wrong.

Action:
Please check Weblogic Administration server connection parameters and the server state.

ODI-26030
ODI-26030: The new password does not meet the password policy. Your change could not be saved.

Category:
Other

Cause:
The new password does not meet the password policy.

Action:
Please verify that the new password meets the password policy (go to the "Security Navigator -> Password policies...").

ODI-26031
ODI-26031: You may not delete work repository {0} because you are connected to it. To delete this repository, reconnect to a different work repository or use a master repository only connection.

Category:
Other

Cause:
Deletion of a work repository which is currently connected is not supported.

Action:
Disconnect from the repository and then connect utilizing a Master Repository Only connection or a different work repository before attempting to delete the specified work repository.

ODI-26032
ODI-26032: This object was modified by {0} on {1} at {2}. Your changes cannot be saved.

Category:
Other

Cause:
The object was changed in the repository after the editor was opened for this object.

Action:
Close the editor without saving changes. Open the editor again and reapply the edits and save. Note: consider using the lock object facility to disallow current modifications to an object.

ODI-26033
ODI-26033: You cannot edit this object because it is locked by another user ({0}). You can only view it.

Category:
Other

Cause:
The ODI object opened for editing is locked by another user. Other ODI users can only view such objects.

Action:
Try to edit the object later.

ODI-26034
ODI-26034: An error occurred while deleting executions.

Category:
Other

Cause:
The specified executions could not be deleted. This is possibly caused by the repository database connection problems.

Action:
Retry to delete the executions. If problem persists, contact Oracle Support Services.

ODI-26035
ODI-26035: Error.

Category:
Other

Cause:
Internal error.

Action:
Review the error details for further information.

ODI-26036
ODI-26036: Error while encrypting.

Category:
Other

Cause:
A general error occured during the ecrypting process, possibly caused by caused by repository database access problems, lack of security permissions, or encryption engine failures,

Action:
Retry the encrypt action again.

ODI-26037
ODI-26037: Encryption key is not valid.

Category:
Other

Cause:
An invalid encryption key was entered causing an encryption engine failure.

Action:
Enter a valid encryption key and retry the action.

ODI-26038
ODI-26038: Unable to execute, the selected Logical Agent is not associated to a Physical Agent in the desired Context.

Category:
Other

Cause:
A Logical Agent was not associated with this Physical Agent in this Context.

Action:
Ensure a valid "Logical Agent - Physical Agent" association exists in the desired Context.

ODI-26039
ODI-26039: Connection failed.

Category:
Other

Cause:
The attempt to connect to the repository failed. This may be due to one or more of the following: invalid connection parameters specified, database problems, network problems.

Action:
Ensure the repository database is available and acceccesible and the repository connection parameters are correct.

ODI-26040
ODI-26040: error while updating

Category:
Other

Cause:
Failed to update the ODI logins file: snps_login_work.xml.

Action:
Ensure write-access is granted to the ODI logins file: snps_login_work.xml.

ODI-26041
ODI-26041: Error while attempting to get FieldData from ObjectDisplay.

Category:
Other

Cause:
An unexpected error occured obtaining FieldData from ObjectDisplay.

Action:
Contact Oracle Support Services.

ODI-26042
ODI-26042: Error while attempting to set FieldUpdate from ObjectUpdate.

Category:
Other

Cause:
An unexpected error occured updating FieldUpdate from ObjectUpdate.

Action:
Contact Oracle Support Services.

ODI-26043
ODI-26043: Window closing cancelled by the User.

Category:
Other

Cause:
User asked to close the parent window where child lines were modified.

Action:
No action performed on that.

ODI-26044
ODI-26044: Host Variable Not Found.

Category:
Other

Cause:
An unexpected error occurred searching for a host variable.

Action:
Review the error details for further information.

ODI-26045
ODI-26045: Unable to perform the drop operation.

Category:
Other

Cause:
Dropped entity is invalid.

Action:
Check whether the dropped entity is valid and perform the drag-n-drop action again.

ODI-26046
ODI-26046: MethodGetter was not found

Category:
Other

Cause:
An unexpected error occured obtaining the getter method.

Action:
Contact Oracle Support Services.

ODI-26047
ODI-26047: Object on method setObjectDisplay(Object pObjectDisplay) is not an array.

Category:
Other

Cause:
This is caused by programmatic error.

Action:
ODI users should normally never see this message.

ODI-26048
ODI-26048: Object on method setObjectDisplay(Object pObjectDisplay) is not a vector.

Category:
Other

Cause:
This is caused by programmatic error.

Action:
ODI users should normally never see this message.

ODI-26049
ODI-26049: Parameters not valid.

Category:
Other

Cause:
An unexpected error occured due to an invalid parameter value.

Action:
Contact Oracle Support Services.

ODI-26050
ODI-26050: Master repository not installed on this connection.

Category:
Other

Cause:
This is caused by programmatic error.

Action:
ODI users should normally never see this message.

ODI-26051
ODI-26051: XML Export Error.

Category:
Other

Cause:
An error occured during the creation of the XML Export file.

Action:
Ensure the repository is accessible and the export file and its directory are writable.

ODI-26052
ODI-26052: XML Import Error.

Category:
Other

Cause:
An unexpected error occurred while importing an XML document.

Action:
Review the error details for further information.

ODI-26053
ODI-26053: An error occurred during initialization.

Category:
Other

Cause:
Initialization failed possibly due a repository access failure or insufficient ODI security permissions.

Action:
Ensure the repository database is available, and the ODI user security permissions permit connection.

ODI-26054
ODI-26054: Page not available.

Category:
Other

Cause:
The selected page number was invalid.

Action:
Ensure the page number entered is greater than 0 and less than the total number of pages.

ODI-26056
ODI-26056: Error while disconnecting.

Category:
Other

Cause:
This error is occured while closing the repository database connection after "Test query" action completed.

Action:
This error may be ignored.

ODI-26057
ODI-26057: Unable to connect the agent. The agent is probably not started.

Category:
Other

Cause:
The connection request to the agent failed.

Action:
Ensure the agent is started and available. Ensure the connection information is valid.

ODI-26058
ODI-26058: Unable to connect the agent. The agent URL cannot be found.

Category:
Other

Cause:
The connection request to the agent failed using the given URL.

Action:
Ensure the agent is started and available. Ensure the connection URL information is valid.

ODI-26059
ODI-26059: Object on method setObjectDisplay(Object pObjectDisplay) is not a List.

Category:
Other

Cause:
An unexpected error occured setting ObjectData.

Action:
Contact Oracle Support Services.

ODI-26060
ODI-26060: The Password and Confirmation Password do not match.

Category:
Other

Cause:
The values entered for Password and Confirmation Password did not match.

Action:
Enter the same value for Password and Confirmation Password.

ODI-26061
ODI-26061: The minimum password length is {0} characters.

Category:
Other

Cause:
The length of the Password entered is less than specified in password policy rule.

Action:
Enter a Password whose length is greater than or equal to the specified minimum length.

ODI-26062
ODI-26062: The password violates the following rule: "{0}". Select another password.

Category:
Other

Cause:
The password supplied was invalid.

Action:
Enter a valid password.

ODI-26063
ODI-26063: Invalid password.

Category:
Other

Cause:
The password supplied was invalid.

Action:
Enter a valid password.

ODI-26064
ODI-26064: Error while exporting.

Category:
Other

Cause:
An error occured during the creation of the Export file.

Action:
Ensure the repository is accessible and the export file and its directory are writable.

ODI-26065
ODI-26065: You must specify all the options.

Category:
Other

Cause:
This is caused by programmatic error.

Action:
ODI users should normally never see this message.

ODI-26066
ODI-26066: An unexpected error has occurred.

Category:
Other

Cause:
An unexpected error occured this process.

Action:
Retry action. If problem persists then contact Oracle Support Services.

ODI-26067
ODI-26067: mandatory field "Java charset" not entered

Category:
Other

Cause:
A value for the "Java character set" field was not entered.

Action:
Enter a value for the "Java character set" field.

ODI-26068
ODI-26068: unable to load export list in the module: {0}

Category:
Other

Cause:
The contents of the export file list was not formatted correctly.

Action:
Correct the format of the export list file specified.

ODI-26069
ODI-26069: The specified export directory does not exist.

Category:
Other

Cause:
The specified export directory is invalid.

Action:
Ensure the specified export directory exists and is writable.

ODI-26070
ODI-26070: The Open Tool class name must not begin with "Snp" or "Odi".

Category:
Other

Cause:
The Open Tool class name begins with "Snp" or "Odi".

Action:
Ensure the Open Tool class name does not begin with "Snp" or "Odi".

ODI-26071
ODI-26071: Open Tool not activated. Your Open Tool references a class which not found.

Category:
Other

Cause:
The class name specified in this Open Tool was not found.

Action:
Ensure the Open Tool class name specified is valid and available in the class path.

ODI-26072
ODI-26072: Your Open Tool has been installed. You can now use it in a procedure or package.

Category:
Other

Cause:
Installation of the Open Tool has been completed.

Action:
No action is required.

ODI-26073
ODI-26073: Could not activate Open Tool. Check that it is in the "oracledi/userlib" directory.

Category:
Other

Cause:
The Open Tool references a class which was not found.

Action:
Ensure the Open Tool class exists in the "oracledi/userlib" directory.

ODI-26074
ODI-26074: Policy "Name" is a mandatory field.

Category:
Other

Cause:
A value for the Policy "Name" field value was not entered.

Action:
Enter a value for the Policy "Name" field.

ODI-26075
ODI-26075: Policy "Name" must be unique.

Category:
Other

Cause:
A Policy with the same name already exists.

Action:
Enter a unique value in Policy "Name" field.

ODI-26076
ODI-26076: You do not have enough memory to generate this report. Increase the maximum Java heap size value (-Xmx).

Category:
Other

Cause:
There was not enough memory allocated to generate the report.

Action:
Increase the maximum Java heap size value by using the "-Xmx" JVM option.

ODI-26077
ODI-26077: Target file name is not specified.

Category:
Other

Cause:
The Target file name is mandatory and was not specified.

Action:
Enter a value for the target file name.

ODI-26078
ODI-26078: Error while creating the version

Category:
Other

Cause:
An unexpected error occurred while versioning an object.

Action:
Review the error details for further information.

ODI-26079
ODI-26079: Version already exists, versioning aborted.

Category:
Other

Cause:
A version with the specified version number already exists.

Action:
Enter a unique version number.

ODI-26080
ODI-26080: Unable to delete version {0} for {1} {2}. It is referenced by label {3}

Category:
Other

Cause:
Deletion of a version of an object referenced by a Solution was attempted.

Action:
Delete the label referencing the object version. Then retry deleting the object version.

ODI-26081
ODI-26081: Unable to delete version {0} for {1} {2}. It is referenced by version {3} of label {4}

Category:
Other

Cause:
An object version cannot be deleted because it is referenced.

Action:
If an object version must be deleted, remove all references first.

ODI-26082
ODI-26082: No difference found

Category:
Other

Cause:
No difference was found between two object versions.

Action:
No action is required.

ODI-26083
ODI-26083: No difference found.

Category:
Other

Cause:
No difference was found between object versions.

Action:
No action is required.

ODI-26084
ODI-26084: Could not compare versions of different objects.

Category:
Other

Cause:
Objects of different types were selected for comparison.

Action:
Select objects of the same type before performing comparison.

ODI-26085
ODI-26085: You cannot restore several versions of the same object.

Category:
Other

Cause:
Multiple versions were selected for restoring.

Action:
Select a single version when performing this action.

ODI-26086
ODI-26086: You cannot select more than one version at the same time.

Category:
Other

Cause:
Multiple version were selected for this action.

Action:
Select a single version when performing this action.

ODI-26087
ODI-26087: You must select a version.

Category:
Other

Cause:
A version was not selected.

Action:
Select a version before performing this action.

ODI-26088
ODI-26088: You must select the version to restore.

Category:
Other

Cause:
A version to restore was not selected.

Action:
Select a version to restore.

ODI-26089
ODI-26089: This object is currently locked by user: {0}. Version restoration cancelled.

Category:
Other

Cause:
The object selected for restoration was locked by another user.

Action:
Ensure the selected object is not locked by another user before retrying the operation.

ODI-26090
ODI-26090: Object version list is empty.

Category:
Other

Cause:
The object selected was not versioned.

Action:
Select a versioned object before retrying the operation.

ODI-26091
ODI-26091: An array with an invalid size was passed to SnpsObjectTableColumnTextIntrospectMapper.createMapFromArrayOfArrays.

Category:
Other

Cause:
An array with an invalid size was passed to SnpsObjectTableColumnTextIntrospectMapper.createMapFromArrayOfArrays.

Action:
Review the error details for further information.

ODI-26092
ODI-26092: Table Model must have at least one Column.

Category:
Other

Cause:
The Model for this Table did not contain any Columns.

Action:
Add at least one Column to the Table's Model.

ODI-26093
ODI-26093: Unable to open window.

Category:
Other

Cause:
An unexpected error occurred while opening a window.

Action:
Review the error details for further information.

ODI-26094
ODI-26094: Your license does not allow Changed Data Capture operations.

Category:
Other

Cause:
The current license does not include change data capture.

Action:
Upgrade the license to include change data capture.

ODI-26095
ODI-26095: This object is locked by {0}. You cannot edit it unless it is unlocked.

Category:
Other

Cause:
Object could not be opened for write access because it was already locked by another user.

Action:
Ensure the selected object is not locked by another user before retrying the operation.

ODI-26096
ODI-26096: Replacement of object failed.

Category:
Other

Cause:
The file specified did not contain correctly formed XML.

Action:
Ensure the XML in the specified file is valid before retrying the operation.

ODI-26097
ODI-26097: Replace failed due to an SQL exception.

Category:
Other

Cause:
The file used to replace this object is not a valid XML format.

Action:
Select a valid XML file format before performing this replace object action.

ODI-26098
ODI-26098: You must specify an Export Path or File.

Category:
Other

Cause:
Either the Export Path or File was not specified.

Action:
Specify a value for either the Export Path or File.

ODI-26099
ODI-26099: You don't have the appropriate license to use this KM

Category:
Other

Cause:
The current license does not include usage of the specified KM.

Action:
Select another compatible KM or upgrade the license.

ODI-26100
ODI-26100: You don't have the appropriate privileges on Step objects.

Category:
Other

Cause:
Package Steps operation failed due to insufficient ODI security permissions.

Action:
Ensure the ODI user security permissions are correct for the Package Steps object.

ODI-26101
ODI-26101: The Data Check cannot be performed. A CKM is not selected on the Model.

Category:
Other

Cause:
No CKM was assigned to the Model.

Action:
Enter a CKM for the Model before performing the Data Check. Consider using the Model editor to make this entry.

ODI-26102
ODI-26102: The Service cannot be generated. An Application Server is not selected on the Model.

Category:
Other

Cause:
No Application Server was assigned to the Model.

Action:
Enter an Application Server for the Model before performing Generate Service. Consider using the Model editor to make entry.

ODI-26103
ODI-26103: You must specify a connection parameter

Category:
Other

Cause:
Repository connection parameters have not been specified.

Action:
Enter all required repository connection parameters.

ODI-26104
ODI-26104: You must specify a query parameter

Category:
Other

Cause:
A query parameter is missing for retrieving a level.

Action:
Supply the missing parameter.

ODI-26105
ODI-26105: Test failed

Category:
Other

Cause:
The value of Schema, Table, Column or Filter was invalid.

Action:
Ensure the Schema, Table, Column and Filter are valid. Consult the details for additional information.

ODI-26106
ODI-26106: Decryption failed. Data has been restored.

Category:
Other

Cause:
The Decryption process failed.

Action:
Consult the details for additional information.

ODI-26107
ODI-26107: Cannot find this {0} icon

Category:
Other

Cause:
An unexpected error occurred while searching for an icon.

Action:
Review the error details for further information.

ODI-26108
ODI-26108: The specified path is not valid.

Category:
Other

Cause:
The specified path was invalid or was not found on the file system.

Action:
Ensure a valid file system path is entered.

ODI-26109
ODI-26109: Error while reading the search criteria. Invalid file

Category:
Other

Cause:
The selected file did not contain search criteria in a valid format.

Action:
Ensure the selected file is one exported from the ODI search UI and contains correctly formatted search criteria information.

ODI-26110
ODI-26110: An error occurred while saving.

Category:
Other

Cause:
An unexpected error occurred during a save operation.

Action:
Review the error details for further information. Ensure that the repository connection is open.

ODI-26111
ODI-26111: Error while accessing the file

Category:
Other

Cause:
The specified file could not be opened.

Action:
Ensure the specified file exists and is accessible.

ODI-26112
ODI-26112: Error while performing the search

Category:
Other

Cause:
An unexpected error occurred while searching for an object.

Action:
Review the error details for additional information.

ODI-26113
ODI-26113: XML parser configuration error

Category:
Other

Cause:
The selected file is not a valid search criteria file format.

Action:
Select a valid search criteria file exported from the ODI search UI.

ODI-26114
ODI-26114: Host cannot be empty.

Category:
Other

Cause:
The Host field is mandatory and was not specified.

Action:
Enter a valid Host name.

ODI-26115
ODI-26115: Port number must be an integer between 1024 and 65535.

Category:
Other

Cause:
The value for Port Number was not valid.

Action:
Enter a valid integer value between 1024 and 65535 for Port Number.

ODI-26116
ODI-26116: User cannot be empty.

Category:
Other

Cause:
The User field is mandatory and was not supplied.

Action:
Enter a valid User Name.

ODI-26117
ODI-26117: Connection failed. Reason:

Category:
Other

Cause:
Could not connect to a repository with the specified connection details.

Action:
Ensure the repository database is available and valid connection details are supplied.

ODI-26118
ODI-26118: External password storage connection test failed.

Category:
Other

Cause:
Could not connect to the external password storage with the specified connection details.

Action:
Ensure the external password storage is available and valid connection details are supplied.

ODI-26119
ODI-26119: Exception when computing the value

Category:
Other

Cause:
An unexpected error occurred while comparing tables.

Action:
Review the error details for further information.

ODI-26120
ODI-26120: Fields compared are not the same

Category:
Other

Cause:
An unexpected error occurred while comparing fields.

Action:
Review the error details for further information.

ODI-26121
ODI-26121: Error while exploring version

Category:
Other

Cause:
An unexpected error occurred while checking the version.

Action:
Review the error details for further information.

ODI-26122
ODI-26122: Exception when getting the children list

Category:
Other

Cause:
An unexpected error occurred while getting a list of child elements.

Action:
Review the error details for further information.

ODI-26123
ODI-26123: Cannot connect to the repository with the provided login information.

Category:
Other

Cause:
Could not connect to a repository with the specified connection details.

Action:
Ensure the repository database is available and valid connection details are supplied.

ODI-26124
ODI-26124: Exception during connection to the repository with the provided login information:

Category:
Other

Cause:
Could not connect to a repository with the specified connection details.

Action:
Ensure the repository database is available and valid connection details are supplied.

ODI-26125
ODI-26125: The configured external password storage is still accessible. Instead, use the Password Storage Switch service to change the configuration.

Category:
Other

Cause:
Could not connect to the external password storage with the specified connection details.

Action:
Ensure the external password storage is available and valid connection details are supplied. Consider using the Password Storage Switch service to change the configuration.

ODI-26126
ODI-26126: Error while opening window.

Category:
Other

Cause:
An unexpected error occured while opening window.

Action:
Contact Oracle Support Services.

ODI-26127
ODI-26127: The selected master repository configured to use internal password storage. Recovery is possible only for external storages.

Category:
Other

Cause:
Recovery was attempted for a master repository configured to use internal password storage.

Action:
Select a master repository not configured to use internal password storage.

ODI-26128
ODI-26128: Unable to open Editor

Category:
Other

Cause:
An unexpected error occurred while opening an editor.

Action:
Review the error details for further information.

ODI-26129
ODI-26129: Unable to open Editor: Technology could not be opened twice

Category:
Other

Cause:
Technology editor is already open.

Action:
Close the other editor before opening a new technology editor.

ODI-26130
ODI-26130: Could not connect to repository

Category:
Other

Cause:
Could not connect to a repository with the specified connection details.

Action:
Ensure the repository database is available and valid connection details are supplied.

ODI-26131
ODI-26131: Specify Import Path

Category:
Other

Cause:
A value for Import Path is a mandatory and it was not supplied.

Action:
Enter the correct value for the Import Path.

ODI-26132
ODI-26132: Repository id {0} or Repository name {1} is already used in your master repository.

Category:
Other

Cause:
The ID or Name specified for the master repository were already used.

Action:
Enter valid unique values for Repository ID and Repository name.

ODI-26134
ODI-26134: Invalid number format for port number.

Category:
Other

Cause:
The value specified for Port Number was not in a valid format and number range.

Action:
Enter a valid Port Number. See SQL*Net documentation for additional information regarding format and range.

ODI-26135
ODI-26135: The Network Adapter could not establish the connection.

Category:
Other

Cause:
Connection via the Network Adapter could not be established.

Action:
Ensure the network resource is available and the connection details in the Network Adapter are correct..

ODI-26136
ODI-26136: The specified character set is not supported.

Category:
Other

Cause:
The specified character set was not supported.

Action:
Select a supported character set.

ODI-26137
ODI-26137: The context or type are incorrect.

Category:
Other

Cause:
The selected ODI context is invalid: it was probably removed from the repository database.

Action:
Reopen Execution dialog again so that the list of ODI contexts will be reloaded.

ODI-26138
ODI-26138: Server initialization failed.

Category:
Other

Cause:
The attempt to initialize the server failed. This may be due to one or more of the following: invalid connection parameters specified, database problems, network problems.

Action:
Ensure the server is available and acceccesible and the connection parameters are correct.

ODI-26139
ODI-26139: Oozie Engine initialization failed.

Category:
Other

Cause:
The attempt to initialize the Oozie engine failed. This may be due to one or more of the following: invalid connection parameters specified, database problems, network problems.

Action:
Ensure the Oozie engine is available and acceccesible and the connection parameters are correct.

ODI-26140
ODI-26140: Oozie Engine test failed.

Category:
Other

Cause:
The attempt to initialize the Oozie engine failed. This may be due to one or more of the following: invalid connection parameters specified, database problems, network problems.

Action:
Ensure the Oozie engine is available and acceccesible and the connection parameters are correct.

ODI-26150
ODI-26150: Incorrect Context.

Category:
Other

Cause:
A valid Context was not specified.

Action:
Select a Context from the list. If none are available then create one from the Topology Navigator.

ODI-26153
ODI-26153: Connection failed; JDBC Error

Category:
Other

Cause:
An unexpected JDBC error was encountered during the connection process.

Action:
Ensure the resource referenced is available and the connection information is correct.

ODI-26155
ODI-26155: No Master Repository on this connection

Category:
Other

Cause:
A connection to the Master Repository could not be established.

Action:
Ensure the Master Repository is available and valid connection details are provided.

ODI-26156
ODI-26156: Designer cannot connect to an Execution repository. The operation will be canceled.

Category:
Other

Cause:
Unable to establish a connection to the Execution repository.

Action:
Ensure the Execution repository is available and the connection details are correct.

ODI-26157
ODI-26157: Connection Error

Category:
Other

Cause:
A connection to the Master Repository could not be established.

Action:
Ensure the Master Repository is available and valid connection details are provided.

ODI-26158
ODI-26158: Work Repository Attachment Error

Category:
Other

Cause:
A connection to the Work Repository could not be established.

Action:
Ensure the Work Repository is available and valid connection details are provided.

ODI-26159
ODI-26159: Error while creating Work Repository

Category:
Other

Cause:
An unexpected error occurred while creating the Work Repository.

Action:
Correct any issues described in the error details.

ODI-26160
ODI-26160: URL not referenced in the list.

Category:
Other

Cause:
The URL is not valid for the driver.

Action:
Ensure that the URL parameters are correct and in the proper format.

ODI-26161
ODI-26161: File Not Found

Category:
Other

Cause:
The XML file for the driver or URL format list is missing.

Action:
Review the exception for the missing file. Those files should be included with the installation.

ODI-26162
ODI-26162: Connection failure

Category:
Other

Cause:
A connection to the repository could not be established.

Action:
Ensure the repository is available and valid connection details are provided.

ODI-26163
ODI-26163: Access Denied

Category:
Other

Cause:
A connection to the repository could not be established because of insufficient user privilege.

Action:
Ensure the ODI user has sufficient privilege to connect to the specified repository.

ODI-26164
ODI-26164: The reverse cannot be executed. Your Model will be created.

Category:
Other

Cause:
The specified technology or driver did not support standard reverse-engineering.

Action:
Ensure the technology or driver supports standard reverse-engineering. Otherwise choose Customized Reverse and select an appropriate RKM for the technology.

ODI-26165
ODI-26165: This driver has no match in the URL list

Category:
Other

Cause:
A match could not be made between the driver and the list of URLs.

Action:
Ensure that the correct driver has been selected.

ODI-26166
ODI-26166: The template was not generated: {0}

Category:
Other

Cause:
The WLS Template could not be generated.

Action:
Correct any errors identified in the error log and retry the operation.

ODI-26167
ODI-26167: File System Error: {0}

Category:
Other

Cause:
Creation of the Server Template file failed due to an error detected by the file system.

Action:
Correct any errors identified in the error log. Ensure the file system location is accessible and retry the operation.

ODI-26168
ODI-26168: Client requires a repository with version {0} but the repository version found is {1}

Category:
Other

Cause:
Could not connect to the repository due to the old repository version.

Action:
Update repository to the latest version.

ODI-26169
ODI-26169: JDBC driver is mandatory.

Category:
Other

Cause:
JDBC driver was not entered.

Action:
Provide JDBC driver for database connection.

ODI-26170
ODI-26170: JDBC URL is mandatory.

Category:
Other

Cause:
JDBC URL was not entered.

Action:
Provide JDBC URL for database connection.

ODI-26171
ODI-26171: User is mandatory.

Category:
Other

Cause:
User was not entered.

Action:
Provide user for database connection.

ODI-26172
ODI-26172: Id is mandatory.

Category:
Other

Cause:
Id was not entered.

Action:
Provide work repository ID.

ODI-26173
ODI-26173: Name is mandatory.

Category:
Other

Cause:
Name was not entered.

Action:
Provide work repository name.

ODI-26174
ODI-26174: Database connection is not available.

Category:
Other

Cause:
Connection error occurred while connecting to the database.

Action:
Verify that the Database Connection details are correct and the database is available.

ODI-26175
ODI-26175: Import folder does not exist or not a valid folder.

Category:
Other

Cause:
Non-existing or invalid folder was specified.

Action:
Ensure the specified folder path is correct and refers to an existing folder.

ODI-26176
ODI-26176: Import file does not exist or not a valid file.

Category:
Other

Cause:
Non-existing or invalid file was specified.

Action:
Ensure the specified file path is correct and refers to an existing file.

ODI-26177
ODI-26177: Unable to connect to the DBA user.

Category:
Other

Cause:
Unable to connect to the DBA account.

Action:
Check that the DBA username and password are correct.

ODI-26178
ODI-26178: Unable to connect to the Repository user.

Category:
Other

Cause:
Unable to connect to the Repository account.

Action:
Check that the Repository connection details are correct.

ODI-26179
ODI-26179: Invalid Date Format

Category:
Other

Cause:
An Invalid Date format was entered in the date filter.

Action:
Ensure the date entered is of the required format.

ODI-26180
ODI-26180: Changing the name of a sequence only impacts the sequence itself; Users need to manually change object(s) which reference the old sequence name.

Category:
Other

Cause:

Action:

ODI-26181
ODI-26181: Unable to add a Project knowledge module

Category:
Other

Cause:
An unsupported action was attempted.

Action:
No action required as Project knowledge modules are not a valid selection to be added to a solution.

ODI-26182
ODI-26182: Object was modified by another user and cannot be saved.

Category:
Other

Cause:
The object could not be saved. It's possible that the object was modified by another user.

Action:
Try to save changed data, then refresh edited object and apply changed data again.

ODI-26183
ODI-26183: The maximum password length is {0} characters.

Category:
Other

Cause:
The entered work repository password length is greater than allowed.

Action:
Provide a shorter password.

ODI-26184
ODI-26184: SQL error occurred. See error details for more information.

Category:
Other

Cause:
SQL error occurred while performing UI action.

Action:
If this error is not expected, contact Oracle Support Services.

ODI-26185
ODI-26185: File does not exist or cannot be created. See error details for more information.

Category:
Other

Cause:
UI action tried to open a file which did not exist, or create a file which could not be created due to some reasons.

Action:
Make sure the file path is typed correctly. Make sure application has enough file system permissions in order to create a file at the specified path.

ODI-26186
ODI-26186: Character set is not supported. See error details for more information.

Category:
Other

Cause:
UI action tried to use character encoding which is not supported.

Action:
Make sure character set is typed correctly.

ODI-26187
ODI-26187: Unexpected I/O error occurred. See error details for more information.

Category:
Other

Cause:
UI action caused unexpected I/O error.

Action:
Contact Oracle Support Services.

ODI-26188
ODI-26188: There is no enough memory to perform this UI action. Increase the maximum Java heap size value (-Xmx).

Category:
Other

Cause:
UI action requires more memory than available at the current moment.

Action:
Increase the maximum Java heap size value by using the "-Xmx" JVM option.

ODI-26189
ODI-26189: Unexpected report generation error occurred. See error details for more information.

Category:
Other

Cause:
UI action caused unexpected report generation error.

Action:
Contact Oracle Support Services.

ODI-26190
ODI-26190: A user with same name {0} already exists in ODI. Note: LDAP user name is case insensitive. You have to first drop that user prior to registering or changing this one.

Category:
Other

Cause:
Due to LDAP user name is case insensitive so ODI will follow same rule in external authenticaiton mode.

Action:
Please drop the existing user with same name(ingoring case) first prior to registering this one.

ODI-26191
ODI-26191: You cannot move this object because it is locked by another user ({0}).

Category:
Other

Cause:
This object was locked by another user.

Action:
Wait until object is unlocked.

ODI-26192
ODI-26192: You cannot drag & drop this object because it is locked by another user ({0}).

Category:
Other

Cause:
This object was locked by another user.

Action:
Wait until object is unlocked .

ODI-26193
ODI-26193: You are not allowed to delete master repository.

Category:
Other

Cause:
User attempt to delete master repository.

Action:
Cancel deleting master repository.

ODI-26194
ODI-26194: Database Connection User is mandatory.

Category:
Other

Cause:
Database Connection User was not entered.

Action:
Provide Database Connection User.

ODI-26195
ODI-26195: Database Connection Password is mandatory.

Category:
Other

Cause:
Database Connection Password was not entered.

Action:
Provide Database Connection Password.

ODI-26196
ODI-26196: Failed to migrate login information to new format.

Category:
Other

Cause:
ODI was not able to migrate login information from old format into the new format.

Action:
Make sure that directory %ODI_HOME%/oracledi has write permissions. Try manually copying %ODI_HOME%/oracledi/snps_login_work.xml into %ODI_HOME%/oracledi/snps_login_work_12.xml file.

ODI-26197
ODI-26197: Failed to delete old login information.

Category:
Other

Cause:
ODI was not able to delete old login information after migration from old format into the new format.

Action:
Make sure that directory %ODI_HOME%/oracledi and file %ODI_HOME%/oracledi/snps_login_work.xml have write permissions. Try manually removing %ODI_HOME%/oracledi/snps_login_work.xml file.

ODI-26198
ODI-26198: Passwords do not match.

Category:
Other

Cause:
Password confirmation doesn't match the entered password.

Action:
Make sure that password and password confirmation are the same.

ODI-26199
ODI-26199: User {0} is not authorized to grant object {1}.

Category:
Security

Cause:
Current user is not authorized to grant generic object privileges

Action:
Assign generic object privileges to user.

ODI-26200
ODI-26200: User {0} is not authorized to grant method {1}.

Category:
Security

Cause:
Current user is not authorized to grant generic method privileges

Action:
Assign generic method privileges to user.

ODI-26201
ODI-26201: Invalid Export Key. Export Key must have a minimum length of eight characters and maximum length of 100 characters, contain at least one alphabetic (lower/upper case) character, at least one numeric-digit or a special characters (@ # $ % + / =).

Category:
Other

Cause:
Export Key must have a minimum length of eight characters and maximum length of 100 characters, contain at least one alphabetic (lower/upper case) character, at least one numeric-digit or a special characters (@ # $ % + / =).

Action:
Provide a valid Export Key

ODI-26202
ODI-26202: The Export Key and the confirmed Export Key are not the same.

Category:
Other

Cause:
Export Key confirmation doesn't match the entered Export Key.

Action:
Make sure that the Export Key and confirmed Export Key are the same.

ODI-26203
ODI-26203: The provided Export Key is not correct for the selected file.

Category:
Other

Cause:
The provided Export Key is not the same as the Export Key of this selected file.

Action:
Provide a correct Export Key

ODI-26204
ODI-26204: The incorrect Export Key is entered three times. The Export Key field will be disabled now. You can Import this file without an Export Key (the cipher data will not be imported) or Cancel import.

Category:
Other

Cause:
The incorrect Export Key entered 3 times.

Action:
Continue import this file without importing cipher data or Cancel import.

ODI-26205
ODI-26205: The incorrect Export Key is entered three times. The Export Key field will be disabled now. Please consider other options or Cancel import.

Category:
Other

Cause:
The incorrect Export Key entered 3 times.

Action:
Continue import this file or all files without importing cipher data, or Skip the file, or Cancel import.

ODI-26206
ODI-26206: Unable to connect Registry Database to the DBA user.

Category:
Other

Cause:
Unable to connect Registry Database by DBA Account.

Action:
Check Registry Database and the DBA username and password are correct.

ODI-26207
ODI-26207: An Option with the name {0} already exists. Please provide another name.

Category:
Other

Cause:
The name provided for the Option is not unique.

Action:
Enter a unique name for the Option.

ODI-26208
ODI-26208: Unable to perform move because {0} already exists in folder {1}.

Category:
Other

Cause:
A folder already consists a such type of object with the same name as a moving object.

Action:
Rename an object, which you want to move, or rename, or delete an existing object from a folder.

ODI-26209
ODI-26209: Repository Seeding Version Mismatch: A client of an older version is used to connect to a repository that already contains newer map component and KM definitions. Continuing login will not update any seeded objects. Continue login?

Category:
Other

Cause:
A client of an older version is used to connect to a repository that already contains newer map component and KM definitions.

Action:
Update the current client by downloading and installing the latest patch. Insure other clients that connect to the same repository are also at the same patch version.

ODI-26210
ODI-26210: The repository contains map component and KM definitions that are older than the ones supported by the current client version. Clicking Yes will continue the login and the map component definitions will be updated. Clicking No will disconnect from the repository without updating. Do you want to continue?

Category:
Other

Cause:
The current client contains map component and KM definitions that are newer than the ones recorded in the repository.

Action:
Continuing the connection will update the repository with map component and KM definitions at the same version as the client. Check and update other clients that connect to the same repository to the same patch version as the current client.

ODI-26211
Mapping name is not unique.

Category:
Other

Cause:
Duplicate mapping name. Mapping with the same name already exists in this folder.

Action:
Choose another mapping name.

ODI-26212
Reusable mapping name is not unique.

Category:
Other

Cause:
Duplicate reusable mapping name. Reusable mapping with the same name already exists in this folder, or there is another global reusable mapping with the same name.

Action:
Choose another reusable mapping name.

ODI-26213
Cannot create connection from {0} to {1}. Connections can only be made within the same component owner.

Category:
Other

Cause:
Cannot make a connection between two components that are contained in different component owners, for example a connection from a component that is inside a dataset to another component outside the dataset.

Action:
Connect to a component that is contained by the same component owner.

ODI-26214
Cannot find appropriate Knowledge Module for node:{0}

Category:
Programmatic

Cause:
Cannot find a KM to assign to this node.

Action:
Set appropriate KM for physical nodes.

ODI-26215
Error when attempting to set the Loading Knowledge Module to AP node:{0}

Category:
Programmatic

Cause:
Cannot find a LKM to assign to this node.

Action:
Set appropriate LKM for AP nodes.

ODI-26216
Error when attempting to set the Extract Knowledge Module to physical node:{0}

Category:
Programmatic

Cause:
Cannot find a XKM to assign to this node.

Action:
Set appropriate XKM for physical nodes.

ODI-26217
Cannot enable Streaming on Map Physical Design

Category:
Programmatic

Cause:
Map Physical Design does not contain any Execution Unit that supports Streaming

Action:
Set appropriate Streaming value

ODI-26218
Error parsing the data format schema for the {0} attribute: {1}

Category:
Programmatic

Cause:
The data format for the complex type attribute cannot be parsed.

Action:
Correct the data format property for the complex type attribute.

ODI-26219
Data type {0} of complex type field {1} is not a valid HDFS type.

Category:
Programmatic

Cause:
The data type of a field in the complex type attribute is not supported.

Action:
Check the data types used in the data format property for the complex type attribute. Only HDFS types are allowed.

ODI-26220
Complex type attribute {0} for flatten component {1} does not have a data format.

Category:
Programmatic

Cause:
The data format of the complex type attribute cannot be located. The attribute may be a simple type or the data format has not been specified.

Action:
Ensure that the data format of the complex type attribute is set. The format may be specified on a bound data store column or upstream map attribute.

ODI-26221
Complex type attribute {0} for flatten component {1} was not found in any source component.

Category:
Programmatic

Cause:
The complex type attribute cannot be located. The attribute may be spelled incorrectly or may not be in scope in the upstream map components.

Action:
Ensure that the complex type attribute is a valid upstream map attribute.

ODI-26223
Complex data types cannot be used with aggregation. Attribute {0} of aggregate component {1} is a complex type.

Category:
Programmatic

Cause:
Complex type attributes are incompatible with aggregation and grouping. They may not be used with the aggregation component.

Action:
Avoid mapping complex attributes into the aggregate component. The flatten component may be applied to complex types prior to aggregate component mapping.

ODI-26224
Join components may not be used in the same Hive execution unit as flatten components with a complex type with a collection.

Category:
Programmatic

Cause:
Join and Flatten components with a collection are present in the same Hive execution unit. The lateral view clause used for Hive complex type flattening is not compatible with multiple sources in the SQL FROM clause.

Action:
Avoid using flatten components with joins in Hive.

ODI-26300
ODI-26300: Following Flexfields are found missing, which are required to persist this object properly: {0} You can use Security Navigator to define Flexfields for this object type.

Category:
Other

Cause:
There are some required flexfields missing in the editor opened. Without the mentioned flexfields the given object will not persist properly.

Action:
User can use Security Navigator to define Flexfields for this object type.

ODI-26301
ODI-26301: The incorrect Export Key is entered three times. The Export Key field will be disabled now. Please consider other options or cancel the Compare.

Category:
Other

Cause:
The incorrect Export Key entered 3 times.

Action:
Continue comparing this file without cipher data or cancel the Compare.

ODI-26310
ODI-26310: Could not delete the Open Tool {0}. It is used within steps in the following packages: {1}

Category:
Other

Cause:
The Open Tool is used within package steps and cannot be deleted.

Action:
Delete the corresponding steps from the referencing package before deleting the Open Tool.

ODI-30000

OWS-00039
The schema using the namespace of {0} may cause unexpected failures, use {1} instead.

Category:
WebService

Cause:

Action:

OWS-00040
The element {0} in the supplied deployment descriptor will be ignored.

Category:
WebService

Cause:

Action:

OWS-00043
The WSDL contains a mixture of document and rpc styles, the generated WSDL will need to be modified to work correctly.

Category:
WebService

Cause:

Action:

OWS-00044
There is no management configuration for service: {0} in supplied proprietary deployment descriptor {1}, make sure the service name is correct

Category:
WebService

Cause:

Action:

OWS-00045
{0} does not have all the getter and setter methods. Set overwriteBeans to true to allow re-generation of correct value type class.

Category:
WebService

Cause:

Action:

OWS-00046
Cannot update web.xml file, <url-pattern> {0} already exists.

Category:
WebService

Cause:
The file output/war/WEB-INF/web.xml already contains a URL pattern that the system wants to use for another servlet mapping.

Action:
Specify a unique uri argument or change the url-pattern in the existing web.xml.

OWS-00047
Could not update web.xml because <servlet-name> "{0}" already exists. The value of <servlet-name> generated by Web Services Assembler is the port name. If bottom-up assembly is used, specify a portName argument value that does not already exist. If topdown assembly or the genDDs command is used, put the two Web services in different WAR files, so that they do not share deployment descriptors.

Category:
WebService

Cause:
The file output/war/WEB-INF/web.xml contained the URL and it was assigned to another servlet.

Action:
For bottom-up assembly specify a different portName. For top-down assembly or genDDs separate two Web services into different WAR files or change the name of the servlet in the web.xml file.

OWS-00048
Could not update webservices.xml because <webservice-description-name> "{0}" already exists. The value of the <webservice-description-name> generated by Web Services Assembler is always the service name. If bottom-up assembly is used, specify a serviceName argument value that does not already exist. If topdown assembly or the genDDs command is used, put the two Web services in different WAR files so they do not share deployment descriptors.

Category:
WebService

Cause:
The file output/war/WEB-INF/webservices.xml already contains a webservice-description-name. The system wants to re-use this name for a new Web service. The value of the <webservice-description-name> generated by the system is always the service name.

Action:
If bottom-up assembly is used, specify a serviceName argument value that does not already exist. If top-down assembly or the genDDs command is used, put the two Web services in different WAR files, so that they do not share deployment descriptors.

OWS-00049
Could not update webservices.xml because <port-component-name> "{0}" already exists. The value of <port-component-name> generated by Web Services Assembler is always the port name. If bottom-up assembly is used, specify a portName argument value that does not

already exist. If topdown assembly or the genDDs command is used, put the two Web services in different WAR files, so they do not share deployment descriptors.

Category:
WebService

Cause:
The file output/war/WEB-INF/webservices.xml already contains a port-component-name that the system wants to use for a new port. The value of the <port-component-name> generated by the system is always the port name.

Action:
If bottom-up assembly is used, specify a portName argument value that does not already exist. If top-down assembly or the genDDs command is used, put the two Web services in different WAR files, so that they do not share deployment descriptors.

OWS-00050
Could not update oracle-webservices.xml because <webservice-description> name "{0}" already exists.The name of the <webservice-description> generated by Web Services Assembler is always the service name. If bottom-up assembly is used, specify a serviceName argument value that does not already exist. If topdown assembly or the genDDs command is used, put the two Web services in different WAR files, so they do not share deployment descriptors.

Category:
WebService

Cause:
The file output/war/WEB-INF/oracle-webservices.xml already contains a webservice-description-name that the system wants to use for a new webservice. The value of the <webservice-description-name> generated by the system is always the service name.

Action:
If bottom-up assembly is used, specify a serviceName argument value that does not already exist. If top-down assembly or the genDDs command is used, put the two Web services in different WAR files so they do not share deployment descriptors.

OWS-00051
Could not update oracle-webservices.xml because <port-component> name "{0}" already exists. The value of <port-component> name generated by Web Services Assembler is always the port name. If bottom-up assembly is used, specify a portName argument value that does not already exist. If topdown assembly or the genDDs command is used, put the two Web services in different WAR files so they do not share deployment descriptors.

Category:
WebService

Cause:
The file output/war/WEB-INF/webservices.xml already contains a port-component name that the system wants to use for a new port. The value of the <port-component> name generated by the system is always the port name.

Action:
If bottom-up assembly is used, specify a portName argument value that does not already exist. If top-down assembly or the genDDs command is used, put the two Web services in different WAR files so they do not share deployment descriptors.

OWS-00052
Could not update oracle-webservices.xml because <endpoint-address-uri> "{0}" already exists. Specify a uri argument value that does not already exist.

Category:
WebService

Cause:
The file output/war/WEB-INF/oracle-webservices.xml already contains an endpoint-address-uri that the system wants to use for a new webservice port.

Action:
Specify a uri argument value that does not already exist.

OWS-00053
The wire signature of operation by name "{0}" is same as operation by name "{1}". This does not conform to WS-I Basic Profile v1.1. R2710: The operations in a wsdl:binding in a description MUST result in wire signatures that are different from one another. An endpoint that supports multiple operations must unambiguously identify the operation being invoked based on the input message that it receives. This is only possible if all the operations specified in the wsdl:binding associated with an endpoint have a unique wire signature.

Category:
WebService

Cause:

Action:

OWS-00054
When "linkReceiveWithReplyTo" is true, either receive destination/connection-factory or reply-to destination/connection-factory must be set.

Category:
WebService

Cause:
The linkReceiveWithReplyTo argument requires the receive or reply-to arguments defined so the system can make the values the same.

Action:
Specify replyToConnectionFactoryLocation and (replyToQueueLocation or replyToTopicLocation) or specify receiveConnectionFactoryLocation and (receiveQueueLocation or receiveTopicLocation).

OWS-00055
When "linkReceiveWithReplyTo" is true, the value of parameter "{0}" and parameter "{1}" should be same.

Category:
WebService

Cause:
When the argument linkReceiveWithReplyTo is set to true and both replyTo* and receive* arguments are specified they must have the same value.

Action:
Either remove one of the arguments shown in the message or set the arguments to the same value.

OWS-00056
JMS delivery mode "{0}" is invalid, ignore this setting.

Category:
WebService

Cause:

Action:

OWS-00057
The received SOAP fault contains non standard fault element: "{0}". This element will be ignored.

Category:
WebService

Cause:

Action:

OWS-00058
The class "{0}" exists, but could not be loaded.

Category:
WebService

Cause:

Action:

OWS-00059
Ignoring method "{1}" in SEI "{0}" because it is not JAX-RPC compliant. The reason is "{2}"

Category:
WebService

Cause:

Action:

OWS-00060
Ignoring property name "{0}" in Java exception "{1}" because it is not JAX-RPC compliant

Category:
WebService

Cause:

Action:

OWS-00061
Ignoring property name "{0}" in Java class "{1}" because it is not JAX-RPC compliant

Category:
WebService

Cause:

Action:

OWS-00062
Ignoring exception of type "{0}" in Java method "{1}" because it is not JAX-RPC compliant

Category:
WebService

Cause:

Action:

OWS-00064
Attribute "schemaLocation" is not present on a schema import element.

Category:
WebService

Cause:

Action:

OWS-00065
Interface "{0}" is not JAX-RPC compliant: it does not extend java.rmi.Remote.

Category:
WebService

Cause:

Action:

OWS-00066
Method "{0}" is not JAX-RPC compliant: it does not throw java.rmi.RemoteException.

Category:
WebService

Cause:

Action:

OWS-00067
There is no management configuration for port {0} in the supplied proprietary deployment descriptor. Ensure the port name is correct.

Category:
WebService

Cause:

Action:

OWS-00070
No matching type found for the custom type mapping with QName {0}

Category:
WebService

Cause:
A custom type has been defined in an oracle-webservices.xml file but no associated type can be found in the schemas associated with the webservice.

Action:
Remove the custom type mapping or correct the name of the custom type mapping so it matches a type in the schema.

OWS-00071
Custom type mappings for global elements are not supported. The custom type mapping with the QName of {0} will not be applied to the global element.

Category:
WebService

Cause:

Action:

OWS-00073

Action:
System Internal Error - Contact Oracle Support Services

OWS-00143
service error: {0}

Category:
WebService

Cause:
Service Invocation failed. It might be because of an error while generating the stub implementation class or a dynamic proxy.

Action:
None

OWS-00144
not an interface: {0}

Category:
WebService

Cause:
In the createService(Class serviceInterface, QName name) method client code has provided an interface that is not a Service interface.

Action:
Ensure that the supplied interface extends javax.xml.rpc.Service

OWS-00145
cannot locate service implementation class for service: {0}

Category:
WebService

Cause:
An error occurred while generating a stub implementation class or a dynamic proxy. The service implementation class could not be found in the classpath.

Action:
Ensure that the service implementation class is available in the classpath.

OWS-00146
failed to create service implementation instance: {0}

Category:
WebService

Cause:
An error occurred while generating a stub implementation class or a dynamic proxy. The service implementation class does not implement a conctere service interface and thus could not be instantiated.

Action:
Ensure that specified service implementation class implements JAXRPC service interface and it's available in the classpath.

OWS-00147
dynamic invocation error: {0}

Category:
WebService

Cause:
Unexpected Error while invoking the service method.

Action:
Ensure that the DII client that invoking the serivce is configured correctly.

OWS-00148
service: {0} does not contain port: {1}

Category:
WebService

Cause:
Service Invocation failed because the <wsdl:service> element does not contain any ports.

Action:
Ensure that the <wsdl:service> element has atleast one port defined.

OWS-00149
port: {0} does not contain operation: {1}

Category:
WebService

Cause:
Service Invocation failed because service endpoint does not contain specified operation.

Action:
Ensure that DII client invoking the operation that advertised in the service descriptor i.e WSDL.

OWS-00150
property: "{0}" must be set on a Call object before it can be invoked in this configuration

Category:
WebService

Cause:
The Dynamic Invocation Interface (DII) client has not set the required property on the Call object.

Action:
For DII client, ensure that all required properties are set correctly on Call object before invoking service.

OWS-00156
call object cannot be created without a TypeRegistry

Category:
WebService

Cause:
Service Invocation failed because the InternalTypeMappingRegistry for serialization/deserialization provided to the Call object is null

Action:
System Internal Error - Contact Oracle Support Services

OWS-00157
cannot set unrecognized property: {0} on a Call object

Category:
WebService

Cause:
Client code is trying to set a property that is not specified for Call objects.

Action:
Check the name of the property that is being set. Use only properties specified for Call objects.

OWS-00158
cannot get unrecognized property: {0} on a Call object

Category:
WebService

Cause:
Client code is trying to get a property that is not specified for Call objects.

Action:
Check the name of the property that client side code is trying to access. Use only properties specified for Call objects.

OWS-00159
WSDL data missing, this operation is not available

Category:
WebService

Cause:
An unconfigured Dynamic Invocation Interface (DII) client is using the getCalls(Qname portName) method on a Service object that does not have an associated WSDL.

Action:
Either use a fully configured DII client, or use a createCall() method that explicitly specifies all required port and operation information to create a Call object instance.

OWS-00160
WSDL data missing, {0}

Category:
WebService

Cause:
An unconfigured (Dynamic Invocation Interface (DII) client uses getPort method on Service Implementation object which is not supported when WSDL information is missing

Action:
Use the configured DII client by getting the service implementation object using creteService(java.net.URL wsdlDocLoc, QName name) method on ServiceFactory object

OWS-00161
output parameters are only available after invoke() has been called

Category:
WebService

Cause:
Dynamic Invocation Interface (DII) client code is trying to get the output parameters before invoking the service

Action:
Ensure that the client code has invoked the service first before accessing the value of output parameters.

OWS-00162
cannot set parameter or return types on this Call object

Category:
WebService

Cause:
Dynamic Invocation Interface (DII) client attempted to set parameter or return types on a Call object when service operation does not require input parameter and does not return anything.

Action:
Check whether Call obect requires to set parameter or return type by calling isParameterAndReturnSpecRequired() on Call object

OWS-00163
operation style: "{0}" not supported

Category:
WebService

Cause:
Dynamic Invocation Interface (DII) Client sets the Call.OPERATION_STYLE_PROPERTY to other than 'rpc' or 'document'

Action:
Set Call.OPERATION_STYLE_PROPERTY to either 'rpc' or 'document'

OWS-00164
encoding style: "{0}" not supported

Category:
WebService

Cause:
Dynamic Invocation Interface (DII) client sets the ENCODINGSTYLE_URI_PROPERTY to an unsupported value i.e other than 'http://schemas.xmlsoap.org/soap/encoding' or null

Action:
Use either 'encoded' or 'literal' encoding style.

OWS-00165
could not find service: {0} in the specified WSDL file. The service names found were: {1}

Category:
WebService

Cause:
Service name provided by client code is not available in the specified WSDL.

Action:
Check the Service name used by the client code and ensure that correct Service name is used as per the specified WSDL.

OWS-00166
could not dispatch to method: {0} known methods are: {1}

Category:
WebService

Cause:
Operation that Dynamic Invocation Interface (DII) client code is trying to invoke does not not match with any operation provided by the service.

Action:
Make sure correct Operation name is used by the DII client code while configuring Call Object.

OWS-00167
The attachment DataHandler object cannot be null

Category:
WebService

Cause:
The attachment DataHandler object cannot be null

Action:
Make sure DataHandler attached to Call object is not null

OWS-00168
error.build.wsdl.model: {0}

Category:
WebService

Cause:
Error in the WSDL Model generation at the client side during service invocation. The useWSI property was set to true, but the WSDL does not conform to the WSI basic profile.

Action:
Ensure that the specified WSDL is compliant to Web Services Interoperability(WS-I) Basic Profile.

OWS-00169
Wrong value type {0} for property {1}. java.io.File or org.w3c.dom.Element is expected

Category:
WebService

Cause:
An unexpected value was set on a Call object. The value must be either of type java.io.File or of type org.w3c.dom.Element.

Action:
Check the type of the value being set on the Call object.

OWS-00170
serialization error: {0}

Category:
WebService

Cause:
Serializer class is missing.

Action:
Make sure the serializer class is defined and available from the classpath.

OWS-00171
deserialization error: {0}

Category:
WebService

Cause:
Deserializer failed.

Action:
Check the incoming message.

OWS-00172
encoding error: {0}

Category:
WebService

Cause:
Failed to initialize dynamic serializer/deserializer for RPC/ENC request

Action:
System Internal Error - Contact Oracle Support Services

OWS-00173
malformed array type: {0}

Category:
WebService

Cause:
The arrayType attribute is missing. The array index is less than 0 or the end index is less than the start index.

Action:
Check the incoming message. Check the incoming message.

OWS-00174
serialized array has too many elements

Category:
WebService

Cause:
At least one array element position is outside the array boundaries in the inbound message.

Action:
Check the incoming message

OWS-00175
illegal array element position: {0}

Category:
WebService

Cause:
Either the array dimension is empty and the element position is not one, or the array dimension length is not equal to the element position length.

Action:
Check the incoming message

OWS-00176
missing array position attribute

Category:
WebService

Cause:
Sparse array does not have a position attribute

Action:
Check the incoming message

OWS-00177
array element position is out of bounds: {0}

Category:
WebService

Cause:
An array position value is outside the array bounds

Action:
Check the incoming message

OWS-00178
unexpected null value during serialization or deserialization

Category:
WebService

Cause:
Serializer cannot serialize a null object for a non-nillable parameter.Deserializer cannot deserialize null to a non-nillable object.

Action:
Make sure the parameter is not null. Check the incoming message.

OWS-00179
Unexpected error while processing a SOAP Message during {0}, message={1}

Category:
WebService

Cause:

Action:

OWS-00180
unexpected reference element during deserialization; the element "{0}" is not defined as a referenceable type

Category:
WebService

Cause:
Failed to deserialize the request message. The request element uses a reference type which is not specified in the WSDL.

Action:
Correct the WSDL definition or correct the request message.

OWS-00181
unexpected element type: expected={0}, actual={1}

Category:
WebService

Cause:
Failed to deserialize the request message. The request element type does not match what is defined in the WSDL.

Action:
Correct the WSDL definition or correct the request message.

OWS-00182
unexpected element name: expected={0}, actual={1}

Category:
WebService

Cause:
Failed to deserialize the request message. The request element name does not match what is defined in the WSDL.

Action:
Correct the WSDL definition or correct the request message.

OWS-00183
unexpected array element type: expected={0}, actual={1}

Category:
WebService

Cause:
The type of an array element does not match its definition in the schema.

Action:
Verify that the type of the array element being sent matches the type defined in the schema.

OWS-00184
non-local reference (href): {0}

Category:
WebService

Cause:
The href attribute, used to reference an attachment, is not specified using the "cid" (Content-ID) protocol string.

Action:
Change the value of the href attribute, used to reference an attachment, to a string that begins with "cid:".

OWS-00185
trailing block elements must have an id attribute

Category:
WebService

Cause:
An element in the SOAP message contains a reference to another element. However no element was found with an id attribute matching the reference.

Action:
Validate the correctness of the received message.

OWS-00186
malformed array dimensions: {0}

Category:
WebService

Cause:
The dimensions of the array specified in the SOAP message cannot be translated into a valid number. The bounds of the array are invalid. For example the lower bound of the array is larger than the upper bound.

Action:
Verify that the SOAP-ENC:arrayType attribute (for SOAP 1.1) or the arraySize attribute (for SOAP 1.2) is valid.

OWS-00187
multi-dimensional array is not regular

Category:
WebService

Cause:
One level in a multi-dimensional array instance is null or contains an invalid size.

Action:
Ensure that all levels of the multi-dimensional array conatin valid values.

OWS-00188
illegal array offset: {0}

Category:
WebService

Cause:
The value specified in the "offset" attribute of an array element is invalid.

Action:
Ensure that the value specified in the offset attribute of the array element in the SOAP message is within the range of the array dimensions.

OWS-00189
array has unexpected rank: expected={0}, actual={1}, arrayType={2}

Category:
WebService

Cause:
The rank of an array does not match the rank specified in the schema.

Action:
Verify that that the soapenc:rank attribute of the array element in the schema matches with the actual dimensions of the array in the SOAPMessage.

OWS-00190
array has unexpected dimensions: expected={0}, actual={1}, arrayType={2}

Category:
WebService

Cause:
The dimensions of an array in the SOAP element do not match those of the element defined in the Schema.

Action:
Verify that the SOAP message matches the WSDL definition

OWS-00191
unexpected encoding style: expected={0}, actual={1}

Category:
WebService

Cause:
The encoding style being used in the message is invalid for the SOAP version. For example, SOAP 1.1 expects the encoding style http://schemas.xmlsoap.org/soap/encoding/ while SOAP 1.2 expects a range of values, one of which is http://www.w3.org/2003/05/soap-encoding.

Action:
Ensure that the encoding style uri of the SOAP message is valid for the version of SOAP in use. Check the SOAP 1.1 and SOAP 1.2 for acceptable values.

OWS-00192
cannot encode XML type because it was not specified

Category:
WebService

Cause:
Unable to find XML type for object.

Action:
System Internal Error - Contact Oracle Support Services

OWS-00193
member {0} has already been defined

Category:
WebService

Cause:
While deserializing the SOAP message a duplicate member variable or setter/getter was found in the target object.

Action:
System Internal Error - Contact Oracle Support Services

OWS-00194
incomplete object encountered while deserializing

Category:
WebService

Cause:
Failure during deserialization (XML to Java).

Action:
System Internal Error - Contact Oracle Support Services

OWS-00195
circular reference detected while serializing: {0}

Category:
WebService

Cause:
An object is referenced from another object that it references. For example A->B->A. This circular reference is not supported in RPC-Literal or Doc-Literal web services.

Action:
Remove the circular dependency or change the web service to RPC-Encoded.

OWS-00196
no attachment with cid (Content-ID) "{0}" found in message

Category:
WebService

Cause:
The cid (Content-ID) for a particular attachment that was referenced from the SOAP body was not found.

Action:
Make sure that the cid is formatted properly. Examine the cid in the soap body with the Content-Id header of the SOAP Message MIME attachment and verify that they match.

OWS-00197
multiple attachments with the same cid (Content-ID) "{0}" found in message

Category:
WebService

Cause:
Found multiple attachments with the same cid (Content-ID). This field must be unique

Action:
If the SOAP message was manually constructed, verify that all the Content-ID headers contain a unique value.

OWS-00198
missing cid (Content-ID header) for attachment

Category:
WebService

Cause:
An attachment was missing the Content-Id header.

Action:
Examine the SOAP message and verify that all Content-Id headers contain a value.

OWS-00199
non "cid:" (Content-ID) reference: {0}

Category:
WebService

Cause:
A SwaRef attachment was found with an invalid reference to a MIME attachment. MIME attachment references must begin with the string "cid:".

Action:
Verify that the attachment reference begins with "cid".

OWS-00203
serializeAsAttachment specified but no AttachmentEncoder was provided for type: "{0}"

Category:
WebService

Cause:
Missing serializer for a particular attachment type.

Action:
System Internal Error - Contact Oracle Support Services

OWS-00204
a deserializer must be registered with a deserialization state before it will accept listeners

Category:
WebService

Cause:
A serializer class was not found during initialization of the serializer framework.

Action:
System Internal Error - Contact Oracle Support Services

OWS-00205
cannot decode XML type "{0}"

Category:
WebService

Cause:
Unable to construct an object from an XML instance (element).

Action:
System Internal Error - Contact Oracle Support Services

OWS-00206
cannot serialize type "{0}"

Category:
WebService

Cause:
An appropriate default serializer for the specified type could not be found.

Action:
A custom serializer must be used for the indicated type. Implementing a custom serializer for a Web service is described in the Oracle Application Server Web Services Developer's Guide.

OWS-00207
null soap version not allowed.

Category:
WebService

Cause:
The SOAP message did not contain enough information to determine the version of the SOAP specification used.

Action:
Typcially the SOAP version is determined by inspecting the namespace declared on the root element (Envelope) of the SOAP message. This value should be one of http://schemas.xmlsoap.org/soap/envelope/ for SOAP 1.1 or http://www.w3.org/2003/05/soap-envelope for SOAP 1.2.

OWS-00208
cannot have enc:id and enc:ref attributes on the same element.

Category:
WebService

Cause:
The SOAP message element contains both an id and a ref attribute. Using both on the same element is illegal.

Action:
The Webservice client that created the message must be modified so that invalid SOAP messages are not created.

OWS-00209
unexpected element name: expected={0}, actual={1}

Category:
WebService

Cause:
The deserializer encountered an unexpected element name when processing the SOAP message.

Action:
The Webservice client that created the message must be modified so that the SOAP messages it creates conform to the messages described in this Webservice's WSDL.

OWS-00210
unexpected element type: expected={0}, actual={1}

Category:
WebService

Cause:
The deserializer encountered an unexpected element type when processing the SOAP message.

Action:
The Webservice client that created the message must be modified so that the SOAP messages it creates conform to the messages described in this Webservice's WSDL.

OWS-00211
unexpected null

Category:
WebService

Cause:
The (de)serializer encountered an unexpected null element/object when processing the SOAP message.

Action:
The Webservice client that created the message must be modified so that the SOAP messages it creates conform to the messages described in this Webservice's WSDL.

OWS-00212
unknown prefix in QName literal: {0}

Category:
WebService

Cause:
The deserializer cannot figure out the Namespace URI for the given prefix when processing the SOAP message.

Action:
The Webservice client that created the message must be modified so that invalid SOAP messages are not created.

OWS-00213
invalid XSD date: {0}

Category:
WebService

Cause:
The deserializer encountered an invalid XSD date when processing the SOAP message.

Action:
The Webservice client that created the message must be modified so that SOAP messages with invalid XSD dates are not created.

OWS-00214
invalid XSD boolean value: {0}

Category:
WebService

Cause:
The deserializer encountered an invalid XSD boolean when processing the SOAP message.

Action:
The Webservice client that created the message must be modified so that SOAP messages with invalid XSD boolean are not created.

OWS-00215
attachment location not found on element

Category:
WebService

Cause:
The deserializer cannot determine the attachment location on an element with binary type.

Action:
The Webservice client that created the message must be modified so that SOAP messages with attachments will correctly reference the attachments.

OWS-00216
attachment with id {0} not found in message

Category:
WebService

Cause:
The deserializer cannot find the attachment from the specified location on an element with binary type.

Action:
The Webservice client that created the message must be modified so that SOAP messages with attachments will correctly reference the attachments.

OWS-00217
invalid XSD positiveInteger value: {0}

Category:
WebService

Cause:
The deserializer encountered an invalid XSD positiveInteger when processing the SOAP message.

Action:
The Webservice client that created the message must be modified so that SOAP messages with invalid XSD positiveInteger are not created.

OWS-00218
invalid XSD nonNegativeInteger value: {0}

Category:
WebService

Cause:
The deserializer encountered an invalid XSD nonNegativeInteger when processing the SOAP message.

Action:
The Webservice client that created the message must be modified so that SOAP messages with invalid XSD nonNegativeInteger are not created.

OWS-00219
invalid XSD negativeInteger value: {0}

Category:
WebService

Cause:
The deserializer encountered an invalid XSD negativeInteger when processing the SOAP message.

Action:
The Webservice client that created the message must be modified so that SOAP messages with invalid XSD negativeInteger are not created.

OWS-00220
invalid XSD nonPositiveInteger value: {0}

Category:
WebService

Cause:
The deserializer encountered an invalid XSD nonPositiveInteger when processing the SOAP message.

Action:
The Webservice client that created the message must be modified so that SOAP messages with invalid XSD nonPositiveInteger are not created.

OWS-00222
invalid XSD unsignedLong value: {0}

Category:
WebService

Cause:
The deserializer encountered an invalid XSD unsignedLong when processing the SOAP message.

Action:
The Webservice client that created the message must be modified so that SOAP messages with invalid XSD unsignedLong are not created.

OWS-00223
invalid XSD unsignedInt value: {0}

Category:
WebService

Cause:
The deserializer encountered an invalid XSD unsignedInt when processing the SOAP message.

Action:
The Webservice client that created the message must be modified so that SOAP messages with invalid XSD unsignedInt are not created.

OWS-00224
invalid XSD unsignedShort value: {0}

Category:
WebService

Cause:
The deserializer encountered an invalid XSD unsignedShort when processing the SOAP message.

Action:
The Webservice client that created the message must be modified so that SOAP messages with invalid XSD unsignedShort are not created.

OWS-00225
invalid XSD unsignedByte value: {0}

Category:
WebService

Cause:
The deserializer encountered an invalid XSD unsignedByte when processing the SOAP message.

Action:
The Webservice client that created the message must be modified so that SOAP messages with invalid XSD unsignedByte are not created.

OWS-00227
error in initialization of standard type mapping: {0}

Category:
WebService

Cause:
Internal error initializing the standard type mapping.

Action:
System Internal Error - Contact Oracle Support Services

OWS-00228
{0} : is not a supported (de)serialization mechanism

Category:
WebService

Cause:
The (de)serializer factory does not support the reported XML processing mechanism type.

Action:
System Internal Error - Contact Oracle Support Services

OWS-00229
type mapping registration failed: {0}

Category:
WebService

Cause:
An unexpected error occurred during registration of a Java to XML mapping. Check the nested error for the real cause.

Action:
Look at the nested error to determine what action to take.

OWS-00230
type mapping retrieval failed: {0}

Category:
WebService

Cause:
An unexpected error occurred during retrieval of a Java to XML mapping. Check the nested error for the real cause.

Action:
Look at the nested error to determine what action to take.

OWS-00231
type mapping does not support the specified encoding style: {0}

Category:
WebService

Cause:
The system does not support the specified schema type and encoding.

Action:
Change the encodingStyle defined in the SOAP binding in the WSDL to a supported value.

OWS-00232
there is no type mapping for the specified encoding style: {0}

Category:
WebService

Cause:
The system does not support the specified encoding.

Action:
Change the encodingStyle defined in the SOAP binding in the WSDL to a supported value.

OWS-00233
no serializer is registered for ({0}, {1})

Category:
WebService

Cause:
The system could not find a serializer that can convert the Java object to XML.

Action:
Create a custom type mapping and serializer that can covert the Java object to XML.

OWS-00234
no deserializer is registered for (java type: {0}, schema type: {1})

Category:
WebService

Cause:
The system could not find a deserializer that can convert the XML to a Java object.

Action:
Create a custom type mapping and serializer that can covert the XML to a Java object.

OWS-00235
no deserializer is registered for schema type: {0}

Category:
WebService

Cause:
The system could not find a deserializer that can convert the XML to a Java object.

Action:
Create a custom type mapping and serializer that can covert the XML to a Java object.

OWS-00236
no deserializer is registered for java type: {0}

Category:
WebService

Cause:
The system could not find a deserializer that can convert the XML to a Java object.

Action:
Create a custom type mapping and serializer that can covert the XML to a Java object.

OWS-00237
dynamic resolution failed to find a serializer for java type:{0}, xml type {1}

Category:
WebService

Cause:
An entry in a list or collection is a type that is not supported by the system.

Action:
Change the instance of the entry to a supported Java type.

OWS-00238
dynamic resolution failed to find a serializer for java type: {0}, xmlType: {1}

Category:
WebService

Cause:
An entry in a list or collection is a type that is not supported by the system.

Action:
Change the instance of the entry to a supported Java type.

OWS-00241
Map entry key cannot be of java type:"{0}", xml type "{1}"

Category:
WebService

Cause:
The key for a map entry has a type mapping for an object that the system does not support.

Action:
Change the signature of the Java class to a supported Java type or change the instance of the key to a supported type.

OWS-00242
Map entry value cannot be of Java type:"{0}", XML type was "{1}"

Category:
WebService

Cause:
The value for a map entry has a type mapping for an object that the system does not support.

Action:
Change the signature of the Java class to a supported Java type or change the instance of the value to a supported type.

OWS-00243
Item in array cannot be of java type:"{0}"

Category:
WebService

Cause:
An item in an array is a type that is not supported by the system.

Action:
Change the signature of the Java class to a supported Java type or change the instance of the value to a supported type.

OWS-00245
unexpected null value for literal data

Category:
WebService

Cause:
The element defined in the schema has a nillable attribute set to false but no value was found in the message.

Action:
Change the client to supply a value for the literal type, or change the schema to accept nillable types.

OWS-00246
unexpected element name: expected={0}, actual={1}

Category:
WebService

Cause:
A message contains an element that the system does not expect.

Action:
Change the client to send messages corresponding to the schema, or change the schema to correspond to the messages.

OWS-00247
expected element is missing: {0}

Category:
WebService

Cause:
The message does not contain an element that is defind as required in the schema.

Action:
Change the schema to make the element optional, or change the client so that the message will include the required element.

OWS-00248
expected simple content, found element name: {0}

Category:
WebService

Cause:
The system was expecting a simple content in the message but found an element instead.

Action:
Change the client to send messages corresponding to the schema, or change the schema to correspond to the messages.

OWS-00249
object not initialized before use

Category:
WebService

Cause:
A serializer was not initialized before calling a method that requires initialization.

Action:
System Internal Error - Contact Oracle Support Services

OWS-00250
{0} is not an array type

Category:
WebService

Cause:
The system found a Java object that is not an array when an array is expected.

Action:
System Internal Error - Contact Oracle Support Services

OWS-00251
expected {0} parameter(s) but received: {1}. Expected parameters: {3}, received parameters: {4}

Category:
WebService

Cause:
The number of parameters in the request SOAP message is incorrect.

Action:
Confirm that the client is based on the correct version of the WSDL definition.

OWS-00252
illegal deserialization state: no deserializer is available for the current element

Category:
WebService

Cause:
There is no deserializer registered for the element.

Action:
A custom serializer must be used for the indicated type. Implementing a custom serializer for a Web service is described in the Oracle Application Server Web Services Developer's Guide.

OWS-00253
Invalid base64 data

Category:
WebService

Cause:
The SOAP request content being processed by the XSDBase64BinaryEncoder is not Base64 encoded.

Action:
Confirm that the client is based on the correct, current version of the WSDL document.

OWS-00254
generator error: {0}

Category:
WebService

Cause:
An unexpected exception occurred during a generation operation.

Action:
Contact Oracle Support Services.

OWS-00255
can"t write file: {0}

Category:
WebService

Cause:
A generated file could not be written to disk. The most likely causes include insufficient disk space or permissions.

Action:
Free some disk space or ensure that the process in which the generator is invoked is run as a user with sufficient permissions.

OWS-00256
can"t create directory: {0}

Category:
WebService

Cause:
The directory for writing a generated file could not be created. The most likely causes include insufficient disk space or permissions.

Action:
Free some disk space or ensure that the process in which the generator is invoked is run as a user with sufficient permissions.

OWS-00257
unsupported type encountered: '{'{1}'}'{0}

Category:
WebService

Cause:
Serialization is not supported for this XML type.

Action:
A custom serializer must be used for the indicated type. Implementing a custom serializer for a Web service is described in the Oracle Application Server Web Services Developer's Guide.

OWS-00258
no Java type for XML type: {0}

Category:
WebService

Cause:
Unable to determine the corresponding Java type for a structured XML type when generating a serializer.

Action:
Ensure that a Java type is associated with the structured XML type and that the custom serializer mapping is correct.

OWS-00259
unsupported encoding encountered: {0}

Category:
WebService

Cause:
The encoding URI of custom serializer mapping does not match that of either SOAP 1.1 or SOAP 1.2.

Action:
Correct the URI encoding of the custom serializer mapping.

OWS-00260
tie class generation error: {0}

Category:
WebService

Cause:
When generating the tie class for a document literal operation, either more than one non-embedded parameter was found, or there were both embedded and non-embedded parameter.

Action:
This sanity check should not have failed. Verify that the document literal operation is correct in the WSDL.

OWS-00262
There is no management configuration for port {0} in the supplied proprietary deployment descriptor. Ensure that the port name is correct

Category:
WebService

Cause:
There is no management configuration information for the port in the supplied management configuration file.

Action:
Verify that the port name is correct and the management configuration file is complete.

OWS-00263
Could not find the Java class {0} for constructor analysis.

Category:
WebService

Cause:
Could not find the Java class for constructor analysis when generating its serializer.

Action:
Check the Java class name and the classpath where the Java class is loaded.

OWS-00264
Current SOAP Version is null. Check port to make sure SOAP version is set.

Category:
WebService

Cause:
Could not determine the SOAP version when generating serializer.

Action:
Verify that the SOAP version is set in the WSDL.

OWS-00266
When using JMS transport, either all operations must be one-way, or the replyToConnectionFactoryLocation and replyToQueueLocation must be specified.

Category:
WebService

Cause:
When using JMS transport for any two-way operation, the replyToConnectionFactoryLocation and replyToQueueLocation parameters must be specified with the jsmAssemble command.

Action:
Re-run the jmsAssemble command with replyToConnectionFactoryLocation and replyToQueueLocation parameters.

OWS-00267
cannot dispatch operation with more that one body block: {0}

Category:
WebService

Cause:
Cannot generate tie class for operations with more than one body block.

Action:
Verify that the offending operation has no more than one body block.

OWS-00268
cannot dispatch operation - either operation names are non-unique, or SOAPAction strings are non-unique: {0}

Category:
WebService

Cause:
Cannot generate tie class for operation with non-unique operation name and non-unique SOAPAction.

Action:
Verify that both the operation name and SOAPAction are unique in the WSDL.

OWS-00269
no encoder for type "{0}" and Java type "{1}"

Category:
WebService

Cause:
Unable to find an encoder for a type and its corresponding Java type when generating serializer.

Action:
Check whether the type is valid and supported.

OWS-00270
Invalid type in xsd:list type "{0}" and Java type "{1}"

Category:
WebService

Cause:
Unable to find an encoder for the list item type and its corresponding Java type when generating serializer.

Action:
Check whether the list item XML type is valid and supported.

OWS-00271
handler error: {0}

Category:
WebService

Cause:
A handler error occurred, check the nested error for the real cause.

Action:
Look at the nested error to determine what action to take.

OWS-00272
A HandlerChain can only contain Handler instances: {0}

Category:
WebService

Cause:
A non-handler instance was found in the handler chain.

Action:
Remove the offending instance,

OWS-00274
cannot create XSLT transformer for the WSDL

Category:
WebService

Cause:
Failed to create a XSLT Transformer object for presentation of WSDL.

Action:
Check whether the web service endpoint is valid and the service is properly deployed.

OWS-00275
WSDL transformation failed

Category:
WebService

Cause:
XSLT Transformation failed when presenting WSDL.

Action:
Check whether the web service endpoint is valid and the service is properly deployed.

OWS-00276
model error: {0}

Category:
WebService

Cause:
A nested model or modeler exception occurred, most likely caused by an invalid WSDL.

Action:
Verify that the WSDL is a valid one.

OWS-00277
unsupported XML Schema feature ({0})

Category:
WebService

Cause:
An unsupported XML Schema feature was encountered during processing of WSDL schema.

Action:
Remove the unsupported XML Schema feature from WSDL schema.

OWS-00278
unsupported type ({0}): {2}:{1}

Category:
WebService

Cause:
An unsupported XML Schema type was encountered during processing of a WSDL schema element.

Action:
Remove the unsupported type or change it to an equivalent supported type.

OWS-00279
unsupported type ({0}): {1}, caused by: {3}

Category:
WebService

Cause:
An unsupported XML Schema type was encountered during processing of a WSDL schema element. Error details are provided.

Action:
Look at the error details for possible action to handle the unsupported type.

OWS-00280
unsupported anonymous type ({0}), caused by: {1}

Category:
WebService

Cause:
An unsupported XML Schema type was encountered during processing of an anonymous WSDL schema element. Error details are provided.

Action:
Look at the error details for possible action to handle the unsupported type.

OWS-00281
invalid literal "{0}" in enumeration "{1}" (namespace: {2})

Category:
WebService

Cause:
An invalid literal value of an enumeration was encountered when processing a WSDL schema.

Action:
Correct the offending literal value in the enumeration.

OWS-00282
uniqueness constraint violation: {0} "{1}" already exists.

Category:
WebService

Cause:
A component with the specified name occurs multiple times

Action:
Check the validity of the WSDL or Java code for duplicate elements

OWS-00283
The value type {0} can not be generated because two members result in the same name of {1}. A jaxrpc mapping file must be specified to resolve this naming conflict.

Category:
WebService

Cause:
There is a naming conflict - two members have the same name

Action:
Use a JAX-RPC mapping file.

OWS-00285
parent of type "{0}" already set to "{1}", new value = "{2}"

Category:
WebService

Cause:
The specified type is duplicated within more than one parent type.

Action:
Rewrite the type hierarchy, so that this type only occurs on one parent.

OWS-00286
parent of fault "{0}" already set to "{1}", new value = "{2}"

Category:
WebService

Cause:
The specified fault is duplicated as a sub-type of more than one parent.

Action:
Ensure that the fault only occurs within a single parent.

OWS-00287
LiteralArrayWrapper element member already set.

Category:
WebService

Cause:
This element cannot be modeled as a LiteralArrayWrapper because it has more than one member

Action:
None

OWS-00288
LiteralArrayWrapper cannot have a parent type

Category:
WebService

Cause:
This element cannot be modeled as a LiteralArrayWrapper because it has a parent type

Action:
None

OWS-00289
LiteralArrayWrapper cannot have subtypes

Category:
WebService

Cause:
This element cannot be modeled as a LiteralArrayWrapper because it has a subtype

Action:
None

OWS-00290
LiteralArrayWrapper cannot have a content member

Category:
WebService

Cause:
This element cannot be modeled as a LiteralArrayWrapper because it has a content member

Action:
None

OWS-00293
class {0} not found.

Category:
WebService

Cause:
The specified Java class could not be loaded.

Action:
The class must exist in the classpath when strictJAXRPCValidation is turned on.

OWS-00295
unexpected type: {0}

Category:
WebService

Cause:
An unexpected type was found during the processing of your action. In the case of top-down design the WSDL contains an unsupported or invalid type. In the case of bottom-up design, the particular class file is currently not supported.

Action:
Top-down design pattern: Correct any problems within the WSDL file. If the WSDL is valid, then it contains types that are currently not supported. Bottom-up design pattern: Correct any type issues within the Java class. Otherwise, the class contains types that are currently not supported. You may want to consider using a different type.

OWS-00296
The following type is invalid because it implements java.rmi.Remote: {0}

Category:
WebService

Cause:
The serializable implementation class inappropriately implements java.rmi.Remote. This is not supported.

Action:
Change the implementation class to not implement java.rmi.Remote.

OWS-00297
class {0} does not have a public accessible empty constructor

Category:
WebService

Cause:
The serializable implementation class does not provide a public accessible no-arg constructor.

Action:
Provide a public no-arg constructor or provide a custom seriallizer.

OWS-00299
class "{0}" cannot have a JavaBean property "{1}" and a public member of the same name.

Category:
WebService

Cause:
The implementation class cannot contain public members with the same name as JavaBean properties.

Action:
Consider making the public member private or protected or renaming the property or JavaBean property.

OWS-00300
nested inner classes are not supported: {0}

Category:
WebService

Cause:
The implementation class contains a nested inner class, which is not supported.

Action:
Consider refactoring the implementation class to remove the nested inner class. See the Oracle Application Server Web Services Developer's Guide.

OWS-00301
Duplicate type name "{0}" for Java type "{1}" found. To remove this error do not specify a single typeNamespace for all value types or specify a mapping file. This error could also be caused when a type name has been used more than once.

Category:
WebService

Cause:
The same type name has been used for multiple Java types. Probably related to inner classes. A possible explanation is the erroneous use of a given type name multiple times.

Action:
Use separate namespaces for the value types or use a mapping file. See the Oracle Application Server Web Services Developer's Guide.

OWS-00302
Type "{0}" is used as a "{1}" and a "{2}"

Category:
WebService

Cause:
The same RMI Modeler type instance is used for two different XML types.

Action:
Correct the XML type or the XML type hierarchy such that there is one Modeler per XML type, or have one type subclass the other type.

OWS-00303
Type "{0}" implements more than one interface: "{1}", "{2}" ...

Category:
WebService

Cause:
The implementation class may implement only a single interface (SEI).

Action:
Consider refactoring the implementation class to implement a single interface.

OWS-00304
Type {0} references an invalid type {1}, which is invalid for the following reason: {2}

Category:
WebService

Cause:
The indicated type has a reference to an invalid type.

Action:
Consider modifying the implementation class to not reference the inappropriate type.

OWS-00305
Ignoring target namespace for schema: "{0}", WSDL target namespace is used for the value types in the same package as Service Endpoint: "{1}"

Category:
WebService

Cause:
The schema namespace is ignored and the WSDL target namespace will be used instead. This is because the namespace of the schema is different from the target namespace of the WSDL and the value types are in the same package as the Service Endpoint Interface (SEI).

Action:

OWS-00306
The constructor for {0} has {1} arguments of type {2}; This ambiguity may result in unexpected behavior. Use a mapping file to guarantee correctness.

Category:
WebService

Cause:
Multiple arguments of the same type introduce ambiguity that is difficult to resolve. This may cause unexpected results.

Action:
Consider using a JAX-RPC mapping file to eliminate the ambiguity.

OWS-00307
Service-specific exception {0} is not allowed to extend {1}.

Category:
WebService

Cause:
Runtime exceptions other than SOAPFaultException are not allowed.

Action:
Consider changing the exception to not be a runtime exception or make it a SOAPFaultException.

OWS-00308
Service-specific exception {0} is not allowed to implement {1}.

Category:
WebService

Cause:
Service exceptions must not implement the java.rmi.Remote interface.

Action:
Consider changing the exception to not implement Remote.

OWS-00314
invalid operation: {0}

Category:
WebService

Cause:
Invalid WSDL operation due to incorrect parameter order.

Action:
Correct the parameter order of the specified operation.

OWS-00315
invalid state while modeling operation: {0}

Category:
WebService

Cause:
System Internal Error

Action:
Contact Oracle Support Services

OWS-00316
result is "inout" parameter in operation: {0}

Category:
WebService

Cause:
In/out parameters are not allowed.

Action:
Consider changing the implementation to return a value.

OWS-00317
"{0}" specified in the parameterOrder attribute of message "{1}" is not a valid part of the message.

Category:
WebService

Cause:
The specified parameter(s) in parameterOrder of portType operation is not a valid part of the message.

Action:
Verify and correct the part name parameter specified in the WSDL portType: ensure that the operation parameterOrder is properly associated and used in the input and output message.

OWS-00318
one or more part names were omitted in the parameterOrder attribute of operation "{0}"

Category:
WebService

Cause:
A message part name was not specified in the WSDL portType operation parameterOrder.

Action:
Verify that input and output message part name are properly specified in the WSDL portType operation parameterOrder.

OWS-00319
parameter "{0}" of operation "{1}" appears with different types in the input and output messages

Category:
WebService

Cause:
The parameter used in an operation appears with different types in the input and output message.

Action:
Verify the type of the input and output message specified in the WSDL portType operation.

OWS-00320
missing header message definition for "{1}", referenced by the binding operation "{0}"

Category:
WebService

Cause:
The soap header message defined in the binding operation is not specified in the WSDL message definition.

Action:
Verify the soap header message defined in the binding operation. Ensure that it is properly specified in the WSDL message definition.

OWS-00321
missing operation "{0}" in port type, referenced by binding "{1}"

Category:
WebService

Cause:
The operation specified in binding does not appear in the corresponding port type.

Action:
Verify the binding operation. Ensure that it is specified in the corresponding port type in the WSDL.

OWS-00322
input message of binding operation "{0}" does not have a SOAP body extension

Category:
WebService

Cause:
The input message of the binding operation does not have a SOAP body extension.

Action:
Verify that the SOAP body extension 'soap:body' is properly specified in the input message of the binding operation in the WSDL.

OWS-00323
output message of binding operation "{0}" does not have a SOAP body extension

Category:
WebService

Cause:
The output message of a binding operation does not have a SOAP body extension.

Action:
Verify that the SOAP body extension 'soap:body' is properly specified in the output message of the binding operation in the WSDL.

OWS-00324
input message of binding operation "{0}" must specify a value for the "namespace" attribute

Category:
WebService

Cause:
The soap request body of the input message of a binding operation must specify a value for the namespace attribute.

Action:
Verify that the namespace attribute is properly specified in the soap request body of the input message of this binding operation in the WSDL.

OWS-00325
output message of binding operation "{0}" must specify a value for the "namespace" attribute

Category:
WebService

Cause:
The soap request body of the output message of a binding operation must specify a value for the namespace attribute.

Action:
Verify that the namespace attribute is properly specified in the soap request body of the output message of this binding operation in the WSDL.

OWS-00326
fault "{0}" in operation "{1}" matches more than one fault in the corresponding port type operation

Category:
WebService

Cause:
The fault in a binding operation matches more than one fault in the corresponding port type operation.

Action:
Verify the exact correspondence between the fault name in the binding operation and in the port type operation of the WSDL.

OWS-00327
fault "{0}" in operation "{1}" does not match any fault in the corresponding port type operation

Category:
WebService

Cause:
The fault in a binding operation does not match any fault in the corresponding port type operation.

Action:
Verify the the correspondence between the fault name in the binding operation and in the port type operation of the WSDL.

OWS-00328
fault "{0}" in operation "{1}" does not have a SOAP fault extension

Category:
WebService

Cause:
The fault in a binding operation does not have a SOAP fault extension.

Action:
Verify that the SOAP fault extension 'soap:fault' is properly specified in this fault of the binding operation.

OWS-00329
fault "{0}" refers to message "{1}", but the message has no parts

Category:
WebService

Cause:
The fault refers to a message in definitions, but the message has no parts.

Action:
Verify and ensure the fault message with properly specified part name in the WSDL.

OWS-00330
fault "{0}" refers to message "{1}", but the message has more than one parts

Category:
WebService

Cause:
The fault refers to a message in definitions, but the message has more than one parts.

Action:
Verify and correct the fault message with properly and exactly specified part name in the WSDL.

OWS-00331
in message "{0}", part "{1}" must specify a "type" attribute

Category:
WebService

Cause:
In this WSDL, there is part must specify a type attribute in message.

Action:
Verify the message in WSDL to ensure some part which also need a type definitions.

OWS-00332
in message "{0}", part "{1}" must specify an "element" attribute

Category:
WebService

Cause:
In this WSDL, there is part in message must specify an element attribute.

Action:
Verify the message in WSDL to ensure some part which also need an element definitions.

OWS-00334
the following naming conflicts occurred: {0}

Category:
WebService

Cause:
There are naming conflicts occurred in WSDL.

Action:
Verify the naming in WSDL is properly and correctly without conflict.

OWS-00335
Unsupported DIME layout: {0}

Category:
WebService

Cause:
The DIME message layout specified in the operation is not supported.

Action:
Verify and check the DIME layout specified. The supported layout are: closed-layout and open-layout.

OWS-00336
binding "{0}" uses both streaming attachments and mime-multipart

Category:
WebService

Cause:
There is binding which uses both streaming attachments and mime-multipart in WSDL.

Action:
Verify and correct the WSDL binding to ensure not both streaming attachments and mime-multipart is used.

OWS-00337
binding "{0}" uses both streaming attachments and DIME

Category:
WebService

Cause:
There is binding which uses both streaming attachments and DIME message in WSDL.

Action:
Verify and correct the WSDL binding to enusre not both streaming attachments and DIME is used.

OWS-00338
<portType> definition is not found in the WSDL

Category:
WebService

Cause:
There is no service and portType definition found in the WSDL.

Action:
Verify and check the WSDL. Either service or portType has to be defined and specified.

OWS-00339
IO error in processing schemas: {0}

Category:
WebService

Cause:

Action:

OWS-00340
The value of service-interface {0} MUST be package qualified. It is changed to {1}.

Category:
WebService

Cause:

Action:

OWS-00341
unrecognized type encountered: {0}

Category:
WebService

Cause:

Action:

OWS-00342
exception occurred while processing type {0}, {1}

Category:
WebService

Cause:

Action:

OWS-00343
Service "{0}" does not contain any usable ports

Category:
WebService

Cause:
There is no port in the current WSDL that is suitable for JAXRPC based proxy generation.

Action:
Correct the WSDL, based on the other error or warning provided, so that there is one port in the current WSDL suitable for JAXRPC based proxy generation.

OWS-00344
Port "{0}" does not contain any usable operations

Category:
WebService

Cause:

Action:

OWS-00345
ignoring port "{0}": because it references "{1}" that does not contain a SOAP Binding. Only soap:binding is supported.

Category:
WebService

Cause:

Action:

OWS-00346
ignoring port "{0}": no SOAP address specified

Category:
WebService

Cause:
The "service/port" element is missing a required child element for SOAP binding: "soap:address".

Action:
Add the missing element in the original WSDL or using a local copy if you do not own the service endpoint.

OWS-00347
ignoring operation "{0}": not request-response or one-way

Category:
WebService

Cause:

Action:

OWS-00348
ignoring RPC-style operation "{0}": parameters are not encoded

Category:
WebService

Cause:

Action:

OWS-00349
ignoring operation "{0}": message part does not refer to a schema element declaration or refers to a schema type declaration without specifiying the name attribute.

Category:
WebService

Cause:

Action:

OWS-00350
ignoring header "{0}" of binding operation "{1}". This header must be mapped to a parameter using a jaxrpc mapping file or the information in the header will be ignored at runtime.

Category:
WebService

Cause:

Action:

OWS-00351
ignoring header "{0}" of binding operation "{1}": not literal

Category:
WebService

Cause:

Action:

OWS-00352
ignoring header "{0}" of binding operation "{1}": not SOAP-encoded

Category:
WebService

Cause:

Action:

OWS-00353
ignoring header "{0}" of operation "{1}": its type is not constant across all operations in this port

Category:
WebService

Cause:

Action:

OWS-00354
ignoring MIME part "{0}" of operation "{1}": either the part was not found in the specified message or the "mimePartToParameter" flag was set to false.

Category:
WebService

Cause:

Action:

OWS-00355
value type package prefix is ignored for the types defined in the schema that has same target namespace as the target namespace of WSDL: "{0}"

Category:
WebService

Cause:

Action:

OWS-00356
binding "{0}" is ignored because it has an invalid attribute: transport="{1}"

Category:
WebService

Cause:
The value of the transport attribute on the soap:binding element is not recognized. The SOAP1.1 value is "http://schemas.xmlsoap.org/soap/http".

Action:
Correct the value of the transport attribute in the original WSDL or use a local copy if you do not own the service endpoint.

OWS-00357
ignoring document-style operation "{0}": parameters are not literal

Category:
WebService

Cause:
The value for the "use" attribute on document-style binding is invalid. the only value supported is "literal".

Action:
Correct the original WSDL or use a local copy if you do not own the service endpoint.

OWS-00358
ignoring operation "{0}": input message with multiparts is not WS-I compliant and is not currently supported

Category:
WebService

Cause:
The wsdl:message referenced by the portType/operation/input element contains more than one part and doesnt comply with WS-I BP 1.1.

Action:
If you have control over the WSDL, changes the message style for bare to wrapped, so that the WSDL comply with WS-I profile. Otherwise, use the SAAJ APIs to invoke the service without to use JAXRPC generated proxy.

OWS-00359
ignoring operation "{0}": output message with multiparts is not WS-I compliant and is not currently supported

Category:
WebService

Cause:
The wsdl:message referenced by the portType/operation/output element contains more than one part and doesnt comply with WS-I BP 1.1.

Action:
If you have control over the WSDL, changes the message style for bare to wrapped, so that the WSDL comply with WS-I profile. Otherwise, use the SAAJ APIs to invoke the service without to use JAXRPC generated proxy.

OWS-00360
The WSDL used has operations with literal and encoded use. -f:searchschema is not supported for this scenario.

Category:
WebService

Cause:
The WSDL has soapbinding subelements with use="literal" as well as use="encoded". Searching of Schema is not supported for this scenario.

Action:
Modify the WSDL to have only use="literal" or use="encoded"

OWS-00361
ignoring fault "{0}" of operation "{1}", part name "{2}" is not unique

Category:
WebService

Cause:
The WSDL uses the fault partname more than once.

Action:
Update WSDL to specify unique fault part name.

OWS-00362
Notification operation "{0}" in binding "{1}" is not supported.

Category:
WebService

Cause:
Notification operations are not supported.

Action:
Use a WSDL with no notification operations.

OWS-00363
Non conforming WSI WSDL used for wsdl:import

Category:
WebService

Cause:
WSDL import element doesnt comply with WS-I

Action:
Update the WSDL so that the imports precede all other top level elements in the WSDL.

OWS-00364
Non conforming WSI WSDL used for wsdl:types

Category:
WebService

Cause:
WSDL types element doesnt comply with WS-I

Action:
Update the WSDL so that the wsdl:types elements appear immediately after the wsdl:imports or if no imports are present wsdl:types should be the first top level element.

OWS-00365
parts "{0}" not found in the message "{1}", wrong WSDL

Category:
WebService

Cause:
The part defined in the input soap body of the binding is not specified in the input message of the operation in the port type. The part defined in the output soap body of the binding is not specified in the output message of the operation in the port type.

Action:
Make sure all the parts that are defined in the input soap body of the binding are defined in the input message of the corresponding operation of the port type. make sure all the parts that are defined in the output soap body of the binding are defined in the output message of the corresponding operation of the port type.

OWS-00366
Custom mappings for rpc-encoded web service is not supported (operation = "{0}").

Category:
WebService

Cause:
the WSDL uses custom mappings and rpc encoded webservices.

Action:
If WSDL has rpc encoded bindings do not specify custom serializers. "schema" argument to Web Services Assembler along with a message format of rpc encoded is not allowed. <type-mapping> in the oracle-webservices.xml is also not allowed with rpc encoded webservices.

OWS-00367
a class by name : "{0}" is already available in the classpath

Category:
WebService

Cause:

Action:

OWS-00368
failed to make an unique serializer class : "{0}" , the error :"{1}"

Category:
WebService

Cause:

Action:

OWS-00369
failed to find accessor method "{0}" in Java type "{1}"

Category:
WebService

Cause:

Action:

OWS-00370
model is missing

Category:
WebService

Cause:
The system is missing a model.

Action:
System Internal Error - Contact Oracle Support Services

OWS-00371
Ignoring Unique Schema Constraint

Category:
WebService

Cause:
The schema used by the WSDL has a unique constraint.

Action:
Remove unique constraint

OWS-00372
The key element has not been implemented

Category:
WebService

Cause:
The WSDL uses the unsupported "key" schema element.

Action:
Modify the schema to remove the key element

OWS-00373
Model group definition has not been implemented

Category:
WebService

Cause:
The WSDL uses a schema with a model group definition

Action:
Modify the schema to remove the model group definition

OWS-00374
Substitution Group Attribute has not been implemented

Category:
WebService

Cause:
The WSDL references a schema that uses the substitutionGroup facility.

Action:
Modify the schema to remove the substitutionGroup element

OWS-00375
Block attribute has not been implemented

Category:
WebService

Cause:
The WSDL refers to a schema that uses an unsupported block attribute.

Action:
Update your schema to set "" or #all as values for the block attribute. All other values are unsupported.

OWS-00377
Base attribute must be specified in restriction tag.

Category:
WebService

Cause:
The base attribute is not specified in the restriction tag.

Action:
Specify a base type from which the complex type is to be derived by restriction.

OWS-00378
Enumeration {0} is not supported

Category:
WebService

Cause:
The enumeration is not supported.

Action:
Modify the schema to remove this enumeraton.

OWS-00379
Attribute restriction is not supported

Category:
WebService

Cause:
The base type has an attribute element with the use="prohibited".

Action:
Remove the use="prohibited" attribute on the base type.

OWS-00380
Group Schema Element has not been implemented

Category:
WebService

Cause:
The "group" schema element is not supported

Action:
Modify the schema to remove the group element

OWS-00381
Unsupported Schema Element

Category:
WebService

Cause:
Facets are not supported in the extension and restriction elements.

Action:
Remove facets (elements like xsd:pattern, xsd:minInclusive etc which restrict values of an element) from your schema.

OWS-00382
Invalid value ({0}) for "minOccurs" attribute of element - {1}. Setting value to 0.

Category:
WebService

Cause:
Invalid "minOccurs" attribute value. Setting value to 0.

Action:
Set minOccurs to 0 if the assoicating element is optional. Otherwise, set the value to 1 or more.

OWS-00383
The "maxOccurs" attribute of the {0} element has an unsupported value of {1}. Currently only boundless arrays are supported. maxOccurs must be 0,1 or unbounded. Setting to default value of "unbounded".

Category:
WebService

Cause:
Invalid or unsupported "maxOccurs" attribute value. Setting value to 0.

Action:
Set this value to a positive integer or unbounded to indicate there is no maximum number of occurrences.

OWS-00384
Value ({0}) for "final" attribute of element -{1} is currently not supported. This attribute is ignored.

Category:
WebService

Cause:
Unsupported final attribute value. Ignore the attribute.

Action:
Set this value to "#all" or ""

OWS-00386
sender error: {0}

Category:
WebService

Cause:
Invalid configuration in oracle-webservices.xml or wsmgmt.xml.

Action:
Verify the configuration setting in oracle-webservices.xml and/or wsmgmt.xml.

OWS-00387
missing body information

Category:
WebService

Cause:
SOAP Body is missing in the request. The SOAP message was not sent.

Action:
Verify request.getBody() returns a SOAP body instance.

OWS-00388
illegal value of "mustUnderstand" attribute: "{0}"

Category:
WebService

Cause:
Response contains illegal value of "mustUnderstand" attribute.

Action:
Verify the response SOAP message. Attribute "mustunderstand" must have a value of "0", "1", "true", or "false".

OWS-00389
unrecognized operation (code: {0})

Category:
WebService

Cause:
The SOAP message is invalid. It cannot be resolved to an operation's request or response.

Action:
Regenerate the stub using either Jdeveloper or the Web Service Assembler tool.

OWS-00390
unrecognized fault block

Category:
WebService

Cause:
The response fault is invalid.

Action:
Verify the content of the fault response.

OWS-00391
received empty response

Category:
WebService

Cause:
No SOAP Message is returned from the server.

Action:
Verify the corresponding WSDL operation is not oneWay.

OWS-00392
stub was not initialized

Category:
WebService

Cause:
The initialize() method of the stub was not invoked.

Action:
Regenerate the stub using either JDeveloper or the Web Service Assembler tool. If problem persists, contact Oracle Support Services.

OWS-00395
XML reader internal error: illegal state ({0})

Category:
WebService

Cause:
XMLReader encounters an XML element that cannot be deserialized.

Action:
Validate the XML document.

OWS-00396
XML reader error: unexpected character content: "{0}"

Category:
WebService

Cause:
XMLReader encounters an element with an unexcpected character content.

Action:
Validate the XML document.

OWS-00397
XML reader error: {0}

Category:
WebService

Cause:
XMLReader cannot close the reading stream.

Action:
Check network connection and file system connection.

OWS-00398
XML parsing error: {0}

Category:
WebService

Cause:
XMLReader cannot read the next element.

Action:
Validate the XML document.

OWS-00400
XML writer error: no prefix for URI: "{0}"

Category:
WebService

Cause:
No prefix is specified for the URI.

Action:
System Internal Error - Contact Oracle Support Services

OWS-00401
XML writer error: {0}

Category:
WebService

Cause:
XML Writer encounters an IOException.

Action:
Check network connection and file system connection.

OWS-00403
unexpected XML reader state. expected: {0} but found: {1}

Category:
WebService

Cause:
The XML document does not have the expected start or end of an element.

Action:
Check if any required element is missing or there are more elements where an end tag was expected.

OWS-00405
unrecognized operation: {0}

Category:
WebService

Cause:
The soap operation is not valid.

Action:
Check the operation name in the message and correct it.

OWS-00406
cannot dispatch ambiguous operation: {0}

Category:
WebService

Cause:
The specified operation is overloaded.

Action:
Remove the overloading by renaming one of the conflicting operations.

OWS-00407
unexpected header block: "{0}"

Category:
WebService

Cause:
The QName of the header block is not correct.

Action:
Correct the header block by verifying its namespace.

OWS-00408
invalid SOAP envelope: body is empty

Category:
WebService

Cause:
The body of the soap message is empty.

Action:
Provide the write content in the body element of the soap message.

OWS-00409
invalid SOAP envelope: body is missing

Category:
WebService

Cause:
The body element is either missing or its namespace is wrong.

Action:
Add the body if missing or correct the namespace of the body element.

OWS-00410
env:Body must be present in a SOAP 1.2 envelope

Category:
WebService

Cause:
The body element is missing from the message. SOAP 1.2 requires that the env:Body element must be present.

Action:
Add the soap body in the message.

OWS-00411
invalid SOAP envelope content

Category:
WebService

Cause:
The content of the soap envelope is invalid.

Action:
Correct the content of the soap envelope.

OWS-00412
invalid SOAP envelope

Category:
WebService

Cause:
The root element of the message is not a soap envelope.

Action:
Make the root element a valid soap envelope.

OWS-00413
SOAP envelope version mismatch

Category:
WebService

Cause:
The namespace or the version of the envelope is not correct.

Action:
Correct the namespace of the soap envelope.

OWS-00414
Caught exception while handling request: {0}

Category:
WebService

Cause:
Refer to the details of the message for further information on possible causes.

Action:
Refer to the details of the message for further information on possible actions.

OWS-00415
Caught exception while preparing response: {0}

Category:
WebService

Cause:
Refer to the details of the message for further information on possible causes.

Action:
Refer to the details of the message for further information on possible actions.

OWS-00416
Caught exception while invoking the post handling hook: {0}

Category:
WebService

Cause:
Refer to the details of the message for further information on possible causes.

Action:
Refer to the details of the message for further information on possible actions.

OWS-00417
Internal Server Error ({0})

Category:
WebService

Cause:
Refer to the details of the message for further information on possible causes.

Action:
Refer to the details of the message for further information on possible actions.

OWS-00418
Could not find the field in the Holder that contains the Holder value: {0}

Category:
WebService

Cause:
Refer to the details of the message for further information on possible causes.

Action:
Refer to the details of the message for further information on possible actions.

OWS-00420
No jar file (or directory) found at specified path: {0}

Category:
WebService

Cause:
The specified jar file does not exist.

Action:
Check if the jar file name is correct and it is in the right directory.

OWS-00422
Exception occured while verifiying EJB: Class: {0} Details: {1}

Category:
WebService

Cause:
Error while parsing ejb-jar.xml. Refer to the details of the message for further information on possible causes.

Action:
Refer to the details of the message for further information on possible actions.

OWS-00423
The EJB {0} was not found in the specified ejb location

Category:
WebService

Cause:
The ejb-jar.xml does not contain the specified EJB.

Action:
Check if the name of the EJB is correct and it is present in the ejb-jar.xml.

OWS-00425
Unable to locate ejb-jar.xml in {0}

Category:
WebService

Cause:
The application does not contain an ejb-jar.xml deployment descriptor file. The deployment descriptor file is inspected to locate the endpoint service interface

Action:
Add ejb-jar.xml and reassemble the application.

OWS-00426
Error parsing ejb-jar.xml. No session beans found.

Category:
WebService

Cause:
The application does not contain any session bean definition. The business functions to be exposed as webservices should be defined in a session bean.

Action:
Write an Enterprise Java Session Bean that contains the business functions that you want to expose.

OWS-00427
Error parsing ejb-jar.xml. Stateful session beans are not supported.

Category:
WebService

Cause:
Creating webservices from a stateful session bean is not supported. The business functions to be exposed as webservices should be defined in a stateless session bean.

Action:
Remove the stateful session bean, write a stateless session bean that contains the business functions that you want to expose.

OWS-00432
ERROR: {0}

Category:
WebService

Cause:
Server or client artifacts generation has failed.

Action:
This is a generic error indicating an error condition. You should also see a message describing the details.

OWS-00433
WARNING: {0}

Category:
WebService

Cause:
Server or client artifacts generation has encountered a possible error.

Action:
This is a generic warning. You should also see a message describing the details.

OWS-00436
-import requires a WSDL-based configuration file

Category:
WebService

Cause:

Action:

OWS-00437
-define requires a service-based configuration file

Category:
WebService

Cause:

Action:

OWS-00439
You have specified : -gen:both or -gen:client with SEI. The use of these modes are recommended with WSDL only.

Category:
WebService

Cause:

Action:

OWS-00442
Problem validating implementation class. {0}

Category:
WebService

Cause:
Supplied Service implementation class is not valid. It could be that the implementation class does not implement the interface correctly or it does not conform to JAXRPC requirements or the class is not found.

Action:
Make sure the implementation class is JAXRPC compliant if it is a JAXRPC webservice; make sure the classpath containing the implementation class is correctly specified

OWS-00450
parsing failed: {0}

Category:
WebService

Cause:
SAXException is thrown from the parser while parsing the WSDL.

Action:
Fix the WSDL according to the error reported by the parser.

OWS-00451
parsing failed: {0}

Category:
WebService

Cause:
ParserConfigurationException is thrown from the parser while parsing the WSDL.

Action:
Unexpected internal error.

OWS-00460
Element type "{1}" is missing required attribute "{0}"

Category:
WebService

Cause:
The WSDL or Schema entity is missing the required attribute.

Action:
Add the required attribte with a valid value to the WSDL or Schema entity.

OWS-00461
Element named "{0}" of type "{2}" is missing required attribute "{1}"

Category:
WebService

Cause:
The WSDL or Schema entity is missing the required attribute.

Action:
Add the required attribte with a valid value to the WSDL or Schema entity.

OWS-00463
missing required sub-entity "{0}" of element "{1}"

Category:
WebService

Cause:
A sub-element required by the schema or WSDL specification is missing.

Action:
Modify the schema or WSDL to add the required sub-element.

OWS-00464
Could not find Attribute : "{0}"

Category:
WebService

Cause:
An attribute reference is not defined in the schema.

Action:
Modify the schema to define the missing attribute reference.

OWS-00465
Unsupported schema feature : "{0}"

Category:
WebService

Cause:
An element defined in the schema is not supported by the system.

Action:
Modify the schema.

OWS-00466
The element is not supported in this context : "{0}"

Category:
WebService

Cause:
A sub-element of the complex type extension/restriction definition in the schema is not supported by the system.

Action:
Modify the complex type extension/restriction definition in the schema.

OWS-00467
Unsupported simple type definition : "{0}" inside "{1}" element

Category:
WebService

Cause:
A simple type defined in the schema is not supported by the system.

Action:
Modify the simple type to a simple type supported by the system.

OWS-00468
invalid sub-element "{0}" of element "{1}"

Category:
WebService

Cause:
The WSDL contains an element with a sub-element that is not supported by the system. Check WSDL 1.1 specification.

Action:
Modify the invalid sub-element based on the WSDL 1.1 specification.

OWS-00469
invalid attribute "{0}" of element "{1}"

Category:
WebService

Cause:
The WSDL or schema contains an element with an attribute that is either formatted incorrectly or does not comply with the specifications support by the system. The specifications to check include SOAP, WSDL 1.1 and jaxrpc.

Action:

OWS-00470
invalid value "{1}" for attribute "{0}"

Category:
WebService

Cause:
A attribute on a WSDL or schema element has a value that is not expected by the system.

Action:
or WSDL to comply with the value for the schema type of the attribute or change the type of the attribute to a simple type like string or int.

OWS-00471
invalid range found (min: {0}, max: {1})

Category:
WebService

Cause:
A complex type in a schema defines min and max occurance on a type that the system does not support.

Action:
Change the max occurances attribute to 1 so the system will except the schema.

OWS-00472
exclusive attributes: "{0}", "{1}"

Category:
WebService

Cause:
A complex type in a schema defines two attributes that are not supposed to be defined at the same time.

Action:
Remove one of the specified attriubutes from the schema.

OWS-00474
not a simple type: "{0}"

Category:
WebService

Cause:
A schema type other than a simple type was found in a schema when a simple type is expected.

Action:
Change the type specified in the error message to a simple schema type or change the reference to this type to a simple schema type.

OWS-00475
port type "{0}" in binding "{0}" not found.

Category:
WebService

Cause:
The specified WSDL is invalid or complete. A binding in a WSDL document has a reference to a portType that is not defined in the WSDL.

Action:
Change the value of the type attribute in the binding to the name of a portType that is defined in the WSDL.

OWS-00476
message "{0}" not found.

Category:
WebService

Cause:
The specified WSDL is invalid or complete. An input, output or fault element has a value for the message attribute that is not defined in the WSDL.

Action:
Change the value of the message attribute to a message that is defined in the WSDL.

OWS-00477
type "{0}" defined for the message part "{1}" could not found.

Category:
WebService

Cause:
The type definition is not found in the schema.

Action:
Add the type definition to the schema, or change the value of the type attribute to the name of an existing schema type.

OWS-00478
element "{0}" defined for the message part "{1}" could not found.

Category:
WebService

Cause:
A schema contains a reference to an element name that does not exist in the specified set of schemas. The set of schemas can be inside of a WSDL document, imported from a WSDL document or imported from other schema documents.

Action:
Change the reference to an element name that is found in the specified set of schemas, or define the type in the schema.

OWS-00480
Binding "{1}" used in port "{0}" not found.

Category:
WebService

Cause:
The specified WSDL is invalid or complete. A port in the WSDL document has a reference to a binding that is not defined in the WSDL.

Action:
Change the value of the binding attribute in the port to the name of a binding that is defined in the WSDL, or define the binding.

OWS-00481
The name "{0}" is not a valid XML NCName. (see http://www.w3.org/TR/1999/REC-xml-names-19990114/#NT-NCName)

Category:
WebService

Cause:
The name is not a valid XML NCName.

Action:
Correct the value of NCName. See http://www.w3.org/TR/1999/REC-xml-names-19990114/#NT-NCName for the format.

OWS-00482
The extensibility element "{0}" is unknown and has a wsdl:required attribute set to "true"

Category:
WebService

Cause:
During WSDL validation, found unrecognized extensibility element with wsdl:required attribute set.

Action:
Ensure required extension registry is set with WSDLReader when reading WSDL document into WSDL definition or remove wsdl:required attribute

OWS-00483
The WSDL contains a mixture of styles - "document" and "rpc". Only "rpc" OR "document" is supported in a WSDL, not both.

Category:
WebService

Cause:
WSDL contains a mixture of styles i.e both "Document" and "Rpc" style operation

Action:
Multiple styles WSDL is not supported by JAXRPC/JAXWS. Make sure WSDL does not contain muplitple styles i.e both document and rpc style bidning operation.

OWS-00484
The WSDL contains a mixture of uses - "literal" and "encoded". Only "literal" OR "encoded" is supported in a WSDL, not both.

Category:
WebService

Cause:
WSDL contains both "literal" and "encoded" use

Action:
Make sure WSDL does not contain mixture of uses - "literal" and "encoded". Only "literal" or "encoded" is supported in a WSDL, not both

OWS-00485
Operation "{0}" and "{1}" have conflicting SOAPAction values. Do not overload any operation or give unique SOAPAction value to each operation binding.

Category:
WebService

Cause:
Two or more operations specified in WSDL have conflicting SOAPAction values.

Action:
Do not overload any operation or give unique SOAPAction value to each operation binding.

OWS-00486
Operation "{0}" does not have a SOAPAction value. Give it a unique value.

Category:
WebService

Cause:
In WSDL, overloaded operation does not contain SOAPAction value.

Action:
Specify unique SOAPAction value for the overloaded operation.

OWS-00487
Element does not have name

Category:
WebService

Cause:
Element declared in schema does not have a "name" attibute set.

Action:
Specify a name to an Element defined in a schema.

OWS-00488
Attribute group does not have name

Category:
WebService

Cause:
Attribute group does not contain any name.

Action:
Specify a name to an attribute group.

OWS-00490
AttributeGroup "{0}" child missing ref attribute.

Category:
WebService

Cause:
Child element of Attirbute group is missing "ref" attribute.

Action:
Specify a name to a child element of Attibute group.

OWS-00491
Attribute declaration missing name.

Category:
WebService

Cause:
In schema, attirbute declaration is missing name.

Action:
Provide valide "name" to the attribute declaration.

OWS-00492
AttributeGroup missing ref attribute

Category:
WebService

Cause:
During schema validation, found AttributeGroup element is missing "ref" attribute.

Action:
Make sure AttributeGroup has "ref" attribute declared.

OWS-00493
Warning: {0} is already defined. Ignoring.

Category:
WebService

Cause:

Action:

OWS-00494
The portType {0} is used by two bindings with different headers mapped to parameters. This usecase is not supported at this time. Map the same headers to parameters for all bindings using this port type.

Category:
WebService

Cause:
The portType defined in WSDL is used by two bindings with different headers mapped to parameters.

Action:
Map the same headers to parameters for all bindings using this port type.

OWS-00495
The specified service name "{0}" was not found.

Category:
WebService

Cause:
In WSDL, service element does not have "name" attirbute defined.

Action:
Make sure WSDL has valid service name.

OWS-00496
Error while loading the schemas defined in WSDL "{0}": "{1}"

Category:
WebService

Cause:
Failed to load the schema specified in the WSDL.

Action:
Ensure the schema location specified in the WSDL is correct.

OWS-00499
LiteralArrayWrapper may only have one element member.

Category:
WebService

Cause:
LiteralArrayWrapper has more than one element member.

Action:
Make sure LiteralArayWrapper contains one element member.

OWS-00500
The annotation type or property "{0}" has been deprecated in this version of Oracle WebServices.

Category:
WebService

Cause:

Action:

OWS-00502
The annotations on the impl bean {0} or a referenced SEI are not consistent with the portType(s), binding(s) and service(s) in the WSDL specified by the wsdlLocation: {1}. Please refer to section 4.1.1 of the JSR-181 specification for details on the usage of wsdlLocation. The {2} was not found in the WSDL.

Category:
WebService

Cause:
The WSDL specified by a wsdlLocation attribute is inconsistent with the portType and bindings declared in the same WSDL.

Action:
Ensure that the annotations are consistent with the WSDL. See section 4.1.1 of the JSR-181 spec.

OWS-00505
Not a java bean

Category:
WebService

Cause:
The specified value type is not a valid Java Bean.

Action:
Ensure that the all declared value types are valid Java Bean.

OWS-00506
Not a java bean. Class is not public.

Category:
WebService

Cause:
The specified class is not a valid Java Bean.

Action:
Ensure the specified class has "public" modifier.

OWS-00526
Not in class path

Category:
WebService

Cause:
The specified class could not found in classpath.

Action:
Ensure that all required classes or jar files containing classes are declared in classpath.

OWS-00527
Element "{0}" can not have both a type attribute and a nested type declaration.

Category:
WebService

Cause:
The WSDL or schema contains an element with a type attribute and a nested type defined.

Action:
None

OWS-00528
Type "{0}" is not a valid JAXRPC value type or it is not serializable.

Category:
WebService

Cause:
SEI contains method with unserializable return type or parameter type

Action:
Ensure that all parameter types and return type are valid value types as per JAXRPC specification.

OWS-00530
WSDL is not WS-I BP compliant. Literal style WSDL at location "{0}" can not have soap encoded type.

Category:
WebService

Cause:
Invalid WSDL. Provided WSDL has both literal and soap encoding style.

Action:
Make sure WSDL has either "literal" or "encoding" style, NOT both

OWS-00531
Could not find schema from URL source, file source, classpath or application context at this lcoation: "{0}"

Category:
WebService

Cause:
Could not locate the schema document from file, url, classpath or application context.

Action:
Verify that the specified location of schema is correct.

OWS-00532
Failed to retrieve policy

Category:
WebService

Cause:
Could not retrieve the policy from the Policy Accessor.

Action:
System Internal Error - Contact Oracle Support Services

OWS-00533
Value {0} is not valid for {1}

Category:
WebService

Cause:
Invalid value encountered while deserializing a Java value from XML.

Action:
Verify that XML datatype contains valid value as per the schema.

OWS-00536
The output of a binding operation "{0}" is missing

Category:
WebService

Cause:
The output of a binding operation is missing.

Action:
Verify that the output element is properly specified in the binding operation in the WSDL.

OWS-00537
The input element, under namespace of "http://schemas.xmlsoap.org/wsdl/", of the binding operation "{0}" is missing

Category:
WebService

Cause:
The input element, under namespace of "http://schemas.xmlsoap.org/wsdl/", of a binding operation is missing.

Action:
Verify that the input element is properly specified in the binding operation in the WSDL.

OWS-00538
The value of the BindingType annotation "{0}" does not match the SOAP version "{1}" on the WSDL.

Category:
WebService

Cause:
The value of the BindingType annotation does not match the SOAP version on the WSDL.

Action:
Verify the value of the BindingType annotation.

OWS-00539
The WebParam or WebResult annotation on method "{0}" does not match the WSDL or Schema; The "{1}" "{2}" element is missing.

Category:
WebService

Cause:
The WebParam or WebResult annotation does not exist, or does not match the WSDL/Schema.

Action:
Verify the value of the WebParam or WebResult annotation.

OWS-00542
Unable to initialize, missing WebServicesProcessor

Category:
WebService

Cause:
Unable to initialize interceptors due to missing WebService Processor

Action:
System Internal Error - Contact Oracle Support Services

OWS-00543
Unable to provision web service, cannot read WSDL. Error: {0}

Category:
WebService

Cause:
Could not read WSDL.

Action:
Check the WSDL URL for correctness and try again or check the server logs for details.

OWS-00544
Error destroying interceptors {0}

Category:
WebService

Cause:

Action:

OWS-00545
Unable to read SOAP message {0}

Category:
WebService

Cause:

Action:

OWS-00546
Invalid port configuration {0}

Category:
WebService

Cause:

Action:

OWS-00547
{0}

Category:
WebService

Cause:

Action:

OWS-00549
The WSDL has overloaded operations "{0}".

Category:
WebService

Cause:
The WSDL has overloaded operations.

Action:
Avoid using overloaded operations.

OWS-00550
JDK1.5 enum is not supported "{0}".

Category:
WebService

Cause:
JDK1.5 enum is not supported

Action:
Provide a custom seriallizer.

OWS-00551
You are running on JDK6 which comes with JAX-WS 2.1 API and JAXB 2.2 API, but this tool requires JAX-WS 2.2 API and JAXB 2.2.1 API. Use the endorsed standards override mechanism (http://java.sun.com/javase/6/docs/technotes/guides/standards/).

Category:
WebService

Cause:
JDK 1.6 not configured correctly for JAX-WS

Action:
Provide an endorsed folder with the newer jars

OWS-03002
Failed to load wsm config schema: {0}

Category:
WebService

Cause:
Failed to load wsm config schema.

Action:
Please check the WSM configuration schema.

OWS-03003
{0}

Category:
WebService

Cause:

Action:

OWS-03004
{0}

Category:
WebService

Cause:
An exception occured while webservice management configuration.

Action:
Verify that the oracle proprietary descriptor for configuration is valid xml file and confirms to the schema "http://xmlns.oracle.com/oracleas/schema/11/oracle-webservices-client-11_1.xsd"

OWS-03005
Unable to connect to URL: {0} due to {1}

Category:
WebService

Cause:

Action:

OWS-03009
Error reading client wsmgmt configuration {0}

Category:
WebService

Cause:
Unexpected error occurs while reading client configuration file

Action:
NONE

OWS-03010
Error creating default client wsmgmt configuration {0}

Category:
WebService

Cause:
Unexpected error occured while creating default client side configuration file

Action:
System Internal Error - Contact Oracle Support Services

OWS-03011
Error parsing client wsmgmt configuration file {0}

Category:
WebService

Cause:

Action:

OWS-03012
Error parsing client wsmgmt configuration file {0}

Category:
WebService

Cause:

Action:

OWS-03013
Error parsing client wsmgmt configuration file {0}

Category:
WebService

Cause:
Unexpected error occured while parsing client webservice management configuration file

Action:
Verify that client side configuration file is a valid xml file

OWS-03014
Error loading policy access cache configuration {0}

Category:
WebService

Cause:
Policy access cache configuration file could not be loaded due to unexpected error

Action:
System Internal Error - Contact Oracle Support Services

OWS-03015
Error accessing policy from cache {0}

Category:
WebService

Cause:
Accessing policy from cache is failed

Action:
System Internal Error - Contact Oracle Support Services

OWS-03016
Error loading interceptor class {0}

Category:
WebService

Cause:
Failed to looad the Inteceptor class

Action:
Ensure all required webservices client side jar files available in classpath

OWS-04007
Error in system configured ejb prehandler: {0}

Category:
WebService

Cause:

Action:

OWS-04011

Category:
WebService

Cause:

Action:

OWS-04121
Invalid use of <web-site> element in oracle-webservices.xml.<web-site> element must have two attributes "host" and "port" with valid values

Category:
WebService

Cause:
<web-site> element of oracle-webservice.xml doesn't contain 'host' and 'port' attributes with valid values

Action:
Add valid 'host' and 'port' attributes to the <web-site> element, or remove the element.

OWS-04123
Unsupported oracle-webservices deployment descriptor for module {0}, schema version {1}

Category:
WebService

Cause:

Action:

OWS-04124
Failed to register the web service Config MBeans for application: {0} endpoint: {1} the error is: {2}

Category:
WebService

Cause:
Failed to register the web service config MBeans for endpoint

Action:
None

OWS-04125
cannot find WSDL definition required to validate input

Category:
WebService

Cause:
cannot load web service WSDL definition, which is required for schema validation of input

Action:
Ensure that the WSDL is available, or set schema validation of input to false

OWS-04126
Input Violates Schema

Category:
WebService

Cause:
SOAP body element of the input message cannot be validated against schema in the WSDL

Action:
Correct input message body, input message type in the WSDL schema, or set schema validation of input to false

OWS-04127
Invalid query string

Category:
WebService

Cause:
User has specified invalid URL Query String.

Action:
Verify that the correct query string is specified for acccessing the testpage.

OWS-04128
Failed to deploy/initialize the application as given archive is missing required standard webservice deployment decriptor.

Category:
WebService

Cause:
The user suppplied war archive is missing required webservice deployment descriptor

Action:
Create WAR file with required webservice deployment descriptor or use WSA's jaxwsAssemble command to assemble the WAR file.

OWS-04130
Failed to initialize Tie class "{0}" at runtime due to Error: {1}

Category:
WebService

Cause:
Failed to initialize the tie class on server side due to classloading issue or java security.

Action:
Please look the server log for exact cause of an error.

OWS-04131
SOAP must understand error. MustUnderstand headers:["{0}"] are not understood.

Category:
WebService

Cause:
Server could not understand SOAP header which has mustUnderstand flag set to true.

Action:
Please look the SOAPFault string for any detail message and check the client and server side configuration.

OWS-04132
FastInfoset is disabled for this service

Category:
WebService

Cause:
A FastInfoset message was received for a service that has FastInfoset disabled

Action:
Please enable FastInfoset for the web service or send a non-FastInfoset input message

OWS-04136
JRF WebServices are not supported in 'Restricted JRF'.

Category:
WebService

Cause:
Trying to deploy JRF WebServices which is not supported in 'Restricted JRF'.

Action:
Use 'Full JRF' for deploying application that uses JRF WebServices implementation.

OWS-04137
DTD is not supported

Category:
WebService

Cause:
Sending SOAP request with DTD

Action:
Do not use DTD in SOAP request to JRF web services

OWS-08008
Web service artifact generation failed.

Category:
WebService

Cause:
Web service artifact generation failed.

Action:
Verify and correct by the error message and stack trace.

OWS-08010
Incorrect packaging ({0}): WSDL should be packaged in a directory named either 'META-INF/wsdl' or 'WEB-INF/wsdl'.

Category:
WebService

Cause:
Incorrect WSDL packaging.

Action:
Verify that the correct the WSDL packaging configurations.

OWS-08015
No web service named '{0}' is defined. Ignoring the proprietary configuration for this web service.

Category:
WebService

Cause:
Web service name is not properly defined.

Action:
Verify that the web service name from the proprietary configuration.

OWS-15001
An extension registry was not found for the element type "{0}"

Category:
WebService

Cause:
An extension registry was not found for an element type

Action:
None

OWS-15002
A failure occurred in loading WSDL from "{0}"

Category:
WebService

Cause:
A failure occurred in loading WSDL

Action:
Verify if the WSDL exists at the specified URL

OWS-15004
WSDL contains an operation type of "{0}" which is not supported for port type "{1}"

Category:
WebService

Cause:
WSDL contains an operation type that is not supported

Action:
Modify the WSDL and change the operation type to a supported one

OWS-15005
An error occurred when invoking the method. Type of WSIF invocation was "{1}" and method name was ("{0}")

Category:
WebService

Cause:
An error occurred when invoking the method

Action:
Check client code and network connection

OWS-15006
Multiple WSIFProvider found supporting the same namespace URI "{0}". Found ("{1}")

Category:
WebService

Cause:

Action:

OWS-15008
WSIFDefaultCorrelationService removing correlator due to timeout. ID:"{0}"

Category:
WebService

Cause:

Action:

OWS-15010
Exception thrown while processing asynchronous response - "{0}"

Category:
WebService

Cause:
Exception thrown while processing asynchronous response

Action:
None

OWS-25106
Internal error: {0}

Category:
WebService

Cause:

Action:

OWS-25108
Some messages have not been acknowledged

Category:
WebService

Cause:

Action:

OWS-25111
Error sending LastMessage: {0}

Category:
WebService

Cause:
Unknown

Action:
Check server logs for additional details.

OWS-25112
The WS-RM client interceptor encountered an exception while handling a response, {0}

Category:
WebService

Cause:

Action:

OWS-25113
Duplicate eliminated for message #{0}

Category:
WebService

Cause:

Action:

OWS-25118
Skip null in handling outbound message {0}

Category:
WebService

Cause:

Action:

OWS-25119
Forcing wsa:Action inside RM code to {0}. Please, verify your addressing handler configuration

Category:
WebService

Cause:

Action:

OWS-25168
An attempt was made to terminate a WS-RM sequence inactivity monitor for the sequence identified by {0}, which is not currently being monitored.

Category:
WebService

Cause:

Action:

OWS-50001
The @WebService.portName is not allowed on endpoint interfaces.: {0}

Category:
WebService

Cause:

Action:

OWS-50002
The @WebService.serviceName is not allowed on endpoint interfaces.: {0}

Category:
WebService

Cause:

Action:

OWS-50003
Could not find schema type : {0}

Category:
WebService

Cause:

Action:

OWS-50004
The method "{0}" does not have the AsyncHandler type parameter.

Category:
WebService

Cause:
The callback type asynchronous method that returns java.util.concurrent.Future must have the last parameter of the type AsyncHandler.

Action:
Add the last parameter of type AsyncHandler in the method, or regenerate the interface using wsa tool.

OWS-50005
Exception while retrieving the soap message from the internal callback handler.

Category:
WebService

Cause:
Refer to the details of the message for further information on possible causes.

Action:
Refer to the details of the message for further information on possible actions.

OWS-50006
Could not deserialize the soap message to get the return value

Category:
WebService

Cause:
Refer to the details of the message for further information on possible causes.

Action:
Refer to the details of the message for further information on possible actions.

OWS-50007
Could not create the instance of asynchronous response bean of type "{0}"

Category:
WebService

Cause:
Cound not create the response Refer to the details of the message for further information on possible causes.

Action:
Check if the bean has a default constructor and the constructor is accessible.

OWS-50008
Cound not set the field "{0}" in the object of type "{1}".

Category:
WebService

Cause:
Possible causes are invalid field name, abcense of setter, inaccessible setter or mismatched field type.

Action:
Correct the bean class based on the details of the message.

OWS-50009
The method "{0}" must have a parameterized return type.

Category:
WebService

Cause:
The return type must be parameterized with the ResponseBean or the actual return type of the web service call.

Action:
Add the appropriate return type as the parameter of the AsyncHandler parameter. Or use the JAX-WS artifacts generation tools to generate the proper interface of asynchronous methods.

OWS-50010
Dispatch currently does not support REST style service.

Category:
WebService

Cause:
The AsyncHandler parameter must be parameterized with the ResponseBean or the actual return type of the web service call.

Action:
Add the appropriate return type as the parameter of the Response. Or use the JAX-WS artifacts generation tools to generate the proper interface of asynchronous methods.

OWS-50011
Dispatch currently does not support REST style service.

Category:
WebService

Cause:
The REST request cannot be processed via Dispatch. The feature is not yet supported.

Action:
Construct an HTTP Request for a RESTful webservice.

OWS-50012
Could not determine the soap version from the BindingType annotation"s value "{0}". Assuming SOAP version as 1.1

Category:
WebService

Cause:
The value of the BindingType annotation is invalid.

Action:
Use one of the valid values for the BindingType annotation. Refer to the documentation of javax.xml.ws.BindingType.

OWS-50013
Could not determine a valid protocol binding to generate for the binding public static final String {0}. A SOAP 1.1 binding will be the only protocol binding generated in the WSDL.

Category:
WebService

Cause:
The value of the BindingType is not supported or is invalid

Action:
Only SOAP and HTTP protocols are supported. Refer to the documentation or JAX-WS specification for valid values for javax.xml.ws.BindingType.

OWS-50014
Both @Deployment.restSupport() and @BindingType(javax.xml.ws.http.HTTPBinding.HTTP_BINDING) were specified. Only the latter will be used.

Category:
WebService

Cause:
Both the @Deployment.restSupport() and @BindingType(javax.xml.ws.http.HTTPBinding.HTTP_BINDING) were provided.

Action:
@Deployment.restSupport() has been deprecated. It should not be used. Use @BindingType(javax.xml.ws.http.HTTPBinding.HTTP_BINDING) instead.

OWS-50015
The given ws-addressing namespace "{0}" is not one of the supported wsa versions.

Category:
WebService

Cause:
The input ws addressing version is not supported

Action:
Correct the addressing version to use 2003/03 or 2004/08 or 2005/08.

OWS-50016
IOException converting AddressingInfo to public static final String.

Category:
WebService

Cause:
IO error converting addressing info to public static final String

Action:
correctAddressingInfo

OWS-50017
Port Metadata missing from the given callback interface class.

Category:
WebService

Cause:
Metadata such as port name or targetnamespace can not be found from the given input class.

Action:
Add the needed annotation to the interface class.

OWS-50018
The file "{0}" does not exist.

Category:
WebService

Cause:
The file name specified in syncInterfaceFileName could not be opened.

Action:
Check if the file name is correct and it exist.

OWS-50019
The file "{0}" should have some class or interface defined.

Category:
WebService

Cause:
The syncInterfaceFileName is not containing any class.

Action:
Check if the file has any class defined. Make sure that the file is compilable and so free of errors.

OWS-50020
There is no method in the file "{0}" to convert to asynchronous method.

Category:
WebService

Cause:
The interface file should have at least one method defined.

Action:
Add the required methods in the interface file.

OWS-50021
Cannot determine what methods to convert to asynchronous in file "{0}".

Category:
WebService

Cause:
The interface file has more than one method defined and no method name has been specified for conversion.

Action:
Please sepcify what methods need to be converted to asynchronous methods.

OWS-50022
The file "{0}" does not exist.

Category:
WebService

Cause:
The file name specified in asyncInterfaceFileName could not be opened.

Action:
Check if the file name is correct and it exist.

OWS-50023
The file "{0}" should have some class or interface defined.

Category:
WebService

Cause:
The asyncInterfaceFileName is not containing any class.

Action:
Check if the file has any class defined. Make sure that the file is compilable and so free of errors.

OWS-50024
Java Model is not set in the file system.

Category:
WebService

Cause:
The file system does not have any Java Model set.

Action:
Make sure that the file system has the Java Model set.

OWS-50025
JAX-WS endpoint bean has @SOAPBinding.use annotation that specifies the 'encoded' message format which is not supported in JAX-WS. JAX-WS 2.0 mandates 'literal' use only and supports either rpc/literal or document/literal style binding.

Category:
WebService

Cause:
In JAX-WS endpoint bean, @SOAPBinding.use annotation has 'encoded' value which is not supported in JAXWS

Action:
In JAX-WS endpoint bean, use either rpc/literal or document/literal style binding.

OWS-50026
Invalid use of @WebMethod annotation on method "{0}".As per JSR-181, if 'exclude' element is specified on @WebMethod annotation then other elements must not be specified with it.

Category:
WebService

Cause:
In JAX-WS endpoint bean, @WebMethod annotation has 'exclude' element that is used with other elements like 'action' or 'operationName' which is against the JSR-181 spec

Action:
Do not use 'action' or 'operationName' element if 'exclude' element is specified on @WebMethod annotation.

OWS-50027
@SOAPBinding annotation is only allowed on a method if SOAPBinding.style is "DOCUMENT". Method "{0}" specifies @SOAPBinding.style to "RPC" which is against JSR-181 so it will be ignored and default sytle "DOCUMENT/LITERAL" will be used.

Category:
WebService

Cause:
@SOAPBinding annotation at method level has 'rpc' style which is not valid as per JSR-181

Action:
Do not specify the 'rpc' style with @SOAPBinding annotation used at method level in JAX-WS enpoint interface/bean.

OWS-50028
The parameter/return type "{0}" in the method "{1}" is not supported. This method will not be exposed.

Category:
WebService

Cause:
The parameter/return type is NOT supported.

Action:
Do not use the unsupported JAVA Type in method parameter or return value.

OWS-50029
The method "{0}" has more than one input parameter that is not mapped to a header and style is BARE. This method will not be exposed.

Category:
WebService

Cause:
The java method has more than one input parameter that is not mapped to a header.

Action:
Map java parameters to a header using @WebParam annotation or use wrapped style operation.

OWS-50030
wsdlDocumentLocation is currently not supported.

Category:
WebService

Cause:
WSDLDocumentLocation is currently not supported

Action:

OWS-50031
Input address, serviceName and endpointName can not be all null

Category:
WebService

Cause:
ServiceName, PortName, or Address can not be all null.

Action:
Supply a non null argument for one of the parameters.

OWS-50032
Service name has not been specified for a non null port name.

Category:
WebService

Cause:
ServiceName can not be null when port name is specified.

Action:
Supply a non null service name.

OWS-50033
Exception occured building W3CEndpointReference.

Category:
WebService

Cause:
Exception occured when building W3C EndpintReference.

Action:
Verify that the Endpoint Reference address and other metadata to build W3C EndpointRefence are correct.

OWS-50034
The method "{0}" is ignored. {1}

Category:
WebService

Cause:
The JAVA method is ignored in WSDL generation.

Action:

OWS-50035
"{0}" cannot be used as parameter type or return value in "{1}".

Category:
WebService

Cause:
The JAVA type cannot be used as parameter type or return value in RPC-Literal and Document-Literal-BARE.

Action:

OWS-50036
Operations on portType should be unique, use @WebMethod(operationName="...") on java method "{0}" to resolve conflict.

Category:
WebService

Cause:
Operations the WSDL port type need to be unique.

Action:
Map non-unique JAVA method names to unique WSDL opeartion names using @WebParam(operation"...")

OWS-50037
Failed to load endpoint interface class "{0}" specified with @WebService.endpointInterface annotation in endpoint bean class "{1}". This may cause unexpected behavior like generated WSDL would be different from the expected one.

Category:
WebService

Cause:
Classloader failed to load the enpoint interface class that is implemented by the enpoint bean class

Action:
Check that the endpoint interface class is in the classpath

OWS-50038
Found "{0}" annotation on class "{1}" which is not allowed with PortableWebService endpoint class.

Category:
WebService

Cause:
User has specified the annotation on either webservice endpoint interface or implementation class which is not allowed with Portable WebService

Action:
Remove annotation which is not valid with @PortableWebService annotation.

OWS-50039
Could not load callback interface "{0}". Any methods defined in the interface will be ignored

Category:
WebService

Cause:
Callback interface class is not available or misspelt.

Action:
Make callback interface available.

OWS-50040
Failed while accessing Keystore details.

Category:
WebService

Cause:
Keystore details are not setup.

Action:
Configure keystore details for the server.

OWS-50042
[MessageID: {0}] Request MDB could not complete asynchronous request processing successfully. No response will be sent to the client. Analyze the details of the exception as it is likely server side configuration error.

Category:
WebService

Cause:
Asynchronous request processing resulted in exception

Action:
Analyze the exception and take appropriate action.

OWS-50043
JMS queue connection failed.

Category:
WebService

Cause:
JMS queues are not created, or wrong queue names are used.

Action:
Check that queues are created and referenced with the right names.

OWS-50044
[MessageID: {0}] Could not post async request message to the JMS queue.

Category:
WebService

Cause:
JMS queues are not created, or wrong queue names are used.

Action:
Check that queues are created and referenced with the right names

OWS-50045
Could not close the connection to JMS queue

Category:
WebService

Cause:
Internal error.

Action:
Can be ignored.

OWS-50047
[MessageID: {0}] No JMS queue specified for the request with non-anonymous replyTo for service "{1}"

Category:
WebService

Cause:
JMS queues are not created, or wrong queue names are used.

Action:
Check that queues are created and referenced with the right names

OWS-50048
ConnectionFactory for the destination "{0}" used for asynchronous service processing is not specified. Using default: "{1}"

Category:
WebService

Cause:
Connection factory is not specified.

Action:
Specify connection factory if default is not good.

OWS-50051
JMS queue for async service processing not found. Configure a JMS queue for this application.

Category:
WebService

Cause:
JMS queue are either not created or not correctly specified in the source annotations.

Action:
Verify that the JMS queues are created and the same are referred in the annotations in the service implementation class.

OWS-50056
Received a fault and user did not supply a fault listener. Details: "{0}"

Category:
WebService

Cause:
The web service implementation class does not have any methods annotated as FaultListener and either the input is fault, or the response from the callback service is fault.

Action:
Add the fault listener method if desired.

OWS-50057
Failed while re-creating the soap message from the JMS message

Category:
WebService

Cause:
System error

Action:
Analyze the exception reported in the log.

OWS-50058
Failed while re-creating the addressing header from the JMS message

Category:
WebService

Cause:
System error

Action:
Analyze the exception reported in the log.

OWS-50059
[MessageID: {0}] Error while processing the message off the JMS queue.

Category:
WebService

Cause:
System error

Action:
Analyze the exception details.

OWS-50061
Context is available locally. Should happen only while running in-process message listener.

Category:
WebService

Cause:
Internal system error.

Action:
Internal system error.

OWS-50062
[MessageID: {0}] Error while processing response. Will try the fault handler in web service implementation class.

Category:
WebService

Cause:
Callback service may be down or policy of the callback service is not matching with the callback client.

Action:
Analyze the exception details.

OWS-50064
[MessageID: {0}] Failed to send async response to client-side callback receiver.

Category:
WebService

Cause:
Callback service may be down, the callback URL may be wrong or callback service is not configured properly.

Action:
Verify the configuration of callback service and take action based on the details of exception.

OWS-50066
Could not save the context for async service in cache with the key "{0}".

Category:
WebService

Cause:
Internal system error.

Action:
Internal system error.

OWS-50067
Could not cleanup the context for async service from cache as it was not found.

Category:
WebService

Cause:
Internal system error.

Action:
Internal system error.

OWS-50069
Could not remove the saved context for async service from cache with the key "{0}".

Category:
WebService

Cause:
Internal system error

Action:
Internal system error.

OWS-50071
[MessageID: {0}] Error while trying the fault handler in web service implementation class.

Category:
WebService

Cause:
The fault handler method did not execute successfully.

Action:
Check the fault handler code.

OWS-50072
[MessageID: {0}] Got SOAPFaultException while executing the asynchronous operation

Category:
WebService

Cause:
This might be because of invalid request, missing resources in the service implementation or a bug.

Action:
Analyze the exception details.

OWS-50073
[MessageID: {0}] Encountered exception or error while invoking user's Java Web Service method.

Category:
WebService

Cause:
This might be because of invalid request, missing resources in the service implementation or a bug.

Action:
Analyze the exception or error details.

OWS-50080
[MessageID: {0}] Response MDB encountered exception during asynchronous response processing.

Category:
WebService

Cause:
Callback service is not up or it's configuration/policy is not matching with the async server.

Action:
Analyze the exception and configure the callback service.

OWS-50081
[MessageID: {0}] Response MDB encountered exception.

Category:
WebService

Cause:
Callback service is not up or it's configuration/policy is not matching with the async server.

Action:
Analyze the exception and configure the callback service.

OWS-50082
[MessageID: {0}] Response MDB will not retry sending response as callback service sent soap fault back. HTTP response code received by response MDB was "{1}".

Category:
WebService

Cause:
Callback service sent the fault back. Retrying may not help. There may be some configuration problem,

Action:
Analyze the fault and configure the client-side callback service properly.

OWS-50085
[MessageID: {0}] Could not create the user transaction for request processing.

Category:
WebService

Cause:
Internal system error.

Action:
Analyze the exception in the log.

OWS-50087
[MessageID: {0}] Could not begin the user transaction for request processing.

Category:
WebService

Cause:
Internal system error.

Action:
Analyze the exception in the log.

OWS-50088
[MessageID: {0}] Could not create user transaction for Web Method execution.

Category:
WebService

Cause:
Internal system error.

Action:
Analyze the exception in the log.

OWS-50090
[MessageID: {0}] Could not begin user transaction for Web Method execution.

Category:
WebService

Cause:
Internal system error

Action:
Analyze the exception in the log.

OWS-50092
[MessageID: {0}] Could not suspend the main transaction for executing the web method.

Category:
WebService

Cause:
Internal system error.

Action:
Internal system error.

OWS-50093
[MessageID: {0}] User transaction was marked for rollback after executing the web method.

Category:
WebService

Cause:
Web method execution marked the transaction for rollback.

Action:
It might be because of invalid input or a bug in the web method. Analyze the failure.

OWS-50094
[MessageID: {0}] Could not rollback the user transaction after executing the web method.

Category:
WebService

Cause:
Internal system error.

Action:
Analyze the exception in the log.

OWS-50095
[MessageID: {0}] User transaction is being rolledback after getting unexpected exception in executing the web method.

Category:
WebService

Cause:
Web method did not complete successfully.

Action:
It might be because of invalid input or a bug in the web method. Analyze the failure.

OWS-50096
[MessageID: {0}] User transaction is being rolled back after getting failure in getting response.

Category:
WebService

Cause:
There might be some problem with the callback service or its configuration.

Action:
Check if the callback service is up and configured properly.

OWS-50100
[MessageID: {0}] Could not get the transaction manager (javax.transaction.TransactionManager).

Category:
WebService

Cause:
Internal system error.

Action:
Internal system error.

OWS-50102
[MessageID: {0}] Could not resume the suspended main transaction.

Category:
WebService

Cause:
Internal system error

Action:
Internal system error.

OWS-50103
[MessageID: {0}] Rolled back a user transaction after executing the web method.

Category:
WebService

Cause:
There might be some problem with the callback service or its configuration.

Action:
Check if the callback service is up and configured properly.

OWS-50104
[MessageID: {0}] Could not rollback a user transaction after executing the web method.

Category:
WebService

Cause:
Internal system error.

Action:
Internal system error.

OWS-50106
[MessageID: {0}] Could not commit the user transaction for web method execution.

Category:
WebService

Cause:
Internal system error.

Action:
Analyze the related exception report in the log.

OWS-50107
[MessageID: {0}] Could not rollback the main transaction

Category:
WebService

Cause:
Internal system error.

Action:
Internal system error.

OWS-50108
[MessageID: {0}] Could not commit the main transaction

Category:
WebService

Cause:
Internal system error.

Action:
Internal system error.

OWS-50109
[MessageID: {0}] HTTP response code received from client-side callback service is "{1}".

Category:
WebService

Cause:
Callback service returned HTTP response other than 200 or 202.

Action:
Analyze the details of soap message returned by callback service or the HTTP error code.

OWS-50111
[MessageID: {0}] Received soap fault from the client-side callback service.

Category:
WebService

Cause:
Callback has sent a soap fault as the response.

Action:
Analyze the fault and configure the callback service properly.

OWS-50112
[MessageID: {0}] Could not dump the soap message

Category:
WebService

Cause:
Internal system error.

Action:
Internal system error.

OWS-50113
[MessageID: {0}] Could not create SSLSocketFactory.

Category:
WebService

Cause:
Keystore may not have been configured properly.

Action:
Configure the keystore details for the server.

OWS-50114
[MessageID: {0}] KeyStore file locations are not available. Configure it for the server to make the SSL work.

Category:
WebService

Cause:
Keystore may not have been configured properly.

Action:
Configure the keystore details for the server.

OWS-50115
Exception in handler chain

Category:
WebService

Cause:
Handler chain has thrown some exception

Action:
Look at the details of exception.

OWS-50117
Unsupported message context, jaxws handler will not be called

Category:
WebService

Cause:

Action:

OWS-50118
Unsupported message context, "{0}" could not handle fault

Category:
WebService

Cause:

Action:

OWS-50121
Error parsing handler chain: "{0}"

Category:
WebService

Cause:

Action:

OWS-50122
Could not process callback interface "{0}". Any methods defined in the interface will be ignored

Category:
WebService

Cause:

Action:

OWS-50123
Unsupported operation when generating schemas "{0}"

Category:
WebService

Cause:

Action:

OWS-50124
Unknown Exception when generating schemas: "{0}"

Category:
WebService

Cause:

Action:

OWS-50125
Could not load schema from location "{0}".

Category:
WebService

Cause:

Action:

OWS-50127
Could not determine wsdl ports.

Category:
WebService

Cause:

Action:

OWS-50128
Could not find service "{0}"; Using first service in WSDL instead.

Category:
WebService

Cause:

Action:

OWS-50129
No wsdl location or document specified

Category:
WebService

Cause:

Action:

OWS-50130
No web module with name of "{0}" so a new war will be created

Category:
WebService

Cause:
TBD

Action:
TBD

OWS-50131
Found web module with name of "{0}", so the generated contents will be merged.

Category:
WebService

Cause:
TBD

Action:
TBD

OWS-50132
Can not specify war argument and have an input be an ear that contains a war with a matching context root.

Category:
WebService

Cause:
TBD

Action:
TBD

OWS-50133
Error extracting war "{0}".

Category:
WebService

Cause:
TBD

Action:
TBD

OWS-50134
Error while processing ejb-jar.xml for ejb module at "{0}".

Category:
WebService

Cause:

Action:

OWS-50135
Could not load jaxrpc annotation parser, the webservices in this ejb will not be manageable

Category:
WebService

Cause:
TBD

Action:
TBD

OWS-50136
Multiple webservice descriptions in webservices.xml has the same port name "{0}" and service name "{1}", defaulting to webservice description named "{2}".

Category:
WebService

Cause:

Action:

OWS-50138
Could not write operation metadata for "{0}".

Category:
WebService

Cause:
Exception in writing operation metadata

Action:
Analyze the exception.

OWS-50139
HandlerChain configuration file: "{0}".

Category:
WebService

Cause:
TBD

Action:
TBD

OWS-50140
Failed to resolve HandlerChain annotation "file" value ({0}) as it is specified on "{1}"

Category:
WebService

Cause:
TBD

Action:
TBD

OWS-50141
Fabric Registration ignored because this service does not use SDO binding.

Category:
WebService

Cause:
TBD

Action:
TBD

OWS-50143
Fabric Registration ignored because Register class "{0}" can not be instantiated.

Category:
WebService

Cause:

Action:

OWS-50144
Fabric Registration ignored because Register class "{0}" can not be accessed.

Category:
WebService

Cause:

Action:

OWS-50146
Fabric Registration failed due to exception: "{0}".

Category:
WebService

Cause:

Action:

OWS-50147
SDO Type Registration failed due to exception: "{0}".

Category:
WebService

Cause:
TBD

Action:
TBD

OWS-50149
There is more than one webservice with the name of "{0}" this can cause problems at deployment or runtime. To resolve the conflict add a serviceName property to a WebService annotation

Category:
WebService

Cause:

Action:

OWS-50151
The service name "{0}" could not be found in the wsdl "{1}". Defaulting to the first service in the wsdl "{2}"

Category:
WebService

Cause:

Action:

OWS-50152
The port name "{0}" could not be found in the wsdl "{1}". Defaulting to the first port named "{2}" in the service named "{3}"

Category:
WebService

Cause:

Action:

OWS-50153
Multiple port components have the same service name "{0}" and port name "{1}", default to port component name "{2}".

Category:
WebService

Cause:

Action:

OWS-50154
Can not add partner links to wsdl because there are not two port types, actual number is "{0}".

Category:
WebService

Cause:

Action:

OWS-50155
Error processing handler chain: "{0}"

Category:
WebService

Cause:

Action:

OWS-50156
Unsupported type when generating schemas: "{0}"

Category:
WebService

Cause:

Action:

OWS-50159
[MessageID: {0}] Messages could not be read while cleaning up the asynchronous message queues. Exception: "{1}".

Category:
WebService

Cause:
System error

Action:
Internal error

OWS-50162
[MessageID: {0}] Request message was found in the queue while processing the response

Category:
WebService

Cause:
There might be a server/jvm crash after successful execution of business logic.

Action:
No action required.

OWS-50163
[MessageID: {0}] Response is not available. The web method execution did not complete or the response was lost.

Category:
WebService

Cause:
Response is not available. The web method execution did not complete or the response was lost.

Action:
Retry calling the method if it is safe to do so.

OWS-50177
Could not read saved context for async service from cache using the key: "{0}".

Category:
WebService

Cause:
Internal system error.

Action:
Internal system error.

OWS-50178
The password for the identity keystore could not be read from the security credential store while sending the response to the callback service. It should have been stored as key "{0}" in the map "{1}". Assuming no password is necessary.

Category:
WebService

Cause:
The password for the identity keystore is probably not saved in the security credentials or, the map or the key name may be wrong.

Action:
Save the password with appropriate key and the map as specified in the error.

OWS-50179
The password for recovering the key could not be read from the security credential store while sending the response to the callback service. It should have been stored as key "{0}" in the map "{1}". Assuming key password to be same as the identity keystore password.

Category:
WebService

Cause:
The password for the private key is probably not saved in the security credentials or, the map or the key name may be wrong.

Action:
Save the password with appropriate key and the map as specified in the error.

OWS-50180
The password for the trust keystore could not be read from the security credential store while sending the response to the callback service. It should have been stored as key "{0}" in the map "{1}". Assuming no password is necessary.

Category:
WebService

Cause:
The password for the trust keystore is probably not saved in the security credentials or, the map or the key name may be wrong.

Action:
Save the password with appropriate key and the map as specified in the error.

OWS-50181
Exception while accessing the password from the security credential store for using SSL while sending the response to the callback service.

Category:
WebService

Cause:
Internal system error.

Action:
Analyze the details of the exception

OWS-50183
Could not get the transaction manager using "{0}". Exception: "{1}"

Category:
WebService

Cause:
Method of getting transaction manager might have changed in this release.

Action:
Internal system error.

OWS-50184
Could not get the transaction manager using "{0}"Got unexpected class "{1}" instead of javax.transaction.TransactionManager.

Category:
WebService

Cause:
Method of getting transaction manager might have changed in this release.

Action:
Internal system error.

OWS-50187
[MessageID: {0}] System Error: Could not get the addressing namespace and so the None URI.

Category:
WebService

Cause:
Addressing namespace is not available.

Action:
Internal system error.

OWS-50198
The content negotiation strategy {0} is incompatible with a service that has FastInfoset disabled according to the WSDL

Category:
WebService

Cause:
The content negotiation strategy provided is incompatible with a Service that has FastInfoset Disabled

Action:
Do not supply a content negotiation strategy On the client

OWS-50199
The FastInfoset content negotiation strategy '{0}' specified in the request context property conflicts with the value '{1}' specified on the feature object

Category:
WebService

Cause:
The content negotiation request context property provided conflicts with the content negotiation feature set on the same client

Action:
Supply either a content negotiation request context property or a feature, not both. If both are provided, make sure they are set to the same value

OWS-50200
The FastInfosetFeature provided on the client has enabled = {0}, while the service WSDL has enabled = {1}. The client value will override the value read from the WSDL

Category:
WebService

Cause:
The FastInfosetFeature provided on the client is different from that advertised on the service WSDL - client feature will be used as an override

Action:
Make sure that the intent was to override the value advertised in the service WSDL - if not, remove the feature on the client

OWS-50201
Found invalid policy references on WebService endpoint. Please make sure you do not have mulitple or conflicting policy refrerences on your webservice endpoint.

Category:
WebService

Cause:
There is invalid policy set due to conflicting or multiple policy references of same category on given JAXWS endpoint.

Action:
Make sure that there are no multiple or conflicting policy refeences specified on webservcie endpoint.

OWS-50205
Could not create request and response JMSChannel instances required to post JMS messages.

Category:
WebService

Cause:
Internal system error

Action:
Analyze the details of the exception

OWS-50207
Could not open the jar in specified path "{0}"

Category:
WebService

Cause:
The jar is not in the path or the jar format error has occurred

Action:
Check if the jar is in the path or with a wrong path in the Manifest file of current ejb jar which depends on it, then check if the jar has broken

OWS-51001
No TypeGeneratorFactory implementation found for factory {0}.

Category:
WebService

Cause:
You may have specified a wrong factory name, or your Web Service libraries are not properly configured.

Action:
Please ensure that you have specified a valid factory name.

OWS-51500
Unable to open or locate the following file or directory: {0}.

Category:
WebService

Cause:
A file or directory was not found or acessible.

Action:
Ensure that the file or directory name is properly specified and accessible.

OWS-51501
No schema mapping found for class {0}

Category:
WebService

Cause:

Action:

OWS-60002
Could not resolve schema resource for namespace "{0}" at location "{1}"

Category:
WebService

Cause:
Could not resolve the schema from given schemaLocation. This may be caused by network problem or malformed or incorrect schemaLocation URL/URI

Action:

OWS-60003
Serializer initialization failed. Unable to define SDO data types.

Category:
WebService

Cause:
Failed to define SDO data types from the given schema/schemas.

Action:
Ensure that the schema/schemas provided through schemaLocation is/are valid and none of the schemas are conflicting with each other.

26

PKI-01001 to PKI-07023

PKI-01001
Missing arguments in the command: {0}

Category:
Other

Cause:
An incomplete command was issued. For example, the wallet password or wallet location is missing.

Action:
Check the usage of the command-line tool and provide all required arguments.

PKI-01002
Invalid password.

Category:
Other

Cause:
Passwords must have a minimum length of eight characters and contain alphabetic characters combined with numbers or special characters.

Action:
Make sure the password policy is followed and try again.

PKI-01003
Passwords did not match.

Category:
Other

Cause:
When creating a wallet, the password entered the second time did not match the password entered the first time.

Action:
Enter the same password both times.

PKI-01004
Cannot specify both keysize and ecccurve options. Please specify keysize for RSA keys, and ecccurve for ECC keys.

Category:
Other

Cause:
Cannot specify both keysize and ecccurve options. Please specify keysize for RSA keys, and ecccurve for ECC keys.

Action:
Specify only one option either keysize or ecccurve

PKI-02001
A wallet already exists at: {0}

Category:
Other

Cause:
Attempted to create a new wallet at a location where a wallet already existed.

Action:
Remove the existing wallet, or create the new wallet at another location.

PKI-02002
Unable to open the wallet. Check password.

Category:
Other

Cause:
Wallet password may be wrong.

Action:
Try again with the correct password.

PKI-02003
Unable to load the wallet at: {0}

Category:
Other

Cause:
Possible causes include a wrong password, parsing errors, or the wallet file was not found.

Action:
Check that the wallet is present at the specified location and the password is correct.

PKI-02004
Unable to verify the wallet.

Category:
Other

Cause:
The wallet may be corrupted.

Action:
Make sure you have the right wallet. Try opening the wallet in enterprise manager or by orapki to make sure it is appropriate.

PKI-02005
Unable to delete the wallet at: {0}

Category:
Other

Cause:
Possible causes include insufficient permission or the wallet being used by another person.

Action:
Obtain the necessary permission and check that the wallet is not being used.

PKI-02006
The specified directory does not exist: {0}

Category:
Other

Cause:
Wallet creation failed because the specified directory did not exist.

Action:
Create the directory prior to the wallet creation.

PKI-02007
The specified location is not a directory: {0}

Category:
Other

Cause:
Wallet creation failed because the specified location was not a directory.

Action:
Create the wallet in an existing directory instead.

PKI-02008
Unable to modify a read-only Auto-login wallet.

Category:
Other

Cause:
Attempted to update a read-only Auto-login wallet.

Action:
Specify the associated Password-protected (.p12 file) wallet.

PKI-02009
Unable to create directory.

Category:
Other

Cause:
OS error in creating directory.

Action:
Check file permissions and disk space.

PKI-02010
Invalid MAC for Wallet. Wallet verification failed.

Category:
Other

Cause:
The wallet is possibly corrupted.

Action:
Restore the wallet from a backup or recreate it.

PKI-02011
Unable to set file permissions for wallet at {0}

Category:
Other

Cause:
Wallet permissions could not be set.

Action:
Try to save the wallet in a different directory.

PKI-02012
Unable to lock file at

Category:
Other

Cause:
May be file channel get closed or blocked while getting lock on p12 or sso file in wallet.

Action:
Try to achieve lock again on wallet.

PKI-02013
Unable to create/parse RSA credentials.

Category:
Other

Cause:
RSA algorithm to create key pair is missing.

Action:
A JCE implementation that supports RSA is required.

PKI-02014
Unable to create/parse ECC credentials.

Category:
Other

Cause:
ECC algorithm to create key pair is missing.

Action:
A JCE implementation that supports ECC is required.

PKI-02015
Trust Flags are not enabled for the wallet.

Category:
Other

Cause:
Trust flags are getting assigned to certificates but the wallet containing them are not permitted to have trust flags.

Action:
Wallet should be trust flag enabled before assigning trust flags to the certificates.

PKI-02016
Trust Flags are already enabled for the wallet.

Category:
Other

Cause:
Trying to enable wallet for trust flag but it is already enabled.

Action:
Wallet is already permitted for trust flags.Do not try to enable it again.

PKI-02017
Thread %d attempted to release non-existent lock

Category:
Other

Cause:
Lock does not exist.

Action:
Please check the existence of lock before releasing it.

PKI-02018
PKCS12 file does not exist.

Category:
Other

Cause:
PKCS12 file path is not valid or empty in given parameters while importing pkcs12 file.

Action:
PKCS12 file path should be valid before importing it.

PKI-03001
The entry already exists: {0}

Category:
Other

Cause:
Attempted to create a new entry with a previously used alias.

Action:
Try again with another alias or delete the existing entry.

PKI-03002
No entry found for the alias: {0}

Category:
Other

Cause:
The specified alias was not found in the secret store.

Action:
Check the alias name and try again.

PKI-03003
Secrets did not match.

Category:
Other

Cause:
The secret (password) entered the second time did not match the one entered the first time.

Action:
Enter the same secret both times.

PKI-03004
Unable to load the secret store.

Category:
Other

Cause:
Possible causes include a wrong password, the secret store file was not found or was corrupted.

Action:
Check that the secret store file is present at the specified location and the password is correct.

PKI-03005
Unable to load the Java keystore.

Category:
Other

Cause:
Possible causes include a wrong password, the Java keystore file was not found or was corrupted

Action:
Check that the Java keystore file is present at the specified location and the password is correct.

PKI-03006
An entry already exists for map {0} and key {1}

Category:
Other

Cause:
Credentials already exist in Secret store.

Action:
Different username and password to be used to store credentials in secret store.

PKI-03007
An entry does not exist for map {0} and key {1}

Category:
Other

Cause:
Credentials do not exist in Secret store.

Action:
Credentials need to be stored before modification can be done on them.

PKI-03008
The specified credential map name is invalid

Category:
Other

Cause:
Map name given is not valid.

Action:
Map name should be valid.

PKI-03009
The specified credential key name is invalid

Category:
Other

Cause:
Key name is not valid or present.

Action:
Key name should be valid.

PKI-04001
Invalid Certificate.

Category:
Other

Cause:
The given certificate did not follow the X509/DER, X509/BASE64, PKCS7/DER, or PKCS7/BASE64 format.

Action:
Use a valid certificate format.

PKI-04002
No valid key or certificate in the wallet.

Category:
Other

Cause:
Attempted to use a wallet for authentication/signatures/SSL, but no key or certificate was found in the wallet.

Action:
Import certificates into the wallet/keystore or use a self-signed wallet/keystore.

PKI-04003
The trusted certificate is already present in the wallet.

Category:
Other

Cause:
Attempted to import a trusted certificate that already existed in the wallet.

Action:
No action required. The trusted certificate is already present in the wallet.

PKI-04004
The user certificate is already installed in the wallet.

Category:
Other

Cause:
Attempted to install a user certificate that already existed in the wallet.

Action:
No action required. The user certificate is already installed in the wallet.

PKI-04005
No matching certificate request in the wallet.

Category:
Other

Cause:
Attempted to install a user certificate, but no matching certificate request was found in the wallet.

Action:
Make sure that the user certificate is being installed into the wallet where the certificate request was created.

PKI-04006
No matching private key in the wallet.

Category:
Other

Cause:
Attempted to install a user certificate, but no matching private key was found in the wallet.

Action:
Make sure that the user certificate is being installed to the wallet where the certificate request was created.

PKI-04007
No matching certificate in the wallet for the DN: {0}

Category:
Other

Cause:
Attempted to access a user certificate, but no matching certificate of the DN was found.

Action:
Make sure that a user certificate with the given DN exists in the wallet.

PKI-04008
An entry with the specified alias already exists in the wallet: {0}

Category:
Other

Cause:
Attempted to create a key or import a certificate with an alias, but the alias already existed in the wallet.

Action:
Try again with another alias.

PKI-04009
No matching private key or certificate request found for the alias: {0}

Category:
Other

Cause:
Attempted to install a user certificate into a wallet with an alias, but no matching private key / certificate request was found for this alias.

Action:
Make sure that the user certificate is being installed with the same alias as the private key / certificate request.

PKI-04010
No matching certificate found for the alias: {0}

Category:
Other

Cause:
Attempted to access a user certificate that is associated with an alias, but no matching certificate was found for this alias.

Action:
Make sure that a user certificate exists in the wallet with the given alias.

PKI-04011
Cannot remove the certificate request if its associated user certificate is still present in the wallet.

Category:
Other

Cause:
Attempted to remove a certificate request, but its associated user certificate was still present in the wallet.

Action:
Remove the associated user certificate first.

PKI-04012
Incomplete certificate chain

Category:
Other

Cause:
Attempted to install a user certificate whose trusted certificate was not present in the wallet.

Action:
Ensure that the CA certificate/Certificate Chain that issued the user certificate is present as trusted certificate in the wallet.

PKI-04013
Entry with matching alias not trusted cert.

Category:
Other

Cause:
Failed to add a trusted certificate into the wallet because the entry with that alias in the keystore was not a trusted cert.

Action:
Specify a different alias.

PKI-04014
No entry with matching alias is present in wallet/keystore.

Category:
Other

Cause:
Failed to delete an entry in wallet/keystore because no entry with that alias was present.

Action:
Specify the correct alias.

PKI-04015
Trusted cert cannot be removed.

Category:
Other

Cause:
The trusted cert is being used in a certificate chain.

Action:
The user cert that has the trusted cert in its certificate chain should be removed first.

PKI-04016
No user certificate found in the wallet.

Category:
Other

Cause:
No user certificate that can be used with SSL was found.

Action:
Install a user certificate into the wallet.

PKI-04017
Entry identified by alias is not a key entry.

Category:
Other

Cause:
No entry in wallet/keystore had matching alias.

Action:
Use a correct alias.

PKI-04018
User cert does not match private key for input alias.

Category:
Other

Cause:
The private key with matching alias did not match the user certificate.

Action:
Use a correct alias.

PKI-04019
Certificate uses unsupported Public Key Algorithm %s.

Category:
Other

Cause:
Key algorithm used is different than RSA or ECC.

Action:
RSA and ECC are only supported

PKI-04020
The certificate already exists in the given path

Category:
Other

Cause:
Certificate already exists at given path.

Action:
Path should be valid to create a new certificate.

PKI-04021
Invalid value(s) of Trust Flags provided.

Category:
Other

Cause:
Trust flag value(s) provided is/are not according to given ones.

Action:
Trust Flags value should be valid one.

PKI-04022
Invalid value of Serial Number provided.

Category:
Other

Cause:
Serial number is not valid. It does not consist of numeric value

Action:
Serial number should be valid.

PKI-04023
No Matching certificate found for given input parameters.

Category:
Other

Cause:
No certificate is found for given subject.

Action:
Subject should be valid of a existing certificate.

PKI-04024
Cannot assign Trust Flags while importing a certificate chain.

Category:
Other

Cause:
Same Trust flag is getting assigned to all certificates in chain.

Action:
All certificates in chain cannot be assigned same trust flag .Correct trust flags need to be assigned.

PKI-04025
Unique certificate cannot be identified.

Category:
Other

Cause:
Multiple certificates with matching parameters exist.

Action:
There should be single certificate of matching subject to do modifications on it

PKI-04026
Certificate of cert or CRL's signer has expired.

Category:
Other

Cause:
Certificate has been expired.

Action:
Certificate should be valid before getting added to CRL.

PKI-05001
Unable to read CRL at: {0}

Category:
Other

Cause:
CRL was not present at the specified location or CRL was corrupted.

Action:
Check the CRL file at the given location.

PKI-05002
Unable to write CRL

Category:
Other

Cause:
Insufficient file permission or insufficient disk space.

Action:
Ensure that a file can be created at the specified location.

PKI-05003
Untrusted or expired CRL

Category:
Other

Cause:
The CRL at the user-given location expired or was not signed by a trusted authority.

Action:
Get a valid or recent CRL from the CA.

PKI-05004
No CRL found for the issuer: {0}

Category:
Other

Cause:
No CRL issued by the CA was found at the specified CRL location.

Action:
Import the specified CA's CRL into the specified location.

PKI-05005
CRL symlink failed with the error: {0}

Category:
Other

Cause:
Failed to set up a symlink for the CRL file.

Action:
Make sure that the target CRL file exists and try again.

PKI-05006
Unable to find signer for CRL.

Category:
Other

Cause:
No CA certificate in wallet for the CRL issuer was found.

Action:
Add CA certificates from CRL issuer to wallet.

PKI-05007
Given CRL already Exists.

Category:
Other

Cause:
CRL is already present at given path

Action:
Valid CRL path should be given to create.

PKI-07001
Unable to login to the LDAP server.

Category:
Other

Cause:
The username or password may be invalid.

Action:
Try again with the correct credentials.

PKI-07002
Unable to find the LDAP subtree: {0}

Category:
Other

Cause:
Attempted to search for CRLs from an LDAP server, but the subtree was not found.

Action:
Confirm that the CRL file is present at the specified location.

PKI-07003
Insufficient privilege to perform the operation in the LDAP server: {0}

Category:
Other

Cause:
Attempted to perform some operation in the LDAP server for which the user did not have permission.

Action:
Obtain the necessary authorization or have an authorized user perform the operation.

PKI-07004
Peer sent no certificates.

Category:
Other

Cause:
The peer sent no certificates (which was needed during handshake).

Action:
Check peer configuration.

PKI-07005
Untrusted certificate chain.

Category:
Other

Cause:
No trusted certificate in wallet/keystore for peer certificate was found.

Action:
Peer should use a different certificate or import the peer's CA certificate into your wallet.

PKI-07006
Invalid certificate signature.

Category:
Other

Cause:
Certificate signature check failed.

Action:
Use a different user certificate/certificate chain on peer.

PKI-07007
Certificate is revoked.

Category:
Other

Cause:
The peer's certificate has been revoked.

Action:
Use a different user certificate/certificate chain on peer.

PKI-07008
Keysize must be 512 or 768 or 1024 or 2048 or 4096.

Category:
Other

Cause:
Keysize value given for certificate is not from recommended ones.

Action:
Keysize value for RSA should be either 512 or 768 or 1024 or 2048 or 4096.

PKI-07009
The elliptic curve name must be one of the fifteen NIST recommended ones.

Category:
Other

Cause:
elliptic curve values given for certificate is not from supported ones.

Action:
Elliptic curve values should be one of recommended ones.

PKI-07010
A key size must be specified when creating an RSA key.

Category:
Other

Cause:
Keysize value has not been provided for RSA key algorithm.

Action:
Keysize value is required for RSA key algorithm

PKI-07011
A curve name must be specified when creating an EC key.

Category:
Other

Cause:
Curve name is missing for ECC key algorithm.

Action:
Curve name should be provided for ECC key algorithm

PKI-07012
Unable to migrate to jks.Trust store password is null.

Category:
Other

Cause:
Trust store password is missing.

Action:
Trust store password is required during jks migration.

PKI-07013
Unable to migrate to jks.Key store password or location is null.

Category:
Other

Cause:
Key store password or location is missing while migrating jks.

Action:
Key store password and location are required.

PKI-07014
Unable to import private key.

Category:
Other

Cause:
Error occurred while importing private key to the wallet.

Action:
Importing private key is not successful.

PKI-07015
Unable to import private key.

Category:
Other

Cause:
Certificate is missing of which private key needs to be imported.

Action:
Certificate is required.

PKI-07016
Unable to export private key.

Category:
Other

Cause:
Private key is not present in wallet for this alias.

Action:
Alias should be valid.

PKI-07018
Operation is unsuccessful. Alias is missing.

Category:
Other

Cause:
Alias is missing in given parameters to search certificate

Action:
Alias is required.

PKI-07019
Unable to export certificate chain

Category:
Other

Cause:
File to which certificate chain needs to be exported is not present.

Action:
File path should be present and be valid.

PKI-07019
Unable to export certificate chain.Certificate chain file is not present.

Category:
Other

Cause:
File to which certificate chain needs to be exported is not present.

Action:
File path should be present and be valid.

PKI-07020
Unable to export certificate chain. Certificate chain is not present in wallet.

Category:
Other

Cause:
Given parameters do not match with any certificate in wallet.

Action:
All input parameters to detect certificate chain should be valid and present.

PKI-07021
Keysize cannot be null or empty.

Category:
Other

Cause:
Keysize would be either null or empty.

Action:
Keysize is required.

PKI-07022
Keysize or serial number cannot be null or empty.

Category:
Other

Cause:
Keysize or serial number would be either null or empty.

Action:
keysize and serial number are required.

PKI-07023
Wallet file has no write permission

Category:
Other

Cause:
Wallet file has no write permission.

Action:
Any modificatin in wallet file requires write permission.

27
RCU-06000 to RCU-07006

RCU-06000
Unable to connect to the database.

Category:
Repository Configuration

Cause:
Could not connect to the database. Required database connection field(s) "{0}" is/are empty.

Action:
Enter valid value in all required field(s).

RCU-06001
Port number validation failed.

Category:
Repository Configuration

Cause:
An invalid port number {0} was specified. A valid port number ranges from 1 to 65535.

Action:
Enter a valid port number.

RCU-06002
Prerequisite validation failed.

Category:
Repository Configuration

Cause:
The minimum requirements to load metadata repository were not met for the specified database.

Action:
Modify the database configuration to meet the prerequisite requirements.

RCU-06003
No metadata repository schema can be dropped.

Category:
Repository Configuration

Cause:
RCU could not find the Schema Version Registry in the database.

Action:
Contact the system administrator.

RCU-06004
Empty database user password.

Category:
Repository Configuration

Cause:
Password for the SYS database user not specified.

Action:
Enter the password for the SYS user.

RCU-06005
Unable to execute sql query.

Category:
Repository Configuration

Cause:
Database not in open state.

Action:
Make sure that the database is open.

RCU-06006
Could not identify valid Oracle Home(s).

Category:
Repository Configuration

Cause:
The inventory associated with the Oracle Home {0} does not recognize any Oracle Home(s).

Action:
Contact the system administrator to fix the issue.

RCU-06007
Error in populating database details.

Category:
Repository Configuration

Cause:
Exception "{0}" occurred while querying database.

Action:
Refer to the RCU log for details.

RCU-06011
Prefix validation failed.

Category:
Repository Configuration

Cause:
An invalid prefix was specified. A valid prefix can contain only alpha-numeric characters. It should not start with a number and should not contain any special characters.

Action:
Select a prefix from the existing prefixes or enter a new prefix.

RCU-06012
Unable to find any prefix.

Category:
Repository Configuration

Cause:
There were no existing prefixes in the Schema Version Registry of the specified database.

Action:
Refer to the rcu logs or contact the system administrator.

RCU-06013
Prefix validation failed.

Category:
Repository Configuration

Cause:
Specified prefix could not be found. Existing prefixes are: {0}

Action:
Specify a valid prefix from the existing prefix list.

RCU-06014
invalid component

Category:
Repository Configuration

Cause:
Specified component did not exist.

Action:
Provide a component that exists.

RCU-06015
Component validation failed.

Category:
Repository Configuration

Cause:
No component was selected or specified.

Action:
Select or specify at least one component.

RCU-06016
Invalid prefix specified.

Category:
Repository Configuration

Cause:
The specified prefix already exists.

Action:
Specify another prefix.

RCU-06017
Valid component is not specified.

Category:
Repository Configuration

Cause:
There was no prefix specified and the specified component already exists.

Action:
If the component is non-prefixable, only one instance can exist. To re-create the instance, drop it first and then create it again.

RCU-06018
Schema owner validation failed.

Category:
Repository Configuration

Cause:
Value for schema owner {0} was not provided.

Action:
Provide values for all schema owners.

RCU-06019
Invalid format was provided for schema owner {0}.

Category:
Repository Configuration

Cause:
Prefixable components should have the schema owner in the following format <prefix>_<Any String> where the prefix is {1}.

Action:
Ensure that the schema owners of all prefixable components begin with the prefix, followed by "_".

RCU-06020
Invalid schema owner {0}.

Category:
Repository Configuration

Cause:
Schema owner {0} was duplicated. Schema owners must be unique.

Action:
Provide unique schema owners.

RCU-06021
Existing components cannot be specified.

Category:
Repository Configuration

Cause:
The specified component ({0}) was non-prefixable, and it already exists.

Action:
Deselect the non-prefixable component as it already exists.

RCU-06022
RCU cannot be executed in resume mode.

Category:
Repository Configuration

Cause:
No components to resume execution.

Action:
Run RCU without resume option.

RCU-06030
Tablespace {0} validation for component {1} failed.

Category:
Repository Configuration

Cause:
The specified tablespace {0} for component {1} did not have enough free space to hold the repository. The required free space is {2} MB, but the available space was {3} MB.

Action:
Modify the properties of the tablespace or change the prerequisite value.

RCU-06051
RCUCommandLine Error - command line options validation failed.

Category:
Repository Configuration

Cause:
Invalid option specified.

Action:
Provide valid command line options. Remove the invalid option:

RCU-06052
RCUCommandLine Error - Error while validating command line arguments.

Category:
Repository Configuration

Cause:
Invalid format/order of command line options and values.

Action:
Ensure that the format/order of the options and values in the command line are correct.

RCU-06053
RCUCommandLine Error - command line option validation failed.

Category:
Repository Configuration

Cause:
More than one mutually exclusive option passed.

Action:
Provide valid command line options. Provide only one valid option from this list:

RCU-06054
RCUCommandLine Error - Database type validation failed.

Category:
Repository Configuration

Cause:
Database type was not provided.

Action:
Provide the database type.

RCU-06055
RCUCommandLine Error - command line arguments validation failed.

Category:
Repository Configuration

Cause:
Database connect string was not provided.

Action:
Provide the database connect string.

RCU-06056
RCUCommandLine Error - Database host name validation failed.

Category:
Repository Configuration

Cause:
Database host name was not provided.

Action:
Provide the database host name.

RCU-06057
RCUCommandLine Error - Database port number validation failed.

Category:
Repository Configuration

Cause:
Database port number was not provided.

Action:
Provide the database port number.

RCU-06058
RCUCommandLine Error - Database service name validation failed.

Category:
Repository Configuration

Cause:
Database service name was not provided.

Action:
Provide the database service name.

RCU-06059
RCUCommandLine Error - Database user validation failed.

Category:
Repository Configuration

Cause:
Database user was not provided.

Action:
Provide the database user.

RCU-06060
RCUCommandLine Error - Database password validation failed.

Category:
Repository Configuration

Cause:
Database password was not provided.

Action:
Provide the database password.

RCU-06061
RCUCommandLine Error - Database role validation failed.

Category:
Repository Configuration

Cause:
Database role was not provided.

Action:
Provide the database role.

RCU-06062
RCUCommandLine Error - Schema prefix validation failed.

Category:
Repository Configuration

Cause:
Schema prefix was not provided.

Action:
Provide the schema prefix.

RCU-06063
RCUCommandLine Error - Tablespace name validation failed.

Category:
Repository Configuration

Cause:
Tablespace name is not provided. Pass DEFAULT_VALUE to use default tablespace name.

Action:
Provide the tablespace name.

RCU-06064
RCUCommandLine Error - Schema owner name validation failed.

Category:
Repository Configuration

Cause:
Schema owner name is not provided. Pass DEFAULT_VALUE to use default schema owner name.

Action:
Provide the schema owner.

RCU-06065
RCUCommandLine Error - component name validation failed.

Category:
Repository Configuration

Cause:
Invalid component name(s) were provided : {0}

Action:
Provide valid component name(s). Supported component names can be obtained by running "-listComponents" command.

RCU-06066
RCUCommandLine Error - Error occurred while validating Checkpoint object.

Category:
Repository Configuration

Cause:
Checkpoint object was not found or was not readable. Cannot proceed in resume mode.

Action:
Refer to the RCU log and make sure that checkpoint object exists to continue in resume mode.

RCU-06067
RCUCommandLine Error - checkpoint validation failed.

Category:
Repository Configuration

Cause:
No pending components found in checkpoint. Cannot proceed in resume mode.

Action:
Invoke RCU without resume option.

RCU-06068
Checkpoint object cannot be created.

Category:
Repository Configuration

Cause:
Failed to write checkpoint object.

Action:
Refer to the RCU log for details.

RCU-06080
Global prerequisite check failed for the specified database.

Category:
Repository Configuration

Cause:
Global prerequisite check failed. Check requirement for the specified database.

Action:
Modify the database configuration to meet the global prerequisite requirements.

RCU-06081
Internal Error - unable to run prereq query in the specified database.

Category:
Repository Configuration

Cause:
Unable to obtain properties of the specified database.

Action:
Make sure that the database is in a proper state.

RCU-06082
Tablespace prerequisite check failed for the selected component.

Category:
Repository Configuration

Cause:
Tablespace prerequisite check failed. Check tablespace requirement for each selected component.

Action:
Modify the properties of the tablespace or change the prerequisite value.

RCU-06083

Category:
Repository Configuration

Cause:
Prerequisite check failed for selected component.

Action:
Refer to the RCU logs for additional details. Make sure that the prerequisite requirements are met.

RCU-06084
{0} failed.

Category:
Repository Configuration

Cause:
invalid format for Java prerequisite: {0}

Action:
Make sure that the java prerequisite is in a valid format.

RCU-06085
Java prerequisite is not met.

Category:
Repository Configuration

Cause:
Error occurred while executing Java prerequisite: {0}

Action:
Make sure that the java prerequisite is in a valid format and all required classes and jar files are present.

RCU-06086
Global prerequisite check failed.

Category:
Repository Configuration

Cause:
Schema metadata initialization failed.

Action:
Refer to RCU logs for more details.

RCU-06090
Connection step validation failed.

Category:
Repository Configuration

Cause:
Skipping main operation: failed to connect to database because database details were missing or invalid.

Action:
Provide correct database details and try again.

RCU-06091
Component validation failed.

Category:
Repository Configuration

Cause:
One or more component specific validation failed.

Action:
Check log for more details and fix the validation error.

RCU-06092
Components are not selected properly.

Category:
Repository Configuration

Cause:
Component Selection validation failed. Refer to log at {0} for details.

Action:
Select one or more components to continue.

RCU-06093
Skipping main operation because of validation error.

Category:
Repository Configuration

Cause:
Failed to validate schema tablespace.

Action:
Check the properties of the database and the tablespaces specified.

RCU-06100
Prerequisite check failed.

Category:
Repository Configuration

Cause:
Exception while executing prerequisite {0}.

Action:
Refer to the logs for details.

RCU-06101
The database prerequisite check failed for {0}

Category:
Repository Configuration

Cause:
Prerequisite failed for {0}. Current Value is {2}. It should {3} {1}

Action:
Modify database configuration to meet the prerequisite requirement.

RCU-06102
The database prerequisite check failed for {0}.

Category:
Repository Configuration

Cause:
The prerequisite {0} returned an empty result.

Action:
Modify the database configuration to meet the prerequisite requirements.

RCU-06103
The database option prerequisite check failed.

Category:
Repository Configuration

Cause:
The database option prerequisite check failed for: {0} Required Value = {1}, Current Value = {2}

Action:
Make sure that the database option has the required value.

RCU-06104
The database object prerequisite check failed.

Category:
Repository Configuration

Cause:
The database object prerequisite check fails for: {0} This object does not exist or its status is not valid.

Action:
Make sure that the database object exists and is valid.

RCU-06105
The database component prerequisite check failed.

Category:
Repository Configuration

Cause:
The database component prerequisite check failed for {0}. This component does not exist or its status is not valid.

Action:
Make sure that the database component exists and is valid.

RCU-06106
The database version prerequisite failed.

Category:
Repository Configuration

Cause:
The database version prerequisite failed because the current database version is not supported with RCU. Current Version is {1}. It should be {2} {0}.

Action:
Make sure that the database version being used is supported with RCU.

RCU-06107
The database initialization parameter prerequisite check failed.

Category:
Repository Configuration

Cause:
The database initialization parameter prerequisite check failed for {0}. Current Value is {2}. It should {3} {1}.

Action:
Make sure that the database initialization parameter has the required value.

RCU-06108
The database tablespace free space prerequisite check failed.

Category:
Repository Configuration

Cause:
The database tablespace free space prerequisite check failed for {0}. Current space is {2}. It should be {3} {1}.

Action:
Modify the properties of the tablespace or change the prerequisite value.

RCU-06120
Component dependencies check failed.

Category:
Repository Configuration

Cause:
Component dependencies not met for components with following ids: {0}.

Action:
Select the dependent components and try again.

RCU-06121
Component dependencies check failed.

Category:
Repository Configuration

Cause:
Required dependent components were not selected.

Action:
Select the dependent components and try again.

RCU-06130
Action failed

Category:
Repository Configuration

Cause:
Action failed - {0}.

Action:
Check the actions for the component or contact the system administrator.

RCU-06131
Error while connecting to the database.

Category:
Repository Configuration

Cause:
An error occurred while connecting to the database.

Action:
Provide correct database details and try again, or contact the system administrator.

RCU-06132
The database type of the specified database is not supported - {0}

Category:
Repository Configuration

Cause:
The database type of the specified database was not supported.

Action:
Use a database type that is supported.

RCU-06133
Error while executing host command action.

Category:
Repository Configuration

Cause:
An error occurred while trying to execute host command action.

Action:
Check the host command action for the component or contact the system administrator.

RCU-06134
Error while executing JDBC action.

Category:
Repository Configuration

Cause:
An error occurred while trying to execute JDBC action.

Action:
Check the jdbc action for the component or contact the system administrator.

RCU-06135
Error while executing Java action.

Category:
Repository Configuration

Cause:
An error occurred while trying to execute Java action.

Action:
Check the java action for the component or contact the system administrator.

RCU-06136
Error while executing SQLPlus action.

Category:
Repository Configuration

Cause:
An error occurred while trying to execute SQLPlus action.

Action:
Check the sqlplus action for the component or contact the system administrator.

RCU-06138
The operation has been halted.

Category:
Repository Configuration

Cause:
The operation was halted.

Action:
Click continue or restart the operation.

RCU-06139
Invalid consolidated schema name {0}.

Category:
Repository Configuration

Cause:
Consolidated schema {0} exists in database, but schema version registry table did not have an entry for the schema with expected status. The consolidated schema should be created through RCU.

Action:
Provide valid consolidated schema name.

RCU-06140
Invalid schemas to be consolidated.

Category:
Repository Configuration

Cause:
{0} was not a valid schema in the given database.

Action:
Provide valid schema name for consolidation.

RCU-06141
Schema validation failed.

Category:
Repository Configuration

Cause:
{0} cannot be consolidated.

Action:
Refer logs for details.

RCU-06142
Provided schema cannot be consolidated.

Category:
Repository Configuration

Cause:
Validation of consolidate schema failed.

Action:
Check the logs for details.

RCU-06143
Provided schema name is not a valid consolidated schema.

Category:
Repository Configuration

Cause:
Provided schema exists in database, but the schema was not valid for given consolidate operation.

Action:
Make sure schema is of type "CONSOLIDATED".

RCU-06144
Same component type schemas are provided for consolidation.

Category:
Repository Configuration

Cause:
Both schemas {0} and {1} are of type {2}. Schemas of same type cannot be consolidated.

Action:
Make sure that schemas to be consolidated are not of the same component.

RCU-06146
Invalid consolidated schema name.

Category:
Repository Configuration

Cause:
{0} was not a valid schema in the provided database.

Action:
Make sure the scripts generated during consolidateGrant are executed.

RCU-06147
Invalid command line option specified.

Category:
Repository Configuration

Cause:
Consolidate operations are supported only in silent mode.

Action:
Invoke the command with "-silent" option.

RCU-06148
Consolidated schema validation failed.

Category:
Repository Configuration

Cause:
Consolidation of an existing schema is not allowed. {0} already consolidated to the schemas {1}.

Action:
Execute "dropConsolidatedSchema" to delete the existing schema and recreate it using "consolidate". To recreate the synonyms to the existing schemas use "-reconsolidate" option.

RCU-06149
Consolidate schema validation failed.

Category:
Repository Configuration

Cause:
Failed to find consolidated schema definition for {0}. Cannot execute reconsolidate on this schema.

Action:
Refer to RCU logs for any errors.

RCU-06150
Consolidate schema validation failed.

Category:
Repository Configuration

Cause:
Specified schema {0} already exists in the database.

Action:
Drop the existing schema or generate the script using different schema name.

RCU-06151
Consolidate schema validation failed.

Category:
Repository Configuration

Cause:
Specified schema {0} does not exist in the database. Could not execute "reconsolidate" option.

Action:
Use "consolidate" option to create the consolidated schema.

RCU-06152
Consolidate schema name validation failed.

Category:
Repository Configuration

Cause:
Specified schema name "{0}" length exceeds allowed number of characters. Maximum number of characters allowed in consolidated schema name is 25.

Action:
Specify valid value for consolidated schema name.

RCU-06153
Edition value of {0} is empty.

Category:
Repository Configuration

Cause:
Specified database type is EBR. But the schema to be consolidated "{0}" is not created with this edition, "{1}". Schemas to be consolidated have to be created in the same edition as the value specified for consolidate schema.

Action:
Ensure that the schemas to be consolidated exist in the same edition as that of the consolidated schema.

RCU-06154
Specified edition/schema name is invalid.

Category:
Repository Configuration

Cause:
Schemas to be consolidated have to be created in the same edition as the value specified for consolidate schema. "{0}" schema is created with edition "{1}". But the edition specified for consolidate schema is "{2}"

Action:
Ensure that the schemas to be consolidated exist in the same edition as that of the consolidated schema.

RCU-06155
Invalid database type or schemas to be consolidated.

Category:
Repository Configuration

Cause:
Specified database type is ORACLE. Consolidated schema could not be created using schemas created in EBR database type. "{0}" schema is created with EBR as database type.

Action:
Ensure that the schemas to be consolidated are not created using EBR database type.

RCU-06156
Validation of edition failed.

Category:
Repository Configuration

Cause:
Edition was not specified or was empty value.

Action:
Specify the value of edition for EBR database type.

RCU-06157
Internal error occurred.

Category:
Repository Configuration

Cause:
Execution of sql query, {0} failed.

Action:
Refer to the RCU logs for details.

RCU-06158
Unable to verify components of the schemas to be consolidated.

Category:
Repository Configuration

Cause:
Error in checking whether the component {0} is consolidatable.

Action:
Refer to the RCU logs for details.

RCU-06159
Invalid command line arguments.

Category:
Repository Configuration

Cause:
Validation of the command line parameters for listSchemas operation failed.

Action:
Refer to the RCU logs for details.

RCU-06160
Invalid database type for "listSchemas" operation.

Category:
Repository Configuration

Cause:
"listSchemas" operation is supported only on ORACLE and EBR

Action:
Provide valid database type.

RCU-06161
Consolidated schema cannot be dropped.

Category:
Repository Configuration

Cause:
Validation of drop consolidated schema failed. Specified consolidated schema was invalid.

Action:
Check the logs for details.

RCU-06162
Invalid consolidated schema name.

Category:
Repository Configuration

Cause:
Consolidated schema name was not provided.

Action:
Provide valid consolidated schema name using "{0}" parameter.

RCU-06163
Invalid schema specified for consolidation.

Category:
Repository Configuration

Cause:
Specified schema {0} was not a valid schema in the schema version registry info.

Action:
Provide valid schema name.

RCU-06164
Invalid schema name specified for drop operation.

Category:
Repository Configuration

Cause:
{0} is not of type "CONSOLIDATED". "-dropConsolidatedSchema" operation can be used only to drop consolidated schemas.

Action:
Specify valid consolidated schema name.

RCU-06165
Invalid consolidated schema name.

Category:
Repository Configuration

Cause:
Consolidated schema name was not provided.

Action:
Provide valid value for {0}.

RCU-06166
Invalid schemas to be consolidated.

Category:
Repository Configuration

Cause:
Consolidated schema list was not provided.

Action:
Provide valid value for {0}.

RCU-06167
Missing command line arguments for consolidate operation.

Category:
Repository Configuration

Cause:
Valid value was not specified for consolidated schema name.

Action:
Provide the argument {0} for consolidate operation.Refer to RCU help for details.

RCU-06168
Missing command line arguments for consolidate operation.

Category:
Repository Configuration

Cause:
Valid value was not specified for schemas to be consolidated.

Action:
Provide the argument {0} for consolidate operation.Refer to RCU help for details.

RCU-06169
Unable to write properties to response file.

Category:
Repository Configuration

Cause:
An IO error occurred while writing into response file.

Action:
Check the log for more details.

RCU-06170
Unable to generate response file.

Category:
Repository Configuration

Cause:
An Internal error happened during response file generation.

Action:
Check the log for more details.

RCU-06171
Initialization of properties from RCU Response template failed.

Category:
Repository Configuration

Cause:
Unable to read the RCUResponse.xml template from RCU jar.

Action:
Contact the administrator to resolve the issue.

RCU-06172
Error in reading properties from RCU Response template.

Category:
Repository Configuration

Cause:
A Jaxb error was thrown while parsing the template xml.

Action:
Check the log for more details.

RCU-06173
Unable to generate RCUResponse file.

Category:
Repository Configuration

Cause:
An error occurred while generating RCUResponse file.

Action:
Check the log for more details.

RCU-06174
Could not create the response file directory

Category:
Repository Configuration

Cause:
Unable to create the response file directory {0}. This could be due to permission related issue.

Action:
Check if neccessary permissions are present to create the directory {0}.

RCU-06175
Could not create response file.

Category:
Repository Configuration

Cause:
Unable to create the response file {0}. This could be due to permission related issue.

Action:
Check if neccessary permissions are present to create the response file {0}.

RCU-06176
{0} is not a valid directory for generating response file.

Category:
Repository Configuration

Cause:
{0} could be a non existent directory or it could already contain an existing response file.

Action:
Choose a different location or clean the directory {0}.

RCU-06177
Unable to use the specified response file location.

Category:
Repository Configuration

Cause:
{0} file already exists under the given directory {1}.

Action:
Specify different directory for response file.

RCU-06178
Unable to use the specified wallet file location.

Category:
Repository Configuration

Cause:
{0} wallet file already exists under the given directory {1}.

Action:
Specify different directory for wallet file.

RCU-06179
An internal error occurred while initializing.

Category:
Repository Configuration

Cause:
Initialization of response file reader failed.

Action:
Check the log for more details and contact the administrator to resolve the issue

RCU-06180
Unsupported RCU Operation

Category:
Repository Configuration

Cause:
No value was specified for the property "operation".

Action:
Refer to the RCU guide or command line help for a list of valid RCU operations.

RCU-06181
Unsupported RCU Operation

Category:
Repository Configuration

Cause:
Value provided for the property "operation" was not a valid RCU operation.

Action:
Refer to the RCU guide or command line help for a list of valid RCU operations.

RCU-06182
No value specified for a mandatory property.

Category:
Repository Configuration

Cause:
Value for property "{0}" was not provided in the response file.

Action:
Provide valid value in the response file.

RCU-06183
Some properties in the response file are missing values.

Category:
Repository Configuration

Cause:
Some of the mandatory properties in the response file were missing values.

Action:
Refer to the log for details.

RCU-06184
An internal error occurred while initializing.

Category:
Repository Configuration

Cause:
Error encountered while reading the response file.

Action:
Check the logs for more details and contact the administrator to resolve the issue.

RCU-06185
Invalid response file.

Category:
Repository Configuration

Cause:
Response file was either null or it did not have read permissions.

Action:
Provide a valid response file.

RCU-06186
Invalid "schemaPrefix" for generating wallet.

Category:
Repository Configuration

Cause:
"schemaPrefix" cannot be empty while generating wallet.

Action:
Provide a valid "schemaPrefix".

RCU-06187
Invalid "dbUser" for generating wallet

Category:
Repository Configuration

Cause:
"dbUser" could not be empty while generating wallet.

Action:
Provide a valid "dbUser".

RCU-06188
Invalid "schemaName" for generating wallet

Category:
Repository Configuration

Cause:
"schemaName" could not be empty while generating wallet.

Action:
Provide a valid "schemaName".

RCU-06189
Unable to create Oracle wallet

Category:
Repository Configuration

Cause:
Directory {0} was either not found or was not a directory.

Action:
Provide a valid directory path.

RCU-06190
Unable to create Oracle Wallet at {0}.

Category:
Repository Configuration

Cause:
An internal error occurred while creating Oracle Wallet at {0}.

Action:
Check the log for more details and contact the administrator to resolve the issue.

RCU-06191
Unable to get wallet data for alias {0} from {1}.

Category:
Repository Configuration

Cause:
A file read error occurred while reading data from wallet {1}

Action:
Make sure that the wallet file has read permissions.

RCU-06192
Specified wallet location is not a valid directory.

Category:
Repository Configuration

Cause:
Wallet location specified did not exist.

Action:
Provide a valid wallet location.

RCU-06193
Wallet alias is not valid.

Category:
Repository Configuration

Cause:
Specified value for wallet alias was empty.

Action:
Provide a valid wallet alias.

RCU-06194
Unable to add entry {0} to wallet at {1}.

Category:
Repository Configuration

Cause:
A file read or write error or a security error was thrown while writing into wallet at {1}.

Action:
Check the log for more details and contact the administrator to resolve the issue.

RCU-06195
Invalid wallet directory location for creating wallet.

Category:
Repository Configuration

Cause:
Specified location {0} had wallet file in it.

Action:
Provide different directory location for creating wallet.

RCU-06196
Unable to create directory {0}.

Category:
Repository Configuration

Cause:
A file read or write error occurred while creating directory {0}.

Action:
Check if you have permissions to create the directory {0}. Contact the administrator if problem persists.

RCU-06197
Invalid arguments specified for the {1} operation.

Category:
Repository Configuration

Cause:
Some of the argument(s) specified, "{0}" were not valid for the {1} operation.

Action:
Refer to the RCU guide or command line help for list of valid arguments.

RCU-06198
invalid SSL arguments.

Category:
Repository Configuration

Cause:
SSL authentication requires client and server authentication or encryption details.

Action:
Provide the properties as key-value pair separated by comma using the argument "-sslArgs".

RCU-06199
invalid "serverDN" value.

Category:
Repository Configuration

Cause:
Value for "serverDN" was not provided. "serverDN" is a mandatory parameter for SSL connection.

