Do one of the following:\n 1. Choose a correct section name for the duplicated application section.\n 2. Choose an alternative name for the newly created application section.

FRC-60108
error processing configuration, invalid entry at line:{0}

Category:
Configuration

Cause:
An unexpected error occurred while persisting the configuration.

Action:
Fix the configuration and submit it again.

11

FRM-41480 to FRM-99999

FRM-41480
error in FSCRATCHPAD.EXPAND_TEMPLATE: syntax error in URI template {0} at offset {1} [characters]

Category:
Data

Cause:
The URI template specified by the 'uri_template' parameter passed to FSCRATCHPAD.EXPAND_TEMPLATE was not syntactically correct [RFC 6570, level 4].

Action:
Correct the URI template.

FRM-41484
error in FSCRATCHPAD.EXPAND_TEMPLATE: "parameters" contains an element of unexpected type; its JSON pointer is {0}

Category:
Data

Cause:
The values of the children of the JSON object specified by the 'parameters' parameter passed to FSCRATCHPAD.EXPAND_TEMPLATE must be strings, arrays of strings, or objects whose child values are strings or arrays of strings. A violation of this constraint was detected.

Action:
Correct the offending element.

FRM-41486
error in FSCRATCHPAD.EXPAND_TEMPLATE: "parameters" contains an element with an object key containing an invalid %-encoding; the element"s JSON pointer is {0}

Category:
Data

Cause:
A child element of the JSON object specified by the 'parameters' parameter passed to FSCRATCHPAD.EXPAND_TEMPLATE corresponded to a variable in a '+' or '#' expression in the URI template specified by the 'uri_template' parameter, and the object key of the child element or an element within it contained an invalid sequence of 3-byte %-encodings. Each %-encoding must consist of '%' followed by 2 hex digits, and the sequence of bytes denoted by the %-encodings must be a valid AL32UTF8 representation of a Unicode character.

Action:
Correct the offending element.

FRM-41487
error in FSCRATCHPAD.EXPAND_TEMPLATE: "parameters" contains a STRING element with a value containing an invalid %-encoding; the element"s JSON pointer is {0}

Category:
Data

Cause:
A child element of the JSON object specified by the 'parameters' parameter passed to FSCRATCHPAD.EXPAND_TEMPLATE corresponded to a variable in a '+' or '#' expression in the URI template specified by the 'uri_template' parameter, and the value of the child element or an element within it contained an invalid sequence of 3-byte %-encodings. Each %-encoding must consist of '%' followed by 2 hex digits, and the sequence of bytes denoted by the %-encodings must be a valid AL32UTF8 representation of a Unicode character.

Action:
Correct the offending element.

FRM-41492
error in runtime process: FSCRATCHPAD contents or FJSON string value not a valid base64 encoding: invalid byte detected at offset {0} [bytes]

Category:
Data

Cause:
'base64_decode := true' was specified for FSCRATCHPAD.TO_FILE or FJSON.STRING_VALUE_TO_FILE, but the scratchpad contents (up to the string specified by the 'stop_at' parameter, if specified) or the JSON string value did not constitute a valid base64 encoding. A valid base64 encoding must contain only white space [blank, tab, carriage return, or line feed] or base64 alphabet characters ['A'-'Z', 'a'-'z', '0'-'9', '+', '/', or '=']. '=' characters are not required, but if present, they must occur only at the end, and they must ensure that the total number of base64 alphabet characters is a multiple of 4. If the invalid base64 encoding was obtained from a string element retrieved from a REST endpoint, a subsequent FRM-41592 provides the offending string element's JSON pointer.

Action:
Correct application logic that populates the scratchpad.

FRM-41493
error in runtime process: FSCRATCHPAD contents or FJSON string value could not be written to {0}

Category:
Files

Cause:
FSCRATCHPAD.TO_FILE or FJSON.STRING_VALUE_TO_FILE was unable to successfully write the contents to the location specified by the 'file_name' parameter.

Action:
Verify that the file name is spelled correctly and that the application has permission to write a file to the specified directory, and that the specified directory has adequate space.

FRM-41494
error in runtime process: could not find file {0} for FSCRATCHPAD or FJSON package

Category:
Files

Cause:
The 'file_name' parameter passed to FSCRATCHPAD.APPEND_FILE or FJSON.NEW_STRING_FROM_FILE specified a file that could not be found.

Action:
Verify that the file name is spelled correctly and that the application has permission to read the file.

FRM-41495
error in runtime process: error reading file {0} for FSCRATCHPAD or FJSON package

Category:
Files

Cause:
The 'file_name' parameter passed to FSCRATCHPAD.APPEND_FILE or FJSON.NEW_STRING_FROM_FILE specified a file that could not be read successfully.

Action:
Verify that the file name is spelled correctly and that the application has permission to read the file.

FRM-41516
loop in JSON parse tree

Category:
Data

Cause:
Application design error. An attempt to produce a JSON pointer for a diagnostic message detected a loop in the JSON parse tree [so it wasn't really a tree at all]: the root of the JSON parse tree was encountered while traversing its descendent elements. The production of the JSON pointer was aborted and the memory it consumed was released. The JSON pointer is shown as '?' in the diagnostic message. This condition was caused by an earlier call to FJSON.ADD, FJSON.SET, or FJSON.PUT that added a child element C to an array or object A, where C was equal to A or was an ancestor of A.

Action:
Correct the application logic.

FRM-41530
error in runtime process: {0} was passed an unexpected retrieved {1} {2}; its JSON pointer was {3}

Category:
Data

Cause:
Application design error. An FJSON.ELEMENT_T value retrieved from a REST endpoint was passed as the first parameter to a function or procedure in the FJSON package or as the second parameter to the POPULATE_GROUP_FROM_JSON procedure, and specified an element whose element type is not supported by the specified function or procedure. An FJSON.CONTENT exception was raised (except for POPULATE_GROUP_FROM_JSON). Additional information was written to ODL, starting with FRM-41539.

Action:
Correct the application logic.

FRM-41531
error in runtime process: unexpected retrieved {0} element found by {1}, which was passed a {2} whose JSON pointer was {3}, and a {4} whose value was {5}

Category:
Data

Cause:
Application design error. An FJSON.FIND_x or FJSON.GET_x function produced an element of an unexpected type that was retrieved from a REST endpoint. An FJSON.CONTENT exception was raised. Additional information was written to ODL, starting with FRM-41539.

Action:
Correct the application logic.

FRM-41532
error in runtime process: no element found where expected by {0}, which was passed a retrieved {1} whose JSON pointer was {2}, and a {3} whose value was {4}

Category:
Data

Cause:
Application design error. An FJSON.FIND_ARRAY, FJSON.FIND_OBJECT, FJSON.GET_ARRAY, or FJSON.GET_OBJECT function produced no element, and the FJSON.ELEMENT_T value passed as the first parameter to the function was retrieved from a REST endpoint. An FJSON.CONTENT exception was raised. Additional information was written to ODL, starting with FRM-41539.

Action:
Correct the application logic.

FRM-41533
error in runtime process: {0} was passed a {1} that contained an unexpected {2} element whose JSON pointer was {3}

Category:
Data

Cause:
Application design error. One of the following occurred:\n1. The JSON array passed as the first parameter to the FJSON.JOIN function contained an element that was not a JSON string.\n2. The JSON array or JSON object passed as the second parameter to the POPULATE_GROUP_FROM_JSON function contained an initial element that was a JSON object, but also contained an element that was not a JSON object.\n3. The JSON array or JSON object passed as the second parameter to the POPULATE_GROUP_FROM_JSON function contained an initial element that was a JSON array or scalar element, but also contained an element that was a JSON object.\n4. The JSON array or JSON object passed as the second parameter to the POPULATE_GROUP_FROM_JSON function contained a scalar element, or a JSON array or JSON object that in turn contained a scalar element, and the type of the scalar element did not match the corresponding record group column. [DATE columns are a special case: if a null epoch_unit was passed to POPULATE_GROUP_FROM_JSON, the corresponding scalar element must be a JSON string (representing an ISO 8601 date/time string); otherwise, it must be a JSON number (representing "epoch": seconds since 1970-01-01).]\nIn case 1, an FJSON.CONTENT exception was raised.\nIf the offending element was retrieved from a REST endpoint, additional information was written to ODL, starting with FRM-41539.

Action:
Correct the application logic.

FRM-41534
error in runtime process: {0} was passed a {1} that contained a {2} element whose JSON pointer was {3}. The element was expected to represent a date, but an ORA-0{4} exception was encountered when the conversion to date was attempted.

Category:
Data

Cause:
Application design error. The JSON array or JSON object passed as the second parameter to the POPULATE_GROUP_FROM_JSON function contained a scalar element, or a JSON array or JSON object that in turn contained a scalar element, and the corresponding record group column was of type DATE. Either a null epoch_unit was passed to POPULATE_GROUP_FROM_JSON and the scalar element was a JSON string which was not in valid ISO 8601 format, or a non-null epoch_unit was specified and the scalar element was a JSON number which was not a valid epoch. If the exception was not ORA-06502 and the FORMS_HTTP_DIAGNOSTIC_LEVEL environment variable is set to 2 or more, the offending value is displayed [FRM-41537]. If the offending element was retrieved from a REST endpoint, additional information was written to ODL, starting with FRM-41539.

Action:
Correct the application logic.

FRM-41535
error in runtime process: {0} was passed a {1} that contained a STRING element whose value was unexpectedly too large. The full JSON pointer was {2}

Category:
Data

Cause:
Application design error. The JSON array or JSON object passed as the second parameter to the POPULATE_GROUP_FROM_JSON function contained a JSON string element, or a JSON array or JSON object that in turn contained a JSON string element, and the value of the string element exceeded 32767 bytes. If the offending element was retrieved from a REST endpoint, additional information was written to ODL, starting with FRM-41539.

Action:
Correct the application logic.

FRM-41536
error in runtime process: {0} was passed a {1} that contained an element whose object key was unexpectedly too large, or was not (when expected) a valid number. The full JSON pointer was {2}

Category:
Data

Cause:
Application design error. A JSON object was passed as the second parameter to the POPULATE_GROUP_FROM_JSON function. It contained an element whose object key exceeded 32767 bytes or, in the case where the first record group column was of type NUMBER, could not be converted to a number. If the offending element was retrieved from a REST endpoint, additional information was written to ODL, starting with FRM-41539.

Action:
Correct the application logic.

FRM-41537
The value which could not be converted was {0}

Category:
Data

Cause:
This message follows FRM-41534 and displays the offending value if the exception was not ORA-06502 and the FORMS_HTTP_DIAGNOSTIC_LEVEL environment variable is set to 2 or more.

Action:
No action is required.

FRM-41539
The unexpected JSON content was produced by a {0} request to the URL generated from the URI template {1}

Category:
Data

Cause:
This message provides additional information about unexpected JSON content in the JSON text response from a REST endpoint. It may be followed by a dump of the request and the response [FRM-41690 and FRM-41691], depending on the value of the FORMS_HTTP_DIAGNOSTIC_LEVEL environment variable.

Action:
No action is required.

FRM-41540
error in runtime process: unexpected content detected in JSON document: {0}

Category:
Data

Cause:
The application called the FJSON.UNEXPECTED_CONTENT procedure with a null target element, presumably because its logic detected unexpected content of some sort. An FJSON.CONTENT exception was raised.

Action:
Try to determine what is producing the unexpected JSON content, e.g. by contacting the owner of the REST service from which the JSON document was retrieved. Correct application logic if necessary.

FRM-41541
error in runtime process: unexpected content detected in JSON document at {0}: {1}

Category:
Data

Cause:
The application called the FJSON.UNEXPECTED_CONTENT procedure with a non-null target element, presumably because its logic detected unexpected content of some sort. An

FJSON.CONTENT exception was raised. If the offending element was retrieved from a REST endpoint, additional information was written to ODL, starting with FRM-41539.

Action:
Try to determine what is producing the unexpected JSON content, e.g. by contacting the owner of the REST service from which the JSON document was retrieved. Correct application logic if necessary.

FRM-41549
error in runtime process: unexpected scalar conversion exception ORA-0{0} encountered while processing JSON document

Category:
Data

Cause:
The application called the FJSON.ANALYZE_EXCEPTION procedure within a PL/SQL exception block, and it tentatively determined that the exception could plausibly have been produced by a PL/SQL assignment from a scalar derived from a REST endpoint response, to a PL/SQL variable (or an assignment from that variable to another using a conversion function such as TO_DATE). An FJSON.CONTENT exception was raised. Additional information was written to ODL, starting with FRM-41550 or FRM-41551.

Action:
Try to determine what is causing the scalar conversion exception. It could be due to an application design error unrelated to the REST service; if so, correct the application logic. Otherwise, try to determine what is producing the unexpected JSON content, e.g. by contacting the owner of the REST service from which the JSON document was retrieved. Correct application logic if necessary.

FRM-41550
The last scalar-producing FJSON function executed prior to calling FJSON.ANALYZE_EXCEPTION was FJSON.{0}, with a {1} whose JSON pointer was {2}, and with a {3} whose value was {4}

Category:
Data

Cause:
This message follows FRM-41549 in the case where the last scalar-producing FJSON function was a "composite" function: get_string_value, get_number_value, get_boolean_value, find_string_value, find_number_value, find_boolean_value, or find_object_key. It specifies the arguments passed to the function: target object or array, and object key or array position.

Action:
No action is required.

FRM-41551
The last scalar-producing FJSON function executed prior to calling FJSON.ANALYZE_EXCEPTION was FJSON.{0}, with a {1} whose JSON pointer was {2}

Category:
Data

Cause:
This message follows FRM-41549 in the case where the last scalar-producing FJSON function was not a composite function. It specifies the JSON element passed to the function.

Action:
No action is required.

FRM-41552
The returned value was null, because no element was found.

Category:
Data

Cause:
This message follows FRM-41550 if the FORMS_HTTP_DIAGNOSTIC_LEVEL environment variable is set to 1 or more and the composite scalar-producing FJSON function found no element.

Action:
No action is required.

FRM-41553
The returned value was null, obtained from a {0} element.

Category:
Data

Cause:
This message follows FRM-41550 or FRM-41551 if the FORMS_HTTP_DIAGNOSTIC_LEVEL environment variable is set to 1 or more and the scalar-producing FJSON function found or was passed a NULL element or a STRING element whose value was the empty string.

Action:
No action is required.

FRM-41554
The returned value was {0}

Category:
Data

Cause:
This message follows FRM-41550 or FRM-41551 if the FORMS_HTTP_DIAGNOSTIC_LEVEL environment variable is set to 2 or more and the scalar-producing FJSON function found or was passed a BOOLEAN element, a NUMBER element, or a STRING element whose value was non-empty and whose AL32UTF8 representation did not exceed 4095 bytes.

Action:
No action is required.

FRM-41555
The returned value was a non-null VARCHAR2 containing {0} characters and {1} bytes (in the NLS_LANG charset: {2}).

Category:
Data

Cause:
This message follows FRM-41550 or FRM-41551 if the FORMS_HTTP_DIAGNOSTIC_LEVEL environment variable is set to 1 and the scalar-

producing FJSON function found or was passed a STRING element whose value was non-empty, or if FORMS_HTTP_DIAGNOSTIC_LEVEL is set to 2 or more and the scalar-producing FJSON function found or was passed a STRING element whose AL32UTF8 representation exceeded 4095 bytes.

Action:
No action is required.

FRM-41556
The returned value was a non-null NUMBER{0} (when rounded to an integer).

Category:
Data

Cause:
This message follows FRM-41550 or FRM-41551 if the FORMS_HTTP_DIAGNOSTIC_LEVEL environment variable is set to 1 and the scalar-producing FJSON function found or was passed a NUMBER element. It indicates whether the value was zero, positive, or negative, and whether it would fit in a PLS_INTEGER.

Action:
No action is required.

FRM-41557
The returned value was a non-null BOOLEAN.

Category:
Data

Cause:
This message follows FRM-41550 or FRM-41551 if the FORMS_HTTP_DIAGNOSTIC_LEVEL environment variable is set to 1 and the scalar-producing FJSON function found or was passed a BOOLEAN element.

Action:
No action is required.

FRM-41560
error in runtime process: syntax error in retrieved JSON text at offset {0} [bytes]

Category:
Data

Cause:
A parse of the JSON text response from a REST endpoint encountered a violation of RFC 7159. The parse was aborted, and the memory that had already been allocated for the parse tree was made available for subsequent JSON parse tree operations. An FJSON.PARSE_FAILURE exception was raised. Additional information was written to ODL, starting with FRM-41569.

Action:
Try to determine why the erroneous JSON text is being returned, e.g. by contacting the owner of the REST service.

FRM-41561
error in runtime process: oversize object key in retrieved JSON text, ending at offset {0} [bytes]

Category:
Data

Cause:
A parse of the JSON text response from a REST endpoint encountered an oversize object key in an object member definition. By default, Oracle Forms does not support object keys whose AL32UTF8 representation exceeds 32767 bytes. [Larger keys cannot be used in PL/SQL VARCHAR2 variables.] The parse was aborted, and the memory that had already been allocated for the parse tree was made available for subsequent JSON parse tree operations. An FJSON.PARSE_FAILURE exception was raised. Additional information was written to ODL, starting with FRM-41569.

Action:

FRM-41562
error in runtime process: oversize array or object in retrieved JSON text, detected at offset {0} [bytes]

Category:
Data

Cause:
A parse of the JSON text response from a REST endpoint encountered an array or object which contained 2G elements or more. The parse was aborted, and the memory that had already been allocated for the parse tree was made available for subsequent JSON parse tree operations. An FJSON.PARSE_FAILURE exception was raised. Additional information was written to ODL, starting with FRM-41569.

Action:
Try to determine why the oversize array or object is being returned, e.g. by contacting the owner of the REST service.

FRM-41569
The JSON text which could not be parsed was produced by a {0} request to the URL generated from the URI template {1}

Category:
Data

Cause:
This message provides additional information about a parse error in the JSON text response from a REST endpoint. It may be followed by a dump of the request and the response [FRM-41690 and FRM-41691], depending on the value of the FORMS_HTTP_DIAGNOSTIC_LEVEL environment variable.

Action:
No action is required.

FRM-41570
error in runtime process: JSON parse memory limit exceeded

Category:
Memory

Cause:
A parse of the JSON text response from a REST endpoint required more memory than the JSON parse memory limit (4Gb or the limit specified by the

FORMS_JSON_PARSE_MEMORY_LIMIT environment variable). The parse was aborted, and the memory that had already been allocated for the parse tree was made available for subsequent JSON parse tree operations. An FJSON.PARSE_ALLOCATION exception was raised.

Action:
Modify the selection criteria specified in the request to the REST endpoint, so as to limit the size of the response, or increase the value of the FORMS_JSON_PARSE_MEMORY_LIMIT environment variable.

FRM-41571
error in runtime process: JSON new memory limit exceeded

Category:
Memory

Cause:
An attempt to programmatically create a JSON element (using e.g. FJSON.CLONE or an FJSON.NEW_x function) would have caused the memory consumed by all programmatically created JSON elements to exceed the new memory limit (4Gb or the limit specified by the FORMS_JSON_NEW_MEMORY_LIMIT environment variable). An FJSON.GLOBAL_ALLOCATION exception was raised.

Action:
Revise application logic so as to programmatically create fewer JSON elements, or increase the value of the FORMS_JSON_NEW_MEMORY_LIMIT environment variable.

FRM-41572
error in runtime process: JSON memory allocation failed

Category:
Memory

Cause:
An operation to create, update, or generate a JSON parse tree was unable to allocate adequate memory. An FJSON.GLOBAL_ALLOCATION exception was raised..

Action:
Modify the selection criteria specified in the request to the REST endpoint, so as to limit the size of the response, or revise application logic so as to programmatically create fewer JSON elements.

FRM-41573
error in runtime process: JSON parse trees require excessive memory for element values

Category:
Memory

Cause:
This error arises only if both the following occur:\n1. The FORMS_JSON_KEY_LENGTH_BITS environment variable [which defaults to 15, limiting object keys to 32767 bytes] was set to a value N in the range 16..30 [the maximum allowed].\n2. The total number of bytes required for all strings, numbers, and hash arrays for all elements in all JSON parse trees exceeded 2 raised to the power of 64-N.\nIf this error occurred, then an FJSON.GLOBAL_ALLOCATION exception was raised.

Action:
Modify the selection criteria specified in the request to the REST endpoint, so as to limit the size of the response, or revise application logic so as to programmatically create fewer JSON elements.

FRM-41574
error in runtime process: too many elements in JSON parse trees

Category:
Memory

Cause:
An operation to create or update a JSON parse tree would have caused the total number of elements in all JSON parse trees to equal or exceed 4G. An FJSON.GLOBAL_ALLOCATION exception was raised.

Action:
Modify the selection criteria specified in the request to the REST endpoint, so as to limit the size of the response, or revise application logic so as to programmatically create fewer JSON elements.

FRM-41580
error in runtime process: invalid $ref string {0} in element at {1}: syntax error at offset {2} [characters]

Category:
Data

Cause:
The element passed to FJSON.RESOLVE$REF specified a $ref string which was not a syntactically valid URI.

Action:
Contact the provider of the service which produced the document containing the invalid JSON reference.

FRM-41581
error in runtime process: loop or overflow in recursive JSON references: {0}

Category:
Data

Cause:
The element passed to FJSON.RESOLVE$REF specified a $ref string which resolved to another $ref element, which in turn resolved to yet another $ref element, and so forth. The chain of recursive references, shown in the diagnostic message, contained a loop or more than 16 entries.

Action:
Contact the provider of the service which produced the document containing the invalid JSON reference.

FRM-41582
error in runtime process: $ref string {0} in element at {1} specifies a document which cannot be loaded: the $ref string itself resides in a document which was not loaded from a URL

Category:
Data

Cause:

Action:
Correct application logic. In general, $ref strings should not be placed in programmatically constructed documents.

FRM-41583
error in runtime process: $ref string {0} in element at {1} specifies a document which could not be loaded and parsed: an error occurred on the internal call to FHTTP.ISSUE_REQUEST

Category:
Data

Cause:
Self-explanatory

Action:
Examine the error messages that were produced for the internal call to FHTTP.ISSUE_REQUEST.

FRM-41584
error in runtime process: JSON pointer {0} could not be evaluated against document {1}: syntax error at offset {2} [characters]

Category:
Data

Cause:
Either (1) an invalid JSON pointer was passed to FJSON.EVALUATE_POINTER, or (2) the element passed to an invocation of FJSON.RESOLVE$REF specified a $ref string whose fragment [the portion after the '#'] was not a valid JSON pointer. The JSON pointer did not begin with '/' or contained an invalid escape sequence ['~' not followed by '0' or '1'].

Action:
In case (1), correct the application logic. In case (2), contact the provider of the service which produced the document containing the invalid JSON reference.

FRM-41585
error in runtime process: JSON pointer {0} could not be evaluated against document {1}: element specified by portion preceding '/' at offset {2} [characters] is not an object or array

Category:
Data

Cause:
Either (1) an invalid JSON pointer was passed to FJSON.EVALUATE_POINTER, or (2) the element passed to an invocation of FJSON.RESOLVE$REF specified a $ref string whose fragment [the portion after the '#'] was not a valid JSON pointer. The JSON pointer contained a '/' at the specified offset, but the portion of the specified JSON pointer preceding that '/' specified a scalar JSON element.

Action:
In case (1), correct the application logic. In case (2), contact the provider of the service which produced the document containing the invalid JSON reference.

FRM-41586
error in runtime process: JSON pointer {0} could not be evaluated against document {1}: key specified after "/" at offset {2} [characters] does not exist in the object specified by portion preceding the "/"

Category:
Data

Cause:
Either (1) an invalid JSON pointer was passed to FJSON.EVALUATE_POINTER, or (2) the element passed to an invocation of FJSON.RESOLVE$REF specified a $ref string whose fragment [the portion after the '#'] was not a valid JSON pointer. The JSON pointer contained a '/' at the specified offset, and the portion of the specified JSON pointer preceding that '/' specified an object, but that object did not contain the key specified after the '/'.

Action:
In case (1), correct the application logic. In case (2), contact the provider of the service which produced the document containing the invalid JSON reference.

FRM-41587
error in runtime process: JSON pointer {0} could not be evaluated against document {1}: invalid array index specified after "/" at offset {2} [characters]

Category:
Data

Cause:
Either (1) an invalid JSON pointer was passed to FJSON.EVALUATE_POINTER, or (2) the element passed to an invocation of FJSON.RESOLVE$REF specified a $ref string whose fragment [the portion after the '#'] was not a valid JSON pointer. The JSON pointer contained a '/' at the specified offset, and the portion of the specified JSON pointer preceding that '/' specified an array, but the array index specified after the '/' was not a valid nonnegative decimal number.

Action:
In case (1), correct the application logic. In case (2), contact the provider of the service which produced the document containing the invalid JSON reference.

FRM-41588
error in runtime process: JSON pointer {0} could not be evaluated against document {1}: array index specified after "/" at offset {2} [characters] does not fall within the array specified by portion preceding the "/"

Category:
Data

Cause:
Either (1) an invalid JSON pointer was passed to FJSON.EVALUATE_POINTER, or (2) the element passed to an invocation of FJSON.RESOLVE$REF specified a $ref string whose fragment [the portion after the '#'] was not a valid JSON pointer. The JSON pointer contained a '/' at the specified offset, and the portion of the specified JSON pointer preceding that '/' specified an array, but that array did not contain the element specified by the 0-relative index after the '/'.

Action:
In case (1), correct the application logic. In case (2), contact the provider of the service which produced the document containing the invalid JSON reference.

FRM-41592
The invalid base64 encoding was obtained from a STRING element whose JSON pointer was {0}

Category:
Data

Cause:
This message provides additional information about an invalid base64 encoding [reported in a preceding FRM-41492] in the JSON text response from a REST endpoint. It may be followed by a dump of the request and the response [FRM-41690 and FRM-41691], depending on the value of the FORMS_HTTP_DIAGNOSTIC_LEVEL environment variable.

Action:
No action is required.

FRM-41610
error in FHTTP.ISSUE_REQUEST: the {0} method sent to the URL generated from the URI template {1}{2} was rejected.

Category:
Requests/Responses

Cause:
The method specified by the 'method' parameter passed to FHTTP.ISSUE_REQUEST was rejected. This can happen if a security manager is set and the method is 'TRACE', but the 'allowHttpTrace' NetPermission is not granted.

Action:
Determine whether the conditions above apply. If not, and the problem persists, contact Oracle Support Services.

FRM-41620
error in FHTTP.ISSUE_REQUEST: server URL could not be obtained due to invalid "server_url_or_id" parameter {0}.

Category:
Data

Cause:
The 'server_url_or_id' parameter passed to FHTTP.ISSUE_REQUEST must begin with 'http:', 'https:', 'ws:', or 'wss:', or else must contain only alphanumeric characters and '_', '.', '-'.

Action:
Correct the 'server_url_or_id' parameter.

FRM-41621
error in FHTTP.ISSUE_REQUEST: server URL could not be obtained due to invalid config section name {0}

Category:
Data

Cause:
If a non-null 'server_url_or_id' parameter is passed to FHTTP.ISSUE_REQUEST, and it does not begin with 'http:', 'https:', 'ws:', or 'wss:', the config section name specified as the config

parameter in the frmservlet URL used to launch the Forms application must contain only alphanumeric characters and '_', '.', '-'.

Action:
Specify a config section with a valid name in the frmservlet URL used to launch the Forms application.

FRM-41622
error in FHTTP.ISSUE_REQUEST: server URL could not be obtained due to missing credential for {0}

Category:
Configuration

Cause:
If a non-null 'server_url_or_id' parameter is passed to FHTTP.ISSUE_REQUEST, and it does not begin with 'http:', 'https:', 'ws:', or 'wss:', the Oracle Platform Security Services Credential Store must contain a generic credential for the server. The credential key must be of the form <config_section_name>=<credential_id>.

Action:
Use Fusion Middleware Control to add the generic credential. The value must be a well-formed URL which specifies a scheme of 'http', 'https', 'ws', or 'wss'.

FRM-41623
error in FHTTP.ISSUE_REQUEST: the server URL {1} specified by the credential for {0} was rejected.

Category:
Configuration

Cause:
If a non-null 'server_url_or_id' parameter is passed to FHTTP.ISSUE_REQUEST, and it does not begin with 'http:', 'https:', 'ws:', or 'wss:', the Oracle Platform Security Services Credential Store must contain a generic credential for the server. The credential key must be of the form <config_section_name>=<credential_id>. The value must be a string that's a well-formed URL which specifies a scheme of 'http', 'https', 'ws', or 'wss'.

Action:
Use Fusion Middleware Control to correct the generic credential.

FRM-41624
error in FHTTP.ISSUE_REQUEST: the server URL {1} was rejected.

Category:
Configuration

Cause:
The 'server_url_or_id' parameter passed to FHTTP.ISSUE_REQUEST began with 'http:', 'https:', 'ws:', or 'wss:', but it was not a well-formed URL.

Action:

FRM-41630
error in FHTTP.ISSUE_REQUEST: syntax error in URI template {0} at offset {1} [characters]

Category:
Data

Cause:
The URI template specified by the 'uri_template' parameter passed to FHTTP.ISSUE_REQUEST was not syntactically correct [RFC 6570, level 4].

Action:
Correct the URI template.

FRM-41633
error in FHTTP.ISSUE_REQUEST: the URL generated from the URI template {0}{1} for a {2} request was rejected.

Category:
Data

Cause:
The URL generated from the 'uri_template' and 'url_parameters' parameters passed to FHTTP.ISSUE_REQUEST was malformed or, if the 'server_url_or_id' parameter was null or not specified, did not specify a scheme of 'http', 'https', 'ws', or 'wss'.

Action:
Correct the 'uri_template' and/or 'url_parameters' parameters.

FRM-41640
error in FHTTP.ISSUE_REQUEST: "url_parameters" contains an unexpected {0} element; its JSON pointer is {1}

Category:
Data

Cause:
The values of the children of the JSON object specified by the 'url_parameters' parameter passed to FHTTP.ISSUE_REQUEST must be strings, arrays of strings, or objects whose child values are strings or arrays of strings. A violation of this constraint was detected.

Action:
Correct the offending element.

FRM-41642
error in FHTTP.ISSUE_REQUEST: "url_parameters" contains an element with an object key containing an invalid %-encoding; the element"s JSON pointer is {0}

Category:
Data

Cause:
A child element of the JSON object specified by the 'url_parameters' parameter passed to FHTTP.ISSUE_REQUEST corresponded to a variable in a '+' or '#' expression in the URI template specified by the 'uri_template' parameter, and the object key of the child element or an element within it contained an invalid sequence of 3-byte %-encodings. Each %-encoding must consist of '%' followed by 2 hex digits, and the sequence of bytes denoted by the %-encodings must be a valid AL32UTF8 representation of a Unicode character.

Action:
Correct the offending element.

FRM-41643
error in FHTTP.ISSUE_REQUEST: "url_parameters" contains a STRING element with a value containing an invalid %-encoding; the element"s JSON pointer is {0}

Category:
Data

Cause:
A child element of the JSON object specified by the 'url_parameters' parameter passed to FHTTP.ISSUE_REQUEST corresponded to a variable in a '+' or '#' expression in the URI template specified by the 'uri_template' parameter, and the value of the child element or an element within it contained an invalid sequence of 3-byte %-encodings. Each %-encoding must consist of '%' followed by 2 hex digits, and the sequence of bytes denoted by the %-encodings must be a valid AL32UTF8 representation of a Unicode character.

Action:
Correct the offending element.

FRM-41650
error in FHTTP.ISSUE_REQUEST: "request_headers" contains an unexpected {0} element; its JSON pointer is {1}

Category:
Data

Cause:
The values of the children of the JSON object specified by the 'request_headers' parameter passed to FHTTP.ISSUE_REQUEST must be strings. A violation of this constraint was detected.

Action:
Correct the offending element.

FRM-41652
error in FHTTP.ISSUE_REQUEST: "request_headers" contains an element whose object key is not a valid HTTP header name: invalid character found at offset {0} [characters]; the element"s JSON pointer is {1}

Category:
Data

Cause:
The object key of a child of the JSON object specified by the 'request_headers' parameter passed to FHTTP.ISSUE_REQUEST did not conform to the syntax for a header name specified by RFC 7230: an invalid character was found. Characters in header values must be visible USASCII characters [0x21-0x7f], and must not be any of: '"', '(', ')', ',', '/', ':', ';', '<', '=', '>', '?', '@', '[', '', ']', '{', '}'.

Action:
Correct the offending element.

FRM-41653
error in FHTTP.ISSUE_REQUEST: "request_headers" contains an element whose value is not a valid HTTP header value: invalid character found at offset {0} [characters]; the element"s JSON pointer is {1}

Category:
Data

Cause:
The value of a child of the JSON object specified by the 'request_headers' parameter passed to FHTTP.ISSUE_REQUEST did not conform to the syntax for a header value specified by RFC 7230: an invalid character was found. Characters in header values must be visible, or space, or horizontal tab. If the FORMS_HTTP_DIAGNOSTIC_LEVEL environment variable is set to 3 or 4, the invalid value is displayed in a subsequent FRM-41654 message.

Action:
Correct the offending element.

FRM-41654
The invalid header value is {0}

Category:
Data

Cause:
This message follows FRM-41653 if the FORMS_HTTP_DIAGNOSTIC_LEVEL environment variable is set to 3 or 4.

Action:
No action is required.

FRM-41660
error in FHTTP.ISSUE_REQUEST: a {0} request to the URL generated from the URI template {1}{2} encountered an error communicating with the external service.

Category:
Network

Cause:
The request issued by FHTTP.ISSUE_REQUEST encountered an IOException while attempting to communicate with the external service. A subsequent FRM-41692 message indicates where the stack trace for the IOException was written.

Action:
Inspect the stack trace in the response identified by message FRM-41692 in ODL. If the stack trace does not indicate how to fix the problem, and the problem persists, contact the owner of the external service.

FRM-41661
error in FHTTP.ISSUE_REQUEST: a {0} request to the URL generated from the URI template {1}{2} received unexpected response status code {3}.

Category:
Requests/Responses

Cause:
The request issued by FHTTP.ISSUE_REQUEST received a response status code that was not specified in the 'accept' parameter and was not one of the status codes that are always accepted, namely 200, and [for all methods except TRACE] 204, and [for PUT and POST] 201 and 205. A subsequent FRM-41691 message indicates where the body of the response was written.

Action:
If the status code is a legitimate response from the accessed external service, include it in the 'accept' parameter, and add appropriate logic to handle it. Otherwise, inspect the diagnostic information in the response identified by message FRM-41691 in ODL.

FRM-41671
error in FHTTP.ISSUE_REQUEST: the runtime process encountered a memory allocation failure while attempting to process a {0} request to the URL generated from the URI template {1}{2}

Category:

Cause:
FHTTP.ISSUE_REQUEST was unable to allocate adequate memory in the runtime process.

Action:
Specify fewer or smaller request headers or a smaller request body, or modify the selection criteria specified in the request to the external service, so as to limit the size of the response.

FRM-41672
error in FHTTP.ISSUE_REQUEST: WebLogic was unable to create a thread to process a request to an external service.

Category:
Threads

Cause:
The number of active threads created by the WebLogic server exceeded the limit specified by the <max-concurrent-new-threads> element in weblogic-application.xml, weblogic.xml, or config.xml, as described in 'Configuring Concurrent Managed Objects' in 'Oracle Fusion Middleware Administering Server Environments for Oracle WebLogic Server'. The Forms application was terminated.

Action:
Increase the limit or run the Forms application when the system is less heavily loaded.

FRM-41673
error in FHTTP.ISSUE_REQUEST: the JVM encountered an OutOfMemoryError while attempting to process a {0} request to the URL generated from the URI template {1}{2}

Category:
Memory

Cause:
FHTTP.ISSUE_REQUEST was unable to allocate adequate memory in the JVM that's issuing the request.

Action:
Specify fewer or smaller request headers or a smaller request body, or modify the selection criteria specified in the request to the external service, so as to limit the size of the response.

FRM-41674
error in Dynamic Monitoring Service (DMS): WebLogic was unable to create a thread to remove unused DMS objects.

Category:
Threads

Cause:
The number of active threads created by the WebLogic server exceeded the limit specified by the <max-concurrent-new-threads> element in weblogic-application.xml, weblogic.xml, or config.xml, as described in 'Configuring Concurrent Managed Objects' in 'Oracle Fusion Middleware Administering Server Environments for Oracle WebLogic Server'.

Action:
No action is necessary if this happens very rarely. Increase the limit if this happens frequently.

FRM-41675
error in Forms prestart processing: WebLogic was unable to create a thread to fill the pool of prestarted Forms runtime processes.

Category:
Threads

Cause:
The number of active threads created by the Weblogic server exceeded the limit specified by the <max-concurrent-new-threads> element in weblogic-application.xml, weblogic.xml, or config.xml, as described in 'Configuring Concurrent Managed Objects' in 'Oracle Fusion Middleware Administering Server Environments for Oracle WebLogic Server'.

Action:
No action is necessary if this happens very rarely. Increase the limit if this happens frequently.

FRM-41690
The reconstructed request line, request headers, and request body (if any) have been written to {0}

Category:
Requests/Responses

Cause:
This message follows FRM-41539, FRM-41569, FRM-41592, and various error messages written by FHTTP.ISSUE_REQUEST, if the FORMS_HTTP_DIAGNOSTIC_LEVEL environment variable is set to 3 or 4.

Action:
No action is required.

FRM-41691
The reconstructed response status line, response headers, and response body (if any) have been written to {0}

Category:
Requests/Responses

Cause:
This message follows FRM-41539 and FRM-41569, if the FORMS_HTTP_DIAGNOSTIC_LEVEL environment variable is set to 4, and various error messages written by FHTTP.ISSUE_REQUEST.

Action:
No action is required.

FRM-41692
The stack trace for the communication error has been written to {0}

Category:
Network

Cause:
This message follows FRM-41660 and FRM-41760.

Action:
No action is required.

FRM-41700
error encrypting credentials for an external service

Category:
Configuration

Cause:
An unexpected error occurred while encrypting credentials for an external service.

Action:
If the problem persists, contact Oracle Support Services.

FRM-41701
error decrypting credentials for an external service

Category:
Configuration

Cause:
An unexpected error occurred while decrypting credentials for an external service.

Action:
If the problem persists, contact Oracle Support Services.

FRM-41712
error in FHTTP.ISSUE_REQUEST: token {0} [{1}] missing from "authorization_info"

Category:
Data

Cause:
The 'authorization_info' parameter passed to FHTTP.ISSUE_REQUEST (consisting of tokens separated by unit separator characters [u001f]) does not contain the token that was expected at the specified index [1-relative].

Action:
Correct the 'authorization_info' parameter.

FRM-41713
error in FHTTP.ISSUE_REQUEST: invalid value {0} for token {1} [{2}] in "authorization_info"

Category:
Data

Cause:
The 'authorization_info' parameter passed to FHTTP.ISSUE_REQUEST (consisting of tokens separated by unit separator characters [u001f]) contains an invalid token at the specified index [1-relative]. In particular, token 1 [credential_id] must contain only alphanumeric characters and '_', '.', '-'.

Action:
Correct the 'authorization_info' parameter.

FRM-41714
error in FHTTP.ISSUE_REQUEST: logon dialog potentially required for an authorization that was not the last authorization in "authorization_info"

Category:
Data

Cause:
The 'authorization_info' parameter passed to FHTTP.ISSUE_REQUEST (consisting of tokens separated by unit separator characters [u001f]) contained multiple authorizations. One of them was of type Basic Authentication or OAuth2 Password. Such an authorization must be the last of the multiple authorizations.

Action:
Correct the 'authorization_info' parameter.

FRM-41715
error in FHTTP.ISSUE_REQUEST: username {0} specified for basic authentication in "authorization_info" contains a colon

Category:
Data

Cause:
The 'authorization_info' parameter passed to FHTTP.ISSUE_REQUEST (consisting of tokens separated by unit separator characters [u001f]) specified basic authentication as the authorization (or one of the authorizations). The username specified in token 3 [1-relative] contained a colon, which is not allowed for basic authentication.

Action:
Correct the 'authorization_info' parameter.

FRM-41721
error in FHTTP.ISSUE_REQUEST: authorization failed due to invalid config section name {0}

Category:
Data

Cause:
Authorization for HTTP requests to external services requires that the config section name specified as the config parameter in the frmservlet URL used to launch the Forms application contain only alphanumeric characters and '_', '.', '-'.

Action:
Specify a config section with a valid name in the frmservlet URL used to launch the Forms application.

FRM-41722
error in FHTTP.ISSUE_REQUEST: authorization failed due to missing credential for {0}

Category:
Configuration

Cause:
API Key and OAuth2 authorizations for HTTP requests to external services require that the Oracle Platform Security Services Credential Store contain a generic credential for the external service. The credential key must be of the form <config_section_name>=<credential_id>.

Action:
Use Fusion Middleware Control to add the generic credential. The value must be the key for API Key authorizations, and <client_id><LF><client_password> or <client_id><LF><client_secret> for OAuth2 authorizations. For OAuth2 Password authorizations, <LF><username><LF><password> may optionally be appended to the value. <LF> is the line-feed character [0x0a]. It may optionally be preceded by a carriage-return character [0x0d].

FRM-41723
error in FHTTP.ISSUE_REQUEST: authorization failed due to invalid credential for {0}

Category:
Configuration

Cause:
API Key and OAuth2 authorizations for HTTP requests to external services require that the Oracle Platform Security Services Credential Store contain a valid generic credential for the external service. A generic credential is allowed (but not required) for Basic Authentication authorizations. The credential key must be of the form <config_section_name>=<credential_id>. The value must be a string of the form <username>:<password> for basic authentication, and <client_id><LF><client_password> or <client_id><LF><client_secret> for OAuth2 authorization. For OAuth2 Password authorizations, <LF><username><LF><password> may optionally be appended to the value. <LF> is the line-feed character [0x0a]. It may optionally be preceded by a carriage-return character [0x0d].

Action:
Use Fusion Middleware Control to correct the generic credential.

FRM-41724
error in FHTTP.ISSUE_REQUEST: authorization failed due to rejected credential for {0}

Category:
Configuration

Cause:
The Oracle Platform Security Services Credential Store contained a generic credential value of the form <username>:<password> for a Basic Authentication authorization, or a generic credential value of the form <client_id><LF><client_password_or_secret><LF><username><LF><password> for an OAuth2 Password authorization, but the username and password were rejected by the external service.

Action:
Determine the correct username and password, and use Fusion Middleware Control to correct the generic credential.

FRM-41725
error in FHTTP.ISSUE_REQUEST: authorization failed due to invalid SSO user credential for {0}

Category:
Data

Cause:
In SSO mode, OAuth2 authorization information may be stored in a password credential for the SSO user in the Oracle Platform Security Services Credential Store, and reused for that user in subsequent Forms application sessions. However, when the stored information was subsequently retrieved, it was found to be in an incorrect format.

Action:
If the problem persists, contact Oracle Support Services. As a temporary workaround, you could use Fusion Middleware Control to remove the password credential, or you could disable SSO mode.

FRM-41760
error in FHTTP.ISSUE_REQUEST: OAuth2 authorization failed for client {0} because the request to the token endpoint URL {1} encountered an error communicating with the token endpoint.

Category:
Network

Cause:
The request presented to the OAuth2 Token URL specified for OAuth2 authorization [as token 5 of the 'authorization_info' parameter] encountered an IOException while attempting to communicate with the token endpoint. A subsequent FRM-41692 message indicates where the stack trace for the IOException was written.

Action:
Inspect the stack trace in the response identified by message FRM-41692 in ODL. If the stack trace does not indicate how to fix the problem, and the problem persists, contact the owner of the external service.

FRM-41761
error in FHTTP.ISSUE_REQUEST: OAuth2 authorization failed for client {0} because the request to the token endpoint URL {1} received unexpected response status code {2}. Details: {3}

Category:
Requests/Responses

Cause:
The request presented to the OAuth2 Token URL specified for OAuth2 authorization [as token 5 of the 'authorization_info' parameter] received a response status code other than 200. If the request specified a scope, [scope=<requested_permissions>] will appear in the error message immediately following the token endpoint URL.

Action:
Refer to the details that appear at the end of the message.

FRM-41762
error in FHTTP.ISSUE_REQUEST: OAuth2 authorization failed for client {0} because the token endpoint URL {1} response {2} contained a syntax error or deviated from OAuth2 protocol at offset {3} [characters].

Category:
Requests/Responses

Cause:
The request presented to the OAuth2 Token URL specified for OAuth2 authorization [as token 5 of the 'authorization_info' parameter] received a response containing a violation of the syntax prescribed by RFC 8259 [JSON] and RFC 6749 [OAuth2].

Action:
Try to determine why the erroneous response is being returned, e.g. by contacting the owner of the external service.

FRM-41763
error in FHTTP.ISSUE_REQUEST: OAuth2 authorization failed for client {0} because the token endpoint URL {1} response specified the unsupported token_type {2}.

Category:
Requests/Responses

Cause:
The request presented to the OAuth2 Token URL specified for OAuth2 authorization [as token 5 of the 'authorization_info' parameter] received a response that specified an unsupported token_type. Currently, only "bearer" is supported.

Action:
Redesign the Forms application.

FRM-41764
error in FHTTP.ISSUE_REQUEST: OAuth2 authorization failed for client {0} because the request to the token endpoint URL {1} requested scope={2}, but the response granted only scope={3}.