Action:
Provide a valid value for "serverDN" argument. To disable the serverDN check, provide the property "oracle.net.ssl_server_dn_match=false" in "-sslArgs".

RCU-06200
Error while validating TDE check on database.

Category:
Repository Configuration

Cause:
TDE was not enabled in the database.

Action:
Specify "-encryptTablespace false" argument.

RCU-06202
RCUCommandLine Error - validation of RCU command line options failed.

Category:
Repository Configuration

Cause:
Invalid command line option was specified.

Action:
Provide one of the following options:

RCU-06203
Invalid script location is provided.

Category:
Repository Configuration

Cause:
Script Location was not provided or was empty string.

Action:
Specify a valid location.

RCU-06204
Specified script location is invalid.

Category:
Repository Configuration

Cause:
The specified directory did not exist.

Action:
Specify an existing directory.

RCU-06205
Database type validation failed.

Category:
Repository Configuration

Cause:
Invalid database type. Valid database types are: {0}

Action:
Provide valid database type.

RCU-06206
invalid Component {0}.

Category:
Repository Configuration

Cause:
Skipping {0} component as config or storage file was missing for the component.

Action:
Specify a valid component name.

RCU-06250
Internal Error while parsing component metadata files.

Category:
Repository Configuration

Cause:
Specified schema base definition {0} not found in the Oracle Home. Schema base definition of {1} was wrong.

Action:
Check the logs for more details and contact the administrator to resolve the issue.

RCU-06251
Drop repository validation failed.

Category:
Repository Configuration

Cause:
Component "{0}" could not be dropped independently.

Action:
Specify schema base component "{0}" to drop component "{1}".

RCU-06252
Consolidated component is not found in the Oracle Home.

Category:
Repository Configuration

Cause:
Component "{0}" is consolidated to the schema of the component "{1}". For dropping consolidated schema, all the consolidated components have to be present in the Oracle Home.

Action:
Invoke dropRepository from Oracle Home which contains the component {0}.

RCU-06253
Tablespace configuration of component "{0}" cannot be overridden.

Category:
Repository Configuration

Cause:
Component "{0}" is consolidated to the schema of the component "{1}". "{0}" could not configure custom tablespace.

Action:
Override the tablespace configuration of the component "{0}" which will be used by the component "{1}" also.

RCU-06254
Drop repository validation failed.

Category:
Repository Configuration

Cause:
Component(s) "{0}" could not be dropped independently.

Action:
Select corresponding schema base component(s) "{0}" to drop component(s) "{1}".

RCU-06255
Drop repository validation failed.

Category:
Repository Configuration

Cause:
Component "{0}" for the prefix "{1}" was created as standalone schema. Component could not be dropped in consolidate mode.

Action:
Disable consolidate mode and drop the component.

RCU-06256
Drop repository validation failed.

Category:
Repository Configuration

Cause:
Component "{0}" for the prefix "{1}" was created as consolidate schema. Component could not be dropped in non-consolidate mode.

Action:
Enable consolidate mode and drop the component.

RCU-06257
Create repository validation failed.

Category:
Repository Configuration

Cause:
Consolidated schema component "{0}" for the prefix "{1}" could not be created. The specified prefix was already in use for some of the standalone schemas.

Action:
Specify different prefix.

RCU-06258
Host name or IP address validation failed.

Category:
Repository Configuration

Cause:
An invalid host name or IP address {0} was specified.

Action:
Enter a valid host name or IP address.

RCU-06259
Component validation failed.

Category:
Repository Configuration

Cause:
Incompatible components {0}, {1} were selected/specified.

Action:
Select/specify either component {0} or component {1}.

RCU-06301
invalid password.

Category:
Repository Configuration

Cause:
Password was not provided for {0} in the wallet.

Action:
Provide a valid password.

RCU-06302
Command line arguments validation failed.

Category:
Repository Configuration

Cause:
Value for "{0}" was not provided.

Action:
Provide values for both "-compInfoXMLLocation" and "-storageXMLLocation" or invoke without any of these arguments.

RCU-06303
internal error

Category:
Repository Configuration

Cause:
Value for "{0}" was not provided in rcu properties file.

Action:
Provide valid values for properties "COMPONENT_INFO_LOCATION" and "STORAGE_INFO_LOCATION" in rcu properties file located at {0}

RCU-07000
The referenced variable validation fails.

Category:
Repository Configuration

Cause:
The referenced variable "{0}" is not defined.

Action:
Provide the required variable value.

RCU-07001
invalid database password.

Category:
Repository Configuration

Cause:
Database password was not provided.

Action:
Specify valid value for database password.

RCU-07002
Validation of SSL arguments fails.

Category:
Repository Configuration

Cause:
SSL arguments are not provided in proper format.

Action:
Refer help for details.

RCU-07003
Command line argument validation fails.

Category:
Repository Configuration

Cause:
Invalid command line argument.

Action:
Refer help for supported arguments. Remove invalid option

RCU-07004
ServerDN validation fails.

Category:
Repository Configuration

Cause:
Value for serverDN is not provided. "serverDN" is mandatory parameter for SSL connection.

Action:
To disable the serverDN check, provide the property "oracle.net.ssl_server_dn_match=false" in "-sslArgs"

RCU-07005
Database connectstring validation fails.

Category:
Repository Configuration

Cause:
Database connectstring is not provided in expected format.

Action:
Refer help for the supported format type.

RCU-07006
Validation of log location failed.

Category:
Repository Configuration

Cause:
Could not create the log directory {0}.

Action:
Make sure that the specified log directory and system temporary directory has write permission.

28

REP-00001 to REP-80012

REP-00001
The Oracle Reports Builder message file cannot be found.

Category:
Other

Cause:
The file of error messages could not be opened or an internal error occurred while opening it.

Action:
Reinstall Oracle Reports Builder or contact Oracle Support Services for assistance.

REP-00002
The string from the message file cannot be retrieved.

Category:
Other

Cause:
Oracle Reports Builder could not retrieve the necessary error message or string.

Action:
For assistance, contact Oracle Support Services.

REP-00003
Global preference file cannot be opened.

Category:
Other

Cause:
The global preference file could not be opened. This is just a warning, so the product will continue to run even if this occurs. The possible causes of this error include the following: Case 1: The file was not found under the specified name in the specified location. Case 2: Lack of necessary privileges to open the file. Case 3: A system error made it impossible to open the file.

Action:
Take the following actions to correct this error: If Case 1: Verify that the file named prefs.ora is stored in the appropriate directory. For more information, contact the database administrator. If Case 2: Verify privileges necessary to access the file, and change privileges accordingly. If Case 3: Consult the operating system documentation or the system administrator.

REP-00004
User preference file cannot be opened.

Category:
Other

Cause:
The local (customized) preference file could not be opened. This is just a warning, so the product will continue to run even if this occurs. The possible causes of this error include the following: Case 1: The file was not found under the specified name in the specified location. Case 2: Lack of necessary privileges to open the file. Case 3: A system error made it impossible to open the file.

Action:
Take the following actions to correct this error: If Case 1: Verify the file prefs.ora is located in the home directory, and change the directory and/or file name as appropriate. If Case 2: Verify privileges necessary to access the file, and change privileges accordingly. If Case 3: Consult the operating system documentation or contact the system administrator.

REP-00005
A syntax error exists at line {0} in global preference file.

Category:
Other

Cause:
One or more of the preferences in the global preference file was specified incorrectly on the line number shown in the message. The most likely cause of this error is that the file has been edited and one or more preferences incorrectly specified. As a result, the Oracle Reports Builder will ignore the incorrectly specified preferences.

Action:
Edit the global preference file and ensure that all preferences are correctly specified, and make the necessary updates.

REP-00006
A syntax error exists at line {0} in user preference file.

Category:
Other

Cause:
One or more of the preferences in the user preference file was specified incorrectly on the line number shown in the message. The most likely cause of this error is that the file has been edited and one or more preferences incorrectly specified. As a result, the Oracle Reports Builder will ignore the incorrectly specified preferences.

Action:
Edit the global preference file and ensure that all preferences are correctly specified. If they are not, make the necessary updates.

REP-00007
The user preference file cannot be written to.

Category:
Other

Cause:
An attempt was made to save preferences and the user preference file could not be written. The possible causes of this error include the following: Case 1: Lack of necessary privileges to write the file. Case 2: A system error made it impossible to write the file.

Action:
Take the following actions to correct this error: If Case 1: Verify privileges necessary to write the file, and change the privileges accordingly. If Case 2: Consult the operating system documentation or contact the system administrator.

REP-00008
An unexpected memory error occurred while initializing preferences.

Category:
Memory

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00058
Data passing to a remote Reports Server is not supported.

Category:
Data

Cause:
A record group was passed to a report to be run remotely.

Action:
Do not specify a Reports Server when passing a record group.

REP-00059
Resources for subcomponent {0} cannot be located.

Category:
Other

Cause:
One of the subcomponents of the Oracle Reports Builder could not locate its resource file. Possible causes of this error include: Case 1: The resource file does not exist. Case 2: The resource file is in the wrong place. Case 3: The environment is not configured properly.

Action:
Take the following actions to correct this error: If Case 1: Verify that the resource files are present. If Case 2: Verify that the resource files are in the proper directory. If Case 3: Verify that the environment is set correctly. On UNIX, verify that the proper environment variable is set; on Windows, check oracle.ini.

REP-00060
A synchronous job cannot be run concurrently with another report.

Category:
Other

Cause:
An attempt was made to run a report initiated by Forms Runtime and requiring data passed from that tool, but one or more other reports are running or queued to run. Reports requiring passed data must be run immediately.

Action:
Wait for all other reports currently listed in the Reports Server queue to run, then rerun report.

REP-00061
An internal error occurred - rxmobfree: reference count is zero.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00062
An internal error occurred - rxmobnew: size mismatch.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00063
An internal error occurred - rxmobnew: memory manager mismatch.

Category:
Memory

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00064
An internal error occurred - rxmobnew: type mismatch.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00065
A virtual memory system error occurred.

Category:
Memory

Cause:
Oracle Reports Builder has encountered a memory error.

Action:
Make note of the error-specific code and contact Oracle Support Services.

REP-00066
An error occurred executing the CA utility.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00067
The value for keyword STYPE is invalid.

Category:
Other

Cause:
In Reports Converter, an invalid value was provided for the STYPE keyword.

Action:
Check the syntax of the keyword. Valid values are DATABASE, REXFILE, RDFFILE, PLLDB, PLLFILE, or PLDFILE. For more information, see the Command Line Keywords appendix in the Publishing Reports to the Web manual.

REP-00068
The value for DTYPE is invalid.

Category:
Other

Cause:
In Reports Converter, an invalid value was provided for the DTYPE keyword.

Action:
Check the syntax of the keyword. Valid value are DATABASE, REXFILE, RDFFILE, REPFILE, TDFFILE, PLLDB, PLLFILE, PLXFILE, or PLDFILE. For more information, see the Command Line Keywords appendix in the Publishing Reports to the Web manual.

REP-00069
An internal error occurred

Category:
Other

Cause:
An Oracle Reports Builder internal code error occurred.

Action:
For assistance, contact Oracle Support Services.

REP-00071
The SSL context cannot be allocated.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00072
The NNIT interface cannot be initialized.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00073
An unknown product cannot be run.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00074
An attempt to run another product using SSL failed.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00075
An error occurred when running the called Oracle component,

Category:
Other

Cause:
Oracle Reports Builder encountered an error after calling Forms Runtime or Graphics Runtime. The accompanying error message displays the error encountered by the called application.

Action:
Resolve the error encountered by the called application and retry the operation.

REP-00076
An internal failure occurred in product integration.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00077
The column in query {0} too long for data passing.

Category:
Data

Cause:
An attempt was made to pass data to a column of excessive size (likely a LONG column).

Action:
Remove the column from the report definition and the calling document's definition.

REP-00078
A single process integration was invoked with BATCH=NO.

Category:
Process

Cause:
An attempt was made to invoke Oracle Reports Builder specifying BATCH=NO with executable in which Oracle Reports Builder is linked with another product.

Action:
Use an executable which integrates using multiple processes, or specify BATCH=YES.

REP-00079
Value for keyword OVERWRITE is invalid.

Category:
Other

Cause:
In Reports Converter, an invalid value was specified for the OVERWRITE keyword.

Action:
Reenter the command, specifying a value of YES, NO, or PROMPT for the OVERWRITE keyword.

REP-00080
The specified value is invalid.

Category:
Other

Cause:
In Reports Converter, OVERWRITE=PROMPT was specified on the command line, then a value other than YES or NO was entered when prompted.

Action:
Specify a value of YES or NO at the prompt, or CANCEL the operation.

REP-00081
An error occurred during the file I/O operation.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00082
An error occurred executing the SCA utility.

Category:
Other

Cause:
The possible causes of this error include the following: Case 1: The initialization file is not current. Case 2: An abnormal condition.

Action:
Take the following actions to correct this error: If Case 1: Ensure that the directory where the report is located is defined in the REPORTS_PATH located in $ORACLE_HOME/bin/reports.sh. If Case 2: For assistance, contact Oracle Support Services.

REP-00083
The value for keyword DUNIT is invalid.

Category:
Other

Cause:
In Reports Converter, an invalid value was specified for the DUNIT keyword.

Action:
Check the syntax of the keyword. Valid values are CENTIMETER, CHARACTER, INCH, or POINT. For more information, see the Command Line Keywords appendix in the Publishing Reports to the Web manual.

REP-00084
The value for keyword PAGESIZE is invalid.

Category:
Other

Cause:
In Reports Converter, an invalid value was specified for the PAGESIZE keyword.

Action:
Check the syntax and value of the keyword. Valid syntax is <width>x<height>. For more information, see the Command Line Keywords appendix in the Publishing Reports to the Web manual.

REP-00085
The value for keyword FORMSIZE is invalid.

Category:
Other

Cause:
In Reports Converter, an invalid value was specified for the FORMSIZE keyword.

Action:
Check the syntax and value of the keyword. Valid syntax is <width>x<height>. For more information, see the Command Line Keywords appendix in the Publishing Reports to the Web manual.

REP-00086
DUNIT must be different than source report's unit of measurement.

Category:
Other

Cause:
In Reports Converter, an invalid value was specified for the DUNIT keyword that was in the same unit of measurement as the report to be converted.

Action:
Check the syntax and value of the keyword. For more information, see the Command Line Keywords appendix in the Publishing Reports to the Web manual.

REP-00087
The value for keyword DESTYPE is invalid.

Category:
Other

Cause:
In Reports Runtime, an invalid value was specified for the DESTYPE keyword.

Action:
Check the syntax and value of the keyword. Valid values are SCREEN, FILE, PRINTER, MAIL, SYSOUT, or PREVIEW. For more information, see the Command Line Keywords appendix in the Publishing Reports to the Web manual.

REP-00088
The value for keyword ONSUCCESS is invalid.

Category:
Other

Cause:
An invalid value was specified for the ONSUCCESS keyword.

Action:
Specify COMMIT, ROLLBACK, or NOACTION either in the Runtime Settings tab of the Tools Options dialog or on the command line. To check the command line syntax, see the Command Line Keywords appendix in the Publishing Reports to the Web manual.

REP-00089
The value for keyword ONFAILURE is invalid.

Category:
Other

Cause:
An invalid value was specified for the ONFAILURE keyword.

Action:
Specify COMMIT, ROLLBACK, or NOACTION either in the Runtime Settings tab of the Tools Options dialog or on the command line. To check the command line syntax, see the Command Line Keywords appendix in the Publishing Reports to the Web manual.

REP-00090
The value for keyword ACCESS is invalid.

Category:
Other

Cause:
For Oracle Reports Builder, an invalid value was specified for the ACCESS keyword.

Action:
Specify FILE or DATABASE. To check the command line syntax, see the Command Line Keywords appendix in the Publishing Reports to the Web manual.

REP-00091
The value for parameter {0} is invalid.

Category:
Other

Cause:
An invalid value was specified for the named parameter. For example, in the Reports Runtime command string, a character value was provided for a parameter with a data type of Number.

Action:
Retry the operation, specifying a valid value for the parameter.

REP-00092
Version 1.1 LANGUAGE argument not supported. Use Oracle National Language environment variable instead

Category:
Other

Cause:
For Oracle Reports Builder or Runtime, the LANGUAGE keyword was included in the command line string.

Action:
Remove the LANGUAGE argument string from the command string, and set the Oracle National Language environment variable NLS_LANG to the appropriate value.

REP-00094
FORMSIZE must be 80x24 if DUNIT is Character.

Category:
Other

Cause:
While using Reports Converter with DUNIT=Character, a Parameter Form size was specified that was not equal to 80x24.

Action:
The character-mode Parameter Form size must be 80x24. Either specify a FORMSIZE of 80x24 when DUNIT=Character, or do not specify a FORMSIZE.

REP-00095
The value for keyword ORIENTATION is invalid.

Category:
Other

Cause:
An invalid value was specified for the ORIENTATION keyword.

Action:
Specify DEFAULT, LANDSCAPE, or PORTRAIT either in the Runtime Settings tab of the Tools Options dialog box or on the command line. To check the command line syntax, see the Command Line Keywords appendix in the Publishing Reports to the Web manual.

REP-00096
The value for keyword MODE is invalid.

Category:
Other

Cause:
An invalid value was specified for the MODE keyword.

Action:
Specify DEFAULT, BITMAP, or CHARACTER either in the Runtime Settings tab of the Tools Options dialog or on the command line. To check the command line syntax, see the Command Line Keywords appendix in the Publishing Reports to the Web manual.

REP-00097
The value for keyword TRACEMODE is invalid.

Category:
Other

Cause:
Either an invalid or no value was specified for the TRACEMODE keyword, or keywords were specified out of order on the command line without being named.

Action:
Either specify Append or Replace for Trace Mode in the Trace Settings dialog or TRACE_APPEND or TRACE_REPLACE on the command line, or check the syntax of the command. To check the command line syntax, see the Command Line Keywords appendix in the Publishing Reports to the Web manual.

REP-00098
The report was not run as it was canceled in the Parameter Form.

Category:
Other

Cause:
The report was not executed because Cancel instead of Run Report was selected in the Runtime Parameter Form.

Action:
No action is necessary.

REP-00099
The report is aborted upon user request.

Category:
Other

Cause:
The report was stopped while it was executing.

Action:
No action is necessary.

REP-00100
The file pointer in file {0} cannot be positioned.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00101
File {0} cannot be read.

Category:
Other

Cause:
Oracle Reports Builder tried to read a file, which could be opened but not read.

Action:
Consult the operating system documentation or contact the system administrator.

REP-00102
File {0} cannot be written to.

Category:
Other

Cause:
Oracle Reports Builder tried to write the file shown in the message and could not. The possible causes of this error include the following: Case 1: Lack of necessary privileges to write the file. Case 2: The file system does not have enough room for the file. Case 3: A system error made it impossible to open the file.

Action:
Take the following actions to correct this error: If Case 1: Verify the privileges necessary to write the file, and change privileges accordingly. If Case 2: Make more room by deleting unnecessary files or expanding storage. If Case 3: Consult the operating system documentation or contact the system administrator.

REP-00103
File {0} cannot be closed.

Category:
Other

Cause:
Oracle Reports Builder tried to close the file, but was unsuccessful. The most likely reason is that a system error made it impossible to close the file.

Action:
Consult the operating system documentation or contact the system administrator.

REP-00104
File {0} cannot be deleted.

Category:
Other

Cause:
Oracle Reports Builder tried to delete the file shown, but was unsuccessful. The most likely reason is that a system error made it impossible to delete the file.

Action:
Consult the operating system documentation or contact the system administrator.

REP-00105
File {0} cannot be locked in exclusive mode.

Category:
Other

Cause:
Oracle Reports Builder tried to lock the file shown, but was unsuccessful. The most likely reason is that a system error made it impossible to lock the file.

Action:
Consult the operating system documentation or contact the system administrator.

REP-00106
File {0} cannot be locked in shared mode.

Category:
Other

Cause:
Oracle Reports Builder tried to lock the file shown, but was unsuccessful. The most likely reason is that a system error made it impossible to lock the file.

Action:
Consult the operating system documentation or contact the system administrator.

REP-00107
File {0} cannot be opened: bad name.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00108
File {0} cannot be found.

Category:
Other

Cause:
Oracle Reports Builder tried to access the file shown, but could not find it.

Action:
Verify the file name. Specify a directory before the file name, or modify the REPORTS_PATH environment variable to include the directory where the file is located.

REP-00109
There are too many files open.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00110
File {0} cannot be opened.

Category:
Other

Cause:
Oracle Reports Builder tried to open the file shown and could not. The possible causes of this error include the following: Case 1: The file was not found under the specified name in the specified location. Case 2: Lack of necessary privileges to open the file. Case 3: A system error made it impossible to open the file.

Action:
Take the following actions to correct this error: If Case 1: Verify that the file is stored in the specified directory under the specified name. If it is not, change the directory and/or file name as appropriate. If Case 2: Verify the privileges necessary to open the file, and change the privileges accordingly. If Case 3: Consult the operating system documentation or contact the system administrator.

REP-00111
Directory {0} is protected.

Category:
Other

Cause:
Oracle Reports Builder attempted to read from or write to a directory that is read and write protected.

Action:
Change the permissions on the directory as necessary.

REP-00112
File {0} is write-protected.

Category:
Other

Cause:
Oracle Reports Builder attempted to write to a file that is write-protected.

Action:
Change the permissions of the file as necessary.

REP-00113
File {0} is read-protected.

Category:
Other

Cause:
Oracle Reports Builder attempted to read a file that is read-protected.

Action:
Change the permissions of the file as necessary.

REP-00114
File {0} no longer exists.

Category:
Other

Cause:
Oracle Reports Builder attempted to access a file that no longer exists.

Action:
Remove the call to the file, re-create the file, or specify a different file.

REP-00115
Directory {0} cannot be read.

Category:
Other

Cause:
Oracle Reports Builder attempted to read from or write to a directory that does not exist.

Action:
Verify that the specified directory exists.

REP-00116
Directory {0} cannot be accessed.

Category:
Other

Cause:
Oracle Reports Builder could not access the specified directory.

Action:
Consult the system administrator.

REP-00117
Exit to the host operating system failed.

Category:
Operating System

Cause:
Oracle Reports Builder attempted to exit the program and return control to the host operating system.

Action:
No action is necessary.

REP-00118
A temporary file cannot be created.

Category:
Other

Cause:
Oracle Reports Builder tried to create a temporary file but could not do so. The possible causes of this error include the following: Case 1: The environment variable that determines in what directory to create temporary files is set to an invalid directory. Case 2: There is not enough free space on the disk to create the temporary file. Case 3: A temporary file that cannot be modified already exists.

Action:
Take the following actions to correct this error: If Case 1: Set the environment variable for temporary files to a valid directory. If Case 2: Free up some space on the disk. If Case 3: Remove the existing temporary file, if possible.

REP-00119
File link boilerplate {0}'s Source Filename {1} cannot be found.

Category:
Other

Cause:
Oracle Reports Builder could not find the source file specified in the Source Filename property for the file link boilerplate object. The possible causes of this error include the following: Case 1: The file was not found under the specified name in the specified location. Case 2: Lack of necessary privileges to open the file. Case 3: A system error made it impossible to open the file.

Action:
Take the following actions to correct this error: If Case 1: Verify that the file is stored in the specified directory under the specified name. If it is not, change the directory and/or file name as appropriate. If Case 2: Verify the privileges necessary to open the file, and change the privileges accordingly. If Case 3: Consult the operating system documentation or contact the system administrator.

REP-00120
Graph {0}'s associated document {1} cannot be found.

Category:
Other

Cause:
Oracle Reports Builder was unable to find the graph document. The possible causes of this error include the following: Case 1: The graph document was not found under the specified name in the specified location. Case 2: Lack of necessary privileges to open the graph document. Case 3: A system error made it impossible to open the graph document.

Action:
Take the following actions to correct this error: If Case 1: Verify that the graph document is stored in the specified directory under the specified name. If it is not, change the directory and/or file name as appropriate. If Case 2: Verify the privileges necessary to open the graph document, and change the privileges accordingly. If Case 3: Consult the operating system documentation or contact the system administrator.

REP-00124
The temporary file cannot be written to.

Category:
Other

Cause:
Oracle Reports Builder tried to write to the temporary file but could not do so.

Action:
Free up some space on the disk.

REP-00125
An internal error occurred: Unable to load NLS character set.

Category:
Other

Cause:
ORA_NLS was not set, or the directory to which it points does not exist.

Action:
Set ORA_NLS to point to the NLS directory containing character set files.

REP-00126
File {0} is not a known type to Oracle Reports Builder. No file conversion can be performed. Check in anyway?

Category:
Other

Cause:
An attempt was made to check in a file of a type that Oracle Reports Builder cannot convert. For example, Oracle Reports Builder cannot convert a Form Builder (FMB) file.

Action:
To continue checking in, click Yes. Otherwise, click No and nothing will be checked in.

REP-00127
File {0} is not a known type to Oracle Reports Builder. No file conversion can be performed. Check out anyway?

Category:
Other

Cause:
An attempt was made to check out a file of a type that Oracle Reports Builder cannot convert. For example, Oracle Reports Builder cannot convert a Form Builder (FMB) file.

Action:
To continue checking out, click Yes. Otherwise, click No and nothing will be checked out.

REP-00128
There are unsaved changes in file {0}. Save before checkin?

Category:
Other

Cause:
An attempt was made to check in a file that is currently open and there are unsaved changes.

Action:
To save and check in the file, click Yes. Click No to check in the file without the changes. Otherwise, click Cancel and nothing will be checked in.

REP-00129
There are unsaved changes in file {0}. Check out anyway?

Category:
Other

Cause:
An attempt was made to check out a file that is is currently open and there are unsaved changes.

Action:
To check out the file, click Yes. Note that this will overwrite all the changes made to this file. Otherwise, click No and nothing will be checked out.

REP-00130
A module saved in the database cannot be checked in. Save it to file before checkin.

Category:
Other

Cause:
Checking in a module saved in the database is not supported.

Action:
Save the module to the filesystem first and then check it in again.

REP-00131
The communication layer cannot be initialized.

Category:
Other

Cause:
The required communication files were not found.

Action:
Check the installation and setup and update with the latest patch.

REP-00132
A JVM cannot be started.

Category:
Other

Cause:
Oracle Reports could not start up the required JVM services.

Action:
Check the installation and setup and update with the latest patch.

REP-00133
Java Classes cannot be found.

Category:
Other

Cause:
Some required files were not found. This could be caused by an invalid installation or missing files.

Action:
Check the installation and setup and update with the latest patch.

REP-00150
There are too many arguments.

Category:
Other

Cause:
More than the allowable number of arguments for the command were entered.

Action:
Check the syntax of the command. For more information, see the Command Line Keywords appendix in the Publishing Reports to the Web manual. Reenter the command correctly.

REP-00151
Duplicate arguments are specified for keyword {0}.

Category:
Other

Cause:
An argument was entered more than once for the keyword shown. The possible causes of this error include the following: Case 1: A positional argument was entered for the keyword and then the keyword was entered with another argument. Case 2: The same keyword was entered twice (for example, KEYWORD1=YES and KEYWORD1=NO).

Action:
Check the syntax of the command (see the Command Line Keywords appendix in the Publishing Reports to the Web manual). Take the following actions to correct this error: If Case 1: Reenter the command with just the positional argument or just the keyword argument. If Case 2: Reenter the command specifying the keyword only once.

REP-00152
A positional argument is specified after a keyword.

Category:
Other

Cause:
On the command line, an argument was entered without its keyword after being an argument was entered with its keyword. Once a keyword is used on the command line, all subsequent arguments must use keywords as well.

Action:
Reenter the command making sure that no positional arguments (arguments where the keyword is implicit) are specified after arguments with keywords.

REP-00153
Multiple values are not allowed for keyword {0}.

Category:
Other

Cause:
In the command, more than the allowable number of values for the keyword were entered. For example, KEYWORD=(A, B) was entered, where KEYWORD accepts only a single value.

Action:
Check the syntax of the command. For more information, see the Command Line Keywords appendix in the Publishing Reports to the Web manual. Reenter the command without the extra values.

REP-00154
The command file cannot be opened.

Category:
Other

Cause:
A command referenced the command file shown and the file could not be opened. The possible causes of this error include the following: Case 1: The file was not found under the

specified name in the specified location. Case 2: Lack of necessary privileges to open the file. Case 3: A system error made it impossible to open the file.

Action:
Take the following actions to correct this error: If Case 1: Verify that the file is stored in the specified directory under the specified name. If it is not, change the directory and/or file name or move the file into the specified directory. If Case 2: Verify the privileges necessary to access the file, and change the privileges accordingly. If Case 3: Consult the operating system documentation or contact the system administrator.

REP-00155
The value for keyword {0} is invalid.

Category:
Other

Cause:
The value entered for the keyword shown was not a valid value.

Action:
Check the syntax of the keyword. For more information, see the Command Line Keywords appendix in the Publishing Reports to the Web manual. Reenter the command with the appropriate value for the keywords.

REP-00156
The value for keyword DESTYPE is invalid.

Category:
Other

Cause:
In Reports Runtime, an invalid value was provided for the DESTYPE keyword.

Action:
Check the syntax of the keyword. Valid values are SCREEN, FILE, PRINTER, MAIL or SYSOUT. For more information, see the Command Line Keywords appendix in the Publishing Reports to the Web manual. Reenter the command with the appropriate value for the keywords.

REP-00157
The value for {0} must be either YES or NO.

Category:
Other

Cause:
A value other than YES or NO was entered for the keyword shown, and the keyword only accepts YES or NO.

Action:
Reenter the command using a value of YES or NO for the keyword shown.

REP-00158
The command line keyword {0} is unknown.

Category:
Other

Cause:
The referenced string was entered as a keyword, but there is no such keyword.

Action:
Check the syntax of the command. For more information, see the Command Line Keywords appendix in the Publishing Reports to the Web manual. Reenter the command with the appropriate value for the keywords.

REP-00159
A syntax error exists on the command line.

Category:
Other

Cause:
The string entered on the command line could not be parsed. The most likely cause of this error is that quotation marks or parentheses were entered without matching end quotation marks or parentheses.

Action:
Check the syntax of the command. For more information, see the Command Line Keywords appendix in the Publishing Reports to the Web manual. Reenter the command using the appropriate syntax.

REP-00160
A syntax error exists in the command file.

Category:
Other

Cause:
Something entered in the command file could not be parsed. The most likely cause of this error is that quotation marks or parentheses were entered without matching end quotation marks or parentheses.

Action:
Check the syntax of the commands. For more information, see the Command Line Keywords appendix in the Publishing Reports to the Web manual. Edit the file and modify the commands as necessary to correct the commands.

REP-00161
No command-line arguments are specified.

Category:
Other

Cause:
Reports Converter was invoked without specifying any command-line arguments.

Action:
Specify the appropriate command-line arguments (for example, SOURCE, DEST) for Reports Converter. For more information, see the Command Line Keywords appendix in the Publishing Reports to the Web manual.

REP-00162
The value for keyword SHOWWINDOW is invalid.

Category:
Other

Cause:
The value specified for the SHOWWINDOW keyword was not valid.

Action:
Check the syntax of the keyword. Valid values are DEFAULT, WIZARD, and PREVIEWER. For more information, see the Command Line Keywords appendix in the Publishing Reports to the Web manual.

REP-00163
The value for keyword DESTYPE is invalid.

Category:
Other

Cause:
The value specified for the DESTYPE keyword was not valid for the Reports Server.

Action:
Check the syntax of the keyword. Valid values are FILE, PRINTER, MAIL, or CACHE.

REP-00164
The value for keyword PARAMFORM is invalid.

Category:
Other

Cause:
The value specified for the PARAMFORM keyword was not valid.

Action:
Reenter the command, specifying a value of YES, NO, or HTML[action] for the PARAMFORM keyword.

REP-00165
The value for keyword SITENAME is missing.

Category:
Other

Cause:
No value was specified for the SITENAME keyword. A value is required for SITENAME in order to schedule a report.

Action:
Specify a WEBDB site name for the keyword SITENAME.

REP-00166
Read/write of the specified directory is not allowed.

Category:
Other

Cause:
Oracle Reports attempted to read from or write to a directory without read/write privileges.

Action:
Check the command line options to identify the directory name. Add the directory to REPORTS_PATH, ORACLE_PATH, or the sourceDir property in the engine element in the server configuration file.

REP-00171
Output from the remote server cannot be retrieved.

Category:
Other

Cause:
An error occurred when retrieving output from the remote server.

Action:
Verify that the file is accessible, and that the server is set to allow retrieving outputs.

REP-00172
The value for keyword SERVER is missing.

Category:
Other

Cause:
No value was specified for the mandatory keyword SERVER.

Action:
Provide a valid argument for the keyword SERVER and rerun the command.

REP-00173
The value for keyword SHOWJOBS is invalid.

Category:
Other

Cause:
In the Reports Queue Viewer, an argument provided in command line for the SHOWJOBS keyword was not valid.

Action:
Reenter the command, specifying a value of PAST, CURRENT or FUTURE for the SHOWJOBS keyword.

REP-00174
An internal error occurred while obtaining the Reports Server queue information.

Category:
Other

Cause:
The Reports Server did not return valid information about its queue to the queue viewer. This could be caused by one of the following reasons: Case 1: The connection to the Reports Server unexpectedly went down. Case 2: The Reports Server is in an unstable state, or has been shut down.

Action:
Verify that the Reports Server is running. Contact the system administrator and retry the command after verifying that the Reports Server is running. If this problem persists, contact Oracle Support Services.

REP-00175
An internal error occurred while obtaining the Reports Server properties information.

Category:
Other

Cause:
The Reports Server did not return valid information about its properties to the queue viewer. This could be caused by one of the following reasons: Case 1: The connection to the Reports Server unexpectedly went down. Case 2: The Reports Server is in an unstable state, or has been shut down.

Action:
Verify that the Reports Server is running. Contact the system administrator and retry the command after verifying that the Reports Server is running. If this problem persists, contact Oracle Support Services.

REP-00176
Server {0} is shutting down.

Category:
Other

Cause:
A report cannot be submitted when the specified Reports Server is shutting down.

Action:
Submit to another Reports Server or wait until the Server is back up.

REP-00177
An error occurred while running in a remote server.

Category:
Other

Cause:
An attempt to run a command line in the remote server failed.

Action:
Check the command line.

REP-00178
Reports Server {0} cannot establish connection.

Category:
Other

Cause:
A proper connection could not be established to the specified Reports Server.

Action:
Check the network and check the status of the Reports Server in question.

REP-00179
Report execution terminated unexpectedly while running.

Category:
Other

Cause:
The Reports Engine has crashed while running.

Action:
Contact the system administrator.

REP-00180
The report has been canceled from the Reports Server.

Category:
Other

Cause:
The report was stopped while it was executing or removed from the queue before it was started.

Action:
No action is necessary.

REP-00181
An error occurred reading or writing the configuration file for the Reports Server.

Category:
Configuration

Cause:
The configuration file cannot be opened, or its content is incomprehensible.

Action:
Check the configuration file and its access rights. Restart the server.

REP-00182
A syntax error occurred on command line for the Reports Server.

Category:
Other

Cause:
The string entered on the command line could not be parsed. The most likely cause of this error is that quotation marks or parentheses were entered without matching end quotation marks or parentheses.

Action:
Check the syntax of the command. For more information, see the Command Line Keywords appendix in the Publishing Reports to the Web manual. Reenter the command using the appropriate syntax.

REP-00183
TNSNAME must be provided to start up the Reports Server.

Category:
Other

Cause:
An attempt was made to start up the Reports Server without specifying the TNSNAME to which the Server should listen.

Action:
Specify the TNSNAME as a command-line argument.

REP-00184
The specified MAXCONNECTS is out of range.

Category:
Other

Cause:
The MAXCONNECTS value specified is out of range for this platform. MAXCONNECTS must be at least 2, and cannot exceed 4096, and on some platforms the limit is even lower.

Action:
Specify an appropriate value.

REP-00185
Bad load arguments were supplied when starting up the Reports Server.

Category:
Other

Cause:
Inconsistent values were specified among MAXCONNECTS, MINLOAD, MAXLOAD, and INITLOAD.

Action:
Verify that 0 <= MINLOAD <= INITLOAD <= MAXLOAD < MAXCONNECTS.

REP-00186
A daemon cannot listen to the port.

Category:
Other

Cause:
Another daemon may be running that is already listening to the port.

Action:
No action is necessary. Since a daemon is already running, submit the report to be run.

REP-00187
A daemon cannot start up the engine.

Category:
Other

Cause:
A daemon cannot start up the engine executable and communicate with it. This is most likely an installation issue.

Action:
Verify that the installation is done properly.

REP-00188
Reports Server only accepts batch jobs.

Category:
Other

Cause:
A job was submitted to the Reports Server where BATCH=NO, DESTYPE=SCREEN, DESTYPE=PREVIEW, or DESTYPE=SYSOUT.

Action:
These settings are not allowed. Change the command line accordingly.

REP-00189
The Reports Server cache cannot be written to.

Category:
Other

Cause:
Reports Server failed to write to the cache directory.

Action:
Verify that the cache directory is specified in the server configuration file and it is writable.

REP-00190
A report cannot be run to screen in the background.

Category:
Other

Cause:
The report was specified to be run in the background, with DESTYPE=SCREEN. A report cannot run in the background while having its output sent to the screen.

Action:
To send the output to the screen, run it in the foreground. To run the report in the background, specify a different DESTYPE.

REP-00194
A character report cannot be run in bitmap mode using this executable.

Category:
Other

Cause:
Oracle Reports attempted to use the character-mode executable to run a character-mode report with MODE=BITMAP. This is not allowed.

Action:
Change the value of the MODE keyword to match the mode of the executable.

REP-00195
A report cannot be run in bitmap mode to screen using this executable.

Category:
Other

Cause:
Oracle Reports attempted to use the character-mode executable to run a bitmapped report to the screen. This is not allowed.

Action:
Run the report using BATCH=YES or use a bitmapped executable.

REP-00196
The report cannot be run in the background.

Category:
Other

Cause:
BACKGROUND=YES was specified under one of the following conditions, none of which are allowed: Case 1: Running the report from the designer. Case 2: BATCH=YES. Case 3: Running the report using the packaged procedure srw.run_report. Case 4: The platform on running the report does not support spawning of another process.

Action:
Ensure that BACKGROUND=NO when any of the above condition are true.

REP-00197
BATCH=YES or BACKGROUND=YES must be specified on the command line when running a bitmapped report.

Category:
Other

Cause:
Oracle Reports attempted to run a bitmapped report using the character-mode executable in the foreground or during an interactive session. This is not supported.

Action:
To run a bitmapped report using the character-mode executable, specify either BATCH=YES or BACKGROUND=YES (unlike BATCH=YES, this setting provides access to the Runtime Parameter Form).

REP-00200
Enough memory cannot be allocated.

Category:
Memory

Cause:
Oracle Reports Builder cannot obtain enough memory from the system to complete the current task.

Action:
Make more memory available, if possible, or ask the system administrator for assistance.

REP-00201
A zero or negative block size was requested.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00202
A null pointer cannot be freed.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00203
A null pointer was passed as a handle.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00204
The handle does not point into an mp block.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00205
There are too many simultaneous locks on one object.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00206
A null cache pointer is passed to virtual memory routine.

Category:
Memory

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00207
The requested block is larger than virtual memory space.

Category:
Memory

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00208
rmaloc was not given a function identifier.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00209
rmaloc was not given a structure identifier.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00210
An illegal operation was requested on a locked handle.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00211
A handle cannot be used after freeing it.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00212
No literal is specified.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00213
An attempt to lock a handle failed.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00214
A virtual memory buffer of size {0} KB cannot be allocated. Try a smaller size.

Category:
Memory

Cause:
Oracle Reports Builder tried to allocate a virtual memory buffer size at or below the number specified for the BUFFERS keyword.

Action:
Specify a smaller size for BUFFERS, either on the command line or in the Runtime Settings tab of the Preferences dialog box (select Edit, then Preferences), or free up more memory. For command line syntax, see the Command Line Keywords appendix in the Publishing Reports to the Web manual.

REP-00215
An error occurred locking, dereferencing, or freeing a memory handle.

Category:
Memory

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00216
There is insufficient memory to save the report as a JSP or XML.

Category:
Memory

Cause:
The report definition file has exceeded 10 MB. The report cannot be saved as a JSP or XML if it exceeds 10 MB.

Action:
Reduce the size of the file.

REP-00230
An error occurred while starting a thread.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00231
An error occurred while posting thread message.

Category:
Threads

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00232
An error occurred while getting thread message.

Category:
Threads

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00235
The Security Server TNSNAME is not provided in the config file.

Category:
Security

Cause:
Security Server TNSNAME must be specified in config file on security mode"

Action:
Specify Security Server TNSNAME in the config file by using the keyword 'securitytnsname'.

REP-00236
The Security Server cannot be connected.

Category:
Security

Cause:
An abnormal condition was encountered.

Action:
Contact the system administrator. For assistance, contact Oracle Support Services.

REP-00238
Authentication failed.

Category:
Security

Cause:
The system userid/password is invalid or does not have privilege to run the report.

Action:
Check the system userid/password to verify that it is correct or contact the system administrator to grant the necessary privilege.

REP-00239
The Security server authentication failed: invalid user name.

Category:
Security

Cause:
The system user ID is incorrect.

Action:
Check the system user ID to verify that it is correct or contact the system administrator about the system user ID.

REP-00240
The Security Server authentication failed: invalid password.

Category:
Security

Cause:
The password for the system user ID is incorrect.

Action:
Check the system user ID password to verify that it is correct or contact the system administrator about the system user ID password.

REP-00241
The Security Server authentication failed: no privilege on the Reports Server.

Category:
Security

Cause:
The system user ID does not have privilege to access the Reports Server.

Action:
Contact the system administrator about the system user ID's privilege on the Reports Server.

REP-00242
The Security Server authentication failed: no privilege on the printer.

Category:
Security

Cause:
The system user ID does not have privilege to access the printer.

Action:
Contact the system administrator about the system user ID's privilege on the printer.

REP-00243
The Security Server authentication failed: no privilege on the module.

Category:
Security

Cause:
The system user ID does not have privilege to access the module.

Action:
Contact the system administrator about the system user ID's privilege on the module.

REP-00244
The Security Server authentication failed: no privilege of this access type.

Category:
Security

Cause:
The system user ID does not have privilege of this access type.

Action:
Contact the system administrator about the system user ID's privilege of this access type.

REP-00245
The Security Server authentication failed: no privilege of this output type.

Category:
Security

Cause:
The system user ID does not have privilege of this output type.

Action:
Contact the system administrator about the system user ID's privilege of this output type.

REP-00246
The Security Server authentication failed: no privilege for the given time.

Category:
Security

Cause:
The system user ID does not have privilege for the given time.

Action:
Contact the system administrator about the system user ID's privilege for the given time.

REP-00247
The Security Server authentication failed: no privilege for the given date.

Category:
Security

Cause:
The system user ID does not have privilege for the given date.

Action:
Contact the system administrator about the system user ID's privilege for the given date.

REP-00250
A symbol table overflow occurred.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00251
The identifier does not match a defined symbol.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00252
The path specified by environment variable {0} is too long and will be ignored.

Category:
Other

Cause:
The path specified by the environment variable is too long.

Action:
Shorten the length of the designated path.

REP-00253
The total length of the search paths is too long and will be truncated.

Category:
Other

Cause:
The combined length of search paths in the path environment is too long. The combined length cannot exceed 255 characters.

Action:
Shorten the length of one or more paths in the path environment.

REP-00300
An Oracle error occurred.

Category:
Other

Cause:
Oracle Reports Builder encountered an Oracle error.

Action:
Scroll through the error message to see where the error occurred and, if possible, fix it. Otherwise, contact the system administrator.

REP-00301
The SELECT statement may not contain an INTO clause.

Category:
Other

Cause:
An INTO clause was entered in a SELECT statement, which is not allowed in Oracle Reports Builder.

Action:
Remove the INTO clause.

REP-00302
Parameter {0} cannot be found in the report.

Category:
Other

Cause:
Oracle Reports referenced a parameter that is not defined in the report. The most likely cause is that a parameter was deleted but not all references to it were deleted.

Action:
Delete all references to the deleted parameter.

REP-00303
The statement entered is not a SELECT statement.

Category:
Other

Cause:
What was entered in the SELECT Statement field is something other than a SELECT statement. The possible causes of this error include the following: Case 1: Something besides a SELECT statement was entered in the SELECT Statement field. Case 2: An external query was referecned that did not contain a SELECT statement.

Action:
Take the following actions to correct this error: If Case 1: Enter a valid SELECT statement. If Case 2: Modify the external query or reference another external query.

REP-00304
& in SELECT statement was not followed by a valid lexical parameter.

Category:
Other

Cause:
An ampersand (&) appears in the SELECT statement by itself. The possible causes of this error include the following: Case 1: A lexical reference either left out the name of the column or parameter altogether or there is a space between the ampersand and the name of the column or parameter. Case 2: An ampersand was accidentally typed in the SELECT statement.

Action:
Take the following actions to correct this error: If Case 1: Verify that the column or parameter name immediately follows the ampersand with no spaces in between. If Case 2: Delete the ampersand.

REP-00305
Reference {0} cannot be used as a lexical parameter because it is not a character value.

Category:
Other

Cause:
An invalid lexical reference appears in the SELECT statement. Lexical references can only be made to parameters or columns containing character data. The possible causes of this error include the following: Case 1: The wrong column or parameter was referenced. Case 2: The reference should be a bind reference, not a lexical reference. Case 3: The parameter or column referenced was created with a non-character data type.

Action:
Take the following actions to correct this error: If Case 1: Change the name that follows the ampersand (&) so it references a parameter or column with a data type of Character. If Case 2: Replace the ampersand (&) with a colon (:) when referencing the parameter or column. If Case 3: Change the data type of the parameter or column to be Character, if appropriate.

REP-00306
The name {0} is not a valid parameter name.

Category:
Other

Cause:
In making reference to a parameter, an attempt was made to create a parameter with an invalid name. For a bind reference, a parameter definition is automatically created using the name specified in the bind parameter. In this case, Oracle Reports Builder could not create the parameter because the name supplied was not a valid name.

Action:
Check the naming conventions for data model objects and rules for parameter names. Rename the parameter and change the name in the bind reference.

REP-00307
The SELECT statement may not contain a FOR UPDATE clause.

Category:
Other

Cause:
A FOR UPDATE clause was entered in the SELECT statement, which is not allowed in Oracle Reports Builder.

Action:
Remove the FOR UPDATE clause.

REP-00308
An internal error occurred: Unknown column type.

Category:
Other

Cause:
The possible causes of this error include the following: Case 1: An attempt was made to display the value of a column using SRW.MESSAGE, but the column's data type (for example, LONG, LONG RAW, ROWID) is not supported for that operation. Case 2: An attempt was made to pass the value of a column to Forms Runtime or Graphics Runtime as a parameter, but the column's data type (for example, LONG, LONG RAW, ROWID) is not supported for that operation.

Action:
Do not attempt to display or pass this column's value.

REP-00309
The specified database cannot connect after three attempts. Access denied.

Category:
Other

Cause:
Case 1: Some part of the logon string entered was incorrect. After three failed attempts, Oracle Reports Builder displays a dialog box with this message. Case 2: The NLS_LANG environment variable value may be invalid.

Action:
Case 1: Accept the dialog box. Confirm the logon information with the system administrator, if necessary. Go back into Oracle Reports Builder and try connecting to Oracle again. If the problem persists, the system administrator may need to create a new Oracle logon. Case 2: Verify the NLS_LANG value is valid.

REP-00310
An error occurred while processing bind variables in a query.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00311
An internal error occurred: Segmented memory used for lexical parameter.

Category:
Memory

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00312
An internal error occurred: Error dealing with segmented memory.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00313
An internal error occurred: Fetching data records would cause memory overflow.

Category:
Data

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00314
The column name exceeds 256 characters, and no alias is assigned.

Category:
Other

Cause:
One of the SQL SELECT statements contains an expression that is longer than 256 characters, but has no alias.

Action:
Edit the SELECT statement and assign an alias to the expression.

REP-00315
Each SELECT statement must have the same number of columns in a compound query.

Category:
Other

Cause:
A query with a UNION, INTERSECT, or MINUS set operator was entered in which the SELECT statements in the query do not have the same number of selected columns.

Action:
Modify the SELECT statements so that they have the same number of columns.

REP-00316
The types of corresponding columns must match in a compound query.

Category:
Other

Cause:
A query with a UNION, INTERSECT, or MINUS set operator was entered in which corresponding columns have different types. For example, column 1 in the first SELECT statement has data type CHAR, while column 1 in the second SELECT statement has data type NUMBER.

Action:
Modify the SELECT statements so that all corresponding columns have the same data type.

REP-00320
The database cannot be connected.

Category:
Other

Cause:
An attempt to connect to the database failed.

Action:
Recheck the user ID and password and try again.

REP-00321
An internal error occurred: Describe of query failed.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00322
An internal error occurred: Attempt to put back fetched rows failed.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00330
An internal error occurred: Location GET_REF parameters failed.

Category:
Other

Cause:
A CDE_MM.GET_REF call in a query did not specify a parameter list.

Action:
Add the parameter list to the call in the query's SELECT statement.

REP-00331
The GET_REF PL/SQL function requires 3 parameters.

Category:
Other

Cause:
The parameter list of a CDE_MM.GET_REF call in a query was incomplete.

Action:
Add the necessary parameters to the call in the query's SELECT statement.

REP-00332
The GET_REF PL/SQL function's last parameter must be of type ROWID.

Category:
Other

Cause:
A parameter of type ROWID was not provided as the last parameter for a GET_REF function.

Action:
Check the parameter list and ensure the last parameter is of type ROWID.

REP-00340
The role password cannot be verified, and the report is not opened.

Category:
Other

Cause:
Incorrect role password. For security reasons, the report cannot be openend.

Action:
Try opening the report again and type in the correct role password.

REP-00341
The roles specified in the report cannot be set, and the report is not opened.

Category:
Other

Cause:
The roles specified in the report cannot be set while opening the report. For security reasons, the report cannot be opened.

Action:
Check role permissions and password.

REP-00342
Roles specified on the command line cannot be set.

Category:
Other

Cause:
The roles specified on the command line cannot be set.

Action:
Check role permissions and password.

REP-00343
Default roles of the current user cannot be set.

Category:
Other

Cause:
Reports is unable to set the default roles of the current user that has passwords.

Action:
Do not use default roles with passwords.

REP-00344
The role password was not confirmed correctly.

Category:
Other

Cause:
The Confirm Password entered is different from the Role Password.

Action:
Reenter and verify that Confirm Password exactly matches the Role Password.

REP-00345
An empty role and a non-empty password is not valid.

Category:
Other

Cause:
No role is specified, while role password is specified.

Action:
Leave all fields empty to not associate a role with this report.

REP-00346
The role must be no longer than {0} characters. It will be truncated.

Category:
Other

Cause:
The role name specified is longer than is allowable. It will be truncated.

Action:
Specify a shorter role name.

REP-00347
The role password must be no longer than {0} characters. It will be truncated.

Category:
Other

Cause:
The role password specified is longer than is allowable. It will be truncated.

Action:
Specify a shorter role password.

REP-00348
The role password is incorrect.

Category:
Other

Cause:
The role password entered was incorrect.

Action:
Reenter with the correct role password.

REP-00450
PL/SQL error {0} was encountered.

Category:
Other

Cause:
Oracle Reports Builder encountered the identified PL/SQL error while running a report.

Action:
Edit and recompile the PL/SQL in the report to avoid this error.

REP-00451
PL/SQL error {0} was encountered. {1}.

Category:
Other

Cause:
Oracle Reports Builder encountered the identified PL/SQL error while running a report.

Action:
Edit and recompile the PL/SQL in the report to avoid this error.

REP-00452
PL/SQL error {0} was encountered. {1}. {2}.

Category:
Other

Cause:
Oracle Reports Builder encountered the identified PL/SQL error while running a report.

Action:
Edit and recompile the PL/SQL in the report to avoid this error.

REP-00453
PL/SQL error {0} was encountered. {1}. {2}. {3}.

Category:
Other

Cause:
Oracle Reports Builder encountered the identified PL/SQL error while running a report.

Action:
Edit and recompile the PL/SQL in the report to avoid this error.

REP-00490
An internal error occurred: Toolkit context unavailable.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00491
Data truncation is possible in column {0}.

Category:
Data

Cause:
The database column's width in the report is defined to be less than its width in the database. This can sometimes occur when the columns in the database are updated subsequent to the report being defined. This warning is raised only when RUNDEBUG is YES.

Action:
Force the query to be reparsed. One method is to type a space at the end of a line in the SELECT Statement field and then accept the SQL Query Statement dialog.

REP-00492
The token {0} is unrecognized.

Category:
Other

Cause:
The SELECT statement entered contains an item that is not part of SQL syntax.

Action:
Review the SELECT statement and ensure that it follows SQL syntax.

REP-00493
An internal error occurred: Unable to expand lexical references.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00494
An internal error occurred: Unable to process lexical references.

Category:
Process

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00495
An internal error occurred: Unable to tokenize the query.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00496
An internal error occurred: Unable to parse the query.

Category:
Other

Cause:
The SQL statement entered cannot be parsed because it contains an error.

Action:
Review the SQL statement to ensure correct syntax. For more information, see the SQL Language Reference Manual.

REP-00497
An internal error occurred: Query failed in rodslt.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00498
The number of columns selected by the query is incompatible with the report definition.

Category:
Other

Cause:
The query is selecting more columns than the report definition is expecting. This can happen when using an external query and the query has been changed since the report was defined.

Action:
Update the report definition so that it accepts the changed query. For example, go to the SQL Query Statement dialog for the query that references the changed external query and modify it. Formulas, summaries, and fields that rely on any changed columns may also need to be updated.

REP-00499
Column {0} selected by the query is incompatible with the report definition.

Category:
Other

Cause:
The column from the database does not match the column in the report definition. The possible causes of this error include the following: Case 1: The definition of the column in the database has changed since the report was defined. Case 2: The report uses an external query and the external query was changed since the report was defined.

Action:
Take the following actions to correct this error: If Case 1: Update the report definition so that it accepts the changed column. For example, if the data type of the column has changed, reaccept the SQL Query Statement dialog external query so the column in the report definition has its data type updated. Formulas, summaries, and fields that rely on the changed column may also need to be updated. If Case 2: Update the report definition so that it accepts the changed query. For example, reaccept the SQL Query Statement dialog that references the changed external query and accept it. Formulas, summaries, and fields that rely on any changed columns may also need to be updated.

REP-00500
The number entered is out of range.

Category:
Other

Cause:
The number specified is too large.

Action:
Check the limits of the field. Look in the chapter where the field is described and enter a number that is within the limits.

REP-00501
The specified database cannot be connected.

Category:
Other

Cause:
Oracle Reports Builder could not connect to Oracle The possible causes of this error include the following: Case 1: The Oracle database is temporarily unavailable. Case 2: The connect information was not valid.

Action:
Take the following actions to correct this error: If Case 1: Retry the operation. Contact the system administrator if the problem persists. Note that after three failed attempts, Oracle Reports Builder closes. If Case 2: Verify the connect information, and try to connect again. Note that after three failed attempts, Oracle Reports Builder closes.

REP-00502
An error occurred attempting to open terminal file {0}.

Category:
Other

Cause:
Oracle Reports Builder was unable to open the terminal definition file specified. Either the name of the file was specified incorrectly after the TERM keyword, or the file was not found.

Action:
Verify the name of the terminal definition file, and its path. If the problem persists, contact the system administrator.

REP-00503
The report name is invalid.

Category:
Other

Cause:
An invalid name was specified for the name of a report.

Action:
Specify a valid report name.

REP-00504
The specified database is not connected.

Category:
Other

Cause:
An attempt was made to perform an operation that requires a connection to the database, but no database connection was established.

Action:
Select File, then Connect to connect to the database.

REP-00505
The width for this column is not valid.

Category:
Other

Cause:
The value entered in Width was invalid. The possible causes of this error include the following: Case 1: Zero or a negative number was entered. Width must be greater than zero. Case 2: Something that was not a number was entered. Case 3: For a column of non-numeric data type, a width of the form (x, y) was entered, where x is the precision and y is the scale. This type of Width specification is only valid when the data type is Number.

Action:
Take the following actions to correct this error: If Case 1: Enter a number greater than zero. If Case 2: Enter a number greater than zero. If Case 3: Enter a number greater than zero or, if possible, change the data type of the column to Number.

REP-00506
Database columns cannot be moved between queries.

Category:
Other

Cause:
An attempt was made to move a column into another group belonging to another query and the column is a database column. A database column must be selected by the query that owns its group.

Action:
Select the column, if possible, in the query that owns the group to which it should be moved.

REP-00507
The file name is invalid.

Category:
Other

Cause:
In a file selection dialog box, the dialog box was accepted without specifying a file name.

Action:
Enter a name and then accept or cancel the dialog box.

REP-00508
The object name is invalid.

Category:
Other

Cause:
In a database object selection dialog box, the dialog box was accepted without specifying an object name.

Action:
Enter a name and then accept or cancel the dialog box.

REP-00509
The number value is invalid.

Category:
Other

Cause:
In a numeric field, something other than a digit or a decimal point was entered.

Action:
Enter a number that contains only digits and, if necessary, a decimal point.

REP-00510
The Unit of Measurement value is invalid.

Category:
Other

Cause:
An invalid unit of measurement was entered in the Unit of Measurement field.

Action:
Select the desired option from the list of values: 'Character', 'Inch', 'Centimeter' or 'Point'

REP-00511
The Panel Print Order value is invalid.

Category:
Other

Cause:
The Panel Print Order entered was not one of the two valid options.

Action:
Select the desired option from the list of values: 'Across/Down' or 'Down/Across'.

REP-00512
The number value is invalid.

Category:
Other

Cause:
The number entered was a decimal value and Oracle Reports Builder was expecting a non-decimal value.

Action:
Enter a non-decimal value.

REP-00513
The Unit of Measurement value is invalid.

Category:
Other

Cause:
The Unit of Measurement is blank and an attempt was made to move to another setting.

Action:
Select an option for Unit of Measurement.

REP-00514
The Page Size value is invalid.

Category:
Other

Cause:
The Page Width and/or Page Height settings were left blank and they require a value.

Action:
Enter a number for Page Width and/or Page Height.

REP-00515
The Parameter Form Size value is invalid.

Category:
Other

Cause:
The Parameter Form Width and/or Parameter Form Height settings were left blank and they require a value.

Action:
Enter a number for Parameter Form Width and/or Parameter Form Height.

REP-00516
The Page Size value is invalid.

Category:
Other

Cause:
The value entered for Page Size was not in character units, and Page Size requires character units.

Action:
Enter a value in characters for Page Size.

REP-00517
The Form Size value is invalid.

Category:
Other

Cause:
The value entered for Form Size was not in character units, and Form Size requires character units.

Action:
Enter a value in characters for Form Size.

REP-00518
The Object Access value is invalid.

Category:
Other

Cause:
The Object Access setting entered was not one of the three valid choices.

Action:
Select an option from the list of values: Database, File, or File/Database.

REP-00519
The Default Text Edit Mode value is invalid.

Category:
Other

Cause:
The Default Text Edit Mode entered was not one of the two valid choices.

Action:
Select an option from the list of values: Insert or Replace.

REP-00520
The Group/Frame Indentation value is invalid.

Category:
Other

Cause:
The value entered for Group/Frame Indentation was outside the valid range of values.

Action:
Enter a number between 0 and 4.

REP-00521
The name {0} is not valid.

Category:
Other

Cause:
An object was given an invalid name.

Action:
Verify the naming conventions for the object type.

REP-00522
A default layout cannot be built because this report has no groups.

Category:
Other

Cause:
Insert>Report Block was selected or a region was drawn using the Report Block tool in the Paper Layout editor before creating a query. A data source is required in order to create a default layout.

Action:
Create one or more queries, then retry the operation.

REP-00523
The Default Layout Style is invalid.

Category:
Other

Cause:
The Default Layout Style entered is not one of the valid options.

Action:
Select a layout style from the list of values.

REP-00524
The Print Direction is invalid.

Category:
Other

Cause:
The Repeat value entered is not one of the valid options.

Action:
Select a value for Repeat from the list of values.

REP-00525
The destination type is invalid.

Category:
Other

Cause:
The destination type entered for the system parameter DESTYPE is not one of the valid options. Possible causes of this error include the following: Case 1: An invalid value was entered for Destination Type in the Runtime Parameter Form. Case 2: An invalid value was entered for Initial Value in the Parameter Property Inspector for DESTYPE.

Action:
Take the following actions to correct this error: If Case 1: Enter one of the valid values, Screen, File, Printer, Mail, or Sysout. If Case 2: Select a value for Initial Value from the list of the values.

REP-00526
The initial value entered is longer than the parameter width.

Category:
Other

Cause:
The value entered is too long for the parameter on the Parameter Property Inspector. The possible causes of this error include the following: Case 1: The Initial Value entered is too big, given what was specified for the parameter's Width. Case 2: The Width entered is too small to contain the values to be entered for the parameter.

Action:
Take the following actions to correct this error: If Case 1: Reenter the Initial Value, making sure that it is not wider than what is specified in Width. If Case 2: Delete the Initial Value. Move to the Width setting for the parameter and increase it such that it can contain the Initial Value specified. Reenter the Initial Value.

REP-00527
A system parameter cannot be deleted.

Category:
Other

Cause:
An attempt was amde to delete a system parameter from the Parameter Property Inspector. This is not allowed.

Action:
To remove the system parameter from the Runtime Parameter Form, suppress the display of the parameter.

REP-00528
The data type value is invalid.

Category:
Data

Cause:
The value entered in Datatype for the parameter is not a valid data type.

Action:
Select a value for Datatype from the list of values: Character, Number, or Date.

REP-00529
The Type value is invalid.

Category:
Other

Cause:
The value entered in Type for the boilerplate is not a valid type.

Action:
Select a value for Type from the list of values: Box, Graphic, Line, or Text.

REP-00530
The file is too long. It will be truncated to fit.

Category:
Other

Cause:
An attempt was made to import a file into a field that has a maximum width less than the size of the file. Oracle Reports Builder only imported as much of the file as could fit in the field.

Action:
To import the entire file, increase the size of the field.

REP-00531
The Object Type is invalid.

Category:
Other

Cause:
In the Navigate to Object dialog box, the value entered for Object Type was invalid.

Action:
Select a value from the list of values.

REP-00532
There is no object of that type with this name.

Category:
Other

Cause:
The value entered in the Object Name field of the Navigate to Object dialog box does not correspond to an object of the specified type in the report.

Action:
Verify the name and that the object is contained in the current report.

REP-00533
Import is allowed only to a text entry field.

Category:
Other

Cause:
Import was selected from the Edit menu while in a non-text entry field (for example, a field that accepts only a number).

Action:
Move to a text entry field to perform an import operation.

REP-00534
Export is allowed only from a text entry field.

Category:
Other

Cause:
Export was selected from the Edit menu while in a non-text entry field (for example, a field that accepts only a number).

Action:
Move to a text entry field to perform an export operation.

REP-00535
No object named {0} exists in the database.

Category:
Other

Cause:
An attempt was made to perform an operation on a document stored in the database, but Oracle Reports Builder could not find the object.

Action:
Verify the name and connection to the database where the document resides.

REP-00536
An object in the database cannot be deleted without ownership.

Category:
Other

Cause:
An attempt was made to delete an object without ownership privileges.

Action:
Request that the owner delete the object.

REP-00537
An object in the database cannot be renamed without ownership.

Category:
Other

Cause:
An attempt was made to rename an object without ownership privileges.

Action:
Request that the owner rename the object.

REP-00538
An object named {0} already exists in the database.

Category:
Other

Cause:
The name entered for the object is already used for an existing object.

Action:
Provide a different name for the object to avoid the conflict or delete the existing object.

REP-00539
The default Parameter Form cannot fit in {0} pages.

Category:
Other

Cause:
The default Parameter Form is too big to fit on the number of pages allocated.

Action:
In the report's Property Inspector, under Parameter Form Window, set the Number of Pages property to the maximum number of pages that the Parameter Form can span.

REP-00540
The page size is too small for the default Parameter Form.

Category:
Other

Cause:
The current Form Width and Form Height settings are too small for the default Parameter Form.

Action:
Increase the size of the Parameter Form pages in the Report Property Inspector by changing Form Width and Form Height. Alternatively, select Tools>Default Parameter Form to default the Parameter Form and reduce its size by editing it in the Parameter Form editor.

REP-00541
The source must be a report.

Category:
Other

Cause:
For Reports Runtime, Converter, or Tools>File Conversion, something other than a report was specified as the source. These operations all require a report as their source.

Action:
Specify a report as the source for the operation.

REP-00542
No date masks have been specified as preferences.

Category:
Other

Cause:
While in the Parameter or Field Property Inspector of a parameter/field of Type Date, the List button was selected for Input Mask or Format Mask, but no masks are specified in the Date Mask list of the Preferences tab of the Tools Options dialog box.

Action:
Enter a date format mask manually or go to the Preferences tab of the Tools Options dialog box and enter some date format masks in the Date Mask list.

REP-00543
No number masks have been specified as preferences.

Category:
Other

Cause:
While in the Parameter or Field Property Inspector of a parameter/field of Type Number, the List button was selected for Input Mask or Format Mask, but no masks are specified in the Number Mask list of the Preferences tab of the Tools Options dialog box.

Action:
Enter a number format mask manually or go to the Preferences tab of the Tools Options dialog and enter some number format masks in the Number Mask list.

REP-00544
The online help system is not available.

Category:
Other

Cause:
Online help was not found. This may have happened because the help files are not installed or because of a help system error.

Action:
Install Developer Tools during Oracle Fusion Middleware installation to install Oracle Reports Builder, which includes the Oracle Reports Online Help. Or, view the Reports Online Help on the Oracle Technology Network (OTN) at http://www.oracle.com/technology/products/reports/index.html.

REP-00545
The number must be greater than 0.

Category:
Other

Cause:
Zero (0) was entered for Page Width, Page Height, or Logical Page Size in the Report Property Inspector.

Action:
Enter a number greater than zero for Page Width, Page Height, or Logical Page Size.

REP-00546
The parameter value is invalid.

Category:
Other

Cause:
In the Runtime Parameter Form, the parameter value entered was invalid.

Action:
Retry the operation with a valid value for the parameter.

REP-00548
An error occurred initializing Oracle Toolkit.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00549
The DESTYPE value is invalid.

Category:
Other

Cause:
An attempt was made to run a report in the background (that is, BATCH=YES), but DESTYPE specified was invalid for running in the background.

Action:
Change the DESTYPE to File, Printer, Mail, or Sysout, or do not run the report with BATCH=YES.

REP-00550
The parent group name is invalid.

Category:
Other

Cause:
The name entered does not identify a valid parent group in the report being defined.

Action:
Select a group from the list of values.

REP-00551
The parent group column is invalid.

Category:
Other

Cause:
The name entered does not identify a valid parent column in the report being defined. The column specified does not exist in the parent group.

Action:
Select a column from the list of values. If the required column does not appear, add it to the SELECT statement of the parent query of the group specified in Parent Group.

REP-00552
The child column name is invalid.

Category:
Other

Cause:
The name entered does not identify a valid child column in the report being defined. The column specified does not exist in the query.

Action:
Select a column from the list of values. If the required column does not appear, add it to the SELECT statement of the query.

REP-00553
The condition is invalid.

Category:
Other

Cause:
The Condition entered for the query is not one of the valid choices.

Action:
Select a value from the list of values for Condition.

REP-00554
The SQL clause value is invalid.

Category:
Other

Cause:
The value entered in SQL Clause is not one of the valid choices.

Action:
Select a value from the list of values for SQL Clause: WHERE, HAVING, or START WITH.

REP-00555
START WITH is Oracle-specific SQL syntax. The report will not run against a non-Oracle database.

Category:
Other

Cause:
The START WITH clause is only available with the Oracle database, but there is no connection or a non-Oracle database connection.

Action:
Either run the report against an Oracle database or remove the START WITH clause before running it against a non-Oracle database.

REP-00556
No data links are created. No foreign key in the child query {0} refers to a primary key in the parent query {1}.

Category:
Data

Cause:
An attempt was made to create a query-to-query link but no foreign key exists in the child query.

Action:
Verify that the tables are accessible, and add the appropriate column constraints if desired.

REP-00558
The query {0} created the lexical parameter {1}.

Category:
Other

Cause:
The specified query references one or more lexical parameters that did not exist.

Action:
No action is needed. Oracle Reports Builder has already created the necessary lexical parameters.

REP-00559
The query {0} has created the bind parameter {1}.

Category:
Other

Cause:
The specified query references one or more bind parameters that did not exist.

Action:
No action is needed. Oracle Reports Builder has already created the necessary bind parameters.

REP-00560
The group name value is invalid.

Category:
Other

Cause:
The group name entered in Group is not a valid group for the column. The group specified does not exist or cannot own the column.

Action:
Create or modify the group such that it can own the column. A database column must be owned by the group associated with the query that selects it. A summary or formula column must be owned by a group that is below the groups that owns the columns being summarized in the group hierarchy (that is, the order of groups as they appear in the Data Model editor).

REP-00561
The type value is invalid.

Category:
Other

Cause:
The value entered in Type for the column was not one of the valid choices.

Action:
Select a value from the list of values for the column's Type: Formula, Summary, or Placeholder.

REP-00562
The column data type value is invalid.

Category:
Data

Cause:
The value entered in Datatype was not one of the valid choices.

Action:
Select a value from the list of values for Datatype.

REP-00563
The data type value is invalid.

Category:
Data

Cause:
The value entered in Datatype was not one of the valid choices.

Action:
Select a value from the list of values for Datatype: Ascending, Descending, or blank.

REP-00564
The file type value is invalid.

Category:
Other

Cause:
The file type value entered in Read From File was not one of the valid types.

Action:
Select a file type from the list of values for Read from File.

REP-00565
The function value is invalid.

Category:
Other

Cause:
The function entered for Function was not one of the valid choices.

Action:
Select one of the functions from the list of values.

REP-00566
The database column cannot be deleted.

Category:
Other

Cause:
An attempt was made to delete a column with a Type of Database.

Action:
Remove the column from the SELECT list of the query that selects it and the column will be deleted automatically.

REP-00567
The summary source value is invalid.

Category:
Other

Cause:
The column entered in Source for the summary was not one of the valid choices. The possible causes of this error include the following: Case 1: The column does not exist. Case 2: The

data type of the Source is Character or Date. Numeric functions (such as Percent, Sum, or Average) require a data type of Number.

Action:
Take the following actions to correct this error: If Case 1: Select a column from the list of values for the function. If Case 2: Enter the name of another column in Source that is of data type Number.

REP-00568
The Value if Null value is invalid.

Category:
Other

Cause:
The value of Value if Null in the Column Property Inspector is invalid for that column. For example, if data type of the column is Number, and a character string was sepcified in Value if Null.

Action:
Specify a valid value for Value if Null.

REP-00569
The query is not parsable, which invalidates associated data link(s).

Category:
Other

Cause:
The query entered in query dialog is not parsable.

Action:
Modify the query and re-create data link(s).

REP-00580
The filter type value is invalid.

Category:
Other

Cause:
The value entered for Type under Filter was not one of the valid choices.

Action:
Select one of the filter types from the list of values.

REP-00581
This is the only group of query {0}, and may not be deleted.

Category:
Other

Cause:
An attempt was made to delete a group that is the only one of the query. Each query must have at least one group.

Action:
To delete the group, delete the group's query.

REP-00582
A group cannot be moved out of its query.

Category:
Other

Cause:
An attempt was made to move a group between queries. Groups can only be moved within the set of groups belonging to the same query.

Action:
Create a group similar to the one that was attempt to be moved under the other query, if possible.

REP-00583
The SQL SELECT Statement is invalid.

Category:
Other

Cause:
The SQL SELECT statement entered was not valid.

Action:
Check the SELECT statement for errors and correct them. For more information, see the SQL Language Reference Manual.

REP-00584
Lexical parameters are not permitted in external queries.

Category:
Other

Cause:
A lexical reference was made in an external query. This is not allowed.

Action:
Delete the reference altogether or, if possible, change it to a bind reference.

REP-00585
The arent group {0} for child query {1} does not exist.

Category:
Other

Cause:
A query was deleted without deleting references to its groups in data links. This usually happens when a query is deleted without cascading the deletion to its associated objects.

Action:
Update the data link in the child query.

REP-00586
Adding this data link will create a cycle.

Category:
Data

Cause:
The group specified as the parent group for the data link is not eligible to be a parent because it is, directly or indirectly, a child of the query to which it is linked.

Action:
If possible, move the group such that it is not a child of the query and therefore eligible to be its parent group.

REP-00587
The PL/SQL group filter condition value is invalid.

Category:
Other

Cause:
Condition was selected for Filter Type, but no PL/SQL condition was entered.

Action:
Enter the PL/SQL or change the Filter Type.

REP-00588
The PL/SQL column formula value is invalid.

Category:
Other

Cause:
Formula was selected as the column's Type, but no PL/SQL for the formula was entered.

Action:
Create a formula or change the column's Type.

REP-00590
Only {0} pages were formatted. The last page is shown.

Category:
Other

Cause:
In the Previewer, an attempt was made to go to a page number that is larger than the total number of pages formatted.

Action:
No action is needed. Do not attempt scroll down from the last page of the report.

REP-00591
The first page is already shown.

Category:
Other

Cause:
In the Previewer, First was selected on the first page of the report.

Action:
No action is needed. Do not attempt to scroll up from the first page of the report.

REP-00592
The last page is already show.

Category:
Other

Cause:
In the Previewer, Last was selected on the last page of the report.

Action:
No action is needed. Do not attempt to scroll down from the last page of the report.

REP-00593
Page {0} is the current page.

Category:
Other

Cause:
In the Previewer, the page number of the current page was entered.

Action:
Enter a different page number and select Go To.

REP-00594
No report output is generated.

Category:
Other

Cause:
The report generated no output.

Action:
Check the accompanying messages for errors in the data model and layout. If the problem persists, contact Oracle Support Services for assistance.

REP-00595
The report definition was modified. Rerunning report.

Category:
Other

Cause:
A report was run and while its output was still in the Previewer, the report definition was modified. The report is rerun to reflect the most recent changes

Action:
Save the changes, close the Previewer, and run the report again.

REP-00596
A page number cannot be greater than {0} or less than 1.

Category:
Other

Cause:
An invalid value was entered for the Page Number setting on the Field Property Inspector for a Parameter Form field. The most likely cause is that values entered were zero, a negative number, or a number that is larger than the largest allowable value.

Action:
Enter a number within the range shown in the message.

REP-00597
This operation is invalid, since it moves objects out of bounds.

Category:
Other

Cause:
An attempt was made to move editor objects in such a way that they would be off the screen.

Action:
Retry the operation so that it will not move objects off the screen.

REP-00598
The anchor end point is out of the boundary of the object.

Category:
Other

Cause:
In moving an anchor, the end point was moved off of the boundary of the object it anchors.

Action:
Move the anchor such that its endpoint is still on the boundary of the object.

REP-00599
This text boilerplate is not editable.

Category:
Other

Cause:
An attempt was made to edit the text of a file link text boilerplate object while it was displayed in the Paper Layout view.

Action:
To edit the text of a file link text boilerplate object, exit the report and edit the file containing the boilerplate text using a text editor.

REP-00600
No list of values is available for this field.

Category:
Other

Cause:
An attempt was made to access a list of values for the current field when none is available.

Action:
No action necessary.

REP-00601
The list of values for this field is empty.

Category:
Other

Cause:
An attempt was made to select from a list of values and the list of values has no values. In order for some lists of values to contain values, another part of the report must be built first. For example, if a list of values is made up solely of column names and the data model is not complete, this error may display.

Action:
Build the report fully. If the error persists, contact Oracle Support Services.

REP-00602
The accessible tables cannot be queried.

Category:
Other

Cause:
The dictionary view of accessible tables is not present or not available.

Action:
See the system administrator.

REP-00603
Table {0} cannot be described.

Category:
Other

Cause:
The dictionary view of accessible tables is not present or not available.

Action:
See the system administrator.

REP-00604
The SELECT statement cannot be built.

Category:
Other

Cause:
The Table and Columns Names dialog box was accepted without anything selected with which to build the SELECT statement.

Action:
Select a table and, if desired, columns or the SELECT columns FROM table option, and then accept the dialog box. To exit the dialog box without building a SELECT statement, click Close.

REP-00606
Link file {0} cannot be read.

Category:
Other

Cause:
Case 1: The file specified in the Source Filename property for the file link boilerplate object cannot be found or its format does not match that specified in the File Format property. Case 2: The REPORTS_DEFAULT_DISPLAY environment variable is set to YES and the image format used is not supported.

Action:
Take the following actions to correct this error: If Case 1: Verify that the file is stored in the specified directory under the specified name, and that it is saved in the specified format. If it is not, change the directory, file name, or format as appropriate. If Case 2: Verify that the image format is one of the supported formats: GIF, JPEG, JPG, PNG, BMP.

REP-00607
Run-only file {0} may not be opened.

Category:
Other

Cause:
An attempt was made to open a runfile (extension .rep). Runfiles cannot be opened, they can only be executed.

Action:
Open the report definition that is associated with the .rep file. It should have an extension of .rdf.

REP-00608
The Source Type is invalid.

Category:
Other

Cause:
Convert was selected from the File menu and the Source Type specified is not valid.

Action:
Select a valid Source Type from the list of values.

REP-00609
The Destination Type is invalid.

Category:
Other

Cause:
Convert was selected from the File menu and the Destination Type specified is not valid.

Action:
Select the Destination Type from the list of values.

REP-00610
An error occurred while attempting to print the screen. Verify that log file {0} is accessible.

Category:
Other

Cause:
Oracle Reports Builder attempted to write the contents of the screen to the file printdef.dat but could not locate the file.

Action:
To determine the proper location for printdef.dat, see the installation instructions.

REP-00611
The Destination Type value is not valid.

Category:
Other

Cause:
In the Runtime Parameter Form, the value provided for Destination Type that was not valid.

Action:
Specify a value of Screen, File, Printer, or Mail for Destination Type.

REP-00612
The date mask value is invalid.

Category:
Other

Cause:
The date mask entered does not correspond to any of the valid date masks.

Action:
Verify the date mask format. For more information, see the date and time format mask information in the Building Reports manual.

REP-00613
The Format Mask value does not match mask {0}.

Category:
Other

Cause:
The mask entered in Format Mask is not a valid mask. The possible causes of this error include the following: Case 1: The string entered as a mask contained invalid characters. Case 2: A number format mask was entered for a field with data type of Character.

Action:
Take the following actions to correct this error: If Case 1: Select a value from the list of values. For more information, see the date and time format mask information in the Building Reports manual. If Case 2: Change the data type of the field to be Number, if possible. If the field is supposed to be Character data type and cannot be changed, a format mask cannot be specified for it.

REP-00614
There is no window active for the Find and Replace action.

Category:
Other

Cause:
A Find and Replace operation was attempted using the Find And Replace dialog box, but the cursor was not positioned in an active Oracle Reports Builder window.

Action:
Position the cursor in a text entry field before performing a Find and Replace operation.

REP-00615
Find and Replace is valid only for a text entry field.

Category:
Other

Cause:
A Find and Replace operation was attempted using the Find And Replace dialog box, but the cursor was not positioned positioned in a text entry field. Find and Replace operations are valid only in text entry fields.

Action:
Position the cursor in a entry field before performing a Find and Replace operation.

REP-00616
Text cannot be replaced in an uneditable region.

Category:
Other

Cause:
Using the Find And Replace dialog box, text replacement was attempted in an inaccessible field.

Action:
Replace text only in editable regions.

REP-00617
The Runtime Parameter Form is already open. To run a new one, close the old one and run again.

Category:
Other

Cause:
An attempt was made to run a report with the Runtime Parameter Form already open.

Action:
Close the currently open Runtime Parameter Form and try running again.

REP-00619
A report cannot be run without a layout.

Category:
Other

Cause:
An attempt was made to run the report with no layout.

Action:
Create a layout, then run the report.

REP-00621
The Vertical Elasticity value is invalid.

Category:
Other

Cause:
The value entered for the object's Vertical Elasticity was not one of the valid values.

Action:
Select a value from the list of values.

REP-00622
The Horizontal Elasticity value is invalid.

Category:
Other

Cause:
The value entered for the object's Horizontal Elasticity was not one of the valid values.

Action:
Select a value from the list of values.

REP-00623
The Print Condition Type value is invalid.

Category:
Other

Cause:
The value entered for the Type of the Print Condition was not one of the valid values.

Action:
Select a value from the list of values.

REP-00624
The Print Condition Object value is invalid.

Category:
Other

Cause:
The value entered for the Object of the Print Condition was not one of the valid values.

Action:
Select a value from the list of values.

REP-00625
The Text Alignment value is invalid.

Category:
Other

Cause:
The value entered for Alignment was not one of the valid values. The value is not valid given the data type of the object. Flush/Left, Flush/Center, and Flush/Right are only valid for fields with data type of Character.

Action:
Select a value from the list of values.

REP-00626
The coordinate position value is invalid.

Category:
Other

Cause:
The x or y coordinate entered was not in the valid range for coordinates. Coordinates cannot be negative numbers.

Action:
Enter a coordinate that is in the valid range.

REP-00627
The object height or width must be a positive integer.

Category:
Other

Cause:
The Width or Height value entered was not a positive, whole number.

Action:
Enter a positive, whole number.

REP-00630
The value must be between {0} and {1}.

Category:
Other

Cause:
The number entered was too large or too small.

Action:
Specify a number that is within the range shown in the message.

REP-00631
The string must be no longer than {0} characters.

Category:
Other

Cause:
The string entered was too large.

Action:
Enter a string that is smaller than the number of characters shown in the message.

REP-00632
The value already exists in the list.

Category:
Other

Cause:
An attempt was made to add an item to a list, but the item was previously added to the list. For example, if an attempt was made to add lib1 to the report's Attached PL/SQL Library list, when lib1 was already found in the Attached PL/SQL Library list, this error displays.

Action:
Once an item has been added to a list, do not attempt to add it again.

REP-00633
No value is specified.

Category:
Other

Cause:
An attempt was made to perform a list operation on an item, but no item was specified. For example, if an attempt was made to add a PL/SQL library to the report's Attached PL/SQL Library list, but the PL/SQL Library field in the Attached PL/SQL Libraries dialog box was left blank and the Add button selected, this error displays.

Action:
Specify the item to add in the appropriate field before choosing a button.

REP-00634
The destination name must be shorter than {0} characters.

Category:
Other

Cause:
The destination specified (probably a file name) was too long.

Action:
Specify a destination that it is of valid length.

REP-00635
The value does not exist in the list.

Category:
Other

Cause:
The value specified was not in the list of valid choices.

Action:
Specify one of the valid choices in the list. If possible, use the list of values to ensure that it is a valid choice.

REP-00636
Property name {0} must be no longer than {1} characters. It will be truncated.

Category:
Other

Cause:
The string specified was longer than is allowable. It will be truncated.

Action:
Specify a shorter string.

REP-00637
Property name {0} must be no longer than {1} characters.

Category:
Other

Cause:
The file name specified was longer than is allowable.

Action:
Specify a shorter file name.

REP-00639
Set a valid DISPLAY value when REPORTS_DEFAULT_DISPLAY is set to NO.

Category:
Other

Cause:
REPORTS_DEFAULT_DISPLAY was set to NO and DISPLAY variable was not set.

Action:
Specify a valid value for DISPLAY when REPORTS_DEFAULT_DISPLAY is set to NO.

REP-00640
The field source value is invalid.

Category:
Other

Cause:
The Source value specified was invalid.

Action:
Select a value from the list of values.

REP-00650
The source group value is invalid.

Category:
Other

Cause:
The group name specified in Source for the repeating frame was invalid.

Action:
Select a value from the list of values.

REP-00651
The Print Direction value is invalid.

Category:
Other

Cause:
The Print Direction specified was not one of the valid values (Across, Across/Down, Down, Down/Across, and Matrix Cell).

Action:
Select a value from the list of values.

REP-00652
The Vertical Spacing value is invalid.

Category:
Other

Cause:
The Vertical Spacing specified was not a valid value.

Action:
Enter zero or a positive integer for Vertical Spacing.

REP-00653
The Horizontal Spacing value is invalid.

Category:
Other

Cause:
The Horizontal Spacing specified was not a valid value.

Action:
Enter zero or a positive integer for Horizontal Spacing.

REP-00654
The Maximum Records per Page value is invalid.

Category:
Other

Cause:
The Maximum Records per Page specified was not a valid value.

Action:
Enter blank or a positive integer for Maximum Records per Page.

REP-00655
The Minimum Widow Records value is invalid.

Category:
Other

Cause:
The Minimum Widow Records specified was not a valid value.

Action:
Enter blank or a positive integer for Minimum Widow Records.

REP-00660
The button source value is invalid.

Category:
Other

Cause:
Multimedia Column was selected as the source for the button action, but the source column was either not specified or invalid.

Action:
Specify a valid source column for the button action, containing sounds, video, or images.

REP-00661
The button source value is invalid.

Category:
Other

Cause:
Multimedia File was selected as the source for the button action, but the source file was either not specified or invalid.

Action:
Specify a valid source file for the button action, containing sounds, video, or images.

REP-00662
The button icon value is invalid.

Category:
Other

Cause:
Icon was selected as the button face, but the icon name was invalid.

Action:
Enter the name of a valid icon file in the text field provided. Include all necessary path information.

REP-00670
The boilerplate type value is invalid.

Category:
Other

Cause:
The Type specified for the boilerplate was not one of the valid values.

Action:
Select a Type from the list of values: Box, Line, Graphic, and Text.

REP-00671
The link file name value is invalid.

Category:
Other

Cause:
The file to which the file link boilerplate object was linked is not a valid file.

Action:
In the Property Inspector for the File Link boilerplate object, check that the Source Filename property is set to an existing file in the current directory.

REP-00672
The Minimum Widow Lines value is invalid.

Category:
Other

Cause:
The Minimum Widow Lines specified was not a valid value.

Action:
Enter blank or a positive integer for Minimum Widow Lines.

REP-00680
The anchoring object name value is invalid.

Category:
Other

Cause:
The object name entered in the Anchored To field of the Anchor Position dialog box was not the name of an object to which this object can be anchored.

Action:
Select an object name for Anchored To from the list of values.

REP-00681
The Edge value is invalid.

Category:
Other

Cause:
The Edge specified was not one of the valid values (Top, Left, Right, and Bottom).

Action:
Select a value for Parent Edge or Object Edge from the list of values.

REP-00682
The anchor point must be a percentage between 0 and 100.

Category:
Other

Cause:
The % specified was not in the valid range (0 to 100).

Action:
Enter a value in the valid range for %.

REP-00690
The starting page number value is invalid.

Category:
Other

Cause:
Start At was left blank.

Action:
Enter zero or a positive integer for Start At.

REP-00691
The page increment value is invalid.

Category:
Other

Cause:
Increment By was blank.

Action:
Enter zero or a positive whole number for Increment By.

REP-00692
The page number reset value is invalid.

Category:
Other

Cause:
Reset At was left blank.

Action:
Select a repeating frame name or &Report from the list of values to indicate where to reset the page number to its Start At value.

REP-00700
The color value is invalid.

Category:
Other

Cause:
The color specified was not one of the valid choices.

Action:
Select a color for the field from the list of values.

REP-00701
The pattern value is invalid.

Category:
Other

Cause:
The pattern specified was not one of the valid choices.

Action:
Select a pattern for the field from the list of values.

REP-00702
The pen width value is invalid.

Category:
Other

Cause:
The pen width specified was not one of the valid choices.

Action:
Select a pen width from the list of values.

REP-00703
The font value is invalid.

Category:
Other

Cause:
The font specified was not one of the valid choices.

Action:
Select a font from the list of values.

REP-00704
The text style value is invalid.

Category:
Other

Cause:
The text style specified was not one of the valid styles.

Action:
Select one of the styles from the list of values.

REP-00705
The text weight value is invalid.

Category:
Other

Cause:
The text weight specified was not one of the valid weights.

Action:
Select one of the weights from the list of values.

REP-00706
The text size value is invalid.

Category:
Other

Cause:
The point size specified was not one of the valid choices.

Action:
Select a valid point size from the list of values.

REP-00707
The text spacing value is invalid.

Category:
Other

Cause:
The spacing value specified was not in the valid range.

Action:
Enter a number in the valid range.

REP-00708
The character mode attribute value is invalid.

Category:
Other

Cause:
The character mode attribute specified was not valid. The values specified in Character Mode Attribute must be defined in the printer definition. To have these attributes appear in the list of values, they must also be listed in VISUAL_PREFS in the preferences file.

Action:
Select the desired values from the list of values. If the desired value is not in the list of values, check the printer definition to verify if the value is a valid one.

REP-00709
Sysout is only valid in batch mode.

Category:
Other

Cause:
Sysout was specified as the destination type when not running the report in batch mode. The possible causes of this error include the following: Case 1: Sysout was specified for DESTYPE in the Runtime Parameter Form. Case 2: Sysout was specified as the Initial Value for DESTYPE and was accepted when not running in batch mode. This may occur inadvertently when the Hide Parameter Form preference is checked.

Action:
Take the following actions to correct this error: If Case 1: Run the report again, but enter a DESTYPE of something other than Sysout unless running in batch mode. If Case 2: Change the Initial Value for DESTYPE to something else or change the DESTYPE to something other than Sysout in the Runtime Parameter Form. If the Initial Value is left as Sysout, do not run in non-batch mode with Hide Parameter Form checked.

REP-00710
The printer description file cannot be found.

Category:
Other

Cause:
Oracle Reports Builder could not find the printer description file specified for DESFORMAT.

Action:
Specify a valid printer description file for DESFORMAT (for example, dflt).

REP-00711
The destination type must be File, Printer, or Mail when printing from the Previewer.

Category:
Other

Cause:
The Print button was selected in the Previewer, but DESTYPE was restricted to a value other than File, Printer, or Mail.

Action:
Ensure that DESTYPE can be set to one of the valid values before attempting to print from the Previewer.

REP-00712
No printer is specified.

Category:
Other

Cause:
An attempt was made to print a report, without a printer name specified in either DESNAME or in the Printer Chooser dialog box.

Action:
Specify a valid printer name using DESNAME. If the same printer is often used, enter the printer name in the Printer Chooser dialog box. Remember that entering a printer name using DESFORMAT will override the printer name set in the Printer Chooser dialog box.

REP-00713
The printer name {0} specified by parameter {1} is invalid.

Category:
Other

Cause:
An attempt was made to generate a report, without a valid printer name specified in DESFORMAT (if DESTYPE was File or Mail) or DESNAME (if DESTYPE was Printer).

Action:
Specify a valid printer name for DESFORMAT if DESTYPE was File or Mail, or a valid printer name for DESNAME if DESTYPE was Printer.

REP-00714
The mail destination value is invalid.

Category:
Other

Cause:
An attempt was made to mail report output to another user, but did not specify a valid username for DESNAME.

Action:
Specify a valid username for DESNAME.

REP-00715
A trace file must be specified when tracing.

Category:
Other

Cause:
Trace mode or trace options were specified without specifying a trace file.

Action:
Specify a trace file.

REP-00716
The option specified for tracing is invalid.

Category:
Other

Cause:
Invalid trace options were specified.

Action:
Respecify trace options. For more information about trace options, see the Publishing Reports to the Web manual.

REP-00717
Options cannot be set or unset if not tracing.

Category:
Other

Cause:
An attempt was made to set or unset trace options while not tracing.

Action:
Begin tracing before attempting to set or unset options.

REP-00718
Trace break information cannot be traced with Reports Runtime.

Category:
Other

Cause:
An attempt was made to trace breaks while running the report using Reports Runtime.

Action:
Do not specify the Break option when using Reports Runtime.

REP-00719
Trace file {0} can be written to.

Category:
Other

Cause:
A trace file was specified that does not have write permission.

Action:
Verify the trace file name is valid.

REP-00720
The repeating frame value is invalid.

Category:
Other

Cause:
The repeating frame specified as the Vertical or Horizontal Frame in the Matrix Property Inspector is not valid.

Action:
Select a repeating frame name from the list of values.

REP-00721
The cross product group value is invalid.

Category:
Other

Cause:
The group entered for Cross Product Group in the Matrix Property Inspector is not valid.

Action:
Select a group name from the list of values.

REP-00723
Uncompiled program units exist, possibly due to no connection to the database.

Category:
Other

Cause:
An attempt was made to convert a report or load an old report, containing PL/SQL which needed to be recompiled.

Action:
Load the report using Oracle Reports Builder, connect to database, and recompile the DE program units.

REP-00724
The value of column {0} cannot be retrieved.

Category:
Other

Cause:
An attempt was made to get the value of the specified column by either issuing a command from the command line of the PL/SQL Interpreter or by executing a stand-alone PL/SQL program unit. A column value can only be retrieved during report execution.

Action:
Do not attempt to use the PL/SQL Interpreter or a PL/SQL program unit to get the value of a column when the report has suspended execution (for example, at a breakpoint). Use an alternate method, such as one of the report-level triggers, to obtain the column value.

REP-00725
The value of column {0} cannot be set.

Category:
Other

Cause:
An attempt was made to set the value of the specified column by either issuing a command from the command line of the PL/SQL Interpreter or by executing a stand-alone PL/SQL program unit. A column value can only be set during report execution.

Action:
Do not attempt to use the PL/SQL Interpreter or a PL/SQL program unit to set the value of a column when the report has suspended execution (for example, at a breakpoint). Use an alternate method, such as one of the report-level triggers, to set the column value.

REP-00726
The value of parameter {0} cannot be retrieved.

Category:
Other

Cause:
An attempt was made to get the value of the specified parameter by either issuing a command from the command line of the PL/SQL Interpreter or by executing a stand-alone PL/SQL program unit. A parameter value can only be retrieved during Parameter Form execution.

Action:
Do not attempt to use the PL/SQL Interpreter or a PL/SQL program unit to get the value of a parameter when the report has suspended execution (for example, at a breakpoint). Use an alternate method, such as one of the report-level triggers, to obtain the parameter value.

REP-00727
The value of parameter {0} cannot be set.

Category:
Other

Cause:
An attempt was made to set the value of the specified parameter by either issuing a command from the command line of the PL/SQL Interpreter or by executing a stand-alone PL/SQL program unit. A parameter value can only be set during Parameter Form execution.

Action:
Do not attempt to use the PL/SQL Interpreter or a PL/SQL program unit to set the value of a parameter when the report has suspended execution (for example, at a breakpoint). Use an alternate method, such as one of the report-level triggers, to set the parameter value.

REP-00728
Column {0} may not be referenced by parameter triggers.

Category:
Other

Cause:
An attempt was made to reference a column in a parameter-related trigger (Before Form, After Form, Validation), which is not allowed.

Action:
Remove the references from the parameter-related triggers and add them to the Before Report trigger.

REP-00729
The program unit {0} of size {1} bytes is too big to be loaded for the current platform at the limit of {2}.

Category:
Other

Cause:
The program unit was created on another operating platform and it too large to be loaded into the current operating platform.

Action:
Reduce the size of the PL/SQL program unit.

REP-00730
The bind variable is not defined.

Category:
Other

Cause:
A bind reference was made to a parameter or column that has not been defined yet.

Action:
Create the parameter definition or column before making a bind reference to it. Or, attempt to use a lexical reference rather than a bind reference.

REP-00732
An error occurred destroying the program unit.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00733
The specified name already exists.

Category:
Other

Cause:
An attempt was made to create a PL/SQL subprogram whose name is identical to an existing subprogram stored in the report.

Action:
Rename the new subprogram so that it does not conflict with any existing subprograms.

REP-00734
No argument is allowed.

Category:
Other

Cause:
The PL/SQL function or procedure entered requires arguments in a PL/SQL field that does not allow PL/SQL with arguments--for example, in a Format Trigger field, a Formula field, or as a group filter.

Action:
Remove the arguments from the PL/SQL source.

REP-00735
Program unit cannot be loaded.

Category:
Other

Cause:
Oracle Reports Builder could not load the entire program unit. It could be that the program unit references one or more objects stored in the database, but these objects were not found.

Action:
Verify the connection to the correct database, and ensure that the program unit is making the correct references.

REP-00736
Uncompiled program units exist.

Category:
Other

Cause:
An attempt was made to convert a report, or load an old report, containing PL/SQL that needed to be recompiled.

Action:
Load the report using Oracle Reports Builder and modify the program units.

REP-00737
The return type {0} is invalid.

Category:
Other

Cause:
The PL/SQL entered does not have the appropriate return type.

Action:
Change the return type of the function to the one specified in the message.

REP-00738
A function is required.

Category:
Other

Cause:
Something other than a function was entered where a function is required.

Action:
Enter a function.

REP-00739
Compiled PL/SQL from other platform cannot be executed.

Category:
Other

Cause:
An attempt was made to run a report on a platform that is not the same as the platform on which the PL/SQL in the report was compiled. The report does not contain the PL/SQL source and, as a result, Oracle Reports Builder could not recompile the PL/SQL on the current platform.

Action:
Run the report on the original platform where the PL/SQL was compiled. Alternatively, obtain a copy of the source report with the source PL/SQL and recompile it from the current platform.

REP-00740
An anchor cannot be anchored with another object.

Category:
Other

Cause:
An attempt was made to anchor an anchor to another layout object, or anchor a layout object to an anchor.

Action:
Remove any anchors of anchors with other layout objects.

REP-00741
A matrix cannot be anchored with another object.

Category:
Other

Cause:
An attempt was made to anchor a matrix object to another layout object, or anchor a layout object to a matrix object.

Action:
Remove any anchors of matrix objects with other layout objects.

REP-00742
A margin cannot be anchored with another object.

Category:
Other

Cause:
An attempt was made to anchor the margin to a layout object, or anchor a layout object to the margin.

Action:
Remove any anchors of the margin to layout objects.

REP-00743
A matrix repeating frame cannot be anchored with another object.

Category:
Other

Cause:
An attempt was made to anchor a matrix repeating frame with a Print Direction of Down or Across to another layout object.

Action:
Remove any anchors of matrix repeating frames with Print Directions of Down or Across to other layout objects.

REP-00744
An anchor must have different parent and child objects.

Category:
Other

Cause:
An attempt was made to create an anchor whose parent and child objects are the same; that is, anchor an object to itself.

Action:
Ensure that all anchors have different parent and child objects.

REP-00745
An object cannot be anchored more than once.

Category:
Other

Cause:
An attempt was made to create two anchors between the same two layout objects.

Action:
Ensure that only one anchor exists between the same two layout objects.

REP-00746
The PL/SQL references an object that does not exist.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00747
A Before Form trigger cannot reference a report column.

Category:
Other

Cause:
The Before Form trigger for the report references a column in the report, which is not allowed.

Action:
Remove any column references from the Before Form trigger. To set the value of a column, do it from the Before Report trigger.

REP-00748
A parameter trigger cannot reference a report column.

Category:
Other

Cause:
A Validation trigger for a parameter references one or more columns in the report, which is not allowed.

Action:
Remove any column references in the Validation trigger of the Parameter Property Inspector.

REP-00749
An After Form trigger cannot reference a report column.

Category:
Other

Cause:
The After Form trigger for the report references a column in the report, which is not allowed.

Action:
Remove any column references in the After Form trigger. To set the value of a column, do it from the Before Report trigger.

REP-00750
An error occurred closing the PL/SQL library.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00751
An error occurred accessing program units from PL/SQL library.

Category:
Other

Cause:
An abnormal condition was encountered. To save changes made to the PL/SQL library, consider saving it under a different name.

Action:
For assistance, contact Oracle Support Services.

REP-00752
The PL/SQL library cannot be saved.

Category:
Other

Cause:
An abnormal condition was encountered. To save changes made to the PL/SQL library, consider saving it under a different name.

Action:
For assistance, contact Oracle Support Services.

REP-00753
An error occurred attaching PL/SQL library {0}.

Category:
Other

Cause:
An attempt was made to attach an invalid PL/SQL library. This could happen because the PL/SQL library is corrupted, or because the file or object specified does not contain a PL/SQL library.

Action:
Verify that the file or object specified contains a valid PL/SQL library.

REP-00754
An error occurred inserting program units into a PL/SQL library.

Category:
Other

Cause:
An attempt was made to save a program unit into a corrupted PL/SQL library, or a file or object that is not a PL/SQL library.

Action:
Verify the file or object specified contains a valid PL/SQL library and consider saving the current program unit.

REP-00755
An error occurred opening PL/SQL library {0}.

Category:
Other

Cause:
An attempt was made to open a corrupted PL/SQL library, or a file or object that is not a PL/SQL library.

Action:
Verify that the file or object contains a valid PL/SQL library.

REP-00756
PL/SQL library {0} cannot be found.

Category:
Other

Cause:
An attempt was made to attach a PL/SQL library that does not exist, or to open a report with one or more attached PL/SQL libraries that were not found.

Action:
Verify that the file or object exists. If the object is a report, reattach the PL/SQL library.

REP-00757
The external location spec cannot be created.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00758
PL/SQL library {0} is already in use.

Category:
Other

Cause:
An attempt was made to attach a PL/SQL library that has the same name as another PL/SQL library that is already attached. This could happen if a file was renamed that contains a PL/SQL library, but the internal name recognized by Oracle Reports Builder was not changed.

Action:
Save the PL/SQL library under a different name.

REP-00759
One or more PL/SQL libraries have been modified since the report was saved; the PL/SQL will be recompiled.

Category:
Other

Cause:
An attempt was made to open or run a report that references one or more PL/SQL libraries, and part or all of the PL/SQL has been modified but not compiled since the report was last saved.

Action:
No action is necessary; Oracle Reports Builder will recompile the PL/SQL.

REP-00760
A print document session is currently in process.

Category:
Other

Cause:
From the File menu, Administration Report was already selected to produce a report on one or more reports.

Action:
Finish producing the current report on reports, then try again to run another report on reports.

REP-00761
The resource for printing the report cannot be opened.

Category:
Other

Cause:
Oracle Reports Builder cannot open the reports that document other reports for printing.

Action:
Verify that the reports that document other reports (shipped with Oracle Reports Builder) are located in the proper directory. For details on the exact location of these reports, see the installation instructions.

REP-00762
The user ID for the interoffice login is invalid.

Category:
Other

Cause:
An attempt was made to save report output to the interoffice repository, but a valid connect string was not specified for the interoffice document server.

Action:
Specify a valid connect string for the interoffice document server.

REP-00763
The interoffice client {0} cannot be launched.

Category:
Other

Cause:
An attempt was made to launch the interoffice client, but it failed to run.

Action:
Verify that the interoffice client is properly installed.

REP-00764
Error {0} occurred running the interoffice client.

Category:
Other

Cause:
The interoffice client was running to check in the documents into repository, but it failed on the indicated error code.

Action:
Check the interoffice error code/message for the reason of failure.

REP-00769
Sending to mail from the Parameter Form when the Paper Design view is open is invalid.

Category:
Other

Cause:
The Paper Design is open and destype is set to mail.

Action:
Select mail directly from the Paper Design view and not from the Parameter Form.

REP-00770
The Before Form trigger failed.

Category:
Other

Cause:
The Before Form trigger in the report returned false.

Action:
Make the appropriate changes (either to the PL/SQL source in the Before Form trigger or to the report) to make the trigger return true.

REP-00771
The After Form trigger failed.

Category:
Other

Cause:
The After Form trigger in the report returned false.

Action:
Make the appropriate changes (either to the PL/SQL source in the After Form trigger or to the report) to make the trigger return true.

REP-00772
Parameter Form Fields {0} and {1} may not have the same Source.

Category:
Other

Cause:
The same Source was specified for two Parameter Form fields. Fields on the Runtime Parameter Form must have unique sources.

Action:
Change the Source of one of the fields.

REP-00773
No Source was specified for Parameter Form Field {0}.

Category:
Other

Cause:
A Source was not specified for a Parameter Form field or the source parameter was deleted from the data model. Fields on the Runtime Parameter Form must have a source.

Action:
Specify a valid Source for the Parameter Form field.

REP-00774
No selectable values are available for LOV parameter {0}.

Category:
Other

Cause:
Either no values were specified for the LOV parameter's select list, or values were specified that cannot be selected.

Action:
Check the SELECT statement or selectable value list of the parameter to ensure that the specified values are selectable.

REP-00775
The data type of the first column of the SELECT statement does not match the data type of LOV parameter {0}.

Category:
Data

Cause:
The data type of the first column specified in the SELECT statement does not match the data type specified for the LOV parameter.

Action:
Check the data type of the LOV parameter, the SELECT statement, and the columns in the database tables accessed by the SELECT statement to ensure that they match.

REP-00776
There are columns with values in segmented memory when populating LOV parameter {0}. They will be ignored.

Category:
Memory

Cause:
Columns were selected with values in segmented memory for the LOV parameter's select list, which is not allowed.

Action:
Select different columns or move the column values.

REP-00777
There are columns whose types cannot be handled when populating LOV parameter {0}. They will be ignored.

Category:
Other

Cause:
Columns were selected whose types cannot be handled (for example, binary data).

Action:
Select different columns.

REP-00778
Some columns cannot be formatted correctly when populating LOV parameter {0}. They will be ignored.

Category:
Other

Cause:
The SELECT statement selecting values for the parameter's LOV retrieves columns whose values cannot be formatted according to their datatypes.

Action:
Convert the values to valid ones or check the database to see if the values of the columns are valid.

REP-00779
Some items of LOV parameter {0} are too long. These items will be truncated.

Category:
Other

Cause:
The items specified or columns selected contain some values that are too long to include in the LOV parameter's select list.

Action:
Check the values of the items and reduce their length if necessary.

REP-00780
The initial value entered is invalid against the input mask {0}.

Category:
Other

Cause:
The value entered in the Initial Value field violates the mask specified in the Input Mask field.

Action:
Either enter a different value in Initial Value or change the mask in Input Mask.

REP-00781
Bind variables are not allowed in the SELECT statement.

Category:
Other

Cause:
Bbind variables were included in the SELECT statement.

Action:
Remove the bind variables from the SELECT statement.

REP-00782
The data type of the parameter does not match the data type of its source columns.

Category:
Data

Cause:
The column selected has an invalid data type to furnish values for the LOV parameter's select list.

Action:
Change the column's data type or specify a different column.

REP-00783
The possible values list has bad syntax.

Category:
Other

Cause:
Incorrect syntax was specified to create the list of possible values for the LOV parameter.

Action:
Edit the possible values list to ensure that it is a proper comma-separated list.

REP-00784
A possible value has invalid width.

Category:
Other

Cause:
A value specified for the LOV parameter's list of possible values has an invalid width.

Action:
Edit the possible values list so that all possible values have valid widths, or alter the width.

REP-00785
A possible value is invalid against the input mask.

Category:
Other

Cause:
A value specified for the LOV parameter's list of possible values is not formatted in accordance with the specified input mask.

Action:
Edit the possible values list to ensure that all possible values are valid against the input mask.

REP-00786
The initial value is not among the possible values.

Category:
Other

Cause:
The initial value specified for the LOV parameter does not appear on the defined list of possible values.

Action:
Add the initial value specified to the possible values list.

REP-00787
The name of the first column of LOV parameter {0}'s select statement is not the same at runtime as design time.

Category:
Other

Cause:
There is a discrepancy between the columns specified in the original SELECT statement and what the tables in question now contains.

Action:
Check the database to determine if the tables in question have been updated since the parameter list was created, or reapply the LOV parameter's SELECT statement.

REP-00788
The value of restricted LOV parameter {0} is not among the selectable values.

Category:
Other

Cause:
The value specified for a LOV parameter is not on the parameter's select list.

Action:
Select a value from the parameter's select list.

REP-00790
Page Width and Page Height must either both be specified or both be blank.

Category:
Other

Cause:
A blank value was specified for either Page Width or Page Height in the Runtime Settings tab of the Tools Options dialog box.

Action:
Specify a valid value for the blank setting, or make both settings blank.

REP-00800
Select All is valid only in a text entry field.

Category:
Other

Cause:
Select All was selected from the Edit menu with the cursor positioned on an element in the Property Inspector other than a text field.

Action:
While in the Property Inspector, select Edit then Select All only in a text field.

REP-00801
The layout canvas must remain large enough to fit all layout objects.

Category:
Other

Cause:
The painting region of the Paper Layout editor was reduced by changing one or more settings in the Report Properties dialog box, or by resizing the margin, but the resized painting region is not large enough to fit all of the layout objects.

Action:
Verify that all layout objects in the body, margin, header, and trailer sections of the report fit in the resized painting region.

REP-00802
The Parameter Form canvas must remain large enough to fit all Parameter Form objects.

Category:
Other

Cause:
The painting region of the Parameter Form editor was reduced by changing one or more settings in the Report Properties dialog box, but the resized painting region is not large enough to fit all of the Parameter Form objects.

Action:
Verify that all Parameter Form objects fit in the resized painting region.

REP-00803
The canvas size specified is too large.

Category:
Other

Cause:
The report contains combined settings of page/form size and either logical page, maximum body page, maximum header page, maximum footer page, or number of Parameter Form pages that results in a value larger than that supported by Oracle Reports Builder (a dpi value greater than 2 gigabytes).

Action:
Make the page/form size smaller, or decrease the value for logical page size, maximum body pages, maximum header pages, maximum footer pages, or number of Parameter Form pages.

REP-00804
The report definition was modified during the current run. Oracle Reports Builder cannot continue running the Parameter Form or report.

Category:
Other

Cause:
While in the Runtime Parameter Form, the report was modified through an editor or Property Inspector.

Action:
Cancel the Runtime Parameter Form and rerun the report.

REP-00805
Menus cannot be initialized.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00806
An error occurred reading window resources.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-00807
The array size is missing.

Category:
Other

Cause:
In the Runtime Settings dialog box, the Array Size field was left blank.

Action:
Enter an Array Size value between 1 and 9999.

REP-00808
The buffer size is missing.

Category:
Other

Cause:
In the Runtime Settings tab of the Tools Options dialog box, the Buffer Size field was left blank.

Action:
Enter a Buffer Size value between 1 and 9999.

REP-00809
The long chunk size is missing.

Category:
Other

Cause:
In the Runtime Settings tab of the Tools Options dialog box, the Long Chunk Size field was left blank.

Action:
Enter a Long Chunk Size value between 1 and 9999.

REP-00810
The Success/On Failure value is invalid.

Category:
Other

Cause:
In the character-mode Runtime Settings dialog box, On Success/On Failure specified an invalid value.

Action:
Select a valid value for On Success/On Failure: Noaction, Rollback, or Commit.

REP-00811
The Destination Type value is invalid.

Category:
Other

Cause:
In the character-mode Runtime Settings dialog, Destination Type specified an invalid value.

Action:
Select a valid value for Destination Type: <In Report Definition>, Screen, File, Printer, or Mail.

REP-00812
The Orientation value is invalid.

Category:
Other

Cause:
In the character-mode Runtime Settings dialog, Orientation specified an invalid value.

Action:
Select a valid value for Orientation: <In Report Definition>, Landscape, or Portrait.

REP-00813
The Mode value is invalid.

Category:
Other

Cause:
In the character-mode Runtime Settings dialog, Mode specified an invalid value.

Action:
Select a valid value for Mode: <In Report Definition>, Default, Bitmap, or Character.

REP-00814
The Background value is invalid.

Category:
Other

Cause:
In the character-mode Runtime Settings dialog box, Background specified an invalid value.

Action:
Select a valid value for Background: <In Report Definition>, Yes, or No.

REP-00815
The Orientation value is invalid.

Category:
Other

Cause:
In the character-mode Runtime Parameter Form, Orientation specified an invalid value.

Action:
Select a valid value for Orientation: Landscape or Portrait.

REP-00816
The Mode value is invalid.

Category:
Other

Cause:
In the character-mode Runtime Parameter Form, Mode specified an invalid value.

Action:
Select a valid value for Mode: Bitmap or Character.

REP-00817
The Background value is invalid.

Category:
Other

Cause:
In the character-mode Runtime Parameter Form, Background specified an invalid value.

Action:
Select a valid value for Background: Yes or No.

REP-00818
The page height has changed for the Parameter Form. Parameters might be crossed by page boundaries.

Category:
Other

Cause:
The height of the Runtime Parameter Form was changed in the Report Property Inspector. This might cause the page boundary to move such that it appears in the middle of an object in the Parameter Form.

Action:
Examine the layout of the Parameter Form in the Parameter Form editor and ensure that none of the objects are directly on the page boundary (the darkened line in the editor). Alternatively, default (or redefault) the Parameter Form.

REP-00819
AUTOCOMMIT ON for SQL Server connection cannot be set.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services. Another option is to remove all instances of SRW.DO_SQL. If this can be done while retaining all necessary functionality in the report, it will run.

REP-00820
cannot import specified image

Category:
Other

Cause:
The specified image cannot be imported.

Action:
Check the image file to ensure it is a valid image and has not been corrupted.

REP-00821
cannot export specified image

Category:
Other

Cause:
The specified object cannot be exported as an image.

Action:
Create or select an image to export.

REP-00822
no drawing imported

Category:
Other

Cause:
The specified drawing cannot be imported.

Action:
Check the file to ensure it is a valid drawing and has not been corrupted.

REP-00823
no drawing exported

Category:
Other

Cause:
The specified object cannot be exported as a drawing.

Action:
Create or select a drawing to export.

REP-00824
The data dictionary is not available on the connected database.

Category:
Data

Cause:
An attempt was made to access the Table and Column Names dialog box but the Data Dictionary is not available on the connected database.

Action:
Connect to another database.

REP-00825
The connected database is not Oracle or DB2. It cannot be used to store report documents.

Category:
Other

Cause:
An attempt was made to store a document to a database that is neither Oracle nor DB2, which is not allowed.

Action:
Either connect to an Oracle or DB2 database or store the document as a file.

REP-00828
Oracle Reports Builder tables are not installed in the database: cancelling report.

Category:
Other

Cause:
The report cannot be run because there are no Oracle Reports Builder tables in the database.

Action:
Inform the database administrator that the Oracle Reports Builder tables were not successfully installed in the database.

REP-00829
Oracle Reports Builder database tables are from an older version of Oracle Reports Builder ({0}): cancelling report.

Category:
Other

Cause:
Oracle Reports Builder tables in the database appear to have been installed from a previous version of the product. The report cannot run against an older version of the database tables.

Action:
Inform the database administrator that the Oracle Reports Builder tables for this version were not successfully installed in the database.

REP-00830
Oracle Reports Builder database tables appear to be corrupted or incorrectly installed: cancelling report.

Category:
Other

Cause:
The report cannot be run because the Oracle Reports Builder tables are in an unstable state.

Action:
Inform the database administrator that the Oracle Reports Builder tables are either corrupted or incorrectly installed in the database.

REP-00831
The query could not be built.

Category:
Other

Cause:
Oracle Reports Builder attempted to build a query at startup but it failed. One cause is that the database account against which the query was being built was not correct. Otherwise it is an abnormal condition.

Action:
If Oracle Reports Builder was launched from another product, check that the database connection string in the other product is correct.

REP-00900
The report cannot close while PL/SQL is still executing.

Category:
Other

Cause:
An attempt was made to close a report while associated PL/SQL was still executing.

Action:
Finish executing the PL/SQL or abort it, then close the report.

REP-00901
Tables and Columns function is not supported for this database server.

Category:
Other

Cause:
The connected database server does not have an accessible Data Dictionary to list tables and columns.

Action:
No action is needed. Tables and Columns functionality is not available for these databases.

REP-00910
The Cue Cards cannot be found. Reinstall the Cue Cards and try again.

Category:
Other

Cause:
An attempt was made to run the Cue Cards, where have not been properly installed.

Action:
Reinstall the Cue Cards.

REP-00911
The Oracle Reports page on OTN cannot be displayed. Reset the browser settings correctly.

Category:
Browser

Cause:
In the Welcome to Oracle Reports Builder dialog box, Getting Started was selected, which displays the Oracle Reports page on the Oracle Technology Network (OTN), but the browser settings are not set correctly.

Action:
1. Edit the Windows registry using a registry editor (for example, open a command prompt window and type regedit.exe). 2. Select File, then Export to back up the current registry settings. 3. Navigate to the following key: HKEY_CURRENT_USER\Software\Oracle\Toolkit\Tkbrowser. 4. Set the BrowserName and the BrowserPath values to the browser name and location. For example: BrowserName: Internet Explorer BrowserPath: C:\Program Files\Internet Explorer\iexplore.exe 5. Close the registry editor. 6. Shut down and restart Oracle Reports Builder. 7. In the Welcome to Oracle Reports Builder dialog box, select Getting Started and click OK. 8. In the Information Navigator Preferences dialog box that displays, specify the following values: - From the Browser list, select the desired browser (for example, Microsoft Internet Explorer). - In the Command to launch browser field, specify the correct path to the browser; click Browse to navigate to the correct path location. For example: C:\Program Files\Internet Explorer\iexplore.exe 9. Click OK to save the settings and display the Oracle Reports page on the Oracle Technology Network (OTN) using the specified browser.

REP-00999
Unimplemented Error:

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01010
This name does not conform to SQL naming standards.

Category:
Other

Cause:
The name entered violates one or more SQL naming conventions.

Action:
Name the object according to the appropriate naming conventions.

REP-01011
Object {0} must be named.

Category:
Other

Cause:
The Name field was left blank for the object and a name is required.

Action:
Name the object according to the appropriate naming conventions.

REP-01012
There is another {0} object with this name.

Category:
Other

Cause:
The name entered duplicates the name of another object of the same type.

Action:
Change the name of at least one of the objects.

REP-01013
This name may not be the same as a reserved word.

Category:
Other

Cause:
The name entered duplicates a reserved word.

Action:
Change the name of the parameter such that it conforms to parameter naming conventions.

REP-01014
The name length cannot exceed 30 bytes.

Category:
Other

Cause:
The name entered was greater than 30 bytes, which is the limit for SQL names.

Action:
Reduce the size of the name to 30 bytes or less.

REP-01048
Owner and Access list are not overwritten.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01049
A report saved with a newer version of Oracle Reports Builder cannot be opened.

Category:
Other

Cause:
An attempt was made to open a report with an older version of Oracle Reports Builder than the one with which the report was saved.

Action:
Use the same or a more recent version of Oracle Reports Builder to open the report.

REP-01050
Document names in the database cannot be accessed.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01051
The document cannot be saved to file {0}.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01052
The document cannot be saved to the database.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01053
A new document ID cannot be obtained from the database.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01054
Table {0} cannot be deleted from.

Category:
Other

Cause:
An attempt was made to delete from a table and the operation failed, possibly due to lack of necessary privileges.

Action:
Contact the system administrator to assign the necessary privileges to delete from the table.

REP-01055
Table {0} cannot be locked.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01056
Object stored in the database cannot be renamed.

Category:
Other

Cause:
An attempt was made to rename a database object and the operation failed, possibly due to lack of necessary privileges.

Action:
Make a copy of the object, or contact the system administrator to assign the necessary privileges to change the name.

REP-01057
File {0} is not a valid Oracle Reports Builder file.

Category:
Other

Cause:
An attempt was made to access a file that is not in the proper format for Oracle Reports Builder.

Action:
Verify that the correct file is being accessed.

REP-01058
The document cannot be read from the database.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01059
unable to read document from file {0}

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01060
Oracle Reports Builder database tables have not been installed.

Category:
Other

Cause:
Oracle Reports Builder failed to access the SRW2_MODULE view in the current database.

Action:
Verify Oracle Reports Builder was properly installed on the database. For help, contact the system administrator.

REP-01061
External file {0} cannot be read.

Category:
Other

Cause:
Read From File was activated and a file name specified as the value of a column, but Oracle Reports Builder could not successfully open or read the specified file.

Action:
Check the spelling of the specified file in the Column Property Inspector, and verif that the specified file exists. If the file does exist, check the permissions on the file for read access.

REP-01062
External query {0} cannot be found.

Category:
Other

Cause:
The possible causes of this error include the following: Case 1: REPORTS_PATH is not set. Case 2: There is no database connection. Case 3: The specified external query does not exist.

Action:
Take the following actions to correct this error: If Case 1: Set REPORTS_PATH to a valid value. If Case 2: Connect to a database. If Case 3: Specify the correct name of the external query.

REP-01063
The PL/SQL {0} has exceeded the platform specific size limit.

Category:
Other

Cause:
The PL/SQL could not be loaded because it is too large for the operating system. It may have been created on a different platform with a higher limit.

Action:
Reduce the size of the PL/SQL so it can be loaded on the platform.

REP-01064
Document {0} cannot be read.

Category:
Other

Cause:
An attempt was made to open a document whose definition, stored in either the database or the filesystem, has been lost or corrupted.

Action:
This document cannot be used.

REP-01065
External query {0} cannot be read.

Category:
Other

Cause:
An attempt was made to read an external query whose definition, stored in either the database or the filesystem, has been lost or corrupted.

Action:
This external query cannot be used.

REP-01066
Comment is corrupted and will be lost.

Category:
Other

Cause:
A storage error caused a comment to be corrupted. It will be discarded.

Action:
No action is necessary. If desired, re-create the comment in the designer.

REP-01067
Some information is missing in the report.

Category:
Other

Cause:
The report cannot be opened because the report definition is incomplete. It may have been corrupted.

Action:
If the report is stored in the database, use SQL*Plus to determine whether the Oracle Reports Builder tables have been corrupted. If the report is an .rdf file, use a file system utility to check if the file is corrupted. Take appropriate actions to recover the data.

REP-01070
An error occurred while opening or saving a document.

Category:
Other

Cause:
An error occurred while opening or saving a document.

Action:
Verify the access privileges for the document.

REP-01071
The end of an object or record scan was reached.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01072
The object cannot be found in the object store.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01073
The object was found in the object store when not expected.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01074
The object is too big.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01075
The object is invalid.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01076
The specified object store is invalid.

Category:
Other

Cause:
An attempt was made to use an invalid file or database object.

Action:
Verify that the object specified is a valid Oracle document, stored in a file or in the database.

REP-01077
The type specified for the object is invalid.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01078
A non-specific file error occurred.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01079
The function is unsupported.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01080
A unique key violation occurred.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01081
A page split occurred.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01082
A close error occurred.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01083
A file version error occurred.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01084
A file header is bad or missing.

Category:
Other

Cause:
An operation required Oracle Reports Builder to open a file. The file either did not have a header or it did not have the expected header. The header may have been changed in an editor or the file may not be compatible with this release of Oracle Reports Builder.

Action:
Attempt to fix the header in an editor, although it is not recommended that Oracle Reports Builder files be edited in this way. For assistance, contact Oracle Support Services.

REP-01085
A file create error occurred.

Category:
Other

Cause:
An operation that required Oracle Reports Builder to create a file failed, most likely due to insufficient privileges to create the file.

Action:
Obtain the necessary privileges for the file.

REP-01086
A file open read-only error occurred.

Category:
Other

Cause:
An operation that required Oracle Reports Builder to open a file failed, most likely due to insufficient privileges to open the file.

Action:
Obtain the necessary privileges for the file.

REP-01087
A file open read-write error occurred.

Category:
Other

Cause:
An operation that required Oracle Reports Builder to open a file failed, most likely due to insufficient privileges to open the file.

Action:
Obtain the necessary privileges for the file.

REP-01088
A file write error occurred.

Category:
Other

Cause:
An operation that required Oracle Reports Builder to write to a file failed, most likely due to insufficient file privileges to write to the file.

Action:
Obtain the necessary privileges for the file.

REP-01089
A file read error occurred.

Category:
Other

Cause:
An operation that required Oracle Reports Builder to read a file failed, most likely due to insufficient file privileges to read the file.

Action:
Obtain the necessary privileges for the file.

REP-01090
A file close error occurred.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01091
The disk or file system is full.

Category:
Other

Cause:
An attempt was made to save an object, but there was not enough space in which to save it.

Action:
Either delete some unnecessary files or expand the storage space.

REP-01092
A file unique key violation occurred.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01093
Allocate failed.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01094
Reallocate failed.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01095
Free failed.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01096
The document {0} is currently locked.

Category:
Other

Cause:
An attempt was made to open a document that is already opened (locked) by another user.

Action:
Wait until the other user closes the document before accessing it.

REP-01097
PRODUCT_USER_PROFILE or SYSTEM.PRODUCT_PROFILE does not exist.

Category:
Other

Cause:
The possible causes of this error include the following: Case 1: The table does not exist. Case 2: The necessary privileges to access the table are not granted.

Action:
Take the following actions to correct this error: If Case 1: If the table is not already created, create it. If Case 2: Get access to the table by creating a public synonym for the table in the PRODUCT_USER_PROFILE table, or by making the table public via the PRODUCT_USER_PROFILE table.

REP-01098
An error occurred reading PRODUCT_USER_PROFILE or SYSTEM.PRODUCT_PROFILE data.

Category:
Other

Cause:
The table is not created correctly.

Action:
Ensure that the table was created with the appropriate columns. If it was not, then modify it as necessary.

REP-01099
Files not created with Oracle Reports Builder cannot be opened.

Category:
Other

Cause:
An attempt was made to open a file that is not an Oracle Reports Builder report.

Action:
Verify that the file is an Oracle Reports Builder report.

REP-01100
The data model is invalid for this type of report.

Category:
Data

Cause:
An attempt was made to create a default layout with a layout style that does not match the data model.

Action:
Either change the data model to match the selected layout style or select a different layout style to match the data model. For more information, see the Oracle Reports online help.

REP-01101
Group {0} has an invalid repeat direction.

Category:
Other

Cause:
An attempt was made to create a default layout, but the selected layout style requires a different repeat direction for one of the groups. Some layout styles place restrictions on the repeat directions that can be selected for groups.

Action:
Either change the repeat direction to meet the layout style requirements or select a different layout style.

REP-01102
The default layout cannot fit onto page of size {0}.

Category:
Other

Cause:
Oracle Reports Builder tried to create the default layout selected but could not fit the entire layout on the page because the page is not wide enough.

Action:
If possible, increase the Page Width on the Report Property Inspector or rearrange objects such that the layout will fit on the page. Otherwise, make the report multiple pages wide.

REP-01103
No column is selected in group {0}.

Category:
Other

Cause:
While trying to create a default layout, a column was not selected for a selected group. Consequently, Oracle Reports Builder cannot build a default layout because one or more of the dimensions of the layout have no value.

Action:
In the Report Wizard, select at least one column from each selected group.

REP-01104
Page level summaries are not supported in the default layout.

Category:
Other

Cause:
A default layout was generated that does not fit within the given amount of space. The possible causes of this error include the following: Case 1: The layout generated is too large given the dimensions specified in the Report Properties dialog box. Case 2: The layout is too big given the size of the marked area in the Paper Layout editor.

Action:
Take the following actions to correct this error: If Case 1: Increase the report dimensions such that the layout can fit, or alter the layout so that it will fit within the current dimensions. If Case 2: Increase the size of the marked area.

REP-01106
no field is generated for column {0}.

Category:
Other

Cause:
When the default layout was created, a field was not generated for the column in the message. The most likely cause is that a summary was not placed in the data model correctly. For example, the source of a summary column may have been specified to be a column in a group above the summary's group, which is not allowed.

Action:
Debug the data model and redefault the layout.

REP-01107
The across or down group in cross product group {0} is missing.

Category:
Other

Cause:
An attempt was made to create a default layout by selecting a Style of Matrix in the Report Wizard, but all of the dimension groups of the cross product group were assigned repeat directions of Down or Across. Each repeat direction should be assigned to the dimension groups in the cross product.

Action:
Redisplay the Report Wizard and reassign the repeat directions of the dimension groups, making sure that each direction is assigned among the groups.

REP-01108
The default layout cannot fit even in region extending to page boundaries.

Category:
Other

Cause:
An attempt was made to create a default layout that would be too large to fit within the defined height and width of a report page.

Action:
Go back to the Report Wizard and reduce the values of default settings (for example, shorten some field widths). Alternatively, increase the size of a report page using the Report Property Inspector. Then re-create the default layout.

REP-01109
Multiple group selection is incompatible with single group layout style.

Category:
Other

Cause:
More than one group was selected to add to the layout but the style selected only supports one group.

Action:
Change the group selection so that only a single group is selected. Alternatively change the layout style to one that supports multiple groups.

REP-01110
The matrix across group in cross product group {0} is missing.

Category:
Other

Cause:
An attempt was made to create a default layout by selecting a Style of Matrix or Matrix with Group in the Report Wizard, but all of the dimension groups of the cross product group were assigned repeat directions of Down.

Action:
Change the repeat direction of one of the cross product dimension groups so that there is at least one Across group and one Down group.

REP-01111
The matrix down group in cross product group {0} is missing.

Category:
Other

Cause:
An attempt was made to create a default layout by selecting a Style of Matrix or Matrix with Group in the Report Wizard, but all of the dimension groups of the cross product group were assigned repeat directions of Across.

Action:
Change the repeat direction of one of the cross product dimension groups so that there is at least one Down group and one Across group.

REP-01112
The matrix cross product group in the matrix report is missing.

Category:
Other

Cause:
An attempt was made to create a default layout by selecting a Style of Matrix or Matrix with Group in the Report Wizard, but a cross product group was not selected to be used as the matrix group.

Action:
Change the repeat direction of one of the cross product group to Matrix.

REP-01113
No groups or reports level columns have been selected.

Category:
Other

Cause:
While trying to create a default layout, no groups or report level columns were selected. Consequently, Oracle Reports Builder cannot build a default layout because one or more of the dimensions of the layout have no value.

Action:
In the Report Wizard, select at least one report level column or a group to be defaulted.

REP-01114
A single group selection is incompatible with a multiple group layout style.

Category:
Other

Cause:
A single group was selected to be defaulted but a defaulting style designed for a multiple groups was also selected.

Action:
Change the group selection so that more than one group is selected. Alternatively, change the layout style to one that supports single groups.

REP-01115
The full template layout cannot be shown because it does not fit onto the page.

Category:
Other

Cause:
The template layout could not be shown properly because it is too large to fit within the defined height and width of the report page. This does not mean that the template is invalid in any way.

Action:
To show the template layout, temporarily enlarge the width and height of the report page. To do this, select the template in the Navigator and open the Property Inspector. Increase the Width and Height properties under the Report heading. Do not forget to reset the Width and Height properties before saving the template.

REP-01118
A cross product group in the Matrix query is missing.

Category:
Other

Cause:
An attempt was made to create a query by selecting the Matrix query option in the Data Wizard, However, the cross product group does not exist in the query to be used as the matrix group.

Action:
Restart the Data Wizard.

REP-01200
The flow compilation failed.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01201
Query text is missing from query {0}.

Category:
Other

Cause:
A query was named, but either no SELECT statement was entered for it or something that did not begin with the keyword SELECT was entered. The SQL Query Statement dialog box only accepts SQL SELECT statements.

Action:
Enter a SQL SELECT statement that begins with the word SELECT (upper or lower case may be used).

REP-01202
An Oracle logon was not specified.

Category:
Other

Cause:
An attempt was made to run a report without an Oracle logon specified.

Action:
Enter a logon string in the Connect dialog box and accept the dialog box before rerunning the report.

REP-01203
Field {0} references an invalid column.

Category:
Other

Cause:
The column specified as the field's Source either is invalid or does not exist.

Action:
Select a column from the list of values.

REP-01204
Repeating frame {0} references an invalid group.

Category:
Other

Cause:
The group name specified in the Group field of the Repeating Frame Property Inspector either is invalid or does not exist.

Action:
Select a group from the list of values.

REP-01205
There is a loop in the positional dependency tree.

Category:
Other

Cause:
Explicit anchors were created such that an object is indirectly anchored to itself. For example, if object A was anchored to object B, object B to object C, and object C to object A, this error displays.

Action:
Remove at least one of the anchors that caused the loop.

REP-01206
An object is anchored to more than one other object.

Category:
Other

Cause:
In the layout, an object was anchored to more than one other object.

Action:
Eliminate the anchors to other objects such that the object is anchored to only one other object.

REP-01207
The PL/SQL procedure for group filter {0} is missing.

Category:
Other

Cause:
The Filter Type on the Group Property Inspector specified a vlue of PL/SQL, but a valid filter was not specified.

Action:
Enter a valid PL/SQL function or change the filter type.

REP-01208
A repeating frame of matrix {0} cannot be anchored.

Category:
Other

Cause:
An attempt was made to run a report with an anchor from an intersecting repeating frame of a matrix object to another object.

Action:
Delete the anchor.

REP-01209
Matrix {0} cannot be anchored.

Category:
Other

Cause:
An attempt was made to run a report with an anchor from a matrix object to another object, which is not allowed.

Action:
Delete the anchor.

REP-01211
Object {0} is larger than its enclosing object {1}.

Category:
Other

Cause:
An object is larger than its enclosing object. The most likely cause is that an attempt was made to enclose a large object within a small, fixed frame.

Action:
Identify the object and the enclosing object and adjust their relative sizes and positions until the proper enclosure is achieved.

REP-01212
Object {0} is not fully enclosed by its enclosing object {1}.

Category:
Other

Cause:
The possible causes of this error include the following: Case 1: An object is not fully enclosed by the page. That is, the object extends beyond the page boundary. Case 2: A repeating frame that forms a matrix is one or more layers above a repeating frame that it contains. In a matrix layout, repeating frames must be below repeating frames that they contain.

Action:
Take the following actions to correct this error: If Case 1: Move or resize the object so that it does not extend outside the page boundary. Alternatively, increase the page size in the Report

Property Inspector. If Case 2: Use Arrange>Send to Back, Arrange>Bring to Front, Arrange>Move Backward, and Arrange>Move Forward to arrange repeating frames such that, in terms of layers, the following is true: repeating frames are below repeating frames that they contain and down repeating frames are below across repeating frames.

REP-01213
Field {0} references column {1} at a frequency below its group.

Category:
Other

Cause:
The source column for the field is in a group below that of the repeating frame that encloses it.

Action:
Move the field into a repeating frame whose source group is at or above the group that contains the field's source column. Otherwise, move the field's source column into the enclosing repeating frame's group, if possible.

REP-01214
Repeating frame {0} is enclosed by a child repeating frame.

Category:
Other

Cause:
The enclosed repeating frame's source group is above the enclosing repeating frame's source group.

Action:
In the editor, make the enclosed repeating frame the enclosing repeating frame. Alternatively, if possible, change the group hierarchy such that the enclosed object's group is below the enclosing object's group.

REP-01216
Object {0} has an illegal print condition.

Category:
Other

Cause:
The Print Condition for the specified object was invalid. For example, an attempt may have been made to set the Print Condition of a margin object.

Action:
Change the Print Condition of the object to another, valid setting.

REP-01218
Object {0} cannot page break before AND keep with parent.

Category:
Other

Cause:
Page Break Before was set for an object as well as Keep with Anchoring Object. The anchoring object, however, precedes the object and therefore the two settings are in conflict.

Action:
Uncheck Page Break Before or Keep with Anchoring Object.

REP-01219
Object {0} has no size; length or width is zero.

Category:
Other

Cause:
A layout object was created of zero width or height.

Action:
Enlarge the opject so that it has a non-zero height and width.

REP-01220
Object {0} has Minimum Widow Records greater than Maximum Records per Page.

Category:
Other

Cause:
Maximum Records per Page was set to a smaller value than Minimum Widow Records. This causes a conflict between the two settings and, in effect, indicates that no instances should be printed.

Action:
Decrease Minimum Widow Records or increase Maximum Records per Page.

REP-01222
The body size is invalid.

Category:
Other

Cause:
A body page width or height was specified that is negative or out of range. This is most likely due to setting the page size to an invalid value using the PAGESIZE executable argument.

Action:
Enter a valid value using the PAGESIZE executable argument, or adjust the body panel size by resizing the margins in the Paper Layout editor.

REP-01223
The page size is invalid.

Category:
Other

Cause:
A physical page width or height was specified that is negative or out of range. This is most likely due to setting the page size to an invalid value using the PAGESIZE executable argument.

Action:
Enter a valid value using the PAGESIZE executable argument, or change the physical page size setting in the Report Property Inspector.

REP-01225
The logical page size is invalid.

Category:
Other

Cause:
A logical page height was specified that is negative.

Action:
Redefine the logical panel height to ensure that it is not defined using a negative number.

REP-01226
The body location is beyond the print area.

Category:
Other

Cause:
The body panel is not enclosed within the physical page.

Action:
Adjust the body panel size by resizing the margins in the Paper Layout editor.

REP-01229
The spacing between records for repeating frame {0} is negative.

Category:
Other

Cause:
The value for Vertical Spacing and/or Horizontal Spacing specified for a repeating frame is negative.

Action:
Respecify the appropriate Spacing setting for the repeating frame.

REP-01230
Field {0} has an invalid page reset group.

Category:
Other

Cause:
In the Reset At field of the Page Numbering dialog box, a repeating frame was specified that does not enclose the layout field that should display the page number. An invalid repeating frame may have been specified, or the repeating frame was deleted after specifying it.

Action:
Specify &Report or the name of a valid repeating frame as the Reset At value for the page number field.

REP-01231
Object {0} has an invalid text wrap style.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01232
Matrix {0} has an invalid source frame.

Category:
Other

Cause:
An invalid object was specified as the source frame of the matrix object, or the repeating frames specified have invalid Print Directions.

Action:
Change the Print Direction of horizontal source repeating frame to Down, and the Print Direction of the vertical source repeating frame to Across.

REP-01233
The frames of matrix {0} do not fully intersect.

Category:
Other

Cause:
The repeating frames that form the matrix do not completely intersect. For example, if there are two down repeating frames, two across repeating frames, and one of the across repeating frames only intersects completely with one of the down repeating frames, this error displays.

Action:
Redefault the matrix layout, if possible, or move the repeating frames that make up the matrix such that they fully intersect one another.

REP-01234
The position of matrix {0} is not at the intersection of its frames.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01235
An error occurred generating index for Cross Product.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01236
Query {0} is invalid.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01237
The data link is invalid.

Category:
Data

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01238
Group {0} is invalid.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01239
Column {0} is invalid.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01240
The anchor is invalid.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01241
A circular column dependency originating with column {0} exists.

Category:
Other

Cause:
A column was created that directly or indirectly references itself. For example, Column A might reference Column B which in turn references Column A.

Action:
Update or delete columns to eliminate the circular dependency.

REP-01242
Matrices must have all down frames below all across frames.

Category:
Other

Cause:
In a matrix layout, down repeating frames must be below across repeating frames.

Action:
Using Arrange>Send to Back, Arrange>Bring to Front, Arrange>Move Backward, and Arrange>Move Forward, arrange repeating frames such that, in terms of layers, the following is true: repeating frames are below repeating frames that they contain, and down repeating frames are below across repeating frames.

REP-01243
An unimplemented type of summary is specified in column {0}.

Category:
Other

Cause:
A summary function was specified that is not available.

Action:
Specify a valid summary function.

REP-01245
The wrong number of source columns are defined for summary function of column {0}.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01246
The graph document is not found.

Category:
Other

Cause:
Oracle Reports Builder cannot find the associated graph document for the graph.

Action:
Correct the file name and path of the graph document.

REP-01247
The report contains uncompiled PL/SQL.

Category:
Other

Cause:
An attempt was made to run the report before all referenced PL/SQL constructs was compiled.

Action:
Compile the PL/SQL, then run the report.

REP-01248
All source columns of placeholder {0} must be in the same group.

Category:
Other

Cause:
An attempt was made to set the value of a placeholder column from columns belonging to different groups.

Action:
Change the placeholder column's group to match the group of the columns changing the placeholder column's value.

REP-01249
Column {0} has no PL/SQL formula.

Category:
Other

Cause:
A column of Type Formula was created with nothing in the Formula field.

Action:
Create a formula for the column or change the column's Type.

REP-01250
A circular query dependency exists.

Category:
Other

Cause:
The report contains at least two queries, with each requiring the other to be executed first.

Action:
Edit one or more of the queries to remove the circular dependency.

REP-01251
A circular query dependency originating with query {0} exists.

Category:
Other

Cause:
The report contains at least two queries, with each requiring the other to be executed first. The query listed in the message is one of the conflicting queries.

Action:
Edit the query listed or another conflicting query to remove the circular dependency.

REP-01252
The matrix should be surrounded by a repeating frame on group {0}.

Category:
Other

Cause:
The data model for the report contains a matrix with a parent group, but in the layout the repeating frame for the parent group either does not exist or does not surround the matrix.

Action:
Modify the layout of the report so that the parent group has a repeating frame that surrounds the matrix.

REP-01253
Matrix objects are on different regions of the layout.

Category:
Other

Cause:
The repeating frames of a matrix are on different regions of the layout (body, margin, header, or trailer).

Action:
Move all repeating frames of the matrix to the same report region.

REP-01254
Anchored objects are on different regions of the layout.

Category:
Other

Cause:
The anchoring and anchored objects of an anchor are on different regions of the layout (body, margin, header, or trailer).

Action:
Move the above-mentioned objects to the same report region.

REP-01255
An object cannot anchor to a hidden object.

Category:
Other

Cause:
The anchored object of an anchor is a hidden object.

Action:
Either make the anchored object not hidden, or delete the anchor.

REP-01256
File link boilerplate text is missing its source file.

Category:
Other

Cause:
A file name was not specified in the Source Filename property for the file link boilerplate object.

Action:
Specify a directory path and file name in the Source Filename property in the file link boilerplate object's Property Inspector.

REP-01257
Oracle Reports Builder cannot fetch data for child query from caller.

Category:
Data

Cause:
Oracle Reports Builder was invoked from another product, and Oracle Reports Builder has been instructed to fetch data for a child query from the caller. Data passed to Oracle Reports Builder can only be for a master query.

Action:
Modify the caller's instructions so that Oracle Reports Builder does not request data for a child query.

REP-01258
Group {0} has no columns.

Category:
Other

Cause:
A group was created that has no columns.

Action:
Delete the group or assign one or more columns to the group.

REP-01259
Group {0} has no break columns.

Category:
Other

Cause:
A parent group was created that has no break columns.

Action:
Mark the Break Order check boxex of the break columns of the group.

REP-01260
Groups {0} and {1} are from the same query and cannot be linked.

Category:
Other

Cause:
Two groups from the same query were linked with a data link, which is not allowed.

Action:
Remove the data link or relink to another group.

REP-01261
Group {0} can have only one parent.

Category:
Other

Cause:
One group has two queries as its parent (it can only have one).

Action:
Remove data links from the same group to different queries.

REP-01262
A circular data link dependency starting from group {0} exists.

Category:
Data

Cause:
A cycle with data links was created (that is, a parent was specified as the child of itself, either directly or indirectly).

Action:
Remove at least one of the links in the cycle.

REP-01263
Cross product group {0} has no or only one dimension group.

Category:
Other

Cause:
A cross product group was defined that has no or only one group inside. Cross product groups must have at least two dimension groups. Multiquery cross product groups must have at least two queries within the cross product group.

Action:
Remove the cross product group or add dimension groups, or dimension queries (if multiquery).

REP-01264
A data link of group {0} crosses cross a product boundary.

Category:
Data

Cause:
In the multiple-query matrix report, a query has some of its groups are inside the cross product and some outside.

Action:
Move all groups of the query to either outside or inside of the cross product group.

REP-01265
A cross product group {0} has no child groups.

Category:
Other

Cause:
A cross product group has no child group, which is required. The child group acts as the cell of the matrix.

Action:
Create a child group for the cross product group.

REP-01266
Page Level column {0} is not allowed in a cross product.

Category:
Other

Cause:
A column was creted in a cross product group that is or relies on a column that is a page-level summary (that is, a summary with Reset At of Page).

Action:
Remove the column from the cross product group, or change the Reset At value of the column or the page-level summary upon which it relies.

REP-01267
Graph {0} references an invalid column as a bind parameter.

Category:
Other

Cause:
The graph references a column that does not exist. An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01268
Graph {0} references a bind column {1} at the wrong frequency.

Category:
Other

Cause:
The column specified for the graph is in a group below that of the repeating frame that encloses the graph.

Action:
Move the graph into a repeating frame whose source group is at or above the group that contains the specified column. Otherwise, move the specified column into the enclosing repeating frame's group, if possible.

REP-01269
Graph {0} references an invalid report group.

Category:
Other

Cause:
The report group specified for the graph does not exist. An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01270
Graph {0} references a report group at the wrong frequency.

Category:
Other

Cause:
The report group specified for the graph is above the source group of the enclosing repeating frame.

Action:
Move the graph into a repeating frame with a source group that is at or above its report group.

REP-01271
Graph column name {1} has been specified multiple times in the graph document {0}.

Category:
Other

Cause:
The specified graph column or parameter has been referenced more than once in the graph document.

Action:
Check the columns and parameters specified for the graph and delete any duplicates.

REP-01272
Column {0} may not be used as a break column.

Category:
Other

Cause:
A Break Order was specified on a summary, function, or placeholder. These types of columns cannot be used as break columns.

Action:
Review the rules for which columns can be break columns. For more information, see the online help topic 'Break Order property'.

REP-01273
Source groups of matrix {0} are not from the same cross product.

Category:
Other

Cause:
The source groups of the repeating frames that form the dimensions of the matrix are not contained by the same cross product group. The dimensions of a matrix must be contained within the same cross product group.

Action:
Change the source groups of the repeating frames or select different repeating frames to form the dimensions of the matrix.

REP-01274
Invalid repeat direction combination in matrix {0}.

Category:
Other

Cause:
Matrix dimension repeating frames whose source groups are in the same "family" hierarchy (that is, are descendants or ancestors of each other) within a cross product group must have the same Print Direction. Parent-child relationships within a cross product group are used to create nesting in the matrix. As a result, the repeating frames associated with such groups must print in the same direction on the page.

Action:
Change the Print Direction of the repeating frames as necessary, select different source groups for the repeating frames, or select different repeating frames to form the dimensions of the matrix.

REP-01275
Page level column {1} may not be referenced from format trigger {0}.

Category:
Other

Cause:
PL/SQL was entered in a Format Trigger that references columns with a Reset At or Compute At of Page.

Action:
Remove the reference to the page-level column or change the column's Reset At or Compute At to something other than Page.

REP-01276
Placeholder {0} references one or more non-formula columns.

Category:
Other

Cause:
A placeholder column contains SRW.REFERENCE, but the column referenced is not a formula column. For placeholder columns, SRW.REFERENCE must refer to a formula column.

Action:
Change the column referenced via SRW.REFERENCE.

REP-01277
The SELECT element is invalid.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01278
The PL/SQL procedure in {0} is invalid.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01279
Frame or repeating frame {0} is invalid.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01280
Field {0} is invalid.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01281
Boilerplate {0} is invalid.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01282
Matrix {0} is invalid.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01283
Graph document {0} is invalid.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01284
Query {0} has no groups.

Category:
Other

Cause:
The data model contains a query that has no groups. Each query in the data model needs at least one group associated with it.

Action:
Create a new group for the query.

REP-01285
Query {0} has no SELECT elements.

Category:
Other

Cause:
The data model contains a query that does not select anything. Each query in the data model must select at least one element.

Action:
Enter a SELECT statement in the query, selecting at least one element.

REP-01286
Group {0} is a cross product as well as a dimension.

Category:
Other

Cause:
A group was specified to act as both a cross product group and as a dimension group for another cross product group, which is not allowed.

Action:
Make the group either a cross product group or a dimension group, but not both.

REP-01287
Cross product group {0} may not have a group filter.

Category:
Other

Cause:
A group filter was specified on a cross product group, which is not allowed.

Action:
Remove the group filter from the cross product group. Create the group filter for another group, if necessary.

REP-01288
The numeric argument for group filter of group {0} is missing.

Category:
Other

Cause:
First or Last was specified for a group's filter, but a number dictating how many records the group should filter was not specified.

Action:
Specify a number for the group filter.

REP-01289
An unimplemented type of group filter is specified in group {0}.

Category:
Other

Cause:
A group filter was specified that is not available or is invalid.

Action:
Specify a valid group filter for the group.

REP-01290
The Source data type is incompatible with the summary function in column {0}.

Category:
Data

Cause:
The summary column was assigned a Source whose data type is incompatible with the specified Function. For example, a temp may have been made to sum a character column.

Action:
Verify that the data type of the source column is compatible with the Function specified in the Summary Column Property Inspector.

REP-01291
Column {0} has an invalid reset group.

Category:
Other

Cause:
An invalid Reset At value was specified for a summary column. Reset At can be set to the same group as the summary column, any group above the summary column's, Page, or Report.

Action:
Specify a valid Reset At value for the summary column in its Property Inspector.

REP-01292
Column {0} has an invalid compute group.

Category:
Other

Cause:
An invalid Compute At value was specified for a summary column. Compute At can be set to the same group as the summary column, any group above the summary column's, Page, or Report.

Action:
Specify a valid Compute At value for the summary column in its Property Inspector.

REP-01293
Column {0} has an invalid product order.

Category:
Other

Cause:
A column in a cross product group was assigned an invalid value for Product Order, or no value at all.

Action:
Specify a valid value for Product Order (consisting of only dimension groups within the cross product) in the column's Property Inspector.

REP-01294
The width of column {0} is too large.

Category:
Other

Cause:
The column's width exceeds the maximum allowed for the operating system.

Action:
Reduce the width of the column in the Column Property Inspector.

REP-01295
The data format of column {0} is unsupported.

Category:
Data

Cause:
Read from File was selected for a column, but an invalid or unavailable data format was specified in the Format field in the Column Property Inspector.

Action:
Specify a valid data format in the Format field. The list of values displays all valid data formats. Note that for LONG, RAW, and LONG RAW database columns, only Text and Oracle Format (Image) are valid values for Format.

REP-01296
The data link child cannot be in the cross product group {0}.

Category:
Data

Cause:
An attempt was made to link a column to a column in a cross product group, or to the cross product group itself.

Action:
Create data links between columns and groups other than cross product groups and their associated columns.

REP-01297
The data link child column {0} must be a database column.

Category:
Data

Cause:
An attempt was made to link a column to another column that is not a database column (for example, a summary, formula, or placeholder column).

Action:
Create data links using only database columns and groups.

REP-01298
Columns {0} and {1} have incompatible types to be linked.

Category:
Other

Cause:
The parent and child columns in the data link have incompatible datatypes that cannot be linked. For example, an attempt was made to link a Number column to a Character column.

Action:
Verify that the parent and child columns specified in data links have compatible datatypes.

REP-01299
Groups {0} and {1} in different cross products cannot be linked.

Category:
Other

Cause:
An attempt was made to create a data link between dimension groups of two different cross product groups, or between columns of the dimension groups.

Action:
Delete data links between two different cross product groups or their columns.

REP-01300
Text boilerplate {0} has no contents.

Category:
Other

Cause:
A text boilerplate object was created that contains no text.

Action:
Enter some text in the boilerplate object, or delete it.

REP-01301
The data link creates a sibling of group {0} within a cross product.

Category:
Data

Cause:
A data link was defined that created a sibling of a dimension group within a cross product group. No siblings of dimension groups are allowed within the cross product.

Action:
Delete the sibling of the dimension group.

REP-01302
The cross product has two or more child groups.

Category:
Other

Cause:
A cross product group has more than one child group. Only one child is allowed per cross product group.

Action:
Remove all but one of the child groups to the cross product group.

REP-01303
The query must be completely in or out of cross product group {0}.

Category:
Other

Cause:
A query was created whose groups are not all inside the cross product, above the cross product, or below the cross product, respectively.

Action:
Verify that each query's groups are all inside of a cross product, above a cross product, or below a cross product.

REP-01304
Cross product group {0} contains another cross product as child.

Category:
Other

Cause:
A cross product group was created that is a child of another cross product group, which is not allowed.

Action:
Ensure that the child group of the cross product group is not a cross product group.

REP-01305
Frame {0} intersects but does not enclose object {1}.

Category:
Other

Cause:
The report layout contains a frame that does not completely enclose the named object. Thus, the object is not considered to be inside the frame.

Action:
To enclose the object with the frame, resize or move the frame.

REP-01306
Summary column {0} has an invalid source.

Category:
Other

Cause:
An invalid source was specified for the summary column. A summary column's source must be from the same group as the summary column, or from a group below the summary column.

Action:
Change the source of the summary column to be from the same group as the summary column or from a group below the summary column.

REP-01307
Summary column {0} has an invalid product order.

Category:
Other

Cause:
The possible causes of this error include: Case 1: A summary exists that is not a running summary (that is, its Reset At is not Report), but its Product Order is not a subset of the source column's product order. The source column of the summary must be at least as frequent as the summary, which means that the summary's Product Order should be some subset of the source column's Product Order. Case 2: A running summary (that is, its Reset At is Report) exists with a Product Order that is not a prefix of the source column's Product Order. For example, if the source column's Product Order were A,B,C, then the summary

column's Product Order would have to be either A (by itself) or A,B. The summary's Product Order could not be B,A.

Action:
Take the following actions to correct this error: If Case 1: Change the Product Order of the summary such that it is a subset of its source column's Product Order. If Case 2: Change the Product Order of the summary such that it is a prefix of the Source column's Product Order.

REP-01308
Placeholder column {0} is not supported in a cross product.

Category:
Other

Cause:
An attempt was made to create a placeholder column inside of a cross product group. Cross product groups cannot contain placeholder columns.

Action:
Delete the placeholder or move it outside the cross product group.

REP-01309
Report level summary {0} cannot be a percent of total.

Category:
Other

Cause:
A summary was created at the report-level (that is, a summary outside of all the groups in the data model) with a Function of % of Total. This Function makes no sense for a report-level summary because it will always be 100%.

Action:
Delete the summary or move it into a group where it will make sense.

REP-01310
Boilerplate {0} references &{1} which is not a field.

Category:
Other

Cause:
A boilerplate object has a reference to a field that does not exist. It could be that the field being referenced was deleted or renamed and so this reference in the boilerplate object is now invalid.

Action:
Depending on circumstances, remove the reference, replace it with a reference to another field, or create the field that it references.

REP-01311
Object {0} with page-dependent references have been changed to fixed sizing.

Category:
Other

Cause:
A field or boilerplate object has a reference to a page calculation or a total number of pages variable. (This is known as a forward reference.) Such layout objects must be fixed in size both horizontally and vertically.

Action:
The layout object's Horizontal and Vertical Elasticity have been set to Fixed by Oracle Reports Builder. Check the output to ensure that the values are not being truncated. If they are, enlarge the layout object so that it is large enough to contain the values.

REP-01312
Page-level column {1} may not be referenced from graph {0}.

Category:
Other

Cause:
A column passed to a graph is or depends upon a page-level summary (that is, a summary with a Reset At or Compute At of Page). A column being passed to a graph cannot be or depend upon a page-level summary.

Action:
Do not pass the column to the graph.

REP-01313
Page-level column {1} may not be referenced from group filter {0}.

Category:
Other

Cause:
A column that was referenced in a group filter is or depends upon a page-level summary (that is, a summary with a Reset At or Compute At of Page). A column referenced by a group filter cannot be or depend upon a page-level summary.

Action:
Do not reference the column in the group filter.

REP-01314
Format trigger {0} references column {1} at the wrong frequency.

Category:
Other

Cause:
A format trigger references a column that is located at the wrong frequency.

Action:
Remove the reference to the column from the format trigger.

REP-01315
Group filter {0} references column {1} at the wrong frequency.

Category:
Other

Cause:
A group filter attempted to reference a column that is inaccessible.

Action:
Remove the reference to the column from the group filter.

REP-01316
Object {0} references column {1} at the wrong frequency.

Category:
Other

Cause:
A procedure or function attempted to reference a column that is inaccessible.

Action:
Remove the reference to the column from the PL/SQL subprogram.

REP-01317
Boilerplate {0} references field with source {1} at the wrong frequency.

Category:
Other

Cause:
A boilerplate object referenced a field using &fieldname, but the two objects are not located at the same frequency. For example, the boilerplate object and the field it references are located within different repeating frames.

Action:
Place the boilerplate object and field at the same frequency, or remove the reference.

REP-01318
An error occurred while setting transaction to read-only.

Category:
Transactioning

Cause:
Having specified READONLY=YES, this error occurred at the start of report execution, while ending the current transaction (with a COMMIT) and starting the read-only transaction, or at the end of report execution, while ending the read-only transaction (with a COMMIT).

Action:
Verify the database connection, and verify that that no cursors or locks were left pending by the previous transaction.

REP-01319
Implicit anchoring algorithm cannot uniquely identify the anchoring object {0}. Arbitrarily choosing {1}.

Category:
Other

Cause:
The specified object (object1) is in the "push path" of two objects and it is equidistant from both objects. As a result, Oracle Reports Builder cannot use its normal criteria (shortest distance) to determine the implicit anchor. In the absence of its normal criteria, Oracle Reports Builder randomly creates an implicit anchor to the specified object (object2). Note that the implicit anchor may vary between runs of the report.

Action:
To avoid the random creation of an implicit anchor, explicitly anchor the specified object (object1) to another object.

REP-01320
Program unit {0} references a column with invalid ID {1}.

Category:
Other

Cause:
A report was run containing invalid PL/SQL (for example, PL/SQL that did not compile). The PL/SQL source included a column reference that cannot be resolved.

Action:
Check the column references in the PL/SQL source, recompile all of the PL/SQL source in the report, and rerun the report.

REP-01322
Page break after on object {0} has no effect.

Category:
Other

Cause:
A Page Break After was activated on an object that has no other objects anchored to it (implicitly or explicitly). In this case, Page Break After has no effect and is invalid. Notice that this is a warning, not an error message.

Action:
Deactivate Page Break After for the object.

REP-01323
Output columns in format trigger {0} are not allowed.

Category:
Other

Cause:
In the format trigger for the specified object, an attempt was made to set the value of an Oracle Reports Builder column parameter. For example, the value of a column called COUNT1 can be used in a condition (for example, IF :COUNT1=10), but its value cannot be directly set in an assignment statement (for example, COUNT1=10).

Action:
Remove the assignment statement from the format trigger.

REP-01324
Output columns in group filter {0} are not allowed.

Category:
Other

Cause:
In the filter for the specified group, an attempt was made to set the value of an Oracle Reports Builder column or parameter. For example, the value of a column called COUNT1 can be used in a condition (for example, IF :COUNT1=10), but its value cannot be directly set in an assignment statement (for example, COUNT1=10).

Action:
Remove the assignment statement from the group filter.

REP-01325
Output columns in a Between Page Trigger are not allowed.

Category:
Other

Cause:
In the Between Page trigger, an attempt was made to set the value of an Oracle Reports Builder column or parameter. For example, the value of a column called COUNT1 can be used in a condition (for example, IF :COUNT1=10), but its value cannot be directly set in an assignment statement (for example, COUNT1=10).

Action:
Remove the assignment statement from the group filter.

REP-01326
Trigger {0} writes to column {1} at the wrong frequency.

Category:
Other

Cause:
In a report trigger, an attempt was made to set the value of an Oracle Reports Builder column at the wrong frequency in the report. Only report-level columns or parameters can be referenced and set, and any page-dependent columns (that is, Reset At of Page) or columns that rely on page-dependent columns cannot be referenced or set.

Action:
Verify that the columns and parameters whose values are referenced or set are report-level columns and parameters.

REP-01327
Column {0} writes to column {1} at the wrong frequency.

Category:
Other

Cause:
In a formula column, an attempt was made to set the value of an Oracle Reports Builder column at the wrong frequency in the report. Only columns that are in the same group or in a higher group in the group hierarchy can be referenced and set. For example, a formula for a report-level column can only reference other report-level columns.

Action:
Verify that the columns whose values are referenced or set are in the same group or in a higher group in the group hierarchy.

REP-01328
A report containing ROWLABEL column {0} cannot be run in a non-trusted OS.

Category:
Other

Cause:
An attempt was made to run a report that requires a secure database while connected to a non-secure database.

Action:
Run the report while connected to a secure database.

REP-01329
Column {0} cannot be linked to column {1} because the child column is not a database column.

Category:
Other

Cause:
A data link was created in which the child column is a summary, formula, or placeholder column. Only database columns can be linked.

Action:
Create a data link using database columns.

REP-01330
Lexical parameter {0} in query {1} must not change column dependencies.

Category:
Other

Cause:
A lexical parameter was created that changes the number, type, or names of columns, or introduces new dependencies on computed columns or new bind references, when the report is run.

Action:
Change the lexical parameter so that it does not change columns or introduce new dependencies or bind references.

REP-01331
Column {0} cannot be linked to column {1} because the child column is determined by a lexical parameter.

Category:
Other

Cause:
A data link was created in which child column's value is determined by a lexical parameter, which is not allowed.

Action:
Replace the child column of the data link with another column.

REP-01332
Group filter for {0} cannot reference column {1}. It is not a valid database column or it depends on a related query.

Category:
Other

Cause:
A group filter was created that references a database column not in the group's query or in a query above it, or references a computed column that depends on an unrelated column.

Action:
Remove the offending reference from the group filter.

REP-01333
Unsupported layout: a matrix may not be inside another matrix.

Category:
Other

Cause:
A matrix layout was created nested within another matrix layout, which is not allowed.

Action:
Redesign the layout to avoid the nesting.

REP-01335
Variable rotated text {0} is treated as fixed/contract width.

Category:
Other

Cause:
The report contains a boilerplate text object that was rotated to an angle that is not a multiple of 90 degrees, although both Horizontal and Vertical Elasticity values were set to Variable or Expand. In this case, the Horizontal Elasticity is treated as Fixed (if Expand was specified) or Contract (if Variable was specified), and this warning is displayed.

Action:
Consider changing the Horizontal and Vertical Elasticity values for this boilerplate object.

REP-01336
The source of field {0} is page-level calculation {1}. {2}.

Category:
Other

Cause:
The specified field references a page summary owned by the named group, but there is no repeating frame for that group that surrounds the field.

Action:
Create a repeating frame whose Source is the named group to surround the field. If such a repeating frame already exists, extend it to enclose the field.

REP-01337
Boilerplate {3} references field {0}, whose source is page-level calculation {1}. {2}.

Category:
Other

Cause:
The specified boilerplate object references the specified field, whose Source is a page-level computation. However, there is no repeating frame (whose Source is the named group) surrounding the field.

Action:
Create a repeating frame whose Source is the named group to surround the field. If such a repeating frame already exists, extend it to enclose the field.

REP-01338
Column mode is not allowed on repeating frame {0}.

Category:
Other

Cause:
The Column Mode setting for a repeating frame does not satisfy either of the following conditions: Print Direction of Down and a Vertical Elasticity of Fixed. Print Direction of Across and a Horizontal Elasticity of Fixed.

Action:
Change the Print Direction or Vertical/Horizontal Elasticity of the repeating frame, or deactivate Column Mode.

REP-01339
Graph {0} is missing a data column specification.

Category:
Data

Cause:
A value was specified for the graph Query, but no columns were specified to be passed from the report to the graph document.

Action:
To pass no data from the report to the graph document, specify nothing for the graph Query and Source. To pass data, specify the columns to be passed in addition to the graph Query and Source.

REP-01340
Passed-in columns do not match report definition {0}.

Category:
Other

Cause:
Another component (for example, Oracle Forms) passed a query to Oracle Reports Builder and there is a mismatch between the columns passed and the columns expected by Oracle Reports Builder. Possible causes of this error include: Case 1: Oracle Reports Builder was expecting more or fewer columns than the number that was actually passed by the calling application. Case 2: The parameter list of the calling application described a column differently than what Oracle Reports Builder expected. For example, if the report's query selects a character column and the calling application assigns that column a date data type, this error is raised.

Action:
Take the following actions to correct this error: If Case 1: Ensure that the calling application is passing the same number of columns that Oracle Reports Builder expects. If Case 2: Ensure that the datatypes and names of the columns being passed by the calling application match the dataypes and names in the report.

REP-01341
Data truncation is possible in column {0}.

Category:
Data

Cause:
The database column's width in the report is defined to be less than its width in the database. This can occur when the columns in the database are updated subsequent to the creation of the report definition.

Action:
Force the query to be reparsed. One method is to type a space at the end of a line in the SELECT Statement and then accept the SQL Query Statement dialog box.

REP-01342
The type of the data link to query {0} is illegal for a non-Oracle server.

Category:
Data

Cause:
A data link was created with the START WITH clause and run while connected to a non-Oracle database. START WITH is only supported by Oracle.

Action:
Remove the data link that uses START WITH or connect to Oracle.

REP-01343
Button {0} is invalid.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01344
Button {0} has no action source file.

Category:
Other

Cause:
An action of Multimedia File was specified for the named button, but either a source file was not specified, or a source file was specified that does not exist.

Action:
Open the Property Inspector for the specified button and verify that a valid file was selected as source for the button action.

REP-01345
Button {0} has an invalid source column.

Category:
Other

Cause:
An action of Multimedia Column was specified for the named button, but either a source column was not specified, or an invalid source column was specified.

Action:
Open the Property Inspector for the specified button and verify that a valid column was selected as source for the button action.

REP-01346
Button {0} references source column {1} at the wrong frequency.

Category:
Other

Cause:
The column specified in the Property Inspector for the named button is in a group below that of the repeating frame that encloses the button.

Action:
Move the button into a repeating frame whose source group is at or above the group that contains the specified column. Otherwise, move the specified column into the enclosing repeating frame's group, if possible.

REP-01347
Button {0} has an invalid icon file.

Category:
Other

Cause:
Either an invalid file or a nonexistent file was specified as the icon file for the button face.

Action:
Ensure that the specified icon file exists and is of the proper format and uncorrupted.

REP-01348
The source column of field {0} is in sound or video format.

Category:
Other

Cause:
A column was specified containing sound or video as the source for a field, but fields cannot display sound and video.

Action:
Specify another column (not sound or video) as source of the field.

REP-01349
The PL/SQL action is missing from button {0}.

Category:
Other

Cause:
The PL/SQL trigger that serves as the specified button's action references a piece of PL/SQL that does not exist.

Action:
Debug the trigger and ensure that it references a valid program unit.

REP-01350
Output columns in action trigger {0} are not allowed.

Category:
Other

Cause:
The PL/SQL trigger that serves as a button action contains a bind variable that returns a value. A PL/SQL action trigger cannot return a value.

Action:
Remove the bind variable from the PL/SQL.

REP-01351
Icon {1} on button {0} cannot be found.

Category:
Other

Cause:
The icon specified as the button face for the named button cannot be found. The report will run, but the button will appear blank.

Action:
Open the Property Inspector for the named button and verify that the icon specified exists and is in the correct format, and that the path information is correct.

REP-01352
The fonts specified for this report cannot be found for the character set specified by NLS_LANG.

Category:
Other

Cause:
The NLS_LANG environment variable specifies a character set for which no font is available.

Action:
Select a font that exists in the character set specified by NLS_LANG. Alternatively, use the Font Alias file to force an available font to be used, instead of the one specified in the report.

REP-01353
The Web property of layout object {0} references field or column {1} at the wrong frequency.

Category:
Other

Cause:
One of the layout object properies (Bookmark, Action. Hyperlink, or Linktag) references a field or column, but the two objects are not located at the same frequency. For example, the layout

object is located within a repeating frame whose source is a different group to that the column is in.

Action:
Place the layout object in a repeating frame at the same frequency as the column object, or remove the reference.

REP-01354
The Web property of layout object {0} references a page-dependent field or column {1}.

Category:
Other

Cause:
One of the layout object properies (Bookmark, Action. Hyperlink, or Linktag) references a field or boilerplate object that has a reference to a page calculation or a total number of pages variable. Web properties may only reference columns and fields that are not based on page calculations.

Action:
Remove the Web property reference to the page-dependent field or column.

REP-01355
PL/SQL is missing from PL/SQL-based query {0}.

Category:
Other

Cause:
A PL/SQL based query was created, but no PL/SQL was entered for it.

Action:
Enter PL/SQL for the query.

REP-01356
A column link is not allowed for linking to PL/SQL-based query {0}.

Category:
Other

Cause:
An attempt was made to link a column to another column that is in PL/SQL-based query, which is not allowed.

Action:
Create group links and use the columns in the PL/SQL-based query as bind variables to set up intended column link conditions.

REP-01357
Auto foreign key column link creation is only for SQL queries.

Category:
Other

Cause:
A link was dragged between two queries to automatically create column links based on foreign key relationships. However, this can be done only between two SQL queries.

Action:
Drag a link between two SQL queries, or change the PL/SQL-based queries to SQL.

REP-01365
A column link is not allowed for linking to Express-based query {0}.

Category:
Other

Cause:
An attempt was made to link a column to another column that is an Express-based query, which is not allowed.

Action:
Create group links and use the columns in an Express-based query as bind variables to set up intended column link conditions.

REP-01366
The XML Settings of object {0} reference page-dependent field or column {1}.

Category:
Other

Cause:
One of the object's XML properties references a field that contains a page calculation or a total number of pages variable. XML Settings canot reference columns and fields that are based on page calculations.

Action:
Remove the XML Settings references to the page-dependent field or column.

REP-01367
The XML Settings of object {0} reference field or column {1} at the wrong frequency.

Category:
Other

Cause:
One of the object's XML properties references a field or column that has a different frequency than the object (for example, the column may be in a different group than the object referencing it).

Action:
Move the object such that it has the same frequency as the field or column (for example, place them in the same group) it references or remove the reference.

REP-01368
Group {0} in the graph settings is invalid.

Category:
Other

Cause:
In the graph object's graph settings, the src attribute is an invalid group name.

Action:
Ensure that value of the src attribute is a valid group name.

REP-01369
An internal error occurred caused by form field {0}.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01370
Action {0} is unsupported.

Category:
Other

Cause:
The action specified against the form field is curently not supported.

Action:
Remove the action entry from the report definition.

REP-01371
Form field object {0} is unsupported.

Category:
Other

Cause:
This form field type is currently not supported by Oracle Reports.

Action:
Remove the Form Field element from the report definition.

REP-01372
The export value specified for {0} is invalid.

Category:
Other

Cause:
Either the export value is not specified or the export value is "off".

Action:
Specify a valid export value ("off" is a reserved word).

REP-01373
The validation and formatAndTreatment elements are not allowed for Form Field {0}.

Category:
Other

Cause:
The 'validation' or 'formatAndTreatment' element was specified for a Check Box and Radio Button.

Action:
Remove the 'validation' or 'formatAndTreatment' element for the Form Field object.

REP-01374
Font {0} is used to subset for the Form Field object {1}.

Category:
Other

Cause:
The font that is used to render a Form Field object was subsetted, which is not allowed.

Action:
Either remove the font entry in uifont.ali or modify the font name of the Form Field object to a font that is not subset.

REP-01400
coxr is not initialized.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01401
A fatal PL/SQL error occurred in program unit {2}.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01402
An unhandled PL/SQL exception occurred in program unit {2}.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01403
A PL/SQL procedure is suspended in program unit {2}.

Category:
Other

Cause:
A PL/SQL construct was suspended during execution or generation.

Action:
Debug and recompile the PL/SQL constructs.

REP-01404
PL/SQL compilation failed.

Category:
Other

Cause:
In generating the report, PL/SQL compilation failed.

Action:
Debug the PL/SQL constructs.

REP-01405
The PL/DQL code is not executable.

Category:
Other

Cause:
A PL/SQL construct did not compile properly or could not be executed.

Action:
Debug the PL/SQL constructs.

REP-01406
Parameterized code cannot be run directly.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01408
The PL/SQL cannot be initialized.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01409
Expected IS after PROCEDURE cannot be found.

Category:
Other

Cause:
A PL/SQL syntax error occurred.

Action:
Correct the PL/SQL procedure in trigger/program unit and compile.

REP-01410
An error occurred executing a PL/SQL filter in program unit {2}.

Category:
Other

Cause:
A PL/SQL syntax error occurred.

Action:
Correct the PL/SQL procedure in trigger/program unit and compile.

REP-01411
An error occurred executing PL/SQL formula in program unit {2}.

Category:
Other

Cause:
A PL/SQL syntax error occurred.

Action:
Correct the PL/SQL procedure in program unit of formula column or trigger. Verify the variable declarations and usage.

REP-01412
PL/SQL function {2} returned an invalid value or no value.

Category:
Other

Cause:
The report contains a PL/SQL function that does not specify a return value (for example, a format trigger that does not return TRUE or FALSE).

Action:
Verify that the function includes a return statement for every code path.

REP-01414
A library unit to run cannot be found in program unit {2}.

Category:
Other

Cause:
This is most likely an abnormal condition.

Action:
Check the PL/SQL code and recompile it. If this error recurs, contact Oracle Support Services.

REP-01415
An unknown user exit {0} was encountered in program unit {2}.

Category:
Other

Cause:
A user exit was called, but it was not found.

Action:
Verify the correct name for the user exit and that it has been compiled and linked.

REP-01416
An error occurred in user exit {0} in program unit {2}. {1}.

Category:
Other

Cause:
An error occurred in a user exit. Possible errors: a reference to an unknown column, a truncated column value, unretrievable PL/SQL source, or the user exit was not found.

Action:
Based on the submessage, debug the user exit. Veirfy columns references are valid and the PL/SQL code and user exit are accessible.

REP-01417
An invalid integer argument was passed to procedure {0} in program unit {2}.

Category:
Other

Cause:
The packaged procedure referenced expected an integer for an argument, but it was not specified.

Action:
Verify that the PL/SQL that references the packaged procedure correctly passes it an integer. For more information about PL/SQL packaged procedures, see the Oracle Reports online help.

REP-01418
Null arguments were passed to procedure {0} in program unit {2}.

Category:
Other

Cause:
The exception SRW.NULL_ARGUMENTS was raised, either by a user-defined PL/SQL subprogram, or because a packaged subprogram was passed one or more null arguments.

Action:
Check any PL/SQL code that might raise this exception. Also, check the argument list that is passed to the specified packaged subprogram.

REP-01419
The PL/SQL program was aborted in program unit {2}.

Category:
Other

Cause:
A PL/SQL construct had a fatal error and was aborted.

Action:
Check the PL/SQL constructs for errors.

REP-01420
The PL/SQL program raised a program error in program unit {2}.

Category:
Other

Cause:
The exception SRW.PROGRAM_ERROR was raised, either by a user-defined PL/SQL subprogram, or because of an abnormal condition.

Action:
Check any PL/SQL code that might raise this exception. If no PL/SQL raised the exception, contact Oracle Support Services.

REP-01421
A column of the wrong type was manipulated in procedure {0} in program unit {2}.

Category:
Other

Cause:
The data type of the column whose name was passed to a packaged procedure is not the correct data type for the packaged procedure (for example, the packaged procedure was expecting a column of Character data type and it was passed a column of another data type).

Action:
Debug the PL/SQL that references packaged procedures and ensure that the packaged procedure is passed the name of a column of the correct data type. Also check the syntax of the packaged procedure to ensure that its is referenced properly.

REP-01422
A procedure by this name already exists.

Category:
Other

Cause:
An attempt was made to create a new PL/SQL procedure with the same name as an existing PL/SQL procedure.

Action:
Change the name of the new procedure or change the name of the existing procedure.

REP-01423
Maximum rows of a query cannot be set after the query started executing in program unit {2}.

Category:
Other

Cause:
SRW.SET_MAX_ROW was used to reduce the number of rows fetched by a query. However, SRW.SET_MAX_ROW was called after the query was already fetched.

Action:
Move SRW.SET_MAX_ROW to the Before Report trigger.

REP-01424
An internal error occurred while executing procedure {0} in program unit {2}.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01425
An error occurred running DO_SQL package in program unit {2}: {0}.

Category:
Other

Cause:
An error occurred while Oracle Reports Builder was executing an SRW.DO_SQL call. Embedded in this message is an Oracle Reports Builder message and, possibly, an Oracle error message describing the exact error that occurred.

Action:
Errors in SRW.DO_SQL are most often the result of a SQL error. Refer to the SQL Language Reference Manual and verify that the SQL statement in the SRW.DO_SQL call is correct.

REP-01426
Procedure {0} was running from incorrect context in program unit {2}.

Category:
Other

Cause:
An attempt was made to call the named packaged procedure from an invalid area. For example, SRW.SET_ATTR cannot be called from a formula.

Action:
Modify the PL/SQL code so that it does not call the packaged procedure from that context.

REP-01427
A nonexistent query name was referenced in procedure {0} in program unit {2}.

Category:
Other

Cause:
A call was made to the SRW.SET_MAXROW procedure in a Before Report trigger, but the query referenced in the procedure call does not exist.

Action:
Change the call to the SRW.SET_MAXROW procedure so that it references an existing query in the report.

REP-01428
An error occurred while running procedure {0} in program unit {2}.

Category:
Other

Cause:
The exception SRW.RUN_REPORT_FAILURE was raised, either by a user-defined PL/SQL subprogram, or because of an abnormal condition after SRW.RUN_REPORT was called.

Action:
Check any PL/SQL code that might raise this exception. If no PL/SQL raised the exception, check the command line string passed to SRW.RUN_REPORT. Verify that BATCH=YES, that the specified report exists, and that all parameter values are correct.

REP-01429
Procedure {0} cannot be invoked with BATCH=NO in program unit {2}.

Category:
Other

Cause:
A call was made to the SRW.RUN_REPORT procedure with a command line string containing BATCH=NO, which is not allowed.

Action:
Remove BATCH=NO from the SRW.RUN_REPORT command string.

REP-01430
A REP file for report {0} cannot be created: compilation errors found.

Category:
Other

Cause:
There is an error in the PL/SQL in the report to be converted.

Action:
Open the report and debug the PL/SQL.

REP-01433
An error occurred running user exit {0} in program unit {2}.

Category:
Other

Cause:
While running the user exit named in the message, an error occurred.

Action:
Debug the user exit and ensure that it is linked.

REP-01434
Procedure {0} cannot be invoked with a user ID in program unit {2}.

Category:
Other

Cause:
A call was included to the SRW.RUN_REPORT procedure with a command line string containing a userid/password, which is not allowed.

Action:
Remove the userid/password from the SRW.RUN_REPORT command string.

REP-01435
The value of column {0} was truncated in program unit {2}.

Category:
Other

Cause:
A column (for example, a placeholder) was assigned a value larger than its width could contain, raising the SRW.TRUNCATED_VALUE exception. The exception was not handled, raising this error.

Action:
Make the column wide enough to contain the assigned value, or handle the exception in the PL/SQL source.

REP-01436
The PL/SQL references an object that is not in the scope in program unit {2}.

Category:
Other

Cause:
In a parameter's Validation Trigger field, PL/SQL source referenced a report column, which is not allowed.

Action:
Remove the reference to the report column from the parameter's Validation Trigger.

REP-01437
A run time error in the PL/SQL development environment (DE).

Category:
Other

Cause:
This is most likely an abnormal condition.

Action:
Refer to the accompanying development environment error message for details on the problem. For assistance, contact Oracle Support Services.

REP-01438
The GETREF function parameter {0} must be of type LONG, LONG RAW, or RAW.

Category:
Other

Cause:
The second parameter in a CDE_MM.GET_REF call specifies a column that is not of type LONG, LONG RAW, or RAW.

Action:
Change the second parameter to specify a column of the correct type.

REP-01440
An unknown column name was passed to {0} in program unit {2}.

Category:
Other

Cause:
A column name specified in the named program unit in one of the triggers is invalid.

Action:
Verify the column name is correct.

REP-01441
A column value was not available for {0} in program unit {2}.

Category:
Other

Cause:
A column name specified in the named program unit in one of the triggers is not available.

Action:
Verify the column value is correct.

REP-01442
Column value {0} cannot be set in program unit {2}.

Category:
Other

Cause:
A value is not settable for this column.

Action:
Verify the procedure is correct.

REP-01443
Column value {0} is invalid in program unit {2}.

Category:
Other

Cause:
A column value specified in the named program unit in one of the triggers is invalid.

Action:
Verify the column value is correct.

REP-01444
No more rows exist in the group handle.

Category:
Other

Cause:
SRW.GH_NEXT() is called when the group handle is already at the last row.

Action:
Catch a SRW.NO_DATA_FOUND exception in PL/SQL.

REP-01445
The JAVA class cannot be found.

Category:
Other

Cause:
The requested class could not be located within the Reports classpath.

Action:
Ensure that the class is correctly specified (for example, java/lang/String) and that the class is in the Reports classpath specified in the REPORTS_CLASSPATH environment variable.

REP-01446
The JAVA method cannot be found.

Category:
Other

Cause:
The requested method could not be located within in the specified class.

Action:
Ensure that the method exists within the specified class and has the correct signature: '(Ljava/lang/String;)Ljava/lang/String;'.

REP-01447
A JAVA exception was encountered.

Category:
Other

Cause:
An error occurred attempting to start the JVM and access the requested Java class and method.

Action:
Check the JVM install and environment.

REP-01448
The data model group passed to SRW.GH_CREATE() does not exist.

Category:
Data

Cause:
The group name parameter of SRW.GH_CREATE() is invalid.

Action:
Ensure that the group name is correctly specified. Catch the SRW.UNKNOWN_GROUP exception in PL/SQL.

REP-01508
Cross Product: value of calculation cannot be found.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01510
Group Manager: unable to compute column {0}.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01516
Reset At Page is an invalid option for column {0} in Web-based reports.

Category:
Other

Cause:
A column in the report layout has Reset At Page, which is invalid for Web-based reports.

Action:
Specify Reset At for either a group or report for Web-based reports.

REP-01517
Column {0} references column {1}, which has incompatible frequency.

Category:
Other

Cause:
A column in the data model references another column (for example, in the Formula field) in the data model, but the two columns are assigned to incompatible groups. For example, if a formula column with a Group of Report referenced a column with a Group of G_Emp, this error is raised.

Action:
Remove the column reference, or assign the referencing column to a group that is compatible with the group of the referenced column.

REP-01518
Group Manager: internal error {0} occurred while processing group {1}.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01607
Record Manager: the source of report level column {0} is not available.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01610
Record Manager: a query with internal joins has Maximum Number of Rows set.

Category:
Other

Cause:
SRW.SET_MAXROW was probably used to set Maximum Number of Rows on the cell query of a multiquery cross product.

Action:
Remove the call to SRW.SET_MAXROW for the cell query.

REP-01760
Error Utility: internal error #1 occurred.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01761
Internal error {0} occurred while processing {2} {1}.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01762
Internal error {0} occurred.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01780
Stack utility: an error occurred during allocation.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01781
Stack utility: an error occurred during push.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01782
Stack utility: an error occurred during pop.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01783
Stack utility: an attempt was made to pop an empty stack.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01800
A formatter error occurred.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01801
An unknown file type was encountered for a Read from File field.

Category:
Other

Cause:
An attempt was made to create a file column, but the file type entered was invalid.

Action:
Display the list of values and pick a valid file type.

REP-01802
Contents of a field cannot be read from a text file.

Category:
Other

Cause:
Read from File was selected for a column, but Oracle Reports Builder could not find the files pointed to by the column. The possible causes of this error include the following: Case 1: The files do not exist. Case 2: The necessary privileges to access the files are not granted. Case 3: A system error made it impossible to find the files.

Action:
Take the following actions to correct this error: If Case 1: Uncheck Read from File or create the necessary files. If Case 2: Update privileges, if possible. If Case 3: Consult the operating system documentation or contact the system administrator.

REP-01803
Destination file {0} cannot be opened.

Category:
Other

Cause:
The destination file specified for the report could not be opened.

Action:
Consult the operating system documentation or contact the system administrator.

REP-01804
Printer definition file {0} cannot be opened.

Category:
Other

Cause:
The printer definition file for the specified printer could not be opened.

Action:
Consult the operating system documentation or contact the system administrator.

REP-01805
Mail text file {0} cannot be opened.

Category:
Other

Cause:
An attempt was made to send the report output to a mail message, but the file for the message could not be opened.

Action:
Consult the Oracle*Mail documentation or contact Oracle Support Services.

REP-01806
Mail command file {0} cannot be opened.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01807
The mail report command failed.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01808
The print command file cannot be opened.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01809
The print report command failed.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01810
The Oracle Reports Builder ASCII Driver will be used to run a character report.

Category:
Other

Cause:
An attempt was made to print a character-mode report to a printer or a file using either a PostScript driver or the Microsoft Windows Generic Text driver.

Action:
No action necessary.

REP-01811
An error occurred while generating a graph.

Category:
Other

Cause:
Oracle Reports Builder called Graphics Runtime to generate a graph, but no graph was created.

Action:
Verify that the named graph document exists and will run.

REP-01812
Too many pages formatted. There is either too much data or an error in the report's definition.

Category:
Data

Cause:
The possible causes of this error include the following: Case 1: A user-defined limit set to catch too much data has been reached. Case 2: An error in the report definition has been reached.

Action:
Take the following actions to correct this error: If Case 1: Abort running the program. Check the value of PAGE_LIMIT in the PRODUCT_PROFILE table. Ensure that it is either '0', which means the user is allowed to format an unlimited number of pages, or some value sufficiently large to enable the user to format the report. If Case 2: Debug the report in the Report Editor.

REP-01813
Object {0} is too large to fit in a matrix cell.

Category:
Other

Cause:
The data fetched into a matrix cell exceeds the capacity of the cell. For example, the cell may contain a variable field, and the data may be longer than expected.

Action:
Either enlarge the matrix cells until they are able to contain the data fetched into them, or redefine the data.

REP-01814
The report cannot be formatted. Object {1} cannot fit within location {0}.

Category:
Other

Cause:
The referenced object is causing the most recently formatted page to start with exactly the same state as the previous page. Formatting will therefore cycle until abnormally terminated. Possible causes of this error include: Case 1: An object whose Print Condition type is All overflows to the next page. Case 2: An object whose sizing is Variable or Expand does not appear to extend beyond page boundaries in the Paper Layout editor but does when the report is formatted. Case 3: A repeating frame does not appear to extend beyond page boundaries in the Paper Layout editor but does when the report is formatted.

Action:
Using the referenced object as a guide, examine the report layout for objects that may extend beyond page boundaries. Note: The object referenced in the message is the object that extends beyond the boundary. This object may be pushed beyond the boundary by another object, and this second object may need modification.

REP-01815
A bad Oracle Number was encountered.

Category:
Other

Cause:
A formula providing the value of a column failed to specify any value.

Action:
Debug any formulas in the report columns and ensure that each formula specifies a value where necessary.

REP-01816
No value was specified for COPIES, and no output was created.

Category:
Other

Cause:
In the Runtime Parameter Form or the Print Job dialog box, zero (0) copies was specified.

Action:
Specify a value of one or more copies.

REP-01817
The start page occurs after the end page. No pages were generated.

Category:
Other

Cause:
In the Print Job dialog box, a starting page number was specified that is greater than the ending page number.

Action:
Change either the starting page number or the ending page number such that the starting number is less than the ending number.

REP-01818
Data in image format could not be read.

Category:
Data

Cause:
Possible causes of this error include: Case 1: An attempt was made to read a file or database column as containing an image, but the file or column's contents are of the wrong format. Case 2: The width of the Oracle Reports Builder column specified may be truncating the image because it is too small. Case 3: REPORTS_DEFAULT_DISPLAY is set to YES and the image format used is not supported.

Action:
Take the following actions to correct this error: If Case 1: Verify that the file or column specified contains an image in a valid format. If Case 2: Change the width of the Oracle Reports Builder column so that it is large enough to display the image. If Case 3: Verify that the image format is one of the supported formats: GIF, JPEG, JPG, PNG, BMP.

REP-01819
Filename {0} is longer than the platform maximum of {1} characters.

Category:
Other

Cause:
A name was specified for a file that is longer than the platform-allowed maximum. This is most likely to occur when accessing a file using Read from File, and the file name in the database is too long.

Action:
Verify that the database is not corrupted, or run the report on a platform that accepts filenames of the specified length.

REP-01820
The Oracle Reports Builder ASCII Driver cannot be used to run a bitmap report.

Category:
Other

Cause:
An attempt was made to print a bitmapped report when the Oracle Reports Builder ASCII Driver is the default printer.

Action:
Select a different printer, then print the report.

REP-01825
The Before Report trigger returned FALSE.

Category:
Other

Cause:
The report includes a Before Report trigger that returned a value of FALSE rather than TRUE. When a trigger returns a value of FALSE, report formatting stops.

Action:
Verify that the report trigger is meant to return a value of FALSE.

REP-01826
The Between Page trigger returned FALSE.

Category:
Other

Cause:
The report includes a Between Page trigger that returned a value of FALSE rather than TRUE. When a trigger returns a value of FALSE, report formatting stops.

Action:
Verify that the report trigger is meant to return a value of FALSE.

REP-01827
Parentheses in the format mask do not balance.

Category:
Other

Cause:
Unmatched parenthesis exist in the format mask.

Action:
Edit the format mask and insert the necessary parenthesis.

REP-01828
A format mask may contain at most one set of parentheses.

Category:
Other

Cause:
More than one set of parentheses was used in the format mask.

Action:
Use only one set of parentheses in the format mask.

REP-01829
Left parenthesis must precede right parenthesis in a format mask.

Category:
Other

Cause:
The order of the parentheses was reversed in the format mask; that is, the right, or close, parenthesis was used before the left, or open parenthesis.

Action:
Edit the format mask and reverse the order of the parentheses.

REP-01830
The Exponent field in a format mask must contain exactly 4 Es.

Category:
Other

Cause:
The scientific notation specified for the field contained too many or too few E's.

Action:
Enter the format mask with four E's. To have extra E's appear in the output, put them in quotation marks (").

REP-01831
A closing quotation mark in format mask is missing.

Category:
Other

Cause:
An opening quotation mark (") was entered before the string in the format mask, but not a closing one. The possible causes of this error include the following: Case 1: No closing quotation mark was entered after the string. Case 2: One quotation mark was entered within the quotation marks that begin and end the string.

Action:
Take the following actions to correct this error: If Case 1: Add an ending quotation mark after the string. If Case 2: Enter another quotation mark next to the quotation mark inside the string.

REP-01832
Illegal character {0} was encountered in the format mask.

Category:
Other

Cause:
A character was entered in a format mask that is not valid for format masks.

Action:
Delete the illegal character. For more information, see the date and time format mask information in the Building Reports manual.

REP-01833
A format mask must contain at least one digit.

Category:
Other

Cause:
The format mask entered contains no digits. At least one token in the mask must represent a digit.

Action:
Enter a token in the format mask that represents a digit. The tokens that represent digits are 0, 9, *, and S. For more information, see the date and time format mask information in the Building Reports manual.

REP-01834
A format mask may contain at most one < character.

Category:
Other

Cause:
The format mask included two left angle brackets (<<). The angle brackets need not be entered sequentially to cause the error.

Action:
Delete the extra left angle bracket or place it inside quotation marks (") as part of a string if it should appear in the output.

REP-01835
A format mask may contain at most one > character.

Category:
Other

Cause:
The format mask included two right angle brackets (>>). The angle brackets need not be entered sequentially to cause the error.

Action:
Delete the extra right angle bracket or place it inside quotation marks (") as part of a string if it should appear in the output.

REP-01836
A left angle bracket must come before a right angle bracket in a format mask.

Category:
Other

Cause:
The left angle bracket (<) must come before the right angle bracket (>) in a format mask.

Action:
Ensure that all angle brackets that are to appear in the output are placed inside quotation marks ("). For the angle brackets that delineate the beginning and ending of the decimal aligned region, ensure that the left angle bracket precedes the right angle bracket in the format mask.

REP-01837
A format mask may contain at most one decimal point.

Category:
Other

Cause:
A format mask was entered with multiple decimal points.

Action:
To have extra decimal points appear in the output, place them in quotation marks ("). Remove any extra decimal points outside of quotation marks.

REP-01838
A format mask may contain at most one scale point.

Category:
Other

Cause:
The token V was entered more than once within the format mask.

Action:
To have extra V's appear in the output, place them in quotation marks ("). Otherwise, delete the V's until there is only one in the format mask.

REP-01839
A comma is not allowed before the first digit in a format mask.

Category:
Other

Cause:
A comma (,) was entered before the first digit in the format mask, which is illegal.

Action:
To have a comma appear before the digits in the output, place it in quotation marks (") as a string. Otherwise, delete the comma.

REP-01840
A comma is not allowed after the last digit in a format mask.

Category:
Other

Cause:
A comma (,) was entered after the last digit in the format mask, which is illegal.

Action:
To have a comma appear after the digits in the output, place it in quotation marks (") as a string. Otherwise, delete the comma.

REP-01841
A comma is not allowed after the decimal point in a format mask.

Category:
Other

Cause:
A comma (,) was entered after the decimal point in the format mask.

Action:
To have a comma appear after the decimal point in the output, place it in quotation marks (") as a string. Otherwise, delete the comma.

REP-01842
A format mask may contain at most one exponent field.

Category:
Other

Cause:
The token EEEE was entered more than once within the format mask. This token may be entered only once per format mask.

Action:
To have the extra E's appear in the output, place them in quotation marks ("). Otherwise, delete the extra EEEE tokens until there is only one in the format mask.

REP-01843
Format masks with exponent fields must have exactly one digit before the decimal point.

Category:
Other

Cause:
A scientific notation format mask was entered that had no digits or more than one digit to the left of the decimal point.

Action:
Delete digits or add a digit until there is only one to the left of the decimal point.

REP-01844
An internal error occurred: Bad index in a flexible array.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01845
The decimal point must come between the angle brackets in a format mask.

Category:
Other

Cause:
A decimal point was placed outside the left and right angle brackets (\< and \>) of the format mask.

Action:
Edit the format mask to either remove the decimal point or place it between the brackets.

REP-01846
A Roman numeral format mask must be simply \"RN\" or \"rn\".

Category:
Other

Cause:
A Roman numeral format mask token (RN or rn) was specified, along with other format mask tokens.

Action:
To format the values as Roman numerals, eliminate all format mask tokens except RN or rn from Format Mask. Otherwise, do not use the RN or rn token.

REP-01847
The current process failed while trying to set up for printing.

Category:
Process

Cause:
An attempt was made to print a report. The possible causes of this error include the following: Case 1: In the Runtime Parameter Form or on the command line, Printer was specified for DESTYPE, but an invalid printer name was specified for DESNAME. Case 2: The report that was executed in turn executes a second report using SRW.RUN_REPORT. DESTYPE for both reports is set to either File or Printer, but the first report must be run to the screen.

Action:
Take the following actions to correct this error: If Case 1: Retry the operation, specifying a valid printer name for DESNAME. If Case 2: Change the DESTYPE for the first report to Screen or Previewer and run it again.

REP-01848
The current process failed while trying to begin printing.

Category:
Process

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01849
The current process failed while printing.

Category:
Process

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01850
An error occurred in column {0} of line {1} of printer definition file {2}: End of file reached inside quoted string.

Category:
Other

Cause:
The printer definition file contains a quoted string that was not ended with a quote before the end of the file.

Action:
Use the location specified in the error message to locate the error and add the end quote to the quoted string in the printer definition file.

REP-01851
An error occurred in column {0} of line {1} of printer definition file {2}: String is longer than {3} characters.

Category:
Other

Cause:
A string in the printer definition file is longer than the maximum number of allowable characters.

Action:
Reduce the length of the string.

REP-01852
An error occurred in column {0} of line {1} of printer definition file {2}.

Category:
Other

Cause:
An incorrect keyword is included in the printer definition file.

Action:
Verify the printer definition file syntax.

REP-01853
An error occurred in column {0} of line {1} of printer definition file {2}.

Category:
Other

Cause:
An incorrect keyword was found in the printer definition file.

Action:
Verify the printer definition file syntax.

REP-01854
An error occurred in column {0} of line {1} of printer definition file {2}: Invalid control character {3}.

Category:
Other

Cause:
An invalid control character was found in the printer definition file.

Action:
Replace or remove the invalid control character in the printer definition file.

REP-01855
An error occurred in column {0} of line {1} of printer definition file {2}: Unknown character {3}.

Category:
Other

Cause:
An unknown character was found in the printer definition file.

Action:
Replace or remove the unknown character in the printer definition file.

REP-01856
An error occurred in column {0} of line {1} of printer definition file {2}: {3} is not a valid ASCII character.

Category:
Other

Cause:
An invalid ASCII character appears in the printer definition file.

Action:
Replace or remove the invalid ASCII character in the printer definition file.

REP-01857
An error occurred in column {0} of line {1} of printer definition file {2} following {3}.

Category:
Other

Cause:
An unmatched parenthesis was found in the printer definition file.

Action:
Edit the printer definition file and insert the necessary parenthesis.

REP-01858
An error occurred in column {0} of line {1} of printer definition file {2}: octal {3} is not a valid ASCII character.

Category:
Other

Cause:
The octal code for an ASCII character in the printer definition file is incorrect.