Category:
Requests/Responses

Cause:
The request presented to the OAuth2 Token URL specified for OAuth2 authorization [as token 5 of the 'authorization_info' parameter] received a response that did not grant all requested permissions.

Action:
If the requested operation does not actually require all the requested permissions, remove the unneeded ones. Otherwise, contact the owner of the external service and/or redesign the Forms application.

FRM-41765
error in FHTTP.ISSUE_REQUEST: OAuth2 authorization failed for client {0} because an Access Token Location of "Form Parameter" was specified, but request content-type was not "application/x-www-form-urlencoded".

Category:
Data

Cause:
The Access Token Location specified for OAuth2 authorization [as token 4 of the 'authorization_info' parameter] was 'Form Parameter', but the request content-type header was missing or specified a media type other than 'application/x-www-form-urlencoded'.

Action:
Correct the Access Token Location or the request content-type.

FRM-41766
error in FHTTP.ISSUE_REQUEST: OAuth2 authorization failed for client {0} because the token endpoint URL {1} response did not specify an access token.

Category:
Requests/Responses

Cause:
The request presented to the OAuth2 Token URL specified for OAuth2 authorization [as token 5 of the 'authorization_info' parameter] received a response which did not contain an access token.

Action:
Try to determine why the erroneous response is being returned, e.g. by contacting the owner of the external service.

FRM-41769
error in FHTTP.ISSUE_REQUEST: OAuth2 authorization failed for client {0} because the OAuth2 Token URL {1} was rejected.

Category:
Data

Cause:
The OAuth2 Token URL specified for OAuth2 authorization [as token 5 of the 'authorization_info' parameter] was malformed or did not specify a scheme of 'http', 'https', 'ws', or 'wss'.

Action:
Correct the OAuth2 Token URL.

FRM-41770
error in FHTTP.ISSUE_REQUEST: OAuth2 authorization failed for client {0} because the attempt to redirect to the authorization endpoint URL {1} encountered an error.

Category:
Network

Cause:
A browser was launched to communicate with the OAuth2 authorization server at the OAuth2 Authorization URL specified for OAuth2 authorization [as token 7 of the 'authorization_info' parameter], but the attempt to redirect the browser response to that URL encountered an IOException. A subsequent FRM-41692 message indicates where the stack trace for the IOException was written.

Action:
Inspect the stack trace in the response identified by message FRM-41692 in ODL. If the stack trace does not indicate how to fix the problem, and the problem persists, contact the owner of the external service.

FRM-41771
error in FHTTP.ISSUE_REQUEST: OAuth2 authorization failed for client {0} because the request to the authorization endpoint URL {1} produced an error. Details: {2}

Category:
Requests/Responses

Cause:
The request presented to the OAuth2 Authorization URL specified for OAuth2 authorization [as token 7 of the 'authorization_info' parameter] generated a response that indicated an error. If the request specified a scope, [scope=<requested_permissions>] will appear in the error message immediately following the authorization endpoint URL.

Action:
Refer to the details that appear at the end of the message.

FRM-41774
error in FHTTP.ISSUE_REQUEST: OAuth2 authorization failed for client {0} because the request to the authorization endpoint URL {1} requested scope={2}, but only scope={3} was granted.

Category:
Requests/Responses

Cause:
A scope was specified in the request presented to the OAuth2 Authorization URL specified for OAuth2 authorization [as token 7 of the 'authorization_info' parameter], but the subsequent response from the token endpoint did not grant all requested permissions.

Action:
If the requested operation does not actually require all the requested permissions, remove the unneeded ones. Otherwise, contact the owner of the external service and/or redesign the Forms application.

FRM-41779
error in FHTTP.ISSUE_REQUEST: OAuth2 authorization failed for client {0} because the OAuth2 Authorization URL {1} was rejected.

Category:
Data

Cause:
The OAuth2 Authorization URL specified for OAuth2 authorization [as token 7 of the 'authorization_info' parameter] was malformed or did not specify a scheme of 'http', 'https', 'ws', or 'wss'.

Action:
Correct the OAuth2 Authorization URL.

FRM-41838
runtime process: unable to open temporary record buffer file

Category:
Files

Cause:
The runtime process was unable to open the file used as the temporary record buffer. A preceding FRM-91180 or FRM-91181 error message provides more detail. (FRM-91181 will occur if the error was on the first write attempt).

Action:
Refer to error message FRM-91180 and FRM-91181.

FRM-41839
runtime process: disk I/O error on temporary record buffer file

Category:
Files

Cause:
An I/O error occurred while the runtime process was attempting to read or write a record to the temporary record buffer file. A preceding FRM-91181 or FRM-91182 error message provides more detail.

Action:
Refer to error message FRM-91181 and FRM-91182.

FRM-60000
fatal error configuring Forms component

Category:
Configuration

Cause:
Forms component provisioning failed.

Action:
Examine the stack trace that accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60001
fatal error removing Forms component

Category:
Configuration

Cause:
Forms component deprovisioning failed.

Action:
Examine the stack trace that accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60002
error reading Forms component registration document {0}

Category:
Configuration

Cause:
An error occurred while reading the Forms component registration document.

Action:
Do one of the following: \n1. Make sure that the registration document is valid. \n2. If the registration document is accidentally deleted or modified then reinstall ORACLE_HOME.

FRM-60003
error reading ORACLE_HOME registry file {0}

Category:
Configuration

Cause:
An error occurred while reading the ORACLE_HOME registry file.

Action:
Do one of the following: \n1. Make sure that the ORACLE_HOME registry file exists. \n2. If ORACLE_HOME registry file is accidentally deleted or modified then reinstall ORACLE_HOME.

FRM-60004
error obtaining text contents of the configuration file {0}

Category:
Configuration

Cause:
Failed to read the text contents of the configuration file.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it.

FRM-60005
Directory {0} exists; renaming it to {1}

Category:
Configuration

Cause:
The subdirectory under the Oracle Instance directory already exists and the provisioning process renamed the existing subdirectory.

Action:
No action is required.

FRM-60006
error obtaining the managed server URL

Category:
Configuration

Cause:
Failed to obtain the managed server URL during Windows application deployment.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60007
error creating Windows shortcuts

Category:
Configuration

Cause:
Failed to create Windows shortcuts during configuration.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60008
error creating Forms instance {0}

Category:
Configuration

Cause:
Failed to create Forms instance.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60009
error updating Forms instance {0}

Category:
Configuration

Cause:
Failed to update Forms instance.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60010
error deleting Forms instance {0}

Category:
Configuration

Cause:
Failed to update Forms instance.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60011
error creating non-managed instance configuration

Category:
Configuration

Cause:
Failed to create Forms instance non-managed configuration.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60012
error updating/deleting instance: invalid Forms instance contents {0}

Category:
Configuration

Cause:
Failed to update Forms instance.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60013
error adding missing non-managed instance configuration

Category:
Configuration

Cause:
Failed to add missing Forms instance non-managed configuration.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60101
error registering Forms J2EE application MBeans during the application startup

Category:
Configuration

Cause:
An error occurred while registering the Forms J2EE application runtime MBean or custom configuration files MBeans.

Action:
Examine the stack trace that accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60102
error deregistering Forms J2EE application MBeans during the application shutdown

Category:
Configuration

Cause:
An error occurred while deregistering the Forms J2EE application runtime MBean or custom configuration files MBeans.

Action:
Examine the stack trace that accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60104
error reading the Forms System component instance

Category:
Configuration

Cause:
An error occurred while reading the Forms system component instance information.

Action:
Do one of the following:\n1. If there are multiple Forms system component instance on the same Weblogic machine, make sure that you have followed the steps in the Forms deployment guide.\n2. Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-60114
error reading default configuration path

Category:
Configuration

Cause:
An error occurred while obtaining the default configuration location.

Action:
Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-60201
error initializing identity store

Category:
Configuration

Cause:
An error occurred while reading the identity store configuration file.

Action:
Examine the stack trace that accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60202
Forms J2EE application {0} is already registered with Oracle Internet Directory host {1} under the container {2}. Deregistering it.

Category:
Configuration

Cause:
An attempt was made to re-create an existing Forms J2EE application footprint in Oracle Internet Directory. This may occur when the same Forms J2EE application is redeployed to the domain.

Action:
No action is required.

FRM-60203
error associating Forms application with Oracle Internet Directory host {0}

Category:
Configuration

Cause:
The Forms application footprint in Oracle Internet Directory failed to be created due to one of the following causes:\n 1. Oracle Internet Directory was not accessible.\n 2. The Forms J2EE application footprint password failed to be seeded in Oracle Platform Security Services on the mid-tier.\n 3. An I/O error occurred during storing of Oracle Internet Directory information from the Forms Oracle Internet Directory properties file.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60205
error disassociating Forms application with Oracle Internet Directory host {0}

Category:
Configuration

Cause:
Failed to remove the Forms J2EE application footprint from Oracle Internet Directory due to one of the following causes:\n 1. Oracle Internet Directory was not accessible.\n 2. An error status was returned while deregistering the Forms J2EE application footprint with Oracle Internet Directory.\n 3. Failed to fetch the Forms J2EE application footprint password from Oracle Platform Security Services on the mid-tier.\n 4. An I/O error occurred while cleaning Oracle Internet Directory information from the Forms Oracle Internet Directory properties file.

Action:
Do one of the following:\n 1. Examine the stack trace which accompanies this message, look for status of the IM tier and resolve the issue.\n 2. If using Fusion Middleware Control, make sure that information passed to deregister the Forms J2EE application with Oracle Internet Directory host is valid.\n 3. If the problem persists, contact Oracle Support Services.

FRM-60207
error storing credentials to Oracle Platform Security Services

Category:
Configuration

Cause:
An error occurred while storing the credentials to Oracle Platform Security Services.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60208
error deleting credentials from Oracle Platform Security Services

Category:
Configuration

Cause:
An error occurred while deleting the credentials from Oracle Platform Security Services.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60209
error obtaining credentials from Oracle Platform Security Services

Category:
Configuration

Cause:
An error occurred while reading the credentials from Oracle Platform Security Services.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60210
error obtaining MBean Server connection

Category:
Configuration

Cause:
An error occurred while connecting to the MBean Server.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60211
error migrating Resource Access Descriptor

Category:
Configuration

Cause:
An error occurred migrating Resource Access Descriptor to Oracle Platform Security Services.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60212
Resource Access Descriptor migration process interrupted

Category:
Configuration

Cause:
A running Resource Access Descriptor migration process was interrupted.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60213
error recording the Resource Access Descriptor migration result

Category:
Configuration

Cause:
An error occurred while recording the Resource Access Descriptor migration results.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60214
Forms Resource Access Descriptor migration thread awaken

Category:
Configuration

Cause:

Action:

FRM-60215
error reading the Resource Access Descriptor migration results

Category:
Configuration

Cause:
An error occurred while reading the Resource Access Descriptor migration results.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60216
error starting Forms Resource access migration to Oracle Platform Security Services

Category:
Configuration

Cause:
The Forms Resource Access Descriptor migration to Oracle Platform Security Services failed to start because the previous migration process is still running.

Action:
Wait for the exiting migration process to complete before running migration again.

FRM-60217
invalid Single Sign-on user

Category:
Configuration

Cause:
The user passed an invalid Single Sign-on user name to create a Resource Access Descriptor.

Action:
Provide a valid existing Single Sign-on user name and run the request again.

FRM-60218
error connecting to LDAP server

Category:
Configuration

Cause:
An error occurred while connecting the LDAP server due to one of the following causes: \n1. Invalid connection credentials were entered. \n2. Invalid hostname, port information was entered.\n3. LDAP server is down.

Action:
Examine the cause, and take the appropriate remedial action.

FRM-60220
error initializing the Forms Identity store

Category:
Configuration

Cause:
An error occurred while initializing the Forms Identity store.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60221
error obtaining the Forms identity store access

Category:
Configuration

Cause:
An error occurred while obtaining the Forms Identity store.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60222
error creating the FormsREST OPSS credential store map

Category:
Configuration

Cause:
An error occurred while creating FormsREST OPSS credential map.

Action
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60223
error accessing Forms local credential store

Category:
Configuration

Cause:
An error occurred while accessing Forms local credential store.

Action
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60224
error writing to the Forms local credential store

Category:
Configuration

Cause:
An error occurred writing to the Forms local credential store.

Action
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60225
error reading user from the Forms local credential store

Category:
Configuration

Cause:
An error occurred reading user from the Forms local credential store.

Action
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60226
error decrypting credential in Forms local credential store

Category:
Configuration

Cause:
An error occurred decrypting credential in Forms local credential store.

Action
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60227
error reading credential from the Forms local credential store

Category:
Configuration

Cause:
An error occurred reading credential from the Forms local credential store.

Action
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60228
error reading credential comments from the Forms local credential store

Category:
Configuration

Cause:
An error occurred reading credential comments from the Forms local credential store.

Action
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60229
error updating credential to the Forms local credential store

Category:
Configuration

Cause:
An error occurred updating credential to the Forms local credential store.

Action
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60230
error storing credential to the Forms local credential store

Category:
Configuration

Cause:
An error occurred storing credential to the Forms local credential store.

Action
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60231
error updating credential: invalid key {0} passed

Category:
Configuration

Cause:
An error occurred updating credential to the Forms local credential store because an invalid key passed.

Action
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60232
error updating credential: invalid map {0} passed

Category:
Configuration

Cause:
An error occurred updating credential to the Forms local credential store because an invalid map passed.

Action
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60233
error encrypting credential in Forms local credential store

Category:
Configuration

Cause:
An error occurred encrypting credential in Forms local credential store.

Action
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60234
error initializing Forms local credential store

Category:
Configuration

Cause:
An error occurred initializing Forms local credential store.

Action
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60235
error deleting credential from the Forms local credential store

Category:
Configuration

Cause:
An error occurred deleting credential from the Forms local credential store.

Action
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60236
error deleting credential: invalid map {0} passed

Category:
Configuration

Cause:
An error occurred deleting credential to the Forms local credential store because an invalid map passed.

Action
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60237
error accessing RADs in the Forms local credential store

Category:
Configuration

Cause:
An error occurred accessing RADs in the Forms local credential store.

Action
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60238
error deleting RADs in the Forms local credential store

Category:
Configuration

Cause:
An error occurred deleting RADs in the Forms local credential store.

Action
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60249
error creating Resource Access Descriptor for Forms application {0}: Resource Access Descriptor already exists

Category:
Configuration

Cause:
An error occurred while creating the Resource Access Descriptor because it already exists.

Action:
Edit the existing Resource Access Descriptor rather than adding it.

FRM-60250
error creating Resource Access Descriptor for Forms application {0}

Category:
Configuration

Cause:
An error occurred while creating the Resource Access Descriptor.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60251
error updating Resource Access Descriptor for Forms application {0}

Category:
Configuration

Cause:
An error occurred while updating the Resource Access Descriptor.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60252
error deleting Resource Access Descriptor for Forms application {0}

Category:
Configuration

Cause:
An error occurred while deleting the Resource Access Descriptor.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60253
error reading Resource Access Descriptor for Forms application {0}

Category:
Configuration

Cause:
An error occurred while reading the Resource Access Descriptor.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60254
error obtaining Resource Access Descriptor

Category:
Configuration

Cause:
An error occurred while obtaining the Resource Access Descriptor.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60255
error stashing Single Single-on user information in the Forms session

Category:
Configuration

Cause:
An error occurred while stashing Single Sign-on user information in the Forms session.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60256
permission error reading the Resource Access Descriptor from Oracle Internet Directory

Category:
Configuration

Cause:
Single Sign-on user does not have the right permission to read the Resource Access Descriptor.

Action:
No action is required.

FRM-60257
error reading Forms application {0}, Resource Access Descriptor for Single Sign-on User {1} from Oracle Internet Directory

Category:
Configuration

Cause:
An error occurred while obtaining the Forms application Resource Access Descritor from Oracle Internet Directory.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60258
error reading Forms application Resource Access Descriptor from Oracle Internet Directory

Category:
Configuration

Cause:
An error occurred while obtaining the Forms application Resource Access Descritor from Oracle Internet Directory.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60259
error processing line {0}: invalid syntax

Category:
Configuration

Cause:
An error occurred while processing the indicated line

Action:
Fix the entry and upload RADs again

FRM-60260
error processing line {0}: invalid set of parameters

Category:
Configuration

Cause:
An error occurred while processing the indicated entry

Action:
Fix the number of parameters at the indicated line

FRM-60261
error processing line {0}: invalid application name

Category:
Configuration

Cause:
An error occurred while processing the indicated entry

Action:
Add the missing application name and upload RADs again

FRM-60262
error processing line {0}: duplicate entry

Category:
Configuration

Cause:
An error occurred while processing the indicated entry

Action:
Delete the duplicate entry at the indicated line and upload RADs again

FRM-60263
error processing line {0}: missing Single Sign-on Username

Category:
Configuration

Cause:
An error occurred while processing the indicated entry

Action:
Add the Single Sign-on Username at the indicated line and upload RADs again

FRM-60264
error processing line {0}: invalid groupRad parameter value

Category:
Configuration

Cause:
An error occurred while processing the indicated entry

Action:
Fix the isGroupRad parameter value at the indicated line and upload RADs again

FRM-60265
error processing line {0}: missing dbUser parameter value

Category:
Configuration

Cause:
An error occurred while processing the indicated entry

Action:
Fix the dbUser parameter value at the indicated line and upload RADs again

FRM-60266
error processing line {0}: missing dbPassword parameter value

Category:
Configuration

Cause:
An error occurred while processing the indicated entry

Action:
Fix the dbPassword parameter value at the indicated line and upload RADs again

FRM-60301
invalid character in the file name argument {0}

Category:
Configuration

Cause:
An error occurred due to an invalid character in the file name.

Action:
Remove the invalid character from the file name and execute the operation again.

FRM-60302
error duplicating the configuration file {0} to {1}

Category:
Configuration

Cause:
An error occurred duplicating the configuration file due to one of the following causes: \n1. MBean registration failed. \n2. Failure to create a new file on the file system.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60303
error duplicating the configuration file {0}: invalid document type {1}

Category:
Configuration

Cause:
Invalid document type argument passed to operation.

Action:
Invoke the 'duplicate file' operation only on the supported valid document types (Type_default.env).

FRM-60304
error duplicating configuration file {0}: invalid argument {1} are passed to 'duplicate file' operation

Category:
Configuration

Cause:
The file the user tried to create already exists.

Action:
Pass a different file name for the new file that has to be created.

FRM-60305
error deleting the configuration file {0}

Category:
Configuration

Cause:
An error occurred deleting the configuration file due to one of the following causes: \n1. MBean deregistration failed. \n2. Failure to delete the file from the file system.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60306
error deleting the configuration file {0}: invalid document type {1}

Category:
Configuration

Cause:
An invalid document type argument was passed to the operation.

Action:
Invoke the 'duplicate file' operation only on the supported valid document types (Type_default.env).

FRM-60307
error converting the configuration object to the relevant CompositeType

Category:
Configuration

Cause:
Failed to convert the configuration object to the relevant CompositeType.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60308
error converting the configuration object to the relevant CompositeData

Category:
Configuration

Cause:
Failed to convert the configuration object to the relevant CompositeData.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it. If the problem persists, contact Oracle Support Services.

FRM-60309
error registering child config MBean for the application section {0}

Category:
Configuration

Cause:
Failed to register the child config MBean for the given application section.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it.

FRM-60310
error deregistering child config MBean for the application section {0}

Category:
Configuration

Cause:
Failed to deregister the child config MBean for the given application section.

Action:
Examine the stack trace which accompanies this message for the possible cause of failures and correct it.

FRM-60311
error deleting application section {0}

Category:
Configuration

Cause:
An attempt was made to delete the default application section or a section that does not exist.

Action:
Choose the correct section name.

FRM-60312
error creating application section {0}

Category:
Configuration

Cause:
An attempt was made to create an application section that already exists or has an invalid section name.

Action:
Choose an alternative name for the section.

FRM-60313
error duplicating application section {0} to {1}

Category:
Configuration

Cause:
Failed to duplicate an application section because of one of the following reasons:\n 1. An attempt was made to duplicate an invalid application section.\n 2. An attempt was made to create an application section that already exists.

Action:
Do one of the following:\n 1. Choose a correct section name for the duplicated application section.\n 2. Choose an alternative name for the newly created application section.

FRM-60314
error encrypting userid for forms application {0}

Category:
Configuration

Cause:
An unexpected error occurred while encrypting the userid parameter value.

Action:
If the problem persists, contact Oracle Support Services.

FRM-60315
error decrypting userid for forms application {0}

Category:
Configuration

Cause:
An unexpected error occurred while decrupting the the userid parameter value.

Action:
If the problem persists, contact Oracle Support Services.

FRM-60316
error encrypting forms userid

Category:
Configuration

Cause:
An unexpected error occurred while encrypting the userid parameter value.

Action:
If the problem persists, contact Oracle Support Services.

FRM-60317
error creating formsapp keystore

Category:
Configuration

Cause:
An unexpected error occurred while creating the formsapp keystore

Action:
If the problem persists, contact Oracle Support Services.

FRM-60318
error processing configuration, invalid entry at line:{0}

Category:
Configuration

Cause:
An unexpected error occurred while persisting the configuration.

Action:
Fix the configuration and submit it again.

FRM-91108
internal error in runtime process: unable to initialize PL/SQL

Category:
Process

Cause:
An unexpected error occurred while the runtime process was attempting to initialize PL/SQL.

Action:
If the problem persists, contact Oracle Support Services.

FRM-91109
internal error in runtime process: application startup failure

Category:
Process

Cause:
An unexpected error occurred while the runtime process was attempting to start the Toolkit component.

Action:
If the problem persists, contact Oracle Support Services.

FRM-91111
internal error in runtime process: window system startup failure

Category:
Process

Cause:
An unexpected error occurred while the runtime process was attempting to start the window system.

Action:
If the problem persists, contact Oracle Support Services.

FRM-91112
internal error in runtime process: resource manager startup failure

Category:
Process

Cause:
An unexpected error occurred while the runtime process was attempting to start the Toolkit Resource Manager.

Action:
If the problem persists, contact Oracle Support Services.

FRM-91116
internal error in runtime process: Oracle*Image startup failure

Category:
Process

Cause:
An unexpected error occurred while the runtime process was attempting to start Oracle*Image.

Action:
If the problem persists, contact Oracle Support Services.

FRM-91119
internal error in runtime process: Oracle*VGS startup failure

Category:
Process

Cause:
An unexpected error occurred while the runtime process was attempting to start Oracle*VGS.

Action:
If the problem persists, contact Oracle Support Services.

FRM-91124
fatal error in runtime process: {0} specified for FORMS_DECIMAL_PREFIX. Should be zero or the empty string

Category:
Configuration

Cause:
An invalid value was specified for the environment variable FORMS_DECIMAL_PREFIX.

Action:
Do one of the following: \n1. Specify FORMS_DECIMAL_PREFIX as '0' to force a zero before a leading decimal point in any number displayed without a format mask in the application. \n2. Specify FORMS_DECIMAL_PREFIX as '' (the empty string).

FRM-91126
fatal error in runtime process: invalid value {0} specified for environment variable {1}

Category:
Configuration

Cause:
An invalid environment variable value was specified. An example would be an invalid timezone for an environment variable that specifies a timezone.

Action:
Correct the environment variable value.

FRM-91127
runtime process: invalid directory name specified for environment variable {0}

Category:
Configuration

Cause:
An invalid value was specified for an environment variable that represents the name of a directory. Specifically, the value is too long: either it is itself longer than a system-imposed maximum, or a subdirectory name that Forms needs to construct would be longer than the system-imposed maximum. Execution of the runtime process might have been terminated, or it might have continued. In the latter case, the functionality that required this environment variable was disabled.

Action:
If this error message appears for DOMAIN_HOME or FORMS_INSTANCE_NAME, and the problem persists, contact Oracle Support Services. Otherwise, correct the environment variable value.

FRM-91128
runtime process warning: invalid value {0} specified for environment variable {1}; using default {2}

Category:
Configuration

Cause:
An invalid environment variable value was specified. The indicated default value was used, and processing continued.

Action:
Correct the environment variable value.

FRM-91129
runtime process: no value specified for required environment variable {0}

Category:
Configuration

Cause:
A required environment variable was not set or was set to the empty string. Execution of the runtime process might have been terminated, or it might have continued. In the latter case, the functionality that required this environment variable was disabled.

Action:
If this error message appears for DOMAIN_HOME or FORMS_INSTANCE_NAME, and the problem persists, contact Oracle Support Services. Otherwise, set the environment variable to a non-empty value.

FRM-91132
fatal error in runtime process: invalid data in timezone file {0}

Category:
Configuration

Cause:
The timezone file (specified by the environment variable FORMS_TZFILE) was found to contain invalid data.

Action:
Correct the FORMS_TZFILE environment variable value. It should specify $ORACLE_HOME/oracore/zoneinfo/timezone.dat or $ORACLE_HOME/oracore/zoneinfo/timezlrg.dat.

FRM-91134
fatal error in runtime process: NLS_LANG specifies unsupported character set

Category:
Configuration

Cause:
The NLS_LANG environment variable specified a character set which is not ASCII-based, e.g. fixed-width Unicode or an EBCDIC-based character set.

Action:
Correct the NLS_LANG environment variable value.

FRM-91135
fatal error in runtime process: message file {0} is missing

Category:
Configuration

Cause:
The specified message file was not found.

Action:
Verify that the file has not been moved or deleted. If necessary, reinstall it.

FRM-91137
runtime process: unable to open log file {0}

Category:
Configuration

Cause:
An invalid name was specified for a log file or a trace file. The name might be too long, or it might specify a non-existent or read-only directory. In the former case, the error message

shows the name truncated at the maximum allowable length, followed by 3 dots. Execution of the runtime process might have been terminated, or it might have continued. In the latter case, messages that subsequently would have been written to the file were silently discarded.

Action:
Correct the environment variable used to specify the directory (e.g. FORMS_TRACE_DIR), and/or the file name proper (which might have been specified e.g. by the value of the 'log' configuration parameter). If no environment variable or configuration parameter was set to specify the directory or the file name proper, and the problem persists, contact Oracle Support Services.

FRM-91138
runtime process: unable to create log file {0}

Category:
Configuration

Cause:
An attempt to open, write, or close a log file failed.

Action:
Verify that the directory specified for the log file has appropriate write privileges and adequate disk space.

FRM-91143
internal error in runtime process: unable to create runform global context

Category:
Process

Cause:
An unexpected error occurred while the runtime process was attempting to create the runform global context.

Action:
If the problem persists, contact Oracle Support Services.

FRM-91144
internal error in runtime process: unable to parse user name

Category:
Process

Cause:
An unexpected error occurred while the runtime process was attempting to parse the user name.

Action:
If the problem persists, contact Oracle Support Services.

FRM-91145
fatal error in runtime process: missing serverArgs parameter

Category:
Configuration

Cause:
If this error occurred when using the Forms Servlet, both the serverArgs configuration parameter and the serverArgs applet parameter (either of which can represent the command-line arguments that are passed to the frmweb executable) were either missing or had a blank value. If this error occurred for static HTML (HTML that's not generated by the Forms Servlet), the serverArgs applet parameter was either missing or had a blank value.

Action:
If this error occurred for static HTML, add a serverArgs parameter to the applet. Otherwise, ensure that the Forms Servlet configuration file or the base HTML files correctly define a serverArgs parameter. [Note that the base HTML files that are shipped with the produce omit the serverArgs parameter, but the shipped Forms Servlet configuration file specifies a non-blank value.]

FRM-91150
internal error in runtime process: unable to initialize Oracore program manager

Category:
Process

Cause:
An unexpected error occurred while the runtime process was attempting to initialize the Oracore program manager.

Action:
If the problem persists, contact Oracle Support Services.

FRM-91151
internal error in runtime process: unable to initialize Oracle NLS

Category:
Process

Cause:
An unexpected error occurred while the runtime process was attempting to initialize Oracle NLS.

Action:
If the problem persists, contact Oracle Support Services.

FRM-91152
internal error in runtime process: unable to set environment variable {0}

Category:
Process

Cause:
An unexpected error occurred while the runtime process was attempting to set an environment variable to a new value.

Action:
If the problem persists, contact Oracle Support Services.

FRM-91153
internal error in runtime process: unable to initialize Common Area component

Category:
Process

Cause:
An unexpected error occurred while the runtime process was attempting to initialize the Common Area component.

Action:
If the problem persists, contact Oracle Support Services.

FRM-91154
internal error in runtime process: unable to initialize Oracore date component

Category:
Process

Cause:
An unexpected error occurred while the runtime process was attempting to initialize the Oracore date component.

Action:
If the problem persists, contact Oracle Support Services.

FRM-91157
internal error in runtime process: unable to redirect stderr to stdout

Category:
Process

Cause:
An unexpected error occurred while the runtime process was attempting to redirect stderr to stdout. This error should never occur at a customer site.

Action:
If the problem persists, contact Oracle Support Services.

FRM-91160
BI Publisher integration error: {0}

Category:
Configuration

Cause:
The runtime process attempted to communicate with BI Publisher but an exception occurred. Some more information about the specific exception is included in this message, which may help to resolve the problem.

Action:
Attempt to use the information provided to resolve the problem. If the problem persists, contact Oracle Support Services.

FRM-91170
runtime process: JVM exiting with code {0}

Category:
Process

Cause:
The runtime process had started a JVM (in order to run Oracle Reports or the Forms debugger, or to update a password in Oracle Internet Directory). That JVM started exiting.

Action:
No action is required.

FRM-91171
runtime process: JVM aborting

Category:
Process

Cause:
The runtime process had started a JVM (in order to run Oracle Reports or the Forms debugger, or to update a password in Oracle Internet Directory). That JVM started aborting.

Action:
No action is required. However, if there appear to be problems running Oracle Reports or the Forms debugger, or updating a password in Oracle Internet Directory, this message may help to indicate the cause.

FRM-91180
fatal error in runtime process: error {0} ({1}) attempting to open temporary record buffer file

Category:
Files

Cause:
An attempt to open the temporary record buffer file encountered the indicated error. Both the error number (errno on Unix and GetLastError() on Windows) and the corresponding error string are given. The runtime process was terminated.

Action:
Examine the error string, and take appropriate remedial action. Verify that the file system or directory in which the file resides exists and that the runtime process has permissions to read and write to the file system or directory.

FRM-91181
runtime process: error {0} ({1}) attempting to write {2} bytes to offset {3} of temporary record buffer file {4}

Category:
Files

Cause:
The specified 'write' operation to the temporary record buffer file encountered the indicated error. Both the error number (errno on Unix and GetLastError() on Windows) and the corresponding error string are given. Execution continued, for the moment at least; however, an error other than "out of space" is likely to cause subsequent termination of the runtime process (message FRM-91195).

Action:
Examine the error string, and take appropriate remedial action. Verify that the file system or directory in which the file resides exists, and that the runtime process has permissions to read and write to the file system or directory, and that the file system contains sufficient space.

FRM-91182
runtime process: error {0} ({1}) attempting to read {2} bytes from offset {3} of temporary record buffer file {4}

Category:
Files

Cause:
The specified 'read' operation to the temporary record buffer file encountered the indicated error. Both the error number (errno on Unix and GetLastError() on Windows) and the corresponding error string are given. Execution continued, for the moment at least; however, the error is likely to cause subsequent termination of the runtime process (message FRM-91195).

Action:
Examine the error string, and take appropriate remedial action.

FRM-91183
runtime process: error {0} ({1}) attempting to allocate {2} bytes at offset {3} of temporary record buffer file {4}

Category:
Files

Cause:
The specified 'allocate' operation ('fallocate' on Linux and 'posix_fallocate' on other Unix platforms) to the temporary record buffer file encountered the indicated error. Both the error number (errno) and the corresponding error string are given. Execution continued, for the moment at least; however, an error other than "out of space" is likely to cause subsequent termination of the runtime process (message FRM-91195).

Action:
Examine the error string, and take appropriate remedial action. Verify that the file system or directory in which the file resides exists, and that the runtime process has permissions to read and write to the file system or directory, and that the file system contains sufficient space.

FRM-91184
runtime process: error {0} ({1}) attempting to truncate or extend temporary record buffer file {2} to {3} bytes

Category:
Files

Cause:
The specified 'ftruncate' operation to the temporary record buffer file encountered the indicated error. Both the error number (errno) and the corresponding error string are given. Execution continued, for the moment at least; however, an error other than "out of space" is likely to cause subsequent termination of the runtime process (message FRM-91195).

Action:
Examine the error string, and take appropriate remedial action. Verify that the file system or directory in which the file resides exists, and that the runtime process has permissions to read and write to the file system or directory, and that the file system contains sufficient space.

FRM-91185
runtime process: error {0} ({1}) attempting to close temporary record buffer file {2}

Category:
Files

Cause:
An attempt to close the temporary record buffer file encountered the indicated error. Both the error number (errno on Unix and GetLastError() on Windows) and the corresponding error string are given. Execution continued; however, it's possible that the temporary record buffer file was not deleted properly.

Action:
Examine the error string, and take appropriate remedial action.

FRM-91190
fatal error in runtime process: unable to allocate {0} bytes of memory

Category:
Memory

Cause:
A critical memory allocation request failed. This may indicate insufficient swap space. Execution of the runtime process was terminated.

Action:
Increase the size of the swap space, or rerun the application when the system is less heavily loaded.

FRM-91191
runtime process: unable to allocate {0} bytes of memory; attempting to continue execution

Category:
Memory

Cause:
A memory allocation request failed. This may indicate insufficient swap space. Execution continued, but the current operation (e.g. the loading of a form) failed. And a subsequent critical memory allocation may have failed, thereby terminating the runtime process.

Action:
Increase the size of the swap space, or rerun the application when the system is less heavily loaded.

FRM-91192
fatal error in runtime process: unable to memory-map {0} bytes of memory

Category:
Memory

Cause:
A memory-map request failed. This probably indicates insufficient swap space. Execution of the runtime process was terminated.

Action:
Increase the size of the swap space, or rerun the application when the system is less heavily loaded.

FRM-91193
runtime process: unable to memory-map {0} bytes of memory; attempting to continue execution

Category:
Memory

Cause:
A memory-map request failed. This probably indicates insufficient swap space. Execution continued, but the current operation (e.g. the loading of a form) failed. And a subsequent critical memory allocation may have failed, thereby terminating the runtime process.

Action:
Increase the size of the swap space, or rerun the application when the system is less heavily loaded.

FRM-91194
fatal error in runtime process: unable to allocate memory for critical record manager operation

Category:
Memory

Cause:
A memory allocation failure (reported in a preceding FRM-91191 message) occurred while attempting a record manager operation, and the operation was subsequently deemed critical. Execution of the runtime process was terminated.

Action:
Increase the size of the swap space, or rerun the application when the system is less heavily loaded.

FRM-91195
fatal error in runtime process: cannot recover from disk I/O error on temporary record buffer file

Category:
Files

Cause:
A disk I/O error on the temporary record buffer file (reported in a preceding FRM-41839 message and in a FRM-91181 or FRM-91182 message preceding that) caused a critical operation to fail. Execution of the runtime process was terminated. Note that an "out of space" error on a write is *not* fatal.

Action:
Examine the preceding FRM-91181 or FRM-91182 message.

FRM-91196
fatal error in runtime process: unable to memory-map {0} bytes of memory backed by a file

Category:
Memory

Cause:
A memory-map request backed by a file failed. This probably indicates insufficient space in the file system (e.g. /tmp). Execution of the runtime process was terminated.

Action:
Increase the size of the file system, or rerun the application when the system is less heavily loaded.

FRM-91197
runtime process: unable to memory-map {0} bytes of memory backed by a file; attempting to continue execution

Category:
Memory

Cause:
A memory-map request backed by a file failed. This probably indicates insufficient space in the file system (e.g. /tmp). Execution continued, but the current operation (e.g. the loading of a form) failed. And a subsequent critical memory allocation may have failed, thereby terminating the runtime process.

Action:
Increase the size of the file system, or rerun the application when the system is less heavily loaded.

FRM-91199
internal error in runtime process: assertion failure: file {0}, line {1}

Category:
Process

Cause:
An assertion failed in code that the runtime process was executing.

Action:
If the problem persists, contact Oracle Support Services.

FRM-91200
fatal error in runtime process: error reading HTTP header

Category:
Network

Cause:
A fatal error occurred while attempting to read an HTTP header.

Action:
Check for problems on the network that connects the Forms Java Client with the Forms Listener Servlet and the runtime process.

FRM-91210
fatal error in runtime process: error reading HTTP data

Category:
Network

Cause:
A fatal error occurred while attempting to read HTTP data.

Action:
Check for problems on the network that connects the Forms Java Client with the Forms Listener Servlet and the runtime process.

FRM-91220
fatal error in runtime process: error writing HTTP data

Category:
Network

Cause:
A fatal error occurred while attempting to write HTTP data.

Action:
Check for problems on the network that connects the Forms Java Client with the Forms Listener Servlet and the runtime process.

FRM-91230
fatal error in runtime process: timeout on connection to Java client

Category:
Network

Cause:
The runtime process was waiting for a message from the Java client, but none appeared within the timeout interval. (This interval defaults to 15 minutes, but can be overridden by the FORMS_TIMEOUT environment variable.)

Action:
Check for problems on the network that connects the Forms Java Client with the Forms Listener Servlet and the runtime process. Also check to see if the Forms applet on the Java client experienced a fatal error.

FRM-91260
internal error in runtime process: unable to initialize the Winsock DLL

Category:
Process

Cause:
An unexpected error occurred while the runtime process was attempting to initialize the Winsock DLL.

Action:
If the problem persists, contact Oracle Support Services.

FRM-91270
runtime process unable to allocate socket for protocol {0}: {1}

Category:
Process

Cause:
The runtime process was unable to allocate a socket for the indicated protocol (IPv4 or IPv6). The error message from the operating system is displayed.\n NOTE: If this error was detected for an IPv4 socket, the runtime process continued execution (and subsequently attempted to configure an IPv6 socket). If this error was detected for an IPv6 socket and an IPv4 socket was not successfully configured, then the runtime process was terminated.

Action:
If the error message from the operating system indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-91272
runtime process unable to set close-on-exec on socket for protocol {0}: {1}

Category:
Process

Cause:
The runtime process was unable to configure the socket that it allocated for the indicated protocol (IPv4 or IPv6), to set close-on-exec. The error message from the operating system is displayed. The runtime process attempted to continue execution.

Action:
If the error message from the operating system indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-91273
runtime process unable to enable local address reuse on socket for protocol {0}: {1}

Category:
Process

Cause:
The runtime process was unable to configure the socket that it allocated for the indicated protocol (IPv4 or IPv6), to enable local address reuse. The error message from the operating system is displayed.\n NOTE: If this error was detected for an IPv4 socket, the runtime process continued execution (and subsequently attempted to configure an IPv6 socket). If this error was detected for an IPv6 socket and an IPv4 socket was not successfully configured, then the runtime process was terminated.

Action:
If the error message from the operating system indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-91274
runtime process unable to translate hostname ({0}) to an address for protocol {1}: {2}

Category:
Process

Cause:
The runtime process was unable to configure the socket that it allocated for the indicated protocol (IPv4 or IPv6) correctly, because the hostname could not be translated to an address. The error message from the operating system is displayed.\n NOTE: If this error was detected for an IPv4 socket, the runtime process continued execution (and subsequently attempted to configure an IPv6 socket). If this error was detected for an IPv6 socket and an IPv4 socket was not successfully configured, then the runtime process was terminated.

Action:
If the error message from the operating system indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-91275
runtime process unable to bind socket address for port {0} to socket for protocol {1}: {2}

Category:
Process

Cause:
The runtime process was unable to configure the socket that it allocated for the indicated protocol (IPv4 or IPv6), to bind the socket address for the indicated port to it. The error message from the operating system is displayed.\n NOTE: If this error was detected for an IPv4 socket, the runtime process continued execution (and subsequently attempted to

configure an IPv6 socket). If this error was detected for an IPv6 socket and an IPv4 socket was not successfully configured, then the runtime process was terminated.

Action:
If the error message from the operating system indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-91276
runtime process unable to obtain port number of socket for protocol {0}: {1}

Category:
Process

Cause:
The runtime process was unable to obtain the port number of the socket that it allocated for the indicated protocol (IPv4 or IPv6). The error message from the operating system is displayed. This error should never occur at a customer site.

Action:
If the problem persists, contact Oracle Support Services.

FRM-91277
internal error in runtime process: unable to write port and process ID information to stderr

Category:
Process

Cause:
An unexpected error occurred while the runtime process was attempting to write port and process ID information to standard error. This error should never occur at a customer site.

Action:
If the problem persists, contact Oracle Support Services.

FRM-91278
runtime process unable to listen for connections on socket for protocol {0}: {1}

Category:
Process

Cause:
The runtime process was unable to configure the socket that it allocated for the indicated protocol (IPv4 or IPv6), to listen for connections. The error message from the operating system is displayed.\n NOTE: If this error was detected for an IPv4 socket, the runtime process continued execution (and subsequently attempted to configure an IPv6 socket). If this error was detected for an IPv6 socket and an IPv4 socket was not successfully configured, then the runtime process was terminated.

Action:
If the error message from the operating system indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-91279
runtime process unable to restrict IPv6 socket to IPv6 only: {0}

Category:
Process

Cause:
The runtime process was unable to configure the socket that it allocated for IPv6, to restrict its use to IPv6 only (as opposed both IPv6 and IPv4). The error message from the operating system is displayed. The runtime process attempted to continue execution, but a subsequent attempt to bind the socket might fail with the error "address already in use".

Action:
If the error message from the operating system indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-91280
runtime process unable to set non-blocking I/O on socket for protocol {0}: {1}

Category:
Process

Cause:
The runtime process was unable to set non-blocking I/O on the socket that it allocated for the indicated protocol (IPv4 or IPv6). The error message from the operating system is displayed. The runtime process attempted to continue execution.

Action:
If the error message from the operating system indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-91292
internal error in runtime process: invalid initial message from Java client

Category:
Process

Cause:
The initial message from the Java client to the runtime process was not in the expected format.

Action:
If the problem persists, contact Oracle Support Services.

FRM-91293
internal error in runtime process: invalid initial message from servlet

Category:
Process

Cause:
The initial message from the servlet to the runtime process was not in the expected format.

Action:
If the problem persists, contact Oracle Support Services.

FRM-91299
fatal error in runtime process: unable to create a connection to the Java client

Category:
Process

Cause:
An unexpected error occurred while the runtime process was attempting to create a connection to the Java client. Usually, a previous message provides more detail.

Action:
If a previous error message indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-91930
message from Forms application: {0}

Category:
Other

Cause:
The Forms application called the MESSAGE built-in with an option of ODL_DEBUG.

Action:
Respond as directed by the application developer.

FRM-91934
message from Forms application: {0}

Category:
Other

Cause:
The Forms application called the MESSAGE built-in with an option of ODL_NOTIFICATION.

Action:
Respond as directed by the application developer.

FRM-91935
message from Forms application: {0}

Category:
Other

Cause:
The Forms application called the MESSAGE built-in with an option of ODL_WARNING.

Action:
Respond as directed by the application developer.

FRM-91936
message from Forms application: {0}

Category:
Other

Cause:
The Forms application called the MESSAGE built-in with an option of ODL_ERROR.

Action:
Respond as directed by the application developer.

FRM-91940
module {0} loaded by Forms runtime process

Category:
Other

Cause:
The Forms application caused the specified module to be opened.

Action:
No action is required.

FRM-91990
runtime process: A maximum of {0}K bytes were simultaneously allocated for archived record data.

Category:
Performance

Cause:
The runtime process allocated the indicated amount of memory without reserving swap space or /tmp file space. The memory will be included in many reports of memory usage (such as the output of the Linux pmap command), but it will not consume system resources (real memory or disk) until it is actually used for archived record data. (See FRM-91992).

Action:
No action is required.

FRM-91991
runtime process: A maximum of {0}K bytes were simultaneously allocated and reserved for archived record data.

Category:
Performance

Cause:
The runtime process allocated the indicated amount of memory, and reserved swap space or /tmp file space for it.

Action:
No action is required. However, if the number reported by this message is significantly larger than the number reported by FRM-91992 and you are using mapped-memory archiving (FORMS_RECMGR_ARCHIVE unset, or set to MAP_SWAP or MAP_TMPFILE), you may want to reduce the value of FORMS_RECMGR_BLOCK_SIZE (which defaults to 64K when memory is being reserved, but can be set as low as 32K). Better yet, don't reserve memory that's allocated for archived record data, if possible. (This can be accomplished in most Unix installations, by setting FORMS_RECMGR_RESERVE_SPACE to '0').

FRM-91992
runtime process: A maximum of {0}K bytes were simultaneously in use for archived record data.

Category:
Performance

Cause:
The runtime process used the indicated amount of memory for archived record data. Specifically, at time of maximum usage, it (the runtime process) had written data into the pages of memory, and the data was still needed at that point (because there was a possibility that the record might subsequently need to be activated). Note that when

FORMS_RECMGR_ARCHIVE has been set to WRITE_TMPFILE, the runtime process has no way of notifying the file system when it no longer needs a page, and so the file system may retain an unneeded page in a real-memory buffer for a while. Thus, in this case the number reported by this message should be viewed as lower bound.

Action:
No action is required. However, the numbers reported by this message for various applications may help to determine an appropriate value for FORMS_RECMGR_ARCHIVE_THRESHOLD.

FRM-91994
runtime process: When total memory in use for archived record data was at its maximum, record groups required {0}K bytes for archived record data, plus approximately {1}K additional bytes for active record data and record anchors. If FORMS_RECMGR_USED_FOR_RECGRPS were set to FALSE, a total of approximately {2}K bytes would instead have been required.