Action:
Edit the printer definition file and correct the code for the ASCII character.

REP-01859
An error occurred in column {0} of line {1} of printer definition file {2}: hex {3} is not a valid ASCII character.

Category:
Other

Cause:
The hex code for an ASCII character in the printer definition file in incorrect.

Action:
Edit the printer definition file and correct the code for the ASCII character.

REP-01860
An error occurred in column {0} of line {1} of printer definition file {2}.

Category:
Other

Cause:
The printer definition file contains an incomplete code string.

Action:
Edit the printer definition file and complete the code string with the appropriate word.

REP-01861
An error occurred in column {0} line {1} of file {2}.

Category:
Other

Cause:
The printer definition file contains an incomplete "box" code string.

Action:
Edit the printer definition file and complete the "box" code string with the appropriate word.

REP-01862
An error occurred in column {0} of line {1} of printer definition file {2}.

Category:
Other

Cause:
The printer definition file does not include the required code "printer".

Action:
Edit the printer definition file and add the required code "printer" followed by the name of the printer in a quoted string, preferably on the first line of the printer definition file.

REP-01863
An error occurred in column {0} of line {1} of printer definition file {2}.

Category:
Other

Cause:
The printer definition file contains the name of the printer after the "printer" code, but the name does not appear in a quoted string.

Action:
Edit the printer definition file and place quotation marks (") around the name of the printer after the "printer" code.

REP-01864
An error occurred in column {0} line {1} of file {2}.

Category:
Other

Cause:
The printer definition file does not contain any of the code words expected in a printer definition file.

Action:
Edit the printer definition file and add the code words that are missing.

REP-01865
An error occurred in column {0} of line {1} of printer definition file {2}.

Category:
Other

Cause:
The printer definition file contains the "width" code, but no number specifying the width of the report appears after it.

Action:
Edit the printer definition file and insert a number specifying the width of the report after the "width" code.

REP-01866
An error occurred in column {0} of line {1} of printer definition file {2}.

Category:
Other

Cause:
The printer definition file contains the "height" code, but no number specifying the height of the report appears after it.

Action:
Edit the printer definition file and insert a number specifying the height of the report after the "height" code.

REP-01867
An error occurred in column {0} of line {1} of printer definition file {2}.

Category:
Other

Cause:
The printer definition file contains the word "before" but not the accompanying word "report".

Action:
Edit the printer definition file to include a complete "before report" entry.

REP-01868
An error occurred in column {0} of line {1} of printer definition file {2}.

Category:
Other

Cause:
The printer definition file contains the word "between" but not the accompanying word "pages".

Action:
Edit the printer definition file to include a complete "between pages" entry.

REP-01869
An error occurred in column {0} of line {1} of printer definition file {2}.

Category:
Other

Cause:
The printer definition file (for a multipage report) contains the code word "after" but not the accompanying word "report".

Action:
Edit the printer definition file to include a complete "after report" entry.

REP-01870
An error occurred in column {0} of line {1} of printer definition file {2}.

Category:
Other

Cause:
The printer definition file contains the "code" code with a user-defined string, but the string is not enclosed within quotation marks.

Action:
Edit the printer definition file and enclose the "code" user-defined string with quotation marks.

REP-01871
An error occurred in column {0} of line {1} of printer definition file {2}.

Category:
Other

Cause:
The printer definition file contains a generalized string using "dec", but "dec" is not followed with a left parenthesis.

Action:
Edit the printer definition file and add parentheses around the value following "dec".

REP-01872
An error occurred in column {0} of line {1} of printer definition file {2}.

Category:
Other

Cause:
The printer definition file contains a generalized string (for example, dec or octal), but no value follows the right parenthesis.

Action:
Edit the printer definition file and add a value between the parentheses in the generalized string.

REP-01873
An error occurred in column {0} of line {1} of printer definition file {2}.

Category:
Other

Cause:
The printer definition file contains a generalized string using "octal", but "octal" is not followed with a left parenthesis.

Action:
Edit the printer definition file and add parentheses around the value following "octal".

REP-01874
An error occurred in column {0} of line {1} of printer definition file {2}.

Category:
Other

Cause:
The printer definition file contains a generalized string (for example, dec or octal), but no value follows the left parenthesis.

Action:
Edit the printer definition file and add a value between the parentheses in the generalized string.

REP-01875
An error occurred in column {0} of line {1} of printer definition file {2}.

Category:
Other

Cause:
The printer definition file contains a generalized string using "hex", but "hex" is not followed with a left parenthesis.

Action:
Edit the printer definition file and add parentheses around the value following "hex".

REP-01876
An error occurred in column {0} of line {1} of printer definition file {2}.

Category:
Other

Cause:
The printer definition file contains a generalized string (for example, dec or octal), but no value follows the left parenthesis.

Action:
Edit the printer definition file and add a value between the parentheses in the generalized string.

REP-01877
An error occurred in column {0} of line {1} of printer definition file {2}.

Category:
Other

Cause:
The printer definition file contains a generalized string using "^", but no control character follows the "^".

Action:
Edit the printer definition file and add a control character after "^".

REP-01878
An error occurred in column {0} of line {1} of printer definition file {2}.

Category:
Other

Cause:
The printer definition file contains a keyword and generalized string (for example, after report or before report), but no left parenthesis follows the word "control".

Action:
Edit the printer definition file and add a left parenthesis following the word "control".

REP-01879
An error occurred in column {0} of line {1} of printer definition file {2}.

Category:
Other

Cause:
The printer definition file contains a keyword and generalized string (for example, after report or before report), but no control character follows the left parenthesis.

Action:
Edit the printer definition file and add a control character between the parentheses after the word "control".

REP-01880
An error occurred in column {0} of line {1} of printer definition file {2}.

Category:
Other

Cause:
The printer definition file contains the "box" code string, but the drawing string specified between quotation marks is more than one character long.

Action:
Edit the printer definition file, making sure that one and only one character is specified as a drawing string.

REP-01881
An error occurred in column {0} of line {1} of printer definition file {2}.

Category:
Other

Cause:
The printer definition file contains the "box" code string, but no drawing string is specified.

Action:
Edit the printer definition file and specify a drawing string.

REP-01882
An error occurred in column {0} line {1} of file {2}.

Category:
Other

Cause:
The printer definition file contains the "box" code string, but the following required word (one of 'horizontal', 'vertical', 'top', 'center', or 'bottom') is not specified.

Action:
Edit the printer definition file and add the appropriate required word.

REP-01883
Unexpected end of printer definition file was reached.

Category:
Other

Cause:
Oracle Reports Builder was able to open the printer definition file, but an error occurred while reading it.

Action:
Verify that the correct printer definition file is specified. Also, check the contents of the printer definition file. Edit the file if necessary.

REP-01884
A hang occurred while sending output.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01885
Output could not be sent to the printer.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-01886
Expected I after M in the format mask cannot be found.

Category:
Other

Cause:
The M entered in a format mask was not followed by I. The only token that begins with M is the MI token.

Action:
To use the MI token, enter an I after the M. To have the character M appear in the output, place it inside double quotation marks ("). Otherwise, delete the M from Format Mask.

REP-01887
Expected R after P in the format mask cannot be found.

Category:
Other

Cause:
The P entered in a format mask was not followed by R. The only token that begins with P is the PR token.

Action:
To use the PR token, enter an R after the P. To have the character P appear in the output, place it inside double quotation marks ("). Otherwise, delete the P from Format Mask.

REP-01888
Only one sign token is allowed.

Category:
Other

Cause:
More than one sign token was entered in a format mask.

Action:
Delete all sign tokens but one from the format mask.

REP-01889
A trailing sign token must be at the end.

Category:
Other

Cause:
A sign token was not placed at the end of the format mask.

Action:
Place the sign token (for example, MI, PR, DB, and CR) at the end of the format mask.

REP-01890
The S token must be at the beginning or end.

Category:
Other

Cause:
The S token was not placed at the beginning or the end of the format mask.

Action:
Place the S token at the beginning or the end of the format mask or delete it.

REP-01891
Parentheses tokens must surround other tokens.

Category:
Other

Cause:
The parentheses tokens do not surround all other tokens in the format mask.

Action:
Place the parentheses around all of the other tokens in the format mask.

REP-01892
The destype specified is not supported for pdf or html.

Category:
Other

Cause:
An invalid destination type (destype) was specified for pdf or html output.

Action:
Specify a destination type (destype) of file or cache for pdf or html output.

REP-01893
The destype specified is not supported on this platform.

Category:
Other

Cause:
An invalid destination type (destype) was specified for the operating system (for example, Sysout, while running on Microsoft Windows).

Action:
Specify a valid destination type.

REP-01894
The report definition was modified during the current run. No new pages will be generated.

Category:
Other

Cause:
While previewing a report (using Oracle Reports Builder), the report's definition was modified, and then an attempt was made to view additional pages from the Previewer. Oracle Reports Builder cannot guarantee that all of the information used at runtime is still present, so formatting is halted.

Action:
No action required.

REP-01895
A date formatting error occurred while processing field {0}.

Category:
Other

Cause:
Oracle Reports Builder could not format the specified date field.

Action:
Check the format mask of the specified date field.

REP-01896
An error occurred in column {0} of line {1} of printer definition file {2}: Expected backspace or overstrike to follow hilight.

Category:
Other

Cause:
The specified printer definition file contains the 'hilight' setting, but the setting was not completed properly.

Action:
Add either 'overstrike' or 'backspace <sequence>' after 'hilight'.

REP-01897
An error occurred in column {0} of line {1} of printer definition file {2}: Non-numeric user-defined printer codes are not supported.

Category:
Other

Cause:
The specified printer definition file contains a user-defined printer code that is not a number.

Action:
Change the user-defined printer code to a number.

REP-01898
An error occurred in column {0} of line {1} of printer definition file {2}: Hilight setting can only be defined once.

Category:
Other

Cause:
The specified printer definition file contains more than one hilight setting.

Action:
Remove all but one of the hilight settings from the printer definition file.

REP-01899
Graphics Display or Icon cannot be converted to .gif format - image skipped.

Category:
Other

Cause:
Oracle Reports Builder was unable to convert an embedded Graphics Display or icon to a GIF format for displaying within an HTML document. This only occurs when Oracle Reports Builder cannot access a window system in order to draw the image.

Action:
Run the report using the bitmap executable under a windowing system to allow Oracle Reports Builder access to a display.

REP-01920
Character mode runtime is incompatible with DESFORMAT of PDF, HTML, HTMLCSS, SPREADSHEET, or RTF.

Category:
Other

Cause:
An attempt was made to run a report with a destination format of PDF, HTML, HTMLCSS, SPREADSHEET, or RTF. These formats are only available when running in a bitmap environment and producing a bitmap output.

Action:
Rerun the report with a bitmap executable or set MODE=BITMAP if already running with a bitmap executable.

REP-01921
Input printer tray {0} is not available on the selected printer.

Category:
Other

Cause:
An attempt was made to alter the input printer tray but the name of the tray specified is not available on the currently selected printer.

Action:
Change the selected printer to one that supports the specified tray or alter the tray name to one supported by the specified printer. Use Page Setup to view the list of printer trays supported by the printer.

REP-01922
A PDF compression error was encountered.

Category:
Other

Cause:
The compression engine failed compressing this page.

Action:
Turn off compression for this report by specifying PDFCOMP=NO on command line.

REP-01923
A PDF Font Embed error was encountered.

Category:
Other

Cause:
The font specified for embedding into the PDF document cannot be found or is invalid.

Action:
The [PDF:Embed] section must be present in the uifont.ali file. Check to ensure that the entry of font in the uifont.ali is syntactically correct. Verify that the location of font files is added to REPORTS_PATH in the registry/environment variable.

REP-01924
Font file {0} cannot be found.

Category:
Other

Cause:
The font file specified in UIFONT.ALI is not found.

Action:
Verify that the font file exists in REPORTS_PATH.

REP-01925
Font file {0} is invalid.

Category:
Other

Cause:
The font file appears to be corrupt or invalid.

Action:
Ensure the specified file is a valid font file.

REP-01926
Identical name {0} was specified for dissimilar form field types {1} and {2}.

Category:
Other

Cause:
The name specified for a form field conflicts with an existing form field of different type.

Action:
Select a new name for one of the form fields. Change the type of the form field to match that of the existing form field.

REP-01927
Cannot print document or generate output in printer format because the printer is offline or paused.

Category:
Other

Cause:
When destination type is printer or format is printer name, running request fails if the printer is offline or paused.

Action:
Bring the printer online and try again.

REP-01940
An error occurred in column {0} line {1} of file {2}: Expected visualorder, logicalorder, contextualshaping, contextuallayout, multibyte, or pcharset.

Category:
Other

Cause:
The printer definition file contains the 'nls' code string, but the required word (one of 'visualorder', 'logicalorder', 'contextualshaping', 'contextuallayout', 'multibyte', or 'pcharset') is not specified.

Action:
Edit the printer definition file and add the required word.

REP-01941
An error occurred in column {0} line {1} of file {2}: Expected yes or no.

Category:
Other

Cause:
The printer definition file contains 'visualorder', 'logicalorder', 'contextualshaping', 'contextuallayout', 'multibyte', or 'pcharset' code string, but the required word (either 'yes' or 'no) is not specified.

Action:
Edit the printer definition file and add the appropriate 'yes' or 'no'.

REP-01942
An error occurred in column {0} line {1} of file {2}: Expected name of character set to follow pcharset.

Category:
Other

Cause:
The printer definition file contains the 'pcharset' code string, but the required string (name of character set) is not specified.

Action:
Edit the printer definition file and add the name of character set.

REP-01943
An error occurred in column {0} line {1} of file {2}: Defined printer character set is unsupported.

Category:
Other

Cause:
The printer definition file contains an unsupported printer character set.

Action:
Edit the printer definition file and specify the name of a supported character set.

REP-01944
Invalid reference value {0} was specified for Report property {1}

Category:
Other

Cause:
The value specified for the indicated property cannot be resolved or is at a wrong frequency.

Action:
Ensure that the reference exists and resolves to a valid value. Only Report-level columns can be referenced with this property.

REP-01950
The Source specified is invalid.

Category:
Other

Cause:
The Source specified for Reports Converter is not a valid source.

Action:
Verify that the correct object or file is specified and that the STYPE is correct for that file or object.

REP-01951
The Destination specified is invalid.

Category:
Other

Cause:
The Destination specified for Reports Converter is not a valid destination.

Action:
Verify that the correct object or file is specified and that the DTYPE is correct for that file or object.

REP-01952
The number of Destination items must be zero or match the number of Source items.

Category:
Other

Cause:
In the Convert dialog box, or while using Reports Converter, the number of Destination items specified was greater than zero and did not match the number of Source items specified.

Action:
To have Oracle Reports Builder derive the Destination names from the specified Source names, leave Destination blank. Otherwise, verify that the number of Destination names specified matches the number of Source names specified. If wildcards are used in the Source specification, verify that the number of Destination names matches the number of Source items in the expanded wildcard list.

REP-02000
An error occurred in the user exit.

Category:
Other

Cause:
An error occurred in the user exit.

Action:
Debug the code or contact the database administrator.

REP-02001
An error occurred in IAF GET: unknown column {0}.

Category:
Other

Cause:
An unknown column name was specified in the user exit's IAF GET statement.

Action:
Specify a valid column name in the IAF GET statement.

REP-02002
An error occurred in IAF PUT: unknown column {0}.

Category:
Other

Cause:
An unknown column name was specified in the user exit's IAF PUT statement.

Action:
Specify a valid column name in the IAF PUT statement.

REP-02003
The user exit cannot be found.

Category:
Other

Cause:
Oracle Reports Builder could not find the user exit that it was supposed to run at this point. The most likely cause is that the name and/or location of the user exit code was not specified correctly.

Action:
Verify the name and location of the code when installing it. Otherwise, contact the database administrator.

REP-02004
PL/SQL source code of object {0} could not be retrieved.

Category:
Other

Cause:
From the File menu, Administration Report was selected to document one or more reports, but the RWEPLS user exit failed to retrieve the PL/SQL source code of an object. This is most likely an abnormal condition.

Action:
Check the PL/SQL source code in the named object. For assistance, contact Oracle Support Services.

REP-02005
An error occurred in IAF PUT: the value of column {0} was truncated.

Category:
Other

Cause:
The IAF PUT statement assigned a value to the named column, but the column was not wide enough to hold the entire value, causing it to truncate.

Action:
Widen the column so that it is can hold the entire value.

REP-02100
An error occurred in Calculation Manager.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-02101
Calculation Manager: the source column cannot use segmented memory.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-02102
Calculation Manager: the computed column cannot use segmented memory.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-02103
The PL/SQL formula returned invalid value or no value for column {0}.

Category:
Other

Cause:
An SRW.DO_SQL statement was entered that caused this Oracle message.

Action:
Edit the SRW.DO_SQL statement. For more information about the Oracle message, see the Oracle Messages and Codes Manual.

REP-02300
Error {0} occurred.

Category:
Other

Cause:
An SRW.DO_SQL statement was entered that caused this Oracle message.

Action:
Edit the SRW.DO_SQL statement. For more information about the Oracle message, see the Oracle Messages and Codes Manual.

REP-02301
An error occurred allocating a SQLDA descriptor: {0}.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-02302
An error occurred parsing the SQL statement: {0}.

Category:
Other

Cause:
Oracle Reports Builder encountered an error while parsing the SRW.DO_SQL statement.

Action:
Refer to the Oracle message to see why the SQL statement could not be parsed.

REP-02303
An error occurred describing bind variables: {0}.

Category:
Other

Cause:
Oracle Reports Builder encountered an error while describing bind variables in an SRW.DO_SQL statement.

Action:
Refer to the Oracle message to see why the bind variables could not be described.

REP-02304
An error occurred opening a SQL cursor: {0}.

Category:
Other

Cause:
Oracle Reports Builder encountered an error while opening a cursor in an SRW.DO_SQL statement.

Action:
Refer to the Oracle message to see why the cursor could not be opened.

REP-02305
An error occurred describing the SELECT list: {0}.

Category:
Other

Cause:
Oracle Reports Builder encountered an error while describing the SELECT list in an SRW.DO_SQL statement.

Action:
Refer to the Oracle message to see why the bind variables could not be described.

REP-02306
An error occurred fetching bind variables: {0}.

Category:
Other

Cause:
Oracle Reports Builder encountered an error while fetching bind variables in an SRW.DO_SQL statement.

Action:
Refer to the Oracle message to see why the bind variables could not be fetched.

REP-02307
An error occurred fetching a data record: {0}.

Category:
Data

Cause:
Oracle Reports Builder encountered an error while fetching a data record in an SRW.DO_SQL statement.

Action:
Refer to the Oracle message to see why the data record could not be fetched.

REP-02308
An error occurred processing the SELECT list: {0}.

Category:
Other

Cause:
Oracle Reports Builder encountered an error while processing the SELECT list in an SRW.DO_SQL statement.

Action:
Refer to the Oracle message to see why the SELECT list is invalid.

REP-02309
An error occurred formatting a date field: {0}.

Category:
Other

Cause:
Oracle Reports Builder encountered an error while formatting a date field in an SRW.DO_SQL statement.

Action:
Refer to the Oracle message to see why the date field could not format.

REP-02310
An error occurred putting a value into a column: {0}.

Category:
Other

Cause:
Oracle Reports Builder encountered an error while trying to insert a value into a column in an SRW.DO_SQL statement.

Action:
Refer to the Oracle message to see why the value could not be assigned.

REP-02311
An error occurred during Commit: {0}.

Category:
Other

Cause:
Oracle Reports Builder encountered an error while trying to do a commit in an SRW.DO_SQL statement.

Action:
Refer to the Oracle message to see why the commit failed.

REP-02312
An error occurred allocating a data record: {0}.

Category:
Data

Cause:
Oracle Reports Builder encountered an error while allocating a data record in an SRW.DO_SQL statement.

Action:
Refer to the Oracle message to see why the record could not be allocated.

REP-02313
An error occurred parsing the SELECT list: {0}.

Category:
Other

Cause:
Oracle Reports Builder encountered an error while parsing the SELECT list in an SRW.DO_SQL statement.

Action:
Refer to the Oracle message to see why the SELECT list could not be parsed.

REP-02314
An error occurred closing a SQL cursor: {0}.

Category:
Other

Cause:
Oracle Reports Builder encountered an error while trying to close a SQL cursor in an SRW.DO_SQL statement.

Action:
Refer to the Oracle message to see why the close cursor operation failed.

REP-02315
An error occurred freeing a data record: {0}.

Category:
Data

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-02316
Column {0} cannot be found.

Category:
Other

Cause:
A column referred to in an SRW.DO_SQL statement cannot be found.

Action:
Debug the PL/SQL and verify that the SRW.DO_SQL statement contains the correct column name.

REP-02317
The value of column {0} was truncated.

Category:
Other

Cause:
A column value obtained via an SRW.DO_SQL statement was truncated.

Action:
Go to the column's Property Inspector and increase its Width. Or, restrict the size of the value that the SRW.DO_SQL statement is putting into the column.

REP-02400
DEBUG: internal error 0 occurred.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-02500
Error {0} occurred. See the Release Notes for further information about this error

Category:
Other

Cause:
The error is documented in the Release Notes.

Action:
See the Release Notes.

REP-02550
The in-process server was not started: {0}.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
Refer to the in-process server message to see why it failed to start. Then restart the Oracle Reports Builder.

REP-03000
An internal error occurred starting Oracle Toolkit.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03001
An internal error occurred initializing the File Dialog.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03002
An error occurred initializing the printer. Verify that a printer is installed.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03020
An internal error occurred starting Oracle Resource Manager.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03021
An internal error occurred processing a menu resource.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03022
An internal error occurred processing a window resource.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03023
The resource file cannot be found.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03040
An internal error occurred starting Oracle Observer Model.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03060
An internal error occurred initializing the color table. Checking VGS resources is recommended.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03080
An internal error occurred initializing Oracle Image.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03081
An error occurred running the image viewer.

Category:
Other

Cause:
A Previewer button was selected with a defined action of displaying an image, but the image viewer is unavailable. Possible causes of this error include: Case 1: The image specified as

the source is in an incorrect format. Case 2: There is no available memory. Case 3: An abnormal condition was encountered.

Action:
Take the following actions to correct this error: If Case 1: Ensure that the image file specified as the source of the button action is in a displayable format. If Case 2: Make more memory available, if possible, or ask the system administrator for assistance. If Case 3: For assistance, contact Oracle Support Services.

REP-03082
An error occurred running the sound dialog.

Category:
Other

Cause:
A Previewer button was selected with a defined action of playing a sound, but the sound dialog is unavailable. Possible causes of this error include: Case 1: The sound file specified as the source is in an incorrect format. Case 2: There is no available memory. Case 3: An abnormal condition was encountered.

Action:
Take the following actions to correct this error: If Case 1: Ensure that the sound file specified as the source of the button action is in a playable format. If Case 2: Make more memory available, if possible, or ask the system administrator for assistance. If Case 3: For assistance, contact Oracle Support Services.

REP-03083
An error occurred running the video player.

Category:
Other

Cause:
A Previewer button was selected with a defined action of playing a video, but the video player is unavailable. Possible causes of this error include: Case 1: The video file specified as the source is in an incorrect format. Case 2: There is no available memory. Case 3: An abnormal condition was encountered.

Action:
Take the following actions to correct this error: If Case 1: Ensure that the video file specified as the source of the button action is in a playable format. If Case 2: Make more memory available, if possible, or ask the system administrator for assistance. If Case 3: For assistance, contact Oracle Support Services.

REP-03085
Multimedia source file {0} cannot be found.

Category:
Other

Cause:
The button was clicked in the Previewer, but the source for the button's intended action (whether sound, image, or video) cannot be found or has been corrupted.

Action:
Open the Property Inspector for the button in question and verify the existence, format, and path information for the specified source file.

REP-03086
The multimedia source file is not available.

Category:
Other

Cause:
The button was clicked in the Previewer, but the source for the button's intended action (whether sound, image, or video) has been corrupted.

Action:
Open the Property Inspector for the button in question and verify the existence, format, and path information for the specified source file. If it is correct, check the file itself.

REP-03087
ImageViewer is not supported in this configuration.

Category:
Other

Cause:
The platform or configuration does not support displaying images via the ImageViewer.

Action:
No action is necessary.

REP-03088
Sound is not supported in this configuration.

Category:
Other

Cause:
The platform or configuration does not support playback of sound files.

Action:
No action is necessary.

REP-03089
Video is not supported in this configuration.

Category:
Other

Cause:
The platform or configuration does not support playback of video files.

Action:
No action is necessary.

REP-03100
A matrix must include at least 1 Down and 1 Across repeating frame.

Category:
Other

Cause:
An attempt was made to create a matrix (selecting Arrange, then Create Matrix) without the proper objects selected in the Paper Layout editor. A matrix layout requires that at least one group have a repeat direction of Down and one have a repeat direction of Across.

Action:
Select two repeating frames--one Down, one Across--that overlap, then select Create Matrix from the Arrange Menu.

REP-03101
All selected Down and Across repeating frames must be nested.

Category:
Other

Cause:
An attempt was made to create a matrix (selecting Arrange, then Create Matrix) and the Down and Across repeating frames were not properly overlapping and nested.

Action:
Verify that the selected Down and Across repeating frames are properly overlapping and nested before creating the matrix.

REP-03102
Anchors, matrices, and margins cannot be grouped.

Category:
Other

Cause:
Group was selected from the Arrange menu and at least one of the objects selected was an anchor, matrix, or margin.

Action:
Deselect all anchors, matrices, and margins before grouping objects.

REP-03103
Only text and graphical boilerplate objects can be rotated.

Category:
Other

Cause:
An attempt was made to rotate a frame, a field, a margin, an anchor, a matrix object, a file link boilerplate object, or a graph. None of these can be rotated.

Action:
Rotate any boilerplate objects except images and file link boilerplate objects. Depending on the operating system, the text of a rotated boilerplate text object may or may not be visible.

REP-03104
Anchors and matrices cannot be scaled separately from their associated objects.

Category:
Other

Cause:
An attempt was made to scale one of the layout objects listed above without also scaling its associated object, which is not allowed.

Action:
Select at least one associated object (anchoring object for anchors, repeating frames for matrices), then retry the scaling operation.

REP-03105
A graph Column must be selected for the graph Query.

Category:
Other

Cause:
A name was entered for the graph Query, but no graph Columns were selected. If a graph Query is specified, graph Columns must also be specified.

Action:
Specify graph Columns or remove the value from the graph Query.

REP-03106
a graph Column was selected without a graph Query name. The selected graph Column will be ignored.

Category:
Other

Cause:
A Source or graph Column was selected but a name for a graph Query was not entered.

Action:
Enter the name of the graph query to which to pass data.

REP-03107
Object {0} cannot be moved in front of its child {1}.

Category:
Other

Cause:
An attempt was made to move a layout object in front of one or more of its own child objects.

Action:
To move the layout object, toggle Confine mode off, then move it. Otherwise, no action is necessary.

REP-03108
Object {0} cannot be moved behind its container {1}.

Category:
Other

Cause:
An attempt was made to move a layout object behind one or more of its own parent objects.

Action:
To move the layout object, toggle Confine mode off, then move it. Otherwise, no action is necessary.

REP-03109
The alignment operation failed because of container constraints.

Category:
Other

Cause:
An attempt was made to align multiple layout objects but the result of such an operation would have violated container constraints (that is, moved a field outside of its enclosing frame).

Action:
Select Edit, then Undo to ensure the layout is the same as before the attempted operation. Then, either resize or reposition the container in question to perform the operation, or do nothing.

REP-03110
Same size operation failed because of container constraints.

Category:
Other

Cause:
An attempt was made to change one or more layout objects to the same size, but the result of such an operation would have violated container constraints (that is, enlarged a field beyond its enclosing frame).

Action:
Select Edit, then Undo to ensure the layout is the same as before the attempted operation. Then, either resize or reposition the container in question to perform the operation, or do nothing.

REP-03111
Changing the border width of {0} violates the constraints of confined mode.

Category:
Other

Cause:
An attempt was made to change the border width of an object such that the result would have violated container constraints (that is, widening the border of a boilerplate object so that it extended beyond its enclosing frame).

Action:
No action is necessary.

REP-03112
Objects cannot be created in the template layout body layer.

Category:
Other

Cause:
An attempt was made to create an object in the layout body layer of a template. Objects may only be created in the margin, header pages, or trailer pages of a template.

Action:
No action is necessary.

REP-03130
Parameter Form fields and images cannot be rotated.

Category:
Other

Cause:
An attempt was made to rotate one of the Parameter Form objects, which is not allowed.

Action:
Rotate any boilerplate objects, except images, in the Parameter Form editor. Depending on the operating system, the text of boilerplate text that is rotated may or may not be visible.

REP-03131
Parameter Form boilerplate text cannot fit on the page.

Category:
Other

Cause:
Text was entered in the Title, Hint, Status, or Label field in the Parameter Form Builder that is too long to fit on the page.

Action:
Reduce the length of the appropriate text field.

REP-03140
A Program Unit Editor internal error occurred: Could not get document handle.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03150
One editor must remain open for each report.

Category:
Other

Cause:
An attempt was made to close all three of the editors (Data Model, Layout, and Parameter Form) for a report. At least one editor must remain open.

Action:
Leave one editor open for each report.

REP-03151
The width for column {0} is invalid and cannot be highlighted, since group {1} is not selected.

Category:
Other

Cause:
An invalid value was entered for the Width of a column in the Report Wizard. Since the group that owns the column is not selected, the column is not listed.

Action:
Select the group that owns the column. Scroll down to the column and enter a valid value for Width.

REP-03152
The link, anchor, or polygon creation must be completed in the editor before this action.

Category:
Other

Cause:
An attempt was made to perform some action (for example, close the report) before finishing the creation of a data link in the Data Model editor, an anchor in the Paper Layout editor, or a polygon in the Paper Layout editor or Parameter Form editor.

Action:
Complete the unfinished object before continuing.

REP-03153
Insufficient resources are available to create the window.

Category:
Other

Cause:
There were insufficient resources available to create the requested window.

Action:
Make more resources available by closing windows or other applications.

REP-03154
Insufficient resources are available to create the document.

Category:
Other

Cause:
There were insufficient resources available to create the requested document (report, external query, PL/SQL library).

Action:
Make more resources available by closing windows or other applications.

REP-03200
Concurrent previewer actions are not allowed.

Category:
Other

Cause:
An attempt was made to activate more than one button at one time, in either the same or multiple Previewers. For example, play a sound and display a video at the same time.

Action:
Activate only one button at a time.

REP-03290
Query Builder does not support lexical parameters.

Category:
Other

Cause:
An attempt was made to pass lexical parameters to Query Builder, which is not supported. Query Builder only supports bind parameters.

Action:
Remove all lexical parameters from the query and reenter Query Builder.

REP-03300
A fatal error occurred: {0}.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03301
An error occurred: {0}.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03302
A fatal error occurred during Quit. Exiting Oracle Reports Builder.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03335
An unhandled internal CA error occurred.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03350
An unhandled internal UI error occurred.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03351
An undefined failure in the UI occurred.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03352
An unexpected error in the UI occurred.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03353
The attribute cannot be created.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03354
The attribute cannot be set.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03355
The attribute cannot be set or retrieved.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03356
The unknown attribute cannot be set or retrieved.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03357
The attributes values are conflicting and cannot be set.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03358
The attribute cannot be set to an out of range value.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03359
This function call is out of context.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03360
The view class does not support being a scrollee.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03361
This function call provokes an illegal recursion.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03362
The internal API memory allocator failed.

Category:
Memory

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03363
The client supplied memory allocation functions failed.

Category:
Memory

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03364
An attempt to use an unsupported function failed.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03365
Attributes cannot be set out of context.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03366
An attempt to perform an illegal operation on a root view failed.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03367
One of the parameters to the functions is out of range.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03368
The connection to the windowing system failed.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03369
The connection to the windowing system is broken.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03370
The windowing system failed.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03371
uiER_CL_FORMAT_UNAVAILABLE

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03372
uiER_CL_FORMAT_UNREGISTERED

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03373
The operation timed out.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03374
uiER_NOT_FOUND

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03375
uiER_ILLEGAL_TOPITEM

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03376
uiER_SE_BAD_FORMAT

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03377
The view class does not support the scroller interface.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03378
An attempt to remove a readshare color from a palette failed.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03379
An attempt to create a window failed.

Category:
Other

Cause:
Oracle Reports Builder was unable to create a window. There may be too many reports or windows open, and lack of memory resources.

Action:
Close some reports and windows.

REP-03380
An attempt to create a view failed.

Category:
Other

Cause:
Oracle Reports Builder was unable to create a view. There may be too many reports or windows open, and lack of memory resources.

Action:
Close some reports and windows.

REP-03381
An attempt to create a color palette failed.

Category:
Other

Cause:
Oracle Reports Builder was unable to create a color palette. There may be too many reports or windows open, and lack of memory resources.

Action:
Close some reports and windows.

REP-03400
An error occurred initializing DE. Checking DE resources is recommended.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03420
An internal error occurred in Oracle Reports Builder.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03430
An unhandled internal HH error occurred.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03431
The attribute value is invalid.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03432
The context is invalid.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03433
The specified word cannot be found.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03434
A link to external document was found.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03435
The help session is null.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03436
The document is not a help document.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03437
The document revision is newer than help.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03438
The specified attribute is not settable.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03439
The specified attribute is not gettable.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03440
The link is invalid.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03441
Logical attributes are missing or bad.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03442
The NLS language string is missing or bad.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03443
No search string is specified.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03444
The string begins with a percent sign.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03445
An unknown toolkit error occurred.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03446
An unknown object store error occurred.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03447
An out of memory condition occurred.

Category:
Memory

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03448
An unknown Resource Manager error occurred.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03480
An unhandled internal REM error occurred.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03485
An unhandled internal VGS error occurred.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03500
An unhandled internal UT error occurred.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03510
An unhandled internal ZOM error occurred.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03600
Both document nodes and non-document nodes selected. Select only nodes from one of these types of nodes.

Category:
Other

Cause:
Navigator>Delete was selected, but both object nodes and document nodes are selected. Documents cannot be closed and deleted in the same action.

Action:
To delete objects, deselect all document nodes. To close documents, deselect all object nodes. Then select Navigator>Delete again.

REP-03601
This report style can only have one Section.

Category:
Other

Cause:
Tabular, Form Letter, and Mailing Label report styles have only one Section each.

Action:
Specify all overrides in the existing Section.

REP-03602
The minimum number of levels cannot be deleted.

Category:
Other

Cause:
Tabular, Form Letter, and Mailing Label report styles have one Section each. Group Above and Group Left report styles have two sections each. Matrix and Matrix Group have one section under each normal, across, and down cell.

Action:
Verify that the particular report style has the minimum number of levels.

REP-03700
Selection Observer initialization failed.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-03701
Selection Observer failed while shutting down.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-04001
An error occurred in the OLE subsystem.

Category:
Other

Cause:
An unspecified OLE2 error occurred during initialization. Refer to the accompanying OLE error message for more information. Other possible causes of this error include the following: Case 1: The OLE2 server is not functioning correctly. Case 2: An error occurred during installation of Oracle Reports Builder and the OLE2 functionality did not install correctly. Case 3: An abnormal condition was encountered.

Action:
Take the following actions to correct this error: If Case 1: Refer to the OLE2 server documentation for more information. If Case 2: Reinstall Oracle Reports Builder. If Case 3: For assistance, contact Oracle Support Services.

REP-04002
An error occurred while initializing OLE subsystem.

Category:
Other

Cause:
An error occurred during initialization of OLE2 libraries. Refer to the accompanying OLE error message for more information. Other possible causes of this error include the following: Case 1: The OLE2 server is not functioning correctly. Case 2: An error occurred during installation of Oracle Reports Builder and the OLE2 functionality did not install correctly. Case 3: An abnormal condition was encountered.

Action:
Take the following actions to correct this error: If Case 1: Refer to the OLE2 server documentation for more information. If Case 2: Reinstall Oracle Reports Builder. If Case 3: For assistance, contact Oracle Support Services.

REP-04003
An error occurred while creating OLE object.

Category:
Other

Cause:
An attempt was made to create an OLE2 object when an OLE error occurred.

Action:
Refer to the accompanying OLE2 error message for more information.

REP-04004
An error occurred while restoring OLE object.

Category:
Other

Cause:
An attempt was made to restore an OLE2 object when an OLE error occurred.

Action:
Refer to the accompanying OLE2 error message for more information.

REP-04005
An error occurred while saving OLE object.

Category:
Other

Cause:
An attempt was made to save an OLE2 object when an OLE error occurred.

Action:
Refer to the accompanying OLE2 error message for more information.

REP-04006
An error occurred while performing a cut/copy operation. An OLE object is not placed in the clipboard.

Category:
Other

Cause:
An attempt was made to cut or copy an OLE2 object when an OLE error occurred.

Action:
Refer to the accompanying OLE2 error message for more information.

REP-04007
An error occurred while pasting OLE object from clipboard.

Category:
Other

Cause:
An attempt was made to paste an OLE2 object from the clipboard when an OLE error occurred.

Action:
Refer to the accompanying OLE2 error message for more information.

REP-04008
An error occurred while trying to perform operation defined by an OLE object.

Category:
Other

Cause:
An attempt was made to perform an action normally supported by the OLE2 server when an OLE error occurred.

Action:
Refer to the accompanying OLE error message for more information.

REP-04009
An error occurred while trying to activate an OLE object.

Category:
Other

Cause:
An attempt was made to activate an OLE2 object (for example, double-click on it in the Previewer) when an OLE error occurred.

Action:
Refer to the accompanying OLE2 error message for more information.

REP-04020
Conversion of OLE object to a different type failed.

Category:
Other

Cause:
An attempt was made to convert an OLE2 object contained in a piece of boilerplate to an OLE2 object of a different type when an OLE error occurred. This indicates a problem with the OLE2 server.

Action:
Check that the object is correctly installed and reinstall, if necessary.

REP-04021
Microsoft Object Linking and Embedding is not supported on this platform

Category:
Other

Cause:
An attempt was made to run a report that was created on a platform supporting OLE2, and created with OLE2 objects, on a platform that does not support OLE2.

Action:
No action is necessary. Remove the object if desired.

REP-04022
The incorrect version of OLE libraries are installed. OLE functionality will be disabled.

Category:
Other

Cause:
The OLE2 libraries installed are incompatible with those supported by the installed version of Oracle Reports Builder. As Oracle Reports Builder cannot guarantee that the OLE2 support will function, it disabled OLE2 functionality.

Action:
Install the correct libraries.

REP-04023
There is insufficient memory available to complete the operation.

Category:
Memory

Cause:
There is not sufficient memory remaining on the system to perform the desired action.

Action:
Exit any unnecessary applications that are running. If that does not work, see the Microsoft documentation for suggested procedures to enhance memory usage.

REP-04024
DOS SHARE services are required for successful operation. SHARE is not running.

Category:
Other

Cause:
The DOS SHARE utility is required, but SHARE is not running.

Action:
Verify that SHARE is running.

REP-04025
A read failure occurred.

Category:
Other

Cause:
Data cannot be read from the specified device.

Action:
Check the device to determine if it is malfunctioning, and, if so, consult the device documentation to determine the proper error recovery procedures.

REP-04026
A write failure occurred.

Category:
Other

Cause:
Data cannot be written to the specified device.

Action:
Check the device to determine if it is read-only. If not, consult the device documentation to determine the proper error recovery procedures.

REP-04027
Too many files opened. There are insufficient resources to open another file.

Category:
Other

Cause:
An attempt was made to open more files than are supported by Windows.

Action:
Close some applications. Also, check the config.sys file and ensure that FILES is not set below 20. Note: Remember that OLE2 boilerplate objects reserve either two or three file handles per object and so there may be more files open than expected.

REP-04028
No space is left on the device.

Category:
Other

Cause:
The device is full.

Action:
Delete unnecessary data or write to a different device.

REP-04029
Presentation of the OLE object failed. Cannot render OLE object.

Category:
Other

Cause:
An attempt was made to display an OLE2 object in a report but the display aspects defined by the OLE2 server were unavailable.

Action:
Verify that the OLE2 object has not been corrupted and that the server is correctly installed. Reinstall if necessary.

REP-04030
Restoration of original display aspects of the OLE object failed. Object content will be used.

Category:
Other

Cause:
An attempt was made to display an OLE2 object in a report but the display aspects defined by the OLE2 server were corrupted or stored in the database and could not be restored. Oracle Reports Builder will display the object using the default aspect.

Action:
Verify that the OLE2 server is correctly installed. Reinstall if necessary.

REP-04031
The server application cannot be found.

Category:
Other

Cause:
An attempt was made to access an OLE2 server via an OLE2 object, but the server is currently inaccessible. The server may have been deleted, renamed, or manually reinstalled in a different location.

Action:
Check the installation of the server and reinstall if necessary.

REP-04032
Connection to the linked OLE object source failed.

Category:
Other

Cause:
Oracle Reports Builder is trying to connect to the specified source of the OLE2 object boilerplate but cannot.

Action:
Verify that the OLE2 object source has not been moved or deleted, and that its file name has not been changed.

REP-04033
Connection to the linked object source failed, because it is across a network that is not connected to this machine.

Category:
Network

Cause:
An attempt was made to link to an OLE2 object that is stored on a device to which there is no established network connection.

Action:
Establish a connection to the proper device.

REP-04034
A file cannot be not found or an invalid file name is used by an OLE object.

Category:
Other

Cause:
An OLE2 object is attempting to access a file that it cannot find.

Action:
Verify that the file has not been corrupted, moved, or renamed.

REP-04035
A share violation has occurred while performing operation on OLE object.

Category:
Other

Cause:
Possible causes: an attempt was made to link to the same file via multiple OLE2 objects, or to access the same temporary file via different applications.

Action:
Verify multiple OLE2 objects are not attempting to access the same file at the same time. Also, check the intallation of the OLE2 server.

REP-04036
Access was denied while performing an operation on an OLE object.

Category:
Other

Cause:
An attempt was made to update an OLE2 object without write access.

Action:
Obtain the proper permissions to the file before trying to update it.

REP-04037
File operation on OLE object failed because disk is write-protected.

Category:
Other

Cause:
An attempt was made to save to file an OLE2 object but it failed because the disk is write-protected.

Action:
Save the object to a disk with write privileges, if possible. If not, no action is necessary.

REP-04038
Unexpected error occurred in the file system while performing an operation on an OLE object.

Category:
Other

Cause:
A non-specific file error such as a corruption of the hard disk occurred.

Action:
Refer to the operating system documentation more information.

REP-04039
An unexpected error was returned by OLE.

Category:
Other

Cause:
A non-specific OLE error occurred.

Action:
Refer to the Microsoft documentation for more information.

REP-04040
Incorrect or corrupted OLE object persistent data was encountered. The OLE object cannot be restored from this data

Category:
Data

Cause:
The information used by the OLE server to restore the OLE2 object in the report is incorrect or has been corrupted. Possible causes for this error include: Case 1: If boilerplate, the file has become corrupted. Case 2: If field, either the database has been corrupted, or the LONG RAW column referenced does not contain OLE2 objects.

Action:
Take the following actions to correct this error: If Case 1: Verify that the object is viable by embedding it in a container using another application. If Case 2: Use SQL*Plus to check the table in the database and verify the contents of the column.

REP-04041
No operations are defined on this object or the object is static.

Category:
Other

Cause:
An attempt was made to take some action on an OLE2 object but no actions have been defined as applying to the object. Possibly the object was converted to a static bitmap.

Action:
No action is necessary.

REP-04042
The requested action on the OLE object is valid, but cannot be performed at this moment. The object server may be busy.

Category:
Other

Cause:
An attempt to take a valid action on an OLE2 object failed, due to lack of server resources. A possible cause is that an attempt was made to open a second instance of a single-instance application.

Action:
Check system resources (such as memory) and increase where possible, or try the operation later.

REP-04043
The operation requested on the object is invalid and cannot be performed.

Category:
Other

Cause:
The action attempted on an OLE2 object was not recognized as valid.

Action:
Verify that the proper version of the OLE server is correctly installed. Reinstall if necessary.

REP-04044
The system registry cannot be accessed.

Category:
Other

Cause:
A read or write operation in the system registry failed.

Action:
Verify that there are enough free system resources and the registry is not corrupted. Consult the Microsoft documentation.

REP-04045
A problem occurred in the system registry.

Category:
Other

Cause:
Some information about the server is missing from the registry.

Action:
Verify that the OLE server is installed correctly. Reinstall if necessary.

REP-04100
An attempt to execute data source failed.

Category:
Data

Cause:
An internal error occurred while executing the specific pluggable data source.

Action:
Look for more details in the engine trace.

REP-04101
An attempt to create conditions for pluggable data source failed.

Category:
Data

Cause:
An internal error occurred while creating conditions for the specific pluggable data source.

Action:
Look for more details in the engine trace in case of a custom PDS.

REP-04102
An attempt to fetch pluggable data source failed.

Category:
Data

Cause:
An internal error occurred when fetching the resultset of the pluggable data source.

Action:
Look for more details in the engine trace in case of a custom PDS.

REP-04103
An attempt to set up pluggable data source driver failed.

Category:
Data

Cause:
An internal error occurred.

Action:
Verify the installation. For assistance, contact Oracle Support Services.

REP-04104
Pluggable data source {0} references unknown column {1}

Category:
Data

Cause:
An invalid column is being referenced in the pluggable data source query.

Action:
Verify the PDS query.

REP-04105
An attempt to create pluggable data source factory {0} failed.

Category:
Data

Cause:
The pluggable data source factory class specification in the preference file is invalid.

Action:
Validate the specification of pluggable data source factory classes in the preference file.

REP-04106
An attempt to edit the query failied because it was created with a later version ({0}) of pluggable data source factory {1}.

Category:
Data

Cause:
Query was created with a later version of pluggable data source factory than the current Builder session's registered factory. For this to occur, the major version of the factories must be different. Major version is the value left of the decimal point in the factory version number.

Action:
Upgrade the registered Oracle Reports Builder pluggable data source factory to one with the equivalent major version number.

REP-04107
The query will be upgraded from version {0} to current factory version {1}.

Category:
Other

Cause:
The query was created with an earlier version of pluggable data source factory than the current Builder session's registered factory. For this to occur, the major version of the factories must be different. Major version is the value left of the decimal point in the factory version number.

Action:
No action is necessary. The query will be automatically upgraded to the version number of the current factory.

REP-04108
The version of the query {0} is different from the pluggable data source factory {1}.

Category:
Data

Cause:
The query was created with version of pluggable data source factory that is slightly different than the current Builder session's registered factory. For this to occur, the minor version of the factories must be different. Minor version is the value right of the decimal point in the factory version number.

Action:
No action is necessary. The Edit operation will proceed.

REP-04109
Factory {0} is not a registered factory class.

Category:
Other

Cause:
The factory class may not be specified correctly in the preference file.

Action:
Verify that the factory class is specified correctly in the preference file.

REP-04110
Query definition for query {0} cannot be found.

Category:
Other

Cause:
Oracle Reports Builder could not connect to the data source referred in the query.

Action:
Check the connection information for the PDS query.

REP-04111
Pluggable data source {0} cannot be created.

Category:
Data

Cause:
Case 1: There is no JVM. Case 2: There is no Oracle Reports pluggable data source driver. Case 3: Pluggable data source class failed to return new pluggable data source object.

Action:
In Case 1: Check the Oracle Reports and Java installation on the machine. In Case 2: Check if the correct Oracle Reports jar file is in the right place. In Case 3: Check if the right pluggable data source class is in place.

REP-04112
Oracle Reports Builder can not display the image for pluggable data source {0}.

Category:
Data

Cause:
The bitmap image may be corrupted.

Action:
Verify that the bitmap image is not corrupted by confirming that it is saved in .gif format and it can be viewed in the appropriate image tool.

REP-04113
Changing the type of pluggable data source bound to this parameter may affect query behavior in the Data Model.

Category:
Data

Cause:
An attempt was made to change a query of one PDS type to another.

Action:
Verify any parameters used in the query when changing PDS type.

REP-04200
An error occurred in the Mail subsystem.

Category:
Other

Cause:
An unspecified error occurred during one of the mail operations. Refer to the accompanying error message for more information. Other possible causes of this error include the following: Case 1: MAPI is not properly installed. Case 2: The Windows mail service provider is not properly installed.

Action:
Take the following actions to correct this error: If Case 1: For other applications using MAPI, check to see if they are functioning properly. If not, try reinstalling MAPI. If Case 2: Verify that the Windows mail service provider is installed, and a mail account exists on the system. For assistance, ask the mail administrator.

REP-04201
An error occurred while initializing the Mail subsystem.

Category:
Other

Cause:
Oracle Reports Builder tried to initialize MAPI, and could not. Refer to the accompanying error message for more information. Other possible causes of this error include the following: Case 1: MAPI is not installed, the MAPI DLL is out of date, or the Mail entry in the WIN.INI file or registry points to the wrong location. Case 2: There is not enough memory available to perform the operation. Case 3: While logging on, an invalid service profile name, username, or password was entered.

Action:
Take the following actions to correct this error: If Case 1: Reinstall MAPI, or correct the Mail entry in the WIN.INI file or registry. If Case 2: Exit any unnecessary applications that are running. If that does not work, see the Microsoft documentation for suggested procedures to enhance memory usage. If Case 3: Verify that the logon information is correct, and try again. If that does not work, confirm the account information with the mail administrator.

REP-04202
An error occurred while logging on to the Mail subsystem.

Category:
Logging

Cause:
An attempt was made to log on to the Mail subsystem and an error occurred. Refer to the accompanying error message for more information. Other possible causes of this error include the following: Case 1: An invalid service profile name, username, or password was entered. Case 2: There is not enough memory available.

Action:
Take the following actions to correct this error: If Case 1: Verify that the logon information is correct, and try again. If that does not work, confirm the account information with the mail administrator. If Case 2: Exit any unnecessary applications that are running. If that does not work, see the Microsoft documentation for suggested procedures to enhance memory usage.

REP-04203
An error occurred while sending a mail message.

Category:
Other

Cause:
An error occurred while composing or sending a mail message. Refer to the accompanying error message for more information. Other possible causes of this error include the following: Case 1: There is not enough free space on the disk. Case 2: There is not enough memory available.

Action:
Take the following actions to correct this error: If Case 1: Free up some space on the disk. If Case 2: Exit any unnecessary applications that are running. If that does not work, see the Microsoft documentation for suggested procedures to enhance memory usage.

REP-04204
An error occurred while trying to validate recipient's name or address.

Category:
Other

Cause:
Oracle Reports Builder tried to validate the destination mail address, and an error occurred.

Action:
Confirm that the recipient has a valid mail account, or ask the mail administrator for assistance. Refer to the accompanying error message for more information.

REP-04220
There is a problem with the Mail subsystem.

Category:
Other

Cause:
An unspecified error occurred during one of the mail operations.

Action:
Try to free up some disk space or exit any unnecessary applications that are running. If other applications are using MAPI, check to see if they are functioning properly. If not, try reinstalling MAPI.

REP-04221
An attachment file cannot be accessed.

Category:
Other

Cause:
An error occurred while trying to access attachment file. Possible causes of this error include the following: Case 1: The attachment file cannot be found. Case 2: The attachment file could not be opened, or there was an error reading or writing it.

Action:
Take the following actions to correct this error: If Case 1: Exit any unnecessary applications that are running. If that does not work, see the Microsoft documentation for suggested procedures to enhance memory usage. If Case 2: Free up some space on the disk.

REP-04222
There is insufficient memory to complete the operation.

Category:
Memory

Cause:
The mail operation cannot be completed, because there is not enough memory available.

Action:
Exit any unnecessary applications that are running. If that does not work, see the Microsoft documentation for suggested procedures to enhance memory usage.

REP-04223
No space is left on the device.

Category:
Other

Cause:
The mail operation cannot be completed because there is not enough free space available on the disk.

Action:
Free up some space on the disk.

REP-04224
The user name, password, or service profile name is incorrect.

Category:
Other

Cause:
The logon information entered is invalid.

Action:
Verify that the logon information is correct, and try again. If that does not work, confirm the account information with the mail administrator.

REP-04225
The operation cannot be completed because the user is not logged on.

Category:
Other

Cause:
The mail operation could not be completed.

Action:
Log on to the Mail subsystem, and try again.

REP-04226
A password is required.

Category:
Other

Cause:
An attempt was made to log on to the Mail subsystem without specifying a password.

Action:
Specify a valid password, and try again. If that does not work, contact the mail administrator.

REP-04227
The service configuration is invalid.

Category:
Configuration

Cause:
The Mail subsystem is incorrectly configured.

Action:
Contact the mail administrator.

REP-04228
MAPI does not support the service requested by Oracle Reports Builder.

Category:
Other

Cause:
The given implementation of MAPI has limited functionality.

Action:
Consider upgrading the Windows mail service provider. Contact the mail administrator.

REP-04229
The character set requested is not supported.

Category:
Other

Cause:
The default character set is not supported by MAPI.

Action:
Contact the mail administrator.

REP-04230
The size of the text string passed is too large.

Category:
Other

Cause:
The text string passed is too large for the given implementation of MAPI.

Action:
Shorten the string, and try again.

REP-04232
Too many files are opened.

Category:
Other

Cause:
The given implementation of MAPI does not support the number of files open.

Action:
Close all unnecessary documents.

REP-06004
Oracle Reports Builder failed to connect to the specified Express server.

Category:
Other

Cause:
Express server is not running.

Action:
Verify that Express server is running.

REP-06006
The Express initialization file, XPDATA.INI, cannot be found.

Category:
Other

Cause:
The Express initialization file, XPDATA.INI, was not found.

Action:
Check the existence and path of the XPDATA.INI file.

REP-06007
The Express connection file (XCF) entry cannot be found in the [Install] section of the Express initialization file, XPDATA.INI.

Category:
Other

Cause:
The Express connection file (XCF) entry was not found in the [Install] section of the Express initialization file, XPDATA.INI.

Action:
Add an XCF entry to XPDATA.INI file, or replace with a valid XPDATA.INI.

REP-06008
The path specified in ORACLE_HOME cannot be found.

Category:
Other

Cause:
The path specified in the the ORACLE_HOME variable was not found.

Action:
Check the ORACLE_HOME setting.

REP-06009
The Oracle SNAPI (OSN) entry cannot be found in the [Install] section of the Express initialization file, XPDATA.INI.

Category:
Other

Cause:
The Oracle SNAPI (OSN) entry was not found in the [Install] section of the Express initialization file, XPDATA.INI.

Action:
Add an OSN entry to XPDATA.INI, or replace with a valid XPDATA.INI.

REP-06010
The Express server description cannot be found in any Express connection files (XCFs).

Category:
Other

Cause:
The Express server description was not found in any Express connection files (XCFs).

Action:
Check the XCF files.

REP-06011
The size of the generated SQL SELECT statement exceeds the 64K limit.

Category:
Other

Cause:
The size of the generated SQL SELECT statement exceeds the 64K limit.

Action:
Modify the query to reduce the size of the SQL statement.

REP-06013
A query failed to run. The Express Query Dialog was invoked with a set of measures/dimensions from a previous query

Category:
Other

Cause:
The Express Query Dialog was invoked with a set of measures/dimensions from a previous query.

Action:
Reexamine the measures/dimensions in the query.

REP-06014
The report ID was not defined when calling the backend XPFetch[N().

Category:
Other

Cause:
The report ID was not defined before calling the backend XPFetch().

Action:
Define the report ID and resubmit the call to the backend XPFetch().

REP-06015
A duplicate report ID was used when calling the backend XPPrepare().

Category:
Other

Cause:
A duplicate report ID was used when the backend XPPrepare() was called.

Action:
Select a unique report ID and resubmit the call to the backend XPPrepare().

REP-06017
The saved query contained incorrect or missing information.

Category:
Other

Cause:
When the query was saved, it contained incorrect or missing information.

Action:
Check the query and correct the information or supply the missing information and try again.

REP-06018
The internal Oracle Express system databases were not attached.

Category:
Other

Cause:
The internal Oracle Express system databases were not attached.

Action:
Attach the internal Oracle Express system databases and try again.

REP-06019
The Oracle Express database specified in the saved query was not attached.

Category:
Other

Cause:
The Oracle Express database that was specified in the saved query was not attached.

Action:
Attach the specified Oracle Express database to the saved query and try again.

REP-06021
The Oracle Express support was not installed.

Category:
Other

Cause:
The Oracle Express support was not installed.

Action:
Install the Oracle Express support and try again.

REP-06023
An unexpected end-of-line was received while parsing the Oracle Express query.

Category:
Other

Cause:
The Oracle Express query might be missing the \s at the end of the line.

Action:
Check the Oracle Express query for a missing \s at the end of the line, add it, and try again.

REP-06026
A duplicate report ID was detected.

Category:
Other

Cause:
A duplicate report ID was used.

Action:
Select a unique report ID and try again.

REP-06027
An undefined report ID was detected.

Category:
Other

Cause:
The report ID that was used has not yet been defined.

Action:
Define the report ID and try again.

REP-06030
The XCONNECT.INI file was missing or was invalid.

Category:
Other

Cause:
This message probably occurred as the result of a missing XCONNECT.INI file. If the XCONNECT.INI file is not missing, then it probably has an invalid General section.

Action:
Check in ORACLE_HOME/OLAP/ECF620 to ensure that the XCONNECT.INI file is there. If not, then add it. If the XCONNECT.INI file is there, verify that it has a valid General section.

REP-06031
This report contains Oracle Express queries that are 6i versions. Convert these queries?

Category:
Other

Cause:
An older version of Oracle Express queries cannot be edited or run with the current version of Oracle Express.

Action:
Reply YES to converting the older version of Oracle Express queries to the newer version of Oracle Express. The queries will be automatically converted.

REP-06032
The Oracle Express query {0} failed to convert.

Category:
Other

Cause:
This error message could have occurred for one of the following reasons: Case 1: The Oracle Express 6i query was corrupted. Case 2: The Oracle Express pluggable data source malfunctioned.

Action:
Take the following actions to correct this error: If Case 1: Ensure that the query is not corrupted by editing and rerunning it in the OracleAS Reports Services environment. If Case 2: For assistance, contact Oracle Support Services.

REP-06033
This operation requires converting the {0} Oracle Express query to the newer version of Oracle Express. Proceed with this conversion?

Category:
Other

Cause:
Older versions of Oracle Express queries cannot be edited or run with the current version of Oracle Express.

Action:
Accept the conversion by replying YES to the conversion. The queries will be automatically converted.

REP-06051
The Oracle Portal connection failed.

Category:
Other

Cause:
The database server might be down or the user ID and password authentication failed.

Action:
Check that the database server is available, verify that the user ID and password are correct and try again.

REP-06052
The database requested does not contain a valid Oracle Portal definition.

Category:
Other

Cause:
This error might have occurred for one of the following reasons: Case 1: The database is not a valid version for the Oracle Portal installation. Case 2: The logged in user does not have permission to read the component definition tables.

Action:
Take the following actions to correct this error: If Case 1: Select a valid database for the Oracle Portal installation. If Case 2: Obtain permissions for the logged in user to read the component definition tables.

REP-06053
There are no components in Oracle Portal that can be imported.

Category:
Other

Cause:
This is an information only message notifying that there are no components available to be imported.

Action:
No action is necessary.

REP-06054
The requested template cannot be found.

Category:
Other

Cause:
This can occur for one of the following reasons: Case 1: The REPORTS_XSL_TEMPLATE environment variable was incorrectly edited. Case 2: The template XSL file was removed from the location where it is supposed to be located.

Action:
Take the following actions to correct this error: If Case 1: Correct the REPORTS_XSL_TEMPLATE and continue. If Case 2: Ensure the template XSL file is in the proper location and continue.

REP-06055
A template error occurred.

Category:
Other

Cause:
The XSL template file was not a well-formed template.

Action:
Verify that the XSL template file is correct. If it is, then the best solution is to restore the original one. Experienced users can edit the file to correct the problems.

REP-06056
A temporary directory was invalid.

Category:
Other

Cause:
The transformation process requires a temporary directory to write a temporary file. The temporary directory might not exist or it might not allow a temporary file to be written to it.

Action:
Look at the REPORTS_TMP environment variable and ensure that it corresponds to an existing, writable temporary directory.

REP-06057
A portal component has not been selected.

Category:
Other

Cause:
OK was clicked without selecting a portal component.

Action:
Select a portal componet or click Cancel.

REP-06058
Database client library error.

Category:
Other

Cause:
Oracle Reports cannot connect to the portal database because of a JDBC error. A common cause is a version mismatch of a database client library in the path.

Action:
Verify that the Oracle Reports bin directory is listed in the path search order before any other ORACLE_HOME/bin or other directory that could have a database client. If this does not solve the problem, check the Java classpath and verify that the correct version of the JDBC library is listed before any other library.

REP-06101
The Java Virtual Machine failed to start. Check the Java Runtime Environment setup. {0}:{1}.

Category:
Other

Cause:
The Java runtime environment in the installation is not valid.

Action:
Verify that the installation is correct. Reinstall if necessary.

REP-06102
The XML parser failed to start.

Category:
Other

Cause:
The XML parser jar files are missing in the installation.

Action:
Verify that the Oracle Fusion Middleware installation is correct. Reinstall if necessary.

REP-06103
An error occurred with the Java Runtime Environment setup.

Category:
Other

Cause:
The Java runtime environment in the installation is not valid.

Action:
Verify that the installation is correct. Reinstall if necessary.

REP-06104
The XML report definition is invalid.

Category:
Other

Cause:
The report definition is invalid.

Action:
Verify the XML report definition.

REP-06105
An error occurred in the XML report definition at line {0}.

Category:
Other

Cause:
The report definition is invalid.

Action:
Verify the XML report definition.

REP-06106
An error occurred in the XML report definition at line {0} in {1}.

Category:
Other

Cause:
The report definition is invalid.

Action:
Verify the XML report definition.

REP-06107
The URL for the XML report definition is invalid: {0}.

Category:
Other

Cause:
The report definition is invalid.

Action:
Verify the URL location / XML report definition.

REP-06108
The XML report definition cannot be applied.

Category:
Other

Cause:
This is an internal error.

Action:
For assistance, contact Oracle Support Services.

REP-06109
The report definition file {0} cannot be saved.

Category:
Other

Cause:
This is an internal error.

Action:
For assistance, contact Oracle Support Services.

REP-06110
The query {0} cannot be created.

Category:
Other

Cause:
The PDS query is invalid.

Action:
Look into the trace information for more details in case of a custom PDS.

REP-06111
The query {0} cannot be modified.

Category:
Other

Cause:
The PDS query is invalid.

Action:
Look into the trace information for more details in case of a custom PDS.

REP-06112
The column {0} cannot be created.

Category:
Other

Cause:
The PDS query is invalid.

Action:
Look into the trace information for more details in case of a custom PDS.

REP-06113
The column {0} cannot be modified.

Category:
Other

Cause:
The PDS query is invalid.

Action:
Look into the trace information for more details in case of a custom PDS.

REP-06114
The data link {0} cannot be created.

Category:
Data

Cause:
The PDS query is invalid.

Action:
Look into the trace information for more details in case of a custom PDS.

REP-06115
The data link {0}cannot be modified.

Category:
Data

Cause:
The PDS query is invalid.

Action:
Look into the trace information for more details in case of a custom PDS.

REP-06116
The field {0} cannot be created.

Category:
Other

Cause:
The PDS query is invalid.

Action:
Look into the trace information for more details in case of a custom PDS.

REP-06117
The field {0} cannot be modified.

Category:
Other

Cause:
The PDS query is invalid.

Action:
Look into the trace information for more details in case of a custom PDS.

REP-06118
The layout for {0} cannot be defaulted.

Category:
Other

Cause:
This is an internal error.

Action:
Contact Oracle Support Services if the problem persists.

REP-06119
Format exception {0} for the field {1} cannot be created.

Category:
Other

Cause:
This is an internal error.

Action:
Contact Oracle Support Services if the problem persists.

REP-06120
Condition {0} in the format exception {1} for the field {2} is invalid.

Category:
Other

Cause:
This is an internal error.

Action:
Contact Oracle Support Services if the problem persists.

REP-06121
The specified layout style {0} is invalid.

Category:
Other

Cause:
An attempt was made to use an invalid layout style.

Action:
Verify the layout style for the report.

REP-06122
The specified layout style {0} in {1} is invalid.

Category:
Other

Cause:
An attempt was made to use invalid layout style.

Action:
Verify the layout style for the report.

REP-06123
Source {0} for field {1} is invalid.

Category:
Other

Cause:
The value used for the field is invalid.

Action:
Verify the value.

REP-06124
A PL/SQL compilation error occurred in {0}.

Category:
Other

Cause:
The PL/SQL procedure is invalid.

Action:
Verify the PL/SQL procedure.

REP-06200
Reports tag library directive cannot be found: {0} in report file

Category:
Other

Cause:
Reports was unable to locate the expected JSP taglib directive in the user supplied report file.

Action:
All Web-based reports must contain the tag library directive. Open any demo .JSP file and copy the taglib lines into the report.

REP-06201
Prefix attribute {0} in report file cannot be found.

Category:
Other

Cause:
The file does not contain an rw:objects tag. The tag library directive does not contain the correct prefix attribute or is otherwise corrupted.

Action:
The rw:objects tag supplies data for report blocks and charts. If this tag is not required in the file then this message can be ignored. If data is required, use the data wizard to add a data model to the report. Open any demo .jsp file and replace the taglib lines in the report with the lines from the demo file.

REP-06202
A rw:report tag in the template file cannot be found.

Category:
Other

Cause:
The file contains a taglib directive but does not contain a rw:report tag.

Action:
The template file can still be used but the rw:report tag must be added to a report before a data model can be added.

REP-06203
Template file cannot be parsed.

Category:
Other

Cause:
Reports was unable to parse the indicated file. Any attempt to execute the report will not run.

Action:
Check the JSP syntax against the documentation in the Help system.

REP-06204
The <rw:objects> tag cannot be found. Save operation aborted

Category:
Other

Cause:
The <rw:objects> tag was missing or invalid JSP syntax was found within the document.

Action:
Check the JSP syntax against the documentation in the Help system.

REP-06205
The ID attribute of tag {0} is not unique.

Category:
Other

Cause:
The report contains duplicate JSP ID attributes.

Action:
JSP ID attributes must be unique within a page. Change the ID of the tags that are not unique.

REP-06206
Tag {0} must be inside the rw:report tag.

Category:
Other

Cause:
A Reports JSP tag is outside the rw:report tag.

Action:
All Reports JSP tags must be inside the rw:report tag. Move the tag inside the rw:report tag. The easiest way to prevent this error is to move the </rw:report> tag to the bottom of the page.

REP-06207
Tag {0} tag has an invalid scope.

Category:
Other

Cause:
A Reports JSP tag is outside of the correct context.

Action:
Move the tag to its correct scope.

REP-06208
More than one rw:report tag is found. A report page can have only one rw:report tag.

Category:
Other

Cause:
The report contains more than one set of rw:report tags.

Action:
Add <rw:report> after the taglib lines at the top of the page. Add </rw:report> at the bottom of the page. Remove the extra rw:report tags.

REP-06209
Required Reports JSP tags are missing. The required Reports JPS tags have been added to the saved file.

Category:
Other

Cause:
When saving the JSP file, required Reports JSP tags were not found.

Action:
Click OK to add the required tags and save the file. Click Cancel to prevent Oracle Reports Builder from adding the tags, and not save the file.

REP-06210
Required Reports JSP tags are being added to the file.

Category:
Other

Cause:
If the file does not contain the required Reports JSP tags when it is first opened, Oracle Reports Builder adds the Reports JSP tags to the file loaded in memory. The original file on disk is not touched.

Action:
Click OK to continue working on the file.

REP-06211
The graph XML definition cannot be parsed.

Category:
Other

Cause:
Oracle Reports was unable to parse the XML definition of the graph.

Action:
Check the graph XML DTD against the Oracle BI Beans documentation.

REP-06212
The graph definition cannot be parsed.

Category:
Other

Cause:
Oracle Reports was unable to parse the definition of the graph.

Action:
Check the graph tag against the reports.tld.

REP-06213
A report level cursor cannot be created.

Category:
Other

Cause:
An internal error occurred when creating the report level cursor.

Action:
Contact Oracle Support Services if the problem persists.

REP-06214
A group cursor cannot be created.

Category:
Other

Cause:
An internal error occurred when creating the group cursor.

Action:
Contact Oracle Support Services if the problem persists.

REP-06215
An error occurred retrieving the next row from the cursor.

Category:
Other

Cause:
An internal error occurred when moving the group cursor to the next row.

Action:
Contact Oracle Support Services if the problem persists.

REP-06216
Unable to create related cursor

Category:
Other

Cause:
An internal error occurred when creating the related group cursor.

Action:
Contact Oracle Support Services if the problem persists.

REP-06217
No source specified for cursor

Category:
Other

Cause:
An internal error occurred. The cursor's source (that is, report for report level cursor, group for group cursor) is not specified.

Action:
Contact Oracle Support Services if the problem persists.

REP-06218
Value of unknown column {0} cannot be retrieved.

Category:
Other

Cause:
The column name is invalid.

Action:
Provide a valid column name.

REP-06219
Column {0} is not in the given cursor hierarchy.

Category:
Other

Cause:
The column does not belong to the cursor provided.

Action:
Modify the report so that the column belongs to given cursor hierarchy.

REP-06220
Value of column cannot be retrieved.

Category:
Other

Cause:
An internal error occurred when getting the value of the column.

Action:
Contact Oracle Support Services if the problem persists.

REP-06221
Column {0} cannot be found.

Category:
Other

Cause:
An internal error occurred when looking for a column.

Action:
Contact Oracle Support Services if the problem persists.

REP-06222
The column in the given cursor cannot be found.

Category:
Other

Cause:
The column does not belong to the cursor provided.

Action:
Modify the report so that column belongs to the given cursor.

REP-06223
Attempt to determine which cursor a column belongs to failed.

Category:
Other

Cause:
An internal error occurred when trying to find out to which cursor a column belongs, among a given list of cursors.

Action:
Contact Oracle Support Services if the problem persists.

REP-16500
This program can only be invoked as a CGI executable.

Category:
Other

Cause:
The Web CGI executable was invoked outside the Web Server context.

Action:
The CGI executable must be invoked by a Web server to work properly.

REP-16501
The Reports Web Agent key map file was not set up properly.

Category:
Other

Cause:
The key map file cannot be found at the location specified.

Action:
Check the file location.

REP-16504
The message subsystem cannot be initialized.

Category:
Other

Cause:
The Oracle Reports message file cannot be found or opened.

Action:
Check the installation. Verify that the Oracle Reports message file was installed properly.

REP-16505
A general error occurred during initialization.

Category:
Other

Cause:
A general error occurred.

Action:
Check the installation and availability of system resources.

REP-16506
The URL contains badly-formed escapes.

Category:
Other

Cause:
The submitted URL is badly formed.

Action:
See the URL rules in the Web Agent documentation.

REP-16507
The key is unrecognized.

Category:
Other

Cause:
The key map configuration is active, but the specified key in the URL is unrecognized, and the command line cannot be built.

Action:
Check the key value and keymap file setup and contents.

REP-16508
Key %s is unrecognized.

Category:
Other

Cause:
The key map configuration is active, but the specified key in the URL is unrecognized, and the command line cannot be built. This error may be due to bad URL syntax, or the key in the URL was not found in the key map file.

Action:
Check the key value and keymap file setup and contents.

REP-16509
Syntax errors are found in the key map file.

Category:
Other

Cause:
Syntax errors occurred in the key map file.

Action:
Check the key map file contents (see Web Agent documentation for rules). Check a definition of submitted key.

REP-16510
Usage in incorrect.

Category:
Other

Cause:
This is a generic error for a non-verbose run.

Action:
Enable verbocity and check the real message.

REP-16511
The URL contains too many parameters.

Category:
Other

Cause:
The URL contains too many parameters (it is too long).

Action:
Use a shorter URL or the key map file to shorten the URL.

REP-16512
out of memory

Category:
Memory

Cause:
There is not enough memory to perform the operation.

Action:
Verify that enough system resources are available.

REP-16513
Communication with the Reports Server is lost.

Category:
Other

Cause:
Reports Server is not answering.

Action:
Verify that Reports Server is up and the tnsnames.ora network setup has a correct entry for it.

REP-16514
The report cannot be run.

Category:
Other

Cause:
This is a generic error for a report run failure.

Action:
See the detailed error message from Reports Server.

REP-16515
The report output cannot be accessed.

Category:
Other

Cause:
The Web Agent cannot access Reports Server run output.

Action:
Check the Web Agent setup (especially WEBLOC variable).

REP-16516
The Reports Server is being shut down.

Category:
Other

Cause:
Reports Server is going down.

Action:
Try again later.

REP-16517
The Oracle Reports job is canceled upon user request.

Category:
Other

Cause:
The Oracle Reports job was canceled.

Action:
Try again if necessary.

REP-16518
The Reports Engine terminated abnormally.

Category:
Other

Cause:
The Reports Engine had problem with the report.

Action:
Contact the Reports Server administrator.

REP-16519
The Oracle Reports job has terminated with an error.

Category:
Other

Cause:
This is a generic error message for report run error.

Action:
See the detailed error message from Reports Server.

REP-16520
An error occurred while queuing a job to Reports Server.

Category:
Other

Cause:
An error occurred while enqueing report to run.

Action:
Try again later.

REP-16521
An error occurred while parsing the Reports Server command line.

Category:
Other

Cause:
An error occurred while attempting to run a report and process a command line.

Action:
Contact the Reports Server administrator.

REP-16522
The Reports Server name is not specified.

Category:
Other

Cause:
An error occurred while attempting to run a report and process a command line.

Action:
Contact the Reports Server administrator. Check the command line for a server name.

REP-16523
A report name is not specified.

Category:
Other

Cause:
An error occurred while attempting to run a report and process a command line.

Action:
Contact the Reports Server administrator. Check the command line for a report name.

REP-16524
A database logon is not specified.

Category:
Other

Cause:
An error occurred while attempting to run a report and process a command line.

Action:
Contact the Reports Server administrator. Check the command line for database logon.

REP-16525
The scheduling command cannot be interpreted.

Category:
Other

Cause:
An error occurred while attempting to run a report and process a command line.

Action:
Contact the Reports Server administrator. Check the SCHEDULE parameter.

REP-16526
The time tolerance cannot be interpreted.

Category:
Other

Cause:
An error occurred while attempting to run a report and process a command line.

Action:
Contact the Reports Server administrator. Check the TOLERANCE parameter.

REP-16527
The Parameter Form type is invalid.

Category:
Other

Cause:
An error occurred while attempting to run a report and process a command line.

Action:
Contact the Reports Server administrator. Check the PARAMFORM parameter.

REP-16528
An error occurred while communicating with the Reports Server.

Category:
Other

Cause:
A communication problem occurred.

Action:
Try again later.

REP-16529
The job cannot be killed.

Category:
Other

Cause:
This is a generic message for job kill failure.

Action:
Investigate why the job cannot be killed.

REP-16530
The job ID is invalid.

Category:
Other

Cause:
The ID of the Reports Server job is invalid.

Action:
Verify the ID.

REP-16531
The job is already finished.

Category:
Other

Cause:
The ID of the Reports Server job is invalid.

Action:
Verify the ID.

REP-16532
The job is not done yet. Try again later.

Category:
Other

Cause:
The ID of the Reports Server job is invalid.

Action:
Verify the ID.

REP-16533
There are insufficient privileges to perform the requested action.

Category:
Other

Cause:
The ID of the Reports Server job is invalid.

Action:
Verify the ID and privileges.

REP-16534
Report output cannot be accessed.

Category:
Other

Cause:
The Oracle Reports output directory is not accessible.

Action:
Check the directory specification and the setup (REPORTS_WEBLOC or REPORTS_WEBLOC_TRANSLATED environment is probably invalid).

REP-16535
Report output cannot be accessed.

Category:
Other

Cause:
The Oracle Reports output directory is not accessible.

Action:
Check the directory specification and the setup (REPORTS_WEBLOC or REPORTS_WEBLOC_TRANSLATED environment is probably invalid).

REP-16537
Report output cannot be saved.

Category:
Other

Cause:
Report output of the returned name already exists in the Web directory.

Action:
Check the Web Agent setup (REPORTS_WEBLOC_TRANSLATED environment probably points to the same location as a Reports Server cache).

REP-16538
Report output was successfully printed.

Category:
Other

Cause:
The report was successfully run to the printer.

Action:
No action is needed.

REP-16539
Report output was successfully mailed.

Category:
Other

Cause:
The report was successfully run to mail.

Action:
No action is needed.

REP-16540
Report output was successfully written to the requested destination.

Category:
Other

Cause:
The report was successfully run to the requested destype.

Action:
No action is needed.

REP-16541
Log on before running the report.

Category:
Other

Cause:
It is necessary to log on before running the report.

Action:
Log on again.

REP-16542
Report output was successfully written to the InterOffice repository.

Category:
Other

Cause:
The report was successfully run to the InterOffice repository.

Action:
No action is needed.

REP-16543
The report output cannot be accessed.

Category:
Other

Cause:
The Oracle Reports output directory is not accessible.

Action:
Check the directory specification. Check the setup (REPORTS_VIRTUAL_MAP, REPORTS_PHYSICAL_MAP and REPORTS_SHARED_CACHE environment is probably invalid.)

REP-16544
The report output cannot be accessed.

Category:
Other

Cause:
The Oracle Reports output directory is not accessible.

Action:
Check directory specification. Check the setup (REPORTS_VIRTUAL_MAP, REPORTS_PHYSICAL_MAP and REPORTS_SHARED_CACHE environment is probably invalid.)

REP-20091
Save the current document before disconnecting from the database?

Category:
Other

Cause:
An open document is stored in the database. If disconnected from the database, changes cannot be saved to the database.

Action:
Select Yes to save the document before disconnecting from the database; the document remains open to reconnect if desired and save it to the database again. Select No to disconnect from the database without saving the document; the document remains open. Select Cancel to remain connected to the database without saving; once again, the document remains open.

REP-20099
Printer changed while previewing. Printer font remapping could cause truncation. Continue with printing?

Category:
Other

Cause:
In the time between running the report and selecting Print from the Previewer, the default printer has changed.

Action:
Select Yes to print anyway. Select No to halt printing, then close the report and either reset the printer and run the report again, or simply run it again to format it for the current printer.

REP-20128
The report was not run with DESTYPE=PREVIEW. Screen font remapping could cause truncation. Continue with printing?

Category:
Other

Cause:
Print was selected from the Previewer, but specified Screen instead of Preview, which formats the report as though using printer fonts and provides a more accurate view of the report's printed output.

Action:
Select Yes to print anyway. Select No to halt printing. Then close the report and run it again while specifying Preview to format it for the printer.

REP-20129
Opening a report saved with a newer version of Oracle Reports Builder. Functionality may be lost. Continue?

Category:
Other

Cause:
An attempt was made to open a report with a version of Oracle Reports Builder older than the version used to create the report. If the report uses functionality unavailable in the older version, that functionality will be eliminated from the report.

Action:
To avoid losing functionality, do not open the report until after upgrading to the most recent version of Oracle Reports Builder.

REP-20135
A layout does not exist. Create a default layout?

Category:
Other

Cause:
An attempt was made to run the report after creating a data model but before creating a layout.

Action:
Select Yes to create a default layout using the Report Wizard. Select No to run the report without a layout.

REP-20136
The region chosen for the default layout is too small. Extend the region to page boundaries?

Category:
Other

Cause:
The Report Block tool was used to draw a region for a layout that was not large enough to accommodate the settings specified in the Report Block Wizard.

Action:
Select Yes to have Oracle Reports Builder extend the possible range of the layout to the boundaries of a report page, or select No and change the settings in the Report Block Wizard to shrink the size of the layout.

REP-20138
Oracle Reports Builder tables may not be installed in the database.

Category:
Other

Cause:
Oracle Reports Builder was not able to access its tables in the database.

Action:
Inform the database administrator that the Oracle Reports Builder tables were not successfully installed in the database.

REP-20139
New Parameter Form layout will not fit its current size. Increase the number of pages to fit?

Category:
Other

Cause:
The new Parameter Form is too big to fit on the number of pages specified for the Parameter Form in the Report Properties dialog box.

Action:
Either select Yes to have Oracle Reports Builder increase the number of pages in the Parameter Form, or select No and change the settings in the Report Properties dialog to enlarge the Parameter Form.

REP-20144
Opening a report saved with a newer version of Oracle Reports Builder. Functionality may be lost.

Category:
Other

Cause:
An attempt was made to open a report with a version of Oracle Reports Builder older than the version used to create the report. If the report uses functionality unavailable in the older version, that functionality will be eliminated from the report.

Action:
To avoid losing functionality, do not open the report until after upgrading to the most recent version of Oracle Reports Builder.

REP-20146
This action may invalidate references to columns in the referenced object.

Category:
Other

Cause:
Collapsing a Database Ref, Database Nested Table, or Database Varray column invalidates any external use of the referenced columns. for example, in PL/SQl Program Units or in Summary Columns.

Action:
To use the referenced columns, do not collapse the Database Ref, Database Nested Table, or Database Varray columns referencing them.

REP-20147
A column link for this detail SQL query cannot be implemented. Converting to group link.

Category:
Other

Cause:
Oracle Reports Builder can only insert column to column links into supported SQL. It defaults to a group to group link in this case.

Action:
Manually insert the required link clause into the detail SQL query.

REP-20150
Page width of report {0} was changed to fit the font for a character cell as a consequence of font-mapping.

Category:
Other

Cause:
A character font has been substituted for a bitmapped font in the report, and the page width has been adjusted accordingly. A possible cause: a bitmapped report is being opened in the character-mode runtime engine.

Action:
To map the font to a specific font, edit the font alias file (uifont.ali or Oracle Font Aliases, depending on the platform) to map the fonts to the desired ones. Otherwise, no action is necessary.

REP-20151
Some fonts have been changed according to the mapping in the font aliases file.

Category:
Other

Cause:
One or more fonts saved with the report have been mapped to different ones, due to a change in platform, display, report destination, or mode.

Action:
To map the font to a specific font, edit the font alias file (uifont.ali or Oracle Font Aliases, depending on the platform) to map the fonts to the desired ones. Otherwise, no action is necessary.

REP-20160
An AutoRecovery file was detected. Recover unsaved changes for {0}?

Category:
Other

Cause:
Oracle Reports Builder can automatically recover unsaved report changes if it stops responding or there is a power failure.

Action:
Either select Yes to have Oracle Reports Builder recover unsaved report changes, or select No to ignore.

REP-20161
Unable to save AutoRecovery file, Autosave functionality would be disabled.

Category:
Other

Cause:
Oracle Reports Builder tried to write an AutoRecovery file and could not. The possible causes of this error include the following: Case 1: Lack of necessary privileges to write the file. Case 2: The file system does not have enough room for the file. Case 3: A system error made it impossible to open the file.

Action:
Either select OK to have Oracle Reports Builder to disable Autosave, or select Cancel to take the following actions to correct this error: If Case 1: Verify the privileges necessary to write the file. If Case 2: Make more room by deleting unnecessary files or expanding storage. If Case 3: Consult the operating system documentation or contact the system administrator.

REP-20190
Quit will terminate the current report, as well as any other pending reports.

Category:
Other

Cause:
A request to exit the Reports Server or Reports Background Engine was issued while one or more reports are still executing or awaiting execution.

Action:
To finish report execution, cancel the operation. Otherwise, accept the warning dialog.

REP-20191
Cannot exit Windows when this program is running. Close the Reports Background Engine and exit Windows.

Category:
Operating System

Cause:
The Reports Background Engine requires Windows, but a request was issued to exit Windows while the Reports Background Engine is still running.

Action:
Exit the Reports Background Engine before exiting Windows.

REP-25206
Converting {0} to {1} failed.

Category:
Other

Cause:
The most likely cause of this error is that the source type specified was incorrect.

Action:
Ensure that the source file is of the specified source type.

REP-25207
Invalid conversion: stype and dtype are not of the same document type.

Category:
Other

Cause:
An attempt was made to convert a document of one type to another type; that is, an attempt to convert one of the possible report files to a PL/SQL file, or vice versa.

Action:
Ensure that the source and destination of theconversion are the same type of document.

REP-25401
User exit .DLL file {0} cannot be found.

Category:
Other

Cause:
The report attempted to execute a user exit, but the user exit .DLL file could not be located. This file typically resides in: the current directory the Windows directory (typically \ \WINDOWS) the Windows system directory (typically \\WINDOWS\\SYSTEM) the directory containing the executable file for the current task the directories listed in the PATH environment variable the list of directories mapped in a network

Action:
Locate the specified .DLL file and place it in one of the directories listed above.

REP-25402
An internal error occurred attempting to locate user exit .DLL file {0} within file {1}

Category:
Other

Cause:
The report attempted to execute a user exit, but certain functions used to locate and execute user exits cannot be located in the user exit .DLL file. This means that the user exit .DLL was built incorrectly, because these functions are located in a .OBJ file shipped with Oracle Reports Builder, which should always be linked into the user exit .DLL.

Action:
Rebuild the specified user exit .DLL correctly.

REP-31681
Connecting to a different database may invalidate existing data model.

Category:
Data

Cause:
Only one connection to a database is valid at a time. If a connection is established to different database, the existing data model may not be valid afterward.

Action:
To keep the existing data model valid, do not reconnect to a different database unless the queries are compatible with the new database connection.

REP-31700
The report definition is incomplete, or the query does not have break groups. Cannot run the Web Wizard.

Category:
Other

Cause:
The report definition was not completed before running the Web Wizard. To run the Web Wizard, the report definition must contain a Data Model with multiple groups and a valid Paper Layout.

Action:
Create at least one query with multiple groups and default the layout using the Report Wizard.

REP-31800
Image file {0} cannot be found.

Category:
Other

Cause:
Oracle Reports Builder could not locate one of its image files. Possible causes of this error include: Case 1: The image file does not exist Case 2: The image file is in the wrong place. Case 3: The environment is not configured properly.

Action:
Take the following actions to correct this error: If Case 1: Verify that the image file is present. If Case 2: Verify that the image file is in the proper directory. If Case 3: Verify that the environment is set correctly. On UNIX, verify that the proper environment variable is set, and on MS Windows check the file oracle.ini.

REP-31801
Image {0} specified in the template cannot be found.

Category:
Other

Cause:
Oracle Reports Builder could not locate the image corresponding to the chosen templage. Possible causes of this error include: Case 1: The image file does not exist Case 2: The image file is in the wrong place. Case 3: The environment is not configured properly.

Action:
Take the following actions to correct this error: If Case 1: Verify that the image file is present. If Case 2: Verify that the image file is in the proper directory. If Case 3: Verify that the

environment is set correctly. On UNIX, verify that the proper environment variable is set, and on MS Windows check the file oracle.ini.

REP-31802
Enter a SQL statement on this page.

Category:
Other

Cause:
In order for the wizard to create the report, a valid SQL text must exist.

Action:
Enter a SQL statement.

REP-31803
SQL text cannot be checked due to no database connection.

Category:
Other

Cause:
The wizard requires a connection to a database in order to check the SQL text.

Action:
Connect to a database by typing in a login string whenever the Connect dialog is shown. Confirm logon information with the database administrator.

REP-31804
The SQL is OK.

Category:
Other

Cause:
The wizard has checked the SQL text against the database and has confirmed that it will work.

Action:
No changes are needed to the SQL text.

REP-31805
Break level {0} has no valid break columns.

Category:
Other

Cause:
Each break level must contain at least one valid break column. A break column cannot be a summary or placeholder column. Nor can it have a data type of Raw, Longraw, or Long.

Action:
Provide at least one valid break column for the break level or move all columns that are currently in this break level to another level which contains a valid break column.

REP-31806
All fields cannot be designated to be break fields.

Category:
Other

Cause:
All fields were chosen to be break fields. Each break field designated groups the data of the fields that are not break fields. With no non-break fields, this situation is invalid.

Action:
Designate at least one field to be a non-break field. For example, remove all break fields from the highest numbered break level (that is, from the bottom of the list of break fields).

REP-31807
Template file {0} cannot be found.

Category:
Other

Cause:
Oracle Reports Builder could not locate the template file with the given name. Possible causes of this error include: Case 1: The template file does not exist. Case 2: The template file is in the wrong place. Case 3: The environment is not configured properly.

Action:
Take the following actions to correct this error: If Case 1: Verify that the template file is present. If Case 2: Verify that the template file is in the proper directory. If Case 3: Verify that the environment is set correctly. On UNIX, verify that the proper environment variable is set, and on MS Windows check the file oracle.ini.

REP-31808
A SQL statement must be entered.

Category:
Other

Cause:
A SQL statement was not entered for the wizard to generate a report.

Action:
Enter a SQL statement in the wizard tab.

REP-31809
At least one field to display must be chosen.

Category:
Other

Cause:
No field has been selected to display.

Action:
Select some fields to display.

REP-31810
At least one break group must be created.

Category:
Other

Cause:
The current report style needs breaks groups.

Action:
Create some break groups.

REP-31811
At least one matrix row must be selected.

Category:
Other

Cause:
Nothing has been selected as matrix rows.

Action:
Select some columns as matrix rows.

REP-31812
At least one matrix column must be selected.

Category:
Other

Cause:
Nothing has been selected as matrix columns.

Action:
Select some columns as matrix columns.

REP-31813
At least one matrix cell must be selected.

Category:
Other

Cause:
Nothing has been selected as matrix cells.

Action:
Select some columns as matrix cells.

REP-31814
At least one matrix break must be selected.

Category:
Other

Cause:
Nothing has been selected as matrix breaks.

Action:
Create some matrix break groups.

REP-31815
At least one field must be displayed per group.

Category:
Other

Cause:
This problem is due to: 1) This field has been specified as a group field. 2) The group of this field has been defaulted, and this field is the only one that has been marked as "to be defaulted" in its group.

Action:
1) If this field has been specified as a group field, go to the group page to deselect this field. 2) If the group of this field has been default, go to the group page to deselect that group.

REP-31816
Groups to be defaulted must be selected.

Category:
Other

Cause:
No group has been selected to be defaulted.

Action:
Select groups to be defaulted.

REP-31817
At the top of the group. Cannot move up.

Category:
Other

Cause:
This column is at the top of its group.

Action:
Do not try to move this column up.

REP-31818
At the bottom of the group. Cannot move down.

Category:
Other

Cause:
This column is at the bottom of its group.

Action:
Do not try to move this column up.

REP-31819
Report level columns cannot be reordered.

Category:
Other

Cause:
Report level columns do not have the POS attribute.

Action:
Set where to display the report level columns in the Paper Layout editor.

REP-31820
Selected groups have no columns in them.

Category:
Other

Cause:
Selected groups have no columns in them, so no report can be generated.

Action:
Select some other groups.

REP-31821
There is no text specified in the text editor.

Category:
Other

Cause:
The text for a mailing label or form letter report is empty.

Action:
Type some text in the text editor.

REP-31822
One group must be selected.

Category:
Other

Cause:
No group has been selected.

Action:
Go to the group page and select one group.

REP-31823
One and only one group must be selected.

Category:
Other

Cause:
There is more than one group selected.

Action:
Select one and only one group.

REP-31824
Another group must be selected since there are no columns in the selected group.

Category:
Other

Cause:
There are no columns in the selected group.

Action:
Select another group that has columns.

REP-31825
Cancel the wizard and fix the problem in report editors.

Category:
Other

Cause:
The data model is invalid or the default region is too small.

Action:
Fix the problem in the Data Model editor or Paper Layout editor.

REP-31826
A custom template file name is not specified.

Category:
Other

Cause:
A custom template is selected, but no template file name is specified.

Action:
Type a custom template file name, or click Browse button to navigate to it.

REP-31827
Invalid print direction or illegal defaulting of page level summary column.

Category:
Other

Cause:
The print direction against one or more groups is invalid for the requested default style, or page level summary column was selected to be defaulted (page level summaries are not supported within defaulting).

Action:
Alter the print direction against the group or the default style, or deselect all page level summaries.

REP-31828
The query definition is invalid.

Category:
Other

Cause:
The query is not properly defined.

Action:
Define a valid query.

REP-31906
This type of graph requires more categories than have been selected.

Category:
Other

Cause:
The number of categories required for a graph depends on the type of graph selected. This type of graph requires more categories than were selected.

Action:
Select the minimum number of categories required by the type of graph selected in a previous panel.

REP-31907
This type of graph requires more data columns than have been selected

Category:
Data

Cause:
The number of data columns required for this graph depends on the type of graph selected. This type of graph requires more data columns than were selected.

Action:
Select the minimum number of data columns required by the type of graph selected in a previous panel.

REP-31908
The Data Model has changed. Reselect categories and data for the created graph.

Category:
Data

Cause:
The data model has been changed for an existing graph.

Action:
Reselect the categories and data for the graph.

REP-31909
This type of graph requires %s categories.

Category:
Other

Cause:
The number of categories required for a graph depends on the type of graph selected. This type of graph requires %s categories.

Action:
Select the minimum number of categories required by the type of graph selected in a previous panel.

REP-31910
This type of graph requires %s data columns.

Category:
Data

Cause:
The number of data columns required for this graph depends on the type of graph selected. This type of graph requires %s data columns.

Action:
Select the minimum number of data columns required by the type of graph selected in a previous panel.

REP-31950
An error occurred in the Oracle Reports Builder graph support.

Category:
Other

Cause:
An error occurred initializing the Graph Wizard.

Action:
Verify that all components are installed properly. Restart the product.

REP-31951
The Graph Wizard cannot be initialized.

Category:
Other

Cause:
The Graph Builder library could not be initialized.

Action:
Verify that the Graph Wizard and Graphics Runtime are properly installed and that there are enough system resources available.

REP-31952
The Graph Wizard cannot be initialized due to incorrect version of libraries.

Category:
Other

Cause:
The Graph Builder library could not be initialized.

Action:
Verify that the Graph Wizard libraries are properly installed and that there are enough system resources available.

REP-31953
An error occurred in the Graph Wizard.

Category:
Other

Cause:
The Graph Builder library could not be initialized.

Action:
Verify that the Graph Wizard libraries are properly installed and that there are enough system resources available.

REP-31954
An error occurred in the Graph Wizard user interface.

Category:
Other

Cause:
The Graph Wizard failed to load properly.

Action:
Verify that the Graph Wizard libraries are properly installed and that there are enough system resources available.

REP-31955
An error occurred in the graph runtime executable while attempting to create a graph.

Category:
Other

Cause:
The Graph Builder failed to build the graph.

Action:
Verify that the Graph Wizard libraries are properly installed and that there are enough system resources available.

REP-31980
Incorrect field mapping is specified. The graph will not be generated.

Category:
Other

Cause:
Fields for both category and value axes were not specified in the Graph Wizard.

Action:
Reenter the Graph Wizard and specify fields for both Category and Value axes.

REP-31981
The Data Model is empty or invalid.

Category:
Data

Cause:
The Graph Wizard was invoked on an empty report.

Action:
Create report (at least a data model) and try again.

REP-32600
An unexpected error occurred. Aborting.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-32601
The report already exists in a translation file.

Category:
Other

Cause:
An attempt was made to overwrite an existing translation file.

Action:
Select a different name for the translation file.

REP-32602
Oracle Reports Builder cannot be initialized.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-32603
The VGS system cannot be initialized.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-32604
A fatal error occurred loading report {0}. Check version.

Category:
Other

Cause:
The specified report cannot be loaded.

Action:
Verify that the correct version of the report is being opened.

REP-32605
The report file cannot be opened for reading.

Category:
Other

Cause:
The report file is unreadable.

Action:
Check the read permission of the report file.

REP-32606
File {0} cannot be opened for reading.

Category:
Other

Cause:
The specified file cannot be opened.

Action:
Verify that the file exists and is readable.

REP-32607
The translation builder tree does not exist.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-32608
Translations for that language do not exist.

Category:
Other

Cause:
The Translation Manager cannot translate into the given target language.

Action:
Verify that the target language is supported.

REP-32609
This is not a valid report tree.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-32610
Source data file {0} does not match.

Category:
Data

Cause:
The translation file being merged into the report was not created from the selected report.

Action:
Merge the translation file into the original report.

REP-32612
The string for the base language cannot be merged.

Category:
Other

Cause:
An attempt was made to merge the untranslated strings back into the original report.

Action:
Translate the strings in the translation file and try again.

REP-32613
A matching VGS string in NX file cannot be found.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-32614
Successfully merged strings for language {0}.

Category:
Other

Cause:
The operation was completed with no errors.

Action:
No action is necessary.

REP-32615
The merge operation failed.

Category:
Other

Cause:
The merge operation encountered errors.

Action:
Check the log file for more information.

REP-32616
Translations in NX file cannot be found.

Category:
Other

Cause:
The translation file does not contain translated strings.

Action:
Verify that the correct translation file is used for the given report.

REP-32617
The NX file is corrupt.

Category:
Other

Cause:
An abnormal condition was encountered.

Action:
For assistance, contact Oracle Support Services.

REP-32618
The NX file cannot be opened for reading.

Category:
Other

Cause:
The translation file cannot be opened.

Action:
Verify that the file exists and is readable.

REP-32750
The data of image {0} cannot be unpacked. The image has been removed.

Category:
Data

Cause:
Case 1: The image data is corrupted. Case 2: REPORTS_DEFAULT_DISPLAY is set to YES and the image format used is not supported.

Action:
Take the following actions to correct this error: If Case 1: Import the image again. If Case 2: Verify that the image format is one of the supported formats: GIF, JPEG, JPG, PNG, BMP.

REP-32751
Some text segments are missing.

Category:
Other

Cause:
Text segments cannot be found for some boilerplate text. The report could be corrupted.

Action:
Check the boilerplate text objects in the report. Remove suspicious ones and create replacements for them.

REP-34202
A value must be entered.

Category:
Other

Cause:
No value has been entered.

Action:
Enter a value.

REP-34203
WARNING: The user modified Format Trigger will be overwritten. Continue?

Category:
Other

Cause:
Format trigger has been modified.

Action:
Click Yes to overwrite the user modified trigger. Click No or Cancel to retain the modified trigger.

REP-34205
At least one condition must be specified.

Category:
Other

Cause:
No condition was specified in the Format Exception dialog box.

Action:
Specify at least one condition.

REP-34300
No distribution list is available.

Category:
Other

Cause:
No distribution target has been specified for the report.

Action:
Create a distribution list.

REP-34301
The value for the field is invalid.

Category:
Other

Cause:
An invalid value or no value has been entered for the field.

Action:
Enter a valid value.

REP-34302
The destination format is not compatible with the runtime mode.

Category:
Other

Cause:
The destination format must be compatible with the current mode for running the report. Likewise, the destination format must be compatible with all other destination formats in the report. There is no support for mixing bitmap output with character mode output.

Action:
Ensure all the destination formats are compatible with either character or bitmap output modes.

REP-34305
The keyword setting for the destid={0} is invalid.

Category:
Other

Cause:
Keyword settings are incorrect in the distribution file.

Action:
Alter the distribution file to ensure that all entries have valid values.

REP-34306
No distribution ID has been specified for the destination.

Category:
Other

Cause:
In the distribution file, the ID for the destination is missing.

Action:
Add a destination ID to the destination line. For example: Dest1:

REP-34307
The destination ID is not unique.

Category:
Other

Cause:
In the distribution file, the ID for the destination is not unique.

Action:
Add a unique destination ID for the entry.

REP-34308
Reference parameter {0} in the distribution list is invalid.

Category:
Other

Cause:
The reference parameter in the distribution list refers to a wrong group.

Action:
Repeat on the same group as that of the reference parameter.

REP-34309
A reference parameter is not allowed in a Report-level distribution list.

Category:
Other

Cause:
A reference parameter was found in a Report-level distribution list.

Action:
Remove the reference paramter distribution item from the Report-level distribution list.

REP-34310
A reference parameter is not allowed in a distribution list for XML destination files.

Category:
Other

Cause:
An XML destination cannot have a reference parameter in the distribution list.

Action:
Remove the reference parameter for the XML file destination from the distribution list.

REP-34311
The XSL transformation file cannot be found.

Category:
Other

Cause:
The XSL transformation file distribution.xsl could not be located.

Action:
Ensure that the XSL file is placed in ORACLE_HOME/reports/conf.

REP-34312
An error occurred in XSL template.

Category:
Other

Cause:
An error occurred when applying XSL transformation. This could be due to an error in the XSL file.

Action:
Check the XSL file and ensure the transformations are correct.

REP-34313
The external file {0} specified in destination {1} cannot be found.

Category:
Other

Cause:
An external file specified in the distribution list was not found.

Action:
Verify the correct path of the external file specified.

REP-34314
The foreach tag cannot be used before both the mail and attach tags at destination {0}.

Category:
Other

Cause:
The foreach tag was used before both the mail tag and the attach tag.

Action:
Correct the entry in the XML distribution file to use a single level of foreach tag.

REP-34315
The instance attribute cannot be used without a foreach tag at destination {0}.

Category:
Other

Cause:
The instance attribute was used without an enclosing foreach tag.

Action:
Correct the entry in the XML distribution file to use a foreach tag at the appropriate level.

REP-34316
Reference parameters cannot be used without a foreach tag in destination {0}.

Category:
Other

Cause:
Reference parameters were used without a foreach tag.

Action:
Correct the entry in the XML distribution file to use a foreach tag appropriately.

REP-34317
The instance attribute cannot be used if 'srctype' is not 'report' in destination {0}.

Category:
Other

Cause:
The instance attribute was used for a body or attach tag whose source is not a report section.

Action:
Correct the entry in the XML distribution file to remove the instance attribute.

REP-34318
The foreach tag cannot be used if 'srctype' is not 'report' in destination {0}.

Category:
Other

Cause:
A foreach tag was used before an attach tag whose source is not a report section.

Action:
Correct the entry in the XML distribution file to remove the foreach tag.

REP-34319
An unknown report section {0} was specified as the source in destination {1}.

Category:
Other

Cause:
The src attribute in the include tag does not specify a valid report section.

Action:
Correct the entry in the XML distribution file to use a valid report section. The valid report sections can be any one of 'headerSection', 'mainSection', 'trailerSection', or 'report'.

REP-34320
Report sections used in destination {1} do not repeat on the same group.

Category:
Other

Cause:
The report sections used in include tags do not repeat on the same group.

Action:
Modify the report definition so that all the sections used repeat on the same group. Use only those report section combinations that repeat on the same group.

REP-34321
Only one external file can be specified in the body or attachment at destination {0}.

Category:
Other

Cause:
More than one external file was specified for the corresponding body or attach tag. Each body or attach tag whose srctype is file, can have only one include tag referring to an external file.

Action:
Correct the entry in the XML distribution file and specify only one external file for the body or attach tag.

REP-34322
Inline text for body or attach tag for destination {0} can be specified only if 'srctype' is 'text'.

Category:
Other

Cause:
Inline text was specified for a body or an attach tag whose 'srctype' is not 'text'.

Action:
Correct the entry in the XML distribution file and specify the correct 'srctype'.

REP-34323
Tag {0} specified for destination {1} cannot be empty.

Category:
Other

Cause:
An empty tag was encountered. Only the include and the property tags can be empty. All other tags must have at least one child.

Action:
Correct the entry in the XML distribution file by either removing the empty tag or inserting the appropriate child tag for it.

REP-34324
Inline text is missing when 'srctype' is 'text' at destination {0}.

Category:
Other

Cause:
Inline text was not specified for a body or an attach tag whose 'srctype' is specified as 'text'.

Action:
Correct the entry in the XML distribution file by specifying the appropriate srctype for the corresponding body or attach tag. If the 'srctype' should be 'text', replace the include tag with inline text.

REP-34325
A reference parameter is not allowed in a distribution list for DelimitedData destination files.

Category:
Other

Cause:
DelimitedData destination cannot have a reference parameter in the distribution list.

Action:
Remove the reference parameter for the DelimitedData file destination from the distribution list.

REP-34326
SPREADSHEET format is not supported in distribution.

Category:
Other

Cause:
SPREADSHEET destination cannot be used in distribution.

Action:
Remove the SPREADSHEET destination from the distribution XML file.

REP-34501
A Web design tool is not registered.

Category:
Other

Cause:
The mail destination specified is too long. Destination names must be less than 1024 characters. The PREFS.ORA file does not contain an entry for a Web design tool.

Action:
Specify a mail destination the 'To' field that is less than 1024 characters. Add an entry for the Web design tool.

REP-34502
The Web design tool registered cannot be found or run.

Category:
Other

Cause:
The Web design tool does not exist, or the file exists but cannot run.

Action:
Correct the PREFS.ORA file and move the Web design program to the correct directory.

REP-34551
Feature {0} is deprecated. See the Oracle Reports documentation for more information.

Category:
Other

Cause:
The feature is deprecated.

Action:
See the Oracle Reports documentation on the Oracle Technology Network (OTN).

REP-34552
The Oracle Graphics Graph in this document will not be saved.

Category:
Other

Cause:
There are one or more obsolete Oracle Graphics graphs in this document that will not be saved.

Action:
Replace the Oracle Graphics graphs with new graphs generated with the Graph Wizard.

REP-35000
The output image format specified is not supported.

Category:
Other

Cause:
The output image format specified on the command line is not supported by Oracle Reports.

Action:
Specify one of the supported output image formats. Refer to the Oracle Reports online help for a list of supported output image formats.

REP-35001
An interanl error occurred writing the image.

Category:
Other

Cause:
The image stream may be invalid or corrupt. A failure occurred while reading the image data from the image stream.

Action:
For assistance, contact Oracle Support Services.

REP-35002
The Reports Toolkit System is not available.

Category:
Other

Cause:
An error occurred initializing the Reports Toolkit System. The required Java classes were not found.

Action:
For assistance, contact Oracle Support Services.

REP-35003
CGM or OGD format cannot be converted to image for HTML/HTMLCSS output.

Category:
Other

Cause:
CGM or OGD is used in the report. It is not supported when Display is not available.

Action:
Remove the OGD or CGM image used in the report. Set DISPLAY and REPORTS_DEFAULT_DISPLAY to NO. Verify that the image format is one of the supported formats: GIF, JPEG, JPG, PNG, BMP.

REP-35004
The Oracle Reports Font Toolkit Subsystem is not available.

Category:
Other

Cause:
An error occurred while initializing the Oracle Reports Font Toolkit Subsystem. The required Java classes were not found.

Action:
For assistance, contact Oracle Support Services.

REP-35503
PDFOWNER and PDFUSER cannot have the same value.

Category:
Other

Cause:
PDFOWNER and PDFUSER cannot be same.

Action:
Specify different values for PDFUSER and PDFOWNER.

REP-50000
A generic error occurred while running the job.

Category:
Other

Cause:
A generic error occurred while running the job.

Action:
For assistance, contact Oracle Support Services.

REP-50001
The server is initializing.

Category:
Other

Cause:
Reports Server is initializing.

Action:
Wait until the Reports Server is ready to serve requests.

REP-50002
The server is shutting down.

Category:
Other

Cause:
The Reports Server is shutting down.

Action:
Restart the Reports Server.

REP-50003
The command line is invalid: {0}.

Category:
Other

Cause:
An invalid command line was submitted.

Action:
Refer to the Oracle Reports documentation for command-line arguments and syntax.

REP-50004
No report is specified on the command line.

Category:
Other

Cause:
There is no report name specified on the command line.

Action:
Specify the name of the report on the command line.

REP-50005
No USERID is specified on the command line.

Category:
Other

Cause:
There is no USERID keyword specified on the command line.

Action:
Specify USERID on the command line as part of the database connection information.

REP-50006
The SCHEDULE argument is invalid on the command line: {0}.

Category:
Other

Cause:
The SCHEDULE argument value on the command line is not correct.

Action:
Refer to the Oracle Reports documentation for the correct SCHEDULE argument syntax.

REP-50007
The TOLERANCE argument is invalid on the command line: {0}.

Category:
Other

Cause:
The TOLERANCE argument value on the command line is not correct.

Action:
Refer to Oracle Reports documentation for correct TOLERANCE argument syntax.

REP-50008
The report is successfully submitted.

Category:
Other

Cause:
The report is successfully submitted to the Reports Server.

Action:
No action required.

REP-50009
The report is successfully run.

Category:
Other

Cause:
The report ran successfully in the Reports Server.

Action:
No action required.

REP-50108
The job is waiting in the queue.

Category:
Other

Cause:
The job is waiting in the queue to be executed.

Action:
No action required.

REP-50109
The report is opening to run.

Category:
Other

Cause:
Opening the report to run.

Action:
No action required.

REP-50110
Report {0} is running.

Category:
Other

Cause:
Running the specified report.

Action:
No action required.

REP-50111
Report {0} finished successfully.

Category:
Other

Cause:
The report has finished successfully.

Action:
No action required.

REP-50112
The report terminated with error: {0}.

Category:
Other

Cause:
The report terminated with the stated error.

Action:
Correct the error and rerun the report.

REP-50113
The engine crashed.

Category:
Other

Cause:
The engine crashed due to an internal error.

Action:
For assistance, contact Oracle Support Services

REP-50114
The job is canceled upon user request.

Category:
Other

Cause:
The job was canceled at the user's request.

Action:
No action required.

REP-50115
The job is canceled as the server is shutting down.

Category:
Other

Cause:
The job was canceled because the Reports Server is shutting down.

Action:
No action required.

REP-50116
The job execution failed and is waiting for retry.

Category:
Other

Cause:
The job execution has failed and waiting to be retried.

Action:
No action required.

REP-50117
The job is sending output.

Category:
Other

Cause:
The job is sending output to specified destinations.

Action:
No action required.

REP-50118
Report execution is initialized.

Category:
Other

Cause:
Initializing report execution.

Action:
No action required.

REP-50119
A Before Report trigger is running.

Category:
Other

Cause:
The report is running a Before Report trigger.

Action:
No action required.

REP-50120
A Between Pages trigger is running.

Category:
Other

Cause:
The report is running a Between Pages trigger.

Action:
No action required.

REP-50121
An After Report trigger is running.

Category:
Other

Cause:
The report is running an After Report trigger.

Action:
No action required.

REP-50122
A Before Parameter Form trigger is running.

Category:
Other

Cause:
The report is running a Before Parameter Form trigger.

Action:
No action required.

REP-50123
An After Parameter Form trigger is running.

Category:
Other

Cause:
The report is running an After Parameter Form trigger.

Action:
No action required.

REP-50124
Page {0} is formatting.

Category:
Other

Cause:
Oracle Reports is formatting the specified page.

Action:
No action required.

REP-50125
An internal exception occurred: {0}.

Category:
Other

Cause:
Oracle Reports encountered an internal exception.

Action:
For assistance, contact Oracle Support Services

REP-50126
File {0} cannot be opened for writing.

Category:
Other

Cause:
Oracle Reports cannot open the specified file for writing.

Action:
Check the write permission of the file, or of the directory in which the file is stored.

REP-50127
File {0} cannot be written to.

Category:
Other

Cause:
Oracle Reports cannot write content to the specified file.

Action:
Check available disk space to verify that that there is enough space to write the file. Verify that no other applications are writing to the same file.

REP-50131
An attempt to bind to {0} failed.

Category:
Other

Cause:
Binding to Reports Server failed.

Action:
Verify that the Reports Server is running and that it is accessible from this machine.

REP-50133
The job has been transferred to {0}, the new job ID is {1}.

Category:
Other

Cause:
The job has been transferred to another server.

Action:
No action required.

REP-50134
Cache subitem {0} does not exist.

Category:
Other

Cause:
An internal error occurred. Some of the report output is deleted unexpectedly.

Action:
Rerun the job to get the correct output.

REP-50135
Class {0} cannot be located.

Category:
Other

Cause:
Oracle Reports cannot locate the specified class.

Action:
Verify that the specified class is in the CLASSPATH and REPORTS_CLASSPATH.

REP-50136
An error occurred reading the input stream: {0}.

Category:
Other

Cause:
Oracle Reports cannot read an input stream due to the stated error.

Action:
Correct the error and rerun the report.

REP-50137
The input stream cannot be closed: {0}.

Category:
Other

Cause:
Oracle Reports cannot close the input stream due to the stated error.

Action:
For assistance, contact Oracle Support Services

REP-50138
A mail server is not available.

Category:
Other

Cause:
There is no mail server specified in Reports Server configuration file.

Action:
Add a <mail> element with a server attribute to the Reports Server configuration file.

REP-50139
File {0} cannot be deleted.

Category:
Other

Cause:
The specified file cannot be deleted.

Action:
The file is probably being used by another application. Close that application and try again.

REP-50140
An internal error {0} occurred.

Category:
Other

Cause:
An internal error occurred.

Action:
For assistance, contact Oracle Support Services

REP-50141
File {0} cannot be opened.

Category:
Other

Cause:
Oracle Reports cannot open the specified file.

Action:
Check whether the specified file exists.

REP-50142
File {0} cannot be read.

Category:
Other

Cause:
Oracle Reports cannot read the specified file.

Action:
Check read permission for specified file.

REP-50143
The job is submitted successfully.

Category:
Other

Cause:
The job has been submitted successfully.

Action:
No action required.

REP-50145
Duplicate parameter {0} is specified.

Category:
Other

Cause:
The parameter was specified more than once on the command line.

Action:
Remove the duplicate parameters.

REP-50148
A Base64 format error occurred.

Category:
Other

Cause:
An internal error occurred.

Action:
For assistance, contact Oracle Support Services

REP-50149
The parameter value is invalid: {0}.

Category:
Other

Cause:
Bad parameter value specified.

Action:
Refer to the Oracle Reports documentation for the correct syntax for the parameter.

REP-50150
The Reports Server object cannot be accessed.

Category:
Other

Cause:
An incorrect signature or key to access the Reports Server object was provided.

Action:
Verify permission to access the Reports Server, and correct pair of signature keys.

REP-50151
An error occurred while sending the file to the printer: {0} - {1}.

Category:
Other

Cause:
Error while sending file to specified printer due to the stated reason.

Action:
Correct the error and try again.

REP-50152
An error occurred while sending mail: {0}.

Category:
Other

Cause:
Error while sending mail due to stated reason.

Action:
Correct the error and try again.

REP-50153
The mail to list is missing.

Category:
Other

Cause:
Missing TO or DESNAME parameter for mail. These parameters point to the recipient list of the report.

Action:
Add TO or DESNAME to the command line or the URL.

REP-50155
The job status is unknown.

Category:
Other

Cause:
Unknown job status.

Action:
No action required.

REP-50156
The scheduled job has expired.

Category:
Other

Cause:
The scheduled job has run for specified number of times or its expiration time has passed.

Action:
No action required.

REP-50157
An error occurred while sending the file to printer {0}. Exit with error code {1}.

Category:
Other

Cause:
An error occurred while sending the file to the specified printer.

Action:
Check if the printer or printer driver is correctly installed.

REP-50158
Job finished successfully but output is purged from cache.

Category:
Other

Cause:
The job has finished successfully, but the output has been purged manually or by the cache system and is no longer available.

Action:
Rerun the job to regenerate the output.

REP-50159
The report generated successfully but distribution to destinations failed.

Category:
Other

Cause:
The job has executed successfully, but there were some errors during the distribution of the output.

Action:
Check the error for each destination, fix them if possible, and rerun the job.

REP-50160
The report is distributing.

Category:
Other

Cause:
Oracle Reports is distributing the report.

Action:
No action required.

REP-50161
The database connection string {0} is invalid.

Category:
Other

Cause:
The database connection string format is not correct.

Action:
Specify a correct database connection string in the format userid=<username>/<password>@<tnsname>.

REP-50162
The job output is distributing.

Category:
Other

Cause:
Oracle Reports is distributing the job output.

Action:
No action required.

REP-50163
The job output is copying.

Category:
Other

Cause:
Oracle Reports is copying the job output.

Action:
No action required.

REP-50164
The job output is printing.

Category:
Other

Cause:
Oracle Reports is printing the job output.

Action:
No action required.

REP-50165
The job output is mailing.

Category:
Other

Cause:
Oracle Reports is mailing the job output.

Action:
No action required.

REP-50166
The job output is uploading.

Category:
Other

Cause:
Oracle Reports is uploading the job output.

Action:
No action required.

REP-50168
A syntax error occurred in the Reports Server configuration file {0}.

Category:
Configuration

Cause:
A syntax error occurred in the specified Reports Server configuration file.

Action:
Refer to rwserverconf.xsd for the correct syntax for the server configuration file.

REP-50169
The type of the value for attribute {0} is invalid.

Category:
Other

Cause:
The type of the value for the specified attribute in the server configuration file is not valid.

Action:
Refer to rwserverconf.xsd for correct syntax for the attribute.

REP-50170
A syntax error occurred in the Reports Server configuration XSD file {0}.

Category:
Configuration

Cause:
A syntax error occurred in the the server configuration XSD file.

Action:
Use the original rwserverconf.xsd, without any change.

REP-50171
Authentication failed.

Category:
Security

Cause:
Authentication failed.

Action:
Provide the correct authentication information.

REP-50175
File {0} cannot be found.

Category:
Other

Cause:
Oracle Reports cannot find the specified file.

Action:
Check if the file exists on the file system.

REP-50177
The naming service is not available.

Category:
Other

Cause:
The naming server is down.

Action:
Start the naming server.

REP-50180
The naming service failed to shut down.

Category:
Other

Cause:
Oracle Reports could not stop the naming server.

Action:
For assistance, contact Oracle Support Services

REP-50200
OID server cannot connect.

Category:
Other

Cause:
The OID server is probably down.

Action:
Verify that the OID server is up.

REP-50201
The user role cannot be retrieved from the OID server.

Category:
Other

Cause:
The OID server is probably down.

Action:
Verify that the OID server is up. Also check the Reports Server trace file under $ORACLE_HOME/reports/logs/<server>.trc for more information.

REP-50509
Destination ID {0} failed with error {1}.

Category:
Other

Cause:
Distribution to the ID failed with specified error.

Action:
Check the distribution list and correct the error.

REP-50602
Servlet config file {0} cannot be parsed. {1}.

Category:
Other

Cause:
The servlet config file could not be parsed. The XML syntax is incorrect.

Action:
Correct the servlet config file and start the server.

REP-50603
The servlet file cannot be found {0}. {1}.

Category:
Other

Cause:
The rwservlet file is not found.

Action:
Contact the system administrator.

REP-51000
The Reports Server name is not specified.

Category:
Other

Cause:
The Reports Server name is not specified on the command line or in the URL.

Action:
Specify the Reports Server name as follows: server=<server_name>.

REP-51002
Bind to Reports Server {0} failed.

Category:
Other

Cause:
Failed to connect to Reports Server.

Action:
Verify that Reports Server is running and that the Reports Server name is correct.

REP-51004
Get connection object failed.

Category:
Other

Cause:
Failed to get a connection object from the server. This can happen because the server has reached the maximum number of connections allowed, or the client does not have privileges to make a connection to the server.

Action:
Increase the maxConnect attribute of the connection element and verify that the client has connect privileges to the server.

REP-51015
Sending job output to the client failed due to {0}.

Category:
Other

Cause:
Failed to send job output to client.

Action:
Fix the problem related to stated reason and rerun the job.

REP-51017
The user ID is incomplete.

Category:
Other

Cause:
The value specified for the user ID was incomplete.

Action:
Specify correct syntax for the user ID: <username>/<password>@<tnsname>.

REP-51018
Database user authentication is missing.

Category:
Security

Cause:
No database user authentication information was provided.

Action:
Provide valid database user authentication information.

REP-51019
System user authentication is missing.

Category:
Security

Cause:
No system user authentication information was provided.

Action:
Provide valid system user authentication information.

REP-51020
Authentication for both system user and database user does not match.

Category:
Security

Cause:
The system and the database user authentication information was different.

Action:
Provide the same authentication information for the system and database user.

REP-51021
System and database user authentication is missing.

Category:
Security

Cause:
No system user and database user authentication information was provided.

Action:
Provide valid system and database user authentication information.

REP-51024
The client has not been connected to Reports Server.

Category:
Other

Cause:
An internal error occurred. The client has not connected to Reports Server before using the server.

Action:
For assistance, contact Oracle Support Services.

REP-51025
User {0} does not have the privilege to run command {1}.

Category:
Other

Cause:
An attempt to run the indicated command failed due to insufficient privileges.

Action:
Contact the Oracle Reports administrator to request the necessary privileges.

REP-51026
No output is generated for job {0}.

Category:
Other

Cause:
No output was generated for the indicated job.

Action:
Check the report and job definition and rerun the job.

REP-51027
Engine {0} cannot be killed.

Category:
Other

Cause:
An attempt was made to kill an engine in an older version of Reports Server.

Action:
This operation is not supported.

REP-52001
The key map file {0} cannot be read.

Category:
Other

Cause:
Failed to read the Reports key map file.

Action:
Verify that the Reports key map file is in ORACLE_HOME/reports/conf and that it contains valid information.

REP-52002
The key map file {0} cannot be parsed.

Category:
Other

Cause:
The Reports key map file cannot be parsed.

Action:
Verify that the Reports key map file has valid entries.

REP-52003
Read Reports template {0} failed

Category:
Other

Cause:
The Reports Servlet template cannot be read.

Action:
Verify that the Reports Servlet template is in ORACLE_HOME/reports/templates.

REP-52004
The authentication template {0} cannot be read.

Category:
Security

Cause:
Failed to read the Reports Servlet authentication template.

Action:
Verify that the Reports Servlet authentication template is in ORACLE_HOME/reports/templates.

REP-52005
The specified key {0} does not exist in the key map file.

Category:
Other

Cause:
The specified key does not exist in the Reports key map file.

Action:
Verify that the Reports key map file contains the specified key.

REP-52006
The specified URL {0} cannot be decoded.

Category:
Other

Cause:
The specified URL cannot be decoded.

Action:
Verify that the URL is a valid URL.

REP-52007
A Parameter Form format error was encountered.

Category:
Other

Cause:
The submitted Parameter Form has an invalid format.

Action:
Check if the hidden_run_parameters variable in the Parameter Form is null.

REP-52009
No such Web command ({0}).

Category:
Other

Cause:
The Web command passed in from rwservlet is not a valid command.

Action:
Check the help page for rwservlet for a valid Web command.

REP-52010
The specified key map file {0} does not exist.

Category:
Other

Cause:
The specified key map file does not exist.

Action:
Verify that the Reports key map file is in ORACLE_HOME/reports/conf.

REP-52242
The job with job ID {0} cannot be killed.

Category:
Other

Cause:
Insufficient privileges to perform this operation, or a job with the specified jobid does not exist.

Action:
Sufficient privileges are required for this operation. Either log in as administrator or as a user who has sufficient privileges. Specify a valid jobid in the command.

REP-52251
The output of job ID {0} requested on {1} cannot be retrieved.

Category:
Other

Cause:
Insufficient privileges for this operation, or invalid job ID or nonexistent output.

Action:
Sufficient privileges are required for this operation. Check if a valid job ID is provided in the command.

REP-52260
No Oracle Home is specified.

Category:
Other

Cause:
Oracle Home is not defined in the environment.

Action:
Define Oracle Home in the environment. See Configuration chapter in the Publishing Reports to the Web manual for details.

REP-52261
Parameter {0} has an incorrect value {1}.

Category:
Other

Cause:
The specified parameter has an invalid value.

Action:
Provide correct value for the parameter.

REP-52262
Diagnostic output is disabled.

Category:
Other

Cause:
Reports Server is unsecure, the DIAGNOSTIC property is set to NO in rwservlet.properties file, and a valid AUTHID is not specified in command line.

Action:
Specify a valid AUTHID in the command line or contact the system sdministrator.

REP-52265
The specified Web command {0} is not supported.

Category:
Other

Cause:
The web command is not a valid command for this utility.

Action:
Check the Publishing Reports to the Web manual for a list of valid commands for this utility.

REP-52266
The in-process Reports Server {0} failed to start.

Category:
Other

Cause:
There maybe a server with same name already existing in the network.

Action:
Verify that the server is not already started as a stand alone server.

REP-52268
The specified HTML code is not allowed: {0}

Category:
Other

Cause:
HTML tags were specified in the URL command.

Action:
Either remove the HTML tags in the URL and rerun the report, or set ALLOWHTMLTAGS in rwservlet.properties to YES and restart the OC4J container. However, note that any HTML code included as part of the report request URL may lead to a security compromise as it causes certain browsers to execute any script or code in the URL. This property is set to NO by default, disallowing any malicious HTML code to be entered in the URL when running a report.

REP-52274
Invalid valuess passed.

Category:
Other

Cause:
Invalid values passed to the Web Command.

Action:
Refer to the Oracle Reports help for the Web Command arguments.

REP-52275
Invcompatible arguments passed.

Category:
Other

Cause:
Incompatible arguments passed to the Web Command.

Action:
Refer to the Oracle Reports help for the Web Command arguments.

REP-52280
An Oracle OID generic error occurred.

Category:
Other

Cause:
Failed to get resource type or resoruce values from OID.

Action:
Check the Oracle OID configuration.

REP-52281
The connection to Oracle OID using provider URL {0} cannot be established.

Category:
Other

Cause:
An attempt to connect to Oracle OID using given provider URL and user ID failed.

Action:
Check the Reports Servlet configuration file and verify that the provider URL and user ID are correct.

REP-52282
The specified resource type {0} in OID cannot be found.

Category:
Other

Cause:
The specified resource type is not created in OID

Action:
Verify that the resource type has been defined in OID.

REP-52283
The specified resource key {0} in OID cannot be found.

Category:
Other

Cause:
The specified resource key is not created in OID

Action:
Verify that the resource key has been defined in OID.

REP-52284
The create resource URL cannot be retrieved from OID.

Category:
Other

Cause:
The create resource URL is not defined in OID.

Action:
Verify that the create resource URL has been defined in OID.

REP-52285
The user name or subscriber name cannot be found in Logon Server cookie.

Category:
Other

Cause:
User is not logged on to Logon Server.

Action:
Log on to Logon Server.

REP-52286
Parameter SSOCONN requires the Reports Server to be secure and Single Sign-On turned on.

Category:
Other

Cause:
Either the Reports Server is running in non-secure mode, or the SINGLESIGNON parameter in rwservlet.properties is set to NO.

Action:
Verify that the Reports Server is running in secure mode, and the SINGLESIGNON parameter in rwservlet.properties is set to YES.

REP-52287
Parameter SSOCONN and AUTHID cannot be used together.

Category:
Security

Cause:
SSOCONN and AUTHID are both used in the command line. The AUTHID value overwrites the SSO userid, and SSOCONN requires the SSO user ID. Therefore, using the keywords together on the command line causes a conflict.

Action:
Remove either SSOCONN or AUTHID from the command line.

REP-53000
The connection is invalid.

Category:
Other

Cause:
An internal error occurred.

Action:
For assistance, contact Oracle Support Services.

REP-53053
Arguments for the function call are invalid.

Category:
Other

Cause:
Bad arguments for the function call.

Action:
Refer to the Oracle Reports help for the function arguments.

REP-53054
AUTHID is not allowed in the URL.

Category:
Security

Cause:
AUTHID was specified in the URL.

Action:
Either remove AUTHDID in the URL and rerun the report, or set ALLOWAUTHID in rwservlet.properties to YES and restart the OC4J container.

REP-54000
The cache item is not found in the cache system.

Category:
Other

Cause:
The cache item has been deleted manually or by the cache system.

Action:
Submit the request again to rerun the report.

REP-54001
The cache group item is not found in the cache system.

Category:
Other

Cause:
An internal error occurred.

Action:
Submit the request again without use cache. There is no tolerance in the command line or URL.

REP-54002
The cache item is no longer valid.

Category:
Other

Cause:
The cache item might have been cleaned up by the cache system due to resource constraints.

Action:
Submit the request again to rerun the report.

REP-54003
The syntax for the value of the time argument {0} is invalid.

Category:
Other

Cause:
The syntax for the time argument is incorrect.

Action:
Refer to the Oracle Reports documentation for the correct syntax of the time argument.

REP-54004
No cache directory is specified.

Category:
Other

Cause:
There is no cache directory specified in the server configuration file.

Action:
Specify a cache directory in the server configuration file.

REP-54005
The cache directory {0} does not exist.

Category:
Other

Cause:
The specified cache directory does not exist.

Action:
Create a cache directory before starting Reports Server.

REP-54006
The cache directory {0} cannot be created.

Category:
Other

Cause:
Unable to create a cache directory.

Action:
Ensure write permission and enough disk space for the cache directory.

REP-54007
The cacheSize value specified {0} is invalid.

Category:
Other

Cause:
The cacheSize value specified is not valid.

Action:
Correct the cacheSize value in the server config file and start the server.

REP-55005
An engine access violation occurred.

Category:
Other

Cause:
An incorrect key to access the engine object was provided.

Action:
For assistance, contact Oracle Support Services.

REP-55006
An attempt to load {0} failed.

Category:
Other

Cause:
Failed to load the specified dynamic library.

Action:
Verify that the dynamic library exists in PATH on NT or LD_LIBRARY_PATH on UNIX.

REP-55008
The report cannot be created. The command line is: {0}.

Category:
Other

Cause:
An attempt to create a report in the engine specified on the command line failed.

Action:
For assistance, contact Oracle Support Services.

REP-55009
The Report Engine failed to start. Port {0} specified in the server config file may be already in use.

Category:
Ports

Cause:
The ORB port specified in the config file is not available for the Reports Engine.

Action:
Specify a free port.

REP-55010
An incorrect value is specified for the ORBPorts element.

Category:
Other

Cause:
The ORB port specified is not in valid format.

Action:
Specify a proper integer value for the ORBPorts element.

REP-55100
The urlparameter not specified for the job.

Category:
Other

Cause:
The URL to be downloaded is not specified in the command line.

Action:
Specify the URL in the command line using urlparameter.

REP-55101
A timeout occurred in accessing the URL {0}.

Category:
Performance

Cause:
The engine cannot access the URLstream.

Action:
Check if the URL is accessible. If the engine is running behind a firewall, specify the necessary proxy settings in the server configuration file.

REP-55102
An error occurred setting the proxy information.

Category:
Other

Cause:
Proxy settings could not be set.

Action:
Check if the proxy settings file is valid.

REP-55103
API {0} is not applicable to the URL engine.

Category:
Other

Cause:
The API used is not applicable to the URL engine.

Action:
Verify the API used.

REP-55105
The distribution failed. Verify the distribution list.

Category:
Other

Cause:
The distribution file may be invalid.

Action:
Ensure that the XML distribution file conforms to the DTD.

REP-55106
The DESTYPE value is invalid.

Category:
Other

Cause:
The destination type (DESTYPE) value is null.

Action:
Specify a valid destination type (DESTYPE): FILE, PRINTER, MAIL, or CACHE.

REP-56000
Cluster {0} cannot be joined.

Category:
Other

Cause:
The Reports Server cluster was not joined because other Reports Servers could not be found.

Action:
Verify that this machine can see other Reports Servers. Use osfind to check for other Reports Server on the network.

REP-56001
LocationService cannot be found.

Category:
Other

Cause:
Unable to locate VisiBroker's LocationService.

Action:
This should not happen with VisiBroker 4.5. Report this problem to Oracle Support Services.

REP-56003
References for LocationService cannot be resolved.

Category:
Other

Cause:
References for VisiBroker's LocationService could not be resolved.

Action:
This should not happen with VisiBroker 4.5. Report this problem to Oracle Support Services.

REP-56014
The arguments for function call {0} are invalid.

Category:
Other

Cause:
The arguments for the specified function call were invalid.

Action:
Refer to jasmine.idl for the function arguments.

REP-56017
Security violation: access to job output not allowed.

Category:
Security

Cause:
An attempt was made to access job output by a non-owner.

Action:
This is security violation, and should not be attempted.

REP-56022
Engine {0} cannot be launched due to {1}.

Category:
Other

Cause:
The specified engine could not be launched for the stated reason.

Action:
Fix the problem described in the message, and restart Reports Server.

REP-56027
An internal error occurred: Engine registration failed.

Category:
Other

Cause:
An internal error occurred when registering the engine to Reports Server.

Action:
Contact Oracle Support Services if problem persists.

REP-56030
The initial engine number must be between minengine ({0}) and maxengine ({1}).

Category:
Other

Cause:
The value of initEngine is not between the minEngine and maxEngine values specified in the server configuration file.

Action:
Change the value of initEngine, minEngine, or maxEngine so that minEngine <= initEngine <= maxEngine.

REP-56033
Job {0} does not exist.

Category:
Other

Cause:
The requested job does not exist.

Action:
Specify a valid ID of a job that exists in the Reports Server.

REP-56034
A job that is in current or scheduled queue cannot be resubmitted.

Category:
Other

Cause:
An attempt was made to resubmit a job that is in the current or scheduled job queue.

Action:
Kill or cancel the job in the current or scheduled queue, then resubmit it.

REP-56035
Connection object cannot be accessed.

Category:
Other

Cause:
The client did not provide the correct key to access the connection object in Reports Server.

Action:
This should not happen; ensure that the connection attempt is legitimate.

REP-56036
The job has been scheduled successfully.

Category:
Other

Cause:
This is a notification generated when a job has been scheduled successfully.

Action:
This is a job submission status. No action is needed.

REP-56040
Server {0} already exists in the network.

Category:
Other

Cause:
Another Reports Server in the network has the same name.

Action:
Specify a different name for this Reports Server.

REP-56041
Proxy server for the Reports 6i client cannot be started.

Category:
Other

Cause:
A failure occurred when attempting to start the proxy server that is used for the Reports 6i client.

Action:
Verify that the Reports Server name is defined in tnsnames.ora.

REP-56042
This function is not supported.

Category:
Other

Cause:
The invoked function is not supported.

Action:
Do not use this function.

REP-56043
No securityUserid is specified in the server configuration file.

Category:
Configuration

Cause:
The securityUserid property is missing from the security element specification in the server configuration file.

Action:
Add the securityUserid property to the security element in the server configuration file.

REP-56044
Parameter {0} has invalid value {1}.

Category:
Other

Cause:
The specified parameter has an incorrect value.

Action:
Refer to the Oracle Reports documentation for the correct parameter value syntax and type.

REP-56045
No Oracle Home is specified.

Category:
Other

Cause:
No Oracle Home is specified in the Reports Server running environment.

Action:
Verify that the ORACLE_HOME environment variable is set in the environment where Reports Server runs.

REP-56046
No method {0} is defined in class {1}.

Category:
Other

Cause:
No method is defined in the specified Java class.

Action:
Add the method into the Java class.

REP-56048
Engine {0} crashed.

Category:
Other

Cause:
Reports Server detected that the specified engine crashed.

Action:
Reports Server should restart another engine. Report the problem to Oracle Support Services with the testcase that caused the engine crash.

REP-56049
No portalUserid is specified in the server configuration file.

Category:
Configuration

Cause:
The portalUserid property is missing from the destination element for destype=oraclePortal in the server configuration file.

Action:
Add the portalUserid property to the destination element in the server configuration file.

REP-56050
Persistent file {0} in invalid or corrupted.

Category:
Other

Cause:
An attempt to read the Reports Server persistent file failed.

Action:
Delete the Reports Server persistent file <server_name>.dat in ORACLE_HOME/reports/server.

REP-56051
The connection to server {0} failed.

Category:
Other

Cause:
The specified server in the same cluster may be down or not ready.

Action:
Verify that the server is up and ready.

REP-56052
The connection to server {0} is dropped.

Category:
Other

Cause:
The specified server in the same cluster has been shut down.

Action:
This is for information only, no action is needed.

REP-56053
Cluster server {0} has been registered.

Category:
Other

Cause:
The specified server in the same cluster has been registered.

Action:
This is for information only, no action is needed.

REP-56054
A connection to server {0} is established.

Category:
Other

Cause:
The new Reports Server has connected to the specified Reports Server to form a cluster.

Action:
This is for information only, no action is needed.

REP-56055
The max connections allowed ({0}) is exceeded.

Category:
Other

Cause:
There are more concurrent connection attempts than the server is allowed.

Action:
Increase the value of the maxConnect attribute of the connection element in the server configuration file if desired.

REP-56062
The repositoryConn property is missing from jobStatusRepository.

Category:
Other

Cause:
The repositoryConn property is missing from the jobStatusRepository element specification in the server configuration file.

Action:
Add the repositoryConn property to the jobStatusRepository element in the server configuration file.

REP-56066
PL/SQL error {0} occurred when inserting job information into the database.

Category:
Other

Cause:
The indicated PL/SQL error occurred when inserting job information into the database.

Action:
Check the PL/SQL error manual for the appropriate action.

REP-56067
PL/SQL error {0} occurred when removing job information from the database.

Category:
Other

Cause:
The indicated PL/SQL error occurred when removing job information from the database.

Action:
Check the PL/SQL error manual for the appropriate action.

REP-56068
PL/SQL error {0} occurred when cleaning job information from the database.

Category:
Other

Cause:
The indicated PL/SQL error occurred when cleaning information from the database.

Action:
Check the PL/SQL error manual for the appropriate action.

REP-56069
An internal error occurred: No cache item for job {0}.

Category:
Other

Cause:
No cache item associated with the specified job was found.

Action:
Resubmit the job.

REP-56070
Error message for error {0} cannot be retrieved.

Category:
Other

Cause:
An attempt to retrieve the error message for the specified error code failed.

Action:
Report the problem to Oracle Support Services.

REP-56071
A security check failed with error message {0}.

Category:
Security

Cause:
A security check failed due to the stated reason.

Action:
Verify the privileges to run the report.

REP-56072
The administrator password in the secure server cannot be changed.

Category:
Other

Cause:
An attempt was made to change the Oracle Reports administrator password in secure mode.

Action:
Use Oracle Portal to change the Oracle Reports administrator password.

REP-56073
The password is invalid.

Category:
Other

Cause:
An attempt was made to change the Oracle Reports administrator password, but the old password provided was incorrect.

Action:
Provide the correct old password.

REP-56074
Additional privileges are required to perform the operation.

Category:
Other

Cause:
An attempt was made to perform an operation for which the user does not have privileges.

Action:
Only an Oracle Reports administrator can perform this operation.

REP-56075
The job cannot be reordered if not in the current queue.

Category:
Other

Cause:
An attempt was made to reorder the job in the past or scheduled job queue.

Action:
Reordering jobs can only be done in the current job queue.

REP-56079
The Oracle Portal module status cannot be updated.

Category:
Other

Cause:
An attempt to update the Oracle Portal module status failed.

Action:
Report the problem to Oracle Support Services.

REP-56081
The minEngine value ({0}) must be smaller than maxEngine ({1}).

Category:
Other

Cause:
The value of minEngine is larger than maxEngine in the server configuration file.

Action:
Change the value of minEngine or maxEngine so that minEngine <= maxEngine.

REP-56082
The maxEngine value must be larger than minEngine ({0}) and initEngine ({1}).

Category:
Other

Cause:
The value of maxEngine is smaller than the values of minEngine and initEngine specified in the server configuration file.

Action:
Change the value of initEngine, minEngine, or maxEngine so that minEngine <= initEngine <= maxEngine.

REP-56083
The Oracle Portal folder for job {0} cannot be created.

Category:
Other

Cause:
An attempt to create an Oracle Portal folder for job ouput failed.

Action:
Verify permission to create the folder.

REP-56084
The Oracle Portal folder has been created for job {0}.

Category:
Other

Cause:
This a notification message that the Oracle Portal folder has been created.

Action:
This is for information only, no action is needed.

REP-56085
The engineId {0} is invalid.

Category:
Other

Cause:
An invalid engineId attribute for the job element is specified in the server configuration file.

Action:
Check the engineId attribute in the server configuration file.

REP-56091
Job {0} is redirected to engine {1} on server {2}.

Category:
Other

Cause:
This a notification message that the specified job has been transferred to another server's engine.

Action:
This is for information only, no action is needed.

REP-56092
No class is defined for destination type {0}.

Category:
Other

Cause:
The class attribute is missing for the destination element in the server configuration file.

Action:
Specify the java class name for the destination element in the reports server configuration file.

REP-56093
Cached output for job {0} is no longer valid.

Category:
Other

Cause:
The cached output has been deleted and no longer valid for use.

Action:
Rerun the report.

REP-56095
Job {0} is waiting for the Oracle Portal folder to be created.

Category:
Other

Cause:
This a notification message that the specified job is waiting for the Oracle Portal folder to be created.

Action:
This is for information only, no action is needed.

REP-56096
Registration of the remote server is rejected because it does not participate in the cluster

Category:
Other

Cause:
Another Reports Server tried to register to this Reports Server, but this server does not participate in the cluster.

Action:
This is for information only, no action is needed.

REP-56097
Engine {0} callback timeout is reached.

Category:
Performance

Cause:
The Reports engine callback timeout value was reached.

Action:
Increase the value of the callbackTimeOut attribute for the engine element in the server configuration file.

REP-56098
Engine name {0} is invalid.

Category:
Other

Cause:
The engine name provided to the Reports Server is invalid.

Action:
Report the problem to Oracle Support Services.

REP-56099
The specified jobtype {0} is not supported.

Category:
Other

Cause:
The jobtype provided to the Reports Server is invalid.

Action:
Check the server configuration file to see what jobtypes are supported.

REP-56100
No engine is defined for jobtype {0}.

Category:
Other

Cause:
No engine is defined for specified jobtype in the server configuration file.

Action:
Define an engine for the specified jobtype in the server configuration file.

REP-56101
Reports Server cannot be shut down remotely when running in process mode.

Category:
Process

Cause:
An attempt was made to shut down Reports Server remotely when running in process mode.

Action:
Shut down the process in which Reports Server is running.

REP-56102
The proxy server has terminated unexpectedly.

Category:
Other

Cause:
The proxy server terminated unexpectedly.

Action:
Check whether the Reports Server tnsname is included in tnsnames.ora.

REP-56103
The proxy server callback has timed out.

Category:
Other

Cause:
The proxy server has not called back within an expected time.

Action:
Report the problem to Oracle Support Services.

REP-56104
The pluginParam element {0} is invalid due to {1}.

Category:
Other

Cause:
An invalid value for the pluginParam element is specified in the server configuration file, most likely the file or URL does not exist.

Action:
Verify that the file or URL that is specified for the pluginParam element in the server configuration file is valid.

REP-56105
Engine {0} died with error: {1}.

Category:
Other

Cause:
The specified engine died for the stated reason.

Action:
Fix the error and restart the server.

REP-56106
Engine {0} is destroyed due to timeout.

Category:
Other

Cause:
The specified Engine did not call back in the expected time.

Action:
Increase the value of the callbackTimeOut attribute of the engine element in the server configuration file if desired.

REP-56107
The specified environment ID {0} is invalid for Job Type {1} in the command line.

Category:
Other

Cause:
An invalid ENVID argument is specified in the command line.

Action:
Specify an ENVID that is already defined in the server configuration file (id attribute of environment elelemnt)or define a environment ID in the server configuration file and restart Reports Server.

REP-56108
No connStr property is defined for workflow notification in the server configuration file.

Category:
Configuration

Cause:
The connStr property is not specified for workflow nofication in the server configuration file.

Action:
Specify a valid connStr (in the format of database connection string) for workflow notification in the server configuration file.

REP-56109
Job {0} is terminated due to a connection timeout.

Category:
Other

Cause:
No activity was detected for the specified job in the timeout period. Either the client has terminated unexpectedly, the client program has hung, or the client program took too long handling other processes.

Action:
Check client program status, or if needed, increase the idleTimeOut attribute for connection element in the server configuration file.

REP-56110
The security repository Oracle Portal cannot be connected.

Category:
Security

Cause:
An attempt to connect to Oracle Portal failed. Oracle Portal is probably down, or an invalid connection string was specified.

Action:
Verify that Oracle Portal is up, and the connection string is correct.

REP-56111
Bad or damaged persist file is backed up as: {0}.

Category:
Other

Cause:
Reports Server shut down abnormally while writing to the indicated file.

Action:
Resubmit the lost current and scheduled jobs as information about past, current, and scheduled jobs might be lost. Provide the backed up file when reporting the problem to Oracle Support Services.

REP-56112
Backup of the damaged persist file {0} cannot be created.

Category:
Other

Cause:
The persist file is damaged. Reports Server encountered an error while creating a backup.

Action:
Rename the file manually, then restart Reports Server. Resubmit all current and scheduled jobs as information about past, current, and scheduled jobs will be lost.

REP-56113
The JSP report cannot be resubmitted.

Category:
Other

Cause:
JSP reports are not stored in the Reports Server persistence cache so they cannot be rerun.

Action:
Submit a new JSP report to the Reports Server.

REP-56114
The attempt to bind to the naming server failed.

Category:
Other

Cause:
The naming server may be down.

Action:
Start the naming server.

REP-56115
Engine {0} does not exist.

Category:
Other

Cause:
An attempt was made to access or kill an engine that does not exist.

Action:
Provide the correct engine name.

REP-56116
A relative path for desname {0} is not allowed when destype=file.

Category:
Other

Cause:
A relative path was specified for desname when destype=file, which is not allowed.

Action:
Specify the absolute path for desname.

REP-56117
JOBTYPE {0} is invalid.

Category:
Other

Cause:
An invalid JOBTYPE argument was specified in the command line.

Action:
Correct the JOBTYPE argument and resubmit the job.

REP-56118
The report is aborted upon user request.

Category:
Other

Cause:
This a notification message that the current job was cancelled.

Action:
No action required.

REP-56119
An invalid value {0} is specified for attribute {1}.

Category:
Other

Cause:
The specified value in the server configuration file is invalid for the attribute.

Action:
Refer to the Publishing Reports to the Web manual for information about the attribute and valid values.

REP-56120
A syntax error exists on the command line for the Reports Server.

Category:
Other

Cause:
The syntax for one or more arguments on the command line is invalid.

Action:
Refer to the Publishing Reports to the Web manual for correct command-line argument syntax.

REP-56121
Authentication failed.

Category:
Security

Cause:
The AUTHID specified was invalid.

Action:
Specify a correct AUTHID.

REP-56122
Reports Server {0} cannot be connected.

Category:
Other

Cause:
An attempt to connect to Reports Server failed.

Action:
Verify that Reports Server is running and that the Reports Server name is correct.

REP-56123
An insufficient number of ports is assigned for Reports Server and engines in the config file.

Category:
Ports

Cause:
The number of ports assigned is less than the number required to start server and engines.

Action:
Increase the number of ORB ports in the server configuration file.

REP-56124
Report Server failed to start; port {0} specified in the server config file may already be in use.

Category:
Ports

Cause:
The ORB port specified in the server configuration file is not available for the Reports Server.

Action:
Specify a free port.

REP-56125
The ORBPorts property value in the config file is invalid.

Category:
Other

Cause:
The ORB port specified in the server configuration file is not in a valid format.

Action:
Specify proper integer values for ORB ports either as a range (4000-6000), or comma separated values (4000,5000,6000).

REP-56126
The server config file {0} cannot be parsed. {1}.

Category:
Other

Cause:
An attempt to parse the server config file failed due to invalid XML syntax.

Action:
Correct the server configuration file and start the Reports Server.

REP-56127
The {0} element cannot be decrypted.

Category:
Other

Cause:
An attempt to decrypt the indicated element failed.

Action:
Verify that the encrypted property is set properly for the element in the server configuration file.

REP-56128
The {0} destination cannot be initialized. Nested exception: {1}.

Category:
Other

Cause:
An attempt to initialize the indicated destination failed.

Action:
Check and correct the destination element in the server configuration file.

REP-56129
Permission is denied for {0}.

Category:
Other

Cause:
An attempt to run the report failed due to lack of permissions.

Action:
Change the parameter values or contact the Oracle Reports administrator.

REP-56130
Permission to run Web command {0} is not granted.

Category:
Other

Cause:
An attempt to run the indicated Web command failed due to lack of permissions.

Action:
Contact the Oracle Reports administrator.

REP-56131
Permission to run Web command {0} is not granted.

Category:
Other

Cause:
An attempt to run the indicated Web command failed due to lack of permissions.

Action:
Contact the Oracle Reports administrator.

REP-56132
Access is denied to the report definition file.

Category:
Other

Cause:
An attempt to read the report definition file failed due to lack of permissions.

Action:
Contact the Oracle Reports administrator to obtain access privileges.

REP-56133
Access is denied to write to the specified location.

Category:
Other

Cause:
An attempt to write to the folder failed due to lack of permissions.

Action:
Change the desname location or contact the Oracle Reports administrator.

REP-56134
Server config file cannot be found.

Category:
Other

Cause:
The server configuration file rwserver.conf was not found.

Action:
Contact the Oracle Reports administrator.

REP-56135
Reports Server is not started using PCS.

Category:
Other

Cause:
The Reports Server was not started using PCS in the MAS environment.

Action:
Start the server using PCS.

REP-56136
An error occurred retrieving the environment required to spawn the engine.

Category:
Other

Cause:
An attempt to retrieve needed environment variables failed.

Action:
Contact the Oracle Reports administrator.

REP-56137
The minEngine value must be smaller than maxEngine {0} and initEngine {1}.

Category:
Other

Cause:
The value of minEngine is larger than maxEngine and initEngine in the server configuration file.

Action:
Change the value of initEngine, minEngin, or maxEngine so that minEngine <= initEngine <= maxEngine.

REP-56138
Job {0} has completed execution.

Category:
Other

Cause:
An attempt was made to kill a job that was running or scheduled.

Action:
Check the job status. Only jobs that are running or scheduled can be killed.

REP-56139
The requested operation is unauthorized.

Category:
Other

Cause:
An attempt to perform an operation failed due to lack of proper authorization.

Action:
Contact the Oracle Reports administrator.

REP-57000
An internal error occurred in the Oracle Reports API:

Category:
Other

Cause:
An internal error occurred.

Action:
For assistance, contact Oracle Support Services.

REP-57001
The in-process server is not initialized.

Category:
Other

Cause:
An internal error occurred.

Action:
For assistance, contact Oracle Support Services.

REP-57002
An attempt to load {0} failed.

Category:
Other

Cause:
An internal error occurred.

Action:
For assistance, contact Oracle Support Services.

REP-57003
A column data type {0} is not valid.

Category:
Data

Cause:
A column in the report contains an unsupported data type.

Action:
Use only supported datatypes. Refer to the Oracle Reports documentation for supported datatypes.

REP-57004
The value of column {0} cannot be retrieved, cursor out of range in cache.

Category:
Other

Cause:
An internal error occurred.

Action:
For assistance, contact Oracle Support Services.

REP-57005
The value of column {0} cannot be retrieved in cache.

Category:
Other

Cause:
An internal error occurred.

Action:
For assistance, contact Oracle Support Services.

REP-57052
An internal error occurred in the in-process server.

Category:
Other

Cause:
An internal error occurred.

Action:
For assistance, contact Oracle Support Services.

REP-58000
Attribute value {0} for attribute name {1} in tag {2} is invalid.

Category:
Other

Cause:
The value of the attribute for the JSP tag is invalid.

Action:
Verify that the attribute value is valid. Refer to the Reference>Oracle Reports JSP tags section of the Oracle Reports online Help.

REP-58001
Either tag attribute {0} or {1} must exist in tag {2}.

Category:
Other

Cause:
One of the specified two optional attributes must exist.

Action:
Specify at least one of the two attributes.

REP-58002
A cursor for group {0} cannot be created.

Category:
Other

Cause:
A cursor object cannot be created for a group in an rw:foreach or an rw:graph tag.

Action:
Verify that the group name is valid.

REP-58004
Format trigger {0} cannot be run.

Category:
Other

Cause:
Failed to run a PL/SQL format trigger in an rw:field tag.

Action:
Verify that the name of the format trigger is correct.

REP-58005
There is no current report for group {0}.

Category:
Other

Cause:
There is no report object for the rw:foreach tag.

Action:
Verify that a report object is created by enclosing the report block inside the rw:report tag.

REP-58006
There is no current report for layout object {0}.

Category:
Other

Cause:
There is no report object for the rw:include tag.

Action:
Verify that a report object is created by enclosing the report block inside the rw:report tag.

REP-58008
There is no current report for column {0}.

Category:
Other

Cause:
There is no report object for the rw:field or rw:getValue tags.

Action:
Verify that a report object is created by enclosing the report block inside the rw:report tag.

REP-58009
A cursor containing column {0} cannot be found.

Category:
Other

Cause:
The column does not belong to any of the enclosing cursors.

Action:
Verify that the column name is valid.

REP-58010
Data type {0} is not supported.

Category:
Data

Cause:
Invalid dataType attribute (NOT USED CURRENTLY) in rw:getValue.

Action:
Use any of the supported data types.

REP-58011
ID {0} in {1} tag is used in a previous {2} tag.

Category:
Other

Cause:
The value for the ID attribute is not unique.

Action:
Use a unique ID value.

REP-58012
Only one rw:report tag is allowed in a JSP report.

Category:
Other

Cause:
There is more than one rw:report tag in the JSP report.

Action:
Verify that there is only one rw:report tag in the JSP report.

REP-58013
Only one rw:objects tag is allowed in a JSP report.

Category:
Other

Cause:
More than one rw:objects tags exists in the JSP report.

Action:
Verify that there is only one rw:objects tag in the JSP report.

REP-58014
rw:objects must be the first JSP tag in rw:report body.

Category:
Other

Cause:
A JSP tag other than rw:object is the first Reports JSP tag in the body of the rw:report tag.

Action:
Verify that there is only one rw:objects tag in the body of the rw:report tag. The rw:objects tag must be the first Reports JSP tag inside the body of the rw:report tag.

REP-58015
breakLevel {0} in the rw:field tag does not match the ID of any enclosing rw:foreach.

Category:
Other

Cause:
The value of a breakLevel attribute from an rw:field tag does not match the ID of any enclosing rw:foreach tags.

Action:
Verify that the value for the breakLevel attribute is valid.

REP-58016
The formatMask {0} attribute is not valid.

Category:
Other

Cause:
The value of a formatMask attribute from an rw:field or an rw:getValue tag is invalid.

Action:
Verify that the value for the formatMask attribute is valid.

REP-58017
FormatTrigger {0} in rw:field tag is not a valid PL/SQL program unit.

Category:
Other

Cause:
The value of the formatTrigger attribute from an rw:field tag is not a program unit name, or it has an invalid signature.

Action:
Verify that the value for the formatTrigger attribute is valid.

REP-58018
Column name {0} in {1} of rw:graph is not valid.

Category:
Other

Cause:
A column name specified in one of the attributes of the rw:graph tag is not valid.

Action:
Verify that the column name is valid. Refer to the Reference>Oracle Reports JSP tags section of the Oracle Reports online Help for the correct syntax of the attributes.

REP-58019
Tag {0} (ID {1}) is not in rw:report body.

Category:
Other

Cause:
A Reports JSP tag is not in a rw:report tag's body.

Action:
Add the tag in a rw:report body.

REP-58100
An error occurred starting the internal Web server at port {0}. Error: {1}.

Category:
Ports

Cause:
Errors occurred while starting the internal Web server.

Action:
Verify that the port is not in use. Also check the .log files and log directory under (docroot)/port# for more information. Unless specified from the command line, the docroot should be located at under $REPORTS_TMP/docroot.

REP-58101
An error occurred stopping the internal Web server: {0}.

Category:
Other

Cause:
Errors were encountered while stopping the internal Web server.

Action:
Check the .log files and config directory under (docroot)/port# for more information. Unless specified on the command line, the docroot is located in the $REPORTS_TMP/docroot directory.

REP-58102
An error occurred sending request {0} to the internal Web server: {1}.

Category:
Requests/Responses

Cause:
Errors were encountered when sending the JSP to the internal Web server.

Action:
Check the .log files and the log directory under (docroot)/port# for more information. Unless specified on the command line, the docroot is located in the $REPORTS_TMP/docroot directory.

REP-58103
An error occurred configuring the internal Web server: {0}.

Category:
Other

Cause:
Errors were encountered when configuring the configuration files from the internal Web server.

Action:
Check the .log files and config directory under (docroot)/port# for more information. Unless specified on the command line, the docroot is located in the $REPORTS_TMP/docroot directory.

REP-58104
Port {0} is in use.

Category:
Ports

Cause:
The port specified from the command line is in use.

Action:
Specify a different port, or allow Reports to choose a free port.

REP-58105
A free port within the {0} to {1} range cannot be automatically found for the internal Web server.

Category:
Ports

Cause:
All ports within the range appear to be in use.

Action:
Specify a free port to use from the command line.

REP-58106
Begin port {0} must be less than end port {1}.

Category:
Ports

Cause:
The begin port is greater or equal to end port.

Action:
Specify a begin port less than end port from the command line.

REP-58107
Port numbers must be within range 1-65536.

Category:
Ports

Cause:
The port used is not within the specified range.

Action:
Specify a free port in the specified range from the command line.

REP-58108
HTML tags are not allowed: {0}.

Category:
Other

Cause:
HTML tags were specified in the query string.

Action:
Remove the HTML tags in the query string and rerun the report.

REP-58109
Web server cannot be created.

Category:
Other

Cause:
A problem was encountered while attempting to create the Web server.

Action:
Contact the system administrator.

REP-60003
An error occurred retrieving the environment required to spawn the engine.

Category:
Other

Cause:
Reports Server was unable to retrieve the current environment setting prevailing on the system.

Action:
Ensure that rwu90.dll is installed and available in the system path on Windows. On UNIX, ensure that librwu90.so is installed and available in the LD_LIBRARY_PATH environment variable.

REP-62000
Connection class {0} cannot be loaded.

Category:
Other

Cause:
The connection class mentioned in the configuration file jdbcpds.conf for the selected driver is invalid.

Action:
Ensure that a valid driver connection class is specified in the configuration file jdbcpds.conf and that it is available.

REP-62001
No entry is present for the driver {0} in the jdbcpds.conf file.

Category:
Configuration

Cause:
The driver used in query is not specified in the configuration file jdbcpds.conf.

Action:
Ensure that the entry for the required driver along with the related driver information is specified in the configuration file jdbcpds.conf.

REP-62002
The data source cannot be connected.

Category:
Data

Cause:
The connection information is invalid.

Action:
Ensure that the username, password, database, and driver type are all valid.

REP-62003
Configuration file jdbcpds.conf cannot be found.

Category:
Configuration

Cause:
The configuration file jdbcpds.conf is not found in the reports/conf directory.

Action:
Ensure that the configuration file jdbcpds.conf is available in the reports/conf directory.

REP-62004
A parsing error occurred in the configuration file jdbcpds.conf. Number of errors: {0}

Category:
Configuration

Cause:
The XML section in the configuration file jdbcpds.conf does not conform with its inline DTD.

Action:
Ensure that the XML section in jdbcpds.conf refers to the correct inline DTD.

REP-62005
An error occurred on line number {0}.

Category:
Other

Cause:
An error was found on the specified line of the configuration file jdbcpds.conf.

Action:
Correct the error on the specified line.

REP-62006
The lexical parameter {0} used in the query is invalid.

Category:
Other

Cause:
The lexical parameter used in the query or procedure is invalid.

Action:
Ensure that the query or procedure uses valid lexical parameters. Create new parameters if they are not available.

REP-62007
A SQL error occurred: {0}.

Category:
Other

Cause:
The data source has reported this SQL syntax error in the specified query or procedure.

Action:
Ensure that the syntax of the query or procedure is valid. Refer to the documentation of the specific data source.

REP-62008
The query or procedure for the specified data source is invalid.

Category:
Data

Cause:
The syntax of the query or procedure is invalid for the specified data source.

Action:
Ensure that the syntax of the query or procedure is valid. Refer to the documentation of the specific data source.

REP-62009
The reference parameter value is invalid.

Category:
Other

Cause:
The value of the reference parameter is invalid.

Action:
Verify that the reference column types and values are correct.

REP-62010
A query or procedure is missing.

Category:
Other

Cause:
The query or procedure text field is empty.

Action:
Type a valid query or procedure in the text area.

REP-62011
The database URL {0} is invalid.

Category:
Other

Cause:
Invalid database URL.

Action:
Verify the specified database name and the selected driver type.

REP-62012
Either the number of columns or the types of columns does not match the query definition.

Category:
Other

Cause:
The data fetched does not match the number of columns or the column types that are specified in the query definition.

Action:
Verify that both the number of columns and the column types match the query definition.

REP-62013
The column type {0} used in the query/procedure is not supported by the Reports JDBC query.

Category:
Other

Cause:
This column type is not supported by the Reports JDBC query interface.

Action:
Ensure that only column types that are supported by the Reports JDBC query interface are used. Refer to the JDBC specification and the Reports documentation for supported types.

REP-62014
The inline DTD section of the configuration file jdbcpds.conf has been modified.

Category:
Configuration

Cause:
The format of the inline DTD section in the configuration file jdbcpds.conf has been altered.

Action:
If the DTD format is modified, ensure that the configuration file is valid as per the JDBCPDS requirement.

REP-62015
The sign-on parameter {0} is invalid.

Category:
Other

Cause:
The specified sign-on parameter for the query or procedure is invalid.

Action:
Ensure that the sign-on parameter is available and valid for the JDBC query type in the report.

REP-62016
The sign-on parameter value {0} is invalid.

Category:
Other

Cause:
The specified connect string for this sign-on parameter is invalid.

Action:
Ensure that the specified connect string for this sign-on parameter is valid for the selected driver.

REP-62017
A reference parameter of type Date is not supported by the JDBC driver used.

Category:
Other

Cause:
The driver used to connect to database does not support the Date data type as reference parameter.

Action:
Use the String data type for the reference parameter or use a different JDBC driver that supports the Date data type as reference parameter.

REP-62200
No image exists for the specified ID {0}

Category:
Other

Cause:
The image ID specified does not map to an existing image object in the store.

Action:
For assistance, contact Oracle Support Services.

REP-62201
The image source is invalid

Category:
Other

Cause:
The image source is not valid.

Action:
For assistance, contact Oracle Support Services.

REP-62202
Unsupported image format

Category:
Other

Cause:
The format of the image used is not supported.

Action:
Ensure that the report uses a supported image format as specified in the Oracle Reports documentation.

REP-62203
Internal error reading the image {0}

Category:
Other

Cause:
The image data appears to be corrupt or invalid.

Action:
Ensure that the image is valid. For assistance, contact Oracle Support Services.

REP-62204
Internal error writing the image {0}

Category:
Other

Cause:
There was an internal error writing the image to the output stream.

Action:
For assistance, contact Oracle Support Services.

REP-62205
Internal error during color reduction

Category:
Other

Cause:
An error occurred doing color reduction on GIF images.

Action:
Use a diffent GIF image with lesser colors or chose another image format.

REP-62206
The input image used is corrupt or invalid

Category:
Other

Cause:
The image data appears to be corrupt or invalid.

Action:
Ensure that the image is valid.

REP-62207
Encountered an unsupported version of GIF image

Category:
Other

Cause:
This GIF version is not supported.

Action:
Ensure that the GIF images used adhere to the standards specified in the Oracle Reports documentation.

REP-62350
URL {0} is invalid.

Category:
Other

Cause:
The location pointed to by the URL appears to be invalid.

Action:
Ensure that the location pointed to by the URL is valid.

REP-62351
The proxy setting specified in proxyinfo.xml will be not be effective.

Category:
Other

Cause:
The proxy setting was ignored due to an invalid configuration in the proxyinfo.xml file.

Action:
Ensure that the proxy setting in proxyinfo.xml is correct.

REP-62352
The FTP proxy server specified is not responding : {0}.

Category:
Other

Cause:
The proxy specified in the proxyinfo.xml file does not support SOCKS protocol.

Action:
Ensure that the proxy supports SOCKS protocol.

REP-62353
The destination file name is missing.

Category:
Other

Cause:
Destination file name missing in the desname argument.

Action:
Specify a valid destination file name.

REP-62354
The directory specified is invalid.

Category:
Other

Cause:
Invalid directory is specified in the desname argument.

Action:
Specify a valid directory path.

REP-62370
URL {0} is invalid.

Category:
Other

Cause:
The location pointed to by the URL appears to be invalid.

Action:
Ensure that the location pointed by the URL is valid.

REP-62371
The proxy setting specified in proxyinfo.xml is not be effective.

Category:
Other

Cause:
The proxy setting was ignored due to an invalid configuration in the proxyinfo.xml file.

Action:
Ensure that the proxy setting in proxyinfo.xml is correct.

REP-63000
No URL specified for {0}

Category:
Other

Cause:
There was no URL specified for either the data definition or the data source.

Action:
Specify a URL for both the data definition and the data source.

REP-63001
Invalid stream in the Data Definition URL {0}

Category:
Data

Cause:
The Data Stream pointed to by the URL appears to be invalid.

Action:
Ensure that the XML Stream pointed to by the URL is valid.

REP-63002
URL specified has an invalid XML stream: {0}

Category:
Other

Cause:
The URL appears to have invalid XML stream.

Action:
Ensure that the XML stream pointed to by the URL contains valid XML.

REP-63003
URL {0} read error

Category:
Other

Cause:
Could not access the specified URL. A timeout occurred while accessing the URL.

Action:
Ensure that the URL is accessible and check that the proxy information in the xmlpds.conf file is correct.

REP-63004
Generic error while parsing the URL stream {0}

Category:
Other

Cause:
The data stream pointed to by the URL appears to be invalid.

Action:
Ensure that the XML stream pointed to by the URL is valid.

REP-63005
The Inline DTD section of xmlpds.conf file has been modified

Category:
Configuration

Cause:
The Inline DTD section of the configuration file xmlpds.conf has been modified.

Action:
Ensure that the configuration file is still valid, per the XMLPDS requirement.

REP-63006
Invalid reference parameter value

Category:
Other

Cause:
The value of the reference parameter is invalid.

Action:
Verify that the types and values of the referenced columns are correct.

REP-63007
Configuration file xmlpds.conf not found

Category:
Configuration

Cause:
The configuration file xmlpds.conf was not found in the reports/conf directory.

Action:
Ensure that the configuration file xmlpds.conf is located in the reports/conf directory.

REP-63008
Parsing error in the xmlpds.conf configuration file Number of errors: {0}

Category:
Configuration

Cause:
The XML section in the xmlpds.conf file does not conform with the corresponding inline DTD.

Action:
Ensure the XML section in the xmlpds.conf file conforms with the corresponding inline DTD.

REP-63009
The proxy setting specified in xmlpds.conf will be not be effective

Category:
Configuration

Cause:
The proxy setting was ignored due to an invalid configuration in the xmlpds.conf file.

Action:
Ensure that the proxy setting in the configuration file xmlpds.conf is correctly specified.

REP-63500
No URL is specified for data source {0}/

Category:
Data

Cause:
There was no URL specified for the data source.

Action:
Specify a URL for the data source.

REP-63501
The specified URL {0} is not compatible with the file format {1} at line number {2}.

Category:
Other

Cause:
The URL appears to have invalid content.

Action:
Ensure that the content pointed to by the URL is a valid file format.

REP-63502
The data is invalid.

Category:
Data

Cause:
Content is not compatible with the file format selected.

Action:
Ensure that the text is valid for the file format selected.

REP-63503
Either the number of columns or the type of columns does not match the query definition.

Category:
Other

Cause:
The data fetched does not match the number of columns or the column types that are specified in the query definition.

Action:
Verify that both the number of columns and the column types match the query definition.

REP-63504
A read error occurred in accessing URL {0}.

Category:
Other

Cause:
Could not access the specified URL. A timeout occurred while accessing the URL.

Action:
Ensure that the URL is accessible and check that the proxy information in the textpds.conf file is correct.

REP-63505
The Inline DTD section of textpds.conf has been modified.

Category:
Configuration

Cause:
The Inline DTD section of the configuration file textpds.conf has been modified.

Action:
Ensure that the configuration file is still valid, per the TextPDS requirement.

REP-63506
The reference parameter is invalid.

Category:
Other

Cause:
The reference parameter is invalid.

Action:
Verify that the name, types, and values of the referenced columns are correct.

REP-63507
The configuration file textpds.conf cannot be found.

Category:
Configuration

Cause:
The configuration file textpds.conf was not found in the reports/conf directory.

Action:
Ensure that the configuration file textpds.conf is located in the reports/conf directory.

REP-63508
A parsing error occurred in textpds.conf. Number of errors: {0}.

Category:
Other

Cause:
The XML section in the textpds.conf file does not conform with the corresponding inline DTD.

Action:
Ensure the XML section in the textpds.conf file conforms with the corresponding inline DTD.

REP-63509
The proxy setting specified in textpds.conf is invalid.

Category:
Configuration

Cause:
The proxy setting was ignored due to an invalid configuration in the textpds.conf file.

Action:
Ensure that the proxy setting in the configuration file textpds.conf is correctly specified.

REP-63510
No fileFormat is specified in textpds.conf.

Category:
Other

Cause:
The entry for fileFormat in textpds.conf is missing.

Action:
Ensure that at least one fileFormat element is specified in the textpds.conf.

REP-63511
The fileFormat specification is invalid.

Category:
Other

Cause:
The entry for fileFormat in textpds.conf is invalid.

Action:
Ensure that fileFormat is specified per the DTD of textpds.conf.

REP-63512
No entry is present for fileFormat {0} in textpds.conf.

Category:
Other

Cause:
The fileFormat used in the query is not defined in textpds.conf.

Action:
Ensure that the entry for the required fileFormat along with the column information is specified in textpds.conf.

REP-63513
The Serialized XML section of the saved report is invalid.

Category:
Other

Cause:
The Serialized XML section has been modified.

Action:
Ensure that Serialized XML section is specified per the TextPDS format.

REP-63514
The column type {0} used in the query is not supported by a Text query.

Category:
Other

Cause:
This column type is not supported by the Text query interface.

Action:
Ensure that only column types that are supported by the Text query interface are used. Refer to the TextPDS specification and the Oracle Reports documentation for supported types.

REP-63515
The data in log file {0} is not according to the date pattern {1} specified in the config file.

Category:
Data

Cause:
The data in the log file is not valid according to the date pattern specified in the config file.

Action:
Ensure that data in the log file is specified according to the date pattern.

REP-64000
No Oracle Home is specified.

Category:
Other

Cause:
ORACLE_HOME is missing in the command line.

Action:
Specify ORACLE_HOME=<oracle_home_dir> in the command line.

REP-64001
The Oracle Reports Bridge failed to start.

Category:
Other

Cause:
The Oracle Reports Bridge failed to start.

Action:
Check log file for detailed message and take appropriate action.

REP-64002
The Oracle Reports Bridge initialization failed {0}.

Category:
Other

Cause:
The Oracle Reports Bridge initialization failed.

Action:
Check the actual message and take appropriate action.

REP-64003
The local port is not set. One-way Oracle Reports Bridge is started.

Category:
Ports

Cause:
One-way Oracle Reports Bridge is started.

Action:
No action needed. Set local port to start two-way bridge if needed.

REP-64004
AUTHID is not specified.

Category:
Security

Cause:
AUTHID argument is not specified in command line.

Action:
Specify AUTHID=<username>/<password> in the command line.

REP-64005
Authentication failed.

Category:
Security

Cause:
The AUTHID specified was invalid.

Action:
Specify a correct AUTHID.

REP-64006
The Oracle Reports Bridge shutdown failed.

Category:
Other

Cause:
An attempt to shut down The Oracle Reports Bridge failed.

Action:
Check the trace for detailed message and take appropriate action.

REP-64009
The Oracle Reports Bridge is already running.

Category:
Other

Cause:
Another Oracle Reports Bridge is already running with the same port.

Action:
Change the port in the config file and start again.

REP-64010
The local listener failed to start.

Category:
Other

Cause:
The open socket could not be opened.

Action:
Check socket is available and usable.

REP-64011
Request {0} cannot be served.

Category:
Requests/Responses

Cause:
Unable to serve the Oracle Reports Bridge request.

Action:
Check the actual message and take appropriate action.

REP-64012
A fatal error {0} occurred. Restart the Oracle Reports Bridge.

Category:
Other

Cause:
The Oracle Reports Bridge is not able to serve any request.

Action:
Restart the Oracle Reports Bridge.

REP-64013
The Oracle Reports Bridge failed to serve the request {0}.

Category:
Requests/Responses

Cause:
An internal error occurred.

Action:
Check the actual message; the Oracle Reports Bridge may recover from this error.

REP-64014
The Oracle Reports Bridge name is not specified.

Category:
Other

Cause:
The NAME=<bridgename> argument is missing in the command line.

Action:
Specify NAME=<bridgename> in the command line.

REP-64015
The command is invalid.

Category:
Other

Cause:
Invalid command-line argument.

Action:
Check command-line arguments.

REP-64016
Cannot connect to the Oracle Reports Bridge {0}.

Category:
Other

Cause:
The Oracle Reports Bridge is not running on specified port.

Action:
The Oracle Reports Bridge may be down. Or check the Bridge port in Bridge config file and try again.

REP-64017
The Oracle Reports Bridge config file is not found.

Category:
Other

Cause:
Configuration file rwbridge.conf is not found.

Action:
Contact the Oracle Reports administrator.

REP-64018
The Oracle Reports Bridge is not started using PCS.

Category:
Other

Cause:
The Oracle Reports Bridge is not started using PCS in the MAS environment.

Action:
Start the Oracle Reports Bridge using PCS.

REP-65001
Communication error {0} occurred.

Category:
Other

Cause:
A network IO error occurred.

Action:
Check the actual message and take appropriate action.

REP-65002
The communication channel {0} cannot be initialized.

Category:
Other

Cause:
Multicast initialization failed.

Action:
Check the actual message and take appropriate action.

REP-65003
The request timed out.

Category:
Requests/Responses

Cause:
Waiting for a response from the server timed out.

Action:
No action required. If all retries fail, increase the timeout value in the network config file.

REP-65004
The naming server cannot be bound.

Category:
Other

Cause:
Naming service may be down.

Action:
Start the naming service and try again.

REP-65005
The network config file cannot be found.

Category:
Network

Cause:
rwnetwork.conf is not found.

Action:
Contact the Oracle Reports administrator.

REP-67000
Creation of Reports Server instance {0} on machine {1} failed

Category:
Other

Cause:
Attempt to create reports server instance failed

Action:
Check the actual error message and take appropriate action

REP-67001
Removal of Reports Server instance {0} failed

Category:
Other

Cause:
Attempt to remove reports server instance failed

Action:
Check the actual error message and take appropriate action

REP-67002
Unable to register reports server configuration mbeans

Category:
Other

Cause:
Reports server configuration mbeans registration failed

Action:
For assistance, contact Oracle Support Services

REP-67004
Validation of component failed: {0}

Category:
Other

Cause:
Component is not successfully validated for attempted operation

Action:
Check the actual error message and take appropriate action

REP-67100
Unable to calculate checksum of file {0}

Category:
Other

Cause:
Checksum calculation of file failed

Action:
For assistance, contact Oracle Support Services

REP-67101
Error in replicating reports server configuration

Category:
Other

Cause:
Replication of configuration from AdminServer machine to managed server failed

Action:
For assistance, contact Oracle Support Services

REP-67200
Creation of Reports Tools instance {0} on machine {1} failed

Category:
Other

Cause:
Attempt to create reports tools instance failed

Action:
Check the actual error message and take appropriate action

REP-67201
Removal of Reports Tools instance {0} failed

Category:
Other

Cause:
Attempt to remove reports tools instance failed

Action:
Check the actual error message and take appropriate action

REP-67202
Unable to register reports tools configuration mbeans

Category:
Other

Cause:
Reports tools configuration mbeans registration failed

Action:
For assistance, contact Oracle Support Services

REP-67204
Validation of component failed: {0}

Category:
Other

Cause:
Component is not successfully validated for attempted operation

Action:
Check the actual error message and take appropriate action

REP-67300
Unable to calculate checksum of file {0}

Category:
Other

Cause:
Checksum calculation of file failed

Action:
For assistance, contact Oracle Support Services

REP-67301
Error in replicating reports tools configuration

Category:
Other

Cause:
Replication of configuration from AdminServer machine to managed server failed

Action:
For assistance, contact Oracle Support Services

REP-67400
Creation of Reports Bridge instance {0} on machine {1} failed

Category:
Other

Cause:
Attempt to create reports bridge instance failed

Action:
Check the actual error message and take appropriate action

REP-67401
Removal of Reports Bridge instance {0} failed

Category:
Other

Cause:
Attempt to remove reports bridge instance failed

Action:
Check the actual error message and take appropriate action

REP-67402
Unable to register reports bridge configuration mbeans

Category:
Other

Cause:
Reports bridge configuration mbeans registration failed

Action:
For assistance, contact Oracle Support Services

REP-67404
Validation of component failed: {0}

Category:
Other

Cause:
Component is not successfully validated for attempted operation

Action:
Check the actual error message and take appropriate action

REP-67500
Unable to calculate checksum of file {0}

Category:
Other

Cause:
Checksum calculation of file failed

Action:
For assistance, contact Oracle Support Services

REP-67501
Error in replicating reports bridge configuration

Category:
Other

Cause:
Replication of configuration from AdminServer machine to managed server failed

Action:
For assistance, contact Oracle Support Services

REP-67550
Component {0} already exists in domain

Category:
Other

Cause:
Component with given name already exists in domain

Action:
Provide a unique component name

REP-67551
Component {0} cannot be removed because it is in state {1}

Category:
Other

Cause:
Component is not in following states : SHUTDOWN, FAILED_NOT_RESTARTABLE, FAILED

Action:
Shutdown the component

REP-67552
Component is not configured to OID

Category:
Other

Cause:
Component is not associated to OID

Action:
Associate component to OID

REP-67600
Connect to a WebLogic server before using this command

Category:
Other

Cause:
Not connected to Weblogic server

Action:
Connect to Weblogic server using appropriate WLST command

REP-67601
createReportsServerInstance command failed

Category:
Other

Cause:
Attempt to create reports server instance failed

Action:
Check the actual error message and take appropriate action

REP-67602
deleteReportsServerInstance command failed

Category:
Other

Cause:
Attempt to remove reports server instance failed

Action:
Check the actual error message and take appropriate action

REP-67603
Argument {0} is not valid

Category:
Other

Cause:
Invalid argument provided to WLST command

Action:
Provide correct argument to WLST command

REP-67604
The following required arguments are missing :{0}

Category:
Other

Cause:
Required argument not provided to WLST command

Action:
Provide required argument to WLST command

REP-67608
associateStandaloneServer command failed

Category:
Other

Cause:
Association of reports server to OID failed

Action:
Check the actual error message and take appropriate action

REP-67610
dissociateStandaloneServer command failed

Category:
Other

Cause:
Dissociation of reports server from OID failed

Action:
Check the actual error message and take appropriate action

REP-67612
associateInprocessServer command failed

Category:
Other

Cause:
Association of reports server to OID failed

Action:
Check the actual error message and take appropriate action

REP-67614
dissociateInprocessServer command failed

Category:
Other

Cause:
Dissociation of reports server from OID failed

Action:
Check the actual error message and take appropriate action

REP-67700
Connect to a WebLogic server before using this command

Category:
Other

Cause:
Not connected to Weblogic server

Action:
Connect to Weblogic server using appropriate WLST command

REP-67701
createReportsToolsInstance() failed

Category:
Other

Cause:
Attempt to create reports tools instance failed

Action:
Check the actual error message and take appropriate action

REP-67702
deleteReportsToolsInstance() failed

Category:
Other

Cause:
Attempt to remove reports tools instance failed

Action:
Check the actual error message and take appropriate action

REP-67703
Argument {0} is not valid

Category:
Other

Cause:
Invalid argument provided to WLST command

Action:
Provide correct argument to WLST command

REP-67704
The following required arguments are missing :{0}

Category:
Other

Cause:
Required argument not provided to WLST command

Action:
Provide required argument to WLST command

REP-67800
Connect to a WebLogic server before using this command

Category:
Other

Cause:
Not connected to Weblogic server

Action:
Connect to Weblogic server using appropriate WLST command

REP-67801
createReportsBridgeInstance() failed

Category:
Other

Cause:
Attempt to create reports bridge instance failed

Action:
Check the actual error message and take appropriate action

REP-67802
deleteReportsBridgeInstance() failed

Category:
Other

Cause:
Attempt to remove reports bridge instance failed

Action:
Check the actual error message and take appropriate action

REP-67803
Argument {0} is not valid

Category:
Other

Cause:
Invalid argument provided to WLST command

Action:
Provide correct argument to WLST command

REP-67804
The following required arguments are missing :{0}

Category:
Other

Cause:
Required argument not provided to WLST command

Action:
Provide required argument to WLST command

REP-67900
Reports 12c Application not found deployed for managed server {0}

Category:
Other

Cause:
Reports 12c Application not found deployed for managed server

Action:
Start reports managed servers once so that reports 12c applications get automatically deployed. Then shutdown managed servers.

REP-67901
Component of type {0} and name {1} does not exist in 12c domain

Category:
Other

Cause:
Reports system component not found in 12c domain

Action:
Use WLST command to create reports component in 12c domain

REP-67902
Config file not found : {0}

Category:
Other

Cause:

Action:
Reports installation is corrupted

REP-67903
Topology document parsing error

Category:
Other

Cause:

Action:
Reports 11g domain is corrupted

REP-67904
Topology document not found : {0}

Category:
Other

Cause:
Reports 11g domain is corrupted or is already upgraded

Action:
Contact the system administrator

REP-80001
An internal error occurred.

Category:
Other

Cause:
Unexpected internal exception.

Action:
For assistance, contact Oracle Support Services.

REP-80002
The report object is invalid.

Category:
Other

Cause:
The report object is invalid, possibly invalid object handle, or an already deleted object.

Action:
Discard this object handle and get a new one.

REP-80003
The report object name is invalid.

Category:
Other

Cause:
The name does not follow report object naming rules; for example, it may contain an invalid character.

Action:
Follow the report object naming rules to create a valid name.

REP-80004
A dialog window not allowed at this time.

Category:
Other

Cause:
The Plugin tried to display a dialog window when it is not allowed; for example, when Reports is running in batch mode.

Action:
Plugin must not raise a dialog window when it is not allowed.

REP-80005
The dialog window location is invalid.

Category:
Other

Cause:
The requested dialog window location is invalid.

Action:
Set a valid dialog window location.

REP-80006
The dialog window size is invalid.

Category:
Other

Cause:
The requested dialog window size is invalid.

Action:
Set a valid dialog window size.

REP-80007
The help system cannot be displayed.

Category:
Other

Cause:
Failure to display online help.

Action:
Check the online help system setup.

REP-80008
The helpset ID is invalid.

Category:
Other

Cause:
Invalid helpset ID.

Action:
Correct the helpset ID.

REP-80009
The help topic is invalid.

Category:
Other

Cause:
The help topic is invalid.

Action:
Correct the help topic.

REP-80010
The trace file cannot be written to.

Category:
Other

Cause:
Fail to write to trace file.

Action:
Check the trace file setup, file write permission, and whether the disk is full.

REP-80011
Sign-on parameter {0} for {1} cannot be set.

Category:
Other

Cause:
The column is not a valid sign-on parameter of this plugin type.

Action:
Use the Property Palette to set this column as a sign-on parameter of this plugin type.

REP-80012
The link between two columns of mismatched datatypes is invalid.

Category:
Other

Cause:
The column link is formed between two columns of different data types.

Action:
Ensure the link is formed between the columns whose datatypes are compatible.

29

SDP-26500 to SDP-26236

SDP-26500
An exception was caught.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-26501
Failed to deliver a message to the gateway at {0}. No Status could be generated for the failed message.

Category:
Process

Cause:
A message failed to be delivered to the gateway.

Action:
Check the connectivity to the gateway

SDP-26502
Unable to connect to the Feedback service at {0}. Will retry to connect.

Category:
Process

Cause:
Unable to poll the Feedback service, due to a network problem.

Action:
Check the connectivity to the Feedback service.

SDP-26503
Unable to poll the Feedback service at {0}.

Category:
Process

Cause:
Unable to poll the Feedback service, probably due to a network problem.

Action:
Check the connectivity to the Feedback service.

SDP-25001
An exception was caught.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-25002
Unable to create JNDI Context.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details. Check the JNDI Context initialization parameters.

SDP-25003
Unable to create an instance of Driver Locator.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-25004
Message could not be delivered to client due to rollback at the client application. Message ID {0}.

Category:
Process

Cause:
The client did rollback on the transaction, hence the message could not be re-delivered to the client.

Action:
Check why the client did rollback

SDP-25005
Failed to create Sending Core instance.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-25006
Failed to remove an EJB instance.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-25007
An error occurred while processing an outbound message.

Category:
Process

Cause:
The outbound JMS message does not contain a valid message or request information.

Action:
Check the stack trace for more details.

SDP-25008
An error occurred while processing an outbound message.

Category:
Process

Cause:
An exception has occurred while processing the outbound message.

Action:
Check the stack trace for more details.

SDP-25009
An error occurred while storing a message.

Category:
Process

Cause:
An exception has occurred while processing the message.

Action:
Check the stack trace for more details.

SDP-25010
An error occurred while sending an outbound message.

Category:
Process

Cause:
An exception has occurred while processing the outbound message.

Action:
Check the stack trace for more details.

SDP-25011
An error occurred while transforming an outbound message.

Category:
Process

Cause:
An exception has occurred while processing the outbound message.

Action:
Check the stack trace for more details.

SDP-25012
An error occurred while processing error statuses.

Category:
Process

Cause:
An exception has occurred while processing error statuses.

Action:
Check the stack trace for more details.

SDP-25013
An error occurred while resending an outbound message.

Category:
Process

Cause:
An exception has occurred while processing the resent outbound message.

Action:
Check the stack trace for more details.

SDP-25014
A JMS exception occurred, trying to recover

Category:
Process

Cause:
A JMS exception occurred

Action:
Check the stack trace for more details.

SDP-25015
There are no transformed messages of message {0} for recipients {1}. Skipping message delivery to these recipients.

Category:
Process

Cause:
An error has occurred while transforming an outbound message.

Action:
Use the messageId to trace the message handling.

SDP-25016
Could not get TimerService or Timers.

Category:
Process

Cause:
Could not get TimerService or Timers.

Action:
Check application server status.

SDP-25017
Could not cancel timer.

Category:
Process

Cause:
Could not cancel timer

Action:
Check the stack trace for more details.

SDP-25020
Unable to schedule a timed failover event.

Category:
Process

Cause:
An exception has occurred while scheduling a timed failover event.

Action:
Check the stack trace for more details.

SDP-25021
An error occurred while processing a timed failover event.

Category:
Process

Cause:
An exception has occurred while processing a timed failover event.

Action:
Check the stack trace for more details.

SDP-25022
Unable to schedule a timed resend event.

Category:
Process

Cause:
An exception has occurred while scheduling a timed resend event.

Action:
Check the stack trace for more details.

SDP-25030
Unable to schedule a timer to refresh the driver locator cache.

Category:
Process

Cause:
An exception has occurred while scheduling a timer to refresh the driver cache.

Action:
Check the stack trace for more details.

SDP-25032
An error occurred while registering driver information {0}.

Category:
Process

Cause:
An exception has occurred while registering the driver information.

Action:
Check the stack trace for more details.

SDP-25033
An error occurred while unregistering driver information {0}.

Category:
Process

Cause:
An exception has occurred while unregistering the driver information.

Action:
Check the stack trace for more details.

SDP-25034
There are total {0} registered User Messaging Drivers. Driver(s): {1}.

Category:
Process

Cause:
A Messaging Driver registered with the Messaging Server

Action:
None

SDP-25035
Messaging store not found.

Category:
Process

Cause:
An exception has occurred while attempting to find the messaging store.

Action:
Check the stack trace for more details.

SDP-25036
An error occurred while registering driver information at User preference subsystem {0}.

Category:
Process

Cause:
An exception has occurred while registering the driver information at User preference subsystem.

Action:
Check the stack trace for more details.

SDP-25037
An error occurred while unregistering driver information at User preference subsystem {0}.

Category:
Process

Cause:
An exception has occurred while unregistering the driver information at User preference subsystem.

Action:
Check the stack trace for more details.

SDP-25040
Unable to create an instance of CommandReceiverBean.

Category:
Process

Cause:
An exception has occurred while attempting to process a command.

Action:
Check the stack trace for more details.

SDP-25042
An error occurred while processing a command message.

Category:
Process

Cause:
An exception has occurred while attempting to process a command.

Action:
Check the stack trace for more details.

SDP-25043
An unknown command message was received, ignoring: {0}.

Category:
Process

Cause:
The engine received an unknown command message and was unable to process the command.

Action:
Check the current log file for additional details, if the system is not functional. Otherwise, ignore this warning.

SDP-25055
Failed to create Receiving Core instance.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-25057
An error occurred while processing an inbound JMS message.

Category:
Process

Cause:
The inbound JMS message does not contain a valid message.

Action:
Check the stack trace for more details.

SDP-25058
An error occurred while processing an inbound message.

Category:
Process

Cause:
An exception has occurred while processing the inbound message.

Action:
Check the stack trace for more details.

SDP-25059
An unknown JMS message is received, ignoring: {0}.

Category:
Process

Cause:
The engine received an unknown JMS message and was unable to process it.

Action:
Check the current log file for additional details, if the system is not functional. Otherwise, ignore this warning.

SDP-25060
There is no application that has registered this address as an access point. The message will be delivered when the access point is registered. Address={0}

Category:
Process

Cause:
There is no application that has registered this recipient address as an access point.

Action:
Register the access point. The message is kept in a pending queue until an application registers a corresponding access point.

SDP-25061
An error occurred while processing inbound message statuses.

Category:
Process

Cause:
An exception has occurred while attempting to process inbound message statuses.

Action:
Check the stack trace for more details.

SDP-25063
Status not delivered to client since no client information found for application {0}.

Category:
Process

Cause:
There is no application client information stored.

Action:
Check the log file for additional information.

SDP-25064
An error occurred while recording a status processing update.

Category:
Process

Cause:
An exception has occurred while attempting to record a status processing update.

Action:
Check the stack trace for more details.

SDP-25065
An error occurred while sending a message to failover address {0}.

Category:
Process

Cause:
An exception has occurred while sending out a failover message.

Action:
Check the stack trace for more details.

SDP-25066
An error occurred while processing an outbound message status.

Category:
Process

Cause:
An exception has occurred while attempting to process an outbound message status.

Action:
Check the stack trace for more details.

SDP-25070
Unable to retrieve messaging engine sending and/or receiving queues from configuration.

Category:
Process

Cause:
A severe configuration error has occurred and the system is not functional.

Action:
Check the messaging engine configuration and the stack trace, if available, for more details.

SDP-25081
An error occurred while adding a message converter rule: {0}.

Category:
Process

Cause:
An invalid message converter rule was provided.

Action:
Check the log file for additional details.

SDP-25082
No predicates and/or devices matched. Ignoring converter rule (MIME type: {0}, delivery type: {1}, predicate: {2}).

Category:
Process

Cause:
An invalid message converter rule was provided.

Action:
Check the log file for additional details.

SDP-25083
Message content is not an instance of MimeMultipart.

Category:
Process

Cause:
An invalid message content was provided to this converter.

Action:
Check the current log file for additional details. Check User Messaging Service Javadoc on OTN for more information on sending MimeMultipart messages.

SDP-25085
Message {0} has a nonunique Message ID or recipient, and does not look like a redelivery attempt.

Category:
Process

Cause:
A message was sent or received that appears to be a duplicate of an already processed message; re-enqueuing message with delay specified.

Action:
Ensure that messages are assigned unique Message IDs.

SDP-25087
No matching driver found for {0} = {1}.

Category:
Process

Cause:
No matching driver found for the given property.

Action:
Check that there is a correctly deployed and configured driver matching the given property.

SDP-25088
Unable to refresh the driver locator cache, due to exception.

Category:
Process

Cause:
An error has occurred while refreshing the driver locator cache.

Action:
Check the reported error message and correct any configuration problems.

SDP-25089
Status could not be delivered to client due to rollback at the client application. Message ID {0} {1}.

Category:
Process

Cause:
The client did rollback on the transaction, hence the status could not be re-delivered to the client.

Action:
Check why the client did rollback

SDP-25101
Caught a database exception.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-25106
Conflicting recipient IDs for Message {0}.

Category:
Process

Cause:
A conflict between recipient identifiers has been detected.

Action:
Ensure that applications are using unique Message IDs.

SDP-25107
Message ID {0} in Status object does not match previously recorded Message ID {1}.

Category:
Process

Cause:
A status object returned from a driver contained a different Message ID than expected.

Action:
Ensure that drivers are mapping Gateway IDs to Message IDs correctly.

SDP-25109
Failed to initialize persistence context.

Category:
Process

Cause:
An exception has occurred while initializing the persistence context.

Action:
Check the stack trace for more details.

SDP-25202
Parameter {0} is missing in SOAPMessageContext sent from client. Generating default value.

Category:
Process

Cause:
The client application sent a message without required attribute.

Action:
Make sure the client application add ApplicationName, ApplicationInstanceName, and ClientType to the SOAPMessageContext.

SDP-25250
An exception was caught.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-25251
Messaging Exception while processing Parlay X request.

Category:
Process

Cause:
A Messaging Exception has occurred.

Action:
Check the stack trace for more details.

SDP-25252
Exception while initializing Parlay X Messaging servlet.

Category:
Process

Cause:
An exception occurred while initializing the Parlay X Messaging servlet.

Action:
Check the stack trace for more details.

SDP-25253
Exception while initializing Parlay X Messaging content servlet.

Category:
Process

Cause:
An exception occurred while initializing the Parlay X Messaging content servlet.

Action:
Check the stack trace for more details.

SDP-25254
Exception while processing SOAP attachment content.

Category:
Process

Cause:
An exception occurred while processing message content in a SOAP attachment.

Action:
Check the stack trace for more details.

SDP-25255
Message contains multiple attachments. All but first attachment will be ignored.

Category:
Process

Cause:
The client application sent a message with multiple attachment parts.

Action:
Client applications should send one attachment part per message. Complex content should be sent as a MIME Multipart object.

SDP-25256
Parameter {0} is missing in SOAPMessageContext sent from client. Generating default value.

Category:
Process

Cause:
The client application sent a message without required attribute.

Action:
Make sure the client application add ApplicationName, ApplicationInstanceName, and ClientType to the SOAPMessageContext.

SDP-25257
Error initializing JAXP DatatypeFactory. Some data types may not be converted correctly.

Category:
Process

Cause:
Could not acquire instance of class javax.xml.datatype.DatatypeFactory. Marshalling/unmarshalling of some XML elements may not happen correctly.

Action:
Ensure that the server's JAXP framework is configured correctly.

SDP-25300
An exception was caught.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-25301
JNDI context is null.

Category:
Process

Cause:
JNDI context was null.

Action:
See the Javadoc on Oracle Technology Network (OTN) for more information about how to instantiate a JNDI context.

SDP-25302
EJB home for UserPrefsService is null.

Category:
Process

Cause:
EJB home for UserPrefsService is null.

Action:
See the Javadoc on Oracle Technology Network (OTN) for more information about how to specify an EJB home.

SDP-25303
Unable to connect to User Messaging Service (UMS) server at {0}.

Category:
Process

Cause:
EJB Naming Exception was caught when creating a UserPrefsServices object.

Action:
Check the stack trace for more details.

SDP-25304
EJB Remote Exception was caught at server {0}.

Category:
Process

Cause:
EJB Remote Exception was caught.

Action:
Check the stack trace for more details.

SDP-25305
EJB Create Exception was caught at server {0}.

Category:
Process

Cause:
EJB Create Exception was caught.

Action:
Check the stack trace for more details.

SDP-25306
XML Document object is null.

Category:
Process

Cause:
XML Document object is null.

Action:
Specify a valid XML document object.

SDP-25307
No file to upload. File name is not set.

Category:
Process

Cause:
The file name to be uploaded was not set.

Action:
Invoke setFileName() to set the file name.

SDP-25308
The file, {0}, cannot be read.

Category:
Process

Cause:
The file cannot be read.

Action:
Check the file.

SDP-25309
File not found: {0}.

Category:
Process

Cause:
The file with the given file name does not exist.

Action:
Check to see if the path and file name are correct. File name must be in /path/filename or file://path/filename format.

SDP-25311
The document cannot be uploaded. Parser and stack are out of sync. Tag name: {0} Local name: {1}.

Category:
Process

Cause:
The document cannot be uploaded because parser and stack were out of sync.

Action:
Fix mismatched tags.

SDP-25312
Provisioning Exception was caught.

Category:
Process

Cause:
Provisioning Exception was caught.

Action:
Check the stack trace for more details.

SDP-25314
Rule {0} is already defined.

Category:
Process

Cause:
Rule with the same name was already defined.

Action:
Choose a different rule name to avoid conflict.

SDP-25316
Input parameter, UserPrefsServices, is null.

Category:
Process

Cause:
The UserPrefsServices object was null.