Category:
Performance

Cause:
At the point in time when total memory in use for archived record data was at its maximum (as reported by FRM-91992), the runtime process used the sum of the first two amounts for all data and anchors for all records in record groups, but would instead have used the third amount if FORMS_RECMGR_USED_FOR_RECGRPS had been set to FALSE.

Action:
No action is required. However, the numbers reported by this message for various applications may help to determine the appropriate value for FORMS_RECMGR_USED_FOR_RECGRPS. [Bear in mind that TRUE (the default) requires more CPU than FALSE.]

FRM-91995
runtime process: The record manager is currently consuming the following for {0}: {1}

Category:
Performance

Cause:
The Forms application issued a call to the GET_RECMGR_STATS built-in, which then issued this message. The parameter {1} in this message is a formatted report of the amount of various types of memory currently being consumed for record data of the type indicated by the parameter {0} in this message (which corresponds to the argument passed to GET_RECMGR_STATS: all_record_data, archived_record_data, active_record_data, or record_anchors). The formatted report lists Kbytes of memory for the following 6 types of memory: MALLOCED, MAPPED, MAPPED_IN_USE, MAPPED_RESERVED, WRITTEN, WRITTEN_IN_USE.

Action:
No action is required.

FRM-93100
Initializing the Forms Servlet. Initialization parameters are:{0}

Category:
Configuration

Cause:
The Forms Servlet was being initialized.

Action:
No action is required.

FRM-93110
No Forms Servlet configuration file is specified.

Category:
Configuration

Cause:
The configFileName initialization parameter was not specified.

Action:
Specify the full name in the servlet parameter configFileName, the system property oracle.forms.configFileName, or the servlet context parameter configFileName.

FRM-93111
Cannot find Forms Servlet configuration file {0}.

Category:
Configuration

Cause:
The Forms Servlet configuration file (specified by the configFileName initialization parameter) was not found.

Action:
Verify that the configFileName initialization parameter specifies the correct value. (The value is taken from the servlet parameter configFileName, the system property oracle.forms.configFileName, or the servlet context parameter configFileName.) Create the file if necessary.

FRM-93112
error reading Forms Servlet configuration file {0}

Category:
Files

Cause:
An I/O error occurred while reading the specified file.

Action:
If the error persists, determine if the file has been damaged. Re-create the file if necessary.

FRM-93113
syntax error at line {0} in configuration file {1}: invalid section name "{2}"

Category:
Configuration

Cause:
The specified configuration file contained an invalid section name.

Action:
Provide a valid section name.

FRM-93114
Forms Servlet configuration file {0} contains invalid data.

Category:
Configuration

Cause:
A syntax error was detected while parsing the specified file.

Action:
A preceding FRM-93113 or FRM-93142 error message will provide more information. Take the action indicated for the FRM-93113 or FRM-93142 message.

FRM-93115
error reading ORACLE_HOME registry file

Category:
Configuration

Cause:
An error occurred while reading the ORACLE_HOME registry file.

Action:
Do one of the following:\n1. Make sure that the ORACLE_HOME registry file exists.\n2. If ORACLE_HOME registry file is accidentally deleted or modified then reinstall ORACLE_HOME.

FRM-93121
Cannot find environment variable configuration file {0}.

Category:
Configuration

Cause:
One of the following occurred. (The first is by far the most likely.) Note that an envFile parameter may specify a relative path; if it was not found in the current directory, Forms will search for it in the directory that contains the Forms Servlet configuration file. \n1. The envFile configuration parameter for this application specified a nonexistent file. A preceding FRM-93141 error message provides details. \n2. The envFile configuration parameter for this application specified a file that existed when the Forms Servlet extracted the parameter, but the file subsequently disappeared. \n3. No envFile configuration parameter that would apply to this application was specified, and the envFile servlet parameter specified a nonexistent file.

Action:
Take action depending on the cause. \n1. Take action indicated for the preceding FRM-93141 error message. \n2. Re-create the file, or correct the envFile configuration parameter. \n3. Verify that the envFile servlet parameter specifies the correct value. Create the file if necessary.

FRM-93122
error reading environment variable configuration file {0}

Category:
Files

Cause:
An I/O error occurred while reading the specified file.

Action:
If the error persists, determine if the file has been damaged. Re-create the file if necessary.

FRM-93124
Environment variable configuration file {0} contains invalid data.

Category:
Configuration

Cause:
The specified configuration file contained an invalid section name.

Action:
Provide a valid section name.

FRM-93128
invalid value {0} specified for environment variable FORMS_HTTP_PROXY_PORT or FORMS_HTTPS_PROXY_PORT; proxy host ignored.

Category:
Configuration

Cause:
This error is typically detected when attempting to access an external service (e.g. a REST service). An invalid environment variable value (non-numeric, < 0, or > 65535) was specified for FORMS_HTTP_PROXY_PORT or FORMS_HTTPS_PROXY_PORT. The value that was specified for FORMS_HTTP_PROXY_HOST or FORMS_HTTPS_PROXY_HOST was ignored, and processing continued. However, in the absence of a proxy, the attempt to access the external service may fail.

Action:
Correct the environment variable value.

FRM-93130
No base HTML file is specified.

Category:
Configuration

Cause:
Java Web Start was not enabled, but the basehtml configuration parameter was not specified, nor was the basehtmljpi configuration parameter, where relevant. (See Oracle Fusion Middleware Forms Services Deployment Guide for details about which configuration parameter is appropriate.) The FRM-93140 error message provides details about which configuration sections were searched. (Note that the error message will always refer to the basehtml configuration parameter, not the basehtmljpi configuration parameter.)

Action:
Specify the appropriate configuration parameter.

FRM-93131
Cannot find base HTML file {0}.

Category:
Configuration

Cause:
Java Web Start was not enabled, but the specified base HTML file was not found. This file is typically specified by the basehtml configuration parameter, but in certain cases may be specified by the basehtmljpi configuration parameter. The FRM-93141 error message provides

details. Note that the parameter may specify a relative path; if the file is not found in the current directory, Forms will search for the file in the directory that contains the Forms Servlet configuration file.

Action:
Verify that the parameter specifies the correct file. Create the file if necessary.

FRM-93132
error reading base HTML or JNLP file {0}

Category:
Files

Cause:
An I/O error occurred while reading the specified file.

Action:
If the error persists, determine if the file has been damaged. Re-create the file if necessary.

FRM-93134
No base JNLP file is specified.

Category:
Configuration

Cause:
Java Web Start was enabled or a JNLP file was embedded in the HTML file, but the basejnlp configuration parameter was not specified. The FRM-93140 error message provides details about which configuration sections were searched.

Action:
Specify the basejnlp configuration parameter.

FRM-93135
Cannot find base JNLP file {0}.

Category:
Configuration

Cause:
Java Web Start was enabled or a JNLP file was embedded in the HTML file, but the specified base JNLP file was not found. This file is specified by the basejnlp configuration parameter. The FRM-93141 error message provides details. Note that the parameter may specify a relative path; if the file is not found in the current directory, Forms will search for the file in the directory that contains the Forms Servlet configuration file.

Action:
Verify that the basejnlp parameter specifies the correct file. Create the file if necessary.

FRM-93136
no base TXT file specified for Oracle Forms Standalone Application

Category:
Configuration

Cause:
The baseSAAfile configuration parameter was not specified.

Action:
Specify the baseSAAfile configuration parameter.

FRM-93140
Section [{0}] of Forms Servlet configuration file {1} does not specify (or inherit) a value for the required parameter {2}.

Category:
Configuration

Cause:
A required configuration parameter was not specified in the indicated configuration section or in a parent section.

Action:
Specify the parameter value in the indicated section, or in a parent section. (See Oracle Fusion Middleware Forms Services Deployment Guide for details about what values are expected.)

FRM-93141
Section [{0}] of Forms Servlet configuration file {1} specifies the nonexistent file {2} for parameter {3}.

Category:
Configuration

Cause:
A configuration parameter in the indicated configuration section specified the name of a nonexistent file.

Action:
Verify that the parameter specifies the correct file. Create the file if necessary.

FRM-93142
Section [{0}] of Forms Servlet configuration file {1} specifies the invalid value "{2}" for parameter {3}.

Category:
Configuration

Cause:
An invalid configuration parameter value was specified in the indicated configuration section. Note that invalid values for certain crucial parameters (such as HTMLdelimiter) will cause a subsequent error, FRM-93114.

Action:
Correct the parameter value. (See Oracle Fusion Middleware Forms Services Deployment Guide for details about what values are expected.)

FRM-93143
Oracle Forms Standalone Launcher checksum failed.

Category:
Configuration

Cause:
The checksum received from the client did not match the Oracle Forms Standalone Launcher jar.

Action:
Contact your system administrator or get the latest Oracle Forms Standalone Launcher file.

FRM-93144
error while generating checksum of Oracle Forms Standalone Launcher file

Category:
Configuration

Cause:
An I/O error occurred while generating the checksum.

Action:
Check if Oracle Forms Standalone Launcher file exists.

FRM-93153
New connections to this Forms Servlet are not being allowed. Attempting to redirect connection attempt to {0}.

Category:
Configuration

Cause:
The allowNewConnections configuration parameter was false, and a value was specified for the connectionDisallowedURL configuration parameter. Redirection will be attempted to that URL.

Action:
No action is required.

FRM-93154
The Forms Servlet is not allowing new connections.

Category:
Configuration

Cause:
The allowNewConnections configuration parameter was false, and either no value was specified for the connectionDisallowedURL configuration parameter, or else redirection to the specified URL failed.

Action:
If a value is specified for the connectionDisallowedURL configuration parameter (as indicated in error message FRM-93153), check to see if the specified URL is malformed; if so, correct the URL. Otherwise, no action is required.

FRM-93156
The Forms Servlet is unable to contact the Forms Load Balancing Server at {0}:{1}.

Category:
Configuration

Cause:
The Forms Servlet was unable to contact the indicated Forms Load Balancing Server, and the MetricsServerErrorURL configuration parameter was not specified.

Action:
Do one or both of the following. \n1. Determine why the server is unavailable, and correct the condition. \n2. Specify a value for the MetricsServerErrorURL parameter in the Forms Servlet configuration file.

FRM-93160
unexpected error while obtaining the JVM pid

Category:
Process

Cause:
An Exception was encountered while obtaining the JVM process ID.

Action:
Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-93162
unexpected error loading native library {0}

Category:
Process

Cause:
An Exception was encountered while loading native library.

Action:
Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-93176
Command "{0}" is using default ORACLE_HOME setting: {1}.

Category:
Configuration

Cause:
A test command has retrieved the specified value for the ORACLE_HOME environment variable, from the environment variable configuration file specified by the envFile parameter in the default section of the Forms Servlet configuration file.

Action:
No action is required.

FRM-93180
Initializing ListenerServlet. Initialization parameters are: {0}

Category:
Configuration

Cause:
The Forms Listener Servlet was being initialized.

Action:
No action is required.

FRM-93196
Process list file {0} does not exist or is not writable; process list disabled.

Category:
Configuration

Cause:
When a runtime process was started or stopped, an attempt was made to write an updated list of runtime processes to the specified file, but it did not exist or was not writable. Note that the name of the process list file is obtained from the em_process_file parameter in the URL, the Forms Servlet configuration file, or the environment variable configuration file.

Action:
Verify that the em_process_file parameter specifies the correct file. If necessary, create the file or make it writable, or both.

FRM-93197
unexpected error while obtaining the application name from JRF

Category:
Configuration

Cause:
An Exception was encountered while obtaining the application name from JRF.

Action:
Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-93198
unexpected error while obtaining the cluster name from JRF

Category:
Configuration

Cause:
An Exception was encountered while obtaining the cluster name from JRF.

Action:
Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-93211
error decoding query string using {0} encoding. Spaces generated from "+" in the value of otherparams may be converted to "%20".

Category:
Configuration

Cause:
There was a mismatch between the way that the browser encoded multibyte characters and the way that the Forms Servlet decoded them. This could indicate an invalid value for the defaultcharset parameter in the configuration file, or possibly a problem in either the browser or Oracle software.

Action:
If the site uses the otherparams parameter in any URLs, verify that the defaultcharset parameter in the configuration file is correct; if the defaultcharset parameter is correct, contact Oracle Support Services. Otherwise, no action is required.

FRM-93214
internal buffer ({0} bytes) not big enough to read request content ({1} bytes)

Category:
Requests/Responses

Cause:
An internal buffer was not big enough to read the content of a request from the Java client. The FRM-93214 error message provides supplemental detail for the FRM-93218 error message.

Action:
If the problem persists, contact Oracle Support Services.

FRM-93217
unable to read whole request from client: expected {0}, got {1}

Category:
Requests/Responses

Cause:
A fatal error occurred while reading the content of a request from the Java client. The FRM-93217 error message provides supplemental detail for the FRM-93218 error message.

Action:
Check for problems on the network that connects the Forms Java Client with the Forms Listener Servlet.

FRM-93218
fatal error reading client request content

Category:
Requests/Responses

Cause:
A fatal error occurred while attempting to read the content of a request from the Java client. A preceding FRM-93214 or FRM-93217 error message might provide more detail.

Action:
Check for problems on the network that connects the Forms Java Client with the Forms Listener Servlet.

FRM-93226
fatal error redirecting response to {0}

Category
Requests/Responses

Cause:
A fatal error occurred while redirecting a response. A subsequent FRM-93227 will display the stack trace

Action:
Check for problems on the network that connects the Forms Java Client with the Forms Listener Servlet.

FRM-93227
stack trace for preceding FRM-93226:

Category
Requests/Responses

Cause:
This message displays the stack trace associated with the preceding FRM-93226 message.

Action:
Check for problems on the network that connects the Forms Java Client with the Forms Listener Servlet.

FRM-93228
fatal error writing response to client

Category:
Requests/Responses

Cause:
A fatal error occurred while writing a response to the Forms Java client.

Action:
Check for problems on the network that connects the Forms Java Client with the Forms Listener Servlet.

FRM-93240
Multiple Forms applications cannot share an HTTP session.

Category:
Session

Cause:
A Forms application was launched in such a way that it attempted to share an HTTP session with an already running Forms application. This might result from one of the following:\n1. The user selected File, then New, then Browser Window (or Ctrl+N) in Internet Explorer while the servlet session was being tracked using cookies (that is, session cookies were enabled). In this case Forms does not support creating a new session for the second window.\n2. An application attempted to launch multiple Forms applications, and session cookies were enabled in the Forms application.\n3. An application attempted to launch multiple Forms applications using POST, cookies were disabled in the Forms application, and the launching application specified the same cookie name as did the Forms application.

Action:
Take action depending on the cause.\n1. No action is required.\n2. Disable session cookies in the Forms application.\n3. Change the cookie name in the launching application or the Forms application. This can be accomplished via <cookie-name> under <session-descriptor> in the weblogic.xml deployment descriptor.

FRM-93245
HTTP session not found on target server; possible load balancer configuration issue.

Category:
Session

Cause:
A GET request to the Forms Servlet or Forms Listener Servlet that was not for SSO Web Start specified a session ID (e.g. jsessionid) in a cookie or the URL, but no matching HTTP session was found on the server machine to which the request was directed. This might result from one of the following:\n1. A load balancer was not correctly configured to support sticky sessions.\n2. (1) cookies were disabled in weblogic.xml, (2) an intermediate agent timed out while an Oracle Forms Standalone application was waiting for an end user to do SSO login or to submit a Resource Access Descriptor (RAD) during SSO authentication, and (3) the preserveHttpSessionId configuration parameter was not set to true.

Action:
Take action depending on the cause.\n1. Verify that the load balancer is correctly configured to support session stickiness.\n2. Try reducing the value specified for the ssoSaaWaitInterval configuration parameter. [It defaults to 25 seconds.] Note that setting the preserveHttpSessionId configuration parameter to true will produce the more illuminating FRM-93248 in this case [i.e. when conditions (1) and (2) are true].

FRM-93248
connection to the server apparently closed after a request had executed for {0,number,#0.000} seconds, probably due to an intermediate agent timing out

Category:
Configuration

Cause:
This message may appear in the terminal window from which a Standalone application was launched. The Oracle Forms Standalone Launcher was waiting for SSO authentication to complete. When the wait exceeds the interval specified by the ssoSaaWaitInterval configuration parameter, the original request returns and the Standalone Launcher issues a new request, repeating until SSO authentication is complete. However, it appears that one of those requests failed, probably due to a timeout in an intermediate agent, which in turn caused the connection to the server to be closed.

Action:
Reduce the value specified for the ssoSaaWaitInterval configuration parameter. [It defaults to 25 seconds.]

FRM-93249
launch of browser window to be used for SSO authentication of an Oracle Forms Standalone application timed out after {0} seconds

Category:
Configuration

Cause:
This message will appear in the terminal window from which the Standalone application was launched. One of the following occurred:\n1. The browser was not launched at all, probably because java.awt.Desktop is not supported on the current platform. This message will be preceded by an FRM-92493 error message.\n2. The browser was launched, but the request generated by its initial URL did not specify a valid HTTP session, probably because a load balancer did not direct the request to the correct server. An FRM-93245 error message will appear on the launched browser window.\n3. A slow network or an overloaded client machine prevented the browser launch from completing within the indicated time interval (specified by

the ssoSaaBrowserLaunchTimeout configuration parameter). The time interval is measured from the initial invocation of frmsal.jar that launched the application.

Action:
Take action depending on the cause.\n1. Launch the Standalone application on a platform which supports java.awt.Desktop.\n2. Verify that the load balancer is correctly configured to support session stickiness.\n3. Increase the value specified by ssoSaaBrowserLaunchTimeout configuration parameter.

FRM-93250
Forms session started.

Category:
Session

Cause:
This message was generated on the initial request from the browser to the Forms Servlet, before an HTTP session was created.

Action:
No action is required.

FRM-93251
Runtime session started for client {0} (IP address {1}).

Category:
Session

Cause:
This message was generated when the runtime process was created (typically just after the HTTP session was created). If performance monitoring was requested, it started at this point.

Action:
No action is required.

FRM-93252
Forms session ended.

Category:
Session

Cause:
This message was generated when the runtime process was terminated. If performance monitoring was requested, it stopped at this point.

Action:
No action is required.

FRM-93301
Fatal authentication error: Unable to connect to Oracle Internet Directory.

Category:
Security

Cause:
A NamingException occurred while attempting to connect to Oracle Internet Directory.

Action:
Verify that the Oracle Internet Directory is up.

FRM-93302
error running Forms in SSO mode.

Category:
Security

Cause:
The OHS instance front-ending Forms managed server is not configured to run with Webgate.

Action:
Configure OHS with the Webgate access client. Refer to the Forms documentation.

FRM-93304
No resource information found for key {0}.

Category:
Security

Cause:
No resource information was found for the specified key in Oracle Internet Directory. This message might be followed by error message FRM-93330 or FRM-93318.

Action:
If a subsequent error message appears, take the action indicated for that error. Otherwise, no action is required.

FRM-93306
Encountered {0} while attempting to retrieve database credentials from Oracle Internet Directory.

Category:
Security

Cause:
A UtilException was encountered while attempting to retrieve database credentials from Oracle Internet Directory. This message might be followed by error message FRM-93330, FRM-93316, or FRM-93318.

Action:
If a subsequent error message appears, take the action indicated for that error. Otherwise, no action is required.

FRM-93308
Unable to get the User Distinguished Name (DN) for the User or the Subscriber

Category:
Security

Cause:
An Exception occurred while attempting to get the User Distinguished Name for the Oracle Access Manager user from Oracle Internet Directory

Action:
Verify that the Oracle Internet Directory is Up.

FRM-93310
Encountered {0} while attempting to decode headers from mod_osso.

Category:
Security

Cause:
An Exception was encountered while attempting to decode headers from mod_osso.

Action:
If a subsequent error message appears, take the action indicated for that error. Otherwise, no action is required.

FRM-93316
Encountered {0} while attempting to obtain user credentials. Redirecting to Delegated Administration Services.

Category:
Security

Cause:
A NoPermissionException occurred while attempting to obtain credentials. The user will be redirected to Delegated Administration Services.

Action:
If a subsequent error message appears, take the action indicated for that error. Otherwise, no action is required.

FRM-93318
Encountered {0} while attempting to obtain user credentials. Redirecting to Delegated Administration Services or to the SSO error URL.

Category:
Security

Cause:
A NamingException that is not a NoPermissionException occurred while attempting to obtain user credentials.

Action:
If a subsequent error message appears, take the action indicated for that error. Otherwise, no action is required.

FRM-93320
unable to obtain application entity credential from Oracle Platform Security Services

Category:
Security

Cause:
The Forms servlet could not retrieve application credential from Oracle Platform Security Services to connect to OID. One of the following was true: \n1. The Forms application did not have privileges to connect to Oracle Platform Security Services. \n2. Oracle Platform Security Services alias and key values were invalid.

Action:
Check whether credentials exist and are valid.

FRM-93322
unable to obtain user credentials; redirecting to Resource Access Descriptor servlet

Category:
Security

Cause:
User credentials were not obtained, and either the symptom was a NoPermissionException, or the ssoDynamicResourceCreate configuration parameter was true.

Action:
No action is required.

FRM-93324
Encountered {0} while attempting to obtain the Delegated Administration Services URL.

Category:
Security

Cause:
A UtilException was encountered while attempting to obtain the Delegated Administration Services URL.

Action:
Verify that Delegated Administration Services is up.

FRM-93326
Delegated Administration Services URL generated: {0}

Category:
Security

Cause:
The Forms application was running in SSO mode, the user did not have proper credentials configured in Oracle Internet Directory, and redirection to Delegated Administration Services was requested. This message provides the URL for Delegated Administration Services.

Action:
No action is required.

FRM-93328
User credentials not obtained; redirecting to the SSO error URL.

Category:
Security

Cause:
User credentials were not obtained. The error was not due to a NoPermissionException. The ssoDynamicResourceCreate configuration parameter was not true. If the ssoErrorURL configuration parameter was not defined, this message will be followed by error message FRM-93140, which will provide details.

Action:
No action is required.

FRM-93330
Fatal authentication error: User does not have proper credentials configured.

Category:
Security

Cause:
The user did not have proper credentials configured in the Identity Store (Oracle Internet Directory or Oracle Platform Security Services), and one of the following was true: \n1. The ssoDynamicResourceCreate configuration parameter was true, or the user did not have the necessary permissions to access Oracle Internet Directory.\n2. The ssoDynamicResourceCreate configuration parameter was not true and the ssoErrorURL configuration parameter was not defined.

Action:
Add the user credentials to the Identity Store (Oracle Internet Directory or Oracle Platform Security Services), if appropriate. Alternatively, define the ssoErrorURL configuration parameter.

FRM-93331
Fatal authentication error: Invalid Single Sign-On User.

Category:
Security

Cause:
There was a failure to obtain the Single Sign-On user information after authentication.

Action:
Re-login using SSO credentials. If the problem persists, contact Oracle Support Services.

FRM-93340
Session requires SSO user authentication.

Category:
Security

Cause:
The session was not SSO-authenticated or had expired.

Action:
No action is required.

FRM-93350
failure in SSO user validation

Category:
Security

Cause:
The Forms Listener Servlet decoded a request's SSO headers, but the values did not match the values from the Forms Servlet. The user was prompted to log in again.

Action:
No action is required.

FRM-93360
This session is in SSO mode.

Category:
Security

Cause:
The ssoMode parameter was specified as true in the base configuration file, and the servlet supported authentication.

Action:
No action is required.

FRM-93362
unable to update password in Oracle Internet Directory

Category:
Security

Cause:
The user did not have proper credentials configured in Oracle Internet Directory to update entries.

Action:
Check with the Oracle Internet Directory administrator to see if the user has permissions to update entries in Oracle Internet Directory.

FRM-93364
Cannot dynamically create resource in Oracle Internet Directory: URL specifies invalid value "{0}" for the config parameter.

Category:
Security

Cause:
The Forms application was running in SSO mode, the user did not have proper credentials configured in Oracle Internet Directory, and SSO dynamic resource creation was enabled. However, dynamic resource creation requires a valid configuration section in the base configuration file, but the user specified a nonexistent configuration section.

Action:
No action is required.

FRM-93365
error running Forms in SSO mode

Category:
Files

Cause:
Forms is not configured to run in SSO mode.

Action:
Configure Forms to run in SSO mode.

FRM-93366
error creating Forms application's Resource Access Descriptor in Oracle Internet Directory.

Category:
Security

Cause:
The Forms application failed to dynamically create a Resource Access Descriptor (RAD) in Oracle Internet Directory.

Action:
Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-93367
invalid parameters {0} passed to the Forms Rad Servlet

Category:
Security

Cause:
Invalid parameters were passed to the Forms Rad Servlet.

Action:
If the problem persists, contact Oracle Support Services.

FRM-93368
Forms Rad Servlet is in an invalid state.

Category:
Security

Cause:
Invalid Http session detected in the Forms Rad Servlet. This should never happen.

Action:
If the problem persists, contact Oracle Support Services.

FRM-93369
Direct user access of Forms RadServlet is not allowed.

Category:
Security

Cause:
User tried to access the Forms RadServlet directly.

Action:
No action is required.

FRM-93370
error reading the Resouce Access Descriptor for update

Category:
Security

Cause:
Forms Rad Servlet failed to read the Resouce Access Descriptor to update it due to an internal error.

Action:
If the problem persists, contact Oracle Support Services.

FRM-93371
error closing connection with Oracle Internet Directory

Category:
Security

Cause:
Forms encountered an error closing connection with Oracle Internet Directory.

Action:
Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-93380
unexpected error while attempting to redirect to Oracle Access Manager or the Forms Rad servlet

Category:
Security

Cause:
An IOException or ServletException was encountered while attempting to do a sendRedirect or forward to Oracle Access Manager or the Forms Rad servlet.

Action:
Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-93382
Oracle Access Manager login processing for an Oracle Forms Standalone application timed out after {0} seconds

Category:
Configuration

Cause:
This message will appear in the terminal window from which the Standalone application was launched. The user did not complete Oracle Access Manager login within the indicated time interval (specified by the ssoSaaBrowserPageTimeout configuration parameter). The time interval is measured from when the page was displayed.

Action:
Increase the time interval specified by ssoSaaBrowserPageTimeout configuration parameter if it is deemed inadequate.

FRM-93383
Resource Access Descriptor processing for an Oracle Forms Standalone application timed out after {0} seconds

Category:
Configuration

Cause:
This message will appear in the terminal window from which the Standalone application was launched. The user did not press Submit or Cancel in the Resource Access Descriptor page within the indicated time interval (specified by the ssoSaaBrowserPageTimeout configuration parameter). The time interval is measured from when the page was displayed.

Action:
Increase the time interval specified by ssoSaaBrowserPageTimeout configuration parameter if it is deemed inadequate.

FRM-93410
unexpected error while prestarting runtime processes

Category:
Process

Cause:
An unchecked Exception or Error was encountered while prestarting runtime processes. The prestarting of runtime processes might not have occurred at all, or it might have been partially completed.

Action:
Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-93412
There are {0} prestarted runtime processes in the runtime process pool for configuration section [{1}].

Category:
Process

Cause:
During runtime process pool initialization, the indicated number of runtime processes were prestarted for the indicated configuration section, because the configuration section specified a value of true for the prestartRuntimes parameter. (The number of runtime processes is derived from the prestartInit parameter.)

Action:
No action is required.

FRM-93421
starting the timer for the runtime process pool for configuration section [{0}]

Category:
Process

Cause:
During runtime process pool initialization, a timer task was started for the indicated configuration section, because the configuration section specified a positive value for the prestartTimeOut parameter.

Action:
No action is required.

FRM-93423
adding {0} runtime processes to the runtime process pool for configuration section [{1}] because the pool has gone below the minimum

Category:
Process

Cause:
A prestarted runtime process was removed from the runtime process pool for the indicated configuration section, in order to start a new Forms application. This caused the number of prestarted runtime processes to fall below the value specified by the prestartMin parameter.

As a result, the indicated number of prestarted runtime processes (derived from the prestartIncrement parameter) were added to the pool.

Action:
No action is required.

FRM-93424
removing the prestarted runtime processes for configuration section [{0}]

Category:
Process

Cause:
The servlet was being shut down, or the prestarting of runtime processes timed out (as indicated by message FRM-93425). As a result, prestarted processes were removed from the pool.

Action:
No action is required.

FRM-93425
The prestarting of runtime processes for configuration section [{0}] has timed out.

Category:
Process

Cause:
The thread that was filling the runtime process pool for the indicated configuration section timed out, after running for the number of minutes specified by the prestartTimeOut parameter for the indicated configuration section. Any prestarted processes in the pool were subsequently removed.

Action:
Determine why prestarting was taking an unexpectedly long time, or increase the value of the prestartTimeOut parameter.

FRM-93426
The prestarting of runtime processes for configuration section [{0}] is terminated.

Category:
Process

Cause:
A concurrent process removed the indicated configuration section's entry in the PoolManager while its runtime process pool was being filled. Any prestarted processes in the pool were subsequently removed.

Action:
No action is required.

FRM-93430
scheduling prestart event: {0}.

Category:
Process

Cause:
A scheduled prestart timer event was processed, resulting in the prestart of one or more Forms runtime processes.

Action:
No action is required.

FRM-93431
unexpected error while prestarting Forms runtime processes for the pre-start event: {0}

Category:
Process

Cause:
An Exception was encountered while prestarting Forms runtime processes for a scheduled prestart event.

Action:
Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-93432
error adding notification listener to the Timer MBean

Category:
Process

Cause:
An Exception was encountered while adding notification listener to the Timer MBean.

Action:
Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-93433
schedules restored from prestart archive file

Category:
Process

Cause:
Notifications were added to the prestart Timer MBean from the prestart archive file.

Action:
No action is required

FRM-93434
error restoring schedule {0} from the prestart archive file

Category:
Process

Cause:
An Exception was encountered while restoring a schedule from the prestart archive file.

Action:
Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-93435
error restoring schedules from the prestart archive file

Category:
Process

Cause:
An Exception was encountered while restoring the schedules from the prestart archive file.

Action:
Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-93436
schedules are written to the prestart archive file

Category:
Process

Cause:
Schedules from the prestart Timer MBean were dumped to the prestart archive file before the Forms application was shutdown.

Action:
No action is required

FRM-93437
error writing schedules to the prestart archive file

Category:
Process

Cause:
An Exception was encountered while writing schedules to the prestart archive file.

Action:
Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-93438
error prestarting Forms runtime processes for the event: {0}

Category:
Process

Cause:
The scheduled Forms runtime processes could not be prestarted because of an invalid entry in the notification event from the prestart Timer MBean.

Action:
No action is required.

FRM-93439
scheduled prestart event not processed for configuration section [{0}]

Category:
Process

Cause:
The prestart scheduling event was not processed because the prestartRuntimes parameter is not set in formsweb.cfg.

Action:
Enable the prestartRuntimes parameter in formsweb.cfg.

FRM-93500
unexpected error while attempting to create the runtime process

Category:
Process

Cause:
An unchecked Exception or Error was encountered while attempting to create the runtime process. Typically, a runtime process creation error would cause a more specific message.

Action:
Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-93520
Runtime process not created: Maximum permissible number of runtime processes is exceeded.

Category:
Configuration

Cause:
The maxRuntimeProcesses configuration parameter specified a positive decimal number, and there appeared to be that many runtime processes already executing.

Action:
No action is required.

FRM-93530
unable to switch to working directory {0}

Category:
Configuration

Cause:
The specified file did not exist or was not a directory. Note that the name of the working directory is obtained from one of the following: \n1. The workingDirectory parameter in the Forms Servlet configuration file. \n2. The workingDirectory servlet parameter. \n3. <oracle_home>/forms, where <oracle_home> is derived from the ORACLE_HOME parameter in the environment variable configuration file. \n4. <oracle_home>/forms, where <oracle_home> is derived from the ORACLE_HOME environment variable.

Action:
For cases 1 and 2, verify that the workingDirectory parameter specifies the correct directory. For cases 3 and 4, verify that the ORACLE_HOME parameter or environment variable specifies the correct directory. If necessary, create the directory.

FRM-93531
cannot create runtime process: unable to switch to working directory

Category:
Configuration

Cause:
Refer to error message FRM-93530 (which always precedes this message). The FRM-93530 message provides the name of the directory.

Action:
Refer to error message FRM-93530.

FRM-93534
unable to execute startup command {0}

Category:
Process

Cause:
The specified command (which was intended to start the runtime process) threw an Exception. The command was retried with <oracle_home>/bin prefixed, but that too threw an Exception. A stack trace accompanies the following FRM-93535 error message. This error should never occur at a customer site. Note that <oracle_home> is derived from one of the following:\n1. The ORACLE_HOME parameter in the environment variable configuration file.\n2. The ORACLE_HOME environment variable.

Action:
Contact Oracle Support Services.

FRM-93535
cannot create runtime process: unable to execute startup command

Category:
Process

Cause:
Refer to error message FRM-93534 (which always precedes this message). The FRM-93534 error message specifies the command. This error should never occur at a customer site.

Action:
Contact Oracle Support Services.

FRM-93536
cannot create runtime process: unable to create temporary logging file

Category:
Files

Cause:
An IOException occurred while trying to create a temporary logging file to capture the standard output and standard error streams of the newly created runtime process.

Action:
Verify that the Forms Listener Servlet has the necessary permissions and disk space to create a temporary file.

FRM-93543
cannot connect to runtime process: unable to get I/O streams from newly created runtime process

Category:
Process

Cause:
The Forms Listener Servlet encountered an Exception when attempting to obtain a BufferedInputStream for the standard output or standard error streams produced by the newly created runtime process. This error should never occur at a customer site.

Action:
Contact Oracle Support Services.

FRM-93546
external message from runtime process: {0}

Category:
Process

Cause:
The runtime process wrote the specified message to stderr or stdout, but the message does not appear to have been written by the frmweb exeutable. It typically will be an O/S message identifying an error that occurred while attempting to load the executable. In such a case, this message will be followed immediately by FRM-93552.

Action:
Examine the external message. If it identifies a fatal error, correct it, if possible. If the problem persists, contact Oracle Support Services.

FRM-93548
Runtime process ID is {0}.

Category:
Process

Cause:
The newly created runtime process sent its process ID back to the Forms Listener Servlet.

Action:
No action is required.

FRM-93550
cannot connect to runtime process: no response from newly created runtime process

Category:
Process

Cause:
The Forms Listener Servlet waited several times (for a total of roughly 4 minutes) for the initial response from the newly created runtime process, but no response arrived.

Action:
If the problem persists, contact Oracle Support Services.

FRM-93552
cannot connect to runtime process: Newly created runtime process has terminated abnormally.

Category:
Process

Cause:
The Forms Listener Servlet created the runtime process, but the process terminated abnormally. The preceding error message provides more detail.

Action:
Take the action indicated for the preceding error message.

FRM-93553
cannot connect to runtime process: unable to establish a socket connection to newly created runtime process

Category:
Process

Cause:
The Forms Listener Servlet created the runtime process, but was unable to establish a socket connection to the process.

Action:
If the problem persists, contact Oracle Support Services.

FRM-93558
cannot connect to runtime process: error reading data from newly created runtime process

Category:
Process

Cause:
The Forms Listener Servlet encountered an IOException while attempting to receive data from the newly created runtime process.

Action:
Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-93566
unexpected error while attempting to stop runtime process

Category:
Process

Cause:
An unchecked Exception or Error was encountered while attempting to stop the runtime process. Processing continued. However, the runtime process might have been left in existence (thereby consuming resources), and messages from the runtime process might not have been written to the Oracle Diagnostic Log.

Action:
Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-93572
error reading messages from runtime process

Category:
Files

Cause:
An I/O error occurred while reading the temporary file to which messages from the runtime process were written. Processing continued. However, messages from the runtime process were not written to the Oracle Diagnostic Log.

Action:
Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-93574
Application server does not support Oracle character set {0}.

Category:
Configuration

Cause:
The runtime process used the specified Oracle character set when it wrote messages for the Oracle Diagnostic Log, but the application server did not support that character set. Processing continued, using the ISO-8859-1 Java character set. However, some multibyte characters (those in variable arguments) in messages from the runtime process might have been displayed incorrectly in the Oracle Diagnostic Log.

Action:
Verify that the environment variable configuration file specifies the correct value for NLS_LANG (specifically, the correct character set). If the problem persists, contact Oracle Support Services.

FRM-93600
unexpected error while attempting to communicate with the client or the runtime process

Category:
Process

Cause:
An unchecked Exception or Error was encountered while attempting to communicate with the client or the runtime process. Typically, a communication error would cause a more specific message.

Action:
Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-93614
invalid or absent Content-Length from runtime process

Category:
Process

Cause:
This message provides more detail for the following FRM-93618 error message.

Action:
Refer to error message FRM-93618.

FRM-93618
fatal error reading data from runtime process

Category:
Process

Cause:
The runtime process was still running, but the Forms Listener Servlet encountered an IOException while attempting to receive data from the process. A preceding message might provide more detail. The accompanying stack trace represents the state of the process when the previous detail message was logged.

Action:
Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-93624
internal buffer ({0} bytes) not big enough to hold header ({1} bytes) for message from servlet to runtime process

Category:
Requests/Responses

Cause:
An internal buffer was not big enough to hold the header for a message from the servlet to the runtime process. The FRM-93624 error message provides supplemental detail for the FRM-93628 error message.

Action:
If the problem persists, contact Oracle Support Services.

FRM-93625
internal buffer ({0} bytes) not big enough to generate initial message from servlet to runtime process

Category:
Requests/Responses

Cause:
An internal buffer was not big enough to generate the initial message from the servlet to the runtime process. The FRM-93625 error message provides supplemental detail for the FRM-93628 error message.

Action:
If the problem persists, contact Oracle Support Services.

FRM-93628
fatal error writing data to runtime process

Category:
Process

Cause:
The runtime process was still running, but the Forms Listener Servlet encountered a fatal error while attempting to write data to the process. A preceding FRM-93624 or FRM-93625 error message might provide more detail.

Action:
Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-93652
The runtime process has terminated abnormally.

Category:
Process

Cause:
The Forms Listener Servlet attempted to communicate with the runtime process, but the process had terminated prematurely. The preceding error message provides more detail.

Action:
Take the action indicated for the preceding error message.

FRM-93654
Runtime process {0} is terminating due to external action.

Category:
Process

Cause:
The runtime process was running on a UNIX platform, and received a signal 9 (SIGKILL) or 15 (SIGTERM), or the runtime process was running on a Windows platform, and exited with exit code 1. Presumably the runtime process was terminated explicitly, either via the Enterprise Manager, or via a 'kill' command (UNIX) or the task manager (Windows). As a result, the runtime process terminated abnormally. This message provides more detail for a following FRM-93552 or FRM-93652 error message.

Action:
No action is required.

FRM-93656
Runtime process {0} is terminating due to signal {1}.

Category:
Process

Cause:
The runtime process was running on a UNIX platform, and received a signal other than 9 (SIGKILL) or 15 (SIGTERM). The signal caused the runtime process to terminate abnormally. This message provides more detail for a following FRM-93552 or FRM-93652 error message. If the FORMS_CATCHTERM environment variable was not set to a value that is equivalent to FALSE, there will typically be a stack trace. If the FORMS_C_STACK_TRACE_TO_FILE environment variable was set to a value that is equivalent to FALSE, the stack trace will accompany this message; otherwise, the stack trace will appear in a file named frmweb_dump_<pid> in the Forms trace directory, where <pid> is the process ID. If the FORMS_CATCHTERM environment variable was set to a value that is equivalent to FALSE, there may be a core file that contains a stack trace.

Action:
Examine the stack trace for the runtime process. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-93657
Runtime process {0} is terminating due to exception {1}.

Category:
Process

Cause:
The runtime process was running on a Windows platform, and encountered an exception (which is displayed as 8 hexadecimal digits in the error message, in some cases followed by a descriptive phrase). The exception caused the runtime process to terminate abnormally. This message provides more detail for a following FRM-93552 or FRM-93652 error message. If the FORMS_CATCHTERM environment variable was not set to a value that is equivalent to FALSE, there will typically be a stack trace. If the FORMS_C_STACK_TRACE_TO_FILE environment variable was set to a value that is equivalent to FALSE, the stack trace will accompany this message; otherwise, the stack trace will appear in a file named frmweb_dump_<pid> in the Forms trace directory, where <pid> is the process ID.

Action:
Examine the stack trace for the runtime process. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-93658
Stack trace for runtime process {0} is being written to file {1}.

Category:
Process

Cause:
The runtime process encountered a signal or an exception (identified by the preceding "FRM-93656" or "FRM-93657" message), and the FORMS_C_STACK_TRACE_TO_FILE environment variable was not set to a value that is equivalent to FALSE.

Action:
No action is required.

FRM-93659
Stack trace for runtime process {0} cannot be written to file {1}.

Category:
Process

Cause:
The runtime process encountered a signal or an exception (identified by the preceding "FRM-93656" or "FRM-93657" message), and the FORMS_C_STACK_TRACE_TO_FILE environment variable was not set to a value that is equivalent to FALSE. However, the stack trace file could not be created.

Action:
Ensure that the FORMS_TRACE_DIR environment variable (if set) and the ORACLE_INSTANCE environment variable each specify a valid directory with write permissions and adequate space.

FRM-93660
unable to get the hostname, using localhost instead of hostname in the Forms DMS table

Category:
Process

Cause:
The runtime process was unable to read the hostname from the server.

Action:
Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-93661
error writing JVM Controller pid file

Category:
Process

Cause:
The runtime process was unable to write the JVM Controller pid file to the disk.

Action:
Ensure that ORACLE_INSTANCE/FRComponent/frcommon/tools/jvm/proc directory exists, the user running Weblogic server has write permissions to write to it and there is adequate disk space.

FRM-93662
error initializing OPMN metrics collection

Category:
Process

Cause:
The runtime process was unable to initialize OPMN metrics collection.

Action:
Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-93700
Request duration is {0} seconds. Request size is {1} bytes; response size is {2} bytes.

Category:
Performance

Cause:
Performance monitoring at the request level was requested.

Action:
No action is required.

FRM-93710
Total duration of network exchanges is {0}. Total number of network exchanges is {1} ({2} long ones over {3} sec). Average time for one network exchange (excluding long ones) is {4}. Total number of bytes sent is {5}. Total number of bytes received is {6}.

Category:
Performance

Cause:
Performance monitoring at the session level was requested.

Action:
No action is required.

FRM-93840
Proctest: Warning: nProcs configuration parameter is nonnumeric - using 1.

Category:
Configuration

Cause:
A nonnumeric value was specifed for the nProcs parameter in the base configuration file. The value will default to 1.

Action:
Correct the nProcs configuration parameter.

FRM-93841
Proctest: Process test starting with {0} processes.

Category:
Process

Cause:
The Proctest command started.

Action:
No action is required.

FRM-93842
Proctest: Creating process {0}.

Category:
Process

Cause:
The Proctest command started creating a runtime process.

Action:
No action is required.

FRM-93843
Proctest: Failure to create process {0} - aborting test.

Category:
Process

Cause:
An Exception occurred while attempting to create a runtime process. The preceding error message identifies the problem, and includes a stack trace.

Action:
Refer to the preceding error message.

FRM-93844
Proctest: Connecting to process {0}.

Category:
Process

Cause:
The Proctest command started connecting to a newly created runtime process.

Action:
No action is required.

FRM-93845
Proctest: Failure to connect to process {0} - aborting test.

Category:
Process

Cause:
An Exception occurred while attempting to connect to a newly created runtime process. The preceding error message identifies the problem, and includes a stack trace.

Action:
Refer to the preceding error message.

FRM-93846
Proctest: unexpected error in process test

Category:
Process

Cause:
This message precedes error message FRM-93843 or FRM-93845 if the problem was an Error or an unchecked Exception that was not caught by Forms code. A stack trace is included.

Action:
Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-93847
Proctest: Number of processes started and connected to is {0}.

Category:
Process

Cause:
The Proctest command created the requested number of runtime processes, and successfully connected to them.

Action:
No action is required.

FRM-93848
Proctest: Stopping the {0} runtime processes.

Category:
Process

Cause:
The Proctest command reached the point in its processing where it was about to stop the runtime processes that it had previously created.

Action:
No action is required.

FRM-93849
Proctest: Process test complete.

Category:
Process

Cause:
The Proctest command completed.

Action:
No action is required.

FRM-93893
Trace: Xlate encountered an IO error

Category:
Files

Cause:
The Xlate utility encountered an IOException.

Action:
Examine the stack trace.

GGSTU-60000 to GGSTU-65036

GGSTU-60000
Unable to deploy.

Category:
Deployment

Cause:
Error happened in OGG Studio while deploying.

Action:
Retry Deployment.

GGSTU-60001
Unable to deploy as rest api service failed.

Category:
Request

Cause:
OGG Rest Service for Process Status is down.

Action:
Restart OGG Manager and Jagent Process.

GGSTU-60002
Unable to deploy as rest api service failed.

Category:
Request

Cause:
OGG Rest Service for Monitoring Points is down.

Action:
Restart OGG Manager and Jagent Process.

GGSTU-60003
Unable to deployment OGG Instance Resource is not assigned.

Category:
Deployment

Cause:
Assignment is not done.

Action:
Do OGG Instance Resource assignment through Wizard or Drag and Drop from Resource Navigator.

GGSTU-60004
Unable to deploy. Data Server Resource is not assigned.

Category:
Deployment

Cause:
Assignment is not done.

Action:
Do Data Server Resource assignment through Wizard or Drag and Drop from Resource Navigator.

GGSTU-60005
Unable to delete trail file.