Action:
Pass a valid UserPrefsServices object as a parameter. Check User Messaging Service Javadoc on OTN for more information.

SDP-25317
Required input parameter, UserID, is null.

Category:
Process

Cause:
Failed to invoke method, because required input parameter, UserID, is null.

Action:
Pass a valid UserID. Check User Messaging Service Javadoc on OTN for more information.

SDP-25318
Invalid input parameter. DeviceAddress object is null.

Category:
Process

Cause:
Input parameter, DeviceAddress object, is null.

Action:
Pass a valid DeviceAddress object. Check User Messaging Service Javadoc on OTN for more information.

SDP-25319
UserRuleSet is not set. Call initProcessor() first.

Category:
Process

Cause:
UserRuleSet object is null.

Action:
Call initProcessor() first to complete initialization.

SDP-25320
Rule Set is null.

Category:
Process

Cause:
The Rule Set was not available or could not be created.

Action:
Use a valid Rule Set.

SDP-25321
XML String representing the Rule Set is null.

Category:
Process

Cause:
The XML document element representing the Rule Set was null or empty.

Action:
Use a valid Rule Set XML element.

SDP-25322
User Rule Set is null.

Category:
Process

Cause:
The User Rule Set was not available or could not be created.

Action:
Use a valid User Rule Set object.

SDP-25323
User Rule Set is inconsistent. See exception for more details.

Category:
Process

Cause:
User Rule Set is inconsistent.

Action:
Check User Rule Set for consistency.

SDP-25324
XML document is invalid. See exception for details.

Category:
Process

Cause:
XML document is invalid. See stacktrace for more details.

Action:
Validate the XML document.

SDP-25325
Cannot serialize Rule Session.

Category:
Process

Cause:
Cannot serialize Rule Session, which is not critical.

Action:
No action needed.

SDP-25326
Filter XML is null.

Category:
Process

Cause:
The Preference Rules were missing or inconsistent.

Action:
Use a well-formed User Preference XML document.

SDP-25327
Cannot create Rule Session.

Category:
Process

Cause:
Cannot create Rule Session.

Action:
No action needed.

SDP-25328
UserPrefsException was caught.

Category:
Process

Cause:
UserPrefsException was caught.

Action:
Check the stack trace for more details.

SDP-25329
Rule {0} does not exist.

Category:
Process

Cause:
The expected rule was not found.

Action:
Check the rule by name on the User Preference page.

SDP-25330
Business Term Type has changed. Term = {0}.

Category:
Process

Cause:
Business Term Type has changed.

Action:
Recheck the Preference Rules.

SDP-25331
Cannot instantiate User Preferences Services.

Category:
Process

Cause:
Cannot instantiate User Preferences Services due to an initialization error.

Action:
Check User Prefs Services configuration.

SDP-25334
Device name is null.

Category:
Process

Cause:
Device name is null.

Action:
Provide a valid Device name.

SDP-25336
Input parameter, UserPrefsObject, is null.

Category:
Process

Cause:
Required parameter, UserPrefsObject, is null.

Action:
Provide a valid UserPrefsObject.

SDP-25337
Failed to move a rule: origin rule number is out of the range of existing rules.

Category:
Process

Cause:
Origin rule number is not valid.

Action:
Specify a valid rule number.

SDP-25341
The order of calling methods is wrong.

Category:
Process

Cause:
The order of calling methods is wrong.

Action:
Check the order of the methods being called.

SDP-25343
No devices are defined.

Category:
Process

Cause:
Tried to call delivery preferences without defining devices.

Action:
Define devices for use with delivery preferences.

SDP-25344
Invalid action {0} is found and ignored.

Category:
Process

Cause:
An invalid action was detected.

Action:
Use one of the valid actions: BROADCAST, FAIL_OVER, and DO_NOT_SEND.

SDP-25345
Runtime exception was caught.

Category:
Process

Cause:
Runtime exception was caught.

Action:
Check the stack trace for more details.

SDP-25346
No configured Business Terms are available, only system terms will be used.

Category:
Process

Cause:
Business Term configuration could not be read.

Action:
Ensure that business term configuration is correct

SDP-25347
Device {0} cannot be added because it is present in the list.

Category:
Process

Cause:
A device was present in the list already.

Action:
Ensure that the device to be added is not in the device list.

SDP-25348
Failed to move a device: device ID index number is out of the range of device list.

Category:
Process

Cause:
Device ID index number is not valid.

Action:
Specify a valid device ID index number.

SDP-25349
Name of rule is not set.

Category:
Process

Cause:
Rule name was not set.

Action:
Set the name of the rule.

SDP-25350
FilterOperation of a rule is not set.

Category:
Process

Cause:
FilterOperation of a rule was not set.

Action:
Set the FilterOperation of the rule.

SDP-25351
ActionOperation of a rule is not set.

Category:
Process

Cause:
ActionOperation of a rule was not set.

Action:
Set the ActionOperation of the rule.

SDP-25352
Condition of a rule is not set.

Category:
Process

Cause:
Condition of a rule was not set.

Action:
Set the condition of the rule.

SDP-25353
unable to send a BROADCAST message because no address is set.

Category:
Process

Cause:
An address has not been set for the BROADCAST action.

Action:
Set at least one address for the BROADCAST action.

SDP-25354
A failover address is not set for the FAIL_OVER action.

Category:
Process

Cause:
An address has not been set for the FAIL_OVER action.

Action:
Set at least one address for the FAIL_OVER action.

SDP-25356
Cannot persist device address {0} for user GUID {1}, because one already exists.

Category:
Process

Cause:
An identical device address already exists.

Action:
Remove the conflicting device address, overwrite it, or specify a different address.

SDP-25361
The Java VM does not support the encoding {0}.

Category:
Process

Cause:
The Java VM does not support the encoding used for XML string representing the RuleSet.

Action:
Check your server Java VM and make sure it supports the encoding.

SDP-25387
Rule fact for term {0} has been ignored as it does not have the correct type, {1}.

Category:
Process

Cause:
The fact from user or application had an incorrect data type.

Action:
Provide the fact with the correct data type as indicated.

SDP-25388
Device named {0} of user {1} not found.

Category:
Process

Cause:
The user does not have a device with that name.

Action:
Check username and device name.

SDP-25390
Failed to set default address of MESSAGING of user {0}.

Category:
Process

Cause:
Failed to set default address

Action:
Check the stack trace for more details.

SDP-25400
An exception was caught.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-25403
Error in registering messaging Runtime MBeans.

Category:
Process

Cause:
Exception was thrown.

Action:
Check stack trace

SDP-25404
Error in unregistering messaging Runtime MBeans.

Category:
Process

Cause:
Exception was thrown.

Action:
Check stack trace.

SDP-25405
Naming exception thrown looking up Management Store: Unable to initialize SDP Messaging Runtime MBeans.

Category:
Process

Cause:
Naming exception thrown while looking up the Management Store EJB.

Action:
Check stack trace.

SDP-25406
Create exception thrown while creating Management Store: Unable to initialize SDP Messaging Runtime MBeans.

Category:
Process

Cause:
Create exception thrown while creating Management Store EJB.

Action:
Check stack trace.

SDP-25407
Exception initializing Runtime MBean.

Category:
Process

Cause:
An exception was thrown during runtime MBean initialization.

Action:
Check stack trace.

SDP-25408
Invalid query parameter: query field: {0}, query condition: {1}, query value: {2}.

Category:
Process

Cause:
Invalid combination of query parameters or invalid query value.

Action:
Check stack trace.

SDP-25409
Unable to initialize the composite type for the MBean.

Category:
Process

Cause:
OpenDataException was caught.

Action:
Check stack trace.

SDP-25410
Unable to convert to composite type and return composite data for the MBean. Name: {0}.

Category:
Process

Cause:
OpenDataException was caught.

Action:
Check stack trace.

SDP-25416
Error occurred while attempting to get the parent server MBean for {0}.

Category:
Process

Cause:
An exception was thrown while attempting to get the parent server MBean.

Action:
Check stack trace.

SDP-25500
Failed to schedule Timer.

Category:
Process

Cause:
Timer could not be scheduled in the TimerManager

Action:
Check stack trace, diagnostic dump

SDP-25501
Exception when delivering pending messages.

Category:
Process

Cause:
Exception when delivering pending messages

Action:
Check the stack trace for more details.

SDP-25502
Unable to create JNDI Context.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details. Check the JNDI Context initialization parameters.

SDP-25503
Unable to connect to the messaging server.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details. Check that the messaging server is up. Check the JNDI Context initialization parameters.

SDP-25504
Unable to register application information with the messaging server.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details. Check that the messaging server is up. Check the JNDI Context initialization parameters.

SDP-25505
Unable to enqueue outbound message.

Category:
Process

Cause:
Engine Sending Queue may not be available.

Action:
Check the stack trace for more details.

SDP-25506
Unable to get receiving queues from application information.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details. Check the Application information properties.

SDP-25507
Unable to enqueue inbound message status because no engine queues were found.

Category:
Process

Cause:
The client is not aware of any engine queues to enqueue the status.

Action:
Check that the application is registered successfully with the messaging server.

SDP-25508
Unable to enqueue inbound message status.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-25510
An error occurred while attempting to retrieve the actual password from the credential store.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-25511
An error occurred while dequeuing a message from the application receiving queue.

Category:
Process

Cause:
An invalid JMS message was dequeued by the Dispatcher MDB.

Action:
Check the stack trace for more details.

SDP-25512
An invalid message was dequeued from the application receiving queue: {0}.

Category:
Process

Cause:
An invalid JMS message was dequeued by the Dispatcher MDB.

Action:
Check the stack trace for more details.

SDP-25513
JNDI lookup of application callback listener failed.

Category:
Process

Cause:
An invalid callback listener was previously registered and could not be invoked.

Action:
Check the stack trace for more details.

SDP-25514
An error occurred while dispatching an inbound message to the application {0}.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-25515
An error occurred while dispatching an inbound status to the application {0}.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-25516
Message/Status listener not configured. Suspending messaging client MDB to disable asynchronous message/status callbacks.

Category:
Process

Cause:
Message/Status listener was not configured by the application.

Action:
If the application requires asynchronous message/status callbacks, configure the listener information. Otherwise, ignore this warning.

SDP-25517
Messaging client MDB suspend failed: {0}.

Category:
Process

Cause:
1) The Messaging client was unable to access the MDB MBean because the container may not be in RUNNING state. 2) The server administrator username 'weblogic' does not exist.

Action:
1) Check the state of the container. Check the stack trace for more details. 2) Specify a valid server administrator username using the system property -Doracle.ums.admin.user and restart the server.

SDP-25519
QueueWorker rejected.

Category:
Process

Cause:
QueueWorker rejected

Action:
Check WorkManager configuration.

SDP-25524
Client called the deprecated method acknowledge().

Category:
Process

Cause:
The method acknowledge is deprecated.

Action:
Use global transactions instead to achieve reliable message reception.

SDP-25532
An error occurred while retrieving the Application Information from the application JNDI context.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-25541
An error occurred while generating received message statuses.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-25542
Security principal in client EJB Context "{0}" does not match security principal in ApplicationInfo "{1}". This may cause permission errors during future Messaging Client operations.

Category:
Process

Cause:
The security principal in the current EJBContext is different from the ApplicationInfo security principal field specified when creating the Messaging Client instance (or the default value, if no principal was provided).

Action:
Ensure that the security principals used by this application for all Messaging Client operations match one another.

SDP-25543
The current authenticated user "{0}" does not match the configured security principal "{1}".

Category:
Process

Cause:
The security principal in effect for the current thread is different from the security principal field specified when creating the Messaging Client instance.

Action:
Ensure that the security principals used by this application for all Messaging Client operations match one another, or avoid configuring a specific security principal.

SDP-25700
An exception was caught.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-25701
Unable to instantiate class {0}.

Category:
Process

Cause:
Unable to instantiate a class.

Action:
Check to see if that class is in classpath or not.

SDP-25702
Unable to set content of Message object.

Category:
Process

Cause:
Unable to set content of a message.

Action:
Check the stack trace for more details.

SDP-25703
Exception when getting cluster name for server {0}.

Category:
Process

Cause:
Could not get cluster name from RuntimeServiceMBean

Action:
Check the stack trace for more details

SDP-25704
Error in setMultiplePayload.

Category:
Process

Cause:
An error occurred in setMultiplePayLoad().

Action:
Check the stack trace for more details.

SDP-25705
Exception printing message content.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-25706
Failed to clone message content.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-25707
Failed to clone headers. Message = {0}.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-25708
Unable to perform JNDI lookup of JMS QCF: {0}.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-25709
Unable to perform JNDI lookup.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-25710
Exception caught when calling onMessage(), will rollback transaction.

Category:
Process

Cause:
Exception caught when calling onMessage(), will rollback transaction.

Action:
Check log to get more information.

SDP-25711
Received unknown object: {0} on queue {1}.

Category:
Process

Cause:
Received unknown object in JMS queue

Action:
Check log to get more information.

SDP-25712
Message received with invalid format: {0} on queue {1}.

Category:
Process

Cause:
Invalid message received on JMS queue

Action:
Check log to get more information.

SDP-25713
Unable to perform JNDI lookup of JMS Queue: {0}.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-25714
Failed to obtaining destination availability for queue with JNDI name: {0}.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-25715
Invalid format, skipping: {0}.

Category:
Process

Cause:
Invalid queue information.

Action:
Check the stack trace for more details.

SDP-25716
Error occurred in looking up QueueConnectionFactory in JNDI, skipping: {0}

Category:
Process

Cause:
Error occurred in looking up QueueConnectionFactory in JNDI.

Action:
Check the stack trace for more details.

SDP-25717
Error occurred in looking up Queue in JNDI, skipping: {0}.

Category:
Process

Cause:
Error occurred in looking up queue in JNDI.

Action:
Check the stack trace for more details.

SDP-25718
Error occurred in getQueueInfoList.

Category:
Process

Cause:
Error occurred in getQueueInfoList().

Action:
Check the stack trace for more details.

SDP-25719
The JMS receiver could not connect to the JMS destination. The error was: {1}. Please ensure the destination is available at the JNDI name {0}. The JMS receiver will periodically attempt to resolve this destination and additional warnings may be issued.

Category:
Process

Cause:
The JMS receiver could not connect to the JMS destination.

Action:
Check the JMS system resource and the JMS server for additional information.

SDP-25725
Message serialization failed.

Category:
Process

Cause:
Failed to serialize message due to I/O Error.

Action:
Ensure that content is being created according to recommendations for Message class.

SDP-25728
Could not determine server platform type. Generic values will be used for platform-specific data.

Category:
Process

Cause:
The Java EE server platform could not be determined. Either this application is executing in a Java SE environment, or the Java EE server is configured incorrectly.

Action:
If executing in a Java SE environment, no action is necessary. Otherwise ensure that Java Required Files module is deployed to this environment.

SDP-25729
An exception occurred while enabling the WS-Security configuration: {0}.

Category:
Process

Cause:
An exception occurred while attaching a WS-Security policy to a web service client or endpoint.

Action:
Ensure that any WS-Security policies are specified in the correct format.

SDP-25730
QueueWorker got exception.

Category:
Process

Cause:
QueueWorker got exception.

Action:
Check the log for related information.

SDP-25731
Failed to find database entry to update. Id: {0}

Category:
Process

Cause:
Failed to find database entry to update.

Action:
Check the stack trace for more details.

SDP-25733
Failed to add/create new QWorker thread {0}

Category:
Process

Cause:
Failed to add/create new QWorker thread {0}.

Action:
Check the stack trace for more details.

SDP-25734
Failed to remove/un-schedule a QWorker thread {0}

Category:
Process

Cause:
Failed to remove/un-schedule a QWorker thread {0}.

Action:
Check the stack trace for more details.

SDP-25900
Exception occurred in config refresh scheduler. Message: {0}

Category:
Process

Cause:
An exception was caught.

Action:
Check the stack trace for more details.

SDP-25901
UMS Config changes found that requires UMS restart. Configs: {0}

Category:
Process

Cause:
Found config changes that requires restart

Action:
Restart Managed server

SDP-25902
Driver reload Failed for driver {0}. Cause {1}

Category:
Process

Cause:
An exception was caught

Action:
Check the stack trace for more details.

SDP-25903
Engine configuration failed to refresh for property {0}. Cause {1}

Category:
Process

Cause:
An exception was caught

Action:
Check the stack trace for more details.

SDP-25904
Timer is requested to stop for Config Refresh scheduler.

Category:
Process

Cause:
Timer is requested to stop

Action:
No Action required.

SDP-25905
Config Refresh scheduler has refreshed the configuration for Properties: {0}

Category:
Process

Cause:
Config Refresh scheduler found difference in configs

Action:
No Action required.

SDP-25906
Unable to initialize config store. Scheduler will not be able to refresh configs. Cause {0}

Category:
Process

Cause:
An exception was caught

Action:
Check the stack trace for more details.

SDP-26000
An exception was caught.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-26001
Cannot create JNDI Context.

Category:
Process

Cause:
Cannot create JNDI Context.

Action:
Check the stack trace for more details.

SDP-26002
The driver {0} is operational

Category:
Process

Cause:
The driver is operational

Action:
None

SDP-26003
Driver {0} is not configured with required properties. Driver disabled until configured.

Category:
Process

Cause:
Driver was not configured with all required properties.

Action:
Configure this driver.

SDP-26004
No Messaging Engine Queue information to enqueue status.

Category:
Process

Cause:
No Engine Queue information to enqueue status.

Action:
Check that the Engine is deployed. Check Engine Queue information.

SDP-26005
Dispatcher failed to find a driver.

Category:
Process

Cause:
Dispatcher failed to find a driver.

Action:
Compare delivery type and content type between message and available drivers.

SDP-26006
An error occurred while processing an outbound message.

Category:
Process

Cause:
An error occurred while processing an outbound message.

Action:
Check the stack trace for more details.

SDP-26007
No configuration was found for this Driver deployment: {0}. Driver disabled until a configuration is created.

Category:
Process

Cause:
No configuration was found for this Driver deployment.

Action:
Create a configuration this SMPP Driver.

SDP-26008
Invalid configuration for driver {0}. Driver disabled until configured.

Category:
Process

Cause:
Invalid configuration for driver

Action:
Correct the driver configuration.

SDP-26009
Could not get JNDI InitialContext.

Category:
Process

Cause:
None

Action:
None

SDP-26010
Failed to start driver: {0}.

Category:
Process

Cause:
Failed to start driver.

Action:
Check stack trace for more details.

SDP-26011
Failed to register driver in UMS engine: {0}.

Category:
Process

Cause:
Failed to register driver in UMS engine.

Action:
Check stack trace and diagnostic dump for more details.

SDP-26012
Timed out while waiting for SubDrivers to start: {0}.

Category:
Process

Cause:
Timed out while waiting for SubDrivers to start.

Action:
Check stack trace and diagnostic dump for more details.

SDP-26013
Failed to stop driver: {0}.

Category:
Process

Cause:
Unable to stop driver.

Action:
Check stack trace for more details.

SDP-26014
Unable to process inbound message/status.

Category:
Process

Cause:
Exception occurred while processing inbound message/status.

Action:
Check stack trace for more details.

SDP-26015
Unable to process command message.

Category:
Process

Cause:
Exception occurred while processing command message.

Action:
Check stack trace for more details.

SDP-26016
Error occurred while attempting to get the parent server MBean for {0}

Category:
Process

Cause:
Error occurred while attempting to get the parent server MBean

Action:
Check stack trace for more details

SDP-26017
Failed to invoke registerDriverInfo() for driver: {0}

Category:
Process

Cause:
Exception thrown while invoking registerDriverInfo().

Action:
Check stack trace for more details.

SDP-26018
Invalid {0} value: {1}

Category:
Process

Cause:
The driver has been configured with an invalid property value.

Action:
Review the driver configuration and ensure that the property is valid.

SDP-26019
Error occurred while registering driver {0}

Category:
Process

Cause:
Error occurred while registering driver.

Action:
Check stack trace for more details.

SDP-26020
Registration of driver {0} succeeded.

Category:
Process

Cause:
None

Action:
None

SDP-26021
Timed out while waiting for reply from Messaging engine.

Category:
Process

Cause:
The registration command timed out in the JMS queue because the Messaging engine is down or the system is under heavy load.

Action:
Check if the Messaging engine is up and ensure the system is not under extremely heavy load.

SDP-26022
Illegal DeliveryType specified, ignoring type {0}.

Category:
Process

Cause:
Illegal DeliveryType specified.

Action:
Check message delivery type.

SDP-26023
Benchmark logging is enabled for all inbound messages, which may slow down system performance. To disable it, unset environment variable sdpm_inbound_benchmark_logging and restart.

Category:
Process

Cause:
Benchmark logging is enabled when environment variable sdpm_inbound_benchmark_logging=true.

Action:
To disable benchmark logging, unset environment variable sdpm_inbound_benchmark_logging and restart.

SDP-26024
Registration of driver {0} did not complete. Current state is {1}. Will retry periodically until messaging server responds.

Category:
Process

Cause:
None

Action:
None

SDP-26025
Error when registering messaging driver Runtime MBeans for {0}.

Category:
Process

Cause:
Exception was thrown.

Action:
Check stack trace

SDP-26026
Error in unregistering messaging driver Runtime MBeans.

Category:
Process

Cause:
Exception was thrown.

Action:
Check stack trace

SDP-26027
Ignoring property {0} with unsupported Java type {1} during driver initialization.

Category:
Process

Cause:
A property with an unsupported Java type was found in 'usermessagingconfig.xml' during driver initialization.

Action:
Use one of the following valid Java types: java.lang.Boolean, java.lang.String, java.lang.Integer, java.lang.Double, java.lang.Byte, java.lang.Short, java.lang.Long, java.lang.Float, java.lang.Character

SDP-26028
Ignoring property {0} with invalid value {1} and/or Java type {2} during driver initialization.

Category:
Process

Cause:
A property with an invalid value and/or unsupported Java type was found in 'usermessagingconfig.xml' during driver initialization.

Action:
Use a valid value and/or one of the following valid Java types: java.lang.Boolean, java.lang.String, java.lang.Integer, java.lang.Double, java.lang.Byte, java.lang.Short, java.lang.Long, java.lang.Float, java.lang.Character

SDP-26029
Exception occurred during driver configuration initialization for {0}.

Category:
Process

Cause:
An exception occurred during driver configuration initialization.

Action:
Check the stack trace.

SDP-26030
Failed to schedule work {0}

Category:
Process

Cause:
An exception occurred while scheduling a work.

Action:
Check stack trace for more details.

SDP-26031
Lookup of encoded credential value {0} in the credential store for property {1} failed during driver initialization. Passing through the value as-is.

Category:
Process

Cause:
A property with an invalid encoded credential value was found in 'usermessagingconfig.xml' during driver initialization.

Action:
Use a valid encoded credential value and ensure the application has permission grants to access the credential store.

SDP-26032
JNDI lookup of driver connection factory {0} failed with the following error message: {1}. Will retry until successful.

Category:
Process

Cause:
Driver connection factory could not be located in JNDI. Driver registration will not occur until this lookup succeeds.

Action:
Wait for server startup to proceed. If driver registration does not occur, ensure that the driver connection factory JNDI name is configured correctly.

SDP-26033
Started messaging driver: {0}

Category:
Process

Cause:
Driver was started.

Action:
None.

SDP-26034
Stopped messaging driver: {0}

Category:
Process

Cause:
Driver was stopped.

Action:
None.

SDP-26035
JNDI lookup of server command endpoint {0} failed. Will retry until successful.

Category:
Process

Cause:
Messaging Server command module could not be located in JNDI. Driver registration will not occur until this lookup succeeds.

Action:
Wait for server startup to proceed. If driver registration does not occur, ensure that the messaging server is deployed and started.

SDP-26036
Unable to perform JNDI lookup.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-26037
Unable to create JMSMessageReceiver

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-26038
Failed to retrieve credential from credential store for user {0}

Category:
Process

Cause:
Failed to retrieve credential from credential store for the specified user.

Action:
Check stack trace or error log.

SDP-26039
Driver {0} does not have inbound configuration. No messages (including information about bounced emails) are received.

Category:
Process

Cause:

Action:

SDP-26040
Driver {0} does not have outbound configuration. Messages cannot be sent through this driver.

Category:
Process

Cause:

Action:

SDP-26041
An attempt to configure inbound for driver {0} was detected. All required properties was not configured so the whole configuration (inbound and outbound) will be invalidated. Driver disabled until configured.

Category:
Process

Cause:
An attempt to configure inbound for the driver was detected. All required properties was not configured so the whole configuration (inbound and outbound) will be invalidated. Driver disabled until configured.

Action:
Remove inbound configuration or configure all required properties for this driver.

SDP-26042
An attempt to configure outbound for driver {0} was detected. All required properties was not configured so the whole configuration (inbound and outbound) will be invalidated. Driver disabled until configured.

Category:
Process

Cause:
An attempt to configure outbound for the driver was detected. All required properties was not configured so the whole configuration (inbound and outbound) will be invalidated. Driver disabled until configured.

Action:
Remove outbound configuration or configure all required properties for this driver.

SDP-26043
Driver {0} lost connection to the external gateway. Will try to reconnect.

Category:
Process

Cause:

Action:

SDP-26044
Driver {0} reconnected to the external gateway.

Category:
Process

Cause:

Action:

SDP-26100
An exception was caught.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-26101
An exception was caught.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-26102
Error while writing e-mail message content.

Category:
Process

Cause:
An exception has occurred while writing e-mail content and headers to an e-mail message.

Action:
Check stack trace or error log.

SDP-26103
Error while writing e-mail subject.

Category:
Process

Cause:
Cannot write the subject.

Action:
Check stack trace or error log.

SDP-26104
Recipient address error.

Category:
Process

Cause:
Recipient e-mail address has an error.

Action:
Check and see if the recipient e-mail address is correct.

SDP-26105
Unable to deliver to following address(es): {0} Reason: {1}

Category:
Process

Cause:
One or more recipient e-mail addresses had an error.

Action:
Ensure that the e-mail address is correct.

SDP-26106
Failed to send the e-mail message

Category:
Process

Cause:
Unable to login to SMTP server.

Action:
Check SMTP server host name, port, user name, and password.

SDP-26107
Failed to add header - name: {0} value: {1}

Category:
Process

Cause:
Unable to add an e-mail header to a multipart message

Action:
Check the stack trace or error log.

SDP-26108
Content type parsing error {0}.

Category:
Process

Cause:
Error occurred while trying to parse the content type.

Action:
Check and see if the content type is specified correctly.

SDP-26109
Caught exception while closing connection to e-mail server.

Category:
Process

Cause:
An exception was caught while closing connection.

Action:
Check stack trace or error log.

SDP-26110
Failed to start Email Driver

Category:
Process

Cause:
Failed to start Email Driver.

Action:
Check stack trace or error log. Check e-mail driver parameters and make sure all email servers are running.

SDP-26111
Failed to retrieve credential from credential store for user {0}

Category:
Process

Cause:
Failed to retrieve credential from credential store for the specified user.

Action:
Check stack trace or error log.

SDP-26112
Authentication failed: user={0}, host={1}:{2}, sslEnabled={3}

Category:
Process

Cause:
Authentication failed for the specified user, server, port, and sslEnabled parameters.

Action:
Check stack trace or error log. Check the username, password, server, port, and sslEnabled parameters.

SDP-26118
Failed to open folder {0} for user {1}

Category:
Process

Cause:
Folder name is not correct or does not exist.

Action:
Check folder name spelling.

SDP-26119
Max retry limit reached for trying to connect to user {0}

Category:
Process

Cause:
Email driver has reached Max retry limit to connect to user.

Action:
Check stack trace or error log. Check e-mail driver parameters and make sure all servers are up.

SDP-26122
An exception has been thrown when connecting to user {0}

Category:
Process

Cause:
Email driver could not connect to user.

Action:
Check username and password. Make sure the user exists and is accessible.

SDP-26123
Could not initialize Email Store for: user {0}, server {1}, folder {2}, sslEnabled {3}

Category:
Process

Cause:
Could not initialize Email Store for the specified user, server, folder, and sslEnabled parameters.

Action:
Check stack trace or error log. Check the username, password, server, folder and sslEnabled parameters.

SDP-26126
Unrecoverable message - {0}

Category:
Process

Cause:
failed to recover an e-mail message

Action:
Check stack trace or error log.

SDP-26130
Ignoring property {0} with invalid value {1} during driver initialization.

Category:
Process

Cause:
A property with an invalid value was found in 'usermessagingconfig.xml' during driver initialization.

Action:
Ensure the value configured value is valid.

SDP-26131
Lookup of encoded credential value {0} in the credential store for property {1} failed during driver initialization.

Category:
Process

Cause:
A property with an invalid encoded credential value was found in 'usermessagingconfig.xml' during driver initialization.

Action:
Use a valid encoded credential value and ensure the application has permission grants to access the credential store.

SDP-26134
Email Driver {0} is not configured with incoming mail properties. No emails (including information about bounced emails) are received.

Category:
Process

Cause:

Action:

SDP-26135
Email Driver {0} is not configured with outgoing mail properties. Emails cannot be sent through this driver.

Category:
Process

Cause:

Action:

SDP-26136
Driver property OutgoingDefaultFromAddr is deprecated. Use DefaultSenderAddress instead.

Category:
Process

Cause:
Driver property OutgoingDefaultFromAddr in 'usermessagingconfig.xml' is deprecated.

Action:
Use DefaultSenderAddress instead.

SDP-26137
Both DefaultSenderAddress and the deprecated OutgoingDefaultFromAddr is configured in 'usermessagingconfig.xml'. DefaultSenderAddress will be used.

Category:
Process

Cause:
Both OutgoingDefaultFromAddr and DefaultSenderAddress is configured in 'usermessagingconfig.xml'. DefaultSenderAddress will be used.

Action:
Remove configuration for OutgoingDefaultFromAddr.

SDP-26138
Message was not delivered. No valid sender(From) address available.

Category:
Process

Cause:
No sender address set in message and DefaultSenderAddress is not configured in 'usermessagingconfig.xml'.

Action:
Set sender(From) address in message or set DefaultSenderAddress in 'usermessagingconfig.xml'.

SDP-26450
An exception was caught.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-26451
One or more sets of extension endpoints were configured using identical protocols and mapped domains: {0}.

Category:
Process

Cause:
Each of the listed protocol/domain pairs is used to configure multiple extension endpoints.

Action:
Remove the conflicting endpoint configuration, or ensure that each endpoint has unique protocol and mapped domain parameters.

SDP-26452
No extension endpoint could be found for the specified recipient address.

Category:
Process

Cause:
None of the configured extension endpoints matched the protocol and domain of the message recipient.

Action:
Ensure that an endpoint is configured for the desired protocol and domain, or configure a default (empty) domain.

SDP-26453
No configuration was found for this Extension Driver deployment: {0}. Driver disabled until a configuration is created.

Category:
Process

Cause:
No configuration was found for this Email Driver deployment.

Action:
Create a configuration this Email Driver.

SDP-26454
Extension Driver {0} is not configured with at least one extension point with a valid endpoint URL and protocol. Driver disabled until configured.

Category:
Process

Cause:
Extension Driver is not configured with at least one extension point with a valid endpoint URL and protocol.

Action:
Configure this driver.

SDP-26455
Error while processing Extension Driver configuration with Endpoint URL: {0}. The configuration must contains a valid endpoint URL and protocol.

Category:
Process

Cause:
An error occurred while processing the Extension Driver configuration.

Action:
Check the corresponding configuration. The configuration must contains a valid endpoint URL and protocol.

SDP-26456
An exception occurred while enabling the WS-Security configuration: {0}

Category:
Process

Cause:
An exception occurred while attaching a WS-Security policy to a web service client or endpoint.

Action:
Ensure that any WS-Security policies are specified in the correct format.

SDP-26457
An exception occurred while constructing the SOAP message: {0}

Category:
Process

Cause:
An exception occurred while constructing the SOAP message

Action:
Check the configuration of the server.

SDP-26550
An exception was caught.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-26551
Failed to deliver a message to the gateway at {0}. No Status could be generated for the failed message.

Category:
Process

Cause:
A message failed to be delivered to the gateway.

Action:
Check the connectivity to the gateway

SDP-26150
An exception was caught.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-26151
Failed to process a received message in SMPP driver, because driver context is null

Category:
Process

Cause:
Driver context is null

Action:
Check the stack trace for more details.

SDP-26152
WorkManager object is null in SMPP driver.

Category:
Process

Cause:
The caller of setWorkManager() passed in a null WorkManager object as an argument

Action:
Make sure WorkManager object is not null.

SDP-26153
Failed to connect to server, host: {0}, port: {1} (local address: {2}, local port: {3})

Category:
Process

Cause:
Failed to connect to server with the specified parameters.

Action:
Check the stack trace and the specified parameters. Ensure that the network is operational.

SDP-26155
unable to initialize SMPP driver, because a driver attribute, sms.account.id, is not set.

Category:
Process

Cause:
The account ID was not set.

Action:
Set the correct account information.

SDP-26156
Failed to initialize SMPP Driver because driver attributes sms.server.host, sms.server.transmitter.port or sms.server.receiver.port is not set.

Category:
Process

Cause:
SMSC server or account information is not correct or missing.

Action:
Check those parameters.

SDP-26158
Caught exception while closing connection

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-26159
Illegal data length value from SMSC received and ignored: {0}

Category:
Process

Cause:
SMPP Driver has detected a corrupted data field from SMSC and it is trying to recover.

Action:
This error suggests communication errors between SMPP driver and SMSC. Check to see if this driver supports that SMSC.

SDP-26160
No configuration was found for this SMPP Driver deployment: {0}. Driver disabled until a configuration is created.

Category:
Process

Cause:
No configuration was found for this SMPP Driver deployment.

Action:
Create a configuration this SMPP Driver.

SDP-26161
Starting SMPP Driver: {0}

Category:
Process

Cause:
SMPP Driver resource adapter initialization.

Action:
None

SDP-26163
Data stream ended unexpectedly while reading packet from SMSC

Category:
Process

Cause:
The data stream ended unexpectedly while reading a packet from the SMSC. Message or command will be dropped.

Action:
None.

SDP-26164
Failed to bind receiver connection; will retry until bind operation is successful.

Category:
Process

Cause:
Could not bind to the SMSC as a receiver. Bind operation will be retried periodically until it is successful.

Action:
None required. Change value of configuration parameter "BindRetryDelay" to adjust retry interval.

SDP-26165
Lookup of encoded credential value for account {0} in the credential failed during driver initialization.

Category:
Process

Cause:
Lookup of encoded credential value in the credential failed during driver initialization.

Action:
Check the stack trace for more details. Ensure that the encoded indirect password and the credential store are properly configured.

SDP-26166
SMPP Driver {0} is not configured with all required properties. Driver disabled until configured.

Category:
Process

Cause:
SMPP Driver was not configured with all required properties.

Action:
Configure this driver.

SDP-27001
An exception was caught.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-27002
Failed to deliver a message to the gateway at {0}. No Status could be generated for the failed message.

Category:
Process

Cause:
A message failed to be delivered to the gateway.

Action:
Check the connectivity to the gateway

SDP-27003
Invalid Credentials provided. {0}

Category:
Process

Cause:
Invalid Credentials provided

Action:
Check the credentials

SDP-27004
Not Found returned from API call please check message. {0}

Category:
Process

Cause:
Not Found returned from API.

Action:
Check the logs for details

SDP-27005
Message Payload contains Invalid data, cause: {0}

Category:
Process

Cause:
Message Payload contains Invalid data.

Action:
Check the message for details.

See log for details.

CLONE-92301
doPasteConfig failed. msg={0} stackTrace={1}

Category:
Process

Cause:
Failure during pasteConfig.

Action:
See log for details.

CLONE-92302
Skipped corrupted ConfigGroup for {0}

Category:
Process

Cause:
Expected one ConfigProperty within ConfigGroup.

Action:
Edit moveplan.xml or configure manually in the production system.

SDP-26300
A Twitter exception was caught.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-26301
Got an exception when receiving tweets.

Category:
Process

Cause:
An exception has occurred when receiving tweets.

Action:
Check the stack trace for more details.

SDP-26302
Got an exception when receiving direct messages.

Category:
Process

Cause:
An exception has occurred when receiving direct message.

Action:
Check the stack trace for more details.

SDP-26303
Exception caught during attributes transferring of an inbound direct message.

Category:
Process

Cause:
An exception has occurred when transferring attributes of a direct message.

Action:
Check the stack trace for more details.

SDP-26304
Exception caught during attributes transferring of an inbound tweet.

Category:
Process

Cause:
An exception has occurred when transferring attributes of a tweet.

Action:
Check the stack trace for more details.

SDP-26305
Got an exception when building an inbound UMS message from a received tweet or direct message.

Category:
Process

Cause:
An exception has occurred when rebuilding an inbound UMS message.

Action:
Check the stack trace for more details.

SDP-26306
Required OAuth login information is missing or incomplete. Consumer key, consumer secret, access token, and/or access token secret is not set.

Category:
Process

Cause:
At least one of Twitter consumer key, consumer secret, access token, and access token secret is missing or not set.

Action:
Check the log file for the missing field(s).

SDP-26307
Required xAuth login information for user {0} is missing or incomplete. Both username and password are required.

Category:
Process

Cause:
Username or password is missing or not set.

Action:
Check the log file for the missing field(s).

SDP-26308
No configuration was found for this Twitter Driver deployment: {0}. Driver disabled until a configuration is created.

Category:
Process

Cause:
No configuration was found for this Twitter Driver deployment.

Action:
Create a configuration this Twitter Driver.

SDP-26309
Twitter Driver {0} is not configured with all required properties. Driver disabled until configured.

Category:
Process

Cause:
Twitter Driver was not configured with all required properties.

Action:
Configure this driver.

SDP-26310
Twitter Driver not properly configured. AuthenticationMode {0} is unknown and not supported.

Category:
Process

Cause:
Twitter Driver not properly configured. AuthenticationMode given is unknown and not supported.

Action:
Configure and restart this driver.

SDP-26311
Retweet id string {0} in meta data could not be converted to long. No tweet for messageId {1}

Category:
Process

Cause:
Retweet id string in meta data could not be converted to long.

Action:
Check how the application generates the meta data.

SDP-26312
Ignoring reply id string {0} in meta data that could not be converted to long.

Category:
Process

Cause:
Ignoring reply id string in meta data that could not be converted to long.

Action:
Check how the application generates the meta data.

SDP-26313
Ignoring geo location string ({0}) in meta data that could not be converted to (double,double).

Category:
Process

Cause:
Ignoring geo location string in meta data that could not be converted to (double,double).

Action:
Check how the application generates the meta data.

SDP-26314
Failed to verify the credentials.

Category:
Process

Cause:
Failed to verify the credentials.

Action:
Check the Twitter Driver configuration.

SDP-26315
Failed to send tweet due to rate limitation.

Category:
Process

Cause:
Failed to send tweet due to rate limitation.

Action:
Adjust the send rate or modify the Twitter Account settings.

SDP-26316
Failed to receive tweet due to rate limitation.

Category:
Process

Cause:
Failed to receive tweet due to rate limitation.

Action:
Wait or modify the Twitter Account settings.

SDP-26317
Twitter exception when sending tweet. Msg={0}

Category:
Process

Cause:
Twitter exception when sending tweet.

Action:
Check the Twitter Exception message.

SDP-25800
Oracle User Messaging Service configuration is successfully upgraded.

Category:
Process

Cause:

Action:

SDP-25801
Shall upgrade driver {0} using configuration file at {1}.

Category:
Process

Cause:

Action:

SDP-25802
Driver {0} upgraded using {1}.

Category:
Process

Cause:

Action:

SDP-25803
Driver {0} already upgraded. Ignoring configuration in {1}.

Category:
Process

Cause:

Action:

SDP-25804
Shall upgrade server {0} using configuration file at {1}.

Category:
Process

Cause:

Action:

SDP-25805
Server {0} upgraded using {1}.

Category:
Process

Cause:

Action:

SDP-25806
Server {0} already upgraded. Ignoring configuration in {1}.

Category:
Process

Cause:

Action:

SDP-25807
Shall upgrade user preference configuration for {0} using file at {1}.

Category:
Process

Cause:

Action:

SDP-25808
User preference configuration for {0} upgraded using {1}.

Category:
Process

Cause:

Action:

SDP-25809
Invalid managed server entered. Continue upgrade to see if we still can do a remote copy of the 11g configuration files.

Category:
Process

Cause:

Action:

SDP-25810
Custom deployed UMS application {0} will be deleted from the domain.

Category:
Process

Cause:
Custom deployed UMS applications are not supported any longer.

Action:

SDP-25811
Failed to read configuration for driver {0}, {1}. Probably due to targeted driver without configuration.

Category:
Process

Cause:

Action:

SDP-25812
Ignoring configuration for application {0}.

Category:
Process

Cause:

Action:

SDP-25820
Error in upgrading Oracle User Messaging Service configuration. Reason: {0}

Category:
Process

Cause:
An unexpected error occurred during Oracle User Messaging Service configuration upgrade.

Action:
Check the error messages in the log file. Correct the problem before running the Upgrade Assistant again. Contact Oracle Support Services if you are unable to correct the problem.

SDP-25821
Failed to read the configuration file {0}.

Category:
Process

Cause:
The configuration file is missing or in wrong format.

Action:
Check if the configuration file exists with correct format. Correct the problem before running the Upgrade Assistant again. Contact Oracle Support Services if you are unable to correct the problem.

SDP-25822
Failed to save the configuration at {0}.

Category:
Process

Cause:
Error occured while saving the configuration to the configuration file.

Action:
Check the error messages in the log file. Correct the problem before running the Upgrade Assistant again. Contact Oracle Support Services if you are unable to correct the problem.

SDP-25823
Failed to delete the old configuration file at {0}.

Category:
Process

Cause:
Error occurred while deleting the old configuration file.

Action:
Check the file system. Correct the problem before running the Upgrade Assistant again.

SDP-25824
Failed to parse the configuration file at {0}.

Category:
Process

Cause:
Error occured while parsing the configuration file.

Action:
Check the error messages in the log file. Correct the problem before running the Upgrade Assistant again.

SDP-25825
Error during copy of configuration files from remote managed server {0}.

Category:
Process

Cause:
Old 11g configuration files where due to some problem not copied correct to the AdminServer. It could be that the plugin is missing information needed to connect to and copy the configuration from one of the managed servers. Or it could be that the sshd is not running on all the managed servers.

Action:
Check the error messages in the log file to see what the problem is. Correct the problem before running the Upgrade Assistant again or perform a manual copy of the old configuration from the remote managed servers to the AdminServer.

SDP-25826
Error connecting to remote managed server {0}.

Category:
Process

Cause:
It could be that the plugin is missing information needed to connect to one of the managed servers. Or it could be that the sshd is not running on all the managed servers.

Action:
Check the error messages in the log file to see what the problem is. Correct the problem before running the Upgrade Assistant again or perform a manual copy of the old configuration from the remote managed servers to the AdminServer.

SDP-25827
Neither the configuration nor the data entered by the user provides all information needed to copy the UMS 11g configuration files.

Category:
Process

Cause:
Upgrade Assistant does not have all information about the remote managed servers to be able to connect and copy the UMS 11g configuration files.

Action:
Make sure to fill in name and address for all remote managed Servers that does not have this information configured.

SDP-25850
Oracle User Messaging Service schema upgraded.

Category:
Process

Cause:

Action:

SDP-25851
Oracle User Messaging Service schema upgrade is valid.

Category:
Process

Cause:

Action:

SDP-25852
Oracle User Messaging Service schema version {0} is the latest one. Upgrade is not required.

Category:
Process

Cause:
Specified Oracle User Messaging Service database schema version is the latest one. Upgrade is not required.

Action:
No user action is required.

SDP-25853
Oracle User Messaging Service schema upgrade is invalid.

Category:
Process

Cause:
Specified User Messaging Service schema was updated but is invalid.

Action:
Restore the User Messaging Service schema from a backup and retry. Check the error messages in Oracle User Messaging Service component log files. Correct the problem before running the Upgrade Assistant again.

SDP-25854
The upgrade is not supported from Oracle User Messaging Service schema version of {0}.

Category:
Process

Cause:
An unsupported base schema version was being upgraded.

Action:
Refer to the Oracle User Messaging Service Upgrade Guide for supported versions to upgrade.

SDP-25855
Error in upgrading Oracle User Messaging Service schema. {0}

Category:
Process

Cause:
An unexpected error occurred during Oracle User Messaging Service schema upgrade.

Action:
Check the error messages in the log file. Correct the problem before running the Upgrade Assistant again. Contact Oracle Support Services if you are unable to correct the problem.

SDP-25856
Oracle User Messaging Service schema status is invalid.

Category:
Process

Cause:
Specified Oracle User Messaging Service database schema was invalid.

Action:
Check the error messages in the log file. Correct the problem before running the Upgrade Assistant again. Contact Oracle Support Services if you are unable to correct the problem.

SDP-25857
Error in Oracle User Messaging Service schema readiness check.

Category:
Process

Cause:
An unexpected error occurred during Oracle User Messaging Service schema readiness check.

Action:
Check the error messages in the log file. Correct the problem before running the Upgrade Assistant again. Contact Oracle Support Services if you are unable to correct the problem.

SDP-26200
An exception was caught.

Category:
Process

Cause:
An exception has occurred.

Action:
Check the stack trace for more details.

SDP-26205
Exception while getting content from message with id={0}

Category:
Process

Cause:
Exception while getting content from message.

Action:
Check the stack trace for more details.

SDP-26213
Exception while sending message - from: {0} to: {1}.

Category:
Process

Cause:
Exception while sending message.

Action:
Check stack trace and recipient address

SDP-26214
Caught an exception in XMPP driver while sending out a message.

Category:
Process

Cause:
An exception was caught.

Action:
Check the stack trace for more details.

SDP-26225
Received Error Message. Code: {0} Text: {1}.

Category:
Process

Cause:
Received Error Message.

Action:
Check error code and error message.

SDP-26236
Got an exception when receiving a message.

Category:
Process

Cause:
Got an exception when receiving a message.

Action:
Check to see if the message is well-formed.

30

SOAPWS-JMS-225010 to SOAPWS-JMS-225012

SOAPWS-JMS-225010
Error starting the JMS listener {0} {1}

Category:
WebService

Cause:
Cannot start JMS listener

Action:
Please check the JMS configuration.

SOAPWS-JMS-225011
Error closing JMS connection {0} {1}

Category:
WebService

Cause:
Cannot close JMS connection

Action:
Please check the JMS configuration.

SOAPWS-JMS-225012
JMS onMessage exception {0} {1}

Category:
WebService

Cause:
Exception in processing JMS onMessage

Action:
Please check the exception cause details.

31

TCM-00006 to TCM-99009

TCM-00006
The NameId for the request is not valid.

Category:
Requests/Responses

Cause:
The NameId for a service request did not contain a Name or an Identifier.

Action:
Provide either a Name or an Identifier for a service request.

TCM-00007
The Id for the request is not valid.

Category:
Requests/Responses

Cause:
The document identifier for the request was not valid. The value supplied was null or an empty string.

Action:
Provide a valid document identifier for a document service request.

TCM-00008
The SectionFlags for the request are not valid.

Category:
Programmatic

Cause:
The wrong section flags were provided for the request.

Action:
Consult the API documentation for the proper section flags for the request.

TCM-00009
No session has been established.

Category:
Requests/Responses

Cause:
A session was expected to exist but was not found. This may occur if operations were called after logging out.

Action:
Log in and properly establish a session before attempting an operation.

TCM-00010
The version of the JRE used by the repository is too low to support Imaging. The required minimum is {0}. The repository is using {1}.

Category:
Configuration

Cause:
An attempt was made to establish a connection to a Content Server repository using the wrong JRE.

Action:
Upgrade the Content Server JRE to the minimum required version. The required version will be stated in the error message.

TCM-00013
Basic Authentication requires SSL.

Category:
Configuration

Cause:
An attempt was made to log in to imaging without using SSL, which is required.

Action:
Configure the imaging server for SSL and use https in the web services URL.

TCM-00015
Unable to find file {0}

Category:
Requests/Responses

Cause:
A file used for input could not be found.

Action:
Check the file path given in the error message and verify that it exists.

TCM-00016
Unable to open file {0}

Category:
Requests/Responses

Cause:
A file used for input could not be opened.

Action:
Check the file path given in the error message and verify that it is readable.

TCM-00020
Unable to authenticate user.

Category:
Requests/Responses

Cause:
Invalid credentials were supplied during login.

Action:
Provide valid credentials.

TCM-00021
This session is already established.

Category:
Requests/Responses

Cause:
An attempt was made to log in to a session that was already established.

Action:
Either use the existing session without logging in again, or log out to establish a new session.

TCM-00022
Service was called without credentials. The calling user cannot be authenticated.

Category:
Requests/Responses

Cause:
No credentials were provided for the service request.

Action:
Ensure the proper security credentials are applied to the login services.

TCM-00026
The requested definition is not found.

Category:
Requests/Responses

Cause:
The definition requested does not exist. The user does not have access to the definition.

Action:
Check the requested definition name or identifier for correctness. Check the user's access to the requested definition.

TCM-00027
User does not have permission to access this page.

Category:
Requests/Responses

Cause:
An attempt was made to access a definition page that the user does not have permission to access.

Action:
Check the user's permissions to the requested definition.

TCM-00028
The definition arrays supplied are empty.

Category:
Programmatic

Cause:
The definitions supplied for an import or export operation were empty arrays.

Action:
Make sure that the definitions arrays are filled in with valid definition NameIds.

TCM-00029
The {0} section is read-only and cannot be modified.

Category:
Programmatic

Cause:
At least one definition section specified for modify was read only and cannot be changed.

Action:
Remove the read-only section from the modify section set argument.

TCM-00030
Invalid date string: {0}

Category:
Requests/Responses

Cause:
The value that was parsed was not a supported date format.

Action:
Fix the value so that it is a supported date format.

TCM-00031
Invalid group, the groupPrincipalHolder is null!

Category:
Requests/Responses

Cause:
The groupPrincipalHolder is null!

Action:
If using Active Directory please verify that the security provider "Use Token Groups for Group Membership Lookup" is disabled or that the configured security provider user accessing Active Directory has tokenGroups privileges to the LDAP.

TCM-00040
Encountered exception initializing regions.

Category:
Requests/Responses

Cause:

Action:

TCM-00041
Cache is Ready = {0}

Category:
Requests/Responses

Cause:

Action:

TCM-00042
Cache Distributed = {0}

Category:
Requests/Responses

Cause:

Action:

TCM-00043
Imaging region exists.

Category:
Requests/Responses

Cause:

Action:

TCM-00044
Cache failed during initialization and may be disabled.

Category:
Requests/Responses

Cause:

Action:

TCM-00045
The cache age limit must be set to a positive number

Category:
Requests/Responses

Cause:

Action:

TCM-00102
Workflow Agent login failure.

Category:
Requests/Responses

Cause:
The Workflow Agent failed to log in.

Action:
Review the server logs for further information.

TCM-00103
Workflow Agent logout failure.

Category:
Requests/Responses

Cause:
The Workflow Agent failed to log out.

Action:
Review the server logs for further information.

TCM-00104
Workflow Agent error processing a message.

Category:
Requests/Responses

Cause:
An error occurred trying to process a worklfow agent message.

Action:
Review the server logs for further information.

TCM-00105
Document {0} returning to workflow agent queue for retry.

Category:
Requests/Responses

Cause:

Action:

TCM-00106
Workflow agent processing fault recorded for document {0}.

Category:
Requests/Responses

Cause:
An error was encountered processing a document. The document was identified in the error message. The error could be due to the workflow server being down.

Action:
Review the server logs for further information. The workflow agent will attempt to reprocess the document.

TCM-00107
Workflow agent cannot record fault for document {0}. Returning to workflow agent queue for retry.

Category:
Requests/Responses

Cause:
An error was encountered processing a document, and the workflow agent was unable to record the error as a fault. The document was identified in the error message.

Action:
Review the server logs for further information. The workflow agent will attempt to reprocess the document.

TCM-00110
Constructed Input Agent Bean.

Category:
Requests/Responses

Cause:

Action:

TCM-00111
Destroyed Input Agent Bean.

Category:
Requests/Responses

Cause:

Action:

TCM-00112
Input Agent encountered an error during shutdown.

Category:
Requests/Responses

Cause:

Action:

TCM-00113
An error occurred trying to read the Input Agent configuration.

Category:
Requests/Responses

Cause:
An error occurred trying to read the Input Agent Bean configuration.

Action:
Review the server logs for further information.

TCM-00114
An error occurred initializing the Input Agent Bean.

Category:
Requests/Responses

Cause:
An error occurred initializing the Input Agent Bean.

Action:
Review the server logs for further information.

TCM-00115
Beginning Input Agent initialization.

Category:
Requests/Responses

Cause:

Action:

TCM-00116
Input Agent initialization is complete.

Category:
Requests/Responses

Cause:

Action:

TCM-00118
Input Agent timer service is not initialized. Cannot continue.

Category:
Requests/Responses

Cause:
Input Agent timer service is not initialized.

Action:
Check the Application Server installation and restart the service.

TCM-00119
Input Agent configuration is empty. Cannot continue.

Category:
Requests/Responses

Cause:
Input Agent configuration is empty.

Action:
Check the JDBC connection and reboot the server.

TCM-00120
Input Agent time interval is not set. Cannot continue.

Category:
Requests/Responses

Cause:
Input Agent time interval is not set.

Action:
Update the Check Interval setting to a valid value in the WebCenter Content: Imaging config MBean.

TCM-00121
An error occurred resetting an input job.

Category:
Requests/Responses

Cause:
An error occurred resetting an input job.

Action:
Review the server logs for further information.

TCM-00122
An error occurred checking for work.

Category:
Requests/Responses

Cause:

Action:

TCM-00126
Beginning Input Agent servlet initialization.

Category:
Requests/Responses

Cause:

Action:

TCM-00127
Input Agent servlet initialization is complete.

Category:
Requests/Responses

Cause:

Action:

TCM-00128
The JMS Queue browser cannot be closed properly.

Category:
Requests/Responses

Cause:
There was a problem closing the JMS Queue browser.

Action:
Review the server logs for more information.

TCM-00129
Input Agent is checking for work.

Category:
Requests/Responses

Cause:

Action:

TCM-00130
Beginning Input Agent Cleanup timer initialization.

Category:
Requests/Responses

Cause:

Action:

TCM-00131
Input Agent Cleanup timer initialization is complete.

Category:
Requests/Responses

Cause:

Action:

TCM-00132
Input Agent Cleanup is looking for expired images.

Category:
Requests/Responses

Cause:

Action:

TCM-00150
Constructed Input Filing MDB.

Category:
Requests/Responses

Cause:

Action:

TCM-00151
Destroyed Input Filing MDB.

Category:
Requests/Responses

Cause:

Action:

TCM-00152
Error while unregistering Input Filing MDB.

Category:
Requests/Responses

Cause:
An error occurred while unregistering Input Filing MDB.

Action:
Review the server logs for further information.

TCM-00153
Beginning filing for Input {0} and data source {1}.

Category:
Requests/Responses

Cause:

Action:

TCM-00154
Filing {0} completed successfully with {1} documents processed successfully out of {2} documents.

Category:
Requests/Responses

Cause:

Action:

TCM-00155
Filing {0} failed with {1} documents that failed to index.

Category:
Requests/Responses

Cause:

Action:

TCM-00156
Error indexing document number {0}.

Category:
Requests/Responses

Cause:
An error occurred while indexing a document.

Action:
Review the server logs for further information.

TCM-00157
An error occurred filing file {0}.

Category:
Requests/Responses

Cause:
An error occurred while filing a job.

Action:
Review the server logs for further information.

TCM-00158
Failed to cancel job.

Category:
Requests/Responses

Cause:
Failed to cancel a job.

Action:
Review the server logs for further information.

TCM-00159
Cannot determine what Input Source to use for job and cannot abort or cancel job.

Category:
Requests/Responses

Cause:

Action:

TCM-00160
Input Filing MDB failed to log out.

Category:
Requests/Responses

Cause:

Action:

TCM-00161
Failed to resume filing for data source {0} and batch {1}.

Category:
Requests/Responses

Cause:

Action:

TCM-00162
Failed to load Batch for new filing.

Category:
Requests/Responses

Cause:

Action:

TCM-00163
An error occurred while completing a batch.

Category:
Requests/Responses

Cause:

Action:

TCM-00164
Input Agent cannot find WLS Runtime MBean server.

Category:
Requests/Responses

Cause:

Action:

TCM-00165
The Input {0} is currently marked offline, so the request to process data source {1} is being rolled back

Category:
Requests/Responses

Cause:

Action:

TCM-00166
Resubmitting job for input source {0} due to error: {1}

Category:
Requests/Responses

Cause:

Action:

TCM-00170
Constructed Ticket Agent MDB.

Category:
Requests/Responses

Cause:

Action:

TCM-00171
Destroyed Ticket Agent MDB.

Category:
Requests/Responses

Cause:

Action:

TCM-00172
Beginning Ticket Agent servlet initialization.

Category:
Requests/Responses

Cause:

Action:

TCM-00173
Ticket Agent servlet initialization is complete.

Category:
Requests/Responses

Cause:

Action:

TCM-00174
An error occurred while restarting the Ticket Agent MDB.

Category:
Requests/Responses

Cause:
An error occurred while restarting the Ticket Agent MDB.

Action:
Review the server logs for further information.

TCM-00175
Ticket Agent timer service is not initialized. Cannot continue.

Category:
Requests/Responses

Cause:
Ticket Agent timer service is not initialized.

Action:
Check the Application Server configuration and restart the service

TCM-00176
An error occurred while initializing Ticket Agent MDB.

Category:
Requests/Responses

Cause:
An error occurred while initializing Ticket Agent MDB.

Action:
Review the server logs for further information.

TCM-00177
Beginning Ticket Agent initialization.

Category:
Requests/Responses

Cause:

Action:

TCM-00178
Ticket Agent initialization is complete.

Category:
Requests/Responses

Cause:

Action:

TCM-00179
Encountered an error while attempting to clean up expired tickets from the imaging system

Category:
Requests/Responses

Cause:

Action:

TCM-00196
Encountered an error while logging out of the imaging system

Category:
Requests/Responses

Cause:

Action:

TCM-00197
Beginning initialization of the Rendering Cache

Category:
Requests/Responses

Cause:

Action:

TCM-00198
Initialization of the Rendering Cache is complete

Category:
Requests/Responses

Cause:

Action:

TCM-00199
WebCenter Content: Imaging API error encountered, attempting restart.

Category:
Requests/Responses

Cause:
A WebCenter Content: Imaging API error was encountered.

Action:
Review the server logs for further information.

TCM-00777
A database error occurred.

Category:
Data

Cause:
An operation caused an unexpected database error.

Action:
Review the logs for the specifics of the database error. You may need to contact Oracle Support Services to resolve the issue.

TCM-00787
A repository error occurred.

Category:
Requests/Responses

Cause:
An unknown error has occurred with a repository.

Action:
Review the logs to determine the cause of the error. You may need to contact Oracle Support Services to resolve the issue.

TCM-00788
The following error is reported by the repository: {0}

Category:
Requests/Responses

Cause:
An error has occurred with a repository. The details of the error were part of the error message.

Action:
Review the message and logs to determine the cause of the error. You may need to contact Oracle Support Services to resolve the issue.

TCM-00789
The Content Server returned no data. This may be an indication of an incorrect server port number, or a connection failure during a request.

Category:
Configuration

Cause:
The Content Server repository returned no data, and it did so without an error. The Content Server was shut down in the middle of a request

Action:
Check the server port used for the connection and make sure it is a correct value. A common mistake is to provide the web server port. The value should match the Content Server IntradocServerPort setting. Check to make sure the Content Server is still up and running.

TCM-00791
The Content Server does not have a defined document profile field.

Category:
Configuration

Cause:
The Content Server repository did not have a defined profile trigger.

Action:
Configure a profile trigger in the Content Server. This can be accomplished by setting EnableIdcProfileField=1 and then restarting the Content Server.

TCM-00792
Your search has timed out. Timeouts are typically a result of searching with value(s) that can be matched by too many documents. Please try refining your search value(s) to narrow the number of documents that will be returned.

Category:
Requests/Responses

Cause:
A timeout error has occurred with a repository.

Action:
The specified query required too much time to complete and timed out while awaiting a response from the database.

TCM-00888
Validation Error.

Category:
Requests/Responses

Cause:
Data supplied to an imaging operation was invalid.

Action:
Correct the invalid data and resend.

TCM-00998
Multiple errors in a subsystem. {0}

Category:
Requests/Responses

Cause:
An error occurred in UOA that has multiple causes.

Action:
Review the logs for the errors. You may need to contact Oracle Support Services to resolve the issue.

TCM-00999
Error in a subsystem. {0}

Category:
Requests/Responses

Cause:
An error occurred in a repository, or when communicating with a workflow server.

Action:
Review the logs for the error. You may need to contact Oracle Support Services to resolve the issue.

TCM-01008
Unable to add application. The application category already exists.

Category:
Requests/Responses

Cause:
A UOA category of the same name already exists.

Action:
Contact Oracle Support Services.

TCM-01009
Unable to add application. The system document category does not exist.

Category:
Requests/Responses

Cause:
A UOA system document category has not been properly configured.

Action:
Ensure that the UOA repository has been initialized prior to creating applications.

TCM-01010
Unable to add application. The application documents folder already exists

Category:
Requests/Responses

Cause:
A UOA folder used for storage of application documents already exists.

Action:
Contact Oracle Support Services.

TCM-01017
Unable to update application. User does not have proper permissions.

Category:
Requests/Responses

Cause:
The current user has not been given the proper rights to update the application.

Action:
Refrain from modifying the application until the proper rights have been granted.

TCM-01018
Unable to delete application. The application contains documents.

Category:
Requests/Responses

Cause:
A user attempted to delete an application that still contains documents.

Action:
Delete all of the documents belonging to the application before attempting to delete the application.

TCM-01019
Another application operation is in progress. Try again later.

Category:
Requests/Responses

Cause:
A user attempted an application operation while another operation was in progress.

Action:
Wait 30 to 60 seconds and try again.

TCM-01020
This document operation is blocked by repository database inconsistencies. This may be due to concurrent application activity (for example, adding, modifying, or deleting an application). Try again later.

Category:
Requests/Responses

Cause:
A user attempted a document operation while the repository metadata table is in an inconsistent state. This could be due to a concurrent application operation.

Action:
Wait 30 to 60 seconds and try again.

TCM-01021
Failed to delete application in the repository. Contact an administrator for assistance.

Category:
Requests/Responses

Cause:
The system was not able to delete the application in the repository.

Action:
Review the logs for possible reasons.

TCM-01025
The NameId for the application does not contain a name or an identifier.

Category:
Requests/Responses

Cause:
The NameId for the application did not contain a name or an identifier.

Action:
Provide either a name or an identifier for the application.

TCM-01027
Lifecycle policy action specification, {0}, is not found.

Category:
Configuration

Cause:
The specified lifecycle policy action specification was not found in the UOA system.

Action:
Ensure that UOA is configured with the specified lifecycle policy action specification.

TCM-01028
Lifecycle policy date rule specification, {0}, is not found.

Category:
Configuration

Cause:
The specified lifecycle policy date rule specification was not found in the UOA system.

Action:
Ensure that UOA is configured with the specified lifecycle policy date rule specification.

TCM-01031
Missing a closing delimiter near "{0}".

Category:
Programmatic

Cause:
An opening delimiter ([) was found without a closing delimiter (]) in a Format Value function.

Action:
Review the Format Value text and ensure that there are matching delimiters.

TCM-01032
The workflow mapping function, {0}, is not a known function.

Category:
Programmatic

Cause:
A workflow Format Value contains a reference to an unknown function.

Action:
Review the API documentation for valid workflow function names.

TCM-01033
The workflow mapping function, {0}, is not allowed.

Category:
Programmatic

Cause:
A workflow function was specified in a location where it is not allowed.

Action:
Review the API documentation for valid workflow function usage.

TCM-01034
The workflow mapping function, {0}, has too many parameters.

Category:
Programmatic

Cause:
Too many parameters were provided for a workflow function.

Action:
Review the API documentation for valid workflow function usage.

TCM-01035
The workflow mapping function, {0}, requires a parameter.

Category:
Programmatic

Cause:
A workflow function was missing a required parameter.

Action:
Review the API documentation for valid workflow function usage.

TCM-01036
The workflow mapping function, {0}, does not accept a parameter.

Category:
Programmatic

Cause:
A parameter was provided to a workflow function that does not accept parameters.

Action:
Review the API documentation for valid workflow function usage.

TCM-01037
Null applications are not allowed.

Category:
Requests/Responses

Cause:
A null value was provided to a function that requires an application definition.

Action:
Provide a valid, non-null, application definition.

TCM-01039
The document is not allowed to be updated. It is read-only.

Category:
Requests/Responses

Cause:
The current user was not given the proper rights to update documents belonging to the application.

Action:
Refrain from modifying the application's documents until the proper rights have been granted.

TCM-02001
The requested document, id={0}, was not found.

Category:
Requests/Responses

Cause:
Document does not exist, or user does not have proper rights.

Action:
Verify document and user rights before attempting to access the document.

TCM-02003
The requested id, {0}, is not a document.

Category:
Requests/Responses

Cause:
Item returned by UOA is not a document.

Action:
Retry action against document.

TCM-02004
The document is currently locked by {0}

Category:
Requests/Responses

Cause:
Document is already locked.

Action:
Unlock document and try again.

TCM-02005
The document cannot be locked

Category:
Requests/Responses

Cause:
Document could not be locked to the user.

Action:
Verify user permissions and try again.

TCM-02006
The document is locked to another user: {0}

Category:
Requests/Responses

Cause:
Document is locked to another user.

Action:
Administrator or current document owner must unlock document.

TCM-02007
The document cannot be unlocked

Category:
Requests/Responses

Cause:
Document could not be unlocked by the user.

Action:
Verify the document state and try to unlock document again.

TCM-02008
The documents cannot be deleted because they are in a legislative hold in the repository.

Category:
Requests/Responses

Cause:
An attempt was made to delete documents that are in legislative hold.

Action:
Refrain from deleting documents until legislative holds have been removed.

TCM-02011
The document is not locked to the requester

Category:
Requests/Responses

Cause:
Document is not locked to the user.

Action:
Document must be unlocked before trying again.

TCM-02012
An invalid file was received "{0}".

Category:
Requests/Responses

Cause:
Invalid file was given to the API.

Action:
Verify the file and try again.

TCM-02014
Original document field values cannot be retrieved.

Category:
Requests/Responses

Cause:
Document fields could not be retrieved from UOA.

Action:
Verify user permissions and try again.

TCM-02015
Invalid field value for field "{0}".

Category:
Requests/Responses

Cause:
Could not resolve field for field value.

Action:
Verify application definition and try again.

TCM-02016
The file name is invalid. A file name must have a file extension, cannot be empty or null, and cannot include any path information.

Category:
Requests/Responses

Cause:
An invalid file name was provided for the document.

Action:
Enter a valid file name. Do not include any path information.

TCM-02019
Replacement or versioning is not allowed for this document.

Category:
Requests/Responses

Cause:
Document cannot be updated.

Action:
Document update is not allowed for documents in this application.

TCM-02020
Page Management functions are valid only with TIFF document types.

Category:
Requests/Responses

Cause:
Cannot modify because it is not a tiff document.

Action:
Page management functions are only valid for tiff documents.

TCM-02021
A page management operation cannot complete because of a system error.

Category:
Requests/Responses

Cause:
Page operation failed. System error occurred accessing image.

Action:
Verify and try again.

TCM-02022
The supporting content key is invalid.

Category:
Requests/Responses

Cause:
Supporting content key for the document is invalid.

Action:
Enter unique supporting content key.

TCM-02023
Cannot find the field {0}, id {1} in the application context.

Category:
Requests/Responses

Cause:
Document missing field information. Cannot create document.

Action:
Enter correct field information.

TCM-02024
Invalid upload token.

Category:
Requests/Responses

Cause:
Token for the uploaded file is invalid.

Action:
Use valid token.

TCM-02025
Cannot move document. Source and destination application are the same.

Category:
Requests/Responses

Cause:
Source and destination applications are the same.

Action:
Specify different application when moving documents.

TCM-02026
The document data provided to the service is invalid

Category:
Requests/Responses

Cause:
Invalid data stream was given to the API

Action:
Check the file and make sure it is valid

TCM-02027
The requested supporting content for the document, id={0}, key={1}, was not found.

Category:
Requests/Responses

Cause:
Supporting content key does not return any results.

Action:
Verify supporting content key is correct.

TCM-02028
This document consists of multiple versions. The destination application does not support versioning.

Category:
Requests/Responses

Cause:
Document consists of multiple versions. Destination application does not support versioning.

Action:
Choose a destination application that supports versioning.

TCM-02029
Write permissions are required on the document in order to set supporting content.

Category:
Requests/Responses

Cause:
Write permissions are required on the document in order to set supporting content.

Action:
Verify user permissions are set correctly for the document

TCM-02030
View permissions are required on the document in order to get supporting content.

Category:
Requests/Responses

Cause:
View permissions are required on the document in order to get supporting content.

Action:
Verify user permissions are set correctly for the document

TCM-02031
Copy failed, document not found.

Category:
Requests/Responses

Cause:
Document does not exist or user does not have rights to copy.

Action:
Verify document and user rights before attempting to copy.

TCM-02032
Moved failed, no document move rights

Category:
Requests/Responses

Cause:
Document does not exist or user does not have rights to move.

Action:
Verify document and user rights before attempting to move.

TCM-02033
Update failed, no document update rights

Category:
Requests/Responses

Cause:
Document does not exist or user does not have rights to update

Action:
Verify document and user rights before attempting to update.

TCM-02034
The document version must be greater than 0.

Category:
Requests/Responses

Cause:
Document version must be greater than 0

Action:
Set version to a value greater than 0

TCM-02035
File, "{0}," is zero length. Documents must have a file length greater than zero.

Category:
Requests/Responses

Cause:
File with zero length was given to the API.

Action:
Check the file and make sure its length is greater than zero.

TCM-02036
Either a valid file, a valid field list, or both, are required to update a document.

Category:
Requests/Responses

Cause:
Invalid file and field list has been passed into update document.

Action:
Verify valid file and field list have been passed in.

TCM-02037
The supporting content key already exists.

Category:
Requests/Responses

Cause:
Supporting content key for the document already exists.

Action:
Enter unique supporting content key.

TCM-02038
The document identifier, {0}, is invalid.

Category:
Requests/Responses

Cause:
The document identifier for the request was invalid.

Action:
Enter a valid document identifier.

TCM-02039
The document action could not be performed because the document is under records management in the repository.

Category:
Requests/Responses

Cause:
A user attempted a document operation while the document is under records management in the repository.

Action:
Refrain from operating or a records managed document.

TCM-02040
The file timeout {0} is invalid for document operations. The timeout must be greater than or equal to 0.

Category:
Requests/Responses

Cause:
The timeout for document operations must be greater than or equal to 0. The current value is invalid

Action:
Set timeout value to greater than or equal to 0.

TCM-03004
Annotation list is Null

Category:
Requests/Responses

Cause:
Annotation list to search is Null.

Action:
Ensure that annotation list object is not null.

TCM-03012
An error occurred while saving annotations

Category:
Requests/Responses

Cause:
An error occurred while saving annotations.

Action:
A repository-specific exception occurred when saving annotations. Check the repository-specific exception stack for diagnostic details.

TCM-03018
Error reading file {0}

Category:
Requests/Responses

Cause:
An error occurred while reading the file

Action:
Check the file and its permissions

TCM-03024
An annotation cannot be accepted due to the lack of permission.

Category:
Requests/Responses

Cause:
An annotation cannot be accepted due to the lack of permission.

Action:
Ensure that all annotations' security settings are compatible with the user's permission set.

TCM-03029
Invalid document Id saving/retrieving document annotations: {0}

Category:
Requests/Responses

Cause:
Invalid document Id when saving/retrieving document annotations.

Action:
Supply a valid document Id.

TCM-03035
User does not have sufficient annotation permission in the destination application.

Category:
Requests/Responses

Cause:
User does not have sufficient annotation permission in the destination application.

Action:
Ensure that the user has sufficient annotation permissions in the destination application for any annotations to be applied.

TCM-03036
An error occurred retrieving annotations for the document.

Category:
Requests/Responses

Cause:
Annotations for the specified document could not be retrieved.

Action:
A repository-specific exception occurred when saving annotations. Check the repository-specific exception stack for diagnostic details.

TCM-03037
Error saving annotations to a document version that is not the current version.

Category:
Requests/Responses

Cause:
An attempt was made to save annotations to a document version that is not the current version.

Action:
Annotations cannot be saved to previous versions of a document.

TCM-04001
A valid Input name or ID must be specified for the operation to complete.

Category:
Requests/Responses

Cause:
The requested Name and ID of the input to be deleted is invalid.

Action:
Provide a valid Name or ID for the Input to delete

TCM-04002
No Input definitions found for the input name {0}, ID {1}.

Category:
Requests/Responses

Cause:
The specified Input could not be found in the system.

Action:
Recheck the Input name or ID.

TCM-04003
Multiple Input definitions found for input name {0}, ID {1}.

Category:
Requests/Responses

Cause:
The name or ID provided has multiple Input Definitions associated with it.

Action:
Examine the system for data integrity.

TCM-04004
Input name is empty

Category:
Requests/Responses

Cause:
The name of the Input is invalid

Action:
Make sure the Input name is not missing, blank or only strings

TCM-04005
Invalid Input properties

Category:
Requests/Responses

Cause:
The properties section of the Input Definition was invalid.

Action:
Make sure that the Input properties section is not missing.

TCM-04006
Input source must be set

Category:
Requests/Responses

Cause:
The Input Definition is missing the input source

Action:
Provide a valid input source

TCM-04008
The Input's Source Properties section is invalid

Category:
Requests/Responses

Cause:
The Input Source Properties section of the Input definition is invalid.

Action:
Check to make sure the properties are set and have valid values.

TCM-04009
The specified data source is invalid.

Category:
Requests/Responses

Cause:
The Data Source in the Input Source Properties was invalid.

Action:
Make sure that the data source is specified and has a valid value.

TCM-04010
The Input Source in the definition is invalid

Category:
Requests/Responses

Cause:
The Input Source is invalid.

Action:
Check the Input Source and make sure it's valid.

TCM-04012
The Input does not define any mappings, or one or more mappings are invalid

Category:
Requests/Responses

Cause:
The Input Mappings section of the Input definition is invalid.

Action:
Check to make sure mappings have been set and map between valid fields.

TCM-04013
The provided StateUpdates are invalid.

Category:
Requests/Responses

Cause:
No valid values were provided for updating the input's state.

Action:
Ensure that the Input.StateFlags provided for all updates are valid.

TCM-04014
The specified input's state cannot be updated

Category:
Requests/Responses

Cause:
Updating the current state for the specified input failed.

Action:
Ensure that the specified input exists, and that the new state settings are valid.

TCM-04015
The specified input definition cannot be updated

Category:
Requests/Responses

Cause:
Updating the provided sections of the input definition failed.

Action:
Ensure values have been properly provided for all of the definition sections you are attempting to update

TCM-04016
The provided Input object is null

Category:
Requests/Responses

Cause:
The Input object provided is null.

Action:
Provide a valid Input, with appropriate sections completed.

TCM-04017
Cannot find the configuration file for the local Input Server settings.

Category:
Requests/Responses

Cause:
The configuration file specified could not be found.

Action:
Ensure that the specified file exists, and that the user has the correct permissions

TCM-04018
An error was encountered loading the configuration file

Category:
Requests/Responses

Cause:
The configuration file couldn't be opened.

Action:
Ensure that the specified file exists, and that the user has the correct permissions

TCM-04019
Failed to get the Input Source list

Category:
Requests/Responses

Cause:
Could not get a listing of available Input Sources

Action:
Check the jar configuration files and make sure they are defined correctly

TCM-04020
The Input Path for CSV filings has not been configured properly.

Category:
Requests/Responses

Cause:
The Input Path is missing from the CSV configuration file.

Action:
Check the CSV configuration file to make sure it exists and is correct.

TCM-04021
Input Source {0} cannot be found

Category:
Requests/Responses

Cause:
The requested Input Source was not found

Action:
Check the /META-INF/input-agent-config.properties file of Input Source jar and make sure it's correct.

TCM-04022
Error loading Input Source Plugin

Category:
Requests/Responses

Cause:
An error occurred while trying to load the input source

Action:
Check the class path to make sure the input source can be loaded.

TCM-04023
The stage path cannot be initialized for processing

Category:
Requests/Responses

Cause:
The stage directory could not be initialized.

Action:
Check the permissions to the Input Directory.

TCM-04024
The file {0} cannot be moved to the directory {1}

Category:
Requests/Responses

Cause:
The input file could not be properly staged for processing.

Action:
Check the input file and stage path for proper permissions.

TCM-04025
the configuration folder path cannot be found

Category:
Requests/Responses

Cause:
The configuration file wasn't found

Action:
Make sure all the configuration files are in place and are correct.

TCM-04027
One or more of the Input Fields are mapped to multiple Application or system fields

Category:
Requests/Responses

Cause:
One of the input mappings is assigned to multiple locations.

Action:
Remove all duplicate mappings from the definition

TCM-04028
The requested input field isn't mapped to an application field

Category:
Requests/Responses

Cause:
The requested mapping wasn't found in the index

Action:
Pass in the correct input field name

TCM-04029
The parser has not been initialized, call StartFiling

Category:
Requests/Responses

Cause:
Start Filing wasn't called on the parser

Action:
Call start filing

TCM-04030
The input file cannot be properly closed

Category:
Requests/Responses

Cause:
A file error closing the input file

Action:
Check file permissions and input file

TCM-04032
The specified data range is invalid

Category:
Requests/Responses

Cause:
Start and end positions for examining the data source are invalid

Action:
Request a valid range

TCM-04033
Date value does not conform to the short, medium or long format type for the current locale, date cannot be parsed.

Category:
Requests/Responses

Cause:
Date format does not parse to a valid date

Action:
Pass in a date value that conforms to the locales short, medium or long format

TCM-04034
Cannot get the local machine name

Category:
Requests/Responses

Cause:
The host could not be determined.

Action:
Check the error code.

TCM-04035
Application {0}({1}) cannot be found. Verify that the application exists and you have permissions to it.

Category:
Requests/Responses

Cause:
The application that the mapping is pointing to could not be found

Action:
Check to make sure that you have access to that Application or that the Application is still valid.

TCM-04036
The mapping for input section {0} is invalid

Category:
Requests/Responses

Cause:
The application field specified in the Input mapping is invalid.

Action:
Check to make sure that the specified application field ID is set and exists in the target application

TCM-04038
Application "{0}" cannot be loaded. Verify that the application exists and you have permissions to it.

Category:
Requests/Responses

Cause:
The Application specified could not be loaded

Action:
Check to make sure that the Application exists and you have access to it.

TCM-04039
The Sample Path for CSV filings has not been configured correctly.

Category:
Requests/Responses

Cause:
The sample path is not configured correctly

Action:
Make sure the sample path configuration value is set to a valid location

TCM-04040
The sample path {0} cannot be initialized for processing

Category:
Requests/Responses

Cause:
The sample path could not be created

Action:
Make sure the sample path is valid, accessible by the server and has the correct permissions

TCM-04041
The get contents request for data source {0} cannot be processed because it is not a sample source.

Category:
Requests/Responses

Cause:
User attempted to get sample data for a data source that wasn't a sample source.

Action:
Use only sample sources when requesting source contents.

TCM-04045
The Input {0} has {1} unfinished batches open against it and cannot be deleted

Category:
Requests/Responses

Cause:
There is an open batch against the Input

Action:
Wait for the filing to finish before deleting the Input

TCM-04046
Input {0} has active or pending jobs and cannot be deleted

Category:
Requests/Responses

Cause:
There are queued jobs for the Input

Action:
Wait for all the work to finish before deleting the Input

TCM-04047
The Input Agent service cannot be accessed to process commands.

Category:
Requests/Responses

Cause:
The Input Agent could not be found to communicate with.

Action:
Validate that the Imaging.ear is started and running properly.

TCM-04048
Content cannot be read from the data source {0}

Category:
Requests/Responses

Cause:
The data source content could not be read

Action:
Examine the inner exception for more information

TCM-04049
The StateUpdate value passed to the ModifyState call is invalid

Category:
Requests/Responses

Cause:
The state update object passed to the API request is invalid

Action:
Check the StateUpdate object to make sure it's properly formed

TCM-04050
No Application is specified in the Input Mapping section

Category:
Requests/Responses

Cause:
The input definition does not have the destination application id set

Action:
Set the Application Id in the Input mapping section

TCM-04051
The input file locale has already been set and cannot be changed

Category:
Requests/Responses

Cause:
A locale has already been specified for the input file and cannot be changed

Action:
Remove the extra locale command from the input file

TCM-04052
The locale identifier {0} is not a valid locale identifier

Category:
Requests/Responses

Cause:
The locale parameter specified in the locale command is invalid

Action:
Specify a valid locale

TCM-04053
The locale command can only be used at the beginning of the input file

Category:
Requests/Responses

Cause:
The locale command was used after the start of the file

Action:
Only use the locale command at the top of the input file

TCM-04054
The start position {0} or range {1} specified are invalid. Make sure that the start position and range values are positive and that the range is greater than the start.

Category:
Requests/Responses

Cause:
The start position or range values are invalid.

Action:
Examine the calling code and ensure that the start position and range are greater than 0 and that the range is greater than the start position

TCM-04055
The value {0} provided for the Input Server state update is the wrong type or is out of range.

Category:
Requests/Responses

Cause:
The value provided to the StateFlag request was invalid.

Action:
Check to make sure the correct type has been passed for the StateFlag and that the value is in the correct range.

TCM-05003
The UOA Repository search failed

Category:
Requests/Responses

Cause:
No Search was found matching the selected search id

Action:
Re-list the available searches

TCM-05004
The Search Definition supplied was null

Category:
Requests/Responses

Cause:
A null value was provided for the search.

Action:
Provide a non-null search.

TCM-05005
The Search Name supplied was null or empty

Category:
Requests/Responses

Cause:
Search name was null or empty

Action:
Provide a valid search name.

TCM-05006
The search supplied has a results formatting structure that is null.

Category:
Requests/Responses

Cause:
The search formatting structure was null or empty.

Action:
Provide a valid search formatting structure.

TCM-05007
The requested search, {0}, was not found.

Category:
Requests/Responses

Cause:
The search requested does not exist. The user does not have access to the search.

Action:
Check the requested search name or ID for correctness. Check the user's access to the requested search.

TCM-05009
A required search parameter, {0}, was missing.

Category:
Requests/Responses

Cause:
A required parameter was missing for this search

Action:
Resubmit the search with the required parameter(s).

TCM-05012
Invalid operator used in search parameter

Category:
Requests/Responses

Cause:
An invalid operator was used in the search parameter

Action:
Use an operator defined in the operator picklist.

TCM-05013
A Search Argument was provided that was not defined in the search

Category:
Requests/Responses

Cause:
A search argument was provided that was not defined in the search

Action:
Provide only those arguments defined in the search.

TCM-05014
The search argument contains a value for a read-only parameter

Category:
Requests/Responses

Cause:
A search argument was provided containing a value for a read-only parameter

Action:
Remove the read only parameter from the search arguments.

TCM-05015
There are multiple search arguments for a single parameter.

Category:
Requests/Responses

Cause:
Multiple search arguments were provided for a single parameter.

Action:
Verify that the number of the search arguments matches the number of parameters.

TCM-05016
The type for the search argument does not match the search parameter type.

Category:
Requests/Responses

Cause:
A search argument with an incorrect type was provided for a search parameter.

Action:
Use an argument with a type that matches the search parameter type.

TCM-05017
The entered value, {0}, is < 1. The default maximum rows returned value must be >= 1.

Category:
Requests/Responses

Cause:
A value less than 1 was entered for the defalut value for the maximum number of rows to be returned from a search.

Action:
Use a value that is greater than or equal to 1.

TCM-05018
The entered value, {0}, is invalid for panel placement. Enter 1, 2, or 3.

Category:
Requests/Responses

Cause:
An invalid value is entered for placement of a panel.

Action:
Enter 1, 2, or 3

TCM-05019
Entered value, {0}, for zoom level in not valid, is < 1. Pick values from 1,2,3,20,50,100,150,200.

Category:
Requests/Responses

Cause:
An invalid value is entered for zoom level.

Action:
Pick values from 1,2,3,20,50,100,150,200.

TCM-06001
Unable to retrieve Role: {0}

Category:
Requests/Responses

Cause:
The role specified was not found.

Action:
Add the role to the security provider or use a defined role.

TCM-06002
Access is denied.

Category:
Requests/Responses

Cause:
User does not have access to the requested information.

Action:
Update the user's permissions.

TCM-06004
Unable to locate the security member specified.

Category:
Requests/Responses

Cause:
The security member does not exist.

Action:
Add the security member to the security provider.

TCM-06009
Unable to locate the system group: {0}

Category:
Requests/Responses

Cause:
The specific system group was not found.

Action:
Add the system group using the security provider.

TCM-06010
Agent users are only allowed to log in through the agent services.

Category:
Requests/Responses

Cause:
An agent user was used to attempt a log in.

Action:
Log in using a different user.

TCM-06011
Users assigned the 'admin' group either directly or indirectly are not allowed to log into WebCenter Content: Imaging.

Category:
Requests/Responses

Cause:
Users assigned the 'admin' group are not allowed to log in because the repository attaches special meaning to this group.

Action:
Log in using a different user or remove the 'admin' group association with this user.

TCM-06012
The User {0} does not exist in the policy store.

Category:
Requests/Responses

Cause:
The security provider was unable to locate the user specified.

Action:
Enter the user into the security provider.

TCM-06013
Unable to locate the default policy store.

Category:
Requests/Responses

Cause:
Unable to load the policy store.

Action:
The default policy store has not been configured correctly.

TCM-06014
The user's principal does not contain a subject.

Category:
Requests/Responses

Cause:
The principal object was not found in the user token.

Action:
Make sure the principal exists within the user token.

TCM-06015
The Group {0} does not exist in the policy store.

Category:
Requests/Responses

Cause:
The authentication provider was unable to locate the group specified.

Action:
Enter the group into the authentication provider.

TCM-06016
Access to modify the security of this definition is denied.

Category:
Requests/Responses

Cause:
The user was unable to modify the security of this definition.

Action:
Update the user permissions with the modify permission.

TCM-06017
Access to modify the document security of this definition is denied.

Category:
Requests/Responses

Cause:
The user was unable to modify the document security of this definition.

Action:
Update the user permissions to include the modify document security permission.

TCM-06018
Unable to create resource in policy store for: {0}

Category:
Requests/Responses

Cause:
Unable to create resource in policy store for: {0}

Action:
The default policy store has not been configured correctly.

TCM-06019
Bad principal type returned by Policy Store for "{0}": {1}

Category:
Requests/Responses

Cause:
Bad principal type returned by Policy Store for "{0}": {1}

Action:
The default policy store has not been configured correctly.

TCM-06020
No Security Profile was found during system startup.

Category:
Requests/Responses

Cause:
No Security Profile was found during system startup.

Action:
The system has not been configured correctly to use a security profile.

TCM-06021
The Security Profile failed to initialize during system startup: {0}

Category:
Requests/Responses

Cause:
The Security Profile failed to initialize during system startup: {0}

Action:
The system has not been configured correctly to use the security profile.

TCM-07001
Requested output format does not support multiple pages

Category:
Requests/Responses

Cause:
An output format was requested that does not support multiple pages.

Action:
Choose a different output format, or restrict the output request to a single page.

TCM-07002
Invalid Document reference in render request

Category:
Requests/Responses

Cause:
The supplied documentObject parameter is null

Action:
Provide a valid Document object reference when calling RenderManager.render().

TCM-07003
Invalid input stream in render request

Category:
Requests/Responses

Cause:
The supplied sourceStream parameter is null

Action:
Provide a valid InputStream object reference when calling RenderManager.render().

TCM-07004
No render options in render request

Category:
Requests/Responses

Cause:
The supplied options parameter is null

Action:
Provide a valid RenderOptions object reference when calling RenderManager.render().

TCM-07008
This document contains annotations that prevent the user from accessing this document in its raw format

Category:
Requests/Responses

Cause:
This document contains annotations that prevent the user from accessing this document in its raw format.

Action:
Export to TIFF with the annotations burned in or contact your administrator for access to the native format.

TCM-07009
The mime-type of "{0}" is not supported.

Category:
Requests/Responses

Cause:
An unsupported mime-type was requested.

Action:
Correct the document content (mime) type.

TCM-07011
An I/O error occurred during image translation.

Category:
Requests/Responses

Cause:
An I/O error occurred during image translation.

Action:
Check permissions and free space in the server temp directory.

TCM-07012
An error occurred when loading an image for translation.

Category:
Requests/Responses

Cause:
An error occurred when loading an image for translation.

Action:
Image handling components failed to load the image. Check nested exception details for diagnostic information.

TCM-07013
There was an error reading TIFF headers. The file may be corrupt.

Category:
Requests/Responses

Cause:
There was an error reading TIFF headers. The file may be corrupt.

Action:
Check permissions and free space in the server temp directory.

TCM-07014
An error occurred when processing image manipulation commands during save.

Category:
Requests/Responses

Cause:
An error occurred when processing image manipulation commands during save.

Action:
Image handling components failed to load the image. Check nested exception details for diagnostic information.

TCM-07016
An I/O error occurred creating the output for this request.

Category:
Requests/Responses

Cause:
An I/O error occurred creating the output for this request.

Action:
Check for nested exceptions, permissions and free space in the server temp directory.

TCM-07017
No document specified when burning annotations into image

Category:
Requests/Responses

Cause:
No document specified when burning annotations into image.

Action:
Specify a valid document path to the document source.

TCM-07019
The requested scale is not within the allowed value range; {0}-{1}

Category:
Requests/Responses

Cause:
The requested scale is not within the allowed value range.

Action:
Provide a scale factor value within the supported range.

TCM-07020
The requested fit rectangle is empty

Category:
Requests/Responses

Cause:
The requested fit rectangle cannot be empty.

Action:
Provide a non-null, non-empty rectangle.

TCM-07021
Unable to get annotation permissions from document

Category:
Requests/Responses

Cause:
Annotation permissions could not be determined.

Action:
Contact the system administrator.

TCM-07022
The supplied document object is null

Category:
Requests/Responses

Cause:
The cache was given a null document object.

Action:
Contact the system administrator.

TCM-07023
A cache exception occurred. {0}

Category:
Requests/Responses

Cause:
A RenderPageCache exception occurred: {0}

Action:
Check the cache exception code and nested exception details for diagnostic information.

TCM-07024
A RenderPageCache object was not found

Category:
Requests/Responses

Cause:
An error occurred retrieving an object from the cache.

Action:
Check the directory and nested exception details for diagnostic information.

TCM-07025
Page number must be a positive value.

Category:
Requests/Responses

Cause:
Page number must be a positive value.

Action:
Provide page number values greater than zero.

TCM-07026
Bounding rectangle specified is empty.

Category:
Requests/Responses

Cause:
Bounding rectangle specified is empty.

Action:
Provide a non-empty rectangle definition.

TCM-07027
The supplied outputType parameter is null.

Category:
Requests/Responses

Cause:
The supplied outputType parameter is null.

Action:
Provide a value for the outputType parameter.

TCM-07028
An invalid argument was provided to method {0}({1}).

Category:
Requests/Responses

Cause:
An invalid argument was provided to a method call.

Action:
Provide non-null values. Page specifications must be > 0.

TCM-07029
Cannot burn the annotations into the destination file {0}.

Category:
Requests/Responses

Cause:
An error occurred while burning annotations into the destination tiff.

Action:
Check the embedded exception for the specific cause of the error.

TCM-07030
An invalid path was specified. Provide a non-null, non-empty string or an existing directory path.

Category:
Requests/Responses

Cause:
An invalid path was set for the render CacheLocation.

Action:
Provide an empty value or an existing directory path.

TCM-07031
An invalid value was specified. Check spelling and character case.

Category:
Requests/Responses

Cause:
An invalid value was specified.

Action:
Check spelling and character case.

TCM-07033
An invalid value was specified. Enter a value from 0 to 100.

Category:
Requests/Responses

Cause:
An invalid value was specified.

Action:
Enter a value from 0 to 100.

TCM-07036
An error occurred during document translation.

Category:
Requests/Responses

Cause:
An error occurred during document translation.

Action:
Check nested exception details for diagnostic information.

TCM-07037
An error occurred retrieving a rendition to create a copy with.

Category:
Requests/Responses

Cause:
An error occurred retrieving a rendition to create a copy with.

Action:
The rendering system was unable to generate a rendition of the document. Check the nested exception details for diagnostic information.

TCM-07038
The requested page number is beyond the document page range.

Category:
Requests/Responses

Cause:
The requested page number is beyond the document page range.

Action:
Specify a valid page number that is within the range of document pages.

TCM-07039
This document content is sealed. IRM content cannot be rendered.

Category:
Requests/Responses

Cause:
This document content is sealed. IRM content cannot be rendered.

Action:
Download the native document and use Oracle IRM Desktop to access this file content.

TCM-07040
RenderAgent is not initialized. Requests cannot be processed.

Category:
Requests/Responses

Cause:
RenderAgent is not initialized. Requests cannot be processed.

Action:
RenderAgentBean initialization failed. Check the nested exception details for diagnostic information.

TCM-07041
The specified viewer cache days value of {0} is invalid. The number of days must be greater than or equal to 0 and less than or equal to 30.

Category:
Requests/Responses

Cause:
The cache days value that was given is invalid.

Action:
Check the cache days parameter sent to the MBean is in the valid range of 0-30.

TCM-07042
The credential for storing the encryption key was not found. It must exist prior to enabling viewer cache encryption.

Category:
Requests/Responses

Cause:
The credential for storing the encryption key was not found.

Action:
Verify the credential exists prior to turning on cache encryption.

TCM-07043
An error occurred while queuing the cache request. The Oracle WebCenter Content: Imaging Viewer Cache application (imaging-vc) was not found.

Category:
Requests/Responses

Cause:
The viewer cache application deployment was not found.

Action:
Check the domain configuration an verify that the viewer cache application is properly deployed.

TCM-08001
System folder "{0}" is not found

Category:
Installation

Cause:
A UOA system folder was not found.

Action:
Ensure proper UOA system installation.

TCM-08005
User does not have create permissions.

Category:
Requests/Responses

Cause:
An attempt was made to create documents in an application where the user does not have create permission.

Action:
Ensure user is granted create permission or refrains from creating documents.

TCM-08006
User does not have delete permissions.

Category:
Requests/Responses

Cause:
An attempt was made to delete documents in an application where the user does not have delete permission.

Action:
Ensure user is granted delete permission or refrains from deleting documents.

TCM-08008
User does not have permission to access the "{0}" system folder.

Category:
Requests/Responses

Cause:
An attempt was made to access a system folder, but the user does not have the proper permission.

Action:
Ensure user is granted the proper permission or refrains from accessing the folder

TCM-08009
Workspace "{0}" is not found.

Category:
Installation

Cause:
A workspace in UOA was not found.

Action:
Ensure proper UOA system installation.

TCM-08010
Interrupted during login retry. Stopping further login attempts.

Category:
Requests/Responses

Cause:
An agent thread was interrupted while attempting to log in.

Action:
Check to see if the thread was shut down.

TCM-08011
Unable to log in to the WebCenter Content: Imaging system

Category:
Requests/Responses

Cause:
An error was encountered while logging in to the imaging system.

Action:
Check the imaging logs and any inner exception for details on why the login failed.

TCM-09010
An error occurred trying to list storage policy volumes.

Category:
Requests/Responses

Cause:
An error occurred trying to obtain a list of storage volumes from a repository.

Action:
Ensure that the repository is running and functioning correctly.

TCM-09011
An error occurred trying to determine the default storage policy volume.

Category:
Requests/Responses

Cause:
An error occurred trying to determine the default volume for a repository.

Action:
Ensure that the repository is running and functioning correctly.

TCM-09012
An error occurred trying to list retention policies.

Category:
Requests/Responses

Cause:
An error occurred trying to list retention policies for a repository.

Action:
Ensure that the repository is running and functioning correctly.

TCM-09013
An error occurred trying to validate a volume.

Category:
Requests/Responses

Cause:
An error occurred trying to validate a volume for a repository.

Action:
Ensure that the repository is running and functioning correctly.

TCM-09014
An error occurred trying to validate a storage group.

Category:
Requests/Responses

Cause:
An error occurred trying to validate a storage group for a repository.

Action:
Ensure that the repository is running and functioning correctly.

TCM-09015
An error occurred trying to validate a retention policy.

Category:
Requests/Responses

Cause:
An error occurred trying to validate a retention policy for a repository.

Action:
Ensure that the repository is running and functioning correctly.

TCM-09016
An error occurred trying to find a retention policy.

Category:
Requests/Responses

Cause:
An error occurred trying to find a retention policy in a repository.

Action:
Ensure that the repository is running and functioning correctly.

TCM-09017
An error occurred trying to discover lifecycle policies.

Category:
Requests/Responses

Cause:
An error occurred trying to find lifecycle policies in a UOA repository.

Action:
Ensure that UOA is running and functioning correctly.

TCM-09018
An error occurred trying to create a storage policy.

Category:
Requests/Responses

Cause:
An error occurred trying to create a storage policy in a UOA repository.

Action:
Ensure that UOA is running and functioning correctly.

TCM-09019
An error occurred trying to delete a storage policy.

Category:
Requests/Responses

Cause:
An error occurred trying to delete a storage policy in a UOA repository.

Action:
Ensure that UOA is running and functioning correctly.

TCM-09020
An error occurred trying to load action specifications.

Category:
Requests/Responses

Cause:
An error occurred trying to load action specifications in a UOA repository.

Action:
Ensure that UOA is running and functioning correctly.

TCM-09021
An error occurred trying to load date rule specifications.

Category:
Requests/Responses

Cause:
An error occurred trying to load date rule specifications in a UOA repository.

Action:
Ensure that UOA is running and functioning correctly.

TCM-09030
Error connecting to workflow system.

Category:
Requests/Responses

Cause:
An error occurred trying to connect to a workflow server.

Action:
Ensure that the workflow server is running and functioning correctly.

TCM-09032
Error determining workflow composite services. The composite DN is {0}.

Category:
Requests/Responses

Cause:
An error occurred trying to determine services for a composite.

Action:
Ensure that the workflow server is running and functioning correctly.

TCM-09033
Error getting workflow system components.

Category:
Requests/Responses

Cause:
An error occurred trying to determine components for a workflow server.

Action:
Ensure that the workflow server is running and functioning correctly.

TCM-09034
Error reading workflow service WSDL document {0}

Category:
Requests/Responses

Cause:
An error occurred trying to read the workflow service WSDL document.

Action:
Ensure that the workflow server is running and functioning correctly. If WSDL protocol is HTTPS, ensure SSL configurations for both imaging and workflow server are correct.

TCM-09035
Error accessing credential key "{0}"

Category:
Requests/Responses

Cause:
An error occurred access a credential key in the credential store.

Action:
Ensure that the correct key was provided and the credentials are properly configured in the credential store.

TCM-09036
Unsupported workflow service. Service definition exceeds hierarchical depth of {0}.

Category:
Requests/Responses

Cause:
Workflow service Definition exceeded the maximum hierarchical depth given in the error message.

Action:
Select a different workflow service operation.

TCM-09037
Unsupported workflow service. Service definition contains choice elements.

Category:
Requests/Responses

Cause:
Workflow service definition contains unsupported choice elements.

Action:
Select a different workflow service operation.

TCM-09038
Unable to map one or more values to workflow payload nodes for document {0}. The missing nodes are: {1}.

Category:
Requests/Responses

Cause:
Workflow payload may have changed after worflow was configured.

Action:
Reconfigure the workflow.

TCM-09040
Unable to obtain a Subject that is required to enable sending tenant information to a workflow server.

Category:
Requests/Responses

Cause:
No Subject was found or created.

Action:
Contact your system administrator and review the server logs for any related information.

TCM-09041
Unable to obtain an ApplSession that is required to enable sending tenant information to a workflow server.

Category:
Requests/Responses

Cause:
No ApplSession was created.

Action:
Contact your system administrator and review the server logs for any related information.

TCM-09042
Unable to find the required libraries to create an ApplSession.

Category:
Requests/Responses

Cause:
The required Appl Core libraries could not be found.

Action:
Contact your system administrator and review the server's deployment libraries.

TCM-09043
The ImagingTenant configuration setting is empty or has a bad value.

Category:
Requests/Responses

Cause:
The ImagingTenant configuration setting is empty or has a bad value.

Action:
Set the ImagingTenant configuration setting to a valid tenant identifier.

TCM-09044
There is no user name configured to create an ApplSession.

Category:
Requests/Responses

Cause:
There is no user name configured to create an ApplSession.

Action:
Change the application workflow configuration to set a csf.key.

TCM-09045
There is no csf.key mapping in an application's workflow configuration.

Category:
Requests/Responses

Cause:
There is no csf.key mapping in an application's workflow configuration.

Action:
Change the application workflow configuration to set a csf.key.

TCM-10001
An error was encountered while searching the repository for closed batches

Category:
Requests/Responses

Cause:
An error occurred while searching the CDB repository for closed batches

Action:
Check the associated exception and CDB log files for errors

TCM-10002
Batch ID {0} for Application {1} has been closed and cannot be indexed into, operation aborted

Category:
Requests/Responses

Cause:
The user requested to index a document into a batch that has been closed

Action:
Check the calling code to determine why the batch was committed too early

TCM-10003
Batch ID {0} for Application {1} has already been committed

Category:
Requests/Responses

Cause:
The user attempted to commit a batch that was already closed

Action:
Check the calling code to determine why the batch was committed twice

TCM-10004
No Batches found for the Batch Name {0}, ID {1}.

Category:
Requests/Responses

Cause:
The Batch could not be found in the CDB system

Action:
Check the NameId passed to the API and make sure it exists

TCM-10005
The target application specified in the Batch object is invalid

Category:
Requests/Responses

Cause:
The target application specified in the Batch object is invalid

Action:
Check the Batch object and ensure that the target application is valid

TCM-10006
No Batches found for Batch ID {0}

Category:
Requests/Responses

Cause:
The Batch could not be found in the CDB system

Action:
Check the NameId passed to the API and make sure it exists

TCM-10007
The Batch provided is null

Category:
Requests/Responses

Cause:
The specified Batch is null

Action:
Pass a valid Batch object to the API call

TCM-10008
The requested Batch ID {0} has documents indexed into it and cannot be removed.

Category:
Requests/Responses

Cause:
The requested batch could not be deleted because it had documents indexed to it.

Action:
Double check that the correct batch was requested and verify that it is empty.

TCM-11001
Turning on or off the auditing configuration failed

Category:
Requests/Responses

Cause:
An FDK Exception was generated by the UOA system when attempting to set the auditing configuration.

Action:
Correct the underlying UOA repository configuration.

TCM-11002
The search of the audit history failed.

Category:
Requests/Responses

Cause:
The search of the repository for auditing data resulted in a repository exception.

Action:
Correct the error identified in the underlying repository exception.

TCM-14000
The provided URL ticket is invalid.

Category:
Requests/Responses

Cause:
The provided URL ticket was determined to be invalid.

Action:
Pass a valid ticket to the API call.

TCM-14001
The URL ticket is set to expire but does not have an expiration time set.

Category:
Requests/Responses

Cause:
The URL ticket was set to expire, but did not have an expiration time set.

Action:
Turn off the expiration or set the expiration time for the ticket.

TCM-14002
No parameters exist in the provided URL ticket.

Category:
Requests/Responses

Cause:
No parameters were specified in the URL ticket.

Action:
Add at least 1 parameter to the URL ticket.

TCM-14003
The parameter for value {0} in the URL ticket is missing a name.

Category:
Requests/Responses

Cause:
The ticket parameter did not have a name defined.

Action:
Assign a name to the ticket parameter.

TCM-14004
The parameter {0} does not have a value assigned to it.

Category:
Requests/Responses

Cause:
Ticket parameter did not have a value defined.

Action:
Assign a value to the parameter.

TCM-14005
The provided ticket identifier is invalid.

Category:
Requests/Responses

Cause:
The ticket identifier was invalid.

Action:
Specify a valid ticket identifier.

TCM-14006
A ticket with the identifier {0} cannot be found.

Category:
Requests/Responses

Cause:
The provided ticket identifier could not be found in the system.

Action:
Verify that the ticket identifier is correct.

TCM-14007
The ticket agent is not processing requests.

Category:
Requests/Responses

Cause:
The ticket agent service could not be located.

Action:
Verify that the imaging ear deployment is valid and is running.

TCM-14008
A create ticket request that is set to expire has an invalid expiration date.

Category:
Requests/Responses

Cause:
An attempt was made to create a ticket with an expiration date in the past.

Action:
Fix the create request so that the ticket has a date in the future.

TCM-14009
The ticket parameter name {0} is longer than the maximum allowed name length of 200.

Category:
Requests/Responses

Cause:
An attempt was made to create a ticket parameter with a name that is too long.

Action:
Shorten the parameter name to be less than 200 characters.

TCM-14010
The ticket parameter value {0} is longer than the maximum allowed value length of 200.

Category:
Requests/Responses

Cause:
An attempt was made to create a ticket parameter with a value that is too long.

Action:
Shorten the parameter value to be less than 200 characters.

TCM-15000
The provided Connection object is null

Category:
Requests/Responses

Cause:
No Connection was provided

Action:
Call the method with a valid Connection object

TCM-15001
Failed to remove the connection as it has the following application dependencies: {0}.

Category:
Requests/Responses

Cause:
Connection is still in use

Action:
Remove the dependent applications prior to removing the connection

TCM-15002
Attempting to create or modify a connection with the following details: {0}.

Category:
Requests/Responses

Cause:

Action:

TCM-15003
Connection successfully created or modified.

Category:
Requests/Responses

Cause:

Action:

TCM-15004
An error occurred during an attempt to create or modify a connection. {0}.

Category:
Requests/Responses

Cause:
An error occurred creating a connection.

Action:
See the log for details of the error and correct the problem before trying again.

TCM-16001
The import data supplied is null.

Category:
Requests/Responses

Cause:
Data supplied for the import operation was null.

Action:
Verify the import data is valid and not null.

TCM-16002
Import/Export requires administrator privileges in order to run.

Category:
Requests/Responses

Cause:
The user supplied does not have the proper permissions.

Action:
Verify the user is an administrator.

TCM-70007
The specified Input Source {0} cannot be found.

Category:
Requests/Responses

Cause:
An Input Source name was provided that does not match any sources that the Input Server has loaded.

Action:
Check the Input Source name.

TCM-70008
The server interval setting is missing from the configuration file.

Category:
Requests/Responses

Cause:
The server interval configuration is missing from the configuration file.

Action:
Check the configuration file.

TCM-70009
The Input Definition is invalid.

Category:
Requests/Responses

Cause:
The Input parameter was null.

Action:
Supply a valid Input to the call.

TCM-70010
No data was provided for the mapped document file section.

Category:
Requests/Responses

Cause:
A document file was not provided.

Action:
Add a patch to the desired document image file to the input file.

TCM-70013
Cannot find the field {0}, id {1} in the Application, check the Application and Input for proper mappings.

Category:
Requests/Responses

Cause:
The application field for a section mapping couldn't be found

Action:
Check to make sure the application field hasn't been deleted and examine the Input field mappings

TCM-70015
The Batch {0} given to Input Agent is marked closed and cannot be used to add objects to.

Category:
Requests/Responses

Cause:
The Batch that Input Agent was assigned to file to is marked as closed

Action:
Restart the entire input file as a new filing.

TCM-70016
A check interval setting of {0} is invalid. Specify a value between 1 and 60.

Category:
Requests/Responses

Cause:
An invalid check interval was provided.

Action:
Set the interval between 1 and 60.

TCM-70017
An error occurred while manipulating the Input Filing Queue

Category:
Requests/Responses

Cause:
An error occurred while trying to browse the input queue

Action:
Check the embedded error for more details

TCM-70018
The value {0} is too large or small to fit in a numeric field.

Category:
Requests/Responses

Cause:
The value that was parsed was outside the valid range for a numeric type.

Action:
Fix the value so that it is inside the numeric data type range.

TCM-70020
The retry count setting {0} is invalid, enter a value between 1 and 100

Category:
Requests/Responses

Cause:
An invalid retry count was set into the MBean

Action:
Try using a retry value between 1 and 100

TCM-70021
The input value {0} could not be converted to a date. It does not conform to a short, medium or long date format for the current locale.

Category:
Requests/Responses

Cause:
An invalid date string was parsed from the input file

Action:
Correct the value so that it is in the correct date format

TCM-70022
The input value {0} could not be converted to a number.

Category:
Requests/Responses

Cause:
An invalid decimal string was parsed from the input file

Action:
Correct the value so that it is a valid number

TCM-70023
The input value {0} could not be converted to a decimal.

Category:
Requests/Responses

Cause:
An invalid date string was parsed from the input file

Action:
Correct the value so that it is a valid decimal

TCM-70024
An existing set of state information was found for the job {0} for Input {1} and cannot be duplicated. Input Agent is ignoring this request.

Category:
Requests/Responses

Cause:
Existing filing State information was found for the data source and Input and cannot be added twice.

Action:
Clear out all filings for the Input and allow the server to remove the extra state information.

TCM-70025
There is no valid document id to run the command on.

Category:
Requests/Responses

Cause:
The command could not be executed because the last document failed to index and no document id was specified.

Action:
Either fix the indexing error for the last document in the file or specify a document id to apply the command to.

TCM-70026
The supporting content key value was not found in the command.

Category:
Requests/Responses

Cause:
No key value was specified for the supporting content command.

Action:
Add a supporting content key to the supporting content command.

TCM-70027
The supporting content file path was not found in the command.

Category:
Requests/Responses

Cause:
The supporting content file name was not found.

Action:
Add the supporting content's full path to the command.

TCM-70028
The annotation file path was not found in the command.

Category:
Requests/Responses

Cause:
The annotation file name was not found.

Action:
Add the annotation file's full path to the command.

TCM-70029
The file cleanup expire days {0} is invalid. The number of days must be greater than or equal to 0 and less than or equal to 30.

Category:
Requests/Responses

Cause:
An invalid file cleanup expire day count was provided.

Action:
Provide an integer value in the range from 0 to 30 days.

TCM-70030
The tenant {0} is not valid

Category:
Requests/Responses

Cause:
An invalid tenant name was given.

Action:
Call the MBean with a valid tenant name that is not empty.

TCM-70031
The specified directory {0} is not a valid input directory.

Category:
Requests/Responses

Cause:
An invalid input directory was provided.

Action:
Provide a directory that is in the input directories list.

TCM-70032
The specified directory {0} is not one of the current Input Directories.

Category:
Requests/Responses

Cause:
The input directory that was provided is not in the current set of Input Directories.

Action:
Specify an Input Directory that is currently in the Input Directory set.

TCM-70033
The Input Directory {0} already has tenant {1} associated with it. Only one tenant can be associated with a directory at one time

Category:
Requests/Responses

Cause:
The input directory that was provided is already associated with a tenant.

Action:
Either delete the existing tenant first or associate the tenant with a different directory.

TCM-70034
Tenant {0} is currently assigned to input directory {1}. A tenant can only be associated with one directory.

Category:
Requests/Responses

Cause:
The tenant name provided is already associated with an input directory.

Action:
Either delete the existing tenant association or provide a unique tenant for the directory.

TCM-71002
The input source cannot set up the stage path correctly.

Category:
Requests/Responses

Cause:
The plugin encountered an error trying to set up the stage path.

Action:
Check to make sure the plugin can get to the machine name.

TCM-71003
Encountered error {0} while writing to the error file {1}

Category:
Requests/Responses

Cause:
An error occurred while writing to the error file.

Action:
Check the disk, path, and user permissions.

TCM-71004
The failed path {0} cannot be initialized for processing.

Category:
Requests/Responses

Cause:
The failed directory could not be initialized.

Action:
Check the permissions to the Input Directory and subdirectories.

TCM-71005
The file mask {0} is invalid because it contains path information in addition to the file mask. Remove the additional path information.

Category:
Requests/Responses

Cause:
The file mask has at least a partial path in it, which is not supported.

Action:
Remove the path portion of the file mask

TCM-71006
Cannot lock the input file {0} for processing.

Category:
Requests/Responses

Cause:
The input file could not be locked for processing.

Action:
Make sure another program isn't accessing the file.

TCM-71007
Cannot save file {0} since a file with the same name already exists there

Category:
Requests/Responses

Cause:
The user tried to upload a sample file with a name that already exists in the directory

Action:
Specify a unique name before uploading to the sample directory

TCM-71008
Cannot save the given file to the sample directory. Error message provided is: {0}.

Category:
Requests/Responses

Cause:
The sample file could not be saved to the sample directory.

Action:
Check the embedded exception for more details.

TCM-71009
The state file {0} cannot be created.

Category:
Requests/Responses

Cause:
The state file could not be created.

Action:
Check the stage directory to make sure that it has enough space and the correct permissions.

TCM-71010
The state file {0} cannot be updated.

Category:
Requests/Responses

Cause:
The state file could not be updated.

Action:
Check the stage directory to make sure that it has enough space and the correct permissions.

TCM-71011
No instances of the delimiter {0} were found in the current line of the input file

Category:
Requests/Responses

Cause:
The delimiter is missing for the input file line

Action:
Check the delimiter in the Input Definition and make sure it's the correct one for the input file

TCM-71012
The file {0} is 0 bytes in length and cannot be processed.

Category:
Requests/Responses

Cause:
An attempt was made to process an input file that has 0 bytes.

Action:
Process a file with data in it.

TCM-71013
The file state information cannot be loaded for data source {0}

Category:
Requests/Responses

Cause:
Error loading the filing state for the input file

Action:
Examine the database and any inner exceptions to determine the cause of the load error

TCM-71014
The filing state information cannot be found for data source {0}.

Category:
Requests/Responses

Cause:
The filing state could not be found for the input file

Action:
Check the database to make sure that the filing state entry still exists

TCM-90001
Conversation ID not found: {0}

Category:
Session

Cause:
Conversation identifier was not found in current session.

Action:
Start over, if the problem persists, contact your system administrator.

TCM-90002
Task Context is unavailable.

Category:
Session

Cause:
Workflow Task Context was not available.

Action:
Start over. If the problem persists, contact your system administrator.

TCM-90003
Invalid Task ID: {0}

Category:
Session

Cause:
Task ID provided was not available in request or in cache.

Action:
Start over, if the problem persists, contact your system administrator.

TCM-90004
Task {0} already acquired by {1}

Category:
Session

Cause:
The chosen workflow task has already been acquired by another user.

Action:
Select another task and try again.

TCM-90005
Username cannot be changed.

Category:
Session

Cause:
Username cannot be changed without changing sessions.

Action:
Logout and log in with the desired user.

TCM-90006
Username cannot be null.

Category:
Session

Cause:
Username passthrough is set to TRUE. Username is required with this setting.

Action:
Provide a valid username and try again.

TCM-91000
An unexpected system error occurred. Contact your system administrator for support.

Category:
Programmatic

Cause:
An error has occurred.

Action:
Contact Oracle Support Services for help determining the cause.

TCM-91001
SolutionParameter not found for: SolutionNamespace={0}, CommandNamespace={1}, ConfigurationNamespace={2}, ParameterKey={3}

Category:
Configuration

Cause:
SolutionParameter was not found in "AXF_SOLUTION_PARAMETERS" table for the provided SolutionNamespace, CommandNamespace, ConfigurationNamespace, ParameterKey.

Action:
Verify that the "AXF_SOLUTION_PARAMETERS" table contains this value.

TCM-91002
SystemParameter not found for: Namespace={0}, ParameterType={1}, ParameterKey={2}

Category:
Configuration

Cause:
SystemParameter was not found in "AXF_SYSTEM_PARAMETERS" table for the provided SolutionNamespace, ParameterType, ParameterKey.

Action:
Verify that the "AXF_SYSTEM_PARAMETERS" table contains this value.

TCM-91003
There was an error with the supplied XPath: {0}

Category:
Configuration

Cause:
There was an error with the provided XPath

Action:
Verify XPATH configuration in "AXF_XPATH_ATTRIBUTE" table

TCM-91004
SolutionNamespace cannot be modified in an existing Conversation

Category:
Programmatic

Cause:
SolutionNamespace cannot be modified in an existing Conversation identifier.

Action:
Start a new Conversation identifier for the new SolutionNamespace.

TCM-91005
SolutionNamespace not configured: {0}

Category:
Configuration

Cause:
Provided SolutionNamespace was not configured in the "AXF_SOLUTIONS" table.

Action:
Ensure the SolutionNamespace entered has a matching entry in the "AXF_SOLUTIONS" table.

TCM-91006
System cache failure

Category:
Process

Cause:
The system cache failed.

Action:
Contact Oracle Support Services with all log information, and restart your server.

TCM-91007
Unable to load command {0} using configured command class {1}

Category:
Configuration

Cause:
Failed to create the instance of command provided in the "AXF_COMMANDS" table

Action:
Check configuration entry in "AXF_COMMANDS" table and verify that the matching class has been loaded in the application server

TCM-91008
Unable to find command "{0}" in the database.

Category:
Configuration

Cause:
Unable to find the provided command in "AXF_COMMANDS" table

Action:
Check the command entry in "AXF_COMMANDS" table

TCM-91009
Unable to create named connection: {0}

Category:
Configuration

Cause:
Failed to find the workflow connection information from the Imaging system

Action:
Check configuration entry in "AXF_SOLUTION_ATTRIBUTE" table and the corrresponding entry in "CONNECTION_DETAILS" table.

TCM-91010
Unable to create named connection without a provider specified

Category:
Configuration

Cause:
Failed to create named connection without a provider specified

Action:
Check configuration entry in "AXF_SOLUTION_ATTRIBUTE" table and the corrresponding entry in "CONNECTION_DETAILS" table.

TCM-91014
Solution Parameter Key {0} has an invalid value of {1} for Solution Namespace = {2} -- Command Namespace = {3} -- Configuration Namespace = {4}

Category:
Configuration

Cause:
The Solution Parameter Key has an invalid value in "AXF_SOLUTION_PARAMETERS" for the provided SolutionNamespace, ParameterType, ParameterKey.

Action:
Verify the configuration parameter in "AXF_SYSTEM_PARAMETERS" table for the Redirect Command.

TCM-91015
Error executing pl/sql procedure: {0} using connection: {1} for conversation: {2}

Category:
Configuration

Cause:
Failed to execute pl/sql procedure in UpdateTaskFromProcedureCommand.

Action:
Verify the configuration parameter in "AXF_SYSTEM_PARAMETERS" table for UpdateTaskFromProcedureCommand.

TCM-91016
Unable to retrieve database connection using JNDI name: {0}

Category:
Configuration

Cause:
Failed to retrieve the JNDI name from Application Server.

Action:
Verify the configuration parameter in "AXF_SYSTEM_PARAMETERS" table and ensure that JNDI is setup correctly in application server.

TCM-91017
Unable to retrieve the web root context from the application server.

Category:
Configuration

Cause:
Failed to retrieve the web root context from the application server.

Action:
Contact Oracle Support Services for help determining cause.

TCM-91018
SolutionNamespace attribute not found for: Namespace={0}, ParameterKey={1}

Category:
Configuration

Cause:
SolutionNamespace attribute was not found in the "AXF_SOLUTION_ATTRIBUTES" table for the BPEL_CONNECTION key.

Action:
Check the "AXF_SOLUTION_ATTRIBUTES" Table for the missing configuration.

TCM-91019
Command Parameter Key {0} has an invalid value of {1} for Solution Namespace = {2}, Command Namespace = {3}

Category:
Configuration

Cause:
Command Parameter Key is missing, invalid or empty for Solution Namespace.

Action:
Check the request parameters for command.

TCM-91020
Unable to decode the value in URL {0}

Category:
Configuration

Cause:
This encoding is not supported.

Action:
Check the encoding URL value.

TCM-91021
UCM unable to process the request - {0}

Category:
Configuration

Cause:
UCM is unable to process the request.

Action:
Check the UCM configuration.

TCM-91022
Please login as Admin user to perform the grant operation.

Category:
Session

Cause:
You are trying to perform the operation as a normal user. Only admin user can perform this operation.

Action:
Login as Admin user to perform this operation.

TCM-91023
Error accessing credential from CSF having key {0}

Category:
Configuration

Cause:
An error occurred while accessing a credential key in the credential store.

Action:
Ensure that the correct key was provided and the credentials are properly configured in the credential store.

TCM-91201
Unable to create sorts for workflow

Category:
Configuration

Cause:
Got the workflow exception while creating ordering

Action:
Check permission for workflow user and workflow log

TCM-91202
Unable to create predicates for workflow

Category:
Configuration

Cause:
Got the workflow exception while creating predicate

Action:
Check permission for workflow user and workflow log

TCM-91203
Payload column is not supported for filtering

Category:
Configuration

Cause:
Payload column is not supported for filtering

Action:
Remove payload from column filtering

TCM-91204
Attributes list is null or empty

Category:
Configuration

Cause:
Attributes list was null or empty

Action:
Supply at least one attribute

TCM-91205
Unable to find the value specified by xpath : {0}

Category:
Configuration

Cause:
Xpath found no matching element in the workload payload.

Action:
Verify the xpath value in "AXF_XPATH_ATTRIBUTES" table and that the workflow payload has a corresponding entry.

TCM-91206
Workflow admin userid is missing

Category:
Configuration

Cause:
Failed to get the workflow admin userid.

Action:
Check the workflow admin userid in CSF of application server for the matching alias key in "CONNECTION_DETAILS" table.

TCM-91207
Workflow admin password is missing

Category:
Configuration

Cause:
Failed to get the workflow admin password.

Action:
Check the workflow admin password in CSF of application server for the matching alias key in "CONNECTION_DETAILS" table.

TCM-91208
Workflow provider url is missing

Category:
Configuration

Cause:
Failed to get the workflow provider url.

Action:
Check the host and port in "CONNECTION_DETAILS" database table

TCM-91209
Unable to authenticate from workflow

Category:
Configuration

Cause:
Failed to authenticate with workflow server.

Action:
Check the workflow password in CSF of application server for the matching alias key in "CONNECTION_DETAILS" table.

TCM-91210
Unable to locate the security member specified

Category:
Configuration

Cause:
Failed to locate the security policy store.

Action:
Check the application server security configuration for authentication.

TCM-91211
Unable to locate the security store identity

Category:
Configuration

Cause:
Failed to locate the security store identity.

Action:
Check the application server security configuration for authentication.

TCM-91212
User {0} does not exist in the policy store.

Category:
Configuration

Cause:
User did not exist in the policy store.

Action:
Validate the user in the policy store.

TCM-91213
Unable to find the users in the policy store.

Category:
Configuration

Cause:
Failed to find the users in the policy store.

Action:
Verify that users exist in the policy store.

TCM-91214
Unable to find the roles in the policy store.

Category:
Configuration

Cause:
Failed to find the roles in the policy store

Action:
Check the application server security configuration for authentication

TCM-91215
Unable to find the policies in the policy store

Category:
Configuration

Cause:
Unable to find the policies in the policy store

Action:
Check the application server security configuration for authentication

TCM-91216
Unable to get the payload value for {0}

Category:
Configuration

Cause:
Failed to find an element in workflow payload using xpath

Action:
Verify the xpath value in "AXF_XPATH_ATTRIBUTES" table and the workflow payload has it

TCM-91217
Unable to load XML file '{0}' into XML Document

Category:
Configuration

Cause:
Failed to load XML file into XML Document to create the views.

Action:
Check the XML file permissions, format, and location on disk.

TCM-91218
View name is blank. It must be set to create a view. XML = {0}

Category:
Configuration

Cause:
View name was blank in the provided XML file.

Action:
Ensure that the view name is not empty in the XML file and node tag is /workflowSet/FFMSet/FFMDefinition/[<view name>]/FFMDetail/name.

TCM-91219
User name is blank. It must be set to create a view. XML = {0}

Category:
Configuration

Cause:
User name was blank, it must be set to create a view.

Action:
Ensure that the user name is not blank in the XML file and node tag is /workflowSet/viewSet/viewDefinition/[<view name>]//userList/user[<user>].

TCM-91220
User name or realm is blank. It must be set to create a view. XML = {0}

Category:
Configuration

Cause:
User name or realm was blank.

Action:
Ensure that the user name or realm is blank in the XML file.

TCM-91221
View Filter Column name is blank. It must be set to create a view. XML = {0}

Category:
Configuration

Cause:
View filter Column name was blank.

Action:
Ensure that the View Filter Column name is not blank in the XML file and node tag is /workflowSet/viewSet/viewDefinition/[<view name>]//userViewDetail/viewPredicate/clause[<position>]/column.

TCM-91222
Filter Operation is blank. It must be set to create a view. XML = {0}

Category:
Configuration

Cause:
Filter operation was blank.

Action:
Ensure that the Filter Operation is not blank in the XML file and node tag is /workflowSet/viewSet/viewDefinition/[<view name>]//userViewDetail/viewPredicate/clause[<position>]/operator.

TCM-91223
Filter Value is blank. XML = {0}

Category:
Configuration

Cause:
Filter value was blank.

Action:
Ensure that the Filter Value is not blank in the XML file and node tag is /workflowSet/viewSet/viewDefinition/[<view name>]//userViewDetail/viewPredicate/clause[<position>]/value.

TCM-91224
View Ordering column name is blank. XML = {0}

Category:
Configuration

Cause:
View ordering column name was blank.

Action:
Ensure that the View ordering column name is not blank in the XML file and node tag is /workflowSet/viewSet/viewDefinition/[<view name>]/userViewDetail/viewOrdering/clause[<position>]/column.

TCM-91225
View Ordering sort order is blank. XML = {0}

Category:
Configuration

Cause:
View ordering sort order was blank.

Action:
Ensure that the View ordering sort order is not blank in the XML file and node tag is /workflowSet/viewSet/viewDefinition/[<view name>]/userViewDetail/viewOrdering/clause[<position>]/sortOrder

TCM-91226
View Creation failed. XML = {0}

Category:
Configuration

Cause:
Failed to create the workflow View

Action:
Check user permissions to create the view and also check the workflow server log

TCM-91227
View Column name was blank. XML = {0}

Category:
Configuration

Cause:
View column name was blank, it must be set to create a view

Action:
View Column name is blank in the XML fileand node tag is /workflowSet/viewSet/viewDefinition/[<view name>]/userViewDetail/viewColumns/column[<position>]

TCM-91228
Unable to get the next task

Category:
Configuration

Cause:
Failed to retrieve the next task from workflow.

Action:
There may be no tasks for this user in workflow. Check the workflow server log.

TCM-91229
Unable to get list of tasks

Category:
Configuration

Cause:
Failed to get list of tasks

Action:
Workflow server may be not running or password is not correct in CSF. Check the workflow server log

TCM-91230
Unable to get list of views

Category:
Configuration

Cause:
Failed to get list of views

Action:
Workflow server may be not running or password is not correct in CSF. Check the workflow server log

TCM-91231
Unable to acquire task id {0} for user {1}

Category:
Configuration

Cause:
Failed to acquire task id from workflow.

Action:
The task may be already acquired by another user. Check the workflow server log.

TCM-91232
got the stale object from workflow

Category:
Configuration

Cause:
The task from workflow is out of date.

Action:
Log out from the application and try again.

TCM-91233
Unable to release task id {0} for user {1}

Category:
Configuration

Cause:
Failed to release task id from workflow.

Action:
Verify that the task can be acquired by the current user. Check the workflow server log.

TCM-91234
Unable to get the task detail for {0}

Category:
Configuration

Cause:
Failed to get the task detail from workflow.

Action:
Verify that the task is not already completed or purged in workflow.

TCM-91235
Task ID is null

Category:
Configuration

Cause:
Task Id was invalid or null.

Action:
Logout from application and try again.

TCM-91236
Unable to update the task for {0}

Category:
Configuration

Cause:
Failed to update the task in workflow.

Action:
Verify that the task may be acquired to update the payload. Check the workflow server log.

TCM-91237
Unable to update outcome for {0}

Category:
Configuration

Cause:
Failed to update the outcome in workflow.

Action:
Verify that the task may be acquired to update and that the outcome is valid. Check the workflow server log.

TCM-91238
Unable to acquire next available task for {0}

Category:
Configuration

Cause:
Failed to acquire next available task in workflow.

Action:
There may be no task for this user in the workflow. Check the workflow server log.

TCM-91239
Unable to update transaction ID in workflow payload

Category:
Configuration

Cause:
Failed to update transaction ID in workflow payload.

Action:
Verify Transaction field exists in the workflow payload.

TCM-91240
Unable to get comments

Category:
Configuration

Cause:
Failed to get comments from workflow.

Action:
Check the user's permission to get comments. Check the workflow server log.

TCM-91241
Comment is null.

Category:
Configuration

Cause:
The value of Comment was null.

Action:
Contact your system administrator.

TCM-91242
Unable to update comment in workflow

Category:
Configuration

Cause:
Failed to update the comment in workflow.

Action:
User may not have permission to update the comment. Check the workflow server log.

TCM-91243
Invalid URL for identity search URL

Category:
Configuration

Cause:
Received URL was Invalid for identity search

Action:
Check the URL for identity search in the database

TCM-91244
Unable to open the connection for identity search URL

Category:
Configuration

Cause:
Failed to open the connection for identity search URL.

Action:
Verify that the Web service is available for identity search.

TCM-91245
Unable to parse the XML date received from identity search URL

Category:
Configuration

Cause:
Failed to parse XML date received from identity search URL

Action:
Check the XML format of input file as it may be invalid. There may be some invalid tag in the file

TCM-91246
Unable to acquire the task. Task is not assigned to the group or is assigned to a different user.

Category:
Configuration

Cause:
Either the task was not assigned to the group or it was assigned to a different user.

Action:
Select another task from the list.

TCM-91247
Invalid Task attribute Key {0}

Category:
Configuration

Cause:
Received Invalid Task attribute Key.

Action:
Check your configuration or command for the attribute Key value

TCM-92002
Access is denied.

Category:
Requests/Responses

Cause:
User does not have access to the requested information.

Action:
Ensure user is defined with proper permissions.

TCM-92501
Duplicate annotation IDs exist

Category:
Requests/Responses

Cause:
Duplicate annotation IDs exist.

Action:
Ensure that each annotation has a unique id. Annotations cannot be added more than once.

TCM-92502
Null or empty annotation Id specified

Category:
Requests/Responses

Cause:
Null or empty annotation Id specified.

Action:
Ensure that annotation id is not null or empty.

TCM-92503
Null annotation object specified

Category:
Requests/Responses

Cause:
Invalid annotation object specified.

Action:
Ensure that annotation object is not null and has a valid Id.

TCM-92504
Annotation list is Null

Category:
Requests/Responses

Cause:
Annotation list to search is null.

Action:
Ensure that annotation list object is not Null.

TCM-92505
Annotation requires at least three points

Category:
Requests/Responses

Cause:
This annotation requires at least three points.

Action:
Provide three points, or use a LineAnnot object.

TCM-92506
There was an error deserializing an annotation file for this document.

Category:
Requests/Responses

Cause:
There was an error deserializing an annotation file for this document.

Action:
Check the nested exception details for diagnostic information.

TCM-92507
There was an error serializing an annotation file for this document.

Category:
Requests/Responses

Cause:
There was an error serializing an annotation file for this document.

Action:
Check the nested exception details for diagnostic information.

TCM-92508
An annotation list cannot be merged with itself

Category:
Requests/Responses

Cause:
An annotation list cannot be merged with itself.

Action:
Specify a unique list of annotations.

TCM-92509
A null value was supplied where an AnnotPoint object is expected.

Category:
Requests/Responses

Cause:
A null value was supplied where an AnnotPoint object is expected

Action:
Provide a valid AnnotPoint object

TCM-92510
The requested scale is not within the allowed value range; {0}-{1}

Category:
Requests/Responses

Cause:
The requested scale is not within the allowed value range.

Action:
Provide a proper scale value within the supported range.

TCM-92511
Page number must be a positive value.

Category:
Requests/Responses

Cause:
Page number must be a positive value.

Action:
Provide a page number that is greater than zero.

TCM-92512
Bounding rectangle specified is empty.

Category:
Requests/Responses

Cause:
Bounding rectangle specified is empty.

Action:
Supply a non-null, non-empty rectangle definition.

TCM-92513
The Document Store provider {0} cannot be loaded

Category:
Requests/Responses

Cause:
The specified Document Store could not be loaded

Action:
Make sure the provided class is correct and that it exists in the classpath

TCM-92514
Redact annotation cannot be assigned HIDDEN security.

Category:
Requests/Responses

Cause:
Redact annotation cannot be assigned HIDDEN security.

Action:
Use a different security setting.

TCM-92515
The page annotations include at least one annotation from another page.

Category:
Requests/Responses

Cause:
An attempt was made to replace page annotations with at least one annotation from a different page.

Action:
Supply only annotations for the page specified.

TCM-92516
Error deserializing annotations. InputStream is null.

Category:
Requests/Responses

Cause:
Error deserializing annotations. InputStream is null.

Action:
Supply a serialized annotation stream.

TCM-92517
Transformation process returned error code {0}.

Category:
Requests/Responses

Cause:
Transformation process returned an error code.

Action:
See the transformation process return code for diagnostic information.

TCM-92518
There was an error launching the external transformation process: {0} {1}

Category:
Requests/Responses

Cause:
There was an error launching the external transformation process

Action:
The transformation process failed unexpectedly. Check nested exception details for diagnostic information.

TCM-92521
The path specified for GdFontPath configuration is invalid.

Category:
Requests/Responses

Cause:
The path specified for GdFontPath configuration is invalid.

Action:
Provide a valid path to a directory containing True Type Fonts.

TCM-92522
There was an error reading TIFF headers. The file may be corrupt.

Category:
Requests/Responses

Cause:
There was an error reading TIFF headers. The file may be corrupt.

Action:
Check permissions and free space in the server temp directory.

TCM-92523
There was an error authenticating the user. Please login and retry.

Category:
Requests/Responses

Cause:
There was an error authenticating the user.

Action:
Check the nested exception details for diagnostic information.

TCM-92524
There was an error getting the document annotations. Please verify the document ID.

Category:
Requests/Responses

Cause:
There was an error getting the document annotations. Please verify the document ID.

Action:
Check the nested exception details for diagnostic information.

TCM-92525
There was an error getting the document. Please verify the document ID.

Category:
Requests/Responses

Cause:
There was an error getting the document. Please verify the document ID.

Action:
Check the nested exception details for diagnostic information.

TCM-92700
The cache config file can not be found

Category:
Requests/Responses

Cause:
The cache configuration file was not found.

Action:
Inspect the Cache jar and verify that the CacheConfig.xml file exists.

TCM-92701
The cache storage configuration is not in the config file

Category:
Requests/Responses

Cause:
The configuration for the cache storage adaptor could not be found.

Action:
Add a valid storage adaptor to the cache config file.

TCM-92702
The cache configuration file cannot be read for processing

Category:
Requests/Responses

Cause:
The cache configuration file could not be read.

Action:
Please examine the inner exception to determine why the read operation failed.

TCM-92703
The cache storage adaptor could not be found

Category:
Requests/Responses

Cause:
The storage adaptor implementation could not be found.

Action:
Check the cache config file and verify that the storage adaptor is correct.

TCM-92704
The cache storage adaptor could not be instantiated

Category:
Requests/Responses

Cause:
The storage adaptor could not be loaded.

Action:
Examine the adaptor code and verify it has a parameterless constructor.

TCM-92705
Error writing to Lock file {0}.

Category:
Requests/Responses

Cause:
There was a problem writing to a file.

Action:
Check the inner exception to determine the cause of the error.

TCM-92706
A lock could not be acquired on lock file {0}.

Category:
Requests/Responses

Cause:
The lock file could not be locked and validated.

Action:
Check the inner exception to determine the cause of the error.

TCM-92707
The directory {0} could not be created.

Category:
Requests/Responses

Cause:
The specified directory could not be created.

Action:
Examine the path to make sure it is not full and that the server account has write privileges to it.

TCM-92708
The Document ID {0} is not valid.

Category:
Requests/Responses

Cause:
The Document ID that was specified is not valid.

Action:
Pass in a valid Document ID to the cache service.

TCM-92709
An error occurred while queuing the cache request for processing.

Category:
Requests/Responses

Cause:
An exception was raised while attempting to queue the cache request.

Action:
Look at the inner exception to get details on the cause of the error.

TCM-92710
The cache repository interface configuration value was not found.

Category:
Requests/Responses

Cause:
The configuration for the repository interface could not be found.

Action:
Add a valid repository interface to the cache config file.

TCM-92711
The configuration string for the repository interface could not be parsed.

Category:
Requests/Responses

Cause:
The configuration information for the repository interface is not valid.

Action:
Look at the repository configuration and make sure that the values are separated by semicolons.

TCM-92712
The viewer cache imaging repository interface could not be initialized.

Category:
Requests/Responses

Cause:
The viewer cache imaging repository interface could not be initialized for processing.

Action:
Examine the inner exception to get specifics on why the initialization failed.

TCM-92713
The viewer cache repository could not retrieve requested document {0}.

Category:
Requests/Responses

Cause:
The requested document could not be retrieved from the viewer cache repository.

Action:
Examine the inner exception to get specifics on why the operation failed.

TCM-92714
The viewer cache repository interface {0} could not be found.

Category:
Requests/Responses

Cause:
The cache repository implementation could not be found.

Action:
Check the cache config file and verify that the repository configuration is correct.

TCM-92715
An instance of the viewer cache repository {0} could not be created.

Category:
Requests/Responses

Cause:
The cache repository could not be loaded.

Action:
Examine the inner exception and repository implementation to determine the load error.

TCM-92716
The viewer cache repository could not get the annotations for document {0}.

Category:
Requests/Responses

Cause:
The requested annotation set could not be retrieved from the viewer cache repository.

Action:
Examine the inner exception to get specifics on why the operation failed.

TCM-92717
The file {0} can not be found for processing.

Category:
Requests/Responses

Cause:
The requested file could not be found for processing.

Action:
Determine if the file exists and has the correct permissions.

TCM-92718
{0} is not a valid document page.

Category:
Requests/Responses

Cause:
The requested page to retrieve from cache is invalid.

Action:
Check the cache request and verify the requested page is greater than 0.

TCM-92719
The requested page range of {0} to {1} is not valid.

Category:
Requests/Responses

Cause:
The requested cache page range is invalid.

Action:
Check the end page of the cache request and verify that it is greater than the start page.

TCM-92720
The cache directory for object {0} could not be locked for processing

Category:
Requests/Responses

Cause:
The cache lock file failed verification.

Action:
Check to make sure that the imaging services have full access to the directory and it is not shared with other imaging systems.

TCM-92721
A failure occurred while attempting to get configuration values from imaging.

Category:
Requests/Responses

Cause:
An error was encountered while trying to look up the configuration data.

Action:
Look at the nested error to get the exact cause of the error.

TCM-92722
Page number {0} is invalid, document {1} only has {2} pages.

Category:
Requests/Responses

Cause:
The requested page is not in the document.

Action:
Request a page number that is in the document's page range.

TCM-92723
Processing was aborted while waiting for results.

Category:
Requests/Responses

Cause:
The operation was stopped while waiting for the operations results.

Action:
Check the logs to see if an operation was forcibly stopped.

TCM-92724
An error was encountered while trying to read or write to the image stream.

Category:
Requests/Responses

Cause:
A failure occurred while reading or writing from an image.

Action:
Check the inner exception to determine the cause of the error.

TCM-92725
The image could not be converted to a PNG stream because the image writer could not be found or have its options set.

Category:
Requests/Responses

Cause:
The PNG image writer could not be loaded or could not have its options set.

Action:
Check the Java installation and verify all the libraries are installed.

TCM-92726
Could not get the annotation security for document {0}.

Category:
Requests/Responses

Cause:
The document's annotation security could not be determined.

Action:
Check the inner exception to determine the cause of the error.

TCM-92727
This document contains annotations that prevent the user from accessing this document in its raw format

Category:
Requests/Responses

Cause:
This document contains annotations that prevent the user from accessing this document in its raw format.

Action:
Export to TIFF with the annotations burned in or contact your administrator for access to the native format.

TCM-92728
The image information for document {0}, page {1} could not be read.

Category:
Requests/Responses

Cause:
The image information could not be read.

Action:
Check the inner exception to determine the cause of the error.

TCM-92729
Error loading the document properties for document {0}

Category:
Requests/Responses

Cause:
Failed to get the document properties.

Action:
Check the inner exception to determine the cause of the error.

TCM-92730
The rendering cache is disabled and not accepting requests.

Category:
Requests/Responses

Cause:
The rendering cache feature is disabled.

Action:
Set the ViewerCacheDays and ViewerCachePath configuration values in the configuration MBean to enable caching.

TCM-92731
Document {0} failed image conversion and cannot be stored in the cache at this time. Please review the server log for details on the cause of the error.

Category:
Requests/Responses

Cause:
The requested document could not be converted to the appropriate image format.

Action:
Examine the log files to determine the cause of the conversion errors.

TCM-92732
The credential for storing the encryption key was not found.

Category:
Requests/Responses

Cause:
The credential for storing the encryption key was not found.

Action:
Verify the credential for the encryption key is available.

TCM-92733
A failure occurred while encrypting the document.

Category:
Requests/Responses

Cause:
A failure occurred while encrypting the document.

Action:
Check the inner exception to determine the cause of the error.

TCM-92734
A failure occurred while generating the encryption key.

Category:
Requests/Responses

Cause:
A failure occurred while generating the encryption key.

Action:
Check the inner exception to determine the cause of the error.

TCM-92735
A failure occurred while retrieving the encryption key.

Category:
Requests/Responses

Cause:
A failure occurred while retrieving the encryption key.

Action:
Check the inner exception to determine the cause of the error.

TCM-92736
A failure occurred while storing the encryption key.

Category:
Requests/Responses

Cause:
A failure occurred while storing the encryption key.

Action:
Check the inner exception to determine the cause of the error.

TCM-92737
A failure occurred while generating the encryption cipher.

Category:
Requests/Responses

Cause:
A failure occurred while generating the encryption cipher.

Action:
Check the inner exception to determine the cause of the error.

TCM-92738
A failure occurred while using the cipher for encryption.

Category:
Requests/Responses

Cause:
A failure occurred while using the cipher for encryption.

Action:
Check the inner exception to determine the cause of the error.

TCM-92739
A failure occurred while using the cipher for decryption.

Category:
Requests/Responses

Cause:
A failure occurred while using the cipher for decryption.

Action:
Check the inner exception to determine the cause of the error.

TCM-92740
No priority value was specified for the add to cache request.

Category:
Requests/Responses

Cause:
A priority was not specified for the add request.

Action:
Call the add request with a priority value.

TCM-92741
An error occurred while queuing the cache request. The Oracle WebCenter Content: Imaging Viewer Cache application (imaging-vc) was not found.

Category:
Requests/Responses

Cause:
The viewer cache application deployment was not found.

Action:
Check the domain configuration an verify that the viewer cache application is properly deployed.

TCM-92742
This document content is sealed. IRM content cannot be rendered.

Category:
Requests/Responses

Cause:
This document content is sealed. IRM content cannot be rendered.

Action:
Download the native document and use Oracle IRM Desktop to access this file content.

TCM-92999
An error occurred in a subsystem. {0}

Category:
Requests/Responses

Cause:
An error occurred in a rendering subsystem.

Action:
Review the logs for the error. You may need to contact Oracle Support Services to resolve the issue.

TCM-99001
The repository definition identifier, {0}, is not valid.

Category:
Requests/Responses

Cause:
An attempt was made to add a repository configuration with a duplicate identifier.

Action:
Use a unique identifier.

TCM-99002
The repository definition name, {0}, is not valid.

Category:
Requests/Responses

Cause:
An attempt was made to add a repository configuration with a duplicate name.

Action:
Use a unique name.

TCM-99003
The repository definition identifier, {0}, is not unique.

Category:
Requests/Responses

Cause:
An attempt was made to add a repository configuration with a duplicate identifier.

Action:
Use a unique identifier.

TCM-99004
The repository definition name, {0}, is not unique.

Category:
Requests/Responses

Cause:
An attempt was made to add a repository configuration with a duplicate name.

Action:
Use a unique name.

TCM-99005
A system repository definition already exists.

Category:
Requests/Responses

Cause:
An attempt was made to add a system repository configuration when one already exists.

Action:
Remove the existing system repository first.

TCM-99006
The destination repository is read only and does not support this operation.

Category:
Requests/Responses

Cause:
An attempt was made to copy or move a document to a repository that is not writeable.

Action:
Change the destination repository to one that is writeable.

TCM-99007
The destination repository is not the same as the source repository.

Category:
Requests/Responses

Cause:
An attempt was made to move a document to a different repository.

Action:
Ensure that the source and destination repositories are the same.

TCM-99008
The destination repository is not the same type as the source repository.

Category:
Requests/Responses

Cause:
An attempt was made to move a document to a different type of repository.

Action:
Ensure that the source and destination repositories are the same type.

TCM-99009
The repository must be initialized to support WebCenter Content: Imaging prior to creating a connection.

Category:
Requests/Responses

Cause:
An attempt was made to create a connection to a system that is not yet configured.

Action:
Ensure that target UCM system is configured prior to creating a connection.

32

UCM-CS-000001 to UCM-CS-800280

UCM-CS-000001
general exception

Category:
Logging

Cause:
An exception occurred in the content server.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-000002
Error:

Category:
Logging

Cause:
An error occurred in the content server.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-000003
Unknown system error encountered.

Category:
Logging

Cause:
An error occurred in the content server.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-000004
Unknown error encountered.

Category:
Logging

Cause:
The system encountered an unknown error.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-000005
Null pointer is dereferenced.

Category:
Logging

Cause:
A null pointer exception occurred in the content server.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-000006
Trace Message:({0})

Category:
Logging

Cause:
A general trace message from the content server.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-000007
Out of memory exception

Category:
Logging

Cause:
An out of memory exception occurred in the content server.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-000008
service exception

Category:
Logging

Cause:
A service exception occurred in the content server.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-000009
data exception

Category:
Logging

Cause:
A data exception occurred in the content server.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-001001
The NativeOsUtils class is not loaded.

Category:
Configuration

Cause:
The required library 'NativeOsUtils' was not successfully loaded.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-001002
Native file operations are disabled.

Category:
Configuration

Cause:
The system's ability to do native file operations has been disabled.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-001003
The platform {0} is not supported.

Category:
Configuration

Cause:
The specified operating system does not supported.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-001004
The platform {0} is not supported for this operation.

Category:
Configuration

Cause:
The specified operating system did not support the specified operation.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-001005
The argument {0} is missing.

Category:
Configuration

Cause:
The method or service was missing the required argument.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-001006
{0} is missing from {1}.

Category:
Configuration

Cause:
The method or service was missing the required argument.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-001007
Unable to load database queries in table {0} for component {1}. The table does not exist.

Category:
Configuration

Cause:
An error was encountered while loading the queries for the named component.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-001008
The feature {0} is not installed.

Category:
Configuration

Cause:
The required feature has not been installed.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-001009
The feature {0} is at level {1}, but level {2} is required.

Category:
Configuration

Cause:
An error was encountered while validating features. The requested feature is not supported.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-001010
Incompatibility with feature {0} at level {1} has been detected.

Category:
Configuration

Cause:
The specified feature was incompatible with a feature provided either by the system or another component.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-001011
The feature {0} does not match feature {1}.

Category:
Configuration

Cause:
The feature did not match an already installed feature.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-001012
The feature {0} is installed at level {1}, but is also provided at level {2}.

Category:
Configuration

Cause:
The feature already existed at a later version.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-001013
The instance name {0} is not valid.

Category:
Configuration

Cause:
The instance name specified contained illegal characters.

Action:
The instance name needs to be configured to be a valid name. Please check documentation for how to configure.

UCM-CS-001014
{0} component, version {1}, requires missing feature(s). {2}

Category:
Configuration

Cause:
For the specified component to function correctly it needs the listed features.

Action:
The components that provide the listed features need to be installed.

UCM-CS-005001
Unable to copy the file {0} to {1}.

Category:
Files

Cause:
An error occurred while copying files. An error occurred while copying files.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack. Details are usually given in the cause exception. Look for

messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005002
Unable to rename the file {0} to {1}.

Category:
Files

Cause:
An error occurred while renaming files. An error occurred while renaming files.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack. Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005003
Unable to open {0}.

Category:
Files

Cause:
An error occurred while opening the named file.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005004
Unable to read {0}.

Category:
Files

Cause:
An error occurred while accessing a file.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005005
Unable to write {0}.

Category:
Files

Cause:
An error occurred while writing a file.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005006
The file is missing.

Category:
Files

Cause:
The specified file was missing.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005007
The file {0} does not exist.

Category:
Files

Cause:
The specified file did not exist.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005008
The file {0} already exists.

Category:
Files

Cause:
The file already existed in the system.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005009
The file {0} already exists in {1} directory.

Category:
Files

Cause:
The file already existed in the named directory.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005010
File I/O error encountered while reading from file.

Category:
Files

Cause:
An error occurred while reading the file.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005011
File I/O error encountered while writing to file.

Category:
Files

Cause:
An error occurred while writing the specified file.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005012
Unable to delete {0}.

Category:
Files

Cause:
An error occurred while deleting the specified file.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005013
Could not create the file {0}.

Category:
Files

Cause:
An error occurred while creating the specified file. An error occurred while creating the specified file.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack. Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005014
File I/O error encountered while saving to file {0}.

Category:
Files

Cause:
An error occurred while saving the specified file.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005015
The file path {0} is invalid.

Category:
Files

Cause:
The specified file path was invalid.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005016
Unable to find the file {0}. This may be a problem with the virtual machine.

Category:
Files

Cause:
The system expected a file at the specified location, but it was missing.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005017
Unable to find the file {0}.

Category:
Files

Cause:
The system was unable to locate the file at the specified location.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005018
Error encountered while creating long-term lock {1} on directory {0}.

Category:
Files

Cause:
An error occurred while creating the long term lock.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005019
Unable to create the directory.

Category:
Files

Cause:
An error occurred while creating the directory.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005020
Unable to create directory {0}.

Category:
Files

Cause:
An error occurred while creating the specified directory.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005021
Directory {0} does not exist.

Category:
Files

Cause:
The system was unable to locate a directory at the specified location.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005022
File {0} does not exist.

Category:
Files

Cause:
The system was unable to locate a file at the specified location. The system was unable to locate a file at the specified location.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack. Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005023
Directory {0} cannot be accessed.

Category:
Files

Cause:
An error occurred while accessing the directory.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005024
File {0} cannot be accessed.

Category:
Files

Cause:
An error occurred while accessing the specified file.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005025
Directory {0} is read-only.

Category:
Files

Cause:
A read-only directory was specified.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005026
File {0} is read-only.

Category:
Files

Cause:
A read-only file was specified.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005027
Directory {0} has an invalid path.

Category:
Files

Cause:
The system tried to access an invalid directory path.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005028
File {0} has an invalid path.

Category:
Files

Cause:
The system tried access an invalid file path.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005029
Accessing the directory {0} caused a system error.

Category:
Files

Cause:
An error was encountered while accessing the directory.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005030
File {0} caused a system error when accessed.

Category:
Files

Cause:
An error was encountered while accessing the file.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005031
Unable to rename the file {0} to {1}.

Category:
Files

Cause:
An error was encountered when trying to rename the specified file.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005032
The source file does not exist.

Category:
Files

Cause:
The specified file did not exist.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005033
The target file cannot be accessed.

Category:
Files

Cause:
The system was unable to access the specified file path.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005034
Unable to copy the file {0} to {1}. The source file does not exist.

Category:
Files

Cause:
An error was encountered while copying the file. The source file did not exist.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005035
Unable to copy the file {0} to {1}.

Category:
Files

Cause:
An error was encountered while copying the file.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005037
File is locked by another process.

Category:
Files

Cause:
The file was locked by another process.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005038
File {0} cannot be deleted. It may be locked by another process.

Category:
Files

Cause:
An error was encountered while deleting the file.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-005039
Long-term lock {0} cannot be created for agent {1}.

Category:
Files

Cause:
An error was encountered while attempting to create a long-term lock.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-010001
Cannot end string with {0}.

Category:
Data

Cause:
During the parsing of a string, an illegal end character was encountered.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-010002
Encountered an unterminated quote ({0}) at {1} in {2}.

Category:
Data

Cause:
During the parsing of a string, the parser found an unclosed quoted string.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-010003
Error encountered converting data with {0} character encoding.

Category:
Data

Cause:
An encoding error was encountered while converting the data.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-010004
Error encountered converting data with the default character encoding.

Category:
Data

Cause:
The system encountered an error while converting data with the default character encoding.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-010005
An error occurred decoding the stream.

Category:
Data

Cause:
An error was encountered while decoding the data.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-010006
Cannot find the parameter {0}.

Category:
Data

Cause:
The system could not find the named parameter.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-010007
The table does not exist.

Category:
Data

Cause:
The named table did not exist or was not loaded into the resource container.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-010008
The column {0} does not exist in this table.

Category:
Data

Cause:
The specified column did not exist in the table.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-010009
Parameter {0} is not present.

Category:
Data

Cause:
The parameter was not defined in the current data set.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-010010
Unable to parse result set {0}.

Category:
Data

Cause:
An error was encountered while parsing the result set.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-010011
Unable to parse properties. Name-value pair {0} is missing an equal sign (=).

Category:
Data

Cause:
An error was encountered while parsing a property name-value pair.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-010012
Error decoding the string. The string is badly formatted: {0}

Category:
Data

Cause:
An error was encountered while decoding the badly formatted string.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-010013
A name-value pair is missing the name in GET or POST syntax.

Category:
Data

Cause:
An error was encountered while parsing the request.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-010014
The input terminated before being able to read the line.

Category:
Data

Cause:
An error was encountered while reading the input stream.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-010015
The stream terminated before being able to read HTTP protocol line.

Category:
Data

Cause:
An error was encountered while reading the input stream.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-010016
Unable to parse data; the request method was not specified.

Category:
Data

Cause:
An error was encountered while parsing the input stream. The request method has not been specified.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-010017
The POST request did not send sufficient data.

Category:
Data

Cause:
An error was encountered while parsing the request.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-010018
Unable to read the stream to determine the format.

Category:
Data

Cause:
An error was encountered while processing the server request.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-010019
Unable to read additional bytes.

Category:
Data

Cause:
An error was encountered while processing the server file request.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-010020
Client terminated the upload of file {0}.

Category:
Data

Cause:
The client terminated the upload of the file.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-050001
illegal state

Category:
Programmatic

Cause:
Something put the system into an unexpected error; this is a generic error.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-050002
The transaction listener {0} failed to close.

Category:
Programmatic

Cause:
The transaction failed to close when performing the service request.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-050003
Database table does not exist.

Category:
Programmatic

Cause:
An error was encountered while performing a database activity.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-050004
Cannot bind all parameters in query {0}.

Category:
Programmatic

Cause:
An error was encountered while creating the SQL query. The number of parameters required was inconsistent with the number of parameters provided.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-050005
Unable to initialize the database {0}.

Category:
Programmatic

Cause:
An error was encountered while the system was initializing the database connections.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-050006
Unable to create database connection for {0}.

Category:
Programmatic

Cause:
An error was encountered while trying to create a database connection for the named server instance.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-050007
Server busy. Unable to obtain a connection to the database.

Category:
Programmatic

Cause:
The server was unable to establish a connection to the database.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-050008
Unable to execute query {0}.

Category:
Programmatic

Cause:
An error was encountered while executing the specified query.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-050009
Unable to execute callable query {0}.

Category:
Programmatic

Cause:
An error was encountered while executing the named callable query.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-050010
Unable to create the result set for query {0}.

Category:
Programmatic

Cause:
An error was encountered while creating the results for the specified query.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-050011
Unable to execute SQL statement {0}.

Category:
Programmatic

Cause:
An error was encountered while executing the given SQL statement.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-050012
Unable to determine the database type.

Category:
Programmatic

Cause:
An error was encountered while determining the database type.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-050013
Error occurred while closing connection: ({0}).

Category:
Programmatic

Cause:
An error was encountered while closing the database connection.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-050014
Cannot begin the transaction. JDBC Error:

Category:
Programmatic

Cause:
An error was encountered while beginning a database transaction.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-050015
Cannot commit the transaction. JDBC Error:

Category:
Programmatic

Cause:
An error was encountered while committing a database transaction.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-050016
Failed to find indexable webviewable for content item {0} with revlabel {1} and dID {2}.

Category:
Programmatic

Cause:
An error was encountered while indexing the specified content item.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-050017
Text conversion of the file {0} failed.

Category:
Programmatic

Cause:
An error was encountered while indexing the specified content item.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-050018
Indexing failed.

Category:
Programmatic

Cause:
An error was encountered while indexing the specified content item.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-050019
The creation date ({0}) of the new revision is not later than the creation date ({1}) of the latest revision in the system.

Category:
Programmatic

Cause:
An error was encountered while importing the content item. The create date for the new revision must be later than the older revision.

Action:
The Archiver uses dates to validate the correct order of revisions. By default, it uses the dCreateDate, but this can be configured to use the dInDate by setting the configuration parameter UseRevisionCreateDate to true.

UCM-CS-050020
The release date ({0}) of the new revision is not later than the release date ({1}) of the latest revision in the system.

Category:
Programmatic

Cause:
An error was encountered while importing the content item. The in date for the new revision must be later than the older revision.

Action:
The Archiver uses dates to validate the correct order of revisions. By default, it uses the dCreateDate, but this can be configured to use the dInDate by setting the configuration parameter UseRevisionCreateDate to true.

UCM-CS-050021
Oracle WebCenter Content failed to initialize inside its servlet environment.

Category:
Programmatic

Cause:
An error was encountered during initialization of the servlet environment./td>

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-050022
Active index ({0}) is not valid for the indexer engine ({1}).

Category:
Programmatic

Cause:
The currently active search index was invalid for the configured indexer engine.

Action:
A rebuild of the search collection is required.

UCM-CS-050023
An error occurred during indexing.

Category:
Programmatic

Cause:
The system encountered an error while indexing a document.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-050024
Search collection is not up-to-date.

Category:
Programmatic

Cause:
The system has determined that the search indexing collection configuration has been modified.

Action:
A rebuild of the search collection is recommended.

UCM-CS-050025
Commit is called by thread {0} in auto-commit mode.

Category:
Programmatic

Cause:
A database commit call was made in a thread configured to be in auto-commit mode.

Action:
The stack trace can be examined to determine which component or feature tried to perform the commit.

UCM-CS-050026
Database running out of tablespace

Category:
Programmatic

Cause:
The database system is running out of tablespace.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-050027
Possible database connection failure encountered. Error message: ({0}).

Category:
Programmatic

Cause:
The system has encountered a database connection failure.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

UCM-CS-050028
Unable to create database connection for the database {0} with connection string {1}. Please make sure that the connection string, user and password are correct.

Category:
Programmatic

Cause:
The system has encountered an issue with creating a database connection.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entries that are part of this message stack.

Error

Cause:
Unable to get the service data source parameters.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800016
Unable to get the query data source parameters.

Category:
Error

Cause:
Unable to get the query data source parameters.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800017
The BL Publisher RTF processor failed.

Category:
Error

Cause:
The BL Publisher RTF processor failed.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800018
Unable to get the related content.

Category:
Error

Cause:
Unable to get the related content.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800019
Unable to get the related content types.

Category:
Error

Cause:
Unable to get the related content types.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800020
The related type ID is missing.

Category:
Error

Cause:
The related type is missing a field.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800021
The related type name '{0}' does not exist.

Category:
Error

Cause:
The related type name does not exist.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800022
The related type name '{0}' already exists.

Category:
Error

Cause:
The related type name already exists.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800023
The related type class ID is missing.

Category:
Error

Cause:
The related type class ID is missing.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800024
The supersede related type cannot be edited. Related content currently exists.

Category:
Error

Cause:
The supersede related type cannot be edited. Related content currently exists.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800025
The content ID (dID) is missing.

Category:
Error

Cause:
The content ID is missing.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800026
No external sources were found. Check to see if the 'ExternalHelper' component is installed and enabled.

Category:
Error

Cause:
No external sources were found. Check to see if the 'ExternalHelper' component is installed and enabled.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800027
More than one superseded content links selected. Please remove excess superseded links.

Category:
Error

Cause:
More than one superseded content links selected. Please remove excess superseded links.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800028
URMAgent or RetentionManager components are disabled. Please click ok to enable the components. Then, restart the server and configure UrmAgent source.

Category:
Error

Cause:
URMAgent or RetentionManager components are disabled. Please click ok to enable the components. Then, restart the server and configure UrmAgent source.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800029
{0} disposition action is not defined in DispositionActionsList

Category:
Error

Cause:
Disposition Action is not specified for this dDispostion.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800030
Error while checking setup requirements for new component install.

Category:
Error

Cause:
Error while checking setup requirements for new component install.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800031
Cannot checkout content item: Not Revisionable.

Category:
Error

Cause:
Cannot checkout content item: Not Revisionable.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800032
Cannot edit content item: Not Editable.

Category:
Error

Cause:
Cannot edit content item: Not Editable.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800033
Cannot delete content item: Not Deletable.

Category:
Error

Cause:
Cannot delete content item: Not Deletable.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800034
User does not have access to folders(or parent folders) or folder does not exists.

Category:
Error

Cause:
User does not have access to folders(or parent folders) or folder does not exists.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800035
Error retrieving information about category '{0}'

Category:
Error

Cause:
Error retrieving information about the category

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800036
Error retrieving information about folder '{0}'

Category:
Error

Cause:
Error retrieving information about the folder

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800037
Error retrieving information about series '{0}'

Category:
Error

Cause:
Error retrieving information about the series

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800038
Error creating category named '{0}': category with specified id exists

Category:
Error

Cause:
Error creating item, item with specified id exists

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800039
Unable to get screening results for categories

Category:
Error

Cause:
Unable to get screening results

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800040
Unable to prepare the HDA edit form.

Category:
Error

Cause:
Unable to prepare the HDA edit form.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800041
Unable to notify pending event actions

Category:
Error

Cause:
Unable to notify pending event actions

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800042
Unable to Mark Reviewed

Category:
Error

Cause:
Unable to Mark Reviewed

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800043
Unable to supersede content or records.

Category:
Error

Cause:
Unable to supersede content or records.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800044
Access denied - cutoff items are readonly

Category:
Error

Cause:
Access denied - cutoff items are readonly

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800045
Failed to delete metadata history.

Category:
Error

Cause:
Failed to delete metadata history.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800046
Disposition contains unprocessed content or record.

Category:
Error

Cause:
Disposition contains unprocessed content or record.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800047
Unable to find log or report information.

Category:
Error

Cause:
Unable to find log or report information.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800048
Failed to process report.

Category:
Error

Cause:
Failed to process report.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800049
Cannot edit frozen content or folder

Category:
Error

Cause:
Cannot edit frozen content or folder

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800050
Unable to run batch services for notifications

Category:
Error

Cause:
Unable to run batch services

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800051
Unable to list scheduled freezes

Category:
Error

Cause:
Unable to list scheduled freezes

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800052
Cannot delete frozen content.

Category:
Error

Cause:
Cannot delete frozen content.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800053
Unable to Notify Process Monitoring Alerts

Category:
Error

Cause:
Unable to Notify Process Monitoring Alerts

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800054
Unable to reset performance process monitoring

Category:
Error

Cause:
Unable to reset performance process monitoring

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800055
Unable to reset performance process monitoring alerts

Category:
Error

Cause:
Unable to reset performance process monitoring alerts

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800056
Unable to parse category dispositions information

Category:
Error

Cause:
Unable to parse category dispositions information

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800057
The field {0} requires an integer entry.

Category:
Error

Cause:
The field requires an integer entry.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800058
System derived cutoff must be first action

Category:
Error

Cause:
System derived cutoff must be first action

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800059
Invalid Trigger Event: first disposition rule has no preceding action

Category:
Error

Cause:
Invalid Trigger Event: first disposition rule has no preceding action

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800060
Delete Revision action is forbidden in permanent categories

Category:
Error

Cause:
Delete Revision action is forbidden in permanent categories

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800061
Destroy or Delete Revision action is forbidden in permanent categories

Category:
Error

Cause:
Destroy or Delete Revision action is forbidden in permanent categories

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800062
Destroy action is forbidden in permanent categories

Category:
Error

Cause:
Destroy action is forbidden in permanent categories

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800063
The first character of the Name field must be alphabetic

Category:
Error

Cause:
The first character of the Name field must be alphabetic

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800064
The Name field contains invalid character

Category:
Error

Cause:
The Name field contains invalid character

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800065
User does not have all matching Supplemental Markings.

Category:
Error

Cause:
User does not have all matching Supplemental Markings.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800066
User does not have Security Markings.

Category:
Error

Cause:
User does not have Security Markings.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800067
User does not have group(alias)/user permissions (ACL-based collaboration security privilege).

Category:
Error

Cause:
User does not have group(alias)/user permissions (ACL-based collaboration security privilege).

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800068
Performance process monitoring time exceeded max limit

Category:
Error

Cause:
Performance process monitoring time exceeded max limit

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800069
This class can only contain classes

Category:
Error

Cause:
This class can only contain classes

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800070
This class can only contain files

Category:
Error

Cause:
This class can only contain files

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800071
This class can only contain content items (or volumes)

Category:
Error

Cause:
This class can only contain content items (or volumes)

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800072
This class can contain classes, files, or content items

Category:
Error

Cause:
This class can contain classes, files, or content items

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800073
This file can only contain sub-files

Category:
Error

Cause:
This file can only contain sub-files

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800074
This file can only contain content items (or volumes)

Category:
Error

Cause:
This file can only contain content items (or volumes)

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800075
This file can contain sub-files or content items

Category:
Error

Cause:
This file can contain sub-files or content items

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800076
This sub-file can only contain content items (or volumes)

Category:
Error

Cause:
This sub-file can only contain content items (or volumes)

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800077
This volume can only contain content items

Category:
Error

Cause:
This volume can only contain content items

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800078
There was an internal error in submitting the form

Category:
Error

Cause:
There was an internal error in submitting the form

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800079
There was an internal error in reseting the form

Category:
Error

Cause:
There was an internal error in reseting the form

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800080
Error initiating connection or retrieving HTTP response code.

Category:
Error

Cause:
Error initiating connection or retrieving HTTP response code.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800081
Unable to get response stream from HTTP request.

Category:
Error

Cause:
Unable to get response stream from HTTP request.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800082
Http request needs a response rule to be specified is requesting agent a browser or an application

Category:
Error

Cause:
Http request needs a response rule to be specified is requesting agent a browser or an application

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800083
Unable to initiate connection.

Category:
Error

Cause:
Unable to initiate connection.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800084
The connection is currently not available.

Category:
Error

Cause:
The connection is currently not available.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800085
Credential map data was not successfully loaded.

Category:
Error

Cause:
Credential map data was not successfully loaded.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800086
Credentials map table {0} is missing.

Category:
Error

Cause:
Credentials map table is missing.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800087
Error creating charge type '{0}'.

Category:
Error

Cause:
Error creationg charge type.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800088
Error editing charge type '{0}'.

Category:
Error

Cause:
Error editing charge type.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800089
Error deleting charge type '{0}'.

Category:
Error

Cause:
Error deleting charge type.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800090
Error retrieving information about charge type '{0}'.

Category:
Error

Cause:
Error retrieving information about charge type.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800091
Charge type '{0}' already exists.

Category:
Error

Cause:
Error creating charge type: charge type with specified id exists. Charge type already exists.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack. Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

Error

Cause:
Error editing payment type.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800095
Error deleting payment type '{0}'.

Category:
Error

Cause:
Error deleting payment type.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800096
Error retrieving information about payment type '{0}'.

Category:
Error

Cause:
Error retrieving information about payment type.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800097
Payment type '{0}' already exists.

Category:
Error

Cause:
Error creating payment type: charge type with specified id exists. Payment type already exists.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack. Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800098
Error creating customer '{0}'.

Category:
Error

Cause:
Error creationg customer.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800099
Error editing customer '{0}'.

Category:
Error

Cause:
Error editing customer.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800100
Error deleting customer '{0}'.

Category:
Error

Cause:
Error deleting customer.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800101
Error retrieving information about customer '{0}'.

Category:
Error

Cause:
Error retrieving information about customer.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800102
Customer '{0}' already exists.

Category:
Error

Cause:
Error creating customer: customer with specified id exists.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800103
Payment type '{0}' already exists.

Category:
Error

Cause:
Error creating payment type: charge type with specified id exists. Payment type already exists.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack. Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800104
Charge type '{0}' already exists.

Category:
Error

Cause:
Error creating charge type: charge type with specified id exists. Charge type already exists.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack. Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800105
Error creating charge transaction '{0}'.

Category:
Error

Cause:
Error creating charge transaction.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800106
Error browsing charge transactions for invoice '{0}'.

Category:
Error

Cause:
Error browsing charge transactions.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800107
Object Type is missing. You must provide an object type for charges with actions (Creation, Destruction or Reservation).

Category:
Error

Cause:
Object Type is missing. You must provide an object type for charges with actions (Creation, Destruction or Reservation).

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800108
Invalid object type. The charge types object type does not match the external items object type

Category:
Error

Cause:
Invalid object type. The charge types object type does not match the external items object type

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800109
Invalid media type. The charge types media type does not match the external items media type

Category:
Error

Cause:
Invalid media type. The charge types media type does not match the external items media type

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800110
Invalid external item. The specific external item does not exist.

Category:
Error

Cause:
Invalid external item. The specific external item does not exist.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800111
Cannot delete a paid transaction.

Category:
Error

Cause:
Cannot delete a paid transaction.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800112
Unable to retrieve transaction results.

Category:
Error

Cause:
Unable to retrieve transaction results.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800113
External Item is missing. You must provide an ID or Name for the external item you wish to add a transaction for.

Category:
Error

Cause:
External Item is missing. You must provide an ID or Name for the external item you wish to add a transaction for.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800114
Must select one or more charge periods for calculation and indicate a number for charge increments. (Days, Weeks, etc).

Category:
Error

Cause:
Must select one or more charge periods for calculation and indicate a number for charge increments. (Days, Weeks, etc).

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800115
Must indicate a number for charge increments for each selected charge period.

Category:
Error

Cause:
Must indicate a number for charge increments for each selected charge period.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800116
Must select a department client for processing.

Category:
Error

Cause:
Must select a department client for processing.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800117
Error Processing Storage Charges.

Category:
Error

Cause:
Error Processing Storage Charges.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800118
Cannot delete charge type '{0}' is being used by charge transactions.

Category:
Error

Cause:
Cannot delete charge type, it is being used by charge transactions.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

Error creating storage item.

Category:
Error

Cause:
Error creating storage item.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800121
Error deleting storage '{0}'

Category:
Error

Cause:
Error deleting storage item.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800122
Storage item is unavailable

Category:
Error

Cause:
Storage item is unavailable

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800123
Storage item is blocked

Category:
Error

Cause:
Storage item is blocked

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800124
Storage item is reserved

Category:
Error

Cause:
Storage item is reserved

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800125
Storage '{0}' is not empty.

Category:
Error

Cause:
Storage item is not empty.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800126
Unable to block storage item(s). One or more storage item(s) contains an external content item(s).

Category:
Error

Cause:
Unable to block storage item(s). One or more storage item(s) contains an external content item(s).

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800127
Unable to reserve storage item(s). One or more storage item(s) contains an external content item(s) or is reserved.

Category:
Error

Cause:
Unable to reserve storage item(s). One or more storage item(s) contains an external content item(s) or is reserved.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800128
Unable to delete storage item(s). One or more storage item(s) contains an external content item(s).

Category:
Error

Cause:
Unable to delete storage item(s). One or more storage item(s) contains an external content item(s).

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800129
Error updating storage availability.

Category:
Error

Cause:
Error updating storage availability.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800130
Unable to get storage items for export.

Category:
Error

Cause:
Unable to get storage items for export.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800131
Error editing storage types.

Category:
Error

Cause:
Error editing storage types.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800132
Error retrieving information about storage type '{0}'.

Category:
Error

Cause:
Error retrieving information about storage type.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800133
Error creating storage type '{0}': storage type with specified id exists.

Category:
Error

Cause:
Error creating storage type: storage type with specified id exists.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800134
Error creating object type '{0}': object type with specified id exists.

Category:
Error

Cause:
Error creating object type: object type with specified id exists.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800135
Object Type is Linked to another object type.

Category:
Error

Cause:
Object Type is Linked to another object type.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800136
Error creating media type '{0}': media type with specified id exists.

Category:
Error

Cause:
Error creating media type: media type with specified id exists.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800137
Media type '{0}' is being used by external content.

Category:
Error

Cause:
Media type is being used by external content.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800138
Error editing request.

Category:
Error

Cause:
Error editing request.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800139
Cannot complete requests that have not been processed

Category:
Error

Cause:
Cannot complete requests that have not been processed

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800140
Cannot update a checked out request with any other status than completed

Category:
Error

Cause:
Cannot update a checked out request with any other status than completed

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800141
Cannot update a non-processed request with status of returned

Category:
Error

Cause:
Cannot update a non-processed request with status of returned

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800142
Check out date cannot be less than request date

Category:
Error

Cause:
Check out date cannot be less than request date

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800143
Error rejecting reservation items.

Category:
Error

Cause:
Error rejecting reservation items.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800144
Error processing reservation content workflow.

Category:
Error

Cause:
Error processing reservation content workflow.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800145
Unable to get reservation items for export.

Category:
Error

Cause:
Unable to get reservation items for export.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800146
The external item is already pending or checked out.

Category:
Error

Cause:
The external item is already pending or checked out.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800147
Record already checked out with another item. Cannot check this item out at this time.

Category:
Error

Cause:
Record already checked out with another item. Cannot check this item out at this time.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800148
Notify Requestors of Overdue Requests

Category:
Error

Cause:
Notify Requestors of Overdue Requests

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800149
Item duplicated within request. Item maybe contained within another requested item.

Category:
Error

Cause:
Item duplicated within request. Item maybe contained within another requested item.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800150
Failed to check in content item for reservation.

Category:
Error

Cause:
Failed to check in content item for reservation.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800151
Requested item has been destroyed. Cannot reserve.

Category:
Error

Cause:
Requested item has been destroyed. Cannot reserve.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800152
Reservation items belonging to this group still exist in the system.

Category:
Error

Cause:
Reservation items belonging to this group still exist in the system.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800153
The external item '{0}' does not exist.

Category:
Error

Cause:
The external item does not exist.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800154
Item inside of a non record container must be a non record

Category:
Error

Cause:
Item inside of a non record container must be a non record

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800155
Access denied by manager

Category:
Error

Cause:
Access denied by manager

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800156
An error occurred writing the audit.

Category:
Error

Cause:
An error occurred writing the audit.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800157
Not authorized to perform action.

Error

Cause:
Error moving storage item, cannot move storage items into 'Other' type storage items

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800165
Error moving storage item, cannot move storage items of type 'Root'.

Category:
Error

Cause:
Error moving storage item, cannot move storage items of type 'Root'.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800166
Error moving storage item, cannot move storage items of type 'Other'.

Category:
Error

Cause:
Error moving storage item, cannot move storage items of type 'Other'.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800167
Error moving storage item, storage item already exists within the selected storage item.

Category:
Error

Cause:
Error moving storage item, storage item already exists within the selected storage item.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800168
Error moving storage item, cannot move storage item into itself.

Category:
Error

Cause:
Error moving storage item, cannot move storage item into itself.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800169
There is a badly defined table element in the web form. The block has been defined as repeating, but it has no table assigned to it.

Category:
Error

Cause:
There is a badly defined table element in the web form. The block has been defined as repeating, but it has no table assigned to it.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800170
Encountered an unexpected end of the table. Cannot find close for repeat block.

Category:
Error

Cause:
Encountered an unexpected end of the table. Cannot find close for repeat block.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800171
An unmatched closing tag was encountered. The advanced element {0} is not properly closed by {1}.

Category:
Error

Cause:
An unmatched closing tag was encountered. The advanced element is not properly closed.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800172
An IO error was encountered during the generation of the web form.

Category:
Error

Cause:
An IO error was encountered during the generation of the web form.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800173
There is no content for the web form file.

Category:
Error

Cause:
There is no content for the web form file.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800174
Unable to access native web form file.

Category:
Error

Cause:
Unable to access native web form file.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800175
Content '{0}' file name does not match with previous revisions.

Category:
Error

Cause:
Content file name does not match with previous revisions.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800176
Unable to access system folders.

Category:
Error

Cause:
Unable to access system folders.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800177
Unable to force security on moved folder or content.

Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800272
Could not add folio to archive.

Category:
Error

Cause:
Could not add folio definition to archive.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800273
Unable to edit locked folio.

Category:
Error

Cause:
Unable to edit locked folio.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800274
Error indexing folio links.

Category:
Error

Cause:
Error indexing folio links.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800275
Declassify On Date is not a valid date

Category:
Error

Cause:
Declassify On Date is not a valid date

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800276
Publication Date is not a valid date

Category:
Error

Cause:
Publication Date is not a valid date

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800277
Failed to check in '{0}' freeze audit information. Please reference '{1}' audit log.

Category:
Error

Cause:
Failed to check in freeze audit information. Please reference audit log.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800278
Unable to run disposition action.

Category:
Error

Cause:
Unable to run disposition action.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800279
Installing the RelatedContent component...

Category:
Error

Cause:
Installing the RelatedContent component...

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UCM-CS-800280
Offsite FTP cannot change to the directory '{0}'. Please make sure it exists on the FTP site.

Category:
Error

Cause:
Offsite FTP cannot change direcotry.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action. Also, examine the preceding or following log entriesthat are part of this message stack.

UPGAST-00001 to UPGAST-05024

UPGAST-00001
unable to continue due to an unexpected error

Category:
Upgrade

Cause:
An unexpected error occurred.

Action:
See the secondary error message for additional details.

UPGAST-00002
Invalid argument {0}; an argument must begin with a hyphen. Enter the command "{1} -help" for details.

Category:
Upgrade

Cause:
A command-line argument did not start with a hyphen.

Action:
Run the command again, using a hyphen to identify any arguments.

UPGAST-00003
invalid argument {0}. Enter the command "{0} -help" for details.

Category:
Upgrade

Cause:
The specified argument was not recognized.

Action:
Run the command again, specifying a valid argument.

UPGAST-00004
Value for argument {0} not supplied. Enter the command "{1} -help" for details.

Category:
Upgrade

Cause:
The value for a command-line argument was not specified.

Action:
Run the command again, specifying the required value for the command-line argument.

UPGAST-00007
Domain {0} is configured as a compact domain which is not a valid starting point for upgrade.

Category:
Upgrade

Cause:
A compact configured domain was specified.

Action:
Specify a domain that is not configured as a compact domain.

UPGAST-00008
failed to copy {0} to domain

Category:
Upgrade

Cause:
Unable to copy the specified file to the domain.

Action:
See the Upgrade Assistant log file for details.

UPGAST-00009
Invalid log level: {0}. Enter the command "{1} -help" for details.

Category:
Upgrade

Cause:
The log level specified was not recognized.

Action:
Run the command again, specifying a valid log level.

UPGAST-00010
Port number {0} is not valid.

Category:
Upgrade

Cause:
The port number specified was not a positive numeric value or was out of range.

Action:
Specify a valid port number.

UPGAST-00011
Host name {0} is not valid or unknown.

Category:
Upgrade

Cause:
Lookup of the specified host name failed.

Action:
Specify a valid host name.

UPGAST-00012
Required port is missing.

Category:
Upgrade

Cause:
A required port was not entered.

Action:
Enter the required port.

UPGAST-00013
Required user name is missing.

Category:
Upgrade

Cause:
A required user name was not entered.

Action:
Enter the required user name.

UPGAST-00014
unable to connect to WebLogic Server at {0}:{1}

Category:
Upgrade

Cause:
Failed connecting to the WebLogic Server at the specified host and port.

Action:
See the secondary error message for additional details.

UPGAST-00015
Required listen address is missing.

Category:
Upgrade

Cause:
A required listen address was not entered.

Action:
Enter the required listen address.

UPGAST-00016
Required password is missing.

Category:
Upgrade

Cause:
A required password was not entered.

Action:
Enter the required password.

UPGAST-00017
Required confirm password is missing.

Category:
Upgrade

Cause:
A required confirm password was not entered.

Action:
Enter the required confirm password.

UPGAST-00018
Password and confirm password do not match.

Category:
Upgrade

Cause:
The password and confirm password do not have the same value.

Action:
Enter the same value for the password and confirm password.

UPGAST-00019
User name may not contain commas, tabs, spaces, or any of the following characters: {0}

Category:
Upgrade

Cause:
An invalid user name was specified.

Action:
Enter the user name using only valid characters.

UPGAST-00020
Listen address {0} is not valid or unknown.

Category:
Upgrade

Cause:
Lookup of the specified listen address failed.

Action:
Specify a valid listen address.

UPGAST-00021
WLST script failure, see {0} for details

Category:
Upgrade

Cause:
The execution of a WLST script has failed

Action:
Check the specified WLST output file for the details of the failure.

UPGAST-00023
Standalone template {0} does not exist for component {1} of type {2}.

Category:
Upgrade

Cause:
A template was not found for the listed component.

Action:
Install the components standalone environment and then rerun the upgrade in that standalone environment.

UPGAST-00024
failed reading {0}

Category:
Upgrade

Cause:
Unable to read or parse the specified file.

Action:
See the secondary error message for additional details.

UPGAST-00025
The password must be at least 8 alphanumeric characters with at least one number or special character.

Category:
Upgrade

Cause:
An invalid password was specified.

Action:
Enter a password using 8 alphanumeric characters with at least one number or special character.

UPGAST-00026
failed reading {0}

Category:
Upgrade

Cause:
Unable to read or parse the specified OPMN file.

Action:
See the secondary error message for additional details.

UPGAST-00027
OPMN file {0} does not exist in the instance directory.

Category:
Upgrade

Cause:
The specified OPMN file did not exist.

Action:
Specify a valid instance directory where the specified OPMN file exists

UPGAST-00028
Template {0} does not exist for component {1} of type {2}.

Category:
Upgrade

Cause:
A template was not found for the listed component.

Action:
Install the listed component and then rerun the upgrade.

UPGAST-00029
Directory is not a valid domain for upgrade. {0}

Category:
Upgrade

Cause:
The specified directory was not a valid Oracle WebLogic domain for standalone upgrades. The domain was not created during a previous standalone upgrade.

Action:
Specify an Oracle WebLogic domain that is created during a previous standalone upgrade.

UPGAST-00030
The specified domain name {0} is invalid. It must include only alphanumeric characters, hyphens ("-") or underscore characters ("_") and contain at least one letter but must not start with a number.

Category:
Upgrade

Cause:
An invalid domain name was specified.

Action:
Enter a valid domain name.

UPGAST-00031
unable to get the active DomainMBean for the WebLogic Server domain

Category:
Upgrade

Cause:
Failed getting the active DomainMBean for the WebLogic Server domain.

Action:
Contact My Oracle Support.

UPGAST-00032
unable to communicate with the WebLogic Server

Category:
Upgrade

Cause:
Communication with the WebLogic Administrative Server was either lost or never established.

Action:
See the secondary error message for additional details.

UPGAST-00033
Required domain directory is missing.

Category:
Upgrade

Cause:
A required domain directory was not entered.

Action:
Enter the required domain directory.

UPGAST-00037
unable to fetch or store attribute "{0}" in the WebLogic Server

Category:
Upgrade

Cause:
The most common cause is an incorrect attribute name.

Action:
See the secondary error message for additional details.

UPGAST-00039
failed deleting {0}

Category:
Upgrade

Cause:
Unable to delete the specified file.

Action:
Manually delete the specified file.

UPGAST-00040
unable to get the DomainRuntimeMBean for the WebLogic Server domain

Category:
Upgrade

Cause:
Failed getting the DomainRuntimeMBean for the current WebLogic Server domain.

Action:
Contact My Oracle Support.

UPGAST-00041
unable to connect to WebLogic Server at {0}:{1}

Category:
Upgrade

Cause:
Failed connecting to the WebLogic Server at the specified host and port.

Action:
See the Upgrade Assistant log file for details.

UPGAST-00047
failed to read the installer inventory

Category:
Upgrade

Cause:
The install inventory could not be accessed.

Action:
See the secondary error message for additional details.

UPGAST-00048
unable to open the file

Category:
Upgrade

Cause:
Failed to open the file.

Action:
See the secondary error message for additional details.

UPGAST-00049
unable to read the file

Category:
Upgrade

Cause:
Failed to read the file.

Action:
See the secondary error message for additional details.

UPGAST-00050
unable to create logging directory: {0}

Category:
Upgrade

Cause:
The directory for log files could not be created.

Action:
See the secondary error message for additional details.

UPGAST-00051
unable to create the log file

Category:
Upgrade

Cause:
Failed to create the log file.

Action:
See the secondary error message for additional details.

UPGAST-00052
unable to initialize logging

Category:
Upgrade

Cause:
Initialization of logging failed.

Action:
See the secondary error message for additional details.

UPGAST-00053
No upgrade components were found in the config file {0}.

Category:
Upgrade

Cause:
No upgrade components in the specified configuration file.

Action:
Contact My Oracle Support.

UPGAST-00054
An error occurred loading the domain configuration file {0}

Category:
Upgrade

Cause:
Either the specified directory does not contain the expected file, or the file does not conform to the expected syntax.

Action:
Specify a valid WebLogic domain root directory.

UPGAST-00055
An error occurred loading the schema creation configuration file {0}

Category:
Upgrade

Cause:
An unexpected error occurred loading the schema creation configuration file.

Action:
Contact My Oracle Support. See the secondary error message for additional details.

UPGAST-00056
error initializing upgrade plug-in for {0}

Category:
Upgrade

Cause:
An unexpected error occurred initializing an upgrade plug-in.

Action:
Contact My Oracle Support. See the secondary error message for additional details.

UPGAST-00058
{0} file does not exist or cannot be accessed.

Category:
Upgrade

Cause:
The specified file did not exist or could not be accessed.

Action:
Make sure the path to the file is correct.

UPGAST-00079
failed to create temporary directory: {0}

Category:
Upgrade

Cause:
An error was encountered creating a temporary directory.

Action:
Ensure that the directory location exists and is not protected.

UPGAST-00093
{0} directory does not exist or is not a directory.

Category:
Upgrade

Cause:
The specified directory did not exist or was not a directory.

Action:
Specify a valid directory.

UPGAST-00094
{0} directory already exists.

Category:
Upgrade

Cause:
The specified directory already existed.

Action:
Specify a valid directory that does not exist.

UPGAST-00095
{0} directory is not writable.

Category:
Upgrade

Cause:
The specified directory must have write permissions.

Action:
Specify a directory that is writable or correct the permissions.

UPGAST-00096
error initializing the help system

Category:
Upgrade

Cause:
An error occurred while setting up the help system.

Action:
Contact My Oracle Support.

UPGAST-00097
The IP address of the host {0} cannot be determined.

Category:
Upgrade

Cause:
The network address of the specified host could not be determined.

Action:
Check the validity of the specified host.

UPGAST-00098
error setting the Oracle look-and-feel for the graphical user interface

Category:
Upgrade

Cause:
An error occurred while setting the appearance for the graphical user interface.

Action:
Contact My Oracle Support.

UPGAST-00107
The DISPLAY environment variable is not set. The graphical user interface (GUI) requires that this environment variable be set on UNIX.

Category:
Upgrade

Cause:
The required DISPLAY environment variable was not defined.

Action:
Set the required DISPLAY environment variable and then rerun the Upgrade Assistant.

UPGAST-00173
The plugin for {0} has requested an input value named {1} but that name is not in the upgrade descriptor.

Category:
Upgrade

Cause:
There was an inconsistency between the plugin descriptor definition and the input values requested by the plugin.

Action:
Contact My Oracle Support.

UPGAST-00174
failed to create or write to response file

Category:
Upgrade

Cause:
The file specified for saving responses could not be created or written to.

Action:
Specify a file in a location that is writable.

UPGAST-00175
Can not read response file {0}.

Category:
Upgrade

Cause:
The file specified for reading responses does not exist, or can not be read.

Action:
Specify a readable response file.

UPGAST-00176
Response file specifies an unknown upgrade step {0}.

Category:
Upgrade

Cause:
The response file specifies an upgrade that is unknown in this Fusion Middleware installation. Either the response file is for some other environment, or the Upgrade Descriptor files have not been properly installed.

Action:
Specify a response file generated for this installation.

UPGAST-00177
Response file line is not understood: {0}

Category:
Upgrade

Cause:
The response file contains syntax errors.

Action:
Correct the syntax errors in the response file and run the Upgrade Assistant again.

UPGAST-00178
Response file specifies a bad input name, {0}.

Category:
Upgrade

Cause:
The response file contains syntax errors, or is not of the correct version.

Action:
Correct the syntax errors in the response file and run the Upgrade Assistant again.

UPGAST-00180
error loading upgrade plug-in for {0}

Category:
Upgrade

Cause:
An unexpected error occurred loading an upgrade plug-in.

Action:
Contact My Oracle Support. See the secondary error message for additional details.

UPGAST-00181
error during execution of upgrade plug-in for {0}

Category:
Upgrade

Cause:
An unexpected error occurred during execution of an upgrade plug-in.

Action:
See the secondary error message for additional details.

UPGAST-00182
The examination phase for plug-in {0} will not be run due to a previous error.

Category:
Upgrade

Cause:
An error occurred when loading or initializing the plug-in which prevented the examination phase from running.

Action:
Review the log file for additional details.

UPGAST-00183
The upgrade phase for plug-in {0} will not be run due to a previous error.

Category:
Upgrade

Cause:
An error occurred when loading or initializing the plug-in which prevented the upgrade phase from running.

Action:
Review the log file for additional details.

UPGAST-00185
failed to load JDBC driver

Category:
Upgrade

Cause:
There was a failure loading a JDBC driver.

Action:
See the log file for details. Contact My Oracle Support.

UPGAST-00186
unable to connect to database as the DBA user name {0}

Category:
Upgrade

Cause:
Required fields to connect to a database were not supplied.

Action:
Enter the missing required fields and rerun.

UPGAST-00187
Unable to connect to WebLogic Admin Server. Some fields are empty.

Category:
Upgrade

Cause:
Required fields to connect to a WebLogic Admin Server were not supplied.

Action:
Enter the missing required fields and rerun.

UPGAST-00189
Exception raised while running an external command.

Category:
Upgrade

Cause:
An exception was raised while running an external command (such as sqlplus) in a subprocess. Check the stack trace for detailed information.

Action:
Attempt to correct the environment problem if any, then retry the upgrade. Contact My Oracle Support.

UPGAST-00190
{0} component version is {1}, status is {2}, upgraded flag is {3}

Category:
Upgrade

Cause:
After a successful schema upgrade the SCHEMA_VERSION_REGISTRY status column is not "VALID", or the upgraded column is not "Y".

Action:
Contact My Oracle Support.

UPGAST-00191
unable to validate the SCHEMA_VERSION_REGISTRY for component {0}

Category:
Upgrade

Cause:
An unexpected error occurred validating the SCHEMA_VERSION_REGISTRY.

Action:
Contact My Oracle Support.

UPGAST-00192
A dependency by component {0} on component {1} is unresolved.

Category:
Upgrade

Cause:
A required component was not found while discovering upgrade components and their dependencies.

Action:
Make sure the required component has been installed and that its upgrade descriptor XML file is in the plugins/upgrade directory of their product home.

UPGAST-00193
unable to connect to database for creating schemas {0}

Category:
Upgrade

Cause:
Required fields to connect to a database were not supplied.

Action:
Specify the missing required fields and rerun.

UPGAST-00194
An invalid component id for creating schemas was specified: {0}.

Category:
Upgrade

Cause:
An invalid component id was specified in the response file.

Action:
Specify a valid component for creating schemas.

UPGAST-00195
Edition name {0} specified in response file does not exist in database.

Category:
Upgrade

Cause:
The response file specified an edition name for creating schemas that does not exist.

Action:
Specify an existing edition name and rerun.

UPGAST-00196
The validate method for plug-in {0} will not be called due to a previous error.

Category:
Upgrade

Cause:
An error occurred when loading or initializing the plug-in which prevents the validate method from executing.

Action:
Review the log file for additional details.

UPGAST-00198
Descriptor tag {0} is only allowed in components of type={1}

Category:
Upgrade

Cause:
An upgrade plugin descriptor is improperly formed.

Action:
Contact My Oracle Support.

UPGAST-00200
Message reference {0} is not defined in resource bundle {1}.

Category:
Upgrade

Cause:
An upgrade plugin descriptor is referencing an undefined message.

Action:
Contact My Oracle Support.

UPGAST-00202
Unable to validate credentials. Some fields are empty.

Category:
Upgrade

Cause:
Required fields to validate credentials were not supplied.

Action:
Enter the missing required fields and rerun.

UPGAST-00203
validate method is not implemented by plug-in {0} for input named {1}.

Category:
Upgrade

Cause:
Required validate method was not implemented by plug-in or the signature of the validate method is incorrect.

Action:
Implement the required validate method with the correct signature.

UPGAST-00204
Response file specifies an unknown field "{0}".

Category:
Upgrade

Cause:
The response file specifies an input value with a qualified field name that is unknown for inputs of this type.

Action:
Specify a response file generated for this installation or correct your editing error.

UPGAST-00205
Response file specifies an incorrect or no format version. Version must be {0}.

Category:
Upgrade

Cause:
The fileFormatVersion specified in the [GENERAL] section of the file is either missing or incorrect for this program.

Action:
Generate new response files using the same version of the program that is going to read them.

UPGAST-00206
No upgrade descriptor files were found in the Oracle home, yet a response file was specified.

Category:
Upgrade

Cause:
Either this Oracle home contains no upgradable components and you are using a response file generated for a different installation, or the installation is incomplete or damaged.

Action:
Make sure that this installation is the one you intended to upgrade, and that the Upgrade Descriptor files are in the plugins/upgrade/ directories

UPGAST-00207
The Upgrade Descriptor in file {0} specifies a bad value "{1}" for the attribute named "{2}".

Category:
Upgrade

Cause:
An attribute in a tag in an Upgrade Descriptor, which provides information to the Upgrade Assistant about individual upgrade plugins, contains an improper value.

Action:
Contact My Oracle Support.

UPGAST-00208
An unrecognized database type "{0}" was specified in a descriptor or response file.

Category:
Upgrade

Cause:
Database type names in descriptor and response files must come from a fixed list of names. A name was encountered which is not on the list.

Action:
Correct the spelling of your database type and run the program again.

UPGAST-00209
directory path is not specified

Category:
Upgrade

Cause:
A required directory path was not entered.

Action:
Enter the required directory path.

UPGAST-00210
file path is not specified

Category:
Upgrade

Cause:
A required file path was not entered.

Action:
Enter the required file path.

UPGAST-00211
The response file specified a dependency on a plugin numbered {0} but either no plugin in the file has that as an INSTANCE value, or the descriptor file does not indicate that such a dependency is possible.

Category:
Upgrade

Cause:
All dependsOnPluginInstance properties must refer to numbers defined earlier in the response file with a pluginInstance property, and must refer to a plugin to which such a dependency is allowed by the upgrade descriptor file.

Action:
If you created or edited the response file, correct the error and try again. If this is a response file generated by the Upgrade Assistant, contact My Oracle Support.

UPGAST-00212
unable to connect to database as the schema user {0}

Category:
Upgrade

Cause:
Required fields to connect to a database were not supplied.

Action:
Enter the missing required fields and rerun.

UPGAST-00213
Unable to connect to database as the dba user "{0}".

Category:
Upgrade

Cause:
The database connection failed for the specified reason.

Action:
See the secondary error message for additional details.

UPGAST-00214
Unable to connect to database as the schema user "{0}".

Category:
Upgrade

Cause:
The database connection failed for the specified reason.

Action:
See the secondary error message for additional details.

UPGAST-00215
Upgrade is not being done due to examine failures.

Category:
Upgrade

Cause:
When using a response file, actual upgrades are not done if any plugin can not complete its EXAMINE phase.

Action:
Correct the problem using information provided in the log file; then retry the operation.

UPGAST-00216
A library file "{0}" referred to in an Upgrade Descriptor file does not exist.

Category:
Upgrade

Cause:
Upgrade Plugins can refer to other JAR files. A file in such a reference can not be found. This can be caused by an incorrect installation.

Action:
Contact My Oracle Support

UPGAST-00217
directory path is not specified {0}

Category:
Upgrade

Cause:
A required directory path was not entered.

Action:
Enter the required directory path.

UPGAST-00218
file path is not specified {0}

Category:
Upgrade

Cause:
A required file path was not entered.

Action:
Enter the required file path.

UPGAST-00219
No schemas were found for component {0} in the Schema Version Registry.

Category:
Upgrade

Cause:
A database query to get a list of schemas from the Schema Version Registry returned an empty list.

Action:
Verify that you have schemas for the specified component.

UPGAST-00220
failed to get a list of schemas from the Schema Version Registry

Category:
Upgrade

Cause:
A database query to get a list of schemas from the Schema Version failed.

Action:
See the secondary error message for additional details.

UPGAST-00221
unexpected error upgrading schema

Category:
Upgrade

Cause:
An unexpected error occurred during schema upgrade.

Action:
Check the error messages in the Upgrade Assistant log files. Correct the problem before running the Upgrade Assistant again.

UPGAST-00222
invalid database type specified

Category:
Upgrade

Cause:
An invalid database type was specified.

Action:
The database type specified is not supported by the RCU JDBCEngine. Contact My Oracle Support.

UPGAST-00223
The upgrade of "{0}" is being skipped because the upgrade for "{1}" has either failed or been skipped.

Category:
Upgrade

Cause:
One component upgrade which is a pre-requisite for a second component's upgrade has not finished successfully. Therefore the second component's upgrade has not been executed.

Action:
Fix the original problem and run Upgrade again.

UPGAST-00224
The specified database does not contain any schemas for {0} or the database user lacks privilege to view the schemas.

Category:
Upgrade

Cause:
The database you have specified does not contain any schemas registered as belonging to the component you are upgrading, or else the current database user lacks privilege to query the contents of the schema version registry.

Action:
Verify that the database contains schema entries in schema version registry. If it does not, specify a different database. Verify that the user has DBA privilege. Connect to the database as DBA.

UPGAST-00225
The response file contains a non-numeric value "{0}" where a number is required.

Category:
Upgrade

Cause:
Plugin ID numbers must be decimal integers.

Action:
Correct the response file and run the program again.

UPGAST-00226
The database connect string format is incorrect. The correct format is: {0}

Category:
Upgrade

Cause:
The database connect string format was specified incorrectly.

Action:
Enter the database connect string using the correct format.

UPGAST-00227
Oracle instance directory path is not specified

Category:
Upgrade

Cause:
A required Oracle instance directory path was not entered.

Action:
Enter the required Oracle instance directory path.

UPGAST-00228
Oracle instance directory path is not specified {0}

Category:
Upgrade

Cause:
A required Oracle instance directory path was not entered.

Action:
Enter the required Oracle instance directory path.

UPGAST-00229
The directory {0} is not an 11g Oracle instance directory.

Category:
Upgrade

Cause:
The directory specified was not a valid 11g Oracle instance directory.

Action:
Enter a valid 11g Oracle instance directory.

UPGAST-00230
No editions were found

Category:
Upgrade

Cause:
A database query to get a list of editions returned an empty list.

Action:
Verify that you have editions enabled and have created one or more editions.

UPGAST-00231
failed to get a list of editions

Category:
Upgrade

Cause:
A database query to get a list of editions failed

Action:
See the secondary error message for additional details.

UPGAST-00232
database query for compatibility failed: {0}

Category:
Upgrade

Cause:
A database query to check that database compatibility is 11.2.0 or greater failed

Action:
See the secondary error message for additional details.

UPGAST-00233
database compatibility must be 11.2.0 or greater not {0}

Category:
Upgrade

Cause:
An EBR-enabled Oracle database requires that compatibility parameter be set to "11.2.0" or greater. However the actual compatibility was less than version 11.2.0

Action:
Issue the SQL command ALTER SYSTEM SET COMPATIBLE = '11.2.0' SCOPE=SPFILE.

UPGAST-00234
Unable to connect to database using SSL settings as the dba user "{0}".

Category:
Upgrade

Cause:
The database connection failed for the specified reason. The connection failure could be due to incorrect SSL settings or incorrect database setup.

Action:
See the secondary error message(s) and the Upgrade Assistant log file for additional details.

UPGAST-00235
Schema version registry table does not exist for component {0}

Category:
Upgrade

Cause:
An attempt to list the contents of the schema version registry table for the component failed because the schema version registry does not exist.

Action:
This is an informational message. No further action is necessary.

UPGAST-00236
There is no schema version registry entry for component {0}

Category:
Upgrade

Cause:
An attempt to list the contents of the schema version registry table for the component failed because no registry entry exists for the component.

Action:
This is an informational message. No further action is necessary.

UPGAST-00237
A duplicate component definition for component {0} has been detected in product home {1}.

Category:
Upgrade

Cause:
Component names must be unique within an Oracle home. Either the component descriptor files are incorrect, or multiple copies of the same component have been installed in the same Oracle home.

Action:
Remove the duplicate installations, or contact My Oracle Support.

UPGAST-00238
Warning: A dependency by component {0} on component {1} is unresolved. Upgrades of component {0} will be disabled.

Category:
Upgrade

Cause:
A dependent component was not found while discovering upgrade components and their dependencies.

Action:
Make sure the required component has been installed.

UPGAST-00239
messageclass attribute must be specified for message reference {0}

Category:
Upgrade

Cause:
A resource bundle was not specified in the component's upgrade descriptor.

Action:
Specify the component's resource bundle using the messageclass attribute.

UPGAST-00240
An unexpected error was encountered while monitoring the progress of a plugin.

Category:
Upgrade

Cause:
During the upgrade phase of a plugin, the upgrade monitor thread encountered an error while shutting down

Action:
The Fusion Middleware schema upgrade was not impacted and the error can be ignored.

UPGAST-00244
unable to connect to {0} Server {1}

Category:
Upgrade

Cause:
Required fields to connect to the specified Server were not supplied.

Action:
Enter the missing required fields and rerun.

UPGAST-00245
An unexpected error has occurred while initializing internal data structures.

Category:
Upgrade

Cause:
A problem was encountered while setting up the internal WLS descriptor.

Action:
Contact My Oracle Support

UPGAST-00246
The selected domain has a version of {0} which is less than the minimum of {1}.

Category:
Upgrade

Cause:
Upgrade requires the domain to be at a certain minimum version, which this domain does not meet.

Action:
Select a different domain, or run the Reconfiguration tool before trying to upgrade.

UPGAST-00247
unable to connect to WebLogic Server at {0}:{1} {2}

Category:
Upgrade

Cause:
Failed connecting to the WebLogic Server at the specified host and port.

Action:
See the secondary error message for additional details.

UPGAST-00248
Descriptor item {0} missing required "text" attribute.

Category:
Upgrade

Cause:
The named input tag in an upgrade descriptor does not have a required "text" attribute.

Action:
Contact My Oracle Support.

UPGAST-00249
isOptionalInputRequired method is not implemented by plug-in {0} for input named {1}.

Category:
Upgrade

Cause:
Required isOptionalInputRequired method was not implemented by plug-in or the signature of the isOptionalInputRequired is incorrect.

Action:
Implement the required isOptionalInputRequired method with the correct signature.

UPGAST-00250
Required input {0} is missing from section {1} in the response file.

Category:
Upgrade

Cause:
The response file does not supply any values for a required input.

Action:
Correct the response file and retry the upgrade.

UPGAST-00251
An error occurred reading Upgrade Descriptor file {0}

Category:
Upgrade

Cause:
The file does not conform to the expected syntax.

Action:
See the secondary message for additional information. Contact My Oracle Support.

UPGAST-00252
Required input {0} is missing from section {1} in response file.

Category:
Upgrade

Cause:
The response file does not supply any values for an optional input that the plugin indicates it needs in this case.

Action:
Correct the response file and retry the upgrade.

UPGAST-00254
invalid response file contents

Category:
Upgrade

Cause:
The response file is not a valid response file.

Action:
Specify a response file generated for this installation or correct your editing error. See secondary message for details.

UPGAST-00255
More than one component definition contains an upgrade for a component. The following component descriptor files each contain an upgrade for component {0}: {1}

Category:
Upgrade

Cause:
There must be only one upgrader of a component within an Oracle home. Two or more schema input declarations exist that are upgrading the same component-id.

Action:
Remove the duplicate upgrades, or contact My Oracle Support.

UPGAST-00256
Upgrade is being skipped because the -examine flag is set

Category:
Upgrade

Cause:
When using a response file, actual upgrades are not done when the -examine command line option is set.

Action:
If you want to perform an actual upgrade in response file mode remove the -examine flag from the command line. If you intended to perform just the examine phase, no action is necessary.

UPGAST-00257
The -examine flag is only allowed with the -response flag

Category:
Upgrade

Cause:
You cannot specify -examine command line option without the -response option.

Action:
You cannot specify the -examine flag when running the upgrade tool in GUI mode. If you want to perform an examine without an actual upgrade you must also specify -response on the command line.

UPGAST-00258
Component plugin {0} named in response file is not in domain {1}.

Category:
Upgrade

Cause:
The response file references a component plugin which is not configured in the specified domain.

Action:
Specify a response file generated for this domain.

UPGAST-00259
The getInitialValue method for plug-in {0} will not be called due to a previous error.

Category:
Upgrade

Cause:
An error occurred when loading or initializing the plug-in which prevents the getInitialValue method from executing.

Action:
Review the log file for additional details.

UPGAST-00260
getInitialValue method is not implemented by plug-in {0} for input named {1}.

Category:
Upgrade

Cause:
Required getInitialValue method was not implemented by plug-in or the signature of the getInitialValue method is incorrect.

Action:
Implement the required getInitialValue method with the correct signature.

UPGAST-00261
The isOptionalInputRequired method for plug-in {0} will not be called due to a previous error.

Category:
Upgrade

Cause:
An error occurred when loading or initializing the plug-in which prevents the isOptionalInputRequired method from executing.

Action:
Review the log file for additional details.

UPGAST-00262
The log directory did not exist or cannot be accessed: {0}.

Category:
Upgrade

Cause:
The log directory specified was not recognized as an existing, writable directory.

Action:
Run the command again, specifying a valid log directory. If necessary create the log directory and make sure it is a writable directory. See the command line help for details.

UPGAST-00263
The response file contained both configuration type and schema type upgrades.

Category:
Upgrade

Cause:
The response file contains a mix of configuration type and schema type upgrades.

Action:
Change the response file to specify only configuration type or schema type upgrades then rerun the upgrade.

UPGAST-00264
Bad "name" attribute value in Upgrade Descriptor.

Category:
Upgrade

Cause:
Names in Upgrade Descriptor files must be alphanumeric.

Action:
Correct the name.

UPGAST-00265
Directory is not a valid domain for upgrade. {0}

Category:
Upgrade

Cause:
The specified directory was not a valid Oracle WebLogic domain.

Action:
Specify an existing WebLogic domain directory.

UPGAST-00266
Oracle instance directory {0} is not a unique directory path.

Category:
Upgrade

Cause:
A duplicate Oracle instance directory path was specified.

Action:
Specify Oracle instance directoies that are not duplicated.

UPGAST-00267
isUpgradeRequired method is not implemented by plug-in {0}.

Category:
Upgrade

Cause:
Required isUpgradeRequired method was not implemented by plug-in or the signature of the isUpgradeRequired is incorrect.

Action:
Implement the required isUpgradeRequired method with the correct signature.

UPGAST-00268
The response file specified is not for a standalone upgrade.

Category:
Upgrade

Cause:
The response file contained WebLogic credentials that are not valid during a standalone upgrade.

Action:
Regenerate the response file and rerun the upgrade.

UPGAST-00269
The response file specified is not for an upgrade requiring WebLogic credentials.

Category:
Upgrade

Cause:
The response file does not contain WebLogic credentials that are required during an online upgrade.

Action:
Regenerate the response file and rerun the upgrade.

UPGAST-00270
Directory is not a valid domain for upgrade. {0}

Category:
Upgrade

Cause:
The specified directory was not a valid Oracle WebLogic domain.

Action:
See the log file for details. Specify a valid WebLogic domain directory.

UPGAST-00271
Validation of specified domain failed. {0}

Category:
Upgrade

Cause:
The specified domain failed validation which will prevent domain reconfiguration.

Action:
Refer to the Troubleshooting section of your upgrade documentation for info on supported domain upgrades. See the log file for details of the validation failure.

UPGAST-00272
Unable to connect to EBR-enabled Oracle database for schema {0} because an edition name was not specified.

Category:
Upgrade

Cause:
An edition name must be provided to establish a connection to an EBR-enabled Oracle Database.

Action:
Add an edition name to the response file (when using response file mode).

UPGAST-00273
Initialization of the inputs for schema {0} in component {1} failed with the error: {2}

Category:
Upgrade

Cause:
One of the inputs was not valid.

Action:
See the secondary error message for additional details.

UPGAST-00280
The -examine flag is not allowed with the -readiness flag

Category:
Upgrade

Cause:
You cannot specify -examine command line option with the -readiness option.

Action:
You cannot specify the -examine flag when running the upgrade tool in readiness check mode. If you want to perform an examine without an actual upgrade you must remove the -response option from the command line.

UPGAST-00281
Upgrade is being skipped because the -readiness flag is set

Category:
Upgrade

Cause:
Actual upgrades are not done when the -readiness command line option is set.

Action:
If you want to perform an actual upgrade remove the -readiness flag from the command line. If you intended to perform just the readiness phase, no action is necessary.

UPGAST-00282
Upgrade readiness check completed with one or more errors.

Category:
Upgrade

Cause:
Examine the readiness check report file and the log file to understand which checks failed.

Action:
Correct the problem using information provided in the log file; then retry the operation.

UPGAST-00283
The readiness check phase for plug-in {0} will not be run due to a previous error.

Category:
Upgrade

Cause:
An error occurred when loading or initializing the plug-in which prevents the readiness check phase from running.

Action:
Review the log file for additional details.

UPGAST-00284
The isUpgradeRequired method for plug-in {0} will not be called due to a previous error.

Category:
Upgrade

Cause:
An error occurred when loading or initializing the plug-in which prevents the isUpgradeRequired method from executing.

Action:
Review the log file for additional details.

UPGAST-00286
A response file referenced one or more schema user names that did not have a matching datasource in the specified domain.

Category:
Upgrade

Cause:
The auto-datasource option found one or more schema user names that did not have a matching datasource.

Action:
Review the domain's datasources and response file specified during upgrade to identify the mismatch.

UPGAST-00287
The getPluginInstantiationCount method for plug-in {0} will not be called due to a previous error.

Category:
Upgrade

Cause:
An error occurred when loading or initializing the plug-in which prevents the getPluginInstantiationCount method from executing.

Action:
Review the log file for additional details.

UPGAST-00288
Duplicate schema version registry entries matched the auto-datasource query.

Category:
Upgrade

Cause:
The auto-datasource option found more than one schema version registry entry that matched the component-id and data source user name.

Action:
Contact My Oracle Support.

UPGAST-00289
Plugin {0} disabled, isUpgradeRequired returned exception.

Category:
Upgrade

Cause:
The plugin threw an exception while processing the request to determine if it has schemas within the domain to upgrade.

Action:
Contact My Oracle Support.

UPGAST-00290
Plugin {0} disabled, the auto-datasource request returned an error.

Category:
Upgrade

Cause:
The auto-datasource option failed while processing the request for this plugin.

Action:
Contact My Oracle Support.

UPGAST-00291
The schema newversion attribute is missing for component {0}

Category:
Upgrade

Cause:
The upgrade framework has detected that the required schema newversion= attribute was missing in an upgrade descriptor file.

Action:
Correct the upgrade descriptor file. Starting in release 12.1.3 the <schema> tags must include a newversion= attribute that shows what the schema version number will become after sucecssful upgrade.

UPGAST-00292
Null value found in UAWLSINTERNAL field "{0}" of the response file.

Category:
Upgrade

Cause:
A value necessary for identifying the WLS domain is missing.

Action:
Correct the response file and rerun the upgrade.

UPGAST-00294
Unable to establish a connection to a WLS server.

Category:
Upgrade

Cause:
Attempt was made to connect to a WLS server during an offline upgrade.

Action:
Correct the response file and rerun the upgrade.

UPGAST-00296
The Upgrade Descriptor in file {0} specifies an illegal combination of attributes "{1}" and "{2}".

Category:
Upgrade

Cause:
A tag in an Upgrade Descriptor, which provides information to the Upgrade Assistant about individual upgrade plugins, contains two attributes whose values are incompatible with each other.

Action:
Contact My Oracle Support.

UPGAST-00297
no text found for offset {0}, read amount {1}, document length {2}

Category:
Upgrade

Cause:
Unknown; possibly the result of previous errors.

Action:
Refresh the file viewer window if possible.

UPGAST-00298
find position {0}, offset, {1}, search string {2}

Category:
Upgrade

Cause:
Unknown; possibly the result of previous errors.

Action:
Refresh the file viewer window if possible.

UPGAST-00300
The preselected check box for {0} has been deselected by the user

Category:
Upgrade

Cause:
The user has manually unchecked an upgrade item that was preselected by Upgrade Assistant.

Action:
Make sure that Oracle's recommendation to always upgrade this item really does not apply to your situation. If you are unsure then this box should be checked in most cases

UPGAST-00301
getTableRowCount method is not implemented by plug-in {0} for input named {1}.

Category:
Upgrade

Cause:
Required getTableRowCount method was not implemented by plug-in or the signature of the getTableRowCount method is incorrect.

Action:
Implement the required getTableRowCount method with the correct signature.

UPGAST-00302
An exception occurred while constructing the backing model for table input {0}.

Category:
Upgrade

Cause:
A call to the plugin method "getTableRowCount" or "getInitialValue" failed.

Action:
See the log file for exception details.

UPGAST-00303
Schema upgrade disabled for plugin {0} because feature set {1} is not installed.

Category:
Upgrade

Cause:
A plugin declared a dependency on a feature set, and the needed feature set is not installed. Schema upgrade of the component is disallowed.

Action:
No action is necessary.

UPGAST-00304
The updateOptionalInputPage method cannot be called for the non-optional input {0}.

Category:
Upgrade

Cause:
An error occurred calling the updateOptionalInputPage method.

Action:
Change the specified input to be optional.

UPGAST-00305
The updateOptionalCustomInput method cannot be called for the non-optional input {0}.

Category:
Upgrade

Cause:
An error occurred calling the updateOptionalCustomInput method.

Action:
Change the specified input to be optional.

UPGAST-00306
The updateOptionalInputPage method can only be called for top level inputs. Input {0} is a custom input or option input.

Category:
Upgrade

Cause:
An error occurred calling the updateOptionalInputPage method.

Action:
Change the specified input to be a top level input.

UPGAST-00307
The updateOptionalCustomInput method cannot be called for the non-custom input {0}.

Category:
Upgrade

Cause:
An error occurred calling the updateOptionalCustomInput method.

Action:
Change the specified input to be a custom input.

UPGAST-00308
An exception occurred while resizing the backing model for table input {0}.

Category:
Upgrade

Cause:
A call to the plugin method "getTableRowCount" failed.

Action:
See the log file for exception details.

UPGAST-00309
An invalid database URL was specified for schema {0}: {1}

Category:
Upgrade

Cause:
An incorrectly formed database URL was identified.

Action:
Contact My Oracle Support.

UPGAST-00310
An invalid database URL was specified for datasource {0} with schema {1}: {2}

Category:
Upgrade

Cause:
An incorrectly formed database URL was identified for the specified datasource.

Action:
Fix the datasource definition in your domain configuration using the WebLogic Server Administration Console.

UPGAST-00311
configUpgrade is not allowed in combination with schemaUpgrade.

Category:
Upgrade

Cause:
You cannot use both schemaUpgrade and configUpgrade in the same command.

Action:
Use only schemaUpgrade if you intend to upgrade your FMW schemas; use only configUpgrade if you intend to upgrade your FMW configurations.

UPGAST-00312
readiness is not allowed with configUpgrade or schemaUpgrade.

Category:
Upgrade

Cause:
You cannot use readiness with either configUpgrade or schemaUpgrade.

Action:
When performing readiness do not specify either the -configUpgrade option or the -schemaUpgrade option. When performing an upgrade do not specify the -readiness option.

UPGAST-00313
The response file contains components that do not match the specified upgrade type.

Category:
Upgrade

Cause:
The response file does not contain inputs that match the type of upgrade specified.

Action:
Regenerate the response file if necessary and rerun the upgrade. Specify a response file with schema inputs when performing a schema upgrade.Specify a response file with configuration inputs when performing a configuration upgrade.

UPGAST-00314
The XML parser reported a problem.

Category:
Upgrade

Cause:
Something unexpected occurred while parsing an XML file.

Action:
No action is necessary unless XML processing was aborted and the Upgrade Assistant was unable to continue. In which case the XML file in question should be identified and corrected. See the log file for exception details.

UPGAST-00315
The Repository Creation Utility (RCU) API returned an unexpected result.

Category:
Upgrade

Cause:
The RCU API completed with an unexpected result.

Action:
See the log file for details. Contact My Oracle Support.

UPGAST-00320
Exception raised while running a concurrent upgrade task. {0}

Category:
Upgrade

Cause:
An exception was raised while running a upgrade task in a concurrent thread. Check the stack trace for detailed information.

Action:
Attempt to correct the environment problem if any, then retry the upgrade. Contact My Oracle Support.

UPGAST-00321
The -threads option was passed an illegal value for number of threads: {0}. Must be an integer from {1} to {2}.

Category:
Upgrade

Cause:
The -threads option was passed a value that is outside the permitted range of threads.

Action:
Run the command again, specifying a valid number of threads, this value determines the number of schema upgrade plugins that can be run at the same time. See the command line help for details.

UPGAST-00323
Was unable to terminate the thread executor pool

Category:
Upgrade

Cause:
The thread pool that is used to schedule multiple plugins concurrently, could not be terminated after being shut down. The cause of this is unknown.

Action:
There is a very long timeout in order to give the thread pool ample time to terminate but the timeout period was still exceeded. There should not be any adverse affect due to this error

UPGAST-00324
Was unable to terminate the thread executor pool, timeout reached while performing {0}.

Category:
Upgrade

Cause:
The thread pool that is used to schedule multiple plugins concurrently, could not be terminated after being shut down. The timeout period was reached

Action:
There is a very long timeout in order to give the thread pool ample time to terminate but the timeout period was still exceeded. There should not be any adverse affect due to this error.

UPGAST-00325
database query for server identify failed: {0}

Category:
Upgrade

Cause:
A database query to compare database server identity failed

Action:
See the secondary error message for additional details.

UPGAST-00328
The schema version registry table does not exist on this database.

Category:
Upgrade

Cause:
The schema version registry table does not exist, because the required 12c schemas, such as the new Service Table schema, have not been created by RCU. The registry table must exist in order to run Upgrade Assistant.

Action:
Create the required 12c schema using RCU before running the Upgrade Assistant. Refer to the upgrade planning guide for the list of required schemas for this release.

UPGAST-00330
Unable to query schema version registry for schema: {0}

Category:
Upgrade

Cause:
An attempt to perform schema version registry queries failed.

Action:
See the secondary error message for additional details.

UPGAST-00331
Option -output requires -backupRegistry

Category:
Upgrade

Cause:
Option -output is only valid with -backupRegistry.

Action:
Remove -output from the command line.

UPGAST-00352
The -readiness option is not allowed in a standalone environment.

Category:
Upgrade

Cause:
You cannot specify the -readiness option in a standalone installation.

Action:
No action is necessary.

UPGAST-00353
Upgrade readiness check was unable to locate a standard query method for {0}

Category:
Upgrade

Cause:
Readiness check was unable to locate the code for a standard query.

Action:
Contact My Oracle Support.

UPGAST-00355
The selected domain has a version of {0} which appears to not be a valid version number.

Category:
Upgrade

Cause:
Upgrade requires the domain to be at a certain version, which this domain does not meet.

Action:
Select a different domain, or run the Reconfiguration tool before trying to upgrade.

UPGAST-00356
The specified domain has a version of {0} which is less than the minimum of {1}.

Category:
Upgrade

Cause:
The domain is at a version less than the minimum version.

Action:
Specify a domain that is more recent than the minimum viable version.

UPGAST-00357
Upgrade readiness check returned an empty result set for test {0}, schema tag {1}, database object {2}

Category:
Upgrade

Cause:
Readiness check encountered an error during execution of a standard query.

Action:
Contact My Oracle Support.

UPGAST-00358
Upgrade readiness check encountered an unexpected error for test {0}, schema tag {1}, database object {2}

Category:
Upgrade

Cause:
Readiness check encountered an error during execution of a standard query.

Action:
Contact My Oracle Support.

UPGAST-00359
Upgrade readiness check encountered a method invocation error for test {0}, schema tag {1}, database object {2}, query {3}

Category:
Upgrade

Cause:
Readiness check encountered an error during execution of a standard query.

Action:
Contact My Oracle Support.

UPGAST-0370
getTablespaceName is only supported for Oracle Database not {0}.

Category:
Upgrade

Cause:
An upgrade plugin used an API that is only supported for the Oracle Database.

Action:
Contact My Oracle Support.

UPGAST-00371
A database query to return tablespace name failed: {0}

Category:
Upgrade

Cause:
A database query to identify the tablespace failed

Action:
See the secondary error message for additional details.

UPGAST-00372
A database query to detect consolidated schema failed: {0}

Category:
Upgrade

Cause:
A database query to detect if this schema is consolidated failed

Action:
See the secondary error message for additional details.

UPGAST-00373
A readiness check that does not apply to consolidated schemas has been skipped for test {0}, schema tag {1}, database object {2}

Category:
Upgrade

Cause:
A standard readiness test was called that does not apply to consolidated schemas. The upgrade framework has skipped the test. This is a successful outcome.

Action:
No further action is necessary.

UPGAST-00374
SQL Query failed because it is only applicable to a consolidated schema: {0}

Category:
Upgrade

Cause:
A database query that obtains information specific to consolidated schemas was called for a non-consolidated schema.

Action:
No further action is necessary.

UPGAST-05001
Error connecting to {0} as user {1}.

Category:
Upgrade

Cause:
A error occurred attempting to connect to the specified database.

Action:
See the secondary error message for additional details.

UPGAST-05002
Error creating Java DB schema {0}.

Category:
Upgrade

Cause:
A error occurred attempting to create the specified Java DB schema.

Action:
See the secondary error message for additional details.

UPGAST-05003
Error getting the Java DB Schema Version Registry table.

Category:
Upgrade

Cause:
A error occurred locating the Schema Version Registry table for a Java DB.

Action:
See the secondary error message for additional details.

UPGAST-05004
Error registering the JDBC drver class {0}.

Category:
Upgrade

Cause:
A error occurred registering the specified JDBC driver.

Action:
See the secondary error message for additional details.

UPGAST-05005
Unsupported database {0} identified.

Category:
Upgrade

Cause:
A database that is not supported was specified.

Action:
Specify a supported database.

UPGAST-05006
Error moving the Schema Version Registry table.

Category:
Upgrade

Cause:
A error occurred while moving the Schema Version Registry table from SYSTEM to FMWREGISTRY.

Action:
See the secondary error message for additional details.

UPGAST-05007
Error dropping the view SYSTEM.SCHEMA_VERSION_REGISTRY.

Category:
Upgrade

Cause:
A error occurred while dropping the database view SYSTEM.SCHEMA_VERSION_REGISTRY.

Action:
See the secondary error message for additional details.

UPGAST-05008
Error copying the contents of schema version registry table.

Category:
Upgrade

Cause:
A error occurred while copying the contents of table SYSTEM.SCHEMA_VERSION_REGISTRY$ to table FMWREGISTRY.SCHEMA_VERSION_REGISTRY$.

Action:
See the secondary error message for additional details.

UPGAST-05009
Error adding triggers to the schema version registry table.

Category:
Upgrade

Cause:
A error occurred while adding triggers to the table SYSTEM.SCHEMA_VERSION_REGISTRY$.

Action:
See the secondary error message for additional details.

UPGAST-05010
Error getting the metadata for the database connection.

Category:
Upgrade

Cause:
A error occurred while requesting the metadata for a database connection.

Action:
See the secondary error message for additional details.

UPGAST-05011
Error testing if the database environment allows creation of system objects.

Category:
Upgrade

Cause:
A error occurred while testing if the database connection allows the creation of system objects.

Action:
See the secondary error message for additional details.

UPGAST-05012
Error testing if the database table exists.

Category:
Upgrade

Cause:
A error occurred while testing if the table {0} exists.

Action:
See the secondary error message for additional details.

UPGAST-05013
Error creating a SYSTEM instance of the schema version registry table.

Category:
Upgrade

Cause:
A error occurred while creating a schema version registry table in SYSTEM for compatibility with pre-FMWREGISTRY code.

Action:
See the secondary error message for additional details.

UPGAST-05014
Error creating the database view SYSTEM.SCHEMA_VERSION_REGISTRY.

Category:
Upgrade

Cause:
A error occurred while creating a database view for for the schema version registry table.

Action:
See the secondary error message for additional details.

UPGAST-05015
Error granting access for SYSTEM instance of the schema version registry.

Category:
Upgrade

Cause:
A error occurred while creating access rights for the SYSTEM instance of the schema version registry to access the FMWREGISTRY instance.

Action:
See the secondary error message for additional details.

UPGAST-05016
Unrecognized database type of {0} was specified.

Category:
Upgrade

Cause:
A database type that is not recognized was specified.

Action:
Specify a supported database type.

UPGAST-05017
Error creating the public synonym SCHEMA_VERSION_REGISTRY.

Category:
Upgrade

Cause:
An error occurred while creating the database synonym SCHEMA_VERSION_REGISTRY.

Action:
See the secondary error message for additional details.

UPGAST-05018
Error dropping the public synonym SCHEMA_VERSION_REGISTRY.

Category:
Upgrade

Cause:
An error occurred while dropping the database synonym SCHEMA_VERSION_REGISTRY.

Action:
See the secondary error message for additional details.

UPGAST-05019
Error dropping the trigger SYSTEM.{0}.

Category:
Upgrade

Cause:
An error occurred while dropping the database trigger specified.

Action:
See the secondary error message for additional details.

UPGAST-05020
Error dropping the view {0}.SCHEMA_VERSION_REGISTRY.

Category:
Upgrade

Cause:
An error occurred while dropping the database view specified.

Action:
See the secondary error message for additional details.

UPGAST-05021
Error dropping the table {0}.SCHEMA_VERSION_REGISTRY$.

Category:
Upgrade

Cause:
An error occurred while dropping the database table specified.

Action:
See the secondary error message for additional details.

UPGAST-05022
Error dropping the user {0}.

Category:
Upgrade

Cause:
An error occurred while dropping the database user specified.

Action:
See the secondary error message for additional details.

UPGAST-05023
Unable to backup schema version registry: {0}

Category:
Upgrade

Cause:
An error occurred while attempting to backup the schema version registry

Action:
See the log file for exception details.

UPGAST-05024
Internal error restoring schema version registry: {0}/{1}

Category:
Upgrade

Cause:
Unexpected data detected while attempting to restore the schema version registry

Action:
Contact My Oracle Support.

34
UPG-OHS-00001 to UPG-OHS-00013

UPG-OHS-00001
Source path {0} does not refer to an Oracle HTTP Server {1} component.

Category:
UA

Cause:
An invalid source directory was specified.

Action:
Select a valid Oracle HTTP Server component configuration directory.

UPG-OHS-00002
An unknown error occurred while logging the migration results from file {0}.

Category:
UA

Cause:
The file specified could not be read, or Upgrade Assistant logging failed.

Action:
Check for other errors with the upgrade task.

UPG-OHS-00003
The configuration file {0} has an invalid format.

Category:
UA

Cause:
The file specified cannot be parsed due to an invalid or unexpected format.

Action:
The information in the file specified must be migrated manually.

UPG-OHS-00004
An error occurred while updating configuration file {0}.

Category:
UA

Cause:
The cause is unknown.

Action:
The information in the file specified must be migrated manually.

UPG-OHS-00005
An error occurred while copying configuration file {0} to {1}.

Category:
UA

Cause:
The cause is unknown.

Action:
The source file specified must be manually copied to the destination file specified.

UPG-OHS-00006
An error occurred while reading file {0}.

Category:
UA

Cause:
The cause is unknown.

Action:
The information in the file specified must be migrated manually.

UPG-OHS-00007
The OHS version {0} is not supported for upgrade.

Category:
UA

Cause:
This OHS Upgrade Assistant plugin supports upgrade only from OHS 11.1.1.6.0 onwards.

Action:
Upgrade to a minimum supported version(11.1.1.6.0) and then try to upgrade henceforth.

UPG-OHS-00008
The files at location {0} are inaccessible.

Category:
UA

Cause:
Files at this location do not have required permissions.

Action:
Change the access permissions of the files at this location.

UPG-OHS-00009
Path {0} does not exist.

Category:
UA

Cause:
The expected file is missing.

Action:
Verify the source OHS installation.

UPG-OHS-00010
Unable to parse {0} of the domain.

Category:
UA

Cause:
The syntax of the file is incorrect.

Action:
Verify that the configuration of source domain is proper.

UPG-OHS-00011
The import of wallet failed.

Category:
UA

Cause:
KSS operations failed.

Action:
Import the wallets manually.

UPG-OHS-00012
KSS operations failed.

Category:
UA

Cause:
The cause is unknown.

Action:
Import the wallets manually.

UPG-OHS-00013
An MD5 or MD2 certificate with subject {0}, issuer {1}, and algorithm {2} is present at the location {3}.

Category:
UA

Cause:
Presence of insecure certificate.

Action:
Replace the certificate manually.

35

WC-05319 to WC-05370

WC-05319
Failed to retrieve security parent portal for the child portal {0}

Category:
Other

Cause:
Failure in retrieving security parent

Action:
Contact Administrator.

WC-05320
Failed to copy security data for portal {0}

Category:
Other

Cause:
Copy of security data from the security parent failed

Action:
Contact Administrator.

WC-05321
Failed to delete portal {0} and all its children

Category:
Other

Cause:
Deletion of portal along with children failed

Action:
Contact Administrator.

WC-05322
Failed to retrieve parent portal for the child portal {0}

Category:
Other

Cause:
Failure in retrieving parent portal

Action:
Contact Administrator.

WC-05323
Failed to retrieve child portals for portal {0}

Category:
Other

Cause:
Failure in retrieving child portals

Action:
Contact Administrator.

WC-05324
Failed to set inheritance from parent for portal {0}

Category:
Other

Cause:
Failure in setting the inheritance flag for child portals

Action:
Contact Administrator.

WC-05370
Failed to retrieve root portal for portal {0}

Category:
Other

Cause:
Failure in retrieving root portal

Action:
Contact Administrator.

WCC-ADF-10000 to WCC-ADF-30002

WCC-ADF-10000
An internal error occurred.

Category:
Other

Cause:
An internal error occurred.

Action:
Report the error details to Oracle Support Services.

WCC-ADF-10001
File not found: {0}

Category:
Files

Cause:
There was no file at the specified path.

Action:
Correct the path or create the missing file.

WCC-ADF-10002
Invalid file name: {0}

Category:
Files

Cause:
The file name is invalid.

Action:
Check the file name, it may contain reserved characters.

WCC-ADF-10003
Error executing the 'toString' method: {0}

Category:
Other

Cause:
The method 'toString' threw an exception.

Action:
Review the error reported in the chained exception.

WCC-ADF-10004
The type '{0}' could not be converted to '{1}'.

Category:
Programmatic

Cause:
The conversion between two types failed.

Action:
Ensure the type conversion is valid.

WCC-ADF-10005
Item not found: {0}

Category:
Programmatic

Cause:
An item with the specified primary key could not be found.

Action:
Verify that the primary key matches that of an existing item.

WCC-ADF-10006
Initialize user data cache: {0} entries, {1} milliseconds

Category:
Programmatic

Cause:

Action:

WCC-ADF-10007
Invalid value for Java system property {0}: {1}

Category:
Configuration

Cause:
The Java system property had an invalid value.

Action:
Review and correct the value

WCC-ADF-10008
Unable to connect profiler: {0}

Category:
Logging

Cause:
The profiler could not connect to the specified hostname and port.

Action:
Ensure a profiler client is running on that hostname and port

WCC-ADF-10009
Profiler connected: {0}

Category:
Logging

Cause:

Action:

WCC-ADF-10010
Profiler disconnected

Category:
Logging

Cause:

Action:

WCC-ADF-10200
Localization key '{0}' was not found in '{1}'.

Category:
Logging

Cause:
An internal warning occurred.

Action:
Report the warning to Oracle Support Services

WCC-ADF-10201
Message key was not found. Parameters: {0} {1} {2} {3} {4} {5}

Category:
Logging

Cause:
An internal warning occurred.

Action:
Report the warning to Oracle Support Services

WCC-ADF-10202
Log message requires localization due to the log level: {0}

Category:
Logging

Cause:
An internal warning occurred.

Action:
Report the warning to Oracle Support Services

WCC-ADF-10203
Error initializing localization preferences for mode: {0}

Category:
Other

Cause:
Localization preferences for the given mode could not be initialized.

Action:
Review the error reported in the chained exception.

WCC-ADF-10400
The cause of the exception cannot be set.

Category:
Other

Cause:
The exception already contains a cause. It could not be updated to this cause.

Action:
The cause is logged. No action required.

WCC-ADF-10401
Server error cannot be mapped: '{0}' '{1}'

Category:
Programmatic

Cause:
This error is not handled by the UI client.

Action:
Report the details of the issue to Oracle Support Services.

WCC-ADF-10600
The XML document could not be parsed.

Category:
Files

Cause:
The XML document is not valid and/or well formed.

Action:
Review and correct the XML document.

WCC-ADF-10601
Node '{0}' has more than one child element named '{1}'.

Category:
Files

Cause:
The XML document was not valid.

Action:
Review and correct the XML document.

WCC-ADF-10602
Node '{0}' has more than one text child.

Category:
Files

Cause:
The XML document was not valid.

Action:
Review and correct the XML document.

WCC-ADF-10700
Application configuration from wcc-adf-config in adf-config.xml or MDS override: {0}

Category:
Configuration

Cause:

Action:

WCC-ADF-10701
Temporary directory does not exist: {0}

Category:
Configuration

Cause:
The specified temporary directory did not exist.

Action:
Specify a valid and readable/writable temporary directory in the configuration.

WCC-ADF-10702
The application configuration property '{0}' has an invalid value: '{1}'

Category:
Configuration

Cause:
The application configuration property has an invalid value.

Action:
Consult the documentation and specify a valid value.

WCC-ADF-10703
It is strongly recommended to set the \'applicationUrl\' configuration property in the form \'https://host[:port]\'

Category:
Configuration

Cause:
Oracle strongly recommends setting the 'applicationUrl' property to a secure (https) URL.

Action:
Specify a secure (https) URL value.

WCC-ADF-10801
Invalid WccInstance name: {0}

Category:
Configuration

Cause:
A WccInstance with the specified name could not be found.

Action:
Review and correct the WccInstance name.

WCC-ADF-10802
Invalid configuration parameter for WccInstance '{0}'. Parameter: {1}={2}

Category:
Configuration

Cause:
A WccInstance configuration parameter was not correct.

Action:
Review and correct the WccInstance configuration parameter.

WCC-ADF-10900
Required feature is not enabled on the WebCenter Content Server instance '{0}'. Feature: '{1}', Minimum level: {2}

Category:
Configuration

Cause:
A required feature was not enabled on the WebCenter Content Server instance, or the feature level did not meet the minimum requirement.

Action:
Enable the required feature on the WebCenter Content Server instance and ensure the feature is at the minimum required level.

WCC-ADF-10901
If the workflow feature is to be used, it is recommended to enable the feature 'WfDbInQueue' by setting the 'config.cfg' option 'UseDatabaseWfInQueue=1' on the WebCenter Content Server instance '{0}'.

Category:
Configuration

Cause:
A recommended feature on the WebCenter Content Server should be enabled if the workflow feature is to be used..

Action:
Enable the required feature on the WebCenter Content Server instance if the workflow feature is to be used.

WCC-ADF-10902
Required Content Server feature has been enabled. The content server must be restarted before the configuration changes will take place.

Category:
Configuration

Cause:
After enabling the required content server feature, the content server must be restarted.

Action:
The content server must be restarted before the configuration changes will take place.

WCC-ADF-11000
Connection '{0}' could not be created for instance '{1}'.

Category:
Requests/Responses

Cause:
An error occurred while attempting to create the connection.

Action:
Review the connection configuration and the error reported in the chained exception.

WCC-ADF-11001
IdcContext could not be created for user '{0}', connection '{1}', instance '{2}'.

Category:
Requests/Responses

Cause:
An error occurred while attempting to create the user IdcContext.

Action:
Review the connection configuration and the error reported in the chained exception.

WCC-ADF-11002
Connection created: instance '{0}', connection '{1}', server URL '{2}', admin user '{3}'

Category:
Configuration

Cause:

Action:

WCC-ADF-11003
RIDC Client Library Version: {0}

Category:
Configuration

Cause:

Action:

WCC-ADF-11004
Credential could not be fetched.

Category:
Configuration

Cause:
An error occurred while fetching the credentials.

Action:
Review the credential access permission and the error reported in the chained exception.

WCC-ADF-11005
Credential user '{0}' fetched successfully from connection architecture layer.

Category:
Configuration

Cause:

Action:

WCC-ADF-11006
Connection architecture mbean could not be found.

Category:
Configuration

Cause:
An error occurred while getting the credential username from connection architecture mbean.

Action:
Review the error reported in the chained exception.

WCC-ADF-11400
Error executing WebCenter Content service '{0}'.

Category:
Requests/Responses

Cause:
An error occurred while executing a WebCenter Content service.

Action:
Review the error reported in the chained exception.

WCC-ADF-11401
Error executing WebCenter Content service '{0}': {1} (status code: {2}, message key: {3})

Category:
Requests/Responses

Cause:
An error occurred while executing a WebCenter Content service.

Action:
Review the error message.

WCC-ADF-11402
'{0}' could not be converted to RIDC string.

Category:
Other

Cause:
An internal error occurred.

Action:
Report the details of this error Oracle Support Services.

WCC-ADF-11403
RIDC string '{0}' could not be converted to type '{1}'.

Category:
Other

Cause:
An internal error occurred.

Action:
Report the details of this error Oracle Support Services.

WCC-ADF-11404
Unsupported data type: {0}

Category:
Programmatic

Cause:
An attribute definition specified an unsupported data type.

Action:
Review and correct the attribute definition.

WCC-ADF-11420
The Content Server request has timed out, but the operation should continue to run on the server.

Category:
Requests/Responses

Cause:
The Content Server request didn't return a response before the RIDC socket read timeout expired.

Action:
The Content Server request was not aborted, and the operation may continue to run after the timeout. No action required.

WCC-ADF-11600
Operation cannot target more than one WccInstance.

Category:
Programmatic

Cause:
The requested operation targeted two or more WccInstances.

Action:
Target a single WccInstance with the operation.

WCC-ADF-11800
File system operation failed on file or directory: {0}

Category:
Files

Cause:
A file system operation failed on the specified file or directory.

Action:
Check the underlying error and file system permissions by the process attempting the operation.

WCC-ADF-11801
File or directory cannot be deleted: {0}

Category:
Files

Cause:
The specified file or directory could not be deleted.

Action:
Check file system permissions for the process attempting to perform the delete.

WCC-ADF-11802
File or directory cannot be created: {0}

Category:
Files

Cause:
The specified file or directory could not be created.

Action:
Check file system permissions for the process attempting to perform the delete.

WCC-ADF-11803
The file cannot be moved from '{0}' to '{1}'.

Category:
Files

Cause:
The specified file could not be moved.

Action:
Check file system permissions for the process attempting to perform the operation.

WCC-ADF-11804
The uploaded file cannot be larger than {0}.

Category:
Files

Cause:
The uploaded file was larger than the maximum allowed.

Action:
Reduce the file size and try the upload again.

WCC-ADF-11805
The following HTTP error occured while transfering file content: {0}

Category:
Requests/Responses

Cause:
An HTTP error occured while transfering file content.

Action:
Examine the HTTP error code, message, and the server state and logs.

WCC-ADF-11806
The uploaded file cannot be empty.

Category:
Files

Cause:
The uploaded file was empty.

Action:
Upload a non-zero length file.

WCC-ADF-11807
The content of one or more documents was not available, possibly due to a system error or because your session was idle for too long.

Category:
Files

Cause:
The uploaded file token was not found.

Action:
Re-try the upload.

WCC-ADF-11808
The temporary directory structure '{0}' has been tampered with. Ensure the application configuration property 'temporaryDirectory' points to a secure filesystem.

Category:
Files

Cause:
The temporary directory structure has been tampered with.

Action:
Ensure the application configuration property 'temporaryDirectory' points to a secure filesystem.

WCC-ADF-12411
Could not retrieve information for user '{0}'.

Category:
Requests/Responses

Cause:
An error occurred while fetching this user's information.

Action:
If this error occurs multiple times for the same user, report it to Oracle Support Services.

WCC-ADF-12416
An item with the specified identifier does not exist, or cannot be accessed due to insufficient privileges.

Category:
Requests/Responses

Cause:
The specified item did not exist or could not be accessed.

Action:
Specify an existing item you have access to.

WCC-ADF-12417
An item with the specified name already exists.

Category:
Requests/Responses

Cause:
The specified item name matched an existing name.

Action:
Specify an item name that does not already exist.

WCC-ADF-12418
You do not have sufficient privileges to access an item or perform the operation.

Category:
Requests/Responses

Cause:
The user had insufficient privileges to perform the operation.

Action:
Perform the operation as a user with sufficient privileges.

WCC-ADF-12419
The folder is not empty.

Category:
Requests/Responses

Cause:
The operation was not performed on an empty folder as expected.

Action:
Perform the operation on an empty folder.

WCC-ADF-12420
You must be authenticated and have sufficient privileges to perform the operation.

Category:
Requests/Responses

Cause:
The user attempting the operation had insufficient privileges, or was unauthenticated.

Action:
Perform the operation as an authenticated user with sufficient privileges.

WCC-ADF-12421
The name must not contain any reserved characters such as : / \ * " < > | ?

Category:
Requests/Responses

Cause:
The name contained one or more illegal characters.

Action:
Choose a name that does not include any illegal characters.

WCC-ADF-12422
The name must not start or end with whitespace.

Category:
Requests/Responses

Cause:
The specified name started and/or ended with whitespace.

Action:
Choose a name that does not start or end with whitespace.

WCC-ADF-12423
The name is {0} characters too long.

Category:
Requests/Responses

Cause:
The specified name was too long.

Action:
Choose a shorter name.

WCC-ADF-12424
The name is reserved by the system.

Category:
Requests/Responses

Cause:
The specified name matched a reserved system name.

Action:
Choose a different name.

WCC-ADF-12425
The name must not contain consecutive spaces.

Category:
Requests/Responses

Cause:
The name contains consecutive spaces.

Action:
Choose a name that does not contain consecutive spaces.

WCC-ADF-12430
You do not have permission to perform this operation with the specified metadata.

Category:
Requests/Responses

Cause:
The user did not have permission to perform the operation with the specified metadata.

Action:
Modify the metadata or perform the operation as a user with sufficient privileges.

WCC-ADF-12431
A document with the specified Document ID already exists.

Category:
Requests/Responses

Cause:
The specified Document ID matched the Document ID of a document that already exists.

Action:
For new documents, choose a Document ID that does not already exist.

WCC-ADF-12432
The expiration date cannot be before the release date.

Category:
Requests/Responses

Cause:
The expiration date cannot be before the release date.

Action:
Choose an expiration date after the release date.

WCC-ADF-12433
You would not have Write access to the Access Control List.

Category:
Requests/Responses

Cause:
The user would not have Write access to the Access Control List.

Action:
Grant Write access to the Access Control List.

WCC-ADF-12434
You would not have Admin access to the Access Control List.

Category:
Requests/Responses

Cause:
The user would not have Admin access to the Access Control List.

Action:
Grant Admin access to the Access Control List.

WCC-ADF-12435
There was an error executing the search, possibly because the search expression was invalid.

Category:
Requests/Responses

Cause:
The search query cannot be executed as specified.

Action:
Check the search term syntax and try again.

WCC-ADF-12436
The value entered for '{0}' exceeds {1} characters, the maximum length allowed for this field.

Category:
Requests/Responses

Cause:
The value entered for the field is too long.

Action:
Enter a value up to the maximum allowed length.

WCC-ADF-12437
You do not have Write access to folder '{0}'.

Category:
Requests/Responses

Cause:
The user does not have write access to the folder.

Action:
Select a folder that has write access.

WCC-ADF-12438
A null value cannot be propagated for field '{0}'.

Category:
Requests/Responses

Cause:
The value entered for the field may not be null.

Action:
Enter a non-null value.

WCC-ADF-12439
Item '{0}' cannot be revised because the source and destination have different types.

Category:
Requests/Responses

Cause:
The source and destination items have different types.

Action:
Manually resolve the conflict by deleting or renaming the destination item.

WCC-ADF-12440
You do not have sufficient privileges to access the content account '{1}'.

Category:
Requests/Responses

Cause:
The user does not have sufficient privileges to access the specified account.

Action:
Select an account that gives the user sufficient privileges.

WCC-ADF-12441
The document is not in workflow.

Category:
Requests/Responses

Cause:
The user is trying to approve or reject a document that is not in workflow.

Action:
Refresh the document information.

WCC-ADF-12442
You are not a reviewer for workflow step '{0}'.

Category:
Requests/Responses

Cause:
The user is not a reviewer for the current workflow step.

Action:
Refresh the document information.

WCC-ADF-12443
The document is not in a workflow review step.

Category:
Requests/Responses

Cause:
The document is not in a workflow review step.

Action:
Refresh the document information.

WCC-ADF-12444
You are not a contributor for workflow step '{0}'.

Category:
Requests/Responses

Cause:
The user is not a contributor for the current workflow step.

Action:
Refresh the document information.

WCC-ADF-12470
You selected a revision that is not the latest revision of the document.

Category:
Requests/Responses

Cause:
The user selected a revision other than the latest revision of the document.

Action:
Refresh the document information, select the latest revision and retry the operation.

WCC-ADF-12471
You selected a document that is not checked out or a revision that is not the latest revision of the document.

Category:
Requests/Responses

Cause:
The user selected a revision other than the latest revision of the document or the document is not checked out.

Action:
Refresh the document information, select the latest revision and retry the operation.

WCC-ADF-12472
You may not move content between the two library or folder types.

Category:
Requests/Responses

Cause:
The user is attempting to move content between two types of libraries or folders that do not allow the operation.

Action:
Select a destination compatible with the source and re-try the move operation.

WCC-ADF-12473
You may not move or copy a document pending initial workflow contribution.

Category:
Requests/Responses

Cause:
The user is attempting to move or copy a document pending initial workflow contribution.

Action:
Try the operation again after the document is out of the initial workflow contribution.

WCC-ADF-12474
You entered the invalid value '{0}' for the Revision field.

Category:
Requests/Responses

Cause:
The value entered for the Revision field is not valid.

Action:
Enter a valid value.

WCC-ADF-12475
The document is checked out by another user.

Category:
Requests/Responses

Cause:
The user is attempting to check out or check in a document that is checked out by another user.

Action:
Try the operation again after the document is no longer checked out by another user.

WCC-ADF-12476
The folder '{0}' could not be renamed.

Category:
Requests/Responses

Cause:
An error occurred while renaming a folder.

Action:
Some system folders cannot be renamed.

WCC-ADF-12480
You may not copy or move a folder into itself or its descendant.

Category:
Requests/Responses

Cause:
Copying or moving a folder into itself or its descendant is prohibited.

Action:
Select a destination for copy or move that is neither the source folder nor its descendant.

WCC-ADF-12490
A value is required for field '{0}'.

Category:
Requests/Responses

Cause:
The required field does not have a value.

Action:
Enter a value for the required field. If the required field is hidden, make sure it has a default valued defined in Content Server.

WCC-ADF-12495
The item cannot be accessed because it was moved to Trash.

Category:
Requests/Responses

Cause:
An attempt was made to access a Trash item from outside the context of the Trash listing.

Action:
Refresh the page where the item was displayed, and verify that the item is no longer displayed after the page has reloaded.

WCC-ADF-12800
The cloud folder could not be found within the Oracle Documents Cloud Service. The folder may be missing, or the cloud service may be unavailable.

Category:
Requests/Responses

Cause:
Its linked folder in Oracle Documents Cloud Service no longer exists or is not accessible.

Action:
Verify its counterpart in Oracle Documents Cloud Service still exists and is accessible.

WCC-ADF-12801
The action failed in Oracle Documents Cloud Service.

Category:
Requests/Responses

Cause:
The action could not be performed in Oracle Documents Cloud Service.

Action:
Content Server doesn't provide much details on this error. Report the error to Oracle Support Services.

WCC-ADF-12802
The cloud folder cannot be shared with your Oracle Documents account.

Category:
Requests/Responses

Cause:
You don't have a personal account for Oracle Documents Cloud Service, or the e-mail address in your WebCenter Content preferences doesn't correspond with your Oracle Documents account.

Action:
Make sure you have a personal account in Oracle Documents Cloud Service, and that your WebCenter Content e-mail address setting corresponds with that account.

WCC-ADF-12803
This file type is not supported by Oracle Documents Cloud Service.

Category:
Requests/Responses

Cause:
This file type is not allowed to be stored in the Oracle Documents repository.

Action:
Don't attempt to copy files of this type to Oracle Documents Cloud Service.

WCC-ADF-12804
This cloud folder has already been shared with your Oracle Documents account.

Category:
Requests/Responses

Cause:
If a cloud folder is currently shared with a particular account, it cannot be shared with that same account again.

Action:
Don't attempt to share this cloud folder with your Oracle Documents account again unless the existing share has been removed.

WCC-ADF-12805
You're already the owner of this cloud folder. Sharing it with your own Oracle Documents account is not a valid operation.

Category:
Requests/Responses

Cause:
The owner of a cloud folder can't share that folder with their own account.

Action:
Don't attempt to share this cloud folder with your Oracle Documents account.

WCC-ADF-14001
The number of accounts assigned to you exceeds the maximum number of accounts allowed by this query, so the listing may not include all the items you have access to. Note that you can still perform operations (such as uploading content or creating folders) for all your

accounts, even though the results of those operations may not be visible in the listing if the account is among those truncated from the query.

Category:
Requests/Responses

Cause:
The number of accounts assigned exceeds the maximum allowed by the query.

Action:
Report the issue to your system administrator.

WCC-ADF-20200
The type '{1}' was unexpected for field '{0}' (treating as STRING).

Category:
Data

Cause:
A field had an unexpected data type.

Action:
Report the details of this warning Oracle Support Services.

WCC-ADF-30000
The Faces Servlet filter '{0}' is not configured correctly.

Category:
Configuration

Cause:
The Faces Servlet filter was not configured correctly.

Action:
Check the documentation for the proper filter configuration.

WCC-ADF-30001
Cannot find UI component '{0}'.

Category:
Logging

Cause:

Action:

WCC-ADF-30002
WCCADF mbean could not be registered.

Category:
Configuration

Cause:
An error occurred while registering the WCCADF mbean.

Action:
Review the error reported in the chained exception.

37

WCS-03051 to WCS-90200

WCS-03051
No event is selected.

Category:
Other

Cause:
There was invalid or missing information in the connection.xml or adf-config.xml file.

Action:
Verify that the connections.xml and adf-config.xml file contains a valid entry with the correct connection information.

WCS-03052
event date validation error

Category:
Other

Cause:
An invalid date or time was selected for the event.

Action:
Verify the date and time.

WCS-03053
No upcoming events were found.

Category:
Other

Cause:
Either the connections.xml file did not contain a valid connection entry for the Portal Events service, or the adapter was not defined.

Action:
Verify that the connections.xml file contains a valid connection for the Portal Events service, and the Portal Events server is running

WCS-03101
The Events service is not able to acquire an adapter from the server.

Category:
Other

Cause:
Either the connections.xml file did not contain a valid connection entry for the Personal Events service, or the adapter was not defined.

Action:
Verify that the connections.xml file contains a valid connection entry for the Personal Events service, and the specified adapter is defined.

WCS-03102
The Events service is unavailable.

Category:
Other

Cause:
The connections.xml file either did not contain a valid connection entry for the Personal Events service, or it was missing the entry for Personal Events with the state attribute set to default.

Action:
Verify that the connections.xml file contains a valid connection entry for the Personal Events service, and the Personal Events server is running.

WCS-03103
Data query in Personal Events service failed

Category:
Other

Cause:
Either the connections.xml file did not contain a valid connection entry for the Personal Events service, or the Personal Events server was down.

Action:
Verify that the connections.xml file contains a valid connection entry for the Personal Events service, and the Personal Events server is running.

WCS-03104
Create event in Personal Events service failed

Category:
Other

Cause:
Either the connections.xml file did not contain a valid connection entry for the Personal Events service, or the Personal Events server was down.

Action:
Verify that the connections.xml file contains a valid connection entry for the Personal Events service, and the Personal Events server is running.

WCS-03105
Update event in Personal Events service failed

Category:
Other

Cause:
Either the connections.xml file did not contain a valid connection entry for the Personal Events service, or the Personal Events server was down.

Action:
Verify that the connections.xml file contains a valid connection entry for the Personal Events service, and the Personal Events server is running.

WCS-03106
Delete event in Personal Events service failed

Category:
Other

Cause:
Either the connections.xml file did not contain a valid connection entry for the Personal Events service, or the Personal Events server was down.

Action:
Verify that the connections.xml file contains a valid connection entry for the Personal Events service, and the Personal Events server is running.

WCS-03107
failure to send event mail in Personal Events service

Category:
Other

Cause:
Either the connections.xml file did not contain a valid connection for the Mail service, or the Mail server was down.

Action:
Verify that the connections.xml file contains a valid connection for the Mail service, and that the Mail server is running.

WCS-03108
failure to retrieve online meeting

Category:
Other

Cause:
Either the connections.xml file did not contain a valid connection entry for the Conference service, or the Conference server was down.

Action:
Verify that the connections.xml file contains a valid connection for the Conference service, and the Conference server is running.

WCS-03109
failure to retrieve personal event list

Category:
Other

Cause:
Either the connections.xml file did not contain a valid connection entry for the Personal Events service, or the Personal Events server was down.

Action:
Verify that the connections.xml file contains a valid connection entry for the Personal Events service, and the Personal Events server is running.

WCS-03110
failure to retrieve personal event detail

Category:
Other

Cause:
Either the connections.xml file did not contain a valid connection entry for the Personal Events service, or the Personal Events server was down.

Action:
Verify that the connections.xml file contains a valid connection entry for the Personal Events service, and the Personal Events server is running.

WCS-03111
The Personal Events service credential is not configured properly.

Category:
Other

Cause:
The Personal Events service credential was not configured properly.

Action:
Verify that the Personal Events service credential is correct, and try again.

WCS-03112
The Personal Events service is not properly configured.

Category:
Other

Cause:
The Personal Events service was not properly configured in connections.xml.

Action:
Verify that the connections.xml file contains a valid entry for the Personal Events service.

WCS-03113
The Personal Events server is not available.

Category:
Other

Cause:
The Personal Events server was not available.

Action:
Verify that the connections.xml file contains a valid entry for the Personal Events service, and the Personal Events server is running.

WCS-03114
failure to send personal event

Category:
Other

Cause:
Either the connections.xml file did not contain a valid connection for the Mail service, or the Mail server was down.

Action:
Verify that the connections.xml file contains a valid connection for the Mail service, and the Mail server is running.

WCS-03201
The Events service is not able to acquire an adapter for an Events server.

Category:
Other

Cause:
Either the connections.xml file did not contain a valid connection entry for the Portal Events service.

Action:
Verify that the connections.xml file contains a valid connection entry for the Portal Events service.

WCS-03202
The Events service is unavailable.

Category:
Other

Cause:
Either the connections.xml file did not contain a valid connection entry for the Portal Events service, or the Portal Events server was down.

Action:
Verify that the connections.xml file contains a valid connection entry for the Portal Events service, and the Portal Events server is running.

WCS-03203
Data query in Events service failed

Category:
Other

Cause:
Either the connections.xml file did not contain a valid connection entry for the Portal Events service, or the Portal Events server was down.

Action:
Verify that the connections.xml file contains a valid connection entry for the Portal Events service, and the Portal Events server is running.

WCS-03204
Create event in Events service failed

Category:
Other

Cause:
Either the connections.xml file did not contain a valid connection entry for the Portal Events service, or the Portal Events server was down.

Action:
Verify that the connections.xml file contains a valid connection entry for the Portal Events service, and the Portal Events server is running.

WCS-03205
Update event in Events service failed

Category:
Other

Cause:
Either the connections.xml file did not contain a valid connection entry for the Portal Events service, or the Portal Events server was down.

Action:
Verify that the connections.xml file contains a valid connection entry for the Portal Events service, and the Portal Events server is running.

WCS-03206
Delete event in Events service failed

Category:
Other

Cause:
Either the connections.xml file did not contain a valid connection entry for the Portal Events service, or the Portal Events server was down.

Action:
Verify that the connections.xml file contains a valid connection entry for the Portal Events service, and the Portal Events server is running.

WCS-03207
Send event mail in Events service failed

Category:
Other

Cause:
Either the connections.xml file did not contain a valid connection for the Mail service, or the Mail server was down.

Action:
Verify that the connections.xml file contains a valid connection for the Mail service, and Mail server is running.

WCS-03208
The changes to the event cannot be saved.

Category:
Other

Cause:
The event was modified or deleted by another user after the event was retrieved.

Action:
Refresh the Events task flow to view changes, and try again.

WCS-03209
Cannot create the category

Category:
Other

Cause:
The category could not be created because a category of the same name already exists.

Action:
Select the existing category.

WCS-03210
cannot add the portal event to the personal calendar

Category:
Other

Cause:
Either the connections.xml file did not contain a valid connection entry for the Personal Events service, or the Personal Events server was down.

Action:
Verify that the connections.xml file contains a valid connection entry for the Personal Events service, and the Personal Events server is running.

WCS-03211
cannot add the portal event to the personal calendar

Category:
Other

Cause:
The Personal Events service was not configured properly in connections.xml or the Personal Events service is down.

Action:
Verify that the connections.xml file contains a valid connection entry for the Personal Events service, and the Personal Events server is running.

WCS-03212
cannot add the portal event to the personal calendar

Category:
Other

Cause:
The credential for the Personal Events service was not configured properly.

Action:
Verify that the credential for the Personal Events service is correct.

WCS-03213
Failure to create category

Category:
Other

Cause:
Either the connections.xml file did not contain a valid connection entry for the Portal Events service, or the Portal Events server was down.

Action:
Verify that the connections.xml file contains a valid connection entry for the Portal Events service, and the Portal Events server is running.

WCS-03214
failure to retrieve categories

Category:
Other

Cause:
Either the connections.xml file did not contain a valid connection entry for the Portal Events service, or the Portal Events server was down.

Action:
Verify that the connections.xml file contains a valid connection entry for the Portal Events service, and the Portal Events server is running.

WCS-03215
failure to retrieve portal event list

Category:
Other

Cause:
Either the connections.xml file did not contain a valid connection entry for the Portal Events service, or the Portal Events server was down.

Action:
Verify that the connections.xml file contains a valid connection entry for the Portal Events service, and the Portal Events server is running.

WCS-03216
failure to retrieve portal event detail

Category:
Other

Cause:
Either the connections.xml file did not contain a valid connection entry for the Portal Events service, or the Portal Events server was down.

Action:
Verify that the connections.xml file contains a valid connection entry for the Portal Events service, and the Portal Events server is running.

WCS-03217
failure to check the relationship for the event

Category:
Other

Cause:
Either the connections.xml file did not contain a valid connection entry for the Relationship service,or the Relationship service was down.

Action:
Verify that the connections.xml file contains a valid entry for the Relationship service, the Relationship service is running.

WCS-03218
failure to save the display mode preference

Category:
Other

Cause:
Either the connections.xml file did not contain a valid connection entry for the Preferences service, or the Preferences service was down.

Action:
Verify that the connections.xml file contains a valid entry for the Preferences service, and the Preferences service is running.

WCS-03219
failure to change the repeat attributes

Category:
Other

Cause:
Either the connections.xml file did not contain a valid connection entry for the Events service, or the Events service was down.

Action:
Verify that the connections.xml file contains a valid entry for the Events service, and the Events service is running.

WCS-03220
The event was deleted by another user after you retrieved it. Refresh the Events task flow to see the changes if necessary.

Category:
Other

Cause:
The event was deleted by another user after you retrieved it.

Action:
Refresh the Events task flow to view changes, and try again.

WCS-03221
The event was updated by another user after you retrieved it. Refresh the Events task flow to see the changes if necessary.

Category:
Other

Cause:
The event was updated by another user after you retrieved it.

Action:
Refresh the Events task flow to view changes, and try again.

WCS-03222
You do not have permission to update this event or your permission to update this event is revoked. Refresh the Events task flow to see the changes if necessary.

Category:
Other

Cause:
You do not have permission to update this event or your permission to update this event is revoked.

Action:
Refresh the Events task flow to view changes, and try again.

WCS-03223
You do not have permission to view this event or your permission to view this event is revoked. Refresh the Events task flow to see the changes if necessary.

Category:
Other

Cause:
You do not have permission to view this event or your permission to view this event is revoked.

Action:
Refresh the Events task flow to view changes, and try again.

WCS-03224
You do not have permission to create the event or your permission to create the event is revoked. Refresh the Events task flow to see the changes if necessary.

Category:
Other

Cause:
You do not have permission to create this event or your permission to create this event is revoked.

Action:
Refresh the Events task flow to view changes, and try again.

WCS-03225
You do not have permission to delete the event or your permission to delete the event is revoked. Refresh the Events task flow to see the changes if necessary.

Category:
Other

Cause:
You do not have permission to delete this event or your permission to delete this event is revoked.

Action:
Refresh the Events task flow to view changes, and try again.

WCS-03226
You do not have permission to manage the event or your permission to manage the event is revoked. Refresh the Events task flow to see the changes if necessary.

Category:
Other

Cause:
You do not have permission to manage this event or your permission to manage this event is revoked.

Action:
Refresh the Events task flow to view changes, and try again.

WCS-03227
Event not found.

Category:
Other

Cause:
The event doesn't exist or was deleted.

Action:
Refresh the Events task flow to view changes, and try again.

WCS-03228
The Events service is currently disabled, preventing you from performing this operation. Contact your administrator.

Category:
Other

Cause:
The Events service is currently disabled.

Action:
Contact your administrator. Enable the Events service.

WCS-03301
The Web Conference service is unavailable.

Category:
Other

Cause:
Either the connections.xml file did not contain a valid connection entry, or the adapter was not defined in the adf-config.xml file.

Action:
Verify that the connections.xml file contains a valid connection entry, and the specified adapter is defined in the adf-config.xml file.

WCS-03302
The Web Conference service is unavailable.

Category:
Other

Cause:
The connections.xml file either did not contain a valid connection entry or the entry for conference service with the state attribute set to default was missing.

Action:
Verify that the connections.xml file contains a valid connection entry and that the conference server is running.

WCS-03303
failure to query data in WebCenter Conference service

Category:
Other

Cause:
There was an issue with the connections.xml file, or the Conference server was down.

Action:
Verify that the connections.xml file contains a valid connection entry and that the Conference server is running.

WCS-03304
failure to create conference in WebCenter Conference service

Category:
Other

Cause:
There was an issue with the connections.xml file, or the Conference server was down.

Action:
Verify that the connections.xml file contains a valid connection entry and that the Conference server is running.

WCS-03305
failure to update conference in WebCenter Conference service

Category:
Other

Cause:
There was an issue with the connections.xml file, or the Conference server was down.

Action:
Verify that the connections.xml file contains a valid connection entry and that the Conference server is running.

WCS-03306
failure to delete conference in WebCenter Conference service

Category:
Other

Cause:
There was an issue with the connections.xml file, or the Conference server was down.

Action:
Verify that the connections.xml file contains a valid connection entry and that the Conference server is running.

WCS-03307
failure to retrieve personal meetings

Category:
Other

Cause:
There was an issue with the connections.xml file, or the Conference server was down.

Action:
Verify that the connections.xml file contains a valid connection entry and that the Conference server is running.

WCS-03308
The Conference service is not properly configured.

Category:
Other

Cause:
The Conference service was not properly configured in connections.xml.

Action:
Verify that the connections.xml file contains a valid entry for the Conference service.

WCS-03309
The Conference service is properly not configured.

Category:
Other

Cause:
The Conference service was not configured in connections.xml.

Action:
Verify that the connections.xml file contains a valid entry for the Conference service.

WCS-03310
The Conference service is not properly configured.

Category:
Other

Cause:
The ambiguous connections of Conference service were found in connections.xml.

Action:
Verify that the connections.xml file contains a valid entry for the Conference service.

WCS-04001
unable to resolve the name {0}

Category:
Other

Cause:
The object with the given name could not be found.

Action:
Check the JNDI configuration or the context passed.

WCS-04002
ADFConfig does not contain adf-collaboration-config details with namespace: {0}.

Category:
Other

Cause:
The collaboration configuration tag 'adf-collaboration-config' might have been missing in ADFConfig.

Action:
Ensure that the adf-config.xml file contains the adf-collaboration-config tag.

WCS-04003
No adapter found for service {0}

Category:
Other

Cause:
No adapter configuration found or the implementation class could not be loaded.

Action:
Ensure adapter is configured properly or change the SessionFactory to override the default behavior.

WCS-04004
unable to load the class {0}

Category:
Other

Cause:
The class named in the error message was not available in the class path.

Action:
Check the class path and ensure this class is available.

WCS-04005
unable to load the class {0}, due to: {1}

Category:
Other

Cause:
Either the class named in the error message was not available in the class path or it could not be instantiated.

Action:
Check the logs for more details. Contact Oracle Support Services.

WCS-04006
ADFConfig {0} {1} does not contain the required attribute {1}.

Category:
Other

Cause:
The required attribute was missing from the configuration.

Action:
Ensure that the required attribute is added to the configuration.

WCS-04007
The attachment size is too large to be consumed.

Category:
Other

Cause:
The storage quota was exceeded.

Action:
Select a different attachment with a smaller size.

WCS-04008
The attachment type is not supported.

Category:
Other

Cause:
The attachment type was not supported.

Action:
Try with a different MIME type.

WCS-04009
The attachment cannot be found.

Category:
Other

Cause:
The attachment was not readable.

Action:
Try a different attachment.

WCS-04010
failure to create, update, or fetch the service configuration file {0}, due to: {1}

Category:
Other

Cause:
One of the following was the cause: There was a concurrent modification by another user; there was an MDS I/O exception; the metadata was not found; a validation error occurred; or the update was not supported.

Action:
Contact Oracle Support Services.

WCS-04011
unable to find the service configuration file {0}, due to: {1}

Category:
Other

Cause:
The service was not provisioned for this portal.

Action:
Provision this service or contact the system administrator.

WCS-04012
unable to find the credentials for user {0}

Category:
Other

Cause:
The credentials were either not supplied, or were invalid.

Action:
Supply credentials using the External Application configured for the service.

WCS-04013
failure to authenticate the user {0}, due to: {1}

Category:
Other

Cause:
There was a failure while connecting to server, or the credentials were invalid.

Action:
Ensure the credentials are supplied and are valid.

WCS-04014
no connections available for: {0}

Category:
Other

Cause:
There are no connections defined for this connection type.

Action:
At least one connection must be defined for this connection type.

WCS-04015
There are multiple connections defined for the connection type {0}, but no default connection is specified.

Category:
Other

Cause:
Multiple connections of this type were defined, but the default connection was not specified.

Action:
Select the appropriate connection for this type and mark it as the default.

WCS-04016
unable to look up connection with name {0}

Category:
Other

Cause:
Either the connection name was wrong or the connection was deleted.

Action:
Verify the name of the connection supplied and also ensure that the connection with this name is available.

WCS-04017
failure to create session instance for: {0}

Category:
Other

Cause:
An instantiation exception occurred for the session class. Either this class was not a valid class or it could not be loaded from the class path.

Action:
Verify that the session class supplied is a valid class, and that it is available in the class path.

WCS-04018
failure to create session for {0}, due to: {1}

Category:
Other

Cause:
Either the required configuration was missing or class was not found.

Action:
Verify that the session class supplied is a valid class, and that it is available in the class path.

WCS-04019
There are multiple adapters for the session {0}, but the default adapter is not specified.

Category:
Other

Cause:
Multiple adapters were defined for this session type, but the default adapter was not specified in the connection.

Action:
Update the connection and ensure that the adapter name is specified (ensure that the "adapter.name" property exists).

WCS-04020
No adapter found with name {0}.

Category:
Other

Cause:
Adapter not found with the given name.

Action:
Ensure the adapter with this name configured in the adf-config.xml file.

WCS-04021
Not an instance of {1} : {0}

Category:
Other

Cause:
Supplied class is not an instance of SessionManager class.

Action:
Check the service configuration property "session.manager.class".

WCS-04022
The service is unavailable.

Category:
Other

Cause:
Cannot establish connection to the server, either the server is down or the connect details are wrong.

Action:
Contact system administrator.

WCS-04023
Cache not available.

Category:
Other

Cause:
Cache is not initialized.

Action:
Contact system administrator.

WCS-04024
unable to find object {0} in the cache

Category:
Other

Cause:
The object was either not cached or it had expired.

Action:
Ensure that the object is cached.

WCS-04025
Session not initialized {0}.

Category:
Other

Cause:
Either initialize method on the session is not invoked or initialization has failed.

Action:
Check logs for more details or Contact system administrator.

WCS-04026
session instance acquired is null from SessionFactory: {0}

Category:
Other

Cause:
SessionFactory returned null session instance. Wrong factory implementation.

Action:
Check the SessionFactory implementation for more details or contact the system administrator.

WCS-04027
Session Factory class not defined.

Category:
Other

Cause:
Either the service-config for the session is missing or "session.factory.class" property is missing.

Action:
Check the service-config.xml for the given session type exists and "session.factory.class" property is defined with a qualified class name that is available in the classpath. Contact system administrator for more information.

WCS-04030
System user session is requested from session {0}, but administrator user name is not defined in the connection nor in adf-config.

Category:
Other

Cause:
Missing "admin.user" property from connection and/or adf-config.xml.

Action:
Ensure that either the connection or ADF service-config contains a property called "admin.user" with a valid administrator user.

WCS-04031
Unexpected error occurred, due to : {0}

Category:
Other

Cause:
An unexpected server exception occurred.

Action:
Contact the system administrator.

WCS-04032
Could not get access to cache object.

Category:
Other

Cause:
API should be invoked only for getting access to the root cache.

Action:
Try using correct API.

WCS-04033
Invalid cache name: {0}.

Category:
Other

Cause:
Cache name supplied is either empty or null.

Action:
Supply valid name for the cache.

WCS-04034
Not able to fetch data due to {0}.

Category:
Other

Cause:
Might be because the backend system is not reachable.

Action:
Try after sometime.

WCS-04035
Session Type for Session instance {0} is null.

Category:
Other

Cause:
Session Factory does not set the SessionType on the Session instance created.

Action:
Check the session factory implementation.

WCS-04036
User not found: {0}.

Category:
Other

Cause:
Unable to find the user with the supplied name in the user repository.

Action:
Check user with the given identity exists in the user repository.

WCS-04037
Supplied class {0} is not an instance of {1}.

Category:
Other

Cause:
Supplied class is not an instance of SessionFactory class.

Action:
Check the adf-config.xml or service-config.xml configuration property "session.factory.class".

WCS-04039
Session Manager instance creation failed for {0}

Category:
Other

Cause:
Either the required configuration is missing or class is not found..

Action:
Check the class supplied is a valid class and its available in the classpath.

WCS-04040
CacheFactory not specified.

Category:
Other

Cause:
CacheFactory instance is not found.

Action:
Set appropriate CacheFactory instance on the Cache class.

WCS-04041
No default or active connection available for: {0}

Category:
Other

Cause:
There is no default or active connection defined for this connection type.

Action:
At least one connection must be defined default or active for this connection type.

WCS-04042
Enterprise role not found: {0}.

Category:
Other

Cause:
Unable to find the enterprise role with the supplied name in the backend server.

Action:
Check group with the given identity exists in the backend server.

WCS-04043
Service is disabled for the current Portal: {0}.

Category:
Other

Cause:
Service is disabled for the current Portal.

Action:
Enable this service or contact the Portal Moderator.

WCS-04201
Error loading relationship service implementation

Category:
Other

Cause:
The relationship service encountered a problem while loading a relationship service implementation.

Action:
Check the stack trace for more information

WCS-04206
Error checking create permission

Category:
Other

Cause:
There was an error loading the relationship security provider.

Action:
Check to make sure that the relationship security provider is properly configured.

WCS-04207
Could not instantiate relationship repository

Category:
Other

Cause:
The relationship service encountered a problem while instantiating the repository.

Action:
Check the stack trace for more information.

WCS-04208
jdbc/WebCenterDS data source not found: {0}

Category:
Other

Cause:
The jdbc/WebCenterDS data source could not be found.

Action:
Ensure that the jdbc/WebCenterDS data source is created.

WCS-04301
Relationship repository is not available.

Category:
Other

Cause:
An error was encountered while checking if the relationship repository was available.

Action:
Check the log for errors that may have caused this.

WCS-04302
Relationship already exists between [sourceApplicationId={0} sourceResourceId={1}] and [targetApplicationId={2} targetResourceId{3}].

Category:
Other

Cause:

Action:

WCS-04303
Resource does not exist [applicationId={0} resourceId={1}].

Category:
Other

Cause:

Action:

WCS-04304
Target resource was not found [targetApplicationId={0} targetResourceId={1}].

Category:
Other

Cause:

Action:

WCS-04305
Relationship was marked as a bi-directional relationship, however no target to source back relationship was found for target [targetApplicationId={0} targetResourceId={1}].

Category:
Other

Cause:

Action:

WCS-04306
Source object was not found [sourceApplicationId={0} sourceResourceId={1}].

Category:
Other

Cause:

Action:

WCS-04401
Exception during event or action

Category:
Other

Cause:
The relationship service encountered a problem while performing an event or action

Action:
Check the application log for more information on the cause

WCS-04403
Could not find relationship service {0}

Category:
Other

Cause:

Action:

WCS-04404
Service {0} threw exception for getViewObject() on RelatedObject {1}

Category:
Other

Cause:

Action:

WCS-04405
linksDetailedPanelWindow is null: cannot add partial target to RequestContext.

Category:
Other

Cause:
The relationship popup task flow is not included in the page.

Action:
Check to make sure the relationship popup task flow is included in the page.

WCS-04406
Cannot get current RichLinksDetailButtonRow.
FacesContext.getCurrentInstance().getRenderKit() returned null for component: {0}

Category:
Other

Cause:

Action:

WCS-04407
Exception while checking for existing links

Category:
Other

Cause:
An error was encountered while checking for existing links.

Action:
Check the application log for more information on the cause.

WCS-04408
Error instantiating RichLinksDetailButtonRow

Category:
Other

Cause:
The relationship service encountered a problem while instantiating a custom component.

Action:
Check the relationship links button component for valid attributes.

WCS-04409
Error instantiating RichLinskDetailMenuItem

Category:
Other

Cause:
The relationship service encountered a problem while instantiating a custom component.

Action:
Check the relationship links menu component for valid attributes.

WCS-04410
Could not find Links Detail Popup in the LinksDetailBean bean

Category:
Other

Cause:
The relationship service encountered a problem while encoding the popup.

Action:
Make sure the links popup task flow is included in the page.

WCS-04412
Attribute value is null for component: {0}

Category:
Other

Cause:
A required attribute value is bound to a null value.

Action:
Make sure the required attributes of this component are bound to non-null values.

WCS-04413
An exception occurred while parsing parameter

Category:
Other

Cause:
A number format exception was encountered while parsing a parameter.

Action:
Make sure the window width/height parameters for launching relationship views are valid numbers.

WCS-04414
Got null from registry for service ID {0}, including all target services: {1}

Category:
Other

Cause:

Action:

WCS-04415
Service {0} returned null for target view object with objectId: {1}.

Category:
Other

Cause:

Action:

WCS-04417
Could not find {0} parameter for the Links Detail taskflow.

Category:
Other

Cause:
The parameter is required for processing links-detail task flow.

Action:
Make sure the parameter is bound to a non-null value.

WCS-04418
User principal is null.

Category:
Other

Cause:
The user principal returned by the security context was null.

Action:
Make sure security is property configured for the application.

WCS-04419
Links components cannot render

Category:
Other

Cause:
The links-detail-popup task flow panelWindow was not found.

Action:
Make sure the view includes the links-detail-popup task flow.

WCS-04420
The image file {0} you tried to select was invalid. Provide a valid image file.

Category:
Other

Cause:
Unable to embed the image as the file is null or invalid.

Action:
Select a valid image file

WCS-04421
The taskflow id {0} was invalid. Provide a valid taskflow id.

Category:
Other

Cause:
Unable to retrieve the taskflow as the id is null or invalid.

Action:
Specify a valid taskflow Id.

WCS-04422
The NewRelatedObject returned from the service {0} was invalid.

Category:
Other

Cause:
Unable to process the returned object.

Action:
Return a valid object for linking.

WCS-04601
unexpected error

Category:
Other

Cause:
An unexpected error occurred for the RTC service.

Action:
Contact Oracle Support Services.

WCS-04602
Unable to load RTC configuration

Category:
Other

Cause:
Connections context could not be acquired.

Action:
Ensure that the connections.xml file is available and valid.

WCS-04603
Unable to load RTC configuration

Category:
Other

Cause:
No RTC (Real-Time Communication) connection was specified.

Action:
Ensure that the property 'selected.connection' for the RTC service's 'service-config' element within the application's adf-config.xml file is available with a valid RTC connection name value.

WCS-04604
Unable to lookup RTC connection {0}

Category:
Other

Cause:
The specified connection name either did not exist or did not resolve to a valid RTC connection.

Action:
Ensure that the property 'selected.connection' for the RTC service's 'service-config' element within the application's adf-config.xml file contains a valid RTC connection name (as defined in the application's connections.xml file).

WCS-04605
Unable to load RTC adapter {0}

Category:
Other

Cause:
The specified RTC adapter name was invalid.

Action:
Ensure that the property 'adapter.name' of the RTC connection is valid and the corresponding adapter definition is available within the RTC 'service-config' element in the application's adf-config.xml file.

WCS-04606
Unable to load RTC adapter {0}

Category:
Other

Cause:
The specified RTC adapter class does not extend from IMPConnection class.

Action:
Ensure that the RTC adapter class extends IMPConnection class and follows its contract.

WCS-04607
Unable to load RTC adapter {0}

Category:
Other

Cause:
The specified RTC adapter class could not be instantiated.

Action:
Ensure that the RTC adapter class extends IMPConnection class and follows its contract.

WCS-04608
Unable to load RTC adapter {0}

Category:
Other

Cause:
The RTC configuration object was null or invalid.

Action:
Ensure that the RTC configuration is valid.

WCS-04610
Unable to create instance of the UserManager implementation class {0}.

Category:
Other

Cause:
The specified user manager class could not be instantiated.

Action:
Ensure that the class exists and can be instantiated with a default constructor.

WCS-04611
Unable to find a valid RTC connection.

Category:
Other

Cause:
No RTC connections were found within the application's connections.xml file.

Action:
Ensure that there is a valid RTC connection defined in the application's connections.xml file.

WCS-04612
Invalid RTC address resolver specified: {0}

Category:
Other

Cause:
Specified address resolver was invalid.

Action:
Ensure that the resolver type is one of DEFAULT, PROFILE_ATTRIBUTE, or CUSTOM.

WCS-04614
Invalid attribute specified for PROFILE address resolver: {0}

Category:
Other

Cause:
The specified profile attribute for the address resolver was invalid.

Action:
Ensure that the 'rtc.address.resolver.mapping' attribute is not null and contains a valid profile attribute.

WCS-04615
Unable to load custom RTC address resolver: {0}

Category:
Other

Cause:
The custom class could not be initialized.

Action:
Ensure that the custom class extends RtcAddressResolver and follows the contract specified by it.

WCS-04616
Unable to load custom RTC address resolver: {0}

Category:
Other

Cause:
No custom class was specified for the CUSTOM type RTC address resolver.

Action:
Ensure that the 'rtc.address.resolver.mapping' attribute is not null and contains a fully qualified and valid class name that extends from the RtcAddressResolver class.

WCS-04619
The RTC address resolver supplied is invalid or null.

Category:
Other

Cause:
The RTC address resolver supplied was invalid or null.

Action:
Ensure that 'rtc.address.resolver.mapping' attribute is not null.

WCS-04620
The domain supplied is invalid or null.

Category:
Other

Cause:
The domain supplied was invalid or null.

Action:
Ensure that the 'domain' attribute is not null or invalid.

WCS-04621
Invalid timeout value specified: {0} Defaulting to {1}

Category:
Other

Cause:
The presence cache timeout value was either null or not a valid number.

Action:
Ensure that the 'rtc.cache.time' attribute is not null and contains a valid number.

WCS-04625
Failed to instantiate IMPSession for the logged-in user.

Category:
Other

Cause:
The adapter class could not be instantiated.

Action:
Ensure that the property 'adapter-class' has been defined for the adapter in the adf-config.xml and is valid.

WCS-04801
Invalid timeout value specified: {0} Defaulting to {1}

Category:
Other

Cause:
The presence cache timeout value was either null or not a valid number.

Action:
Ensure that the 'rtc.cache.time' attribute is not null and contains a valid number.

WCS-04804
Unable to acquire RTC connection for user {0}. RTCService running in dummy mode.

Category:
Other

Cause:
Exception caught while initializing IMPConnection.

Action:
Check the log file for more information.

WCS-04805
Unable to acquire associated external application details.

Category:
Other

Cause:
The external application ID could not be loaded from the RTC connection configuration.

Action:
Ensure that the 'ext.app.id' attribute is not null and refers to a valid external application ID.

WCS-04806
Unable to acquire associated external application details.

Category:
Other

Cause:
The external application was not found for the external application ID.

Action:
Ensure that external application ID refers to a valid external application.

WCS-04851
Failed to generate endpoint to talk to OCS WebService.

Category:
Other

Cause:
The webservice is unreachable.

Action:
Ensure that the OCS connection entry contains the 'base.connection.url' property and points to a valid URL.

WCS-04852
Unable to perform operation {0}

Category:
Other

Cause:
Failed to perform the operation on remote Web service.

Action:
Ensure that the RTC configuration is correct, the remote system is available, and the errors generated in the remote system's logs have been fixed.

WCS-04853
Exception caught while fetching buddy list for user {0}

Category:
Other

Cause:
Failed to retrieve buddy list from the Remote Service.

Action:
Ensure that valid OCS connection entries have been supplied and the server is up.

WCS-04854
Exception caught while fetching presence information using user account {0}

Category:
Other

Cause:
Failed to fetch presence information from the remote service.

Action:
Ensure that valid OCS connection entries have been supplied and the server is up.

WCS-04855
Account field missing from user credentials

Category:
Other

Cause:
Cannot login to server without the account information.

Action:
Ensure that a valid sip address value is supplied as the Account in credentials.

WCS-04856
Connection not defined

Category:
Other

Cause:
Connection is not defined.

Action:
Ensure that the connection is defined.

WCS-04857
External application ID not defined.

Category:
Other

Cause:
The required configuration parameter External Application ID was not found.

Action:
Contact your system Administrator.

WCS-04901
Not initializing RtcAction {0} as it does not extend from RtcAction

Category:
Other

Cause:
Specified class does not extend from RtcAction.

Action:
Ensure that the specified class is a proper subclass of RtcAction.

WCS-04902
Failed to initialize RtcAction {0}

Category:
Other

Cause:
Unable to instantiate the supplied RtcAction subclass.

Action:
Ensure that the specified class is a proper subclass of RtcAction, and provides a default constructor.

WCS-04903
ADFConfig does not contain rtc-config details with namespace : {0}.

Category:
Other

Cause:
The RTC actions tag 'rtcC:actions' might be missing in ADFConfig.

Action:
Ensure adf-config.xml file contains rtcC:actions tag.

WCS-04904
Cannot process call request : User Profile for user {0} not found

Category:
Other

Cause:
User has selected PSTN call method but its profile cannot be found for the user to read the contact number.

Action:
Ensure that the user profile exists in the system.

WCS-04905
Cannot process call request : Contact information for user {0} not found

Category:
Other

Cause:
User has selected PSTN call method but has not supplied the correct ldap attribute to read the contact information.

Action:
Ensure that correct ldap attribute has been supplied in connection/adf-config and its value has been set in the profile.

WCS-04906
Cannot process call request : Incorrect call method supplied

Category:
Other

Cause:
User has supplied an incorrect call method.

Action:
Ensure that correct call method is supplied. Refer to the documentation to find the supported call methods.

WCS-04907
Cannot process call request : Call domain not specified in connection.

Category:
Other

Cause:
User has selected PSTN call method but has not supplied the call.domain property.

Action:
Ensure that correct call.domain has been supplied in connection/adf-config.

WCS-04908
Cannot process call request : User name is missing or not provided.

Category:
Other

Cause:
User name is missing or it has not been provided.

Action:
Ensure that correct user name is provided, contact administrator.

WCS-05001
Cannot retrieve the metadata for a portal

Category:
Other

Cause:
Unable to fetch the portal metadata due to an internal error.

Action:
Contact Oracle Support Services.

WCS-05002
An error occurred while trying to get the ScopeAPI implementation for the service {0}.

Category:
Other

Cause:
Service {0} does not support provisioning.

Action:
Contact Oracle Support Services.

WCS-05003
The service object passed to the wrapper is null.

Category:
Other

Cause:
A null service object was retrieved from the service registry.

Action:
Contact Oracle Support Services.

WCS-05004
A portal template named {0} already exists.

Category:
Other

Cause:
Name specified for the portal template was not unique. A template with the same name already exists.

Action:
Provide a unique name for the portal template.

WCS-05005
Cannot create portal template

Category:
Other

Cause:
No name was provided for the portal template.

Action:
Provide a unique name for the portal template.

WCS-05006
Unable to retrieve information about {0}.

Category:
Other

Cause:
No portal template was found with the name specified.

Action:
Provide the name of an existing portal template.

WCS-05007
The reference to the portal template metadata {0} is invalid.

Category:
Other

Cause:
No portal template was found with the name specified.

Action:
Provide the name of an existing portal template.

WCS-05008
Unable to get mutable metadata for the portal template {0}

Category:
Other

Cause:
Some portion of the portal template metadata has already been modified.

Action:
Contact Oracle Support Services.

WCS-05009
Metadata for the portal template {0} is invalid.

Category:
Other

Cause:
MDS reported a metadata validation error.

Action:
Contact Oracle Support Services.

WCS-05010
An error occurred reading or writing metadata of portal template {0}.

Category:
Other

Cause:
MDS reported an IO error.

Action:
Contact Oracle Support Services.

WCS-05011
The commit operation failed due to a concurrent metadata change for portal template {0}.

Category:
Other

Cause:
MDS reported a concurrent metadata change error.

Action:
Contact Oracle Support Services.

WCS-05012
Couldn''t retrieve the portal members email ids for {0} due to {1}.

Category:
Other

Cause:

Action:

WCS-05013
Unable to execute portal related operation on {0}

Category:
Other

Cause:
Either the metadata did not exist, an invalid metadata reference was used or an attempt was made to get mutable metadata that has already been changed.

Action:
Contact Oracle Support Services.

WCS-05014
Unable to get metadata for portal {0}.

Category:
Other

Cause:
Either the metadata did not exist, an invalid metadata reference was used or an attempt was made to get mutable metadata that has already been changed.

Action:
Contact Oracle Support Services.

WCS-05015
Cannot create metadata for portal {0}

Category:
Other

Cause:
Metadata for the specified portal already exists.

Action:
Provide a different name.

WCS-05018
The reference to the metadata of portal {0} is invalid.

Category:
Other

Cause:
The metadata reference was invalid.

Action:
Contact Oracle Support Services.

WCS-05019
Unable to get mutable metadata for portal {0}

Category:
Other

Cause:
Some portion of the portal metadata has already been modified.

Action:
Contact Oracle Support Services.

WCS-05020
Metadata of portal {0} is invalid.

Category:
Other

Cause:
MDS reported a metadata validation error.

Action:
Contact Oracle Support Services.

WCS-05021
An error occurred reading or writing metadata of portal {0}.

Category:
Other

Cause:
MDS reported an IO error.

Action:
Contact Oracle Support Services.

WCS-05022
The commit operation failed due to a concurrent metadata change for portal {0}.

Category:
Other

Cause:
MDS reported a concurrent metadata change error.

Action:
Contact Oracle Support Services.

WCS-05023
Cannot retrieve a list of members for the current portal.

Category:
Other

Cause:
An error occurred trying to access the specified portal.

Action:
Contact Oracle Support Services.

WCS-05025
Could not create portal {0} from portal template {1}.

Category:
Other

Cause:
An internal error occurred.

Action:
Contact Administrator.

WCS-05026
Could not create portal template {1} from portal {0}.

Category:
Other

Cause:
Either the specified portal template already exists or the name was invalid.

Action:
Provide a valid,unique name for the portal template.

WCS-05027
Unable to get preference metadata for portal {0}

Category:
Other

Cause:
Either the metadata does not exist, an invalid metadata reference was used or an attempt was made to get mutable metadata that has changed.

Action:
Contact Oracle Support Services.

WCS-05035
Unexpected error in renaming portal from {0} to {1}. Contact administrator or try again after some time.

Category:
Other

Cause:
An invalid character was found in the name.

Action:
Remove the invalid character(s) from the name and try again.

WCS-05036
A portal with the URL {0} already exists.

Category:
Other

Cause:
A portal with the specified URL exists.

Action:
Specify a unique name for the portal.

WCS-05037
The portal template name contains an invalid character {0}.

Category:
Other

Cause:
An invalid character was found in the portal template name.

Action:
Remove the invalid character(s) from the portal template name and try again.

WCS-05038
A portal template named {0} already exists.

Category:
Other

Cause:
A portal template with the specified name already exists.

Action:
Specify a unique name for the portal template.

WCS-05039
An error occurred attempting to save this portal as a portal template.

Category:
Other

Cause:
An internal error occurred.

Action:
Contact Oracle Support Services.

WCS-05040
The portal name contains one or more blank space characters.

Category:
Other

Cause:
A blank was found in the portal name. Blank spaces are not allowed.

Action:
Remove all blank spaces from the portal name and try again.

WCS-05041
The portal template name contains one or more blank space characters.

Category:
Other

Cause:
A blank space was found in the name of the portal template. Blank spaces are not allowed.

Action:
Remove all blank spaces from the portal template name and try again.

WCS-05042
Unable to get metadata {1} for portal {0}.

Category:
Other

Cause:
Either the metadata did not exist, an invalid metadata reference was used or an attempt was made to get mutable metadata that has already been changed.

Action:
Contact Oracle Support Services.

WCS-05043
A portal with title {0} already exists. While the portal may not be available to you, another portal has that title. Choose a different title for your portal.

Category:
Other

Cause:
A portal with the specified display name exists.

Action:
Specify a unique display name for the portal.

WCS-05047
Sending invitation to user(s) failed. The reason is : {0}.

Category:
Other

Cause:
Connection details for the BPEL server providing portal invitation services were not available.

Action:
Ask your administrator to configure a connection to the BPEL server providing portal invitation services.

WCS-05048
Unexpected error occurred while trying to invite user(s) to portal {0}

Category:
Other

Cause:
The BPEL server that provides the portal invitation service might have been down.

Action:
Ask your administrator to restart the BPEL server, and try again.

WCS-05058
Cannot create policy store metadata for portal {0}

Category:
Other

Cause:
An internal error occurred.

Action:
Contact Oracle Support Services.

WCS-05059
Cannot save the changes

Category:
Other

Cause:
An internal error occurred.

Action:
Contact Oracle Support Services.

WCS-05063
Cannot delete portal {0} due to unknown errors.

Category:
Other

Cause:
An internal error occurred.

Action:
Contact Oracle Support Services.

WCS-05065
Cannot not get the list of available services

Category:
Other

Cause:
No services were available in the service registry.

Action:
Contact Oracle Support Services.

WCS-05066
An error occurred while attempting to unsubscribe a user from portal {0}.

Category:
Other

Cause:
The BPEL server supporting portal unsubscription may be down

Action:
Ask your administrator to restart the BPEL server and try again.

WCS-05067
Unable to send unsubscription request to Portal Manager(s). The reason is : {0}.

Category:
Other

Cause:
Connection details for the BPEL server providing portal unsubscription services were not available.

Action:
Ask your administrator to configure a connection to the BPEL server providing portal unsubscription services.

WCS-05068
An error occurred attempting to unsubscribe user from portal {0}: {1}.

Category:
Other

Cause:
Connection details for the BPEL server providing portal unsubscription services were not available.

Action:
Ask your administrator to configure a connection to the BPEL server providing portal unsubscription services.

WCS-05069
Unable to send subscription notification to Portal Manager(s). The reason is : {0}.

Category:
Other

Cause:
The BPEL URL has not been configured yet.

Action:
Notify your administrator that the BPEL service supporting portal subscription is not configured

WCS-05070
An error occurred attempting to subscribe a user to portal{0}.

Category:
Other

Cause:
The BPEL server providing the portal subscription service may be down.

Action:
Ask your administrator to restart the BPEL server, and try again.

WCS-05071
An error occurred attempting to subscribe user to portal {0}: {1}.

Category:
Other

Cause:
The BPEL server providing the portal subscription service may be down.

Action:
Ask your administrator to restart the BPEL server, and try again.

WCS-05072
Error occurred while navigating to portal {0}.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-05073
Could not create portal with name {0}

Category:
Other

Cause:
The portal name provided could not be created.

Action:
Please contact Administrator.

WCS-05074
An error occurred attempting to access a page of the renamed portal.

Category:
Other

Cause:
The portal rename operation was not successful.

Action:
Contact Oracle Support Services.

WCS-05075
An error occurred attempting to rename a portal.

Category:
Other

Cause:
An internal error occurred.

Action:
Contact Oracle Support Services.

WCS-05077
Could not retrieve portal workflow configuration. Please contact administrator.

Category:
Other

Cause:
An error occurred attempting to retrieve the BPEL Several URL configured in connections.xml

Action:
Contact Oracle Support Services.

WCS-05078
Cannot delete workflow approval metadata from the portal

Category:
Other

Cause:

Action:

WCS-05079
Cannot get the security handler for portal template {0}

Category:
Other

Cause:
The policy store metadata was not available for portal template security initialization.

Action:
Contact Oracle Support Services.

WCS-05080
Cannot create the portal template {0}

Category:
Other

Cause:
The portal template was not created due to an error reported by the metadata store.

Action:
Contact Oracle Support Services.

WCS-05081
Unable to retrieve metadata object for portal {0}

Category:
Other

Cause:
An internal error occurred.

Action:
Contact Oracle Support Services.

WCS-05082
Adding workflow approval metadata to the portal failed

Category:
Other

Cause:

Action:

WCS-05083
An error occurred attempting to rename portal {0} to {1}.

Category:
Other

Cause:
The portal rename operation was successful.

Action:
Contact Oracle Support Services.

WCS-05084
An unexpected error occurred attempting to delete portal {0}.

Category:
Other

Cause:
The portal delete operation was unsuccessful.

Action:
Contact Oracle Support Services.

WCS-05085
Portal name cannot be null

Category:
Other

Cause:
Portal name was blank.

Action:
Enter a valid alphanumeric name for the portal

WCS-05086
Portal name is a reserved keyword.

Category:
Other

Cause:
The portal name specified was a reserved keyword.

Action:
Specify a valid alphanumeric name for the portal which excludes the following reserved keywords: webcenter, pages, page, spaces, space, group, groups, space, spaces, webcenter space, webcenter spaces, webcenter Portal, WebCenter Portal, WebCenter Portal spaces, portal, webcenter administration, my spaces, admin, last, system.

WCS-05087
The portal name contains invalid characters. Only alphanumeric and space characters are allowed.

Category:
Other

Cause:
Portal name contained non-alphanumeric/space characters.

Action:
Specify a valid alphanumeric name for the portal that only contains a-z, A-Z, 0-9, _, or a space character

WCS-05088
Cannot delete the seeded portal template {0}

Category:
Other

Cause:
An attempt was made to delete a seeded portal template.

Action:
Do not try to delete a seeded portal template.

WCS-05089
Connection details for the BPEL server providing portal notification services are not available. Unable to send add or delete notifications to members of portal{0}

Category:
Other

Cause:
Connection details for the BPEL server providing portal invitation services were not available or configured incorrectly.

Action:
Ask your administrator to configure a connection to the BPEL server providing portal notification services.

WCS-05090
An error occurred attempting to send a notification to a member added to or deleted from portal {0}

Category:
Other

Cause:
An error occurred attempting to send a portal notification.

Action:
Contact Oracle Support.

WCS-05091
Connection details for the BPEL server providing notification services in WebCenter Portal not found.

Category:
Other

Cause:
Connection details for the BPEL server providing notification services in WebCenter Portal were not available.

Action:
Ask the administrator to configure a connection to the BPEL server providing notification services in WebCenter Portal.

WCS-05092
One of the arguments passed to API call {0} is null

Category:
Other

Cause:
A null argument was passed to an API call

Action:
Invoke the API with non-null arguments

WCS-05093
Portal template name cannot be null

Category:
Other

Cause:
No name was specified for the portal template.

Action:
Specify a valid alphanumeric name for portal template.

WCS-05094
Portal template name is a reserved keyword.

Category:
Other

Cause:
The template name specified was a reserved keyword.

Action:
Specify a valid alphanumeric name for the template which excludes the following reserved keywords: admin, builder, group, groups, home, last, page, pages, my portals, my spaces, portal, portals, spaces, space, system, webcenter, webcenter administration, webcenter portal, webcenter portals, webcenter space, webcenter spaces.

WCS-05095
Template name contains invalid characters. Only alphanumeric and space characters are allowed.

Category:
Other

Cause:
Template name contains non-alphanumeric or space characters

Action:
Specify a valid alphanumeric name for the template that only contains:a-z, A-Z, 0-9, _, or a space character

WCS-05096
A portal template with name {0} already exists.

Category:
Other

Cause:
A portal template with the specified name exists.

Action:
Specify a unique name.

WCS-05097
Cannot upload portal icon

Category:
Other

Cause:
An error occurred while attempting to upload the file to WebCenter Portal

Action:
Try again or contact Oracle Support Services

WCS-05098
Cannot upload a portal logo

Category:
Other

Cause:
An error occurred attempting to upload the file to WebCenter Portal

Action:
Try again or contact Oracle Support Services

WCS-05099
Unable to set lock on portal {0}

Category:
Other

Cause:
A lock could not be acquired for this portal.

Action:
Try again later.

WCS-05100
Unable to execute operation on portal {0}

Category:
Other

Cause:
Portal {0} was locked by some other operation.

Action:
Wait for the first operation to complete and try again.

WCS-05101
Unable to execute portal operation

Category:
Other

Cause:
The portal was locked by some other operation.

Action:
Wait for the first operation to complete and try again.

WCS-05102
Error creating portal {0} from portal template {1}

Category:
Other

Cause:
An internal error occurred.

Action:
Contact Oracle Support Services.

WCS-05103
Errors while renaming portal {0}

Category:
Other

Cause:
An internal error occurred.

Action:
Contact Oracle Support Services.

WCS-05104
Unexpected error while trying to request change membership to portal {0}

Category:
Other

Cause:
The BPEL server might have been down.

Action:
Ensure BPEL server is up and retry. Contact the portal manager for assistance.

WCS-05105
Unexpected error while trying to send notification to user {0}

Category:
Other

Cause:
The BPEL server might have been down.

Action:
Ensure BPEL server is up and retry. Contact the portal manager for assistance.

WCS-05106
Unexpected error creating region in cache

Category:
Other

Cause:
An attempt to create a region in the JOC (Java Object Cache) failed.

Action:
Ensure that the JOC configuration is correct.

WCS-05107
Unexpected error getting object {0} from region {1} in cache

Category:
Other

Cause:
An attempt to retrieve an object from the cache failed.

Action:
Ensure that the JOC configuration is correct.

WCS-05108
Search {0} for portal returned more than {2} results.

Category:
Other

Cause:
Search matched {1} results for portal template. The maximum number of result records allowed for this report is {1}.

Action:
Restrict your query further, or use a different query.

WCS-05109
Portal operation resulted in unexpected exception.

Category:
Other

Cause:
An internal error occurred.

Action:
Contact Oracle Support Services.

WCS-05111
Creating template resulted in unexpected exception.

Category:
Other

Cause:
An internal error occurred.

Action:
Contact Oracle Support Services.

WCS-05112
Fetching portal member count resulted in unexpected exception.

Category:
Other

Cause:
An internal error occurred.

Action:
Contact Oracle Support Services.

WCS-05113
An error occurred while trying to provision the service {0}. The service did not get provisioned.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact the administrator.

WCS-05114
An error occurred while trying to unprovision the service {0}. The service did not get unprovisioned.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact the administrator.

WCS-05115
An error occurred while trying to determine the selected service.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Reload the browser page, and if problem persists, contact the administrator.

WCS-05116
An error occurred while trying to process the service that was selected.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Reload the browser page, and if problem persists, contact the administrator.

WCS-05117
An error occurred while trying to load the configuration screen for the selected service.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Reload the browser page, and if problem persists, contact the administrator.

WCS-05118
Failed to delete portal {0} security metadata

Category:
Other

Cause:
Deletion of portal security metadata failed

Action:
An unexpected error occurred while trying to deleting portal {0}. Please contact administrator for assistance.

WCS-05119
An unexpected error occurred while trying to provision/unprovision services.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact the administrator.

WCS-05120
An unexpected error occurred while trying to save the configuration for the service {0}.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact the administrator.

WCS-05121

Category:
Other

Cause:
An unexpected error occurred while adding the custom attributes.

Action:
Contact the administrator.

WCS-05134
Error occurred while deleting the name={0} custom attribute

Category:
Other

Cause:
An unexpected error occurred while deleting the custom attribute.

Action:
Contact the administrator.

WCS-05135
Error occurred while editing the custom attribute name={0} and value={1}.

Category:
Other

Cause:
An unexpected error occurred while editing the custom attribute.

Action:
Contact the administrator.

WCS-05136
Error occurred while fetching the custom attributes for portal {0}.

Category:
Other

Cause:
An unexpected error occurred while fetching the custom attribute.

Action:
Contact the administrator.

WCS-05137
No Such Attribute exists.

Category:
Other

Cause:
Unable to find the custom attributes

Action:
Contact the administrator.

WCS-05138
Unexpected error in getting the list of portals. You can try again later or contact Administrator.

Category:
Other

Cause:
Unexpected error in getting portals.

Action:
Please contact administrator.

WCS-05139
Unexpected error in retrieving portal {0}.

Category:
Other

Cause:
Unexpected error in retrieving the portal.

Action:
Contact Administrator.

WCS-05140
Unexpected error while rolling back the service {0}

Category:
Other

Cause:
Error in rolling back the service.

Action:
Contact Administrator.

WCS-05141
Unknown errors creating portal. Please contact Administrator.

Category:
Other

Cause:
Post creating the portal, there were errors.

Action:
Contact administrator.

WCS-05142
Portal was created successfully but refreshing the portal list failed. You may try to refresh the portal list manually.

Category:
Other

Cause:
List refresh failed after creating portal.

Action:
Manually refresh the portal list.

WCS-05143
Errors were encountered in creating portal. The main error is - {0}. You may want to delete the current portal if it is visible in your lists. Contact the administrator if the problem persists.

Category:
Other

Cause:
Errors were seen in post-processing the create portal.

Action:
Contact Administrator.

WCS-05144
Errors were encountered while creating the portal. The main error is - {0}. Rollback of the creation also failed. You may want to clean the current portal if it is visible in your lists. You may want to try to create the portal again later or contact the administrator.

Category:
Other

Cause:
Error in post-processing the portal.

Action:
Contact administrator.

WCS-05145
Portal created with the following warning(s) : {0}

Category:
Other

Cause:
Portal was created with warnings.

Action:
Contact Administrator.

WCS-05146
Unexpected errors in deleting the portal. Contact Administrator.

Category:
Other

Cause:
Unexpected error in deleting the portal.

Action:
Contact administrator.

WCS-05147
Deletion of the portal resulted in errors. The main error is - {0}. You may want to try deleting the portal again later. If the error persists, contact the administrator.

Category:
Other

Cause:
Delete of the portal resulted in error.

Action:
Contact Administrator.

WCS-05148
Deletion of portal resulted in errors. The main error is - {0}. Rollback of the deletion failed as well. You may want to try deleting the portal again later. If the error persists, contact the administrator.

Category:
Other

Cause:
Delete of the portal resulted in error.

Action:
Contact Administrator

WCS-05149
Portal was deleted successfully but refreshing the portal list failed. You may try to refresh the portal list manually.

Category:
Other

Cause:
List refresh failed after deleting portal.

Action:
You can refresh the portal list manually.

WCS-05150
Unexpected errors in renaming the portal. Contact Administrator.

Category:
Other

Cause:
Unknown errors in renaming the portal.

Action:
Contact Administrator.

WCS-05151
Rename of the portal resulted in errors. The main error is - {0}. You may want to try to rename the portal again later. If the error persists, contact the administrator.

Category:
Other

Cause:
Rename of the portal resulted in error.

Action:
Contact Administrator.

WCS-05152
Rename of the portal resulted in errors. The main error is - {0}. Rollback of renaming also failed. You may want to try to rename the portal again later or contact the administrator.

Category:
Other

Cause:
Portal was renamed but there were errors in processing.

Action:
Contact administrator.

WCS-05153
Portal was renamed successfully but refreshing the portal list failed. You may try to refresh the portal list manually.

Category:
Other

Cause:
Refreshing the list after renaming the portal failed.

Action:
Manually refresh the list of portals.

WCS-05154
Portal was renamed with warnings. These are some of the warnings - {0}.

Category:
Other

Cause:
Portal was renamed with warnings.

Action:
Contact Administrator.

WCS-05155
Unexpected error in retrieving the portal list.

Category:
Other

Cause:
Unexpected error in retrieving the portal list.

Action:
Try again after some time. If problem persist, contact administrator.

WCS-05156
Unexpected error while provisioning some optional services in the portal. You may want to provision them again by going to portal Administration.

Category:
Other

Cause:
Unexpected error while provisioning some optional services in the portal.

Action:
Contact Administrator.

WCS-05157
Provisioning some optional services {0} in the portal did not go through successfully. You may want to provision them again by going to portal Administration.

Category:
Other

Cause:
Provisioning some optional services in the portal did not go through successfully.

Action:
Contact Administrator.

WCS-05158
Unexpected error while unprovisioning the services.

Category:
Other

Cause:
Unexpected error in unprovisioning the services.

Action:
Contact administrator.

WCS-05159
Portal was deleted with warnings. These are some of the warnings - {0}.

Category:
Other

Cause:
Portal was renamed with warnings.

Action:
Contact Administrator.

WCS-05160
Unexpected errors while granting user access on new portal {0}. Please contact Administrator.

Portal template {0} deletion failed due to concurrent operation performed on the same resource by some other user.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact the administrator.

WCS-05197
Portal mail ID is not available because the Mail service is not configured.

Category:
Other

Cause:
Portal mail ID is not available because the Mail service is not configured.

Action:
Contact the administrator to configure the Mail service.

WCS-05198
Failed to initialize cache for portal template {0}.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact the administrator.

WCS-05200
Failed to update cache for portal template {0}.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact the administrator.

WCS-05201
Unknown error occurred while processing the templates.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact the administrator.

WCS-05202
User was added but could not be notified due to some errors.

Category:
Other

Cause:
The BPEL server may be down.

Action:
Ensure BPEL server is up and retry.

WCS-05203
Template name must contain at least one alphanumeric character

Category:
Other

Cause:
Template name did not contain any alphanumeric characters

Action:
Provide at least one alphanumeric character for template name.

WCS-05204
Portal display name cannot be null.

Category:
Other

Cause:
Portal display name was blank.

Action:
Enter a valid alphanumeric name for the portal display name

WCS-05205
Portal display name is a reserved keyword. One of: {0}

Category:
Other

Cause:
The portal display name specified was a reserved keyword

Action:
Specify a valid alphanumeric name for the portal display name which excludes the following reserved keywords: admin, builder, group, groups, home, last, page, pages, my portals, my spaces, portal, portals, spaces, space, system, webcenter, webcenter administration, webcenter portal,webcenter portals, webcenter space, webcenter spaces.

WCS-05206
The portal name contains invalid characters.

Category:
Other

Cause:
Portal display name contained non-alphanumeric/space characters.

Action:
Specify a valid alphanumeric name for the portal display name that only contains a-z, A-Z, 0-9, _, or a space character

WCS-05207
The portal name must contain at least one letter or number.

Category:
Other

Cause:
Portal display name did not contain any alphanumeric characters

Action:
Provide at least one alphanumeric character for portal display name.

WCS-05208
Select at least one portal to change state/status of portal.

Category:
Other

Cause:
No portal has been selected or changing the state.

Action:
Select at least one portal.

WCS-05209
There are no templates available for creating the portal(s). You should refresh the list of templates by going to the Portal Templates page or create new templates or publish available templates if any to continue creating portal(s). If the problem persists, contact system administrator

Category:
Other

Cause:
No templates available for creating portal.

Action:
Create new templates or publish existing templates if any.

WCS-05210
Unknown error occurred while initiating creation of a portal.

Other

Cause:
Cannot retrieve metadata for portal {0} as another user is modifying the settings. Please try after some time.

Action:
Contact Oracle Support Services.

WCS-05215
User(s) added successfully, but sending notification to the user(s) failed

Category:
Other

Cause:
The BPEL server may be down.

Action:
Ensure BPEL server is up and retry.

WCS-05216
User was removed successfully, but sending notification to the user failed

Category:
Other

Cause:
The BPEL server may be down.

Action:
Ensure BPEL server is up and retry.

WCS-05217
User role was modified successfully, but sending notification to the user failed

Category:
Other

Cause:
The BPEL server may be down.

Action:
Ensure BPEL server is up and retry.

WCS-05218
Unknown error occurred while navigating to portal {0}.

Category:
Other

Cause:
Unable to navigate to the portal.

Action:
Contact system administrator.

WCS-05219
Try accessing the portal from the Portal Switcher menu or the Portal page if the portal creation resulted in warnings. If the portal is not listed, refresh the list. If the portal is still not visible, report the error to your administrator. If the portal creation resulted in error, try deleting the portal if it is visible or else request the administrator to delete the portal

Category:
Other

Cause:
You can try accessing the portal from the Portal Switcher menu or the Portal page. If the portal is not listed, try refreshing the listing on the Portal page.

Action:
Contact system administrator.

WCS-05220
Deletion or Rename is being performed on portal {0} by another Portal Manager. Refresh the list of portals and try again after some time.

Category:
Other

Cause:
Portal {0} is already being deleted or renamed.

Action:
Contact Administrator.

WCS-05221
An unexpected error occurred while trying to delete portal template. Try again after some time. If the problem persists, contact administrator.

Category:
Other

Cause:
An unexpected error occurred while trying to delete portal template.

Action:
Contact system administrator.

WCS-05222
Some optional services in the portal could not be provisioned as they were disabled. You may want to provision them again by going to portal Administration.

Category:
Other

Cause:
Unexpected error while provisioning some optional services in the portal.

Action:
Contact Administrator and look in the logs for information about the specific service that has been disabled.

WCS-05223
Admin Role does not exist in the policy store for portal {0}, so creating it

Category:
Other

Cause:
An internal error occurred

Action:
Contact Oracle Support Services.

WCS-05224
Unexpected error occurred while revoking portal public status.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact the administrator.

WCS-05225
Cannot retrieve the portal distribution list for {0} due to {1}.

Category:
Other

Cause:

Action:

WCS-05226
Cannot retrieve the portal managers list for {0} due to {1}.

Category:
Other

Cause:

Action:

WCS-05227
Cannot retrieve the Webcenter Portal administrators list due to {1}.

Category:
Other

Cause:

Action:

WCS-05228
Unable to send change membership notification. The reason is : {0}.

Category:
Other

Cause:
The BPEL URL has not been configured yet.

Action:
Notify your administrator that the BPEL service supporting portal subscription is not configured

WCS-05229
Cannot retrieve portal workflow configuration. Please contact your administrator.

Category:
Other

Cause:
The BPEL URL has not been configured yet.

Action:
Notify your administrator that the BPEL service supporting portal subscription is not configured

WCS-05230
An error occurred while searching invited user {0} in portal {1}. Contact your administrator.

Category:
Other

Cause:
Unable to search invited status metadata

Action:
Contact your administrator for assistance.

WCS-05231
Cannot retrieve user {0} email ID in portal {1} due to {2}

Category:
Other

Cause:
Failed to retrieve email id due to {2}

Action:
Contact your administrator for assistance.

WCS-05232
Template publishing role does not exist in the policy store for portal {0}, so creating it

Category:
Other

Cause:
Copy of the role failed, now trying to sanitize the portal security data

Action:
Contact Oracle Support Services.

WCS-05233
Sanitizing template {0} failed unable to copy the publish data

Category:
Other

Cause:
An internal error occurred

Action:
Contact Oracle Support Services.

WCS-05234
WebCenter Portal is not configured with BPEL server information.

Category:
Other

Cause:
BPEL server is not configured.

Action:
Contact your administrator for assistance.

WCS-05235
WebCenter Portal is not properly configured with the required BPEL server information.

Category:
Other

Cause:
BPEL server information is not correct.

Action:
Contact your administrator for assistance.

WCS-05236
BPEL server is either down or not properly configured.

Category:
Other

Cause:
Either the BPEL server is down or the portal workflows are not configured properly

Action:
Contact your administrator for assistance.

WCS-05237
Unexpected error occurred rebuilding the user portals list.

Category:

Unknown error in mapping access for the new portal template {0}

Category:
Other

Cause:
Unexpected errors while mapping access on portal template {0}

Action:
Contact Administrator.

WCS-05278
Portal template {0} already exists.

Category:
Other

Cause:
Name specified for the portal template was not unique. A portal template with the same name already exists.

Action:
Provide a unique name for the portal template.

WCS-05279
Unexpected error while rolling back the template during {0}

Category:
Other

Cause:
Error in rolling back the plugin.

Action:
Contact Administrator.

WCS-05280
Creation of portal template resulted in error. Rollback of the create template failed as well. The main error is - {0}. You may delete the template if it is available in the list as this template is in unusable state.

Category:
Other

Cause:
Error in rolling back the plugin.

Action:
Try deleting this template if it is available on the Portale Templates page.

WCS-05281
Rollback of portal template metadata also resulted in error. The main error is - {0}. Try deleting the template from the Portal Templates page if it is available as this template is in unusable state.

Category:
Other

Cause:
Error in deleting the template metadata.

Action:
Try deleting this template if it is available on the Portal Templates page.

WCS-05282
Unexpected errors in deleting the portal template. Contact Administrator.

Category:
Other

Cause:
Unexpected error in deleting the portal template.

Action:
Contact Administrator.

WCS-05283
Deletion of the portal template resulted in errors. The main error is - {0}. You may want to try again later. If the error persists, contact the administrator.

Category:
Other

Cause:
Delete of the portal template resulted in error.

Action:
Contact Administrator.

WCS-05284
Deletion of portal template resulted in errors. Rollback of the deletion failed as well. The main error is -{0}. You may want to try again later. If the error persists, contact the administrator.

Category:
Other

Cause:
Delete of the portal template resulted in error.

Action:
Contact Administrator

WCS-05285
Portal template was deleted successfully but refreshing the portal template list failed. You may try to refresh the portal template list manually.

Category:
Other

Cause:
List refresh failed after deleting portal template.

Action:
You can refresh the portal template list manually.

WCS-05286
Updates or deletes are being performed on portal template {0} by another Portal Manager. Please try again after some time.

Category:
Other

Cause:
Portal template {0} is already being deleted.

Action:
Contact Administrator.

WCS-05287
Unexpected errors occurred while creating template {0}.

Category:
Other

Cause:
Unexpected errors occurred while creating template.

Action:
Contact Administrator.

WCS-05288
Creation of template resulted in errors. The main error is - {0}. Try again after some time or contact administrator

Category:
Other

Cause:
Template creation resulted in errors.

Action:
Contact Administrator.

Unexpected error occurred while fetching list of all portals

WCS-05367
Unable to display the list of portals you have access on due to unexpected errors. Try again after some time or contact administrator if the problem persists.

Category:
Other

Cause:
Unexpected error occurred while fetching list of all portals

Action:
Unexpected error occurred while fetching list of all portals

WCS-05368
Portal GUID not specified

Category:
Other

Cause:
The supplied portal GUID was null or blank.

Action:
Specify a valid portal GUID that is not null or blank.

WCS-05369
Portal not found

Category:
Other

Cause:
The system could not find the specified portal.

Action:
Specify a valid portal.

WCS-05370
Internal handler error

Category:
Other

Cause:
The internal handler for portal {0} failed.

Action:
Refer to logs for more information and contact the administrator

WCS-05371
The list of portal name passed was null

Category:
Other

Cause:
The list of portal names passed to fetch the metadata was empty.

Action:
Pass a valid list of values.

WCS-05372
The customizations available in portal template {1} were not copied to portal {0} since that process was interrupted.

Category:
Other

Cause:
Thread executing the customization document copy has been cancelled.

Action:
Retry this option using mds export/import wlst commands.

WCS-05373
The customizations available in portal template {1} were not copied to portal {0} since that process has timed-out.

Category:
Other

Cause:
Thread executing the customization document copy has been timed out

Action:
Retry this option using mds export/import wlst commands.

WCS-05374
The customizations available in portal template {1} were not copied to portal {0} due to unexpected errors.

Category:
Other

Cause:
Thread executing the customization document copy has failed to unexpected errors

Action:
Retry this option using mds export/import wlst commands.

WCS-05375
The customizations available in portal {1} were not copied to portal template {0} since that process was interrupted.

Category:
Other

Cause:
Thread executing the customization document copy has been cancelled.

Action:
Retry this option using mds export/import wlst commands.

WCS-05376
The customizations available in portal {1} were not copied to portal template {0} since that process has timed-out.

Category:
Other

Cause:
Thread executing the customization document copy has been timed out

Action:
Retry this option using mds export/import wlst commands.

WCS-05377
The customizations available in portal {1} were not copied to portal template {0} due to unexpected.

Category:
Other

Cause:
Thread executing the customization document copy has failed to unexpected errors

Action:
Retry this option using mds export/import wlst commands.

Other

Cause:
Unexpected error occurred while deleting the package containing generic-site-resources documents for portal {0}.

Action:
Contact Administrator.

WCS-05406
Unable to create portal as a portal with the URL or display name {0} already exists.

Category:
Other

Cause:
A portal with the specified URL or display name already exists.

Action:
Specify a unique UURL or display name for the portal.

WCS-05407
Unable to create portal as portal name is a reserved keyword. One of: {0}

Category:
Other

Cause:
The portal name specified was a reserved keyword.

Action:
Specify a valid alphanumeric name for the portal which excludes the following reserved keywords: webcenter, pages, page, Spaces, Space, group, groups, Space, Spaces,

webcenter Space, webcenter Spaces, webcenter Portal, WebCenter Portal, WebCenter Portal Spaces, portal, webcenter administration, my Spaces, admin, last.

WCS-05408
Unable to create portal as portal display name is a reserved keyword. One of: {0}

Category:
Other

Cause:
The portal display name specified was a reserved keyword

Action:
Specify a valid alphanumeric name for the portal display name which excludes the following reserved keywords: webcenter, pages, page, Spaces, Space, group, groups, Space, Spaces, webcenter Space, webcenter Spaces, webcenter Portal, WebCenter Portal, WebCenter Portal Spaces, portal, webcenter administration, my Spaces, admin, last.

WCS-05409
Simulated error condition during creation of portal {0} for internal test purposes.

Category:
Other

Cause:
Simulated error condition during creation of portal {0} for internal test purposes.

Action:
This is just for negative tests.

WCS-05410
Unexpected error occurred while deleting the portal template(s) {0}

Category:
Other

Cause:
Unexpected error occurred while deleting following portal template(s) {0}

Action:
Contact Administrator or try again after some time.

WCS-05411
Couldn''t get the first accessible page for portal {0} due to {1}.

Category:
Other

Cause:
Error in getting the first accessible page for the portal.

Action:
Contact the application administrator.

WCS-05412
Unexpected error occurred in setting {0} as parent of portal {1} due to {2}.

Category:
Other

Cause:
Error in setting the parent portal.

Action:
Contact the application administrator.

WCS-05413
Unexpected error while setting the parent to {0} due to {1}.

Category:
Other

Cause:
Error in setting the parent and security parent for the scope

Action:
Contact the application administrator.

WCS-05414
User {0} is not authorized to generate site maps for this site.

Category:
Other

Cause:
User {0} is not authorized to generate site maps for this site.

Action:
Contact the administrator.

WCS-05415
Unexpected error while getting the site map index.

Category:
Other

Cause:
Error in getting the site map index.

Action:
Contact the administrator.

WCS-05416
Unexpected error while getting the site map for portal {0}.

Category:
Other

Cause:
Error in getting the portal site map.

Action:
Contact the administrator.

WCS-05417
Unexpected error while generating the site map.

Category:
Other

Cause:
Error while generating the site map.

Action:
Contact the administrator.

WCS-05418
Unexpected error while generating the site map for portal {0}.

Category:
Other

Cause:
Error while generating the portal site map.

Action:
Contact the administrator.

WCS-05419
Unexpected error while updating the site map for portal {0}.

Category:
Other

Cause:
Error while updating the site map.

Action:
Contact the administrator.

WCS-05420
Unexpected error occurred while deleting the portal entry from default portal metadata due to {0}.

Category:
Other

Cause:
Error while deleting the portal from default portal metadta.

Action:
Contact the administrator.

WCS-05421
Unexpected error occurred while renaming the portal entry from default portal metadata due to {0}.

Category:
Other

Cause:
Error while renaming the portal from default portal metadta.

Action:
Contact the administrator.

WCS-05422
Error fetching parent space for space {0} due to {1}

Category:
Other

Cause:
Error occurred while fetching parent space.

Action:
Contact the administrator.

WCS-05423
Unexpected error occurred while fetching the Portal Manager list for space{0} due to {1}

Category:
Other

Cause:
Error occurred while fetching the list of Portal Managers.

Action:
Contact the administrator.

WCS-05424

Category:
Other

Cause:
Attribute name cannot be null or blank.

Action:
Please enter a valid name.

WCS-05426
Failed to update last active time for user guid {0} with exception {1}.

Category:
Other

Cause:
Unexpected error while updating last active time for user guid {0} due to exception {1}.

Action:
Contact the application administrator.

WCS-05427
Exceptions occurred while revoking role {1} for user {0} due to failures in some of the services {2}

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact the administrator.

WCS-05428
Unexpected error occurred while revoking roles for member {0}. Refer to the diagnostic WebCenter Portal log file for more information or contact your system administrator.

Category:
Other

Cause:
Unexpected error occurred while deleting role(s).

Action:
Contact Administrator.

WCS-05429
User {0} cannot be removed from portal {1} because {0} is the only member assigned to the Portal Manager role in the portal.

Category:
Other

Cause:
You cannot remove a member from a portal if that member is the sole Portal Manager of the portal.

Action:
Assign another member as the portal manager, then proceed to remove the current user.

WCS-05430
Cannot delete portal {0} as the Portal API cannot find this portal.

Category:
Other

Cause:
An internal error occurred.

Action:
Contact Oracle Support Services.

WCS-05431
Cannot create portal {0} due to error encountered when creating Portal object.

Category:
Other

Cause:
An internal error occurred.

Action:
Contact Oracle Support Services.

WCS-05432
Cannot create portal {0} due to error encountered when updating Portal object.

Category:
Other

Cause:
An internal error occurred.

Action:
Contact Oracle Support Services.

WCS-05433
Cannot create portal {0} due to error encountered when updating Portal object - {0}.

Category:
Other

Cause:
An internal error occurred.

Action:
Contact Oracle Support Services.

WCS-05434
User {0} does not have the privileges required for deployment operation on Portals. Verify that the user has "Create Portal" permission while performing the deployment operation.

Category:
Other

Cause:
Verify that the user has Create Portal permission while performing the deployment operation.

Action:
Try performing the operation as an administrator.

WCS-05435
User {0} does not have the privileges required for deployment operation on portal {1}. Verify that the user has "Manage Portal" permission while performing the deployment operation.

Category:
Other

Cause:
Verify that the user has Manage Portal permission while performing the deployment operation.

Action:
Try performing the operation as an administrator.

WCS-05436
User {0} does not have the privileges required for deployment operation on Portals. Verify that the user has "Deploy" permission while performing the deployment operation.

Category:
Other

Cause:
Verify that the user has Deploy permission while performing the deployment operation.

Action:
Try performing the operation as an administrator.

WCS-05437
User {0} does not have the privileges required for propagation operation on portal {1}. Verify that the user has "Manage Portal" permission while performing the propagation operation.

Category:
Other

Cause:
Verify that the user has Manage Portal permission while performing the propagation operation.

Action:
Try performing the operation as an administrator.

WCS-05438
User {0} does not have the privileges required for propagation operation on Portals. Verify that the user has "Deploy" permission while performing the propagation operation.

Category:
Other

Cause:
Verify that the user has Deploy permission while performing the propagation operation.

Action:
Try performing the operation as an administrator.

WCS-05439
User {0} does not have the privileges required for import operation on Portals. Verify that the user has "Create Portal" permission while performing the import operation.

Category:
Other

Cause:
Verify that the user has Create Portal permission while performing the import operation.

Action:
Try performing the operation as an administrator.

WCS-05440
User {0} does not have the privileges required for import operation on Portals. Verify that the user has "Deploy" permission while performing the import operation to be able to import the shared assets.

Category:
Other

Cause:
Verify that the user has Deploy permission while performing the import operation to be able to import the shared assets.

Action:
Try performing the operation as an administrator.

WCS-05441
User {0} does not have the privileges required for this operation on portal {1}. Verify that the user has "Manage Portal" permission while performing the export, deployment or propagation operation.

Category:
Other

Cause:
Verify that the user has Manage Portal permission while performing the export, deployment or propagation operation.

Action:
Try performing the operation as an administrator.

WCS-05442
User {0} does not have the privileges required for this operation on Portals. Verify that the user has "Deploy" permission while performing the deployment or propagation operation to be able to export the shared assets.

Category:
Other

Cause:
Verify that the user has Deploy permission while performing the deployment or propagation operation to be able to export the shared assets.

Action:
Try performing the operation as an administrator.

WCS-05443
User {0} does not have the privileges required for this operation on Portal Templates.

Category:
Other

Cause:
Check if the user has required permission on Portal Templates for performing lifecycle operations.

Action:
Try performing the operation as an administrator.

WCS-05444
User {0} does not have the privileges required for this operation on the WebCenter Portal Server application.

Category:
Other

Cause:
Check if the user has required permission on WebCenter Portal Server application for performing lifecycle operations.

Action:
Try performing the operation as an administrator.

WCS-05445
User {0} does not have the privileges required for import operation on portal {1}. Verify that the user has "Manage Portal" permission while performing the import operation.

Category:
Other

Cause:
Verify that the user has Manage Portal permission while performing the import operation.

Action:
Try performing the operation as an administrator.

WCS-05446
List of Members cannot be empty

Category:
Other

Cause:
Members List passed is empty.

Action:
Please enter a valid value.

WCS-05447
Role Name cannot be empty

Category:
Other

Cause:
Role Name is empty.

Action:
Please enter a valid Role Name.

WCS-05448
Base Role Name cannot be empty

Category:
Other

Cause:
Base Role Name is empty.

Action:
Please enter a valid Base Role Name.

WCS-05449
Portal Image URL cannot be empty

Category:
Other

Cause:
Portal Image URL is empty.

Action:
Please enter a valid Image URL.

WCS-05450
Attribute type not specified

Category:
Other

Cause:
Attribute type cannot be null or blank.

Action:
Please enter a valid type.

WCS-05451
New Portal name for rename not specified

Category:
Other

Cause:
New Portal Name cannot be null or blank.

Action:
Please enter a valid Portal name.

WCS-05452
Unexpected error occurred while performing the method {0}. Contact Administrator and check the logs for more details

Category:
Other

Cause:
Runtime error occurred while performing method {0}.

Action:
Contact Administrator and check logs.

WCS-05453
Unexpected error finding portal.

Category:
Other

Cause:
An error occuring when trying to retrieve a Portal object by its identifier.

Action:
Check underlying exception for cause.

WCS-05454
Unexpected error while trying to change membership of portal {0} due to {1}

Category:
Other

Cause:
The user roles may be invalid.

Action:
Contact the portal manager for assistance and check logs.

WCS-05455
Unexpected error while trying to subscribe a user to portal{0} due to {1}

Category:
Other

Cause:
The user roles may be invalid.

Action:
Contact the portal manager for assistance and check logs.

WCS-05701
Deleting portal {0} failed

Category:
Other

Cause:
WebService API failed to execute deleting web service call.

Action:
Check the web service parameters, make sure the configuration is correct.

WCS-05702
Creating portal {0} failed

Category:
Other

Cause:
WebService API failed to execute create web service call.

Action:
Check the web service parameters, make sure the configuration is correct.

WCS-05703
An error occurred while revoking the roles {1} for users in portal {0}

Category:
Other

Cause:
WebService API failed to execute revoke role web service call.

Action:
Check the web service parameters, make sure the configuration is correct.

WCS-05704
An error occurred while granting roles for {1} users in portal {0}

Category:
Other

Cause:
WebService API failed to execute grant role web service call.

Action:
Check the web service parameters, make sure the configuration is correct.

WCS-05705
Getting portal template {0} metadata failed

Category:
Other

Cause:
WebService API failed to execute get portal template metadata web service call.

Action:
Check the web service parameters, make sure the configuration is correct.

WCS-05706
Getting portal metadata {0} failed

Category:
Other

Cause:
WebService API failed to execute get portal metadata web service call.

Action:
Check the web service parameters, make sure the configuration is correct.

WCS-05707
Getting portals for search string {0} failed

Category:
Other

Cause:
WebService API failed to execute get spaces web service call.

Action:
Check the web service parameters, make sure the configuration is correct.

WCS-05708
Getting portal templates for search string {0} failed

Category:
Other

Cause:
WebService API failed to execute get template web service call.

Action:
Check the web service parameters, make sure the configuration is correct.

WCS-05709
Setting the Custom Attributes for scope {0} failed

Category:
Other

Cause:
WebService API failed to execute Custom Attributes.

Action:
Check the web service parameters, make sure the configuration is correct.

WCS-05710
An error occurred while attempting to retrieve spaces web service endpoint configured in connections.xml of caller application

Category:
Other

Cause:
Unable to retrieve spaces web service endpoint configured in caller applications connections.xml

Action:
Please check spaces web service endpoint configured in connections.xml

WCS-05711
One of the arguments passed to API call {0} is null

Category:
Other

Cause:
A null argument was passed to an API call

Action:
Ensure to invoke the API with non-null arguments

WCS-05712
No portal name is provided

Category:
Other

Cause:
Portal name is not provided

Action:
Ensure to invoke the API with non-null arguments

WCS-05713
No portal template name is provided

Category:
Other

Cause:
Portal template name is not provided

Action:
Ensure to invoke the API with non-null arguments

WCS-05714
No portal user name is provided

Category:
Other

Cause:
Portal user name is not provided

Action:
Ensure to invoke the API with non-null arguments

WCS-05715
No portal role name is provided

Category:
Other

Cause:
Portal role name is not provided

Action:
Ensure to invoke the API with non-null arguments

WCS-05716
No portal custom attribute name is provided

Category:
Other

Cause:
Portal custom attribute name is not provided

Action:
Ensure to invoke the API with non-null arguments

WCS-05717
No portal custom attribute value is provided

Category:
Other

Cause:
Portal custom attribute value is not provided

Action:
Ensure to invoke the API with non-null arguments

WCS-05718
Error while setting the new end point for the space web services

Category:
Other

Cause:
Portal web services client already has an endpoint {0}

Action:
It cannot be overridden at the runtime. Try setting it in connections.xml and restarting the application

WCS-05719
Portal web service client is null

Category:
Other

Cause:
Portal web service client is null

Action:
You need to set the context for the client and then initialize it

WCS-05720
An unexpected error occurred while instantiating space web services client

Category:
Other

Cause:
Unable to create an instance of GroupSpaceWSClient

Action:
Please verify the context parameters or contact administrator

WCS-05721
An error occurred when user {0} tried to accept invite for portal {2} with role {1}

Category:
Other

Cause:
Failed to execute acceptance of portal invite

Action:
Check the parameters being passed to the acceptInvite API or contact administrator

WCS-05722
An error occurred when user {0} tried to reject the invite for portal {1}

Category:
Other

Cause:
Failed to execute rejection of portal invite

Action:
Check the parameters being passed to the rejectInvite API or contact administrator

WCS-05723
An error occurred while fetching the roles for portal {0}

Category:
Other

Cause:
An error occurred while fetching the roles for portal {0}

Action:
Contact administrator

WCS-05724
An error occurred while inviting {0} members to portal {1}

Category:
Other

Cause:
An error occurred while inviting the members to portal {1}

Action:
Contact administrator

WCS-05725
An error occurred while creating the portal template {0} based on portal {1}

Category:
Other

Cause:
An error occurred while creating the portal template {0}

Action:
Contact Administrator

WCS-05726
An error occurred while fetching the roles for portal template {0}

Category:
Other

Cause:
An error occurred while fetching the roles for portal template {0}

Action:
Contact administrator

WCS-05727
The Service ID {0}, is invalid.

Category:
Other

Cause:
An error occurred while fetching the RSS Feed URL for the Service ID, {0}.

Action:
Contact administrator

WCS-05728
An error occurred while checking if a login user {0} is a member of portal {1}

Category:
Other

Cause:
An error occurred while checking if a login user {1} is a member of portal {0}

Action:
Contact administrator

WCS-05729
Deleting portal template {0} failed

Category:
Other

Cause:
WebService API failed to execute deleting web service call.

Action:
Check the web service parameters, make sure the configuration is correct.

WCS-05730
Search on portals for search string {0} failed

Category:
Other

Cause:
WebService API failed to execute search for portals.

Action:
Check the web service parameters, make sure the configuration is correct.

WCS-05731
Creation of role {0} failed in portal {1}

Category:
Other

Cause:
WebService API failed to execute create role for portals.

Action:
Check the web service parameters, make sure the configuration is correct.

WCS-05732
Dropping of role {0} failed in portal {1}

Category:
Other

Cause:
WebService API failed to execute drop role for portals.

Action:
Check the web service parameters, make sure the configuration is correct.

WCS-05733
Failed to get role information for identity {0} in portal {1}

Category:
Other

Cause:
WebService API failed to get role information.

Action:
Check the web service parameters, make sure the configuration is correct.

WCS-05734
Failed to get member information for portal {0}

Category:
Other

Cause:
WebService API failed to get member information.

Action:
Check the web service parameters, make sure the configuration is correct.

WCS-05735
Search on portal templates for search string {0} failed

Category:
Other

Cause:
WebService API failed to execute search for portal template.

Action:
Check the web service parameters, make sure the configuration is correct.

WCS-05736
No image URL is provided

Category:
Other

Cause:
Image URL is not provided

Action:
Ensure to invoke the API with non-null arguments

WCS-05737
Unexpected error occurred in preparing image URL {0}

Category:
Other

Cause:
An error occurred in preparing image URL

Action:
Make sure that the URL passed is correct.

WCS-05738
Failed to grant role for some members in portal {0}.

Category:
Other

Cause:
WebService API failed to execute grant role web service call for some or all members. This may be because these members already have provided role grants.

Action:
Check the web service parameters, make sure the configuration is correct.

WCS-05739
An error occurred while revoking roles for some users in portal {0}.

Category:
Other

Cause:
WebService API failed to execute revoke role web service call for some members.

Action:
Check the web service parameters, make sure the configuration is correct.

WCS-05900
Unexpected error occurred while performing operation.

Category:
Other

Cause:
Error occurred due to unknown cause

Action:
Try the operation again or contact oracle support

WCS-06001
JCR session leak: leaked {0} sessions during {1} request to URI {2}.

Category:
Other

Cause:
JCR sessions have not been returned to the pool after the request ended.

Action:
Contact Oracle Support Services.

WCS-06002
Connection "{0}" is not a content repository connection.

Cause:

Action:

WCS-06902
Incomplete repository connection, cannot login.

Category:
Other

Cause:
The repository configuration details are not valid and a classpath issue prevented the loading of the underlying JCR repository.

Action:
Verify that all the configuration parameters are correct and check the message from the underlying exception.

WCS-06905
Credentials for connection {0} not found using External Application Identifier {1}.

Category:
Other

Cause:
An attempt to fetch user credentials failed. User credentials may not have been provisioned or the external application configuration may be incorrect.

Action:
Verify the external application configuration. If necessary, provision credentials for the user.

WCS-06906
invalid credentials for connection {0} using External Application Identifier {1}

Category:
Other

Cause:
An attempt to log in using the provisioned credentials failed. The user's credentials for this connection might have been changed or the external application configuration might have been incorrect.

Action:
If the provisioned credentials for the given user are not valid, then those credentials must be provisioned again. It might also be necessary to verify the external application configuration.

WCS-06908
JCR Repository creation failure.{0}

Category:
Other

Cause:
A JCR repository instance could not be created from the parameters provided.

Action:
Check the configuration parameters, and retry.

WCS-06910
External Application Definition not found using External Application Identifier {0}

Category:
Other

Cause:
An attempt to fetch user credentials failed. The External Application ID is incorrect.

Action:
Verify that the External Application definition has been created for this connection.

WCS-06911
There is no authenticated user and PUBLIC credentials are not supported for External Application ID {0}.

Category:
Other

Cause:
An attempt to fetch credentials failed because there is not currently an authenticated user and the External Application ID does not support PUBLIC credentials.

Action:
Use an External Application ID that supports PUBLIC credentials or authenticate so that no attempt to use PUBLIC credentials will occur.

WCS-06912
There is no authenticated user and the PUBLIC credentials provisioned for External Application ID {0} are not valid.

Category:
Other

Cause:
An attempt to login using PUBLIC credentials failed because the provisioned PUBLIC credentials are not valid.

Action:
Contact your system administrator and inform them that the PUBLIC credentials need to be updated or authenticate so that no attempt to utilize the PUBLIC credentials will occur.

WCS-06913
The SHARED credentials provisioned for External Application ID {0} are not valid.

Category:
Other

Cause:
An attempt to login using SHARED credentials failed because the provisioned SHARED credentials are not valid.

Action:
Contact your system administrator and inform them that the SHARED credentials need to be updated.

WCS-07001
severe internal error

Category:
Other

Cause:
An irrecoverable internal error has occurred.

Action:
Contact Oracle Support Services.

WCS-07002
error obtaining Documents service ADF configuration

Category:
Other

Cause:
An error occurred while obtaining or interpreting the DocLib section of ADF configuration.

Action:
Verify that the Documents service section of the ADF configuration is present, complete, and contains valid data.

WCS-07003
error obtaining content repository connection

Category:
Other

Cause:
A JNDI Naming Exception occurred while attempting to obtain the content repository connection.

Action:
Verify that connections.xml contains a valid entry for the content repository connection.

WCS-07004
content repository login failure

Category:
Other

Cause:
The attempt to log on to the content repository failed.

Action:
Make sure the credentials used are valid.

WCS-07005
JCR error connecting to content repository

Category:
Other

Cause:
A JCR repository exception (other than login) occurred.

Action:
Use the associated JCR exception text to diagnose the problem.

WCS-07006
runtime error obtaining content repository

Category:
Other

Cause:
An unexpected runtime exception occurred.

Action:
Use the associated runtime exception text to diagnose the problem.

WCS-07007
cannot list items in directory {0}

Category:
Other

Cause:
An error occurred while trying to list the items in the specified folder.

Action:
Make sure that the content repository connection is accessible and that the specified folder exists.

WCS-07008
cannot get breadcrumbs for directory {0}

Category:
Other

Cause:
An error occurred while trying to list the breadcrumbs items for the specified folder.

Action:
Make sure that the content repository connection is accessible and that the specified folder exists.

WCS-07010
error listing folder {0}

Category:
Other

Cause:

Action:

WCS-07011
The Rich Text Editor could not load the target document, it may have been deleted.

Category:
Other

Cause:

Action:

WCS-07012
The Rich Text Editor could not load the destination folder, it may have been deleted.

Category:
Other

Cause:

Action:

WCS-07013
No content repository connection with the name "{0}" can be found.

Category:
Other

Cause:
A JNDI Name Not Found Exception occurred while attempting to obtain the content repository connection.

Action:
Verify connections.xml contains an entry for the specified content repository connection name.

WCS-07014
An attempt to log on to the content repository did not complete within the allotted time.

Category:
Other

Cause:
The content repository may have been slowed by heavy loads or network congestion.

Action:
Wait a while, and then retry. Optionally, ask the system administrator to allocate more resources for the content repository or to lengthen the timeout period.

WCS-07015
An attempt to log on to the content repository did not succeed because the Documents service is disabled.

Category:
Other

Cause:
Login failed because the Documents service was disabled. Another login was still executing, exceeding its allotted timeout period.

Action:
Wait a while, and then retry. Optionally, ask the system administrator to allocate more resources for the content repository or to lengthen the timeout period.

WCS-07016
Cannot get the user name for the selected user.

Category:
Other

Cause:

Action:

WCS-07017
The target Content Server does not support the following query used to retrieve recent documents: {0}.

Category:
Other

Cause:
Required components may not have been installed or properly configured.

Action:
Check the Content Server installation guide for WebCenter for details on required components and their configuration.

WCS-07018
An error occurred while trying to convert the following object from {0} to {1}: {2}.

Category:
Other

Cause:

Action:

WCS-07019
Cannot create folder "{0}" in "{1}".

Category:
Other

Cause:

Action:

WCS-07020
Error refreshing the JCR session.

Category:
Other

Cause:

Action:

WCS-07021
The transferable object contains no usable data.

Category:
Other

Cause:

Action:

WCS-07022
After fail-over, failed to get the item {0} from the repository.

Category:
Other

Cause:

Action:

WCS-07023
Please refresh to see the latest content (View > Refresh Content).

Category:
Other

Cause:

Action:

WCS-07024
Please refresh to see the latest content (View > Refresh Content). You may need to navigate up the folder hierarchy before refreshing.

Category:
Other

Cause:

Action:

WCS-07025
Unable to rename the selected document.

Category:
Other

Cause:

Action:

WCS-07026
Unable to perform the operation. The document or folder may have been deleted or you do not have permission.

Category:
Other

Cause:

Action:

WCS-07027
An error occurred performing post operation refreshing. The current document or folder may have been deleted or you do not have permission.

Category:
Other

Cause:

Action:

WCS-07028
The folder being renamed no longer exists.

Category:
Other

Cause:

Action:

WCS-07029
Unable to checkout {0}. This document is already checked out.

Category:
Other

Cause:

Action:

WCS-07030
Unable to perform the current operation.

Category:
Other

Cause:

Action:

WCS-07031
Unable to delete selected documents or folders.

Category:
Other

Cause:

Action:

WCS-07032
Unable to rename the selected folder.

Category:
Other

Cause:

Action:

WCS-07033
Unable to create folder.

Category:
Other

Cause:

Action:

WCS-07034
Unable to display folder properties.

Category:
Other

Cause:

Action:

WCS-07035
Unable to create new HTML document.

Category:
Other

Cause:

Action:

WCS-07036
Unable to upload the document.

Category:
Other

Cause:

Action:

WCS-07037
Unable to edit the HTML document.

Category:
Other

Cause:

Action:

WCS-07038
Unable to display document properties.

Category:
Other

Cause:

Action:

WCS-07039
Unable to display folder properties.

Category:
Other

Cause:

Action:

WCS-07040
Unable to save folder properties.

Category:
Other

Cause:

Action:

WCS-07041
Unable to check in the document.

Category:
Other

Cause:

Action:

WCS-07042
Unable to check out the document.

Category:
Other

Cause:

Action:

WCS-07043
Unable to cancel the document check-out.

Category:
Other

Cause:

Action:

WCS-07044
Unable to view version history for the document.

Category:
Other

Cause:

Action:

WCS-07045
Unable to copy selected documents or folders.

Category:
Other

Cause:

Action:

WCS-07046
Unable to paste selected documents or folders.

Category:
Other

Cause:

Action:

WCS-07047
A document or folder with the same name exists in this folder.

Category:
Other

Cause:

Action:

WCS-07048
A document or folder with the same name exists in this folder.

Category:
Other

Cause:

Action:

WCS-07049
You do not have permission.

Category:
Other

Cause:

Action:

WCS-07050
The folder no longer exists.

Category:
Other

Cause:

Action:

WCS-07051
The selected documents or folders no longer exist.

Category:
Other

Cause:

Action:

WCS-07052
The document no longer exists.

Category:
Other

Cause:

Action:

WCS-07053
The parent folder no longer exists.

Category:
Other

Cause:

Action:

WCS-07054
The document or folder being copied/moved no longer exists or the target folder no longer exists.

Category:
Other

Cause:

Action:

WCS-07055
The parent folder is currently unavailable.

Category:
Other

Cause:

Action:

WCS-07056
One or more of the selected documents or folders no longer exists.

Category:
Other

Cause:

Action:

WCS-07057
The document being renamed no longer exists.

Category:
Other

Cause:

Action:

WCS-07058
The document or folder no longer exists.

Category:
Other

Cause:

Action:

WCS-07059
The maximum number of folders stored within a folder has been reached. Contact your systems administrator.

Category:
Other

Cause:

Action:

WCS-07060
The maximum number of documents stored within a folder has been reached. Contact your systems administrator.

Category:
Other

Cause:

Action:

WCS-07061
The document is checked out by another user.

Category:
Other

Cause:

Action:

WCS-07062
The document is checked out by user {0}.

Category:
Other

Cause:

Action:

WCS-07063
The document is not checked out.

Category:
Other

Cause:

Action:

WCS-07064
An unknown error occurred in the Oracle Content Server.

Category:
Other

Cause:

Action:

WCS-07065
The selected document or folder or its parent folder may have been deleted or your permissions may have been revoked.

Category:
Other

Cause:

Action:

WCS-07066
Unable to move selected documents or folders.

Category:
Other

Cause:

Action:

WCS-07067
A document or folder with the same name exists in this folder.

Category:
Other

Cause:

Action:

WCS-07068
A document or folder with the same name exists in this folder.

Category:
Other

Cause:

Action:

WCS-07069
The folder name contains an invalid character.

Category:
Other

Cause:

Action:

WCS-07070
The folder name is too long.

Category:
Other

Cause:

Action:

WCS-07071
Unable to save document properties.

Category:
Other

Cause:

Action:

WCS-07072
The destination cannot be a child folder of the source folder.

Category:
Other

Cause:

Action:

WCS-07073
Unable to display item properties.

Category:
Other

Cause:

Action:

WCS-07074
Unable to save item properties.

Category:
Other

Cause:

Action:

WCS-07075
No transfer data found for data flavor {0}.

Category:
Other

Cause:

Action:

WCS-07076
No value found for task flow parameter {0}.

Category:
Other

Cause:

Action:

WCS-07077
An error occurred while adding the content presenter task flow to the page.

Category:
Other

Cause:

Action:

WCS-07078
The class method "{0}.{1}" cannot be called with a null or empty argument "{2}".

Category:
Other

Cause:
The specified method call cannot be called with the specified argument with value of null.

Action:
Ensure the specified argument has a non-null value.

WCS-07079
Datasource type "{0}" was expected but found "{1}".

Category:
Other

Cause:
The configured datasource type did not match the expected datasource type.

Action:
Correct the presenter configuration to the expected datasource type.

WCS-07080
Error retrieving node(s).

Category:
Other

Cause:
An error was encountered retrieving node(s).

Action:
Please contact a system administrator for assistance.

WCS-07081
Error saving Content Presenter Configuration.

Category:
Other

Cause:
An error was encountered saving the specified configuration document.

Action:
Please contact a system administrator for assistance.

WCS-07082
Query expression must be a valid, non-empty expression.

Category:
Other

Cause:
The specified query expression was invalid.

Action:
Review the specified query expression and correct it.

WCS-07083
The datasource type "{0}" requires "{1}" to be set.

Category:
Other

Cause:
The specified datasource type is not consistent with the datasource state.

Action:
Specific datasource types require different parameters to be set. Please resolve this situation.

WCS-07084
Invalid datasource type "{0}". Valid datasource types:{1}.

Category:
Other

Cause:
The specified datasource type was invalid.

Action:
Correct the specified datasource type to one of the examples provided in the error message.

WCS-07085
The configuration {0} is required.

Category:
Other

Cause:
You have not specified the mentioned configuration item.

Action:
Make sure the mentioned configuration item is provided for this presenter instance.

WCS-07086
Both page size and maximum results are required and must be a positive integer (pageSize: {0}, maxResults:{1}).

Category:
Other

Cause:
You have not specified the page size and maximum results.

Action:
Correct the page size and maximum results.

WCS-07087
Error loading task-flow instance configuration

Category:
Other

Cause:
An error occurred while loading the task-flow instance configuration.

Action:
Check the base exception for more details.

WCS-07088
Error saving task-flow instance configuration

Category:
Other

Cause:
An error occurred while saving the task-flow instance configuration.

Action:
Check the base exception for more details.

WCS-07089
Unable to save Content Presenter configuration data.

Category:
Other

Cause:
An error occurred while saving the presenter configuration data.

Action:
Check the base exception for more details.

WCS-07090
Unable to retrieve presenter configuration data.

Category:
Other

Cause:
An error occurred while retrieving the presenter configuration data.

Action:
Check the base exception for more details.

WCS-07091
Unable to retrieve presenter template data.

Category:
Other

Cause:
An error occurred while retrieving the presenter template data.

Action:
Check the base exception for more details.

WCS-07092
An error occurred while running the query.

Category:
Other

Cause:
An error occurred while previewing the query.

Action:
Check the base exception for more details.

WCS-07093
An error occurred while retrieving the node.

Category:
Other

Cause:
An error occurred while retrieving the node.

Action:
Check the base exception for more details.

WCS-07094
Maximum results (current:{0}) must be an integer between {1} and {2}.

Category:
Other

Cause:
The value you have specified for maximum results must inclusively be between the range specified.

Action:
Correct the maximum results to be inclusively be between the specified range.

WCS-07095
An error occurred while running the query.

Category:
Other

Cause:
A general repository exception has occurred.

Action:
Check the base exception for more details.

WCS-07096
Unable to retrieve properties for the specified item.

Category:
Other

Cause:
An error occurred while retrieving properties for the specified item.

Action:
Check the base exception for more details.

WCS-07097
Unable to retrieve markup for the specified item: {0}

Category:
Other

Cause:
An error occurred while retrieving markup for the specified item.

Action:
Check the base exception for more details.

WCS-07098
Unable to delete the selected version.

Category:
Other

Cause:

Action:

WCS-07099
Unable to retrieve workflow approvers for the specified item: {0}

Category:
Other

Cause:
An error occurred while retrieving workstate approvers for the specified item.

Action:
Check the base exception for more details.

WCS-07100
Oracle Content Server error: {0}

Category:
Other

Cause:
An unexpected error occurred in the Oracle Content Server.

Action:
Check the Oracle Content Server logs for details on this exception.

WCS-07101
Repository error: {0}

Category:
Other

Cause:
An unexpected error occurred in the content repository.

Action:
Check the base exception and repository's log for more details.

WCS-07102
Repository error

Category:
Other

Cause:
An unexpected error occurred in the content repository.

Action:
Check the base exception and repository's log for more details.

WCS-07103
Unsupported repository operation

Category:
Other

Cause:
The Documents service tried to invoke an operation that is not supported by the underlying document repository.

Action:
Avoid this operation with this repository.

WCS-07104
Access Denied

Category:
Other

Cause:

Action:

WCS-07105
Versioning is not supported on this repository.

Category:
Other

Cause:

Action:

WCS-07106
Locking is not supported on this repository.

Category:
Other

Cause:

Action:

WCS-07107
The recent documents query is not supported on this repository.

Category:
Other

Cause:

Action:

WCS-07108
Repository error: {0}

Category:
Other

Cause:
An unexpected error occurred in the content repository.

Action:
Check the base exception and repository's log for more details.

WCS-07109
Unable to save Content Presenter configuration data because no content item was selected. Select a content item before proceeding further.

Category:
Other

Cause:
An error occurred while saving the presenter configuration data without a content item.

Action:
Check the base exception for more details.

WCS-07201
Unable to approve the selected document.

Category:
Other

Cause:

Action:

WCS-07202
Unable to reject the selected document.

Category:
Other

Cause:

Action:

WCS-07203
Error initializing the user security cache.

Category:
Other

Cause:

Action:

WCS-07204
Unable to create new wiki page.

Category:
Other

Cause:

Action:

WCS-07205
Unable to find parent folder.

Category:
Other

Cause:

Action:

WCS-07206
parent folder is not set.

Category:
Other

Cause:

Action:

WCS-07207
Could not retrieve links count for resource {0}.

Category:
Other

Cause:

Action:

WCS-07208
Could not retrieve tags count for resource {0}.

Category:
Other

Cause:

Action:

WCS-07209
Could not retrieve comments count for resource {0}.

Category:
Other

Cause:

Action:

WCS-07210
Could not retrieve likes count for resource {0}.

Category:
Other

Cause:

Action:

WCS-07211
Could not retrieve likes/comments count for resource {0}.

Category:
Other

Cause:

Action:

WCS-07212
Error trying to retrieve spaces page for resource {0}.

Category:
Other

Cause:

Action:

WCS-07213
Could not set the security on the folder or document.

Category:
Other

Cause:
An error occurred while trying to update the item's security.

Action:
Review the associated error messages.

WCS-07214
The Scenario datasource was not constructed correctly

Category:
Other

Cause:
Either the conductor or the scenario have not be set correctly.

Action:
Review the specified conductor service and scenario configurations to make sure they are correct.

WCS-07215
Failed to get UCM configuration settings.

Category:
Other

Cause:
An error occurred while getting configuration information from the Content Server.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07216
The workflow settings could not be saved as there are too many approvers. Please reduce the number of approvers.

Category:
Other

Cause:

Action:

WCS-07217
Unable to add the following approvers to the workflow, the approvers username limit has been reached.{0}

Category:
Other

Cause:

Action:

WCS-07218
Unknown error while retrieving recent documents

Category:
Other

Cause:
An unknown error occurred while querying for recent documents.

Action:
Check the underlying exception for more details.

WCS-07219
Invalid parameter combination: the connection name specified by resourceId = {0} is not the same as specified in parameter connectionName = {1}.

Category:
Other

Cause:

Action:

WCS-07220
Invalid parameter combination: the item identified by resourceId = {0} is not a child of startFolderPath = {1}.

Category:
Other

Cause:

Action:

WCS-07221
{0} is not a valid resource identifier.

Category:
Other

Cause:

Action:

WCS-07222
The item with resourceId = {0} does not exist or is not accessible.

Category:
Other

Cause:

Action:

WCS-07223
Invalid content id "{0}" for datasource type "{1}".

Category:
Other

Cause:
The specified content id was invalid.

Action:
Correct the specified content id to a valid id.

WCS-07225
The object is not a Document Library resource.

Category:
Other

Cause:
An unexpected condition has occurred.

Action:
Contact your Oracle support representative.

WCS-07226
Failed to set ACL on content item as item ACL has been changed concurrently.

Category:
Other

Cause:
The attempt to change the security settings has failed because the settings have already been changed by another user.

Action:
Re-try the operation against the refreshed view of the item's security policy.

WCS-07227
Modifications to an item's security policy are not supported.

Category:
Other

Cause:
An attempt has been made to modify an item's security policy.

Action:
An item's security policy must be updated entirely and not partially.

WCS-07228
Failed to set ACL on content item {0}.

Category:
Other

Cause:
The attempt to set ACL security on an Oracle Content Server repository item has failed.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07229
Failed to restore content item {0} for security settings.

Category:
Other

Cause:
The attempt to restore a content item from its identifier has failed.

Action:
Retry the security settings operation.

WCS-07230
Determining if Content Server is configured to support item level security failed.

Category:
Other

Cause:
An error occurred while getting configuration information from the Content Server.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07231
Determining if Content Server is configured to support Slide Previewer failed.

Category:
Other

Cause:
An error occurred while getting configuration information from the Content Server.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07232
Error discovering if user has admin access to file or folder.

Category:
Other

Cause:
An error occurred when trying to discover if the current user has admin capabilities for the file or folder.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07233
Cannot perform action, item is in a workflow.

Category:
Other

Cause:
An action is being attempted on a document which is in a workflow.

Action:
Retry the action, when the workflow is complete.

WCS-07234
Fetching Workflow data from Content Server failed.

Category:
Other

Cause:
An error occurred while getting workflow information from the Content Server.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07235
No connection specified for Documents to use.

Category:
Other

Cause:
An attempt was made to use Documents without explicitly specifying a connection or configuring a primary connection.

Action:
Either explicitly supply Documents with a connection or specify a primary connection in the ADF configuration.

WCS-07237
Determining if Content Server is configured with AutoVue failed.

Category:
Other

Cause:
An error occurred while getting configuration information from the Content Server.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07238
Unexpected exception: {0}

Category:
Other

Cause:
An unexpected exception occurred.

Action:
Check the server logs for details on this exception.

WCS-07239
Unexpected error

Category:
Other

Cause:
An unexpected error occurred.

Action:
Check the server logs for details on this error.

WCS-07240
Unsupported resource type

Category:
Other

Cause:
The Documents service tried to perform an operation on a resource but failed to do so because the resource type was not recognized.

Action:
Avoid this operation with this particular type of resource.

WCS-07241
Renaming the root folder is not allowed.

Category:
Other

Cause:
An attempt was made to rename the root folder.

Action:
Avoid the rename operation with the root folder.

WCS-07242
Error reading the document's content.

Category:
Other

Cause:
The document's content could not be accessed.

Action:
Verify that the document is available.

WCS-07243
Error performing paste.

Category:
Other

Cause:
An error prevented the items from being pasted at the destination folder.

Action:
Verify that the destination folder still exists, is writable, and no items with the same names exist there.

WCS-07244
When searching between dates, if the dates are not specified in ascending order, the search may not return any results.

Category:
Other

Cause:
The begin and end dates have been specified in the wrong order.

Action:
Specify the dates in ascending order.

WCS-07245
Operation not allowed on Public folders.

Category:
Other

Cause:
An attempt has been made to perform an illegal operation on a Public folder.

Action:
Do not select a Public folder when performing operations such as delete and rename. If performing a copy or move operation then select item(s) inside the Public folder, not the Public folder itself.

WCS-07246
Approver list is too large for current workflow.

Category:
Other

Cause:
Unable to save the set of approvers for the workflow as the usernames exceed the 255 character limit.

Action:
Reduce the approvers for the workflow.

WCS-07247
Could not list the items in a folder;

Category:
Other

Cause:
An error occurred while trying to list the items in a folder.

Action:
Make sure that the content repository connection is accessible and that the folder exists. Navigate to another folder in the hierarchy.

WCS-07248
Unable to open the editor.

Category:
Other

Cause:

Action:

WCS-07249
Could not connect to the content repository.

Category:
Other

Cause:
A error occurred while trying to connect to the content repository.

Action:
Make sure that the content repository is running and accessible.

WCS-07250
Provisioning of the Documents service failed.

Category:
Other

Cause:
An error occurred while trying to provision the Documents service.

Action:
Make sure that the content repository connection is accessible. Check the Oracle Content Server logs for more information.

WCS-07251
The item may have been deleted or has already been approved or rejected.

Action:

WCS-07265
An error occurred while invoking the WCC filter.

Category:
Other

Cause:
An error occurred while invoking the WCC filter

Action:
Contact Oracle Support Services.

WCS-07501
There is no role matching the given ID: {0}.

Category:
Other

Cause:
The application attempted to look up a service role with an invalid role ID.

Action:
Ensure that your application uses a valid service role ID.

WCS-07502
Cannot grant super administrator role for scope {1}.

Category:
Other

Cause:
Could not grant the super administrator role to the scope. The super administrator role can only be granted to the default scope; other roles must be granted on a portal scope.

Action:
Verify that the role mapping is correctly defined.

WCS-07503
Cannot log on to the content repository.

Category:
Other

Cause:
The username and password used for the current login were not correct.

Action:
Check the username and password.

WCS-07504
There was an unknown content repository exception.

Category:
Other

Cause:

Action:

WCS-07505
The repository login was interrupted.

Category:
Other

Cause:

Action:

WCS-07601
Unable to read document metadata ("{0}","{1}").

Category:
Other

Cause:
Generally caused by a malformed xml document.

Action:
Check the specified xml document for errors.

WCS-07602
Document metadata ("{0}","{1}") is expected to be of type "{2}", but found "{3}".

Category:
Other

Cause:
Generally caused by a malformed xml document with an incorrect namespace.

Action:
Check the specified xml document and make sure the xmlns attribute is set to 'http://xmlns.oracle.com/webcenter/content/templates/registry'.

WCS-07603
No content list template or content template found in registry("{0}","{1}").

Category:
Other

Cause:
Generally caused by an empty display template descriptor.

Action:
Check the specified xml document and make sure that either content-templates or content-list-templates are defined.

WCS-07604
Default template view named "{0}" not found for content type "{1}".

Category:
Other

Cause:
A content type has been configured in the template registry with a default template that has not been found.

Action:
Check the specified xml document and make sure a template view exists with the id of the defaultView specified on the content type.

WCS-07605
There are duplicate template categories with id "{0}".

Category:
Other

Cause:
There are duplicate template categories that are defined with the specified id.

Action:
Check the template registry document and make sure and change the name of the specified template category.

WCS-07606
There are duplicate content types by name "{0}".

Category:
Other

Cause:
There are duplicate content types that are defined with the specified name.

Action:
Check the template registry document and make sure and change the name of the specified content type.

WCS-07607
There are duplicate content repositories by name "{0}" and type "{1}".

Category:
Other

Cause:
There are duplicate content repositories that are defined with the specified name.

Action:
Check the template registry document and make sure and change the name of the specified content repository.

WCS-07608
There are duplicate template views by id "{0}".

Category:
Other

Cause:
There are duplicate template views that are defined with the specified id.

Action:
Check the template registry document and make sure and change the id of the specified template view.

WCS-07609
The class method "{0}.{1}" cannot be called with a null argument "{2}".

Category:
Other

Cause:
The specified method call cannot be called with the specified argument with value of null.

Action:
Ensure the specified argument has a non-null value.

WCS-07610
Unable to locate resource key "{0}" in bundle "{1}".

Category:
Other

Cause:
The display template registry is configured with a resource bundle and key that is unable to be found.

Action:
Check the specified resource bundle and ensure that the specified key exists.

WCS-07611
No template category defined by id "{0}".

Category:
Other

Cause:
The display template registry does not contain a category configuration by the specified id.

Action:
Add the specified category id to the template registry.

WCS-07612
No template view defined by id "{0}".

Category:
Other

Cause:
The display template registry does not contain a template configuration by the specified id.

Action:
Add the specified template id to the template registry.

WCS-07613
No template registry found in application.

Category:
Other

Cause:
The display template registry does not exist or cannot be found.

Action:
Check application configuration and ensure registry is properly configured.

WCS-07614
Default template view named "{0}" not found in template category "{1}".

Category:
Other

Cause:
A category has been configured in the template registry with a default template view that has not been found.

Action:
Check the specified xml document and make sure a template view exists with the id of the defaultView specified on the category.

WCS-07615
Default category named "{0}" not found in the registry.

Category:
Other

Cause:
A default category has been configured in the template registry that has not been found.

Action:
Check the specified xml document and make sure a the default category has been defined.

WCS-07616
No template view defined by id "{0}" and category "{1}".

Category:
Other

Cause:
The display template registry does not contain a template configuration by the specified category and view.

Action:
Add the specified template id to the template registry.

WCS-07617
A general display template error has occurred.

Category:
Other

Cause:
An unexpected exception has occurred processing the display template registry.

Action:
Review the original stacktrace cause for more information.

WCS-07618
No default template view specified for category id "{0}". Returning the default view for the default category.

Category:
Other

Cause:
The specified category in the template registry is not configured with a default view, but has been referenced using the default behavior.

Action:
Update the specified category in the template registry to configure a default view.

WCS-07619
Invalid configuration for category id "{0}". Could not find view defined for view id "{1}".

Category:
Other

Cause:
The specified category in the template registry is configured with no default templates.

Action:
Update the registry to only include a single default template for the category.

WCS-07620
Invalid configuration for category id "{0}". Multiple templates found for view id "{1}".

Category:
Other

Cause:
The specified category in the template registry is configured with multiple templates.

Action:
Update the registry to only include a single template for the category and view id combination.

WCS-07621
Invalid configuration for content type name "{0}" in repository name "{1}" configuration.

Category:
Other

Cause:
The specified category in the template registry is configured with no default templates.

Action:
Update the registry to only include a single default template for the category.

WCS-07622
Invalid configuration for content type name "{0}" in repository "{1}". Multiple default templates found.

Category:
Other

Cause:
The specified category in the template registry is configured with multiple templates.

Action:
Update the registry to only include a single template for the category and view id combination.

WCS-07701
severe internal error while getting the template view ID

Category:
Other

Cause:
An irrecoverable internal error has occurred.

Action:
Contact Oracle Support Services.

WCS-07702
Error while getting the template view ID

Category:
Other

Cause:
An error occurred while determining the template for a node.

Action:
Check the underlying exception.

WCS-07703
No request dispatcher for template viewID {0} located at {1}

Category:
Other

Cause:
An error occurred while trying to dispatch the request to the template. The target template may not exist.

Action:
Check that the target template exists.

WCS-07704
Error processing the display template include for template viewID {0} located at {1}

Category:
Other

Cause:
An error occurred while processing the template include. This may result from a syntax or logic error in the template code.

Action:
Check the underlying exception for the details of the error.

WCS-07710
Error while getting the template view ID because of null node or view, node: {0}, view: {1}

Category:
Other

Cause:

Action:

WCS-07712
Error setting up context for template. {0}

Category:
Other

Cause:
An error occurred while trying to setup the context for the template.

Action:
Check the underlying error.

WCS-07713
Internal error: illegal reentrant use of template context.

Category:
Other

Cause:
An internal error was detected, attempted reentrant use of template context.

Action:
Contact your Oracle Support representative.

WCS-07714
Error tearing down context for template. {0}

Category:
Other

Cause:
An error occurred while trying to teardown the context for the template.

Action:
Check the underlying error.

WCS-07715
Error popping context, found another template context. {0}. {1}.

Category:
Other

Cause:
An error occurred while trying to pop the context, found another template context.

Action:
Contact your Orale support representative.

WCS-07716
Error popping context, found another context. {0}.

Category:
Other

Cause:
An error occurred while trying to pop the context, found another context.

Action:
Contact your Oracle support representative.

WCS-07717
Error while invoking component.

Category:
Other

Cause:
An error occurred while invoking the template component.

Action:
Check the underlying exception.

WCS-07718
Error when resuming context: no queued context to resume.

Category:
Other

Cause:
Template context cannot be resumed, as context queue is empty.

Action:
Contact your Oracle support representative.

WCS-07719
Error when resuming context: no context to resume.

Category:
Other

Cause:
Template context cannot be resumed, as there is no context to resume.

Action:
Contact your Oracle support representative.

WCS-07720
Error retrieving Region Template from WebCenter Content.

Category:
Other

Cause:
An error occurred retrieving the Region Template from the WebCenter Content server.

Action:
Check the exception for the underlying cause.

WCS-07801
Cannot seed the WebCenter data into the content repository.

Category:
Other

Cause:
An error occurred while seeding data for the Documents service in the content repository.

Action:
Check the underlying exception and content repository log for more information.

WCS-07802
Cannot find the adf-config.xml file.

Category:
Other

Cause:
Could not find an adf-config.xml document in the classpath.

Action:
To enable the Documents service in WebCenter, ensure adf-config.xml and connections.xml containing Documents service information are on the classpath.

WCS-07803
Cannot open a connection to the Oracle Content Server.

Category:
Other

Cause:
The application failed to open a connection to the Oracle Content Server.

Action:
Check that the Oracle Content Server connection is properly configured and that the server is available.

WCS-07804
Cannot create the Security Group, {0}, in the Oracle Content Server.

Category:
Other

Cause:
A Content Server error occurred while executing the operation.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07805
Cannot create the seeded role, {0}, in the Oracle Content Server.

Category:
Other

Cause:
A Content Server error occurred while executing the operation.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07806
Cannot create the folder, {0}, in the folder, {1}, in the Oracle Content Server.

Category:
Other

Cause:
A Content Server error occurred while executing the operation.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07807
Cannot rename the folder, {0}, to {1}, in the Oracle Content Server.

Category:
Other

Cause:
A Content Server error occurred while executing the operation.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07808
Cannot delete the folder, {0}, in the Oracle Content Server.

Category:
Other

Cause:
A Content Server error occurred while executing the operation.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07809
Cannot get folder with the path, {0}, from the Oracle Content Server.

Category:
Other

Cause:
A Content Server error occurred while executing the operation.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07810
Error obtaining the content repository connection "{0}".

Category:
Other

Cause:
A JNDI Naming Exception occurred while attempting to obtain the content repository connection.

Action:
Verify that connections.xml contains a valid content repository connection.

WCS-07811
Unsupported repository connection "{0}" for the Documents service.

Category:
Other

Cause:
The specified content repository is not currently supported for Documents service WebCenter Portal integration. The supported content repository types is Oracle Content Server.

Action:
Verify that adf-config.xml and connections.xml contain a valid entry for the Documents service repository.

WCS-07812
Cannot remove permissions, {0}, for user/group, {1}, to the account for the folder, {2}.

Category:
Other

Cause:
The application failed to remove permissions for the user/group on the folder.

Action:
Check that the permissions and user/group are valid and that the folder exists.

WCS-07813
Cannot grant permissions, {0}, for user, {1}, to the account for the folder, {2}.

Category:
Other

Cause:
The application failed to grant permissions for the user on the folder.

Action:
Check that the permissions and user are valid and that the folder exists.

WCS-07814
Error while removing an account from all users credentials.

Category:
Other

Cause:
A Content Server error occurred while executing the operation.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07816
Unable to seed the WebCenter data in the Oracle Content Server repository.

Category:
Other

Cause:
A Content Server error occurred while seeding the WebCenter data in the repository.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07817
Unable to seed the Personal Folder data in the Oracle Content Server repository.

Category:
Other

Cause:
A Content Server error occurred while seeding the Personal Folder data in the repository.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07818
Cannot find the WebCenter administrators to seed in the Document Library repository.

Category:
Other

Cause:
The application failed to determine the list of WebCenter administrators.

Action:
Check the underlying exception for more information.

WCS-07819
Cannot release the session pool.

Category:
Other

Cause:
Failed to release the session pool for the content repository administrative connection.

Action:
Check the underlying exception for more information.

WCS-07820
Cannot create a search result row from the JCR node.

Category:
Other

Cause:

Action:

WCS-07821
Error while calling the EC_SET_PROPERTY service with dECPropType = {0}, dECPropKey = {1}, dECPropSubKey = {2}, dECPropValue = {3}.

Category:
Other

Cause:
A call to the Oracle Content Server EC_SET_PROPERTY service during repository setup failed to complete.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07822
Cannot get the WebCenter URL.

Category:
Other

Cause:

Action:

WCS-07823
Cannot grant the account, {0}, to all users.

Category:
Other

Cause:
An error occurred while trying to grant the account to all users.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07824
Unable to get the admin session to the Oracle Content Server repository.

Category:
Other

Cause:
An error occurred while trying to obtain an admin session to the Oracle Content Server repository.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07825
Cannot remove role, {0}, for user/group, {1}.

Category:
Other

Cause:
The application failed to remove the specified role from the user/group.

Action:
Check the role and user/group are valid.

WCS-07826
Cannot remove role {0} and permissions, {1}, to the account for the folder, {2} for the user/group {3}.

Category:
Other

Cause:
The application failed to remove the role and permissions on the folder for the user/group.

Action:
Check that the permissions and user/group are valid and that the folder exists.

WCS-07827
Cannot add role, {0}, for user/group, {1}.

Category:
Other

Cause:
The application failed to add the specified role to the user/group.

Action:
Check the role and user/group are valid.

WCS-07828
Cannot add role {0} and permissions, {1}, to the account for the folder, {2} for the user/group {3}.

Category:
Other

Cause:
The application failed to add the role and permissions on the folder for the user/group.

Action:
Check that the permissions and user/group are valid and that the folder exists.

WCS-07829
Cannot update the account for the portal {0}, with permission, {1}, for all users.

Category:
Other

Cause:
An error occurred while trying to update the portal account for all users.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07830
Cannot set default attributes, {0}, for the key, {1}

Category:
Other

Cause:
An error occurred while trying to set default attributes for the specified key.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07831
Cannot delete default attributes for the key, {0}.

Category:
Other

Cause:
An error occurred while trying to delete default attributes for the specified key.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07832
Cannot determine account and permission from the default attributes for the portal, {0}.

Category:
Other

Cause:
An error occurred while trying to determine the account and permission from the default attributes for the portal. The default attributes are not in the correct format.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07833
The Java Object Cache is not available.

Category:
Other

Cause:
An error occurred while trying to retrieve the cache.

Action:
Check the underlying exception for more information.

WCS-07834
A Java Object Cache operation timed out. Distributed caches may be inconsistent.

Category:
Other

Cause:
A cache operation timed out.

Action:
Check the underlying exception for more information.

WCS-07835
Java Object Cache, Put operation failed.

Category:
Other

Cause:
A cache put operation failed.

Action:
Check the underlying exception for more information.

WCS-07836
Java Object Cache, Destroy operation failed.

Category:
Other

Cause:
A cache destroy operation failed.

Action:
Check the underlying exception for more information.

WCS-07837
Java Object Cache, Get operation failed.

Category:
Other

Cause:
A cache get operation failed.

Action:
Check the underlying exception for more information.

WCS-07838
Java Object Cache, release ownership failed.

Category:
Other

Cause:
A cache unlock operation on a cached object failed.

Action:
Check the underlying exception for more information.

WCS-07839
Invalid document service ADF configuration.

Category:
Other

Cause:
The documents services configuration in adf-config.xml is invalid.

Action:
Verify that the documents services configuration in adf-config.xml conforms to the documents service configuration data schema.

WCS-07840
Cannot get folder with the GUID, {0}, from the Oracle Content Server.

Category:
Other

Cause:
A Content Server error occurred while executing the operation.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07845
Error loading Site Studio content.

Category:
Other

Cause:
An error occurred while loading data for Site Studio into the content repository.

Action:
Check the underlying exception and content repository log for more information.

WCS-07846
Error checking Site Studio content into Content Server.

Category:
Other

Cause:
An error occurred while checking in Site Studio content into the content repository.

Action:
Check the underlying exception and content repository log for more information.

WCS-07847
Error checking installation of SiteStudio on Content Server.

Category:
Other

Cause:
An error occurred while checking the installation of the Site Studio in the content repository.

Action:
Check the underlying exception and content repository log for more information.

WCS-07848
Error creating temporary directory to extract SiteStudio content to.

Category:
Other

Cause:
An error occurred while creating the directory to extract the Site Studio content to.

Action:
Check the underlying exception for more information.

WCS-07850
Failed to destroy Java Object Cache region, {0}.

Category:
Other

Cause:
An error occurred while trying to destroy the Doclib Java Object Cache region.

Action:
Check the underlying exception for more information.

WCS-07857
Cannot get the version for the {0} component from the Oracle Content Server.

Category:
Other

Cause:
A Content Server error occurred while executing the operation.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07863
Cannot determine if Document Library supports Enterprise Roles.

Category:
Other

Cause:
A Content Server error occurred while executing the operation.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07864
Cannot enable the workflow {0}.

Category:
Other

Cause:
A Content Server error occurred while executing the operation.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07865
Cannot create the workflow with the name {0}.

Category:
Other

Cause:
A Content Server error occurred while executing the operation.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07866
Cannot create the workflow step {0} for the workflow {1}.

Category:
Other

Cause:
A Content Server error occurred while executing the operation.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07867
Cannot get the portal account from the GUID {0}.

Category:
Other

Cause:
A Content Server error occurred while executing the operation.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07868
Cannot propagate account for the portal folder {0} to its contents.

Category:
Other

Cause:
A Content Server error occurred while executing the operation.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07870
Security settings are only supported for Oracle Content Server.

Category:
Other

Cause:
An attempt has been made to set security for a non Oracle Content Server repository.

Action:
To enable security, use Oracle Content Server.

WCS-07871
Cannot set default attributes, for the key, {1}

Category:
Other

Cause:
An error occurred while trying to get default attributes for the specified key.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07872
Unable to upgrade the WebCenter data in the Oracle Content Server repository.

Category:
Other

Cause:
A Content Server error occurred while upgrading the WebCenter data in the repository.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07873
Cannot get the workflow {0}.

Category:
Other

Cause:
A Content Server error occurred while getting the workflow.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07874
The documents services configuration in adf-config.xml is invalid, one of the settings is being used in another Webcenter's configuration.

Category:
Other

Cause:
Either the portal root or application name in the Document Properties is the same as another WebCenter instance using the same Content Server.

Action:
Ensure the portal root and application are both unique and not being used in another WebCenter's configuration using the same Content Server.

WCS-07875
Can not get the folder metadata for the scope, {0}.

Category:
Other

Cause:
A Content Server error occurred while getting the scope's folder metadata.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07877
Error invalidating the VCR cache entry for {0}.

Category:
Other

Cause:
An error happened while trying to remove an item from the VCR cache.

Action:
Check the underlying exception for more information.

WCS-07878
Error determining if a scope in the export set has document library provisioned.

Category:
Other

Cause:
An error happened while trying to determine if the scope is provisioned.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07879
Error while writing doclib provisioned scope to export file.

Category:
Other

Cause:
An error happened while trying to output the scopes which have document library provisioned.

Action:
Check the underlying exception for more information.

WCS-07880
Error while writing the doclib export document to MDS for portal(s) {0}.

Category:
Other

Cause:
An error happened while trying to write the document containing the document library export data to MDS.

Action:
Check the underlying exception for more information.

WCS-07884
Error while reading the set of doclib provisioned scopes from the export file.

Category:
Other

Cause:
An error happened while trying to read the scopes which have document library provisioned from the export file.

Action:
Check the underlying exception for more information.

WCS-07885
Error while reading the doclib export document from MDS for portals{0} .

Category:
Other

Cause:
An error happened while trying to read the document containing the document library export data from MDS.

Action:
Check the underlying exception for more information.

WCS-07886
Error provisioning document library for a scope in the import set.

Category:
Other

Cause:
An error happened while trying to provisioning document library during import.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07887
No document library export data found for import in MDS under path {0} for portal(s) {1}.

Category:
Other

Cause:

Action:

WCS-07888
Invalid datasource type "{0}". Valid datasource types:{1}.

Category:
Other

Cause:
The specified datasource type was invalid.

Action:
Correct the specified datasource type to one of the examples provided in the error message.

WCS-07889
Query expression must be a valid, non-empty expression.

Category:
Other

Cause:
The specified query expression was invalid.

Action:
Review the specified query expression and correct it.

WCS-07890
The Scenario datasource was not constructed correctly

Category:
Other

Cause:
Either the conductor or the scenario have not be set correctly.

Action:
Review the specified conductor service and scenario configurations to make sure they are correct.

WCS-07891
Failed to get UCM configuration settings.

Category:
Other

Cause:
An error occurred while getting configuration information from the Content Server.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07892
Invalid content id "{0}" for datasource type "{1}".

Category:
Other

Cause:
The specified content id was invalid.

Action:
Correct the specified content id to a valid id.

WCS-07893
The datasource type "{0}" requires "{1}" to be set.

Category:
Other

Cause:
The specified datasource type is not consistent with the datasource state.

Action:
Specific datasource types require different parameters to be set. Please resolve this situation.

WCS-07894
Both page size and maximum results are required and must be a positive integer (pageSize: {0}, maxResults:{1}).

Category:
Other

Cause:
You have not specified the page size and maximum results.

Action:
Correct the page size and maximum results.

WCS-07895
Maximum results (current:{0}) must be an integer between {1} and {2}.

Category:
Other

Cause:
The value you have specified for maximum results must inclusively be between the range specified.

Action:
Correct the maximum results to be inclusively be between the specified range.

WCS-07896
An error occurred while retrieving the node.

Category:
Other

Cause:
An error occurred while retrieving the node.

Action:
Check the base exception for more details.

WCS-07897
Error retrieving node(s).

Category:
Other

Cause:
An error was encountered retrieving node(s).

Action:
Please contact a system administrator for assistance.

WCS-07898
The datasource type "{0}" is currently not supported for custom folder.

Category:
Other

Cause:
The specified datasource type is not supported for ContentListFactory custom folder.

Action:
Only specific datasource types are supported. Please resolve this situation.

WCS-07899
Cannot update the seeded role, {0}, in the Oracle Content Server.

Category:
Other

Cause:
A Content Server error occurred while executing the operation.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07900
Can not perform document library role mapping, role mapper is not initialized.

Category:
Other

Cause:
A Content Server error occurred while executing the operation.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07901
Can not perform document library role mapping, role mapper was initialized with a different scope to that being processed. Initialized with scope {0} and processing with scope {1}.

Category:
Other

Cause:
The document library role mapper can only process actions for the scope with which it was initialized. A request has been made to process role mapping for a different scope which is not permitted.

Action:
Check the underlying exception and Oracle Content Server log for more information.

WCS-07902
Can not perform document library role mapping, the scope does not have Document Library provisioned.

Category:
Other

Cause:
The document library role mapper can only map roles for a scope which has document library provisioned.

Action:
Check the scope has document library provisioned.

WCS-07903
Invalid repository name {0}.

Category:
Other

Cause:
An invalid repository was specified.

Action:
Verify that a valid repository is specified.

WCS-07904
Error while exporting the documents content.

Category:
Other

Cause:
An error happened while trying to export the documents content of the scopes being exported.

Action:
Check the underlying exception for more information.

WCS-07905
Error while getting the documents contents of the source scope.

Category:
Other

Cause:
An error happened while trying to get the documents of the source scope from the Content Server.

Action:
Check the underlying exception for more information.

WCS-07906
No scopes have been specified for export.

Category:
Other

Cause:
No portals have been specified to be exported.

Action:
Specify scopes to be exported.

WCS-07907
Error while importing the documents content.

Category:
Other

Cause:
An error happened while trying to import the documents content of the scopes being imported.

Action:
Check the underlying exception for more information.

WCS-07908
Group Space folder does not exist in target instance can not proceed with import.

Category:
Other

Cause:
The scope has not been provisioned in the target instance, can not proceed to import data into the target instance.

Action:
Ensure WebCenter Export Import has completed successfully and the Scope is provisioned in the target instance.

WCS-07909
The import archive {0} was not found, no document data will be imported.

Category:
Other

Cause:
The archive containing the documents data was not found. Import of documents content will not occur.

Action:
Ensure WebCenter Export included the exporting of documents content..

WCS-07910
Unable to delete data in the target scope prior to import.

Category:
Other

Cause:
An error happened while trying to delete existing data in the target scope before import commences.

Action:
Check the underlying exception for more information.

WCS-07911
Unable to create document in target scope.

Category:
Other

Cause:
An error happened while trying to create a document in the target scope.

Action:
Check the underlying exception for more information.

WCS-07916
The following documents were not imported {0}.

Category:
Other

Cause:
The documents in the list could not be imported into the target UCM.

Action:
Check the logs for more information.

WCS-07917
Error creating content URL.

Category:
Other

Cause:
An error occurred creating a content URL.

Action:
Check the underlying exception for more information.

WCS-07918
The content item {0} was not imported. An item with the filename {1} already exists in the folder.

Category:
Other

Cause:
Oracle Content Server does not permit multiple content items with the same filename to be checked into the same folder. The content item being imported has the same filename as an existing content item in the same folder. The duplicate document has not been imported.

Action:
Check the source UCM instance and either remove the duplicate content items, or ensure the import has imported the correct version of the content item.

WCS-07919
The content item {0} was not imported. The filename {1} contains an invalid characters.

Category:
Other

Cause:
The filename of the file being imported contains invalid characters, the document can not be checked in.

Action:
Check the logs for more information.

WCS-07920
An error occurred loading the names of additional content attributes.

Category:
Other

Cause:
An error occurred loading the names of additional content attributes.

Action:
Check the underlying exception for more information.

WCS-07923
No primary content repository connection.

Category:
Other

Cause:
There is no content repository connection name set as the primary connection.

Action:
Set a content repository connection as the primary connection.

WCS-07924
Error checking foldering service (Framework Folders/folders_g) of content server.

Category:
Other

Cause:
An error occurred while checking doclib foldering service implementation of content server.

Action:
Check the underlying exception and content repository log for more information.

WCS-07925
Foldering service from content server {0} and Portal Server Configuration {1} do not match.

Category:
Other

Cause:
Value stored in WC_PORTAL_PROPERTIES table and response from content server is not same.

Action:
Contact System Administrator.

WCS-07926
Framework Folders version on Oracle WebCenter Content Server is not supported for Oracle WebCenter Portal. The supported versions are {0} and later.

Category:
Other

Cause:
Framework Folders version on Oracle WebCenter Content Server is not supported for Oracle WebCenter Portal. The supported versions are 2.1 and later.

Action:
Contact System Administrator.

WCS-07927
Error creating system library list.

Category:
Other

Cause:
An error occurred while creating system library list from Oracle WebCenter Content Server.

Action:
Check the underlying exception in WebCenter Portal and Content Server logs for additional information.

WCS-07928
Failed to get document rules from Oracle WebCenter Content Server.

Category:
Other

Cause:

Action:

WCS-07929
Failed to add document rule {0} to Oracle WebCenter Content Server.

Category:
Other

Cause:

Action:

WCS-07930
An error occurred while redirecting to resource using url:{0}.

Category:
Other

Cause:

Action:

WCS-07931
An error occurred while importing portal content. Ensure that Oracle WebCenter Content Server is up and running.

Category:
Other

Cause:
An error occurred while importing portal content from Oracle WebCenter Content Server.

Action:
Check the underlying exception in WebCenter Portal and Content Server logs for additional information.

WCS-07932
Unable to get the filename for the document with ID: {0}.

Category:
Other

Cause:

Action:

WCS-07933
Error checking desktop tag component in content server.

Category:
Other

Cause:
An error occurred while checking doclib desktop tag component status in content server.

Action:
Check the underlying exception and content repository log for more information.

WCS-07934
Error seeding data for SESCrawlerExport component.

Category:
Other

Cause:
An error occurred while seeding data for SESCrawlerExport component into the content repository.

Action:
Check the underlying exception and content repository log for more information.

WCS-07935
Error loading search indexer engine name.

Category:
Other

Cause:
An error occurred while loading search indexer engine name from Oracle WebCenter Content Server.

Action:
Check the underlying exception in WebCenter Portal and Content Server logs for additional information.

WCS-07936
Error updating metadata fields used for search.

Category:
Other

Cause:
An error occurred while updating metadata fields used for search in Oracle WebCenter Content Server.

Action:
Check the underlying exception in WebCenter Portal and Content Server logs for additional information.

WCS-08001
Supplied class {0} is not an instance of {1}.

Category:
Other

Cause:
Forum service adapter details were not configured properly in the adf-config.xml file or the adapter implementation class was not correct.

Action:
Check that the adapter class name in the adf-config file is correct.

WCS-08002
Not able to invoke constructor of class {0} through Constructor.newInstance() call.

Category:
Other

Cause:
Application tried to instantiate a class through Constructor.newInstance().

Action:
Check that the adapter class name in the adf-config file is correct.

WCS-08003
Not able to find the method "{0}" in the class "{1}".

Category:
Other

Cause:
Matching constructor was not found in the adapter implementation class.

Action:
Contact Oracle Support Services.

WCS-08004
Not able to resolve the name {0}

Category:
Other

Cause:
Not able to acquire Context to look up.

Action:
Check for JNDI configuration.

WCS-08005
User "{0}" is not authorized.

Category:
Other

Cause:
Contact your administrator for access to discussions forum.

Action:
Provide valid user credentials, or check if user exists or has appropriate permissions.

WCS-08006
User "{0}" not logged on.

Category:
Other

Cause:
User might not have logged on to the system.

Action:
Try logging on using correct user credentials.

WCS-08007
User "{0}" not found

Category:
Other

Cause:
User might not have been created, or user might have been deleted from the back-end application.

Action:
Contact your administrator or try different user credentials.

WCS-08008
Service "{0}" is not a valid service or it is not supported by the "{1}" adapter implementation.

Category:
Other

Cause:
Adapter implementation does not recognize this service type.

Action:
Read the documentation for more details.

WCS-08009
Discussion forum Category with name "{0}" already exists.

Category:
Other

Cause:
Category with the given name already exists.

Action:
Try with a different category name.

WCS-08010
Category not found.

Category:
Other

Cause:
Category does not exists or user is not authorized to access it.

Action:
Provide a valid category ID.

WCS-08011
Discussion forum object Forum with name "{0}" already exists.

Category:
Other

Cause:
Discussion forum object Forum with the given name already exists.

Action:
Try with a different forum name.

WCS-08012
No forums were found.

Category:
Other

Cause:
Forum does not exists or user is not authorized to access it.

Action:
Provide a valid forum ID.

WCS-08013
Topic not found.

Category:
Other

Cause:
Topic does not exists or user is not authorized to access it.

Action:
Provide a valid topic ID.

WCS-08014
Message not found.

Category:
Other

Cause:
Message does not exists or user is not authorized to access it.

Action:
Provide a valid message ID.

WCS-08015
There is a problem with the supplied attachments.

Category:
Other

Cause:
Possible causes: attachment was larger than expected, it was not readable or available, or it was not a supported mime type.

Action:
Try with a different attachment or contact your system administrator.

WCS-08016
Unable to look up the forum connection with name "{0}".

Category:
Other

Cause:
Either the forum connection name is not valid or corresponding connection details are deleted from the connection store.

Action:
Check the default connection name in adf-config and connection details in connection store for discussion forum service or contact your system administrator.

WCS-08017
Ambiguous forum connection definitions found in the connection store.

Category:
Other

Cause:
More than 1 connection type found for discussion forum service. Unable to decide which one to use.

Action:
Configure the appropriate connection name as the default connection to use from the management console or contact your system administrator.

WCS-08018
Discussion forum object Message with subject "{0}" is prevented from being posted.

Category:
Other

Cause:
Discussion forum object Message is rejected because of any one of the following reasons: 1) blocking a set of users from posting, 2) preventing a user from posting more than once every X seconds, 3) rejecting any messages that contain profanity from the back-end application.

Action:
If you are authorized to post messages and your text has valid language, then try again after some time.

WCS-08019
Host address "{0}" configured in connection store is not correct.

Category:
Other

Cause:
IP address of the host configured in connection store could not be determined.

Action:
Configure the correct host name in connection store or contact your system administrator.

WCS-08020
Unable to connect to discussion server.

Category:
Other

Cause:
Possible reasons: The IP address of the host configured in the connection store could not be determined, or the connection was refused by the host.

Action:
Configure the correct host name in connection store or contact your system administrator.

WCS-08021
Forum connection details are not available in the connection store.

Category:
Other

Cause:
Forum connection details were not available in the connection store.

Action:
Configure discussion forum service connection details in connection store or contact your system administrator.

WCS-08022
Unable to create discussion forum object Forum with name "{0}".

Category:
Other

Cause:
Unable to create discussion forum object Forum with the supplied name and description.

Action:
Contact your administrator.

WCS-08023
Not able to reach service endpoint port type due to {0}.

Category:
Other

Cause:
Service end point is not reachable.

Action:
Contact your administrator.

WCS-08024
Input parameter value "{0}" supplied is invalid.

Category:
Other

Cause:
Invalid input parameter value is supplied.

Action:
Provide valid values for the input parameters.

WCS-08025
You do not have permission to see forums for this portal.

Category:
Other

Cause:
User is not authorized to access the forum.