Category:
Deployment

Cause:
Some error is happening while deleting the trail file.

Action:
Please delete the old trail file manaully.

GGSTU-60006
Unable to connect to OGG Instance.

Category:
Deployment

Cause:
Jagent in OGG is down or configuration of OGG Instance Resource is wrong.

Action:
Please check Jagent should be running in OGG or check configuraion of OGG Instance Resource.

GGSTU-60007
Unable to create root or temp directory

Category:
Deployment

Cause:
The root directory of oracledi and temp directory inside could not be verified.

Action:
Please check to see if the directory oracledi and temp directory inside it are accessible.

GGSTU-60008
Unable to process obey header template file

Category:
Deployment

Cause:
The file /oracle/oggstudio/deploy/resources/templateHeader.vm may have accessibility issues.

Action:
Please retry.

GGSTU-60009
Unable to take backup of the file

Category:
Deployment

Cause:
Error in the taking backup of prm or obey file.

Action:
Please start/stop jagent process and redeploy.

GGSTU-60010
Unable to deploy Oracle Data Pump Initial Load

Category:
Deployment

Cause:
Selected Database is not Oracle.

Action:
Please use Oracle Database.

GGSTU-60050
Rest Service failure. Unable to open connection to REST service

Category:
Deployment

Cause:
Failure in connecting to REST service.

Action:
Please check to see REST service is up. Check to see if the URL used to connect to REST service is correct.

GGSTU-60051
Rest Service failure. Unable to get status

Category:
Deployment

Cause:
Error in parsing of status response received from REST service.

Action:
Please check to see REST service is up and sending correct format response for status.

GGSTU-60052
Rest Service failure. Unable to get monitorying data.

Category:
Deployment

Cause:
Error in parsing of Monitoring data response received from REST service.

Action:
Please check to see REST service is up and sending correct format response for monitoring.

GGSTU-60053
Unable to synchronize profile

Category:
Deployment

Cause:
Error while synchronizing profiles with solution.

Action:
Please refresh Project navigator and try again.

GGSTU-60054
Unable to create diroby directory in OGG Instance.

Category:
Deployment

Cause:
Error while creating diroby directory in OGG Instance.

Action:
Please update installed Jagent or create diroby directory manaully.

GGSTU-60200
Unable to start/stop process.

Category:
UI

Cause:
Error in starting or stoping process.

Action:
Please check if the JAgent service is up and running.

GGSTU-60201
Unable to create deployment archive.

Category:
UI

Cause:
Error in creating deployment archive.

Action:
Critical error UI after creation of deployment archive failed.

GGSTU-60202
Unable to do online deployment.

Category:
UI

Cause:
Error in executing job of online deployment.

Action:
Critical error UI after job of online deployment failed.

GGSTU-60203
Unable to create deployment agent dialog box.

Category:
UI

Cause:
Error in showing dialog box for deployment agent.

Action:

GGSTU-60250
Framework error in opening a CEF editor.

Category:
UI

Cause:
Error in initializing the UI for a CEF editor.

Action:
Critical error in UI module in opening a CEF editor.

GGSTU-60251
Framework error in closing a CEF editor.

Category:
UI

Cause:
Error in closure of the UI for a CEF editor.

Action:
Critical error in UI module in closing a CEF editor.

GGSTU-60300
Error while adding a page to the panel for the Initial load wizard.

Category:
WIZARD

Cause:
Exception while adding page to the Initial load panel wizard.

Action:
Page addition to Initial load wizard failed. Check to see if the Initial load is configured properly.

GGSTU-60301
Error while adding a page to the panel for the Instance assignment wizard.

Category:
WIZARD

Cause:
Exception while adding page to the Instance assignment wizard.

Action:
Page addition to Instance Assignemnt wizard failed. Check to see if the Instances are configured properly.

GGSTU-60302
Error while adding a page to the panel for the Data Server assignment wizard.

Category:
WIZARD

Cause:
Exception while adding page to the Data Server assignment wizard.

Action:
Page addition to Data Server Assignemnt wizard failed. Check to see if the Data Servers are configured properly.

GGSTU-61000
Addin failed to initialize.

Category:
UI

Cause:
Exception while trying to initialize the Studio addin.

Action:
The addin failed. Try to restart the application.

GGSTU-61001
Exception while checking if CEF node can be duplicated

Category:
UI

Cause:
Exception while trying to check if the CEF node can be duplicated.

Action:

GGSTU-61002
Exception while handling duplicate CEF node event.

Category:
UI

Cause:
Exception while trying to process the duplicate CEF node event.

Action:

GGSTU-61003
Exception while handling repository export event.

Category:
UI

Cause:
Exception while trying to process the repository export event.

Action:

GGSTU-61004
Exception while handling repository import event.

Category:
UI

Cause:
Exception while trying to process the repository import event.

Action:

GGSTU-61100
Overall exception in loading metadata for OGG Studio.

Category:
UI

Cause:
Generic Exception in loading metadata.

Action:
Overall failure of loading metadata. Please check for other error codes for specific action.

GGSTU-61101
Exception in loading resource bundle of metadata for OGG Studio.

Category:
UI

Cause:
Error during loading resource bundle for meta data.

Action:
Please check and see if the resource bundle for meta data is present in correct location.

GGSTU-61102
Exception in parsing the metadata xml for OGG Studio.

Category:
UI

Cause:
Error during parking the meta data file.

Action:
Please check and see if the format of meta data file is correct. Check for any missing tags etc.

GGSTU-61103
Exception in reading the metadata properties file for OGG Studio.

Category:
UI

Cause:
Error during reading the meta data properties file.

Action:
Please check and see if the meta data properties file is present at the correct location. Also check if the directory has correct permissions.

GGSTU-61104
Exception in reading and parsing the metadata xml file for OGG Studio.

Category:
UI

Cause:
Error during reading and parsing the meta data xml file.

Action:
Please check and see if the meta data xml file is present at the correct location. Also check if the directory has correct permissions. Also check for any missing tags in the xml file.

GGSTU-64000
Connection context creation failure. Unable to get OGG Resources connection context.

Category:
Resources

Cause:
Error while getting OGG Resources Connection context

Action:
Please make sure connection context configuration is correct

GGSTU-64001
Unable to destroy adf connection context.

Category:
Resources

Cause:
Error while destroying adf connection context.

Action:
Please make sure connection context exists and the user has permissions to destroy the context.

GGSTU-64002
JNDI Context creation failure. Unalbe to create jndi context.

Category:
Resources

Cause:
Error while creating jndi context.

Action:
Please make sure JNDI configuration is correct.

GGSTU-64003
ADF Config creation failure. Unable to create adf config files.

Category:
Resources

Cause:
Error while creating adf config files.

Action:
Please make sure PROVIDER URL is correctly configured.

GGSTU-64004
Unable to create adf connection context document

Category:
Resources

Cause:
Error while creating adf connection context document.

Action:
Please make sure ADF connection context is configured correctly.

GGSTU-64005
JNDI Context initialization failure. Unable to initialize JNDI context factory.

Category:
Resources

Cause:
Error while initializing jndi context.

Action:
Please make sure JNDI is correctly configured.

GGSTU-64006
Resource save failure. Unable to save resource in adf config.

Category:
Resources

Cause:
Error while saving resource in adf config.

Action:
Kindly retry by using a different resource name. Also, make sure all the resource parameters are correct.

GGSTU-64007
Resource persist failure. Unable to save/persist resource in repository.

Category:
Resources

Cause:
Error while saving resource in repository

Action:
Please try to use a different resource name. Also, make sure that the parameters of resource are correct.

GGSTU-64008
Resource already exists in repository.

Category:
Resources

Cause:
Resource already exists in repository.

Action:
Please use a different resource name.

GGSTU-64009
Resource not found error. Unable to find the specified resource

Category:
Resources

Cause:
Error while retrieving the resource.

Action:
Please use a resource that exists in repository.

GGSTU-64010
Resource Modification failure. Not able to modify/update the specified resource.

Category:
Resources

Cause:
Error while updating the resource.

Action:
Please retry with different properties of resource. Some of the values modifed might be incorrect.

GGSTU-64011
Resource deletion failure. Not able to delete the specified resource.

Category:
Resources

Cause:
Error while deleting resource

Action:
Please make sure this resource is not used by some other object. Kindly delete any association of this resource with others before trying again.

GGSTU-64012
Unable to load adf context document.

Category:
Resources

Cause:
Error while loading adf context document

Action:
Please make sure the adf configuration is correctly configured.

GGSTU-64013
Unable to copy mapping group to global resource library

Category:
Resources

Cause:
Error while copying mapping group to Global Resource Library

Action:
Please make sure that a resource with same name does not currenlty exist. Kindly retry.

GGSTU-64014
OGG Instance name must have text; it must not be empty or blank.

Category:
Resources

Cause:
Error while creating resource

Action:
Please make sure this Instance name is provided in Name field

GGSTU-64015
Unable to find if the data server is assigned to any solution. Data server cannot be renamed.

Category:
Resources

Cause:
Error while trying to find if the data server is assigned to any solution.

Action:
Please create another data server connection with the desired name.

GGSTU-65010
Unable to open the Conflict Resolution edit dialog

Category:
PI

Cause:
Component definition file is missing.

Action:
Make sure component definition file exists in the location

GGSTU-65011
Unable to open the edit dialog

Category:
PI

Cause:
Component definition file is missing.

Action:
Make sure component definition file exists in the location

GGSTU-65012
Failed to open the component panel.

Category:
PI

Cause:
Component definition file is missing or component file has error.

Action:
Make sure component definition file exists in the location

GGSTU-65013
Unable to initialize the component.

Category:
PI

Cause:
Component definition file is missing or component file has error.

Action:
Make sure component definition file exists in the location

GGSTU-65030
Unable to get the node graphic

Category:
Diagram Node

Cause:
Unable to read/write the stream

Action:
Make sure that read/write permission is available or the file exists

GGSTU-65031

IAM-3010176
An error occurred while generating the {0}. No data passed for {1} generation.

Category:
Logging

Cause:

Action:

IAM-3010177
An error occurred while generating the {0}. The Policy {1} for {2} generation does not exist.

Category:
Logging

Cause:

Action:

IAM-3010178
An error occurred while generating the {0}. Cannot fetch the policy {1}.

Category:
Logging

Cause:

Action:

IAM-3010180
An error occurred while retrieving the User Entity Attributes for attribute length check in {0} generation.

Category:
Logging

Cause:

Action:

IAM-3010181
An error occurred while generating the {0}. Length of {1} exceeds the expected length {2}.

Category:
Logging

Cause:

Action:

IAM-3010182
An error occurred while generating the {0}. Length of one or more attributes exceeds the expected length.

Category:
Logging

Cause:

Action:

IAM-3010183
An error occurred while checking if a user already exists with the {0} generated. {0}

Category:
Logging

Cause:

Action:

IAM-3010185
An error occurred while generating the {0}. Please provide {1} as expected by {2}.

Category:
Logging

Cause:

Action:

IAM-3010186
An error occurred while generating the {0} because all of the generated names already exist.

Category:
Logging

Cause:

Action:

IAM-3010187
{0} generated in pre process handler - {0}.

Category:
Logging

Cause:

Action:

IAM-3010188
Unable to generate a {0} with the given data. Please specify a {1} manually or provide the required data as per generation policy.

Category:
Logging

Cause:

Action:

IAM-3010189
The container {0} already contains a user with the {1} {2}

Category:
Logging

Cause:

Action:

IAM-3010190
Either the RDN {0} of the user is being modified, or the user container is changed without referential integrity being enabled on target LDAP directory.

Category:
Logging

Cause:

Action:

IAM-3010191
An error occurred while verifying if {0} is unique.

Category:
Logging

Cause:

Action:

IAM-3010192
An error occurred while getting a connection to LDAP directory.

Category:
Logging

Cause:

Action:

IAM-3010194
An error occurred while getting the LDAP container rules.

Category:
Logging

Cause:

Action:

IAM-3010195
The user with key {0} will be deleted by scheduler once the automatically delete on date {1} is reached.

Category:
Logging

Cause:

Action:

IAM-3010196
The RDN {0} of the role is being modified, or the role container has changed, without referential integrity being enabled on target LDAP directory.

Category:
Logging

Cause:

Action:

IAM-3010197
The user container is being changed to {0}, for which referential integrity needs to be enabled.

Category:
Logging

Cause:

Action:

IAM-3010198
Referential Integrity is not enabled in target LDAP system and hence the RDN {0} update will be ignored. Rest of the attributes will be updated.

Category:
Logging

Action:

IAM-4067023
An error occurred in {0} when user with key {1} performs direct operation {2} for target entity type {3} and the cause of error is {4}.

Category:
Logging

Cause:

Action:

IAM-4067024
An error occurred in {0} while checking access for logged in user with key {1} to perform action {2} on entity with type {3} and entity id {4} and approval obligation name {5}.

Category:
Logging

Cause:

Action:

IAM-4067025
An error occurred in {0} as access denied to logged in user with key {1} to perform action {2} for entity {3} .

Category:
Logging

Cause:

Action:

IAM-4067026
An error occurred in {0} as entitlement instance with key {1} does not exist.

Category:
Logging

Cause:

Action:

IAM-4067027
An error occurred in {0} and the cause of error is {1}.

Category:
Logging

Cause:

Action:

IAM-4067028
An error occurred in {0} as user with key {1} is in status {2}.

Category:
Logging

Cause:

Action:

IAM-4067029
An error occurred in {0} as account with id {1} does not exist.

Category:
Logging

Cause:

Action:

IAM-4067030
An error occurred in {0} as entity-publication cache refresh failed for {1} with key {2}.

Category:
Logging

Cause:

Action:

IAM-4067031
An error occurred in {0} as access denied to logged in user with key {1} to search for {2} with key {3}.

Category:
Logging

Cause:

Action:

IAM-4067032
An error occurred in {0} as entity key is not passed for {1} and hence access denied to logged in user with key {2} to search for {3} with key {4}.

Category:
Logging

Cause:

Action:

IAM-4067033
An error occurred in {0} while finding details for request key {1} and the cause of error is {2}.

Category:
Logging

Cause:

Action:

IAM-4067034
An error occurred in {0} as process instance with key {1} does not exist.

Category:
Logging

Cause:

Action:

IAM-4067040
An error occurred in {0} as there is no entitlement instance associated with account key {1} and entitlement key {2}.

Category:
Logging

Cause:

Action:

IAM-4067041
Configuration Error: The entitlement field cannot be determined as there is no field marked as Entitlement in form {0}.

Category:
Logging

Cause:

Action:

IAM-4067042
Configuration Error: The entitlement field cannot be determined as there are multiple fields marked as Entitlement but no field marked as OIAParentAttribute in form {0}.

Category:
Logging

Cause:

Action:

IAM-4067043
Configuration Error: The entitlement field cannot be determined as there are multiple fields marked as OIAParentAttribute and Entitlement in form {0}.

Category:
Logging

Cause:

Action:

IAM-4067044
An error occurred in {0} as account start and end dates are not valid.

Category:
Logging

Cause:

Action:

IAM-4067045
Entitlement start/end date is not valid for entitlement with name {1} for account {2}.

Category:
Logging

Cause:

Action:

IAM-4067046
An error occurred in {0} as ApplicationObjectclass with name {1} already exists.

Category:
Logging

Cause:

Action:

IAM-4067047
ApplicationObjectclass with ID {0} is not found.

Category:
Logging

Cause:

Action:

IAM-4067048
ApplicationObjectclass with name {0} is not found.

Category:
Logging

Cause:

Action:

IAM-4067049
An error occurred in {0} while creating ApplicationObjectclass {1} and the cause of error is {2}.

Category:
Logging

Cause:

Action:

IAM-4067050
An error occurred in {0} while creating schema for ApplicationObjectclass {1} and the cause of error is {2}.

Category:
Logging

Cause:

Action:

IAM-4067051
Access denied to logged in user with key {0} to perform direct operation {1} for entity type {2}.

Category:
Logging

Cause:

Action:

IAM-4067052
An error occurred in {0} for ApplicaionObjectclass with name {1} and the cause of error is {2} .

Category:
Logging

Cause:

Action:

IAM-4067053
An error occurred in {0} while deleting ApplicaionObjectclass with ID {1} and the cause of error is {2} .

Category:
Logging

Cause:

Action:

IAM-4067054
An error occurred in {0} while finding ApplicaionObject and the cause of error is {2} .

Category:
Logging

Cause:

Action:

IAM-4067055
An error occurred while retrieving count of revoke entitlement request existing for a particular entitlement .

Category:
Logging

Cause:

Action:

IAM-4068000
An error occurred while executing the schedule job - {0}, and the corresponding error message is - {1}

Category:
Logging

Cause:

Action:

IAM-4068001
An error occurred while updating account with application instance and type.

Category:
Logging

Cause:

Action:

IAM-4068002
An error occurred while trying to get account key for user from database.

Category:
Logging

Cause:

Action:

IAM-4068003
An error occurred while waiting for user thread to die.

Category:
Logging

Cause:

Action:

IAM-4068004
An error occurred while trying to get user key from database.

Category:

IAU-01023 to IAU-62023

IAU-01023
Invalid filter preset. The Valid choices are {0}

Category:
Other

Cause:
The given audit level(filter preset) is invalid.

Action:
Give a valid audit level(filter preset) like Low,Medium,None,Custom.

IAU-01024
Max Dir Size should be atleast double that of min File Size and min File Size should be 4K

Category:
Other

Cause:
Error in setting the maximum directory size or file size for audit logs.

Action:
Give a valid value for maximum directory and file size.

IAU-01025
Unknown componentType {0} at character position:{1}

Category:
Other

Cause:
The component type given in custom event expression is invalid.

Action:
Enter valid component type. listAuditEvents() command gives a list of component types.

IAU-01026
Invalid Event Name: {0}

Category:
Other

Cause:
The event name in custom event expression is invalid.

Action:
Enter valid event name. listAuditEvents() command gives a list of all the events for a given component.

IAU-01027
Invalid component Type: {0}

Category:
Other

Cause:
The component type given in custom event expression is invalid.

Action:
Give valid component type.listAuditEvents() command gives a list of component types.

IAU-01028
Can't read components_dir {0}

Category:
Other

Cause:
Install is possibly corrupted.

Action:
Check your install and contact Oracle Customer Support.

IAU-01029
User {0} not found

Category:
Other

Cause:
The user to be removed is not in the list of special users(users to always audit).

Action:
Check for the list of special users(users to always audit)already present using getAuditPolicy() command.

IAU-01030
Unknown construct . expecting eventName at character position:{0}

Category:
Other

Cause:
Invalid syntax in custom event expression.

Action:
Event name is expected at that position.

IAU-01031
Unknown event {0} at character position:{1}

Category:
Other

Cause:
Invalid event in custom event expression.

Action:
Enter a valid event name. listAuditEvents() command gives a list of all the events for a given component.

IAU-01032
Expecting SUCCESSESONLY or FAILURESONLY after the dot at charcter position:{0}

Category:
Other

Cause:
Invalid syntax in custom event expression.

Action:
The events name should be qualified with either SUCCESSONLY or FAILURESONLY after the dot.

IAU-01033
Unknown construct . expecting componentType at character position {0}

Category:
Other

Cause:
componentType is expected at that position.

Action:
Enter valid component type.listAuditEvents() command gives a list of component types.

IAU-01034
Component type {0} is repeated at character position:{1}

Category:
Other

Cause:
Invalid syntax in custom event expression.

Action:
Specify a component exactly once giving the list of all events to be added or removed.

IAU-01035
Missing character after backslash at character position:{0}

Category:
Other

Cause:
The string at the specified position is invalid.

Action:
Remove the trailing backslash.

IAU-01036
Unterminated quoted string at character position:{0}

Category:
Other

Cause:
No matching end quote in the string.

Action:
Check the specified string and add the matching end quote.

IAU-01037
custom events can only be specified for custom filter preset

Category:
Other

Cause:
Custom events are added when the audit level(filter preset) is not Custom.

Action:
Change the audit level(filter preset) to Custom.

IAU-01038
Unexpected token {0} found at character position {1}

Category:
Other

Cause:
Invalid syntax in custom events expression.

Action:
Check the custom events expression given.

IAU-01039
Unfinished string that started at position {0}

Category:
Other

Cause:
Custom event expression string is not terminated.

Action:
Check the string and terminate it.

IAU-01040
Unrecognized token at position {0}

Category:
Other

Cause:
Invalid syntax in custom events expression.

Action:
Check for the syntax of custom events expression.

IAU-01041
Expecting RHS for the boolean operator {0} at position {1}

Category:
Other

Cause:
Invalid syntax in custom event expression.

Action:
Give a RHS value for the boolean operator to evaluate.

IAU-01042
Unexpected token {0} found. Expecting -and or -or or ')' at position {1}

Category:
Other

Cause:
Invalid syntax in custom events expression.

Action:
Check for the syntax of custom events expression.

IAU-01043
Expecting ')' corresponding to '(' at {0}

Category:
Other

Cause:
There is no matching end brace in custom events expression string.

Action:
Check the expression and add a closing brace at the end to match with the beginning brace.

IAU-01044
Expecting a relation expression at position {0}

Category:
Other

Cause:
Invalid syntax in custom events expression.

Action:
Check for the syntax of custom events expression.

IAU-01045
Operator {0} is not applicable for an attribute of type {1} at position {2}

Category:
Other

Cause:
Invalid operator given for an attribute in custom events expression.

Action:
Use an operator that is allowed to be used with the attribute.

IAU-01046
Invalid boolean operator {0}

Category:
Other

Cause:
Invalid syntax in custom events expression.

Action:
Give a valid boolean operator.

IAU-01047
Attribute {0} needs a string at position {1}

Category:
Other

Cause:
The value given for the attribute is not a string.

Action:
Give a string value in double quotes.

IAU-01048
Attribute {0} needs a boolean at position {1}

Category:
Other

Cause:
The value given for the attribute in custom events expression is of a different type.

Action:
Give a boolean value(true or false) for this attribute.

IAU-01049
Attribute {0} needs a number at position {1}

Category:
Other

Cause:
The value given for the attribute in custom events expression is of a different type.

Action:
Give a number value for this attribute.

IAU-01050
Attribute {0} needs a date at position {1}

Category:
Other

Cause:
The value given for the attribute in custom events expression is of a different type.

Action:
Give a date value for this attribute.

IAU-01051
Cannot parse {0} into a date. Error {1} at {2}

Category:
Other

Cause:
Date value entered is invalid.

Action:
Give a valid date value.

IAU-01052
Unparseable date {0} at position {1}

Category:
Other

Cause:
Date value entered is invalid.

Action:
Give a valid date value.

IAU-01053
Unparseable time {0} at position {1}

Category:
Other

Cause:
Invalid time given in the custom events expression.

Action:
Enter valid time format.

IAU-01054
Error in expression: unknown operator

Category:
Other

Cause:
Invalid operator given in a custom events expression.

Action:
Give a valid operator.

IAU-01055
Expecting a Boolean value for attrib:{0}

Category:
Other

Cause:
The value given for the attribute in custom events expression is of a different type.

Action:
Give a boolean value for the attribute.

IAU-01056
Expecting a Number value for attrib:{0}

Category:
Other

Cause:
The value given for the attribute in custom events expression is of a different type.

Action:
Give a number value for the attribute.

IAU-01057
No relational expressions allowed for Binary operator

Category:
Other

Cause:
Binary attribute is present in the custom events expression.

Action:
Remove binary attribute from the custom events expression.

IAU-01058
Expecting a Date value for attrib:{0}

Category:
Other

Cause:
A non-date value is given to the date attribute.

Action:
Give a date value for the attribute.

IAU-01059
trailing backslash in special users

Category:
Other

Cause:
Invalid special users(Users to always audit) string.

Action:
Remove the trailing back slash in special users(Users to always audit)string.

IAU-01060
Invalid config file

Category:
Other

Cause:
Config file given in importAuditConfig() command is possibly corrupted.

Action:
Contact Oracle Customer Support.

IAU-1061
Dynamic audit store is not configured

Category:
Other

Cause:
The setup is not configured to use Audit Store

Action:
Read the documentation and configure audit store

IAU-01062
Audit Registration Service is not available

Category:
Other

Cause:
Component audit registration failed

Action:
There could be something wrong with the component audit event definition. Check the diagnostic logs for more information

IAU-1063
Either a component event definition file or the compoentType has not been provided

Category:
Other

Cause:
Component event definition file is missing or the compoentType has not been provided

Action:
Provide a componentType and the component event definition file

IAU-1064
AuditLoader Configuration Initialized with Unsupported Timezone {0}. Defaulting to UTC

Category:
Other

Cause:
Unsupported timezone property value is used

Action:
Use a supported timezone value. Supported values are local and utc

IAU-1065
Event(s) {0} exists in audit policy for component type {1}

Category:
Other

Cause:
Events being added already exists in the Custom Event list for the component

Action:
Remove duplicate events from the events that are being added to the Custom event list

IAU-1066
Event(s) {0} not found in audit policy for component type {1}

Category:
Other

Cause:
Events being removed do not exist in the Custom Event list for the component

Action:
Do not try to remove events that do not exist in the Custom Event list

IAU-1067
ComponentType should not be passed in for System Components

Category:
Other

Cause:
Passing in the componentType as one of the params for audit WLST commands is not supported for system components

Action:
Do not pass in the componentType for non JEE/JSE components

IAU-1068
Problem retrieving System Component Attributes from audit store

Category:
Other

Cause:
There is something wrong with the audit store

Action:
Check the diagnostic logs for more information

IAU-1069
Environment variables COMMON_COMPONENTS_HOME or {0} or {1} is not set to read Events

Category:
Other

Cause:
Environment variable COMMON_COMPONENTS_HOME is not set

Action:
Set the value for COMMON_COMPONENTS_HOME

IAU-1070
Cannot start the audit loader thread. Error in executor service retrieval

Category:
Other

Cause:
Executor service retrieval failed

Action:
Check the diagnostic logs for more information

IAU-1071
Cannot change the repository type from DB to File. Valid value for switchToDB switch is true

Category:
Other

Cause:
The value for switchToDB in setAuditRepository WLST command was set to false

Action:
We cannot change the repositoryType from Db to File

IAU-1072
Cannot change the interval value to {0}, Valid value for interval switch is positive numeric

Category:
Other

Cause:
The interval value for audit loader is not valid

Action:
Pass in a valid value for audit loader interval

IAU-1073
Cannot change the timezone value to {0}, Valid value for timezone switch is local or utc

Category:
Other

Cause:
The timezone value is invalid.

Action:
Give a valid timezone value

IAU-1074
Audit Repository Information updated

Category:
Other

Cause:
The audit config has been updated with the audit repository information

Action:
None

IAU-1075
Operation is not supported. componentType needs to be passed in

Category:
Other

Cause:
The operation failed because the componentType was not provided

Action:
Provide the componentType

IAU-1076
Cannot create IAU Audit DB View. Invalid View Type {0}

Category:
Other

Cause:
Invalid view type has been provided

Action:
Provide a valid view type for creating the IAU Audit DB view

IAU-1077
Cannot create Indexable IAU Audit DB View. No indexable used attributes found in definition for componentType {0}

Category:
Other

Cause:
Indexable attributes not found in component audit definition

Action:
Provide indexable attributes in component audit definition

IAU-1078
Cannot create Indexable IAU Audit DB View. No mappings found for NS {0}

Category:
Other

Cause:
No attribute data mappings found for component

Action:
Check if the component audit registration was successful in the diagnostic logs

IAU-1079
There is no data mapping for the component type passed {0}

Category:
Other

Cause:
Component audit registration could have been unsuccessful

Action:
Check the diagnostic logs for more information

IAU-1080
Audit Store passed is null

Category:
Other

Cause:
Audit Store failure

Action:
Check the diagnostic logs for more information

IAU-1081
Audit Data DB Type {0} is not supported for {1} IAU view

Category:
Other

Cause:
Some other DB type other than Oracle was provided

Action:
Provide Oracle as the DB type

IAU-1082
Couldn't retrieve connected user from datasource. Grants may fail

Category:
Other

Cause:
Database access failed

Action:
Check the diagnostic logs for more information

IAU-1083
Couldn't create Indexable IAU Audit DB View for component {0}

Category:
Other

Cause:
Failure during the creation of Indexable Audit Database view

Action:
Check the diagnostic logs for more information

IAU-1084
No Definitions found for component {0} in audit store

Category:
Other

Cause:
Component is not registered in the audit store

Action:
Register the component in audit store

IAU-1085
Successfully Created IAU View {1} for component {0}

Category:
Other

Cause:
IAU view has been created for the component

Action:
None

IAU-1086
Could not Create IAU View for component {0}

Category:
Other

Cause:
Creation of audit view failed for component

Action:
Check if view creation is disabled or if there is some issue with the indexable/simple view creation. Check diagnostic logs for more information

IAU-1087
Couldn't generate SQL. Only Oracle Database is supported for Indexable IAU view

Category:
Other

Cause:
Generation of indexable view creation script failed

Action:
Check if the appropriate DB type is passed in. Only Oracle database is supported

IAU-05011
Audit Loader initialization failed. The Audit loader is disabled. Caught Exception {0}

Category:
Other

Cause:
An error prevented the Audit Loader from starting.

Action:
Check the diagnostic logs and contact Oracle Customer Support.

IAU-05042
Error in reading component definition from {0}

Category:
Other

Cause:
Install might be corrupted.

Action:
Check the install and contact Oracle Customer Support.

IAU-05043
Cannot create directory for saving AuditLoader state {0}

Category:
Other

Cause:
OS error in creating directory.

Action:
Check file permissions and disk space.

IAU-05044
Cannot save AuditLoader state to file {0}

Category:
Other

Cause:
OS error in writing to state file.

Action:
Check file permissions and disk space.

IAU-05045
Cannot read AuditLoader state from file {0}

Category:
Other

Cause:
OS error in reading state file.

Action:
Check file permissions or the file is possibly corrupted.

IAU-05046
Stopping AuditLoader, caught exception: {0}

Category:
Other

Cause:
An error prevented Audit Loader from continuing.

Action:
Check the diagnostic logs and contact Oracle Customer Support.

IAU-05047
Problem in transferring audit record from file:{0} position:{1} will retry in next cycle. caught exception {2}

Category:
Other

Cause:
The database containing Audit store is probably down.

Action:
Check the database availability. Restart the database if required.

IAU-05048
Problem in transferring audit record to Repository {0}. Please verify your Repository Configuration

Category:
Other

Cause:
The database configuration is invalid or the database is down.

Action:
Check Audit Store configuration and bring up the database if it is down.

IAU-5049
Unable to create Data Source for connection string {0} and DB user {1}

Category:
Other

Cause:
Creation of data source failed. The connection string or the DB user value could be wrong.

Action:
Check if the connection string and DB user values are correct

IAU-5050
Unable to close data source

Category:
Other

Cause:
Failed to close data source

Action:
Check diagnostic logs for more information

IAU-5051
Unable to get a database connection with connect string {0}

Category:
Other

Cause:
Failed to get database connection. The connection string used to connect to the database could be wrong.

Action:
Check if the connection string value is correct

IAU-5052
JNDI resource does not exist for JNDI name {0}

Category:
Other

Cause:
There is no corresponding JNDI resource for the JNDI name specified

Action:
Check if the JNDI resource exists or the correct JNDI name was used

IAU-5053
Unable to get a connection from the data source for JNDI name {0}

Category:
Other

Cause:
Database access failed

Action:
Check if the datasource for the JNDI name exists and if the correct JNDI name is used

IAU-5054
Problem in getting Audit Service, caught exception: {0}

Category:
Other

Cause:
Error in getting the audit service.

Action:
Check the diagnostic logs for more information

IAU-5055
Properties {0}, {1} and {2} should be defined in the audit service properties

Category:
Other

Cause:
Required properties do not have values set

Action:
Set valid property values for required properties

IAU-5056
Unable to determine the audit log directory. Either the audit service property {0} or system properties {1}, {2} have not been provided

Category:
Other

Cause:
Audit log directory location has not been set

Action:
Set the audit log directory value for the audit.logDirectory service property or use the system property to set the audit log directory. Refer to the OPSS Audit section in Oracle documentation

IAU-5057
Cannot create state file for saving AuditLoader state. Base directory is not set.

Category:
Other

Cause:
Audit log directory location has not been set

Action:
Set the audit log directory value for the audit.logDirectory service property or use the system property to set the audit log directory. Refer to Oracle documentation for more information

IAU-06001
Error in reading audit configuration file from {0}.

Category:
Other

Cause:
Install might be corrupted.

Action:
Check the install and contact Oracle Customer Support.

IAU-06002
Invalid {0} directory: {1}.

Category:
Other

Cause:
Invalid directory path.

Action:
Check that the directory path is valid and the directory is writable.

IAU-06003
Cannot create directory: {0}.

Category:
Other

Cause:
Unable to create directory.

Action:
Check the directory path is valid and the directory is writable.

IAU-06004
Cannot write to {0}: {1}.

Category:
Other

Cause:
Unable to create directory.

Action:
Check the directory path is valid and the directory is writable.

IAU-06005
Denied access to log directory: {0}.

Category:
Other

Cause:
Unable to read/write from/to directory

Action:
Check the directory path is valid and the directory is writable.

IAU-06006
Error in parsing audit component events definition from {0}.

Category:
Other

Cause:
Audit configuration file is possibly corrupted.

Action:
Check the diagnostic logs and contact Oracle Customer Support.

IAU-06007
Failed while reloading audit configuration.

Category:
Other

Cause:
Audit configuration file is possibly corrupted.

Action:
Check the diagnostic logs and contact Oracle Customer Support.

IAU-06008
Error while evaluating event auditability.

Category:
Other

Cause:
Audit configuration file is possibly corrupted.

Action:
Check the diagnostic logs and contact Oracle Customer Support.

IAU-06009
Failed to log audit event.

Category:
Other

Cause:
Error in loading audit configuration or writing to audit logs.

Action:
Check the diagnostic logs and contact Oracle Customer Support.

IAU-6010
"Error while reading release version from audit log file {0} : {1}

Category:
Other

Cause:
Audit log file is not present

Action:
Check the diagnostic logs for more information

IAU-6011
Failed to log busstop header

Category:
Other

Cause:
OS error while writing to the audit log file

Action:
Check file permissions and disk space. Also, check the diagnostic logs for more information

IAU-6012
Unable to determine the audit log directory. No log directory specified

Category:
Other

Cause:
Audit log directory location is not set

Action:
Check the diagnostic logs for more infomation

IAU-6013
Error in audit channel for component {0}. Cannot write audit records. Check if audit log directory is set.

Category:
Other

Cause:
Audit log directory location is not set

Action:
Check the diagnostic logs for more infomation

IAU-6014
Duplicated audit entry : {0} exists in componentType {1}

Category:
Other

Cause:
Duplicate entry in component audit definition

Action:
Remove the duplicate entry from the component audit definition

IAU-62003
parsing of component_events.xml file failed

Category:
Other

Cause:
Install is possibly corrupted.

Action:
Check the install. Contact Oracle Customer Support if needed.

IAU-62004
parsing of auditconfig.xml file failed

Category:
Other

Cause:
Install is possibly corrupted.

Action:
Check the install. Contact Oracle Customer Support if needed.

IAU-62005
parsing of generic_events.xml file failed

Category:
Other

Cause:
Install is possibly corrupted.

Action:
Check the install. Contact Oracle Customer Support if needed.

IAU-62006
ORACLE_HOME environment variable not set

Category:
Other

Cause:
The environment variable ORACLE_HOME was not set.

Action:
Set the ORACLE_HOME environment variable.

IAU-62007
COMPONENT_CONFIG_PATH environment variable not set

Category:
Other

Cause:
The environment variable COMPONENT_CONFIG_PATH was not set.

Action:
Set the COMPONENT_CONFIG_PATH to point to the location of the auditconfig.xml file.

IAU-62008
ORACLE_INSTANCE environment variable not set

Category:
Other

Cause:
The environment variable ORACLE_INSTANCE was not set.

Action:
Set the ORACLE_INSTANCE environment variable.

IAU-62009
COMPONENT_NAME environment variable not set

Category:
Other

Cause:
The COMPONENT_NAME environment variable was neither set nor was the component_events.xml file present in the expected default location.

Action:
Check if the component_events.xml file is present in the expected default location or set the COMPONENT_NAME environment variable to point to the correct component name.

IAU-62010
COMPONENT_TYPE environment variable was not set

Category:
Other

Cause:
The COMPONENT_TYPE environment variable was neither set nor was the component_events.xml file present in the expected default location.

Action:
Check if the component_events.xml file is present in the expected default location or set the COMPONENT_TYPE environment variable to point to the correct component type.

IAU-62012
audit event creation failed

Category:
Other

Cause:
The creation of the audit event failed.

Action:
Contact Oracle Customer Support.

IAU-62015
audit custom expression parsing failed

Category:
Other

Cause:
Parsing of the custom expression had failed.

Action:
Check if the custom expression used in the audit configuration is valid.

IAU-62016
audit log file creation failed

Category:
Other

Cause:
OS error in creating the file.

Action:
Check file permissions and disk space.

IAU-62018
timestamp error

Category:
Other

Cause:
There was a problem with getting the current date and time.

Action:
Check the diagnostic logs and contact Oracle Customer Support.

IAU-62019
audit enabled check failed

Category:
Other

Cause:
Invalid values assgined to audit event attributes.

Action:
Check the diagnostic logs and contact Oracle Customer Support.

IAU-62021
busstop open failed

Category:
Other

Cause:
OS error in creating or opening the bus-stop file.

Action:
Check the file permissions and disk space.

IAU-62023
audit config reload failed

Category:
Other

Cause:
There was a problem in reloading the audit config data that has been modified.

Action:
Check the diagnostic logs and contact Oracle Customer Support.

INST-01000 to INST-10117

INST-01000
Internal Error: Undefined module found: {0}.

Category:
Installation

Cause:
The module {0} present in engineConfig.xml is undefined.

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01001
Abnormal Program Termination.

Category:
Installation

Cause:
The program has experienced an error for some internal or unexpected reason.

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01002
Error: Undefined flag: {0}.

Category:
Installation

Cause:
The flag {0} specified on the command line is not supported.

Action:
Refer to the usage: setup.exe -help

INST-01003
Error: Response file not specified.

Category:
Installation

Cause:
A response file must be provided when installing in the {0} mode.

Action:
Specify a valid response file. Usage: setup.exe -s -response <Full path to response file>

INST-01004
Internal Error: File not found: {0}.

Category:
Installation

Cause:
Page data definition {0} for page {1} not found.

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01005
Internal Error: Multiple pages found with "{0}" attribute set to true.

Category:
Installation

Cause:
There can be only one page with {0} attribute set to true.

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01006
Internal Error: No page found with the "{0}" attribute set to true.

Category:
Installation

Cause:
At least one page must have the "{0}" attribute set to true.

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01007
Error: Invalid input: "{0}"

Category:
Installation

Cause:
This error is caused due to invalid input on the command line

Action:
Refer to the command line usage.

INST-01008
Internal Error: Operation not specified

Category:
Installation

Cause:
Engine did not find an operation to run in this configuration.

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01009
Error: Invalid flags specified for operation "{0}": "{1}"

Category:
Installation

Cause:
Flags specified by the user on the command line are not supported for this operation:{0}

Action:
Refer to the command line usage.

INST-01010
Internal Error: Parse error:{0}

Category:
Installation

Cause:
A parse error occurred. The file:"{0}" is not in proper format.

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01011

Internal Error: More than one incompatible mode is specified at a time: "{0}", "{1}"

Category:
Installation

Cause:
Incompatible modes specified

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01013
Internal Error: Default mode not specified for operation:{0}

Category:
Installation

Cause:
Default mode not specified

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01014
Internal Error: Default Operation not specified.

Category:
Installation

Cause:
Default Operation not specified

Action:
Contact Oracle Support Services with these log files {0}\n{1}.

INST-01015
Internal Error: Found cyclic references to page: "{0}". Verify file: "{1}".

Category:
Installation

Cause:
Cyclic references to other pages were found in the page data file: {0}

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01016
Internal Error: Multiple references of page: "{0}" found in the "{1}" section for page: "{2}"

Category:
Installation

Cause:
Multiple next page references are not supported by the Oracle Install Engine.

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01017
Internal Error: The following pages do not have a default next page specified: "{0}"

Category:
Installation

Cause:
Default Next Page is mandatory for each page.

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01018
Internal Error: Duplicate definition found for pages: "{0}".

Category:
Installation

Cause:
Duplicate definition of pages detected.

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01019
Internal Error: Next page sequence not specified for the following pages: "{0}".

Category:
Installation

Cause:
In cases where multiple next pages follow this page, next page sequence is mandatory to define the page flow.

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01020
Internal Error: Page definition not found for: "{0}".

Category:
Installation

Cause:
Each Page should be accompanied by its page definition in the page data file.

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01021
Internal Error: Page name not specified for file: "{0}".

Category:
Installation

Cause:
Page name not specified

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01022
Internal Error: Page name mismatch. Names specified: "{0}" and "{1}".

Category:
Installation

Cause:
Page name mismatch

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01023
Internal Error: Unable to provide usage

Category:
Installation

Cause:
No usage available for this option: {0}. For more help refer this to Oracle Support Services.

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01024
Invalid checkpoint file: {0}.

Category:
Installation

Cause:
The existing checkpoint file is not in the correct format.

Action:
Delete the invalid checkpoint file:{0}

INST-01025
Invalid checkpoint file: {0}. The release and/or version of the product in the checkpoint does not match the current product. {1}.

Category:
Installation

Cause:
Not a valid checkpoint file for the current release/version.

Action:
Delete the invalid checkpoint file

INST-01026
Response File parse error at Line no: {0} - {1}

Category:
Installation

Cause:
The response file may be corrupted or has errors

Action:
Correct the errors in the response file and try the install operation again.\nCheck if you have missed specifying square brackets around the section names

INST-01027
Section name cannot be empty and should be enclosed in square brackets.

Category:
Installation

Cause:
The Response File is not a valid response file. The Section Name is not specified or is not specified properly.

Action:
The Response Files are organized into 4 sections namely ENGINE, GENERIC, SYSTEM AND APPLICATIONS. \nEach Section Should be enclosed in square brackets and appropriate entries should be specified under them (Example: [Generic]). Check the Section Names.

INST-01028
Error: No Section defined.

Category:
Installation

Cause:
The Response File does not have any valid sections specified. The Response File is organized into 4 sections namely ENGINE, GENERIC, SYSTEM and APPLICATIONS.\nAll Section Names are specified within square brackets.

Action:
Verify the Specified Response Files for valid Section Names and Syntaxes

INST-01029
Response File Parse Error : No Equal Symbol "=" was found

Category:
Installation

Cause:
The Format of specifying the value for a variable inside the response file is as VARIABLE_NAME=VALUE. The Equal Symbol "=" was missed

Action:
Correct the Response File to specify the value for a variable as VARIABLE_NAME=VALUE. Insert the Equal Symbol "=" in appropriate position to correct the same

INST-01030
Response File Parse Error

Category:
Installation

Cause:
The Variable {0} was not Found in the Response File

Action:
Specify the Variable in the Response File. The Syntax of specifying a variable is as VARIABLE_NAME=VALUE

INST-01031
Response File Parse Warning. No value found. Ignoring.

Category:
Installation

Cause:
The Variable {0} was found in the Response File with no value assigned to it and hence it was ignored while the Response File was Parsed.

Action:
Specify the corresponding value.

INST-01032

Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01035
Internal Error: Fatal Error Occurred while loading Configuration Actions.

Category:
Installation

Cause:
Configuration Actions are improper\n:{0}

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01036
Internal Error: Fatal Error Occurred while setting data for Configuration Actions.

Category:
Installation

Cause:
Variable: {0} required by Action: {1} not found.

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01037
Internal Error: Fatal Error Occurred while initializing data for Configuration Action.

Category:
Installation

Cause:
Variable: {0} required by Action: {1} not initialized.

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01038
Internal Error: Fatal Error Occurred while loading Configuration Action:{0}.

Category:
Installation

Cause:
Class: {0} not found.

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01039
Internal Error: Fatal Error Occurred while running lifecycle methods for Configuration Actions.

Category:
Installation

Cause:
Lifecycle Error

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01040
Internal Error: There was an error while copying files to this location: {0}.\n Installation cannot continue.

Category:
Installation

Cause:
Error in copying files

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01041
Response File Location:{0} is not readable.

Category:
Installation

Cause:
Response File does not exist or does not have read permission. Response File path contains special characters.

Action:
Ensure that the response file exists and is readable. The response file path must not contain any special characters.\nOnly Alphanumeric, _, dot, and space characters are allowed.

INST-01042
An error occurred while reading the response file.

Category:
Installation

Cause:
Response File does not exist at the specified location. Response file is not in the correct format.

Action:
Ensure that the response file exists. Ensure that the Response File is in the correct format. The Response Files are organized into 4 sections namely ENGINE, GENERIC, SYSTEM AND APPLICATIONS.\nEach Section Should be enclosed in square brackets and appropriate entries should be specified under them.

INST-01043
Internal Error: Response File location not defined.

Category:
Installation

Cause:
The file location provided to the writer is empty.

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01044
Response File Location: {0} is not writable.

Category:
Installation

Cause:
The specified file already exists or user does not have write permission in the given location. Response File path contains special characters.

Action:
Ensure that the response file location is writable. The response file path must not contain any special characters.\nOnly Alphanumeric,_,dot and space characters are allowed.

INST-01045
Response File Parse Error: Section Name "{0}" is invalid.

Category:
Installation

Cause:
Section "{0}" does not exist.