Action:
Contact your administrator.

WCS-08026
You do not have permission to see recent topics for this portal.

Category:
Other

Cause:
User is not authorized to access the recent topics.

Action:
Contact your administrator.

WCS-08027
You do not have permission to see popular topics for this portal.

Category:
Other

Cause:
User is not authorized to access the popular topics.

Action:
Contact your administrator.

WCS-08028
{0} not accessible.

Category:
Other

Cause:
Contact your administrator for access.

Action:
Check if data exist or check for appropriate permissions.

WCS-08029
Could not connect to the configured discussions server.

Category:
Other

Cause:
Configured discussion server is not reachable.

Action:
Check if server details are correct or contact your administrator.

WCS-08201
Not able to create forum configuration file for community "{0}" due to : {1}.

Category:
Other

Cause:
Possible failure creating the category or forum, or an issue with the MDS write operation.

Action:
Contact your system administrator or read the discussion forum service configuration documentation for more details.

WCS-08202
Failed to flush changes into preference store due to {0}.

Category:
Other

Cause:
Possible failure in the backing store, or a failure to contact the backing store.

Action:
Contact system administrator

WCS-08601
Supplied class {0} is not an instance of {1}.

Category:
Other

Cause:
Service db adapter details were not configured properly in the adf-config.xml file or the adapter implementation class was not correct.

Action:
Check that the adapter class name in the adf-config file is correct.

WCS-08602
Not able to instantiate the class {0}, no default empty constructor found.

Category:
Other

Cause:
Application tried to instantiate a class through Constructor.newInstance().

Action:
Check that the adapter class name in the adf-config file is correct and ensure to have a default empty constructor.

WCS-08603
User "{0}" not logged on.

Category:
Other

Cause:
User might not have logged on to the system.

Action:
Try logging on using correct user credentials.

WCS-08604
Category with name "{0}" already exists.

Category:
Other

Cause:
Category with the given name already exists.

Action:
Try with a different category name.

WCS-08605
Unable to find the Category: {0}.

Category:
Other

Cause:
Category does not exists or user is not authorized to access it.

Action:
Provide a valid category ID.

WCS-08606
Unable to find the Survey {0}.

Category:
Other

Cause:
Survey does not exists or user is not authorized to access it.

Action:
Provide a valid survey ID.

WCS-08607
Survey already exists: {0}.

Category:
Other

Cause:
Survey with the given name already exists.

Action:
Try with a different survey name.

WCS-08608
Survey already closed: {0}

Category:
Other

Cause:
Survey is closed, some operations on closed surveys are not allowed.

Action:
Some operations on closed surveys are not allowed.

WCS-08609
Survey already published: {0}

Category:
Other

Cause:
Survey is published, some operations on published surveys are not allowed.

Action:
Some operations on published surveys are not allowed.

WCS-08610
Unable to find the Survey Item {0}.

Category:
Other

Cause:
Survey item does not exists.

Action:
Provide a valid survey item ID.

WCS-08611
Unable to find the Survey Template {0}.

Category:
Other

Cause:
Survey template does not exists or user is not authorized to access it.

Action:
Provide a valid survey template ID.

WCS-08612
Failed to perform {0} operation. Check logs for more details.

Category:
Other

Cause:
Unknown exception occured.

Action:
Contact your administrator to check logs for more details.

WCS-08613
Failed to perform {0} operation. Check logs for more details.

Category:
Other

Cause:
Unknown exception occured.

Action:
Contact your administrator to check logs for more details.

WCS-08614
Survey not published: {0}

Category:
Other

Cause:
Survey is not published, certain operations are not allowed without publishing.

Action:
Publish the survey to allow this operation.

WCS-09001
The IMAP host cannot be null or an empty string.

Category:
Other

Cause:
The IMAP server host address was not specified.

Action:
Configure Mail Service connection.

WCS-09002
The SMTP host cannot be null or an empty string.

Category:
Other

Cause:
The SMTP server host address was not specified.

Action:
Configure Mail Service connection.

WCS-09003
Anonymous user access is not permitted on the mail service. Users must log on to the application.

Category:
Other

Cause:
User was not logged on to the application. ADF security context was not set to authenticated user.

Action:
Log on to the application using the ADF authentication mechanism.

WCS-09004
User credentials not found in the credential store for user "{0}" with external application ID: {1}.

Category:
Other

Cause:
Mapped user credentials for the current logged on user were not found in the credential store.

Action:
Supply valid credentials.

WCS-09005
Multiple connection definitions found for mail service.

Category:
Other

Cause:
Multiple connection definitions were defined in the registry; could not identify the default connection to use.

Action:
Specify the default connection to be used in adf-config.xml. For more details, refer to the Mail Service documentation for creating connections.

WCS-09006
Lookup for connection "{0}" failed.

Category:
Other

Cause:
Failed to get the JNDI context, or the mail connection with the given name was not available.

Action:
Supply proper connection name, and ensure that the entry exists in the connection repository.

WCS-09007
ADF connections context could not be acquired. Failed to find mail connection.

Category:
Other

Cause:
Failed to get the JNDI context for the connection repository.

Action:
ADF connection context details were missing from the adf-config.xml file. For more information, refer to the ADF Developer's Guide.

WCS-09008
Failed to create mail session due to: {0}

Category:
Other

Cause:
Unexpected failure: either the IMAP/SMTP server did not respond, it failed to understand the request, or it was not configured properly.

Action:
Contact Oracle Support Services.

WCS-09009
Failed to connect to the mail server. Connection timed out.

Category:
Other

Cause:
Could not connect to the mail server in the given time.

Action:
Confirm that the IMAP/SMTP servers are running or increase the timeout value.

WCS-09010
Failed to read messages from the folder "{0}". Further information: {1}

Category:
Other

Cause:
Either the IMAP folder had issues or the search term was not supported by the server.

Action:
Contact your system administrator to check the issues in the log file.

WCS-09011
Failed to get message with ID "{0}" from the folder "{1}". Further information: {2}.

Category:
Other

Cause:
Either the IMAP folder had issues or the search term was not supported by the server.

Action:
Contact your system administrator to check the issues in the log file.

WCS-09012
Failed to send the message with subject "{0}". Further information: {1}

Category:
Other

Cause:
Either the SMTP server did not respond or the message was corrupted.

Action:
Contact your system administrator to check the issues in the log file.

WCS-09013
Message with ID "{0}" has been permanently removed from the "{1}" folder.

Category:
Other

Cause:
Either this message did not exist on the IMAP folder or it was been deleted via expunge on the folder.

Action:
The IMAP folder has been expunged to permanently delete all messages. The message cannot be recovered.

WCS-09014
Unable to find the "{0}" folder.

Category:
Other

Cause:
Either the folder with this name did not exist on the IMAP server or the mail server did not support folders.

Action:
Ensure that the folder with the given name exists and that the IMAP server is properly configured.

WCS-09015
Failed to perform the {0} operation due to: {1}.

Category:
Other

Cause:
Either the mail server was down or it did not support this operation.

Action:
Ensure that the IMAP and SMTP servers are properly configured and available.

WCS-09016
Logon failed: unknown user name or incorrect password

Category:
Other

Cause:
The user credentials acquired from the credential store were incorrect.

Action:
Ensure that the user credentials supplied for logon are correct.

WCS-09017
Could not make an attachment: not a valid body part for creating an attachment.

Category:
Other

Cause:
Either the body part was not recognized, it could not be attached to the message, or the body part could not be processed.

Action:
Contact your system Administrator.

WCS-09018
No recipients for the mail specified.

Category:
Other

Cause:
No recipients for the mail specified.

Action:
At least one recipient must be specified for the mail to be delivered.

WCS-09019
No mail connection found.

Category:
Other

Cause:
No mail connection was specified.

Action:
The mail connection is not available in the connection repository. Ensure that a connection to the mail server is defined.

WCS-09020
Connection to the server failed.

Category:
Other

Cause:
Connection to the server failed: either the host or port information was wrong or the server was down.

Action:
Check the mail server connection details and ensure that the mail server is up and running.

WCS-09021
User name to connect to the mail server for Email Gateway is not supplied.

Category:
Other

Cause:
Connection to the server failed: mail user account was not complete.

Action:
User account details are required to connect to the mail server.

WCS-09022
User password to connect to the mail server for Email Gateway is not supplied.

Category:
Other

Cause:
Connection to the server failed: mail user account is not complete.

Action:
User account details are required to connect to the mail server.

WCS-09023
Cannot attach file. Either the file exceeds the maximum allowed file size or it is empty(zero bytes). Attached files must be less than 2 MB.

Category:
Other

Cause:
Either the attachment size is 0(zero) or greater than 2 MB.

Action:
Attach a file within in the expected size limit.

WCS-09025
Message delivery failure: The message could not be sent because connecting to the SMTP mail server failed. The server may be unavailable. If the problem persists, report the error to your administrator.

Category:
Other

Cause:
Connection to the server failed: either the host or port information was wrong or the server was down.

Action:
Check the mail server connection details and ensure that the mail server is up and running.

WCS-09026
Error processing the message.

Category:
Other

Cause:
The message might have been sent with improper encoding.

Action:
Contact system administrator.

WCS-09027
The number of recipients for the mail:{0} has exceeded the maximum limit:{1} set by the space administrator.

Category:
Other

Cause:
The number of recipients for the mail has exceeded the maximum limit set by the space administrator.

Action:
Reduce the number of recipients or contact the space administrator to change the maximum limit

WCS-09201
Distribution list "{0}" already exists.

Category:
Other

Cause:
A distribution list with the supplied name already exists.

Action:
Create the distribution list with a different name.

WCS-09202
Distribution list "{0}" is not available.

Category:
Other

Cause:
A distribution list with the supplied name does not exist.

Action:
Verify the supplied name and ensure that the list exists on the mail server.

WCS-09203
Mandatory connection property "{0}" missing from the directory connection.

Category:
Other

Cause:
The mandatory connection property required to establish directory connection was not supplied.

Action:
Verify the supplied directory connection details, and ensure that the required details are supplied.

WCS-09204
Filter criteria not defined for the directory search: {0}.

Category:
Other

Cause:
Filter criteria was not defined for the directory search.

Action:
Search criteria should contain filter details.

WCS-09205
Incorrect format for the schema attribute. Value retrieved is: {0}.

Category:
Other

Cause:
The schema was not specified properly.

Action:
Check the base DN for the schema details and supply the complete base DN.

WCS-09214
Failed to acquire the initial directory context for name: {0}, due to : {1}

Category:
Other

Cause:
Failed to acquire the connection either the connection details are wrong or server is not reachable.

Action:
Ensure proper configuration is provided or Contact your administrator.

WCS-09215
Unable to create the distribution list: {0}, Mandatory attributes missing. Further information: {1}

Category:
Other

Cause:
Mandatory attributes to create a group are missing.

Action:
Contact System Administrator

WCS-09216
Unexpected error occurred. Further info: {0}

Category:
Other

Cause:
Unexpected error occurred contact system administrator.

Action:
Contact Oracle Support

WCS-09217
Unable to lookup the context name: {0}, due to : {1}

Category:
Other

Cause:
Unable to find the context.

Action:
Contact System Administrator

WCS-09218
Unable to destroy the context name: {0}, due to : {1}

Category:
Other

Cause:
Either context does not exists or its not a proper context name.

Action:
Contact System Administrator

WCS-09219
Unable to modify attributes for the context name: {0}, due to : {1}

Category:
Other

Cause:
Either context does not exists or its not a proper context name.

Action:
Contact System Administrator

WCS-09220
Unable to find the attribute: {0} under context {1}, due to {2}

Category:
Other

Cause:
Required attribute not found in the context object.

Action:
Ensure the required attribute is available in the context object.

WCS-09251
Failed to make attachment, due to: {0}.

Category:
Other

Cause:
Either the file size was too large or the selected file was not readable. Check the server settings.

Action:
Ensure that the file is available and readable. Also ensure that the file is not too large. If the problem persists, then contact your system administrator.

WCS-09252
Failed to remove attachment due to: {0}.

Category:
Other

Cause:
Either this attachment did not exist or it failed to read the message. See the error log for more details.

Action:
Contact your system administrator.

WCS-09253
Failed to send message, due to: {0}.

Category:
Other

Cause:
Either the mail session was expired or the user was not logged in.

Action:
Contact your system Administrator.

WCS-09254
Failed to read attachments, due to: {0}.

Category:
Other

Cause:
Either the mail session is expired or the user is not logged-in.

Action:
Contact your system Administrator.

WCS-09255
External application ID not defined.

Category:
Other

Cause:
The required configuration parameter External Application ID was not found.

Action:
Contact your system Administrator.

WCS-09256
This message has been deleted.

Category:
Other

Cause:
This message had been deleted.

Action:
Only non-deleted mails can be viewed.

WCS-09257
No compose message object found.

Category:
Other

Cause:
User may not be in the compose mode or the state is lost.

Action:
Ensure the user is in compose message view.

WCS-09258
Unable to find the attachment table component.

Category:
Other

Cause:
Unable to find the table component in the current view.

Action:
Ensure the table component id name is not changed.

WCS-09259
Unable to find the backing bean by name {0}.

Category:
Other

Cause:
Either the backing bean is removed or the name is changed.

Action:
Ensure the backing bean names are intact.

WCS-09501
An unexpected error occurred.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-09502
Supplied class {0} is not an instance of {1}.

Category:
Other

Cause:
Announcement service adapter details might not have been configured properly in the adf-config.xml file or adapter implementation class was not proper.

Action:
Check that the adapter class name in the adf-config file is correct.

WCS-09503
Not able to invoke constructor of class {0} through Constructor.newInstance() call.

Category:
Other

Cause:
Application is trying to instantiate a class through Constructor.newInstance().

Action:
Check that the adapter class name in the adf-config file is correct.

WCS-09504
Not able to find the method "{0}" in the class "{1}".

Category:
Other

Cause:
Matching constructor might not be found the adapter implementation class.

Action:
Contact Oracle Support Services.

WCS-09505
User "{0}" is not authorized.

Category:
Other

Cause:
Contact your administrator for access to announcements.

Action:
Provide valid user credentials, or check if user exists or has appropriate permissions.

WCS-09506
User "{0}" not logged on.

Category:
Other

Cause:
User might not have logged on to the system.

Action:
Try logging on using correct user credentials.

WCS-09507
User "{0}" is not found.

Category:
Other

Cause:
User might not have been created, or user might have been deleted from the back-end application.

Action:
Contact your administrator or try different user credentials.

WCS-09508
Announcement configuration file for community "{0}" not found or details such as category ID and announcement ID are not available.

Category:
Other

Cause:
There was a failure in creating the announcement configuration or an issue with the MDS read or write operation.

Action:
Contact your system administrator or read the announcement service configuration documentation for more details.

WCS-09509
Announcement not found.

Category:
Other

Cause:
Announcement object with the supplied announcement ID was not available or it was not accessible.

Action:
Provide a valid announcement ID.

WCS-09510
Announcement parent not found.

Category:
Other

Cause:
Announcement parent object with the supplied ID was not available or it was not accessible.

Action:
Provide a valid accessible parent ID.

WCS-09511
Announcement parent not found.

Category:
Other

Cause:
Announcement parent object is not accessible from discussion forum.

Action:
Check if discussion service is configured properly.

WCS-09512
Unable to lookup the announcement connection with name "{0}".

Category:
Other

Cause:
Either the announcement connection name is not valid or corresponding connection details are deleted from the connection store.

Action:
Check the default connection name in adf-config for discussion announcement service or contact your system administrator.

WCS-09513
Ambiguous announcement connection definitions found in the connection store.

Category:
Other

Cause:
More than 1 connection type found for discussion announcement service. Unable to decide which one to use.

Action:
Configure the appropriate connection name as the default connection to use from the management console or contact your system administrator.

WCS-09516
Announcement service configuration not found

Category:
Other

Cause:
service configuration details are missing

Action:
Ensure service config details are either loadable from classpath or from adf-config.

WCS-09517
Announcement service configuration not correct.

Category:
Other

Cause:
service configuration details are not provided as expected.

Action:
Correct the service configuration details.

WCS-09518
Host address "{0}" configured in connection store is not correct.

Category:
Other

Cause:
IP address of the host configured in connection store could not be determined.

Action:
Configure the correct host name in connection store or contact your system administrator.

WCS-09519
Not able to log on to the back-end system with host address "{0}".

Category:
Other

Cause:
Possible reasons: The IP address of the host configured in the connection store could not be determined, or the connection was refused by the host.

Action:
Configure the correct host name in connection store or contact your system administrator.

WCS-09520
Expiry date cannot be earlier than start date.

Category:
Other

Cause:
Expiry date is specified to be earlier than start date.

Action:
Specify expiry date to be later than start date.

WCS-09521
Not able to query data from SQL Connection.

Category:
Other

Cause:
Possible reasons: The database is down or invalid SQL Connection configuration in the DataSource.

Action:
Configure the correct SQL Connection in the DataSource.

WCS-09522
Announcement parent not accessible.

Category:
Other

Cause:
Contact your administrator for access to announcements.

Action:
Check if announcements parent exists or user has permissions to access announcements.

WCS-09523
Could not connect to the configured discussions server.

Category:
Other

Cause:
Configured discussion server is not reachable.

Action:
Check if server details are correct or contact your administrator.

WCS-09601
Not able to create announcement configuration file for community {0} due to : {1}.

Category:
Other

Cause:
Possible failure creating category or announcement or an issue with the MDS write operation.

Action:
Contact your system administrator or read the announcement service configuration documentation for more details.

WCS-09602
Failed to flush changes into preference store due to {0}.

Category:
Other

Cause:
Possible failure in the backing store, or failure to contact the backing store.

Action:
Contact system administrator

WCS-11001
Error on content write: {0}

Category:
Other

Cause:
The content write operation failed for the given reason.

Action:
Investigate the reason for the failure.

WCS-11002
Internal server error: {0}

Category:
Other

Cause:
An unexpected internal error has occurred.

Action:
Contact your Oracle Support representative.

WCS-11003
Invalid Request

Category:
Other

Cause:
The client has submitted an invalid HTTP request.

Action:
Re-send the corrected request.

WCS-11004
Path not found: {0}

Category:
Other

Cause:
The requested path has not been found on the server.

Action:
Correct the path on the client and re-send the request.

WCS-11005
Not an ISO8601 date: {0}

Category:
Other

Cause:
The client supplied a date which is not in ISO8601 format.

Action:
Correct the date format on the client and re-send the request.

WCS-11006
Not an HTTP date: {0}

Category:
Other

Cause:
The client supplied a date which is not in HTTP date format.

Action:
Correct the date format on the client and re-send the request.

WCS-11007
Namespace not supported: {0}

Category:
Other

Cause:
The repository does not support the given namespace.

Action:
Specify a valid namespace.

WCS-11008
Bad request

Category:
Other

Cause:
The client submitted a request that could not be understood by the server.

Action:
Correct the syntax and resubmit the request.

WCS-11009
Not modified

Category:
Other

Cause:
The client has performed a conditional GET request, access is allowed but the document has not changed.

Action:
No action required as resource has not been modified and hence it is not returned.

WCS-11010
Not acceptable

Category:
Other

Cause:
The requested resource could not generate an entity with an acceptable media-type for the client.

Action:
If applicable, resubmit the request with a broader acceptance criteria.

WCS-11011
Precondition failed

Category:
Other

Cause:
A request precondition has failed.

Action:
If applicable, resubmit the request with different preconditions.

WCS-11012
The Java virtual machine does not support the UTF-8 character set.

Category:
Other

Cause:
The UTF-8 character set is not supported by the Java virtual machine.

Action:
Contact your Oracle Support Representative.

WCS-11013
No DAV dead property name matches the JCR property name {0}.

Category:
Other

Cause:
A unexpected JCR property name has been found that does not correspond to a DAV dead property name.

Action:
Contact your Oracle Support Representative.

WCS-11014
Cannot close the servlet output stream.

Category:
Other

Cause:
There was an error closing the servlet output stream.

Action:
Review the server logs for possible cause of failure.

WCS-11015
Cannot close content input stream.

Category:
Other

Cause:
There was an error closing the content input stream.

Action:
Review the server logs for possible cause of failure.

WCS-11016
Invalid resource name: {0}

Category:
Other

Cause:
The given name is not a valid resource name.

Action:
The client should resubmit the request with a corrected URL.

WCS-11017
Invalid resource name; illegal escape sequence in path: {0}

Category:
Other

Cause:
The given name was not a valid resource name as it contains an illegal escape sequence.

Action:
The client should resubmit the request with a corrected URL.

WCS-11018
Forbidden request method: {0}

Category:
Other

Cause:
The requested HTTP method was not completed as the server forbids the execution of this type of method.

Action:
Compatible clients should not use the specified HTTP method.

WCS-11019
Folder listing is disabled.

Category:
Other

Cause:
Folder listing has been disabled.

Action:
Folder listing must be explicitly enabled in the application's web.xml.

WCS-11020
Error storing uploaded file content.

Category:
Other

Cause:
Uploaded file could not be stored.

Action:
Check other errors for cause.

WCS-11021
Error verifying CSRF token: ADF session scope token null.

Category:
Other

Cause:
CSRF could not be verified as session CSRF null.

Action:
Contact your Oracle Support representative.

WCS-11022
CSRF token check fail, session and request token mis-match.

Category:
Other

Cause:
CSRF verification failed as request and session tokens do not match.

Action:
Contact your Oracle Support representative.

WCS-11023
CSRF token check fail, session and multi-part form token mis-match. Form: {0} Session {1}

Category:
Other

Cause:
CSRF verification failed as session and multipart form tokens do not match.

Action:
Contact your Oracle Support representative.

WCS-11024
Cannot write file as CSRF not verified.

Category:
Other

Cause:
File write prohibitied as CSRF not verified.

Action:
Contact your Oracle Support representative.

WCS-11025
Error while writing response..

Category:
Other

Cause:
An error occured on sending upload response.

Action:
Check other errors for cause.

WCS-12001
Following services are not configured: {0}. Configure these services and retry the operation.

Category:
Other

Cause:
Portals imported requires some services that are not configured in the instance.

Action:
Ensure that the specified services are included and configured in the application and restart the import process.

WCS-12002
The handler found in the classpath at run time cannot process the data or metadata of the archive: {0}.

Category:
Other

Cause:
Handlers enable services to manage their data and metadata in the manner best suited to each service. The version of the handler used during import was not compatible with the version of the handler used while creating the data or metadata on export.

Action:
Include compatible versions of handlers in the application and restart the import process.

WCS-12003
The required handlers are not found: {0}.

Category:
Other

Cause:
Handlers enable services to manage their data and metadata in the manner best suited to each service. Not all handlers that were used while creating this archive could be found during the import.

Action:
Ensure that the specified services are included and configured in the application and restart the import process.

WCS-12004
Unable to retrieve the JAXB bean for the export/import document in MDS.

Category:
Other

Cause:
An error occurred in the MDS configuration of the application.

Action:
Check the MDS configuration files of the application.

WCS-12006
The export archive does not contain any scope metadata.

Category:
Other

Cause:
An error occurred during the export process, or the exported archive was damaged.

Action:
Reattempt import with a different export file.

WCS-12007
Scope with name {0} already exists in the import destination and it does not match with the scope being imported.

Category:
Other

Cause:
A scope with the specified name already exists for the current application instance. This caused a conflict between the source and target instances.

Action:
Delete the scope from the current application instance and reattempt the import.

WCS-12008
The export archive is from an older version of WebCenter Portal and is not compatible with the current version.

Category:
Other

Cause:
The export archive is created using an older version. This archive cannot be imported into the current version of WebCenter Portal.

Action:
Reattempt import with a newer export archive.

WCS-12009
The Lifecycle Manager MBean cannot be deregistered.

Category:
Other

Cause:
There are numerous possible reasons for this failure.

Action:
For information, review other messages in the log file and the reported exception stacks.

WCS-12010
The Lifecycle Manager MBean cannot be created and registered. This problem will not prevent the application from running. However, the Lifecycle Manager will be unavailable.

Category:
Other

Cause:
There are numerous possible reasons for this failure.

Action:
For information, review other messages in the log file and the reported exception stacks.

WCS-12012
Information related to run time MBeans cannot be saved in the ADFContext application scope.

Category:
Other

Cause:
The system failed to store data in the ADFContext application scope. Lifecycle functions may not be available.

Action:
Review the log files to see if there are any other problems which may have resulted in the ADFContext object becoming unusable.

WCS-12013
An internal class cast error has occurred. Actual class: {0}, cast-to class: {1}.

Category:
Other

Cause:
The possible errors could be in the code or application configuration.

Action:
Resolve any application configuration errors. If the problem recurs on subsequent attempts, then contact Oracle Support Services.

WCS-12014
The activity {0} has ended but completed less child activities ({1}) than the expected ({2}).

Category:
Other

Cause:

Action:

WCS-12015
The activity {0} has ended but completed more child activities ({1}) than the expected ({2}).

Category:
Other

Cause:

Action:

WCS-12016
The activity {0} has completed more child activities ({1}) than the expected ({2}).

Category:
Other

Cause:

Action:

WCS-12017
The export/import listener {0} has thrown an exception, which is being ignored.

Category:
Other

Cause:
A class listening to export/import progress events has thrown an exception.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12018
The resource {0} for lifecycle operation cannot be found on the classpath.

Category:
Other

Cause:

Action:

WCS-12019
The connection {0} cannot be exported because it is not a Reference or Referenceable.

Category:
Other

Cause:

Action:

WCS-12020
An error has occurred while exporting the connection {0}.

Category:
Other

Cause:

Action:

WCS-12021
The output stream for table {0} failed to close. The exception {1} will not be thrown.

Category:
Other

Cause:

Action:

WCS-12022
A SQL exception was thrown while closing the connection. This exception will be ignored.

Category:
Other

Cause:

Action:

WCS-12023
An error has occurred while closing the output stream to which the XML was being written. The export process will not be aborted.

Category:
Other

Cause:

Action:

WCS-12024
Value of the SQL type is not recognized, attempting to use the CHAR handler.

Category:
Other

Cause:

Action:

WCS-12025
Value of the SQL type is not recognized.

Category:
Other

Cause:

Action:

WCS-12026
A SQL exception {0} was caught while rolling back in response to an earlier exception {1}.

Category:
Other

Cause:

Action:

WCS-12027
A SQL exception {0} was caught while closing the statement {1}.

Category:
Other

Cause:

Action:

WCS-12028
A SQL exception {0} was caught while closing the connection {1}.

Category:
Other

Cause:

Action:

WCS-12029
An error {1} has occurred while creating a DocumentName for table {0}. The import will not be aborted.

Category:
Other

Cause:

Action:

WCS-12030
An error {1} has occurred while retrieving input stream from MDS for {0}. The import will not be aborted.

Category:
Other

Cause:

Action:

WCS-12031
An error {1} has occurred while deleting the table export document {0} from MDS. The import will not be aborted.

Category:
Other

Cause:

Action:

WCS-12032
The Queue Callback handler was interrupted while waiting for child threads to complete.

Category:
Other

Cause:

Action:

WCS-12033
Exception occurred in child thread: {0}.

Category:
Other

Cause:

Action:

WCS-12034
The Queue Consumer with name {0} was interrupted while taking an object from the queue. The Queue Consumer will continue and ignore the exception: {1}.

Category:
Other

Cause:

Action:

WCS-12038
IOException while creating stage directory for export

Category:
Other

Cause:
The possible causes could be coding, hardware, or file system errors.

Action:
Review the full exception stack for details of the exception.

WCS-12039
IOException while creating temporary directory to extract the import archive to

Category:
Other

Cause:
The possible causes could be coding, hardware, or file system errors.

Action:
Review the full exception stack for details of the exception.

WCS-12040
IOException extracting import archive

Category:
Other

Cause:
The possible causes could be coding, hardware, or file system errors.

Action:
Review the full exception stack for details of the exception.

WCS-12041
Input archive path not set on context.

Category:
Other

Cause:
The possible errors could be in the code or application configuration.

Action:
Resolve any application configuration errors. If the problem recurs on subsequent attempts, then contact Oracle Support Services.

WCS-12042
Input archive does not exist.

Category:
Other

Cause:
The possible errors could be in the code or application configuration.

Action:
Resolve any application configuration errors. If the problem recurs on subsequent attempts, then contact Oracle Support Services.

WCS-12043
MDSConfigurationException constructing source instance for MDS transfer.

Category:
Other

Cause:
The possible errors could be in the code or application configuration.

Action:
Resolve any application configuration errors. If the problem recurs on subsequent attempts, then contact Oracle Support Services.

WCS-12044
An unanticipated exception {0} has occurred while generating the oracle-archive.xml deployment descriptor of the export archive.

Category:
Other

Cause:
Cause is dependent upon the type and details of the exception being processed.

Action:
Review the exception being processed for more details.

WCS-12045
Operation aborted because of an exception thrown by subunit ({0})

Category:
Other

Cause:
The cause of the exception that was thrown is dependent upon the type and details of the exception.

Action:
Review the exception thrown for more details.

WCS-12046
MDSException while creating lifecycle document in MDS transfer source

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12047
The import archive file does not contain a metadata archive.

Category:
Other

Cause:
The supplied file to import was not a valid export archive.

Action:
Retry the import operation with a valid export archive.

WCS-12048
FileNotFoundException extracting metadata transport archive

Category:
Other

Cause:
The possible causes could be coding, hardware, or file system errors.

Action:
Resolve any hardware or file system errors. If the problem recurs on subsequent attempts, then contact Oracle Support Services.

WCS-12049
IOException while extracting metadata transport archive

Category:
Other

Cause:
The possible causes could be coding, hardware, or file system errors.

Action:
Review the full exception stack for details of the exception.

WCS-12050
IOException while creating metadata transport archive

Category:
Other

Cause:
The possible causes could be coding, hardware, or file system errors.

Action:
Review the full exception stack for details of the exception.

WCS-12051
Output path has not been set on operation context.

Category:
Other

Cause:
The possible errors could be in the code or application configuration.

Action:
Resolve any application configuration errors. If the problem recurs on subsequent attempts, then contact Oracle Support Services.

WCS-12052
MDSException constructing transfer list for MDS transfer.

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12053
MDSException performing MDS transfer.

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12054
MDSException deleting existing metadata.

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12055
An exception has occurred while creating the transformer factory to write lifecycle information document.

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12056
IOException occurred creating lifecycle information document

Category:
Other

Cause:
An error occurred writing to the file system while creating the lifecycle information document. The possible causes could be application configuration, or hardware errors.

Action:
Review the full exception stack for details of the exception.

WCS-12057
TransformerException while writing lifecycle information document

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12058
Input path has not been set on operation context.

Category:
Other

Cause:
The possible errors could be in the code or application configuration.

Action:
Resolve any application configuration errors. If the problem recurs on subsequent attempts, then contact Oracle Support Services.

WCS-12059
IOException while creating oracle-archive.xml

Category:
Other

Cause:
An error occurred while writing the oracle-archive.xml file to the file system. The possible causes could be application configuration, or hardware errors.

Action:
Review the full exception stack for details of the exception.

WCS-12060
IOException while creating transport archive

Category:
Other

Cause:
The possible causes could be coding, hardware, or file system errors.

Action:
Review the full exception stack for details of the exception.

WCS-12061
Output archive path has not been set on operation context.

Category:
Other

Cause:
The possible errors could be in the code or application configuration.

Action:
Resolve any application configuration errors. If the problem recurs on subsequent attempts, then contact Oracle Support Services.

WCS-12062
An unexpected exception occurred while removing lock {0}:{1}

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12063
MDSException occurred while removing lock {0}:{1}

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12064
A lock is blocking application import.

Category:
Other

Cause:
Another operation was being performed that prevented the import.

Action:
Retry the import operation after the other operation is complete.

WCS-12065
A lock is blocking application import.

Category:
Other

Cause:
Another operation was being performed that prevented the import.

Action:
Retry the import operation after the other operation is complete

WCS-12066
MDSException while creating application import lock

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12067
A lock is blocking the import of scope {0}.

Category:
Other

Cause:
Another operation was being performed that prevented the import.

Action:
Retry the import operation after the other operation is complete

WCS-12068
A lock exists that prevents the import of scope {0}.

Category:
Other

Cause:
An import of the specified scope was being performed that prevented this import.

Action:
Retry the import operation after the other operation is complete

WCS-12069
MDSException while creating scope import lock

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12070
A lock exists that blocks the export set import.

Category:
Other

Cause:
Another operation was being performed that prevented the export set import.

Action:
Retry the import operation after the other operation is complete

WCS-12071
A lock exists that prevents the export set import.

Category:
Other

Cause:
An export set import was already being performed preventing this import.

Action:
Retry the import operation after the other operation is complete

WCS-12072
MDSException while creating an export set import lock

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12073
MDSException while obtaining the Lifecycle bean from the MDS session

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12074
ID of export set in MDS does not match that of the application. MDS ID: {0}, Application ID: {1}.

Category:
Other

Cause:
An export set was imported from an incompatible source and has been ignored.

Action:
Import an export set from a compatible instance.

WCS-12076
NamingException while binding connection {0} to the export connections.xml

Category:
Other

Cause:
The possible causes could be coding or application configuration errors.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12077
NamingException while getting environment for exporting the ADF credential store

Category:
Other

Cause:
The possible causes could be coding or application configuration errors.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12078
IOException while exporting ADF credential store

Category:
Other

Cause:
The possible causes could be coding, hardware, or file system errors.

Action:
Review the full exception stack for details of the exception.

WCS-12079
JPSException while exporting JPS credential store

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12080
MDSException while creating lifecycle information metadata in transport set

Category:
Other

Cause:
An existing document with the same name as the lifecycle information document was found in the transport set being constructed.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12081
ReferenceException while creating lifecycle information metadata in transport set

Category:
Other

Cause:
An unexpected exception occurred while creating the lifecycle document in transport set.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12082
UnsupportedUpdateException while creating lifecycle information metadata in transport set

Category:
Other

Cause:
An unexpected exception occurred while creating the lifecycle document in the transport set.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12083
MDSException while building transfer list for lifecycle metadata

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12084
MDSException while constructing metadata store for MDS transfer

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12085
ParserConfigurationException while creating lifecycle information document

Category:
Other

Cause:
An unexpected exception occurred while creating the lifecycle document in the transport set.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12086
SAXException while creating lifecycle information document

Category:
Other

Cause:
An unexpected exception occurred while creating the lifecycle document in the transport set.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12087
ServiceException while getting registered services

Category:
Other

Cause:
There was an error in the application's configuration.

Action:
Contact Oracle Support Services.

WCS-12088
Cannot find lifecycle service extension registry

Category:
Other

Cause:
An error in the application's configuration.

Action:
Contact Oracle Support Services.

WCS-12089
Destination path specified to create the temporary directory is not a directory.

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Resolve any application configuration or hardware errors. If the problem recurs on subsequent attempts, then contact Oracle Support Services.

WCS-12090
The source path specified to archive does not exist

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Resolve any application configuration or hardware errors. If the problem recurs on subsequent attempts, then contact Oracle Support Services.

WCS-12091
The source path specified to archive is not a directory

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Resolve any application configuration or hardware errors. If the problem recurs on subsequent attempts, then contact Oracle Support Services.

WCS-12092
A file already exists with the same name as the destination folder.

Category:
Other

Cause:
A call was made to extract an archive to a destination directory with the same name as an existing file.

Action:
Retry the operation that caused this error.

WCS-12093
{0} is an invalid value for the maximum number of steps. The maximum number of steps must be a least 1.

Category:
Other

Cause:
The probable cause is a coding error.

Action:
Contact Oracle Support Services.

WCS-12094
MDSException while constructing metadata store for MDS transfer

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12095
Import archive file does not exist or could not be read.

Category:
Other

Cause:
The specified file could not be found either because it does not exist or does not have the correct access permissions.

Action:
Check that the path is correct, the file exists and has the appropriate access permissions.

WCS-12096
A lock is blocking application export.

Category:
Other

Cause:
Another operation was being performed that prevented the export.

Action:
Retry the export operation after the other operation is complete.

WCS-12097
A lock is blocking application export.

Category:
Other

Cause:
Another operation was being performed that prevented the export.

Action:
Retry the export operation after the other operation is complete

WCS-12098
MDSException while creating application export lock

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12099
An unexpected exception occurred while refreshing lock {0}:{1}

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12100
MDSException occurred while refreshing lock {0}:{1}

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12101
Unable to find data source

Category:
Other

Cause:
The data source hasn't been configured

Action:
Configure the data source

WCS-12102
An exception occurred while refreshing lock {0}:{1}

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12103
Unexpected RuntimeException performing MDS transfer.

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12104
Unexpected exception occurred while exporting portlet producer information. The producer may be down or unavailable.

Category:
Other

Cause:
The possible causes could be the portlet producer is down or unavailable, errors from the portlet producer, or application configuration.

Action:
Check that the portlet producers are available, and then retry the export. Review the full exception stack for details of the exception should it recur.

WCS-12106
Document {0} has been excluded from the export set.

Category:
Other

Cause:
The path of the document exceeds file system constraints and therefore cannot be exported.

Action:
None

WCS-12107
InvalidReferenceException constructing MDS rename plan for upgrade.

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12108
MDSException performing MDS rename for upgrade.

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12109
MDSException while committing metadata changes for upgrade.

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12110
Unable to import Scope {0} under Scope {0}

Category:
Other

Cause:
Unable to import scope under itself

Action:
Import the scope either as a root level scope or specify a different parent for the scope.

WCS-12111
Unable to import {0} as a root level scope as it inherits security.

Category:
Other

Cause:
Unable to import scope as a root level scope as it inherits security.

Action:
Import the scope as a subscope and not as a root level scope.

WCS-12112
The parent scope {0} does not exist

Category:
Other

Cause:
Unable to import as the parent scope does not exist

Action:
Import the scope either as a root level scope or specify a different parent for the scope.

WCS-12113
Export operation aborted due to the following reasons. {0}

Category:
Other

Cause:
Export operation aborted

Action:
Retry the operation fixing the cause of failure

WCS-12114
Failed to fetch the handler due to invalid resource type - {0}

Category:
Other

Cause:
Invalid Resource type is passed during import.

Action:
Retry the operation with the correct resource type.

WCS-12115
Portal Export operation aborted due to the following reasons. {0}

Category:
Other

Cause:
Backup operation aborted

Action:
Retry the operation fixing the cause of failure

WCS-12116
Exception while creating the export label

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12117
Portal {0} already exists. If you want to overwrite the portal use the "overwrite" option.

Category:
Other

Cause:
Portal already exists.

Action:
If you want to overwrite the existing portal, use the "overwrite" option.

WCS-12118
A SQL exception {0} was caught while closing the resultset.

Category:
Other

Cause:

Action:

WCS-12119
Unable to upload as the archive does not contain a shared asset.

Category:
Other

Cause:
The asset you are trying to upload belongs to a specific portal, it is not a shared asset.

Action:
Verify which portal owns the asset and then upload the asset to that portal.

WCS-12120
Unable to upload the asset as the archive does not contain an asset that belongs to this portal.

Category:
Other

Cause:
The asset you are trying to upload belongs to a different portal.

Action:
Verify which portal owns the asset and then upload the asset to that portal.

WCS-12121
A lock is blocking the deployment of portal: {0}.

Category:
Other

Cause:
Another operation was being performed that prevented the deployment.

Action:
Retry the deployment operation after the other operation is complete

WCS-12122
A lock is blocking the propagation of portal: {0}.

Category:
Other

Cause:
Another operation was being performed that prevented the propagation.

Action:
Retry the propagation operation after the other operation is complete

WCS-12123
Unable to deploy the portal "{0}" because this portal is currently being deployed to the target "{1}" by "{2}". Try again later.

Category:
Other

Cause:
Deployment of the specified portal to the specific target portal server was being performed that prevented this current deployment operation.

Action:
Retry the deployment operation after the other operation is complete

WCS-12124
Unable to deploy the portal "{0}" because changes for this portal are currently being propagated to the target "{1}" by "{2}". Try again later.

Category:
Other

Cause:
Propagation of the specified portal to the specific target portal server was being performed that prevented this current deployment operation.

Action:
Retry the deployment operation after the other operation is complete

WCS-12125
Changes for portal "{0}" cannot be propagated because this portal is currently being deployed to the target "{1}" by "{2}". Try again later.

Category:
Other

Cause:
Deployment of the specified portal to the specific target portal server was being performed that prevented this current propagation operation.

Action:
Retry the propagation operation after the other operation is complete

WCS-12126
Changes for portal "{0}" cannot be propagated because changes for this portal are currently being propagated to the target "{1}" by "{2}". Try again later.

Category:
Other

Cause:
Propagation of the specified portal to the specific target portal server was being performed that prevented this current propagation operation.

Action:
Retry the propagation operation after the other operation is complete

WCS-12127
MDSException while creating portal deployment lock

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12128
An internal error occurred while exporting portal data. Refer to the WebCenter Portal Server log for more information.

Category:
Other

Cause:
An exception was thrown while exporting the persistence data for the portal.

Action:
Retry the operation. If the exception occurs again, review the full exception stack for details.

WCS-12129
An internal error occurred while importing portal data. Refer to the WebCenter Portal Server log for more information.

Category:
Other

Cause:
An exception was thrown while importing the persistence data for the portal.

Action:
Retry the operation. If the exception occurs again, review the full exception stack for details.

WCS-12130
No user created assets of type "{0}" exist in the portal "{1}" for export.

Category:
Other

Cause:
No user created assets of the specified type exist in the portal for export.

Action:
Refresh the list of assets to see if the assets you are attempting to still exist.

WCS-12131
No user created global assets of type "{0}" exist for export.

Category:
Other

Cause:
No user created global assets of the specified type exist for export.

Action:
Refresh the list of assets to see if the assets you are attempting to still exist.

WCS-12132
Changes for portal "{0}" cannot be propagated because Oracle WebCenter Content Server is not configured properly.

Category:
Other

Cause:
Propagation of the specified portal failed because Oracle WebCenter Content Server has not been configured properly.

Action:
Retry the propagation operation after fixing the Oracle WebCenter Content Server configuration on the Oracle WebCenter Portal Server instance.

WCS-12133
Specify a valid name for the asset archive. Usage of special character / or \ is not allowed.

Category:
Other

Cause:
Usage of special character / or \ is not allowed.

Action:
Specify a valid name for the asset archive.

WCS-12134
Invalid asset archive extension provided: {0}. Specify a valid name for the asset archive using the file extension {1}.

Category:
Other

Cause:
Invalid asset archive extension specified.

Action:
Specify a valid name for the asset archive using the file extension ".aar".

WCS-12135
Specify a valid name for the asset archive using the file extension {0}.

Category:
Other

Cause:
Invalid file extension specified.

Action:
Specify a valid name for the asset archive using the file extension ".aar".

WCS-12136
An exception occurred while finding the conflicting assets.

Category:
Other

Cause:
An exception was thrown while finding the conflicting assets.

Action:
Retry the operation. If the exception occurs again, review the full exception stack for details.

WCS-12137
The archive specified is corrupted. Specify a valid archive, and try again.

Category:
Other

Cause:
The specified archive is corrupted and could not be imported.

Action:
Ensure the export archive is valid and retry the import operation.

WCS-12138
Operation aborted because of an exception thrown due to missing configuration mandated for secured lifecycle operations. Fix the configuration issues, and try again.

Category:
Other

Cause:
Operation aborted because of an exception thrown due to missing configuration mandated for secured lifecycle operations.

Action:
Retry the operation after fixing the configuration mandated for secured lifecycle operations on the Oracle WebCenter Portal Server instance.

WCS-12139
An exception occurred while calculating the checksum for the contents.

Category:
Other

Cause:
An exception occurred while calculating the checksum for the contents.

Action:
Retry the operation and review the full exception stack for details of the exception should it recur.

WCS-12140
Import and upload operations have reached the maximum number of concurrent operations allowed. Try again later.

Category:
Other

Cause:
Import and upload operations have reached the maximum number of concurrent operations allowed.

Action:
Retry the operation after any one of the concurrent operations has completed.

WCS-12141
An error occurred while deleting the portal deployment records.

Category:
Other

Cause:
The possible causes could be application configuration or hardware issues.

Action:
Retry the operation. If the error persists, review the full exception stack for details of the exception.

WCS-12900
Invalid portal template archive extension provided: {0}. Specify a valid name for the portal template archive and use the file extension {1}.

Category:
Other

Cause:
Invalid portal template archive extension specified.

Action:
Specify a valid name for the portal template archive and use the file extension '.par'

WCS-12901
An unexpected error has occurred, unable to save the archive: {0}

Category:
Other

Cause:
Unexpected erro occurred while saving the archive.

Action:
Contact Oracle Support Services.

WCS-12902
Specify an archive that exists on the server.

Category:
Other

Cause:
Unable to locate archive for import.

Action:
Specify a valid archive that exists on the server and try again.

WCS-12903
An unexpected error has occurred, unable to complete the import process.

Category:
Other

Cause:
Unable to complete the import process.

Action:
Contact Oracle Support Services.

WCS-12904
Unable to upload archive from the local file system.

Category:
Other

Cause:
Unable to upload the archive from the local file system.

Action:
Contact Oracle Support Services.

WCS-12905
Cannot save the export archive to the local file system because the file size exceeds the maximum value allowed.

Category:
Other

Cause:
Cannot save the export archive to the local file system because the file size exceeds the maximum value allowed.

Action:
Save the archive to a server and then transfer the file separately.

WCS-12906
The portal archive specified is invalid. Specify a valid archive with file extension "{0}", and try again.

Category:
Other

Cause:
Invalid portal archive extension specified.

Action:
Specify a valid name for the portal archive with the file extension '.par'

WCS-12920
A problem was encountered when invoking a method on a remote mBean ({0}) which has caused the local operation to fail.

Category:
Other

Cause:
In order for the local operation to be performed a method on a remote mBean has to be invoked - there are numerous reasons why the remote method invocation could fail ranging from connection problems between servers to the remote object simply not existing

Action:
Review the log files for a record of this error in order to ascertain the primary cause.

WCS-12950
The required customization class is not found: {0}

Category:
Other

Cause:
To export the specified customization class, first an instance of the class must be created. An instance of this class could not be created because the class was not included in the classpath.

Action:
Include the customization class in the classpath of the application and restart the application.

WCS-12951
The required customization class cannot be instantiated: {0}

Category:
Other

Cause:
To export the specified customization class, first an instance of the class must be created. An instance of this class could not be created because it is an interface or abstract class.

Action:
Contact Oracle Support Services.

WCS-12952
The required customization class cannot be instantiated: {0}

Category:
Other

Cause:
To export the specified customization class, first an instance of the class must be created. An instance of this class could not be created because the current method was unable to access it.

Action:
Contact Oracle Support Services.

WCS-12953
A listener cannot be registered to generate notification about the progress of the export. The export will continue but notification will not be generated on its progress.

Category:
Other

Cause:

Action:

WCS-12955
The notification arrived out of sequence. Latest sequence:{0}; sequence of this notification:{1}.

Category:
Other

Cause:

Action:

WCS-12957
Exception occurred while importing data. No data imported.

Category:
Other

Cause:
The issue may be due to a hardware error or an application configuration error.

Action:
Review other messages in the log file and the reported exception stacks for additional information. Resolve any application configuration or hardware errors.

WCS-12958
Import failed with errors.

Category:
Other

Cause:
The issue may be due to a hardware error or an application configuration error.

Action:
Review other messages in the log file and the reported exception stacks for additional information. Resolve any application configuration or hardware errors.

WCS-12959
Export failed with errors.

Category:
Other

Cause:
The issue may be due to a hardware error or an application configuration error.

Action:
Review other messages in the log file and the reported exception stacks for additional information. Resolve any application configuration or hardware errors.

WCS-12980
Service {0} has not been provisioned for Scope {1}.

Category:
Other

Cause:
The Service has not been provisioned for the specified Scope.

Action:
Contact Oracle Support Services.

WCS-12981
Service {0} has already been provisioned for Scope {1}.

Category:
Other

Cause:
The Service has already been provisioned for the specified Scope.

Action:
Do not provision the Service for a Scope it is already provisioned for or unprovision the Service first.

WCS-12982
Scope {0} is not known.

Category:
Other

Cause:
A Scope with the specified name has not been created.

Action:
Create a Scope with the specified name using the createScope method on the ServiceContext.

WCS-12983
Service {0} has not been configured for the application.

Category:
Other

Cause:
The Service has not been configured for the application.

Action:
Configure the Service and try the operation again.

WCS-12984
An error occurred removing the security policies for service {0}.

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Review the full exception stack for details of the exception.

WCS-12985
An error occurred invoking isProvisioned for service {0}.

Category:
Other

Cause:
The possible causes could be coding, application configuration, or hardware errors.

Action:
Review the full exception stack for details of the exception.

WCS-12986
An error occurred invoking isEnabled for service {0}.

Category:
Other

Cause:
The possible causes could be coding or application configuration.

Action:
Review the full exception stack for details of the exception.

WCS-12990
Specified key does not match that of the lock with type "{0}" and name "{1}".

Category:
Other

Cause:
The application attempted to manipulate a lock with an incorrect lock key.

Action:
Contact Oracle Support Services.

WCS-12991
Lock with type "{0}" and name "{1}" already exists.

Category:
Other

Cause:
A lock with the specified type and name already exists.

Action:
Contact Oracle Support Services.

WCS-12992
Lock with type "{0}" and name "{1}" does not exist.

Category:
Other

Cause:
The application attempted to manipulate a lock that no longer exists.

Action:
Contact Oracle Support Services.

WCS-12993
Lock with type "{0}" and name "{1}" could not be created as a lock with type "{2}" exists.

Category:
Other

Cause:
A lock with a type that prevents locks with the specified type being created exists.

Action:
Contact Oracle Support Services.

WCS-14001
An unexpected error occurred.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-14002
An object of type {0} with this id ({1}) already exits.

Category:
Other

Cause:
An attempt was made to create an object with an id that is already in use.

Action:
Specify a unique id.

WCS-14004
The name ({0}) is not valid.

Category:
Other

Cause:
The specified name is not valid.

Action:
Specify a valid name.

WCS-14005
The specified list type could not be found.

Category:
Other

Cause:
The specified list type could not be found. This may be due to the list type being deleted by another user.

Action:
Try reloading to see if the list has been deleted.

WCS-14006
Object has been changed by another user.

Category:
Other

Cause:
The object has been changed by another user.

Action:
Reload the object and try the operation again.

WCS-14007
An Object of type {0} with id={1} could not be found.

Category:
Other

Cause:
The specified object could not be found. This may be due to the list being deleted by another user.

Action:
Specify a valid id.

WCS-14008
Object ({0}) is immutable.

Category:
Other

Cause:
An attempt to change this object was made, but this object is currently immutable.

Action:
Retrieve mutable object to make changes.

WCS-14010
{0} is not a valid reference name to MDS.

Category:
Other

Cause:
The name is not a valid MDS reference name.

Action:
Contact Oracle Support Services.

WCS-14011
The MDS session does not support updates.

Category:
Other

Cause:
MDS was not configured correctly to support updates.

Action:
Configure the MDS store to support updates.

WCS-14012
An IO error occurred when accessing metadata.

Category:
Other

Cause:
An IO error occurred in MDS.

Action:
See the log for more details on the specific IO error to correct the problem.

WCS-14013
The object is not valid.

Category:
Other

Cause:
The metadata for the object does not pass validation.

Action:
Contact Oracle Support Services.

WCS-14014
Failed to construct attribute set for list [{0}].

Category:
Other

Cause:
Failed to construct attribute set for list.

Action:
Contact Oracle Support Services.

WCS-14015
Failed to add data flavor to ListTransferable. List=[{0}] DataFlavor=[{1}]

Category:
Other

Cause:
Failed to add data flavor to ListTransferable.

Action:
Contact Oracle Support Services.

WCS-14016
The query attribute predicate {0}{1}{2} was ignored because the column does not exist or the comparator is not supported.

Category:
Other

Cause:

Action:

WCS-14017
An error occurred when deleting metadata.

Category:
Other

Cause:
An error occurred in MDS while deleting metadata.

Action:
See the log for more details on the specific error to correct the problem.

WCS-14018
A column with the name ({0}) already exists.

Category:
Other

Cause:
A column was created or renamed with the name of an existing column in the list.

Action:
Specify a unique column name within the list.

WCS-14019
A list with the name ({0}) already exists.

Category:
Other

Cause:
A list was created or renamed with the name of an existing list.

Action:
Specify a unique list name.

WCS-14020
The maximum number of columns for this list has been exceeded.

Category:
Other

Cause:
A list was created or modified with more than 30 columns.

Action:
Do not add more than 30 columns to a list.

WCS-14021
User does not have permission to perform {0} operation for {1}.

Category:
Other

Cause:
User does not have permission to perform the specified operation.

Action:
Grant the user permission to perform the specified operation.

WCS-14022
The Lists service is not provisioned for scope {0}.

Category:
Other

Cause:
The Lists service is not provisioned for the specified scope.

Action:
Provision the Lists service for the specified scope.

WCS-14023
The value is the wrong data type. The data type expected is {0}.

Category:
Other

Cause:
The value is the wrong data type.

Action:
Use the value with the correct data type.

WCS-14024
The WebCenter repository is not available.

Category:
Other

Cause:
An error occurred accessing the repository.

Action:
Contact your system administrator. Check the log for more details.

WCS-14025
An error occurred accessing the WebCenter metadata repository.

Category:
Other

Cause:
An error occurred accessing the repository.

Action:
Contact your system administrator. Check the log for more details.

WCS-14026
List column values were converted or deleted based on list column changes during import: scope={0}, list={1}, column={2}.

Category:
Other

Cause:

Action:

WCS-14027
List are not enabled for this portal or a parent portal.

Category:
Other

Cause:
Lists are not enabled in this portal.

Action:
Enable lists if required by this portal.

WCS-14028
Enabling lists failed.

Category:
Other

Cause:
An error occurred enabling lists.

Action:
Contact your system administrator. Check the log for more details.

WCS-14029
Lists not enabled for portal {0}.

Category:
Other

Cause:
Lists not enabled for the specified portal.

Action:
Enable lists for the specified portal.

WCS-14501
The list was not found.

Category:
Other

Cause:
The list could not be found.

Action:
Remove the list view for the invalid list from the page.

WCS-14502
Another user deleted the row while you modified it. Discard any unsaved changes, then refresh the list.

Category:
Other

Cause:
Another user deleted the row while you modified it.

Action:
Discard any unsaved changes, then refresh the list.

WCS-14503
Another user modified a row while you modified it. Discard any unsaved changes, then refresh the list.

Category:
Other

Cause:
Another user modified a row while you modified it.

Action:
Discard any unsaved changes, then refresh the list.

WCS-14504
Another user deleted the list after you displayed it. Discard any unsaved changes, then refresh the list.

Category:
Other

Cause:
Another user deleted the list after you displayed it.

Action:
Discard any unsaved changes, then refresh the list.

WCS-14505
Another user modified this list after you displayed it. Discard any unsaved changes, then refresh the list.

Category:
Other

Cause:
Another user modified this list after you displayed it.

Action:
Discard any unsaved changes, then refresh the list.

WCS-14506
Invalid minimum/maximum range

Category:
Other

Cause:
Minimum value must be less than or equal to maximum value.

Action:
Modify the minimum value or maximum value.

WCS-14507
Default value is out of range

Category:
Other

Cause:
Default value must be between the minimum and maximum values.

Action:
Modify the default value, minimum value, or maximum value.

WCS-14508
An error occurred accessing the WebCenter repository.

Category:
Other

Cause:
An error occurred accessing the repository.

Action:
Contact your system administrator. Check the log for more details.

WCS-14509
Your permission to perform this operation was revoked. Refresh the list and discard unsaved changes.

Category:
Other

Cause:
Your permission to perform this operation was revoked.

Action:
Request permission to perform this operation.

WCS-14510
The Lists service was disabled, preventing you from performing this operation. Refresh the list and discard unsaved changes.

Category:
Other

Cause:
The Lists service was disabled, preventing you from performing this operation.

Action:
Enable the Lists service.

WCS-14514
An unexpected error occurred. Please retry the operation.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Retry the operation. If the problem persists, contact your administrator.

WCS-14515
Default value is too long

Category:
Other

Cause:
Default value must not exceed the maximum length.

Action:
Modify the default value or maximum length.

WCS-14516
The WebCenter metadata repository was temporarily unavailable. Please retry the operation.

Category:
Other

Cause:
The connection to the WebCenter metadata repository failed.

Action:
Retry the operation. If the problem persists, contact your administrator.

WCS-14517
Another user deleted the list after you displayed it. Discard any unsaved changes, then click Close to exit list edit mode.

Category:
Other

Cause:
Another user deleted the list after you displayed it.

Action:
Discard any unsaved changes, then click Close to exit list edit mode.

WCS-14518
Another user deleted the list. Click Close to exit list edit mode.

Category:
Other

Cause:
Another user deleted the list.

Action:
Click Close to exit list edit mode.

WCS-14519
The list row was not found.

Category:
Other

Cause:
The list row could not be found.

Action:
None.

WCS-14522
Lists are disabled, preventing you from performing this operation. Enable lists to continue making changes.

Category:
Other

Cause:
Lists are disabled, preventing you from performing this operation.

Action:
Enable lists.

WCS-18001
An unexpected error occurred.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18002
Missing Configuration for List of Contacts. Could not locate the class {0}.

Category:
Other

Cause:
An incorrect class name was provided.

Action:
Please contact Oracle Support.

WCS-18003
Class {0} does not implement the interface {1}.

Category:
Other

Cause:
The specified class had not implemented the required interface.

Action:
Ensure that the class implements the required interface.

WCS-18004
Cannot instantiate class {0}.

Category:
Other

Cause:
The specified class did not have a default constructor accessible to public.

Action:
Ensure that the class has a default constructor and it is accessible to public.

WCS-18005
Cannot instantiate class {0}.

Category:
Other

Cause:
Either the specified class was not a concrete implementation or it did not have a default constructor accessible to public.

Action:
Ensure that the class is a concrete implementation and has a default constructor accessible to public.

WCS-18006
The implementation class {0} returned null.

Category:
Other

Cause:
The implementation class returned a null object.

Action:
Ensure that the implementation class returns a non-null list of contacts.

WCS-18007
An error occurred while trying to validate metadata.

Category:
Other

Cause:
Invalid metadata has been introduced.

Action:
Contact Oracle Support Services.

WCS-18008
Unable to save the metadata in persistence store

Category:
Other

Cause:
An error occurred while writing to persistence store or metadata was locked by another user.

Action:
Contact Oracle Support Services.

WCS-18009
Cannot apply the current metadata changes to a concurrently modified metadata.

Category:
Other

Cause:
Recent changes in this session conflicts with changes made in the same session.

Action:
Contact Oracle Support Services.

WCS-18010
Cannot locate the requested metadata.

Category:
Other

Cause:
The metadata was not found in the configured metadata stores or it had been deleted on this session.

Action:
Contact Oracle Support Services.

WCS-18011
Cannot obtain the metadata for write operations.

Category:
Other

Cause:
The metadata store could be spanning multiple back-end stores or concurrent updates were attempted.

Action:
Contact Oracle Support Services.

WCS-18012
Metadata already exists in metadata store.

Category:
Other

Cause:
An attempt was made to create a metadata document when it already exists.

Action:
Contact Oracle Support Services.

WCS-18013
The reference to the specified metadata is invalid.

Category:
Other

Cause:
The reference to the metadata was incorrect.

Action:
Contact Oracle Support Services.

WCS-18014
Could not be complete the sort operation.

Category:
Other

Cause:
A null table component was returned.

Action:
Contact Oracle Support Services.

WCS-18015
Could not get contact details.

Category:
Other

Cause:
The selected contact details were unavailable due to an internal error.

Action:
Contact Oracle Support Services.

WCS-18016
Could not launch the dialog for view {0}.

Category:
Other

Cause:
Profile page details are unavailable due to an internal error.

Action:
Contact Oracle Support Services.

WCS-18017
Could not perform a people search.

Category:
Other

Cause:
Instance of identity store is not available.

Action:
Contact Oracle Support Services.

WCS-18018
Could not get display name from user profile.

Category:
Other

Cause:
User did not have the display name or user's profile was not accessible.

Action:
Contact the administrator of directory services/webcenter.

WCS-18019
Could not get name from user profile.

Category:
Other

Cause:
User does not have the name or user's profile is not accessible.

Action:
Please contact the administrator of directory services/webcenter.

WCS-18020
Could not save the search criterion.

Category:
Other

Cause:
An internal error.

Action:
Contact Oracle Support Services.

WCS-18021
Could not fetch the search criterion.

Category:
Other

Cause:
An internal error.

Action:
Contact Oracle Support Services.

WCS-18022
Could not fetch the sort criteria.

Category:
Other

Cause:
An internal error.

Action:
Contact Oracle Support Services.

WCS-18023
Could not save the sort criteria.

Category:
Other

Cause:
An internal error.

Action:
Contact Oracle Support Services.

WCS-18024
Cannot get an instance of the identity store

Category:
Other

Cause:
There was either an improper configuration or an internal error.

Action:
Contact Oracle Support Services.

WCS-18025
Could not create the contacts list.

Category:
Other

Cause:
An internal error.

Action:
Contact Oracle Support Services.

WCS-18026
Could not perform a people search.

Category:
Other

Cause:
An internal error.

Action:
Contact Oracle Support Services.

WCS-18401
An unexpected error occurred in the Message Board sub-system.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18402
Failed to create an instance of Message Board

Category:
Other

Cause:
Message Board viewing user name not found

Action:
Make sure that the user is logged in

WCS-18403
Failed to create an instance of Message Board

Category:
Other

Cause:
Message Board owner user name not specified

Action:
Provide owner user name in the request for an instance of Message Board

WCS-18405
Failed to publish Message Board activity

Category:
Other

Cause:
Activity Stream service raised an exception

Action:
Verify the reason for the failure in the Activity Stream sub-system

WCS-18406
Message Board message cannot be deleted

Category:
Other

Cause:
User is not authorized to delete this message

Action:
Resubmit the request with correct parameters

WCS-18407
Failed to delete Message Board message

Category:
Other

Cause:
Message does not exist

Action:
Resubmit the request with correct parameters

WCS-18408
Message Board message cannot be updated

Category:
Other

Cause:
User is not authorized to update this message

Action:
Resubmit the request with correct parameters

WCS-18409
Failed to update Message Board message

Category:
Other

Cause:
Message does not exist

Action:
Resubmit the request with correct parameters

WCS-18410
Message Board message cannot be added

Category:
Other

Cause:
Message content is empty

Action:
Provide a non empty message board message text

WCS-18411
Message Board message cannot be hidden

Category:
Other

Cause:
User is not authorized to hide message

Action:
Resubmit the request with correct parameters

WCS-18412
Failed to hide Message Board message

Category:
Other

Cause:
Message does not exist

Action:
Resubmit the request with correct parameters

WCS-18413
Failed to retrieve user display name from profile service

Category:
Other

Cause:

Action:

WCS-18414
Failed to add message to Message Board.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18415
Failed to hide or unhide message in Message Board.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18416
Failed to delete message in Message Board.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18417
Failed to query messages in Message Board.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18418
Failed to update message in Message Board.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18419
Failed to create an instance of Message Board.

Category:
Other

Cause:
Message Board preferences manager not specified

Action:
Provide preferences manager in the request for Message Board

WCS-18420
Failed to query preferences for Message Board.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18421
Message cannot be added to Message Board.

Category:
Other

Cause:
User is not authorized to add message

Action:
Resubmit the request with correct parameters

WCS-18422
Failed to retrieve Message Board message

Category:
Other

Cause:
Message does not exist

Action:
Resubmit the request with correct parameters

WCS-18423
Failed to find the portal of the message board.

Category:
Other

Cause:
The portal doesn't exist.

Action:
Contact your administrator.

WCS-18424
Failed to find the user of the message board.

Category:
Other

Cause:
The user doesn't exist.

Action:
Contact your administrator.

WCS-18425
Failed to attach file to selected portal.

Category:
Other

Cause:
The portal does not exist or does not have document services configured.

Action:
Contact your administrator.

WCS-18451
Unexpected error getting preference.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18452
Unexpected error saving preference.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18453
Encountered exception: {0}. For diagnosis, turn on the logging level to FINEST and retry the operation. Details about the current state: {1}.

Category:
Other

Cause:
An unexpected error occurred.

Action:
To diagnose the error, turn on the logging level to FINEST and retry the operation.

WCS-18501
Error retrieving {0}"s Profile

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18502
User: {0} not found in identity store.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Check if the specified user exists in the configured identity store and contact Oracle Support Services.

WCS-18503
Personal status note can be changed only for the current user

Category:
Other

Cause:
attempt made by an user to update personal status of another user

Action:
login as the user whose status you want to change

WCS-18504
unexpected error operating on personal status note

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18506
User does not have the privilege required to access the user profile.

Category:
Other

Cause:
Either the system policy or the target user's access control settings restrict the current user from performing this operation.

Action:
Contact the Administrator to grant the required permission, or contact the target user to allow access.

WCS-18507
Insufficient Privilege.

Category:
Other

Cause:
Cannot Edit Profile.

Action:
Contact Webcenter Administrator.

WCS-18508
Unexpected error retrieving user {0}''s photo

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18509
Unexpected error saving user {0}''s photo to the back-end. The photo may not have been saved. Please refresh to find out and then retry the operation.

Category:
Other

Cause:
An unexpected error occurred.

Action:
The photo may not have been saved. Please refresh to find out and then retry the operation. If the issue persists contact Oracle Support Services.

WCS-18510
Unexpected error invalidating user {0}''s photo cache

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18511
User not specified

Category:
Other

Cause:
The supplied username was null or blank.

Action:
Specify a valid username that is not null or blank.

WCS-18514
Unexpected error saving the Profile Admin Settings

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18515
Unexpected error saving the Profile user preference

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18516
Unexpected error initializing the admin config bean

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18517
Unexpected error saving the profile

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18520
Unexpected error retrieving unique identifier for user {0}"s photo

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18521
Unexpected error evaluating property "{0}" of base {1}

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18522
Modifying property "{0}" of base {1} not allowed

Category:
Other

Cause:
The application does not allow modifying the value of the specified property of the specified base object.

Action:
Ensure that property of the object being modified is not read-only.

WCS-18523
Error getting the instant message address for the person

Category:
Other

Cause:
unexpected error getting the sip address

Action:
contact the administrator

WCS-18524
Error getting tag data

Category:
Other

Cause:
unexpected error getting tag data

Action:
contact the administrator

WCS-18525
Unexpected error saving attribute: {0}

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services with the error on the log.

WCS-18526
User does not have the privilege required for updating the user profile

Category:
Other

Cause:
The system policy restricts the current user from updating the user profile.

Action:
Contact the Administrator to obtain the required permission.

WCS-18527
The image file {0} you tried to upload was invalid. Provide a valid image file.

Category:
Other

Cause:
Unable to upload the image as the file is null or invalid.

Action:
Upload a valid image file

WCS-18528
Unexpected error instantiating object.

Category:
Other

Cause:
Unexpected error instantiating object.

Action:
contact the administrator

WCS-18529
Error instantiating profile (user name: {0}, GUID: {1})

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18530
Unable to retrieve display name for profile (user name: {0}, GUID: {1}) in locale {2}. For diagnosis, turn on the logging level to FINEST and retry the operation. Error summary: {3}.

Category:
Other

Cause:
An unexpected error occurred.

Action:
To diagnose the error, turn on the logging level to FINEST and retry the operation.

WCS-18531
Error navigating the hierarchy

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18532
Unexpected error writing vcard

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18533
Unexpected error retrieving reporting chain

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18534
Unexpected error searching user profiles

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18535
User: {0} not found in identity store or user does not have the required privilege for updating the user profile.

Category:
Other

Cause:
Either user is not available in the user repository or system policy restriction is applied.

Action:
contact the administrator

WCS-18536
User Class type not expected, found: {0} expected{1}.

Category:
Other

Cause:
The User instance found in the cache is not of the expected Class type.

Action:
Check if the Profile Service Lifecycle Listener is executed which sets the appropriate UserFactory.

WCS-18537
Error updating {0} with {1} and {2}.

Category:
Other

Cause:
The cause of this error could be MetadataNotFoundException, UnsupportedUpdateException, MDSIOException, ConcurrentMOChangeException or ValidationException

Action:
Check if the pages.xml is present, you have update permission on the document or if the pages.xml has some invalid content. If all the things listed are fine then try again after sometime.

WCS-18538
An unknown error occurred while trying to determine security attributes of type {0}

Category:
Other

Cause:
Review the logs for the underlying exception

Action:
Take action based on the underlying exception. Rerun the crawl.

WCS-18539
An unknown error occurred while trying to determine security attributes of type {0} for user {1}

Category:
Other

Cause:
Review the logs for the underlying exception

Action:
Take action based on the underlying exception. Rerun the crawl.

WCS-18540
Unknown error accessing assets

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services with logs.

WCS-18541
Action {0} cannot be executed on asset type {1}

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18542
You do not have privileges to perform {0} on {1}.

Category:
Other

Cause:
The user does not have permission to perform the action on the given asset or asset type.

Action:
Contact your administrator to give you privileges to perform the required action.

WCS-18543
Unknown error while determining if user can access asset manager in scope {0}.

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details.

WCS-18544
Unknown error while determining if user can access {0} asset type in asset manager in scope {1}.

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details.

WCS-18545
Unknown error while deleting assets permission for scope {0}.

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details.

WCS-18546
Selected operation cannot be performed as the asset is already deleted, refresh the list using the refresh icon.

Category:
Security

Cause:
The asset on which the action is being performed does not exist.

Action:
Refresh the list using the Refresh icon.

WCS-18547
Unknown error while trying to delete a resource for scope {0}, resourceType {1}, resourceGUID {2} and backURL {3}.

Category:
Other

Cause:
An unexpected error occurred while trying to delete a resource.

Action:
Contact Oracle Support Services with logs.

WCS-18548
Unknown error while trying to toggle the visibility of a resource for scope {0}, resourceType {1} and resourceGUID {2}

Category:
Other

Cause:
An unexpected error occurred while trying to toggle the visibility of a resource.

Action:
Contact Oracle Support Services with logs.

WCS-18549
Unknown error while trying to get resources.

Category:
Other

Cause:
An unexpected error occurred while trying to get the resources from the resource query options.

Action:
Contact Oracle Support Services with logs.

WCS-18701
An unexpected error occurred in the Feedback sub-system.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18702
Failed to create an instance of Feedback

Category:
Other

Cause:
Feedback object's viewing user name not found

Action:
Make sure that the user is logged in

WCS-18703
Failed to create an instance of Feedback

Category:
Other

Cause:
Feedback object's user name not specified

Action:
Provide user name in the request for an instance of Feedback

WCS-18705
Failed to publish Feedback activity

Category:
Other

Cause:
Activity Stream service raised an exception

Action:
Verify the reason for the failure in the Activity Stream sub-system

WCS-18706
Feedback message cannot be deleted

Category:
Other

Cause:
User is not authorized to delete this message

Action:
Resubmit the request with correct parameters

WCS-18707
Failed to delete Feedback message

Category:
Other

Cause:
Message does not exist

Action:
Resubmit the request with correct parameters

WCS-18708
Feedback message cannot be updated

Category:
Other

Cause:
User is not authorized to update this message

Action:
Resubmit the request with correct parameters

WCS-18709
Failed to update Feedback message

Category:
Other

Cause:
Message does not exist

Action:
Resubmit the request with correct parameters

WCS-18710
Feedback message cannot be added

Category:
Other

Cause:
User is not authorized to add message

Action:
Resubmit the request with correct parameters

WCS-18711
Feedback message cannot be hidden

Category:
Other

Cause:
User is not authorized to hide message

Action:
Resubmit the request with correct parameters

WCS-18712
Failed to hide Feedback message

Category:
Other

Cause:
Message does not exist

Action:
Resubmit the request with correct parameters

WCS-18713
Feedback message cannot be added

Category:
Other

Cause:
Feedback message content is empty

Action:
Provide a non empty feedback message text

WCS-18714
Failed to retrieve user display name from profile service

Category:
Other

Cause:

Action:

WCS-18715
Failed to add feedback.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18716
Failed to hide or unhide feedback.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18717
Failed to delete feedback.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18718
Failed to query feedback messages.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18719
Failed to create an instance of Feedback

Category:
Other

Cause:
Feedback object's preferences manager not specified

Action:
Provide preferences manager in the request for an instance of Feedback

WCS-18720
Failed to query preferences for Feedback object.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-18751
Unknown error accessing portal assets

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services with logs.

WCS-18752
Unknown error in instantiating portal assets factory

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services with logs.

WCS-18753
Unexpected error occurred while adding a portal asset.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services with logs.

WCS-18754
Unexpected error occurred while deleting a portal asset

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services with logs.

WCS-18755
Unexpected error occurred while updating a portal asset

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services with logs.

WCS-18756
Unexpected error occurred while getting the list of portal assets

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services with logs.

WCS-18757
Portal asset for update is not valid

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services with logs.

WCS-18758
An attribute in this asset is not valid.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services with logs.

WCS-18759
An error occurred in setting up the asset

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services with logs.

WCS-18760
Copy operation resulted in error. If you see the asset in asset manager, delete it.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services with logs.

WCS-18761
Delete operation resulted in error. If you see the asset in asset manager, try deleting it again.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services with logs.

WCS-18762
You do not have the privileges required to perform this operation.

Category:
Other

Cause:
No privilege to do the current operation

Action:
Contact webcenter administrator for change in role.

WCS-18763
Asset with the same display name already exists.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Enter a new display name for the asset.

WCS-18764
An unexpected error occurred while trying to check {0} access for {1}, denying access.

Category:
Other

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details.

WCS-18765
Unable to import, as the asset being imported conflicts with another asset.

Category:
Other

Cause:
Another asset in the target has the metadata file or jspx with the same path as the asset being imported.

Action:
Take action based on the underlying exception details.

WCS-18766
Unable to import as the asset being imported conflicts with another asset of a different type in the same portal.

Category:
Other

Cause:
Either the metadata file or jspx with the same path already exists on the target application in same scope.

Action:
Take action based on the underlying exception details.

WCS-18767
Unable to validate the content of the archive. Import of asset is aborted.

Category:
Other

Cause:
Error while trying to check if a document exists in MDS.

Action:
Take action based on the underlying exception details.

WCS-18768
Unable to import as {1}, as the asset in the archive is of type {0}

Category:
Other

Cause:
Select the correct asset type to import.

Action:
Select the correct asset type to import.

WCS-18769
Encountered exception while trying to determine if path {0} points to an asset, resorting to default security check.

Category:
Other

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details.

WCS-18770
Asset with id "{0}" does not exist.

Category:
Other

Cause:
The asset was possibly deleted by another user.

Action:
Refresh the asset manager to see if the asset still exists

WCS-18771
Unable to export as the asset is type {0} but was invoked as {1}

Category:
Other

Cause:
Incorrect asset type

Action:
Select the correct asset type to import.

WCS-18772
Unable to upload as the asset belongs to {0} but is being uploaded into {1}

Category:
Other

Cause:
The asset you are trying to upload belongs to a different portal.

Action:
Verify which portal owns the asset and then upload the asset to that portal.

WCS-18773
Unable to upload the asset. The owner of the asset is not valid.

Category:
Other

Cause:
Cannot identify the owner of the asset.

Action:
The archive is corrupt with invalid documents. Contact Oracle Support Services and provide log information.

WCS-18774
Global asset of type "{2}", with ID "{0}" does not exist.

Category:
Other

Cause:
The specified asset was probably deleted by another user.

Action:
Refresh the list of assets to see if the asset still exists.

WCS-18775
Asset of type "{2}", with ID "{0}" does not exist in the portal "{1}".

Category:
Other

Cause:
The specified asset was probably deleted by another user.

Action:
Refresh the list of assets to see if the asset still exists.

WCS-18776
You do not have the permissions required to perform the operation. Verify that you have the appropriate Create/Edit/Delete permission for the type of shared asset you are attempting to upload/download.

Category:
Other

Cause:
Verify that you have the appropriate Create/Edit/Delete permission.

Action:
Contact your WebCenter Portal administrator to request the required permissions.

WCS-18777
You do not have the permissions required to perform the operation. Verify that you have the appropriate Create/Edit/Delete permission for all portal assets or for the specific type of portal asset you are attempting to upload/download.

Category:
Other

Cause:
Verify that you have the appropriate Create/Edit/Delete asset permissions for the portal.

Action:
Contact the portal administrator to request the required permissions.

WCS-18778
Unable to upload as the archive does not contain a shared asset.

Category:
Other

Cause:
The asset you are trying to upload belongs to a specific portal, it is not a shared asset.

Action:
Verify which portal owns the asset and then upload the asset to that portal.

WCS-18779
Unable to upload the asset as the archive does not contain an asset that belongs to this portal.

Category:
Other

Cause:
The asset you are trying to upload belongs to a different portal.

Action:
Verify which portal owns the asset and then upload the asset to that portal.

WCS-18780
Global asset of type "{2}", with name "{0}" does not exist.

Category:
Other

Cause:
The specified asset was probably deleted by another user.

Action:
Refresh the list of assets to see if the asset still exists.

WCS-18781
Asset of type "{2}", with name "{0}" does not exist in the portal "{1}".

Category:
Other

Cause:
The specified asset was probably deleted by another user.

Action:
Refresh the list of assets to see if the asset still exists.

WCS-18782
Name or Resource Id of the resource to be exported is not specified. Specify either the name or the Id of the resource.

Category:
Other

Cause:
Name or ID of the resource to be exported in not mentioned.

Action:
Specify either the name or the ID of the resource.

WCS-18783
Name, Resource Id and type of the resource to be exported do not match.

Category:
Other

Cause:
Name, Resource Id and type of the resource to be exported do not match.

Action:
Specify either the name or the ID of the resource.

WCS-18784
Asset is a system asset. You cannot export system assets.

Category:
Other

Cause:
The asset you are trying to export is a system asset.

Action:
Refer to export documentation for more information or contact your administrator.

WCS-18785
Asset is a system asset. You cannot import system assets.

Category:
Other

Cause:
The asset you are trying to import is a system asset.

Action:
Refer to import documentation for more information or contact your administrator.

WCS-18786
Global asset of type "{3}", with the name "{0}" already exists with a different guid "{2}".

Category:
Other

Cause:
An unexpected error occurred.

Action:
Enter a new display name for the global asset.

WCS-18787
Asset of type "{3}", with the name "{0}" already exists in the portal "{1}" with a different guid "{2}".

Category:
Other

Cause:
An unexpected error occurred.

Action:
Enter a new display name for the asset.

WCS-18788
Asset of type "{1}", with id "{0}" is a system asset. You cannot export system assets.

Category:
Other

Cause:
The asset you are trying to export is a system asset.

Action:
Refer to export documentation for more information or contact your administrator.

WCS-18789
Asset of type "{1}", with name "{0}" is a system asset. You cannot export system assets.

Category:
Other

Cause:
The asset you are trying to export is a system asset.

Action:
Refer to export documentation for more information or contact your administrator.

WCS-18790
Portal asset for copy is not valid

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services with logs.

WCS-18791
The asset archive specified is not a valid asset archive.

Category:
Other

Cause:
The asset archive specified is not a valid asset archive.

Action:
Verify the asset archive and provide a valid archive.

WCS-18792
An exception occurred while exporting the data for the asset named "{0}" of type {1}.

Category:
Other

Cause:
An exception occurred while exporting the persistence data for the asset.

Action:
Verify the asset data in the persistence store and retry the operation.

WCS-18793
An exception occurred while importing the data for the asset named "{0}" of type {1}.

Category:
Other

Cause:
An exception occurred while importing the persistence data for the asset.

Action:
Verify the asset data in the persistence store and retry the operation.

WCS-18794
Error occurred while trying to find resource with id {0} and type {1}

Category:
Other

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details.

WCS-18801
Access Policy for component "{0}" could not be saved.

Category:
Other

Cause:
There was an error in saving access policy.

Action:
Contact Oracle Support Services.

WCS-18802
Access Policy for component "{0}" defined by {1} could not be read.

Category:
Other

Cause:
There was an error in reading access policies of the component.

Action:
Verify in 'Display Options' tab that the el expression in 'Show Component' property is not malformed

WCS-18803
Attribute "{0}" could not be read for component "{1}"

Category:
Other

Cause:
There was an error in reading an attribute of the component.

Action:
Verify in 'Display Options' tab that the el expression in 'Show Component' property is not malformed

WCS-18804
Attribute "rendered" of component "{0}" having EL expression "{1}" could not be parsed.

Category:
Other

Cause:
There was an error in parsing EL Expression of attribute "rendered"

Action:
Verify in 'Display Options' tab that the el expression in 'Show Component' property is not malformed

WCS-18805
Attributes of component "{0}" has not been modified.

Category:
Other

Cause:
Attributes of selected component has not been modified.

Action:
Message is informational only

WCS-19001
Unexpected error occurred

Category:
Other

Cause:
An internal error occurred

Action:
Contact Oracle Support Services.

WCS-19002
Unable to execute operation on {0}

Category:
Other

Cause:
An internal error occurred

Action:
Contact Oracle Support Services.

WCS-19003
Metadata file {0} not found

Category:
Other

Cause:
The expected metadata file was not found

Action:
Contact Oracle Support Services

WCS-19004
Unexpected error occurred while creating page table

Category:
Other

Cause:
An internal error occurred

Action:
Contact Oracle Support Services.

WCS-19005
Internal error while creating policy store metadata for {0}

Category:
Other

Cause:
Policy store for WebCenter Portal not found

Action:
Contact Oracle Support Services

WCS-19007
Unable to copy application or portal policies for {0}

Category:
Other

Cause:
Exception occurred while copying policies for WebCenter Portal.

Action:
Contact Oracle Support Services.

WCS-19008
No matching users were found with search string {0}

Category:
Other

Cause:
No users matched the search string you entered: {0}

Action:
Enter a new search term and try again

WCS-19010
Couldn''t retrieve metadata for role {0}

Category:
Other

Cause:
No roles matched the search string you entered: {0}

Action:
Enter a new search term and try again.

WCS-19013
User not specified

Category:
Other

Cause:
A null or empty string was provided for the user name.

Action:
Enter a valid user name.

WCS-19014
Role not specified

Category:
Other

Cause:
A null or empty string was provided for the role name.

Action:
Enter a valid role name.

WCS-19016
Unable to grant user {2} with role {1} in {0}

Category:
Other

Cause:
An attempt to grant a user role failed. Either, role {1} does not exist, user {0} does not exist, or the user is already granted the role

Action:
Determine the cause and, if necessary, try again.

WCS-19017
Unable to revoke role {1} from identity {0}

Category:
Other

Cause:
An attempt to grant a identity role failed. Either, role {1} does not exist,identity {0} does not exist, or the identity does not have the specified role.

Action:
Determine the cause and, if necessary, try again.

WCS-19018
Unable to add role {0} to the policy store

Category:
Other

Cause:
An attempt to create a new role failed. Either the role already exists, or the policy store is currently unavailable

Action:
Determine the cause and, if necessary, try again.

WCS-19019
An error occurred while trying to remove role {0} from the policy store

Category:
Other

Cause:
An attempt to delete the specified role failed. Either the role does not exist, or the policy store is currently unavailable.

Action:
Determine the cause and, if necessary, try again.

WCS-19020
Identity {0} has already been granted the role(s).

Category:
Other

Cause:
User has been already granted the same role.

Action:
Determine the cause and, if necessary, try again.

WCS-19022
Role {0} already exists in the policy store

Category:
Other

Cause:
An attempt to create a new role failed because the policy store contains a role with the name specified.

Action:
Enter a unique name for the role.

WCS-19025
Only authenticated users can perform the requested operation

Category:
Other

Cause:
You do not have sufficient privileges to perform the requested operations.

Action:
Ask your WebCenter Portal administrator to grant you the appropriate privileges and then try again.

WCS-19026
Unable to revoke permission {0}

Category:
Other

Cause:
The specified permission was not removed from the policy store. The permission may not exist

Action:
Check whether the permission exists in the policy store

WCS-19027
Unable to grant permission {0}

Category:
Other

Cause:
The user was not granted the specified permission. The user may already be assigned that permission.

Action:
Check whether the user is assigned this permission.

WCS-19029
Policy for WebCenter Portal could not be found

Category:
Other

Cause:
Policy for WebCenter Portal was missing from the policy store.

Action:
Check the policy store for WebCenter Portal is configured correctly.

WCS-19030
Page definition for page {0} not found

Category:
Other

Cause:
Page definition for page {0} does not exist.

Action:
Check whether the page definition for page {0} exists

WCS-19031
Policy store instance cannot be null

Category:
Other

Cause:
No policy store instance was found

Action:
Verify and instantiate the policy store instance and try the operation again.

WCS-19032
Security Manager already initialized

Category:
Other

Cause:
An attempt was made to initialize the Security Manager but it was already initialized.

Action:
Use the existing Security Manager.

WCS-19033
Security Manager is not initialized

Category:
Other

Cause:
A security operation was attempted before the Security Manager was initialized.

Action:
Initialize the Security Manager and try again

WCS-19034
WebCenterSecurityManager class cannot be initialized directly

Category:
Other

Cause:
An attempt was made to initialize the WebCenterSecurityManager class through a protected constructor.

Action:
Initialize the WebCenterSecurityManager class with a default constructor.

WCS-19035
Security Manager is null

Category:
Other

Cause:
Security Manager could not be initialized

Action:
Use valid parameters and try again.

WCS-19036
Scoped Security Manager is null for scope {0}

Category:
Other

Cause:
Security manager can not be initialized

Action:
Please try to initialize again with proper parameters

WCS-19037
Invalid context {1} for scope {0}

Category:
Other

Cause:
Current scope did not match the cached scope

Action:
Refresh your page again and try again.

WCS-19038
An error occurred while importing security policies.

Category:
Other

Cause:
Failed to create security policies (grants, roles and permissions) during import.

Action:
Verify that the export archive is valid, otherwise check logs for error details and contact Oracle Support Services.

WCS-19039
ADFContext is NULL, so returning NULL as username

Category:
Other

Cause:
An internal error occurred while fetching the user name.

Action:
Contact Oracle Support Services.

WCS-19040
SecurityContext is NULL, so returning NULL as username

Category:
Other

Cause:
SecurityContext was not found for the current session

Action:
Contact Oracle Support Services.

WCS-19042
Unable to retrieve Personal Sidebar items

Category:
Other

Cause:
An error locating for opening the JSPX document for the Personal Sidebar

Action:
Ensure that the JSPX document pointing to the Personal Sidebar is available to the application

WCS-19043
Unable to persist personalization for tag with webcenterId "{0}" in the Personal Sidebar

Category:
Other

Cause:
An error saving the personalization document for the Personal Sidebar JSPX, or the tag with this webcenterId could not be located.

Action:
Ensure that the personalization is enabled on the Personal Sidebar JSPX, and the tag has a unique webcenterId

WCS-19044
Unable to retrieve item called {0} from the shell in the request {1}

Category:
Other

Cause:
Either the item name is incorrect or the item is not available in the current shell context

Action:
Verify that the item name is correct and that the shell context is setup properly for the current request.

WCS-19045
Unable to register shell handler of type {0}

Category:
Other

Cause:
Either the class name of the shell handler is incorrect or there was a problem while instantiating the shell handler

Action:
Verify whether the shell handler type is correct or determine why the shell handler is not instantiating properly

WCS-19046
Unable to retrieve the visibility of shell panel {0}

Category:
Other

Cause:
An error occurred trying to retrieve the visibility information from the shell handler of the current request.

Action:
Defaulting visibility to 'true'

WCS-19048
Unable to retrieve panel metadata for panel properties (panel name: {0})

Category:
Other

Cause:
The metadata for the panel in the shell metadata document may be corrupted or missing, or the name of the panel is incorrect.

Action:
Verify whether the panel name is correct and whether the metadata for the panel is valid

WCS-19049
An attempt to set change the skin was ignored

Category:
Other

Cause:
An attempt was made to change the skin but this feature is not yet implemented.

Action:
Contact Oracle Support Services.

WCS-19051
An attempt was made to set the template and ignored

Category:
Other

Cause:
This change would not take place as the feature is not implemented

Action:
Please contact Oracle Support for more details

WCS-19054
Error retrieving a physical page view-id for the request {0} (context URL {1})

Category:
Other

Cause:
The request URL could be invalid, or an unknown problem occurred fetching the metadata

Action:
Verify the request URL and try again.

WCS-19055
Unable to display a page for the requested URL {0}

Category:
Other

Cause:
The request URL was invalid, either because there was no shell handler or the shell handler could not provide a physical page to forward to.

Action:
Verify the request URL and try again.

WCS-19058
Unable to retrieve scope IDs for the current user

Category:
Other

Cause:
An internal error occurred while fetching the scope for the current user.

Action:
Contact Oracle Support Services

WCS-19061
Unable to INSTANTIATE shell handler factory of type {0}

Category:
Other

Cause:
Shell handler factory of type {0} was not in the classpath.

Action:
Contact Oracle Support Services

WCS-19062
Unable to INITIALIZE the shell handler factory

Category:
Other

Cause:
An internal error occurred while initializing the shell handler factory.

Action:
Contact Oracle Support Services.

WCS-19066
Unable to set up the default shell handler factory.

Category:
Other

Cause:
An internal error occurred while setting up the default shell handler factory.

Action:
Contact Oracle Support Services.

WCS-19067
Unable to navigate to the page. Page creation might have failed or an error occurred while attempting to load the new page. Open your Manage Pages dialog box to see if the page exists. If the problem persists, contact your administrator.

Category:
Other

Cause:
An error occurred trying to reference the newly created page (the page may not have been created properly).

Action:
Try to selecting the new page from the pages dropdown list. If the page is not listed, try creating the page again

WCS-19068
Unable to create page in the current scope

Category:
Other

Cause:
An unexpected error occurred while trying to create a page in a scope.

Action:
Ask your WebCenter Portal administrator to resolve the issue.

WCS-19070
Unable to delete page {0} ({1})

Category:
Other

Cause:
An attempt to delete a page failed. Either the page and/or its associated files (for example, ADFm page definition) have been modified but not saved

Action:
Verify that the page is not being modified and try again.

WCS-19071
Page {0} ({1}) not deleted properly. Unable to remove associated metadata.

Category:
Other

Cause:
An attempt was made to delete a page when metadata associated with the page was in use.

Action:
Try again.

WCS-19072
Unable to retrieve the list of users

Category:
Other

Cause:
An attempt to retrieve the user list failed.Either the Identity store was corrupt or is inaccessible.

Action:
Verify that the identity store is valid and accessible, and try again.

WCS-19073
Unable to register page {0} (of scope {1}) for navigation

Category:
Other

Cause:
An error occurred while registering the page {0}.

Action:
Try to register the page again and if unsuccessful contact Oracle Support.

WCS-19075
No users available

Category:
Other

Cause:
No users found in the identity store associated with WebCenter Portal.

Action:
Contact Oracle Support Services.

WCS-19077
Permission class {0} does not have proper constructor method

Category:
Other

Cause:
The specified class does not have the required constructor

Action:
Provide the required constructor in the specified class

WCS-19079
Unable to process the security extension metadata

Category:
Other

Cause:
The argument is not an instance of ExtensionPermissionMetadata

Action:
Provide an instance of ExtensionPermissionMetadata as the argument

WCS-19080
Unable to access permission class {0} in your project libraries

Category:
Other

Cause:
Either the specified permission class does not exist or it is not in the correct location.

Action:
Ensure that the specified permission class is in the correct location.

WCS-19082
Unable to load up the {0} service.

Category:
Other

Cause:
An internal error occurred and the {0} service failed to load.

Action:
Contact Oracle Support Services

WCS-19083
Access to permission class {0} is not allowed

Category:
Other

Cause:
An attempt was made to access the specified permission class.Permission class {0} is not accessible.

Action:
Contact Oracle Support Services

WCS-19084
Permission class{0} can not be instantiated

Category:
Other

Cause:
An internal error occurred

Action:
Contact Oracle Support Services.

WCS-19085
Unable to instantiate the policy store for WebCenter Portal

Category:
Other

Cause:
An error occurred while trying to access the policy store associated with WebCenter Portal.

Action:
Contact Oracle Support Services

WCS-19088
Failed to register application management beans

Category:
Other

Cause:
Application management beans(MBean) registration failed.Either there are issues with OC4J or the application was not packaged properly.

Action:
Restart OC4J or examine OC4J log files for further details.

WCS-19089
Failed to unregister application management beans

Category:
Other

Cause:
Application management beans(MBean) unregistration failed. Either the Mbeans were not registered or the Mbeans were already unregistered.

Action:
Examine the OC4J log files for further details.

WCS-19090
An unexpected error has occurred, unable to complete the export process.

Category:
Other

Cause:
The export process failed due to an internal error.

Action:
Contact Oracle Support Services.

WCS-19101
Unable to save the export archive on the local file system due to an unexpected error.

Category:
Other

Cause:
Unexpected error occurred while saving the export archive on the local file system.

Action:
Contact Oracle Support Services

WCS-19102
Unexpected error occurred while exporting the security policy. Unable to export the policy store.

Category:
Other

Cause:
An unexpected error occurred while exporting policy store metadata to the local file system.

Action:
Contact Oracle Support Services.

WCS-19104
Unable to export connection details for external application with ID {0}

Category:
Other

Cause:
An internal error occurred. Unable to retrieve details for an external application appearing in WebCenter Portal.

Action:
Ask your WebCenter Portal administrator to clean up external applications appearing in the Sidebar or reconfigure the external application connection using Enterprise Manager.

WCS-19105
Unable to find connection details for external application with ID {0}

Category:
Other

Cause:
No connection details found for external application with the specified ID.

Action:
Remove the external application link associated with the specified ID from the Applications pane in the Sidebar.

WCS-19106
Unable to save preference settings

Category:
Other

Cause:
An error occurred while attempting to save preferences settings to the metadata store.

Action:
Contact Oracle Support Services.

WCS-19107
Invalid date format {0} retrieved from the preference store.

Category:
Other

Cause:
An attempt was made to retrieve date information but the source date format was invalid.

Action:
Verify whether the date format source returns the correct date format.

WCS-19108
Invalid time format {0} retrieved from the preference store.

Category:
Other

Cause:
An attempt was made to retrieve time information but the source time format was invalid.

Action:
Verify whether the time format source returns the correct time format

WCS-19109
Unable to find service.

Category:
Other

Cause:
Unable to find the service metadata in WebCenter Portal

Action:
Contact Oracle Support Services

WCS-19110
Specify a location on server.

Category:
Other

Cause:
Unable to locate archive for import.

Action:
Specify the archive's name and server location, and try again.

WCS-19111
Specify an archive that exists on the file system.

Category:
Other

Cause:
Unable to locate archive for import.

Action:
Specify a valid archive that exists on the file system and try again.

WCS-19112
Specify a server location.

Category:
Other

Cause:
Unable to locate the specified directory for the export archive.

Action:
Specify a valid directory on the server for the export archive and try again.

WCS-19113
Specify an existing directory on the server.

Category:
Other

Cause:
Unable to locate the specified directory.

Action:
Specify a valid directory on the server and try again.

WCS-19114
Specify a valid name for the portal archive. Usage of special character / or \ is not allowed.

Category:
Other

Cause:
Usage of special character / or \ is not allowed.

Action:
Specify a valid name for the portal archive.

WCS-19115
Specify a valid name for the portal template archive. Usage of special character / or \ is not allowed.

Category:
Other

Cause:
Usage of special character / or \ is not allowed.

Action:
Specify a valid name for the portal template archive.

WCS-19116
Specify a valid name for the portal archive with the file extension {0}.

Category:
Other

Cause:
Invalid file extension specified.

Action:
Specify a valid name for the portal archive with the file extension '.par'

WCS-19117
Specify a valid name for the portal template archive with the file extension {0}.

Category:
Other

Cause:
Invalid file extension specified.

Action:
Specify a valid name for the portal template archive with the file extension '.par'

WCS-19118
Invalid portal archive extension provided: {0}. Specify a valid name for the portal archive and use the file extension {1}.

Category:
Other

Cause:
Invalid portal archive extension specified.

Action:
Specify a valid name for the portal archive and use the file extension '.par'

WCS-19119
Unable to add the new link : {0}

Category:
Other

Cause:
An attempt to add a new link {0} to the metadata store failed.

Action:
Contact Oracle Support Services.

WCS-19120
Unable to add link as no proper handler found for the selected resource type

Category:
Other

Cause:
An attempt to add a new link but the resource being added is neither a task flow or an external application.

Action:
Only task flows or external application link can be included.

WCS-19121
Unable to retrieve the shell configuration metadata

Category:
Other

Cause:
The metadata file is corrupt or missing.

Action:
Ensure that the file exists and complies with the schema.Alternatively, contact your WebCenter Portal administrator for assistance.

WCS-19122
Invalid shell panel name

Category:
Other

Cause:
The shell panel name was probably NULL.

Action:
Provide a valid shell panel name.

WCS-19123
Unable to retrieve the shell handler for the current request {1}

Category:
Other

Cause:
The shell handler was not set for the current request

Action:
Verify the URL and that the WebCenter Portal shell filter is configured to handle requests of this kind

WCS-19124
Unable to save changes to shell metadata

Category:
Other

Cause:
An error occurred while saving the shell metadata document.

Action:
Ensure that the shell metadata document is not corrupt and is writable and personalizable.

WCS-19125
Account for user {0} is disabled

Category:
Other

Cause:
The account for user {0} account is disabled.

Action:
Ask the WebCenter Portal administrator to activate the account.

WCS-19126
Account for user {0} is inactive

Category:
Other

Cause:
The account for user {0} is disabled.

Action:
Ask the WebCenter Portal administrator to activate the account.

WCS-19127
The account for user {0} is locked

Category:
Other

Cause:
The account is locked for user {0}

Action:
Ask the WebCenter Portal administrator to unlock the account.

WCS-19128
Password has expired for user account {0}

Category:
Other

Cause:
Password for this user has expired

Action:
Contact the WebCenter Portal administrator for assistance.

WCS-19129
Incorrect Old Password for user account {0}

Category:
Other

Cause:
The old password specified for this user is not correct.

Action:
Enter the correct password

WCS-19130
Password for user account {0} is null

Category:
Other

Cause:
No password was specified.

Action:
Enter a valid password.

WCS-19131
Error occurred granting permissions to user {0} for the newly created page {1}

Category:
Other

Cause:
An unexpected error occurred while granting the user permission

Action:
Contact the WebCenter Portal administrator

WCS-19132
Unable to retrieve the permission target for page {0}

Category:
Other

Cause:
An unexpected error occurred. The ADFm page definition of the page may be missing

Action:
Ensure that the page definition exists and is valid.

WCS-19133
Unable to determine the page in focus

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services

WCS-19134
Unable to hide a page, locked by another user

Category:
Other

Cause:
An attempt was made to hide a page that is currently locked by another user.

Action:
Contact Oracle Support Services.

WCS-19135
No page selected for hiding

Category:
Other

Cause:
Unable to determine which page has focus.

Action:
Select the page you want to hide and try again.

WCS-19136
Unable to hide the page.

Category:
Other

Cause:
An attempt was made to hide the last open page.

Action:
Open some other page and try again.

WCS-19137
Unable to determine the page focus for hiding

Category:
Other

Cause:
Unable to determine which page has focus.

Action:
Select the page you want to hide and try again. Alternatively, contact Oracle Support Services.

WCS-19138
Unable to encode the value {1} of parameter {0} using encoding format {2}

Category:
Other

Cause:
The encoding format was unexpectedly invalid.

Action:
Contact Oracle Support Services.

WCS-19139
Unable to decode the value {1} of parameter {0} using encoding format {2}

Category:
Other

Cause:
The encoding format was unexpectedly invalid.

Action:
Contact Oracle Support Services.

WCS-19140
Unable to update the page titled {0} ({1})

Category:
Other

Cause:
An error occurred while saving the changes.

Action:
Contact Oracle Support Services.

WCS-19141
Unable to save changes to the metadata store

Category:
Other

Cause:
An error occurred while saving the changes.

Action:
Contact Oracle Support Services.

WCS-19142
Role mapping SPIs are throwing exception

Category:
Other

Cause:
An internal occurred error while accessing role mapping SPIs.

Action:
Contact Oracle Support Services.

WCS-19143
Unable to retrieve the catalog for adding applications

Category:
Other

Cause:
An attempt to access the external application catalog failed. Either the external application catalog is not configured or configuration details are unavailable.

Action:
Check whether the ext-app-catalog attribute is configured in webcenter-config.xml

WCS-19144
Role name for user account is null or contains invalid characters

Category:
Other

Cause:
Either the role name was left blank or the role name contained invalid characters.

Action:
Enter a valid role name.

WCS-19145
Operation succeeded with errors. The mapping of roles failed

Category:
Other

Cause:
Changes in services failed due to the following errors

Action:
Contact Oracle Support Services.

WCS-19146
Grant role completed with errors The mapping of roles failed in scope {0}

Category:
Other

Cause:
Changes in services failed due to the following errors

Action:
Contact Oracle Support Services.

WCS-19147
Page path can not be null

Category:
Other

Cause:
The specified page path is null or an empty string.

Action:
Provide a valid string for the page path.

WCS-19148
Cannot get the service categories metadata from the application metadata

Category:
Other

Cause:
Service category metadata has not been defined in the application metadata

Action:
Contact Oracle Support Services.

WCS-19149
Cannot get metadata for all services from the application metadata.

Category:
Other

Cause:
All service metadata has not been defined in the application metadata.

Action:
Contact Oracle Support Services.

WCS-19150
Cannot get metadata for configurable services from the application metadata

Category:
Other

Cause:
Metadata for configurable services has not been defined in the application metadata.

Action:
Contact Oracle Support Services.

WCS-19151
Cannot find a service with the ID {0}

Category:
Other

Cause:
No definition exists for a service with the specified service identifier

Action:
Contact Oracle Support Services.

WCS-19152
User {0} already has access.

Category:
Other

Cause:

Action:

WCS-19153
Edit the user to modify his role.

Category:
Other

Cause:

Action:

WCS-19154
This exception is due to one or more of the following exceptions -

Category:
Other

Cause:
One or more services configurations have failed.

Action:
Contact Oracle Support Services.

WCS-19155
User {0} already has access or is invited.

Category:
Other

Cause:

Action:

WCS-19156
You cannot send an invite to this user as an invite has already been sent.

Category:
Other

Cause:

Action:

WCS-19157
Portal {0} may have been deleted or renamed

Category:
Other

Cause:
An attempt was made to access a portal that has been deleted or renamed.

Action:
Contact the portal moderator or try searching for the portals.

WCS-19158
Cannot personalize visibility of page {0} in portal {1}

Category:
Other

Cause:
A personalization attempt failed. Either the backing store could not be accessed or some other personalization operation was performed simultaneously.

Action:
Try the operation again. If the problem persists, contact your WebCenter Portal administrator.

WCS-19159
Unable to save page creation

Category:
Other

Cause:
An attempt to save the new page failed. Either the back-end store could not be accessed or another page was created simultaneously.

Action:
Try the operation again. If the problem persists, contact your WebCenter Portal administrator.

WCS-19160
Unable to save the personal sequence of pages in scope {0}

Category:
Other

Cause:
An attempt to personalize the page sequence failed. Either the back-end store could not be accessed or some other personalization operation was performed simultaneously

Action:
Try the operation again. If the problem persists, contact your WebCenter Portal administrator.

WCS-19161
Unable to save the change in sequence of pages in scope {0}

Category:
Other

Cause:
An attempt to change page sequence failed. Either the back-end store could not be accessed or a similar operation was performed simultaneously.

Action:
Try the operation again. If the problem persists, contact your WebCenter Portal administrator.

WCS-19162
Revoke role completed with errors The mapping of roles failed

Category:
Other

Cause:
Changes in services failed due to the following errors

Action:
Contact Oracle Support Services

WCS-19163
Scope is NULL for Security Manager

Category:
Other

Cause:
Scope identifier passed to the security manager is NULL.

Action:
Contact Oracle Support Services.

WCS-19164
The security policy in the archive file was found to be invalid.

Category:
Other

Cause:
The imported security policy file was found to be invalid.

Action:
Export the data again and try the import operation again.

WCS-19165
The security policy in the archive file to be imported is invalid as it contains more than one jazn-policy node.

Category:
Other

Cause:
The imported security policy file is invalid as it contains more than one jazn-policy node.

Action:
Export the data again the import operation again.

WCS-19166
The security policy in the archive file to be imported is located on a read-only file system and this means the data cannot be updated.

Category:
Other

Cause:
The imported security policy file is located on a read-only file system and this means the data cannot be updated.

Action:
Export the data again and try the import operation again.

WCS-19167
Failed to import security configuration from the selected archive.

Category:
Other

Cause:
An unexpected error occurred while updating the deployed application in the import source archive.

Action:
Check the logs for details of the error.Alternatively, contact Oracle Support Services.

WCS-19168
Role {0} is created successfully but failed to copy the permissions from role {1}. The role {1} is not found.

Category:
Other

Cause:
An attempt to create the role failed because the base role was not found.

Action:
Check whether the base role is still available.

WCS-19169
An error occurred while trying to remove a role {0} from the policy store.

Category:
Other

Cause:
The specified role does not exist in the policy store.

Action:
Check the details of the error and try again.

WCS-19170
Application role {0} still used in the policy store

Category:
Other

Cause:
The specified role is in use.

Action:
Remove the usage of the role and try again.

WCS-19171
Application role {0} to be granted is not found

Category:
Other

Cause:
Specified role was not found.

Action:
Check the role name {0} and try again.

WCS-19172
Internal error while creating security manager for portal {0}

Category:
Other

Cause:
Unable to resolve the Scope GUID for Scope {0}

Action:
Contact Oracle Support Services.

WCS-19173
New passwords for user account {0} do not match

Category:
Other

Cause:
Passwords were entered incorrectly.

Action:
Enter the correct passwords.

WCS-19174
Few of the mandatory resource(s) are in use. Please try again later.

Category:
Other

Cause:
The lock, client is trying to release is already locked.

Action:
Try after some time

WCS-19175
Unable to release the lock on document {0}

Category:
Other

Cause:
A call to release lock in the back-end has failed.

Action:
Contact Oracle Support Services.

WCS-19176
Releasing the current lock on {0} failed

Category:
Other

Cause:
The lock, client is trying to release is already released.

Action:
Acquire the lock again to release.

WCS-19177
Name Cannot Be Null

Category:
Other

Cause:
Name Cannot Be Null

Action:
Enter a User or Group

WCS-19178
User Not Found

Category:
Other

Cause:
User Not Found

Action:
Enter a username

WCS-19179
Group not found or multiple groups with the same name exist.

Category:
Other

Cause:
Group not found or multiple groups with the same name exist

Action:
Enter a Group

WCS-19180
User with this name doesn't exist

Category:
Other

Cause:
User with this name doesn't exist

Action:
Enter a role which has users

WCS-19181
Unable to read the application configuration metadata

Category:
Other

Cause:
The metadata file could have got corrupt or removed

Action:
Please ensure that the file exists and complies with the schema, or contact the administrator for assistance

WCS-19182
Unable to move link/folder

Category:
Other

Cause:
The metadata file could have got corrupt or removed

Action:
Contact Oracle Support Services

WCS-19183
Unable to create folder {0}

Category:
Other

Cause:
The metadata file could have got corrupt or removed

Action:
Contact Oracle Support Services

WCS-19184
Unable to delete link/folder {0}

Category:
Other

Cause:
The metadata file could have got corrupt or removed

Action:
Contact Oracle Support Services

WCS-19185
Role cannot be created because it contains special characters

Category:
Other

Cause:
Creation of Role {0} failed because it contains special characters

Action:
Remove special characters used in your role and try again.

WCS-19186
Role {0} cannot be created, as the role of same name exists in the policy store

Category:
Other

Cause:
Creation of Role {0} failed because policy store already contains a role of same name

Action:
Try changing role name

WCS-19187
Granting of Role {0} partially succeeded for identity {1}. Granting permissions for {2} failed. You can take actions regarding these warnings in portal settings.

Category:
Other

Cause:
Granting of Role for certain Services failed due to RoleMapping Exception

Action:
Please check the log for actual error stack.

WCS-19188
Revoking of Role {0} partially succeeded for identity {1}. Revoking permissions for {2} failed. You can take actions regarding these warnings in portal settings.

Category:
Other

Cause:
revoking of Role for certain Services failed due to RoleMapping Exception

Action:
Please check the log for actual error stack.

WCS-19189
Mapping the permissions {0} failed. You may want to try the operation again after some time or can contact Administrator.

Category:
Other

Cause:
Granting of Role for certain Services failed due to RoleMapping Exception

Action:
Please check the log for actual error stack.

WCS-19190
Fatal Error while granting role for certain services.

Category:
Other

Cause:
Granting of Role for certain Services failed due to RoleMapping Exception

Action:
Please check the log for actual error stack.

WCS-19191
User(s) {0} has already been granted the role {1}.

Category:
Other

Cause:
Current User / Role {0} has been already granted the application role.

Action:
Don't Provision this user since it is already provisioned.

WCS-19192
Role has been granted with errors. You might want to contact Administrator or Remove/Grant Role again.

Category:
Other

Cause:
Role was granted with errors.

Action:
Contact the Administrator.

WCS-19193
Fatal Error while granting the role.

Category:
Other

Cause:
Fatal Error while granting the role.

Action:
Contact Administrator.

WCS-19194
Invitations were sent out but persisting the invited users data resulted in fatal error.

Category:
Other

Cause:
Members Fatal Error while granting the role.

Action:
Contact Administrator.

WCS-19195
Page {0} cannot be found in the system

Category:
Other

Cause:
The page may have been deleted or the page path is incorrect

Action:
Specify a correct path to an existing page

WCS-19196
{0} : Irresolvable error(s) occurred. You may want to contact Administrator with the error reference.

Category:
Other

Cause:
Fatal Error occurred.

Action:
Contacts the administrator.

WCS-19197

Other

Cause:
Fatal Error occurred.

Action:
Contacts the administrator.

WCS-19204
Unable to save Invite message for portal {0} due to unknown errors. Please try later or contact administrator

Category:
Other

Cause:
Error occurred while obtaining the invite message

Action:
Try later or contact administrator

WCS-19205
Unable to save member changes for a portal{0} due to unknown errors. Please try later or contact administrator

Category:
Other

Cause:
Error occurred while saving the member changes

Action:
Try later or contact administrator

WCS-19206
Could not find security policy in the archive file being imported.

Category:
Other

Cause:
The security policy file was not found in import archive.

Action:
Export the data again and try the import operation again.

WCS-19207
One or more mandatory roles are not found in the copied instance for scope {0}. Role Name: {1}

Category:
Other

Cause:
One or more mandatory roles are not found in the copied instance.

Action:
Add the mandatory role {1} in the security metadata to get WebCenter Portal functionality or contact administrator.

WCS-19208
Deletion of security metadata failed for scope {0}

Category:
Other

Cause:
Deletion of roles for the current scope {0} has failed.

Action:
Try later or contact administrator.

WCS-19209
An unexpected error occurred while trying to upload WebCenter Portal logo to path {0}

Category:
Other

Cause:
MDS StreamedObject creation failed for WebCenter Portal logo

Action:
Contact administrator for further assistance.

WCS-19210
The image upload failed as the image file you tried to upload was invalid. Provide a valid image file.

Category:
Other

Cause:
Unable to upload the WebCenter Portal logo as the file is null or not available.

Action:
Upload a valid image file

WCS-19211
An error occurred while trying to retrieve the templates to be used for page creation. Please contact Administrator with error reference.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contacts the administrator.

WCS-19212

Portal {0} being exported is either online or being exported/imported by another user. Wait for some time and try the export operation again.

Category:
Other

Cause:
Portal is either online or blocked by another user/process.

Action:
Refresh the portal list and try to export the portal again. If the problem persists, contact the administrator.

WCS-19249
Portal template {0} you are trying to export is being exported/imported by another user. Wait for some time and try the export operation again.

Category:
Other

Cause:
Portal template is blocked by another user/process.

Action:
Refresh the portal template list and try to export the portal template again. If the problem persists, contact the administrator.

WCS-19250
Portal template {0} you are trying to import is being exported/imported by another user on the target. Wait for some time and try the import operation again.

Category:
Other

Cause:
Portal template is blocked by another user/process.

Action:
Wait for some time and try to import the portal template again. If the problem persists, contact the administrator.

WCS-19251
You are trying to import portals but the archive specified contains portal templates. Check the archive file and try again.

Category:
Other

Cause:
You are trying to import portals but the archive specified contains portal templates.

Action:
Use an export archive that contains portals.

WCS-19252
You are trying to import portal templates but the archive specified contains portals. Check the archive file and try again.

Category:
Other

Cause:
You are trying to import portal templates but the archive specified contains portals.

Action:
Use an export archive that contains portal templates.

WCS-19253
Cannot locate the document "{0}".

Category:
Other

Cause:
The path is incorrect or it is not available in the system.

Action:
Verify whether the path is correct and is available in the system.

WCS-19254
Error occurred while reading the WebCenter Portal environment configuration file {0}.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-19255
Unexpected error occurred while navigating to portal administration pages.

The default shell-config document cannot be read for looking up application-specific URL parameters, due to {0}.

Category:
Other

Cause:
The metadata repository might be down or the document may have got corrupted.

Action:
Verify that the metadata repository is up and the document contents are valid.

WCS-19348
Error occurred during permissions related operations. Refresh the roles screen to see the updated information. Contact your administrator for the list of errors.

Category:
Other

Cause:
An unexpected error occurred during permission related operations.

Action:
Contact system administrator.

WCS-19349
Could not find application role matching the search string {0} due to {1}.

Category:
Other

Cause:

Action:

WCS-19350
Removing role mapping related to service {0} failed due to {1}.

Category:
Other

Cause:

Action:

WCS-19351
Could not send notification to administrator as server may be down or Portal workflows are not accessible. Try again after some time.

Category:
Other

Cause:
Failed to connect to SOA server.

Action:
Check if the SOA server is up or if Portal workflows are deployed on SOA server.

WCS-19352
Unable to complete the export process as required resources are not available. Another export or import process might be in progress. Please try export again after sometime.

Category:
Other

Cause:
Export operation failed. Either another export process or portal operation is in progress.

Action:
Wait for some time and try the export operation again. If the problem persists, contact the administrator.

WCS-19353
Import failed. The portal archive contains new portals without security information.

Category:
Other

Cause:
The portal archive you are trying to import contains new portals without security. All new portals must include security information.

Action:
Export the portals again with security and try again. If the problem persists, contact the administrator.

WCS-19354
The page {0} (in {1}) cannot be copied due to {2}.

Category:
Other

Cause:
An error occurred while trying to copy the page.

Action:
Refine the logging level, retry the operation, and check the logs for more information about the error, or contact Oracle Support Services.

WCS-19355
Unable to make updates to the attributes of the page {0} due to {1}.

Category:
Other

Cause:
An error occurred while trying to make updates to the page attributes.

Action:
Refine the logging level, retry the operation, and check the logs for more information about the error, or contact Oracle Support Services.

WCS-19356
Unable to open the requested page.

Category:
Other

Cause:
An unexpected error while opening the page or while creating a copy of it for editing.

Action:
Contact the administrator.

WCS-19357
Could not find the page label due to {0}.

Category:
Other

Cause:

Action:

WCS-19358
Identity(s) {0} has already been added to portal.

Category:
Other

Cause:
An unexpected error occurred while adding users.

Action:
Contact system administrator.

WCS-19359
You cannot invite yourself as a member.

Cause:
An internal error occurred

Action:
Contact Oracle Support Services.

WCS-19375
Group {0} is not found in Identity Store

Category:
Other

Cause:
Given group name is not found

Action:
Please pass the correct group name

WCS-19376
{0} User(s) including {1} have already been granted role(s) {2}.

Category:
Other

Cause:
User(s) already granted roles.

Action:
User(s) already granted roles.

WCS-19377
Group(s) {0} has already been granted role(s).

Category:
Other

Cause:
Group(s) already granted role(s)

Action:
Group(s) already granted role(s)

WCS-19378
Unable to grant role mapping permissions for role {0} in scope {1}

Category:
Other

Cause:
The role was not granted role mapping permissions. Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details.

WCS-19379
Unable to drop role mapping permissions for role {0} in scope {1}

Category:
Other

Cause:
There was an error while dropping role mapping permissions for the role. Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details.

WCS-19380
Unexpected error while restoring the Default Profile Gallery Page.

Category:
Other

Cause:
There was an error while removing the profile page customization. Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details.

WCS-19381
Unexpected error occurred while setting the language

Category:
Other

Cause:
Unexpected error occurred while trying to save the language choice

Action:
Contact Oracle Support Services.

WCS-19382
Copying of members failed for following identities {0}

Category:
Other

Cause:
Copying of members failed for following identities {0}.

Action:
Try again after some time or Contact Administrator.

WCS-19383
Operation not allowed on child portal {0}

Category:
Other

Cause:
Child portal does not support the operation.

Action:
Perform on correct parent portal or Contact Administrator.

WCS-19384
Unexpected error occurred while getting the list of page templates

Category:
Other

Cause:
Unexpected error occurred while getting the list of Page Templates

Action:
Contact Oracle Support Services.

WCS-19385
Unexpected error occurred while getting the list of Resource Catalogs

Category:
Other

Cause:
Unexpected error occurred while getting the list of Resource Catalogs

Action:
Contact Oracle Support Services.

WCS-19386
Unexpected error occurred while getting the languages

Category:
Other

Cause:
Unexpected error occurred while trying to retrieve the languages

Action:
Contact Oracle Support Services.

WCS-19387
Unexpected error occurred while creating translations for the imported portal.

Category:
Other

Cause:
Unexpected error occurred while creating the translations.

Action:
Contact Administrator

WCS-19388
Unexpected error occurred while collapsing the sidebar

Category:
Other

Cause:
Unexpected error occurred while

Action:
Contact Oracle Support Services.

WCS-19389
Unexpected error occurred while expanding the sidebar

Category:
Other

Cause:
Unexpected error occurred while

Action:
Contact Oracle Support Services.

WCS-19390
Unexpected error occurred while getting the list of recently accessed portals.

Category:
Other

Cause:
Unexpected error occurred while getting the list of recently accessed portals.

Action:
Contact Oracle Support Services.

WCS-19391
Unexpected error downloading vcard

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-19392
Unexpected error looking up user profile

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-19393
Unexpected error launching resource

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-19394
Unexpected error occurred while getting the list of portals current user can access.

Category:
Other

Cause:
Unexpected error occurred while getting the list of portals current user can access.

Action:
Contact Oracle Support Services.

WCS-19395
A page named {0} already exists.

Category:
Other

Cause:
A page with the specified name exists.

Action:
Specify a unique name for the page.

WCS-19396
Unexpected error while restoring the Default Page.

Category:
Other

Cause:
There was an error while removing the page customization. Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details.

WCS-19397
Unexpected error while changing the permission model for portal {0}.

Category:
Other

Cause:
Unexpected error while changing the permission model for portal {0}.

Action:
Contact Administrator.

WCS-19398
No users/groups selected

Category:
Other

Cause:
No users/groups were selected to perform the requested operation on.

Action:
Select one or more users/groups and retry the operation.

WCS-19399
Exception occurred while searching groups for a user :{0}

Category:
Other

Cause:
An unexpected error/exception occurred.

Action:
Contact Oracle Support Services.

WCS-19400
Failed to determine public access on page {0} due to {1}

Category:
Other

Cause:
An unexpected error/exception occurred.

Action:
Contact Oracle Support Services.

WCS-19401
"Unexpected error getting read lock on {0}

Category:
Other

Cause:
An unexpected error/exception occurred.

Action:
Contact Oracle Support Services.

WCS-19402
Error determining the template for the current page

Category:
Other

Cause:
Unexpected severe error.

Action:
Contact Administrator.

WCS-19403
Error occurred while fetching the list of navigations.

Category:
Other

Cause:
Unexpected error while fetching list of navigations.

Action:
Contact Administrator.

WCS-19404
Scope list cannot be empty.

Category:
Other

Cause:
Unexpected error while fetching list of portals.

Action:
Contact Administrator.

WCS-19405
Unable to set the security parent of {0} to {1}.

Category:
Other

Cause:
Unexpected error while setting the security parent.

Action:
Contact Administrator.

WCS-19406
Unable to delete base docs from archive.

Category:
Other

Cause:
Unexpected error while deleting base docs from archive.

Action:
Contact Administrator.

WCS-19407
Resources conflict. Base resource on target is not same as the base resource on source. Import cannot proceed.

Category:
Other

Cause:
Resources conflict occurred at the target.

Action:
Contact Administrator.

WCS-19408
Unable to flush changes for deleted base docs from archive.

Category:
Other

Cause:
Unexpected error while deleting base docs from archive.

Action:
Contact Administrator.

WCS-19409
Could not create site registry as folder does not exists.

Category:
Other

Cause:
Unexpected error while creating the site registry.

Action:
Contact Administrator.

WCS-19410
Error occurred while refreshing template cache.

Category:
Other

Cause:
Unexpected error occurred while refreshing template cache.

Action:
Contact Administrator.

WCS-19411
{0}.

Category:
Other

Cause:
Unexpected error while fetching list of navigations.

Action:
Contact Administrator.

WCS-19412
Error occurred while saving the custom attributes in metadata.

Category:
Other

Cause:
Unexpected error occurred while saving the custom attributes in metadata.

Action:
Contact Administrator.

WCS-19413
Error occurred while granting permission to portal {0} for the provisioned service(s).

Category:
Other

Cause:
Unexpected error occurred while granting permission.

Action:
Contact Administrator.

WCS-19414
Error occurred while checking for portal permission.

Category:
Other

Cause:
Error occurred while checking community manage permission.

Action:
Contact Administrator.

WCS-19415
For user {0}, couldn"t retrieve the list of pages last accessed due to {1}

Category:
Other

Cause:

Action:

WCS-19416
Check for valid repository failed.

Category:
Other

Cause:
Either the database is down or the WebCenter Portal repository is not installed.

Action:
Check the exception's details to why this error occurred.

WCS-19417
For user {0}, the last accessed page couldn''t be found due to {1}

Category:
Other

Cause:

Action:

WCS-19418
For user {0}, couldn''t clean the last accessed page due to {1}

Category:
Other

Cause:

Action:

WCS-19419
For user {0}, couldn''t retrieve the last accessed page in {1} due to {2}

Category:
Other

Cause:

Action:

WCS-19420
Unexpected error occurred while checking custom access for the portal {0}.

Category:
Other

Cause:
Likely the authorizer class specified in WebCenter Portal configuration could not be accessed. Review the underlying exception in the logs to determine the exact cause.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-19421
Denying access for scope {0} as {1} property not specified in WebCenter Portal configuration

Category:
Other

Cause:
The authorizer class is not specified against specified property in WebCenter Portal Configuration

Action:
Define the specified property pointing to the required ResourceAuthorizer implementation in WebCenter Portal configuration

WCS-19422
Grant Role to Role Mapped Service for Portal User role not supported in scope {0}

Category:
Other

Cause:
Grant Role to Role Mapped Service for Portal User role not supported in scope {0}.

Action:
Do not try this operation in this scope

WCS-19423
Grant Role to Role Mapped Service for Public User role not supported in scope {0}

Category:
Other

Cause:
Grant Role to Role Mapped Service for Public User role not supported in scope {0}.

Action:
Do not try this operation in this scope

WCS-19424
Unable to delete site resource registry file from archive.

Category:
Other

Cause:
Unexpected error while deleting site resource registry file from archive.

Action:
Contact Administrator.

WCS-19425
Checking whether portal is published to Portal user is not supported in Home Portal.

Category:
Other

Cause:
An attempt was made to check whether the portal is published to Portal user in Home portal.

Action:
This API must be invoked in the context of portal and not Home portal

WCS-19426
Encountered exception: {0}. For diagnosis, turn on the logging level to FINEST and retry the operation. Details about the current state: {1}

Category:
Other

Cause:
An exception was encountered unexpectedly.

Action:
Turn on the logging level to FINEST and retry the operation.

WCS-19427
Error in setting Show Page of the business role page.

Category:
Other

Cause:
Unexpected error occurred while setting Show Page of the business role page.

Action:
Contact Oracle Support Services.

WCS-19428
Unexpected error occurred while importing the security policy. Unable to import the policy store.

Category:
Other

Cause:
An unexpected error occurred while importing policy store metadata from the import archive.

Action:
Contact Oracle Support Services.

WCS-19429
Unexpected error occurred while checking if the current user can {0} the scope {1}.

Category:
Other

Cause:
Unexpected error occurred while checking if the current user can {0} the scope {1}.

Action:
Try again later or contact administrator

WCS-19430
Unexpected error occurred while checking if the current user can {0} the asset {1} in scope {2}.

Category:
Other

Cause:
Unexpected error occurred while checking if the current user can {0} the asset {1} in scope {2}.

Action:
Try again later or contact administrator

WCS-19431
Unexpected error occurred while fetching roles for user {0} in portal {1}.

Category:
Other

Cause:
Unexpected error occurred while fetching roles for user {0} in portal {1}.

Action:
Try again later or contact administrator

WCS-19432
Fetching the roles of current user is not supported in default scope.

Category:
Other

Cause:
Fetching the roles of current user is not supported in default scope.

Action:
Do not try this operation

WCS-19433
Unexpected error occurred while setting action {0} to role {1}.

Category:
Other

Cause:
Unexpected error occurred while setting action {0} to role {1}.

Action:
Contact Administrator

WCS-19434
Fatal error occurred while getting members count.

Category:
Other

Cause:
An unexpected error occurred while getting the members count.

Action:
Please contact the administrator.

WCS-19435
Couldn''t get the first accessible page for the Home portal due to {1}.

Category:
Other

Cause:
Error in getting the first accessible page for the Home portal.

Action:
Contact the application administrator.

WCS-19436
The community query permission is not found

Category:
Other

Cause:
The community query permission is not found.

Action:
Contact the application administrator.

WCS-19437
The community manage membership permission is not found

Category:
Other

Cause:
The community manage membership permission is not found.

Action:
Contact the application administrator.

WCS-19438
The community view membership permission is not found

Category:
Other

Cause:
The community view membership permission is not found.

Action:
Contact the application administrator.

WCS-19439
The community edit membership permission is not found

Category:
Other

Cause:
The community edit membership permission is not found.

Action:
Contact the application administrator.

WCS-19440
One or more pages of portal {0} is being edited by other users. The export archive may not contain the page changes.

Category:
Other

Cause:
One or more portal pages is being edited by other users. The export archive may not contain the page changes.

Action:
Close all pages open in edit mode and try again.

WCS-19441
One or more pages of portal {0} is being edited by other users. The import may not complete properly.

Category:
Other

Cause:
One or more portal page is in edit mode. The import may not complete properly.

Action:
Close all pages open in edit mode and try again.

WCS-19442
Invalid input - unmatched quotes

Category:
Other

Cause:
A string was provided with unmatched quotes.

Action:
Ensure all quotes are opened and closed.

WCS-19450
Unable to fetch custom property {0} at the application level

Category:
Other

Cause:
Review the underlying exception in the logs to determine the exact cause

Action:
Take action based on the underlying exception details

WCS-19451
Unable to fetch custom property {0} from scope {1}

Category:
Other

Cause:
Review the underlying exception in the logs to determine the exact cause

Action:
Take action based on the underlying exception details

WCS-19452
Could not initialize Default Portal Setting

Category:
Other

Cause:
Review the underlying exception in the logs to determine the exact cause

Action:
Take action based on the underlying exception details

WCS-19453
Could not update the default portal identity settings

Category:
Other

Cause:
Review the underlying exception in the logs to determine the exact cause

Action:
Take action based on the underlying exception details

WCS-19454
Could not update the default portal public setting

Category:
Other

Cause:
Review the underlying exception in the logs to determine the exact cause

Action:
Take action based on the underlying exception details

WCS-19455
Could not update the default portal default setting

Category:
Other

Cause:
Review the underlying exception in the logs to determine the exact cause

Action:
Take action based on the underlying exception details

WCS-19456
Could not set the redirect on login setting for default portal

Category:
Other

Cause:
Review the underlying exception in the logs to determine the exact cause

Action:
Take action based on the underlying exception details

WCS-19457
Could not update default portal settings to handle rename of portal from {0} to {1}

Category:
Other

Cause:
Review the underlying exception in the logs to determine the exact cause

Action:
Take action based on the underlying exception details. Change the portal manually in Administration screens

WCS-19458
Could not update default portal settings to handle delete of portal {0}

Category:
Other

Cause:
Review the underlying exception in the logs to determine the exact cause

Action:
Take action based on the underlying exception details. Change the portal manually in Administration screens

WCS-19459
The default portal configuration is being modified by another user. Try operation after some time.

Category:
Other

Cause:
>Another admin user is updating the default portal configuration

Action:
Try the operation after some time

WCS-19460
Could not fetch the default portal configuration from webcenter-config

Category:
Other

Cause:
Review the underlying exception in the logs to determine the exact cause

Action:
Go the Default Portal Configuration screen and change the default setting to desired values

WCS-19461
Unexpected error while fetching the default portal due to {0}

Category:
Other

Cause:
Unexpected error while fetching the default portal

Action:
Unexpected error while fetching the default portal

WCS-19462
User {0} does not have the privileges required for this operation on Portals/Portal Templates. Verify that the user has "Create Portal" permission while performing import or deployment operation, "Create and Manage Portal" permission while performing redeployment operation and "Manage Portal" permission while performing export or propagation operation.

Category:
Other

Cause:
Check if the user has required permission on Portals for performing lifecycle operations.

Action:
Try performing the operation as an administrator.

WCS-19463
Error occurred while importing the security policy as the UCM server is down.

Category:
Other

Cause:
Error occurred while importing the security policy as the UCM server is down.

Action:
Start the UCM server and retry this operation

WCS-19464
User {0} not authorized to view Application.

Category:
Other

Cause:
User not authorized to view Application

Action:
Contact Administrator to grant more permissions.

WCS-19465
User {0} not authorized to configure Application.

Category:
Other

Cause:
User not authorized to configure Application

Action:
Contact Administrator to grant more permissions.

WCS-19466
Error occurred in creating translated scope resource bundle {0} due to {1}.

Category:
Other

Cause:
Unexpected error while creating scope resource bundle for newly created Portal/Template.

Action:
Take action based on the underlying exception details.

WCS-19467
Error occurred while parsing document name due to {0}.

Category:
Other

Cause:
Unexpected error while parsing scope resource bundle file name.

Action:
Take action based on the underlying exception details.

WCS-19468
Unexpected error occurred while adding Business Role Page for Impersonation due to {0}.

Category:
Other

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details.

WCS-19469
Error occurred while adding Impersonation page:{0} to pages:{1} due to {2}.

Category:
Other

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details.

WCS-19470
Error occurred while granting navigation permissions for role {0} for the scope {1} due to {2}

Category:
Other

Cause:
An unexpected error occurred while granting the user permission

Action:
Contact the WebCenter Portal administrator

WCS-19471
Error occurred while deleting the list of tabs to persistence store

Category:
Other

Cause:
An unexpected error occurred while deleting the list of pages.

Action:
Contact system administrator.

WCS-19472
Unexpected error occurred while fetching current device group due to {0}

Category:
Other

Cause:
Unexpected error occurred while fetching current device group due to {0}

Action:
Contact Administrator for more details

WCS-19473
Get GUID call for LibOVDUser {0} returned null, which caused NullPointerException.

Category:
Other

Cause:
Misconfiguration found in jps-config.xml.

Action:
Please contact the WebCenter Portal administrator.

WCS-19474
There are no Portal Server URL connections set.

Category:
Other

Cause:
There are no Portal Server URL connections set for deploying the portals.

Action:
Please create a Portal Server URL Connection.

WCS-19475
Failed to update application ready status

Category:
Other

Cause:
Status update to indicate application readiness with ReadyApp failed. There may be issues with registering or configuring the application.

Action:
Examine WebLogic Server debug logs for further details.

WCS-19476
Failed to update application not ready status

Category:
Other

Cause:
Status update to indicate application non-readiness with ReadyApp failed. There may be issues with registering or configuring the application.

Action:
Examine WebLogic Server debug logs for further details.

WCS-19477
Creation of seeded role is not supported for scope {0}

Category:
Other

Cause:
Currently the creation of seeded role is not supported.

Action:
Contact the administrator.

WCS-19478
Unable to grant permissions to {0} role in the policy store

Category:
Other

Cause:
An attempt to grant permissions failed due to unexpected errors.

Action:
Determine the cause and, if necessary, try again.

WCS-19479
Password does not adhere to password policy. {0}

Category:
Other

Cause:
Password does not adhere to password policy.

Action:
Password must adhere to password policy.

WCS-19480
The Web Address contains invalid characters. Make sure the Web Address begins with "/portal", "/webcenter", "http://", or "https://"

Category:
Other

Cause:
The Web Address contains invalid character.

Action:
Input valid characters.

WCS-19481
The Location contains invalid characters and make sure it begins with "/portal", "/webcenter", "http://", or "https://"

Category:
Other

Cause:
The Location contains invalid character.

Action:
Input valid characters.

WCS-26001
Search Configuration Error: {0}

Category:
Other

Cause:
A configuration error has been encountered.

Action:
Refer to the error details and the documentation for how to debug this.

WCS-26021
Invalid Query {0}.

Category:
Other

Cause:
An invalid query was sent.

Action:
Query validity is dependent on the service running it. Refer to the query in the log and the documentation for the service involved to debug this.

WCS-26022
Contradiction caused when clause "{0}" is added to "{1}"

Category:
Other

Cause:
An unexpected programming error occurred. This is not something that can be fixed.

Action:
Contact Oracle Support Services.

WCS-26023
The addition of criteria to {0} existing date criterion is not supported

Category:
Other

Cause:
An unexpected programming error occurred. This is not something that can be fixed.

Action:
Contact Oracle Support Services.

WCS-26041
General Search Execution Error

Category:
Other

Cause:
A general execution error has been encountered.

Action:
Query execution error is dependent on the service running it. Refer to the Query in the log and the documentation for the service involved to debug this.

WCS-26042
The execution of the query does not complete within the execution time limit

Category:
Other

Cause:
The search query does not complete within the time limit.

Action:
Re-try the search query again later.

WCS-26061
General Search Response Error

Category:
Other

Cause:
A general response error has been encountered.

Action:
Query execution response error is dependent on the service running it. Refer to the Query in the log and the documentation for the service involved to debug this.

WCS-26062
Query results are immutable; removing elements from it is unsupported.

Category:
Other

Cause:
A caller tried to remove an element from the result set.

Action:
Inform the caller that this is not a supported function.

WCS-26063
SQL ResultSet consumption failed with the message "{0}".

Category:
Other

Cause:
A SQL ResultSet cannot be consumed.

Action:
Refer to the underlying exception to debug this.

WCS-26064
Cannot call "remove" method before calling "next" method.

Category:
Other

Cause:
Caller tried to call "remove" method of QueryResult class before calling "next" method.

Action:
Inform the caller that this is an illegal operation.

WCS-26065
Cannot convert "{0}" value to "{1}".

Category:
Other

Cause:
The target object had no "valueOf" method to convert the source.

Action:
No action is needed; appropriate contingencies have been applied.

WCS-26066
Parameter type {0} cannot be converted into a primitive type.

Category:
Other

Cause:
The conversion failed because the bean property was not of primitive type.

Action:
No action is needed; appropriate contingencies have been applied.

WCS-26081
General Search Authentication Error

Category:
Other

Cause:
A general authentication error has been encountered.

Action:
Query execution authentication error is dependent on the service running it. Refer to the Query in the log and the documentation for the service involved to debug this.

WCS-26091
Search API Implementation error in {0} class

Category:
Other

Cause:
An implementation error has been encountered.

Action:
Report to the provider of the Search API Implementation.

WCS-26101
An error occurred while parsing an XML document at {0}.

Category:
Other

Cause:
The XML document in question may not be well-formed or valid with respect to the referred XML schema.

Action:
Examine the XML document again and check the XML schema to make sure there are not any mistakes or typos.

WCS-26102
An error occurred while parsing the search configuration in adf-config.xml at {0}.

Category:
Other

Cause:
The XML fragment within adf-config.xml may not be well-formed or valid with respect to what is expected for search configuration.

Action:
Examine the adf-config.xml document again and check the documented XML schema to make sure there are not any mistakes or typos.

WCS-26103
An unexpected XML error occurred.

Category:
Other

Cause:
Something with the underlying XML system or implementation of JAXP failed unexpectedly.

Action:
Check the nested exception for more information.

WCS-26121
A general MDS error has occurred.

Category:
Other

Cause:
An MDS-related error has occurred. Something with the MDS setup is misconfigured.

Action:
Check the nested exception for more information.

WCS-26122
An MDS error has occurred because a Metadata Object by the name of {0} cannot be found.

Category:
Other

Cause:
An MDS Metadata Object was not found.

Action:
Check the details of the Metadata Object and check the MDS repository to confirm that it is there.

WCS-26123
Encountered "{0}" with message "{1}" when committing MDS changes.

Category:
Other

Cause:
Something within the current MDS Session cannot be committed.

Action:
Contact Oracle Support Services.

WCS-26124
Saved Search Deletion aborted because the Metadata Object (MO) Reference for ID "{0}" is not found.

Category:
Other

Cause:
The system is in an inconsistent state allowing deletion of non-existent MDS documents

Action:
There is nothing to be done about this. No deletion is performed.

WCS-26125
Encountered "{0}" with message "{1}" while formulating the final MDS Condition.

Category:
Other

Cause:
Some MDS conditions that are being joined caused a failure to come up with the final condition.

Action:
Contact Oracle Support Services.

WCS-26126
MDS query result is null

Category:
Other

Cause:
MDS query result set is null. The MDS repository might be unavailable.

Action:
Perform the operation again after MDS repository becomes available again.

WCS-26141
A configuration error has occurred for the Search service model. The offending configuration is {0}.

Category:
Other

Cause:
The Search service keeps its configuration in adf-config.xml, connections.xml, and MDS.

Action:
Check in the appropriate configuration files to see if there are any obvious erroneous data.

WCS-26142
A security error has occurred for the Search service model. The offense is {0}.

Category:
Other

Cause:
The Search service model security maintained by the service caused a failure.

Action:
Check the security settings for each underlying service to identify any anomalies.

WCS-26143
Failed to commit changes to Search preferences, encountering {0}.

Category:
Other

Cause:
Some underlying MDS issues with the Preferences implementation is causing the failure.

Action:
Contact Oracle Support Services.

WCS-26144
An error occurred while parsing the default full crawl interval "{0}".

Category:
Other

Cause:
An internal error occurred while trying to instantiate a DatatypeFactory for parsing Duration values.

Action:
Contact Oracle Support Services.

WCS-26145
An invalid full crawl interval "{0}" was specified in adf-config.xml.

Category:
Other

Cause:
The fullCrawlInterval attribute of the crawl-properties element in adf-config.xml may not be well-formed or valid.

Action:
Make sure that the fullCrawlInterval attribute value is in the duration format as defined in the W3C XML Schema 1.0.

WCS-26146
An invalid full crawl interval "{0}" was specified for service {1}.

Category:
Other

Cause:
The fullCrawlInterval attribute of a service-crawl-properties element in adf-config.xml may not be well-formed or valid.

Action:
Make sure that the fullCrawlInterval attribute value is in the duration format as defined in the W3C XML Schema 1.0.

WCS-26147
An error occurred while parsing the crawl-properties element in adf-config.xml.

Category:
Other

Cause:
An internal error occurred while trying to parse the crawl-properties element in adf-config.xml.

Action:
Contact Oracle Support Services.

WCS-26161
Encountered a message from MDS indicating unsupported operation while deleting a Saved Search with ID "{0}", MO Reference name "{1}", and MO Absolute Name "{2}".

Category:
Other

Cause:
The deletion of a Saved Search triggered some MDS operation that is not supported on said Saved Search document.

Action:
Contact Oracle Support Services

WCS-26162
A saved search with name "{0}" already exists, use a different name.

Category:
Other

Cause:
The name you provided is used already.

Action:
Use a different name when saving your searches.

WCS-26163
Duplicated identifier found while adding a saved search with a identifier "{0}" with Metadata Object name "{1}"; replacing with "{2}".

Category:
Other

Cause:
The system is in an inconsistent state where an old ID is used on a new Saved Search.

Action:
This is a cautionary message only. Appropriate actions will be taken to fix the uniqueness issue.

WCS-26164
Encountered an MDS exception "{1}" with message "{2}" while querying for saved searches with condition "{0}".

Category:
Other

Cause:
An underlying MDS exception occurred during the query execution.

Action:
Contact Oracle Support Services.

WCS-26165
Failed to retrieve a Saved Search in MDS with Metadata Object reference name "{0}", and absolute name "{1}".

Category:
Other

Cause:
This can be due to an MDS misconfiguration issue.

Action:
Contact Oracle Support Services.

WCS-26166
Failed to retrieve most recent Saved Searches in MDS with Metadata Object reference name "{0}", and absolute name "{1}".

Category:
Other

Cause:
This can be due to an MDS misconfiguration issue.

Action:
Contact Oracle Support Services.

WCS-26167
Encountered an MDS exception "{2}" with message "{3}" while saving a saved search with Metadata Object name "{0}", and absolute name "{1}".

Category:
Other

Cause:
This can be due to an MDS misconfiguration issue.

Action:
Refer to MDS documentation to resolve a lookup failure with the given details.

WCS-26168
Encountered an MDS exception "{2}" with message "{3}" while deleting a saved search with Metadata Object name "{0}", and absolute name "{1}".

Category:
Other

Cause:
An underlying MDS exception caused this.

Action:
Contact Oracle Support Services.

WCS-26169
Encountered an MDS reference exception "{1}" with message "{2}" while retrieving Saved Search Metadata Object reference in MDS with Metadata Object absolute name "{0}".

Category:
Other

Cause:
An underlying MDS exception caused this.

Action:
Contact Oracle Support Services.

WCS-26170
Saved Search Update aborted because the Metadata Object (MO) Reference for ID "{0}" is not found.

Category:
Other

Cause:
This can be due to an MDS misconfiguration issue.

Action:
Refer to MDS documentation to resolve a lookup failure with the given details.

WCS-26171
Encountered an MDS exception "{1}" with message "{2}" while creating a document with Metadata Object absolute name "{0}".

Category:
Other

Cause:
An underlying MDS exception caused this.

Action:
Contact Oracle Support Services.

WCS-26181
Failed to retrieve UI Metadata in MDS with Metadata Object reference name "{0}", and absolute name "{1}".

Category:
Other

Cause:
This can be due to an MDS misconfiguration issue.

Action:
Refer to MDS documentation to resolve a lookup failure with the given details.

WCS-26182
Encountered an MDS exception "{2}" with message "{3}" while adding a UI Metadata with identifier "{0}" and Metadata Object name "{1}".

Category:
Other

Cause:
An underlying MDS exception caused this.

Action:
Contact Oracle Support Services.

WCS-26183
Encountered an MDS exception "{1}" with message "{2}" while querying for UI Metadata with condition "{0}".

Category:
Other

Cause:
An underlying MDS exception caused this.

Action:
Contact Oracle Support Services.

WCS-26184
Encountered an MDS reference exception "{1}" with message "{2}" while looking up UI Metadata Object reference in MDS with Metadata Object absolute name "{0}".

Category:
Other

Cause:
An underlying MDS exception caused this.

Action:
Contact Oracle Support Services.

WCS-26185
Encountered an MDS exception "{0}" with message "{1}" while creating default service list in MDS.

Category:
Other

Cause:
An underlying MDS exception occurred during the creation of the service list in the Search UI Metadata.

Action:
Contact Oracle Support Services.

WCS-26186
Encountered an MDS exception "{1}" with message "{2}" while updating UI Metadata Object in MDS with Metadata Object absolute name "{0}".

Category:
Other

Cause:
An underlying MDS exception occurred during the update of the Search UI Metadata.

Action:
The update by this user will be lost. Refresh the page and continue.

WCS-26201
Encountered "{2}" with message "{3}" when loading QueryManager Class "{0}" for service "{1}" in Extension Handler.

Category:
Other

Cause:
Any one of the possible exceptions resulting from loading a class using reflection occurred.

Action:
Contact Oracle Support Services.

WCS-26202
Search Extension Registry loading failed, encountering "{0}" with message "{1}".

Category:
Other

Cause:
There may be misconfiguration in the adf-config.xml file.

Action:
Check your adf-config.xml to see if the Search extension registry is declared. Make sure that the version numbers match those specified in the documentation.

WCS-26203
Cannot access children, encountering "{0}" with message "{1}".

Category:
Other

Cause:
Encountered a Search exception when trying to extract children executors from a Query Federator

Action:
Contact Oracle Support Services.

WCS-26204
Failed in creating a Row QueryHandler for "{0}", encountering "{1}" with message "{2}".

Category:
Other

Cause:
A run time or Search exception was encountered. This can be due to the creation process timing out or any service-specific creation failure.

Action:
Contact Oracle Support Services.

WCS-26205
{0} occurred during the preparation of Query Handler with identifier "{1}".

Category:
Other

Cause:
The Query Handlers are prepared in parallel; the preparation failed because of underlying concurrency mechanism.

Action:
Contact Oracle Support Services.

WCS-26206
Creation of Row QueryHandler did not complete within the time limit for executor {0}.

Category:
Other

Cause:
The time allowed to create a Row QueryHandler is not sufficient.

Action:
If this problem is persistent, increase the value of prepareExecutionTimeoutMs parameter in adf-search-config section of adf-config.xml file.

WCS-26207
Oracle Secure Enterprise Search (SES) is not configured. Search query cannot be executed.

Category:
Other

Cause:
Oracle Secure Enterprise Search (SES) is not configured.

Action:
Oracle Secure Enterprise Search (SES) must be configured before search query can be executed.

WCS-26221
Search execution was interrupted because of "{0}" with message "{1}".

Category:
Other

Cause:
The service search execution was interrupted because of a timeout or a failure.

Action:
Examine the log to determine the root cause and take appropriate debugging steps.

WCS-26222
Search execution failure for service "{0}", encountering "{1}" with message "{2}".

Category:
Other

Cause:
An exception occurred while executing search.

Action:
Examine the log to determine the root cause and take appropriate debugging steps.

WCS-26223
Search executors not initialized due to null Query.

Category:
Other

Cause:
Query is not set so no Query Executors have been initialized.

Action:
No action is necessary; this is just a diagnostic message.

WCS-26224
Query Handler creation of {0} was interrupted.

Category:
Other

Cause:
The Query Handler named took too long to be created and was timed out.

Action:
Increase your prepareTimeoutMs value in the search-config section of the adf-config.xml file

WCS-26225
{0} occurred during Search result transfer of service with identifier "{1}" with message "{2}"

Category:
Other

Cause:
An unexpected exception occurred when transferring search results after execution.

Action:
Contact Oracle Support Services.

WCS-26226
Failed to extract Refiners from executor {0}.

Category:
Other

Cause:
Failure occurred when extracting refiners from the execution results of an executor.

Action:
Inspect the failure message and fix accordingly.

WCS-26227
Column not found for {0}

Category:
Other

Cause:
When formulating an query with a condition based on an attribute, the attribute is not found.

Action:
Inspect your input and make sure that the values for the attributes are one of "name", "title", "description", "creator", "created", "modifier", "modified", and "tags".

WCS-26228
Parsing of date operand "{0}" failed

Category:
Other

Cause:
When formulating an query with a condition based on a date attribute, the date value specified fails to be parsed.

Action:
Inspect your date attribute and make sure that it follows the format: "yyyy-MM-dd"

WCS-26229
Search query execution timed out for service "{0}".

Category:
Other

Cause:
The search query does not complete within the time limit.

Action:
Re-try the search query again later.

WCS-26281
getSessionVersion failed with Exception {0}

Category:
Other

Cause:
Operation to get Sessions Version from SES failed.

Action:
Examine the log files to extract the root cause to identify the proper debugging steps.

WCS-26282
getAllFacets failed with Exception {0}

Category:
Other

Cause:
Operation to fetch allfacets from SES failed.

Action:
Examine the log files to extract the root cause to identify the proper debugging steps.

WCS-26283
getAllAttributes failed with Exception {0}

Category:
Other

Cause:
Operation to fetch allattributes from SES failed.

Action:
Examine the log files to extract the root cause to identify the proper debugging steps.

WCS-26284
getAllAttributes failed with Exception {0}

Category:
Other

Cause:
Operation to fetch all attributes from SES failed.

Action:
Examine the log files to extract the root cause to identify the proper debugging steps.

WCS-26322
Skipping consumption of a Date ComplexPredicate with 1 child because its type {0} is not AttributePredicate<Calendar> as expected.

Category:
Other

Cause:
A Date ComplexPredicate was passed down from the query that contains the wrong type for its single child.

Action:
Contact Oracle Support Services.

WCS-26323
Skipping consumption of a Date ComplexPredicate with 2 children because their types {0} and {1} are not AttributePredicate<Calendar> as expected.

Category:
Other

Cause:
A Date ComplexPredicate was passed down from the query that contains the wrong type for both its children.

Action:
Contact Oracle Support Services.

WCS-26324
Skipping consumption of a Date ComplexPredicate with {0} children because we only support at most two.

Category:
Other

Cause:
Too many children are passed down the Date ComplexPredicate when we can only handle two.

Action:
Contact Oracle Support Services.

WCS-26325
Execution of the search query to show all rows did not complete within the time limit for executor {0}.

Category:
Other

Cause:
The time allowed to execute the search query to show all rows is not sufficient.

Action:
Increase the value of showAllExecutionTimeoutMs parameter in adf-search-config section of adf-config.xml file.

WCS-26326
Execution of the search query did not complete within the time limit for executor {0}.

Category:
Other

Cause:
The time allowed to execute the search query is not sufficient.

Action:
If this problem is persistent, increase the value of executionTimeoutMs parameter in adf-search-config section of adf-config.xml file.

WCS-26327
Query execution failed for {0}.

Category:
Other

Cause:
Query execution failed.

Action:
Examine the log files to extract the root cause to identify the proper debugging steps.

WCS-26328
Search failure: time out error

Category:
Other

Cause:
Search execution timed out.

Action:
Examine the log files to extract the root cause to identify the proper debugging steps.

WCS-26329
Search failure: problem preparing search executor

Category:
Other

Cause:
Unable to create a search executor.

Action:
Examine the log files to extract the root cause to identify the proper debugging steps.

WCS-26330
Search failure: problem with execution

Category:
Other

Cause:
Search execution problem.

Action:
Examine the log files to extract the root cause to identify the proper debugging steps.

WCS-26331
Search failure: problem with adding refiner

Category:
Other

Cause:
Unable to add refiner.

Action:
Examine the log files to extract the root cause to identify the proper debugging steps.

WCS-26332
Search failure: problem with removing refiner

Category:
Other

Cause:
Unable to remove refiner.

Action:
Examine the log files to extract the root cause to identify the proper debugging steps.

WCS-26333
Search failure: problem with updating refiner

Category:
Other

Cause:
Unable to update the refiner.

Action:
Examine the log files to extract the root cause to identify the proper debugging steps.

WCS-26341
Search UI Metadata Lookup Failed: {0}

Category:
Other

Cause:
The UI Metadata document necessary for rendering Search views could not be found.

Action:
Refer to the error messages presented in the dialog box and act accordingly.

WCS-26342
Search UI Metadata Update Failed: {0}

Category:
Other

Cause:
The UI Metadata document necessary for rendering Search views could not be updated (customized).

Action:
Refer to the error messages presented in the dialog box and act accordingly.

WCS-26343
Search Options Update Failed

Category:
Other

Cause:
An MDS error caused the update of search options to fail.

Action:
Contact Oracle Support Services.

WCS-26361
Failed to update the last used date / time of saved search with ID "{0}".

Category:
Other

Cause:
An MDS error caused the update of the Saved Search document to fail when updating the last accessed date.

Action:
Contact Oracle Support Services.

WCS-26362
Saved Search Update Failed

Category:
Other

Cause:
An error occurred when trying to update a Saved Search.

Action:
Refer to the error messages presented in the dialog box and act accordingly.

WCS-26363
Saved Search Creation Failed

Category:
Other

Cause:
An error occurred when trying to create a Saved Search.

Action:
Refer to the error messages presented in the dialog box and act accordingly.

WCS-26364
Saved Search Deletion Failed

Category:
Other

Cause:
An error occurred when trying to delete a Saved Search.

Action:
Refer to the error messages presented in the dialog box and act accordingly.

WCS-26365
Failed to delete saved search with ID "{0}".

Category:
Other

Cause:
An MDS error caused the deletion of the Saved Search document to fail.

Action:
Contact Oracle Support Services.

WCS-26366
Failed to update the sharing setting of saved search with ID "{0}".

Category:
Other

Cause:
An MDS error caused the update of the Saved Search document to fail when updating the sharing setting.

Action:
Contact Oracle Support Services.

WCS-26367
Saved search with ID "{0}" could not be found.

Category:
Other

Cause:
Saved search was deleted by another user.

Action:
Refresh page to get updated list of saved searches.

WCS-26381
Resource ID is not available to show the resource.

Category:
Other

Cause:
A link to render a resource did not carry the unique identifier for that resource and therefore could not perform the rendering.

Action:
Contact Oracle Support Services.

WCS-26391
Encountered an exception "{2}" with message "{3}" while populating Data Flavor "{0}" of "{1}" class.

Category:
Other

Cause:
Failed to populate the given Data Flavor in the Resource Catalog Adapter.

Action:
Examine the log for the root cause and take appropriate debugging steps.

WCS-26392
Failed to initialize Search service context DirContext Schema with message "{0}"

Category:
Other

Cause:
A naming exception was encountered when binding attributes while initializing the Resource Catalog schema for the Search service.

Action:
Contact Oracle Support Services.

WCS-26393
Failed to get attributes of resource "{0}"

Category:
Other

Cause:
Failed to get attributes of a given resource.

Action:
Examine the log for the root cause and take appropriate debugging steps.

WCS-26396
Search Box Size not a number - "{0}". Using Default size instead.

Category:
Other

Cause:
taskflow parameter passed to this component not an integer.

Action:
Examine the taskflow parameter and replace value with a number.

WCS-26397
Search Taskflow ID does not correspond to a valid taskflow. Using Default taskflow instead.

Category:
Other

Cause:
taskflow parameter passed to this component not a valid taskflow id.

Action:
Examine the taskflow parameter and replace with appropriate value.

WCS-26398
Search Scope ID parameter value is not a Scope object - "{0}".

Category:
Other

Cause:
taskflow parameter EL or value is not a Scope object

Action:
Examine the taskflow parameter and replace value with a valid Scope object.

WCS-26399
Service with service ID: "{0}" is not registered and cannot be included in Categories list.

Category:
Other

Cause:
Service Id is not a registered service.

Action:
Have an administrator remove service from Services to be included list.

WCS-26400
Locale or Service Registry not found.

Category:
Other

Cause:
Taskflow is not in an appropriate application or adf context was lost.

Action:
Refresh page or place taskflow in appropriate template.

WCS-26401
Encountered "{0}" during proxy login with application entity "{1}" to Oracle SES at [{2}], as search user "{3}".

Category:
Other

Cause:
The proxy login operation encountered error. Some underlying exception is causing the error.

Action:
Refer to the root exception and identify the proper debugging steps.

WCS-26402
Received status "{0}" during proxy login with application entity "{1}" to Oracle SES at [{2}], as search user "{3}". Defaulting to public.

Category:
Other

Cause:
The application entity may not have been provisioned in the identity management system used by SES, or its password may have been expired.

Action:
Log on to the Oracle SES administration tool and make sure that the application entity has been provisioned. Then make sure that the account is enabled on the identity management system and has not expired.

WCS-26403
Federation Trusted Entity parameters not configured. Search as public user on Oracle SES.

Category:
Other

Cause:
Federation Trusted Entity parameters not configured.

Action:
Configure Federation Trusted Entity parameters.

WCS-26421
Failed to initialize data group ID from {0} in {1}, encountering {2}

Category:
Other

Cause:
Either the group ID in question does not exist or SES is down.

Action:
Make sure that SES is up and check the group IDs present on SES.

WCS-26422
Failed to discover attributes from {0} in {1}, encountering {2}

Category:
Other

Cause:
Some underlying exception is causing the discovery of attributes from SES to fail.

Action:
Refer to the root exception and identify the proper debugging steps.

WCS-26423
No attributes discovered from {0} in {1}

Category:
Other

Cause:
The SES instance in question does not offer any attributes to query on.

Action:
Confirm that Oracle SES is up.

WCS-26424
Failed to discover info source nodes from {0} in {1}, encountering {2}

Category:
Other

Cause:
Some underlying exception is causing the discovery of info source nodes of SES to fail.

Action:
Refer to the root exception and identify the proper debugging steps.

WCS-26441
Retrieving the SES Reference failed with Connection Architecture

Category:
Other

Cause:
Something occurred when getReference of the SesReferenceable is called.

Action:
Refer to the root exception and identify the proper debugging steps.

WCS-26442
Looking up the SES Connection failed with Connection Architecture

Category:
Other

Cause:
Encountered a JCA ResourceException when calling getConnection on the connection factory for Searchlets.

Action:
Refer to the root exception and identify the proper debugging steps.

WCS-26443
Connection entry "{0}" not found

Category:
Other

Cause:
The specified connection entry is not in connections.xml

Action:
Add the specified connection entry to connections.xml

WCS-26444
Invalid value for addrType attribute in "{1}" entry. Expected value is "{0}"

Category:
Other

Cause:
Incorrect value for addrType attribute found in connections.xml

Action:
Update connections.xml with the correct value for addrType attribute

WCS-26451
Failed to create an instance of class "{0}"

Category:
Other

Cause:
Failed creating an instance of the XML object representing an SES admin object.

Action:
A RuntimeException would have been thrown to propagate the underlying Exception causing this. Please inspect the log to see what else can be done to fix the issue.

WCS-26452
This command is not supported for the version of SES running on the target SES instance.

Category:
Other

Cause:
The version of SES running on the target SES instance does not support this command.

Action:
This command requires SES 11.2.2.2.0 or later.

WCS-26461
Failed to marshal SES Filter for Advanced Search due to JAXB issues - {0}

Category:
Other

Cause:
A JAXB problem has caused the marshalling of an SES filter before sending it to SES for execution.

Action:
Examine the log to look at the XML structure to verify validity.

WCS-26462
SES Search Execution failed, encountering "{0}" with message "{1}".

Category:
Other

Cause:
The cause is embedded in the Exception and can be SES-specific.

Action:
Examine the log files to extract the root cause to identify the proper debugging steps.

WCS-26463
Can not convert SES Result Element value from {0} to {1}

Category:
Other

Cause:
Conversion from SES Result Element value failed.

Action:
No action is needed. The conversion will default to using String

WCS-26464
Cannot find attribute mapping for column {0}

Category:
Other

Cause:
You have specified a column ID that cannot be found in the list of SES attributes.

Action:
Examine your SES installation and make sure the attribute has a valid column ID.

WCS-26465
Failed to create JAXBContext using package {0}

Category:
Other

Cause:
A JAXBContext instance could not be created for the SES cluster deserializer.

Action:
Make sure that the required files can be found in the specified package and that the required classes can be loaded from the classpath.

WCS-26466
Failed to unmarshal byte stream into Cluster

Category:
Other

Cause:
Unmarshalling failed because a JAXBContext instance could not be obtained.

Action:
Make sure that the required files can be found in the specified package and that the required classes can be loaded from the classpath.

WCS-26467
SES search query execution timed out - "{0}" with message "{1}".

Category:
Other

Cause:
The search query does not complete within the time limit.

Action:
Re-try the search query again later.

WCS-26468
Unable to determine whether primary search configuration is elasticsearch.

Category:
Other

Cause:
Review the underlying exception to determine the cause.

Action:
Take action based on the underlying exception.

WCS-26481
SearchCrawlExtension class is not found for service {0}

Category:
Other

Cause:
Portal crawler failed to introspect a Crawlable SPI implementation for the involved service, specified by a URL parameter indicating a crawler's intent to crawl said service. This theoretically should never happen because the URL that crawlers would use are all generated by the Search framework code when crawlers access the root feed that we provide. But if a crawler explicitly starts with a particular service, bypassing our root feed, this warning may result.

Action:
Please check the potential crawling SES instances to make sure that there isn't a source that directly targets a service which has no Crawlable implementation.

WCS-26491
The processing and preparing of the control feed for service {0} failed

Category:
Other

Cause:
The processing and preparing of the control feed for service {0} failed. This could mean that there is a fundamental error in the writing the feed content to the output stream which is to be returned to the caller of the URL.

Action:
Most likely there is a network issue which may well be temporary. Restart the crawl again and see if the problem persists.

WCS-26492
The processing and preparing of the data feed for service {0} failed

Category:
Other

Cause:
The processing and preparing of the data feed for service {0} failed. This could mean that there is a fundamental error in the writing the feed content to the output stream which is to be returned to the caller of the URL.

Action:
Most likely there is a network issue which may well be temporary. Restart the crawl again and see if the problem persists.

WCS-26493
No new entries to crawl for service {0}

Category:
Other

Cause:
There are no items to crawl for the service

Action:
This is expected if there are no items available for crawl. If on the contrary, there are artifacts pertaining to this service, then try scheduling crawl again.

WCS-26501
Creation of the Tags service failed.

Category:
Other

Cause:
The Tags service is loaded by reflection. Something may have happened to cause that to fail.

Action:
Check whether the class name logged is accessible through the class path of the WebCenter Web application.

WCS-26502
Query Federator for the Tags service not created because a Tags Service cannot be created.

Category:
Other

Cause:
The creation of the Tags service was unsuccessful causing the subsequent creation of a Row Query Federator for Tagging to fail.

Action:
Check for /META-INF/tagging-class-config.properties and verify that a correct accessible class is specified.

WCS-26503
findSystemResources failed because of invalid arguments passed in to the method: keywords ({0}).

Category:
Other

Cause:
One of the input arguments to findSystemResources was invalid.

Action:
Make sure that arguments passed in to findSystemResources are all valid.

WCS-26504
findSystemTags failed because of invalid arguments passed in to the method: keywords ({0}).

Category:
Other

Cause:
One of the input arguments to findSystemResources was invalid.

Action:
Make sure that arguments passed in to findSystemTags are all valid.

WCS-26505
lookupTag failed because of invalid arguments passed in to the method: tagName ({0}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26506
findFilteredPersonalTags failed because of invalid arguments passed in to the method: userId ({0}), filter ({1}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26507
findTopFilteredSystemTags failed because of invalid arguments passed in to the method:userId({0}), filter ({1}), count({2}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26508
findTopFilteredPersonalTags failed because of invalid arguments passed in to the method: userId ({0}), filter ({1}), count({3}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26509
findAllTopFilteredSystemTags failed because of invalid arguments passed in to the method:userId({0}), filter({1}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26510
findAllTopFilteredPersonalTags failed because of invalid arguments passed in to the method: userId ({0}), filter ({1}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26511
findSystemTags failed because of invalid arguments passed in to the method: userId ({0}), filter ({1}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26512
findRelatedSystemTagsByTag failed because of invalid arguments passed in to the method: userId ({0}), tagWords ({1}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26513
findRelatedSystemTags failed because of invalid arguments passed in to the method: serviceId ({0}), resourceId({1}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26514
findRecommendedTags failed because of invalid arguments passed in to the method: serviceId ({0}), resourceId ({1}), userId ({2}), count ({3}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26515
deleteTag failed because of invalid arguments passed in to the method: tag ({0}).

Category:
Other

Cause:
One of the input arguments is invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26516
deletePersonalTags failed because of invalid arguments passed in to the method: userId ({0}), tagWord ({1}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26517
renamePersonalTags failed because of invalid arguments passed in to the method: userId ({0}), oldTagWord ({1}) newTagWord({2}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26518
renamePersonalTags failed because of invalid arguments passed in to the method: userId ({0}), tagWord ({1}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26519
getTagsByName failed because of invalid arguments passed in to the method: userId ({0}), tagWord ({1}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26520
lookupResource failed because of invalid arguments passed in to the method: serviceId ({0}), resourceId({1}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26521
createNewResource failed because of invalid arguments passed in to the method: serviceId ({0}), resourceId ({1}), resource name ({2}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26522
findFilteredPersonalResource failed because of invalid arguments passed in to the method: userId ({0}), filter ({1}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26523
findSystemResources failed because of invalid arguments passed in to the method: userId ({0}), userFilters ({1}), tagFilters ({2}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26524
findPersonalResources failed because of invalid arguments passed in to the method: userId ({0}), userFilters ({1}), tagFilters ({2}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26525
findRelatedSystemResources failed because of invalid arguments passed in to the method: serviceId ({0}), resourceId ({1}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26526
findRelatedUsers failed because of invalid arguments passed in to the method: serviceId ({0}), resourceId ({1}).

Category:
Other

Cause:
One of the input arguments is invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26527
findRelatedUsersByTag failed because of invalid arguments passed in to the method: userId({0}), tagWords ({1}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26528
createNewBookmark failed because of invalid arguments passed in to the method: userId ({0}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26529
lookupBookmark failed because of invalid arguments passed in to the method: serviceId ({0}), resourceId ({1}, userId ({2}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26530
saveBookmark failed because of invalid arguments passed in to the method: bookmark ({0}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26531
deleteBookmark failed because of invalid arguments passed in to the method: bookmark ({0}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26532
A bookmark has been updated at the same time.

Category:
Other

Cause:
There was a concurrent update on the bookmarks.

Action:
Ask user to retry the operation.

WCS-26533
A database exception was thrown (for example., Unique Key constraint violation error).

Category:
Other

Cause:
Tried to insert a duplicate object.

Action:
Retry the action.

WCS-26534
Resource can not be displayed because the service with ID {0} is not found in the Service Registry.

Category:
Other

Cause:
Service definition is not found in Service Registry.

Action:
Please register the service in Service Registry

WCS-26535
Tags service is not available due to {0}.

Category:
Other

Cause:
Check the cause specified in the message.

Action:
Act appropriately to reverse the cause.

WCS-26536
Resource can not be displayed because the authorizerClass {0} is not found.

Category:
Other

Cause:
Class specified by authorizerClass is not found.

Action:
Check the class path of the application to verify inclusion of the authorizerClass.

WCS-26537
findPopularTags failed because of invalid arguments passed in to the method: userId ({0}), order ({1}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26538
findPopularTags failed because of invalid arguments passed in to the method: userId ({0}), serviceId ({1}), resourceId ({2}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26539
findUpdatedResources failed because of invalid arguments passed in to the method: serviceId ({0}), date ({1})).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26540
getTags failed because of invalid arguments passed in to the method: serviceId ({0}), resourceId ({1})).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Make sure that arguments passed in are all valid.

WCS-26541
Error encountered while publishing to activity stream due to {0}.

Category:
Other

Cause:
Error caused by Activity Stream

Action:
Turn on the logging to finest to check the exception detail.

WCS-26542
Error encountered while retrieving user profile due to {0}.

Category:
Other

Cause:
Error caused by Profile server

Action:
Turn on the logging to finest to check the exception detail.

WCS-26543
Error encountered while renaming personal tags.

Category:
Other

Cause:
The creation of the Tagging Service failed or input arguments were invalid

Action:
Turn on the logging to finest to check the exception detail.

WCS-26544
Error encountered while deleting personal tags.

Category:
Other

Cause:
The creation of the Tagging Service failed or input arguments were invalid

Action:
Turn on the logging to finest to check the exception detail.

WCS-26545
Error encountered while finding personal tags.

Category:
Other

Cause:
The creation of the Tagging Service failed or input arguments were invalid

Action:
Turn on the logging to finest to check the exception detail.

WCS-26546
Error encountered while finding personal resources.

Category:
Other

Cause:
The creation of the Tagging Service failed or input arguments were invalid

Action:
Turn on the logging to finest to check the exception detail.

WCS-26547
saveBookmark callback failed for service {0}.

Category:
Other

Cause:
The specified service encountered an internal error.

Action:
Make sure that the service is configured correctly and that arguments passed in are all valid.

WCS-26548
service-definition.xml requires a resource-type element and one or more object-type elements.

Category:
Other

Cause:
The service-definition.xml does not have the appropriate components.

Action:
Add a resource-type and an object type to the service-definition.xml

WCS-26601
No service ID or resource ID - cannot perform {0}.

Category:
Other

Cause:
The consumption of the EditBookmarkBean from the view layer did not pass in the service or the resource IDs necessary.

Action:
Check the view layer to make sure that the resourceId and the serviceId parameters are passed into the page flow scope.

WCS-26602
Cannot create a recommended list because the Tags service cannot be created.

Category:
Other

Cause:
The creation of the Tags service was unsuccessful, so the recommended list could not be created.

Action:
Check for /META-INF/tagging-class-config.properties and verify that a correct accessible class is specified.

WCS-26603
Bookmark cannot be loaded because Tags service cannot be created.

Category:
Other

Cause:
The creation of the Tags service was unsuccessful, so the bookmark object could not be created.

Action:
Check for /META-INF/tagging-class-config.properties and verify that a correct accessible class is specified.

WCS-26604
Bookmark saving failed because a Tags service cannot be created.

Category:
Other

Cause:
The creation of the Tags service was unsuccessful, so the bookmark could not be saved.

Action:
Check for /META-INF/tagging-class-config.properties and verify that a correct accessible class is specified.

WCS-26605
lookupBookmark failed because of invalid arguments passed in to the method: service ID ({0}), resource ID ({1}), and user ID ({2}).

Category:
Other

Cause:
One of the input arguments to lookupBookmark was invalid.

Action:
Make sure that arguments passed in to lookupBookmark are all valid.

WCS-26606
createBookmark failed because of invalid arguments passed in to the method: service ID ({0}), resource ID ({1}), resource name ({2}), and user ID ({3}).

Category:
Other

Cause:
One of the input arguments to createBookmark was invalid.

Action:
Make sure that arguments passed in to createBookmark are all valid.

WCS-26607
findRecommendedTags failed because of invalid arguments passed in to the method: service ID ({0}), resource ID ({1}), and user ID ({2}).

Category:
Other

Cause:
One of the input arguments to findRecommendedTags was invalid.

Action:
Make sure that arguments passed in to findRecommendedTags are all valid.

WCS-26608
This item has been tagged by the same user at the same time. Re-apply your changes.

Category:
Other

Cause:
Concurrent update on the bookmarks.

Action:
Retry the action.

WCS-26609
Some items whose tags are to be renamed have been updated at the same time. Re-apply your changes.

Category:
Other

Cause:
Concurrent update on the bookmarks.

Action:
Retry the action.

WCS-26610
Some items whose tags are to be deleted have been updated at the same time. Re-apply your changes.

Category:
Other

Cause:
Concurrent update on the bookmarks.

Action:
Retry the action

WCS-26611
Tagging Button or Tagging Menu Item will not be rendered because the region "tagging-launch-dialog" is not included in the page.

Category:
Other

Cause:
While building the page, the tagging button was added without adding a corresponding popup task flow.

Action:
Check to make sure the "tagging-launch-dialog" region is indeed included in the page.

WCS-26612
The tagging component "{0}" was not rendered because the underlying Tags service was not available.

Category:
Other

Cause:
The underlying Tags service was not available.

Action:
Look for the errors causing the underlying Tags service to not be available and fix them.

WCS-26613
Error encountered while renaming personal tags.

Category:
Other

Cause:
The creation of the Tagging Service failed or input arguments were invalid

Action:
Turn on the logging to finest to check the exception detail.

WCS-26614
Error encountered while deleting personal tags.

Category:
Other

Cause:
The creation of the Tagging Service failed or input arguments were invalid

Action:
Turn on the logging to finest to check the exception detail.

WCS-26615
Error encountered while finding personal tags.

Category:
Other

Cause:
The creation of the Tagging Service failed or input arguments were invalid

Action:
Turn on the logging to finest to check the exception detail.

WCS-26616
Error encountered while finding personal resources.

Category:
Other

Cause:
The creation of the Tagging Service failed or input arguments were invalid

Action:
Turn on the logging to finest to check the exception detail.

WCS-26617
Error encountered while updating resource with serviceId: {0} resourceId:{1} and resourceName:{2}.

Category:
Other

Cause:
There was a problem saving the updated resource.

Action:
Turn on the logging to finest to check the exception detail.

WCS-26618
This item has been deleted by another user while being tagged. Refresh this page.

Category:
Other

Cause:
Resource was deleted while being tagged.

Action:
Retry the action.

WCS-26621
EncodeBegin error for TaggingPopup tag

Category:
Other

Cause:
Catastrophic error

Action:
Contact Oracle Support Services.

WCS-26622
Error in Tagging Button tag usage - component {0} has attribute {1} whose value is {2}.

Category:
Other

Cause:
The attribute mentioned in the error cannot be null, but no value was found for this attribute.

Action:
Correct your tag usage.

WCS-26623
Component {0} does not support client listeners.

Category:
Other

Cause:
Tried to add a client listener to a component that does not support client listeners.

Action:
Contact Oracle Support Services.

WCS-26701
Could not determine if primary search configuration is Elasticsearch.

Category:
Other

Cause:
Review the underlying exception to determine the cause.

Action:
Take action based on the underlying exception.

WCS-26702
Invalid query string {0}, returning empty results.

Category:
Other

Cause:
The query string for searching is probably empty or null.

Action:
Ensure you give a valid search query string.

WCS-26703
Invalid JSON query format {0}.

Category:
Other

Cause:
Review the underlying exception to determine the cause.

Action:
Take action based on the underlying exception.

WCS-26704
Invalid Search Response {0} for query {1} to url {2}.

Category:
Other

Cause:
Review the response received and determine the cause.

Action:
Take action based on the response received.

WCS-26705
Connection failure while obtaining search result.

Category:
Other

Cause:
Review the underlying exception to determine the cause.

Action:
Take action based on the underlying exception.

WCS-26706
Unsupported search facet {0}.

Category:
Other

Cause:
Review the underlying exception to determine the cause.

Action:
Take action based on the underlying exception.

WCS-26707
Could not obtain search provider factory.

Category:
Other

Cause:
Review the underlying exception to determine the cause.

Action:
Take action based on the underlying exception.

WCS-26708
Crawl failed for service {0}.

Category:
Other

Cause:
Review the underlying exception to determine the cause.

Action:
Take action based on the underlying exception.

WCS-26709
No records to crawl for service {0}.

Category:
Other

Cause:
There is no data to crawl for the given service.

Action:
No action required. If the service does have some data, then review the logs for any other exceptions that might explain why service data is not getting crawled.

WCS-26710
Could not determine last crawled time for service {0} while performing partial crawl, performing full crawl therefore.

Category:
Other

Cause:
Full crawl has not been run on service data yet.

Action:
Full crawl needs to be performed before partial crawl.

WCS-26711
Invalid Crawl source {0}.

Category:
Other

Cause:
Crawling not supported for the given source.

Action:
Contact Oracle Support Services.

WCS-26712
Type and mapping creation failed for service {0} with response {1}.

Category:
Other

Cause:
Review the underlying exception to determine the cause.

Action:
Take action based on the underlying exception.

WCS-26713
Elasticsearch is not configured, crawl no-op for type {0}.

Category:
Other

Cause:
Elasticsearch is not configured.

Action:
Ensure you have configured Elasticsearch for the application.

WCS-26714
No new entries to crawl for service {0}.

Category:
Other

Cause:
There are no items to crawl for the service.

Action:
This is expected if there are no items available for crawl. If on the contrary, there are artifacts pertaining to this service, then try scheduling crawl again.

WCS-26715
Failure to set last crawled time for service {0} due to {1}.

Category:
Other

Cause:
Review the underlying exception for the cause.

Action:
Take action based on the underlying exception.

WCS-26716
Error occurred while obtaining MBean server connection.

Category:
Other

Cause:
Review the underlying exception for the cause.

Action:
Contact Oracle Support Services.

WCS-26717
Crawler source is null.

Category:
Other

Cause:
The crawler source object passed is null.

Action:
Ensure that you have passed non-null object.

WCS-26718
Crawler source type is null.

Category:
Other

Cause:
The crawler source type object passed is null.

Action:
Ensure that you have passed non-null object.

WCS-26719
Error occurred while obtaining the details of external application connection {0}.

Category:
Other

Cause:
Review the underlying exception for the cause.

Action:
Contact Oracle Support Services.

WCS-26720
Error occurred while obtaining external application connections.

Category:
Other

Cause:
Review the underlying exception for the cause.

Action:
Contact Oracle Support Services.

WCS-26721
Error occurred while creating external application connection {0}.

Category:
Other

Cause:
Review the underlying exception for the cause.

Action:
Contact Oracle Support Services.

WCS-26722
Error occurred while saving external application connection {0}.

Category:
Other

Cause:
Review the underlying exception for the cause.

Action:
Contact Oracle Support Services.

WCS-26723
Error occurred while looking up external application connection {0}.

Category:
Other

Cause:
Review the underlying exception for the cause.

Action:
Contact Oracle Support Services.

WCS-26724
Error occurred while editing external application connection {0}.

Category:
Other

Cause:
Review the underlying exception for the cause.

Action:
Contact Oracle Support Services.

WCS-26725
Error occurred while setting credentials for external application connection.

Category:
Other

Cause:
Review the underlying exception for the cause.

Action:
Contact Oracle Support Services.

WCS-26726
Crawler schedule is null.

Category:
Other

Cause:
The crawler schedule object passed is null.

Action:
Ensure that you have passed non-null object.

WCS-26727
Error occurred while creating/updating the crawler schedule for source: {0}.

Category:
Other

Cause:
Review the underlying exception for the cause.

Action:
Contact Oracle Support Services.

WCS-26728
Error occurred while updating crawler schedule for source: {0}, status: {1}.

Category:
Other

Cause:
Review the underlying exception for the cause.

Action:
Contact Oracle Support Services.

WCS-26729
Crawler schedule not found for source: {0}.

Category:
Other

Cause:
Review the underlying exception for the cause.

Action:
Contact Oracle Support Services.

WCS-26730
Error occurred while executing the crawler for type: {0}.

Category:
Other

Cause:
Review the underlying exception for the cause.

Action:
Contact Oracle Support Services.

WCS-26731
Error occurred while enabling crawler source: {0}.

Category:
Other

Cause:
Review the underlying exception for the cause.

Action:
Contact Oracle Support Services.

WCS-26732
Error occurred while getting crawler schedule for source: {0}.

Category:
Other

Cause:
Review the underlying exception for the cause.

Action:
Contact Oracle Support Services.

WCS-26733
Crawler is already executing for source: {0}.

Category:
Other

Cause:
Trying to perform an operation which is not supported while crawler is executing.

Action:
Ensure that you perform the operation once the crawler execution is complete.

WCS-26734
Create Mapping failed for type {0} due to {1}. Original request sent to url {2} was {3}.

Category:
Other

Cause:
Creating mapping in Elasticsearch failed due to reason mentioned.

Action:
Review the cause and take action based on that. Run crawl again.

WCS-26735
Search connection configured is not of type Elasticsearch. Unexpected response {0} received.

Category:
Other

Cause:
Unexpected response received while trying to determine if search connection configured is elastic.

Action:
If your search is SES based, ignore this warning. Otherwise review the cause and take action based on that. Restart the Portal Server afterwards.

WCS-26736
Primary Search Connection URL {0} or index {1} not configured.

Category:
Other

Cause:
Search connection URL or search index is not configured

Action:
Configure the search connection and properties and retry.

WCS-26737
Error occurred while trying to fetch search attributes for service {1}

Category:
Other

Cause:
Review the underlying exception for the cause

Action:
Take action based on the underlying exception

WCS-26738
Error occurred while trying to fetch all search attributes configured

Category:
Other

Cause:
Review the underlying exception for the cause

Action:
Take action based on the underlying exception

WCS-26739
Search Attribute {0} was found to be different to {1}. Search Attributes with same name cannot be different.

Category:
Other

Cause:
Search Attributes with same name cannot be different.

Action:
Follow documentation and ensure that search attributes with same name are similar in their attributes.

WCS-26740
Attribute {0} is missing in the configured search attributes for service {1}

Category:
Other

Cause:
Search Attribute is missing in the search-service-attributes.xml which is used to create Elasticsearch mappings and to display custom attributes in search screens.

Action:
Follow documentation and add the missing attribute in the MDS repository.

WCS-26741
Exception while fetching user attributes for Discussions for user: {0}.

Category:
Other

Cause:
Could not fetch Security Attributes from Discussions Crawler Schema.

Action:
Could not fetch Security Attributes.

WCS-26742
Discussions Service is not configured.

Category:
Other

Cause:
Discussions Service is not configured.

Action:
Discussions Service is not configured.

WCS-26743
Exception while fetching partial crawl data.

Category:
Other

Cause:
Failed to parse last crawl time : {0}.

Action:
Could not fetch data for partial crawl.

WCS-26744
Failed to create Elasticsearch index: {0}. Request made : {1}; Response code: {2}; Response data: {3}

Category:
Other

Cause:
Review the underlying exception to determine the cause.

Action:
Take action based on the underlying exception.

WCS-26745
Authorization error while creating Elasticsearch index: {0}.

Category:
Other

Cause:
Review the underlying exception to determine the cause.

Action:
Take action based on the underlying exception.

WCS-26746
Error occurred while creating Elasticsearch index: {0}. Response code: {1}. Response data: {2}

Category:
Other

Cause:
Review the underlying exception to determine the cause.

Action:
Take action based on the underlying exception.

WCS-26747
Could not create elastic search index for source {0}.

Category:
Other

Cause:
Review the underlying exception to determine the cause.

Action:
Take action based on the underlying exception.

WCS-26748
Deleting index failed for {0} due to {1}.

Category:
Other

Cause:
Review the underlying exception to determine the cause.

Action:
Take action based on the underlying exception.

WCS-26749
Index {0} already exists, therefore not creating it.

Category:
Other

Cause:
The index already exists.

Action:
Specify a different alias. If you wish to recreate the index, then delete the said index and retry.

WCS-26750
Failed to create Extractor pipeline in Elasticsearch due to {0}. Original Request: {1}.

Category:
Other

Cause:
Review the underlying exception to determine the cause.

Action:
Take action based on the underlying exception.

WCS-26751
Authorization error while creating Extractor Pipeline in Elasticsearch.

Category:
Other

Cause:
Review the underlying exception to determine the cause.

Action:
Take action based on the underlying exception.

WCS-26752
Error occurred while creating Extractor Pipeline in Elasticsearch: {0}. Response code: {1}.

Category:
Other

Cause:
Review the underlying exception to determine the cause.

Action:
Take action based on the underlying exception.

WCS-26753
Error while getting calendar instance from date.

Category:
Other

Cause:
Either given date or time is invalid.

Action:
No action is necessary; this is just a diagnostic message.

WCS-26754
Get attribute {0} failed with error {1}.

Category:
Other

Cause:
The attribute value is null or invalid.

Action:
No action is necessary; this is just a diagnostic message.

WCS-26755
Bulk Index call failed for service {0} with status {1} and response {2}

Category:
Other

Cause:
Review the status to determine the cause. Alternatively turn on debug logging.

Action:
Take action based on the underlying cause.

WCS-26756
REST call to crawl url {0} failed for service {1} with status {2} and response {3}

Category:
Other

Cause:
Review the status to determine the cause. Alternatively turn on debug logging.

Action:
Take action based on the underlying cause.

WCS-26757
Incorrect data format received from crawl url {0} for service {1}. Expected {2}, got {3}

Category:
Other

Cause:
Review the crawl url and the parameters passed to it.

Action:
Ensure the url stated returns the data in the specified format

WCS-26758
Error while processing control feed for service {0} during crawl

Category:
Other

Cause:
Review the underlying exception to determine the cause.

Action:
Take action based on the underlying exception.

WCS-26759
Unexpected service {0} tagged for exclusion during crawl, will not be honoured

Category:
Other

Cause:
The excludedServiceIds specified in Portal Crawl URL contains an unsupported service id. The supported ones are oracle.webcenter.community, oracle.webcenter.page, oracle.webcenter.list and oracle.webcenter.peopleconnections.profile

Action:
Review the excludedServiceIds specified in Portal Crawl URL

WCS-26760
Error while trying to determine excluded service ids in portal crawl, all services will be included by default

Category:
Other

Cause:
Review the underlying exception to determine the cause.

Action:
Take action based on the underlying exception.

WCS-26761
Failure to get last crawled time for service {0} due to {1}.

Category:
Other

Cause:
Review the underlying exception for the cause.

Action:
Take action based on the underlying exception.

WCS-26762
Bulk Index Request to url {0} resulted in failure: {1}.

Category:
Other

Cause:
Review the crawl failure message for underlying cause.

Action:
Take action based on the underlying cause.

WCS-26763
Crawler {0} was still executing when server was restarted, therefore setting it to failed.

Category:
Other

Cause:
The Crawler was still executing when the server was restarted. The process was halted and therefore marked failed.

Action:
Schedule or invoke another crawl as per your needs.

WCS-26764
Bulk indexing failed for record {0}.

Category:
Other

Cause:
See the log message for the reason for failure.

Action:
Take action based on the failure and invoke another crawl.

WCS-26765
Fetching data feed for crawl url {0} resulted in failure, trying another time. Status = {1}, Message = {2}

Category:
Other

Cause:
See the log message for the reason for failure.

Action:
No action required, we are attempting the request again.

WCS-26766
Fetching data feed for service {0} crawl url {1} resulted in failure, this data will not be crawled.

Category:
Other

Cause:
See the underlying exception for the reason for failure.

Action:
Take action based on the failure and invoke another crawl.

WCS-26767
Crawler is disabled for source: {0}.

Category:
Other

Cause:
Trying to perform an operation which is not supported while crawler is disabled.

Action:
Ensure that you perform the operation once the crawler is enabled.

WCS-26768
Facet creation of {0} failed due to {1}

Category:
Other

Cause:
Review the facet creation message for underlying cause.

Action:
Take action based on the underlying cause.

WCS-26769
Facet updation of {0} failed due to {1}

Category:
Other

Cause:
Review the facet updation message for underlying cause.

Action:
Take action based on the underlying cause.

WCS-26770
Facet deletion of {0} failed due to {1}

Category:
Other

Cause:
Review the facet deletion message for underlying cause.

Action:
Take action based on the underlying cause.

WCS-26771
Fetching Facets failed due to {0}

Category:
Other

Cause:
Review the facet fetch failure message for underlying cause.

Action:
Take action based on the underlying cause.

WCS-26772
Failed to update the alias {0} with the index {1}.

Category:
Other

Cause:
Review the underlying exception to determine the cause.

Action:
Take action based on the underlying exception.

WCS-26773
The response obtained is not a valid JSON format, reason: {0}

Category:
Other

Cause:
Review the underlying exception to determine the cause.

Action:
Take action based on the underlying exception.

WCS-26774
Update Mapping failed for type {0} due to {1}. Original request sent to url {2} was {3}.

Category:
Other

Cause:
Update mapping in Elasticsearch failed due to reason mentioned.

Action:
Review the cause and take action based on that. Run crawl again.

WCS-26775
Error while reading the value for property: {0} from MDS, reason: {1}.

Category:
Other

Cause:
Review the underlying exception to determine the cause.

Action:
Take action based on the underlying cause.

WCS-26776
The configured value for property 'query_string' is not a valid JSON. Value: {0}, failure reason: {1}.

Category:
Other

Cause:
Review the underlying exception to determine the cause.

Action:
Take action based on the underlying cause.

WCS-26777
Unexpected error occured while fetching the metadata of the files to be excluded in search due to {0}.

Category:
Other

Cause:
Review the underlying exception to determine the cause.

Action:
Take action based on the underlying cause.

WCS-26778
Unexpected error occured while fetching the metadata of the files to mime type mapping due to {0}.

Category:
Other

Cause:
Review the underlying exception to determine the cause.

Action:
Take action based on the underlying cause.

WCS-26779
Reindex failed for service {0} with response {1}.

Category:
Other

Cause:
Review the underlying exception to determine the cause.

Action:
Take action based on the underlying exception.

WCS-26780
Reindex failed for record {0}; cause: {1}, status code {2}.

Category:
Other

Cause:
See the log message for the reason for failure.

Action:
Take action based on the failure and invoke reindex again.

WCS-26781
Failed to validate Elasticsearch admin user credentials for {0} due to {1}.

Category:
Other

Cause:
Review the underlying exception to determine the cause.

Action:
Take action based on the underlying exception.

WCS-35006
cannot load metadata from XML node

Category:
Other

Cause:
The content of the data-control file (.dcx) might be invalid.

Action:
Verify that the content in the data-control file (.dcx) is valid.

WCS-35008
Login failed.

Category:
Other

Cause:
The specified user credentials were invalid.

Action:
Provide valid user credentials.

WCS-35013
missing method parameters

Category:
Other

Cause:
The data-control operation was invoked without any parameters.

Action:
Contact Oracle Support Services.

WCS-35016
Retrieving data-control definition from runtime data-control object returned null.

Category:
Other

Cause:
The ADF framework did not set the data-control definition within the runtime data control.

Action:
Contact Oracle Support Services.

WCS-35300
Parameters for the operation are missing.

Category:
Other

Cause:
The ADF framework passed a null parameter map to the data-control operation.

Action:
Contact Oracle Support Services.

WCS-35301
The path parameter is not correct.

Category:
Other

Cause:
The path string that was specified was not a valid JCR repository path.

Action:
Verify that the specified path string is a valid path in the content repository, and that it starts with /.

WCS-35302
The type parameter is not correct.

Category:
Other

Cause:
The type string that was specified was not a valid node type in the JCR repository.

Action:
Make sure the type specified is valid in the content repository on which the data control is based. Both the prefix and the local name should be valid. For example, nt:file and nt:folder are valid types.

WCS-35303
cannot generate XPath query

Category:
Other

Cause:
The parameters that were given in the search operation could not be resolved into a valid XPath query string using the content repository session.

Action:
Ensure the attribute names and prefixes used in the parameters are valid and registered in the JCR repository.

WCS-35304
incorrect attribute {0} specified in the predicate

Category:
Other

Cause:
The specified attribute was not found in the repository.

Action:
Provide a valid attribute name.

WCS-35305
incorrect prefix for the attribute {0} in the predicate

Category:
Other

Cause:
The namespace that was used in the attribute was not correct or not registered in the JCR repository.

Action:
Provide a valid prefix, or report the problem to the provider of the JCR adapter used with the repository.

WCS-35306
cannot resolve attribute {0} using the repository session

Category:
Other

Cause:
An invalid attribute or an unregistered prefix was used in the JCR session.

Action:
Provide a valid attribute name in the JCR repository session.

WCS-35307
operator {0} not supported

Category:
Other

Cause:
An invalid operator was specified.

Action:
Specify a valid operator.

WCS-35309
The XPath query {0} is not supported by the JCR adapter.

Category:
Other

Cause:
The JCR adapter might not have been compliant with the XPath support that is required to work with the Content Repository data control.

Action:
Verify that the XPath query is supported by this JCR adapter.

WCS-35310
error in the JCR repository

Category:
Other

Cause:
An error occurred in the JCR adapter.

Action:
Check the exception's cause and JCR adapter's error log.

WCS-35311
error getting the item's URL

Category:
Other

Cause:
An error occurred while generating the URL for an item.

Action:
Contact Oracle Support Services.

WCS-35312
invalid return attribute name {0}

Category:
Other

Cause:
An invalid Java name was entered. The name of a return attribute must be a valid Java name and must be different from "name", "URL", "path" and "primaryType".

Action:
Verify that the attribute name is valid and is not "name", "URL", "path" and "primaryType".

WCS-35313
invalid return attribute type

Category:
Other

Cause:
An invalid return attribute type was specified. Return attributes must be one of the following JCR types: Boolean, Integer, Double, String, or Date.

Action:
Specify a valid return attribute type.

WCS-35314
cannot get value for attribute {0}

Category:
Other

Cause:
The value for the specified attribute could not be retrieved from the JCR node.

Action:
Verify that the JCR path for the attribute is correct.

WCS-35501
No repository was set in the environment.

Category:
Other

Cause:
No repository was specified for this resource.

Action:
Specify a repository to use in creating the resource.

WCS-35502
could not log on to the content repository

Category:
Other

Cause:
There was a problem logging on to the content repository.

Action:
Verify that the connection and credentials are defined correctly and that the repository is accessible.

WCS-35503
An error occurred while accessing the content repository.

Category:
Other

Cause:
There was a problem accessing the content repository.

Action:
Verify that the content repository is accessible.

WCS-35504
An error occurred while trying to close the connection.

Category:
Other

Cause:
Could not close the content repository connection.

Action:
Verify that the connection is still available, and try to close it again.

WCS-35505
Item {0} is not a file or folder.

Category:
Other

Cause:
An item was specified that is not a file or folder.

Action:
Specify an item that is either a file or a folder.

WCS-35506
Item {0} does not exist.

Category:
Other

Cause:
An item was specified that does not exist.

Action:
Verify that the specified item exists.

WCS-35507
unknown control type: {0}

Category:
Other

Cause:
An unknown control type was specified.

Action:
Specify a known control type.

WCS-35508
{0} does not name a ContentDirContext.

Category:
Other

Cause:
An item was specified that is not a ContentDirContext.

Action:
Verify that the item specified is a ContentDirContext.

WCS-35509
invalid search operation: {0}

Category:
Other

Cause:
An unrecognized search operation was specified.

Action:
Use only recognized search operations.

WCS-35510
unable to generate schema

Category:
Other

Cause:
An error occurred while adding attributes to the schema.

Action:
Make sure the schema attributes are defined properly and are not already bound.

WCS-35511
unable to create DataFlavor

Category:
Other

Cause:
An error occurred while trying to create a DataFlavor from the given MIME type.

Action:
Make sure the MIME type is valid and non-null, and that any referenced classes can be loaded.

WCS-35513
unable to create TaskFlowDescriptor

Category:
Other

Cause:
An error occurred while trying to create a TaskFlowDescriptor object.

Action:
Make sure the required classes are in the classpath.

WCS-35514
This feature is only available in a design environment.

Category:
Other

Cause:
A call to a design time only feature was made from run time.

Action:
Do not call this method from run time code.

WCS-35515
Error getting information for connection {0}. The connection will be skipped in the resource catalog.

Category:
Other

Cause:

Action:

WCS-35516
This factory cannot be used at design time.

Category:
Other

Cause:

Action:

WCS-35517
Not a valid content URL: {0}

Category:
Other

Cause:

Action:

WCS-35518
Error getting information for node ID {0}. This node will be skipped in the resource catalog.

Category:
Other

Cause:

Action:

WCS-35900
Illegal value state, cannot read a value previously streamed.

Category:
Other

Cause:
The application mixed calls to getStream() and other get* accessors on the same value object.

Action:
Verify your application code.

WCS-35901
Illegal value state, cannot stream a value previously read.

Category:
Other

Cause:
The application mixed calls to getStream() and other get* accessors on the same value object.

Action:
Verify your application code.

WCS-35902
Error in value conversion (source type = {0}, target type = {1}).

Category:
Other

Cause:
The JCR values could not be converted to the specified type; the source and target type may not be compatible.

Action:
Verify the value conversion rules defined in the JCR specification.

WCS-35903
Error in value conversion (invalid ISO8601 string).

Category:
Other

Cause:
The specified string was not a valid ISO8601 string as specified by JCR and therefore could not be converted to a date.

Action:
Verify the format of the date string.

WCS-35904
Cannot create REFERENCE values.

Category:
Other

Cause:
Values of type REFERENCE are not supported by this JCR repository.

Action:
Avoid using properties of type REFERENCE in your application.

WCS-35905
Input/Output error while reading the binary stream.

Category:
Other

Cause:
The data for the binary property could not be accessed.

Action:
Verify that the storage medium for the JCR repository is accessible.

WCS-35906
UTF8 encoding not supported on this JVM

Category:
Other

Cause:
The JVM does not support UTF-8 encoding.

Action:
Use a supported Java 5 compliant JVM.

WCS-35907
This iterator does not contain any more elements.

Category:
Other

Cause:
The iterator has exhausted all its elements.

Action:
Check the usage of the RangeIterator by your application.

WCS-35908
This iterator does not support the remove operation.

Category:
Other

Cause:
The remove() operation is not supported on this iterator.

Action:
Avoid making calls to RangeIterator#remove() in your application.

WCS-35909
The item at path {0} is not a node.

Category:
Other

Cause:
An item was found at the specified path but it was not a node.

Action:
Check that your application is specifying the correct path.

WCS-35910
"{0}" is not a known namespace prefix.

Category:
Other

Cause:
The name or path contained a namespace prefix unknown to this repository.