Action:
Ensure that the Section name is one of the following 1. ENGINE 2. GENERIC 3. SYSTEM 4. APPLICATIONS

INST-01046
Internal Error: Invalid Install Session.

Category:
Installation

Cause:
Data Model is empty.

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01047
Silent Install cannot continue, error {0}.

Category:
Installation

Cause:
Data provided in the response file is insufficient to complete this installation. Data provided in the response file is incorrect and did not pass all the validations.

Action:
Fill the indicated information in the response file and restart installation. Verify and change the indicated values specified in the response file and restart installation.

INST-01048
Internal Error: Aborting Silent Install.

Category:
Installation

Cause:
Error while running silent install

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01049
There was a problem in creating the page sequence. Response File Data is incomplete.\nError: {0}

Category:
Installation

Cause:
Data provided in the response file is insufficient to complete this installation.

Action:
Fill the indicated information in the response file and restart installation.

INST-01050
Some required prerequisites for this installation have failed. Installation cannot continue

Category:
Installation

Cause:
Response File does not exist at the specified location. Response file is not in the correct format.

Action:
Ensure that the response file exists. Ensure that the Response File is in the correct format. The Response Files are organized into 4 sections namely ENGINE, GENERIC, SYSTEM AND APPLICATIONS.\nEach Section Should be enclosed in square brackets and appropriate entries should be specified under them.

INST-01051
Some required prerequisites for this installation have failed. Installation cannot continue

Category:
Installation

Cause:
Failed Prerequisite: {0}

Action:
Take a look at the failed prerequisites and fix the necessary items. Restart the installation after you are done.

INST-01052
Error: Property: {0} does not belong to the Section: {1}. It will be ignored.

Category:
Installation

Cause:
All variables in the response files are associated with a valid section. The variable specified in the response file does not belong to the section it appears in.

Action:
Check if the variable is actually a valid property name and is present in the appropriate section.

INST-01053
[CONFIG]:: ACTION: {0} running.

Category:
Installation

Cause:

Action:

INST-01054
[CONFIG]:: STEP {0} running.

Category:
Installation

Cause:

Action:

INST-01055
Configuration Directory:{0} does not exist.

Category:
Installation

Cause:

Action:

INST-01056
The file:{0} cannot be loaded as a configuration action.

Category:
Installation

Cause:
The Configuration framework loads the configuration actions from jars or xml files. This file does not represent a configuration action.

Action:
Correct the file and retry

INST-01057
Invalid Log level: {0} specified.

Category:
Installation

Cause:
Log levels that can be specified on the command line can be: INFO, ERROR, DEBUG

Action:
Specify a valid log level.

INST-01058
Log level changed to: {0}

Category:
Installation

Cause:

Action:

INST-01059
Following checks will be retried by the Prerequisites checker:\n{0}

Category:
Installation

Cause:

Action:

INST-01060
Error: Prerequisite check: {0} has failed.

Category:
Installation

Cause:
Prerequisite check: {0} has failed

Action:
Correct the failed prerequisite and retry

INST-01061
Warning: An optional Prerequisite check: {0} has failed.

Category:
Installation

Cause:

Action:

INST-01062
Invalid Inventory Pointer location: {0} specified on the command line.

Category:
Installation

Cause:
Inventory pointer file does not exist. Directory specified for the inventory cannot be created.

Action:
Create a valid inventory pointer file at the location which is specified on the command line. Inventory pointer file is a property file containing two entries\ninventory_loc=<Directory where new inventory is present or to be created>\nGROUP=<group of the installing user>

INST-01063
Invalid inventory location:{0}.

Category:
Installation

Cause:
Directory specified for the inventory cannot be created.

Action:
Provide a writable directory for the inventory.

INST-01064
Oracle home value was not set by the Installer.

Category:
Installation

Cause:
Required Oracle home value not set

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01065
Library: {0} required for Action: {1} not found.

Category:
Installation

Cause:
Required library not found

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01066
Configuration Data Store not found.

Category:
Installation

Cause:
Required Configuration Data Store not found

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01067
Error while loading Configuration Actions from file: {0}

Category:
Installation

Cause:
Problem while loading the configuration actions

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01068
No configurations defined for this installation.

Category:
Installation

Cause:

Action:

INST-01069
Internal Error: Unable to load Configuration Action: {0}

Category:
Installation

Cause:
Class not found: {0}

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-01070
Internal Error: Entry Point for Configuration Not Found.

Category:
Installation

Cause:
Entry point not found

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-03000
Error: ClassName is blank in roadmap file for page: {0}

Category:
Installation

Cause:
The ClassName provided for the page named {0} is either null or blank or the class is nonexistent.

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-03001
Error: ClassName is null or not provided in roadmap file for page: {0}

Category:
Installation

Cause:
The ClassName provided for the page named {0} is either null or blank or the class is nonexistent.

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-03002
Error: Class {0} is not found.

Category:
Installation

Cause:
Either Class {0} is not present or it has an invalid format or it has been compiled with a different version of java compiler.

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-03003
Internal Error: Runtime error occurred while loading page : {0}

Category:
Installation

Cause:
Error occurred while loading the class for page {0}

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-03004
Internal Error: The Resource Key name provided is blank

Category:
Installation

Cause:
Resource Key name provided is blank

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-03005
Internal Error: Exception occurred while constructing the Navigation Tree

Category:
Installation

Cause:
Error while constructing the Navigation Tree

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-03006
Internal Error: Exception occurred while preparing the Action Queue

Category:
Installation

Cause:
Error occurred while preparing the Action Queue

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-03007
Internal Error: Exception occurred while loading the help files.

Category:
Installation

Cause:
The help files are corrupt or the help files are not present.

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-03008
Internal Error: Exception occurred while parsing the displayConfig.xml file

Category:
Installation

Cause:
The format of displayConfig.xml is corrupt.

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-03009
Internal Error: Exception occurred launching the welcome window.

Category:
Installation

Cause:
Error occurred launching the welcome window

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-03010
Internal Error: Exception occurred launching the Wizard.

Category:
Installation

Cause:
Error occurred launching the Wizard

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-03011
Internal Error: Exception occurred while setting the UI default properties.

Category:
Installation

Cause:
Error occurred while setting the UI default properties

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-03012
Internal Error: Unknown Exception occurred.

Category:
Installation

Cause:
Unknown exception occurred during installation

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-03013
Internal Error: Exception while creating the Wizard Sequence

Category:
Installation

Cause:
The sequence provided in roadmap.xml is not proper.

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-03014
Internal Error: Exception occurred while creating the validation tree

Category:
Installation

Cause:
Error occurred while creating the validation tree

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-03015
Internal Error: Exception occurred while selecting the next page.

Category:
Installation

Cause:
Error occurred while selecting the next page

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-03016
Internal Error: Exception occurred while updating the data model with user-specified data

Category:
Installation

Cause:
Error occurred while updating the data model with user-specified data

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-03017
Internal Error: Exception occurred while restoring the data from checkpoint.

Category:
Installation

Cause:
The checkpoint data is corrupted.

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-03018
Internal Error: Exception occurred while shrinking the image.

Category:
Installation

Cause:
Either the image is corrupted or the machine has not enough memory to perform the operation.

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-03019
Internal Error: Error while fetching the image.

Category:
Installation

Cause:
Either the image is not present or the image is corrupted.

Action:
Provide the following files to Oracle Support Services: \n\n"{0}"\n"{1}"

INST-03020
Error in connecting to the Database. Connect string is missing

Category:
Installation

Cause:
Connect String is missing

Action:
Provide a valid value

INST-03021
Error in connecting to the Database

Category:
Installation

Cause:
Unable to connect to the Database with the given credentials

Action:
Check the values. Make sure the Database is up and running and connect string, user name and password are correct. Enter a valid user name with DBA privileges

INST-03022
Error in validating Database details. Schema Type is missing

Category:
Installation

Cause:
Schema Type is missing

Action:
Provide a valid value

INST-03023
Error in validating Database details

Category:
Installation

Cause:
Unable to connect to the Database with the given credentials. Listener could be down

Action:
Check the values. Make sure the Database is up and running and connect string, user name and password are correct. Enter a valid user name with DBA privileges

INST-03024
Error in validating Database details

Category:
Installation

Cause:
Unable to connect to the Database with the given credentials. Invalid user name/password

Action:
Check the values. Make sure the Database is up and running and connect string, user name and password are correct. Enter a valid user name with DBA privileges

INST-03025
Error in validating Database details

Category:
Installation

Cause:
Unable to connect to the Database with the given credentials. User is not a SYSDBA

Action:
Check the values. Make sure the Database is up and running and connect string, user name and password are correct. Enter a valid user name with DBA privileges

INST-03026
Error in validating Database details

Category:
Installation

Cause:
Unable to connect to the Database with the given credentials. Database could be down

Action:
Check the values. Make sure the Database is up and running and connect string, user name and password are correct. Enter a valid user name with DBA privileges

INST-03027
Error in validating Database details

Category:
Installation

Cause:
Unable to connect to the Database with the given credentials. Invalid service id

Action:
Check the values. Make sure the Database is up and running and connect string, user name and password are correct. Enter a valid user name with DBA privileges

INST-03028
Error in validating Database details

Category:
Installation

Cause:
Unable to connect to the Database with the given credentials. Invalid service name

Action:
Check the values. Make sure the Database is up and running and connect string, user name and password are correct. Enter a valid user name with DBA privileges

INST-03029
Error in validating Database details

Category:
Installation

Cause:
Could not find {0} type Schema in the Database

Action:
Check the values. Make sure the Database is up and running and connect string, user name and password are correct. Enter a valid user name with DBA privileges

INST-07000
Error in validating {0} location

Category:
Installation

Cause:
{0} location specified is null or contains invalid characters

Action:
The directory name may only contain alphanumeric, underscore (_), hyphen (-) , or dot (.) characters, and it must begin with an alphanumeric character. Provide a different directory name.

INST-07001
Validation of {0} location failed. Null Value

Category:
Installation

Cause:
Provide a valid value for {0} location.

Action:

INST-07002
Validation of {0} location failed. String is too long.

Category:
Installation

Cause:
Specified {0} location: {1} is too long

Action:
Change the path to a value that is less than or equal to {2} characters

INST-07003
Validation of {0} location failed. Not Absolute.

Category:
Installation

Cause:
{0} location is not absolute path

Action:
Provide an absolute path

INST-07004
Validation of {0} location failed. Invalid Characters.

Category:
Installation

Cause:
{0} location contains one or more invalid characters

Action:
The directory name may only contain alphanumeric, underscore (_), hyphen (-) , or dot (.) characters, and it must begin with an alphanumeric character. Provide a different directory name.

INST-07005
Validation of {0} location failed. Directory already Exists.

Category:
Installation

Cause:
Validation of {0} location failed. The location specified already exists and is a nonempty directory

Action:
Provide an empty or nonexistent directory location

INST-07006
Validation of {0} location failed. No read/write permission.

Category:
Installation

Cause:
Validation of {0} location failed. The location specified does not have read/write permissions

Action:
Provide a location with read/write permission

INST-07007
Validation of {0} location failed. Directory exists as a file.

Category:
Installation

Cause:
Validation of {0} location failed. The location specified already exists and is a file

Action:
Provide an empty or nonexistent directory location

INST-07008
Validation of {0} location failed. No create permission.

Category:
Installation

Cause:
Validation of {0} location failed. User does not have permission to create home/instance location

Action:
Make sure that you have the required permission to create the directory

INST-07009
Error in validating {0} location

Category:
Installation

Cause:
An unexpected error occurred while validating {0} location

Action:
Enter a valid directory

INST-07010
Validation of {0} location failed. String is too long.

Category:
Installation

Cause:
Specified {0} location: {1} is too long

Action:
Change the path to a value that is less than or equal to {3} characters

INST-07011
Validation of Front End URL failed. Null Value

Category:
Installation

Cause:
Provide a valid value for Front End URL

Action:

INST-07012
Validation of Front End URL failed. Invalid Protocol

Category:
Installation

Cause:
Validation of Front End URL failed. The protocol entered is not valid

Action:
Provide a valid protocol. The valid protocol list is {0}

INST-07013
Validation of Hostname failed. Invalid Host

Category:
Installation

Cause:
The hostname entered is not valid

Action:
Provide a valid hostname

INST-07014
Validation of port value failed. Invalid port

Category:
Installation

Cause:
The port entered is not valid

Action:
Provide a valid port number

INST-07015
Validation of Front End URL failed. Invalid format

Category:
Installation

Cause:
Validation of Front End URL failed. The front end URL entered is not valid

Action:
Provide a valid URL in [http://host.domainname:port] format

INST-07016
Error in validating the Front End URL

Category:
Installation

Cause:
An unexpected error occurred while validating the Front End URL

Action:
Provide a valid value

INST-07017
Error in obtaining free space

Category:
Installation

Cause:
Error in obtaining free space. Value for drive name contains invalid characters

Action:
Provide a valid value

INST-07018
Error in obtaining free space. Null Value

Category:
Installation

Cause:
Error in obtaining free space. Value for drive name is null

Action:
Provide a valid value

INST-07019
Error in obtaining free space

Category:
Installation

Cause:
An unexpected error occurred while calculating available free space

Action:
Provide a valid value

INST-07020
Error in obtaining default {0} location

Category:
Installation

Cause:
An unexpected error occurred while obtaining default home location

Action:
Provide a valid value

INST-07021
Error in obtaining available Oracle homes

Category:
Installation

Cause:
An unexpected error occurred while obtaining available Oracle homes

Action:
Provide a valid value

INST-07033
Error in validating the {0} field value

Category:
Installation

Cause:
{0} field value is null or contains invalid characters.

Action:
Provide a valid value

INST-07034
Error in validating the {0} field value

Category:
Installation

Cause:
Provide a value for {0}

Action:

INST-07035
Error in validating the {0} field value. Length less than minimum length

Category:
Installation

Cause:
{0} has less than {1} characters

Action:
Length should be at least {0} characters

INST-07036
Error in validating the {0} field value. Length greater than maximum length

Category:
Installation

Cause:
{0} has more than {1} characters

Action:
Length should not be greater than {0} characters

INST-07037
Error in validating the {0} field value. Invalid characters

Category:
Installation

Cause:
{0} field value contains one or more invalid characters or the value is not in proper format.

Action:
Enter valid characters

INST-07038
Error in validating the {0} field value. Invalid Start character

Category:
Installation

Cause:
{0} field value contains one or more invalid start characters

Action:
Enter valid start character

INST-07039
Error in validating the {0} field value

Category:
Installation

Cause:
An unexpected error occurred while validating {0} field value

Action:
Enter a valid value

INST-07040
Error in Password Check

Category:
Installation

Cause:
Passwords entered were null or contained invalid characters

Action:
Provide valid values

INST-07041
Error in Password Check

Category:
Installation

Cause:
An unexpected error occurred while processing the handler

Action:
Enter passwords that match

INST-07042
Error in Password Check. Password value null

Category:
Installation

Cause:
Password value is null

Action:
Enter a valid value for password

INST-07043
Error in Password Check. Confirm password value null.

Category:
Installation

Cause:
Confirm Password value is null

Action:
Enter a valid value for confirm password

INST-07044
Error in Password Check. Passwords do not match

Category:
Installation

Cause:
Passwords entered do not match

Action:
Enter identical passwords

INST-07045
Error in validating the {0} field value

Category:
Installation

Cause:
An unexpected error occurred while validating {0} field value

Action:
Enter a valid number

INST-07046
Error in validating the {0} field value

Category:
Installation

Cause:
Provide a valid value for {0}

Action:

INST-07047
Error in validating the {0} field value. Not a number

Category:
Installation

Cause:
{0} field value is not a number

Action:
Enter a valid number

INST-07048
Error in Validating {0} and {1}

Category:
Installation

Cause:
Values specified are null or contain invalid characters

Action:
Provide valid values

INST-07049
Error in Validating {0} and {1}

Category:
Installation

Cause:
An unexpected error occurred while validating {0} and {1}

Action:
Enter values that do not match

INST-07050
Error in Validating {0} and {1}. Null Value

Category:
Installation

Cause:
Provide a valid value for {0}

Action:

INST-07051
Error in Validating {0} and {1}. Values do not match

Category:
Installation

Cause:
{0} and {1} are different

Action:
Enter same values

INST-07052
Error in Validating {0} and {1}. Values match

Category:
Installation

Cause:
{0} and {1} are the same

Action:
Enter different values

INST-07053
Error in validating the {0} field value

Category:
Installation

Cause:
{0} field value is null or contains invalid characters

Action:
Provide valid values

INST-07054
Error in validating the {0} field value

Category:
Installation

Cause:
An unexpected error occurred while validating {0} field value

Action:
Enter a valid host name

INST-07055
Error in validating the {0} field value. Host name value null

Category:
Installation

Cause:
Provide a valid value for {0}

Action:

INST-07056
Error in validating the {0} field value. Invalid host name

Category:
Installation

Cause:
{0} field value is not a valid host name

Action:
Enter a valid value for host name

INST-07057
Error in validating the {0} field value. Host is not up and running

Category:
Installation

Cause:
Error in validating the {0} field value. Entered host is not up and running

Action:
Make sure that the host is up and running

INST-07058
Error in validating Oracle home location

Category:
Installation

Cause:
An unexpected error occurred while validating Oracle home location

Action:
Provide a valid value

INST-07059
Error in validating Oracle home location

Category:
Installation

Cause:
Oracle home location Specified is missing. Provide a valid Oracle home location

Action:

INST-07060
Error in validating Oracle home location

Category:
Installation

Cause:
The Oracle home location specified is not a valid {0} home location

Action:
Provide a valid {0} home location

INST-07061
Error in obtaining default port file location

Category:
Installation

Cause:
An unexpected error occurred while obtaining default port file location

Action:
Provide a valid value

INST-07062
Error in connecting to the Database

Category:
Installation

Cause:
An unexpected error occurred while trying to connect to the Database

Action:
Check the values. Make sure the Database is up and running and connect string, user name and password are correct. Enter a valid user name with DBA privileges

INST-07063
Error in connecting to the Database. Connect String is missing

Category:
Installation

Cause:
Connect string is missing

Action:
Provide a valid value for Connection String

INST-07064
Error in connecting to the Database

Category:
Installation

Cause:
Unable to connect to the Database with the given credentials

Action:
Check the values. Make sure the Database is up and running and connect string, user name and password are correct. Enter a valid user name with DBA privileges

INST-07065
Error in validating Database details

Category:
Installation

Cause:
An unexpected error occurred while trying to connect to the Database

Action:
Try again and check the values. Make sure the Database is up and running and connect string, user name and password are correct. Enter a valid user name with DBA privileges

INST-07066
Error in validating Database details. Schema Type is missing

Category:
Installation

Cause:
Schema type is missing

Action:
Provide a valid value for Schema Type

INST-07067
Error in validating Database details. Schema name is missing

Category:
Installation

Cause:
Schema is missing

Action:
Provide a valid value for Schema Name

INST-07068
Error in validating Database details. Invalid Schema

Category:
Installation

Cause:
Specified {0} schema does not exist in the given Database

Action:
Check the schema name and the Database credentials

INST-07069
Validation of {0} location failed. Existing Oracle home

Category:
Installation

Cause:
Validation of {0} location failed. The location specified is an existing Oracle home

Action:
Provide an empty or nonexistent directory location

INST-07072
Error in validating Oracle home location

Category:
Installation

Cause:
The Oracle home location specified is an existing Oracle home

Action:
Provide an empty or nonexistent directory location

INST-07073
Error in validating Oracle home location

Category:
Installation

Cause:
The Oracle home location specified is not a valid {0} home location

Action:
Provide an empty or nonexistent directory location or a valid {0} home location

INST-07074
Error in validating Database details. Null Value

Category:
Installation

Cause:
User name is missing

Action:
Provide a valid user name with DBA privileges

INST-07075
Error in validating Database details. Invalid user

Category:
Installation

Cause:
User does not have DBA privileges

Action:
Provide a user with DBA privileges

INST-07076
Error in validating Database details

Category:
Installation

Cause:
An unexpected error occurred while trying to connect to the Database

Action:
Try again and check the values. Make sure the Database is up and running and connect string, user name and password are correct. Enter a valid user name with DBA privileges

INST-07077
Error in validating Oracle home and Oracle Instance home

Category:
Installation

Cause:
Oracle home is inside the Oracle Instance home

Action:
Enter a different location

INST-07078
Error in validating LDAP credentials

Category:
Installation

Cause:
An unexpected error occurred while validating LDAP credentials

Action:
Provide a valid value

INST-07079
Error in validating LDAP credentials

Category:
Installation

Cause:
Could not connect to LDAP with the given credentials.

Action:
Verify the credentials. Make sure that hostname, port and password are correct

INST-07080
Error in validating available disk space

Category:
Installation

Cause:
Space required is missing or not a valid value

Action:
Provide a valid value

INST-07081
Error in validating available disk space

Category:
Installation

Cause:
Insufficient space to install the selected components

Action:
Specify a different Oracle Home or increase disk space.

INST-07082
Error in validating available disk space

Category:
Installation

Cause:
An unexpected error occurred while validating available disk space

Action:
Provide a valid value

INST-07083
Error in validating port file

Category:
Installation

Cause:
Specified port file location is missing

Action:
Provide a valid value

INST-07084
Error in validating port file

Category:
Installation

Cause:
Specified port file is invalid

Action:
Specify a valid file

INST-07085
Error in validating port file

Category:
Installation

Cause:
Specified port file does not exist

Action:
Specify a valid file

INST-07086
Error in validating port file

Category:
Installation

Cause:
An unexpected error occurred while parsing the port file

Action:
Verify the file. Check if the values are provided in the proper format. There should be at least one section in the file.

INST-07087
Error in validating port file

Category:
Installation

Cause:
An unexpected error occurred while validating port file

Action:
Provide a valid value. Check if the values are provided in the proper format. There should be at least one section in the file.

INST-07088
Error in validating available disk space

Category:
Installation

Cause:
Insufficient disk space to install the product

Action:
Specify a different Oracle Home or increase disk space.

INST-07093
Error in validating port file

Category:
Installation

Cause:
Keys {0} does not have proper values

Action:
Provide valid values. Ensure that the port is free, valid and it is not used by any other Oracle Home

INST-07094
Error in validating port file

Category:
Installation

Cause:
Ports {0} are not free or not valid

Action:
Ensure that the port is free, valid and it is not used by any other Oracle Home. If ports are specified using a file, check if proper values are given for key.

INST-07095
Error in validating port file

Category:
Installation

Cause:
Key {0} does not have proper value

Action:
Provide a valid value

INST-07096
Required component not found in Oracle home

Category:
Installation

Cause:
One or more of the required components required for the install options selected may be missing from the Oracle home

Action:
Specify a valid Oracle home with all required Components

INST-07097
Error in validating component name

Category:
Installation

Cause:
Component name specified is not correct

Action:
Provide a valid component name

INST-07098
Error in validating Oracle home location

Category:
Installation

Cause:
Component {0} is not available in the Oracle home but selected for configuration.

Action:
Deselect the above component for configuration

INST-07099
Error in validating Oracle home location

Category:
Installation

Cause:
Components {0} are not available in the Oracle home but selected for configuration.

Action:
Deselect the above components for configuration

INST-07100
Error in validating port file

Category:
Installation

Cause:
Port {0} is duplicated

Action:
Provide different ports

INST-07101
Error in validating port file

Category:
Installation

Cause:
Ports {0} are duplicated

Action:
Provide different ports

INST-07102
Error in validating port file

Category:
Installation

Cause:
Port {0} is already used by existing Oracle Homes

Action:
Provide a port which is valid and free

INST-07103
Error in validating port file

Category:
Installation

Cause:
Ports {0} are already used by existing Oracle Homes

Action:
Provide port values which are valid and free

INST-07104
Error in validating port file

Category:
Installation

Cause:
Key {0} should not be specified as a range

Action:
Provide a single port which is valid and free

INST-07105
Error in validating port file

Category:
Installation

Cause:
Key {0} should not be specified as a range

Action:
Provide single port values which are valid and free

INST-07106
Error in validating port file

Category:
Installation

Cause:
Port {0} is not free or not valid

Action:
Ensure that the port (a number between 0 - 65535) is free and it is not used by any other Oracle Home. If ports are specified using a file, check if proper values are given for key

INST-07107
Error in validating port value

Category:
Installation

Cause:
An unexpected error occurred while validating port value

Action:
Provide a valid value

INST-07108
Error in validating components selected for configuration

Category:
Installation

Cause:
An unexpected error occurred while processing the handler

Action:
Select valid components

INST-07109
Error in validating components selected for configuration

Category:
Installation

Cause:
At least one component should be selected for configuration

Action:
Select at least one component for configuration

INST-07110
Error in validating Database details

Category:
Installation

Cause:
Unable to connect to the Database with the given credentials. Invalid service id

Action:
Check the values. Make sure the Database is up and running and connect string, user name and password are correct. Enter a valid user name with DBA privileges

INST-07111
Error in validating Database details

Category:
Installation

Cause:
Unable to connect to the Database with the given credentials. Invalid service name

Action:
Check the values. Make sure the Database is up and running and connect string, user name and password are correct. Enter a valid user name with DBA privileges

INST-07112
Error in obtaining schema details

Category:
Installation

Cause:
An unexpected error occurred while trying to get schema details

Action:
Try executing again and check the values. Make sure the Database is up and running and connect string, user name and password are correct. Enter a valid user name with DBA privileges

INST-07113
Error in obtaining schema details

Category:
Installation

Cause:
Error in validating schema details. Could not fetch schema details from database

Action:
Try executing again and check the values. Make sure the Database is up and running and connect string, user name and password are correct. Enter a valid user name with DBA privileges

INST-07114
Error in obtaining schema details

Category:
Installation

Cause:
Error in validating schema details. Schema Registry table does not exist

Action:
Provide a Database which has schemas loaded

INST-07115
Error in validating {0} schema details

Category:
Installation

Cause:
An unexpected error occurred while validating {0} schema details

Action:
Try again and check the values. Make sure the Database is up and running and connect string, user name and password are correct. Enter a valid user name with DBA privileges

INST-07119
Error in validating Database details

Category:
Installation

Cause:
Unable to connect to the Database with the given credentials. Listener could be down

Action:
Check the values. Make sure the Database is up and running and connect string, user name and password are correct. Enter a valid user name with DBA privileges

INST-07120
Error in validating Database details

Category:
Installation

Cause:
Unable to connect to the Database with the given credentials. Invalid user name/password

Action:
Check the values. Make sure the Database is up and running and connect string, user name and password are correct. Enter a valid user name with DBA privileges

INST-07121
Error in validating Database details

Category:
Installation

Cause:
Unable to connect to the Database with the given credentials. User is not a SYSDBA

Action:
Check the values. Make sure the Database is up and running and connect string, user name and password are correct. Enter a valid user name with DBA privileges

INST-07122
Error in validating Database details

Category:
Installation

Cause:
Unable to connect to the Database with the given credentials. Database could be down

Action:
Check the values. Make sure the Database is up and running and connect string, user name and password are correct. Enter a valid user name with DBA privileges

INST-07123
Error in validating port file

Category:
Installation

Cause:
Specified file is empty or does not contain valid entries

Action:
Provide a valid file

INST-07124
Error in validating Oracle home location

Category:
Installation

Cause:
Component {0} is not available in the Oracle home but selected for installation.

Action:
Deselect the above component

INST-07125
Error in validating Oracle home location

Category:
Installation

Cause:
Components {0} are not available in the Oracle home but selected for installation.

Action:
Deselect the above components

INST-07132
Error in validating jpsRootDN value

Category:
Installation

Cause:
User(s) {0} are not present in the specified LDAP

Action:
Users "fmwadmin" and "systemuser" must be present. The user must also have privileges to create users and groups

INST-07133
Error in obtaining LDAP bindpass

Category:
Installation

Cause:
User {0} does not have permission to create {1}

Action:
Users "fmwadmin" and "systemuser" must be present. The user must also have privileges to create users and groups

INST-07134
Error in validating Oracle Configuration Manager Service credentials

Category:
Installation

Cause:
Customer Identification Number is missing or invalid

Action:
Provide a valid value for Customer Identification Number

INST-07135
Error in validating Oracle Configuration Manager Service credentials

Category:
Installation

Cause:

Action:

INST-07136
Error in validating Oracle Configuration Manager Service credentials

Category:
Installation

Cause:
Country Code value is incorrect

Action:
Provide a valid value for Country Code

INST-07137
Error in validating Oracle Configuration Manager Service credentials

Category:
Installation

Cause:
Could not connect Oracle Configuration Manager Service with the specified credentials

Action:
Verify the values. Make sure the Customer Identification Number, My Oracle Support User Name and the Country code are correct

INST-07138
Error in validating Oracle Configuration Manager Service credentials

Category:
Installation

Cause:
An unexpected error occurred while validating the Oracle Configuration Manager Service credentials

Action:
Verify the values and try again

INST-07139
Error in validating Oracle Configuration Manager Service credentials

Category:
Installation

Cause:
Provide a valid value for Customer Identification Number

Action:
CSI number must contain numeric characters only

INST-07144
Error in validating LDAP Credentials

Category:
Installation

Cause:
Specified LDAP Type ({0}) is not valid

Action:
Valid values are "{0}". Enter a valid LDAP Type

INST-07150
Error in validating jpsRootDN value

Category:
Installation

Cause:
Specified JPS Root DN value is not valid

Action:
Provide a valid value. Make sure that the root DN provided is an empty container.

INST-07151
Error in validating jpsRootDN value

Category:
Installation

Cause:
Provide a valid value for JPS Root DN

Action:

INST-07152
Error in obtaining LDAP Host

Category:
Installation

Cause:
An unexpected error occurred while processing the handler

Action:
Provide a valid value

INST-07153
Error in obtaining LDAP Port

Category:
Installation

Cause:
An unexpected error occurred while processing the handler

Action:
Provide a valid value

INST-07154
Error in obtaining LDAP binddn

Category:
Installation

Cause:
An unexpected error occurred while processing the handler

Action:
Provide a valid value

INST-07155
Error in obtaining LDAP bindpass

Category:
Installation

Cause:
An unexpected error occurred while processing the handler

Action:
Provide a valid value

INST-07156
Error in validating URL

Category:
Installation

Cause:
Provide a valid value the URL

Action:

INST-07157
Error in validating URL

Category:
Installation

Cause:
URL {0} is not valid

Action:
Provide a valid URL in [hostname.domainname:port] format and make sure the given URL is accessible

INST-07158
Error in validating URL

Category:
Installation

Cause:
URL {0} is not accessible.

Action:
Provide a valid URL which is accessible.

INST-07159
Error in validating URL

Category:
Installation

Cause:
An unexpected error occurred while validating the URL

Action:
Verify the values and try again

INST-07169
Error in validating port file

Category:
Installation

Cause:
Port range {0} is not valid. Start range is greater than end range

Action:
Provide a valid port range

INST-07172
Error in validating port file

Category:
Installation

Cause:
Key {0} is missing in the section [{1}]

Action:
Provide a value for the key

INST-07173
Error in validating port file

Category:
Installation

Cause:
Keys {0} are missing in the section [{1}]

Action:
Provide valid value for the keys

INST-07174
Error in validating port file

Category:
Installation

Cause:
Key {0} is not valid in the section [{1}]

Action:
Valid keys for section [{0}] are {1}

INST-07175
Error in validating port file

Category:
Installation

Cause:
Keys {0} were not valid in the section [{1}]

Action:
Valid keys for section [{0}] are {1}

INST-07176
Error in validating port file

Category:
Installation

Cause:
Key {0} is duplicated

Action:
Remove duplicate entries

INST-07177
Error in validating port file

Category:
Installation

Cause:
Keys {0} are duplicated

Action:
Remove duplicate entries

INST-07179
Error in validating port file

Category:
Installation

Cause:
Port range {0} are not valid. Start range is greater than end range

Action:
Provide a valid port range

INST-07180
Error in validating port file

Category:
Installation

Cause:
Specified Port range {0} does not have free port.

Action:
Provide a different range. Check if the same range is mentioned more than once in the file.

INST-07181
Error while obtaining registry key value

Category:
Installation

Cause:
An error occurred while obtaining a registry key value

Action:
Provide a valid value for Registry Key

INST-07182
Error while obtaining registry key value

Category:
Installation

Cause:
An error occurred while obtaining a registry key value

Action:
Provide a valid value for Registry Sub Key

INST-07183
Error while obtaining registry key value

Category:
Installation

Cause:
An error occurred while obtaining a registry key value

Action:
Provide a valid value for Registry Property Name

INST-07184
Error while obtaining registry key value

Category:
Installation

Cause:
An unexpected error occurred while obtaining registry key value

Action:
Verify the values and try again

INST-07185
Error in validating proxy credentials

Category:
Installation

Cause:
Provide a valid value for Proxy Server

Action:

INST-07186
Error in validating proxy credentials

Category:
Installation

Cause:
Provide a valid value for Proxy Port

Action:

INST-07187
Error in validating proxy credentials

Category:
Installation

Cause:
Specified Proxy port is not a valid value

Action:
Provide a valid number for Proxy Port

INST-07188
Error in validating proxy credentials

Category:
Installation

Cause:
Could not establish connection to the specified proxy credentials

Action:
Verify the values. Make sure the proxy server, proxy port values are correct

INST-07189
Error in validating proxy credentials

Category:
Installation

Cause:
An unexpected error occurred while obtaining registry key value

Action:
Verify the values and try again

INST-07202
Error in validating container name

Category:
Installation

Cause:
Provide a valid value for container name

Action:

INST-07203
Error in validating container name

Category:
Installation

Cause:
Specified value is a reserved key word.

Action:
Provide value other than {0}

INST-07204
Error in validating container name

Category:
Installation

Cause:
An unexpected error occurred while validating the URL

Action:
Verify the values and try again

INST-07205
Error in validating port file

Category:
Installation

Cause:
Port {0} is duplicated for keys {1}

Action:
Provide different ports

INST-07206
Error in validating port file

Category:
Installation

Cause:
Port {0} (JMX Port No + 1) is not free

Action:
JMX Port No + 1 will be used as Java Object Cache Local Port No. Specify a value for Java Object Cache Local Port No key or provide a JMX Port No which has also (JMX Port No + 1) free

INST-07207
Error in validating port file

Category:
Installation

Cause:
Port {0} (JMX Port No + 2) is not free

Action:
JMX Port No + 2 will be used as Java Object Cache Remote Port No. Specify a value for Java Object Cache Remote Port No key or provide a JMX Port No which has also (JMX Port No + 2) free

INST-07208
Error in validating port file

Category:
Installation

Cause:
Reserved ports are not allowed under section [{0}]. Key(s) {1} have Operating System reserved port entries.

Action:
Provide different port(s)

INST-07210
Error in obtaining 10g SSO information

Category:
Installation

Cause:
An unexpected error occurred while obtaining 10g SSO information

Action:
Verify the LDAP credentials. Make sure that hostname, port, binddn, password are correct

INST-07211
Error in obtaining Oracle Internet Directory version

Category:
Installation

Cause:
An unexpected error occurred while processing the handler

Action:
Provide a valid value

INST-07212
Error in checking the version of Oracle Internet Directory

Category:
Installation

Cause:
Version of the given Oracle Internet Directory is not {0}

Action:
Provide an alternate Oracle Internet Directory location

INST-07213
Error in checking the version of Oracle Internet Directory

Category:
Installation

Cause:
An unexpected error occurred while checking the version of Oracle Internet Directory

Action:
Verify the LDAP credentials. Make sure that hostname, port, binddn, password are correct

INST-07214
Error in validating URL

Category:
Installation

Cause:
Specified URL is not valid

Action:
Provide a valid value for the URL

INST-07215
Error in validating URL

Category:
Installation

Cause:
Specified URL is not correct format

Action:
Provide a valid URL

INST-07216
Error in validating URL

Category:
Installation

Cause:
Specified URL is not accessible

Action:
Provide a valid URL

INST-07217
Error in validating URL

Category:
Installation

Cause:
Specified URL is not accessible

Action:
Provide a valid URL

INST-07221
Error in validating database details

Category:
Installation

Cause:
Specified connect string is not in a valid format

Action:
Provide the value in the following format. Format: hostname:port:servicename , For Real Application Cluster Database hostname1:port1^hostname2:port2@servicename

INST-07222
Error in validating database details

Category:
Installation

Cause:
Specified connect string is not in a valid format

Action:
Provide the value in the following format. Format: hostname:port:sid , For a Real Application Cluster Database, use hostname1:port1^hostname2:port2@servicename

INST-07223
Error in obtaining work repository details

Category:
Installation

Cause:
Work repository table does not exist

Action:
Provide a Database which has repositories loaded

INST-07224
Error in obtaining work repository details

Category:
Installation

Cause:
Error in obtaining work repository details. Could not fetch repository details from database

Action:
Try executing again and check the values. Make sure the Database is up and running and connect string, user name and password are correct.

INST-07225
Error in validating work repository details

Category:
Installation

Cause:
An unexpected error occurred while validating work repository details

Action:
Try again and check the values. Make sure the Database is up and running and connect string, user name and password are correct.

INST-07226
Error in validating Database details. Invalid Work Repository

Category:
Installation

Cause:
Specified {0} repository does not exist in the given Database

Action:
Check the {0} repository name and the Database credentials

INST-07227
Error in validating work repository details

Category:
Installation

Cause:
Provide a valid {0} repository name

Action:

INST-07228
Error in connecting to the Database

Category:
Installation

Cause:
Unable to connect to the Database with the given credentials

Action:
Check the values. Make sure the Database is up and running and connect string, user name and password are correct.

INST-07229
Error in validating Database details

Category:
Installation

Cause:
Unable to connect to the Database with the given credentials. Listener could be down

Action:
Check the values. Make sure the Database is up and running and connect string, user name and password are correct

INST-07230
Error in validating Database details

Category:
Installation

Cause:
Unable to connect to the Database with the given credentials. Invalid user name/password

Action:
Check the values. Make sure the Database is up and running and connect string, user name and password are correct

INST-07231
Error in validating Database details

Category:
Installation

Cause:
Unable to connect to the Database with the given credentials. User is not a SYSDBA

Action:
Check the values. Make sure the Database is up and running and connect string, user name and password are correct

INST-07232
Error in validating Database details

Category:
Installation

Cause:
Unable to connect to the Database with the given credentials. Database could be down

Action:
Check the values. Make sure the Database is up and running and connect string, user name and password are correct

INST-07233
Error in validating Database details

Category:
Installation

Cause:
Unable to connect to the Database with the given credentials. Invalid service id

Action:
Check the values. Make sure the Database is up and running and connect string, user name and password are correct

INST-07234
Error in validating Database details

Category:
Installation

Cause:
Unable to connect to the Database with the given credentials. Invalid service name

Action:
Check the values. Make sure the Database is up and running and connect string, user name and password are correct

INST-07235
Error in validating the {0} field value

Category:
Installation

Cause:
Please enter the {0} field value in the range {1} - {2}

Action:

INST-07236
Error in validating the agent name

Category:
Installation

Cause:
Provide a valid value for the agent name

Action:

INST-07237
Error in validating the agent name

Category:
Installation

Cause:
Agent name already exists. Provide a different value

Action:

INST-07238
Error in validating the agent name

Category:
Installation

Cause:
Unable to verify the agent name

Action:
Verify the values. Make sure the Master Database is up and running and connect string, user name, password, ODI supervisor username and ODI supervisor password are correct.

INST-07239
Database details are invalid.

Category:
Installation

Cause:
The specified schema {0} was invalid.

Action:
Check the schema name and database credentials.

INST-07240
{0} components cannot be obtained from the Oracle WebLogic Middleware Administration Server.

Category:
Installation

Cause:
The Oracle WebLogic Middleware Administration Server may be unresponsive or may not recognize the given credentials.

Action:
Make sure the Oracle WebLogic Middleware Administration Server is up. Verify that the host name, port number, user name, and administrator password are correct.

INST-07241
Connection to the Oracle WebLogic Middleware Administration Server has failed.

Category:
Installation

Cause:
The provided credentials were null or contained invalid characters.

Action:
Make sure the Middleware Administration Server is up and hostname, port, user name and administration password are correct.

INST-07242
Connection to the Oracle WebLogic Middleware Administration Server has failed.

Category:
Installation

Cause:
The Oracle Middleware Administration Server may be down. The provided credentials may be incorrect.

Action:
Make sure the Oracle Middleware Administration Server is up and running. Verify that the host name, port number, user name, and administrator password are all correct.

INST-07243
Connection to the Oracle WebLogic Middleware Administration Server has failed.

Category:
Installation

Cause:
Host name was missing.

Action:
Enter a valid host name.

INST-07244
Connection to the Oracle WebLogic Middleware Administration Server has failed.

Category:
Installation

Cause:
The port number was missing.

Action:
Enter a valid port number.

INST-07245
Connection to the Oracle WebLogic Middleware Administration Server has failed.

Category:
Installation

Cause:
The administrator user name is missing.

Action:
Enter a valid administrator user name.

INST-07246
{0} home location cannot be validated.

Category:
Installation

Cause:
The home location is invalid.

Action:
Enter a valid value for {0} home location.

INST-07247
{0} home location cannot be validated.

Category:
Installation

Cause:
Specified {0} home location is either not valid or missing.

Action:
Enter a valid {0} home location.

INST-07248
{0} home location cannot be validated.

Category:
Installation

Cause:
Specified {0} home location was not valid.

Action:
Enter a valid {0} home location.

INST-07249
{0} home location cannot be validated.

Category:
Installation

Cause:
An unexpected error occurred during the validation of {0} home location.

Action:
Check the values.

INST-07250
Error in validating Middleware home and WebLogic home

Category:
Installation

Cause:
Specified WebLogic home is not associated with the given Middleware home

Action:
Enter a WebLogic home that is associated with the specified Oracle Middleware home

INST-07251
Error in validating Middleware home and WebLogic home

Category:
Installation

Cause:
An unexpected error occurred during the validation of Oracle Middleware home and WebLogic home

Action:
Check the values

INST-07252
Default Middleware home and WebLogic home directories cannot be obtained.

Category:
Installation

Cause:
An unexpected error occurred while obtaining default Oracle Middleware home and WebLogic home directories.

Action:
Check the values.

INST-07253
Instance name cannot be validated.

Category:
Installation

Cause:
Specified instance name is not valid.

Action:
Enter a valid instance name associated with the specified instance home.

INST-07254
Instance name cannot be validated.

Category:
Installation

Cause:
An unexpected error occurred.

Action:
Check the inputted values.

INST-07255
Instance name cannot be validated.

Category:
Installation

Cause:
The specified instance name was incorrect.

Action:
Enter a valid instance name.

INST-07256
{0} component name cannot be validated.

Category:
Installation

Cause:
Component type failed validation.

Action:
Enter a valid value for {0} component name.

INST-07257
Component type cannot be validated.

Category:
Installation

Cause:
The specified component type failed validation.

Action:
Enter a valid value for component type.

INST-07258
Component name cannot be validated.

Category:
Installation

Cause:
The provided component name could not be located.

Action:
Verify the instance home location. Ensure that the component name is correct.

INST-07259
{0} component name cannot be validated.

Category:
Installation

Cause:
The specified value for {0} component name already exists.

Action:
Provide a different value.

INST-07260
Error in validating {0} component name

Category:
Installation

Cause:
Specified value for {0} component name is not valid. A directory with the same name already exists under INST_HOME/config/{0}

Action:
Provide a different value

INST-07261
Error in validating component name

Category:
Installation

Cause:
Specified component name is not a valid component name

Action:
Enter a valid component name associated with the specified instance

INST-07262
Error in validating instance details in the domain

Category:
Installation

Cause:
Specified instance details are not valid

Action:
Enter a valid instance name available in the domain. Make sure the instance home entered is in conjunction with the instance name.

INST-07263
Error in validating instance name

Category:
Installation

Cause:
Specified instance name is not valid

Action:
Enter a valid instance name available in the domain.

INST-07264
Error in validating instance details in the domain

Category:
Installation

Cause:
An unexpected error occurred during the validation of instance details

Action:
Check the values. Verify the instance name and instance home location

INST-07265
Error in validating instance name

Category:
Installation

Cause:
An unexpected error occurred during the validation of instance name

Action:
Check the values. Verify the instance name

INST-07266
Error in validating component name in the domain

Category:
Installation

Cause:
Specified {0} component name already exists in the domain

Action:
Provide a different value

INST-07267
Error in validating component name in the domain

Category:
Installation

Cause:
An unexpected error occurred during the validation of component name

Action:
Check the values. Verify the component name

INST-07268
Error in validating component name in the domain

Category:
Installation

Cause:
Specified {0} component name does not exist in the domain

Action:
Enter an existing component name

INST-07269
Error while obtaining default values for instance name and instance location

Category:
Installation

Cause:
An unexpected error occurred while obtaining default values for instance name and instance location

Action:
Check the values and try again

INST-07270
Error in validating instance name in the domain

Category:
Installation

Cause:
Specified instance name already exists in the domain

Action:
Provide a different value

INST-07271
Error in validating instance name in the domain

Category:
Installation

Cause:
An unexpected error occurred during the validation of instance name

Action:
Check the values. Verify the instance name

INST-07272
Error while obtaining the component names from the instance home

Category:
Installation

Cause:
An unexpected error occurred while obtaining the component names from the instance home

Action:
Check the values. Verify the instance home location

INST-07273
Error while obtaining the component names of a given component type from the instance home

Category:
Installation

Cause:
An unexpected error occurred while obtaining the component names of a given component type from the instance home

Action:
Check the values. Verify the instance home location

INST-07274
Error in validating port value

Category:
Installation

Cause:
Port {0} is not valid. Privileged ports are not allowed

Action:
Provide a different value

INST-07275
Error in validating {0} home location

Category:
Installation

Cause:
Specified {0} home location does not have read/write permissions

Action:
Provide read/write permissions for the {0} home location

INST-07276
Error in validating {0} home location

Category:
Installation

Cause:
Enter a valid value for {0} home location

Action:

INST-07277
Error in validating {0} name

Category:
Installation

Cause:
Specified {0} name is either not valid or the corresponding location is not empty

Action:
Enter a valid {0} name

INST-07278
Error in validating {0} home location

Category:
Installation

Cause:
Specified {0} home location does not have Read/Write permissions

Action:
Provide Read/Write permissions for the specified {0} home location

INST-07279
Error in validating {0} home location

Category:
Installation

Cause:
An unexpected error occurred during the validation of {0} home location

Action:
Check the values

INST-07280
Error in validating domain credentials

Category:
Installation

Cause:

Action:

INST-07281
Error in validating domain credentials

Category:
Installation

Cause:
{0} is not set up in the specified domain

Action:
Enter a domain which has {0} set up

INST-07282
Error in validating {0} home location

Category:
Installation

Cause:
Specified {0} home location does not exist

Action:
Provide an existing {0} home location

INST-07285
Error in validating Database details. Invalid Schema

Category:
Installation

Cause:
The schema name {0} and schema type {1} do not match

Action:
Provide a valid schema name for {1}

INST-07286
Error in validating Middleware home location

Category:
Installation

Cause:
Specified Oracle Middleware home location does not have minimum version {0} of WebLogic server. If the version is incorrect then configuring with the Weblogic server will fail.