Action:
Check the namespace mappings in the current session.

WCS-35911
"{0}" is not a known namespace URI.

Category:
Other

Cause:
The repository did not recognize the specified namespace URI.

Action:
Check the set of namespaces allowed by the current repository.

WCS-35912
The prefix "{0}" is already used.

Category:
Other

Cause:
The specified prefix was already mapped to a namespace and could not be remapped.

Action:
Change the prefix mapping for the URI associated with that prefix before mapping it to another URI.

WCS-35913
{0} is a reserved namespace prefix and cannot be remapped

Category:
Other

Cause:
The "xml" prefix could not be remapped as it is reserved by JCR.

Action:
Check that your application is not trying to remap the "xml" prefix.

WCS-35914
Namespace prefix remapping is not permitted

Category:
Other

Cause:
Could not remap the namespace as the JCR repository does not permit persistent namespace remapping.

Action:
Use the session for any namespace remapping requirements.

WCS-35915
Invalid JCR name or path: {0}

Category:
Other

Cause:
The name or path specified was not a valid JCR name or path.

Action:
Check that the name or path uses valid namespace prefixes and satisfies the JCR grammar rules for names and paths.

WCS-35916
Cannot append an absolute Path

Category:
Other

Cause:
Could not append an absolute path to the existing path.

Action:
Make sure that the appended path is always relative.

WCS-35918
Unexpected error while accessing node type

Category:
Other

Cause:
An unexpected error occurred while accessing a node type.

Action:
Contact Oracle Support Services.

WCS-35919
No such node type: {0}

Category:
Other

Cause:
The node type specified was unknown to the JCR repository.

Action:
Ensure that your are using correct node types for this repository.

WCS-35920
Not a supported query language: {0}

Category:
Other

Cause:
The query language specified was a not a supported query language; this repository only supports XPath.

Action:
Make sure you use only XPath queries.

WCS-35921
Saved queries are not supported.

Category:
Other

Cause:
Could not save the query as this repository does not support saved queries.

Action:
Ensure that your application does not call unsupported JCR functionality.

WCS-35922
Incorrect XPath expression

Category:
Other

Cause:
Could not recognize the XPath expression specified as it is not supported by this JCR repository.

Action:
Check that your XPath query conforms to the JCR specification.

WCS-35923
XPath expression error: invalid enumeration value.

Category:
Other

Cause:
An internal data structure used an invalid value.

Action:
Contact Oracle Support Services.

WCS-35924
XPath expression error: invalid expression tree.

Category:
Other

Cause:
The XPath expression specified was not recognized as it is not supported by this JCR repository.

Action:
Check that your XPath query conforms to the JCR specification.

WCS-35925
Error while generating XML representation of expression tree

Category:
Other

Cause:
Could not create an XML representation of this expression tree.

Action:
Check the exception stack trace for more details.

WCS-35926
Invalid xpath expression.

Category:
Other

Cause:
The XPath expression specified was not recognized as it is not supported by this JCR repository.

Action:
Check that your XPath query conforms to the JCR specification.

WCS-35927
Invalid qualified name: {0}

Category:
Other

Cause:
The specified XPath expression contained an invalid qualified name.

Action:
Check that your XPath query conforms to the JCR specification.

WCS-35928
Unexpected error during XML export.

Category:
Other

Cause:
There was an XML processing error while performing an XML export operation.

Action:
Check that you are using Oracle XML parser v2.

WCS-35930
Index out of bound while accessing path

Category:
Other

Cause:
The specified index for a path element was not valid.

Action:
Check your use of the path object.

WCS-35988
FOTY0012: argument node does not have a typed value

Category:
Other

Cause:

Action:

WCS-35989
XPST0010: The query uses an axis that is not supported by the query engine.

Category:
Other

Cause:

Action:

WCS-35990
XPST0081: A QName used in the expression contains a namespace prefix that cannot be expanded into a namespace URI by using the statically known namespaces.

Category:
Other

Cause:

Action:

WCS-35991
"{0}" is not a valid expression for use as a search string with jcr:contains().

Category:
Other

Cause:
The specified full text search expression was not a valid argument for jcr:contains().

Action:
Check the full text search expression syntax defined in the JCR specification.

WCS-35992
"{0}" is not a valid expression for use as a search string with jcr:like().

Category:
Other

Cause:
The specified regular expression was not a valid argument for jcr:like().

Action:
Check the regular expression syntax defined in the JCR 1.0 specification.

WCS-35993
This XPath expression contains constructs that are not supported by this query engine.

Category:
Other

Cause:
Could not execute this XPath query as it contained constructs that were not supported by this repository.

Action:
Check that your XPath query conforms to the JCR specification.

WCS-35994
XPTY0004: It is a type error if, during the static analysis phase, an expression is found to have a static type that is not appropriate for the context in which the expression occurs, or during the dynamic evaluation phase, the dynamic type of a value does not match a required type as specified by the matching rules in 2.5.4 SequenceType Matching.

Category:
Other

Cause:

Action:

WCS-35995
XPST0017: It is a static error if the expanded QName and number of arguments in a function call do not match the name and arity of a function signature in the static context.

Category:
Other

Cause:

Action:

WCS-35996
FORG0006: invalid argument type

Category:
Other

Cause:

Action:

WCS-35997
FORG0001: invalid value for cast/constructor

Category:
Other

Cause:

Action:

WCS-35998
XPTY0006: (Not currently used)

Category:
Other

Cause:

Action:

WCS-35999
FONC0001: undefined context item

Category:
Other

Cause:

Action:

WCS-36201
Unable to find Page Definition for the template page.

Category:
Other

Cause:

Action:

WCS-36202
Cannot find page with name "{0}".

Category:
Other

Cause:

Action:

WCS-36203
Failed to create SubPath "{0}".

Category:
Other

Cause:

Action:

WCS-36204
Cannot find Page Definition with name "{0}".

Category:
Other

Cause:

Action:

WCS-36205
Unable to find page with path "{0}".

Category:
Other

Cause:

Action:

WCS-36206
Pages metadata file already exists under the path "{0}".

Category:
Other

Cause:

Action:

WCS-36207
Unable to update DataBindings.cpx to update page usageId.

Category:
Other

Cause:

Action:

WCS-36208
Scope folder "{0}" for rename does not exist.

Category:
Other

Cause:

Action:

WCS-36209
Failed to get Permission class for page "{0}".

Category:
Other

Cause:

Action:

WCS-36210
Failed to get Permission target for page "{0}".

Category:
Other

Cause:

Action:

WCS-36211
Cache is not available.

Category:
Other

Cause:

Action:

WCS-36212
Failed to add pages to cache "{0}".

Category:
Other

Cause:

Action:

WCS-36213
Failed to invalidate cache "{0}".

Category:
Other

Cause:

Action:

WCS-36214
Failed to invalidate cache for scope "{0}".

Category:
Other

Cause:

Action:

WCS-36215
A page with name {0} under path {1} does not exist.

Category:
Other

Cause:

Action:

WCS-36216
Failed to remove the page permissions for "{0}".

Category:
Other

Cause:

Action:

WCS-36217
Failed to create .rdf file for page "{0}".

Category:
Other

Cause:

Action:

WCS-36218
Failed to delete .rdf file "{0}".

Category:
Other

Cause:

Action:

WCS-36301
Unable to find page "{0}" in the Binding Context.

Category:
Other

Cause:
Page objects do not exist in the Binding Context.

Action:
Check if the page in the specified path exists.

WCS-36302
Unable to create a document with name "{0}".

Category:
Other

Cause:
Invalid MO name supplied for creation in MDS.

Action:
Check the name provided for creation of the document and ensure that it is a valid MO name.

WCS-36303
Unable to create a document in path "{0}".

Category:
Other

Cause:
MDS raised an MDS_UNSUPPORTED_UPDATE exception while creating document.

Action:
Check the MDS config to ensure that the path is editable.

WCS-36304
Unable to create a pagedefs directory under the scope "{0}".

Category:
Other

Cause:
MDS raised an exception while creating pagedefs folder.

Action:
Check the MDS config to ensure that the path is editable.

WCS-36305
Unable to delete page "{0}".

Category:
Other

Cause:
MDS raised an exception while deleting the page.

Action:
Check the MDS config to ensure that the path is editable.

WCS-36306
Unable to create metadata for page "{0}".

Category:
Other

Cause:
MDS raised an exception while creating metadata for page.

Action:
The metadata for the page already exists under the scope.

WCS-36307
Unable to copy page "{0}".

Category:
Other

Cause:
MDS raised an exception while copying the page.

Action:
Check the MDS config to ensure that the path is editable.

WCS-36308
Unable to rename scope "{0}" to "{1}".

Category:
Other

Cause:
MDS raised an exception while renaming the pages under the scope.

Action:
Check the MDS config to ensure that the path is editable.

WCS-36309
An unexpected error occurred.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact your system administrator.

WCS-36310
Unable to create a page with the name "{0}".

Category:
Other

Cause:
A page with the same name already exists.

Action:
Change to use a different name.

WCS-36311
PageService object is not an instance of PageServiceImpl.

Category:
Other

Cause:
PageService object is not an instance of PageServiceImpl.

Action:
Create a Page service instance and try again.

WCS-36312
Could not flush changes to MDS. Adding view activity failed.

Category:
Other

Cause:
Could not flush changes to MDS.

Action:
Try to create a new page.

WCS-36313
Unable to find page definition file for page "{0}".

Category:
Other

Cause:
The page definition file does not exist or the page definition path is wrong in the Binding Context file.

Action:
Check if the page definition file exists and make sure its path is correct in the Binding Context file.

WCS-36314
Unable to create a page for now because another page is being created.

Category:
Other

Cause:
Another page is being created and all page metadata is locked.

Action:
Try again.

WCS-36315
The page style is no longer available.

Category:
Other

Cause:
The page style is deleted or hidden.

Action:
Choose another page style.

WCS-36316
Cannot perform the requested operation.

Category:
Other

Cause:
You do not have sufficient privileges to perform the requested operations.

Action:
Ask your administrator to grant you the appropriate privileges and then try again.

WCS-36701
Failed to redirect because the page is not specified.

Category:
Other

Cause:

Action:

WCS-36702
An ADF component with name "{0}" is not found.

Category:
Other

Cause:

Action:

WCS-36703
Failed to redirect because the page is not specified.

Category:
Other

Cause:

Action:

WCS-36704
User {0} already has access to the page.

Category:
Other

Cause:

Action:

WCS-36705
You do not have permission to change page security settings anymore.

Category:
Other

Cause:

Action:

WCS-36706
You do not have permission to change page properties anymore.

Category:
Other

Cause:

Action:

WCS-36707
Failed to save the changes because another page operation was in progress.

Category:
Other

Cause:

Action:

WCS-36708
Failed to instantiate DocSecurityBean.

Category:
Other

Cause:

Action:

WCS-36709
Failed to instantiate PageSecurityManager.

Category:
Other

Cause:

Action:

WCS-36801
Failed to change page permission to "{0}".

Category:
Other

Cause:
An unexpected error occurred when changing page permission.

Action:
Check error stack for details.

WCS-36802
Failed to grant page permission "{0}" to user "{1}".

Category:
Other

Cause:
An unexpected error occurred when granting page permission to a user.

Action:
Check error stack for details.

WCS-36803
Failed to revoke page permission from user "{0}".

Category:
Other

Cause:
An unexpected error occurred when granting page permission to a user.

Action:
Check error stack for details.

WCS-36804
Failed to change page security to default mode.

Category:
Other

Cause:
An unexpected error occurred when changing page security mode.

Action:
Check error stack for details.

WCS-36805
A page named {0} already exists.

Category:
Other

Cause:
A page with the specified name exists.

Action:
Specify a unique name for the page.

WCS-37001
An unexpected error occurred.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-37002
An object of type {0} with this ID ({1}) already exits.

Category:
Other

Cause:
An attempt was made to create an object with an existing ID.

Action:
Use a unique ID to Create the object.

WCS-37003
Configuration invalid.

Category:
Other

Cause:
Either the configuration does not exist or the MDS instance is not specified.

Action:
Specify a valid configuration with a MDS instance.

WCS-37004
The name ({0}) is invalid.

Category:
Other

Cause:
The name specified was not valid.

Action:
Specify a valid name.

WCS-37006
Object modified by another user.

Category:
Other

Cause:
The object has been changed by another user.

Action:
Refresh the object and try again.

WCS-37007
Object of type {0} with ID={1} could not be found.

Category:
Other

Cause:
The ID is invalid.

Action:
Specify a valid object ID.

WCS-37008
Object ({0}) is immutable.

Category:
Other

Cause:
An attempt to change this object was made but this object is currently immutable.

Action:
Either update object to allow changes or perform this operation on another object.

WCS-37009
Method: {1} in class: {0} is invalid.

Category:
Other

Cause:
The specified class.method does not exist or is invalid.

Action:
Check underlying method/property specification.

WCS-37010
{0} is not a valid reference name to MDS.

Category:
Other

Cause:
The name specified is not a valid MDS reference name.

Action:
Correct the name to a valid reference.

WCS-37500
The note no longer exists.

Category:
Other

Cause:
Another user deleted the note.

Action:
Refresh the links to see the latest changes.

WCS-37501
This note has been modified by another user.

Category:
Other

Cause:
Another user modified the note. You can only modify the latest version.

Action:
Refresh the page to see the latest changes.

WCS-38001
An unexpected error occurred.

Category:
Other

Cause:
The cause of this error is unknown.

Action:
Try repeating the action that caused this error.

WCS-38002
Data source ({0}) does not exist.

Category:
Other

Cause:
The specified data source is invalid.

Action:
Specify a valid data source and try again.

WCS-38003
Invalid configuration.

Category:
Other

Cause:
Either the configuration does not exist or MDSInstance is not specified.

Action:
Specify a valid MDS configuration and try again.

WCS-38004
Object ({0}) is immutable.

Category:
Other

Cause:
An attempt to change this object was made but this object is currently immutable.

Action:
Either update the object to allow changes or perform this operation on another object.

WCS-38005
An object of type {0} with ID={1} could not be found.

Category:
Other

Cause:
The object ID is invalid.

Action:
Specify a valid object ID.

WCS-38006
Unable to perform transformation

Category:
Other

Cause:
Transformation input sources were invalid.

Action:
Validate the input sources and try again.

WCS-38007
A search error occurred while searching for lists.

Category:
Other

Cause:
The search parameters were invalid.

Action:
Validate the search parameters and try again.

WCS-38008
An error occurred while configuring the List API.

Category:
Other

Cause:
An invalid List API configuration was specified.

Action:
Specify a valid List API configuration and try again.

WCS-38009
An error occurred while looking up list row data.

Category:
Other

Cause:
The database connection not found.

Action:
Verify that a valid database connection exists and try again.

WCS-38010
A search error occurred while searching the discussion forums.

Category:
Other

Cause:
A connection to the discussion forum service could not be established.

Action:
Validate the discussion forum connection details in connections.xml and try again.

WCS-38011
An error occurred while retrieving recent activity information.

Category:
Other

Cause:
Invalid parameters were passed to the Recent Activity API.

Action:
Validate the API usage and try again.

WCS-38012
A search error occurred while searching the service.

Category:
Other

Cause:
Invalid parameters were passed to the Search API.

Action:
Validate the API usage and try again.

WCS-38013
Unable to instantiate class

Category:
Other

Cause:
An invalid class reference was detected.

Action:
Validate the class usage and try again.

WCS-38014
Illegal access exception while accessing class

Category:
Other

Cause:
An invalid class reference was detected.

Action:
Validate the class usage and try again.

WCS-38015
Unable to find class

Category:
Other

Cause:
An unknown class was referenced.

Action:
Verify the class reference and try again.

WCS-38016
Unable to find 'getEnabledScopes' method in class

Category:
Other

Cause:
Class is missing required method.

Action:
Verify that the method exists and try again.

WCS-38017
Service exception while getting service registry.

Category:
Other

Cause:
Invalid parameters were passed to the Service Registry API.

Action:
Validate the API usage and try again.

WCS-38018
A null stream was returned for the RSS XML

Category:
Other

Cause:

Action:

WCS-38019
Object instance for reading RSS feed is not available

Category:
Other

Cause:

Action:

WCS-38020
Unable to get a HTTP connection object for the URL {0}

Category:
Other

Cause:

Action:

WCS-38021
Null object for the XML document

Category:
Other

Cause:

Action:

WCS-38022
The RSS XML does not have a root element

Category:
Other

Cause:
Invalid XML content detected

Action:
Ensure that the RSS feed URL returns XML conforming to the RSS format

WCS-38023
The root element name of the RSS XML is not rss

Category:
Other

Cause:
The XML content is not RSS XML format compliant.

Action:
Ensure that the XML returned by the feed URL is RSS XML format compliant.

WCS-38024
The root element name of the RSS XML does not have any child elements

Category:
Other

Cause:
The XML content returned by the feed URL is not valid

Action:
Ensure that the XML returned by the feed URL is RSS XML format compliant.

WCS-38025
The XML content returned by the feed URL does not have the channel element

Category:
Other

Cause:
The XML content is not RSS XML format compliant

Action:
Ensure that XML returned by the feed URL is RSS XML format compliant.

WCS-38026
The channel element of the RSS XML does not have any child elements

Category:
Other

Cause:
The XML content returned by the feed URL is invalid

Action:
Ensure that the XML returned by the feed URL is RSS XML format compliant.

WCS-42301
The external application ID {0} found while rendering the credential provisioning page is invalid.

Category:
Configuration

Cause:
The external application being referred was probably deleted.

Action:
Check the configuration of the service that is being accessed and fix up the external application reference.

WCS-42302
No back URL exists in the process scope.

Category:
Configuration

Cause:
The credential provisioning page could not establish the back URL because of the following possible reasons: 1) The page was run either in the standalone mode or as a dialog. 2) There was some unexpected error while setting the back URL in the process scope.

Action:
Ensure you haven't run the credential provisioning page in a standalone mode. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-42303
cannot retrieve the back URL to redirect the credential provisioning page

Category:
Logging

Cause:
An I/O error occurred while trying to obtain the back URL to redirect the credential provisioning page.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-42304
The external application ID is found to be null while rendering the credential provisioning page.

Category:
Configuration

Cause:
The credential provisioning page was probably run standalone, or it was invoked from a portlet added from a producer that was not associated with an external application.

Action:
While running the credential provisioning page, ensure that: 1) It is not run in the standalone mode. 2) It is invoked from the link in portlets added from the producers associated with the external application.

WCS-42305
The page is available only to authenticated users.

Category:
Configuration

Cause:
You had not logged into the application before accessing the external application credential provisioning page.

Action:
Ensure that you have logged in before accessing the external application credential provisioning page.

WCS-42306
cannot initialize credential provisioning page

Category:
Logging

Cause:
An unexpected error occurred while trying to initialize the external application. Review the underlying exception in the logs for exact cause.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-42307
cannot store credentials of external application {0} for user {1}

Category:
Logging

Cause:
There was an unexpected error while trying to store external application credentials for the user. Review the underlying exception in the logs for exact cause.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-43001
Unable to find the service with ID "{0}" in the service registry.

Category:
Other

Cause:
Either the service ID is wrong or the corresponding META-INF/service-definition.xml file is not available in the classpath.

Action:
Ensure the service ID is correct and the corresponding META-INF/service-definition.xml file is available in the classpath. Note: service-definition.xml file is mostly available from service libraries (within .jar file) of each service, make sure the required service libraries are in the classpath.

WCS-43002
Cannot add service to the registry with the same ID. Service with ID "{0}" is already registered from source "{1}". Failed to add service read from source "{2}".

Category:
Other

Cause:
Either the service-definition contains a service Id that conflicts with another service definition or the same service library (.jar containing the service-definition.xml) is available from multiple classpath locations.

Action:
Ensure the service ID is correct in the corresponding META-INF/service-definition.xml file. Also ensure the same jar file is not available from multiple classpath locations.

WCS-43003
Failed to parse the service-definition.xml found at location "{0}". Due to : {1}

Category:
Other

Cause:
Either the service-definition.xml does not conform to the schema or its not well-formed xml file or its not readable.

Action:
Verify the corresponding service-definition.xml file conforms to the schema with well-formed xml and read access is set on it.

WCS-43004
ServiceContext resource configuration file "{0}" not found, cannot proceed.

Category:
Other

Cause:
The main configuration file that defines the default implementation of ServiceContext class is missing.

Action:
Contact Oracle Support Services.

WCS-43005
ServiceContext resource configuration file "{0}" found, but the data is missing. Cannot proceed.

Category:
Other

Cause:
The main configuration file that defines the default implementation of ServiceContext class is misconfigured, all the required data is not available in this file.

Action:
Contact Oracle Support Services.

WCS-43006
ServiceContext resource configuration file "{0}" found, but the class defined "{1}" is not an instance of oracle.webcenter.framework.service.ServiceContext.

Category:
Other

Cause:
The main configuration file that defines the default implementation of ServiceContext class is misconfigured, the supplied class is not an instance oracle.webcenter.framework.service.ServiceContext.

Action:
Contact Oracle Support Services.

WCS-43007
service-definition being processed from source location "{0}" does not conform to the schema. Missing "definitions" tag.

Category:
Other

Cause:
This is caused due to wrong configuration of service-definition.xml file.

Action:
Update the corresponding file and ensure it starts with 'definitions' tag with namespace as 'http://xmlns.oracle.com/webcenter/framework/service' (e.g.: <definitions xmlns="http://xmlns.oracle.com/webcenter/framework/service">).

WCS-43008
Required attribute "{0}" missing from tag "{1}".

Category:
Other

Cause:
This is caused when the user is required to set the mandatory attribute for the given tag, but and its not set.

Action:
Modify the appropriate configuration file to and supply the mandatory attribute with corresponding value.

WCS-43009
Attempt to invoke "{0}" method on class "{1}", when its locked.

Category:
Other

Cause:
This class or method is locked and cannot be invoked in the current state.

Action:
Do not invoke methods on this class in a state its not accessible, please check the class documentation for more help.

WCS-43010
Scope object cannot be null.

Category:
Other

Cause:
This is caused when an attempt is made to set scope with null value.

Action:
Supply a valid scope object, or create a scope from ServiceContext.

WCS-43011
Unable to find the "{0}" view definition from service: {1}.

Category:
Other

Cause:
The required view definition is missing from the service-definition file.

Action:
Check the appropriate service-definition.xml file to have an entry of the required view definition. Refer to service documentation for more details.

WCS-43012
Error occurred processing the service-definition.xml file from source location "{0}". Due to: {1}.

Category:
Other

Cause:
Either the service-definition is malformed or does not conform to the schema defined.

Action:
Update the corresponding service-definition.xml with correct details.

WCS-43013
ExtensionRegistry instance found "{0}" for registry Id "{1}", is not an instance of {2} class.

Category:
Other

Cause:
This is caused due to wrong configuration of adf-service-config tag in the adf-config.xml file.

Action:
Check the adf-config.xml file for an entry of adf-service-config tag. Search for extension-registry tag here with ID "oracle.webcenter.framework.service.ServiceRegistry", this tag's registry-class attribute should point to a class that is extending from ServiceRegistry class.

WCS-43014
Either the supplied registry Class "{0}" for extension-registry ID "{1}", is not an instance of oracle.webcenter.framework.service.ExtensionRegistry or the class is not available in the classpath. Please check the adf-config.xml for corresponding configuration details.

Category:
Other

Cause:
This is caused due to wrong configuration of extension-registry in the adf-config.xml file.

Action:
Check the adf-config.xml file for an entry of adf-service-config tag. Search for extension-registry tag and ensure this tag's registry-class attribute point's to a class that is an instance of 'oracle.webcenter.framework.service.ExtensionRegistry' class. Also this class should be available in the classpath, otherwise it will fail to load.

WCS-43015
Unable to find the Extension Registry information in the adf-config for registry ID "{0}". Please check the adf-config.xml for corresponding configuration details.

Category:
Other

Cause:
This is caused due to missing tension-registry in configuration in the adf-config.xml file.

Action:
Contact Oracle Support Services.

WCS-43016
Either the supplied handler Class "{0}" for extension-registry ID "{1}", is not an instance of oracle.webcenter.framework.service.ExtensionHandle or the class is not available in the classpath. Please check the adf-config.xml for corresponding configuration details.

Category:
Other

Cause:
This is caused due to wrong configuration of extension-registry in the adf-config.xml.

Action:
Check the adf-config.xml file for an entry of adf-service-config tag. Search for extension-registry tag and ensure this tag's handler-class attribute point's to a class that is an instance of 'oracle.webcenter.framework.service.ExtensionHandler' class. Also this class should be available in the classpath, otherwise it will fail to load.

WCS-43017
Extension tag name cannot be null or empty value.

Category:
Other

Cause:
Wrong extension configuration, mandatory tag name cannot hold null or empty string.

Action:
Refer to the service framework documentation for details on extension-registry configuration.

WCS-43018
No Extension Registry information available for element type "{0}", with the ServiceRegistry. Please check the adf-config.xml for extension registry configuration details.

Category:
Other

Cause:
This is caused due to missing extension-registry configuration in the adf-config.xml for the specified registry Id.

Action:
Check the adf-config.xml file for an entry of adf-service-config tag. Search for extension-registry tag for the appropriate registry Id that is missing and ensure all the registry details are provided.

WCS-43019
ADFConfig does not contain adf-service-config details. Ensure adf-config.xml file contains adf-service-config tag with namespace : {0}.

Category:
Other

Cause:
This is caused due to missing adf-service-config tag from adf-config.xml file.

Action:
Check the adf-config.xml file for an entry of adf-service-config tag.

WCS-43020
No ADF Config information.

Category:
Configuration

Cause:
ADFConfig could not be acquired, either adf-config.xml file is missing or application is not configured properly.

Action:
>Examine the adf-config.xml file and add or update the WebCenter section.

WCS-43021
No Oracle WebCenter Framework information in adf-config file.

Category:
Configuration

Cause:
The application adf-config.xml was found, but the Oracle WebCenter Framework section could not be read or is missing.

Action:
Examine the adf-config.xml file and add or update the WebCenter section.

WCS-43022
resourceInfoPopup jsp inclusion missing from the page.

Category:
Other

Cause:
The jspx or jsff page containing the rah:resourceActionBehavior tag does not include the inline popup fragment: /oracle/webcenter/framework/service/view/jsf/fragments/resourceInfoPopup.jsff that is required to show resource mini-views.

Action:
If this is a custom usage of rah:resourceActionBehavior, add a jsp:include to the page and a reference to the resourceMiniViewPopup page in the page definition. If this is not a custom usage of rah:resourceActionBehavior, contact Oracle Support Services.

WCS-43023
Could not find component : {0}.

Category:
Other

Cause:
The specified component is missing from the current page.

Action:
If this is a customized jsff or jspx page, verify that the component is included at the correct location.

WCS-43024
The ADF Faces application to be used for WebCenter RAH requests has already been specified as {0} in another web.xml.

Category:
Other

Cause:
Multiple web.xml files in the application ear have been marked as being the web application to use for RAH requests.

Action:
Examine the web.xml files from each war file and remove from all but the web application to be used for handling RAH requests.

WCS-43026
No resource ID found for resource group: {0}.

Category:
Other

Cause:
This error occurs when the resource view does not define corresponding group ID.

Action:
Supply valid resource group ID.

WCS-43027
Failed to generate an absolute URL to a resource view.

Category:
Other

Cause:
A runtime problem occurred whilst generating the absolute URL to a resource view.

Action:
Contact Oracle Support Services.

WCS-43028
Scope with name "{0}" already exists.

Category:
Other

Cause:
This error occurs when user tries to create a scope with a name that is already created. Duplicate scopes are not allowed.

Action:
Chose a different name for the scope.

WCS-43029
Scope with name "{0}" does not exist.

Category:
Other

Cause:
This error occurs when user tries to read a scope with a name that is not created earlier.

Action:
Create the scope with the appropriate name and then access it.

WCS-43030
Could not handle complex element "{0}". Neither element has a class attribute nor any of the ElementTypeResolvers could handle it.

Category:
Other

Cause:
This can occur due to missing extension-registry configuration in the adf-config.xml or there is no set/add method on the corresponding application bean to handle complex node.

Action:
Have a proper extension handler registered for this complex node or have set/add method on the bean with the tag name.

WCS-43031
XML processing error: unable to create instance of the class: {0}. {1}

Category:
Other

Cause:
This can occur due to missing extension-registry configuration in the adf-config.xml or there is no set/add method on the corresponding application bean to handle complex node.

Action:
Have a proper extension handler registered for this complex node or have set/add method on the bean with the tag name.

WCS-43032
Class: {0} does not have set or add method for tag: {1}.

Category:
Other

Cause:
This can occur due to missing extension-registry configuration in the adf-config.xml file or there is no set/add method on the corresponding application bean to handle complex node.

Action:
Have a proper extension handler registered for this complex node or have set/add method on the bean with the tag name.

WCS-43033
An error occurred processing the xml, due to: {0}.

Category:
Other

Cause:
Runtime problem invoking the operation.

Action:
Contact Oracle Support Services.

WCS-43034
Unable to set or get an ADF Preference value.

Category:
Other

Cause:
The ADF Preference service raised an exception whilst initializing, getting or setting a preference value.

Action:
Check MDS classpath includes PreferenceNode.xsd.

WCS-43036
Cannot provide the resource link. No FacesContext and no webapp base URL set.

Category:
Other

Cause:
Unable to build up a URL to WebCenter from outside of the web application.

Action:
Contact Oracle Support Services.

WCS-43038
Unable to find help for the current topic.

Category:
Configuration

Cause:
Either the help system is not setup or it is not accessible.

Action:
Examine the WebCenter Configuration for Help and make sure that Help System is up and running.

WCS-43039
Scope Provider resource configuration file "{0}" not found, cannot proceed.

Category:
Other

Cause:
The main configuration file that defines the default implementation of ScopeMetadataProvider class is missing.

Action:
Contact Oracle Support Services.

WCS-43040
Scope Provider resource configuration file "{0}" found, but the data is missing. Cannot proceed.

Category:
Other

Cause:
The main configuration file that defines the default implementation of ScopeMetadataProvider class is misconfigured, all the required data is not available in this file.

Action:
Contact Oracle Support Services.

WCS-43041
ScopeMetadataProvider resource configuration file "{0}" found, but the class defined "{1}" is not an instance of oracle.webcenter.framework.service.ScopeMetadataProvider.

Category:
Other

Cause:
The main configuration file that defines the default implementation of ScopeMetadataProvider class is misconfigured, the supplied class is not an instance oracle.webcenter.framework.service.ScopeMetadataProvider.

Action:
Contact Oracle Support Services.

WCS-43042
Resource Action not created due to missing attributes.

Category:
Other

Cause:
The Group ID (Service ID) and the Resource ID are not present as f:attribute values in the consuming JSPX page.

Action:
Check the JSPX page where this originated from and make sure you add the groupId and resourceId attributes and that they are not null.

WCS-43043
Failed to load resource action handler class "{0}"; using default.

Category:
Other

Cause:
The resource action handler class specified failed to load.

Action:
Check the classpath to inspect whether this class is available; then check accompanying exceptions in the log to further debug the cause.

WCS-43044
Failed to parse view renderer "{0}" as a valid TaskFlow ID; returning null.

Category:
Other

Cause:
The specified task flow ID cannot be parsed properly.

Action:
Check the value of the view renderer specified and investigate how you arrived at that value.

WCS-43045
Failed to parse view renderer "{0}" as a valid TaskFlow ID; treating it as a View ID instead.

Category:
Other

Cause:
The specified task flow ID cannot be parsed properly.

Action:
Check the META-INF/service-definition.xml of the service to verify whether it is a view ID or a TaskFlow ID by checking the documented syntax of both.

WCS-43046
Can not find the message key {0} in the resource bundle "{1}" (from original bundle: {2}).

Category:
Other

Cause:
The string identified by the given key is not found in the resource bundle.

Action:
If this is a custom resource bundle, add a message with the given key to the resource bundle, otherwise contact Oracle Support Services.

WCS-43047
The JPS Service Locator cannot be obtained.

Category:
Security

Cause:
The error was caused while obtaining the JPS Service Locator. Review the underlying exception in the logs to determine the exact cause.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-43048
User Principal could not be found for authenticated user.

Category:
Other

Cause:
This indicates an error with the Identity Store, or Java Platform Security setup.

Action:
This is an internal warning. The Administrator needs to verify the Identity Store setup.

WCS-43049
An error occurred reading the Connections Context.

Category:
Other

Cause:
This indicates an error with reading the Connection Context.

Action:
Refer to exception detail. If insufficient details to resolve the issue, then contact Oracle Support Services.

WCS-43050
An error occurred reading a service's configuration.

Category:
Other

Cause:
This indicates an error with reading a service's configuration.

Action:
Refer to exception detail. If insufficient details to resolve the issue, then contact Oracle Support Services.

WCS-43051
cannot access Java Object Cache

Category:
Other

Cause:
An exception occurred while accessing Java object cache.

Action:
Review the exception thrown for more details.

WCS-43052
cannot create userprofile region in Java Object Cache

Category:
Other

Cause:
An exception occurred while creating userprofile region in Java object cache.

Action:
Review the exception thrown for more details.

WCS-43053
cannot destroy userprofile region in Java Object Cache.

Category:
Other

Cause:
An exception occurred while removing userprofile region from Java object cache.

Action:
Review the exception thrown for more details.

WCS-43054
An error occurred while trying to lookup connection {0}.

Category:
Other

Cause:
The name may not have been pointing to a valid connection, or some other error occurred when trying to retrieve the connection object.

Action:
Ensure that the connection defined in connections.xml is valid and that the necessary classes can be loaded.

WCS-43055
Resource can not be displayed because the authorizerClass {0} is not found.

Category:
Other

Cause:
Class specified by authorizerClass is not found.

Action:
Check the class path of the application to verify inclusion of the authorizerClass.

WCS-43056
Database type {0} is not recognized.

Category:
Other

Cause:
WebCenter has been configured with a database platform that is not recognized.

Action:
Ensure that the database platform type is set correctly.

WCS-43057
Error closing entity manager factory

Category:
Other

Cause:
An unexpected exception occurred while closing the entity manager factory.

Action:
Review the exception thrown for more details.

WCS-43058
Could not load LifecycleListener class for "{0}" from the service definition.

Category:
Other

Cause:
An unexpected exception occurred while attempting to access the LifecycleListener.

Action:
Review the exception thrown for more details.

WCS-43059
The WebCenterConfig will be reinitialized. Expected class "{0}", class loader "{1}", parent class loader "{2}". Actual class "{3}", class loader "{4}", parent classLoader "{5}".

Category:
Other

Cause:
This indicates an recoverable error with retrieving the WebCenterConfig.

Action:
No action required.

WCS-43060
The connection named "{0}" cannot be found.

Category:
Other

Cause:
The connection name may be incorrect.

Action:
Ensure that the name matches a connection defined for the application.

WCS-43061
Unable to find the WebCenter data source

Category:
Other

Cause:
The data source may not have been configured or cannot be read.

Action:
Check the configuration of the WebCenter data source.

WCS-43062
Unable to parse link

Category:
Other

Cause:
The link URL or network connection is wrong.

Action:
Check the network connection, proxy setting and the link URL.

WCS-43063
Error retrieving enterprise ID/prefix from ADF Context.

Category:
Other

Cause:

Action:

WCS-43064
The version ({0}) of WebCenter Framework Design Time used to create the Portal application is not the same as the version ({1}) of WebCenter Framework Runtime.

Category:
Other

Cause:

Action:

WCS-43065
The build label ({0}) of WebCenter Framework Design Time used to create the Portal application is not the same as the build label ({1}) of WebCenter Framework Runtime.

Category:
Other

Cause:

Action:

WCS-43067
Error "{1}" getting service with ID "{0}".

Category:
Other

Cause:
An unexpected error occurred getting a service by ID.

Action:
Check the configuration of the WebCenter data source.

WCS-43068
Error "{0}" reading service category configuration.

Category:
Other

Cause:
An unexpected error occurred reading the service category configuration.

Action:
Review the exception thrown for more details.

WCS-43069
WebCenterUserNotFoundWarning: Unable to find user {0}.

Category:
Other

Cause:
User with the given name, unique identifier or distinguished name does not exist in the identity store.

Action:
Ensure the user name, unique identifier or distinguished name is correct.

WCS-43070
Unable to find enterprise role {0}.

Category:
Other

Cause:
Role with the given name does not exist in the identity store.

Action:
Ensure the role name is correct.

WCS-43071
Could not obtain display name for user {0} in locale {1}, will resort to default display name

Category:
Other

Cause:
There was an error trying to fetch locale specific display name from identity store.

Action:
Turn on logging and check the logs for the cause of the exception

WCS-43072
cannot access Coherence Cache

Category:
Other

Cause:
An exception occurred while accessing Coherence cache.

Action:
Review the exception thrown for more details.

WCS-43073
cannot destroy userprofile region in Coherence Cache.

Category:
Other

Cause:
An exception occurred while removing userprofile region from Coherence cache.

Action:
Review the exception thrown for more details.

WCS-43075
Unexpected error occurred while encoding the URL {0} due to {1}.

Category:
Other

Cause:
Unexpected error occurred while encoding the URL.

Action:
Review the exception thrown for more details.

WCS-43076
Unexpected error occurred while decoding the URL {0} due to {1}.

Category:
Other

Cause:
Unexpected error occurred while decoding the URL.

Action:
Review the exception thrown for more details.

WCS-43077
Unexpected error occurred while renaming the document {0} to {1} due to {2}.

Category:
Other

Cause:
Unexpected error occurred while renaming the document.

Action:
Review the exception thrown for more details.

WCS-43078
An error occurred while sanitizing the HTML input

Category:
Other

Cause:
Unexpected error occurred while sanitizing the HTML input

Action:
Review the exception thrown for more details.

WCS-43079
The URL entered is not available in the list of valid URLs.

Category:
Other

Cause:
The URL is invalid

Action:
Contact your system administrator for valid URLs.

WCS-43080
Unexpected error occured while validating the URL due to {0}.

Category:
Other

Cause:
Unexpected error occured while validating the URL

Action:
Review the exception thrown for more details

WCS-43081
An error occurred while trying to fetch custom attribute {0}

Category:
Other

Cause:
Unexpected error occurred while trying to fetch the custom attribute setting

Action:
Review the exception thrown for more details.

WCS-44001
cannot load role provider implementation for service ID: {0}

Category:
Security

Cause:
The provider class configured in role-mapping-metadata tag of the specified service definition was not available to the classloader.

Action:
Ensure that the provider class specified in the service-definition.xml file is available to the classloader.

WCS-44002
The Role Mapping provider encountered an exception while performing security role mapping for service {0}.

Category:
Security

Cause:
This is caused by an error experienced by service-specific Role Mapping provider.

Action:
Inspect the server logs and rectify the problem encountered by the service Role Mapping provider.

WCS-44003
The Role Mapping provider cannot find the service role: {0}. Exception from the provider: {1}.

Category:
Security

Cause:
The Role Mapping provider cannot find the service role. Review the exception from the provider to determine the exact cause.

Action:
Inspect the server logs and rectify the problem encountered by the service Role Mapping provider.

WCS-44004
An internal JPS error occurred while retrieving information from the Application Policy Store.

Category:
Security

Cause:
Review the underlying exception in the logs to determine the cause.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44005
cannot find security extension in Service Registry for service ID: {0}

Category:
Security

Cause:
No security extension was registered for the given service. Perhaps the service library was not available in the classpath.

Action:
Check the service library is available in the classpath. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44006
There is no mapped service role for the WebCenter Portal role {1} to which the user {0} is assigned.

Category:
Security

Cause:
A user was assigned to a WebCenter Portal role that was not yet mapped to any service role.

Action:
Ensure that the WebCenter Portal role is mapped to a service role.

WCS-44007
An internal JPS error occurred while initializing the Application Policy Store.

Category:
Security

Cause:
The Application Policy Store (jps-config.xml) was probably not configured correctly.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44009
Error obtaining JPS Service instance: {0}.

Category:
Security

Cause:
The value returned for the JPS Service instance was null. This may be caused by configuration error in jps-config.xml.

Action:
Contact Oracle Support Services.

WCS-44010
A JPS error occurred while deleting users from the service ID/service role: {0} / {1}.

Category:
Security

Cause:
The error was caused while accessing the application policy store for deleting users. Review the underlying exception in the logs to determine the exact cause.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44011
Error getting handle to application policy for application {0}.

Category:
Security

Cause:
Either the application policy is not available or policy store is not configured correctly. Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44012
Error getting handle to default policy store.

Category:
Security

Cause:
Either the policy store is not accessible or not configured correctly. Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44101
Invalid PeoplePicker Scope {0} passed.

Category:
Configuration

Cause:
The scope is not of the valid type. It can be GLOBAL or SUB_SCOPED

Action:
Pass a valid scope

WCS-44102
Invalid PeoplePicker Scope ID {0} passed.

Category:
Configuration

Cause:
An invalid Scope ID has been passed.

Action:
Ensure a valid scope/community ID is passed.

WCS-44103
Unknown error encountered while selecting user(s) in people picker.

Category:
Security

Cause:
Review the root cause of the exception for more details.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44104
Scope Id is a required parameter for scoped people search.

Category:
Security

Cause:
Scope Id not provided.

Action:
Provide Scope Id.

WCS-44105
And unknown error occurred while trying to validate if user {0} exists

Category:
Security

Cause:
Review the root cause of the exception for more details.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44106
Unknown error encountered while selecting group(s) in group picker.

Category:
Security

Cause:
Review the root cause of the exception for more details.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44107
And unknown error occurred while trying to validate if group {0} exists

Category:
Security

Cause:
Review the root cause of the exception for more details.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44108
The search exceeded the time limit. Check the identity store connection details or refine your search criterion.

Category:
Security

Cause:
The underlying identity store and policy store could be down.

Action:
Check that underlying repositories are accessible. Check logs and contact Oracle Support

WCS-44109
The search exceeded the size limit. Refine your search criterion.

Category:
Security

Cause:
The search results in a large dataset that is not supported by the underlying identity store.

Action:
Refine your search criterion to something more narrow.

WCS-44110
An unexpected error occurred while searching for users/roles. Check logs for further details.

Category:
Security

Cause:
An unexpected error occurred while searching for identities. Consult the underlying cause.

Action:
If the underlying cause does not provide any action, contact Oracle Support.

WCS-44151
An error occurred while retrieving the Identity Store.

Category:
Security

Cause:
This is caused when the Identity Store configured in jps-config.xml is not accessible or is not running. Review the underlying exception in the logs to determine the exact cause.

Action:
Ensure that the Identity Store is configured correctly in jps-config.xml and is running. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44152
An error occurred while sending an e-mail.

Category:
Security

Cause:
The error occurred because the e-mail account or the e-mail service was not configured correctly or the e-mail server was not running.

Action:
Ensure that your e-mail account and the e-mail service are configured properly and the e-mail server is running.

WCS-44153
An error occurred while generating the HMAC token.

Category:
Security

Cause:
The JVM did not support MessageDigest algorithms, such as MD5 or SHA, or the UTF8 encoding.

Action:
Ensure the JVM supports UTF8 encoding and MD5/SHA message digest algorithms. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44154
An error occurred while getting the scope roles for scope ID {0}.

Category:
Security

Cause:
Either the policy store was configured incorrectly or was inaccessible or the scope ID passed was invalid.

Action:
Ensure that the policy store is configured correctly and is running. Also, ensure that the scope ID passed is valid.

WCS-44155
The permission class is null for the service ID: {0}.

Category:
Security

Cause:
The permission class was not defined in the service-definition.xml file.

Action:
Ensure that the permission class is defined in the service-definition.xml file for the service.

WCS-44156
The value of resource bundle is null for the service ID: {0}.

Category:
Security

Cause:
The resource bundle was not defined in the service-definition.xml file.

Action:
Ensure that the resource bundle is defined in the service-definition.xml file.

WCS-44157
The value of permission target is null for the service ID: {0}.

Category:
Security

Cause:
The permission target was not defined in the service-definition.xml file.

Action:
Ensure that the permission target is defined in the service-definition.xml file.

WCS-44158
The value of permission action is not defined for the service ID: {0}.

Category:
Security

Cause:
The permission action (permission-action-list tag) was not defined in the service-definition.xml file.

Action:
Ensure that the permission actions are defined in the service-definition.xml file by using the permission-action-list tag.

WCS-44159
The value of permission admin action is not defined for the service ID: {0}.

Category:
Security

Cause:
The permission admin action (permission-manage-action tag) was not defined in the service-definition.xml file.

Action:
Ensure that the permission admin actions are defined in the service-definition.xml file by using the permission-manage-action tag.

WCS-44160
The role mapping class is not defined for the service ID: {0}.

Category:
Security

Cause:
The role mapping class was not defined in the service-definition.xml file.

Action:
Ensure that the role mapping class is defined in the service-definition.xml file.

WCS-44161
The role mapping resource bundle is not defined for the service ID: {0}.

Category:
Security

Cause:
The role mapping resource bundle was not defined in the service-definition.xml file.

Action:
Ensure that the role mapping resource bundle is defined in the service-definition.xml file.

WCS-44162
Security Extension is not defined for the service ID: {0}.

Category:
Security

Cause:
The Security Extension (security-definition node) was not defined in the service-definition.xml file of the service.

Action:
Ensure that the Security Extension (security-definition node) is properly defined in the service-definition.xml file.

WCS-44163
An error occurred while retrieving service extension definition(service-definition.xml).

Category:
Security

Cause:
The service jars are not correctly packaged or the jars are corrupt.

Action:
Ensure that webcenter framework shared library is correctly defined and the library jars are not corrupt.

WCS-44164
An error occurred while retrieving the spi file .

Category:
Security

Cause:
The are multiple spi files.

Action:
Ensure that only spi file with the name oracle.webcenter.security.selfregistration.custom.SelfRegActionHandlerSpi.properties exists.

WCS-44165
The principal is not of type JpsRole

Category:
Security

Cause:
The principal object passed to the api is not of type JpsRole.

Action:
Ensure that the parameter passed to the api is of type JpsRole.

WCS-44166
Application Policy for {0} does not exist. Creating a new application policy.

Category:
Security

Cause:
The application did not package any policies.

Action:
None as a new policy has been created. However ensure that application did not indeed package any policies and this was not a case of policies not being migrated. Contact Oracle Support in that case.

WCS-44167
Public registration is not enabled for this site.

Category:
Security

Cause:
The public registration option is not enabled.

Action:
Ensure that public registration is enabled in the general tab of Webcenter administration.

WCS-44168
The principal argument is null

Category:
Security

Cause:
The principal object passed to the api is null.

Action:
Ensure that the parameter passed to the api is not null.

WCS-44169
Error while determining security attributes for user {0}

Category:
Security

Cause:
The user {0} passed to determine security attributes does not exist in the underlying identity store.

Action:
Ensure the user name is valid.

WCS-44170
Error occurred while retrieving the security attributes of user {0}

Category:
Security

Cause:
An error occurred while querying the identity store or the policy store to determine the user's security attributes. Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details.

WCS-44171
Error occurred while determining security attributes for service {0}

Category:
Security

Cause:
An error occurred while querying the policy store to determine the principals that were granted view access for the given service. Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details.

WCS-44172
Error occurred while determining security attributes for service {0} in scope {1}

Category:
Security

Cause:
An error occurred while querying the policy store to determine the principals that were granted view access for the given service and scope. Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details.

WCS-44173
Error occurred while determining security attributes for artifact {0} belonging to service {1}

Category:
Security

Cause:
An error occurred while querying the policy store to determine the principals that were granted view access for the given service and artifact. Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details.

WCS-44174
Error encountered while getting the HMAC initial key from the credential store

Category:
Security

Cause:
There is a problem while accessing the credential store. Review the underlying exception in the logs to determine the exact cause.

Action:
Ensure the credential store is setup properly. Take action based on the underlying exception details.

WCS-44175
Error occurred while obtaining mapped service {0} roles for WebCenter Portal role {1}

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44176
Error occurred while obtaining mapped application roles for service {0} and service role with ID {1} in scope {2}

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44177
Error occurred while adding role mapping entry for service {0} and service role {1} to webcenter role {2}

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services. This error can be ignored if upgrade is being re-run.

WCS-44178
Error occurred while removing role mapping entry for service {0} and service role {1} from WebCenter Portal role {2}

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44179
Error occurred while removing role mapping entries for service {0} in scope {1}

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44180
Error occurred while removing role mapping entries for scope {0}

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44181
Error occurred while fetching role mapping metadata for scope {0}

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44182
Error occurred while adding role mapping metadata to scope {0}

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44183
Cannot copy role mapping metadata for scope {0} as the metadata already exists

Category:
Security

Cause:
Role mapping metadata already existed for the given scope.

Action:
Remove the role mapping metadata for the scope and then perform this operation again. Alternatively, you can pass a different scope for which the role mapping metadata does not already exist.

WCS-44184
Error occurred while fetching role mapping metadata for service {0} in scope {1}

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44185
Error occurred while adding role mapping metadata for service {0} in scope {1}

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44186
Unable to obtain service {0} role mapping metadata for scope {1}

Category:
Security

Cause:
The query to obtain role mapping metadata for the scope returned a path for which the metadata did not exist.

Action:
Ensure the service role mapping metadata exists for the scope.

WCS-44187
The role mapping metadata for service {0} in scope {1} is being modified by another user. Try the operation again after some time.

Category:
Security

Cause:
Another user acquired the write lock on the service role mapping metadata.

Action:
Try the operation after some time.

WCS-44188
Cannot copy the role mapping metadata for service {0} in scope {1}

Category:
Security

Cause:
The service role mapping metadata for the scope already existed.

Action:
Remove the service role mapping for the scope and then perform the operation again. Alternatively, you can pass a different service and scope for which the role mapping metadata does not already exist.

WCS-44189
Cannot find the WebCenter Portal application role {0}

Category:
Security

Cause:
The WebCenter Portal application role passed to Role Manager did not exist.

Action:
Ensure that a valid application role is passed to Role Manager.

WCS-44190
Error copying role mapping metadata from role {0} to role {1} in scope {2}

Category:
Security

Cause:
Role mapping metadata could not be copied. Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details. To perform role mapping, use the Roles tab in the portal settings.

WCS-44191
Error deleting role mapping metadata from role {0} in scope {1}

Category:
Security

Cause:
The role mapping metadata could not be deleted. Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details.

WCS-44192
Error while determining enterprise role mapping support. Enterprise groups, and not the individual group members, will be added directly as members.

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
If a service configured does not support enterprise role mapping, then take action based on the underlying exception details.

WCS-44193
The permission action is invalid for the service ID: {0}.

Category:
Security

Cause:
Either permission action name or icon was not specified in the service-definition.xml file.

Action:
Ensure that the permission action name and icon is defined correctly in the service-definition.xml file for the service. The permission action should be specified as <permission-action name="view" icon="/adf/webcenter/view_qualifier.png"/>

WCS-44194
The application level permission class is null for the service ID: {0}.

Category:
Security

Cause:
The application permission class was not defined in the service-definition.xml file.

Action:
Ensure that the application permission class is defined in the service-definition.xml file for the service. The application permission class should be specified as <application-permission-impl>permission class</application-permission-impl> in <application-permission> node.

WCS-44195
The application level permission target is not defined for the service ID: {0}.

Category:
Security

Cause:
The application permission target was not defined in the service-definition.xml file.

Action:
Ensure that the application permission target is defined in the service-definition.xml file for the service. The application permission target should be specified as <application-permission-target-id>permission target</application-permission-target-id> in <application-permission> node.

WCS-44196
The application level permission actions is not defined for the service ID: {0}.

Category:
Security

Cause:
The application permission actions list was not defined in the service-definition.xml file.

Action:
Ensure that the application permission actions list is defined in the service-definition.xml file for the service. The application permission actions should be specified as <application-permission-action-list>permission actions</application-permission-action-list> in <application-permission> node.

WCS-44197
The scope level permission class is not defined for the service ID: {0}.

Category:
Security

Cause:
The scope permission class was not defined in the service-definition.xml file.

Action:
Ensure that the scope permission class is defined in the service-definition.xml file for the service. The scope permission class should be specified as <scope-permission-impl>permission class</scope-permission-impl> in <scope-permission> node.

WCS-44198
The scope level permission target is not defined for the service ID: {0}.

Category:
Security

Cause:
The scope permission target was not defined in the service-definition.xml file.

Action:
Ensure that the scope permission target is defined in the service-definition.xml file for the service. The scope permission target should be specified as <scope-permission-target-id>permission target</scope-permission-target-id> in <scope-permission> node.

WCS-44199
The scope level permission actions is not defined for the service ID: {0}.

Category:
Security

Cause:
The scope permission actions list was not defined in the service-definition.xml file.

Action:
Ensure that the scope permission actions list is defined in the service-definition.xml file for the service. The scope permission actions should be specified as <scope-permission-action-list>permission actions</scope-permission-action-list> in <scope-permission> node.

WCS-44200
The resource level permission class is not defined for the service ID: {0}.

Category:
Security

Cause:
The resource permission class was not defined in the service-definition.xml file.

Action:
Ensure that the resource permission class is defined in the service-definition.xml file for the service. The resource permission class should be specified as <resource-permission-impl>permission class</resource-permission-impl> in <resource-permission> node.

WCS-44201
The resource level permission target is not defined for the service ID: {0}.

Category:
Security

Cause:
The resource permission target was not defined in the service-definition.xml file.

Action:
Ensure that the resource permission target is defined in the service-definition.xml file for the service. The resource permission target should be specified as <resource-permission-target-id>permission target</resource-permission-target-id> in <resource-permission> node.

WCS-44202
The resource level permission actions is not defined for the service ID: {0}.

Category:
Security

Cause:
The resource permission actions list was not defined in the service-definition.xml file.

Action:
Ensure that the resource permission actions list is defined in the service-definition.xml file for the service. The resource permission actions should be specified as <resource-permission-action-list>permission actions</resource-permission-action-list> in <resource-permission> node.

WCS-44203
The application role operations list is not specified at the application level for the service ID: {0}.

Category:
Security

Cause:
The application role operations list is not specified at the application level. It was not defined in the service-definition.xml file.

Action:
Ensure that the application role operations list is defined at the application level in the service-definition.xml file for the service.

WCS-44204
The application role operations list is not specified at the scope level for the service ID: {0}.

Category:
Security

Cause:
The application role operations list is not specified at the scope level was not defined in the service-definition.xml file.

Action:
Ensure that the application role operations list is defined at the scope level in the service-definition.xml file for the service.

WCS-44205
The application role operations list is not specified at the resource level for the service ID: {0}.

Category:
Security

Cause:
The application role operations list is not specified at the resource level was not defined in the service-definition.xml file.

Action:
Ensure that the application role operations list is defined at the resource level in the service-definition.xml file for the service.

WCS-44206
The application role operation specified is invalid for the service ID: {0}.

Category:
Security

Cause:
Operation name or application role or icon has not been specified correctly for the application role operation in service-definition.xml

Action:
Ensure that the application role operation is specified correctly with operation name, application role and icon in the service-definition.xml file for the service. An application role operation entry looks like this - <application-operation name="manage" approle="AppConnectionManager" icon="/adf/webcenter/manage.png"/>

WCS-44207
Error occurred while adding resource {0} security override entry for service {1} in scope {2}

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44208
Error occurred while removing resource {0} security override entry for service {1} in scope {2}

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44209
Error occurred while checking if resource {0} override security for service {1} in scope {2}

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44210
Error occurred while removing security override entries for scope {0}

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44211
Error occurred while removing security override entries for service {0} in scope {1}

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44212
The security override metadata for service {0} in scope {1} is being modified by another user. Try the operation again after some time.

Category:
Security

Cause:
Another user acquired the write lock on the service security override metadata.

Action:
Try the operation after some time.

WCS-44213
Invalid Security Handler for service {0}. Expected Type: {1} Actual Type: {2}.

Category:
Security

Cause:
Security Handler defined in service-definition was of incorrect type

Action:
Define the correct security handler in the service-definition as specified

WCS-44214
Security Extension not found for service {0}.

Category:
Security

Cause:
Security Extension not defined in service-definition.

Action:
Define the security extension appropriately in the service-definition.

WCS-44215
Security Handler not found for service {0}.

Category:
Security

Cause:
Security Handler specified in the security extension is either undefined or could not be found.

Action:
Ensure the correct security handler class is defined in the security extension of service-definition.

WCS-44216
Could not determine security authorization type for service {0}. It needs to be one of the following - PERMISSION, APPLICATION_ROLE or ROLEMAPPING.

Category:
Security

Cause:
The security extension either does not contain any authorization model or contains more than one.

Action:
Depending on the authorization model, security extension must be updated to specify the appropriate security model.

WCS-44217
Permission security model not defined at {0} level for service {1}.

Category:
Security

Cause:
Permission check or provisioning is being attempted at specified level where as the security extension in the service-definition does not define given level permission security model

Action:
Either define specified level permission security metadata or do not attempt security provisioning or check at given level for the service.

WCS-44218
Application Roles security model not defined at {0} level for service {1}.

Category:
Security

Cause:
Security check or provisioning is being attempted at specified level where as the security extension in the service-definition does not define given level application role security model

Action:
Either define specified level application role security metadata or do not attempt security provisioning or check at given level for the service.

WCS-44219
Error occurred revoking permissions for {0} service resource {1}

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44220
Application Role not defined for {0} service action {1} at {2} level.

Category:
Security

Cause:
Application Role for the given service action and level not defined in security extension of service-definition.

Action:
Define the application role mapping for the given service action at the given level else do not attempt security provisioning or check for the service at given level.

WCS-44221
Error occurred checking {0} action for {1} service at {2} level.

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44222
An error occurred while retrieving the policies or permissions.

Category:
Security

Cause:
This is caused when the policy store is not accessible or is not running or the service definition is not defined properly.

Action:
Ensure that the policy store and service definition is configured properly and is running.

WCS-44223
An error occurred while saving the permissions.

Category:
Security

Cause:
This is caused when the policy store is not accessible or is not running or the service definition is not defined properly.

Action:
Ensure that the policy store and service definition is configured properly and is running.

WCS-44224
An error occurred while saving the permissions.

Category:
Security

Cause:
This is caused when the service definition is not defined properly.

Action:
Ensure that the service definition is configured properly.

WCS-44225
An error occurred while setting service id.

Category:
Security

Cause:
This is caused when the service definition is not defined properly.

Action:
Ensure that the service definition is configured properly.

WCS-44226
Error while accessing data from OPSS Policy Store.

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44227
An error occurred while getting portal assets and WebCenter Portal services

Category:
Security

Cause:
This is caused when the service definition is not defined properly.

Action:
Ensure that the service definition is configured properly.

WCS-44228
An error occurred while determining list of portal assets that override security for service {0} in scope {1}

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details.

WCS-44229
An error encountered while getting mapped action.

Category:
Security

Cause:
This is caused when the service definition is not defined properly.

Action:
Ensure that the service definition is configured properly.

WCS-44230
An error encountered while trying to retrieve {0} service policies at {1} level for scope {2} and asset {3}.

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details.

WCS-44231
An error encountered while trying to grant {0} service policies at {1} level for scope {2} and asset {3}.

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause. The grant could already exist.

Action:
Take action based on the underlying exception details. If the grant already exists, revoke the grant using WLST and perform operation again.

WCS-44232
An error encountered while trying to revoke {0} service policies at {1} level for scope {2} and asset {3}.

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause. The grant being revoked probably does not exist.

Action:
Take action based on the underlying exception details.

WCS-44233
An error encountered while trying to obtain subject for user {0}, returning anonymous user subject instead.

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause.

Action:
Take action based on the underlying exception details.

WCS-44234
An error encountered while trying to create role {0}.

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause. The role may be already exists or there is a problem with policy store.

Action:
Take action based on the underlying exception details.

WCS-44235
An error encountered while trying to get application roles.

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause. The roles may not exists or there is an issue with the policy store.

Action:
Take action based on the underlying exception details.

WCS-44236
An error encountered while trying to create role {0}.

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause. The role may be already exists or there is a problem with the policy store.

Action:
Take action based on the underlying exception details.

WCS-44237
An error encountered while trying to get members.

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause. The members may not exist or there is a problem with the policy store.

Action:
Take action based on the underlying exception details.

WCS-44238
An error encountered while trying to get members.

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause. The member may not exist or there is a problem with the policy store.

Action:
Take action based on the underlying exception details.

WCS-44239
An error encountered while trying to delete members.

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause. The member may already exist or there is a problem with the policy store.

Action:
Take action based on the underlying exception details.

WCS-44240
Cannot access the resource

Category:
Security

Cause:
The service was not defined properly.

Action:
Ensure that the service definition is configured properly.

WCS-44241
Failed to issue token.

Category:
Security

Cause:
Trust Service Token Manager failed to issue the token.

Action:
Take action based on the underlying exception details.

WCS-44242
TrustService instance is null.

Category:
Security

Cause:
Failed to get TrustService instance from the JPS context.

Action:
Take action based on the underlying exception details.

WCS-44243
TokenManager instance is null.

Category:
Security

Cause:
Failed to get TokenManager instance from the TrustService.

Action:
Take action based on the underlying exception details.

WCS-44244
Could not execute search

Category:
Security

Cause:
The identity store is not up or is not configured properly.

Action:
Ensure that the identity store is up and configured properly.

WCS-44245
Could not add to role

Category:
Security

Cause:
The policy object already exists or the policy store is not configured properly.

Action:
Ensure that the policy is not already added and policy store is configured properly.

WCS-44246
An internal JPS error occurred while exporting / importing application roles.

Category:
Security

Cause:
This may have been caused when retrieving information from the Application Policy Store or while granting permissions to roles.

Action:
Review the exception to determine exact cause.

WCS-44247
Could not delete application role {0}.

Category:
Security

Cause:
This may have been caused because the role to be deleted does not exist any more.

Action:
Review the exception to determine exact cause.

WCS-44248
The documents role mapping failed during import for portal : {0} and application role {1}.

Category:
Security

Cause:
This is caused by an error experienced by service-specific Role Mapping provider.

Action:
Inspect the server logs and rectify the problem encountered by the service Role Mapping provider.

WCS-44249
No application role found for scope : {0}.

Category:
Security

Cause:
This may be due to an error that could have occurred during Portal creation or import due to which the roles were not created.

Action:
Inspect the logs to confirm which Portal is this error being thrown for and try manually accessing the Portal. If the Portal is inaccessible, re try import or, re create the Portal.

WCS-44250
Unable to obtain MDSSession to initialize {0} store.

Category:
Security

Cause:
This is caused by an underlying MDS Configuration exception while trying to initialize the customization config.

Action:
Review the exception to determine exact cause.

WCS-44251
Start time {0} specified for an impersonation grant cannot be after end time {1}

Category:
Security

Cause:
Start time for impersonation grant is after end time

Action:
Ensure start time specified for an impersonation grant is before end time

WCS-44252
You cannot add, update, or remove yourself as an impersonator

Category:
Security

Cause:
Adding, updating, or removing oneself as an impersonator is not allowed

Action:
Ensure impersonator being added, updated or removed is a valid impersonator

WCS-44253
Impersonator {0} already added for user {1}

Category:
Security

Cause:
You can add an impersonator only once for a user

Action:
Ensure you add an impersonator only once for a user. To specify a different time duration, edit the existing grant

WCS-44254
Impersonatee {0} already added for user {1}

Category:
Security

Cause:
You can add an impersonator only once for a user

Action:
Ensure you add an impersonator only once for a user. To specify a different time duration, edit the existing grant

WCS-44255
Cannot update or delete impersonator {0} for user {1} as impersonator not yet added

Category:
Security

Cause:
The impersonator being updated or deleted has not been added yet

Action:
Ensure the impersonator has been added before trying to update or remove the impersonation grant

WCS-44256
Cannot update or delete impersonatee {0} for user {1} as impersonatee not yet added

Category:
Security

Cause:
The impersonator being updated or deleted has not been added yet

Action:
Ensure the impersonator has been added before trying to update or remove the impersonation grant

WCS-44257
Impersonator user {0} could not be found

Category:
Security

Cause:
The impersonator specified is not a valid user

Action:
Ensure you specify a valid impersonator

WCS-44258
Impersonatee user {0} could not be found

Category:
Security

Cause:
The impersonatee specified is not a valid user

Action:
Ensure you specify a valid impersonatee

WCS-44259
Fetching Impersonator user {0} failed

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause

Action:
Take action based on the underlying exception details

WCS-44260
Fetching Impersonatee user {0} failed

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause

Action:
Take action based on the underlying exception details

WCS-44261
Adding impersonator {0} for user {1} failed

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause

Action:
Take action based on the underlying exception details

WCS-44262
Updating impersonator {0} for user {1} failed

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause

Action:
Take action based on the underlying exception details

WCS-44263
Removing impersonator {0} for user {1} failed

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause

Action:
Take action based on the underlying exception details

WCS-44264
Getting impersonators for user {0} failed

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause

Action:
Take action based on the underlying exception details

WCS-44265
Getting impersonatees for user {0} failed

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause

Action:
Take action based on the underlying exception details

WCS-44266
Removing expired impersonation grants for user {0} failed

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause

Action:
Take action based on the underlying exception details

WCS-44267
Starting impersonation session for user {0} failed

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause

Action:
Take action based on the underlying exception details

WCS-44268
Terminating impersonation session for current user failed

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause

Action:
Take action based on the underlying exception details

WCS-44269
User {0} is not a valid impersonator

Category:
Security

Cause:
The user specified as impersonator does not belong to webcenter#-#impersonators role.

Action:
Ensure you specify a user that belongs to webcenter#-#impersontors role.

WCS-44270
Determining if user {0} is a valid impersonator failed

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause

Action:
Take action based on the underlying exception details

WCS-44271
Adding or updating impersonator {0} for user {1} failed

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause

Action:
Take action based on the underlying exception details

WCS-44272
Searching for impersonators matching pattern {0} failed

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause

Action:
Take action based on the underlying exception details

WCS-44273
Impersonation Time delta {0} specified is in invalid format

Category:
Security

Cause:
Time delta specified was not a valid integer

Action:
Check documentation to understand the format in which this delta needs to be specified. It needs to be a valid integer

WCS-44274
Impersonation configuration check failed

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause

Action:
Take action based on the underlying exception details

WCS-44275
End time {0} cannot be before current time.

Category:
Security

Cause:
End time for impersonation grant is before current time

Action:
Ensure end time is not before current time

WCS-44300
An error encountered while granting permissions

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause. The policy may already have been granted or the identity may not exist or there is a problem with the policy store.

Action:
Take action based on the underlying exception details.

WCS-44301
An error encountered while revoking permissions

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause. The policy may not exist or the identity may not exist or there is a problem with the policy store.

Action:
Take action based on the underlying exception details.

WCS-44302
An OPSS error occurred while locating the audit service.

Category:
Security

Cause:
The error would be caused when Audit Service is not configured. Review the jps-config.xml configuration file in conjunction with the stack trace if Audit Service needs to be enabled for WebCenter Portal.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-44304
Invalid security attribute {0} obtained for artifact {1} in service {2}

Category:
Security

Cause:
The security attribute returned by the service does not comply to the list of expected security attributes

Action:
Ensure the security attribute is one of the expected values i.e. user, group, application role, authenticated and anonymous roles

WCS-44305
An error occurred while upgrading portal role {0} due to {1}

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause. The role may already have been upgraded.

Action:
Take action based on the underlying exception details.

WCS-44306
An error occurred while upgrading portal roles due to {0}

Category:
Security

Cause:
Review the underlying exception in the logs to determine the exact cause. The role may already have been upgraded.

Action:
Take action based on the underlying exception details.

WCS-47201
An unexpected error occurred in the Activity Stream sub-system.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-47202
The publish activity failed because invalid arguments were passed to the method: activity ({0}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Ensure that all arguments passed are valid.

WCS-47203
The retrieve activities failed because invalid arguments were passed to the method: privateAndUpActorIds ({0}), sharedAndUpActorIds ({1}), publicActorIds ({2}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Ensure that all arguments passed are valid.

WCS-47205
Cannot establish connections. A connections exception was thrown.

Category:
Other

Cause:
A connections exception has been thrown.

Action:
Check the exception's details to see why it was thrown.

WCS-47206
A Service Framework exception was thrown.

Category:
Other

Cause:
A Service Framework exception has been thrown.

Action:
Check the exception's details to see why it was thrown.

WCS-47207
A Settings exception was thrown.

Category:
Other

Cause:
A Settings exception was thrown.

Action:
Check the exception's details to see why it was thrown.

WCS-47208
The retrieve activities failed because invalid arguments were passed to the method: applicationId ({0}), servivceId ({1}), activityType ({2}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Ensure that all arguments passed are valid.

WCS-47209
The retrieve activities failed because invalid arguments were passed to the method: applicationId ({0}), servivceId ({1}), activityType ({2}), sinceDate ({3}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Ensure that all arguments passed are valid.

WCS-47210
A database exception occurred in the Activity Stream Toplink module.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-47211
A query exception occurred in the Activity Stream Toplink module.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-47212
Create Actor failed because an invalid argument was passed to the method: guid ({0}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Ensure that all arguments passed are valid.

WCS-47213
Create Object failed because an invalid argument was passed to the method: guid ({0}), type ({1}), displayName ({2}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Ensure that all arguments passed are valid.

WCS-47214
Create Activity Element failed because an invalid argument was passed to the method: applicationID ({0}), scope ({1}), serviceID ({2}), activityType ({3}), actors ({4}), permission ({5}), activityTime ({6}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Ensure that all arguments passed are valid.

WCS-47215
Create Activity Type failed because an invalid argument was passed to the method: id ({0}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Ensure that all arguments passed are valid.

WCS-47216
Create Object Type failed because an invalid argument was passed to the method: id ({0}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Ensure that all arguments passed are valid.

WCS-47217
Create Activity Element failed because an invalid argument was passed to the method: applicationID ({0}), activityType ({1}), actors ({2}), permission ({3}), activityTime ({4}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Ensure that all arguments passed are valid.

WCS-47218
Publish activity {0} failed due to {1}.

Category:
Other

Cause:
An unexpected error during the publishing activity.

Action:
Contact Oracle Support Services.

WCS-47219
An error occurred due to {0}.

Category:
Other

Cause:
An exception occurred.

Action:
Contact Oracle Support Services.

WCS-47220
An unexpected error occurred resolving property "{0}":"{1}" for an Analytics event of type {2}

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-47221
Unable to publish the Analytics event (of type {0}).

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-47222
This operation is not supported.

Category:
Other

Cause:
This operation not supported.

Action:
Contact Oracle Support Services.

WCS-47223
Skipping profile information for user {0}

Category:
Other

Cause:

Action:

WCS-47224
For user {0}, the last accessed page couldn"t be found due to {1}

Category:
Other

Cause:

Action:

WCS-47225
Check for valid repository failed.

Category:
Other

Cause:
Either the database is down or the WebCenter repository is not installed.

Action:
Check the exception's details to why this error occurred.

WCS-47226
For user {0}, couldn''t retrieve the list of pages last accessed due to {1}

Category:
Other

Cause:

Action:

WCS-47227
For user {0}, couldn''t retrieve the last accessed page in {1} due to {2}

Category:
Other

Cause:

Action:

WCS-47228
For user {0}, couldn''t clean the last accessed page due to {1}

Category:
Other

Cause:

Action:

WCS-47229
The task flow instance was not specified.

Category:
Other

Cause:
The supplied taskflow instance ID was null or blank.

Action:
Specify a valid taskflow instance ID that is not null or blank.

WCS-47230
An activity exception was encountered during the bulk publish operation.

Category:
Other

Cause:
One or more activities threw an exception.

Action:
Check the individual activity exception.

WCS-47231
Create Cust Attr failed because an invalid argument was passed to the method: name ({0}), value ({1}), url ({2}).

Category:
Other

Cause:
One of the input arguments was invalid.

Action:
Ensure that all arguments passed are valid.

WCS-47232
An unexpected error occurred while setting up the Comments service.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-47233
An unexpected error occurred while retrieving comments.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-47234
An unexpected error occurred while posting a comment.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-47235
An unexpected error occurred while preparing a comments summary.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-47236
An unexpected error occurred while preparing comments.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-47237
Comment text cannot be empty.

Category:
Other

Cause:
The supplied text for the comment is null or blank.

Action:
Specify a non-empty text for the comment.

WCS-47238
An object was not specified.

Category:
Other

Cause:
The supplied object identifier is null.

Action:
Specify a non-null object identifier.

WCS-47239
An object ID is not present for the specified object.

Category:
Other

Cause:
The ID of the specified object is null.

Action:
Specify an object with a valid ID.

WCS-47240
A service ID is not present for the specified object.

Category:
Other

Cause:
The service ID for the specified object is null.

Action:
Specify an object with a valid service ID.

WCS-47241
An object type is not present for the specified object.

Category:
Other

Cause:
The object type for the specified object is null.

Action:
Specify an object with a valid object type.

WCS-47242
An unexpected error while expanding comments.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-47243
An unexpected error occurred while collapsing comments.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-47244
An unexpected error occurred while setting up the Likes service.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-47245
An unexpected error occurred while retrieving Likes.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-47246
An unexpected error occurred while retrieving Likes.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-47247
An unexpected error occurred while posting a Like.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-47248
A comment ID not specified.

Category:
Other

Cause:
The supplied comment ID was null or blank.

Action:
Specify a valid comment ID that is not null or blank.

WCS-47249
An unexpected error occurred while deleting a comment.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-47250
An unexpected error occurred while initializing the scope.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-47252
The follow object failed because an invalid arguments was passed to the method: actor ({0}), object ({1}), object service id ({2}).

Category:
Other

Cause:
One of the input arguments is invalid.

Action:
Ensure that all arguments passed are valid.

WCS-47253
Can"t archive due to an invalid argument: date ({0}).

Category:
Other

Cause:
One of the input arguments is invalid.

Action:
Ensure that all arguments passed are valid.

WCS-47254
An unexpected error occurred while archiving.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-47255
Failed to register application management beans.

Category:
Other

Cause:
Application management beans(MBean) registration failed. Either there are issues with WebLogic or the application was not packaged properly.

Action:
Restart WebLogic or examine WebLogic log files for further details.

WCS-47256
Failed to unregister application management beans.

Category:
Other

Cause:
Application management beans(MBean) unregistration failed. Either the Mbeans were not registered or the Mbeans were already unregistered.

Action:
Examine the WebLogic log files for further details.

WCS-47257
An unexpected error occurred while deleting service data corresponding to the activity.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-47258
The advanced query parameter contains invalid or unsupported constructs.

Category:
Other

Cause:
There are invalid or unsupported SQL constructs specified in the Advanced Query filter parameter.

Action:
Correct the Advanced Query filter parameter.

WCS-47259
An unexpected error occurred in setting up the JMS queue {0}.

Category:
Other

Cause:
The AQ JMS ConnectionFactory or Queue lookup failed.

Action:
Correct JMS Modules in Admin Console.

WCS-47260
An unexpected error occurred while send message to the JMS queue.

Category:
Other

Cause:
The JMS Queue found, but enqueue failed.

Action:
Examine the Weblogic log files for exception details.

WCS-47261
Fail to get Resource URI for published Activity.

Category:
Other

Cause:
The ResourceActionUtils.getUrl() failed for input Activity.

Action:
Examine the Weblogic log files for exception details.

WCS-47262
Fail to get Activity message for message key {0} in bundle {1}.

Category:
Other

Cause:
The getMessage() failed for input Activity.

Action:
Examine the Weblogic log files for exception details.

WCS-47263
Failed to unfollow objects due to {0}.

Category:
Other

Cause:
An unexpected error occurred during the unfollowing objects.

Action:
Contact Oracle Support Services.

WCS-47264
The unfollowed object failed because an invalid arguments was passed to the method: actor ({0}), object ({1}).

Category:
Other

Cause:
One of the input arguments is invalid.

Action:
Ensure that all arguments passed are valid.

WCS-47265
Failed to initialize context for asynchronous activity listeners processing.

Category:
Other

Cause:
Failed to initialize context for asynchronous activity listeners processing.

Action:
Contact Administrator.

WCS-47266
Failed to parse the activity definition file {0} due to {1}

Category:
Other

Cause:
Validate the activity-definition.xml file..

Action:
Examine the Weblogic log files for exception details.

WCS-47267
Failed to lookup connection for name {0}.

Category:
Other

Cause:
Invalid OSN connection name.

Action:
Contact Administrator.

WCS-47268
Could not load extension handler due to {0}.

Category:
Other

Cause:
Could not load extension handler.

Action:
Examine the WebCenter log files for exception details.

An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-47834
Cannot create a connection between users "{0}" and "{1}" who already connected

Category:
Other

Cause:
The specified users are already connected with each other.

Action:
Specify users who are not yet connected.

WCS-47835
Unexpected error reading default configuration "{0}" or custom configuration

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-47836
Unexpected error getting connections with preferences (userGuid = {0}, applicationId = {1}, scope = {2}, serviceId = {3}, settingKey = {4}, configurableSettingKey = {5})

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-47837
Unexpected error getting connections lists with preferences (listNames = {0}, userGuid = {1}, applicationId = {2}, scope = {3}, serviceId = {4}, settingKey = {5}, configurableSettingKey = {6})

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-47838
Cannot create a Connection list with the same name as existing one ({0})

Category:
Other

Cause:
You already have a connection list with the specified name.

Action:
Specify a name other than that of your existing connection lists.

WCS-49001
Injectable Service provider did not set list service

Category:
Other

Cause:
Injectable Service provider could not find the list service.

Action:
Make sure List Service injectable provider is available in webapp.

WCS-49002
List id is null

Category:
Other

Cause:
List ID was not specified in request.

Action:
Make sure List ID is specified in request.

WCS-49003
Column id is null

Category:
Other

Cause:
Column ID was not specified in request.

Action:
Make sure Column ID is specified in request.

WCS-49004
Row id is null

Category:
Other

Cause:
Row ID was not specified in request.

Action:
Make sure Row ID is specified in request.

WCS-49005
No 'column' in the request body

Category:
Other

Cause:
Column data was not found in the request body.

Action:
Make sure Column data is specified in the request body.

WCS-49006
No 'list' in the request body

Category:
Other

Cause:
List data was not found in the request body.

Action:
Make sure List data is specified in the request body.

WCS-49007
No 'row' in the request body

Category:
Other

Cause:
Row data was not found in the request body.

Action:
Make sure Row data is specified in the request body.

WCS-49008
List could not be found for list id [{0}]

Category:
Other

Cause:
List ID was not found.

Action:
Make sure List ID exists.

WCS-49009
Column could not be found for column id [{0}]

Category:
Other

Cause:
Column ID was not found.

Action:
Make sure Column ID exists.

WCS-49010
Row could not be found for row id [{0}]

Category:
Other

Cause:
Row ID was not found.

Action:
Make sure Row ID exists.

WCS-49011
Unable to create list

Category:
Other

Cause:
List was not created.

Action:
See logs for more information.

WCS-49012
'id' should not be supplied with a POST -- use PUT if you want to update

Category:
Other

Cause:
'id' should not be supplied with a POST.

Action:
Use PUT if you want to update.

WCS-49013
Search parameter must follow [column:[operator:]]value;[column:[operator:]value] syntax

Category:
Other

Cause:
Search parameter syntax not understood.

Action:
Syntax must follow: [column:[operator:]]value;[column:[operator:]value]

WCS-49014
Comparator [{0}] is invalid

Category:
Other

Cause:
Invalid search comparator.

Action:
Use valid search comparator.

WCS-49015
MetaColumn [{0}] is a required field, and cannot be set to null

Category:
Other

Cause:
Missing required field.

Action:
Make sure required field is present.

WCS-49016
Invalid "row" data in the request body [{0}]

Category:
Other

Cause:
Invalid row data was found in the request body.

Action:
Make sure valid row data is specified in the request body.

WCS-49017
Portal name not found [{0}]

Category:
Other

Cause:
Portal name not found.

Action:
Please specify a valid portal name.

WCS-49018
Portal name not found for GUID [{0}]

Category:
Other

Cause:
Portal name GUID not found.

Action:
Please specify a valid portal name GUID.

WCS-49101
Injectable Service provider did not set forum service

Category:
Other

Cause:
Injectable Service provider could not find the forum service.

Action:
Make sure Forum Service injectable provider is available in webapp.

WCS-49102
Can't establish Forum Session

Category:
Other

Cause:
Injectable Service provider could not establish a Forum Session.

Action:
Make sure Jive Forum is configured and running and/or you have a valid user session established. Re-authenticating may help.

WCS-49103
Forum id not found [{0}]

Category:
Other

Cause:
Forum not found.

Action:
Please specify a valid forum.

WCS-49104
Portal name not found [{0}]

Category:
Other

Cause:
Portal name not found.

Action:
Please specify a valid portal name.

WCS-49105
All resources require a name.

Category:
Other

Cause:
Resource name required.

Action:
Please specify a resource name in the request body.

WCS-49106
Topic id not found [{0}]

Category:
Other

Cause:
Topic not found.

Action:
Please specify a valid topic.

WCS-49201
Injectable Service provider did not set Spaces service

Category:
Other

Cause:
Injectable Service provider could not find Space the service.

Action:
Make sure Space Service injectable provider is available in webapp.

WCS-49202
Portal id is null

Category:
Other

Cause:
Portal ID was not specified in request.

Action:
Make sure Portal ID is specified in request.

WCS-49203
No 'document' in the request body

Category:
Other

Cause:
Portal document data was not found in the request body.

Action:
Make sure Portal document is specified in the request body.

WCS-49204
Portal name not found [{0}]

Category:
Other

Cause:
Portal name not found.

Action:
Please specify a valid portal name.

WCS-49205
Members not found for portal [{0}]

Category:
Other

Cause:
No Members found.

Action:
Please specify a portal with members.

WCS-49206
Member [{0}] not found in portal [{1}]

Category:
Other

Cause:
Member not found.

Action:
Please specify a different member or portal name.

WCS-49207
Attributes not found in portal [{0}]

Category:
Other

Cause:
Attributes not found.

Action:
Please specify a different portal name.

WCS-49208
Attribute name [{0}] not found in portal [{1}]

Category:
Other

Cause:
Attribute name not found.

Action:
Please specify a different Attribute name or portal name.

WCS-49209
Portal params [{0}] and [{1}] result in exception

Category:
Other

Cause:
General exception.

Action:
Please specify a different set of parameters.

WCS-49210
Attempted operation resulted in security exception

Category:
Other

Cause:
Insufficient authorization.

Action:
Contact portal administrator.

WCS-49211
Retrieving Portal failed due to service unavailability

Category:
Other

Cause:
Service inaccessible.

Action:
Contact portal administrator.

WCS-49212
Failed to retrieve document repository info for portal.

Category:
Other

Cause:
Unknown document repository error.

Action:
Contact portal administrator.

WCS-49213
No Portal provided in body.

Category:
Other

Cause:
Portal was not provided in POST body of request.

Action:
Provide Portal in POST body of request.

WCS-49214
Portal template name not specified.

Category:
Other

Cause:
No portal template name was specified in POST body of request.

Action:
Please specify a portal template name.

WCS-49215
Portal name not specified.

Category:
Other

Cause:
No portal name was specified in POST body of request.

Action:
Please specify a portal name.

WCS-49216
Unable to create Portal.

Category:
Other

Cause:
Internal error creating Portal.

Action:
Contact portal administrator and/or see logs for additional errors.

WCS-49217
No Member provided in body.

Category:
Other

Cause:
Member was not provided in POST body of request.

Action:
Provide Member in POST body of request.

WCS-49218
Member name not specified.

Category:
Other

Cause:
No member name was specified in POST body of request.

Action:
Please specify a member name.

WCS-49219
Role name not specified.

Category:
Other

Cause:
No role name was specified in POST body of request.

Action:
Please specify a role name.

WCS-49220
Retrieving Portal Assets failed due to service unavailability

Category:
Other

Cause:
Service inaccessible.

Action:
Contact portal administrator.

WCS-49221
Injectable Service provider did not set Asset Lifecycle service

Category:
Other

Cause:
Injectable Service provider could not find Asset Lifecycle the service.

Action:
Make sure Asset Lifecycle Service injectable provider is available in webapp.

WCS-49222
Portal name specified for asset publishing not found : {0}

Category:
Other

Cause:
Portal name not found.

Action:
Specify a valid portal name.

WCS-49223
Archive for asset upload has not been provided

Category:
Other

Cause:
Asset archive for upload not provided.

Action:
Specify an asset archive for upload.

WCS-49224
Asset archive is invalid : {0}

Category:
Other

Cause:
Asset archive files or content is not packaged properly.

Action:
Include a valid asset archive. See associated message for more details.

WCS-49225
Portal template not found with the name not specified.

Category:
Other

Cause:
No portal template was found corresponding to the name specified in POST body of request.

Action:
Please specify an existing portal template name.

WCS-49251
REST API Injectable Service provider did not set message board service.

Category:
Other

Cause:
REST API Injectable Service provider did not set message board service.

Action:
Contact Oracle Support Services.

WCS-49252
No 'message' in the request body

Category:
Other

Cause:
Message data was not found in the request body.

Action:
Make sure Message data is specified in the request body.

WCS-49253
Message body not specified

Category:
Other

Cause:
No 'message' in the body when trying to create a new message.

Action:
Specify a valid message body that is not null or blank.

WCS-49254
'id' should not be supplied with a POST -- use PUT if you want to update

Category:
Other

Cause:
'id' should not be supplied with a POST.

Action:
Use PUT if you want to update.

WCS-49255
Error accessing profile for user with GUID {0}. Ignoring.

Category:
Other

Cause:
Error retrieving user profile.

Action:
Verify that the user GUID is correct.

WCS-49256
Permissions class called with wrong number of resource IDs. Expecting 2 or 3, but got {0}.

Category:
Other

Cause:

Action:

WCS-49257
Error accessing user or portal message board {0}.

Category:
Other

Cause:

Action:

WCS-49258
Error accessing message {0} from user or portal message board {1}.

Category:
Other

Cause:

Action:

WCS-49259
Error retrieving messages {0} to {1} from user or portal message board {2}.

Category:
Other

Cause:
Error retrieving message from user's message board.

Action:
Check startIndex and itemsPerPage.

WCS-49260
Error trying to delete message {0} from message board for user or portal {1}.

Category:
Other

Cause:

Action:

WCS-49261
Error trying to create message on message board for user or portal {0}.

Category:
Other

Cause:

Action:

WCS-49262
Invalid message board type. Got "{0}", expected "person" or "space".

Category:
Other

Cause:
Invalid message board type in URI.

Action:
Verify that the message board type is either 'person' or 'space'.

WCS-49263
Invalid message type. Got "{0}", expected "private", "public", "hidden", "private_hidden".

Category:
Other

Cause:
Invalid message type in URI.

Action:
Verify that the message type is either 'private', 'public', hidden' or 'private_hidden'.

WCS-49264
Message type "{0}" not supported with message board type "{1}".

Category:
Other

Cause:
Invalid message type in URI.

Action:
Verify that the message type is empty.

WCS-49265
Message type "{0}" not supported for users other than current user.

Category:
Other

Cause:
Invalid message type in URI.

Action:
Verify that the message type is empty.

WCS-49301
REST API Injectable Service provider did not set profile service.

Category:
Other

Cause:
REST API Injectable Service provider did not set profile service.

Action:
Contact Oracle Support Services.

WCS-49302
Cannot delete a member from a list that the current user does not own.

Category:
Other

Cause:
Cannot delete a member from a list that the current user does not own.

Action:
Make sure REST URL specifies the correct list and is accessing list for the current user.

WCS-49303
Retrieving list names is only supported for current user. Found GUID {0}.

Category:
Other

Cause:
Retrieving list names is only supported for current user.

Action:
Make sure REST URL specifies the current user GUID (or @me).

WCS-49304
Creating lists is only supported for the current user. Found GUID {0}.

Category:
Other

Cause:
Creating lists is only supported for current user.

Action:
Make sure REST URL specifies the current user GUID (or @me).

WCS-49305
No 'list' in the request body

Category:
Other

Cause:
List data was not found in the request body.

Action:
Make sure List data is specified in the request body.

WCS-49306
List name not specified

Category:
Other

Cause:
No 'name' in the body when trying to create a new list.

Action:
Specify a valid list name that is not null or blank.

WCS-49307
Creating connections is only supported for the current user. Found GUID {0}.

Category:
Other

Cause:
Creating connections is only supported for current user.

Action:
Make sure REST URL specifies the current user GUID (or @me).

WCS-49308
No 'member' in the request body

Category:
Other

Cause:
Member data was not found in the request body.

Action:
Make sure member data is specified in the request body.

WCS-49309
Connection GUID not specified

Category:
Other

Cause:
No 'guid' in the body when trying to create a new connection.

Action:
Specify a valid user GUID that is not null or blank.

WCS-49310
Only connection lists can be deleted, and only by the current user. Found GUID {0} and list ID {1}.

Category:
Other

Cause:
Only connection lists can be deleted, not the current user or the intrinsic connections list. They can only be deleted by the current user.

Action:
Make sure REST URL specifies the connection list ID, not @self or @connections, and is accessing the current user.

WCS-49311
Accessing status is only supported for @self id. Found selector {0}.

Category:
Other

Cause:
Accessing status is only supported for @self id.

Action:
Make sure REST URL specifies the @self selector.

WCS-49312
Updating status is only supported for the current user. Found GUID {0}.

Category:
Other

Cause:
Accessing status is only supported for the current user.

Action:
Make sure REST URL is accessing the current user.

WCS-49313
Error trying to access profile for user {0}.

Category:
Other

Cause:

Action:

WCS-49314
Error checking for people permissions. Wrong number of arguments. Expected 1-3, but found {0} for permission {1}. Ignoring.

Category:
Other

Cause:

Action:

WCS-49315
Error checking for people permissions. Could not parse type {0}. Expected: person, status, lists, list, member. Ignoring.

Category:
Other

Cause:

Action:

WCS-49316
Error trying to access connection lists for user {0}.

Category:
Other

Cause:

Action:

WCS-49317
Error accessing connection list {0}.

Category:
Other

Cause:
Error accessing connection list.

Action:
Verify that the list ID is correct.

WCS-49318
Error accessing connection relationship of user {0} to current user {1}.

Category:
Other

Cause:

Action:

WCS-49319
Error adding/deleting user {0} for list {1} of current user.

Category:
Other

Cause:
Error adding/deleting user in connection list of current user.

Action:
Verify that the list ID is correct and is not @CONNECTIONS (use invitations instead) and the user GUID is correct, and that the user is not already a member of the list when adding user.

WCS-49320
"Error using Resource Action Handler to get link to user {0}.

Category:
Other

Cause:

Action:

WCS-49321
Invalid user search query {0}. Unable to process search. Verify that the search query is of the form [loginid:equals:X] or [guid:equals:Y].

Category:
Other

Cause:
Invalid search query was passed into People REST API.

Action:
Verify that the search query is of the form [loginid:equals:X] or [guid:equals:Y].

WCS-49322
Error accessing connection list {0} for user {1}.

Category:
Other

Cause:
Error accessing connection list.

Action:
Verify that the list ID and GUID are correct.

WCS-49323
Invalid invitation search query {0}. Unable to process search. Verify that the search query is either [invitor:equals:@me] or [invitee:equals:@me].

Category:
Other

Cause:
Invalid search query was passed into People Invitations REST API.

Action:
Verify that the search query is either [invitor:equals:@me] or [invitee:equals:@me].

WCS-49324
No 'invitation' in the request body

Category:
Other

Cause:
Invitation data was not found in the request body when trying to create a new invitation.

Action:
Make sure Invitation data is specified in the request body.

WCS-49325
Invitation invitee GUID not specified

Category:
Other

Cause:
No 'invitee' item or 'guid' item in 'invitee' in the body when trying to create a new invitation.

Action:
Specify a valid invitee user GUID that is not null or blank.

WCS-49326
Error retrieving invitations for current user.

Category:
Other

Cause:

Action:

WCS-49327
Error inviting user {0} to be a connection of the current user

Category:
Other

Cause:
Error inviting user {0} to be a connection of the current user.

Action:
Verify the invitee user GUID is correct and is not null or blank.

WCS-49328
The invitation ID in the request body ({0}) did not match the ID in the query string ({1})

Category:
Other

Cause:
The invitation ID in the request body did not match the ID in the query string when trying to update invitation status.

Action:
Make sure the invitation ID specified in the request body matches the invitation ID in the query string.

WCS-49329
Error deleting invitation {0}

Category:
Other

Cause:
Error deleting invitation {0}.

Action:
Verify the invitation ID is correct, and that the current user has permissions to delete the invitation (i.e. created or received it).

WCS-49330
Unable to update invitation {0} with status {1}. Verify that the invitation id is valid, the current user has permission to update the invitation, and that the status is either "accepted" or "ignored".

Category:
Other

Cause:
Unable to update invitation status.

Action:
Verify that the invitation id is valid, the current user has permission to update the invitation, and that the status is either "accepted" or "ignored".

WCS-49331
Error inviting user {0} to be a connection of current user.

Category:
Other

Cause:
Error inviting user to be a connection of current user.

Action:
Verify that the user GUID is correct, and that the user has not already been invited by the current user.

WCS-49332
Error accessing relationship information for connections and invitations of current user.

Category:
Other

Cause:

Action:

WCS-49333
Unable to lookup email address {0}.

Category:
Other

Cause:
Unable to lookup email address.

Action:
Make sure the email address is correct, and the identity store is configure properly.

WCS-49334
Error creating connection list {0}. List already exists.

Category:
Other

Cause:
Error creating connection list. List already exists.

Action:
Choose a new name for the new connection list.

WCS-49351
REST API Injectable Service provider did not set activity service.

Category:
Other

Cause:
REST API Injectable Service provider did not set activity service.

Action:
Contact Oracle Support Services.

WCS-49352
No 'activity' in the request body

Category:
Other

Cause:
Activity data was not found in the request body.

Action:
Make sure Activity data is specified in the request body.

WCS-49353
'id' should not be supplied with a POST -- use PUT if you want to update

Category:
Other

Cause:
'id' should not be supplied with a POST.

Action:
Use PUT if you want to update.

WCS-49354
Creating activities requires the service ID and activity type to be present.

Category:
Other

Cause:
Creating activities requires the service ID and activity type.

Action:
Make sure the activity POST contains the service ID and activity type.

WCS-49355
Error accessing activity {0}.

Category:
Other

Cause:

Action:

WCS-49356
Error accessing activities for user {0}.

Category:
Other

Cause:

Action:

WCS-49357
Error accessing activities for Portal {0}.

Category:
Other

Cause:

Action:

WCS-49358
Error trying to access profile for user {0}.

Category:
Other

Cause:

Action:

WCS-49359
Unable to retrieve object type for parameter object {0} in activity {1}.

Category:
Other

Cause:

Action:

WCS-49360
Unable to retrieve object with index {0} for parameter object {1} in activity {2}, because there are only {3} objects available.

Category:
Other

Cause:

Action:

WCS-49361
Unable to parse key {0}, activity type {1}, service id {2}, activity id {3} for activity parameter. Should be of form "{actor[n]"} or "{object[n]"}.

Category:
Other

Cause:
Unable to parse key for activity parameter.

Action:
Make sure key starts with actor or object and the index is numeric.

WCS-49362
Unable to find Portal scope for {0}.

Category:
Other

Cause:
Unable to find Portal scope from specified value.

Action:
Make sure Portal value is correct.

WCS-49363
Unable to publish activity for service {0}.

Category:
Other

Cause:

Action:

WCS-49364
Error accessing comments for object {2} with service id {0} and type {1}.

Category:
Other

Cause:

Action:

WCS-49365
Error creating comment for object {2} with service id {0} and type {1}.

Category:
Other

Cause:

Action:

WCS-49366
Error deleting comment {0}.

Category:
Other

Cause:
Unable to delete comment.

Action:
Make sure current user has permission to delete this comment.

WCS-49367
Error accessing activity object with id {2} with service id {0} and type {1}.

Category:
Other

Cause:
Unable to access activity object.

Action:
Make sure the service id, object type, and object id are correct.

WCS-49368
Error accessing activity object details for object with id {2} with service id {0} and type {1}.

Category:
Other

Cause:
Unable to access activity object details.

Action:
Make sure the service id, object type, and object id are correct.

WCS-49369
Error accessing comments service.

Category:
Other

Cause:
Error accessing comments service.

Action:
Contact Oracle Support Services.

WCS-49370
REST API Injectable Service provider did not set comment service.

Category:
Other

Cause:
REST API Injectable Service provider did not set comment service.

Action:
Contact Oracle Support Services.

WCS-49371
No 'comment' in the request body

Category:
Other

Cause:
Comment data was not found in the request body.

Action:
Make sure comment data is specified in the request body.

WCS-49372
Creating comments requires the comment text to be present.

Category:
Other

Cause:
Creating comments requires the comment text.

Action:
Make sure the comment POST contains the comment text.

WCS-49373
Invalid data parameter "{0}" for activity. Must include "data", and may include "commentsSummary" and "likesSummary".

Category:
Other

Cause:
Invalid data parameter for activity.

Action:
Make sure the data parameter includes 'data'. 'commentsSummary' and 'likesSummary' are optional.

WCS-49374
Error accessing likes for object {2} with service id {0} and type {1}.

Category:
Other

Cause:

Action:

WCS-49375
Error creating like for object {2} with service id {0} and type {1}.

Category:
Other

Cause:

Action:

WCS-49376
Error deleting like {0}.

Category:
Other

Cause:
Unable to delete like.

Action:
Make sure current user has permission to delete this like.

WCS-49377
Error accessing likes service.

Category:
Other

Cause:
Error accessing likes service.

Action:
Contact Oracle Support Services.

WCS-49378
REST API Injectable Service provider did not set like service.

Category:
Other

Cause:
REST API Injectable Service provider did not set like service.

Action:
Contact Oracle Support Services.

WCS-49379
No 'like' in the request body

Category:
Other

Cause:
Like data was not found in the request body.

Action:
Make sure like data is specified in the request body.

WCS-49380
Activity ID is null

Category:
Other

Cause:
Activity ID cannot be null.

Action:
Use valid activity ID.

WCS-49382
Error accessing comments for activity {0}.

Category:
Other

Cause:

Action:

WCS-49383
Error creating comment for activity {0}.

Category:
Other

Cause:

Action:

WCS-49384
Error creating like for activity {0}.

Category:
Other

Cause:

Action:

WCS-49385
Error accessing likes for activity {0}.

Category:
Other

Cause:

Action:

WCS-49386
User has insufficient permission to access object {2} with service id {0} and type {1}.

Category:
Other

Cause:
Unable to access the object due to permission settings.

Action:
Make sure current user has permission to access this object.

WCS-49387
User has insufficient permission to access activity {0}.

Category:
Other

Cause:
Unable to access the object due to permission settings.

Action:
Make sure current user has permission to access this object.

WCS-49388
User has insufficient permission to access object {2} with service id {0} and type {1}.

Category:
Other

Cause:

Action:

WCS-49389
User has insufficient permission to access activity {0}.

Category:
Other

Cause:

Action:

WCS-49390
Unable to parse date {0}. Make sure date format is yyyy-MM-dd.

Category:
Other

Cause:
Date format is not correct.

Action:
Make sure date format is yyyy-MM-dd.

WCS-49401
REST API Injectable Service provider did not set feedback service.

Category:
Other

Cause:
REST API Injectable Service provider did not set feedback service.

Action:
Contact Oracle Support Services.

WCS-49402
No 'message' in the request body

Category:
Other

Cause:
Message data was not found in the request body.

Action:
Make sure Message data is specified in the request body.

WCS-49403
Message body not specified

Category:
Other

Cause:
No 'message' in the body when trying to create a new feedback item.

Action:
Specify a valid message body that is not null or blank.

WCS-49404
'id' should not be supplied with a POST -- use PUT if you want to update

Category:
Other

Cause:
'id' should not be supplied with a POST.

Action:
Use PUT if you want to update.

WCS-49405
Error retrieving display name from profile for user with GUID {0}. Ignoring.

Category:
Other

Cause:
Error retrieving user profile.

Action:
Verify that the user GUID is correct.

WCS-49406
Permissions class called with wrong number of resource IDs. Expecting 1 or 2, but got {0}.

Category:
Other

Cause:

Action:

WCS-49407
Error accessing feedback for user {0}.

Category:
Other

Cause:

Action:

WCS-49408
Error accessing feedback item from user {1}.

Category:
Other

Cause:

Action:

WCS-49409
Error retrieving received feedback items from {0} to {1} for user {2}.

Category:
Other

Cause:
Error retrieving received feedback for user.

Action:
Check startIndex and itemsPerPage.

WCS-49410
Error retrieving given feedback items from user {0} for items {1} to {2}.

Category:
Other

Cause:
Error retrieving feedback for user.

Action:
Check startIndex and itemsPerPage.

WCS-49411
Error trying to delete feedback {0}.

Category:
Other

Cause:

Action:

WCS-49412
Error trying to create feedback for user {0}.

Category:
Other

Cause:

Action:

WCS-49413
Unable to find link {0} for feedback item {1}..

Category:
Other

Cause:

Action:

WCS-49414
Error trying to get feedback for user. Either unknown GUID {0} or unknown selector {1}.

Category:
Other

Cause:
Either an unknown GUID was entered, expected @me or GUID or unknown selector was entered, expected @self, @all, or valid GUID. Selector can only be a valid GUID if the {guid} value entered is @me or the GUID of the current logged in user.

Action:
Double check the GUID or selector entered is valid.

WCS-49415
No 'receivedUser' in the request body

Category:
Other

Cause:
The received user data was not found in the request body.

Action:
Make sure the received user is specified in the request body.

WCS-49416
Invalid selector for creating feedback. Expected "@self", but found "{0}".

Category:
Other

Cause:
Feedback can only be POSTed to a URI of the form {guid}/@self.

Action:
Make sure the URI selector is @self.

WCS-49417
GUID specified in URI and GUID specified in POST body do not match. URI GUID was "{0}", POST body received user GUID was "{1}".

Category:
Other

Cause:
GUID in URI and GUID specified in POST body received user GUID must match.

Action:
Make sure the URI GUID and POST body received user GUID match.

WCS-49451
Error trying to access profile for user {0}.

Category:
Other

Cause:

Action:

WCS-49452
The current DB version does not support this REST API. Expected version 11.1.1.2.0 or greater.

Category:
Other

Cause:

Action:

WCS-49453
Unable to use Resource Action Handler to get link to object with type {0} from service {1} and ID {2}.

Category:
Other

Cause:

Action:

WCS-49454
The "{0}" parameter was not found in the query string, or was empty.

Category:
Other

Cause:
The query string was missing a required parameter.

Action:
Make sure the specified parameter is present in the query string and is not empty.

WCS-49455
The "{0}" date time parameter could not be parsed: "{1}"

Category:
Other

Cause:
The query string date time parameter was not formatted correctly.

Action:
Make sure the specified date time parameter is formatted according to the XSD spec: YYYY-MM-DD with optional time and timezone components hh:mm:ss, +HH:mm, -HH:mm, or Z. The time component may include milliseconds, but they will not be used.

WCS-49456
Unable to encode data for use in URI.

Category:
Other

Cause:

Action:

WCS-49457
Unable to decode data from URI: {0}.

Category:
Other

Cause:
Unable to decode data from URI.

Action:
Make sure the specified data is correctly URL encoded before being passed to the server.

WCS-49458
A query string parameter was set to the default value of "{0}", which is a default template parameter, not a valid value.

Category:
Other

Cause:
A query string parameter was set to a default template parameter value with a starting '{ and ending '}, which is not a valid value.

Action:
Make sure the query string parameter is either set to a valid value, or removed.

WCS-49459
Secure Enterprise Search is not configured.

Category:
Other

Cause:
SES Crawl is not enabled for this instance

Action:
Make sure crawl is enabled for Documents, Forums, and Portals sources

WCS-49460
This Secure Enterprise Search version is not supporting facets.

Category:
Other

Cause:
SES Version is not supporting faceted queries

Action:
Make sure to use the SES version that supports faceted serch

WCS-49461
No UriService is available for the REST resource {0}.

Category:
Other

Cause:
No UriService is available for the REST resource.

Action:
Make sure the REST resource is correctly configured and annotated.

WCS-49501
Injectable Service provider did not set search service

Category:
Other

Cause:
Injectable Service provider could not find the search service.

Action:
Make sure Search Service injectable provider is available in webapp.

WCS-49509
Column could not be found for column id [{0}]

Category:
Other

Cause:
Column ID was not found.

Action:
Make sure Column ID exists.

WCS-49513
Search parameter must follow [column:[operator:]]value;[column:[operator:]value] syntax

Category:
Other

Cause:
Search parameter syntax not understood.

Action:
Syntax must follow: [column:[operator:]]value;[column:[operator:]value]

WCS-49514
Search parameter must follow [column:[operator:]]value;[column:[operator:]value] syntax

Category:
Other

Cause:
Search parameter syntax not understood.

Action:
Syntax must follow: [column:[operator:]]value;[column:[operator:]value]

WCS-49515
Comparator [{0}] is invalid

Category:
Other

Cause:
Invalid search comparator.

Action:
Use valid search comparator.

WCS-49516
Invalid argument: [{0}]

Category:
Other

Cause:
Invalid search argument.

Action:
Use valid search argument.

WCS-49517
Internal Search Error: [{0}]

Category:
Other

Cause:
Internal search error.

Action:
Please see error on server console.

WCS-49551
REST API Injectable Service provider did not set event service.

Category:
Other

Cause:
REST API Injectable Service provider did not set event service.

Action:
Contact Oracle Support Services.

WCS-49552
Unable to find Portal scope for {0}.

Category:
Other

Cause:
Unable to find Portal scope from specified value.

Action:
Make sure Portal value is correct.

WCS-49553
Unable to access calendar for scope {0}.

Category:
Other

Cause:
Unable to access requested calendar.

Action:
Make sure the scope value is a valid Portal GUID.

WCS-49554
Unable to access event {0} in Portal scope {1}.

Category:
Other

Cause:
Unable to access Portal event.

Action:
Make sure Portal and event ID values are correct.

WCS-49555
Unable to create event in Portal scope {1}.

Category:
Other

Cause:
Unable to create Portal event.

Action:
Make sure the Portal ID is correct and the current user has permission to create an event in that Portal.

WCS-49556
Unable to update event {0} in Portal scope {1}.

Category:
Other

Cause:
Unable to update Portal event.

Action:
Make sure Portal and event ID values are correct.

WCS-49557
Unable to delete event {0} in Portal scope {1}.

Category:
Other

Cause:
Unable to delete Portal event.

Action:
Make sure Portal and event ID values are correct.

WCS-49558
No 'event' in the request body.

Category:
Other

Cause:
Event data was not found in the request body.

Action:
Make sure Event data is specified in the request body.

WCS-49559
Event POST or PUT request bodies cannot contain the ID, author, created date, modifier, modified date, or duration.

Category:
Other

Cause:
Event POST or PUT request bodies cannot contain the ID, author, created date, modifier, modified date, or duration.

Action:
Make sure Event data does not contain the ID, author, created date, modifier, modified date, or duration in the request body.

WCS-49560
The event object was missing required data. Events are required to have summary, startTime, and endTime data.

Category:
Other

Cause:
The event object was missing required data.

Action:
Make sure Event summary, startTime, and endTime data are specified in the event object.

WCS-49561
Invalid portal GUID {0}.

Category:
Other

Cause:
This GUID does not refer to a valid portal.

Action:
Make sure the portal GUID is not null or empty, and refers to a valid portal. Home Portal cannot be used for portal events.

WCS-49562
Invalid time sequence: startTime {0} must be before endTime {1}..

Category:
Other

Cause:
The startTime must be before the endTime.

Action:
Make sure the startTime is before the endTime.

WCS-49563
Unable to access event categories for Portal scope {0}.

Category:
Other

Cause:
Unable to access Portal event categories.

Action:
Make sure Portal guid is correct.

WCS-49564
Unable to create event category {0} in Portal scope {1}.

Category:
Other

Cause:
Unable to create Portal event category.

Action:
Make sure the Portal ID is correct and the current user has permission to create an event category in that Portal.

WCS-49565
Unable to delete event category {0} in Portal scope {1}.

Category:
Other

Cause:
Unable to delete Portal event category.

Action:
Make sure Portal and event category name values are correct.

WCS-49601
Injectable Service provider did not set tagging service

Category:
Other

Cause:
Injectable Service provider could not find the tagging service.

Action:
Make sure Tagging Service injectable provider is available in webapp.

WCS-49613
Required query Parameter "{0}" was not found.

Category:
Other

Cause:
Query parameter "{0}" omitted or null.

Action:
Query parameter "{0}" required. Please try again with a non-null value for this parameter

WCS-49614
{1} Body must include "{0}" as a field. Could not complete POST Request.

Category:
Other

Cause:
{1} Body must include "{0}" as a field.

Action:
Provide a complete {1} Object as the body for this request

WCS-49615
Tag {0} could not be deleted.

Category:
Other

Cause:
There was an error while deleting this item

Action:
Please check if item exists and if you have the appropriate permissions to delete this item.

WCS-49616
Item with service Id: {0} and resource id: {1} could not be deleted.

Category:
Other

Cause:
There was an error while deleting this item

Action:
Please check if item exists and if you have the appropriate permissions to delete this item.

WCS-49617
Item with service id: {0} and resource id: {1} is already tagged by you

Category:
Other

Cause:
There was an error while tagging this item

Action:
Please check if item exists and if you have the appropriate permissions to tag this item.

WCS-49618
Item with service id: {0} and resource id: {1} was not found

Category:
Other

Cause:
There was an error while finding this item

Action:
Please check if item exists and if you have the appropriate permissions to tag this item.

WCS-49619
Tag {0} could not be found.

Category:
Other

Cause:
There was an error while finding this tag

Action:
Please check if item exists and if you have the appropriate permissions to tag this item.

WCS-49620
Required query Parameter "{0}" was not valid.

Category:
Other

Cause:
Query parameter "{0}" not valid.

Action:
Query parameter "{0}" required. Please try again with a valid value for this parameter

WCS-49651
REST API Injectable Service provider did not set links service.

Category:
Other

Cause:
REST API Injectable Service provider did not set links service.

Action:
Contact Oracle Support Services.

WCS-49652
No 'source' in the request body

Category:
Other

Cause:
Links source object was not found in the request body.

Action:
Make sure source object is specified in the request body.

WCS-49653
No 'target' in the request body

Category:
Other

Cause:
Links target object was not found in the request body.

Action:
Make sure target object is specified in the request body.

WCS-49654
Error trying to create links.

Category:
Other

Cause:
Error trying to create links

Action:
Make sure webcenter repository is available.

WCS-49655
No 'link' in the request body

Category:
Other

Cause:
Link data was not found in the request body.

Action:
Make sure Link data is specified in the request body.

WCS-49656
Unable to create link

Category:
Other

Cause:
Link was not created.

Action:
See logs for more information.

WCS-49657
Source "serviceid" or "resourceid" not specified

Category:
Other

Cause:
No source "serviceid" or "resourceid" when trying to create a link.

Action:
Specify valid "serviceid" and "resourceid" that are not null or blank.

WCS-49658
Target "serviceid" or "resourceid" not specified

Category:
Other

Cause:
No target "serviceid" or "resourceid" when trying to create a link.

Action:
Specify valid "serviceid" and "resourceid" that are not null or blank.

WCS-49659
Attempted operation resulted in security exception

Category:
Other

Cause:
Insufficient authorization.

Action:
Contact portal administrator.

WCS-49701
Injectable Service provider did not set recommendation service

Category:
Other

Cause:
Injectable Service provider could not find the recommendation service.

Action:
Make sure the Activity Graph Service injectable provider is available in webapp.

WCS-49702
A database exception occured when connecting to the recommendation service

Category:
Other

Cause:
A database exception occured when connecting to the recommendation service

Action:
Make sure the Activities data source is correctly configured and that the database server is working.

WCS-49703
The Activity Graph engines have not been run yet; there is no data to query. Please contact your administrator to configure and run the Activity Graph engines.

Category:
Other

Cause:
The Activity Graph engines have not been run yet and there is no data to query.

Action:
Please contact your administrator to configure and run the Activity Graph engines.

WCS-49704
An exception occured when connecting to the recommendation service

Category:
Other

Cause:
An exception occured when connecting to the recommendation service

Action:
Make sure the Activity Graph server is correctly configured and is working.

WCS-49705
The item class urn and object urns in the request body ({0}, {1}) did not match the values in the path ({2}, {3})

Category:
Other

Cause:
The item class urn and object urns in the request body did not match the values in the path when trying to update item status.

Action:
Make sure the item class urn and object urn specified in the request body matches the values in the uri path.

WCS-49706
Unable to update item {0}, {1} with status {2}. Verify that the item''s class URN and object URN are valid, that the current user has permission to update the item, and that the status is either "interested" or "not interested".

Category:
Other

Cause:
Unable to update the item's status.

Action:
Verify that the item's class URN and object URN are valid, that the current user has permission to update the item, and that the status is either "interested" or "not interested".

WCS-49707
Unable to update item. Verify that the item's class URN and object URN are valid.

Category:
Other

Cause:
The item's class URN and object URN must be specified

Action:
Verify that the item's class URN and object URN are valid and specified

WCS-49708
Unable to query for common items. Verify that the required parameters are valid and specified.

Category:
Other

Cause:
One or more mandatory query parameters have not been specified.

Action:
Verify that the required parameters are valid and specified.

WCS-49709
Unable to query for recommendations. Verify that the required parameters are valid and specified. You need to provide a recipe, an objectURN and either a classURN or serviceId parameters.

Category:
Other

Cause:
One or more mandatory query parameters have not been specified.

Action:
Verify that the required parameters are valid and specified. You need to provide a recipe, an objectURN and either a classURN or serviceId parameters.

WCS-49710
One of the query arguments is invalid. Verify that all arguments are correct, and that recipe and similarity URNs match the specified object types.

Category:
Other

Cause:
One or more query parameters is invalid.

Action:
Verify that all arguments are correct, and that recipe and similarity URNs match the specified object types.

WCS-49711
The following recipe is invalid: {0}. Verify that all similarity URNs are correct, that each URN has a positive weight, and that the recipe is formatted like this: item-edit:100;item-tag:10.

Category:
Other

Cause:
The recipe is invalid.

Action:
Verify that all similarity URNs are correct, that each URN has a positive weight, and that the recipe is formatted like this: item-edit:100;item-tag:10.

WCS-49712
The Activity Graph service is not present in this installation. It has either not been installed or not been configured correctly. Please contact your administrator to install and configure the Activity Graph service.

Category:
Other

Cause:
The Activity Graph service is not present in this installation. It has either not been installed or not been configured correctly.

Action:
Please contact your administrator to install and configure the Activity Graph service.

WCS-49713
Unable to query for top items. Verify that the required parameters are valid and specified.

Category:
Other

Cause:
One or more mandatory query parameters have not been specified.

Action:
Verify that the required parameters are valid and specified.

WCS-49714
Unable to query for autocompletions because the query string or index URNs are empty or missing. Verify that the required query string and index URN arguments are present and not empty.

Category:
Other

Cause:
The autocomplete query string or index URNs are missing.

Action:
Verify that the autocomplete query string and index URN arguments are present and not empty.

WCS-49715
The Activity Graph autocomplete engine has not been run yet; there is no data to query. Please contact your administrator to configure and run the Activity Graph engines.

Category:
Other

Cause:
The Activity Graph autocomplete engine has not been run yet and there is no data to query.

Action:
Please contact your administrator to configure and run the Activity Graph engines.

WCS-49716
An exception occured when connecting to the autocomplete service

Category:
Other

Cause:
An exception occured when connecting to the autocomplete service

Action:
Make sure the Activity Graph server is correctly configured and is working.

WCS-49801
Invalid ID

Category:
Other

Cause:
ID provided in the URL or query parameters is incorrect.

Action:
Make sure provided IDs in path or parameters are correct.

WCS-49802
Portal Not Found

Category:
Other

Cause:
Portal does not exist.

Action:
Make sure you specify the correct portal ID is provided and that this portal has not been deleted.

WCS-49803
Could not create object.

Category:
Other

Cause:
Could not create object based on provided PropertyBean.

Action:
Make sure valid paramters were passed for object creation.

WCS-49804
Invalid Query or OrderBy Parameter {0}.

Category:
Other

Cause:
Query or OrderBy param provided in the URL is incorrect.

Action:
Verify that the query name and query parameters you specified are correct. For more information, refer to the PortalQuery API documentation.

WCS-49805
Portal specified with short ID {0} not found.

Category:
Other

Cause:
Portal not found.

Action:
Specify a valid portal short id.

WCS-49806
Portal archive for import has not been provided. Specify the portal archive against the control name {0}.

Category:
Other

Cause:
Portal archive for import not provided.

Action:
Specify a portal archive for import archive against the control name fileName.

WCS-49807
Failed to create temporary directory within 5 attempts.

Category:
Other

Cause:
Failed to create temporary directory.

Action:
Make sure you have read and write permissions on the temporary locations on the server.

WCS-49808
Asset specified for download operation with short ID {0} not found.

Category:
Other

Cause:
Asset not found.

Action:
Specify a valid asset short id.

WCS-49809
Asset specified for download operation with short ID {0} does not belong to the portal {1}.

Category:
Other

Cause:
Asset specified for download operation does not belong to the specified portal.

Action:
Specify a valid asset short id which belongs to the specified portal.

WCS-49810
Asset archive for upload has not been provided. Specify the asset archive against the control name {0}.

Category:
Other

Cause:
Asset archive for upload not provided.

Action:
Specify an asset archive for upload archive against the control name fileName.

WCS-49811
Invalid limit ({0}) or offset ({1}) value for REST query.

Category:
Other

Cause:
Invalid limit or offset value for REST query.

Action:
Make sure the limit is greater than zero and the offset is greater than or equal to zero.

WCS-49812
The portal archive specified is invalid. Specify a valid archive that exists on the file system, and try again.

Category:
Other

Cause:
The portal archive specified is invalid.

Action:
Specify a valid portal archive for upload against the fileName attribute.

WCS-49813
The asset archive specified is invalid. Specify a valid archive that exists on the file system, and try again.

Category:
Other

Cause:
The asset archive specified is invalid.

Action:
Specify a valid asset archive for upload against the fileName attribute.

WCS-49814
Unable to clean up after creation failed for portal template {0}.

Category:
Other

Cause:
Portal template creation has failed and cleanup has failed.

Action:
Check the underlying exception.

WCS-49815
Unable to clean up after creation failed.

Category:
Other

Cause:
Creation has failed and cleanup has failed.

Action:
Check the underlying exception.

WCS-49816
Seeded asset modification is not allowed.

Category:
Other

Cause:
Seeded asset modification is not allowed.

Action:
Seeded asset modification is not allowed.

WCS-49817
Failed to add custom attribute to spaces.xml file due to {0}.

Category:
Other

Cause:
Failed to add custom attribute to spaces.xml file.

Action
Take action based on the underlying exception.

WCS-49818
Attribute [{0}] not found in portal [{1}]

Category:
Other

Cause:
Attribute name not found.

Action
Please specify a different Attribute name or portal name.

WCS-49819
Duplicate Attribute [{0}] in portal [{1}]

Category:
Other

Cause:
Duplicate attribute can not be added.

Action
Please specify a different Attribute name or portal name.

WCS-49820
Attributes not found in portal [{0}]

Category:
Other

Cause:
Attributes not found.

Action
Please specify a different portal name.

WCS-49821
Attribute name/value can not be null/empty

Category:
Other

Cause:
null/empty value is not accepted

Action
Please specify the attribute name/value.

WCS-50001
An unexpected error occurred in the notification sub-system.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-50002
Error in Notification Button tag usage - component {0} has attribute {1} whose value is {2}.

Category:
Other

Cause:
The attribute mentioned in the error cannot be null, but no value was found for this attribute.

Action:
Correct your tag usage.

WCS-50003
Component {0} does not support client listeners.

Category:
Other

Cause:
Tried to add a client listener to a component that does not support client listeners.

Action:
Contact Oracle Support Services.

WCS-50004
Mandatory parameter {0} not provided in parameters

Category:
Other

Cause:
The caller did not provide the required parameter to generate notification

Action:
Contact your system administrator

WCS-50005
Notification template {0} not found

Category:
Other

Cause:
The service failed to read the notification template. The template is not available

Action:
Contact your system administrator

WCS-50006
Could not create notification contents based on default template {0}

Category:
Other

Cause:
The service failed to process the default notification template.

Action:
Contact your system administrator

WCS-50007
Invalid child element {0} found for parent {1}

Category:
Other

Cause:
The template contains invalid child elements.

Action:
Contact your system administrator

WCS-50008
End tag {0} not found in CDATA section corresponding to the tag at index {2}

Category:
Other

Cause:
The CDATA section of the template contains a notification tag without corresponding end tag.

Action:
Contact your system administrator

WCS-50009
Value for the token {0} not found in parameters

Category:
Other

Cause:
The value for the token is not provided in the list of parameter values

Action:
Contact your system administrator

WCS-50010
Message key {0} not defined in resource bundle of service {1}

Category:
Other

Cause:
The message key used in the template does not exist in the service resource bundle

Action:
Contact your system administrator

WCS-50011
Error occurred in parsing message {0} in resource bundle of service {1}

Category:
Other

Cause:
The message has invalid syntax

Action:
Contact your system administrator

WCS-50012
An unexpected error occurred in the notification sub-system.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact your system administrator.

WCS-50013
Failed to add subscription.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-50014
Failed to remove subscription.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-50015
Failed to query subscription.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-50016
Failed to update subscription.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-50017
Failed to save subscription.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-50018
Failed to remove subscription.

Category:
Other

Cause:
Subscription does not exist

Action:
Resubmit the request with correct parameters

WCS-50019
Subscription cannot be added.

Category:
Other

Cause:
Subscription content is empty

Action:
Provide a non empty description

WCS-50020
Error occurred in initializing the notification sender

Category:
Other

Cause:
Failed initialize notification sender

Action:
Contact Administrator

WCS-50021
Error occurred in sending notification

Category:
Other

Cause:
Failed to send notification

Action:
Contact Administrator

WCS-50022
Fail to get UMS instance url.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact your system administrator.

WCS-50023
Error occurred in saving user preference settings

Category:
Other

Cause:
Failed to save user preference settings

Action:
Contact Administrator

WCS-50024
The settings document is invalid

Category:
Other

Cause:
Contents of the settings document are invalid

Action:
Verify and correct the settings document

WCS-50025
Fail to get user preference settings for the service {0}

Category:
Other

Cause:
Fail to get user preference settings for the service

Action:
Verify and correct the service

WCS-50026
Service Framework Exception is thrown.

Category:
Other

Cause:
Service Framework exception thrown.

Action:
Check the exception's detail to see the reason why the exception is thrown.

WCS-50027
Notification sender is not configured

Category:
Other

Cause:
Notification sender is not configured

Action:
Contact Administrator

WCS-50028
Error in parsing notification configuration

Category:
Other

Cause:
Error in parsing notification configuration

Action:
Contact Administrator

WCS-50029
Error processing activity for notifications

Category:
Other

Cause:
Error in processing activity for notification

Action:
Contact Administrator

WCS-50030
Failed to initialize context for asynchronous processingError processing

Category:
Other

Cause:
Failed to initialize context for asynchronous processingError processing

Action:
Contact Administrator

WCS-50031
Unexpected error occurred, please retry the unsubscribe operation

Category:
Other

Cause:
An internal error occurred

Action:
Retry the unsubscribe operation. Contact Oracle Support Services if the issue persists.

WCS-50032
Can not find scope for the given name

Category:
Other

Cause:
The given scope name is invalid

Action:
Verify and correct the scope name

WCS-50033
An unexpected error occurred while retrieving configuration document.

Category:
Other

Cause:
Failed to get configuration document.

Action:
Contact Administrator.

WCS-50034
An unexpected error occurred while retrieving service name for service id {0}.

Category:
Other

Cause:
Failed to get service name.

Action:
Contact Administrator.

WCS-50035
An unexpected error occurred while retrieving subscription object type.

Category:
Other

Cause:
Failed to get subscription object type.

Action:
Contact Administrator.

WCS-50036
An unexpected error occurred while sending UMS notification message.

Category:
Other

Cause:
Failed to send UMS notification message.

Action:
Contact Administrator.

WCS-52002
error obtaining content repository connection

Category:
Other

Cause:
A JNDI naming exception occurred while attempting to obtain the content repository connection.

Action:
Verify that connections.xml contains a valid entry for the content repository connection.

WCS-52003
error obtaining blog folder for the page

Category:
Other

Cause:
The blog folder for the page cannot be found or created.

Action:
Check the server logs for details on this exception.

WCS-52004
After fail-over, failed to get the item {0} from the repository.

Category:
Other

Cause:

Action:

WCS-52005
error obtaining blog entry for the page

Category:
Other

Cause:
The blog entry for the page cannot be found.

Action:
Check the server logs for details on this exception.

WCS-62001
Unexpected error occurred while saving translations for {0},{1}.

Category:
Other

Cause:
Unexpected error getting translations.

Action:
Contact Oracle support services.

WCS-62002
Unexpected error loading translations into WebCenter Portal.

Category:
Other

Cause:
Unexpected error loading translations.

Action:
Contact Oracle support services.

WCS-62003
The MDS Root location for loading translations cannot be null.

Category:
Other

Cause:
Null MDS root provided for loading translations.

Action:
Please specify a valid MDS root location.

WCS-63001
An unexpected error occurred.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-63002
An object of type {0} with this id ({1}) already exits.

Category:
Other

Cause:
An attempt was made to create an object with an id that is already in use.

Action:
Specify a unique id.

WCS-63003
The name ({0}) is not valid.

Category:
Other

Cause:
The specified name is not valid.

Action:
Specify a valid name.

WCS-63004
Object has been changed by another user.

Category:
Other

Cause:
The object has been changed by another user.

Action:
Reload the object and try the operation again.

WCS-63005
An Object of type {0} with id={1} could not be found.

Category:
Other

Cause:
The specified object could not be found. This may be due to the object being deleted by another user.

Action:
Specify a valid id.

WCS-63006
Object ({0}) is immutable.

Category:
Other

Cause:
An attempt to change this object was made, but this object is currently immutable.

Action:
Retrieve mutable object to make changes.

WCS-63007
{0} is not a valid reference name to MDS.

Category:
Other

Cause:
The name is not a valid MDS reference name.

Action:
Contact Oracle Support Services.

WCS-63008
The MDS session does not support updates.

Category:
Other

Cause:
MDS was not configured correctly to support updates.

Action:
Configure the MDS store to support updates.

WCS-63009
An IO error occurred when accessing metadata.

Category:
Other

Cause:
An IO error occurred in MDS.

Action:
See the log for more details on the specific IO error to correct the problem.

WCS-63010
The object is not valid.

Category:
Other

Cause:
The metadata for the object does not pass validation.

Action:
Contact Oracle Support Services.

WCS-63011
Failed to construct attribute set for list [{0}].

Category:
Other

Cause:
Failed to construct attribute set for list.

Action:
Contact Oracle Support Services.

WCS-63012
Failed to add data flavor to ListTransferable. List=[{0}] DataFlavor=[{1}]

Category:
Other

Cause:
Failed to add data flavor to ListTransferable.

Action:
Contact Oracle Support Services.

WCS-63013
The query attribute predicate {0}{1}{2} was ignored because the column does not exist or the comparator is not supported.

Category:
Other

Cause:

Action:

WCS-63014
An error occurred when deleting metadata.

Category:
Other

Cause:
An error occurred in MDS while deleting metadata.

Action:
See the log for more details on the specific error to correct the problem.

WCS-63015
A column with the name ({0}) already exists.

Category:
Other

Cause:
A column was created or renamed with the name of an existing column in the list.

Action:
Specify a unique column name within the list.

WCS-63016
A list with the name ({0}) already exists.

Category:
Other

Cause:
A list was created or renamed with the name of an existing list.

Action:
Specify a unique list name.

WCS-63017
The maximum number of columns for this list has been exceeded.

Category:
Other

Cause:
A list was created or modified with more than 30 columns.

Action:
Do not add more than 30 columns to a list.

WCS-63019
The Lists service is not provisioned for scope {0}.

Category:
Other

Cause:
The Lists service is not provisioned for the specified scope.

Action:
Provision the Lists service for the specified scope.

WCS-63020
The value is the wrong data type. The data type expected is {0}.

Category:
Other

Cause:
The value is the wrong data type.

Action:
Use the value with the correct data type.

WCS-63021
The WebCenter repository is not available.

Category:
Other

Cause:
An error occurred accessing the repository.

Action:
Contact your system administrator. Check the log for more details.

WCS-63022
An error occurred accessing the WebCenter metadata repository.

Category:
Other

Cause:
An error occurred accessing the repository.

Action:
Contact your system administrator. Check the log for more details.

WCS-63023
List column values were converted or deleted based on list column changes during import: scope={0}, list={1}, column={2}.

Category:
Other

Cause:

Action:

WCS-64001
JAXRS framework encryption service threw exception with message {0}.

Category:
Other

Cause:
JAXRS framework encryption service not initialized correctly.

Action:
Ensure JAXRS framework encryption service is initialized.

WCS-64002
JAXRS framework encryption service set up required. Key generator algorithm not set up in credential store framework.

Category:
Other

Cause:
Key generator algorithm not set up in credential store framework.

Action:
Set up key generator algorithm in credential store framework.

WCS-64003
JAXRS framework encryption service set up required. Cipher transformation not set up in credential store framework.

Category:
Other

Cause:
Cipher transformation not set up in credential store framework.

Action:
Set up cipher transformation in credential store framework.

WCS-64005
The ResourceType element named \"{0}\" is missing its \"{1}\" element.

Category:
Other

Cause:
The specified element is required by ResourceType element and cannot be empty.

Action:
Correct the ResourceType by setting the specified element to a non-empty value.

WCS-64006
ResourceType maps require the key element to be of type String.

Category:
Other

Cause:
The ResourceType map key should be of type String.

Action:
Correct the ResourceType by setting the specified map key to a String.

WCS-64007
The ResourceType element \"resourceTypeUrn\" requires a urn value.

Category:
Other

Cause:
The specified element value is required by ResourceType.

Action:
Correct the ResourceType by setting the specified element to a non-empty value.

WCS-64008
The ResourceType element named \"{0}\" must match the end of the resourceType urn name, \"{1}\".

Category:
Other

Cause:
The end of the resourceType urn name must match the element's name.

Action:
Correct the ResourceType by setting the specified element's name to the end of the resourceType urn string.

WCS-64010
The resource config provider cannot be instantiated.

Category:
Other

Cause:
The resource config provider for Jersey servlet is not configured properly.

Action:
Check web.xml to make sure the resource config provider is configured correctly.

WCS-64011
The TokenManager is not initialized.

Category:
Other

Cause:
The Token Manager is not configured correctly and cannot be initialized.

Action:
Check web.xml to make sure the Token Manager is configured correctly.

WCS-64012
Failed to set capabilities for REST resource type {0} due to exception {1}.

Category:
Other

Cause:
Failed to set capabilities for REST resource.

Action:
Make sure REST resource is annotated correctly.

WCS-64013
Null injectee in REST injection resolver class {0}.

Category:
Other

Cause:
Null injectee in REST injection resolver class.

Action:
Make sure REST servlet and resources are configured correctly.

WCS-64014
Missing WebCenter resource registration class.

Category:
Other

Cause:
The WebCenter resource registration class is missing.

Action:
Make sure a WebCenter resource registration class is implemented and registered in the web.xml file and mapped to the oracle.jaxrs.config.registration context parameter.

WCS-64015
The WebCenter resoruce registration class {0} is incorrectly implemented.

Category:
Other

Cause:
The WebCenter resource registration class does not implement the WebCenterResourceRegistration interface.

Action:
Make sure the WebCenter resource registration class implements the WebCenterResourceRegistration interface and is correctly registered in the web.xml file.

WCS-64016
Failed to invoke the WebCenter resoruce registration class {0} due to exception {1} with message {2}.

Category:
Other

Cause:
Failed to invoke the WebCenter resource registration class at runtime.

Action:
Make sure the WebCenter resource registration class is correctly implemented and registered in the web.xml file.

WCS-65001
Web service data control creation failed. Check the WSDL and re-create the data control

Category:
Other

Cause:
WSDL may be inaccessible or the WSDL file may be incorrect.

Action:
Make sure the WSDL is accessible and correct, then re-create the data control.

WCS-65002
An unexpected error occurred while creating visualization.

Category:
Other

Cause:
Parameter form not generated.

Action:
Check the logs for exception.

WCS-69251
{0} of {1} is out-of-bounds

Category:
Other

Cause:
Page is not responding within configured limits

Action:
Check the regions on the page to identify which region is problematic, or general system health

WCS-69252
{0} of {1} is out-of-bounds

Category:
Other

Cause:

Action:

WCS-69253
{0} of {1} is out-of-bounds.

Category:
Other

Cause:
Portlet is not responding within configured limits

Action:
Check the backend Producer or the network connectivity to it, or general system health

WCS-69254
{0} of {1} is out-of-bounds

Category:
Other

Cause:
Document Library Upload service is not responding within configured limits

Action:
Check the Content Server or the network connectivity to it, or general system health

WCS-69255
{0} of {1} is out-of-bounds

Category:
Other

Cause:
Document Library Download service is not responding within configured limits

Action:
Check the Content Server or the network connectivity to it, or general system health

WCS-72001
Missing @PersistProperty, @PersistText, @PersistCollection or @PersistReference annotation on method: {0}.

Category:
Other

Cause:
@PersistProperty, @PersistText, @PersistCollection or @PersistReference annotation is required on the accessors corresponding to persistence methods to enable access through the Portal Core Persistence Layer.

Action:
Add the @PersistProperty, @PersistText, @PersistCollection or @PersistReference annotation to the accessor as defined in the Portal Core Persistence Layer's integration documentation.

WCS-72002
PersistenceManager does not support method: {0}.

Category:
Other

Cause:
An attempt was made to use a method that is not supported by the Portal Core Persistence Layer.

Action:
Add the required method to the class.

WCS-72003
Invalid value passed to reference operation "{0}" for reference "{1}". Expected {2}, received {3}.

Category:
Other

Cause:
A value passed to a reference mutator could not be converted to the required type.

Action:
Modify calling code to ensure references are only updated with valid types.

WCS-72004
Cannot instantiate object using abstract PortalEntity interface: {0}

Category:
Other

Cause:
An attempt was made to create a PortalEntity object using an interface that is marked as abstract.

Action:
Supply a non-abstract type or remove the @AbstractEntity annotation from this interface.

WCS-72005
Unable to delete null {0}.

Category:
Other

Cause:
A null PortalEntity or PortalEntityObject was supplied.

Action:
Supply a non-null PortalEntity or PortalEntityObject.

WCS-72006
Unable to delete PortalEntity. A PortalEntity in portal "{0}" and namespace "{1}" with name "{2}" was not found.

Category:
Other

Cause:
An attempt was made to delete a PortalEntity object that does not exist.

Action:
Ensure that the supplied portal, namespace and name values are correct.

WCS-72007
Unable to delete PortalEntity. A PortalEntity with ID "{0}" was not found.

Category:
Other

Cause:
An attempt was made to delete a PortalEntity object that does not exist.

Action:
Ensure that the supplied ID is correct.

WCS-72008
PortalEntity in portal "{0}" and namespace "{1}" with name "{2}" was found but is not of the requested type. Type requested = {3}, type found = {4}.

Category:
Other

Cause:
The type of PortalEntity object found in the persistence store was not as expected.

Action:
Ensure that the supplied portal, namespace, name and type parameters are correct.

WCS-72009
PortalEntity object with ID "{0}" was found but is not of the requested type. Type requested = {1}, type found = {2}.

Category:
Other

Cause:
The type of PortalEntity object found in the persistence store was not as expected.

Action:
Ensure that the supplied ID and type parameters are correct.

WCS-72010
An error occurred while starting a transaction.

Category:
Other

Cause:
An error occurred while starting a transaction.

Action:
Check the root cause of the exception.

WCS-72011
An error occurred while committing a transaction.

Category:
Other

Cause:
An error occurred while committing a transaction.

Action:
Check the root cause of the exception.

WCS-72012
An error occurred while rolling-back a transaction.

Category:
Other

Cause:
An error occurred while rolling-back a transaction.

Action:
Check the root cause of the exception.

WCS-72013
An error occurred while checking the status of a transaction.

Category:
Other

Cause:
An error occurred while checking the status of a transaction.

Action:
Check the root cause of the exception.

WCS-72014
Unable to read the value of property "{0}" of PortalEntity "{1}" using method "{2}".

Category:
Other

Cause:
An error occurred while trying to read a property of a PortalEntity object.

Action:
Use the associated exception to determine why the property could not be read.

WCS-72015
Unable to create XML document.

Category:
Other

Cause:
An error occurred while using JAXB to create an XML document.

Action:
Use the associated exception to determine why JAXB serialization failed.

WCS-72018
Unable to read XML document.

Category:
Other

Cause:
An error occurred while using JAXB to read an XML document.

Action:
Use the associated exception to determine why JAXB deserialization failed.

WCS-72019
Unable to set the value of property "{0}" for PortalEntity "{1}" using method "{2}".

Category:
Other

Cause:
An error occurred while trying to set a property of a PortalEntity object.

Action:
Use the associated exception to determine why the property could not be set.

WCS-72020
Unable to find set method for property "{0}" of PortalEntity "{1}".

Category:
Other

Cause:
An error occurred while trying to set a property of a PortalEntity object.

Action:
Unable to find set method for the property.

WCS-72021
Unable to set references for "{0}" of property "{1}" for PortalEntity "{2}".

Category:
Other

Cause:
An error occurred while trying to set a reference property of a PortalEntity object.

Action:
Use the associated exception to determine why the property could not be set.

WCS-72022
Unsupported data type: {0}.

Category:
Other

Cause:
A data type has been used for a persisted property of an object which is not supported by the Portal Core Persistence Layer.

Action:
Use a data type specified by the oracle.webcenter.portal.persistence.PersistedDataType enum.

WCS-72023
Invalid offset {0} for data type {1}

Category:
Other

Cause:
The offset used for a persisted property is not valid.

Action:
Try using a smaller offset value, if possible.

WCS-72024
PortalEntity object with short ID "{0}" was found but is not of the requested type. Type requested = {1}, type found = {2}.

Category:
Other

Cause:
The type of PortalEntity object found in the persistence store was not as expected.

Action:
Ensure that the supplied short ID and type parameters are correct.

WCS-72025
Unable to delete PortalEntity. A PortalEntity with short ID "{0}" was not found.

Category:
Other

Cause:
An attempt was made to delete a PortalEntity object that does not exist.

Action:
Ensure that the supplied short ID is correct.

WCS-72026
A PortalEntity object with ID "{0}" and name "{1}" was found but is not of the expected type. Type expected = {2}, type found = {3}.

Category:
Other

Cause:
The type of a PortalEntity object found in the persistence store was not as expected.

Action:
Ensure that the type requested in the query is correct.

WCS-72027
Invalid pagination requested in query: Row limit {0}, first row {1}.

Category:
Other

Cause:
Invalid criteria specified for query pagination.

Action:
Ensure that the row limit is greater than zero, and the first row index is greater than or equal to zero.

WCS-72028
Permission class "{0}" cannot be used with actions "{1}".

Category:
Other

Cause:
The permission class name and actions specified via an @Authorization annotation on a PortalEntity class cannot be used with the current security manager.

Action:
Correct the permission class name or actions.

WCS-72029
Could not find permission class named: "{0}".

Category:
Other

Cause:
A permission class specified by the permissionClassName element of an @Authorization annotation could not be loaded.

Action:
Ensure that the name of the class is correct.

WCS-72030
Type "{0}" is not valid. More than one property has datatype {1} and offset {2}, see methods: {3} and {4}.

Category:
Other

Cause:
A type makes incorrect use of the @PersistProperty annotation.

Action:
Use a different offset for one of the methods named in the error message.

WCS-72031
Could not find the persistence object with ID {0} and type {1} in the persistent store.

Category:
Other

Cause:
A PortalEntity was passed to the PersistenceManager but does not correspond to an entity in the persistent store.

Action:
Requery the PortalEntity and try the operation again.

WCS-72032
Invalid from-clause for the query. You must specify one or more types.

Category:
Other

Cause:
The Query.from(Class... types) method was called with either a null or empty list of types.

Action:
Update the code to pass one or more types to the Query.from(Class... types) method.

WCS-72033
The query contains an invalid reference to property {0}.

Category:
Other

Cause:
An invalid property name has been specified in the query.

Action:
Update the query to correct the error.

WCS-72034
The property {0} cannot be used for a property comparsion in a query.

Category:
Other

Cause:
The property type does not implement the Comparable interface and so cannot be used in with an operation that requires a Comparable interface.

Action:
Update the query to correct the error.

WCS-72035
The property {0} is not indexed and so cannot be used in a query without enabling the unindexed property mode.

Category:
Other

Cause:
The property maps to a column that was not marked as indexed and the unindexed property mode is not enabled.

Action:
Either use a different property in the query or enable the unindexed property mode for the query.

WCS-72036
The property {0} cannot be used in the order-by clause of the query.

Category:
Other

Cause:
An invalid property was used in an order-by clause.

Action:
Update the query to use a valid property for the order-by clause.

WCS-72037
Could not set the value of the long text field because the CLOB has not been created.

Category:
Other

Cause:
There has been an attempt to set the value of the long text field before the CLOB has been created.

Action:
Update the calling code to create the CLOB before setting the long text field.

WCS-72038
Cannot import "{1}" resource "{0}" as the target portal is not set and the source portal is not part of the export set

Category:
Other

Cause:
Resource import failed because the portal ID associated with the resource did not match any portal in the target portal server, or the specified portal was not part of the export set, or the target portal was not set on the importXML() method.

Action:
Update the importXML() method to specify a valid portal on the target.

WCS-72039
The target portal for the import does not exist on the portal server.

Category:
Other

Cause:
Import failed as the target portal does not exist on the portal server.

Action:
Update the importXML() method to specify a valid portal on the target.

WCS-72040
The text property getter method {0} has an invalid return type {1}.

Category:
Other

Cause:
The getter method for the text property has a return type that is neither String nor java.io.Reader.

Action:
Update the method to return either String or java.io.Reader.

WCS-72041
The text property setter method {0} has an invalid parameter {1}.

Category:
Other

Cause:
The first parameter of the setter method for the text property is neither String nor java.io.Reader.

Action:
Update the method so that the first parameter is a String or java.io.Reader.

WCS-72042
An attempt was made to create a PortalEntity object named "{0}" and type "{1}" with a null Portal property.

Category:
Other

Cause:
PortalEntities must specify a Portal on creation, unless the type of PortalEntity is a Portal.

Action:
Ensure that a Portal is set on the PortalEntity object prior to creation.

WCS-72043
An attempt was made to set a PortalEntity object named "{0}" and type "{1}" with a null Portal property.

Category:
Other

Cause:
PortalEntities must not specify null as the Portal property on a set operation, unless the type of PortalEntity is a Portal.

Action:
Ensure that a null is not set on the PortalEntity, unless the type of PortalEntity is a Portal.

WCS-72044
Failed to set collection "{0}" of type "{1}" for PortalEntity object of type "{2}" on import.

Category:
Other

Cause:
Collections of this type are not supported.

Action:
Ensure that the data being imported is compatible with this version of the portal server.

WCS-72045
While importing object "{0}" with ID "{1}", could not find referenced object with ID "{2}" (reference name "{3}").

Category:
Other

Cause:
An object referenced by an object in the export set could not be found on the target server.

Action:
If required, transfer the referenced object from the source server to the target server.

WCS-72046
While importing object "{0}" with ID "{1}", could not find referencing object with ID "{2}" and type "{3}" (reference name "{4}").

Category:
Other

Cause:
An object referencing an object in the export set could not be found on the target server.

Action:
If required, transfer the referencing object from the source server to the target server.

WCS-72047
Unable to copy a Portal because a Portal with the name "{0}" already exists.

Category:
Other

Cause:
An attempt was made to copy a Portal with the name of an existing Portal.

Action:
Ensure that the supplied Portal name is unique.

WCS-72048
The targetPortal parameter must be null when copying a Portal.

Category:
Other

Cause:
An attempt was made to copy a Portal with the targetPortal parameter set to a none-null value.

Action:
Ensure that the targetPortal parameter is set to null.

WCS-72049
The current user is not authorized to perform action "{2}" on object {0} ({1}).

Category:
Other

Cause:
The current user does not have permission to perform an action on an object.

Action:
Ensure that the user is granted appropriate permissions.

WCS-72050
A conflict has occurred with your edit, it will be necessary to resubmit the changes using the updated resource.

Category:
Other

Cause:
An optimitistic locking exception was raised by the persistence store, due to an earliuer update on the resource by another transaction.

Action:
Re-try your edits using the updated resource.

WCS-72051
Attempted to apply a security ID {0} on an entity {1} with no Authorization annotation (type {2})

Category:
Other

Cause:
Either setSecurityId() or setSecurityEntity() was called on this entity with a non-null value, but the type of this entity has no Authorization annotation defined.

Action:
Modify the type definition to add the Authorization annotation, or avoid securing this entity type.

WCS-72052
The current user is not authorized to create an object of type "{0}" in portal with ID "{1}"..

Category:
Other

Cause:
The current user does not have permission to create objects of the specified type.

Action:
Ensure that the user is granted appropriate permissions.

WCS-72053
Permission class "{0}" cannot be used with actions "{1}" in @CreateAuthorization annotation.

Category:
Other

Cause:
The permission class name and actions specified via a @CreateAuthorization annotation on a PortalEntity class cannot be used with the current security manager.

Action:
Correct the permission class name or actions.

WCS-72054
An error occurred while setting the timeout of a transaction.

Category:
Other

Cause:
An error occurred while setting the timeout of a transaction.

Action:
Check the root cause of the exception.

WCS-72055
The user is not authorized to perform this operation.

Category:
Other

Cause:
The user was not authorized to perform the operation.

Action:
Check the root cause of the exception for further details.

WCS-72056
A PortalEntity could not be created from PortalEntityObject {0} because no type factories could be found.

Category:
Other

Cause:
An internal error occurred.

Action:
Contact Oracle Support Services.

WCS-72057
None of the available type factories were able to create a PortalEntity from PortalEntityObject {0}.

Category:
Other

Cause:
An internal error occurred.

Action:
Contact Oracle Support Services.

WCS-72058
The EntityManager's transaction is already active.

Category:
Other

Cause:
An error occurred initializing the TransactionManager.

Action:
Modify calling code to remove direct acces to the Portal EntityManager's transaction.

WCS-72059
The EntityManager is configured for JPA.

Category:
Other

Cause:
An error occurred initializing the TransactionManager.

Action:
The Portal EntityManager must be configured for resource local transactions.

WCS-72060
The TransactionManager has uncommitted changes which have been rolled back.

Category:
Other

Cause:
The TransactionManager's context is ending and the uncommitted changes have been rolled back.

Action:
Contact your Oracle Support representative.

WCS-72061
The TransactionManager has uncommitted changes which cannot be rolled back.

Category:
Other

Cause:
The TransactionManager's context is ending and rollback of its uncommitted changes has failed.

Action:
Check the root cause of the exception and contact your Oracle Support representative.

WCS-72062
The TransactionManager cannot begin the transaction as the EntityManager's transaction is already active.

Category:
Other

Cause:
The EntityManager's transaction is already active.

Action:
Ensure that no calling code is directly accessing the Portal EntityManager's transaction.

WCS-72063
The TransactionManager must fully rollback.

Category:
Other

Cause:
All outstanding transactions must be rolled-back.

Action:
Rollback all outstanding transactions.

WCS-72064
An error occurred executing a transactional method.

Category:
Other

Cause:
An error occurred executing a transactional method.

Action:
Check the root cause of the exception.

WCS-72065
Transactions cannot be commited out of order.

Category:
Other

Cause:
The calling code is attempting to commit transactions out of order.

Action:
The calling code must commit transactions in the same order as they were begun.

WCS-72067
Failed to set translation "{0}" for Locale "{1}" on PortalEntity object of type "{2}" on import.

Category:
Other

Cause:
An error occurred while trying to set a property of a PortalEntity object.

Action:
Use the associated exception to determine why the property could not be set.

WCS-72068
None of the available factories are able to create an instance of type "{0}".

Category:
Other

Cause:
An internal error occurred.

Action:
Contact Oracle Support Services.

WCS-72401
Cannot determine the ID of the current page. The current page will not be available via the Portal Request Context.

Category:
Other

Cause:
The Portal Runtime Framework was unable to obtain the ID of the current page using JSF.

Action:
Ensure that the application is running in a JSF environment.

WCS-72402
Cannot find a page with ID "{0}". The current page will not be available via the Portal Request Context.

Category:
Other

Cause:
The current page with the given ID could not be found in the Portal's persistent store.

Action:
Ensure that the page with the given ID is present in the Portal's persistent store.

WCS-72403
The AdfPortalController Failed to redirect to URL "{0}".

Category:
Other

Cause:
An internal error occurred whilst attempting to perform a redirect of the portal.

Action:
Contact Oracle Support Services.

WCS-72404
Could not load policy factory of type: {0}

Category:
Other

Cause:
No policy factory classes of the given type could be found.

Action:
Contact Oracle Support Services.

WCS-72405
PortalExternalContext accessed when the PortalExternalContext stack is empty.

Category:
Other

Cause:
A PortalExternalContext must be pushed on to the context stack before it is first accessed.

Action:
Contact Oracle Support Services.

WCS-72501
Unable to find the CDI bean for type: {0}.

Category:
Other

Cause:
No beans of the given type are available for injection.

Action:
Make sure that an injectable implementation of the given type is on the classpath.

WCS-72551
Method "{0}" cannot be called when the current transaction is active.

Category:
Other

Cause:
A method with a Transactional annotation whose propagation element was set to NEVER was called when a transaction was active.

Action:
Make sure the transaction is not active when the method is called.

WCS-72552
Method "{0}" must be called when the current transaction is active.

Category:
Other

Cause:
A method with a Transactional annotation whose propagation element was set to MANDATORY was called when a transaction was not active.

Action:
Make sure the transaction is active when the method is called.

WCS-72571
Cache name "{0}" is invalid.

Category:
Other

Cause:
An invalid cache name has been used.

Action:
Make sure the cache name is of the form "oracle.webcenter.*".

WCS-72601
Failed to create a document with Metadata Object absolute name "{0}".

Category:
Other

Cause:
An underlying MDS exception caused this.

Action:
See related log entries.

WCS-72602
Metadata Object absolute name "{0}" already exists.

Category:
Other

Cause:
Metadata already exists.

Action:
Check the metadata to be created.

WCS-72603
Pattern syntax error in name "{0}".

Category:
Other

Cause:
Pattern syntax error in name.

Action:
Check name.

WCS-72604
Metadata Object absolute name "{0}" not found.

Category:
Other

Cause:
Metadata not found.

Action:
Check the metadata to be found.

WCS-72605
Encountered an MDS exception "{0}" with message "{1}".

Category:
Other

Cause:
An underlying MDS exception caused this.

Action:
Check underlying exception.

WCS-72608
Failed to update a Portal object.

Category:
Other

Cause:
An underlying exception caused this.

Action:
Check underlying exception.

WCS-72609
Failed to delete a Portal object.

Category:
Other

Cause:
An underlying exception caused this.

Action:
Check underlying exception.

WCS-72610
Required parameter {0} not specified.

Category:
Other

Cause:
Required parameter is not specified.

Action:
Ensure that the required parameter is specified.

WCS-72611
Required parameters {0} and/or {1} not specified.

Category:
Other

Cause:
Required parameters are not specified.

Action:
Ensure that the required parameters are specified.

WCS-72612
File type is required for paramter {0}

Category:
Other

Cause:
File type is not specified in the parameter.

Action:
Ensure that the file type is specified.

WCS-72613
A version conflict was detected when updating the portal object. {0}

Category:
Other

Cause:
The supplied PropertyBean has a non-null currentVersionId property, and it does not match the current version ID of the object it was applied to.

Action:
Requery the portal object properties and apply the update again if appropriate.

WCS-72615
PropertyBean create validation failed: {0}

Category:
Other

Cause:
The supplied PropertyBean violates the validation constraints that are enforced for creation with this type of PropertyBean.

Action:
Review the error message for details of the constraint violations.

WCS-72616
PropertyBean update validation failed: {0}

Category:
Other

Cause:
The supplied PropertyBean violates the validation constraints that are enforced for update with this type of PropertyBean.

Action:
Review the error message for details of the constraint violations.

WCS-72620
ValidationFrame not populated.

Category:
Other

Cause:
The ValidationFrame providing context for PropertyBean validation did not contain state that was expected to be present.

Action:
Contact Oracle Support Services.

WCS-72621
FrameAwareValidator invoked outside of a ValidationFrame.

Category:
Other

Cause:
The ValidationFrame providing context for PropertyBean validation was not found.

Action:
Contact Oracle Support Services.

WCS-72622
Error getting bean value.

Category:
Other

Cause:
Inspect the cause exception to determine the underlying cause.

Action:
Contact Oracle Support Services.

WCS-72624
An error occurred while attempting to copy the portlets.

Category:
Other

Cause:
An exception was thrown while attempting to copy the portlets for a page.

Action:
Check the root cause of the exception.

WCS-72625
An error occurred while trying to instantiate the query manager or named query via reflection.

Category:
Other

Cause:
An exception was thrown while attempting to load query classes via reflection.

Action:
Check that the classes requested are valid for this operation.

WCS-72627
The asset of the given Id {0} is not found.

Category:
Other

Cause:
The asset is not found.

Action:
Check that the asset with the given Id value exists.

WCS-72628
Duplicate name: {0}.

Category:
Other

Cause:
An attempt was made to create an object with a name that has already been used.

Action:
Use a different name.

WCS-72629
Duplicate portal name: {0}.

Category:
Other

Cause:
An attempt was made to create a portal with a name that has already been used for a portal.

Action:
Use a different name for the portal.

WCS-72632
Device Operation {0} not allowed.

Category:
Other

Cause:
Devices and Device Groups cannot be created, modified or deleted in a custom portal

Action:
Ensure that the operations are performed at the portal server

WCS-72633
Device group {0} being customized in {1} portal does not exist at the portal server

Category:
Other

Cause:
Device group being customized at the portal level does not exist

Action:
Ensure that device group being customized exists in the portal server

WCS-72637
Authorization failure when trying to delete {0} type object "{1}" with ID: {2}

Category:
Other

Cause:
The current user is not authorized to delete the object

Action:
Ensure that the user is granted the appropriate permissions

WCS-72638
Authorization failure when trying to update {0} type object "{1}" with ID: {2}

Category:
Other

Cause:
The current user is not authorized to update the object

Action:
Ensure that the user is granted the appropriate permissions

WCS-72639
The Portal API object is not attached.

Category:
Other

Cause:
The Portal API object has a null id. This means it is not attached to any underlying persistence object.

Action:
The Portal API client should attach the object or obtain a new object with a valid id from the PortalObjectRepository. The object can become unattached if it has been deleted.

WCS-72640
The persistence resource with ID "{0}" associated with the ManagedPortalObject could not be found.

Category:
Other

Cause:
The Portal API ManagedPortalObject object is attached to an underlying persistence resouce that is no longer available.

Action:
The Portal API client should take appropriate action to account for the deleted Portal API object.

WCS-72641
There was a failure adding member "{0}" to portal "{1}"

Category:
Other

Cause:
A failure occurred adding a member to a portal.

Action:
Examine the logged exception for more details.

WCS-72642
There was a failure removing member "{0}" from portal "{1}"

Category:
Other

Cause:
A failure occurred removing a member from a portal.

Action:
Examine the logged exception for more details.

WCS-72643
There was a failure removing members for role "{0}" from portal "{1}"

Category:
Other

Cause:
A failure occurred removing all members with a role from a portal.

Action:
Examine the logged exception for more details.

WCS-72646
Duplicate portal display name: {0}.

Category:
Other

Cause:
An attempt was made to create a portal with a display name that has already been used for a portal.

Action:
Use a different display name for the portal.

WCS-72647
Null portal name.

Category:
Other

Cause:
An attempt was made to create a portal with a null name.

Action:
Use a non-null name for this portal.

WCS-72648
Null portal display name.

Category:
Other

Cause:
An attempt was made to create a portal with a null display name.

Action:
Use a non-null display name for this portal.

WCS-72649
Operation forbidden without authorization to perform action {0} on {1} (type {2}, id {3})

Category:
Other

Cause:
An attempt was made to perform an unauthorized action.

Action:
Ensure user is authorized to perform this action and retry.

WCS-72650
Invalid name: {0}.

Category:
Other

Cause:
An attempt was made to create an object with a invalid name.

Action:
Use a different valid name.

WCS-72651
Invalid portal name: {0}.

Category:
Other

Cause:
An attempt was made to create a portal with a invalid name.

Action:
Use a name containing only letters and digits.

WCS-72652
Invalid portal template name: {0}.

Category:
Other

Cause:
An attempt was made to create a portal template with a invalid name.

Action:
Use a name containing only letters and digits.

WCS-72653
Failed to rename a Portal object.

Category:
Other

Cause:
An underlying exception caused this.

Action:
Check underlying exception.

WCS-72654
Unable to cleanup properly after failed creation of {0}.

Category:
Other

Cause:
An underlying exception caused this.

Action:
Check underlying exception.

WCS-72655
Some properties have violated their constraints.

Category:
Other

Cause:
Constrainst have been violated on setting or updating the properties.

Action:
Check that the properties values are correct.

WCS-72656
The combination of (isDiscoverable=false and isPublic=true) is not allowed.

Category:
Other

Cause:
The Access Level setting constraint has been violated.

Action:
Check that the properties values are correct.

WCS-72657
Operation is forbidden.

Category:
Other

Cause:
The operation is forbidden.

Action:
Do not attempt this operation.

WCS-72658
Cannot copy service {0} from {1} to {2}, as service not provisioned in {1}.

Category:
Other

Cause:
The service cannot be copied as it is not provisioned in the source portal.

Action:
Exclude the service from the portal copy request.

WCS-72659
Attempt to modify or delete seeded object {0}. Seeded objects cannot be modified or deleted.

Category:
Other

Cause:
Seeded objects cannot be modified or deleted.

Action:
None

WCS-72660
A failure occurred during MDS document contents substitution.

Category:
Other

Cause:
An underlying exception caused this.

Action:
Check underlying exception.

WCS-72661
Unable to cleanup properly after failed deletion of {0}.

Category:
Other

Cause:
An underlying exception caused this.

Action:
Check underlying exception.

WCS-72662
Unable to copy resource bundle documents for portal : {0}.

Category:
Other

Cause:
An underlying exception caused this.

Action:
Check underlying exception.

WCS-72663
Invalid display name: {0}.

Category:
Other

Cause:
An attempt was made to create an object with a invalid display name.

Action:
Use a different valid display name.

WCS-72664
Invalid portal display name: {0}.

Category:
Other

Cause:
An attempt was made to create a portal with a invalid display name.

Action:
Use a display name containing only letters and digits.

WCS-72701
Error in checking if the service ${0} is provisioned for portal ${1}.

Category:
Other

Cause:
Unable to discover the service's provisioning status.

Action:
Examine the exception for further information.

WCS-72702
Error in checking which services are configured.

Category:
Other

Cause:
Unable to discover which services are configured.

Action:
Examine the exception for further information.

WCS-72703
Error in provisioning service ${0} for portal ${1}.

Category:
Other

Cause:
Unable to provision the service for the portal.

Action:
Examine the exception for further information.

WCS-72704
Error in unprovisioning service ${0} for portal ${1}.

Category:
Other

Cause:
Unable to unprovision the service for the portal.

Action:
Examine the exception for further information.

WCS-72705
Error in retrieving the ScopeAPI for the ${0} service.

Category:
Other

Cause:
Unable to get the ScopeAPI for the service.

Action:
Examine the exception for further information.

WCS-72706
Error getting group info for user ${0}.

Category:
Other

Cause:
Unable to get group info for a user.

Action:
Examine the exception for further information.

WCS-72707
Error in copying service ${0} from portal ${1} to portal {2}.

Category:
Other

Cause:
Unable to unprovision the service for the portal.

Action:
Examine the exception for further information.

WCS-72801
Error publishing activity to the activity stream

Category:
Other

Cause:
Unable to publish an activity to the activity stream.

Action:
Examine the exception for further information.

WCS-72802
The {2} role has already been granted for user {1} in portal {0}

Category:
Other

Cause:
Unable to grant the role because it has already been granted.

Action:
Examine the exception for further information.

WCS-72803
Failed to grant the {2} role for user {1} in portal {0}

Category:
Other

Cause:
Unable to grant the role due to an exception.

Action:
Examine the exception for further information.

WCS-72804
Failed to revoke the {2} role for user {1} in portal {0}

Category:
Other

Cause:
Unable to revoke the role due to an exception.

Action:
Examine the exception for further information.

WCS-72805
Failed to set permissions for portal {0}

Category:
Other

Cause:
Unable to set permissions due to an exception.

Action:
Examine the exception for further information.

WCS-72806
Failed to drop role {0} for portal {1}

Category:
Other

Cause:
Unable to drop role due to an exception.

Action:
Examine the exception for further information.

WCS-72807
Failed to to set permission actoins for role {0} for portal {1} on member {2}

Category:
Other

Cause:
Unable to set a member's permission actions for a role due to an exception.

Action:
Examine the exception for further information.

WCS-72808
Failed to to create translation bundle for portal {0}

Category:
Other

Cause:
Unable to create translation bundle due to an exception.

Action:
Examine the exception for further information.

WCS-72901
The method {0} is not supported

Category:
Other

Cause:
A method that is not supported has been called.

Action:
Update the application to use another method.

WCS-73000
Muffling exception.

Category:
Other

Cause:
An error occurred but processing was allowed to continue.

Action:
Use the context information to determine if remedial action is required.

WCS-73001
Unable to instantiate upgrade handler {0}.

Category:
Other

Cause:
Review the underlying exception in the logs to determine the cause.

Action:
Make sure that handler implementation is on the classpath.

WCS-73002
Unable to instantiate upgrade manager.

Category:
Other

Cause:
Review the underlying exception in the logs to determine the cause.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73003
Upgrade failed for portal {0}.

Category:
Other

Cause:
Review the underlying exception in the logs to determine the cause.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73004
Upgrade clean up failed for portal {0}.

Category:
Other

Cause:
Review the underlying exception in the logs to determine the cause.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73005
Upgrade initialization failed for handler {0}.

Category:
Other

Cause:
Review the underlying exception in the logs to determine the cause.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73006
Upgrade validation failed for {0}:{1} in scope {2}.

Category:
Other

Cause:
Review the underlying exception in the logs to determine the cause.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73007
Upgrade validation failed for {0}:{1} in scope {2} due to : {3}.

Category:
Other

Cause:
Validation failed for the said cause.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73008
Upgrade phase failed for {0}:{1} in scope {2}.

Category:
Other

Cause:
Review the underlying exception in the logs to determine the cause.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73009
Upgrade clean up failed for {0}:{1} in scope {2}.

Category:
Other

Cause:
Review the underlying exception in the logs to determine the cause.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73010
Post upgrade failed for {0}:{1} in scope {2}.

Category:
Other

Cause:
Review the underlying exception in the logs to determine the cause.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73011
Portal {0} with id {1} not found in the repository.

Category:
Other

Cause:
Either the portal upgrade has not happened or there is some data corruption.

Action:
Check logs for related error. Re-run upgrade. If you still continue to see the issue, contact Oracle Support Services.

WCS-73012
Default portal upgrade failed therefore halting the upgrade.

Category:
Other

Cause:
Review the related exception in the logs to determine the cause.

Action:
Re-run upgrade. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73013
Exception while resolving the reference for {0} , message: {1}.

Category:
Other

Cause:
Review the related exception in the logs to determine the cause.

Action:
Re-run upgrade. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73014
Exception while getting a list of scopes for upgrade, message: {0}.

Category:
Other

Cause:
Review the related exception in the logs to determine the cause.

Action:
Re-run upgrade. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73015
Exception while getting a list of scopes for clean up, message: {0}.

Category:
Other

Cause:
Review the related exception in the logs to determine the cause.

Action:
Re-run upgrade. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73016
Exception while persisting the information related to upgrade scope failure, message: {0}.

Category:
Other

Cause:
Review the related exception in the logs to determine the cause.

Action:
Re-run upgrade. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73017
An error occurred while trying to audit portal server using MDS root {0}.

Category:
Other

Cause:
Review the related exception in the logs to determine the cause.

Action:
Re-run audit. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73018
An error occurred while trying to generate audit report for portal server in report directory {0}.

Category:
Other

Cause:
Review the related exception in the logs to determine the cause.

Action:
Re-run audit. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73019
An error occurred while trying to audit portals {0} using MDS root {1}.

Category:
Other

Cause:
Review the related exception in the logs to determine the cause.

Action:
Re-run audit. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73020
An error occurred while trying to generate audit report for portals {0} in report directory {1}.

Category:
Other

Cause:
Review the related exception in the logs to determine the cause.

Action:
Re-run audit. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73021
An error occurred while trying to initialize mbeans to audit deprecated connection usage.

Category:
Other

Cause:
Review the related exception in the logs to determine the cause.

Action:
Re-run audit. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73022
An error occurred while trying to audit deprecated connection usage.

Category:
Other

Cause:
Review the related exception in the logs to determine the cause.

Action:
Re-run audit. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73023
An error occurred while trying to audit deprecated usage of type {0} in scopes {1}.

Category:
Other

Cause:
Review the related exception in the logs to determine the cause.

Action:
Re-run audit. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73024
Exception while getting a list of scopes for post upgrade, message: {0}.

Category:
Other

Cause:
Review the related exception in the logs to determine the cause.

Action:
Re-run upgrade. If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73025
Post upgrade failed for portal {0}.

Category:
Other

Cause:
Review the underlying exception in the logs to determine the cause.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73026
Unable to instantiate Upgrade Context for scope {0}.

Category:
Other

Cause:
Review the underlying exception in the logs to determine the cause.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73027
An error occurred while upgrade.

Category:
Other

Cause:
Review the underlying exception in the logs to determine the cause.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73028
Could not find scope having identifier {0} while auditing {1} with path {2}

Category:
Other

Cause:
This looks like a case of data corruption where scope does not exist for a resource

Action:
Review list of portals in the Portal Server and see if you can find the required portal or any logs pertaining to its failure. Otherwise contact Oracle Support Services.

WCS-73029
Unable to update the audit data for the resources of scope {0}.

Category:
Other

Cause:
An error occurred applying the audit data.

Action:
No action may be required if this information is not deemed as important, otherwise if the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73030
Unable to update the audit data for the resource with id {0} of scope {1}.

Category:
Other

Cause:
An error occurred applying the audit data.

Action:
No action may be required if this information is not deemed as important, otherwise if the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73031
Failed to delete data file ({0}) associated with the audit data for scope {1}.

Category:
Other

Cause:
An error occurred deleteing the audit data file.

Action:
If the exception details do not provide sufficient information to resolve the issue. However, this failure is unlikely to affect the success of the upgrade.

WCS-73032
One or more scopes failed to have audit data columns updated, e.g. Portal last updated by and updated date information.

Category:
Other

Cause:
An error occurred during audit column data update.

Action:
No action may be required if this information is not deemed as important, otherwise see if the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73033
The upgrade process was unable to create a directory ({0}) required to persist upgrade data during the upgrade process.

Category:
Other

Cause:
An error occurred during directory creation.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73034
The upgrade process was unable to read the audit column data file ({0}) for scope {1}.

Category:
Other

Cause:
An error occurred during an attempt to read the audit column datafile.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73035
The upgrade process was unable to create a file ({0}) required to persist upgrade data during the upgrade process.

Category:
Other

Cause:
An error occurred during file creation.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73036
Could not find the devices data file in the MDS repository. No devices and device groups will be migrated.

Category:
Other

Cause:
The instance being upgraded is probably release 11.1.1.7.0 or earlier where the device support feature did not exist.

Action:
If the instance being upgraded is release 11.1.1.7.0 or earlier, this is expected and can be safely ignored.

WCS-73037
Upgrade of portal {0} encountered a custom attribute named {1} with the following value exceeding the limit of 2000 characters : {2}

Category:
Other

Cause:
A large value has been set for a custom attribute which exceeds the size limit for upgraded Portal's custom attributes.

Action:
If this attribute is required in the upgraded Portal attempt to use a value of less than 2000 characters, or find another mechanism to handle the requirements which does not utilize the custom attribute mechanism.

WCS-73038
Error while trying to determine whether default scope upgrade succeeded

Category:
Other

Cause:
Review the underlying exception in the logs to determine the cause.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73039
Default Scope cleanup is not attempted due to existing failures in other scopes

Category:
Other

Cause:
A few scopes have failed during upgrade. Default Scope cleanup is not attempted until all other scopes pass upgrade

Action:
Address the existing failures and run the upgrade process again.

WCS-73040
Portal Members not copied to Moderator role for portal {0}

Category:
Other

Cause:
There may not be any portal members with the moderator role or the member data is corrupted.

Action:
Contact the administrator.

WCS-73041
An error occurred while trying to obtain a list of members from the moderator role for portal {0}.

Category:
Other

Cause:
Review the underlying exception in the logs to determine the cause. This may be a case of data corruption, where there are no moderators for the portal.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73042
Permissions not copied for Moderator role for portal {0}

Category:
Other

Cause:
Permissions may not be set for the moderator role or the member data is corrupted.

Action:
Contact the administrator.

WCS-73043
An error occurred while trying to obtain permissions for the moderator role for portal {0}.

Category:
Other

Cause:
Review the underlying exception in the logs to determine the cause. This may be a case of data corruption, where the permissions are not set for the moderator role.

Action:
If the exception details do not provide sufficient information to resolve the issue, then contact Oracle Support Services.

WCS-73044
Skipping sub portal security upgrade for portal {0} since security is not inherited for this portal.

Category:
Other

Cause:
Skipping sub portal security handler upgrade since security is not inherited for this portal.

Action:
Check the portal for any data issues.

WCS-73045
Upgrade for scope {0} has not been attempted.

Category:
Other

Cause:
Upgrade may have been halted abruptly.

Action:
Rerun Upgrade again

WCS-89001
An unexpected error occurred in the activity stream sub-system.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-89002
WSRP Connection Name {0} already exists.

Category:
Other

Cause:
Connection Name used already exists.

Action:
Use a different name for the connection.

WCS-89003
Web Service Connection Name {0} already exists. WSRP connection {1} cannot be created.

Category:
Other

Cause:
Connection Name used already exists.

Action:
Use a different name for the connection.

WCS-89004
Cannot register the producer due to connectivity issues.

Category:
Other

Cause:
Failed to connect to the producer. Either the connection details specified were invalid or there was a network problem.

Action:
Verify that the producer connection details are correct, and then check to see if a firewall or some other network issue is blocking the connection.

WCS-89005
Unable to register the producer due to an invalid WSDL URL.

Category:
Other

Cause:
The WSDL URL specified for the WSRP producer was invalid.

Action:
Specify a valid WSDL URL, and then try again.

WCS-89006
URL Connection Name {0} already exists.

Category:
Other

Cause:
Connection Name used already exists.

Action:
Use a different name for the connection.

WCS-89007
Web Producer Name {0} already exists.

Category:
Other

Cause:
Web Producer Name used already exists.

Action:
Use a different name for the Web producer.

WCS-89008
Unable to register the producer due to exception {0}. Contact your administrator.

Category:
Other

Cause:
Error occurred registering the producer.

Action:
Examine the log files for more detail.

WCS-89009
Unable to unregister the producer due to exception {0}. Contact your administrator.

Category:
Other

Cause:
Error occurred deregistering the producer.

Action:
Examine the log files for more detail.

WCS-89010
Unable to get producer connections due to exception {0}. Contact your administrator.

Category:
Other

Cause:
Error occurred retrieving the list of producers.

Action:
Examine the log files for more detail.

WCS-89011
Unable to register the WSRP producer due to exception {0}. Contact your administrator.

Category:
Other

Cause:
Error occurred registering the WSRP producer.

Action:
Examine the log files for more detail.

WCS-89012
Unable to register the JPDK producer due to exception {0}. Contact your administrator.

Category:
Other

Cause:
Encountered an exception when registering the JPDK producer.

Action:
Examine the log files for more detail.

WCS-89013
Unable to create the WSRP producer connection due to exception {0}. Contact your administrator.

Category:
Other

Cause:
Error occurred creating the WSRP producer connection.

Action:
Examine the log files for more detail.

WCS-89014
Unable to refresh the producer connections due to exception {0}

Category:
Other

Cause:
Error occurred refreshing the list of producers.

Action:
Examine the log files for more detail.

WCS-89015
Failed to clean up producer registration due to exception {0}. Contact your administrator.

Category:
Other

Cause:
Error occurred cleaning up the producer registration.

Action:
Examine the log files for more detail.

WCS-89016
The operation failed due to an exception. Contact your administrator.

Category:
Other

Cause:
Error occurred performing the operation.

Action:
Examine the log files for more detail.

WCS-89017
Error parsing policy XML ({0}) from PolicyApplication mbean with message {1}

Category:
Other

Cause:
Error parsing policy XML from PolicyApplication mbean.

Action:
Make sure the policy XML in the PolicyApplication mbean is set correctly.

WCS-89018
Registration of OmniPortlet is not supported

Category:
Other

Cause:
Registration of OmniPortlet is not supported.

Action:
Register any other JPDK Portlet other than OmniPortlet.

WCS-89501
An unexpected error occurred in the activity stream sub-system.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Contact Oracle Support Services.

WCS-89502
External Application Connection Name {0} already exists.

Category:
Other

Cause:
Connection Name used already exists.

Action:
Use a different name for Connection.

WCS-89503
No connection selected for this operation.

Category:
Other

Cause:
No External Application connection selected for this operation.

Action:
Select a External Application connection from the table listing the available connections.

WCS-90100
No moveplan.xml file available.

Category:
Other

Cause:
moveplan.xml file missing.

Action:
Contact Oracle Support Services.

WCS-90200
Error in validating the source environment.

Category:
Other

Cause:
Invalid source environment.

Action:
Contact Oracle Support Services.

38

WSM-00001 to WSM-09029

WSM-00001
A JAXB context for path "{0}" cannot be created due to underlying error "{1}".

Category:
Other

Cause:
The error could have been caused by creating the JAXB2.0 marshaller/unmarshaller.

Action:
Contact Oracle Support Services.

WSM-00002
A class of type {0} cannot be marshaled due to underlying error "{1}".

Category:
Other

Cause:
Error occurred in JAXB marshalling (1.e converting java object to xml.)

Action:
Contact Oracle Support Services or refer to http://java.net/jaxb.

WSM-00003
An element of type {0} cannot be unmarshalled due to underlying error "{1}".

Category:
Other

Cause:
Error occurred while doing JAXB unmarshall i.e converting XML to Java.

Action:
Contact Oracle Support Services.

WSM-00004
WS-Security Exception : {0}

Category:
Security

Cause:
The system encountered a generic failure in security.

Action:
Contact Oracle Support Services.

WSM-00005
Error in sending the request.

Category:
Security

Cause:
Failure occurred while trying to send the request message, possibly due to a failure in security code.

Action:
Retry the operation for a maximum of 3 times. If the problem persists, contact Oracle Support Services.

WSM-00006
Error in receiving the request: {0}.

Category:
Security

Cause:
Failure occurred while processing the request message, possibly due to a failure in security checks.

Action:
Refer to the policy for the expected nature of the request message and retry the operation.

WSM-00007
JPS exception

Category:
Security

Cause:
The error was most likely due to an invalid JPS configuration.

Action:
Correct the JPS configuration and retry the operation.

WSM-00008
Login Exception: {0}.

Category:
Security

Cause:
Login Exception at OPSS.

Action:
Resend valid credentials.

WSM-00009
The password policy does not match. Expected: {0}, Received:{1}.

Category:
Security

Cause:
The expected and actual password types did not match.

Action:
Refer to the policy to determine the allowed password type value.

WSM-00010
Message rejected as the nonce element in the WS-Security header is missing.

Category:
Security

Cause:
Nonce was required according to policy requirements, but was not found.

Action:
Resend the request with valid value of nonce.

WSM-00011
The wsu:Created element is required.

Category:
Security

Cause:
The Created element was required, but was not found.

Action:
Resend the request with valid value of the Created element with the UTC timestamp of the instance in which the request was created.

WSM-00012
The password is ignored, as it is not required by the policy.

Category:
Security

Cause:
The password was sent in the <UsernameToken>, when it was not required.

Action:
The password type prescribed by the policy is None, so password should not be sent.

WSM-00015
The user name is missing.

Category:
Security

Cause:
Username was expected but was not found.

Action:
Either the username element or the username inside the username element is missing. Resend the request with a valid username.

WSM-00016
The username/password credentials or certificates {0} are missing.

Category:
Security

Cause:
It is possible that username/password or certificate is missing.

Action:
Resend valid credentials.

WSM-00017
The <bindings> element for {0}:{1} is missing.

Category:
Configuration

Cause:
It is likely that the bindings element is missing inside policy.

Action:
Re-create the policy with valid bindings.

WSM-00018
There is more than one security header with the same role {0}.

Category:
Security

Cause:
More than one security header was found with the same role associated.

Action:
Refer to the WS-Security 1.0 or 1.1 specifications. Do not send more than one security header having the same role.

WSM-00019
The version of SOAP used is not supported: {0}.

Category:
Requests/Responses

Cause:
An envelope was obtained that conforms to an unsupported version of SOAP.

Action:
Use a supported version. SOAP 1.1 and 1.2 are supported.

WSM-00020
Error sending the response.

Category:
Other

Cause:
A failure occurred while building the response.

Action:
Retry a maximum of three times. If the retry attempts fail, contact Oracle Support Services.

WSM-00021
Error receiving the response.

Category:
Security

Cause:
A failure occurred while processing the response, most likely due to a failure in the security check.

Action:
Retry sending the response to the client.

WSM-00022
Error sending a fault.

Category:
Other

Cause:
A failure occurred while sending the fault.

Action:
Retry for a maximum of three times. If the retry attempts fail, contact Oracle Support Services.

WSM-00023
Error receiving a fault.

Category:
Security

Cause:
A failure occurred while processing the fault, most likely due to a failure in the security check.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-00024
The SAML token is missing from the security header. Ensure that there is a SAML token policy attached on the client side. Tokens found in the security header are :- {0}.

Category:
Security

Cause:
The SAML assertion that was expected inside the security header was not found.

Action:
Insert valid SAML assertions and resend the request.

WSM-00025
SAML token verification failure.

Category:
Security

Cause:
SAML token verification failed.

Action:
Check the validity period of the SAML assertion using Conditions, or determine whether the assertion must be signed. Ensure that the SAML token conforms to the requirements of the SAML 1.0 specification.

WSM-00026
The SAML token cannot be added to the security header.

Category:
Other

Cause:
A failure occurred while adding the SAML token to the security header.

Action:
Check the log file for a possible cause.

WSM-00027
The configuration parameter {0} contains an invalid value [{1}].

Category:
Configuration

Cause:
The configuration settings were invalid.

Action:
Check the configuration and retry the operation.

WSM-00028
Failure in getting user credentials from client.

Category:
Configuration

Cause:
Failure occurred while extracting user credentials from the client side.

Action:
Check Keystore/Username and the Password/CSF configuration.

WSM-00029
The algorithms used to encrypt the data do not match those specified in the policy. : Expected : {0}, Actual : {1}.

Category:
Security

Cause:
The expected and actual data encryption algorithms did not match.

Action:
Check the policy to determine the permitted values for the data encryption algorithm.

WSM-00030
The encryption method key wrap algorithms do not match : Expected : {0}, Actual : {1}.

Category:
Security

Cause:
The expected and actual key wrap encryption algorithms did not match.

Action:
Check the policy to determine the permitted values for the key wrap encryption algorithm. In addition, refer to WS-Security Policy 1.1 for a list of allowed values.

WSM-00031
The digest algorithms do not match.

Category:
Security

Cause:
The actual digest algorithms for the signature did not match the expected algorithms.

Action:
Check the policy to determine the permitted values for the signature digest algorithms.

WSM-00033
The encrypted message elements or parts do not comply with the policy. The following headers/elements (<name space: local name>) or attachments (<attachment ID: attachment type>) must be encrypted:- {0}

Category:
Security

Cause:
Parts or elements to be encrypted according to policy were different from those in the SOAP message.

Action:
Refer to the policy and WS-Security specifications to ensure that all encryption requirements mandated by the policy and the specifications are met.

WSM-00034
Error in Encryption reference mechanism compliance : Expected : {0} , Actual : {1}. Ensure that a compatible policy is attached at the client side.

Category:
Security

Cause:
The expected and actual encryption reference mechanisms did not match.

Action:
Check the policy to determine the permitted values for the encryption reference mechanism.

WSM-00035
Error in Signature reference mechanism compliance : Expected : {0} , Actual : {1}. Ensure that a compatible policy is attached at the client side.

Category:
Security

Cause:
The expected and actual signature reference mechanisms did not match.

Action:
Check the policy to determine the allowed value of the signature reference mechanism.

WSM-00036
The signed message elements or parts do not comply with the policy. The following headers/elements (<name space: local name>) or attachments (<attachment ID: attachment type>) must be signed:- {0}

Category:
Security

Cause:
Parts or elements to be signed according to policy were different from those in the soap message.

Action:
Refer to the policy and WS-Security specifications to make sure that all the signature requirements mandated by the policy and the specifications are met.

WSM-00037
Error in signature confirmation compliance.

Category:
Security

Cause:
The error could have occurred because the response signature confirmation element was not signed.

Action:
Check that all the signature confirmations in the response are signed and referenced in the response signature.

WSM-00039
Message is not compliant with timestamp requirement of the policy. Timestamp element is required by policy but it is not present in the message.

Category:
Security

Cause:
Policy compliance failed due to timestamp. Timestamp element is required by policy but it is not present in the message.

Action:
Check the message and make sure message is compliant with timestamp requirement of the service policy.

WSM-00042
The request must be made over SSL.

Category:
Requests/Responses

Cause:
The request was expected to be sent over SSL, but it was not.

Action:
Check the SSL port and send the request over SSL.

WSM-00043
No peer certificates are present from the HTTP request.

Category:
Security

Cause:
A certificate in the trust chain is missing.

Action:
Ensure that the complete certificate chain is propagated in the request, if certificates signed by CA are used.

WSM-00044
The HTTP authorization header is missing.

Category:
Security

Cause:
The authorization Header was not found.

Action:
Ensure that the request HTTP headers contain an authorization header.

WSM-00045
HTTP authentication/authorization failure.

Category:
Security

Cause:
Failure occurred in basic authentication.

Action:
Use the appropriate Base64 encoded combination of a valid username and password.

WSM-00046
Error in advertisement of WS-Policy.

Category:
Other

Cause:
An error occurred while advertising ORAWSDL to WS-Policy.

Action:
Contact Oracle Support Services.

WSM-00047
Invalid key referencing mechanism: {0}.

Category:
Configuration

Cause:
The sign or encryption key reference mechanism used was invalid.

Action:
Valid supported values are direct, issuerserial, SKI, or thumbprint.

WSM-00048
The signature confirmation value is invalid. Expected : {0}, Actual : {1}.

Category:
Security

Cause:
Signature confirmation sent in the response was invalid.

Action:
See the WS-Security 1.1 specification for the correct @Value of SignatureConfirmation.

WSM-00049
The expected {0} signature is missing in the request message.

Category:
Security

Cause:
No signature (message, or endorsing) was found in the request to confirm.

Action:
Resend the request with at least one <Signature>.

WSM-00050
Cannot obtain security token reference.

Category:
Other

Cause:
The message was not signed or encrypted properly.

Action:
Check the <ds:Reference> section of the message.

WSM-00051
The encrypted data or key cannot be obtained.

Category:
Other

Cause:
The referenced encrypted object could not be found. The referenced encrypted object could not be found.

Action:
Ensure that the reference points to valid <EncryptedData> element. Ensure that the reference points to valid <EncryptedKey> element.

WSM-00052
There is an invalid or nonexistent configuration for the Login Module class [{1}] in the Java Platform Security (JPS) context [{0}].

Category:
Configuration

Cause:
An invalid or nonexistent configuration for Login Module could have been used.

Action:
Change the configuration and retry the operation.

WSM-00053
The propagated subject is either null or empty.

Category:
Security

Cause:
No Subject was found.

Action:
Send a valid nonempty Subject.

WSM-00054
The password credentials cannot be obtained from the Credential Store Framework (CSF). Unable to retrieve the csfKey "{0}". The csf map "{1}" found in the credential store is being used and the following keys are found in this map <CsfKeyName: UserName>:- {2}

Category:
Configuration

Cause:
Failure occurred while doing query for credentials from Credential Store Framework (CSF).

Action:
Check CSF configuration.

WSM-00055
The keystore located at {0} cannot be loaded due to {1}. Ensure that valid keystore type and password are configured.

Category:
Configuration

Cause:
The following keystore-related configuration properties may not be valid:keystore.type, keystore.pass. Also, the keystore could be corrupt or could have been tampered with.

Action:
Verify the configuration properties mentioned above and retry the operation. In a rare situation, replace or regenerate the keystore.

WSM-00056
The key, {0}, is not retrieved. Ensure that the above key exists in the credential store. The location of the key store being used is "{1}" and its type is "{2}". The following aliases are found in the keystore:- {3}

Category:
Configuration

Cause:
Error occurred while obtaining key from store.

Action:
Make sure the key exists in the keystore. Check JPS configuration settings for correct key alias, key password and keystore password. Also, check the values of the key keystore-csf-key and its password in the oracle.wsm.security map, through EM or WLST. In a rare situation, this error can also happen if the actual keystore type is ORACLE_WALLET and the keystore type specified in JPS configuration file is PKCS12.

WSM-00057
The certificate, {0}, is not retrieved.{4}The location of the key store being used is "{1}" and its type is "{2}". The following aliases are found in the keystore:- {3}

Category:
Configuration

Cause:
Failure occurred while retrieving certificate from store.

Action:
Verify keystore location configuration property as well as make sure that the requested certificate is present.

WSM-00058
The key type {0} is not supported.

Category:
Configuration

Cause:
The private key algorithm that was used is unsupported.

Action:
Ensure that the private key follows the RSA algorithm.

WSM-00059
Signature method algorithms are mismatched. Expected : {0}, Actual : {1}.

Category:
Security

Cause:
Expected and actual values of signature method algorithms did not match.

Action:
Check the policy and WS-Security Policy 1.1 specification for valid values.

WSM-00060
Error validating timestamp.

Category:
Security

Cause:
Timestamp is expired.

Action:
Check the timestamp. Check the allowed clockskew and message expiration time.

WSM-00061
Signature digest verification failure. The system property xml.debug.verify should be enabled for the details about the digest calculations during verification phase (note xml.debug.verify slows down the signature verification for very large messages). Caused by:-{0}

Category:
Security

Cause:
Digest verification failed possibly due to corrupted digest, or a message that was tampered with.

Action:
Recompute the digest and send the message again.

WSM-00062
The path to the certificate used for the signature is invalid.

Category:
Security

Cause:
The intermediate and root certificates of the signing certificate were not present in the keystore at the verifying end.

Action:
Make sure that the entire certificate chain is available in the keystore for verification.

WSM-00063
The version of SAML is incorrect. Expected : {0}, Actual : {1}.

Category:
Security

Cause:
SAML version in the SAML assertion did not match the expected version.

Action:
Check to see that the major version and minor version of the assertion are according to policy.

WSM-00064
SAML subject confirmation mismatch. Expected : {0}, Actual : {1}.

Category:
Security

Cause:
Subject confirmation method in SAML assertion did not match the policy requirements.

Action:
Check to see that the confirmation method for all the SAML assertions is sender-vouches.

WSM-00065
Error sending request over SSL.

Category:
Other

Cause:
Failure in creating SSL request possibly due to invalid configuration of Credential Store FrameWork (CSF).

Action:
Check the JPS configuration for CSF.

WSM-00066
The matching certificate for the given Subject Key Identifier (SKI) cannot be found.

Category:
Security

Cause:
None

Action:
None

WSM-00067
None SOAP message parts can be encrypted.

Category:
Security

Cause:
The elements to be encrypted in the policy were selected to be either of soap Envelope/Body/Header.

Action:
The core soap nodes cannot be encrypted according to WS-Security 1.0 specification.

WSM-00068
The security token is missing.

Category:
Security

Cause:
Security token was expected but was not found.

Action:
Security token is missing. Resend request with valid Security token.

WSM-00069
The security header is missing in request. Ensure that there is a valid security policy attached at the client side, and the policy is enabled.

Category:
Security

Cause:
Security header was expected but was not found.

Action:
Security header is missing. It could be that client side policy has not been applied. Resend request with appropriate Security header.

WSM-00070
The nonce cannot be validated.

Category:
Security

Cause:
Failure occurred while performing nonce Validation.

Action:
This may be due to a repeated value of nonce. Resend the request with a valid nonce.

WSM-00071
Error validating the wsu:Created attribute.

Category:
Security

Cause:
Failure occurred while doing Created(Timestamp) validation.

Action:
Resend the request with a valid timestamp, and or within the expiration limits.

WSM-00072
An encryption algorithm suite policy compliance failure occurred, expected algorithm: {0}, actual algorithm: {1}

Category:
Security

Cause:
Failure occurred in encryption algorithms policy compliance check, expected algorithm: {0}, actual algorithm: {1}

Action:
Check the encryption algorithm requirements of the policy and resend the message with appropriate value of algorithm suite.

WSM-00073
The mechanism {0} used in the authentication header is not supported.

Category:
Configuration

Cause:
The value of mechanism attribute used was not supported.

Action:
Change the policy to point to valid value of mechanism(basic), and retry the operation.

WSM-00074
The authorization header {0} is not correctly encoded using the Base64 encoding.

Category:
Security

Cause:
The authorization header was not encoded according to Base64 requirements.

Action:
Encode the header with Base64(username:realm:password) format and resend the request.

WSM-00075
The realm property is not configured in the policy.

Category:
Configuration

Cause:
The realm property was not configured in the policy.

Action:
Configure appropriate value of realm inside the policy.

WSM-00076
The user name is missing from the encoded authorization header.

Category:
Security

Cause:
The Authorization header did not contain a properly encoded username, or username was null.

Action:
Encode the header with Base64(username:realm:password) format and resend the request.

WSM-00077
The password is missing from the encoded authorization header.

Category:
Security

Cause:
The Authorization header did not contain password encoded properly, or password was null.

Action:
Encode the header with Base64(username:realm:password) format and resend the request.

WSM-00078
The configuration of the credentials in the policy is incorrect.

Category:
Configuration

Cause:
Credential configuration in the policy was incorrect.

Action:
Configure policy with valid Credential Store Framework (CSF) key, or username/password properties.

WSM-00079
The <BinarySecurityToken> element is missing.

Category:
Security

Cause:
<BinarySecurityToken> was not found.

Action:
For reference mechanisms that are configured with value direct, send the certificate inside <BinarySecurityToken> element.

WSM-00080
STR Dereferencing Transform not found

Category:
Security

Cause:
STR Dereferencing Transform was not found.

Action:
For reference mechanisms that are configured with value SKI, the Transforms section should contain the STR Dereferencing Transform.

WSM-00081
The X.509 certificate is not signed.

Category:
Security

Cause:
The X509 token used was not signed according to requirements of certificate authentication scenario.

Action:
Sign the X509 token (depending upon the reference mechanism used) for certificate authentication.

WSM-00082
The roles and/or attributes of the user profile cannot be retrieved.

Category:
Security

Cause:
No information could be obtained regarding the user roles or attributes.

Action:
Try resending the request for another user.

WSM-00083
Error computing the digest for this reference.

Category:
Security

Cause:
Digest computation for the <Reference> failed.

Action:
Check log file for possible cause.

WSM-00084
Error computing <SignatureValue> for this signature block.

Category:
Security

Cause:
Signature value computation for the signature block failed.

Action:
Check log file for possible cause.

WSM-00085
The certificates cannot be retrieved from the keystore.

Category:
Security

Cause:
Failure occurred while trying to retrieve certificate from keystore.

Action:
Use a valid alias for the certificate and retry the operation.

WSM-00086
Error initializing nonce cache.

Category:
Security

Cause:
Failure occurred while initializing iAS Cache.

Action:
Check log file for possible cause.

WSM-00087
Either {0} property or the oracle.j2ee.home system property is not set.

Category:
Security

Cause:
The cache configuration file for iAS cache was not found.

Action:
Set the system property oracle.j2ee.home or javacache.config.home system property to the path of the configuration file javacache.xml.

WSM-00088
The ObSSOCookie is missing.

Category:
Security

Cause:
The OAM security token was not found.

Action:
Resend the request by embedding the ObSSOCookie token inside a <BinarySecurityToken> element.

WSM-00089
The attachments security transform is incorrect. Expected : {0}, Actual : {1}.

Category:
Security

Cause:
The attachment security transform used was incorrect.

Action:
Refer to the recipient's policy for information about which SwA Security Transform is to be used.

WSM-00090
The signature for the attachment is non-compliant.

Category:
Security

Cause:
The attachment signature was not compliant.

Action:
Refer to the recipient's policy for information about which SwA Security Transform is to be used.

WSM-00091
The encryption of the attachment is non-compliant.

Category:
Security

Cause:
The attachment encryption was not compliant.

Action:
Refer to the recipient's policy for information about which SwA Security Transform is to be used.

WSM-00092
The <EncryptedKey> element is missing in the request. Ensure that there is a message protection policy attached at the client side.

Category:
Security

Cause:
No <EncryptedKey> elements were found in the request.

Action:
Refer to the WS-Security 1.0 and 1.0 specifications for the semantics.

WSM-00093
The <saml:Assertion> element is missing in the security header. Ensure that there is a SAML token policy attached at the client side. Tokens found in the security header are:- {0}.

Category:
Security

Cause:
No SAML assertions were found inside the security Header.

Action:
Resend the message with at least one SAML assertion in the header.

WSM-00094
The negotiated cipher suite does not meet policy requirements. Expected : {0}, Actual : {1}.

Category:
Security

Cause:
The negotiated cipher suite did not meet policy requirements.

Action:
Check the recipient's policy for the permitted values of the cipher suite.

WSM-00095
There is more than one assertion assigned to the same category {0} in the security policy.

Category:
Configuration

Cause:
Two or more assertions assigned to the same category were used.

Action:
Ensure that assertions inside a security policy belong to different categories.

WSM-00096
The order of the assertions is incorrect.

Category:
Configuration

Cause:
Assertion order does not match the requirements of policy.

Action:
Use the following order for client side policy : authentication -> msgprotection or authentication -> authorization and following for server side security policy msg-protection -> authentication or msg-protection -> authentication -> authorization.

WSM-00097
HTTP basic authentication header is missing.

Category:
Security

Cause:
HTTP basic authentication header was missing.

Action:
Client must provide the HTTP basic authentication header.

WSM-00098
User realm {0} is either null or is a mismatch with service realm {1}.

Category:
Security

Cause:
User realm was either null or was a mismatch with service realm.

Action:
Make sure user realm sent from client matches with the service realm.

WSM-00099
Username, password, or both are missing from the HTTP authentication header.

Category:
Security

Cause:
Username, password, or both were missing from HTTP authentication header.

Action:
Make sure the HTTP request header contains the username/password token.

WSM-00100
Found more than one keystore files {0} in application classpath. By default the first keystore is used. Make sure the desired keystore is being used by clearing others from the classpath.

Category:
Security

Cause:
Found more than one keystore file in application classpath. By default, the first keystore is used.

Action:
To ensure the desired keystore is being used, remove other keystores from the classpath, if possible.

WSM-00101
The specified keystore file {0} cannot be found; it either does not exist or its path is not included in the application classpath.

Category:
Security

Cause:
Keystore file did not exist or its path was either incorrect or not included in the application classpath.

Action:
Verify the keystore file does exist and its path is included in the application classpath.

WSM-00102
The specified user/subject does not belong to any role in system ID store.

Category:
Security

Cause:
The subject/user did not belong to any defined role in system ID store.

Action:
Verify and make sure that the specified user belongs to one or more roles.

WSM-00103
The policy is configured incorrectly without specifying roles, or denyAll or permitAll elements.

Category:
Security

Cause:
The policy was incorrectly configured with no roles and no denyAll/permitAll elements.

Action:
Correct the policy by configuring it with a denyAll element, a permitAll element, or at least one role.

WSM-00104
The specified JPS context {0} cannot be found in system-level JPS configuration file.