Action:
Provide a Oracle Middleware home location which contains WebLogic server with minimum version {0} or upgrade the Weblogic server to {0} or higher version and restart the install.

INST-07287
Error in obtaining connection with Oracle WebLogic Middleware Administration Server

Category:
Installation

Cause:
Unable to connect to Oracle WebLogic Middleware Administration Server. Server is not running.

Action:
Make sure the Middleware Administration Server is up

INST-07288
Error in obtaining connection with Oracle WebLogic Middleware Administration Server

Category:
Installation

Cause:
Unable to connect to Oracle WebLogic Middleware Administration Server. Invalid username/ password

Action:
Enter a valid username and password

INST-07289
Error in validating WebLogic Server Directory

Category:
Installation

Cause:
Specified WebLogic Server Directory is either not valid or empty

Action:
Enter a valid WebLogic Server Directory

INST-07290
Error in validating Oracle home location

Category:
Installation

Cause:
Specified Middleware home already has a {0} home. Only one {0} home location can reside under a Middleware home.

Action:
Provide a different Middleware home location

INST-07291
Error in validating Oracle home location

Category:
Installation

Cause:
Top Component name specified is null.

Action:
Provide a valid component name

INST-07292
Error in validating Middleware home location

Category:
Installation

Cause:
Middleware home location specified is not a valid location. Provide a valid Middleware home location

Action:
Provide a valid Middleware home location.

INST-07293
Error in validating SSO credentials

Category:
Installation

Cause:
Given OID does not have a proper SSO.

Action:
Provide an OID with a 10g SSO.

INST-07294
Error in validating SSO credentials

Category:
Installation

Cause:
Could not retrieve SSO information with the given credentials.

Action:
Verify the credentials. Make sure that hostname, port and password are correct

INST-07295
Error in validating UCM Installer Location

Category:
Installation

Cause:
Specified UCM Installer Location is not valid

Action:
Provide a valid value for UCM Installer Location.

INST-07296
Error in validating UCM Installer Location

Category:
Installation

Cause:
An unexpected error occurred while processing the handler

Action:
Provide a valid value

INST-07297
Error in validating Web Server HTTP Address

Category:
Installation

Cause:
Webserver HTTP Address is missing

Action:
Provide a valid value for Webserver HTTP Address

INST-07298
Error in validating Web Server HTTP Address

Category:
Installation

Cause:
Specified Web Server HTTP Address is not valid

Action:
The Web Server HTTP Address has to be in http(s)://[host]:[port]?/[webroot] format

INST-07299
Error in validating Web Server HTTP Address

Category:
Installation

Cause:
An unexpected error occurred while processing the handler

Action:
Provide a valid value

INST-07300
Error in validating UCM Installer Location

Category:
Installation

Cause:
UCM Installer Location is missing

Action:
Provide a valid value for UCM Installer Location

INST-07301
Error in validating UCM Installer Location

Category:
Installation

Cause:
Specified UCM Installer Location is empty

Action:
Provide a valid value for UCM Installer Location.

INST-07302
Error in validating Domain

Category:
Installation

Cause:
Specified domain cannot be used for Expand Cluster configuration

Action:
Specify a domain which has clusters

INST-07303
Error in validating Domain

Category:
Installation

Cause:
Specified domain cannot be used for Extend Domain configuration

Action:
Specify a domain which has at least one component not configured

INST-07304
Validation of User Name failed. Invalid User Name

Category:
Installation

Cause:
The user name entered is not valid

Action:
Provide a valid user name

INST-07305
Validation of password value failed. Invalid password

Category:
Installation

Cause:
The password entered is not valid

Action:
Provide a valid password

INST-07306
Error in validating Database details. RAC Dabase is not supported

Category:
Installation

Cause:
RAC Database is not supported for {0}

Action:
{0}

INST-07307
Error in validating Oracle home location

Category:
Installation

Cause:
Oracle home location specified is not inside Middleware home location. Provide a valid location for Oracle home.

Action:

INST-07308
Oracle Universal Content Management is already installed and configured at location {0}

Category:
Installation

Cause:
Oracle Universal Content Management is already installed and configured at location {0}

Action:
Either select not to configure again or uninstall Oracle Universal Content Management and then try to reconfigure

INST-07309
Error in validating master repository details

Category:
Installation

Cause:
Specified Master Repository credentials are not valid.

Action:
Verify the values. Make sure the Master Database is up and running and connect string, user name, password, ODI supervisor username and ODI supervisor password are correct.

INST-07310
Error in validating database details

Category:
Installation

Cause:
Specified connect string is not in a valid format

Action:
Provide the value in the following format. Format: hostname:port:servicename

INST-07311
Error in validating database details

Category:
Installation

Cause:
Specified connect string is not in a valid format

Action:
Provide the value in the following format. Format: hostname:port:sid

INST-07312
Error in validating database details

Category:
Installation

Cause:
Specified connect string is not in a valid format

Action:
Provide the value in the following format. Format: hostname:port:servicename , For Real Application Cluster Database hostname1:port1^hostname2:port2@servicename

INST-07313
Error in validating database details

Category:
Installation

Cause:
Specified connect string is not in a valid format

Action:
Provide the value in the following format. Format: hostname:port:sid , For a Real Application Cluster Database, use hostname1:port1^hostname2:port2@servicename

INST-07314
Error in validating port file

Category:
Installation

Cause:
Port {0} is not valid

Action:
Provide a valid port number (a number between {0})

INST-07315
Error in validating port value

Category:
Installation

Cause:
An unexpected error occurred while validating port value

Action:
Provide a valid value

INST-07316
Error in validating port file

Category:
Installation

Cause:
Port {0} is not free or not valid

Action:
Ensure that the port (a number between 1024 - 65535) is free and it is not used by any other Oracle Home. If ports are specified using a file, check if proper values are given for key.

INST-07317
Validation of {0} location failed. Directory does not exist.

Category:
Installation

Cause:
Validation of {0} location failed. The location specified does not exist.

Action:
Enter a valid existing directory

INST-07318
Validation of {0} location failed. Directory s empty.

Category:
Installation

Cause:
Validation of {0} location failed. The location specified is empty.

Action:
Enter a nonempty directory

INST-07319
Validation of {0} location failed. Directory already exists and is not a valid Oracle Home directory.

Category:
Installation

Cause:
Validation of {0} location failed. The location specified already exists and is a nonempty directory and not a valid Oracle Home

Action:
Provide an empty or nonexistent directory location, or a valid existing Oracle Home

INST-07320
Validation of {0} location failed. String is too long.

Category:
Installation

Cause:
Specified {0} location: {1} is too long

Action:
Change the path to a value that is less than or equal to 256 characters

INST-07404
Error in validating Oracle home

Category:
Installation

Cause:
Specified Oracle home value is null

Action:
Specify the correct Oracle home name

INST-07405
Error in validating Oracle home

Category:
Installation

Cause:
The specified Oracle home does not match with the Domain Oracle home

Action:
Specify Oracle home name same as that of the Domain Oracle home

INST-07406
Error in validating {0} home location

Category:
Installation

Cause:
Specified {0} home location is either not valid or is empty

Action:
Enter a valid {0} home location

INST-07407
Error in detecting machine platform or JVM bits.

Category:
Installation

Cause:
Unable to detect machine platform or JVM bits.

Action:
Make sure machine platform and JVM are supported.

INST-07408
Cannot install or configure the product on a 32-bit JVM on a 64-bit machine.

Category:
Installation

Cause:
Unable to install or configure the product on a 32-bit JVM on a 64-bit machine.

Action:
Make sure to install and configure the product in supported modes.

INST-07409
Error in validating instance name

Category:
Installation

Cause:
Unexpected error in validating instance name

Action:
Make sure entered values are correct

INST-07410
Error in validating instance name

Category:
Installation

Cause:
Specified instance name is not valid, a windows service with the specified instance name already exists

Action:
Provide a different instance name

INST-07411
Error in validating oracle home

Category:
Installation

Cause:
Provide valid value for Oracle Home Directory.

Action:

INST-07412
Error in validating Oracle Home

Category:
Installation

Cause:
Oracle Home Directory name cannot be oracle_common.

Action:
Provide a different value for Oracle Home Directory.

INST-07413
Error in validating Oracle Home

Category:
Installation

Cause:
Unexpected error in validating Oracle Home Directory

Action:
Make sure entered values are correct

INST-07414
Error in validating {0}

Category:
Installation

Cause:
Specified {0} is not valid

Action:
Provide a valid value {0}

INST-07415
Error in validating Home Type

Category:
Installation

Cause:
Home Type Specified is not Correct

Action:
Provide a valid a valid Home Type

INST-07416
Error in validating {0}

Category:
Installation

Cause:
An unexpected error occurred while validating {0}

Action:
Provide a valid value

INST-07417
Error in validating the {0}

Category:
Installation

Cause:
{0} has not been installed in the specified {1}. Provide a different Location

Action:
Provide a different {0}

INST-07420
Error in validating Oracle Home

Category:
Installation

Cause:
Oracle Home Directory name cannot be {0}.

Action:
Provide a different value for Oracle Home Directory.

INST-07421
Error in executing the software update flow

Category:
Installation

Cause:
An error occurred while validating the values for software updates

Action:
Make sure entered values are correct

INST-07422
Error in validating library

Category:
Installation

Cause:
The library {0} does not exists in the provided location

Action:
Make sure the library {0} exists in the provided location

INST-07423
Error in validating library

Category:
Installation

Cause:
The library {0} does not exists in the provided location

Action:
Make sure the library {0} exists in the provided location

INST-07424
Error in validating library

Category:
Installation

Cause:
The version of library at the provided location is not as expected

Action:
Make sure the version of library at the provided location is correct

INST-07425
Error in verifying version of Application Server

Category:
Installation

Cause:
Could not access versionInfo script under the Application Server Directory provided

Action:
Make sure the the Application Server directory has versionInfo script under bin folder

INST-07426
Error in verifying version of Application Server

Category:
Installation

Cause:
The version of Application Server is not valid

Action:
Make sure the the version of Application Server is at least {0}

INST-07427
Error in verifying Application Server

Category:
Installation

Cause:
The Application Server Directory does not refer to WebSphere Application Server

Action:
Provide the directory location of WebSphere Application Server

INST-07440
Error in validating Application Server Type

Category:
Installation

Cause:
Validation of Application Server Type failed. Supported Application Server Types are WLS and WAS.

Action:
Specify a valid Application Server Type. Supported Application Server Types are WLS and WAS.

INST-07441
Error in validating Application Server Type

Category:
Installation

Cause:
Validation of Application Server Type failed. Specified Application Server Type does not match with the Application Server detected in the Middleware home.

Action:
Specify a valid Application Server Type.

INST-07509
Error in validating master repository details

Category:
Installation

Cause:
Specified Master Repository schema details are not valid.

Action:
Verify the values. Make sure the Master Database schema version is correct and master repository is created with appropriate Repository Creation Utility.

INST-07520
Error in validating {0} location

Category:
Installation

Cause:
Enter a valid value for {0} location

Action:

INST-07521
Error in validating {0} home location

Category:
Installation

Cause:
Specified {0} home location does not exist

Action:
Provide an exisiting {0} home location

INST-07522
Error in validating {0} home location

Category:
Installation

Cause:
Specified {0} home location does not have read/write permissions

Action:
Provide read/write permissions for the {0} home location

INST-07523
Error in validating {0} home location

Category:
Installation

Cause:
Specified {0} home location is either not valid or empty

Action:
Enter a valid {0} home location

INST-07524
Error in validating {0} home location

Category:
Installation

Cause:
Specified {0} home location is not a valid location

Action:
Enter a valid {0} home location

INST-07525
Error in validating {0} home location

Category:
Installation

Cause:
An unexpected error occurred during the validation of {0} home location

Action:
Check the values

INST-07526
Error in validating {0} home location

Category:
Installation

Cause:
Specified {0} home location is not a valid location

Action:
Enter a valid {0} home location

INST-07527
Error in validating Middleware home location

Category:
Installation

Cause:
Specified Oracle Middleware home location does not have appropriate version of WebLogic server

Action:
Provide a Oracle Middleware home location which contains WebLogic server with a supported version

INST-07528
Validation of {0} location failed. Directory does not exist.

Category:
Installation

Cause:
Validation of {0} location failed. The location specified does not exist.

Action:
Enter a valid existing directory

INST-07529
Error in validating Farm Name

Category:
Installation

Cause:
Farm Name cannot be {0}.

Action:
Enter a different Farm Name.

INST-07530
Patchset component found in Oracle home

Category:
Installation

Cause:
This Patchset has already been applied to the Oracle home

Action:
Specify an Oracle home where the patchset has not already been applied.

INST-07531
Error in validating contents of Oracle home

Category:
Installation

Cause:
The Oracle home provided does not contain {0}.

Action:
In order to patch your existing version please provide an Oracle home that contains the product mentioned above. If you choose to continue, only the oracle_common directory and any components that both products have in common will be patched.

INST-07532
Error in validating contents of Oracle home

Category:
Installation

Cause:
The Oracle home provided does not contain {0}.

Action:
In order to patch your existing version please provide an Oracle home that contains the product mentioned above. If you choose to continue, only the oracle_common directory and any components that both products have in common will be patched.

INST-07533
Error in validating Middleware home location

Category:
Installation

Cause:
Middleware home location specified is missing.

Action:
Provide a valid Middleware home location

INST-07534
Error in validating Oracle home location

Category:
Installation

Cause:
Oracle home location specified is not inside Middleware home location. Provide a directory name only for Oracle home.

Action:
Provide a different Oracle home location which is inside Middleware home.

INST-07535
Error in obtaining hostname

Category:
Installation

Cause:
An unexpected error occurred while retrieving hostname

Action:
Provide a valid value

INST-07536
Error in validating Oracle home location

Category:
Installation

Cause:
Middleware home location specified does not have the required Oracle homes installed in it. The Oracle homes for the following components are not installed: {0}.

Action:
Provide a different Middleware home location or install the required Oracle Products and try the install again

INST-07537
The weblogic server processes are still running.

Category:
Installation

Cause:
Unable to install while the weblogic processes are running.

Action:
Make sure that the node manager and the weblogic servers are shutdown before the installation.

INST-07538
The OPMN processes are still running.

Category:
Installation

Cause:
Unable to install while the OPMN processes are running.

Action:
Make sure that opmnctl stopall is run before the installation.

INST-07539
{0} found in Oracle home

Category:
Installation

Cause:
This Oracle home already contains a version of {0} which cannot be updated by this installation

Action:
Specify either a new Oracle Home Directory or an Oracle Home which can be updated by this installer.

INST-07540
Missing Dependent Feature sets in {0}

Category:
Installation

Cause:
Enter a valid {0} which has all required dependent featuresets

Action:

INST-07541
Error in validating Feature set Dependencies in {0}

Category:
Installation

Cause:
Unexpected Error

Action:

INST-07542
Error in validating Oracle Home location.

Category:
Installation

Cause:
The distribution {0} is not installed in the given Oracle Home.

Action:
Choose a different Oracle Home location.

INST-07543
Error in validating Oracle Home location.

Category:
Installation

Cause:
{0} cannot be installed in an Oracle Home that has {1} already installed.

Action:
Choose a different Oracle Home location.

INST-07544
Error in validating Oracle Home location.

Category:
Installation

Cause:
Oracle Home provided is null or empty

Action:
Provide a different Oracle Home location.

INST-07545
Error in validation. Unexpected Error

Category:
Installation

Cause:
Unexpected Error. {0}

Action:

INST-07546
Error in validating installation type.

Category:
Installation

Cause:
Unable to find install type {0}

Action:
Provide a valid install type

INST-07547
Incompatible installation type.

Category:
Installation

Cause:
Incompatible installation type provided. {0}

Action:
Select a valid install type. Check http://www.oracle.com/pls/topic/lookup?ctx=fmw122130&id=installhome for details about compatible products and install types.

INST-07548
No compatible installation type found.

Category:
Installation

Cause:
The selected distribution does not have any compatible install type for the selected Oracle Home.

Action:
Provide a different oracle Home. Check http://www.oracle.com/pls/topic/lookup?ctx=fmw122130&id=installhome for details about compatible products and install types.

INST-07549
No compatible installation type found.

Category:
Installation

Cause:
Incompatible Installation Type : {0}

Action:
Incompatibility Details : {0}

INST-07550
Unable to find dependent featuresets for the selected installation type

Category:
Installation

Cause:
Unable to find dependent featuresets for the selected installation type. {0}

Action:
Select a different install type or provide a different Oracle Home having all dependencies. Check http://www.oracle.com/pls/topic/lookup?ctx=fmw122130&id=installhome for details about compatible products and install types.

INST-07551
Unable to find dependent featuresets for the selected installation type

Category:
Installation

Cause:
Not all dependent featuresets for install type "{0}" could be found. {1}

Action:
Select a different Oracle Home having all dependencies. Check http://www.oracle.com/pls/topic/lookup?ctx=fmw122130&id=installhome for details about compatible products and install types.

INST-07939
Error in validating install types

Category:
Installation

Cause:
Unexpected error in validating install types

Action:
Make sure entered values are correct

INST-07940
Error in validating install types

Category:
Installation

Cause:
This installation type cannot be installed, because the selected Oracle Home contains Oracle Fusion Middleware Infrastructure.

Action:
For more information about the prerequisites for this install type, see Installing and Configuring Oracle HTTP Server in the Oracle Fusion Middleware documentation library.

INST-07941
Error in validating install types

Category:
Installation

Cause:
This installation type cannot be installed, because Oracle Fusion Middleware Infrastructure is not installed in the selected Oracle Home.

Action:
For more information about the prerequisites for this install type, see Installing and Configuring Oracle HTTP Server in the Oracle Fusion Middleware documentation library.

INST-08001
Validation of Middleware home location failed. Directory path invalid

Category:
Installation

Cause:
Validation of Middleware home location failed. The location specified contains missing, mandatory directories

Action:
Make sure that Oracle/Middleware is in the path

INST-10001
Error in validating Component Dependency Details

Category:
Installation

Cause:
Dependency for {0} is missing. Missing dependent component ids are {1}.

Action:
Make sure to select / specify all dependent components

INST-10002
Error in validating Component Dependency Details

Category:
Installation

Cause:
Component Ids {0} are invalid

Action:
Provide valid component id

INST-10003
Error in validating Component Dependency Details

Category:
Installation

Cause:
An unexpected error occurred while validating Component Dependency Details

Action:
Check the values

INST-10101
Error in validating {0} Base Image Location

Category:
Installation

Cause:
{0} Base Image Location is null or blank.

Action:
Provide a valid {0} Base Image Location

INST-10102
Error in validating {0} Base Image Location

Category:
Installation

Cause:
The {0} Base Image Location provided is not existing or not a valid file

Action:
Provide a valid {0} Base Image Location

INST-10103
Error in validating the {0} Base Image Location for Assembly Builder

Category:
Installation

Cause:
An unexpected error occurred while validating the {0} Base Image Location for Assembly Builder

Action:
Check the values

INST-10104
Error in validating {0} Base Image Location

Category:
Installation

Cause:
The {0} Base Image File name must be {1}

Action:
Provide a valid {0} Base Image Location

INST-10105
Error in validating {0} Base Image Virtual Machine configuration file Location

Category:
Installation

Cause:
The {0} Base Image Virtual Machine configuration File (vm.cfg) is not existing

Action:
The vm.cfg file must be present in same directory as the Base Image ({1}), provide a valid {0} Base Image Location

INST-10106
Error in validating Keystore

Category:
Installation

Cause:
An unexpected error occurred while validating the {0} Keystore for Assembly Builder

Action:
Check the values

INST-10107
The Keystore path must not be null or blank

Category:
Installation

Cause:
The Keystore path must not be null or blank

Action:
Provide a valid Keystore path

INST-10108
The Keystore password must not be null or blank

Category:
Installation

Cause:
The Keystore password must not be null or blank

Action:
Provide a valid Keystore password

INST-10109
Invalid keystore.

Category:
Installation

Cause:
Failed to validate the Keystore.

Action:
Provide a valid Keystore

INST-10110
The Key password must not be null or blank

Category:
Installation

Cause:
The Key password must not be null or blank

Action:
Provide a valid Key password

INST-10111
The Key alias must not be null or blank

Category:
Installation

Cause:
The Key alias must not be null or blank

Action:
Provide a valid Key alias

INST-10112
Invalid key alias

Category:
Installation

Cause:
Invalid key alias and password combination.

Action:
Provide a valid Key alias and password combination

INST-10113
Error in validating Component Version

Category:
Installation

Cause:
Component Version is null or blank.

Action:
Provide a valid Component Version.

INST-10114
Error in validating Component List

Category:
Installation

Cause:
Component List is null or blank.

Action:
Provide a valid Component List.

INST-10115
Error in validating Oracle Home

Category:
Installation

Cause:
Oracle Home is null or blank.

Action:
Provide a valid Oracle Home.

INST-10116
Installation of Studio and Deployer detected in the selected Oracle Home. Installing into an existing Oracle Home is done to either reinstall binaries or to upgrade an Oracle Home from one release to another

Category:
Installation

Cause:
Installation of Studio and Deployer detected in the selected Oracle Home.

Action:
Installing into an existing Oracle Home is done to either reinstall binaries or to upgrade an Oracle Home from one release to another.

INST-10117
Error in validating the installed component in {0} Oracle Home

Category:
Installation

Cause:
An unexpected error occurred while validating the installed component in {0} Oracle Home

Action:
An unexpected error occurred while validating the installed component in {0} Oracle Home

16
J2EE HTTPC-00004 to J2EE HTTPC-12011

J2EE HTTPC-00004
Unable to parse header value: name={0}, value="{1}".

Category:

J2EE HTTPC-12011
Setting Socket Read Timeout to {0} milliseconds

Category:
Requests/Responses

Cause:

Action:

17
JPS-00001 to JPS-90642

JPS-00001
The method {0} is not supported.

Category:
Requests/Responses

Cause:
An unsupported method was used.

Action:
This operation is not supported. It cannot be used.

JPS-00003
The HTTP response callback is null.

Category:
Session

Cause:
HTTP response callback was null.

Action:
Check the log files and provide a valid HTTP response callback.

JPS-00004
The HTTP response is null.

Category:
Session

Cause:
HTTP response was null.

Action:
Check the log files and provide a valid HTTP response.

JPS-00005
HTTP request callback is null.

Category:
Session

Cause:
HTTP request callback was null.

Action:
Check the log files and provide a valid HTTP request callback.

JPS-00006
The HTTP request is null.

Category:
Session

Cause:
HTTP request was null.

Action:
Check the log files and provide a valid HTTP request.

JPS-00007
Cannot find an application ID.

Category:
Session

Cause:

Action:

JPS-00008
The application ID {0} is invalid.

Category:
Configuration

Cause:
Application ID was NULL.

Action:
Provide a valid application ID.

JPS-00009
The subject is read-only, and it cannot modified.

Category:
Requests/Responses

Cause:
Attempted to modify a read-only subject.

Action:
A read-only subject cannot be modified.

JPS-00010
A JPS context is not available in the callback handler.

Category:
Session

Cause:
A context was not available from callback handler.

Action:
Check configuration in jps-config.xml.

JPS-00011
The service instance {0} already exists.

Category:
Configuration

Cause:
The named service instance was already in use.

Action:
Use a different name for this service instance.

JPS-00012
The service instance {0} is missing.

Category:
Configuration

Cause:
The service instance with the name {0} was not found.

Action:
Ensure the service instance name is present in the file jps-config.xml.

JPS-00013
The login module {0} already exists.

Category:
Configuration

Cause:
The login module with the name {0} was already present.

Action:
Ensure the login module name is correct.

JPS-00014
The login module with {0} is missing.

Category:
Configuration

Cause:
The login module with the name {0} did not exist.

Action:
Ensure the login module name is correct.

JPS-00015
All available service instance names are already in use.

Category:
Configuration

Cause:
All service instance names were in use.

Action:
Remove unwanted service instances from jps-config.xml.

JPS-00016
All available service provider names are already in use.

Category:
Configuration

Cause:
All service provider names were in use.

Action:
Remove unwanted service providers form jps-config.xml.

JPS-00017
The LDAP type is invalid.

Category:
Configuration

Cause:
An invalid LDAP type was specified.

Action:
Provide a valid LDAP type. Valid types are XML, OID, ACTIVE_DIRECTORY, IPLANET, OUD and OVD. See the documentation for details.

JPS-00018
The keystore path {0} is null or invalid.

Category:
Configuration

Cause:
Keystore path was null.

Action:
Provide a valid keystore path.

JPS-00019
The key type {0} is not supported.

Category:
Configuration

Cause:
Invalid key type was provided.

Action:
Provide a valid key type.

JPS-00020
LDAP URL {0} is null or invalid.

Category:
Configuration

Cause:
Invalid or null LDAP URL was provided.

Action:
Provide a valid LDAP URL.

JPS-00021
An Object named {0} does not exist.

Category:
Configuration

Cause:
Object with the name {0} did not exist.

Action:
Verify that the object name is valid and exists.

JPS-00022
Callback handler missing for this login module request.

Category:
Requests/Responses

Cause:
The callback handler was null.

Action:
Provide an appropriate callback handler to invoke this login module.

JPS-00023
The callback used for this operation has no HTTP request value.

Category:
Requests/Responses

Cause:
The callback did not have a request method.

Action:
Verify that the callback is initialized with the correct HTTP request value.

JPS-00024
The callback used for this operation has no digest response object value.

Category:
Requests/Responses

Cause:
The callback did not have any digest response object.

Action:
Verify that the callback is initialized with the correct digest response value.

JPS-00025
The {0} subscriber {1} from the HTTP header is different from the subscriber configured by the identity store as {2}.

Category:
Configuration

Cause:
Found a subscriber mismatch.

Action:
Check the identity store subscriber configuration.

JPS-00026
The value "{0}" is invalid for {1}.

Category:
Requests/Responses

Cause:
An invalid value was provided for this application.

Action:
Provide the correct value for the application.

JPS-00027
There was an internal error: {0}

Category:
Requests/Responses

Cause:
Internal system error was found.

Action:
See the log files or contact the system administrator.

JPS-00028
The property runas.mode is deprecated and supported only for backward compatibility.

Category:
Requests/Responses

Cause:
The property runas.mode has been deprecated.

Action:
Use instead the oracle.security.jps.jaas.mode property in jps-config.xml.

JPS-00029
The audit service initialization failed for the application {0}. Reason {1}.

Category:
Configuration

Cause:
Audit service failed.

Action:
Check the audit service configuration in jps-config.xml.

JPS-00030
Cannot complete exist operation.

Category:
Configuration

Cause:
Could not find entity.

Action:
Verify that the entity exist.

JPS-00031
Cannot load the required class {0}. Reason {1}.

Category:
Upgrade

Cause:
Could not load a class.

Action:
Ensure the class is in the class path.

JPS-00032
The migration cannot write directly to the specified LDAP identity store; specify an alternate LDIF file to create.

Category:
Upgrade

Cause:
Could not perform a direct LDAP write operation.

Action:
See the log files for details.

JPS-00033
The direct policy store should be XML-based, and it can be specified as an XML file or as an input stream.

Category:
Upgrade

Cause:
The policy store specification was invalid.

Action:
Check the policy store specification.

JPS-00034
Cannot find the application context.

Category:
Session

Cause:
A context was not available for the application.

Action:
Check the jps-config.xml configuration.

JPS-00035
The WSS digest value {0} is invalid.

Category:
Requests/Responses

Cause:
Found missing WSS digest value in callback.

Action:
Verify that the callback has a valid WSS digest value.

JPS-00036
The WSS digest nonce {0} is invalid.

Category:
Requests/Responses

Cause:
Found missing WSS digest nonce in callback.

Action:
Verify that the callback has a valid WSS digest nonce.

JPS-00037
The WSS digest created {0} is invalid.

Category:
Requests/Responses

Cause:
Found missing WSS digest created in callback.

Action:
Verify that the callback has a valid WSS digest created.

JPS-00038
Cannot create or retrieve a ContextFactory.

Category:
Other

Cause:
Cannot retrieve or create a JPS ContextFactory.

Action:
Check jps-config.xml for correctness.

JPS-00039
The service instance with provider {0} and name {1} is missing.

Category:
Configuration

Cause:
A service instance configuration was missing.

Action:
Check the service instance configuration.

JPS-00040
The JPS audit component events file {0} is missing or invalid.

Category:
Other

Cause:
Cannot find the audit component events file.

Action:
Make sure the audit component events file is available and valid.

JPS-00041
Cannot load the JpsAdminService class.

Category:
Other

Cause:
The class JpsAdminService or a dependent class could not be loaded.

Action:
Review the cause to resolve the error.

JPS-00042
The LDAP connection pool provider {0} is not valid; the supported providers are JNDI or IDM. If unspecified, it defaults to UCP/JNDI provider.

Category:
Configuration

Cause:
The connection.pool.provider.type property value was invalid.

Action:
Configure a supported connection.pool.provider.type value, or use the default provider by not setting the connection.pool.provider.type property.

JPS-00043
Cannot establish an LDAP connection after {0} attempts.

Category:
Requests/Responses

Cause:
The connection could not be established.

Action:
Check the LDAP configuration.

JPS-00044
The LDAP URL format must be ldap://<host>:<port> or ldaps://<host>:<port>; but found {0}.

Category:
Configuration

Cause:
Invalid LDAP URL format was found.

Action:
The format of the LDAP URL must be ldap://<host>:<port> or ldaps://<host>:<port> format.

JPS-00045
The LDAP principal {0} is invalid.

Category:
Configuration

Cause:
The LDAP principal was invalid.

Action:
Provide a correct value for principal.

JPS-00046
The LDAP credential is invalid.

Category:
Configuration

Cause:
The LDAP credential was invalid.

Action:
Provide the correct credential value.

JPS-00047
The Subject parameter cannot be null.

Category:
Programmatic

Cause:
The supplied parameter was null.

Action:
Check the Subject parameter supplied in the method call.

JPS-00048
Principals are missing in the Subject.

Category:
Programmatic

Cause:
No principals were not found in the Subject.

Action:
Verify that the supplied Subject contains principals.

JPS-00049
The authenticated user principal is missing in the Subject.

Category:
Programmatic

Cause:
Authenticated user principal was not found in the Subject.

Action:
Verify that the supplied Subject contains an authenticated user principal.

JPS-00050
Invalid Subject parameter supplied.

Category:
Programmatic

Cause:
The Subject contained an anonymous user principal and an authenticated user principal.

Action:
Ensure that the Subject does not contain the anonymous user principal.

JPS-00051
The oracle.security.jps.config property not set.

Category:
Upgrade

Cause:
The oracle.security.jps.config property was not set.

Action:
Set the oracle.security.jps.config property to an appropriate value.

JPS-00052
Failed to Refresh Audit Service with new configuration.

Category:
Configuration

Cause:
Failed to reload the audit configuration.

Action:
Check the audit configuration file to see if the lastest changes are valid.

JPS-00053
Component events file is missing for {0} at {1}.

Category:
Configuration

Cause:
The component events file for the given component type was missing.

Action:
Verify that the properties set for the component files are correct in jps-config.xml.

JPS-00054
Failed to create the auditor for {0}.

Category:
Configuration

Cause:
Failed to create the auditor object.

Action:
Ensure that the component events file is not missing or corrupt and check the log files additional errors.

JPS-00055
Bootstrap credential store service is not initialized for the service configurator.

Category:
Programmatic

Cause:
The bootstrap credetial store service was not initialised.

Action:
Make sure the bootstrap credetial store service is initialized before any other services.

JPS-00056
Failed to create identity store service instance {0}. Reason: {1}.

Category:
Configuration

Cause:
Failed to create identity store service instance {0}. Cause: {1}.

Action:
Check the log files to resolve the error.

JPS-00057
Failed to set OutputProperty for indent or XML encoding. Reason {0}.

Category:
Configuration

Cause:
Failed to setOutputProperty for indent or XML encoding. Cause: {0}

Action:
Check the XML Transformer implementation.

JPS-00058
Failed to set XML output encoding to UTF-8 in OutputStreamWriter. Reason {0}.

Category:
Configuration

Cause:
Failed to set XML output encoding to UTF-8 in OutputStreamWriter. Cause: {0}

Action:
Check the JDK OutputStreamWriter supported encodings.

JPS-00059
The specified enterprise identity is null or invalid.

Category:
Configuration

Cause:
An enterprise identity provided was null or invalid

Action:
Provide a valid enterprise identity value.

JPS-00060
The specified enterprise identity {0} is not found in identity store.

Category:
Configuration

Cause:
The specified enterprise identity {0} was not found in the identity store.

Action:
Provide a valid enterprise identity value.

JPS-00061
No platform specific factory is found to create the platform principals. Check errors in the log files.

Category:
Configuration

Cause:
No platform specific factory was found to create platform principals.

Action:
Check the log files for the errors.

JPS-00062
No identity store associated with policy store found.

Category:
Configuration

Cause:
No identity store associate with policy store found

Action:
Contact system administrator

JPS-00063
Jps servlet filter creation failed. Reason: {0}.

Category:
Configuration

Cause:
Jps Servlet Filter creation failed

Action:
Contact system administrator

JPS-00064
Jps ejb interceptor creation failed. Reason: {0}.

Category:
Configuration

Cause:
Jps EJB Interceptor creation failed

Action:
Contact system administrator

JPS-00065
Jps platform factory creation failed. Reason: {0}.

Category:
Configuration

Cause:
Jps Platform Factory creation failed

Action:
Contact system administrator

JPS-00066
Jps property value retrieval failed. Reason: {0}.

Category:
Configuration

Cause:
Jps property value retrieval failed

Action:
Check the property values in jps configuration files

JPS-00068
Ldap security checking failed. The LDAP url should start with ldaps and oracle.ldap.wltloc system property should be set. Reason : {0}.

Category:
Security

Cause:
Is LDAP secure failed

Action:
Contact system administrator

JPS-00069
Ldap credential store provider missing.

Category:
Security

Cause:
LDAP credential provider missed

Action:
Ensure ldap credential store provider is configured

JPS-00070
Ldap policy store provider missing.

Category:
Security

Cause:
LDAP policy store provider missing

Action:
Ensure ldap policy store is configured

JPS-00071
Ldap bootstrap credential retrieval failed. Reason:{0}.

Category:
Security

Cause:
Retrieval of bootstrap credential failed

Action:
Check the credential store configuration for credential types, maps and key

JPS-00072
Policy schema upgrade not required. Store Schema version {0} is compatible to the seed schema version {1}

Category:
Configuration

Cause:
Comparison of policy schema version in the store against to seed schema version.

Action:
No action required

JPS-00073
Policy store schema version not found

Category:
Configuration

Cause:
Trying to determine version of the policy schema in the store

Action:
Contact Oracle Support Services.

JPS-00074
Policy store schema version {0} is less than the latest schema version {1}, upgrade the Policy store schema to latest version.

Category:
Configuration

Cause:
Comparison of the Policy schema version in the store against the schema to seed

Action:
No action required

JPS-00075
Unable to query Policy store schema version under "{0}", Cause {1}

Category:
Configuration

Cause:
Query of Policy schema from the store failed

Action:
Confirm the Policy store schema containers are present in the store

JPS-00076
Policy schema version set to {0}

Category:
Configuration

Cause:
Version of the policy schema has been set in the store

Action:
No action required

JPS-00077
Setting version of policy schema in the store failed. Cause {0}

Category:
Configuration

Cause:
Unexpected error occurred while setting the version of the Policy schema in the store

Action:
Confirm the container is present in the store and caller has sufficient privileges to perform this operation

JPS-00078
Credential store schema upgrade not required. Store Schema version {0} is compatible to the seed schema version {1}

Category:
Configuration

Cause:
Comparison of Credential schema version in the store against the seed schema version.

Action:
No action required

JPS-00079
Credential store schema version not found

Category:
Configuration

Cause:
Check if the DN exists, or if the Credential Store schema version attribute is present at the specificied location

Action:
Contact Oracle Support Services.

JPS-00080
Credential store schema version {0} is less than the latest schema version {1}, upgrade the Credential store schema to latest version.

Category:
Configuration

Cause:
Comparison of the Credential schema version in the store against the schema to seed

Action:
No action required

JPS-00081
Unable to query Credential store schema version under "{0}", Cause {1}

Category:
Configuration

Cause:
Query of Credential schema from store store failed

Action:
Confirm the Credential store schema container in the store is present

JPS-00082
Credential schema version set to {0}

Category:
Configuration

Cause:
Version of the credential schema has been set in the store

Action:
No action required

JPS-00083
Setting version of credential schema in the store failed. Cause {0}

Category:
Configuration

Cause:
Unexpected error occurred while setting the version of the credential schema in the store

Action:
Confirm the container is present in the store and caller has sufficient privileges to perform this operation

JPS-00084
IOException raised from FileLocker {0}.

Category:
Other

Cause:
Closing IO objects in FileLocker

Action:
Check the file system for access privileges and disk space availability.

JPS-00085
OID version is unavailable.

Category:
Other

Cause:
OID version is unavalable

Action:
Check the ldap url against the server type passed.

JPS-00086
Error while encoding search string: {0} to UTF-8 encoding

Category:
Other

Cause:
Unable to encode user string to UTF-8 encoding

Action:
Check the search string.

JPS-00087
The subject parameter is null.

Category:
Security

Cause:
The subject parameter is null

Action:
Make sure the subject parameter is not null

JPS-00088
The user name parameter is null.

Deployment

Cause:

Action:

JPS-00138
Exception occurs on opening the staging application in {0}.

Category:
Deployment

Cause:
This may be caused by bad .ear file on the disk.

Action:
Check the .ear file on the disk.

JPS-00139
Exception occurs on loading the property file of the staging application in {0}.

Category:
Deployment

Cause:
Failed to open the property file.

Action:
Check the property file on the disk.

JPS-00140
Failed to delete the staging app {0}. Migration flag file created.

Category:
Deployment

Cause:

Action:

JPS-00141
Cannot handle offline deployed application due to the required system property {0} is not set.

Category:
Deployment

Cause:
The cause may be that the product was installed inproperly.

Action:
Install the product properly.

JPS-00142
No opss-application.xml found.

Category:
Deployment

Cause:

Action:

JPS-00143
Error on migrating security artifacts.

Category:
Deployment

Cause:
Error on migrating security artifacts.

Action:
Check security related files in your application, such as opss-application.xml, jazn-data.xml, cwallet.sso, etc.

JPS-00144
Error on opening ear file {0}.

Category:
Deployment

Cause:
Error on opening ear file.

Action:
Check the ear file.

JPS-00145
Found no installed application at {0}.

Category:
Deployment

Cause:
Found no installed application at {0}.

Action:
Check the installed application at {0}.

JPS-00146
Failed to create identity store service instance {0}. Reason: the service does not enable the virtualizes flag, but references other service instance.

Category:
Configuration

Cause:
Failed to create identity store service instance {0}. Cause: the service does not enable the virtualize flag, but references other service instance.

Action:
Either make the virtualize flag true, or directly define the ldap configuration instead of using service reference

JPS-00147
Keystore re-association not supported.

Category:
Configuration

Cause:
Configuration of key store was not suitable for re-association.

Action:
Confirm the key store configuration is updated.

JPS-00148
Jps JBoss signing key seeded.

Category:
Security

Cause:

Action:

JPS-00149
Jps JBoss signing key already exists. Seeding ignored.

Category:
Security

Cause:

Action:

JPS-00150
Key 1 and Key 2 are no longer supported for system parameter -Djps.subject.cache.key, please use key 4 (default), 3, or 5 (fastest).

Category:
Security

Cause:

Action:

JPS-00151
Audit store instantiation failure, type: {0} reason: {1}

Category:
Configuration

Cause:
Audit metadata store failed to be instantiated, type: {0}, reason: {1}

Action:
Check the audit service configuration in jps-config.xml.

JPS-00152
Component not registered, name: {0}

Category:
Configuration

Cause:
Component {0} not registered and no audit configuration found.

Action:
Register component with audit service.

JPS-00153
The principal {0} is invalid.

Category:
Configuration

Cause:
The principal is invalid.

Action:
Provide a correct value for principal.

JPS-00154
The rule condition {0} is invalid.

Category:
Configuration

Cause:
The rule condition function is invalid.

Action:
Provide a correct value for rule condition function.

JPS-00155
Audit metadata store is not instantiated in audit service.

Category:
Configuration

Cause:
Audit metadata store is not instantiated.

Action:
Verify that the audit store properties for audit service are correct in jps-config.xml.

JPS-00156
Audit metadata store type {0} is invalid

Category:
Configuration

Cause:
Audit metadata store type {0} is invalid

Action:
Check the audit service configuration in jps-config.xml.

JPS-00157
The DN {0} was invalid LdapName format, see javax.naming.ldap.LdapName

Category:
Configuration

Cause:
The DN {0} was invalid LdapName format, see javax.naming.ldap.LdapName

Action:
Ensure property in format of javax.naming.ldap.LdapName.

JPS-00158
Audit store schema upgrade not required. Store Schema version {0} is compatible to the seed schema version {1}

Category:
Configuration

Cause:
Comparison of Audit schema version in the store against the seed schema version.

Action:
No action required

JPS-00159
Audit store schema version not found

Category:
Configuration

Cause:
Check if the DN exists, or if the Audit Store schema version attribute is present at the specificied location

Action:
Contact Oracle Support Services.

JPS-00160
Audit store schema version {0} is less than the latest schema version {1}, upgrade the Audit store schema to latest version.

Category:
Configuration

Cause:
Comparison of the Audit schema version in the store against the schema to seed

Action:
No action required

JPS-00161
Unable to query Audit store schema version under "{0}", Cause {1}

Category:
Configuration

Cause:
Query of Audit schema from store store failed

Action:
Confirm the Audit store schema container in the store is present

JPS-00162
Audit schema version set to {0}

Category:
Configuration

Cause:
Version of the audit schema has been set in the store

Action:
No action required

JPS-00163
Setting version of audit schema in the store failed. Cause {0}

Category:
Configuration

Cause:
Unexpected error occurred while setting the version of the audit schema in the store

Action:
Confirm the container is present in the store and caller has sufficient privileges to perform this operation

JPS-00164
Audit store re-association not supported.

Category:
Configuration

Cause:
Configuration of audit store was not suitable for re-association.

Action:
Confirm the audit store configuration is updated.

JPS-00165
Failed to reload component {0} runtime policy with error message {1}.

Category:
Other

Cause:
Failed to reload component runtime policy.

Action:
Check component run policy and custom fitler preset definition.

JPS-00166
Failed to retrieve Embedded LDAP store information.

Category:
Configuration

Cause:
Failed to retrieve embedded ldap store information.

Action:
Check the log files to resolve the error.

JPS-00167
Invalid xml content was found. {0} Location: {1}.

Category:
Security

Cause:
Invalid xml content was found. {0} Location: {1}.

Action:
Fix the invalid xml elements according to the xsd schema definition.

JPS-00168
OID server version {0} is not supported

Category:
Other

Cause:
OID server version {0} is not supported

Action:
Check the support matrix.

JPS-00169
Cannot get server log directory. Reason: {0}.

Category:
Security

Cause:
Cannot get server log directory. Reason: {0}.

Action:
Check server configuration.

JPS-00170
Initializing OPSS Java Policy Provider.

Cause:

Action:

JPS-00202
Jps post service activation operations started.

Category:
Security

Cause:

Action:

JPS-00203
Upgrade of file based domain not supported

Category:
Configuration

Cause:
Upgrading of file based domain not supported

Action:
Please move the file based domain to database based domain, then run reconfiguration

JPS-00204
Migrate source or destination store context lookup failure

Category:
Configuration

Cause:
Migrate source or destination context in migration could not be looked up.

Action:
Check the configuration file to verify service context settings

JPS-00205
Security store version configured is incompatible

Category:
Configuration

Cause:
Security store version configured is incompatible with this release.

Action:
Please use security store version 12.1.3 or lower

JPS-00206
Jps is already started.

Category:
Security

Cause:
Can not start Jps again since it is already started.

Action:
Please do not start JPS if it is already started

JPS-00207
Service context {0} is not in active state

Category:
Security

Cause:
Service context is not in active state.

Action:
Please check logs to see service context failure.

JPS-00208
Jps initializing.

Category:
Security

Cause:

Action:

JPS-00209
Jps startup failed.

Category:
Security

Cause:
Jps startup is failed due to some error.

Action:
Please check logs to see Jps startup failure.

JPS-00210
Jps inactive.

Category:
Security

Cause:

Action:

JPS-00211
Not supported platform type {0}.

Category:
Security

Cause:

Action:

JPS-00212
Error occurred while stopping jps due to: {0}.

Category:
Configuration

Cause:
Error occured while stopping the OPSS

Action:
Check the server logs for details.

JPS-00213
Parameter "{0}" cannot be null.

Category:
Data

Cause:
method parameter cannot be null

Action:
provide a non-null value for the parameter

JPS-00214
Operation "{0}" is not supported in OPSS Mode "{1}".

Category:
Configuration

Cause:
the invoked operation is not supported in JPS_API mode

Action:
set the OPSS Mode to one of COMPATIBLE or MULTIPLE

JPS-00215
executeAs: Switching SecurityContext from "{0}" to "{1}" is not permitted.

Category:
Configuration

Cause:
the requested SecurityContext Switch is not Permitted

Action:
Look at documentation for allowed context switches

JPS-00216
Failed to get a handle to the global audit service for tenant {0}.

Category:
Security

Cause:
Failed to get a handle to the global audit service

Action:
Check configuration

JPS-00217
The schema specified in {0} is already in use for security store. Please create a new schema.

Category:
Configuration

Cause:
The schema specified in {0} is already in use for security store.

Action:
Please create a new schema.

JPS-00218
Comparison of credential failed for map : {0}, key : {1}.

Category:
Requests/Responses

Cause:
Encryption key comparison failed.

Action:
Retry importEncryptionKey command or api.

JPS-00219
Expected keys not found in the credential map : {0}.

Category:
Requests/Responses

Cause:
Expected keys not found in the credential map

Action:
Verify the credential store content.

JPS-00220
Cannot find datasource definition {0}. Reason: {1}.

Category:
Security

Cause:
Cannot find datasource definition {0}. Reason: {1}.

Action:
Check weblogic configuration.

JPS-00221
Error occurred while resetting jps due to: {0}.

Category:
Configuration

Cause:
Error occured while resetting OPSS

Action:
Check the server logs for details.

JPS-00222
Jps is reset.

Category:
Security

Cause:

Action:

JPS-00223
Specified JPS context "{0}" not found

Category:
Security

Cause:
Specified JPS context not found

Action:
Check the input configuration that the correct context name is present and is the one supplied as input.

JPS-00224
Invalid inputted migration parameters "{0}"

Category:

Check the log files for details.

JPS-00234
Persist jps-config.xml to directory: {0} - done.

Category:
Configuration

Cause:
Persist jps-config.xml to directory: {0} - done.

Action:
No action Required.

JPS-00235
Persist jps-config-jse.xml to directory: {0} - done.

Category:
Configuration

Cause:
Persist jps-config-jse.xml to directory: {0} - done.

Action:
No action Required.

JPS-00236
Bootstrap key store service instance already present in bootstrap credential store context.

Category:
Process

Cause:
Bootstrap key store service instance already present in bootstrap credential store context.

Action:
No Action Required

JPS-00237
Adding keystore service instance to bootstrap context for the {0} file.

Category:
Process

Cause:
Adding keystore service instance to bootstrap context for the {0} file.

Action:
No Action Required

JPS-00238
Error in loading the property file.

Category:
Configuration

Cause:
Error in loading the property file.

Action:
Check the log files to resolve the error.

JPS-00239
Exception while updating the keystore service instance to bootstrap context for {0} file.

Category:
Process

Cause:
Exception while updating the keystore service instance to bootstrap context for {0} file.

Action:
Check the log files to resolve the error.

JPS-00240
JpsConfiguration object is not passed, not able to add Keystore service instance to Bootstrap context.

Category:
Configuration

Cause:
JpsConfiguration object is not passed, not able to add Keystore service instance to Bootstrap context.

Action:
Check the log files to resolve the error.

JPS-00241
No file based keystore service instance is found, not able to add Keystore service instance to Bootstrap context.

Category:
Configuration

Cause:
This operation is not supported in restricted-JRF domain

Action:
Please check document for supported operations in restricted-JRf domain

JPS-00242
This operation is not supported in restricted-JRF domain

Category:
Configuration

Cause:
No file based keystore service instance is found, not able to add Keystore service instance to Bootstrap context.

Action:
Check the log files to resolve the error.

JPS-00243
{0} cannot be started as JRF Executor serivce retrieval got failed.

Category:
Security

Cause:
{0} cannot be started as JRF Executor serivce retrieval got failed.

Action:
Check stack trace for more details.

JPS-00244
No audit log directory is set. Cannot perform audit operations for component {0}.

Category:
Configuration

Cause:
Failed to get audit log directory. Audit calls may fail.

Action:
Check if the audit log directory is set either in audit service properties or as a system property.

JPS-00245
No audit log directory is set. Disabling audit for component {0}.

Category:
Configuration

Cause:
Failed to get audit log directory.

Action:
Check if the audit log directory is set either in audit service properties or as a system property.

JPS-00246
new Startup().start() is required to be called before using OPSS API.

Category:
Configuration

Cause:
OPSS API is used without calling new JpsStartup().start() first.

Action:
Call new JpsStartup().start() before using OPSS API.

JPS-00247
Could not retrieve tenant context.

Category:
Configuration

Cause:
Tenant context could not be retrieved.

Action:
Ensure tenant has been provisioned.

JPS-00248
This JpsStartup object was cleaned up. To start OPSS again, need create a new instance of JpsStartup.

Category:
Configuration

Cause:
The start() method is called on an JpsStartup object that was cleaned up.

Action:
Create a new instance of JpsStartup, then call the start() method on it.

JPS-00249
Operation "{0}" can only be performed when OPSS is in state "{1}". Current state is {2}.

Category:
Configuration

Cause:
Operation "{0}" can only be performed when OPSS is in state "{1}". Current state is {2}.

Action:
Perform operation "{0}" only when OPSS is in state "{1}".

JPS-00250
OPSS is already pre-started.

Category:
Configuration

Cause:
preStart() is called when OPSS is already pre-started.

Action:
Do not call preStart() if OPSS is already pre-started.

JPS-00251
This JpsStartup object is already reset.

Category:
Configuration

Cause:
reset() on a JpsStartup object is called when the object is already reset.

Action:
Do not call reset() when the JpsStartup objet is already reset.

JPS-00252
The {0} operation starting for partition {1}.

Category:
Process

Cause:
Starting the operation for partition.

Action:
No Action Required

JPS-00253
The {0} operation completed for partition {1}.

Category:
Process

Cause:
Completed the operation for partition.

Action:
No Action Required

JPS-00254
Tenant services {0} successfully for partition {1}.

Category:
Process

Cause:
Tenant services operation done successfully for partition.

Action:
No Action Required

JPS-00255
JPS post service started.

Category:
Process

Cause:
JPS post service started.

Action:
No Action Required

JPS-00256
JPS default service started.

Category:
Process

Cause:
JPS default service started.

Action:
No Action Required

JPS-00257
JPS bootstrap service started.

Category:
Process

Cause:
JPS bootstrap service started.

Action:
No Action Required

JPS-00258
Bootstrap services are used by OPSS internally and clients should never need to directly read/write bootstrap credentials. If required, use Wlst or configuration management interfaces.

Category:
Configuration

Cause:
An attempt to obtain bootstrap context is made.

Action:
Use WLST commands like addBootstrapCredential /modifyBootstrapCredential if required.

JPS-00259
Cannot terminate OPSS service context for partition {0}. Reason {1}.

Category:
Configuration

Cause:
Cannot terminate OPSS service context for partition {0}. Reason {1}.

Action:
Check reason for detail

JPS-00260
Database access error. SQL state: {0}, error code: {1}.

Category:
Configuration

Cause:
Database access error. SQL state: {0}, error code: {1}.

Action:
Check log for detail.

JPS-00261
Invalid value for "order" : {0} in service instance reference {1}

Category:
Configuration

Cause:
Configuration is corrupt.

Action:
Correct the configuration

JPS-00262
Duplicate value for "order" : {0} in service instance reference {1}

Category:
Configuration

Cause:
Configuration is corrupt.

Action:
Correct the configuration

JPS-00263
Cannot modify read only artifacts

Category:
Requests/Responses

Cause:
An attempt to modify/delete read only artifacts has been made.

Action:
Read only artifacts cannot be modified at runtime.

JPS-00264
Database is disconnected. SQL state: {0}, error code: {1}.

Category:
Configuration

Cause:
Database is disconnected. SQL state: {0}, error code: {1}.

Action:
Check log for detail.

JPS-00265
executeAs: SecurityContext with name "{0}" does not exist

Category:
Configuration

Cause:
The requested SecurityContext does not exist

Action:
Input a valid SecurityContxt name

JPS-00266
System property oracle.net.tns_admin has been set, OPSS can not overwrite it.

Category:
Configuration

Cause:
System property oracle.net.tns_admin has been set, OPSS can not overwrite it.

Action:
Skip setting tns property

JPS-00267
Tenant context already exists - {0}.

Category:
Requests/Responses

Cause:
The tenant context already activated.

Action:
No actions are required.

JPS-00268
Tenant context not activated - {0}.

Category:
Requests/Responses

Cause:
The tenant context not activated.

Action:
No actions are required.

JPS-00269
Client name "{0}" is too long.

Category:
Other

Cause:
Client name is too long when calling opssRestClient to register a client.

Action:
Make client name shorter

JPS-00270
Datasource ID {0} from tenant context {1} conflicts with tenant context {2}.

Category:
Other

Cause:
Datasource ID from DataSourceCallback handler conflicts with existing tenant.

Action:
Make client name shorter

JPS-00271
Exception occurs during JpsStartup start. Reason {0}. Will retry {1} time(s) in next {2} seconds.

Category:
Other

Cause:
Exception occurs during JpsStartup start, will retry

Action:
Check cause of failure

JPS-00272
Exception occurs during JPS API "{0}" called. Reason {1}. Will retry {2} time(s) in next {3} seconds.

Category:
Other

Cause:
Exception occurs during JPS API call, will retry

Action:
Check cause of failure

JPS-00273
Tenant context activated - {0}.

Category:
Requests/Responses

Cause:
The tenant context activated.

Action:
No actions are required.

JPS-00274
Tenant context {0} activation failed. Error: {1}.

Category:
Requests/Responses

Cause:
The tenant context activation failed.

Action:
No actions are required.

JPS-00648
Operation is not supported - unable to set key entry for non-existent stripe and keystore.

Category:
Compliance

Cause:
Combining certs from two truststores into a single truststore failed

Action:
Look at the logs for any exceptions that could have caused this failure

JPS-00649
********** * Demonstration CA was found in use in this environment. * * This deployment may be vulnerable to security attacks. * * Replace the Demonstration CA with a custom CA immediately. *
****

Category:
Compliance

Cause:
Demonstration CA was found in use in a production environment.

Action:
Refer documentation to switch to a custom CA.

JPS-00650
Virtual KSS URI to aggregate multiple keystores already exists

Category:
Compliance

Cause:
The virtual KSS URI passed in already exists

Action:
Use a different virtual KSS URI

JPS-00651
Aggregation of multiple keystores pointed by virtual URI failed

Category:
Compliance

Cause:
Aggregation of Keystores pointed to by virtual URI failed

Action:
Check if the source Keystores pointed to by virtual URI are valid

JPS-00652
Cannot set or save entries in virtual keystore

Category:
Compliance

Cause:
Setting of an entry in a virtual Keystore failed

Action:
Entries cannot be saved to a virtual Keystore

JPS-00653
Cannot save a virtual keystore

Category:
Compliance

Cause:
Saving a virtual Keystore failed

Action:
A virtual keystore cannot be persisted

JPS-00654
Cannot delete a virtual keystore that does not exist

Category:
Compliance

Cause:
Deleting a virtual Keystore failed

Action:
Cannot delete a virtual keystore that does not exist

JPS-01000
The credential map {0} is invalid.

Category:
Requests/Responses

Cause:
The specified credential map name was invalid.

Action:
Ensure the credential map name is valid.

JPS-01001
The credential key {0} is invalid.

Category:
Requests/Responses

Cause:
The specified credential key name was invalid.

Action:
Ensure the credential key name is valid.

JPS-01002
The value {0} is invalid in this password credential.

Category:
Requests/Responses

Cause:
The specified password credential was invalid.

Action:
Use only a supported credential type. The supported types are {0}.

JPS-01003
The value of name {0}, url {1}, of port {2} is invalid in this datasource credential.

Category:
Requests/Responses

Cause:
The specified datasource credential was invalid.

Action:
Use only a supported credential type. The supported types are {0}.

JPS-01004
The value {0} is invalid in this generic credential.

Category:
Requests/Responses

Cause:
The specified generic credential was invalid.

Action:
Use only a supported credential type. The supported types are {0}.

JPS-01005
The credential type {0} is not supported.

Category:
Requests/Responses

Cause:
The specified credential type was invalid.

Action:
Use only a supported credential type. The supported types are {0}.

JPS-01006
The credential expired on {0}.

Category:
Requests/Responses

Cause:
This credential expired on {0}.

Action:
Create a new credential.

JPS-01007
The credential with map {0} and key {1} already exists.

Category:
Requests/Responses

Cause:
This credential already existed.

Action:
Use a credential with different map name or key.

JPS-01008
The credential map name {0} already exists.

Category:
Requests/Responses

Cause:
This credential map name already existed.

Action:
Use a different map name.

JPS-01009
The credential with map {0} and key {1} does not exist.

Category:
Requests/Responses

Cause:
This credential did not exist.

Action:
Check the credential map name and key.

JPS-01010
The credential map {0} does not exist.

Category:
Requests/Responses

Cause:
This credential map name did not exist.

Action:
Check the credential map name.

JPS-01011
The credential store location property {0} is not configured, or the configured value {1} is invalid.

Category:
Configuration

Cause:
The credential store location was not specified.

Action:
Check the value of the location attribute.

JPS-01012
The credential property {0} is invalid or not defined.

Category:
Requests/Responses

Cause:
The credential property {0} was invalid or not defined.

Action:
Check the configuration of this property.

JPS-01013
The credential store DN {0} is missing in the store; the target DN must be pre-configured.

Category:
Requests/Responses

Cause:
The expected credential store DN {0} was missing.

Action:
Configure this DN during the bootstrap process.

JPS-01014
The credential {0} is invalid.

Category:
Requests/Responses

Cause:
This credential was invalid.

Action:
Use only a supported credential type. The supported types are password or generic.

JPS-01015
Cannot retrieve credential {0}.

Category:
Requests/Responses

Cause:
This credential was invalid.

Action:
Use only a supported credential type. The supported types are password or generic.

JPS-01016
A password credential is expected; instead found {0} for alias {1} and key {2} at location {3}.

Category:
Other

Cause:
Wrong credential type was found.

Action:
Use the password credential type. Expecting password credential but found {0} for alias {1} and key {2} at location {3}.

JPS-01017
A generic credential is expected; instead found {0}.

Category:
Other

Cause:
Wrong credential type was found.

Action:
Use the generic credential type. Expecting generic credential but found {0}.

JPS-01018
A password credential is missing in the credential store.

Category:
Session

Cause:
The password credential was not found in the credential store.

Action:
Ensure that the credential is present in the credential store.

JPS-01019
The credential store {0} has been moved or deleted.

Category:
Configuration

Cause:
The specified credential store did not exist.

Action:
Ensure that the credential store location is valid.

JPS-01020
Cannot create store {0}.

Category:
Configuration

Cause:
Could not create the credential store.

Action:
Verify the store location, that sufficient permissions are in place, and that sufficient disk space is available.

JPS-01021
The generic credential {0} is not serializable.

Category:
Requests/Responses

Cause:
This generic credential was not serializable.

Action:
Make this credential serializable.

JPS-01022
The expiration time {0} is invalid: the expiration time must be later than the creation time.

Category:
Requests/Responses

Cause:
Invalid credential expiration time.

Action:
Set the expiration time to a time later than the credential creation time.

JPS-01023
Store does not contain all expected maps. Reason {0}.

Category:
Compliance

Cause:

Action:

JPS-01024
Store contains all expected maps. Result {0}.

Category:
Compliance

Cause:

Action:

JPS-01025
Store does not contain all expected credentials. Reason {0}.

Category:
Compliance

Cause:

Action:

JPS-01026
Store contains all expected credentials. Result {0}.

Category:
Compliance

Cause:

Action:

JPS-01027
Cannot get credential map. Reason {0}.

Category:
Compliance

Cause:

Action:

JPS-01028
successful getting of credential map

Category:
Compliance

Cause:

Action:

JPS-01029
successful getting of credential

Category:
Compliance

Cause:

Action:

JPS-01030
Cannot get credential. Reason {0}.

Category:
Compliance

Cause:

Action:

JPS-01031
Cannot retrieve map names. Reason {0}.

Category:
Compliance

Cause:

Action:

JPS-01032
successful setting of credential

Category:
Compliance

Cause:

Action:

JPS-01033
Cannot set credential. Reason {0}.

Category:
Compliance

Cause:

Action:

JPS-01034
successful resetting of credential

Category:
Compliance

Cause:

Action:

JPS-01035
Cannot reset credential. Reason {0}.

Category:
Compliance

Cause:

Action:

JPS-01036
successful setting of credential map

Category:
Compliance

Cause:

Action:

JPS-01037
Cannot set credential map. Reason {0}.

Category:
Compliance

Cause:

Action:

JPS-01038
successful resetting of credential map

Category:
Compliance

Cause:

Action:

JPS-01039
Cannot reset credential map. Reason {0}.

Category:
Compliance

Cause:

Action:

JPS-01040
successful deletion of credential

Category:
Compliance

Cause:

Action:

JPS-01041
Cannot delete credential. Reason {0}.

Category:
Compliance

Cause:

Action:

JPS-01042
successful deletion of credential map

Category:
Compliance

Cause:

Action:

JPS-01043
Cannot delete credential map. Reason {0}.

Category:
Compliance

Cause:

Action:

JPS-01044
successful deletion of all credentials from the store

Category:
Compliance

Cause:

Action:

JPS-01045
Cannot delete all credentials from the store. Reason {0}.

Category:
Compliance

Cause:

Action:

JPS-01046
successful retrieving of map names; mapNameSet {0}.

Category:
Compliance

Cause:

Action:

JPS-01047
Cannot persist the wallet. Reason {0}.

Category:
Compliance

Cause:

Action:

JPS-01048
Modifying of credential failed. Reason {0}

Category:
Compliance

Cause:
Modification of credential failed

Action:
Contact system administrator

JPS-01049
Reading all credentials from the store failed. Reason {0}

Category:
Compliance

Cause:
Read of all credentials failed

Action:
Contact system administrator

JPS-01050
Opening of wallet based credential store failed. Reason {0}

Category:
Compliance

Cause:
Credential wallet could not be opened

Action:
Contact system administrator

JPS-01051
Credential audit events cannot be logged. Reason {0}

Category:
Compliance

Cause:
Credential store audit events logging not enabled

Action:
Check the audit configuration to ensure auditing enabled

JPS-01052
Credential audit event logging failed. Reason {0}

Category:
Compliance

Cause:
Credential audit event logging failed

Action:
Contact system administrator

JPS-01053
Creation of new credential map failed. Reason {0}

Category:
Compliance

Cause:
Creation of new credential map failed

Action:
Ensure all jps libraries are in setup properly in the runtime

JPS-01054
Refresh of credential wallet failed. Reason {0}

Category:
Compliance

Cause:
Refresh of credstore wallet failed

Action:
Contact system administrator

JPS-01055
Could not create credential store instance. Reason {0}

Category:
Compliance

Cause:
Could not create credential store instance

Action:
Contact system administrator

JPS-01056
The credential store location {0} was invalid. It should be a directory or full path to cwallet.sso file.

Category:
Configuration

Cause:
The credential store location {0} was invalid. It should be a directory or full path to cwallet.sso file.

Action:
Check the value of the location property

JPS-01057
The credential map was invalid. Reason {0}

Category:
Requests/Responses

Cause:
The credential map was null.

Action:
Check the value of the credential map

JPS-01058
The credential dn {0} was invalid.

Category:
Requests/Responses

Cause:
The credential dn was invalid.

Action:
Ensure the credential dn is valid.

JPS-01059
The credential store instance {0} was not fully initialized.

Category:
Configuration

Cause:
The credential store was not fully initialized until data source is available.

Action:
Wait and retry later

JPS-01060
The credential store instance does not have the property ldap url/JDBC url/datasource JNDI name defined.

Category:
Configuration

Cause:
The credential store property ldap.url or jdbc.url or datasource.jndi.name was not defined.

Action:
Check the configuration for this property.

JPS-01061
Access to boostrap credential store denied to application code.

Category:
Security

Cause:
Application code was trying to access a bootstrap credential store. Bootstrap credential store is intended only for the OPSS usage.

Action:
bootstrap_credstore_context need not be used for credential store operations.

JPS-01062
A backup of the bootstrap credential store could not be created.

Category:
Security

Cause:
A backup of the bootstrap cwallet.sso could not be created.

Action:
Investigate the logs to find out the root cause of the exception in file operations

JPS-01063
Credential compatibility check failed. Cannot migrate credential: {0}

Category:
Security

Cause:
There exists one or more generic credential in the store that cannot be migrated.

Action:
Ensure that the store does not contain any generic credential with binary attribute before migration.

JPS-01064
Invalid password: Passwords must have a minimum length of eight characters and contain alphabetic characters combined with numbers or special characters.

Category:
Security

Cause:

Action:

JPS-01065
Could not decrypt a random credential

Category:
Security

Cause:
Decryption of credential failed

Action:
Ensure that the bootstrap wallet contains the correct encryption key that was used to encrypt the credentials in the store.

JPS-01066
Cannot get credential due to database disconnected. Reason {0}.

Category:
Compliance

Cause:

Action:

JPS-01067
Failed to retrieve customer encryption key password.

Category:
Security

Cause:
No password was specified in the custom callback.

Action:
Ensure that the password for decrypting customer encryption key is provided.

JPS-01068
Missing callback handler to provide context information

Category:
Security

Cause:
No custom callback to provide context information specified.

Action:
Ensure that a callback handler is specified.

JPS-01500
The anonymous service configuration is missing.

Category:
Configuration

Cause:
The anonymous service configuration was missing in jps-config.xml.

Action:
Configure the anonymous service in jps-config.xml.

JPS-01501
The anonymous identity store provider instance {0} is not found.

Category:
Configuration

Cause:
The anonymous identity store provider configuration was invalid.

Action:
Check the anonymous identity store provider configuration in jps-config.xml.

JPS-01502
The LDAP identity store provider instance {0} is not found.

Category:
Configuration

Cause:
Invalid or missing LDAP identity store provider configuration.

Action:
Check LDAP identity store provider configuration in jps-config.xml.

JPS-01503
The XML identity store provider instance {0} is not found.

Category:
Requests/Responses

Cause:
Invalid or missing XML identity store provider configuration.

Action:
Check the XML identity store provider configuration in jps-config.xml.

JPS-01504
The secret store provider for provider {0} and instance {1} does not exist.

Category:
Requests/Responses

Cause:
The credential provider was missing.

Action:
Check the configuration of the credential store provider in jps-config.xml.

JPS-01505
The key store provider {0} is missing or not configured.

Category:
Configuration

Cause:
The keystore provider configuration was missing in jps-config.xml.

Action:
Configure a keystore provider in jps-config.xml.

JPS-01506
Invalid context name.

Category:
Configuration

Cause:
Invalid context name found.

Action:
Check the configurations of contexts in jps-config.xml.

JPS-01507
Invalid login module name.

Category:
Configuration

Cause:
Invalid login module name found.

Action:
Check the login module configurations in jps-config.xml.

JPS-01508
Invalid login module descriptor.

Category:
Configuration

Cause:
Invalid login module descriptor found.

Action:
Check the login module instance configurations in jps-config.xml.

JPS-01509
Invalid login module class name.

Category:
Configuration

Cause:
Invalid login module class name found.

Action:
Check the loginModuleClassName property in the login module instance configuration in jps-config.xml.

JPS-01510
Invalid login module entries.

Category:
Configuration

Cause:
Invalid login module entries found.

Action:
The expected login module to be invoked is not present or misconfigured. Check the login module instance configurations in jps-config.xml.

JPS-01511
Invalid login module entry.

Category:
Configuration

Cause:
The login module entries were not valid in the jps-config.xml file.

Action:
Correct the login module entries in service instances and service providers.

JPS-01512
Missing login module entry.

Category:
Configuration

Cause:
The login module entries were missing in the jps-config.xml file.

Action:
Add the appropriate login module entries in service instances and service providers.

JPS-01513
The configuration of the JAAS login provider {0} and the service instance {1} are missing.

Category:
Configuration

Cause:
The login module provider was missing.

Action:
Ensure that a login module provider is configured in the jps-config.xml.

JPS-01514
The default context is missing in jps-config.xml.

Category:
Configuration

Cause:
Default context was missing in jps-config.xml.

Action:
Add a default context to jps-config.xml.

JPS-01515
A context named anonymous is missing in jps-config.xml.

Category:
Configuration

Cause:
Context named anonymous was missing in jps-config.xml.

Action:
Add a context named anonymous in jps-config.xml file with an anonymous service instance reference.

JPS-01516
The default credential store service is missing in default jps-config.xml.

Category:
Other

Cause:
The default credential store service was missing in the default context in jps-config.xml.

Action:
There must be at least one credential store service configured in the default context.

JPS-01517
The generic identity store provider is missing.

Category:
Configuration

Cause:
Invalid or missing generic identity store provider configuration.

Action:
Check the generic identity store provider configuration in jps-config.xml.

JPS-01518
The anonymous service is not available in the application context.

Category:
Session

Cause:
The anonymous service was not available in context.

Action:
Check the context in jps-config.xml.

JPS-01519
The default context configuration is missing in jps-config.xml.

Category:
Session

Cause:
The default context configuration was not available in jps-config.xml.

Action:
Ensure that the default context is present in jps-config.xml.

JPS-01520
Cannot initialize identity store, cause: {0}.

Category:
Configuration

Cause:
Could not initialize identity store.

Action:
Correct the identity store configuration.

JPS-01521
Identity store file path is invalid.

Category:
Configuration

Cause:
Identity store file path was invalid or null.

Action:
Ensure that the path configured with the property ADF_IM_FILE_PATH is valid.

JPS-01522
The Jps configuration is invalid.

Category:
Configuration

Cause:
JPS configuration was null or invalid.

Action:
Verify configuration in jps-config.xml.

JPS-01523
The service instance {0} is invalid or not configured in jps-config.xml.

Category:
Configuration

Cause:
A service instance configuration was not valid.

Action:
Verify that the instance is correctly configured in jps-config.xml.

JPS-01524
The service instance {0} is invalid or not configured in jps-config.xml.

Category:
Configuration

Cause:
A service provider configuration was invalid.

Action:
Veirfy that the provider is correctly configured in jps-config.xml.

JPS-01525
The identity store service is not properly configured.

Category:
Configuration

Cause:
Found invalid identity store service configuration in jps-config.xml.

Action:
Ensure a valid identity store configuration in jps-config.xml.

JPS-01526
Configured identity store, user manager, or role manager is invalid. The error is {0}.

Category:
Configuration

Cause:
Found null value for configured identity store, user manager, or role manager.

Action:
Correct the identity store configuration.

JPS-01527
The identity store factory name is not configured.

Category:
Configuration

Cause:
Could not find identity store factory name.

Action:
Use the property ADF_IM_FACTORY_CLASS to specify the factory class.

JPS-01528
Idm identity store is invalid.

Category:
Configuration

Cause:
The identity store was not configured correctly.

Action:
Correct the configuration of the identity store in jps-config.xml.

JPS-01529
The context {0} contains multiple services of type {1}.

Category:
Configuration

Cause:
The context {0} contains multiple services of type {0}.

Action:
Check jps-config.xml for correctness.

JPS-01530
The anonymous service is already configured in the context {0}.

Category:
Configuration

Cause:
The anonymous service is already configured in the context {0}.

Action:
Check jps-config.xml for correctness.

JPS-01531
Configuration location {0} is a directory. File name expected.

Category:
Configuration

Cause:
Configuration location {0} is a directory. File name expected.

Action:
Provide a valid configuration file location, including a file name.

JPS-01532
The service instance location {0} is invalid or not configured in jps-config.xml.

Category:
Configuration

Cause:
A service instance configuration was invalid.

Action:
Verify that the location of the instance is correctly configured in jps-config.xml.

JPS-01533
Failed to create service instance {0} for application {1}.

Category:
Configuration

Cause:
Failed to create service instance {0} for application {1}.

Action:
Check the log files to resolve the error.

JPS-01534
Failed to get identity store configuration.

Category:
Security

Cause:
Failed to get identity store configuration.

Action:
Ensure the configuration is available.

JPS-01535
Failed to get configuration name {0}.

Category:
Configuration

Cause:
Failed to get configuration name {0}.

Action:
Check the log files to resolve the error.

JPS-01536
Failed to evaluate XML expression on Object {0}.

Category:
Configuration

Cause:
Failed to evaluate XML expression on Object {0}.

Action:
Check the log files to resolve the error.

JPS-01537
Failed to handle config location {0}. Reason {1}.

Category:
Security

Cause:

Action:

JPS-01538
The default policy provider was not found.

Category:
Security

Cause:
The default policy provider was not found.

Action:
Ensure policy provider configuration is correct.

JPS-01539
The Ovd IGF service provider instance {0} is not found.

Category:
Configuration

Cause:
Invalid or missing Ovd IGF service provider configuration.

Action:
Check Ovd IGF service provider configuration in jps-config.xml.

JPS-01543
The value of {0} is invalid. It must be an integer.

Category:
Configuration

Cause:
attribute.expire.time.seconds is not an integer.

Action:
Ensure attribute.expire.time.seconds is a valid integer.

JPS-01544
The provided configuration file path {0} is invalid or null.

Category:
Configuration

Cause:
The provided configuration file path {0} is invalid or null.

Action:
Provide a valid configuration file path.

JPS-01545
Back up of JPS Config file {0} done.

Category:
Configuration

Cause:
Back up of JPS Config file {0} done.

Action:
No action required

JPS-02000
The authentication of user {0} succeeded.

Category:
Requests/Responses

Cause:

Action:

JPS-02001
The authentication of user {0} failed. Reason: {1}

Category:
Requests/Responses

Cause:
User authentication failed.

Action:
Ensure the user exists in the identity store. Check the user credentials that are being sent for authentication.

JPS-02003
Authentication failed.

Category:
Requests/Responses

Cause:
Could not authenticate user.

Action:
Ensure that authentication uses valid user name and password.

JPS-02004
Cannot authenticate user {0}.

Category:
Security

Cause:
Could not authenticate user.

Action:
Ensure that the credentials provided for authentication are correct.

JPS-02005
Cannot login user {0} because {1}. Check the log files for more details.

Category:
Requests/Responses

Cause:
Encountered an error while authenticating user.

Action:
Contact the domain administrator.

JPS-02008
Authenticated role name is invalid: property {0} is invalid or not configured.

Category:
Configuration

Cause:
Found invalid or undefined authentication role name property.

Action:
Ensure that authentication role name properties are valid in jps-config.xml.

JPS-02009
SAML trusted assertion issuer is not configured: property set {0} is not configured.

Category:
Configuration

Cause:
Could not find configuration for SAML trusted assertion issuer.

Action:
Set the property saml.trusted.issuers in jps-config.xml.

JPS-02010
Cannot verify SAML assertion.

Category:
Requests/Responses

Cause:
Found invalid assertion; SAML trusted assertion issuer was not configured.

Action:
Check assertion and set the property saml.trusted.issuers in jps-config.xml.

JPS-02011
SAML assertion is missing name identifier.

Category:
Requests/Responses

Cause:
Found invalid assertion: name identifier was missing.

Action:
Ensure the use of a valid assertion.

JPS-02012
SAML assertion subject name is invalid.

Category:
Requests/Responses

Cause:
Found invalid assertion: subject name was null.

Action:
Ensure the use of a valid assertion.

JPS-02013
SAML assertion issuer name is invalid.

Category:
Requests/Responses

Cause:
Found invalid assertion: issuer name was invalid.

Action:
Ensure the use of a valid assertion.

JPS-02014
SAML assertion is invalid.

Category:
Requests/Responses

Cause:
Found invalid assertion.

Action:
Ensure the use of a valid assertion.

JPS-02015
SAML assertion has missing subject.

Category:
Requests/Responses

Cause:
Found invalid assertion: subject statement was missing.

Action:
Ensure the use of a valid assertion.

JPS-02016
SAML assertion is missing conditions.

Category:
Requests/Responses

Cause:
Found invalid assertion: condition statement was missing.

Action:
Ensure the use of a valid assertion.

JPS-02017
Found invalid condition "not before" in SAML assertion. Current Time:{0}, {1} milli seconds, {2} Time:{3}.

Category:
Requests/Responses

Cause:
Found invalid condition "not before" in SAML assertion. Current Time:{0}, {1} milli seconds, {2} Time:{3}.

Action:
Verify that the condition "not before" in the SAML assertion is set to a date earlier than or equal to today's date.

JPS-02018
Found invalid condition "on or after" in SAML assertion. Current Time:{0}, {1} milli seconds, {2} Time:{3}.

Category:
Requests/Responses

Cause:
Found invalid condition "on or after" in SAML assertion. Current Time:{0}, {1} milli seconds, {2} Time:{3}.

Action:
Verify that the condition "on or after" in the SAML assertion is set to a valid date.

JPS-02019
SAML assertion is missing assertion issuers signature.

Category:
Requests/Responses

Cause:
Found invalid assertion: assertion issuers signature was missing.

Action:
Ensure the use of a valid assertion.

JPS-02020
Signature for SAML assertion issuer is invalid.

Category:
Configuration

Cause:
Found invalid signature in SAML assertion issuer.

Action:
Ensure the use of a valid assertion.

JPS-02021
Signature certificate (X509 Data) for SAML assertion issuer is invalid.

Category:
Configuration

Cause:
Found invalid signature certificate (X509 Data) in SAML assertion.

Action:
Ensure the use of a valid assertion.

JPS-02022
Cannot verify signature for SAML assertion.

Category:
Configuration

Cause:
Failed to verify issuers signature in assertion.

Action:
Check the assertion and set the property saml.trusted.issuers in jps-config.xml.

JPS-02023
Cannot verify SAML assertion signature certificate path.

Category:
Configuration

Cause:
Found invalid assertion signature.

Action:
Check the assertion and set the property saml.trusted.issuers in jps-config.xml.

JPS-02024
Cannot retrieve trusted CA policy for issuer {0}.

Category:
Configuration

Cause:
Found invalid assertion.

Action:
Check the assertion and set the property saml.trusted.issuers in jps-config.xml.

JPS-02025
Cannot modify read-only Subject.

Category:
Requests/Responses

Cause:
Could not modify a read-only subject.

Action:
Ensure the program logic is correct and that the program does not attempt to modify a read-only subject.

JPS-02026
X509 certificate is invalid.

Category:
Other

Cause:
The X509 certificate passed to the callback handler was null or invalid.

Action:
Ensure that the callback handler uses a valid X509 certificate.

JPS-02027
The property set {0} is missing in jps-config.xml.

Category:
Configuration

Cause:
Could not find property set in jps-config.xml.

Action:
Configure the property set in jps-config.xml.

JPS-02028
The extended property set {0} is missing in jps-config.xml.

Category:
Configuration

Cause:
Could not find extended property set in jps-config.xml.

Action:
Configure the extended property set in jps-config.xml.

JPS-02029
The default realm is not configured in identity store service {0}.

Category:
Configuration

Cause:
Could not find the default realm in the identity store service.

Action:
Configure the default realm property in the identity store service.

JPS-02030
The default realm configured in identity store service {0} is empty or null.

Category:
Configuration

Cause:
Found null default realm configured in identity store service.

Action:
Configure the default realm property in the identity store service.

JPS-02031
The invalid realm name property {0} is configured in identity store service {1}.

Category:
Configuration

Cause:
Found invalid realm name property in identity store service.

Action:
Configure the correct realm name property in the identity store service.

JPS-02032
The duplicate realm name {0} is configured in identity store service {1}.

Category:
Configuration

Cause:
Found duplicate realm in identity store service.

Action:
Remove duplicate realm configuration from the identity store service.

JPS-02033
The realm name {0} passed for authentication is invalid. Was expecting {1}, but found {0}.

Category:
Configuration

Cause:
Found invalid realm name {0}. Was expecting {1}, but found {0}.

Action:
Check the realm name passed to the authentication of user name.

JPS-02034
Realm name is missing in user name for authentication in multi-realm configuration.

Category:
Configuration

Cause:
The realm name was not supplied for authentication of multi-realm configuration.

Action:
Ensure that the realm name value is passed in the user name when authenticating a multi-realm configuration.

JPS-02035
Cannot properly initialize the Kerberos authenticator.

Category:
Requests/Responses

Cause:
Could not initialize the Kerberos authenticator.

Action:
Check the log files for errors and contact the domain administrator.

JPS-02036
Browser does not support Kerberos authentication.

Category:
Requests/Responses

Cause:
Could not find support for Kerberos authentication, or it was not configured correctly.

Action:
Verify that the browser is set to allow Kerberos authentication.

JPS-02037
The SAML assertion issuer {0} certificate is missing from the keystore.

Category:
Configuration

Cause:
Could not find SAML assertion certificate in keystore.

Action:
Store the SAML assertion issuer's certificate in the keystore, and configure the trustpoint alias in JpsSAMLLoginModuule.

JPS-02038
The SAML assertion {0} is missing a signature.

Category:
Requests/Responses

Cause:
Could not find expected signature in assertion.

Action:
Check that the assertion sent has a valid signature.

JPS-02039
Cannot assert certificate. Reason {0}.

Category:
Requests/Responses

Cause:
Found invalid certificate, or could not find corresponding user in identity store.

Action:
Make sure that the assertion is valid.

JPS-02040
Both user identity and token were provided for assertion. Either user identity or token should be provided, not both.

Category:
Other

Cause:
Both user identity and token were provided for assertion.

Action:
Provide either user identity or a token for assertion, not both.

JPS-02041
Asserter class was configured as {0}, but does not implement {1}.

Category:
Other

Cause:
Assertor class was configured as {0}, but does not implement {1}.

Action:
Provide an Assertor that implements {1}.

JPS-02042
Token assertion failed.

Category:
Other

Cause:
Token assertion failed.

Action:
Check detailed logs for more information.

JPS-02043
User name cannot be null or empty.

Category:
Requests/Responses

Cause:
User name cannot be null or empty.

Action:
Check that the user name is not null or empty.

JPS-02044
Found invalid attesting entity in SAML assertion. Attesting entity: {0}.

Category:
Requests/Responses

Cause:
Found invalid attesting entity in SAML assertion. Attesting entity: {0}.

Action:
Check that the attesting entity for the SAML assertion is valid.

JPS-02045
Audience URI for SAML assertion is invalid.

Category:
Requests/Responses

Cause:
SAML assertion audience URI is invalid.

Action:
Check that the audience URI for the SAML assertion is valid.

JPS-02046
Cannot get the user name from SAML assertion name identifier: {0}.

Category:
Requests/Responses

Cause:
Cannot get the user name from SAML assertion name identifier: {0}.

Action:
Check that the name identifier for the SAML assertion is valid.

JPS-02047
SAMLNameIdentifierMapper class was configured as {0}, but does not implement oracle.security.jps.internal.jaas.module.saml.SAMLNameIdentifierMapper.

Category:
Other

Cause:
SAMLNameIdentifierMapper class was configured as {0}, but does not implement oracle.security.jps.internal.jaas.module.saml.SAMLNameIdentifierMapper.

Action:
Provide an SAMLNameIdentifierMapper that implements oracle.security.jps.internal.jaas.module.saml.SAMLNameIdentifierMapper.

JPS-02048
Incorrect password was provided.

Category:
Requests/Responses

Cause:
Incorrect password was provided.

Action:
Ensure that authentication uses correct password.

JPS-02049
Null or empty password was provided.

Category:
Requests/Responses

Cause:
Null or empty password was provided.

Action:
Ensure that authentication uses correct password.

JPS-02050
Signature verification failed. Principal: {0}

Category:
Security

Cause:
Signature verification failed.

Action:
This error is unlikely to occur. Contact technical support when necessary.

JPS-02051
No auth module to validate request: auth context ID "{0}" of application context "{1}".

Category:
Security

Cause:
Server auth context did not have auth module to validate request.

Action:
Ensure that the server auth module is properly configured and bound for use by applications.

JPS-02052
No auth module to secure response: auth context ID "{0}" of application context "{1}".

Category:
Security

Cause:
Server auth context did not have auth module to secure response.

Action:
Ensure that the server auth module is properly configured and bound for use by applications.

JPS-02053
No auth module to validate response: auth context ID "{0}" of application context "{1}".

Category:
Security

Cause:
Client auth context did not have auth module to validate response.

Action:
Ensure that the client auth module is properly configured and bound for use by applications.

JPS-02054
No auth module to secure request: auth context ID "{0}" of application context "{1}".

Category:
Security

Cause:
Client auth context did not have auth module to secure request.

Action:
Ensure that the client auth module is properly configured and bound for use by applications.

JPS-02055
Cannot instantiate auth module class "{0}" for application context "{1}", cause: {2}.

Category:
Security

Cause:
Could not load the auth module.

Action:
Ensure that the module class name is correctly supplied and the class is in the class path.

JPS-02056
The auth module must support message type: {0}.

Category:
Security

Cause:
Auth module did not support the required message type.

Action:
Ensure that the class correctly implements the required auth module interfaces.

JPS-02057
The message layer "{0}" is not supported.

Category:
Requests/Responses

Cause:
The specified message layer was not supported.

Action:
Provide a valid message layer.

JPS-02058
Null callback handler is not supported.

Category:
Requests/Responses

Cause:
The specified callback handler was null.

Action:
Supply a non-null callback handler.

JPS-02059
The default auth provider "{0}" for layer "{1}" is not configured.

Category:
Configuration

Cause:
The default auth provider was not configured.

Action:
Ensure that the provider is configured in jps-config.xml.

JPS-02060
The auth module "{0}" is missing.

Category:
Configuration

Cause:
The specified auth module did not exist.

Action:
Configure the auth module in jps-config.xml.

JPS-02061
No auth module configured for provider "{0}".

Category:
Configuration

Cause:
No auth module configured for the specified provider.

Action:
Configure an auth module for the provider in jps-config.xml.

JPS-02062
Cannot determine the JDK vendor. Defaults to Oracle JDK Kerberos Login Module.

Category:
Configuration

Cause:
Cannot determine the JDK vendor. Defaults to Oracle JDK Kerberos Login Module.

Action:
See error message.

JPS-02063
Failed to create Kerberos Login Module instance "{0}". Reason: {1}.

Category:
Requests/Responses

Cause:
Failed to create Kerberos Login Module instance "{0}". Reason: {1}.

Action:
Ensure that the Login Module class name is correctly supplied and the class is in the class path.

JPS-02064
Cannot retrieve value for key {0}. Expecting key type {1}, found {2}.

Category:
Configuration

Cause:
Found invalid object type in role mapping map for key {0}. Expecting {1}, Found {2}.

Action:
Check the role mapping values passed in the callback.

JPS-02066
Cannot map default service role

Category:
Configuration

Cause:
default service roles are missing in the role mapping provided.

Action:
Check the role mapping values passed in the callback. Default service role should be provided if mapping of roles is enabled but mapping is not provided

JPS-02500
The principal name is invalid.

Category:
Requests/Responses

Cause:
Found null principal name.

Action:
Check the principal name.

JPS-02501
The principal type {0} is invalid.

Category:
Requests/Responses

Cause:
Found invalid principal type.

Action:
Check the principal type.

JPS-02502
The password {0} is invalid.

Category:
Data

Cause:
Found invalid password.

Action:
Check the password passed to create user account.

JPS-02503
The user name {0} is invalid.

Category:
Data

Cause:
Found invalid user name.

Action:
Ensure that the user name used to create, fetch, or remove the account is valid.

JPS-02504
The user range starting at {0} and ending at {1} is not a valid range.

Category:
Data

Cause:
The user range was invalid.

Action:
Check the start and end range. The start range cannot be less than 0, and the end range cannot be less than start range.

JPS-02505
The group {0} is invalid.

Category:
Data

Cause:
Group name was invalid.

Action:
Check the group name that is being sent for creating/fetching/removing group.

JPS-02506
The group range starting at {0} and ending at {1} is not valid range.

Category:
Data

Cause:
The JPSUserManager.getGroups() method was invoked with invalid start or end range.

Action:
Check the start and end range. The start range cannot be less than 0, and the end range cannot be less than start range.

JPS-02507
The anonymous user is not found.

Category:
Session

Cause:
The anonymous user was not found.

Action:
Ensure that a valid anonymous user is configured.

JPS-02508
The anonymous user name is invalid; property {0} is invalid or not defined.

Category:
Configuration

Cause:
The anonymous.user.name property was not configured in the anonymous service configuration.

Action:
Configure the anonymous.user.name property to a valid user name in the identity store while configuring the Anonymous Service.

JPS-02509
The user {0} already exists in the store; choose a different user name.

Category:
Requests/Responses

Cause:
The specified user name already existed in the store.

Action:
Provide a different user name.

JPS-02510
The group {0} already exists in the store; choose a different group name.