Category:
Security

Cause:
The JPS context could not be found in system level JPS configuration.

Action:
Verify system level JPS configuration file to ensure that it contains the context.

WSM-00105
Credential Store service instance is missing. Either the Oracle WSM JPS context being used for the keystore does not contain a reference to the Credential Store service instance, or the reference is not valid. The Credential Store service instance needs to be declared at the same level (system or application) as the keystore service instance. Therefore, if an application-level keystore is being used, a Credential Store Framework (CSF) store must also be declared at the application level.

Category:
Security

Cause:
No Credential Store (CSF) was found at the level where keystore was used.

Action:
Verify that the WSM JPS context is configured correctly. The error indicates that either the WSM JPS context which is being used for keystore does not contain reference to the Credential Store service instance, or the reference is not valid. The Credential Store service instance needs to be declared at the same level (system or application) as the keystore service instance. Therefore, if an application level keystore is being used, a CSF store must also be declared at the the application level.

WSM-00106
Assertion assigned to a non-security category {0} cannot be added to policy assigned to a security category.

Category:
Security

Cause:
Assertion belonging to non-security categories could not be added to policies belonging to security category.

Action:
Ensure that assertions in security policy also belongs to security category.

WSM-00107
Assertion belonging to {0} category is not valid for generic policy. Only assertion of type security/logging can be added to a generic policy (policy applicable to clients and servers). Check the assertions added to the generic policy.

Category:
Security

Cause:
Invalid assertions were found in generic policy.

Action:
Only assertion of type security/logging can be added to a generic policy (policy applicable to clients and servers). Recheck the assertions added to the generic policy.

WSM-00108
If password type is set to digest, addNonce and addCreated should be true.

Category:
Security

Cause:
UserNameToken Assertion had Passwordtype as digest but addNonce or addCreated was false.

Action:
In case of passwordtype as digest, addNonce and addCreated both should be true. Recheck the assertion.

WSM-00109
Algorithm suite is not supported, only TripleDes is supported for Kerberos assertion.

Category:
Security

Cause:
Kerberos Assertion had algorithm-suite other than TripleDES.

Action:
Only TripleDES algorithm is supported in case of Kerberos, so set algorithm-suite as TripleDes.

WSM-00110
Basic192 and *RSA15 algorithm-suites are not supported for SSL. Change the algorithm suite to one that is supported.

Category:
Security

Cause:
Basic192 or RSA algorithm-suite was used for SSL.

Action:
Use other supported Algorithm-suite for SSL except Basic192 and RSA algorithms.

WSM-00111
Keystore is not properly configured. Check your keystore configurations.

Category:
Security

Cause:
Keystore was not properly configured.

Action:
Check the keystore configuration, and try again.

WSM-00112
Missing keystore service instance reference in Oracle WSM JPS context.

Category:
Security

Cause:
Keystore Service instance reference was not found in WSM JPS Context.

Action:
Add the keystore service instance reference to WSM JPS Context, and try again.

WSM-00113
Unsupported configuration value for Client Credential Configuration location.

Category:
Security

Cause:
An unsupported configuration value of Client Credential location configuration was provided.

Action:
Refer to the documentation for valid values and add the proper configuration value for Client Credential Configuration Location, and try again.

WSM-00114
No matching SSL cipher suite is found for algorithm suite value, specified in the Policy.

Category:
Security

Cause:
No matching SSL cipher suite was found for algorithm suite value, specified in WS Policy.

Action:
Set algorithm suite of Web Service policy to a value that has matching SSL cipher suite.

WSM-00115
JSSE System Property for SSL cipher suite is either not set or does not match algorithm suite value specified in WS Policy.

Category:
Security

Cause:
JSSE System Property for SSL cipher suite was either not set or did not match algorithm suite value specified in WS Policy.

Action:
Set JSSE System Property (https.cipherSuites) to a value that matches algorithm suite as specified in WS Policy.

WSM-00116
Error retrieving SOAP body from SOAP message.

Category:
Security

Cause:
An error ocurred while retrieving SOAPBody from SOAPMessage. Either the SOAPMessage was not proper or had been tampered with.

Action:
Check whether the SOAPMessage is according to the Specifications and try again.

WSM-00117
Error occurred while transforming the security header.

Category:
Security

Cause:
TransformerException occurred while transforming the WssHeader to String. The SOAPMessage might not have been proper or it did not conform to the specifications.

Action:
Check the SOAPMessage and try again.

WSM-00118
OAM token can be inserted only on hosted clients where authenticated subject has been established.

Category:
Security

Cause:
Insertion of an OAM token tried from a non-hosted client where Authenticated Subject is not established.

Action:
Try to add OAM token from a hosted client as only the hosted clients can insert the OAM token extracting it from Authenticated Subject

WSM-00119
Either authorization header or requireTLS must be present.

Category:
Security

Cause:
The security policy attached did not have either auth Header or requireTLS set to true.

Action:
Change the policy to have either auth Header or requireTLS to be true.

WSM-00120
Cannot compute endorsing signature as no message signature is present.

Category:
Security

Cause:
The security policy did not sign anything from the message, so no signature was there. Endorsing Signature could not be computed as the signature which it was trying to endorse was not present.

Action:
Change the policy to Sign at least something in the message.

WSM-00121
Only the attachments are to be signed/encrypted and they are not present.

Category:
Security

Cause:
Only the attachments were to be signed/encrypted and they were not present.

Action:
Retry after putting attachments in the SOAP Message.

WSM-00122
Valid timestamp is not present in the message. It is missing the Created time.

Category:
Security

Cause:
Valid timestamp was not present in the message. It was missing the Created time.

Action:
Ensure the timestamp element conforms to the specifications.

WSM-00123
Timestamp of the message is in future.

Category:
Security

Cause:
The message had Created timestamp of a time in future so it failed Future message validation.

Action:
Ensure freshness of the message and check WSM configuration system for the configured value of clock skew.

WSM-00124
Timestamp of the message is in past.

Category:
Security

Cause:
The message was older than the permissible time limit so it failed Past message validation.

Action:
Ensure freshness of the Message and check the WSM configuration system for the configured values of clock skew and expire time.

WSM-00125
Password digest validation failed.

Category:
Security

Cause:
The password digest in the message was not correct so it failed the digest validation.

Action:
Retry after ensuring password digest is proper.

WSM-00126
Subject does not contain JPS user.

Category:
Security

Cause:
The subject mentioned did not have the JPS User.

Action:
Retry after ensuring JPS user in the subject.

WSM-00127
User not in identity store.

Category:
Security

Cause:
The user mentioned was not present in the identity store.

Action:
Retry after ensuring that user is present in the identity Store.

WSM-00128
Keystore instance is null.

Category:
Security

Cause:
Could not obtain keystore instance. Either the keystore instance type was wrong or the keystore configuration was wrong.

Action:
Check JPS configuration settings. Use correct keystore instance type.

WSM-00129
Unsupported SAML token provided : {0}.

Category:
Security

Cause:
An unsupported SAML token confirmation method was provided.

Action:
Provide a supported SAML token confirmation method and retry the operation.

WSM-00130
SAML assertion subject is missing.

Category:
Security

Cause:
The SAML assertion subject name was not specified.

Action:
Provide the SAML assertion subject and retry the operation.

WSM-00131
Unsupported data encryption algorithm: {0}.

Category:
Security

Cause:
An unsupported data encryption algorithm was provided.

Action:
Consult the documentation for the supported encryption algorithms and retry the operation.

WSM-00132
Invalid JPS configuration.

Category:
Security

Cause:
An invalid JPS configuration was provided.

Action:
Make sure that the JPS configuration is valid.

WSM-00133
Unsupported MessageContext type {0}.

Category:
Configuration

Cause:
Unsupported MessageContext type was provided.

Action:
Correct the MessageContext type and retry the operation.

WSM-00134
The signature key, {0}, is not retrieved due to exception {1}.

Category:
Security

Cause:
Error occurred while obtaining the signature key from store.

Action:
Check JPS configuration settings. Make sure that the key password , keystore password, and key alias are valid.

WSM-00135
The encryption key, {0}, is not retrieved due to exception {1}.

Category:
Security

Cause:
Error occurred while obtaining encryption key from store.

Action:
Check JPS configuration settings. Use correct key password, keystore password, and key alias.

WSM-00136
The signature certificate, {0}, is not retrieved due to exception {1}.

Category:
Security

Cause:
Failure occurred while retrieving the signature certificate from store.

Action:
Check JPS configuration settings for keystore location and make sure that the requested certificate is present.

WSM-00137
The encryption certificate, {0}, is not retrieved due to exception {1}.

Category:
Security

Cause:
Failure occurred while retrieving the encryption certificate from store.

Action:
Check JPS configuration settings for keystore location and make sure that the requested certificate is present.

WSM-00138
The path to the certificate is invalid. Validation failed for the certificate {0}

Category:
Security

Cause:
The intermediate and root certificates of the certificate were not present in the keystore during verification.

Action:
Make sure that the entire certificate chain is available in the keystore for verification.

WSM-00139
The scenario category {0} is not supported.

Category:
Security

Cause:
The scenario category is not supported.

Action:
Consult the Oracle documentation for supported categories.

WSM-00140
Invalid execution stage {0} resulting in system internal error.

Category:
Security

Cause:
System encountered an invalid execution stage.

Action:
Retry the operation, If problem persists contact Oracle Support Services.

WSM-00141
Error retrieving SOAP header from SOAP message.

Category:
Security

Cause:
An error occurred while retrieving the header from the SOAP Message. The SOAP message was invalid or was tampered with.

Action:
Make sure that the SOAP message is valid according to the specifications and retry the operation.

WSM-00142
Assertion belonging to {0} category is not valid for Component policy

Category:
Security

Cause:
Assertion belonging to authentication or message protection category was found in Component policy and it is invalid.

Action:
Modify the policy to correct the problem and retry the operation.

WSM-00143
Failure creating Java Keystore instance for type {0}.

Category:
Configuration

Cause:
Either the keystore type provided is not supported or there is no implementation provider for Java keystore.

Action:
Consult the Oracle documentation for supported Keystore types and make sure the implementation provider for Java Keystore is available.

WSM-00144
Failure retrieving Keystore aliases.

Category:
Configuration

Cause:
Keystore may have not been initialized.

Action:
Check the log file for possible causes and retry the operation.

WSM-00145
Keystore location or path can not be null or empty; it must be configured through the domain level configuration or policy configuration override.

Category:
Configuration

Cause:
Keystore location/path was either missing, set to be null, or empty.

Action:
Make sure that Keystore location is configured properly in the domain level configuration or through policy configuration override.

WSM-00146
Keystore type {0} defined using keystore.type property in the domain level configuration or through policy configuration override is not supported.

Category:
Configuration

Cause:
Invalid or unsupported keystore.type property value was found.

Action:
Consult the oracle documentation to ensure that a valid keystore.type is configured either through the domain level configuration or using policy configuration override.

WSM-00147
JPS context property is no longer supported in policy configuration

Category:
Configuration

Cause:
Unsupported JPS context property value was found.

Action:
Remove JPS context property from the configuration file.

WSM-00148
Security policy cannot be applied to streamed attachments. Streaming should be turned off if there are any security policies for attachments.

Category:
Configuration

Cause:
Security policy cannot be applied to streamed attachments.

Action:
Make sure streaming is off if security policies are being used for attachments.

WSM-00149
SAML assertion is missing.

Category:
Security

Cause:
Failed to locate SAML assertion with ID {0}.

Action:
Make sure that a valid SAML asssertion exists.

WSM-00150
Processed header list fetched from InterceptorContext is null, agentFunction:{0}, listType:{1}.

Category:
Security

Cause:
Processed header list fetched from InterceptorContext is null.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-00151
Role class {0} specified in the policy is either invalid or is not available in the classpath. Exception thrown : {1}.

Category:
Configuration

Cause:
Class name required for retrieving principal/role from subject is either invalid or class not present in the classpath

Action:
Specify a valid class name in the policy and ensure that the instances of the class specified are associated with the subject created.

WSM-00152
Callback {0} is not supported by Oracle WSM callback handler.

Category:
Security

Cause:
Callback specified is not supported by Oracle WSM callback handler.

Action:
Specify a valid callback class that Oracle WSM callback handler can support.

WSM-00153
Error retrieving Weblogic Server subject from JPS subject using SubjectSecurityUtil API

Category:
Security

Cause:
A failure occurred while converting JPS subject to Weblogic Server subject.

Action:
Check log file for possible cause.

WSM-00154
The empty or all-spaces value set explicitly for property {0} is detected and it is not valid value.

Category:
Security

Cause:
The property value was probably set unintentionally to empty or all-spaces through policy configuration override or JPS configuration.

Action:
Make sure that the value provided either through policy configuration override, policy binding, or JPS configuration is not empty or all spaces.

WSM-00155
Error retrieving Oracle WSM security policies.

Category:
Security

Cause:
A failure occurred while retrieving Oracle WSM security policies.

Action:
Check log file for possible cause.

WSM-00156
Invalid binary security token.

Category:
Security

Cause:
Binary security token in the header and the certificate used for endorsing signature did not match.

Action:
Make sure a valid binary security token is being passed.

WSM-00157
Recipient key alias not configured and signer certificate was not available because no part of the request was signed.

Category:
Security

Cause:
Recipient key alias not configured and signer's certificate was not available because no part of request was signed.

Action:
Set recipient key alias in service policy or sign part of the request.

WSM-00158
KerberosLoginModule class is not available in the classpath

Category:
Security

Cause:
The class for the Kerberos login module was not available in the classpath.

Action:
Make sure that the KerberosLoginModule class is included in the classpath, and configure the class name properly in WSM configuration system.

WSM-00159
TextCallbackHandler class is not available in the classpath

Category:
Security

Cause:
The class for the Text callback handler was not available in the classpath.

Action:
Make sure that the TextCallbackHandler class is included in the classpath, and configure the class name properly in WSM configuration system.

WSM-00160
The SSL policy must contain a requireTLS element.

Category:
Security

Cause:
The security policy attached did not have requireTLS set to true.

Action:
Change the policy to have requireTLS as true.

WSM-00161
Client encryption public certificate is not configured for Async web service client

Category:
Security

Cause:
Client encryption public certificate is not configured for async web service client with message protection.

Action:
Make sure that client public certificate is configured in client keystore, or provided through client config override for Async web service client that uses message protection

WSM-00162
Invalid recipient cert type: {0} may have been provided through override; It should be either a X509Certificate object or Base64 encoded value in String format.

Category:
Configuration

Cause:
Invalid recipient cert type may have been provided through override; It should be either a X509Certificate object or Base64 encoded value in String format.

Action:
Verify that only X509Certificate object, or Base64 encoded String value are provided in Policy, descriptor file or through program.

WSM-00163
Failure in getting recipient certificate using recipient key alias {0}

Category:
Configuration

Cause:
The recipient key alias might not be valid

Action:
Check to see if there is such certificate in keystore corresponding to the recipient key alias provided.

WSM-00164
Cannot obtain a valid recipient cert for client message sending

Category:
Configuration

Cause:
Encountered error while obtaining recipient certificate for sending request.

Action:
Must provide valid recipient certificate, or recipient alias for client to send request with message protection.

WSM-00165
Creating recipient certificate from base64 encoded string: {0} failed.

Category:
Configuration

Cause:
Encountered error while creating recipient certificate from base64 encoded string.

Action:
Must provide valid certificate in valid base64 encoded string.

WSM-00166
Extract certificate from saved ReplyTo header failed.

Category:
Configuration

Cause:
X509Certificate within ReplyTo header element might be invalid.

Action:
Ensure that cert. insertion, ReplyTo header serialization/deserializaton to JMS queue are all working properly.

WSM-00167
Actual Hostname {0} and Hostname retrieved from Certificate {1} do not match

Category:
Security

Cause:
HostName verification of certificate retrieved from WSDL failed

Action:
Either ensure that the Subject Dn matches the Hostname of the Service or disable the HostName Verification check

WSM-00168
Unable to extract X509Certificate from WSDL Definition Object as WSDL definition Object is unavailable

Category:
Security

Cause:
WSDL definition required for extraction of X509Certificate not available

Action:
Ensure that WSDL Definition Object is available from the MessageContext

WSM-00169
Error decrypting the request message.

Category:
Security

Cause:
The request message could not be decrypted using the key specified for decryption.

Action:
Ensure that the key used for decryption is same as the one used for encryption.

WSM-00170
There are no assertions available under the ExactlyOne policy operator.

Category:
Security

Cause:
There are no assertions under ExactlyOne policy operator.

Action:
Ensure that one or more security assertions are kept under ExactlyOne policy operator.

WSM-00171
A client policy contains an ExactlyOne policy operator.

Category:
Security

Cause:
A client policy contained an ExactlyOne policy operator.

Action:
Remove the ExactlyOne policy operator or switch to a service binding.

WSM-00172
A generic policy contains an ExactlyOne policy operator.

Category:
Security

Cause:
A generic policy contained an ExactlyOne policy operator.

Action:
Remove the ExactlyOne policy operator or switch to a service binding.

WSM-00173
A policy contains more than one ExactlyOne policy operator.

Category:
Security

Cause:
A policy contained more than one ExactlyOne policy operator.

Action:
Remove the additional ExactlyOne policy operators.

WSM-00174
A policy contains a nested ExactlyOne policy operator.

Category:
Security

Cause:
A policy contained a nested ExactlyOne policy operator.

Action:
Remove the nested ExactlyOne policy operators.

WSM-00175
Recipient Certificate for async callback client is not found under the ReplyTo element in async callback client message context

Category:
Configuration

Cause:
Recipient cert. for async callback client is not available from message context.

Action:
Ensure that original async client has public encryption certificate configured and is inserted into the ReplyTo header or the original async request. Also ensure that the original ReplyTo header along with client encryption certification is preserved and restored to the callback client message context.

WSM-00176
The mapped long name(s) for property {0} is null, the property might not be available for client programmatic override. Make sure it is indeed the intention, otherwise, add a mapping to map ConfigOverrideMapping.

Category:
Configuration

Cause:
The config override property does not have a corresponding long name mapping

Action:
Make sure this is indeed intended, otherwise, add a mapping to the ConfigOverrideMapping.

WSM-00177
The CSF key provided by the user is not present in the credential store. So using the default key is being used.

Category:
Security

Cause:
The CSF key provided by the user is not present in the credential store

Action:
Provide a valid key. Till then the default key will be used.

WSM-00178
Public key not found for SAML signature verification.

Category:
Configuration

Cause:
Public key not found for SAML signature verification

Action:
Ensure that public key is present in Security header which is reqruied For SAML signature verification

WSM-00179
SAML assertion issuer name is invalid.

Category:
Security

Cause:
SAML assertion issuer name is invalid.

Action:
Check to see that the overridden SAML trused issuers has SAML assertion issuer name.

WSM-00180
The trust version {0} is not supported for policy advertisement, hence ignored. The default trust version {1} is advertised.

Category:
Configuration

Cause:
The trust version specified in the policy is not supported.

Action:
Modify the policy with a supported trust version.

WSM-00181
A policy issued-token attributes require-internal-reference and require-external-reference both are false, one of them has to be true.

Category:
Configuration

Cause:
A policy issued-token attribute require-internal-reference and require-external-reference can not both be false.

Action:
At least one of the attribute require-internal-reference and require-external-reference must be set to true

WSM-00182
A policy request-security-token-template element attribute token-type has an unsupported value: {0}

Category:
Configuration

Cause:
A policy request-security-token-template element contains a token-type that is not supported.

Action:
Check documentation for supported token-type

WSM-00183
A policy request-security-token-template element attribute algorithm-suite has a value: {0} which does not match to that of msg-security: {1}, change it to match {1}.

Category:
Configuration

Cause:
A policy request-security-token-template element contains an algorithm-suite value that does not match to that of msg-security.

Action:
Change the algorithm-suite attribute value to match exactly the one in msg-security

WSM-00184
An attribute trust-version has an unsupported version: {0}

Category:
Configuration

Cause:
A policy contains an unsupported WS-TRUST version.

Action:
Check documentation for supported WS-TRUST version

WSM-00185
Attribute require-client-entropy and require-server-entropy can not both be set to false, at lease one of them must be set to true.

Category:
Configuration

Cause:
A policy can not have both require-client-entropy and require-server-entropy attributes set to false.

Action:
At lease set one of them to true

WSM-00186
A policy request-security-token-template key-type attribute is expected to be: {0}, but got: {1}

Category:
Configuration

Cause:
A policy request-security-token-template key-type attribute value is not set to the expected Bearer.

Action:
Set the attribute value to the expected

WSM-00187
A policy request-security-token-template key-type attribute is expected to be: {0}, but got: {1}

Category:
Configuration

Cause:
A Bearer policy request-security-token-template key-type attribute value is not set to the expected Symmetric or Public.

Action:
Set the attribute value to one of the expeted value Symmetric or Public

WSM-00188
STS Trust Config policy attribute port-uri has invalid value "{0}", it must be not null, not empty and in the format of http(s)://host:port/sts-service

Category:
Configuration

Cause:
STS trust config attribute port-uri is either null, empty or not in the format of "http(s)://host:port/sts-service-name".

Action:
Provide valid attribute value which is in the format of "http(s)://host:port/sts-service"

WSM-00189
STS Trust Config policy attribute port-endpoint has invalid value "{0}", it must be not empty and in the format of target-namespace#wsdl.endpoint(service-name/port-name)

Category:
Configuration

Cause:
STS trust config attribute port-endpoint is either empty or not in the format of "target-namespace#wsdl.endpoint(service-name/port-name)".

Action:
Provide valid attribute value which is in the format of "target-namespace#wsdl.endpoint(service-name/port-name)"

WSM-00190
STS Trust Config policy attribute policy-reference-uri can not have empty value.

Category:
Configuration

Cause:
The value of STS trust config attribute policy-reference-uri is empty or not in the URI format

Action:
Specify value for attribute policy-reference-uri

WSM-00191
STS Trust Config policy attribute sts-keystore-recipient-alias can not have null or empty value.

Category:
Configuration

Cause:
The value of STS trust config attribute sts-keystore-recipient-alias is null or empty

Action:
Specify a non null or empty value for attribute sts-keystore-recipient-alias

WSM-00192
Kerberos name identifier format is not supported for SAML 1.1 token.

Category:
Security

Cause:
Kerberos name identifier format is not supported for SAML 1.1 token.

Action:
Kerberos name identifier format is only for SAML 2.0 token, use other name identifier formats.

WSM-00193
Security policy contains NULL or empty value for signed-element local name or namespace.

Category:
Security

Cause:
Security policy contains NULL or empty value for signed-element local name or namespace.

Action:
Signed-element local name or namespace must not be null or empty.

WSM-00194
Security policy contains NULL or empty value for signed-part header namespace.

Category:
Security

Cause:
Security policy contains NULL or empty value for signed-part header namespace.

Action:
Signed-part header namespace must not be null or empty.

WSM-00195
Security context for derived key unknown (cannot determine the base symmetric key).

Category:
Security

Cause:
Security context for derived key unknown (cannot determine the base symmetric key).

Action:
DerivedKeyToken should include SecurityReferenceToken (can only be empty in responses where the message context includes the base key).

WSM-00196
Unable to resolve base key referenced in DerivedKeyToken.

Category:
Security

Cause:
Unable to resolve base key referenced in DerivedKeyToken.

Action:
Ensure the SecurityTokenReference in the DerivedKeyToken specifies a valid base key within the security context.

WSM-00197
Unsupported SecurityTokenReference type for DerivedKeyToken : {0}.

Category:
Security

Cause:
Unsupported SecurityTokenReference type for DerivedKeyToken.

Action:
Ensure the SecurityTokenReference in the DerivedKeyToken is one of the supported types.

WSM-00198
Unable to resolve EncryptedKey that matches EncryptedKeySHA1 in KeyInfo.

Category:
Security

Cause:
Unable to resolve EncryptedKey that matches EncryptedKeySHA1 in KeyInfo.

Action:
The value of the EncryptedKeySHA1 should match an encrypted key in the security context.

WSM-00199
Unsupported key identifier type "{0}" in security token reference.

Category:
Security

Cause:
Unsupported key identifier type in security token reference.

Action:
Use only of the supported key idetifier types in the security token.

WSM-00200
Exception encountered while checking compliance; returning false.

Category:
Security

Cause:
Exception encountered while checking compliance; returning false.

Action:
Check log for exception details.

WSM-00201
There are no <EncryptedKey> elements in the request.

Category:
Security

Cause:
There are no <EncryptedKey> elements in the request.

Action:
The request should have an <EncryptedKey> element.

WSM-00202
Proof key type is invalid, valid values are null, public, symmetric.

Category:
Configuration

Cause:
The value of ketype is invalid for SAML Issued Token Policy , valid values are null (no proof key), public, symmetric

Action:
Specify valid value for keytype based on the policy

WSM-00203
Invalid OPSS Trust Service

Category:
Configuration

Cause:
OPSS TrustService is empty or null

Action:
Configure Trust Service in OPSS

WSM-00204
Invalid issued token from trust token exchange

Category:
Requests/Responses

Cause:
Issued token is null

Action:
Check Logs and correct any errors during issuance

WSM-00205
Proof key type is invalid, valid value is bearer

Category:
Configuration

Cause:
The value of ketype is invalid for SAML Bearer Issued Token Policy , valid value is bearer

Action:
Specify bearer as the key type for this policy

WSM-00206
Requester credentials for authenticating to STS are invalid

Category:
Configuration

Cause:
Requester Credentials required for autenticating to STS are missing

Action:
Configure sts.auth.user.csf.key or sts.auth.x509.csf.key in issued token policy

WSM-00207
Asymmetric proof key is invalid

Category:
Configuration

Cause:
Assymetric proof key is invalid

Action:
Configure sts.auth.x509.csf.key in issued token policy

WSM-00208
STS On behalf of user is invalid

Category:
Configuration

Cause:
STS On behalf of user is invalid

Action:
Configure sts.auth.on.behalf.of.csf.key in issued token policy

WSM-00209
Permission{0} required to switch the identity not granted to the resource. {1}

Category:
Security

Cause:
Permission required to switch the identity not granted

Action:
Grant Permission for identity switching to the codesource.

WSM-00210
Client is unable to find actual webservice endpoint to set in appliesTo

Category:
Configuration

Cause:
Client requires appliesTo and unable to find the actual webservice endpoint URL

Action:
Chenck if agent binding ws port ID , service name and port name in log file

WSM-00211
Trust token provider tried creating RequestSecurityToken message and it failed because algorithm use to generate asymmetric key pair was invalid

Category:
Requests/Responses

Cause:
Trust token provider tried creating RequestSecurityToken message and it failed because algoirthm use to generate asymmetric key pair was invalid

Action:
Check the asymmetric key algorithm

WSM-00212
Trust token provider tried creating RequestSecurityToken message and it failed because asymmetric proof key was invalid

Category:
Requests/Responses

Cause:
Trust token provider tried creating RequestSecurityToken message and it failed because assymetic proofk key was invalid

Action:
Check if sts.auth.x509.csf.key is configured correctly in issued token client policy

WSM-00213
Unable to parse SOAP message sent by STS

Category:
Requests/Responses

Cause:
Unable to parse SOAP message sent by STS

Action:
Check if message sent by STS is valid

WSM-00214
Unable to parse RequestSecurityTokenRespnseCollection

Category:
Requests/Responses

Cause:
Unable to parse RequestSecurityTokenResponseCollection

Action:
Check if RequestSecurityTokenResponseCollection message sent by STS is valid

WSM-00215
Unable to parse STSTrustConfig

Category:
Requests/Responses

Cause:
Unable to parse STSTrustConfig

Action:
Check if STSTrustConfig is valid

WSM-00216
Unable to create SOAP RequestSecurityToken message

Category:
Requests/Responses

Cause:
Unable to create SOAP RequestSecurityToken message

Action:
Failure in creating SOAP RequestSecurityToken message, check log files

WSM-00217
STS endpoint URL or WSDL URL (if configured) is invalid

Category:
Requests/Responses

Cause:
STS endpoit URL is invalid

Action:
Check if STS endpoint URL is valid

WSM-00218
Security token returned by STS is null

Category:
Requests/Responses

Cause:
Security token returned by STS is null

Action:
Check if RSTR message sent by STS is valid

WSM-00219
Proof token returned by STS is null

Category:
Requests/Responses

Cause:
Proof token returned by STS is null

Action:
Check if RSTR message sent by STS is valid

WSM-00220
Invalid proof token type, valid values are computedKey and BinarySecret

Category:
Requests/Responses

Cause:
Invalid proof token type, valid values are computedKey and BinarySecret

Action:
Check the proof token type, valid values are computedKey and BinarySecret

WSM-00221
Computed key in RSTR message sent by STS is invalid

Category:
Requests/Responses

Cause:
Computed key in RSTR message sent by STS is invalid

Action:
Check the computed key in RSTR message sent by STS

WSM-00222
Computed key algorithm in RSTR message sent by STS is invalid}

Category:
Requests/Responses

Cause:
Computed key algorithm in RSTR message sent by STS is invalid, valid value is http://docs.oasis-open.org/ws-sx/ws-trust/200512/CK/PSHA1

Action:
Check the computed key in RSTR message sent by STS, valid value is http://docs.oasis-open.org/ws-sx/ws-trust/200512/CK/PSHA1

WSM-00223
Request type is invalid, valid value is issue

Category:
Requests/Responses

Cause:
Request type invalid, valid value is issue

Action:
Check request type in response sent by STS

WSM-00224
User credentials of the user on behalf of whom the token is to be issued is missing

Category:
Requests/Responses

Cause:
User credentials of the user on behalf of whom the token is to be issued is missing

Action:
Check on.behalf.of property in issued token policy. If its set to true then either subject or sts.auth.on.behalf.of.csf-key property needs to be present

WSM-00225
STS On behalf of user password is invalid

Category:
Configuration

Cause:
STS On behalf of user password is invalid

Action:
Configure sts.auth.on.behalf.of.csf.key in issued token policy

WSM-00226
Security policy contains NULL or empty value for encrypted-element local name or namespace.

Category:
Security

Cause:
Security policy contains NULL or empty value for encrypted-element local name or namespace.

Action:
Encrypted-element local name or namespace must not be null or empty.

WSM-00227
Could not resolve key to use for decryption.

Category:
Security

Cause:
Could not resolve key to use for decryption.

Action:
Ensure request contains all the information necessary to succesfully resolve decryption key.

WSM-00228
Oracle system user is missing in identity store

Category:
Configuration

Cause:
Could not find oracle system user .

Action:
Check if OracleSystemUser exists in identity store

WSM-00229
jndi.lookup.csf.key missing in policy-accessor-config

Category:
Configuration

Cause:
Could not find valid jndi.lookup.csf.key in wsm configuration system .

Action:
Check jndi.lookup.csf.key is configured correclty in policy-accessor-config.xml

WSM-00230
Cannot find service information from WSDL {0}

Category:
Requests/Responses

Cause:
Cannot find service information from WSDL

Action:
Check the service information in the WSDL

WSM-00231
Cannot find client compatible policy for STS {0}, port name {1}

Category:
Requests/Responses

Cause:
Cannot find compatible client policy for STS invocation

Action:
Check if policy store has compatible client policy

WSM-00232
Failed to create dynamic STS policy

Category:
Requests/Responses

Cause:
Failed to create dynamic STS policy

Action:
Check exception stack trace for details

WSM-00233
STS WSDL URI {0} is invalid

Category:
Configuration

Cause:
STS trust config attribute wsdl-uri is not in the format of "http(s)://host:port/sts-service?wsdl".

Action:
Provide valid attribute value which is in the format of "http(s)://host:port/sts-service?wsdl

WSM-00234
The <saml:Assertion> element of version {0} is missing in the security header.

Category:
Requests/Responses

Cause:
Saml assertion with specific version e.g. 1.1, or 2.0 etc. is missing. in the received message

Action:
Check exception stack trace for details

WSM-00235
Failed to initialize dispatcher

Category:
Requests/Responses

Cause:
Failed to initialize dispatcher for client to STS communication

Action:
Check exception stack trace for details

WSM-00236
Keystore name property value was not set through the domain level configuration

Category:
Security

Cause:
Keystore name property value was not set through the domain level configuration.

Action:
Make sure that the value is provided for keystore name through the domain level configuration.

WSM-00237
KSS keystore with URI {0} can not be loaded due to {1}.

Category:
Configuration

Cause:
The following KSS keystore-related configuration properties may not be valid:keystore.type, location. Also, check permissions on the keystore.

Action:
Verify the configuration properties mentioned above and retry the operation.

WSM-00238
Unable to read KSS keystore. Grant necessary permission to read KSS keystore with URI {0}

Category:
Configuration

Cause:
KKS keystore may have not been initialized or necessary permissions are not granted.

Action:
Ensure that necessary permission to read KSS keystore is granted.

WSM-00239
KSS trust store can not be loaded, ensure that necessary permissions are granted.

Category:
Configuration

Cause:
KSS trust store can not be loaded, probably necessary permissions are not granted.

Action:
Ensure that necessary permission to read KSS trust store is granted.

WSM-00240
KSS trust store is NULL, ensure that KSS system trust store exist.

Category:
Configuration

Cause:
KSS trust store is NULL, may be it doesn't exists or probably necessary permissions are not granted.

Action:
Ensure that KSS trust store exists in system stripe and permissions are granted.

WSM-00241
Failure retrieving KSS trust store aliases.

Category:
Configuration

Cause:
KSS trust store may have not been initialized.

Action:
Check the log file for possible causes and retry the operation.

WSM-00242
The certificates cannot be retrieved from the trust store.

Category:
Security

Cause:
Failure occurred while trying to retrieve certificate from trust store.

Action:
Use a valid alias for the certificate and retry the operation.

WSM-00243
Unable to read key from KSS keystore. Grant necessary permission to read alias {1} from KSS keystore with URI {0}

Category:
Configuration

Cause:
Unable to read key from KSS keystore. KSS keystore may have not been initialized or necessary permissions are not granted.

Action:
Ensure that alias exists in keystore and necessary permission to read key alias is granted.

WSM-00244
Unable to read certificate from KSS keystore. Grant necessary permission to read certificate alias {1} from KSS keystore with URI {0}

Category:
Configuration

Cause:
Unable to read certificate from KSS keystore. KSS keystore may have not been initialized or necessary permissions are not granted.

Action:
Ensure that alias exists in keystore and necessary permission to read certificate alias is granted.

WSM-00245
Failure retrieving KSS key store aliases.

Category:
Configuration

Cause:
Unable to list alias from KSS key store.

Action:
Check the log file for possible causes and retry the operation.

WSM-00246
Failure retrieving IssuedTokenAssertion from advertised policy.

Category:
Data

Cause:
Possibilly there is a failure in parsing the advertised policy

Action:
Check the log file for possible causes and retry the operation.

WSM-00247
Failed to sign with RSA Key Pair

Category:
Security

Cause:
Failed to sign with RSA Key Pair

Action:
Check exception stack trace for details

WSM-00248
Attesting entity attribute {0} is unsupported.

Category:
Security

Cause:
Unsupported attesting entity attribute is used

Action:
Attesting entity attribute must be DN.

WSM-00249
SAML token DN validation failed for SAML assertion signer DN {0}.

Category:
Security

Cause:
SAML token DN list validation failed.

Action:
Assertion signer DN is not present in trusted DN list, if DN is valid then add it to trusted DNs list.

WSM-00250
Unable to find an implementation class for {0}.

Category:
Security

Cause:
Unable to find an implementation class for 'javax.el.ExpressionFactory'.

Action:
Make sure that the implementation class for 'javax.el.ExpressionFactory' is available in the classpath.

WSM-00251
Failed to create an instance of {0}.

Category:
Security

Cause:
Failed to create an instance of the javax.el.ExpressionFactory implementation class.

Action:
Make sure that the javax.el.ExpressionFactory implementation class can be instantiated.

WSM-00252
Failed to evaluate the constraint expression "{0}" due to the exception: {1}

Category:
Security

Cause:
Failed to evaluate the constraint expression.

Action:
Make sure that the constraint expression is valid. Check exception stack trace for details.

WSM-00253
The constraint expression "{0}" is not valid. The constraint expression should evaluate to the boolean values.

Category:
Security

Cause:
The constraint expression is not valid.

Action:
Make sure that the constraint expression evaluates to the boolean values.

WSM-00254
The message is expired. Check the timestamp element in the message. The current server time is "{0}", incoming message creation time is "{6}", configured agent expiry is {5} seconds, incoming message expiry is {7} seconds, effective message expiry (minimum of agent expiry and incoming message expiry) is {4} seconds, configured clock skew is {3} seconds. The acceptable time range is "{1}" to "{2}". The incoming message is outside the valid range as allowed by clock skew and expiry times.

Category:
Security

Cause:
The incoming message is outside the valid range as allowed by clock skew and expiry times.

Action:
Adjust times on servers/clients. Check the allowed clockskew and message expiration time and configure them as required.

WSM-00256
The property "{0}" is not set. The csf maps that are used to retrieve property are:- "{1}". The properties found in the JPS config are <PropertyName: Value>:- {2}

Category:
Security

Cause:
The property value is null.

Action:
Make sure that the value provided either through policy configuration override, policy binding, or domain level configuration is not null.

WSM-00257
Callback class name "{0}" set for SAML certificate validation not found

Category:
Security

Cause:
Callback class set for SAML certificate validation not found.

Action:
Make sure that callback class name is correct and added in classpath.

WSM-00258
Callback class name "{0}" set for SAML certificate validation is invalid.

Category:
Security

Cause:
Callback class set for SAML certificate validation is not valid.

Action:
Make sure that callback class correctly extends required class.

WSM-00259
SAML certificate validation callback failed. {0}.

Category:
Security

Cause:
Callback class set for SAML certificate validation failed.

Action:
Check the error message for details.

WSM-00260
SAML over SSL certificate validation failed because certificate returned from callback and actual certificate differ. Actual certificate DN={0} and callback cert DN={1}

Category:
Security

Cause:
SAML over SSL certificate validation failed because certificate returned from callback and actual certificate differ.

Action:
Make sure that client certificate sent over SSL and certificate returned from callback are same.

WSM-00261
SAML certificate validation callback failed because certificate returned from callback is NULL.

Category:
Security

Cause:
Callback class set for SAML certificate validation failed because certificate returned from callback is NULL.

Action:
Check callback implementation class for the reason of null certificate.

WSM-00262
SAML assertion with confirmation method {0} is missing inside signature.

Category:
Security

Cause:
SAML assertion is missing inside signature.

Action:
Ensure that SAML assertion has required inside signature.

WSM-00263
Failed to create SAML token as 'anonymous' user principal found in Subject.

Category:
Security

Cause:
Failed to create SAML token as 'anonymous' user principal found in Subject.

Action:
Make sure that the subject is created from a valid user.

WSM-00264
Must Understand check failed for headers: "{0}" in the SOAP message.

Category:
Security

Cause:
Unprocessed 'mustUnderstand' header element in SOAP message.

Action:
Make sure that you have attached security policy at service side.

WSM-00265
The Username token is missing in the security header. Ensure that there is a Username token policy attached on the client side. Tokens found in the security header are :- {0}.

Category:
Security

Cause:
Username token was expected in the security header but was not found.

Action:
Username token is missing. Resend request with valid username token.

WSM-00266
The Kerberos token is missing in the security header.

Category:
Security

Cause:
Kerberos token was expected in the security header but was not found.

Action:
Resend request with valid kerberos token.

WSM-00267
Authentication token specified in the policy for re-authenticate in secure conversation is not supported. Only SAML token is supported currently.

Category:
Configuration

Cause:
Authentication token specified in the policy for re-authenticate in secure conversation is not supported.

Action:
Only SAML token is supported as of now.

WSM-00268
The certificate to be validated is NULL.

Category:
Security

Cause:
The certficate to be validated is null.

Action:
Make sure that the certificate to be validated is not null.

WSM-00269
There is no trusted certificate found in the trust store.

Category:
Security

Cause:
Trust store does not have any trusted certificate.

Action:
Make sure that the required trusted certificates are present in the trust store.

WSM-00270
The issuer "{0}" is not found in the trust store.

Category:
Security

Cause:
The issuer certificate is not present in the trust store.

Action:
Make sure that the issuer certificate is present in the trust store.

WSM-00271
Basic constraints check failed due to the certificate "{0}" is not a CA certificate.

Category:
Security

Cause:
The certificate is not a CA certificate.

Action:
Make sure that the issuer certificate is a CA certificate.

WSM-00272
Basic Constraints check failed for the certificate "{0}", since only an end-entity certificate may follow this certificate in the certification path chain.

Category:
Security

Cause:
Basic Constraints check failed for the issuer certificate.

Action:
Make sure that the issuer certificate is a valid.

WSM-00273
Failed to verify the issuer "{0}".

Category:
Security

Cause:
The issuer certificate verification failed.

Action:
Check error logs for more details.

WSM-00274
The certification path for the certificate "{0}" is NULL.

Category:
Security

Cause:
The certification path is found to be null.

Action:
Check error logs for more details.

WSM-00275
The Identity type "{0}" is not supported.

Category:
Security

Cause:
The Identity type published in the WSDL certificate is not supported.

Action:
Make sure that the identity type published in the WSDL certificate is either X509Certificate or supported one.

WSM-00276
Validation failed for the identity published in the WSDL endpoint "{1}". Caused By: {0}

Category:
Security

Cause:
Validation failed for the Identity published in the WSDL certificate.

Action:
Check error logs for more details.

WSM-00277
Endorsing signature is not found in the message. Ensure that a compatible policy is attached at the client side. The security policy "{1}" is attached to the service. Tokens found in the security header are :- {0}.

Category:
Security

Cause:
Endorsing signature is expected in the message but not found.

Action:
Make sure that the endorsing signature is included in the message.

WSM-00278
Failed to decrypt the encrypted key due to {1}. Ensure that the client is properly configured with the server certificate. Client should be using this certificate:- {0}.

Category:
Security

Cause:
An error occurred while decrypting the encrypted key.

Action:
Ensure that the client is properly configured with the server's certificate.

WSM-00279
The following Fault Message is received at the client side from the service:- {0}. The client side policy is:- {4}. The service endpoint url is:- {3}. Keystore properties:- {1}. Properties found in the message context (Partial list):- {7}. PolicyReference OverrideProperty: {6} Policy configuration properties (some of these may be overridden by the properties passed in the PolicyReference or message context, for details about the order of precedence of properties consult documentation):- {5}. Other related information:- {2}.

Category:
Security

Cause:
Fault Message received at the client side from the service

Action:
Check the log file for possible causes.

WSM-00280
Caching of STS client executor failed which is required for secure conversation.

Category:
Security

Cause:
Caching of STS client executor failed which is required for se cure conversation.

Action:
Check error logs for more details.

WSM-00281
Failed to calculate session id for user {0}, due to {1}

Category:
Security

Cause:
Failed to calculate session id for user.

Action:
Check error logs for more details.

WSM-00282
Failed to calculate session id for user {0} because required credential "{1}" is NULL.

Category:
Security

Cause:
Failed to calculate session id because required credential is NULL.

Action:
Make sure that all required credentials are set.

WSM-00283
Failed to create token context required for secure conversation due to {0}

Category:
Security

Cause:
Failed to create token context which is required for secure conversation.

Action:
Check logs for finding out exact reason of failure.

WSM-00284
Failed to send secure conversation bootstrap request.

Category:
Security

Cause:
Failure occurred while trying to send secure conversation bootstrap request message, possibly due to a failure in security code.

Action:
Check logs for finding out exact reason of failure.

WSM-00285
Failed to issue secure conversation token due to : {0}.

Category:
Security

Cause:
Failed to issue secure conversation token.

Action:
Check logs for finding out exact reason of failure.

WSM-00286
Failed to renew secure conversation token.

Category:
Security

Cause:
Failed to renew secure conversation token.

Action:
Check logs for finding out exact reason of failure.

WSM-00287
Failed to cancel secure conversation token.

Category:
Security

Cause:
Failed to cancel secure conversation token.

Action:
Check logs for finding out exact reason of failure.

WSM-00288
SecurityContextToken required for secure conversation not found. You might have not enabled secure conversation on other side.

Category:
Security

Cause:
SecurityContextToken required for secure conversation not found.

Action:
Make sure that valid SCT is used for signing and encryption of message. You might have not enabled secure conversation on other side.

WSM-00289
SecurityContextToken version used for secure conversation is not matching with expected version. Expected : {0} but found namespace: {1}

Category:
Security

Cause:
SecurityContextToken version used for secure conversation is not matching with expected version.

Action:
Check documentation for supported WS Secure conversation version.

WSM-00290
SecurityContextToken version "{0}" used for secure conversation is not supported.

Category:
Security

Cause:
SecurityContextToken version used for secure conversation is not supported.

Action:
Check documentation for supported WS Secure conversation version.

WSM-00291
Failed to add addressing header to the secure conversation bootstrap message.

Category:
Security

Cause:
Failed to add addressing headers when creating secure conversation bootstrap message.

Action:
Check logs for finding out exact reason of failure.

WSM-00292
sc.lifetime property value given in secure conversation policy is not valid.

Category:
Security

Cause:
sc.lifetime property value "{0}" given in secure conversation policy is not valid.

Action:
sc.lifetime should have valid integer value.

WSM-00293
sc.lifetime property value given in domain configuration is not valid.

Category:
Security

Cause:
sc.lifetime property value "{0}" given in domain configuration is not valid.

Action:
sc.lifetime should have valid integer value.

WSM-00294
Secure Conversation token inclusion mechanism is not supported: {0}

Category:
Security

Cause:
Secure Conversation token inclusion mechanism is not supported.

Action:
Make sure to use supported token inclusion mechanism.

WSM-00295
Secure Conversation session has expired for SCT ID: {0}

Category:
Security

Cause:
Secure Conversation session has expired for SCT ID.

Action:
Renew session.

WSM-00296
Secure Conversation session not found in session manager for SCT ID: {0}

Category:
Security

Cause:
Secure Conversation session not found in session manager for SCT ID.

Action:
Check logs for the exact reason.

WSM-00297
Security Context Token in RSTR is null

Category:
Security

Cause:
Security Context Token in RSTR is null.

Action:
Check logs for the exact reason.

WSM-00298
Policy Reference URI(s) passed to dispatcher is empty.

Category:
Security

Cause:
Policy Reference URI(s) passed to dispatcher is empty.

Action:
Check logs for the exact reason.

WSM-00299
Exception is thrown by the Session Manager

Category:
Security

Cause:
Exception is thrown by the Session Manager.

Action:
Check logs for the exact reason.

WSM-00300
Invalid input to the Session Manager on {0}.

Category:
Security

Cause:
Invalid input to Session Manager.

Action:
Check logs for the exact reason.

WSM-00301
Error in creating session id since the reference resource pattern is null

Category:
Security

Cause:
Error in creating session id since the reference resource pattern is null

Action:
Check logs for the exact reason.

WSM-00302
Error in creating session id since the service URL in message context is null

Category:
Security

Cause:
Error in creating session id since the service URL in the message context is null

Action:
Check logs for the exact reason.

WSM-00303
Secure conversation is unsupported for the assertion {0}. The policy file should be checked to not have secure conversation "on" for this assertion.

Category:
Security

Cause:
Secure conversation is unsupported for this assertion.

Action:
Check your policy

WSM-00304
Message does not contain client entropy which is required by service policy.

Category:
Security

Cause:
Message does not contain client entropy while server policy requires it.

Action:
Check your client policy and make sure require-client-entropy is enabled on it.

WSM-00305
Session ID "{0}" removed from session manager because BadContextToken received. This happens because SecurityContextToken sent from client is not accepted by service which can be due to the time difference between client and service being more than configured clock skew and it can also happen if service is not using session persistence while client is.

Category:
Security

Cause:
BadContextToken fault received which is due to invalid or expired SecurityContextToken (SCT). This happens because SCT sent from client is not accepted by service which can be due to the time difference between client and service being more than configured clock skew and it can also happen if service is not using session persistence while client is.

Action:
Replay message again which will go through fine because dead session has been cleaned. Make sure that client and server clocks are synchronized properly or set correct clock skew. Also make sure that server and client are both configured with compatible session manager providers.

WSM-00306
The derived keys security token could not be obtained from the message.

Category:
Security

Cause:
The Derived keys could not be located

Action:
Either turn off the use-derived-keys flag or provide the derived keys in the message.

WSM-00307
Client Credential did not get delegated to the Service.

Category:
Security

Cause:
Client Credential did not get delegated to the Service.

Action:
Make sure the Kerberos configuration file on the client supports credential delegation.

WSM-00308
Conflicting client credential available from Config-Override and Credential Delegation.

Category:
Security

Cause:
Conflicting client credential available from Config-Override and Credential Delegation.

Action:
Either remove the client side config-overrides for Caller Principal Name and Keytab location or disable credential delegation.

WSM-00309
HTTP SPNEGO Authorization Header is missing in the request.

Category:
Security

Cause:
HTTP SPNEGO Authorization Header is missing in the request.

Action:
Client must provide a valid Authorization header for SPNEGO.

WSM-00310
Client Credential not available.

Category:
Security

Cause:
Client Credential not available.

Action:
Either provide caller principal name and keytab location or enable credential delegation if appropriate.

WSM-00311
SAML over HTTP authentication failure.

Category:
Security

Cause:
Failure occurred in SAML over HTTP authentication.

Action:
Use the appropriate GZIP and Base64 encoded combination of a valid SAML.

WSM-00312
Keystore reloading failed due to {0}

Category:
Security

Cause:
Reloading of the keystore failed.

Action:
Restart the server to load the latest keystore.

WSM-00313
Could not obtain the certificate for the corresponding thumbprint

Category:
Security

Cause:
The certificate for the corresponding SKI could not be obtained

Action:
Add the certificate to the Keystore.

WSM-00314
The Xpath transformation of the type "{0}" is not allowed. Only Xpath transformations of the type "{1}" are allowed. To allow all the Xpath transformations, set the property "{2}" to true.

Category:
Security

Cause:
The Xpath transformation present in the incoming SOAP message is not supported.

Action:
Make sure that incoming SOAP message contains only supported Xpath expressions, see the exception stack trace for details.

WSM-00315
The details of the keystore {0} removed from the system.

Category:
Security

Cause:
Removing the keystore details as keystore was replaced with a wrong one.

Action:
Replace the keystore with a valid one. After keystore has been replaced, it will be reloaded on next invocation.

WSM-00316
The CSF key "{0}" is reserved and can not be used for username credentials. Ensure that the reserved CSF key {1} is not used.

Category:
Security

Cause:
The CSF key being used is reserved and can not be used for username credentials.

Action:
Ensure that the reserved CSF keys are not used. Check error logs for more details.

WSM-00317
Required OES resource string is incomplete: application: {0}, resource_type: {1}, resource_name: {2}

Category:
Security

Cause:
Required OES resource string is incomplete.

Action:
Ensure that all components of resource string is available either dynamially or using config overrides.

WSM-00318
Required OES resource string is null because required resource pattern is null.

Category:
Security

Cause:
Required OES resource string is null because resource patterns is null.

Action:
Ensure that resource pattern is available which is passed from web service stack.

WSM-00319
Error while populating attributes for OES authorization. Actual error message is: {0}

Category:
Security

Cause:
Error occured while populating attributes for OES authorization.

Action:
Check logs for actual cause of error.

WSM-00320
PEPException has occurred while making authorization call to PDP using PEP API.

Category:
Security

Cause:
Error occured while invoking OES's authorization engine using PEP API.

Action:
Check logs for actual cause of PEP APIs failure.

WSM-00321
XPath attributes configured for fine-grained authorization will be ignored because no valid XML message found in current payload.

Category:
Security

Cause:
XPath attributes are being ignored because no SOAP message or XML msg found in current payload.

Action:
SOAP message should have valid envelope or if its SOA then XML request message should be available.

WSM-00322
Error occurred while evaluating XPath query. XPath query will be ignored. Specific error is: {0}

Category:
Security

Cause:
Error while evaluating XPath query. Query is being ignored.

Action:
Check logs if there is any error or XPath query may not be valid for current XML payload.

WSM-00323
STS {0} obtained from WSDL is {1}. Local STS configuration is also not available.

Category:
Security

Cause:
STS (issuer) uri is not available in the WSDL or client side STS configuration.

Action:
Ensure that STS trust config policy is attached to either the client or the service.

WSM-00324
Automatic (Client) Policy Configuration failed to determine a compatible client side policy to communicate with the STS at {0}.

Category:
Security

Cause:
Automatic (Client) Policy Configuration failed to determine compatible client side policy to communicate with STS.

Action:
Ensure that STS trust config service policy is attached and is configured with the correct issuer uri.

WSM-00325
The protocol "{0}" set in the token configuration for the token to be cached is not recognized. If the problem persists, contact Oracle Support Services.

Category:
Security

Cause:
The protocol set in the token configuration for the token to be cached is not recognized.

Action:
If the problem persists, contact Oracle Support Services.

WSM-00326
The client clock skew value should not be negative

Category:
Security

Cause:
Invalid client clock skew value.

Action:
Change client clock skew to a positive value.

WSM-00327
Incoming request did not have a valid authentication token. Service will send a 401 Challenge in response to the client with WWW-Authenticate header.

Category:
Security

Cause:
Incoming request did not have a valid authentication token.

Action:
Service will send a 401 Challenge in response to the client. Client should understand the authentication scheme and re-send the request with required token.

WSM-00328
The XPath expression {0} is not valid.

Category:
Security

Cause:
The XPATH expression could not be evaluated for the SOAP/XML Message. It could be because the xpath is not following xpath syntax.

Action:
THe XPATH expression is not valid, correct the XPATH and try again.

WSM-00329
The PII for the xpath {0} to be encrypted is already encrypted.

Category:
Security

Cause:
The PII Node to be encrypted is already encrypted. It could be because the same XPATH is being used twice or the message already had PII encrypted

Action:
Check if the same XPATH is being used again. There is some place where the PII policy should have been attached but was not attached properly.

WSM-00330
The XPATH {0} used to configure the PII does not result in TEXT_NODE.

Category:
Security

Cause:
The PII Xpath did not return a TEXT_NODE. If the Xpath does not return a TEXT_NODE then it is not a Supported XPATH

Action:
Rectify the XPATH configured for the PII so that it returns a TEXT_NODE.

WSM-00331
The key used to encrypt/decrypt PII could not derived.

Category:
Security

Cause:
The Secret Key for PII could not be derived. The policy is not configured properly

Action:
Rectify the PII configuration so that the secret key can be generated.

WSM-00332
The resource pattern is not configured properly.

Category:
Security

Cause:
The Resource Pattern is null.

Action:
The ResourcePattern should be properly configured.

WSM-00333
The PII policy is not supported on the SubjectType: {0}

Category:
Security

Cause:
PII Policy not supported on this SubjectType.

Action:
Dettach the PII policy from this subject as it is not supported here.

WSM-00334
The PII denoted by xpath {0} was encrypted in {1}, but was being decrypted in {2}, which is not allowed.

Category:
Security

Cause:
PII encrypted in one entity and decrypted in a different entity.

Action:
Attach the decrypt policy in the earlier entity, so that PII gets decrypted in the same entity where it was encrypted.

WSM-00335
Anonymous user found in the SAML assertion so anonymous subject has been created. Trusted issuers validation, DN list validation and other validations related to SAML token will be skipped. Subject: {0}

Category:
Security

Cause:
Anonymous user found in the SAML assertion so anonymous subject has been created. Trusted issuers validation, DN list validation and other validations related to SAML token will be skipped.

Action:
If anonymous user was not expected in token then check client's configuration.

WSM-00336
Anonymous user is being propagated as subject is {0}.

Category:
Security

Cause:
Anonymous user is being propagated as subject is either NULL or anonymous.

Action:
Check client's configuration if anonymous user should not be propagated.

WSM-00338
Error creating OPSS subject from username and policy context.

Category:
Security

Cause:
A failure occurred while creating OPSS subject from username and policy context.

Action:
Check log file for possible cause.

WSM-00339
Error creating anonymous subject.

Category:
Security

Cause:
A failure occurred while creating anonymous subject.

Action:
Check log file for possible cause.

WSM-00340
The key for the alias {0} not found in the KSS Keystore {1}. The following aliases are found in the Keystore: {2}

Category:
Configuration

Cause:
Key does not exist in the KSS keystore.

Action:
Ensure that alias exists in keystore and necessary permission to read key alias is granted.

WSM-00341
SAML assertion signature digest verification failed

Category:
Security

Cause:
SAML assertion signature verification failed.

Action:
Ensure that SAML assertion signature is valid.

WSM-00342
Certificate/Key with subject DN "{0}" has expired.

Category:
Security

Cause:
Certificate/Key has expired.

Action:
Get a new certificate/key.

WSM-00343
Could not get new Kerberos TGT and current TGT has expired.

Category:
Security

Cause:
Could not get new Kerberos TGT and current TGT has expired.

Action:
Check logs for the reason of failure. Principal and password (for example using keytab) must be available for login.

WSM-00344
Failed to authorize user request for {0}. {1}

Category:
Security

Cause:
Failed to authorize user request.

Action:
Check logs for the reason of failure and also check if required premission is granted.

WSM-00345
Failed to decrypt the encrypted key at client side due to {0}. Ensure that the client is configured with sign key as crypt key.

Category:
Security

Cause:
An error occurred while decrypting the encrypted key at client side.

Action:
Ensure that the client is configured with the sign key as crypt key.

WSM-00346
There is no matching assertion found in the service side policy which can process the incoming message. Ensure that there is a compatible policy attached at the client side. Tokens found in the security header are:- {0}. Authentication mechanism found in the HTTP header:- {1}. The assertions found in the service side policy are:- {2}.

Category:
Security

Cause:
No matching assertion found in the service side policy which can process the incoming message.

Action:
Ensure that a compatible client policy is attached and enabled at the client side.

WSM-00347
The request message contains the Derived Keys but service side policy is not configured to use Derived Keys for message decryption. Ensure that the service side policy is configured to use Derived Keys.

Category:
Security

Cause:
The request message contains the Derived Keys but service side policy is not configured to use Derived Keys for message decryption.

Action:
Ensure that the service side policy is configured to use Derived Keys.

WSM-00348
EncrytpedData element found inside the ReferenceParameters element. This might result in security vulnerabilities, so removing its data reference "{0}" from the reference list to avoid decryption of any EncrytpedData element inside the ReferenceParameters element. Ensure that the entire ReferenceParameters element is either encrypted or without any EncrytpedData element.

Category:
Security

Cause:
EncrytpedData element found inside the ReferenceParameters element. This might result in security vulnerabilities.

Action:
Ensure that the entire ReferenceParameters element is either encrypted or without any EncrytpedData element.

WSM-00349
The HTTP header is missing in the incoming client request message. Service will send back a 401 Challenge to the client with response header {0}: {1}.

Category:
Security

Cause:
Incoming request did not have any authentication token in the HTTP header.

Action:
Service will send back a 401 Challenge to the client. Client should understand one of the authentication schemes and re-send the request with one of the supported authentication token.

WSM-00350
The name attribute for the token issuer trust document is not found.

Category:
Security

Cause:
The name attribute for the token issuer trust document is not found.

Action:
Make sure the name is provided when creating a token issuer trust document.

WSM-00351
The tokentype attribute "{0}" for the Issuer in token issuer trust document is not supported.

Category:
Security

Cause:
The tokentype attribute for the Issuer in the token issuer trust document is not supported.

Action:
Change it to a supported token type when creating the Issuer in token issuer trust document.

WSM-00352
The keytype attribute "{0}" for a trusted key for an Issuer in the token issuer trust document is not supported.

Category:
Security

Cause:
The keytype attribute for a trusted key for an Issuer in the token issuer trust document is not supported.

Action:
Change it to a supported key type when creating the trusted key for the Issuer in token issuer trust document.

WSM-00353
The valuetype attribute "{0}" for a trusted key for an Issuer in the token issuer trust document is not supported.

Category:
Security

Cause:
The valuetype attribute for a trusted key for an Issuer in the token issuer trust document is not supported.

Action:
Change it to a supported key valuetype when creating the trusted key for the Issuer in token issuer trust document.

WSM-00354
The attribute "{0}" for which the filter is configured in a token attribute rule is not supported.

Category:
Security

Cause:
The attribute for which the filter is configured in a token attribute rule is not supported.

Action:
Set the filter only for supported attributes in a token attribute rule.

WSM-00355
Name Id "{0}" in the token is not allowed by the token attribute rule for the DN "{1}".

Category:
Security

Cause:
Token Name ID validation for the DN failed.

Action:
Name ID value is not allowed for the DN of token signing certificate. Make sure a valid user is sent.

WSM-00356
Failed to enforce token attribute rule "{0}" configured for the DN "{1}" of the signing certificate.

Category:
Security

Cause:
Token attribute rule configured for the DN of the signing certificate failed.

Action:
Check logs for the details. Either rule is not configured properly or token does not has required details to enforce it.

WSM-00357
Token attribute rule identifier "{0}" is not associated with any trusted key of a trusted token issuer.

Category:
Security

Cause:
Token attribute rule identifier "{0}" is not assocoated with any trusted key of a trusted token issuer.

Action:
Check the identifier to make sure it matches the key identifier value of a trusted key for an trusted issuer configured.

WSM-00358
SAML assertion signature reference is pointing to invalid URI

Category:
Security

Cause:
SAML assertion signature reference is pointing to invalid URI .

Action:
Ensure that SAML assertion signature is valid

WSM-00359
Instance tenancy is not available but used as property value: "{0}"

Category:
Security

Cause:
Instance tenancy is not available.

Action:
Make sure that instance tenancy is available or don't use that property if not required.

WSM-00360
Tenant name set in configuration property "{0}" does not match with tenancy: "{1}" of current subject.

Category:
Security

Cause:
Tenant name set in configuration property does not match with current subject's tenancy.

Action:
Make sure that tenant name set as configuration property matches with current subject's tenant name.

WSM-00361
The SAML HOK token found in the incoming message does not contain the KeyInfo element. Make sure that the incoming message contains a valid SAML HOK assertion and contains the KeyInfo element.

Category:
Security

Cause:
The SAML HOK assertion found in the incoming message does not contain the KeyInfo element.

Action:
Insert valid SAML HOK assertion containing the KeyInfo element and resend the request.

WSM-00362
The SAML HOK token found in the incoming message does not contain the KeyValue element. Make sure that the incoming message contains a valid SAML HOK assertion and contains the KeyValue element.

Category:
Security

Cause:
The SAML HOK token found in the incoming message does not contain the KeyValue element.

Action:
Insert valid SAML HOK token containing the KeyValue element and resend the request.

WSM-00363
The SAML token found in the incoming message is not valid. Both AttributeStatement and AuthenticationStatement elements are missing from the SAML assertion.

Category:
Security

Cause:
The SAML token found in the incoming message is not valid. Both AttributeStatement and AuthenticationStatement elements are missing from the SAML assertion.

Action:
Insert valid SAML token and resend the request.

WSM-00364
JWT token has expired

Category:
Security

Cause:
JWT token received after the token has expired.

Action:
Fix the expiry claim and retry the operation.

WSM-00365
JWT token issuer - "{0}" is not trusted. Configured trusted issuers are "{1}"

Category:
Security

Cause:
JWT token issuer is not trusted.

Action:
Fix the issuer claim and retry the operation.

WSM-00366
JWT symmetric key "{0}" is not trusted

Category:
Security

Cause:
JWT key id is not trusted.

Action:
Fix the symmetric key and retry the operation.

WSM-00367
JWT certificate DN "{0}" is not trusted

Category:
Security

Cause:
JWT certificate DN is not trusted.

Action:
Fix the JWT certificate and retry the operation.

WSM-00368
JWT x5t claim is invalid

Category:
Security

Cause:
Cannot find certificate matching the JWT x5t claim.

Action:
Fix the JWT x5t claim and retry the operation.

WSM-00369
JWT signature csf key is not configured

Category:
Configuration

Cause:
Cannot find JWT signature csf key.

Action:
Fix the JWT signature csf key and retry the operation.

WSM-00370
JWT token is not signed

Category:
Security

Cause:
JWT token is not signed.

Action:
Sign the JWT token and retry the operation.

WSM-00371
JWT signature algorithm mismatch, expecting "{0}", found "{1}"

Category:
Security

Cause:
JWT signature algorithm does not match policy.

Action:
Fix the JWT signature algorithm and retry the operation.

WSM-00372
Unsupported signature algorithm specified

Category:
Security

Cause:
An unsupported signature algorithm was provided.

Action:
Consult the documentation for the supported signature algorithms and retry the operation.

WSM-00373
JWT audience claim - "{0}" is invalid. Audience conditions are not satisfied. "{1}"

Category:
Security

Cause:
JWT audience claim is invalid

Action:
Fix the audience claim to match the resource and retry the operation.

WSM-00374
JWT issued time claim is invalid

Category:
Security

Cause:
JWT token received before the issued time.

Action:
Fix the issued time claim and retry the operation.

WSM-00375
Unable to determine user tenant name in multi-tenant environment

Category:
Security

Cause:
Unable to determine user tenant name in multi-tenant environment.

Action:
Ensure that the user tenant name is set.

WSM-00376
SAML token authentication failed for issuer "{0}"

Category:
Security

Cause:
SAML token based authentication failed.

Action:
SAML token based authentication failed. Check logs for more details.

WSM-00377
{0}. This error is most likely due to secure conversation not enabled at the service side policy

Category:
Security

Cause:
Secure conversation is not enabled at the service side policy.

Action:
Disable secure conversation at the client side policy and try again.

WSM-00378
Incoming Kerberos token has an invalid/unsupported Value Type: {0} : {1}

Category:
Security

Cause:
The value type of the incoming Kerberos token did not match the expected type at service side.

Action:
Make sure client sends the Kerberos token of value type as expected by service policy.

WSM-00379
There are no Xpath transformations allowed inside CipherReference in EncryptedKey. To allow all the Xpath transformations, set the property {0} to true.

Category:
Security

Cause:
No Xpath transformations are supported inside CipherReference in EncryptedKey which are present in the incoming SOAP message.

Action:
Do not include any XPATH transformations inside CipherReference

WSM-00380
An Exception was thrown while retreiving the keystore password from the credential store.

Category:
Security

Cause:
The Keystore password was not retrieved

Action:
Check if the keystore password is configured correctly.

WSM-00381
Alias "{0}" is not valid for the keystore entry.

Category:
Security

Cause:
Alias doesn't point to any trusted certificate or a private key entry.

Action:
Ensure that alias either points to any trusted certificate or a private key entry and retry the operation.

WSM-00382
An Exception was thrown while loading the keystore, only JKS type keystores are supported by the oracle.wsm.security.store.jks.mgmt.KeystoreMBean.

Category:
Configuration

Cause:
Keystore MBean only support JKS type keystore.

Action:
Consult the oracle documentation to ensure that keystore.type that is configured is of type JKS for the oracle.wsm.security.store.jks.mgmt.KeystoreMBean.

WSM-00383
Failed to initialize JKS Mbean auditor.

Category:
Security

Cause:
An internal error occurred; failed to initialize the auditor.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-00384
Alias "{0}" points to a certificate which is not a trusted certificate.

Category:
Security

Cause:
Alias already exists but does not identify an entry containing a trusted certificate.

Action:
Check that a trusted certificate already exists for the given alias and retry the operation.

WSM-00385
Alias "{0}" does not point to a valid private key entry in the keystore.

Category:
Security

Cause:
Alias doesn't point to a private key entry.

Action:
Ensure that alias points to a private key entry in the keystore.

WSM-00386
Invalid type argument "{0}". Valid values are "Certificate" and "PKCS7".

Category:
Security

Cause:
Invalid type argument. Valid values are "Certificate" for single certificate and "PKCS7" for certificate chain.

Action:
Ensure that either "Certificate" or "PKCS7" is passed as type argument.

WSM-00387
No trusted certificate identified by alias "{0}".

Category:
Security

Cause:
No trusted certificate entry identified by the alias.

Action:
Ensure that alias points to a trusted certificate and retry the operation.

WSM-00388
Certificate deletion failed for "{0}" alias(es).

Category:
Security

Cause:
An error occurred while deleting the alias.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-00389
Public key entry of the certificate to be imported does not match the existing public key entry in the keystore for alias "{0}".

Category:
Security

Cause:
The public key in the certificate does not match the one in the keystore.

Action:
Ensure that the certificate is imported into the alias used for generating certificate request.

WSM-00390
Failed to retrieve Private key entry for alias "{0}" due to invalid password.

Category:
Security

Cause:
Failed to retrieve private key entry due to invalid password.

Action:
Ensure that correct password is used to import/set the certificate.

WSM-00391
Creating certificate from base64 encoded string failed for alias "{0}".

Category:
Configuration

Cause:
Encountered error while creating certificate from base64 encoded string.

Action:
Must provide valid certificate in valid base64 encoded string.

WSM-00392
Failed to store keystore to the file system.

Category:
Configuration

Cause:
Encountered error while storing the keystore to the file system.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-00393
Permission "{0}" required to access the application specific CSF map "{1}" is not granted to the resource "{2}". Underlying exception message : "{3}"

Category:
Security

Cause:
Permission required to access application specific credential map is not granted.

Action:
Grant permission for accessing application specific credential map to the codesource and retry the operation.

WSM-00394
The given name "{0}" for permission "{1}" with action "{2}" is not supported target format. If action is "assert", supported target format is resource={RESOURCENAME}. If action is "getKey", supported target format is resource={RESOURCENAME},mapName={CSF_MAP_NAME}.

Category:
Security

Cause:
The target format of the specified WSIdentityPermission is not supported.

Action:
Correct the supported target terms for WSIdentityPermission and retry the operation.

WSM-00395
The action "{0}" is not supported for permission "{1}".

Category:
Security

Cause:
The action of the specified WSIdentityPermission is not supported.

Action:
Correct the supported actions for WSIdentityPermission and retry the operation.

WSM-00396
JKS "{0}" audit operation failed.

Category:
Configuration

Cause:
Encountered error while auditing JKS operation.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-00397
JKS Mbean registration failed.

Category:
Security

Cause:
JKS Mbean registration failed.

Action:
Check logs for actual cause of Mbean registration failure.

WSM-00398
The OAuth2 policy configuration property token-uri has an invalid value of "{0}". The value must point to a valid Oauth token endpoint and should be specified in the form "http(s)://host:port/tokens"; it should not be a null or empty string.

Category:
Configuration

Cause:
OAuth2 config attribute token-uri is either null, empty or not in the format of "http(s)://host:port/tokens".

Action:
Provide valid attribute value for Oauth token endpoint which is in the format of "http(s)://host:port/tokens".

WSM-00399
OAuth2 request sent to OAuth2 server failed with Message : "{0}". Please check OAuth2 server logs for more details.

Category:
Security

Cause:
OAuth2 token request failed

Action:
Check the OAuth2 Server logs and exception stack trace to determine why the request failed.

WSM-00400
OAuth2 server responded with status : "{0} {1}", error : "{2}". Please check OAuth2 server logs for more details. Additional info: Token URI - "{3}", Client ID - "{4}", Scope - "{5}".

Category:
Security

Cause:
OAuth2 server responded with error message and bad request

Action:
Check the error message returned by OAuth2 server to determine why the request was rejected.

WSM-00401
JWT signature verification failed.

Category:
Security

Cause:
JWT Signature verification failed

Action:
Fix the JWT token or import the right trusted issuer certificate and retry the operation.

WSM-00402
JWT kid "{0}" claim is not valid. Certificate mathcing the kid claim does not exist in OWSM trust store.

Category:
Security

Cause:
Cannot find certificate matching the JWT kid claim.

Action:
Fix the JWT kid claim or import the certificate in OWSM trust store and retry the operation.

WSM-00403
oauth2_config_client_policy is not found. Attach it using GPA or LPA.

Category:
Configuration

Cause:
The oauth2_config_client_policy is not attached.

Action:
Check the configuration and attach oauth2_config_client_policy using GPA or LPA.

WSM-00404
Provide valid value for oauth2.client.csf.key config override.

Category:
Configuration

Cause:
oauth2.client.csf.key config override is missing.

Action:
Provide valid value for oauth2.client.csf.key after adding entry in CSF.

WSM-00405
Add a CSF entry with client id

Category:
Configuration

Cause:
oauth2.client.csf.key config override does not point to a valid entry

Action:
Add an entry in CSF corresponding to oauth2.client.csf.key.

WSM-00406
Configured redirect.uri = "{0}" is invalid .Configure a valid redirect.uri value for 3-legged OAuth

Category:
Configuration

Cause:
redirect.uri config override does not point to a valid value

Action:
Configure redirect.uri in the config override

WSM-00407
Invalid policy alternatives found inside XOR policy operator. It contains two or more message protection assertions ({0}, {1}) which have same authentication token type.

Category:
Configuration

Cause:
Invalid policy alternatives found inside XOR policy operator. It contains two or more message protection assertions which have same authentication token type.

Action:
Ensure that you have only one message protection assertion with same authentication token type in the XOR policy

WSM-00408
Invalid policy alternatives found inside XOR policy operator. It contains two or more non message protection or SSL assertions ({0}, {1}) which have same authentication token type.

Category:
Configuration

Cause:
Invalid policy alternatives found inside XOR policy operator. It contains two or more non message protection or SSL assertions which have same authentication token type.

Action:
Ensure that you have only one non message protection assertion with same authentication token type in the XOR policy

WSM-00409
Invalid policy alternatives found inside XOR policy operator. It contains more than one of x509, anonymous or custom authentication token type ({0}, {1}).

Category:
Configuration

Cause:
Invalid policy alternatives found inside XOR policy operator. It contains more than one of x509, anonymous or custom authentication token type.

Action:
Ensure that you have only one of either x509, anonymous or custom authentication token types in the XOR policy

WSM-00410
Invalid policy alternatives found inside XOR policy operator. It contains two or more secure conversation enabled message protection assertions ({0}, {1}) which have same authentication token type.

Category:
Configuration

Cause:
Invalid policy alternatives found inside XOR policy operator. It contains two or more secure conversation enabled message protection assertions which have same authentication token type.

Action:
Ensure that you have only one secure conversation enabled message protection assertion with same authentication token type in the XOR policy

WSM-00411
Invalid policy alternatives found inside XOR policy operator. It contains two or more secure conversation enabled SSL assertions ({0}, {1}) which have same authentication token type.

Category:
Configuration

Cause:
Invalid policy alternatives found inside XOR policy operator. It contains two or more secure conversation enabled SSL assertions which have same authentication token type.

Action:
Ensure that you have only one secure conversation enabled SSL assertion with same authentication token type in the XOR policy

WSM-00412
Invalid policy alternatives found inside XOR policy operator. It contains more than one secure conversation enabled assertion with either x509, anonymous or custom authentication token types ({0}, {1}).

Category:
Configuration

Cause:
Invalid policy alternatives found inside XOR policy operator. It contains more than one secure conversation enabled assertion with x509, anonymous or custom authentication token type.

Action:
Ensure that you have only one secure conversation enabled assertion with either x509, anonymous or custom authentication token types in the XOR policy

WSM-00413
Invalid policy alternatives found inside XOR policy operator. It contains two or more message protection assertions which have different values for keystore.enc.csf.key ({0}, {1}).

Category:
Configuration

Cause:
Invalid policy alternatives found inside XOR policy operator. It contains two or more message protection assertions which have different values for keystore.enc.csf.key property.

Action:
Ensure that you have same value for keystore.enc.csf.key for all message protetcion assertions

WSM-00414
DMS string not available in ClientConfig properties. Setting dummy value for OWSM agent initialization. Monitoring will not work for subject identified by {0}

Category:
Security

Cause:
DMS string not available in ClientConfig properties.

Action:
Set the WSMExecutionConstants.AGENT_TOPOLOGYNODE_PATH proeprty with a String value in the ClientConfig object of the Jersey Client.

WSM-00415
The value of algorithm suite,"{0}" used in the JWT assertion is not valid. The only valid value to be used is "{1}".

Category:
Security

Cause:
The algorithm suite specified in the policy is not supported by JWT policies. Only Asymmetric key signature is supported at this time.

Action:
Make sure that a valid value of algorithm-suite is provided in the JWT assertion.

WSM-00416
The current server time is "{0}", incoming message creation time is "{1}", incoming message expiry time is "{2}" , configured clock skew is "{3}" seconds. The acceptable time range is "{4}"

to "{5}". The incoming token is outside the valid range as allowed by clock skew and expiry times.

Category:
Security

Cause:
The incoming message is outside the valid range as allowed by clock skew and expiry times.

Action:
Make sure the token is not expired. Check the allowed clock skew and configure them as required.

WSM-00417
Alias "{0}" already exists in the Keystore.

Category:
Security

Cause:
Alias already points to trusted certificate or a private key entry.

Action:
Ensure that alias do not already exist in the Keystore and retry the operation.

WSM-00418
Subject Name Identifier is missing in the SAML token. Check if the user identifier is properly set up to be included in the SAML assertion.

Category:
Security

Cause:
Subject Name Identifier is missing in the SAML token.

Action:
Check if the user identifier is properly set up to be included in the SAML assertion.

WSM-00419
Keystore properties updation failed due to {0}

Category:
Security

Cause:
Check nested error for failure

Action:
Check nested error for fixing the issue

WSM-00420
The key, {0}, is not retrieved due to exception "{4}". The location of the key store being used is "{1}" and its type is "{2}". The following aliases are found in the keystore:- {3}

Category:
Configuration

Cause:
Error occurred while obtaining key from store.

Action:
Make sure the key exists in the keystore. Check JPS configuration settings for correct key alias, key password and keystore password. Also, check the values of the key keystore-csf-key and its password in the oracle.wsm.security map, through EM or WLST. In a rare situation, this error can also happen if the actual keystore type is ORACLE_WALLET and the keystore type specified in JPS configuration file is PKCS12.

WSM-00421
The claim "{0}" contains null or empty value in the JWT token "{1}".

Category:
Security

Cause:
The claim contains empty or null value in the incoming JWT token.

Action:
Make sure that the claim is present in the incoming JWT token.

WSM-00422
Message is not compliant with timestamp requirement of the policy. Policy indicates that the timestamp element should not be present, but it is found in the message.

Category:
Security

Cause:
Timestamp policy compliance failed. Policy indicates that the timestamp element should not be present, but it is found in the message.

Action:
Check the message and make sure message is compliant with timestamp requirement of the service policy.

WSM-00423
Web service authentication failed.

Category:
Security

Cause:
Web Service Authentication failed at the server end.

Action:
Resend valid credentials.

WSM-00424
The init-param named servlet-name not found in the deployment descriptor. Skipping SecurityFilter initialization. OWSM SecurityFilter will not be enforced.

Category:
Security

Cause:
servlet-name init param for the OWSM security filter definition was missing from the application's web.xml.

Action:
User must provide a value for the servlet-name init param of the filter definition in the web.xml for the OWSM Security Filter to be initialized.

WSM-00425
The security header is missing in request. Ensure that there is a valid security policy attached at the client side, and the policy is enabled. And make sure timestamp is present in the security header.

Category:
Security

Cause:
Security header was expected but was not found.

Action:
Security header is missing in request. It could be that client side policy has not been applied. Resend request with appropriate Security header. And make sure timestamp is present in the security header.

WSM-00426
The security header is missing in response. Ensure that response message is compliant with security requirement of the client policy. And make sure timestamp is present in the security header.

Category:
Security

Cause:
Security header was expected but was not found.

Action:
Security header is missing in response. The response message is not compliant with security requirement of the client policy. Check the response message sent by service. And make sure timestamp is present in the security header.

WSM-00427
Security Exception : {0}

Category:
Security

Cause:
The system encountered a failure while enforcing security.

Action:
Check diagnostic log file to get more details.

WSM-00428
The certificate for the alias {0} not found in the KSS Keystore {1}. The following aliases are found in the Keystore: {2}

Category:
Configuration

Cause:
Certificate does not exist in the KSS keystore.

Action:
Ensure that certificate exists in keystore

WSM-00429
The value of the name id attribute {0} present in the token is not of type string.

Category:
Configuration

Cause:
name id attribute value present in the token is not of string type.

Action:
Ensure that name id attribute value is of type string in the token.

WSM-00430
Signature not present in the SAML Assertion.

Category:
Security

Cause:
Signature not present in the SAML Assertion.

Action:
Check to see that the SAML Assertion is signed or turn off saml.enveloped.signature.required.

WSM-00431
Provide valid value for oauth1.client.csf.key config override.

Category:
Configuration

Cause:
oauth1.client.csf.key config override is missing.

Action:
Provide valid value for oauth1.client.csf.key after adding entry in CSF.

WSM-00432
The property "{0}" is not found in the incoming message context.

Category:
Configuration

Cause:
The message contains empty or null value for the property in the incoming message context.

Action:
Make sure that the property is present in the incoming message context.

WSM-00433
HTTP Request type "{0}" is invalid. Valid values are GET and POST.

Category:
Configuration

Cause:
The HTTP Request type was invalid.

Action:
Valid supported values are GET and POST

WSM-00434
Entity type "{0}" is invalid. Only type Form corresponding to Content-Type application/x-www-form-urlencoded is supported.

Category:
Configuration

Cause:
Entity type is invalid. Only type Form corresponding to Content-Type application/x-www-form-urlencoded is supported.

Action:
Use Content-Type application/x-www-form-urlencoded and corresponding class object

WSM-00435
Message type "{0}" is invalid. Only REST is supported for oauth1 client policy.

Category:
Configuration

Cause:
Message type is invalid. Only REST is supported.

Action:
Use REST for using oauth1 policy

WSM-00436
Provide valid value for csf-key config override.

Category:
Configuration

Cause:
csf-key config override is missing.

Action:
Provide valid value for csf-key after adding entry in CSF.

WSM-00437
Virtual user is being propagated as subject is {0}.

Category:
Security

Cause:
Subject based on virtual user is being propagated.

Action:
Check client's configuration if virtual user should not be propagated.

WSM-00438
Failure occurred while performing signature caching validation.

Category:
Security

Cause:
Failure occurred while performing signature caching validation.

Action:
This may be due to same message being replayed. SignatureValue entry is found in the Signature Replay Cache. Resend the request with a valid signature.

WSM-00439
Algorithm Suite mismatch, expecting "{1}", found "{0}".

Category:
Security

Cause:
UsernameToken with Password Derived Keys Assertion had algorithm-suite other than Basic128.

Action:
UsernameToken with Password Derived Keys supports only BASIC128 algorithm suite.Set algorithm-suite as Basic128.

WSM-00440
Both Signed and Encrypted parts not allowed when using password derived keys support .

Category:
Security

Cause:
Both Signing and Encryption not supported for UsernameToken with Password Derived Keys Policy.

Action:
Make sure policy does not have both signed and encrypted parts.

WSM-00441
The iterations value provided by the user: "{0}" is not valid. The default value of 1000 is being used .

Category:
Security

Cause:
The Iteration value provided by the user is not valid

Action:
Provide a valid value. Till then the default value 1000 will be used.

WSM-00442
The {0} token found in the request, Encoded token: [{1}] Decoded token: [{2}] is invalid and token authentication failed

Category:
Security

Cause:
Improper security token/assertion in the request found during authentication.

Action:
Check the security token/assertion in the request.

WSM-00443
The HTTP USER header from OAM is missing.

Category:
Security

Cause:
The User Header was not found.

Action:
Ensure that the request HTTP headers contain an User header from OAM.

WSM-00444
Public keys using open id connect discovery document could not be trusted for issuer {0}.

Category:
Security

Cause:
Cannot configure jwk trust with the issuer.

Action:
Check the logs and retry the operation.

WSM-00445
The key type of the public key is not supported. Only RSA is supported.

Category:
Security

Cause:
JWK key type of the key is not trusted. Only RSA is supported.

Action:
Check the kty param of JWK document and retry the operation.

WSM-00447
Kid {0} is not a valid a trusted kid for issuer {1}.

Category:
Security

Cause:
JWK key id is not trusted.

Action:
Import the JWK through CLI or REST API.

WSM-00448
Public key required for signature verification could not be retrieved for kid {0} from both local JWK as well as remotely configured JWK.

Category:
Security

Cause:
kid is not present in the JWT token.

Action:
Check kid present in the JWT.

WSM-00449
kid attribute is missing in the JWT token.

Category:
Security

Cause:
The kid attribute is missing in the JWT Token.

Action:
Check the JWK token and try again.

WSM-00450
The JWK url is not configured.

Category:
Security

Cause:
The JWK URL is not configured.

Action:
Configure the JWK trust using REST or CLI command.

WSM-00451
JWK or Certificate based trust is not configured.

Category:
Security

Cause:
JWK or Certificate based trust is not configured

Action:
Configure the JWK or Certificate based trust using REST or CLI command.

WSM-00452
Failure in looking up requested Runtime MBean Server of the Weblogic Server where this application is running because the JNDI name used, "{0}", is wrong.

Category:
Security

Cause:
Failure occurred in looking up or connecting to the requested Runtime MBean server on the Weblogic server.

Action:
Make sure that the right JNDI name for the Runtime MBean server is passed for the lookup and retry the operation.

WSM-00453
Failure in identifying the correct object name of the Runtime Service MBean for this Weblogic server because the String provided, "{0}", does not correspond to a valid object-name representing the WLS Runtime Service MBean.

Category:
Security

Cause:
Failure occurred in identifying the correct object name of the Runtime Service MBean for this Weblogic server.

Action:
Make sure that the String representing the object-name of the Runtime Service MBean is correct.

WSM-00454
JWT audience claim - "{0}" is invalid. The value of resource tenancy "{1}" is not same as tenant claim "{2}"

Category:
Security

Cause:
JWT audience claim is invalid

Action:
Fix the audience claim to match the resource tenancy with tenant claim and retry the operation.

WSM-00455
JWT audience claim - "{0}" is invalid. Necessary Audience condition is not satisfied. "{1}"

Category:
Security

Cause:
JWT necessary audience claim is not satisfied

Action:
Fix the audience claim to match the resource and retry the operation.

WSM-00456
Failure occurred while looking for a specific MBean or attribute in the Runtime Service MBean, "{0}", for this Weblogic server. See the exception for more details.

Category:
Security

Cause:
Failure occurred while looking for a specific MBean or attribute in the Runtime Service MBean for this Weblogic server.

Action:
Make sure that the MBean name or attribute name being looked for is correct.

WSM-00457
Credential could not be found for csf key "{0}" under csf map "{1}".

Category:
Other

Cause:
Credentials are not found in the credential store..

Action:
Check for credentials in the credential store..

WSM-00458
Could not connect to "{0}". Server returned HTTP Code: {1}.

Category:
Other

Cause:
Incorrect response code is recieved.

Action:
Check if URL endpoint is correct and is serving content.

WSM-00459
Failure occurred while trying to authenticate an incoming Basic Auth header on behalf of Weblogic server. See the exception for more details.

Category:
Security

Cause:
Failure occurred while trying to authenticate incoming Basic Auth header on behalf of Weblogic server.

Action:
Make sure that valid credentials are being used to generate the request.

WSM-00460
JWT token verification failed.

Category:
Security

Cause:
JWT Token verification failed

Action:
Fix the JWT token and retry the operation.

WSM-00461
Global configuration for IDCS issuer is invalid with incorrect baseURL={0} or idcsClientCsfKey={1}. It might not have been configured

Category:
Security

Cause:
Global configuration for IDCS issuer is invalid. It might not have been correctly configured

Action:
check the global configuration and retry the operation.

WSM-00462
Global configuration for IDCS issuer is not present. Hence unable to retrieve baseURL and idcsClientCsfKey

Category:
Security

Cause:
Global configuration for IDCS issuer is not present.

Action:
create the global configuration and retry the operation.

WSM-00463
Service instance app name is not present in HTTP header. This is required for retrieving TAGS configuration from IDCS.

Category:
Security

Cause:
Service instance app name is not present in HTTP header. This is required for retrieving TAGS configuration from IDCS.

Action:
configure the client to send service instance app name and retry the operation.

WSM-00464
Resource tenancy is not present in HTTP header. This is required for retrieving TAGS configuration from IDCS.

Category:
Security

Cause:
Resource Tenancy is not present in HTTP header. This is required for retrieving TAGS configuration from IDCS.

Action:
configure the client to send resource tenancy and retry the operation.

WSM-00465
Failure occurred while trying to retieve tags from IDCS due to {0}

Category:
Security

Cause:
Failure occurred while trying to retrieve tags from IDCS.

Action:
Make sure that IDCS is up and has tags configured.

WSM-00466
Error parsing refresh interval {0}, using default value...

Category:
Security

Cause:
Error parsing refresh interval.

Action:
Make sure that refreshInterval is a valid integer value.

WSM-00467
Failed retrieving IDCS Discovery Metadata for {0} info from {1}.

Category:
Security

Cause:
Failed retrieving IDCS Discovery Metadata.

Action:
Make sure that IDCS is up and running.

WSM-00468
Error locating service with HK2: {0}

Category:
Security

Cause:
Failure in locating service.

Action:
Make sure that services are properly configured with HK2.

WSM-00469
Failure occurred while trying to get access token from IDCS due to {0}

Category:
Security

Cause:
Failure occurred while trying to retrieve access token from IDCS.

Action:
Make sure that IDCS is up and credentials are correct.

WSM-00470
Error processing tags with TAG data used: {0}

Category:
Security

Cause:
Failed processing tags.

Action:
Analyze the data.

WSM-00471
JWT audience claim - "{0}" is invalid. Custom necessary audience condition returns NULL result on evaluation

Category:
Security

Cause:
JWT necessary audience claim is not satisfied as the implementation of custom condition not correct

Action:
Fix the custom audience condition implementation and retry the operation.

WSM-00472
Required policy configuration scope is missing for OAuth2 three-legged policy. Configure a valid scope value

Category:
Security

Cause:
Required policy configuration scope is missing for OAuth2 three-legged policy.

Action:
Configure policy with a valid scope config override.

WSM-00473
State is not present in the response received from OAuth2 server for the request for authorization code for 3-legged flow. Hence rejecting the response.

Category:
Security

Cause:
State is not present in the response received from OAuth2 server for the request for authorization code for 3-legged flow.

Action:
Resend the request.

WSM-00474
State is not valid in the response received from OAuth2 server for the request for authorization code for 3-legged flow. Hence rejecting the response.

Category:
Security

Cause:
State is not valid in the response received from OAuth2 server for the request for authorization code for 3-legged flow.

Action:
Resend the request.

WSM-00475
Error initializing servlet filter for 3-legged flow.

Category:
Security

Cause:
There was error in initializing servlet filter for 3-legged flow.

Action:
Check the server for application deployment logs.

WSM-00476
Error in redirecting incoming request to original address for 3-legged flow.

Category:
Security

Cause:
There was error in redirecting incoming request to original address for 3-legged flow.

Action:
Check the server for application deployment logs.

WSM-00477
Servlet Filter Exception while enforcing 3-legged OAuth security

Category:
Security

Cause:
The system encountered a failure while enforcing security in the servlet filter for 3-legged flow.

Action:
Check diagnostic log file to get more details.

WSM-00478
Error in enforcing security for OAuth2 3-legged flow. Please check the logs for more details.

Category:
Security

Cause:
The system encountered a failure while enforcing security in the servlet filter for 3-legged flow.

Action:
Check diagnostic log file to get more details.

WSM-00479
There is no incoming authorization code found but the policy is configured for 3-legged flow.

Category:
Security

Cause:
There is no incoming authorization code found but the policy is configured for 3-legged flow.

Action:
Configure the required filters to obtain authorization code.

WSM-00481
Configured authorization.uri = "{0}" is invalid .Configure a valid authorization.uri value for 3-legged OAuth

Category:
Configuration

Cause:
authorization.uri config override does not point to a valid value

Action:
Configure authorization.uri in the config override

WSM-01501
failure in parsing the policy attachment

Category:
Data

Cause:
The XML was not well formed, or the XML did not follow the policy attachment schema.

Action:
Ensure that the XML is well formed, and the XML follows the policy attachment schema.

WSM-01502
failure in parsing the assertion template

Category:
Data

Cause:
The XML was not well formed, or the XML did not follow the assertion template schema.

Action:
Ensure that the XML is well formed, and the XML follows the assertion template schema.

WSM-01503
failure in parsing the assertion

Category:
Data

Cause:
The XML was not well formed, or the XML did not follow the assertion schema.

Action:
Ensure that the XML is well formed, and the XML follows the assertion schema.

WSM-01504
failure in parsing the property set configuration

Category:
Data

Cause:
The XML was not well formed, or the XML did not follow the property set Config schema.

Action:
Ensure that the XML is well formed, and the XML follows the property set Config schema.

WSM-01505
failure in creating a copy of the policy {0}

Category:
Data

Cause:
Copying of the policy failed.

Action:
Ensure that the policy to be copied is valid. If the problem persists, contact Oracle Support Services.

WSM-01506
failure in creating a copy of the assertion template {0}

Category:
Data

Cause:
Copying of the assertion template failed.

Action:
Ensure that the assertion template to be copied is valid. If the problem persists, contact Oracle Support Services.

WSM-01507
failure in creating a copy of the assertion {0}

Category:
Data

Cause:
Copying of the assertion failed.

Action:
Ensure that the assertion to be copied is valid. If the problem persists, contact Oracle Support Services.

WSM-01508
failure in transforming policy {0} to XML

Category:
Data

Cause:
The policy could not be serialized to XML.

Action:
Ensure that the policy Java object can be serialized to XML format.

WSM-01509
failure in transforming policy set {0} to XML

Category:
Data

Cause:
The policy set could not be serialized to XML.

Action:
Ensure that the policy set Java object can be serialized to XML format.

WSM-01510
failure in transforming policy attachment {0} to XML

Category:
Data

Cause:
The policy attachment could not be serialized to XML.

Action:
Ensure that the policy attachment Java object can be serialized to XML format.

WSM-01511
failure in transforming assertion template {0} to XML

Category:
Data

Cause:
The assertion template could not be serialized to XML.

Action:
Ensure that the assertion template Java object can be serialized to XML format.

WSM-01512
failure in transforming assertion {0} to XML

Category:
Data

Cause:
The assertion could not be serialized to XML.

Action:
Ensure that the assertion Java object can be serialized to XML format.

WSM-01513
failure in transforming configuration {0} to XML

Category:
Data

Cause:
The configuration could not be serialized to XML.

Action:
Ensure that the configuration Java object can be serialized to XML format.

WSM-01514
failure in transforming policy reference {0} to XML

Category:
Data

Cause:
System could not serialize policy reference to XML.

Action:
Ensure passed policy reference Java object doesn't have issues that causes the serialization to XML to fail.

WSM-01515
failure in transforming policy subject {0} to XML

Category:
Data

Cause:
System could not serialize policy subject to XML.

Action:
Ensure passed policy subject Java object doesn't have issues that cause the serialization to XML to fail.

WSM-01524
failure in serialization of WSDL

Category:
Data

Cause:
WSDL Serialization failed.

Action:
Ensure WSDL Extensions are available and configured. Consult diagnostic log for details or contact Oracle Support Services.

WSM-01526
WSDL Definition object is null

Category:
Data

Cause:
WSDL Definition Object is not available

Action:
Ensure that a valid WSDL Definition object is sent to OWSM for advertisement of wsdl.

WSM-01527
Failed to advertise policy for tenant context {0} due to underlying exception "{1}".

Category:
Configuration

Cause:
The policy advertisement failed due to invalid tenant context.

Action:
Ensure that a valid tenant context is set in the header for the policy advertisement.

WSM-01600
error in creating or initializing the assertion, key={0}, qname={1}, wspqname={2}, constructorName={3}

Category:
Programmatic

Cause:
An assertion object could not be created.

Action:
Verify that the assertion follows the interface requirements defined in the Oracle documentation.

WSM-01601
failure in loading the resource

Category:
Configuration

Cause:
The requested resource could not be loaded.

Action:
Ensure that the requested resource is present in the class path.

WSM-01602
error in loading class {0}

Category:
Programmatic

Cause:
The requested class could not be loaded.

Action:
Ensure that the requested class is present in the class path.

WSM-01603
failure in parsing the policy due to {0}.

Category:
Data

Cause:
Parsing of the policy failed.

Action:
Ensure that the policy XML follows the policy schema, or a valid policy file exists.

WSM-01604
XML Parser Configuration error

Category:
Configuration

Cause:
The XML Parser was not configured properly.

Action:
Consult Oracle documentation or Java documentation on how to configure the XML Parser.

WSM-01605
XML parser exception

Category:
Data

Cause:
Parsing of the XML failed.

Action:
Ensure that the XML is well formed.

WSM-01606
system I/O error

Category:
Files

Cause:
The system could not open the Input/Output streams.

Action:
Consult the Java documentation.

WSM-01607
XPath expression evaluation error

Category:
Data

Cause:
Evaluation of the XPATH expression failed.

Action:
Ensure that the XPATH expression is valid, and the XML follows the schema.

WSM-01608
The class cannot be found.

Category:
Configuration

Cause:
The requested class was not found in the class path.

Action:
Ensure that the class name is correct in the configuration files and is in the class path.

WSM-01610
cannot initialize standard serializers/deserializers

Category:
Configuration

Cause:
The standard serializer and deserializer objects could not be loaded.

Action:
Ensure that the product configuration is correct. If the problem persists, contact Oracle Support Services.

WSM-01611
The class cannot be loaded because of Java security restrictions.

Category:
Configuration

Cause:
The requested classes could not be loaded due to class loading security restrictions.

Action:
Contact the site administrator or consult the Java documentation to ensure that the classes have the necessary Java security permissions.

WSM-01612
An instance of the requested class cannot be created.

Category:
Configuration

Cause:
The system could not create an instance of the requested class.

Action:
Consult the Java documentation or contact Oracle Support Services.

WSM-01613
The XML parser cannot be configured.

Category:
Configuration

Cause:
The XML parser could not be configured.

Action:
Consult the Java documentation on how to configure the XML parser.

WSM-01614
The assertion XML Java Document cannot be serialized to a String.

Category:
Data

Cause:
The assertion XML Java Document could not be serialized to a String.

Action:
Check the assertion for any errors and retry the operation.

WSM-01615
The assertion XML String cannot be converted to a Java object.

Category:
Data

Cause:
The assertion XML String could not converted to a Java Document.

Action:
Ensure that the String being converted to XML is a well-formed XML.

WSM-01616
Policy {0} cannot be inserted into the WSDL.

Category:
Data

Cause:
The WSDL extensions for the policy could not be found or were incorrectly configured.

Action:
Ensure that the WSDL extensions for the policy being injected are available and configured. Consult Oracle documentation for more information.

WSM-01617
error in parsing the policies embedded in the WSDL

Category:
Data

Cause:
The WSDL extensions for the policy could not be found or were incorrectly configured.

Action:
Ensure that the WSDL extensions for policy are available and configured. Consult Oracle documentation for more information.

WSM-01618
error in parsing the policy references embedded in the WSDL

Category:
Data

Cause:
The XML for the policy references in the WSDL could not be parsed.

Action:
Ensure that the WSDL extensions for the policy reference are available and configured. Consult Oracle documentation for more information.

WSM-01619
This assertion type is not recognized.

Category:
Data

Cause:
The assertion type was not recognized.

Action:
Consult Oracle documentation for the supported assertion types.

WSM-01620
cannot convert XML Java Document to String

Category:
Data

Cause:
The XML Java Document being converted was not well formed.

Action:
Ensure that the assertions can be serialized to a String.

WSM-01621
Policy intersection algorithm is not defined for assertion type :

Category:
Data

Cause:
The policy intersection algorithm was not found for the assertion.

Action:
Ensure that the intersection algorithm for the assertion used is configured.

WSM-01622
Policy merge algorithm is not defined for assertion type :

Category:
Data

Cause:
The policy merge algorithm was not found for the assertion.

Action:
Ensure that the merge algorithm for the assertion used is configured.

WSM-01623
Policy reference cannot be resolved :

Category:
Data

Cause:
The policy reference was invalid.

Action:
Ensure that the policy reference is valid.

WSM-01624
The policy does not exist in the policy store :

Category:
Data

Cause:
The policy reference was invalid, or the referenced policy could not be retrieved.

Action:
Ensure that the policy reference is valid, and the policy exists in the policy store.

WSM-01625
The Name attribute of the property is missing.

Category:
Data

Cause:
The Name attribute for a property was missing.

Action:
Provide a value for the Name attribute.

WSM-01626
The Type attribute of the property is missing.

Category:
Data

Cause:
The Type attribute for a property was missing.

Action:
Provide a value for the Type attribute.

WSM-01627
The assertion contains too many bindings.

Category:
Data

Cause:
The assertion contained more than one binding.

Action:
Ensure that the assertion contains a single binding.

WSM-01628
The policy normalization algorithm is not defined for this assertion type

Category:
Data

Cause:
The policy normalization algorithm was not found for the assertion.

Action:
Ensure that the normalization algorithm for the assertion used is configured.

WSM-01629
The assertion template contains too many assertions.

Category:
Data

Cause:
The assertion template contained more than one assertion.

Action:
Ensure that assertion template contains only one assertion.

WSM-01630
Element {0} is not a known policy element.

Category:
Data

Cause:
XML parsing failed; the system encountered unsupported XML elements.

Action:
Ensure that the XML follows the schema, and the XML contains only those elements that are supported.

WSM-01631
The assertion {0} contains multiple bindings.

Category:
Data

Cause:
The assertion contained more than one binding.

Action:
Ensure that the assertion contains only one binding.

WSM-01632
The assertion {0} contains multiple policies as child elements.

Category:
Data

Cause:
The assertion contained more than one policy child element.

Action:
Ensure that the assertion contains only one policy child element.

WSM-01633
Assertion type {0} does not match the corresponding Java Object type created.

Category:
Configuration

Cause:
The assertion type was incorrectly defined for the assertion.

Action:
Ensure that the correct assertion type is set for the assertion.

WSM-01635
Passed Java Object {0} does not extend the Assertion class

Category:
Data

Cause:
The Assertion class did not extend the correct classes.

Action:
Consult Oracle Documentation for creating assertion implementations.

WSM-01636
The assertion type {0} is not supported.

Category:
Data

Cause:
The assertion type does not match any of the predefined assertion types.

Action:
Ensure that the assertion type is supported.

WSM-01637
The policy attachment cannot be parsed.

Category:
Data

Cause:
The policy attachment XML was invalid.

Action:
Ensure that policy attachment XML follows the policy attachment XML schema.

WSM-01638
The policy attachment is not valid because the domain is not specified.

Category:
Data

Cause:
The policy attachment did not contain domain expressions.

Action:
Ensure that policy attachment XML follows the policy attachment XML schema.

WSM-01640
The policy reference {0} is not valid.

Category:
Data

Cause:
The policy reference could not be resolved.

Action:
Ensure that the referenced policy exists in the policy store.

WSM-01641
The policy advertisement level is not specified for the policy.

Category:
Configuration

Cause:
The policy advertisement level was not specified.

Action:
Ensure that a valid value is set for the policy advertisement level.

WSM-01642
Policy advertisement is not supported for unsupported WSDL elements.

Category:
Data

Cause:
Policy advertisement was not supported for the WSDL object.

Action:
Consult Oracle documentation for supported WSDL objects.

WSM-01643
What the XML system expects is different from what is encountered.

Category:
Data

Cause:
Usage of system was invalid or the feature was unsupported.

Action:
Consult Documentation on usage and supported features.

WSM-01644
The WSDL object {0} is not supported.

Category:
Data

Cause:
The WSDL object was not supported.

Action:
Consult Oracle documentation for the supported WSDL objects.

WSM-01645
The resource pattern {0} does not match the corresponding WSDL object.

Category:
Data

Cause:
WSDL Objects did not match.

Action:
Ensure that the WSDL Objects match.

WSM-01646
The value for the attachTo attribute of the policy is not valid.

Category:
Data

Cause:
The attachTo attribute of the policy did not match any of the predefined attachTo values.

Action:
Consult Oracle documentation for the valid values for the attachTo attribute.

WSM-01647
There are no policies that match the specified category {0} and resource pattern {1}.

Category:
Data

Cause:
No policies matched the specified search criteria.

Action:
Ensure that the policies that match the search categories exist in the policy store.

WSM-01650
cannot construct policy object

Category:
Programmatic

Cause:
Construction of the policy Java object failed.

Action:
Consult the diagnostic log for details.

WSM-01651
cannot advertise requested policies

Category:
Programmatic

Cause:
Advertisement of the policies failed.

Action:
Consult the diagnostic log for details, or contact Oracle Support Services.

WSM-01652
error in parsing the time stamp in the policy set document

Category:
Data

Cause:
The Timestamp attribute in the XML representation of a policy set document is not a valid number.

Action:
Correct or remove the invalid attribute value.

WSM-01653
The assertion contains more than one Guard element.

Category:
Data

Cause:
The assertion contained more than one guard.

Action:
Ensure that the assertion contains a single guard.

WSM-01654
failure in serialization of security scenario assertion

Category:
Data

Cause:
The SecurityScenario in OraPolicy could not be serialized or was incorrectly configured.

Action:
Ensure that the OraPolicy is correct. Consult Oracle documentation for more information.

WSM-01655
There are no policies that match the specified category {0}.

Category:
Data

Cause:
No policies matched the specified category.

Action:
Ensure that the policies that match the search category exist in the policy store.

WSM-01656
generic Oracle WSM Policy Manager error

Category:
Data

Cause:
An internal error occurred during the Policy related operation.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-01657
Oracle WSM Advertisement Engine must be initialized with valid properties. Following properties [{0}] are either empty or null

Category:
Configuration

Cause:
WSM Advertisement Engine initialized with invalid parameters.

Action:
Ensure that valid parameters are set during WSM Advertisement Engine configuration

WSM-01658
X509 Certificate will not be advertised as {0} not found

Category:
Other

Cause:
Implementation class for advertising X509 Certificate in WSDL is not available

Action:
Ensure that implementation class required for advertising X509 Certificate in WSDL is not available. Consult diagnostic log for details or contact Oracle Support Services.

WSM-01659
A JAXBContext cannot be created due to underlying exception "{0}".

Category:
Data

Cause:
One or more expected classes could not be located.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-01660
A JAXB unmarshaller cannot be created due to underlying exception "{0}".

Category:
Data

Cause:
An error occurred while creating an unmarshaller.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-01661
A string cannot be unmarshalled into an object due to underlying exception "{0}".

Category:
Data

Cause:
The string is not suitable for unmarshalling to the requested type.

Action:
Provide a string that is suitable for unmarshalling to the requested type.

WSM-01662
The QName "{0}" does not match the expected QName "{1}" for the unmarshalled object.

Category:
Data

Cause:
The string is not suitable for unmarshalling to the requested type.

Action:
Provide a string that is suitable for unmarshalling to the requested type.

WSM-01663
A null or empty string cannot be unmarshalled into an Intent object.

Category:
Data

Cause:
An attempt was made to unmarshall an Intent from a null or empty String.

Action:
Provide a String that contains a marshalled Intent.

WSM-01664
A null or empty string cannot be unmarshalled into a PolicySet object.

Category:
Data

Cause:
An attempt was made to unmarshall a PolicySet from a null or empty String.

Action:
Provide a String that contains a marshalled PolicySet.

WSM-01665
A JAXB marshaller cannot be created due to underlying exception "{0}".

Category:
Data

Cause:
An error occurred while creating a marshaller.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-01666
An object cannot be marshalled to a string due to underlying exception "{0}".

Category:
Data

Cause:
Marshalling the supplied type of the object is not supported.

Action:
Provide an object of a supported type.

WSM-01667
An object cannot be marshalled to a DOM object due to underlying exception "{0}".

Category:
Data

Cause:
Marshalling the supplied type of the object is not supported.

Action:
Provide an object of a supported type.

WSM-01668
A null Intent object cannot be marshalled.

Category:
Data

Cause:
An attempt was made to marshall a null Intent object.

Action:
Provide a non-null Intent object.

WSM-01669
A null PolicySet object cannot be marshalled.

Category:
Data

Cause:
An attempt was made to marshall a null PolicySet object.

Action:
Provide a non-null PolicySet object.

WSM-01670
An object cannot be marshalled into a null DOM object.

Category:
Data

Cause:
An attempt was made to marshall an object into a null Document object.

Action:
Provide a non-null Document object.

WSM-01671
The DOM element cannot be null for policy subject identified by the resource pattern: "{0}".

Category:
Compliance

Cause:
The null DOM element was passed.

Action:
Pass a valid non-null DOM element.

WSM-01672
The policy reference URI: "{1}" for policy subject identified by the resource pattern: "{0}" cannot be empty.

Category:
Compliance

Cause:
Empty policy references were found in the DOM element node.

Action:
Verify the DOM element node and make sure the policy references specify a valid value and the referenced policies exist in the repository.

WSM-01673
Duplicate policy references: "{1}" are found for policy subject identified by resource pattern "{0}".

Category:
Compliance

Cause:
Duplicate policy references were found in the same DOM element node.

Action:
Remove the duplicate policy references from the DOM element node.

WSM-01674
The DOM element: "{1}" for policy subject identified by resource pattern "{0}" is unsupported element.

Category:
Compliance

Cause:
Policies cannot be retrieved for unsupported DOM element node.

Action:
Verify that a supported DOM element node is provided for retrieving the policy.

WSM-01675
The policy references cannot be null.

Category:
Compliance

Cause:
A null policy reference was passed.

Action:
Pass the valid non-null policy reference object.

WSM-01676
The resource pattern cannot be null.

Category:
Compliance

Cause:
A null resource pattern was passed.

Action:
Pass a valid non-null resource pattern.

WSM-01677
The domain expression cannot be null.

Category:
Compliance

Cause:
A null domain expression was passed.

Action:
Pass a valid non-null domain expression.

WSM-01678
Element {0} is not a valid child element for Policy object.

Category:
Data

Cause:
Invalid child element found for Policy object.

Action:
Check the policy string being parsed and make sure only valid child elements are present for the Policy.

WSM-01679
A DOM node cannot be unmarshalled into an object due to underlying exception "{0}".

Category:
Data

Cause:
The string is not suitable for unmarshalling to the requested type.

Action:
Provide a string that is suitable for unmarshalling to the requested type.

WSM-01680
A null node cannot be unmarshalled into a RepositoryInfo object.

Category:
Data

Cause:
An attempt was made to unmarshall a RepositoryInfo from a null node.

Action:
Provide a node that contains a marshalled RepositoryInfo.

WSM-01681
A null or empty string cannot be unmarshalled into a RepositoryInfo object.

Category:
Data

Cause:
An attempt was made to unmarshall a RepositoryInfo from a null or empty String.

Action:
Provide a String that contains a marshalled RepositoryInfo.

WSM-01682
A null RepositoryInfo object cannot be marshalled.

Category:
Data

Cause:
An attempt was made to marshall a null RepositoryInfo object.

Action:
Provide a non-null RepositoryInfo object.

WSM-01683
The passed String "{0}" could not be parsed using UTF encoding.

Category:
Data

Cause:
Underlying JVM does not support UTF-8 encoding.

Action:
Check the JVM configuration to make sure it supports UTF-8 encoding format.

WSM-01684
A null or empty string cannot be unmarshalled into a Policy object.

Category:
Data

Cause:
An attempt was made to unmarshall a Policy from a null or empty String.

Action:
Provide a String that contains a marshalled Policy.

WSM-01685
Issuer Uri is not available. Either sts_trust_config_service_policy is not attached to service or the Issuer Uri is missing from the policy. Ignore this warning if sts_trust_config_client_policy is attached to client.

Category:
Configuration

Cause:
Issuer Uri is not available. Either sts_trust_config_service_policy is not attached to service or the Issuer Uri is missing from the policy. Ignore this warning if sts_trust_config_client_policy is attached to client.

Action:
Attach sts_trust_config_service_policy if not attached yet, or specify issuer uri value in the policy if not specified. Ignore if using sts_trust_config_client_policy.

WSM-01686
Advertisement failed due to an unexpected assertion type: {0}.

Category:
Configuration

Cause:
The assertion type is not recognized.

Action:
Internal error. Provide

WSM-01687
The constant property "{0}" cannot be overridden.

Category:
Configuration

Cause:
There is an attempt to override a property value which is defined as a constant in the policy.

Action:
Ensure that there is no attempt to override a constant property.

WSM-01688
X509 Certificate will not be advertised due to underlying exception "{0}".

Category:
Configuration

Cause:
Either the keystore was not available or the keystore configuration was incorrect.

Action:
Ensure the keystore exists and that the keystore password and aliases are correct.

WSM-01689
Advertisement failed due to an incorrect ws-policy/ws-securitypolicy specification version {0}/{1}.

Category:
Configuration

Cause:
Invalid ws-policy/ws-securitypolicy specification version used to advertise policy.

Action:
Ensure the ws-policy/ws-securitypolicy specification versions are correct.

WSM-01690
Assertion {0} located by QName {1} is not an instanceof type {2}.

Category:
Data

Cause:
An internal error, probably policy was not deserialized into the correct assertion instance.

Action:
Consult diagnostic log for details or contact Oracle Support Services.

WSM-01691
Cannot construct or access policy object for policy "{0}" due to underlying exception "{1}".

Category:
Programmatic

Cause:
Construction of the policy Java object failed for the given policy name.

Action:
Consult the diagnostic log for details.

WSM-01692
Advertisement failed due to multiple ws-policy specification version specified.

Category:
Configuration

Cause:
Multiple ws-policy specification version used to advertise policy.

Action:
Remove the duplicate ws-policy specification versions and try again.

WSM-01693
Advertisement failed due to multiple wssecurity-policy specification version specified.

Category:
Configuration

Cause:
Multiple ws-securitypolicy specification version used to advertise policy.

Action:
Remove the duplicate ws-securitypolicy specification versions and try again.

WSM-01694
Policy compatibility check failed due to invalid policy set. {0}.

Category:
Other

Cause:
Policy compatibility check failed due to invalid policy set.

Action:
Ensure that the policy set attached to the client is a valid policy set. Consult diagnostic log for details or contact Oracle Support Services.

WSM-01695
Encountered internal error while attempting to reorder PolicyReferences "{0}" in a PolicySet "{1}".

Category:
Other

Cause:
Encountered unexpected Policy model exception during reordering PolicyReferences in a PolicySet

Action:
Consult diagnostic log for details or contact Oracle Support Services.

WSM-01696
While validating the input PolicySet array to be merged, one or more PolicySets resource pattern are not same as that of the base, baseResourcePattern={0}, invalid input PolicySets={1}

Category:
Other

Cause:
While validating the input PolicySet array to be merged, found policyset resourcepattern that is different than that of the base.

Action:
Make sure ResourcePattern of all PolicySet in the array either all null, or for non-null ones they must all have the same ResourcePattern.

WSM-01697
The ResourcePattern of the base runtime PolicySet for merging is null, basePolicySet={0}, input PolicySet array={1}. All PolicySet in the array should be either null, or has the same resource pattern as that of the base policy set and all callback policy sets should have the same resource pattern.

Category:
Other

Cause:
The ResourcePattern of the base runtime Policy Set for merging is null, possibly the base runtime Policy Set is constructed using empty Policyset() constructor.

Action:
Make sure runtime PolicySet is created with not-null ResourcePattern.

WSM-01698
Runtime PolicySet is locked and it can not be modified with operation "{0}" and argument "{1}".

Category:
Other

Cause:
Runtime PolicySet is locked and read only; it cannot be modified

Action:
Donot modify PolicySet

WSM-01699
Runtime PolicySet "{0}" operation got an invalid argument "{1}" with value "{2}".

Category:
Other

Cause:
Runtime PolicySet add method passed in a null or invalid argment(s).

Action:
Check the arguments and correct them.

WSM-01700
The current Runtime PolicySet "{0}" merge method got an invalid PolicySet "{1}" in the List of PolicySet passed in; it is not an instance of PolicySet, very likely it is a CallbackPolicySet

Category:
Other

Cause:
Runtime PolicySet merge method passed invalid argument.

Action:
Check the arguments and correct them.

WSM-01701
Cannot perform changes to the DOM document provided to the storage provider since its a read-only document.

Category:
Other

Cause:
WSM Assembly document could not be fetched for write operation.

Action:
The WSM Assembly document provided to the storage provider does not support update. Provide a writeable DOM document and retry the operation.

WSM-01702
A null WSM Assembly object cannot be marshalled.

Category:
Other

Cause:
An attempt was made to marshall a null WsmAssembly object.

Action:
Provide a non-null WsmAssembly object.

WSM-01703
Failed to retrieve descriptor identified by "{0}" in storage provider due to an exception

Category:
Other

Cause:
WSM descriptor document could not be fetched due to IOException.

Action:
Check with logging for detail, and retry, if problem persists, contact Oracle Support.

WSM-01704
While advertising policies under subject "{0}", the specified web service with QName "{1}" does not exist in the wsdl; it may not be valid, make sure that namespace and local name of the service are correct.

Category:
Other

Cause:
The QName of the web service specified does not exist in the wsdl

Action:
Verify the namespace and local name and make sure there are valid

WSM-01705
While advertising policies under subject "{0}", the specified port name "{1}" does not exist under the service "{2}" in wsdl.

Category:
Other

Cause:
The port name specified does not exist in the servie of wsdl

Action:
Verify the port name and make sure it is valid

WSM-01706
A null node cannot be unmarshalled into an Intent object.

Category:
Data

Cause:
An attempt was made to unmarshall an intent from a null node.

Action:
Provide a node that contains a marshalled intent.

WSM-01707
A null node cannot be unmarshalled into an assertion metadata object.

Category:
Data

Cause:
An attempt was made to unmarshall assertion metadata from a null node.

Action:
Provide a node that contains a marshalled assertion metadata.

WSM-01708
Advertisement expression "{0}" for portable expression "{1}" is not valid.

Category:
Data

Cause:
The advertisment expression probably is not set correctly.

Action:
Check the log and verify it is not null and confirm to the format.

WSM-01709
The Runtime PolicySet cannot be advertised due to validation errors. PolicySet "{0}" validation errors: "{1}" .

Category:
Other

Cause:
Runtime PolicySet cannot be advertised due to validation errors.

Action:
Check the logs and correct errors in the PolicySet.

WSM-01710
The Policy "{0}" has following validation errors= "{1}".

Category:
Other

Cause:
Policy has validation errors.

Action:
Check the logs and correct errors in the Policy.

WSM-01711
One or more Callback PolicySets ResourcePattern are not the same. baseResourcePattern={0}, callbackPolicySetsHaveDifferentResourcePatterns= {1}. All PolicySet in the array should be either null, or has the same resource pattern as that of the base policy set and all callback policy sets should have the same resource pattern.

Category:
Other

Cause:
Found invalid PolicySet in the input PolicySet array to be merged.

Action:
Make sure all PolicySet resource pattern in the array should be either null, or has the same resource pattern as that of the base policy set and all callback policy sets should have the same resource pattern.

WSM-01712
While validating the input PolicySet array to be merged, input resource pattern subject type={0} is incompatible with that of base={1}, input policySet={2}.

Category:
Other

Cause:
While validating the input PolicySet array to be merged, input callback subject type is not compatible with that of the base.

Action:
Input resource pattern should be either null, same as base, or a compatible callback type

WSM-01713
A null node cannot be unmarshalled into a TimestampInfo object.

Category:
Data

Cause:
An attempt was made to unmarshall a TimestampInfo from a null node.

Action:
Check the log and retry the operation.

WSM-01714
A null TimestampInfo object cannot be marshalled.

Category:
Data

Cause:
An attempt was made to marshall a null TimestampInfo object.

Action:
Check the log and retry the operation.

WSM-01715
The current thread context class loaders "{0}" are unable to locate the OWSM seed policy JAR "{1}". URLs that have the searched resource "{2}" are "{3}".

Category:
Configuration

Cause:
The current thread classpath does not include the path to the wsm-seed-policies.jar.

Action:
Check the log for detail info.

WSM-01716
The current thread context class loader is unable to locate the OWSM seed policy JAR "{0}" by searching resource "{1}".

Category:
Configuration

Cause:
The current thread classpath does not include the path to the wsm-seed-policies.jar.

Action:
Check the log and retry the operation.

WSM-01717
A null node cannot be unmarshalled into an PolicyReference object.

Category:
Data

Cause:
An attempt was made to unmarshal PolicyReference from a null node.

Action:
Provide a node that contains a valid policy reference.

WSM-01718
A null PolicyReference object cannot be marshalled.

Category:
Data

Cause:
An attempt was made to marshal a null PolicyReference object.

Action:
Provide a non-null PolicyReference object.

WSM-01719
Error while getting input stream for entry "{0}" from seed jar located at "{1}".

Category:
Data

Cause:
Error in reading jar entry from seed jar.

Action:
Check the jar file and retry the operation.

WSM-01720
Error while parsing entry "{0}" from seed jar located at "{1}".

Category:
Data

Cause:
Error in parsing file in seed jar.

Action:
Remove the invalid file and retry the operation.

WSM-01751
The name of an assertion property is empty.

Category:
Data

Cause:
The name of an assertion property was empty.

Action:
Make sure that you specify a name for all assertion properties.

WSM-01752
The data type of the value does not match the data type of property {0}. The expected data type is "string".

Category:
Data

Cause:
The datatype of the property value entered was not of type "string".

Action:
Make sure that the data type for the property value is of type "string".

WSM-01753
The data type of the value does not match the data type of property {0}. The expected data type is "boolean".

Category:
Data

Cause:
The data type of the property value entered was not of type "boolean".

Action:
Make sure that the data type for the property value is of type "boolean".

WSM-01754
The data type of the value does not match the data type of property {0}. The expected data type is "integer".

Category:
Data

Cause:
The data type of the property value entered was not of type "integer".

Action:
Make sure that the data type for the property value is of type "integer".

WSM-01755
An empty value is specified for property {0}.

Category:
Data

Cause:
An empty value was specified for a property that has a data type of type "password".

Action:
Specify a value for all properties that have a data type of type "password".

WSM-01756
The Property Set name field of context: {0} is empty

Category:
Data

Cause:
The Property Set Name field in one of the assertions was empty.

Action:
Make sure that you specify a name for all assertion property sets.

WSM-01757
The name attribute for the "Config" element is empty.

Category:
Data

Cause:
The name for the Config element was empty.

Action:
Make sure that a name is specified for the Config element.

WSM-01758
The assertion name is empty.

Category:
Data

Cause:
The assertion name was empty.

Action:
Make sure that the assertion name is specified.

WSM-01759
The policy ID is empty.

Category:
Data

Cause:
The policy ID was empty.

Action:
Make sure that the policy ID is specified.

WSM-01760
The policy name is empty.

Category:
Data

Cause:
The policy name was empty.

Action:
Make sure that the policy name is specified.

WSM-01761
Specifying a policy ID for a child policy is not permitted : {0}.

Category:
Data

Cause:
Policy ID must not be specified for child policies.

Action:
Remove the policy ID of the child policy.

WSM-01762
Specifying a policy name for a child policy is not permitted : {0}.

Category:
Data

Cause:
Policy name must not be specified for child policies.

Action:
Remove the policy name of the child policy.

WSM-01763
The value specified for the policy attachTo attribute {0}, does not match any of the supported values.

Category:
Data

Cause:
The value specified for the policy attachTo attribute did not match any of the supported values.

Action:
Specify a valid value for the attachTo attribute. Consult the Oracle documentation for the supported values.

WSM-01764
The value specified for the policy category {0} does not match any of the supported values.

Category:
Data

Cause:
The value specified for policy category attribute did not match any of the supported values.

Action:
Specify a valid value for the category attribute. Consult the Oracle documentation for the supported values.

WSM-01765
The data type of the value specified for property {0} is not supported.

Category:
Data

Cause:
The data type specified for the property did not match any of the supported data types.

Action:
Specify a valid data type for the property. Consult the Oracle documentation for the supported data types.

WSM-01766
The assertion template ID cannot be empty.

Category:
Data

Cause:
The assertion template ID was empty.

Action:
Specify a value for assertion template ID.

WSM-01767
The assertion template name cannot be empty.

Category:
Data

Cause:
The assertion template name was empty.

Action:
Specify a value for the assertion template name.

WSM-01768
The value specified for the assertion template attachTo attribute {0} does not match any of the supported values.

Category:
Data

Cause:
The value specified for the assertion template attachTo attribute did not match any of the supported values.

Action:
Specify a valid value for the attachTo attribute. Consult the Oracle documentation for the supported values.

WSM-01769
The value specified for the assertion template category {0} does not match any of the supported values.

Category:
Data

Cause:
The value specified for the assertion template category attribute did not match any of the supported values.

Action:
Specify a valid value for the category attribute. Consult the Oracle documentation for the supported values.

WSM-01770
A value or default value is not specified for property {0}.

Category:
Data

Cause:
No value or default value was specified for the property.

Action:
Specify a value or a default value for the property.

WSM-01771
Attaching multiple reliable messaging policies is not supported. Only one reliable messaging policy can be attached to a policy subject

Category:
Data

Cause:
More than one reliable messaging policy was attached to a policy subject.

Action:
Make sure that only one reliable messaging policy is attached to a policy subject.

WSM-01772
Attaching multiple make connection(WSMC) policies is not supported. Only one WSMC policy can be attached to a policy subject.

Category:
Data

Cause:
More than one MTOM policy was attached to a policy subject.

Action:
Make sure that only one reliable MTOM is attached to a policy subject.

WSM-01773
Attaching multiple WS-Addressing policies is not supported. Only one WS-Addressing policy can be attached to a policy subject.

Category:
Data

Cause:
The user attached more than one WS-Addressing policy.

Action:
Make sure that only one reliable WS-Addressing is attached to a policy subject.

WSM-01774
The policy "{0}" cannot be attached to policy subject "{1}" having unsupported subject type "{2}".

Category:
Data

Cause:
A policy was attached to an unsupported policy subject.

Action:
Make sure that the policy subject supports policy attachment. Consult the Oracle documentation for the supported values.

WSM-01775
The policy "{0}" cannot be attached to ResourcePattern "{1}" SubjectType "{2}" of attachTo "{3}" since it may only be used with "{4}".

Category:
Data

Cause:
An incompatible policy was attached to the policy subject.

Action:
Make sure that the attached policy is compatible with the policy subject.

WSM-01776
The policy reference "{0}" is invalid.

Category:
Data

Cause:
The policy reference was invalid because the policy did not exist.

Action:
Make sure that the referenced policy exists in the policy store.

WSM-01777
Attaching multiple authorization security policies is not supported. Only one authorization security policy can be attached to a policy subject.

Category:
Data

Cause:
More than one authorization security policy was attached to a policy subject.

Action:
Make sure that only one authorization security policy is attached to a policy subject.

WSM-01778
Attaching multiple authentication security policies is not supported. Only one authentication security policy can be attached to a policy subject.

Category:
Data

Cause:
More than one authentication security policy was attached to a policy subject.

Action:
Make sure that only one authentication security policy is attached to a policy subject.

WSM-01779
Attaching multiple message protection security policies is not supported. Only one message protection security policy can be attached to a policy subject.

Category:
Data

Cause:
More than one message protection security policy was attached to a policy subject.

Action:
Make sure that only one message protection security policy is attached to a policy subject.

WSM-01780
The policy reference category and the policy category do not match.

Category:
Data

Cause:
There was a mismatch between the policy reference category and the policy category.

Action:
Ensure that the policy reference category matches the policy category.

WSM-01781
Validation failure due to generic error.

Category:
Data

Cause:
A generic internal error occurred.

Action:
Consult the diagnostic logs for details.

WSM-01782
Policy contains no assertions. A policy must contain at least one assertion.

Category:
Data

Cause:
The policy did not contain any assertions.

Action:
Make sure that the policy contains at least one assertion.

WSM-01783
Guard does not contain any of the three elements of resource-match, action-match and constraint-match.

Category:
Data

Cause:
Guard does not contain any of the three elments of resource-match, action-match and constraint-match.

Action:
Make sure that at least one of three elements of resource-match, action-match and constraint-match is specified with its corresponding value in the Guard element.

WSM-01784
Validation is not supported for "{0}" type of Documents. Only a Policy, AssertionTemplate or PolicySet can be validated.

Category:
Data

Cause:
Validation is not supported for the type of Documents.

Action:
Ensure that the document is either a Policy or a PolicySet or AssertionTemplate.

WSM-01785
Signing or encryption of the soap fault is not supported.

Category:
Data

Cause:
The soap fault is to be signed or encrypted.

Action:
Make sure that the soap fault is not to be signed or encrypted.

WSM-01786
Attaching multiple STS-Config policies is not supported. Only one STS-Config policy can be attached to a policy subject.

Category:
Data

Cause:
More than one sts-config policy was attached to a policy subject.

Action:
Make sure that only one sts-config policy is attached to a policy subject.

WSM-01787
The policy name {0} contains invalid characters.

Category:
Data

Cause:
The policy name contains invalid characters.

Action:
Make sure that policy name contains valid characters.

WSM-01788
The assertion template name {0} contains invalid characters.

Category:
Data

Cause:
The assertion template name contains invalid characters.

Action:
Specify a valid value for the assertion template name.

WSM-01789
Attaching multiple web service transaction(WSTX) policies is not supported. Only one WSTX policy can be attached to a policy subject.

Category:
Data

Cause:
More than one WSMC policy was attached to a policy subject.

Action:
Make sure that only one make connection policy is attached to a policy subject.

WSM-01790
Attaching multiple Message Transmission Optimization Mechanism (MTOM) policies is not supported. Only one MTOM policy can be attached to a policy subject.

Category:
Data

Cause:
More than one WSTX policy was attached to a policy subject.

Action:
Make sure that only one reliable WSTX is attached to a policy subject.

WSM-01791
Combination of a sts-config policy and a non sts authentication/message protection policy is not valid.

Category:
Data

Cause:
sts-config policy and non sts policy was attached to a policy subject.

Action:
Make sure that a sts-config policy and a non sts config policy are not attached together to a policy subject.

WSM-01792
Attachment of a sts-config policy without any sts policy is invalid. Attach a valid sts policy together with a sts-config policy.

Category:
Data

Cause:
Sts policy was attached without sts-config policy to a policy subject.

Action:
Make sure that a sts config policy is attached together with a sts policy to a policy subject.

WSM-01793
The OR group contains no assertions. Edit the OR group to include one or more assertions.

Category:
Data

Cause:
The OR group contains no assertions.

Action:
Edit the OR group to include one or more assertions.

WSM-01794
Combination of an oauth2-config policy and a non oauth2 client policy is not valid.

Category:
Data

Cause:
oauth2-config policy and non oauth2 policy was attached to a policy subject.

Action:
Make sure that an oauth2-config policy and a non oauth2 config policy are not attached together to a policy subject.

WSM-01795
Attachment of an oauth2 config policy without any oauth2 client policy is invalid. Ensure you attach a valid oauth2 policy either via Direct Policy Attachment or via Global Policy Attachment along with an oauth2 config policy.

Category:
Data

Cause:
Oauth2 config policy was attached without oauth2 client policy to a policy subject.

Action:
Make sure that an oauth2 config policy is attached together with a oauth2 policy to a policy subject.

WSM-01796
Attaching multiple Oauth2-Config policies is not supported. Only one Oauth2-Config policy can be attached to a policy subject.

Category:
Data

Cause:
More than one oauth2-config policy was attached to a policy subject.

Action:
Make sure that only one oauth2-config policy is attached to a policy subject.

WSM-01797
Attachment of an oauth2 client policy without oauth2 config policy is invalid. Ensure you attach a valid oauth2 config policy either via Direct Policy Attachment or via Global Policy Attachment along with an oauth2 client policy.

Category:
Data

Cause:
Oauth2 client policy was attached without oauth2-config policy to a policy subject.

Action:
Make sure that a oauth2 config policy is attached together with a oauth2 policy to a policy subject.

WSM-01801
The type of resources expression is empty or missing.

Category:
Data

Cause:
The value specified for the appliesTo attribute was empty.

Action:
Specify a valid non-empty value for the appliesTo attribute.

WSM-01802
The type of resources expression "{0}" is not supported.

Category:
Data

Cause:
The value specified for the appliesTo attribute was invalid.

Action:
Specify a valid value for the appliesTo attribute.

WSM-01811
The attachment expression is empty or missing; a non-empty expression with a function is expected.

Category:
Data

Cause:
The value specified for the attachTo attribute was empty.

Action:
Specify a valid, non-empty value for the attachTo attribute.

WSM-01812
The function "{2}" at index {1} in attachment expression "{0}" is empty or malformed. A function requires a non-empty, quoted value.

Category:
Data

Cause:
The argument for a function was missing, empty, or malformed.

Action:
Specify a valid, non-empty value for the function argument.

WSM-01813
The function "{2}" at index {1} in attachment expression "{0}" duplicates a previous function. A function may only appear once in an expression.

Category:
Data

Cause:
A function appeared more than once in an attachment expression.

Action:
Remove the duplicated function from the expression.

WSM-01814
The function "{2}" is not expected at index {1} in attachment expression "{0}". An operator is expected at this point.

Category:
Data

Cause:
A function was found in an attachment expression where an operator was expected.

Action:
Specify the "and" operator between each function.

WSM-01815
A function is expected at index {1} in attachment expression "{0}".

Category:
Data

Cause:
The attachment expression ended with an operator.

Action:
Remove the dangling operator or add the missing function.

WSM-01816
The operator "{2}" at index {1} in attachment expression "{0}" is not supported. "and" is the only supported operator.

Category:
Data

Cause:
An unrecognized operator was found in an attachment expression.

Action:
Specify the "and" operator between each function.

WSM-01817
The text "{2}" at index {1} in attachment expression "{0}" is not expected. A function is expected at this point.

Category:
Data

Cause:
An unrecognized block of text was found in an attachment expression where a function was expected.

Action:
Specify a valid function in the expression.

WSM-01818
The text "{2}" at index {1} in attachment expression "{0}" is unrecognized. The operator "and" is expected at this point.

Category:
Data

Cause:
An unrecognized block of text was found in an attachment expression where an operator was expected.

Action:
Specify the "and" operator between each function.

WSM-01821
The function "{0}" in attachment expression "{1}" is incompatible with "{2}" type of resources.

Category:
Data

Cause:
A function was found in an attachment expression that is not usable with the type of resource.

Action:
Specify a function that is compatible with the associated type of resource.

WSM-01822
The function "{0}" in attachment expression "{1}" is not supported for attachment.

Category:
Data

Cause:
A function was found in an attachment expression that is not usable for attachment.

Action:
Specify a function that is compatible with the associated type of resource.

WSM-01823
The policy set name is empty.

Category:
Data

Cause:
The policy set name was empty.

Action:
Make sure that the policy set name is specified.

WSM-01824
The policy set name {0} contains invalid characters.

Category:
Data

Cause:
The policy set name contains invalid characters.

Action:
Make sure that policy set name contains valid characters.

WSM-01825
Secure conversation is enabled in assertion to which it does not currently apply.

Category:
Data

Cause:
Secure conversation is enabled in assertion to which it does not currently apply.

Action:
Make sure that secure conversation is enabled only in supported assertions.

WSM-01826
Secure conversation re-authenticate feature is not supported in this assertion.

Category:
Data

Cause:
Secure conversation re-authenticate feature is not supported in this assertion.

Action:
Make sure that secure conversation re-authenticate feature is enabled only in supported assertions.

WSM-01827
Attaching multiple policies of category "{0}" is not supported. Policies in list ["{1}"] already have the category, current policy "{2}" also has that category.

Category:
Data

Cause:
More than one policy with the same category was attached to a policy subject.

Action:
Make sure that only one such policy is attached to a policy subject.

WSM-01828
Invalid category : {0} for policy : {1}. Only policies assigned to the security category are supported.

Category:
Compliance

Cause:
The Policy category provided was not valid.

Action:
Verify that the Policy category is correct.

WSM-01829
Policy: {0} contains unsupported assertions.

Category:
Security

Cause:
Policy contains unsupported assertions. Assertions of type http-security are not supported for WLS JAXWS web services.

Action:
Check the assertion type.

WSM-01830
The policy binding value "{0}" is not valid.

Category:
Security

Cause:
The policy binding value provided for the PolicySubject is invalid.

Action:
Verify that the SubjectType arguemt is correct.

WSM-01831
PII assertions cannot be combined with other assertions in a policy. This policy includes PII and non PII assertions which is not valid.

Category:
Configuration

Cause:
The policy contains PII assertion as well as other assertions. PII Assertion cannot be combined with other assertions in a policy.

Action:
Remove other assertions from this policy or remove the PII assertion.

WSM-01832
PII Policy {0} is not supported on the Resource {1} , as the PII policy is not supported on SubjectType : {2}

Category:
Configuration

Cause:
The PII Policy is not applicable on this SubjectType.

Action:
Detach the PII policy from the Subject.

WSM-01833
PII Policy {0} has local optimization turned ON, it should always be turned OFF.

Category:
Security

Cause:
Local optimization cannot be ON for PII Policy.

Action:
Turn local optimization off in PII policy.

WSM-01834
Policy: {0} contains assertion(s) that are not supported for the REST endpoint with Resource Pattern: {1}

Category:
Security

Cause:
Policy Set validation failed because the attached policy contains assertions that are not supported for REST endpoints.

Action:
Make sure the assertion(s) included in the policy are supported for REST endpoints.

WSM-01835
Policy: {0} contains assertion(s) that are not supported for the virtual endpoint with Resource Pattern: {1}, Subject type: {2}. If SubjectType is VS_SERVICE, policy must have VS_SERVICE intent and policy references must have SOAP_HTTP intent. If SubjectType is VS_REST_RESOURCE, policy must have VS_REST_RESOURCE intent and policy

references must have REST_HTTP intent. If SubjectType is VS_URL_RESOURCE, policy must have VS_URL_RESOURCE intent and policy references must have URL intent.

Category:
Security

Cause:
Policy Set validation failed because the attached policy contains assertions that are not supported for virtual endpoints.

Action:
Make sure the assertion(s) included in the policy are supported for virtual endpoints. Check log for more details.

WSM-01844
The data type of the value does not match the data type of property {0}. The expected data type is "long".

Category:
Data

Cause:
The data type of the property value entered was not of type "long".

Action:
Make sure that the data type for the property value is of type "long".

WSM-01845
The value specified for the policy attachTo attribute {0}, is invalid for the assertion category: {1}.

Category:
Data

Cause:
The value specified for the policy attachTo attribute is invalid for the category.

Action:
Specify a valid value for the attachTo attribute. Consult the Oracle documentation for the supported values.

WSM-01846
The policy "{0}" having category "{1}" is not valid for resource pattern "{2}" of subject type "{3}".

Category:
Security

Cause:
Policy of this category is not applicable to the subject type.

Action:
Detach the policy from the subject.

WSM-01847
The type of policy set "{0}" is not specified or empty.

Category:
Data

Cause:
The policy set type is not specified or empty.

Action:
Make sure that the policy set type is specified.

WSM-01848
The type "{0}" of PolicySet "{1}" is invalid

Category:
Data

Cause:
The value specified for the policy set type is invalid.

Action:
Specify a valid value for policy set type. Refer documentation for the list of valid values.

WSM-01849
The type "{0}" of PolicySet "{1}" does not support external attachments.

Category:
Data

Cause:
The external attachment is not spoorted by the specified subject type.

Action:
Specify subject type which supports external attachment.

WSM-01850
WARNING: Non-Security policies do not apply to {0}

Category:
Data

Cause:
Non-Security policies do not apply to resource type.

Action:
Make correction according to the documentation and retry.

WSM-01851
The policy "{0}" is not supported for SOAP/JMS endpoint.

Category:
Data

Cause:
Specified policy is not supported for SOAP JMS.

Action:
Make correction according to the documentation and retry.

WSM-01852
The field "{0}" of policyset "{1}" is not updatable; attampted to change {2} to "{3}".

Category:
Data

Cause:
Policyset field is not updatable.

Action:
Do not change the value of the field.

WSM-01853
The status field of object "{0}" has invalid value "{1}".

Category:
Data

Cause:
The value specified for status is invalid.

Action:
Specify a valid value for status. Refer documentation for the list of valid values.

WSM-01854
The constraint value "{0}" of PolicySet "{1}" is invalid and caused ParseException.

Category:
Data

Cause:
Parsing of constraint set in the global PolicySet caused ParseException

Action:
Correct the value of constraint in global PolicySet and retry.

WSM-01860
The configuration property name "{0}" is unknown.

Category:
Data

Cause:
The configuration property name is unknown.

Action:
Check the documentation and provide a valid name.

WSM-01861
The configuration property category "{0}" unknown.

Category:
Data

Cause:
The configuration property category is invalid.

Action:
Check the documentation and provide a valid category.

WSM-01862
The combination of property name "{0}" and category "{1}" is invalid.

Category:
Data

Cause:
The combination of property name and category is invalid.

Action:
Check the documentation and provide a valid combination of property name and category.

WSM-01863
Property "{0}" within category "{1}" is readonly and cannot be modified.

Category:
Data

Cause:
Read-only property cannot be modified.

Action:
Specify a modifiable property.

WSM-01864
Multiple values are not allowed for property "{0}" within category "{1}"

Category:
Data

Cause:
Multiple values are not allowed for the property.

Action:
Specify a single value.

WSM-01865
The format for value(s) "{0}" does not match the allowed format "{1}".

Category:
Data

Cause:
Format of the value does not match the allowed format.

Action:
Check the documentation and provide a valid format.

WSM-01866
The provided configuration platform type "{0}" contains invalid character.

Category:
Data

Cause:
The configuration platform type contains invalid character.

Action:
Please check the documentation and provide a valid platform type.

WSM-01867
The provided configuration domain name "{0}" contains invalid character.

Category:
Data

Cause:
The configuration domain name contains invalid character.

Action:
Please check the documentation and provide a valid domain name.

WSM-01868
Seed token issuer trust document "{0}" can not be modified or deleted. It is a read-only document.

Category:
Data

Cause:
The Seed Token Issuer Trust Document is read-only and can not be modified or deleted.

Action:
Create a new document that can be customized to your needs.

WSM-01869
A token issuer trust document name must be provided for this operation.

Category:
Data

Cause:
A token issuer trust document name is required for this operation.

Action:
Specify a name to proceed with this operation.

WSM-01870
The field "{0}" of Token Issuer Trust "{1}" is not updatable; attampted to change "{2}" to "{3}".

Category:
Data

Cause:
Trust field is not updatable.

Action:
Do not change the value of the field.

WSM-01871
The TokenIssuerTrust document name cannot be null or empty.

Category:
Security

Cause:
The TokenIssuerTrust document name cannot be null or empty.

Action:
Make sure the name is provided when creating an Issuer.

WSM-01872
The tokentype attribute "{0}" for the Issuer "{1}" is not supported.

Category:
Security

Cause:
The tokentype attribute for the Issuer is not supported.

Action:
Change it to a supported token type when creating the Issuer in token issuer trust document.

WSM-01873
The field "{0}" of an Issuer cannot be missing.

Category:
Security

Cause:
The issuer name cannot be null or empty.

Action:
Make sure the name is provided when creating an Issuer.

WSM-01874
The field "{0}" of Issuer is not updatable.

Category:
Data

Cause:
Trust field is not updatable.

Action:
Do not change the value of the field.

WSM-01875
The value of field "{0}" of Issuer is not valid, it must be a boolean value.

Category:
Security

Cause:
The enabled field should be a boolean value.

Action:
Make sure to use "true" or "false" boolean value.

WSM-01876
RelyingParty is only valid for Issuers that of JWT token type. Current Issuer token type is . "{0}".

Category:
Security

Cause:
The replying party is only valid for Issuers that are of JWT token type.

Action:
Change it to a supported tokentype vs relying party type pair when creating replying party under an Issuer.

WSM-01877
The value of field "{0}" in TokenIssuerTrust is not supported.

Category:
Security

Cause:
The field value in TokenIssuerTrust is not supported.

Action:
Change it to a supported key value type when creating the trusted key under an Issuer.

WSM-01878
KeyIdentifiers that are of publickey type are not accepted through user input but are resolved from metadata url "{0}".

Category:
Security

Cause:
The public key is not accepted through user input

Action:
Remove public KeyIdentifiers from user input data.

WSM-01879
The value of field "{0}" of the TrustedKey is not valid, it must be a boolean value.

Category:
Security

Cause:
The enabled field should be a boolean value.

Action:
Make sure to use "true" or "false" boolean value.

WSM-01880
The combination of value of field "{0}" and field "{1}" of TrustedKey is not supported.

Category:
Security

Cause:
The key and key value type combination is not valid

Action:
Change it to a supported key and key value type pair when creating the trusted key under an Issuer.

WSM-01881
The value of field "{0}" of TrustedKey is not valid for value of field "{1}" in Issuer.

Category:
Security

Cause:
The key type and its beloning Issuer's token type combination is not valid

Action:
Change it to a supported key type when creating the trusted key under an Issuer.

WSM-01882
The metadata URL "{0}" for fetching public key is not valid URL.

Category:
Security

Cause:
The TrustedKey MDRUL is not valid URL.

Action:
Provide a valid URL.

WSM-01883
Field "{0}" must be set.

Category:
Security

Cause:
The TrustedKey MDRUL should not be null.

Action:
Provide a valid URL value.

WSM-01884
Refresh interval "{0}" of TrustedKey is not valid; it should be an integer.

Category:
Security

Cause:
The TrustedKey refreshinterval is not an integer.

Action:
Provide an integer value.

WSM-01885
The field "{0}" in TrustedKey is applicable only and must be set for Issuers that are of JWT token type, current issuer token type is "{1}".

Category:
Security

Cause:
The TrustedKey MDRUL is applicable for issers of JWT token type.

Action:
Choose Issuer that is of JWT token type.

WSM-01886
The field "{0}" and "{1}" of a TokenAttributeRule cannot be empty, missing or NONE at the same time.

Category:
Security

Cause:
The TokenAttributeRule field cannot be null or empty at the same time.

Action:
Make sure the fields are provided when creating a TokenAttributeRule.

WSM-01887
The field "{0}" of TokenAttributeRule is not updatable.

Category:
Data

Cause:
TokenAttributeRule field is not updatable.

Action:
Do not change the value of the field.

WSM-01888
The field "{0}" of an Attribute is not updatable.

Category:
Data

Cause:
Attribute field is not updatable.

Action:
Do not change the value of the field.

WSM-01889
The field "{0}" of an Attribute cannot be missing.

Category:
Security

Cause:
The Attribute field cannot be null or empty.

Action:
Make sure the field is provided when creating an Attribute.

WSM-01890
The field "{0}" of the VirtualUser is not updatable.

Category:
Data

Cause:
VirtualUser field is not updatable.

Action:
Do not change the value of the field.

WSM-01891
The value of field "{0}" of the VirtualUser is not valid, it must be a boolean value.

Category:
Security

Cause:
The enabled field of VirtualUser should be a boolean value.

Action:
Make sure to use "true" or "false" boolean value.

WSM-01892
One or more values of field "{0}" in the VirtualUser is not valid.

Category:
Security

Cause:
One or more values in the a filed of a VritualUser is not valid.

Action:
Make a correction and try again.

WSM-01893
The value of field "{0}" of a TokenRoleMapping should not be null or empty

Category:
Security

Cause:
The field of a TokenRoleMapping should not have null or empty value.

Action:
Provid a non empty generic name.

WSM-01894
The value of field "{0}" of TokenRoleMapping should be an non empty list.

Category:
Security

Cause:
The field of TokenRoleMapping should not have null or empty list.

Action:
Provid a list of values.

WSM-01895
The value of field "{0}" of an Attribute or NameId should not be null or empty

Category:
Security

Cause:
The field of an Attribute or NameId should not have null or empty value.

Action:
Provid a non empty generic name.

WSM-01896
The value of field "{0}" of Mapping should not be null or empty

Category:
Security

Cause:
The field of an Mapping should not have null or empty value.

Action:
Provid a non empty generic name.

WSM-01897
ConfigOverride field "{0}" is either missing or has null or empty value

Category:
Security

Cause:
The field of ConfigOverride have either null or empty value.

Action:
Provid a generic name or value.

WSM-01898
The value of "{0}" contains invalid NCName character

Category:
Data

Cause:
Name contains invalid character.

Action:
Please check the documentation and provide valid name.

WSM-01899
The value of fields "{0}" of DiscoveryInfo must be set.

Category:
Data

Cause:
Required fields are null.

Action:
Provide valid value.

WSM-01900
Field "{0}" value of "{1}" is not a valid URL

Category:
Data

Cause:
Field value is not a valid URI.

Action:
Provide valid value.

WSM-01901
Field "{0}" value of "{1}" is not a valid PATH

Category:
Data

Cause:
Field value is not a valid URI.

Action:
Provide valid value.

WSM-01902
The value of one or more required fields "{0}" of Proxy are either empty or missing.

Category:
Data

Cause:
Required fields are missing.

Action:
Provide valid value.

WSM-01903
The proxyport value "{0}" of the Proxy is not an integer.

Category:
Data

Cause:
Port is not an integer.

Action:
Provide integer value.

WSM-01904
The field "{0}" of Proxy cannot be set to null

Category:
Data

Cause:
Field cannot be set to null.

Action:
Provide a valid value.

WSM-01905
The field "{0}" has invalid value, must be one of the predefinded values: {1}

Category:
Security

Cause:
The TrustedKey trust type is not one of the valid predefined values.

Action:
Provide a valid trust type.

WSM-03001
Oracle WSM Monitor internal error {0}

Category:
Configuration

Cause:
An unexpected error occurred while monitoring Oracle WSM Agent.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-03002
Failure initializing Oracle WSM Monitor, {0} is null.

Category:
Configuration

Cause:
Creation of one or more DMS Event sensors failed while initializing Oracle WSM Monitor.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-03003
The topology node value {0} is not valid.

Category:
Configuration

Cause:
The topology node value passed from the security interceptor to Oracle WSM Agent was invalid.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-03004
The parameter {0} is not valid.

Category:
Configuration

Cause:
The parameter was either null or invalid.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-04501
generic error in accessing the data store

Category:
Data

Cause:
An internal error occurred while accessing the MDS data store.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-04502
The name of the resource is empty.

Category:
Programmatic

Cause:
The name of the resource to be updated or retrieved was empty.

Action:
Assign a name to the resource being processed.

WSM-04503
resource {0} does not exist in the data store

Category:
Data

Cause:
The requested resource was not found in the data store.

Action:
Check the search criteria and try again.

WSM-04504
resource {0} cannot be updated

Category:
Data

Cause:
The resource could not be updated.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-04505
resource {0} cannot be created

Category:
Data

Cause:
The specified name has already been assigned to another resource.

Action:
Specify a unique name, and retry the operation.

WSM-04506
cannot create resource {0}

Category:
Data

Cause:
The resource could not be saved to the data store.

Action:
Retry the operation.

WSM-04507
cannot delete resource {0}

Category:
Data

Cause:
The resource could not be deleted from the data store.

Action:
Retry the operation.

WSM-04508
cannot update resource {0}

Category:
Data

Cause:
The resource could not be updated to the data store.

Action:
Retry the operation.

WSM-04509
cannot initialize the connection to the data store

Category:
Data

Cause:
Connecting to the data store failed.

Action:
Check the data store credentials, and retry the operation. Ensure that WSM-PM is installed, deployed correctly and running at http://<host:port>/wsm-pm/ and by clicking the Validator link. Also, ensure that the database to which WSM-PM connects is up and the mds-owsm data source is configured properly and targeted to the right server.

WSM-04510
The version {0} for resource {1} cannot be found.

Category:
Data

Cause:
The requested version for the specified resource was not found.

Action:
Check the search criteria, and retry the operation.

WSM-04511
cannot perform simultaneous deletes

Category:
Data

Cause:
Deleting multiple resources simultaneously from the data store failed.

Action:
Check supplied data, and retry the operation.

WSM-04512
internal data store error

Category:
Data

Cause:
A generic data store exception occurred.

Action:
Check the data store credentials that were provided and retry the operation. If the problem persists, contact Oracle Support Services.

WSM-04513
cannot commit changes to the repository

Category:
Data

Cause:
A failure occurred while finalizing changes to the data store.

Action:
Retry the operation.

WSM-04514
The version {0} for resource {1} cannot be deleted.

Category:
Data

Cause:
Deleting the specified version(s) of the resource failed.

Action:
Check the supplied values, and retry the operation.

WSM-04515
Auditing is disabled for MDS operations.

Category:
Data

Cause:
An internal error occurred; failed to initialize the auditor.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-04516
The version of the passed resource is invalid.

Category:
Programmatic

Cause:
The requested version of the resource was invalid.

Action:
The version number must be a positive integer.

WSM-04517
cannot update resource {0}

Category:
Programmatic

Cause:
The resource to be updated was concurrently being updated by another process.

Action:
Make sure no other process is attempting to change the resource being updated, and retry the operation.

WSM-04518
document name is invalid

Category:
Programmatic

Cause:
The document name was invalid.

Action:
Specify a name for the document that follows the document naming conventions. Refer to Oracle documentation for the naming rules.

WSM-04519
Unable to create document.

Category:
Programmatic

Cause:
The repository permissions were read-only. Creation of a new document requires write permissions.

Action:
Reconfigure the repository to have write permissions.

WSM-04520
The repository timestamp is invalid.

Category:
Programmatic

Cause:
The repository timestamp was invalid or missing.

Action:
Retry the operation. If the problem persists, consult the diagnostic logs.

WSM-04521
Resource to be deleted does not exist in datastore.

Category:
Data

Cause:
The resource could not be deleted since it does not exist in the data store.

Action:
You don't need to take any action, the resource is not present in the datastore.

WSM-04601
A JDBC URL is required to connect to a database-based MDS repository.

Category:
Programmatic

Cause:
A null or empty JDBC URL was provided when attempting to create an MDS instance for a database-based repository.

Action:
Provide a valid JDBC URL and try again.

WSM-04602
A password is required to connect to a database-based MDS repository.

Category:
Programmatic

Cause:
A null or empty password was provided when attempting to create an MDS instance for a database-based repository.

Action:
Provide a valid password and try again.

WSM-04603
A username is required to connect to a database-based MDS repository.

Category:
Programmatic

Cause:
A null or empty username was provided when attempting to create an MDS instance for a database-based repository.

Action:
Provide a valid username and try again.

WSM-04606
One or more directories are required to connect to a file-based MDS repository.

Category:
Programmatic

Cause:
A path was not provided when attempting to create an MDS instance for a file-based repository.

Action:
Provide a valid directory and try again.

WSM-04611
An MDS session cannot be created due to underlying error "{0}".

Category:
Data

Cause:
MDS encountered an unexpected condition.

Action:
Follow the recommendations for the underlying exception.

WSM-04641
The operation "{0}" for document "{1}" cannot be performed on a closed session.

Category:
Programmatic

Cause:
A operation was requested on a session that has already been closed.

Action:
Create a new repository session and perform the operation again.

WSM-04642
The operation "{0}" for document "{1}" cannot be performed on a read-only session.

Category:
Configuration

Cause:
A write operation was requested on a read-only session. See error message.

Action:
Provide the name of a creator to associate with write operations. Create a new session on a writable repository and try again.

WSM-04643
The operation "{0}" cannot be performed on virtual document "{1}".

Category:
Configuration

Cause:
A write operation was requested on a virtual document.

Action:
Choose a different document name and try again.

WSM-04651
The search criterion "{0}" does not identify a specific document to be created.

Category:
Programmatic

Cause:
The supplied criterion does not have the correct type.

Action:
Supply a NAME search criterion.

WSM-04652
The document "{0}" already exists in the repository.

Category:
Data

Cause:
The document already exists in the repository.

Action:
Choose a different name for the document to create or perform an update instead.

WSM-04653
The document "{0}" cannot be created in a read-only repository.

Category:
Configuration

Cause:
The repository is read-only.

Action:
Reconfigure the repository to support writes and try again.

WSM-04654
The name "{0}" is invalid for creating a document due to underlying reason "{2}".

Category:
Data

Cause:
The document name is invalid for the repository.

Action:
Choose a valid name and try again.

WSM-04655
Repository information cannot be marshalled due to underlying parser error "{2}"

Category:
Other

Cause:
The system does not support the required DOM document builder configuration.

Action:
Correct underlying error or contact Oracle Support Services for assistance.

WSM-04656
Repository information cannot be marshalled due to underlying marshalling error "{2}"

Category:
Data

Cause:
The repository information object could not be marshalled into a DOM document.

Action:
Correct underlying error or contact Oracle Support Services for assistance.

WSM-04657
The document "{0}" cannot be created in a session spanning multiple stores due to underlying error "{2}".

Category:
Configuration

Cause:
The document to be created belongs in a store that is different from other write operations in the session.

Action:
Create the document in a different session.

WSM-04661
The document "{0}" cannot be deleted in a read-only repository.

Category:
Data

Cause:
The repository is read-only.

Action:
Reconfigure the repository to support writes and try again.

WSM-04662
The name "{0}" is invalid for deleting a document due to underlying reason "{2}".

Category:
Data

Cause:
The document name is invalid for the repository.

Action:
Choose a valid name and try again.

WSM-04663
The document "{0}" cannot be deleted in a session spanning multiple stores due to underlying error "{2}".

Category:
Data

Cause:
The document to be created belongs in a store that is different from other write operations in the session.

Action:
Delete the document in a different session.

WSM-04664
Version {1} to {3} of document "{0}" cannot be deleted.

Category:
Data

Cause:
The repository does not support deletion of individual versions of a document.

Action:
Ignore the document version or delete the entire document.

WSM-04671
A concurrent write prevented the document "{0}" from being written due to underlying error "{2}".

Category:
Data

Cause:
Two or more incompatible operations were performed on the same document. A document in this session was modified by another session.

Action:
Perform the incompatible operations in different sessions. Retry the operation.

WSM-04672
The document "{0}" cannot be written to repository due to underlying error "{2}".

Category:
Data

Cause:
An I/O error occurred while writing to repository.

Action:
Correct the underlying problem and retry.

WSM-04673
The session cannot be committed due to underlying error "{2}".

Category:
Data

Cause:
The resource could not be deleted since it does not exist in the data store.

Action:
You don't need to take any action, the resource is not present in the datastore.

WSM-04674
The document "{0}" cannot be validated due to underlying error "{2}".

Category:
Data

Cause:
Validation failed for a metadata object written in the session.

Action:
Correct the underlying problem and retry.

WSM-04681
The document "{0}" to be modified was not found in the repository due to underlying error "{2}".

Category:
Data

Cause:
The document was not found in the repository.

Action:
Create the document instead of modifying it.

WSM-04682
The document "{0}" cannot be modified in a session spanning multiple stores due to underlying error "{2}".

Category:
Data

Cause:
The document to be modified belongs in a store that is different from other write operations in the session.

Action:
Modify the document in a different session.

WSM-04691
The document "{0}" cannot be found in repository due to underlying error "{2}".

Category:
Data

Cause:
The document was not found in the repository.

Action:
Create the document and try again.

WSM-04692
The name "{0}" is invalid for retrieving a document due to the error "{2}".

Category:
Data

Cause:
The document name is invalid for the repository.

Action:
Choose a valid name and try again.

WSM-04693
Version information is not available for document "{0}".

Category:
Data

Cause:
The document does not exist The repository does not support versioning.

Action:
Create the document first. Configure the repository to support versioning.

WSM-04694
An invalid directory was provided to connect to a file-base MDS repository.

Category:
Programmatic

Cause:
An invalid directory was provided when attempting to create an MDS instance for a file-based repository.

Action:
Provide a valid directory and try again.

WSM-04695
The retrieved version of document "{0}" is no longer available.

Category:
Data

Cause:
A new version of the document was created after it was initially retrieved.

Action:
Retry the operation to get the latest version of the document.

WSM-04696
The operation "{0}" cannot be performed on a closed session.

Category:
Programmatic

Cause:
A operation was requested on a session that has already been closed.

Action:
Create a new repository session and perform the operation again.

WSM-04697
The operation "{0}" cannot be performed on a read-only session.

Category:
Configuration

Cause:
A write operation was requested on a read-only session. See error message.

Action:
Provide the name of a creator to associate with write operations. Create a new session on a writable repository and try again.

WSM-04698
Versions {1} to {3} of document "{0}" cannot be deleted due to underlying error "{2}".

Category:
Data

Cause:
An I/O error occurred while trying to delete versions of a document from repository.

Action:
Correct the underlying problem and retry.

WSM-04699
A write lock is not available to delete versions {1} to {3} of document "{0}" due to underlying error "{2}".

Category:
Data

Cause:
A write lock could not be obtained to delete versions of a document.

Action:
Retry the operation.

WSM-04700
cannot delete read-only resources {0}

Category:
Programmatic

Cause:
The document is read-only and cannot be deleted.

Action:
Choose document(s) that are not read-only for modification.

WSM-04701
A connection provider is required to connect to a database-based MDS repository.

Category:
Programmatic

Cause:
A null connection provider was provided when attempting to create an MDS instance for a database-based repository.

Action:
Provide a valid connection provider and try again.

WSM-04702
Timestamp information cannot be marshalled due to underlying parser error "{2}"

Category:
Data

Cause:
The timestamp information object could not be marshalled into a DOM document.

Action:
Retry the operation and if problem persists, contact Oracle Support Services for assistance.

WSM-04703
Repository timestamp information cannot be marshalled due to underlying parser error "{2}"

Category:
Other

Cause:
The system does not support the required DOM document builder configuration.

Action:
Correct underlying error or contact Oracle Support Services for assistance.

WSM-06001
Error obtaining Policy Set.

Category:
Configuration

Cause:
Failed to get PolicySet.

Action:
Check log file for possible causes.

WSM-06017
Error converting to the canonical path for the File Policy Resolver.

Category:
Files

Cause:
An invalid canonical path was passed for the File Policy Resolver.

Action:
Verify the canonical path passed for the File Policy Resolver and retry the operation.

WSM-06036
The class cannot be instantiated.

Category:
Configuration

Cause:
The system could not instantiate a class.

Action:
Consult the Java documentation or Oracle Support Services.

WSM-06101
The policy set cannot be created for null Service Component Architecture (SCA) node.

Category:
Compliance

Cause:
The PolicySet could not be generated for the null Service Component Architecture (SCA) node.

Action:
Pass a valid SCA node object.

WSM-06102
The policy reference URI "{0}" is not valid.

Category:
Compliance

Cause:
The Policy Reference URI provided was not valid.

Action:
Verify that the Policy Reference URI in the SCA node is correct and the policy exists in the repository.

WSM-06103
No configuration has been specified for the Policy Accessor.

Category:
Configuration

Cause:
The Policy Accessor object could not be initialized because it is not correctly configured.

Action:
Call the init method to initialize the Policy Accessor object before invoking this method.

WSM-06104
The protocol specified for Policy Accessor is not supported.

Category:
Compliance

Cause:
A policy access protocol was specified that was invalid for this environment.

Action:
Change protocol to one that is supported by the environment. For J2EE environments, the supported protocols are "local" and "remote"; for J2SE environments, the supported protocols are "classpath", "local", and "remote".

WSM-06105
The duplicate policy references are found in the same Service Component Architecture (SCA) binding node.

Category:
Compliance

Cause:
The same policy has been attached multiple times and so duplicate policy references were found in the same Service Component Architecture (SCA) binding node.

Action:
Remove the duplicate policy references from the SCA binding node by attaching each policy only once.

WSM-06106
The policy reference URI cannot be empty.

Category:
Compliance

Cause:
Empty policy references were found in the Service Component Architecture (SCA) node.

Action:
Verify the Service Component Architecture (SCA) node and make sure the policy references specify a valid value and the referenced policies exist in the repository.

WSM-06107
The node that is expected is <binding.ws> or <component>. The node {0} passed is not a supported node.

Category:
Compliance

Cause:
An unsupported Service Component Architecture (SCA) node was found.

Action:
Specify a supported SCA node. Consult Oracle documentation for further details

WSM-06108
Error initializing the Oracle WSM Policy Resolver because incorrect configuration is passed

Category:
Configuration

Cause:
The Policy Resolver did not get created. This could be due to the wrong configuration being passed.

Action:
Verify the configuration passed for creating the Policy Resolver. Verify that the correct Policy Accessor protocol is passed.

WSM-06109
Cannot retrieve policies.

Category:
Data

Cause:
The policies were not retrieved. This may be due to incorrect policy references in the Service Component Architecture (SCA) node.

Action:
Verify that the policy references are referring to policies that exist in the repository. Also, ensure that the data store is seeded with policies.

WSM-06110
The MetaData Store (MDS) home cannot be null.

Category:
Configuration

Cause:
The Policy Repository was not valid because MDS Home is set to null.

Action:
Check the mds.home.module property for the correct value for MDS Home.

WSM-06111
The policy name cannot be null.

Category:
Compliance

Cause:
The policy name passed was null or empty.

Action:
Verify that the policy name is not an empty string, and verify that a null policy name is not being passed.

WSM-06112
Policies are not supported for a node of type:{0}.

Category:
Compliance

Cause:
Policies cannot be retrieved for unsupported Service Component Architecture (SCA) nodes.

Action:
Verify that a supported SCA node is provided for retrieving the policy.

WSM-06113
The configuration name cannot be null or empty.

Category:
Configuration

Cause:
The configuration file was either empty or did not exist.

Action:
Verify that the configuration file exists and contains policy references to retrieve policies from the Policy Repository.

WSM-06114
The home directory for the File Policy Resolver cannot be null.

Category:
Files

Cause:
The home directory for File Policy Resolver was null.

Action:
Verify that a valid home directory is passed for the File Policy Resolver.

WSM-06115
The path for the File Policy Resolver does not exist.

Category:
Files

Cause:
The path for File Policy Resolver did not exist.

Action:
Ensure that a valid path is passed for File Policy Resolver.

WSM-06116
The path for the File Policy Resolver is not a directory.

Category:
Files

Cause:
An invalid directory name was passed for the File Policy Resolver.

Action:
Verify that a valid directory name is passed for the File Policy Resolver.

WSM-06118
The resource name for the File Policy Resolver cannot be null.

Category:
Files

Cause:
The resource name for the File Policy Resolver is null.

Action:
Verify that a valid resource name is passed for the File Policy Resolver.

WSM-06119
The file {0} for the File Policy Resolver does not exist under {1}.

Category:
Files

Cause:
The file did not exist.

Action:
Verify that the file exists at the specified location.

WSM-06120
The resource name for the File Policy Resolver cannot be null.

Category:
Files

Cause:
The resource name for the File Policy Resolver was null.

Action:
Ensure that a non-null resource name is passed for the File Policy Resolver.

WSM-06121
No policy is found for the policy reference: {0}.

Category:
Data

Cause:
No policy was found for the specified policy reference.

Action:
Verify that the policy exists in the repository for the given policy reference, and that the correct policy reference is passed.

WSM-06122
Error retrieving policies.

Category:
Data

Cause:
An unexpected error occurred while retrieving the policies from the Policy Manager.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-06123
Error initializing internally the File Policy Resolver: {0} {1}

Category:
Security

Cause:
An unexpected error occurred while initializing the File Policy Resolver.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-06124
Error initializing the Oracle WSM Policy Manager Policy Resolver : {0} {1}.

Category:
Configuration

Cause:
An unexpected error occurred while initializing the Policy Manager Policy Resolver. The Policy Manager Policy Resolver was not able to find the property named mds.config

Action:
Verify that the property mds.config exists and is referencing a valid property file.

WSM-06125
Error in the XPath expression {0}.

Category:
Compliance

Cause:
The XPath Expression for the policy reference for the given Service Component Architecture (SCA) node was invalid.

Action:
Verify the XPath for the policy reference within the SCA node.

WSM-06128
Error accessing the PolicySet : {0} : {1}.

Category:
Configuration

Cause:
An unexpected error occurred while accessing the PolicySet.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-06129
Error parsing the PolicySet : {0} : {1}.

Category:
Configuration

Cause:
An unexpected error occurred while parsing the PolicySet.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-06130
Error creating the policy parser.

Category:
Configuration

Cause:
The Policy Parser did not get created.

Action:
Check the configuration for the Policy Parser.

WSM-06132
Error creating a connection to Oracle WSM Policy Manager.

Category:
Configuration

Cause:
A failure occurred while connecting to the Policy Manager.

Action:
Ensure that the Policy Manager is up and running. Ensure that WSM-PM is installed, deployed correctly and running at http://<host:port>/wsm-pm/ and by clicking the Validator link. Also, ensure that the database to which WSM-PM connects is up and the mds-owsm data source is configured properly and targeted to the right server.

WSM-06133
Error connecting to Oracle WSM Policy Manager.

Category:
Configuration

Cause:
A failure occurred while connecting to Policy Manager J2EE Application.

Action:
Before connecting to a Policy Manager, ensure that the Policy Manager is up and running.

WSM-06134
The class cannot be found.

Category:
Configuration

Cause:
The class could not be found in the classpath.

Action:
Verify that the class name is correct in the configuration files and ensure that the class is specified in the classpath variable.

WSM-06135
The class cannot be loaded due to Java 2 security restrictions.

Category:
Configuration

Cause:
Some classes were not loaded due to class loading security restrictions.

Action:
Contact the site administrator or Java documentation to ensure that the classes have the necessary Java2 security permissions.

WSM-06137
The "mds" policy access protocol is deprecated - use "local" instead.

Category:
Configuration

Cause:
A deprecated Policy Accessor Protocol was specified.

Action:
Update the configuration to use the standard protocol name.

WSM-06138
The "owsm" policy access protocol is deprecated - use "remote" instead.

Category:
Configuration

Cause:
A deprecated Policy Accessor protocol was specified.

Action:
Update the configuration to use the standard protocol name.

WSM-06139
Error closing a stream

Category:
Configuration

Cause:
Failure occurred in closing the stream while parsing the configuration file or the policy in the FILE protocol.

Action:
Verify that the correct configuration file or policy name is provided.

WSM-06140
Failure finding policy {0} in the classpath roots path {1}.

Category:
Configuration

Cause:
The policy did not exist in any of the configured roots. The configured roots are invalid.

Action:
Correct the reference to point to a policy that exists. Correct the classpath roots to point to the correct locations.

WSM-06141
Error initializing Policy Resolver.

Category:
Configuration

Cause:
The Policy Resolver was not initialized.

Action:
Invoke the init method to initialize the Policy Resolver before executing this method.

WSM-06142
Unable to retrieve policy store timestamp.

Category:
Configuration

Cause:
The Policy Resolver could not connect to Policy Manager to retrieve the policy store timestamp.

Action:
Check the MDS configuration file.

WSM-06143
The validation check in the policy "{0}" failed.

Category:
Configuration

Cause:
An error occurred while validating the policy.

Action:
Ensure that the policy is valid.

WSM-06144
Null policy subject value is not allowed from JEE application.

Category:
Compliance

Cause:
The null policy subject value was passed from JEE application.

Action:
Ensure that a valid policy subject is passed from the JEE application.

WSM-06145
Internal system error, cannot look up credential

Category:
Configuration

Cause:
Failure occurred while looking up credentials.

Action:
Internal system configuration error. Contact Oracle Support Services.

WSM-06146
Error deleting the attachment entries.

Category:
Configuration

Cause:
Failure occurred while deleting the attachment entries.

Action:
Ensure that a valid list of policy subjects for deactivated lifecycle type is passed

WSM-06147
There is mismatch in Policy reference category "{0}" and Policy category "{1}". Policy reference category should match with Policy category.

Category:
Data

Cause:
Mismatch in expected policy category and fetched policy category.

Action:
Confirm that the Policy Reference category is correct and that it matches the Policy category.

WSM-06148
Unable to apply property overrides to Policy

Category:
Data

Cause:
Unable to apply property overrides to Policy.

Action:
Make sure the policy model conforms to the Oracle Web service policy model.

WSM-06149
The policy reference URI is not valid : {0}

Category:
Compliance

Cause:
The Policy Reference URI provided was not valid.

Action:
Verify that the Policy Reference URI is correct.

WSM-06150
Invalid category : {0} for policy : {1}. Only policies assigned to the security category are supported.

Category:
Compliance

Cause:
The Policy category provided was not valid.

Action:
Verify that the Policy category is correct.

WSM-06152
The Policy Cache is not available.

Category:
Compliance

Cause:
The Policy Cache is not available.

Action:
You may need to restart the server.

WSM-06153
Could not access the Policy Cache.

Category:
Compliance

Cause:
Cannot access the Policy Cache.

Action:
You may need to restart the server.

WSM-06154
Could not initialize Policy Java Object Cache.

Category:
Compliance

Cause:
Cannot initialize the Policy Cache.

Action:
You may need to restart the server.

WSM-06155
Could not re-create Policy Java Object Cache.

Category:
Compliance

Cause:
Could not re-create the Policy Cache.

Action:
You may need to restart the server.

WSM-06156
The policy referenced by URI "{0}" could not be retrieved since the URI is invalid.

Category:
Compliance

Cause:
The policy URI is missing, empty or contains invalid characters.

Action:
Provide a valid URI for a policy in the repository or remove the reference.

WSM-06157
The policy referenced by URI "{0}" could not be retrieved due to incorrect repository configuration.

Category:
Compliance

Cause:
The repository database is not configured correctly or not running.

Action:
Verify that the repository database is configured correctly according to the user documentation and is running.

WSM-06158
The policy referenced by URI "{0}" does not exist in the repository.

Category:
Data

Cause:
The referenced policy does not exist in the repository.

Action:
Provide the URI for a policy in the repository or load the desired policy into the repository.

WSM-06159
The policy referenced by URI "{0}" could not be retrieved due to invalid credential "{1}" being used to connect to the Policy Manager.

Category:
Compliance

Cause:
Cannot connect to the policy manager due to credential issue.

Action:
Verify that credentials are correctly specified, if not using the default principal, and that the principal is authorized to access the policy manager application.

WSM-06160
The policy referenced by URI "{0}" could not be retrieved since Policy Manager is either not deployed or not in active state.

Category:
Compliance

Cause:
The policy manager application has not been deployed or is not running.

Action:
Verify that the policy manager application is deployed and configured correctly and in an active state.

WSM-06161
The policy referenced by URI "{0}" could not be retrieved since Policy Manager is not deployed.

Category:
Compliance

Cause:
The policy manager application has not been deployed.

Action:
Verify that the policy manager application is deployed.

WSM-06162
The policy referenced by URI "{0}" could not be retrieved as connection to Policy Manager cannot be established at "{1}" due to invalid configuration or inactive state.

Category:
Compliance

Cause:
The policy manager application is not running or is not configured correctly.

Action:
Verify that the policy manager application is configured correctly and is in an active state. Provide correct configuration for URL of policy manager, setting its listen address if using auto-discovery, and ensure that any required SSL certificate is valid.

WSM-06163
The policy referenced by URI "{0}" could not be retrieved as connection to Policy Manager cannot be established due to invalid certificate configuration.

Category:
Compliance

Cause:
Cannot connect to the policy manager due to certificate issue.

Action:
Verify that credential store and trust store location are correctly specified, and ensure that the certificate entry is valid.

WSM-06201
The {0} repository accessor class cannot be accessed due to underlying error "{1}".

Category:
Configuration

Cause:
The nullary constructor for the specified accessor is not accessible to the configuration framework.

Action:
Specify a valid accessor.

WSM-06202
The {0} repository accessor class cannot be initialized due to underlying error "{1}".

Category:
Configuration

Cause:
A exception was encountered during evaluation of a static initializer for the specified accessor class.

Action:
Specify a valid accessor.

WSM-06203
The {0} repository accessor class cannot be used as a repository accessor because it does not implement the {1} interface.

Category:
Configuration

Cause:
The specified accessor does not implement the IRepositoryAccessor interface.

Action:
Specify a valid accessor.

WSM-06204
The {0} repository accessor class cannot be linked due to underlying error "{1}".

Category:
Configuration

Cause:
The specified accessor depends on a class whose signature has changed since the accessor was compiled.

Action:
Update the accessor class or revert to an older version of the dependent class.

WSM-06205
The repository accessor "{0}" cannot be found due to underlying error "{1}".

Category:
Configuration

Cause:
The specified accessor was not found.

Action:
Specify a valid accessor.

WSM-06206
The {0} repository accessor class cannot be instantiated due to underlying error "{1}".

Category:
Configuration

Cause:
The specified accessor is an abstract class, an interface, an array class, a primitive type, or void, or the class does not have a nullary constructor.

Action:
Specify a valid accessor.

WSM-06207
A task scheduler was not available for configuring the {0} repository accessor for context "{1}".

Category:
Configuration

Cause:
A task scheduler was not supplied to the configuration framework.

Action:
Provide a task scheduler to the configuration framework.

WSM-06208
Access to the {0} repository accessor class is denied due to underlying error "{1}".

Category:
Configuration

Cause:
The configuration framework does not have permission to instantiate the specified accessor.

Action:
Ensure the necessary permissions are granted to the WSM code base.

WSM-06214
A task scheduler was provided for configuring the {0} repository accessor for context "{1}".

Category:
Configuration

Cause:
A task scheduler was supplied to the configuration framework.

Action:
None.

WSM-06219
A task scheduler was not available for configuring the {0} repository accessor for the default context.

Category:
Configuration

Cause:
A task scheduler was not supplied to the configuration framework.

Action:
Provide a task scheduler to the configuration framework.

WSM-06220
A task scheduler was provided for configuring the {0} repository accessor for the default context.

Category:
Configuration

Cause:
A task scheduler was supplied to the configuration framework.

Action:
None.

WSM-06221
The password credentials cannot be obtained from the Credential Store.

Category:
Configuration

Cause:
Failure occurred while querying for credentials from CSF.

Action:
Check CSF configuration.

WSM-06222
The credentials passed to the credentials store are expired.

Category:
Configuration

Cause:
The Credentials have expired.

Action:
Ensure valid credentials are passed

WSM-06223
The access to the store or credentials is denied.

Category:
Configuration

Cause:
The requested access Credentials or Store is denied.

Action:
Ensure Store is properly initialized and valid credentials are passed

WSM-06224
Unexpected exception "{0}" caught when privileged method is called.

Category:
Configuration

Cause:
Unexpected exception caught on calling a privileged code.

Action:
Check the underlying signature of method called in privileged code

WSM-06225
Unable to retrieve credentials for the specified CSF key {0}.

Category:
Configuration

Cause:
Credential configuration in the policy accessor configuration file was incorrect.

Action:
Configure policy with valid CSF key.

WSM-06226
An instance of the {0} bean was obtained for accessing the local repository at path "{1}".

Category:
Configuration

Cause:
A bean instance was obtained by the configuration framework.

Action:
None.

WSM-06227
An instance of the {0} bean was obtained for accessing the remote repository.

Category:
Configuration

Cause:
A bean instance was obtained by the configuration framework.

Action:
None.

WSM-06228
Unable to retrieve "ENTERPRISE" model via classpath accessor during configuration initialization.

Category:
Configuration

Cause:
The seed ENTERPRISE model cannot be retrieved via ClasspathAccessor during configuration manager startup.

Action:
Verify the availability of seed documents jar witin the classpath.

WSM-06229
Unable to retrieve "default" resource via classpath accessor during configuration initialization.

Category:
Configuration

Cause:
The seed default resource cannot be retrieved via ClasspathAccessor during configuration manager startup.

Action:
Verify the availability of seed documents jar witin the classpath.

WSM-06301
Subject Metadata is required when registering a listener.

Category:
Programmatic

Cause:
A null value was provided for the subject metadata.

Action:
Provide a valid metadata.

WSM-06302
A listener is required for asynchronous notification.

Category:
Programmatic

Cause:
A null value was provided for asynchronous listener registration.

Action:
Provide a valid listener.

WSM-06303
The method "{0}" was not called with required permission "{1}"

Category:
Security

Cause:
The method was not called with required permission

Action:
Ensure necessary permissions are granted to the caller before calling the required methods.

WSM-06401
The assembly referenced by "{0}" is not registered with the application.

Category:
Programmatic

Cause:
The assembly is not registered with the application.

Action:
Retry the operation after registering the assembly with the application.

WSM-06402
The resource pattern identifying the metadata model is not provided.

Category:
Programmatic

Cause:
The resource pattern identifying the metadata is not provided.

Action:
Ensure that a valid resource pattern is passed for identifying the metadata.

WSM-06403
Valid instance of StorageProvider must be provided for accessing the assembly file.

Category:
Programmatic

Cause:
A storage provider is required for extracting metadata information from assembly file.

Action:
Retry the operation with valid instance of storage provider.

WSM-06404
The resource pattern "{0}" identify the subject is invalid or incomplete .

Category:
Programmatic

Cause:
The resource pattern identifying the subject is invalid.

Action:
Retry the operation with valid value for subject resource pattern.

WSM-06405
The subject referenced by "{0}" is not registered with the assembly.

Category:
Programmatic

Cause:
The subject is not registered with the assembly.

Action:
Retry the operation after registering the subject with the assembly.

WSM-06406
Valid PolicySubjectDefinition must be provided for retrieving the effective policy set.

Category:
Programmatic

Cause:
The subject definition is not provided for creating policy set.

Action:
Provide valid value for subject definition for creating policy set.

WSM-06407
Attempted to register the listener "{0}" to a policy subject "{1}" which was already previously registered with listener "{2}".

Category:
Programmatic

Cause:
Attempt to reregistering a listener for a policy subject.

Action:
Make sure that a policy subject registers a listener only once.

WSM-06408
The local policy attachment data for policy subject "{0}" is not available due to underlying IO exception "{1}".

Category:
Data

Cause:
The policy assembly containing the policy subject's metadata cannot be accessed.

Action:
Correct the underlying condition and retry the operation.

WSM-06409
The local policy attachment data for policy subject "{0}" is not available due to underlying JAXB exception "{1}".

Category:
Data

Cause:
The policy assembly containing the policy subject's metadata is corrupt.

Action:
Correct the underlying condition and retry the operation.

WSM-06410
JMX APIs are not available in this environment, verify environment configuration for JMX.

Category:
Data

Cause:
JMX api's are not available in this environment, so not initializing PolicyApplicationMBean

Action:
Verify environment configuration for JMX.

WSM-06411
A task scheduler was not available for configuring the repository accessor due to undelying error "{0}".

Category:
Configuration

Cause:
OWSM Configuration Manager not able to set the task scheduler.

Action:
Provide a task scheduler to the configuration framework.

WSM-06412
The partition aware scheduler fetch failed due to underlying Naming exception "{0}".

Category:
Data

Cause:
The partition aware scheduler cannot be fetched.

Action:
Correct the underlying condition and retry the operation.

WSM-06413
The value of term "{0}" from resource pattern terms "{1}" is not provided and cannot be resolved by platform support API either, hence will be set to default "{2}", please verify the cause.

Category:
Data

Cause:
PlatformSupport API returned unexpected null value in J2EE environment.

Action:
Check the log for more info and possible cause.

WSM-07501
Failure in Oracle WSM Agent processRequest, category={0}, function={1}, application={2}, composite={3}, modelObj={4}, policy={5}, policyVersion={6}, assertionName={7}.

Category:
Configuration

Cause:
Processing request failed in the security interceptor while enforcing policy.

Action:
Check the log file for possible causes.

WSM-07502
Failure in Oracle WSM Agent processResponse, category= {0}, function={1}, application={2}, composite={3}, modelObj={4}, policy={5}, policyVersion={6}, assertionName={7}.

Category:
Configuration

Cause:
Processing response failed in the security interceptor while enforcing policy.

Action:
Check the log file for possible causes.

WSM-07503
Failure in Oracle WSM Agent processFault, category= {0}, function={1}, application={2}, composite={3}, modelObj={4}, policy={5}, policyVersion={6}, assertionName={7}.

Category:
Configuration

Cause:
Processing fault failed in the security interceptor while enforcing policy.

Action:
Check the log file for possible causes.

WSM-07504
Failure in Oracle WSM Agent processEvent, category= {0}, function={1}, application={2}, composite={3}, modelObj={4}.

Category:
Configuration

Cause:
Processing Fabric Lifecycle event failed in security interceptor.

Action:
Check the log file for possible causes

WSM-07505
Failure in Oracle WSM Agent initialization, category= {0}, function={1}.

Category:
Configuration

Cause:
Agent initialization failed in the security interceptor.

Action:
Check the log file for possible causes.

WSM-07506
Failure in Oracle WSM Agent processFinish, category= {0}, function={1}, application={2}, composite={3}, modelObj={4}.

Category:
Configuration

Cause:
Agent finish failed in the security interceptor.

Action:
Check the log file for possible causes.

WSM-07507
Failure in Oracle WSM Agent, category= {0}, function={1}, stage={2} due to RuntimeException.

Category:
Data

Cause:
An unexpected RuntimeException was encountered while trying to access security interceptor.

Action:
Check the log file for possible causes and retry the operation.

WSM-07508
Oracle WSM Agent initialization failed due to PolicySet validation errors: {0}, with PolicySet={1}

Category:
Configuration

Cause:
Agent not initialized due to PolicySet validation errors

Action:
Check the log for detail

WSM-07509
Oracle WSM Agent must be initialized with valid properties. Following parameters [{0}] are either Empty or null

Category:
Configuration

Cause:
Agent not initialized with valid parameters.

Action:
Initialize the Agent with required parameters

WSM-07510
JAX-RS Filter is already initialized for policy subject with Resource Pattern "{0}". It can not be passed another PolicySubjectDefintion with Resource Patter "{1}". {2}

Category:
Data

Cause:
The JAX-RS Filter was already initialized with a PolicySubjectDefinition. It can not be passed any more PolicySubjectDefinition objects.

Action:
Do not Initialize the JAX-RS Filter multiple times.

WSM-07511
Failed to initialize JAX-RS Filter. The PolicySubjectDefinition array is either null, empty or has length > 1

Category:
Data

Cause:
JAX-RS Filter not initialized with an array of PolicySubjectDefinition objects whose length is exactly 1. The filter supports a single PolicySubjectDefinition at any time.

Action:
Create a PolicySubjectDefinition array with a single object and retry the operation.

WSM-07512
PolicySubjectDefinition could not be created for the JAX-RS resource. The JAX-RS resource object passed to create PolicySubjectDefinition was null.

Category:
Programmatic

Cause:
PolicySubjectDefinition could not be created for the JAX-RS resource. The JAX-RS resource object passed to create PolicySubjectDefinition was null.

Action:
Pass a valid, non-null resource class object.

WSM-07513
A resource filter could not be created for the JAX-RS resource. Either the HttpServletRequest [{0}] or the HttpServletResponse [{1}] passed to the constructor was null.

Category:
Programmatic

Cause:
RESTResourceFilter could not be instantiated. Either of the servlet request or response objects passed by the RESTResourceFilterFactory was null.

Action:
Make sure the HttpServletRequest/Response objects were injected in the filter factory.

WSM-07514
OWSM Security Filter failed to initialize. The param-value of "oracle.wsm.metadata.policySet" init-param can not be parsed.

Category:
Configuration

Cause:
The XML value configured as CDATA for "oracle.wsm.metadata.policySet" init-param in the application's web.xml was not parsed successfully.

Action:
Make sure that the value of "oracle.wsm.metadata.policySet" init-param is well-formed XML enclosed as CDATA.

WSM-07515
OWSM Security Filter failed to initialize. The filter was unable to create a valid ResourcePattern object for this servlet: {0}.

Category:
Configuration

Cause:
The servlet may be under the default (root) context path.

Action:
Make sure that the servlet to be protected is not under the default (root) context path.

WSM-07516
OWSM Authorization Code Client Filter failed to initialize. The param-value of "oracle.wsm.metadata.policySet" init-param can not be parsed.

Category:
Configuration

Cause:
The XML value configured as CDATA for "oracle.wsm.metadata.policySet" init-param in the application's web.xml was not parsed successfully.

Action:
Make sure that the value of "oracle.wsm.metadata.policySet" init-param is well-formed XML enclosed as CDATA.

WSM-07600
Error while copying the message.

Category:
Security

Cause:
An unexpected error occurred while cloning SOAP or normalized message context.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-07601
Failure initializing the WSPolicyExecutor class {0}.

Category:
Configuration

Cause:
An unexpected error occurred while initializing the policy engine.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-07602
Failure in WS-Policy Execution due to exception.

Category:
Security

Cause:
Due to an unexpected error, policy execution failed at runtime.

Action:
Check the log file for possible causes.

WSM-07603
Failure in log assertion execution caused by exception.

Category:
Files

Cause:
File I/O problem or SOAP message access problem occurred.

Action:
Verify file access permission and the SOAP message.

WSM-07604
Internal error during policy enforcement.

Category:
Security

Cause:
An unexpected error occurred while enforcing the policy.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-07605
The binding.ws port ID {0} is invalid.

Category:
Configuration

Cause:
An unexpected error occurred in the Oracle WSM processEvent API.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-07606
Policy {0} execution failure.

Category:
Security

Cause:
Due to an unexpected error, policy execution failed at runtime.

Action:
Check the log file for possible causes.

WSM-07607
Failure in execution of assertion {0} executor class {1}.

Category:
Security

Cause:
The policy engine failed to execute an assertion.

Action:
Check the log file for possible causes.

WSM-07608
The assertion type is not valid.

Category:
Security

Cause:
Policy execution failed due to an invalid assertion.

Action:
Check the assertion type.

WSM-07609
Policy with attachto value of {0} cannot be applied to subject of type {1}.

Category:
Security

Cause:
The attached policy was incompatible with the subject.

Action:
Verify that the subject type and the policy's Attachto value are compatible.

WSM-07610
Internal error in policy status audit. One or more of the argument passed is null, result:{0}, agentFunction:{1}, policy:{2}, msgCtx:{3}

Category:
Configuration

Cause:
An internal error occurred; the enforcement auditor encountered one or more null arguments.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-07611
Failure initializing of enforcement auditor: category={0}, function= {1}, topologyNode={2}.

Category:
Configuration

Cause:
An internal error occurred; the enforcement auditor initialization failed.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-07612
Failure shutting down enforcement auditor.

Category:
Configuration

Cause:
An internal error occurred; the enforcement auditor shutdown failed.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-07613
Failure enforcing auditing policy.

Category:
Configuration

Cause:
An internal error occurred while auditing security or management policy enforcement.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-07614
Failure in Agent initialization due to invalid topology node path. Topology node path cannot be null or empty for non-JSE client. category={0}, function={1}, topologyNode={2}, isRunningInJEE={3}

Category:
Configuration

Cause:
Oracle WSM Agent initialization failed due to problem creating and initializing DMS instrumentation. An invalid, null, or empty topology node path was encountered for non-JSE client.

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-07616
Resource name not retrievable from MessageContext. Guard evaluation requires resource name to be present in MessageContext

Category:
Security

Cause:
Resource name not retrievable from MessageContext. Guard evaluation requires resource name to be present in MessageContext

Action:
Retry the operation. If the problem persists, contact Oracle Support Services.

WSM-07617
Policy: {0} contains unsupported assertions.

Category:
Security

Cause:
Policy contains unsupported assertions. Assertions of type http-security are not supported for WLS JAXWS web services.

Action:
Check the assertion type.

WSM-07618
Failed to execute the assertion "{0}" in the conditional policy. {1}

Category:
Security

Cause:
Failed to execute the assertion

Action:
Check exception stack trace for details

WSM-07619
Failed to retrieve the Weblogic Server subject.

Category:
Security

Cause:
An error occurred while retrieving Weblogic Server subject.

Action:
Check log file for possible cause.

WSM-07620
Agent cannot enforce policies due to either failure in retrieving polices or error in validations, detail= "{0}".

Category:
Security

Cause:
Either policies can not be retrieved or Policy/PolicySet have validation errors.

Action:
Correct the validation errors and retry again.

WSM-07621
Oracle WSM Advertisement Engine failed with valid PolicySet, validation errors: [{0}], and PolicySet: [{1}]

Category:
Other

Cause:
Advertisment failed due to runtime PolicySet validation error in WSMEngineInvoker

Action:
Check log for detail to correct Runtime PolicySet

WSM-07622
The agent instance for enforcement cannot be null for scope "{0}". Check logs for details.

Category:
Data

Cause:
The agent instance for enforcement is null.

Action:
Check server logs for more details.

WSM-09001
The audit event definitions cannot be found.

Category:
Configuration

Cause:
Component audit event definitions were missing.

Action:
Check the installation for any missing or corrupted JAR files.

WSM-09002
The audit event definitions file cannot be opened.

Category:
Configuration

Cause:
Component audit event definitions could not be opened.

Action:
Check the installation for any corrupted JAR files, or free up system resources.

WSM-09003
The audit event definitions file cannot be read.

Category:
Configuration

Cause:
Component's audit event definitions were not readable.

Action:
Check the installation for any corrupted JAR files.

WSM-09004
Component auditing cannot be initialized.

Category:
Logging

Cause:
The audit framework encountered an error.

Action:
Check the logs for the possible causes.

WSM-09005
It is not possible to verify that the event is enabled.

Category:
Logging

Cause:
The audit framework encountered an error.

Action:
Check the logs for the possible causes.

WSM-09006
The event cannot be audited. Another attempt will be made to audit the event.

Category:
Logging

Cause:

Action:

WSM-09007
The event cannot be audited.

Category:
Logging

Cause:
The audit framework encountered an error.

Action:
Check the logs for the possible causes.

WSM-09008
A URL cannot be created for {0}.

Category:
Logging

Cause:
XML utility encountered an error.

Action:
Check the logs for the possible causes.

WSM-09009
Failure parsing the XML file

Category:
Logging

Cause:
XML utility encountered an error.

Action:
Check the logs for the possible causes.

WSM-09010
Error opening and/or closing the stream

Category:
Logging

Cause:
XML utility encountered an error.

Action:
Check the logs for the possible causes.

WSM-09011
Error writing the XML file

Category:
Logging

Cause:
XML utility encountered an error.

Action:
Check the logs for the possible causes.

WSM-09012
Key, {0}, is not found in the resource bundle {1}.

Category:
Configuration

Cause:
No key was found in the provided resource bundle.

Action:
Add the key to the resource bundle and retry the operation.

WSM-09013
Failure shutting down auditing.

Category:
Logging

Cause:
An exception was caught when attempting to shut down the audit framework.

Action:
Examine the stack trace for any underlying errors.

WSM-09014
Streaming SOAP message attachment is not being logged.

Category:
Logging

Cause:
SOAP message attachment was not logged because it was a streaming attachment.

Action:
Check the logs for the possible causes.

WSM-09015
Interrupted while checking out object from pool.

Category:
Other

Cause:
Received interrupt while checking out from pool.

Action:
Check the logs for the possible causes.

WSM-09016
Failure creating transformer using factory {0}.

Category:
Other

Cause:
Transformer factory failed to create new transformer instance.

Action:
Check the logs for the possible causes.

WSM-09017
Failure checking out a transformer instance.

Category:
Other

Cause:
Failure checking out a transformer instance.

Action:
Check the logs for the possible causes.

WSM-09018
A ScheduledExecutorService is required when creating a scheduler wrapper.

Category:
Other

Cause:
A ScheduledExecutorService was not provided when constructing a wrapper.

Action:
Provide a valid ScheduledExecutorService instance.

WSM-09019
An executor requires a task for scheduling.

Category:
Other

Cause:
A task was not provided when scheduling a task.

Action:
Provide a valid task.

WSM-09020
An executor rejected a task due to error "{0}".

Category:
Other

Cause:
The ScheduledExecutorService refused to schedule a task.

Action:
Check the logs for the possible causes.

WSM-09021
A TimerManager is required when creating a scheduler wrapper.

Category:
Other

Cause:
A TimerManager was not provided when constructing a wrapper.

Action:
Provide a valid TimerManager instance.

WSM-09022
A timer cannot schedule a task due to illegal argument error "{0}".

Category:
Other

Cause:
A task was not provided when scheduling a task. The scheduling parameters were negative.

Action:
Provide a valid task. Provide non-negative values.

WSM-09023
A timer cannot schedule a task due to illegal state error "{0}".

Category:
Other

Cause:
A task could not be scheduled because the underlying TimerManager was stopped.

Action:
Schedule the task using a running TimerManager.

WSM-09024
Failure parsing the XML URL when: {0}, from: {1}

Category:
Logging

Cause:
XML utility parseXMLDocument from URL encountered an error.

Action:
Check the logs for the possible causes.

WSM-09025
Unable to initialize WSM Coherence cache service, Defaulting to local Coherence cache. {0}

Category:
Logging

Cause:
Unable to initialize Coherence cache service.

Action:
Make sure that the Coherence is properly configured for the cluster environment.

WSM-09027
Resource bundle {0} is missing.

Category:
Configuration

Cause:
Resource bundle is missing.

Action:
Add the resource bundle and retry the operation.

WSM-09028
Failed to get server log directory due to error {0}.

Category:
Other

Cause:
Failed to get server Log directory.

Action:
See logs for details.

WSM-09029
Diagnostic logging handler creation failed due to error {0}.

Category:
Other

Cause:
Failed to create handler for diagnosis logs.

Action:
See logs for details.