Category:
Requests/Responses

Cause:
The specified group name already existed in the store.

Action:
Provide a different group name.

JPS-02511
The role for group {0} is invalid.

Category:
Requests/Responses

Cause:
Found null role in group.

Action:
Check the group's name.

JPS-02512
Cannot create a new user {0}.

Category:
Configuration

Cause:
Could not create user.

Action:
Ensure that the user name is valid and distinct from any other existing user name.

JPS-02513
Cannot drop user {0}.

Category:
Configuration

Cause:
Could not drop the user.

Action:
Ensure this user already exists.

JPS-02514
Cannot retrieve user profile.

Category:
Configuration

Cause:
Could not get profile for user.

Action:
Ensure that the user exists.

JPS-02515
Cannot update user profile.

Category:
Configuration

Cause:
Could not set profile for user.

Action:
Ensure that the user exists.

JPS-02516
Cannot retrieve role profile.

Category:
Configuration

Cause:
Could not get role profile.

Action:
Ensure that the role exists.

JPS-02517
Cannot update role profile.

Category:
Configuration

Cause:
Could not set role profile.

Action:
Ensure that the role exists.

JPS-02518
Cannot create role {0}.

Category:
Security

Cause:
Could not create role.

Action:
Ensure that the role exists.

JPS-02519
Cannot drop role {0}.

Category:
Configuration

Cause:
Could not drop role.

Action:
Ensure that the role exists.

JPS-02520
Cannot grant role to the principal.

Category:
Configuration

Cause:
Could not grant permission to role.

Action:
Ensure that the permission is set for the role.

JPS-02521
Cannot revoke role from principal.

Category:
Configuration

Cause:
Could not revoke role.

Action:
Check that the correct permission to revoke the role is set.

JPS-02522
Cannot add user to role owners.

Category:
Configuration

Cause:
Could not add owner to role.

Action:
Check log files and correct the appropriate configuration.

JPS-02523
Cannot remove user from role owners.

Category:
Configuration

Cause:
Could not remove owner from role.

Action:
Check log files and correct the appropriate configuration.

JPS-02524
Cannot retrieve role owners.

Category:
Configuration

Cause:
Could not get role owners.

Action:
Check log files and correct the appropriate configuration.

JPS-02525
Cannot retrieve role grantees.

Category:
Configuration

Cause:
Could not get role grantees.

Action:
Check log files and correct the appropriate configuration.

JPS-02526
Cannot retrieve the roles granted to principal.

Category:
Configuration

Cause:
Could not get granted roles.

Action:
Check log files and correct the appropriate configuration.

JPS-02527
Cannot close identity store.

Category:
Configuration

Cause:
Could not close identity store.

Action:
Check log files and correct the appropriate configuration.

JPS-02528
Cannot obtain a handle for role manager MBean.

Category:
Configuration

Cause:
Could not get role manager object name.

Action:
Check log files and correct the appropriate configuration.

JPS-02529
Cannot obtain a handle for user manager MBean.

Category:
Configuration

Cause:
Could not get user manager object name.

Action:
Check log files and correct the appropriate configuration.

JPS-02530
Cannot get a list of searchable attributes.

Category:
Configuration

Cause:
Could not get searchable attributes.

Action:
Check log files and correct the appropriate configuration.

JPS-02531
Cannot get list of user property names.

Category:
Configuration

Cause:
Could not get user property names.

Action:
Check log files and correct the appropriate configuration.

JPS-02532
Cannot parse principals of role.

Category:
Configuration

Cause:
Could not parse role principals.

Action:
Check log files and correct the appropriate configuration.

JPS-02533
Cannot parse principals of user.

Category:
Configuration

Cause:
Could not parse user principals.

Action:
Check log files and correct the appropriate configuration.

JPS-02534
Cannot find role {0}.

Category:
Configuration

Cause:
Could not completer search role operation.

Action:
Correct the role name and, if necessary, contact the domain administrator.

JPS-02535
Cannot complete search for roles.

Category:
Configuration

Cause:
Could not complete search for multiple roles.

Action:
Correct role names and, if necessary, contact the domain administrator.

JPS-02536
Cannot complete search for user {0}.

Category:
Configuration

Cause:
Could not completer user search.

Action:
Correct user name and, if necessary, contact the domain administrator.

JPS-02537
Cannot complete search for users.

Category:
Configuration

Cause:
Could not complete search for multiple users.

Action:
Correct user names and, if necessary, contact the domain administrator.

JPS-02538
Cannot complete search operation.

Category:
Configuration

Cause:
Failed to complete search.

Action:
Correct the search query.

JPS-02539
Cannot change password of user {0}.

Category:
Configuration

Cause:
Could not change password.

Action:
Contact the domain administrator.

JPS-02540
User {0} not found in the identity store.

Category:
Configuration

Cause:
User {0} not found in the identity store.

Action:
Ensure user is valid.

JPS-02541
Identity store has an invalid configured subscriber name.

Category:
Configuration

Cause:
Found invalid subscriber name.

Action:
Correct the configuration of property subscriber.name.

JPS-02542
unknown identity store service type {0}.

Category:
Configuration

Cause:
Found unknown identity store service type {0}.

Action:
Correct the identity store configuration.

JPS-02543
Search type {0} is invalid.

Category:
Other

Cause:
Found invalid search type {0}.

Action:
Correct the type passed for the search.

JPS-02544
Operation type {0} is invalid.

Category:
Other

Cause:
Found invalid operation type {0}.

Action:
Correct the type passed for the operation.

JPS-02545
Search filter type {0} is invalid.

Category:
Other

Cause:
Found invalid search filter type {0}.

Action:
Correct the type passed for the search filter.

JPS-02546
Scope type is invalid {0}.

Category:
Other

Cause:
Found invalid scope type {0}.

Action:
Correct the type passed for the scope.

JPS-02547
Cannot create realm {0}.

Category:
Requests/Responses

Cause:
Could not created realm.

Action:
Check log files for error details.

JPS-02548
Cannot delete realm {0}.

Category:
Requests/Responses

Cause:
Could not delete realm.

Action:
Check log files for error details.

JPS-02549
A realm with the specified name already exists.

Category:
Requests/Responses

Cause:
A realm with the specified name already exists.

Action:
Choose a different realm name.

JPS-02550
The realm {0} does not exist.

Category:
Requests/Responses

Cause:
Could not find realm with the name {0}.

Action:
Correct the supplied realm name.

JPS-02551
Cannot perform an unsupported operation on a serialized object.

Category:
Requests/Responses

Cause:
Could not perform operation on serialized object.

Action:
Check log files for error details.

JPS-02552
Cannot add a duplicate owner.

Category:
Data

Cause:
Attempted to add already present owner.

Action:
Correct the owner's name.

JPS-02553
Cannot remove an owner that is not present.

Category:
Data

Cause:
Attempted to remove a non existing owner.

Action:
Correct the owner's name.

JPS-02554
Cannot add a duplicate member.

Category:
Requests/Responses

Cause:
Attempted to add already present member.

Action:
Correct the member's name.

JPS-02555
Cannot complete identity store operation. The error is {0}.

Category:
Requests/Responses

Cause:
Could not perform identity store operation.

Action:
Check error log files for details.

JPS-02556
Run into error {0} while using identity store.

Category:
Requests/Responses

Cause:
Run into an internal identity store error.

Action:
Check error log files for details.

JPS-02557
The group {0} is invalid.

Category:
Requests/Responses

Cause:
Found null or invalid group.

Action:
Correct the group's name.

JPS-02558
Operation isOwnedBy failed.

Category:
Configuration

Cause:
Could not perform operation isOwnedBy.

Action:
Correct the owner's name.

JPS-02559
Operation isManagedBy failed.

Category:
Configuration

Cause:
Could not perform operation isManagedBy.

Action:
Correct the name.

JPS-02560
Cannot update role.

Category:
Configuration

Cause:
Could not update role.

Action:
Verify that the role name is correct and, if necessary, contact the domain administrator.

JPS-02561
The realm entry {0} is missing in the identity store XML file.

Category:
Configuration

Cause:
Could not find realm entry {0} in XML-based identity store.

Action:
Ensure that the realm name is present in the XML-based identity store.

JPS-02562
Identity store entry is missing in the identity store XML file.

Category:
Configuration

Cause:
Could not find identity store entry in XML-based identity store.

Action:
Ensure that entry is present in the XML-based identity store.

JPS-02563
Length of the name attribute should be more than {0}.

Category:
Configuration

Cause:
Found attribute name with less than {0} characters.

Action:
Ensure that the length of the attribute name is at least the minimum length.

JPS-02564
Length of the name attribute should be less than {0}.

Category:
Configuration

Cause:
Found attribute name with more than {0} characters.

Action:
Ensure that the length of the attribute name is at most the maximum length.

JPS-02565
Name attribute contains invalid characters.

Category:
Configuration

Cause:
Found invalid characters in attribute name.

Action:
Ensure that attribute names have characters in the following sets only: [a-z], [A-Z], [0-9], ['.', '-', '_'].

JPS-02566
The identity store config property {0} with value {1} is invalid.

Category:
Configuration

Cause:
Found invalid identity store configuration property.

Action:
Correct the configuration of the identity store property.

JPS-02567
The credential with map {0} and key {1} does not exist.

Category:
Configuration

Cause:
Could not find credential with map and key names provided.

Action:
Ensure that a credential with given map and key is present in the credential store.

JPS-02568
The password credential with map {0} and key {1} is invalid.

Category:
Configuration

Cause:
Found invalid user name or password.

Action:
Ensure that the user name and password in the credential store are correct.

JPS-02569
Cannot find the XML file {0}.

Category:
Configuration

Cause:
Could not find XML file for XML-based identity store {0}.

Action:
Check the path of the XML file specified for the identity store.

JPS-02570
XML file is unspecified.

Category:
Configuration

Cause:
Could not determine XML file.

Action:
Specify the XML file for the XML-based repository.

JPS-02571
The algorithm {0} to encode passwords is not supported.

Category:
Configuration

Cause:
Found invalid password encoding algorithm.

Action:
Specify a valid algorithm for password encoding.

JPS-02572
Caller does not have IdentityAssertion permission to execute this operation. Reason {0}.

Category:
Requests/Responses

Cause:
Caller did not have IdentityAssertion permission.

Action:
Make sure the caller has IdentityAssertion permission to execute this operation.

JPS-02573
Cannot grant a role to itself.

Category:
Configuration

Cause:
Attempted to grant a role to itself.

Action:
Verify that no role is being granted to itself.

JPS-02574
Cannot delete default realm.

Category:
Requests/Responses

Cause:
Could not delete default realm.

Action:
The default realm cannot be deleted: assign another realm as the default realm before deleting this one.

JPS-02575
A user with the specified name does not exist.

Category:
Requests/Responses

Cause:
Could not find user with the specified name.

Action:
Check the user name.

JPS-02576
A role with the specified name already exists.

Category:
Requests/Responses

Cause:
Role with the specified name already existed.

Action:
Use a different role name.

JPS-02577
A role with the specified name does not exist.

Category:
Requests/Responses

Cause:
Could not find role with the specified name.

Action:
Check the role name.

JPS-02578
The principal type {0} is invalid for the identity store type {1}.

Category:
Requests/Responses

Cause:
Found unsupported principal type {0} for identity store type {1}.

Action:
Verify that principals have supported types.

JPS-02579
Identity store type for application {0} is null or empty.

Category:
Requests/Responses

Cause:
Found null identity store type configured in identity store.

Action:
Pass one of the following identity store types: XML, OID, ACTIVE_DIRECTORY, IPLANET, EDIRECTORY, OPEN_LDAP, COREID, OVD, OUD, or CUSTOM.

JPS-02580
Cannot grant role {0} to {1} because it would lead to a cyclic dependency.

Category:
Requests/Responses

Cause:
Could not grant role {0} to {1}, because it would lead to a cyclic dependency.

Action:
Revoke the grant which would create the cyclic dependency, and try again.

JPS-02582
LDAP user or group search base is invalid.

Category:
Requests/Responses

Cause:
Found invalid LDAP user or group search base.

Action:
Check that the user and group search base properties are valid.

JPS-02583
JPS principal "{0}" with identity store type "{1}" cannot be created.

Category:
Security

Cause:
JPS principal "{0}" with identity store type "{1}" cannot be created.

Action:
Ensure the principal value is valid.

JPS-02584
JPS user name "{0}", principal type "{1}" with identity store type "{2}" cannot be created.

Category:
Security

Cause:
JPS user name "{0}", principal type "{1}" with identity store type "{2}" cannot be created.

Action:
Ensure the user value is valid.

JPS-02585
JPS enterprise role name "{0}", principal type "{1}" with identity store type "{2}" cannot be created.

Category:
Security

Cause:
JPS enterprise role name "{0}", principal type "{1}" with identity store type "{2}" cannot be created.

Action:
Ensure the enterprise role value is valid.

JPS-02586
JPS application role name "{0}", principal type "{1}" cannot be created.

Category:
Security

Cause:
JPS application role name "{0}", principal type "{1}" cannot be created.

Action:
Ensure the application role value is valid.

JPS-02587
Principal class "{0}", name "{1}" cannot be created.

Category:
Security

Cause:
Principal class "{0}", name "{1}" cannot be created.

Action:
Ensure the principal value is valid.

JPS-02588
Enterprise user principal "{0}" cannot be created. Reason: {1}.

Category:
Security

Cause:
Enterprise user principal "{0}" cannot be created.

Action:
Ensure the user principal value is valid.

JPS-02589
Enterprise role principal "{0}" cannot be created. Reason: {1}.

Category:
Security

Cause:
Enterprise role principal "{0}" cannot be created.

Action:
Ensure the role principal value is valid.

JPS-02590
Token type {0} cannot be supported. Supported types are: {1}.

Category:
Configuration

Cause:
Token type {0} cannot be supported. Supported types are: {1}.

Action:
Use the Supported types.

JPS-02591
Guid {0} is assigned to principal {1}.

Category:
Security

Cause:
Guid {0} is assigned to principal {1}.

Action:
Check log for more details.

JPS-02592
Failed to push ldap config data to libOvd for service instance "{0}" in JPS context "{1}", cause: {2}

Category:
Security

Cause:
Failed to push ldap config data to libOvd for service instance "{0}" in JPS context "{1}", cause: {2}

Action:
Check libOvd log for more details.

JPS-02593
Failed to get IGF UserManager or RoleManager instance from IGF API, cause: {0}

Category:
Security

Cause:
Failed to get IGF UserManager or RoleManager instance from IGF API, cause: {0}

Action:
Check IGF API or libOvd log for more details.

JPS-02594
The service instance "{0}" in JPS context "{1}" has no LDAP instance configured

Category:
Security

Cause:
The service instance "{0}" in JPS context "{1}" has no LDAP instance configured

Action:
Check jps-config.xml to make sure the IGF service has either the IDStore instance defined, or use the WlsLdapIdStoreConfigProvider to get LDAP config from WLS Authentication providers.

JPS-02595
The IGFService specified ldap "{0}" is not defined in the JPS service instances

Category:
Security

Cause:
The IGFService specified ldap "{0}" is not defined in the JPS service instances

Action:
Check jps-config.xml to make sure the specified ldap is defined as a JPS service instance.

JPS-02596
The provider class type for the specified ldap instance "{0}" is configured as "{1}", which not the expected type of "oracle.security.jps.internal.idstore.ldap.LdapIdentityStoreProvider"

Category:
Security

Cause:
The provider class type for the specified ldap instance "{0}" is configured as "{1}", which not the expected type of "oracle.security.jps.internal.idstore.ldap.LdapIdentityStoreProvider"

Action:
Check jps-config.xml to make sure the provider type class for ldap instance is "oracle.security.jps.internal.idstore.ldap.LdapIdentityStoreProvider".

JPS-02597
You configured a custom Authentication Provider or WLS generic LDAPAuthenticator, which the libOvd can not recognize. Supply the idstore.type property in jps-config.xml file, or use a specific WLS LDAP Authentication provider that matches your LDAP server instead of a generic one.

Category:
Security

Cause:
You configured a custom Authentication Provider or WLS generic LDAPAuthenticator, which is a custom type and not supported by libOvd

Action:
The "idstore.type" property must be specified in jps-config.xml file as specific type such as OID, OVD etc. Alternatively, select a specific WLS LDAP Authentication provider that matches your LDAP server.

JPS-02598
Pushed ldap name and types info to libOvd. Ldaps : {0}.

Category:
Security

Cause:
libOvd is enabled so Ldap configuration info is passed to libOvd

Action:
No action required

JPS-02599
The configured Identity Store provider "{0}" is not supported by IDM IdentityDirectory

Category:
Security

Cause:
The configured Identity Store provider "{0}" is not supported by IDM IdentityDirectory

Action:
Use supported Identity Store provider for the IdentiyStoreService

JPS-02600
libOvd required system parameter of "common.components.home" is not supplied in the JVM command line

Category:
Security

Cause:
libOvd required system parameter of "common.components.home" is not supplied in the JVM command line

Action:
Supply the system flag of "-Dcommon.components.home" and point it to the oracle_common folder

JPS-02601
Failed to get Ovd virtualization service for service instance "{0}" in JPS context "{1}", cause: {2}

Category:
Security

Cause:
Failed to get Ovd virtualization service for service instance "{0}" in JPS context "{1}", cause: {2}

Action:
Check Ovd log for more details.

JPS-03000
Cannot instantiate permission class "{0}", target "{1}", or actions "{2}" as defined in the application policy context "{3}". Cause {4}

Category:
Security

Cause:
Could not load a permission class.

Action:
Ensure that the class name is correct and available in the current class loader.

JPS-03001
Cannot instantiate permission class "{0}", target "{1}", or actions "{2}" as defined in the system policy context. Cause {3}

Category:
Security

Cause:
Could not load a class.

Action:
Ensure that the class name is correct and is available in the current class loader.

JPS-03004
Cannot log check authorization event to the audit service.

Category:
Security

Cause:
Could not log check authorization events to the audit service.

Action:
Ensure that auditing is configured correctly in your environment and application.

JPS-03005
LDAP policy store contains invalid configuration parameters.

Category:
Security

Cause:
Found invalid parameters in LDAP policy store configuration.

Action:
Check the configuration of the LDAP policy store.

JPS-03006
The name "{0}" of application role "{1}" is missing or invalid.

Category:
Security

Cause:
Found missing or invalid name in application role.

Action:
The internal identifier generated by the policy store seems malformed, due to an internal policy store error; contact Oracle Support Services.

JPS-03007
Authorization check permission succeeded.

Category:
Security

Cause:

Action:

JPS-03008
Authorization check permission failed.

Category:
Security

Cause:
Current Subject or source code did not have required permissions

Action:
Provide the required permissions.

JPS-03009
Executing privileged action in {0} mode as subject {1}.

Category:
Security

Cause:

Action:

JPS-03010
Policy store cleanup thread started.

Category:
Security

Cause:

Action:

JPS-03011
Policy store cleanup thread stopped.

Category:
Security

Cause:

Action:

JPS-03012
Error occurred when computing application roles in application context {0} for subject {1}. Exception: {2}

Category:
Security

Cause:
Error occurred when computing application roles in application context {0} for subject {1}. Exception: {2}

Action:
Refer to the base exception in logs to resolve the issue.

JPS-03013
Unsupported API method call.

Category:
Security

Cause:
Unsupported API method call.

Action:
Check the policy provider.

JPS-03014
Failed to distribute policy by timer.

Category:
Configuration

Cause:
Failed to distribute policy by timer.

Action:
Check the log for more details or contact the administator.

JPS-03015
Resource-Actions "{0}" will be skipped in bulk authorization evaluation for Application: "{1}".

Category:
Configuration

Cause:
Application name not set in the resource-actions.

Action:
Set the Application name in the resource-actions

JPS-03016
Resource-Actions "{0}" will be skipped in bulk authorization. Reason: "{1}"

Category:
Configuration

Cause:
Failed to convert the Resource-Actions into a Permission instance.

Action:
Check the logs for more information to resolve the error.

JPS-03017
Failed to compute Application roles for Subject "{0}". Reason "{1}"

Category:
Configuration

Cause:
Unable to get the ApplicationRoles granted to a principal.

Action:
Check the logs for more information to resolve the error.

JPS-03018
The authorization result is ignoring policies from application {0} as the application is not available

Category:
Configuration

Cause:
The application is not available at runtime, or the application is not defined in the policystore.

Action:
Check if the application is provisioned in the policystore.

JPS-03019
Policy evaluation in the application {0} failed. Reason: {1}

Category:
Configuration

Cause:
Error occurred while evaluating policies.

Action:
Refer to the logs to rectify the problem.

JPS-03020
Policy evaluation in the system policy failed. Reason: {0}

Category:
Configuration

Cause:
Error occurred while evaluating system policies.

Action:
Refer to the logs to rectify the problem.

JPS-03021
Admin Policy evaluation in the application {0} failed. Reason: {1}

Category:
Configuration

Cause:
Error occurred while evaluating administrative policies.

Action:
Refer to the logs to rectify the problem.

JPS-03022
Failed to initialize PolicyStore for Discovery mode. Reason: {0}

Category:
Configuration

Cause:
Failed to initialize PolicyStore for Discovery mode. Reason: {0}

Action:
Refer to the logs to rectify the problem.

JPS-03023
Discovered policy directory either not exist or can not write, isExist={0},isDirectory={1},canWrite={2}

Category:
Configuration

Cause:
Discovered policy directory either not exist or can not write, isExist={0},isDirectory={1},canWrite={2}

Action:
Make sure directory for writing discovered policy exist, is directory and can write.

JPS-03024
Failed to write policy information during discovery. Reason: {0}

Category:
Configuration

Cause:
Failed to dump policy objects in discovery mode. Reason: {0}

Action:
Refer to the logs to rectify the problem.

JPS-03025
Input permission is null when getPermissions is called for application name= {0}

Category:
Configuration

Cause:
Input permission is null when getPermissions is called. application name= {0}

Action:
Refer to the logs to rectify the problem.

JPS-03026
PDPService and PolicyStore Service instance not found in default context. Reason: {0}

Category:
Configuration

Cause:
PolicyStore service instance and PDPService service instance not found in the default JpsContext in an uncontrolled mode.

Action:
Configure a PDPService service instance in the default JpsContext, or if running in an uncontroled mode, a PolicyStore Service.

JPS-03027
PDPService service instance failed during initialization due to lack of grant. If you are seeing this error after a new installation, make sure you have updated weblogic.policy as installation step suggested

Category:
Configuration

Cause:
PDPService service instance failed during initialization because of lack of grant.

Action:
check codebase grant like weblogic.policy to see if proper grant set for all codebase of PDP service.

JPS-03028
Unable to convert to a permission entry to resource-actions entry. Reason: {0}

Category:
Configuration

Cause:
Unable to convert to a permission entry to resource-actions entry.

Action:
Check the logs for more information to resolve the error.

JPS-03029
Unable to Notify to external Application:{0} Refresh Event. Reason {1}

Category:
Configuration

Cause:
Unable to Notify to external Appliacation Refresh Event.

Action:
Check the logs for more information to resolve the error.

JPS-03030
Catch exception in PDP registration, will retry later.

Category:
Configuration

Cause:
Catch exception in PDP registration, retry later.

Action:
check the exception details and retry

JPS-03031
Catch InterruptedException in PDP registration. Registration failed.

Category:
Configuration

Cause:
Catch InterruptedException in PDP registration. Registration failed

Action:
check the exception details and retry

JPS-03032
Can not access PD server web service during PDP registration, will retry later.

Category:
Configuration

Cause:
PD Server web service not available, retry later.

Action:
wait retry to access to PD Server web service

JPS-03033
Can not access PD client web service during PDP registration, will retry later.

Category:
Configuration

Cause:
PD client web service not available, retry later.

Action:
wait retry to access to PD client web service

JPS-03034
Policystore is not ready on admin server during PDP registration, will retry later.

Category:
Configuration

Cause:
Policystore isn't available from admin server, retry later.

Action:
wait retry accessing policystore

JPS-03035
PDP registration succeeded.

Category:
Configuration

Cause:

Action:

JPS-03036
No PDP Service is found in JPS Context {1}

Category:
Configuration

Cause:
PDPService service instance is not found in JPS Context.

Action:
Configure a PDPService service instance in JPS Context

JPS-03037
Exception happened during PDP initialization.

Category:
Configuration

Cause:
Exception happened during PDP Initialization

Action:
check the exception details and retry

JPS-03038
Unable to find PolicyStore or Schema Version. Check farm name and root name of policystore service instance in OPSS configuration file.

Category:
Configuration

Cause:
Unable to find PolicyStore or Schema Version.

Action:
Check farm name and root name of policystore service instance in OPSS configuration file

JPS-03039
Exception {0} happened during Policystore agent processing message {1}, the message will be ignored.

Category:
Configuration

Cause:
Exception happened during PolicyStore agent processing

Action:
check the exception details and retry

JPS-03040
Subject resolver cache initiation failed.

Category:
Security

Cause:
Subject resolver cache initiation failed.

Action:
Make sure all jars are included in the classpath.

JPS-03041
Subject resolver cache property, key: {0}, value: {1} is not valid.

Category:
Security

Cause:
Subject resolver cache property, key: {0}, value: {1} is not valid.

Action:
Check pdp service configuration.

JPS-03042
PDP Service property, key: {0}, value: {1} is not valid, use default value: {2}.

Category:
Security

Cause:
PDP Service property, key: {0}, value: {1} is not valid, use default value: {2}.

Action:
Check pdp service configuration.

JPS-03043
Configuration property, key: {0}, value: {1} is not valid, use default value: {2}.

Category:
Security

Cause:
Configuration property, key: {0}, value: {1} is not valid, use default value: {2}.

Action:
Check pdp service configuration.

JPS-03044
Mandatory property {0} of PDP service is missing.

Category:
Configuration

Cause:
Mandatory property of PDP service is missing.

Action:
provide the required property

JPS-03045
Can not clean application : {0} from runtime cache. Reason:mode : {1} it is not non-controlled mode or not non-bound application in mixed mode.

Category:
Security

Cause:
Can not clean application : {0} from runtime cache. Reason: mode : {1} it is not non-controlled mode or not non-bound application in mixed mode.

Action:
Check pdp service configuration.

JPS-03046
Application {0} is not found when being preloaded.

Category:
Programmatic

Cause:
Application {0} is not found when being preloaded.

Action:
Please check policy store, application might have been deleted.

JPS-03047
Upsupported preload key type {0} with condition oracle.security.jps.policystore.policy.lazy.load.enable being {1} .

Category:
Programmatic

Cause:
Upsupported preload key type {0} with condition 'oracle.security.jps.policystore.policy.lazy.load.enable' being {1}

Action:
Please check the preload key and the configuration parameters for PDP service.

JPS-03048
Unable to remove application {0} from runtime cache, due to {1}

Category:
Security

Cause:
Unable to remove application {0} from runtime cache, due to {1}

Action:
Check full stacktrace

JPS-03049
Cannot {0} {1} {2} {3} because the policy lockdown has been enabled.

Category:
Security

Cause:
Cannot {0} {1} {2} {3} because the policy lockdown has been enabled

Action:
The exception is because of violation of policy customization rule. Seeded policy definition can not be modified.

JPS-03150
Error during setting the field of a provider MBean. {0}

Category:
Security

Cause:
Error during setting the field of a provider MBean. {0}.

Action:
Refer to the log files for details and correct the error.

JPS-03151
getSecurityService returning null for requested service type of {0} for realm {1}

Category:
Security

Cause:
getSecurityService returning null for requested service type of {0} for realm {1}.

Action:
Refer to the log files for details and correct the error.

JPS-03152
Query Atz Cache specified but no response collector supplied

Category:
Security

Cause:
Query Atz Cache specified but no response collector supplied.

Action:
Supply the response collector in the request.

JPS-03153
Error parsing atz. cache flush time.

Category:
Security

Cause:
Error parsing atz. cache flush time.

Action:
Verify that the value is an integer.

JPS-03154
Authorization cache has been flushed. Time={0}

Category:
Security

Cause:
Authorization cache has been flushed. Time={0}.

Action:
No actions are required.

JPS-03155
Cannot locate class: {0}

Category:
Security

Cause:
Cannot locate class: {0}.

Action:
Refer to the log files for details and correct the error.

JPS-03156
The exception has been thrown by ARME. The authorization result is set to deny.

Category:
Security

Cause:
The exception has been thrown by ARME. The authorization result is set to deny.

Action:
Refer to the log files for details and correct the error.

JPS-03157
Error during initialization of the security framework.

Category:
Security

Cause:
Error during initialization of the security framework.

Action:
Refer to the log files for details and correct the error.

JPS-03158
Failed to parse resource cache size: {0}

Category:
Security

Cause:
Failed to parse resource cache size: {0}

Action:
Refer to the log files for details and correct the error.

JPS-03159
Invalid built in type in Value object: {0}

Category:
Security

Cause:
Invalid built in type in Value object: {0}

Action:
Refer to the log files for details and correct the error.

JPS-03160
Attempt to {0} a {1} value for type: {2}

Category:
Security

Cause:
Attempt to {0} a {1} value for type: {2}

Action:
Refer to the log files for details and correct the error.

JPS-03161
identifier not found in symbol table: {0}

Category:
Security

Cause:
Identifier not found in symbol table: {0}

Action:
Refer to the log files for details and correct the error.

JPS-03162
ERROR: PARSE: reason:==> {0}

Category:
Security

Cause:
ERROR: PARSE: reason:==>

Action:
Refer to the log files for details and correct the error.

JPS-03163
Invalid Declaration type received by setDeclType

Category:
Security

Cause:
Invalid Declaration type received by setDeclType.

Action:
Refer to the log files for details and correct the error.

JPS-03164
Got exception

Category:
Security

Cause:
Got exception.

Action:
Refer to the log files for details and correct the error.

Installing custom retriever: {0}

Category:
Security

Cause:
Installing custom retriever: {0}.

Action:
No actions are required.

JPS-03217
Caught exception while retrieving attribute from context: {0} Continue retrieving static attribute value.

Category:
Security

Cause:
Caught exception while retrieving attribute from context: {0} Continue retrieving static attribute value.

Action:
Refer to the log files for details and correct the error.

JPS-03218
Failed to transport AttributeValue to AttributeElement, caught {0}: {1}

Category:
Security

Cause:
Failed to transport AttributeValue to AttributeElement, caught {0}: {1}.

Action:
Refer to the log files for details and correct the error.

JPS-03219
AttributeValue type error, not single and list, return null

Category:
Security

Cause:
AttributeValue type error, not single and list, return null.

Action:
Refer to the log files for details and correct the error.

JPS-03220
Exception from the LDAP/DB server, code: {0}, trying alternate connection

Category:
Security

Cause:
Exception from the LDAP/DB server, code: {0}, trying alternate connection.

Action:
Refer to the log files for details and correct the error.

JPS-03221
Alternate LDAP/DB connection failed, code: {0}

Category:
Security

Cause:
Alternate LDAP/DB connection failed, code: {0}.

Action:
Refer to the log files for details and correct the error.

JPS-03222
Null extendedContext is passed to attribute retriever, cannot look for value.

Category:
Security

Cause:
Null extendedContext is passed to attribute retriever, cannot look for value.

Action:
Refer to the log files for details and correct the error.

JPS-03223
Caught exception while retrieving attribute: {0}

Category:
Security

Cause:
Caught exception while retrieving attribute: {0}.

Action:
Refer to the log files for details and correct the error.

JPS-03224
Parameter value is null or wrong type.

Category:
Security

Cause:
Parameter value is null or wrong type.

Action:
Refer to the log files for details and correct the error.

JPS-03225
Calling RBACEvals:{0}

Category:
Security

Cause:
Calling RBACEvals:{0}.

Action:
No actions are required.

JPS-03226
Empty Application name or Obligation name is passed to report_obligation function.

Category:
Security

Cause:
Empty Application name or Obligation name is passed to report_obligation function.

Action:
Refer to the log files for details and correct the error.

JPS-03227
Unexpected error: invalid parameter instances.

Category:
Security

Cause:
Unexpected error: invalid parameter instances.

Action:
Refer to the log files for details and correct the error.

JPS-03228
The value of args is null

Category:
Security

Cause:
args is null.

Action:
Refer to the log files for details and correct the error.

JPS-03229
Error during initialization of RetrieverConfiguration.

Category:
Security

Cause:
Error during initialization of RetrieverConfiguration.

Action:
Refer to the log files for details and correct the error.

JPS-03230
args value type is null or wrong type value

Category:
Security

Cause:
args value type is null or wrong type value.

Action:
Refer to the log files for details and correct the error.

JPS-03231
{0} supplied to subject_in_group is not a qualified group, will qualify

Category:
Security

Cause:
{0} supplied to subject_in_group is not a qualified group, will qualify.

Action:
Refer to the log files for details and correct the error.

JPS-03232
Qualified group is {0}

Category:
Security

Cause:
qualified group is {0}.

Action:
Refer to the log files for details and correct the error.

JPS-03233
Type of args should be String[]

Category:
Security

Cause:
args should be String[].

Action:
Refer to the log files for details and correct the error.

JPS-03234
No value is passed to {0}

Category:
Security

Cause:
No value is passed to {0}.

Action:
Refer to the log files for details and correct the error.

JPS-03235
No attribute name is passed to sys_obj_exists

Category:
Security

Cause:
No attribute name is passed to sys_obj_exists.

Action:
Refer to the log files for details and correct the error.

JPS-03236
Failed to get attribute {0} for eval function {0}

Category:
Security

Cause:
Failed to get attribute {0} for eval function {0}.

Action:
Refer to the log files for details and correct the error.

JPS-03237
Value passed to {0} is not valid, {1}

Category:
Security

Cause:
Value passed to {0} is not valid, {1}.

Action:
Refer to the log files for details and correct the error.

JPS-03238
{0} is not a valid value for {1}

Category:
Security

Cause:
{0} is not a valid value for {1}.

Action:
Refer to the log files for details and correct the error.

JPS-03239
valid_timeval called for unexpected eval function {0}

Category:
Security

Cause:
valid_timeval called for unexpected eval function {0}.

Action:
Refer to the log files for details and correct the error.

JPS-03240
Unknown eval function {0} used in valid_until_timeofday

Category:
Security

Cause:
Unknown eval function {0} used in valid_until_timeofday.

Action:
Refer to the log files for details and correct the error.

JPS-03241
Disabling extended performance data...

Category:
Security

Cause:
Disabling extended performance data...

Action:
No actions are required.

JPS-03242
The extended performance data have been retrieved. The total number of attributes is {0}, the total number of functions is {1}.

Category:
Security

Cause:
The extended performance data have been retrieved. The total number of attributes is {0}, the total number of functions is {1}.

Action:
No actions are required.

JPS-03243
Unexpected MBean attribute get method: {0}

Category:
Security

Cause:
Unexpected mbean attribute get method: {0}.

Action:
Refer to the log files for details and correct the error.

JPS-03244
{0} specified but no response collector supplied

Category:
Security

Cause:
{0} specified but no response collector supplied.

Action:
Refer to the log files for details and correct the error.

JPS-03245
Received {0} in isProtectedResource

Category:
Security

Cause:
Received {0} in isProtectedResource.

Action:
Refer to the log files for details and correct the error.

JPS-03246
Role object passed into wles atz provider is null, ignoring

Category:
Security

Cause:
Null role object passed into wles atz provider, ignoring.

Action:
Refer to the log files for details and correct the error.

JPS-03247
A SecurityRole object passed to the authorization engine has role name equal to null. The object will be ignored. The string representation of the object is {0}.

Category:
Security

Cause:
A SecurityRole object passed to the authorization engine has role name equal to null. The object will be ignored. The string representation of the object is {0}.

Action:
Refer to the log files for details and correct the error.

JPS-03248
Error {0}

Category:
Security

Cause:
Error {0}.

Action:
Refer to the log files for details and correct the error.

JPS-03249
ASI shutdown failed

Category:
Security

Cause:
ASI shutdown failed.

Action:
Refer to the log files for details and correct the error.

JPS-03250
getInstance: Warning: The parent classloaders are different.

Category:
Security

Cause:
getInstance: Warning: The parent classloaders are different.

Action:
Refer to the log files for details and correct the error.

JPS-03251
addClassJars: {0}

Category:
Security

Cause:
addClassJars: {0}.

Action:
Refer to the log files for details.

JPS-03252
Missing JAR file: {0}

Category:
Security

Cause:
Missing JAR file: {0}.

Action:
Refer to the log files for details.

JPS-03253
Error initializing URLs in classloader. Vector: {0}

Category:
Security

Cause:
Error initializing URLs in classloader. Vector: {0}.

Action:
Refer to the log files for details.

JPS-03254
lazy getRoles failed with error {0}

Category:
Security

Cause:
lazy getRoles failed with error {0}.

Action:
Refer to the log files for details.

JPS-03255
null value returned in roles list, ignoring

Category:
Security

Cause:
null value returned in roles list, ignoring.

Action:
Refer to the log files for details.

JPS-03256
Internal error. Method queryRoles has returned role {0} that starts with an incorrect prefix for a role. The role will be ignored.

Category:
Security

Cause:
Internal error. Method queryRoles has returned role {0} that starts with an incorrect prefix for a role. The role will be ignored.

Action:
Refer to the log files for details.

JPS-03257
Passed an non URLResource, in getAttributeValue

Category:
Security

Cause:
Passed a non URLResource, in getAttributeValue.

Action:
Refer to the log files for details.

JPS-03258
Initializing UserUtils; {0}

Category:
Security

Cause:
Initializing UserUtils; {0}.

Action:
No actions are required.

JPS-03259
Invalid built in type received

Category:
Security

Cause:
Invalid built in type received.

Action:
Refer to the log files for details.

JPS-03260
Attempt to {0} when CRED is wrong type

Category:
Security

Cause:
Attempt to {0} when CRED is wrong type.

Action:
Refer to the log files for details.

JPS-03261
No locally defined evaluator found for function {0}.

Category:
Security

Cause:
No locally defined evaluator found for function {0}.

Action:
Refer to the log files for details.

JPS-03262
DiscoveryModeRoleMap does not support this operation

Category:
Configuration

Cause:
DiscoveryModeRoleMap does not support this operation

Action:
Do not call method not supported

JPS-03263
DiscoveryModeRoleMap never contains data

Category:
Configuration

Cause:
DiscoveryModeRoleMap never contains data

Action:
Do not try to get data from DiscoveryModeRoleMap.

JPS-03264
The attribute dependency leads to a dead loop, {1} depends on {0} already.

Category:
Security

Cause:
The attribute dependency leads to a dead loop, {1} depends on {0} already.

Action:
Please check the configuration.

JPS-03265
Data source based DB query failed, try again.

Category:
Security

Cause:
Data source based DB query failed, try again.

Action:
Refer to the log files for details.

JPS-03266
Failed to retrieve connection for url {0} due to following exception {1}.

Category:
Security

Cause:
Failed to retrieve connection for {0}.

Action:
Refer to the log files for details.

JPS-03267
Ignoring credential variable exception in computeObligation for {0}.

Category:
Security

Cause:

Action:

JPS-03268
In Policy {0}, an invalid Resource Name Expression {1} was encountered. The Policy will not participate in the runtime authorization evaluation. Reason: {2}

Category:
Security

Cause:
Resource name expression in policy is invalid

Action:
Correct the reource name expression.

JPS-03269
Size of bag provided for type-one-and-only function is not one.

Category:
Programmatic

Cause:
Size of bag provided to type one and only function is not one.

Action:
Provide correct function.

JPS-03270
Invalid value of year {0} or month {1} in yearMonthDuration .Must be between max and min values for integer.

Category:
Programmatic

Cause:
Value provided for year or month is outside the supported integer range on this JVM.

Action:
Provide a valid integer value.

JPS-03271
Function name passed to evaluator is null.

Category:
Programmatic

Cause:
Function name is null.

Action:
Provide a valid function name.

JPS-03272
No arguments passed to function {0}.

Category:
Programmatic

Cause:
No arguments passed to function.

Action:
Provide a valid function arguments.

JPS-03273
Application {0} attribute {1} is not available.

Category:
Programmatic

Cause:
Application {0} attribute {1} is not available.

Action:
None.

JPS-04000
Cannot get the default policy store.

Category:
Security

Cause:
Could not find to the default policy store.

Action:
Refer to the log files for details and correct the error.

JPS-04001
Cannot read the default policy store.

Category:
Security

Cause:
Could not read the default policy store.

Action:
Refer to the log files for details and correct the error.

JPS-04002
Cannot get application policy for application "{0}".

Category:
Security

Cause:
Encountered a policy store internal error.

Action:
Refer to the log files for details and correct the error.

JPS-04003
Duplicate principal present "{0}"in a grant request.

Category:
Security

Cause:
Found that list of principals in the grantee for the grant contains duplicate

Action:
Correct the list of principals in the grantee.

JPS-04004
Duplicate permission present "{0}" in a grant request.

Category:
Security

Cause:
Found that list of permissions in the grant contains duplicate.

Action:
Correct the list of permissions in the grant.

JPS-04005
More than one result found for given Application Name:{0}, Query:{1}, Actual results:{2}.

Category:
Security

Cause:
More than one results found for application name.

Action:
Refer to the log files for details and correct the error.

JPS-04006
No results found for given Application Name:{0}, DN: {1}, Query: {2}.

Category:
Security

Cause:
No results found for application name.

Action:
Refer to the log files for details and correct the error.

JPS-04021
Application Policy "{0}" already exists.

Category:
Security

Cause:
Encountered two application policy contexts with identical names.

Action:
Modify an application policy context to have a distinct name.

JPS-04022
Cannot create application policy context "{0}".

Category:
Security

Cause:
Failed to complete persist operation while creating an application policy.

Action:
Refer to the base exception in log files and correct the error.

JPS-04026
Application policy "{0}" does not exist.

Category:
Security

Cause:
Could not find a policy context with the provided name.

Action:
Verify that a context with the provided name exists.

JPS-04027
Role with name "{0}" does not exist.

Category:
Configuration

Cause:
Could not find a role with name {0}.

Action:
Verify that a role with the provided name exists.

JPS-04028
Application with name "{0}" does not exist.

Category:
Configuration

Cause:
Could not find application with name {0}.

Action:
Verify that an application with the provided name exists.

JPS-04029
Cannot create principal with class name "{0}".

Category:
Configuration

Cause:
Could not create principal with class name {0}.

Action:
Verify that the provided class name is valid.

JPS-04030
Cannot delete application policy context "{0}".

Category:
Security

Cause:
Failed to complete persist operation while deleting an application policy.

Action:
Refer to the base exception in log files and correct the error.

JPS-04031
Parameter "{0}" is null or empty.

Category:
Security

Cause:
Supplied parameter {0} was null or empty.

Action:
Verify that the supplied parameter is non-null. If it is of type String, ensure that its length is positive.

JPS-04032
Parameter "{0}" supplied is not the instance of "{1}".

Category:
Security

Cause:
Parameter {0} supplied is not the instance of {1}.

Action:
Ensure parameter is of correct datatype.

JPS-04033
Parameter "{0}" supplied is not of the type "{1}" (as expected).

Category:
Security

Cause:
Parameter {0} supplied is not of the type {1} (as expected).

Action:
Ensure parameter is of correct datatype.

JPS-04034
Failed to modify properties for Application "{0}".

Category:
Security

Cause:
Cannot modify application policy.

Action:
Check the logs for errors.

JPS-04035
AttributeName {0} supplied should start with alphabet or an underscore. Name cannot contain characters other than alphanumeric and/or underscores.

Category:
Security

Cause:
AttributeName {0} supplied should start with alphabet or an underscore. Name cannot contain characters contain other than alphanumeric and/or underscores.

Action:
Ensure attribute name is of correct datatype.

JPS-04036
Function Name {0} supplied should start with alphabet or an underscore. Name cannot contain characters other than alphanumeric and/or underscores.

Category:
Security

Cause:
Function Name {0} supplied should start with alphabet or an underscore. Name cannot contain characters contain other than alphanumeric and/or underscores.

Action:
Ensure function name is of correct datatype.

JPS-04037
Name "{0}" starts or ends with whitespace.

Category:
Security

Cause:
Object name should not start with or end with whitespace.

Action:
Ensure object name has no whitespace in the beginning and end.

JPS-04038
Object name only contains whitespace.

Category:
Security

Cause:
Object name should not only contain whitespace.

Action:
Ensure object name doesn't only contain whitespace.

JPS-04039
Application "{0}", Deleting {1} entries under "{2}", Maximum remaining re-tries {3}.

Category:
Security

Cause:

Action:

JPS-04080
Scanning of system policy failed. Reason {0}

Category:
Security

Cause:
Scan of system policy failed.

Action:
Check the system policy setup and the provider setup.

JPS-04081
Policy store purge thread interrupted. Reason {0}.

Category:
Security

Cause:
Purge thread interrupted in policy caching.

Action:
Check the policy setup and the provider setup

JPS-04082
Deletion of system policy failed. Reason {0}

Category:
Security

Cause:
Deletion of system policy failed.

Action:
Provide legal non empty values for policy name

JPS-04083
Creation of system policy failed. Reason {0}

Category:
Security

Cause:
Creation of system policy failed.

Action:
Provide legal non empty values for policy name

JPS-04084
Migration of application policy failed. Further migration of application policies halted. Reason: {0}.

Category:
Security

Cause:
Exception in migration of application policy

Action:
Check application policy setup or contact system administrator

JPS-04085
Migration of codebase policy failed. Reason: {0}.

Category:
Security

Cause:
Exception in migration of codebase policy

Action:
Check codebase policy setup or contact system administrator

JPS-04086
Could not perform isPolicyModified. Reason {0}

Category:
Security

Cause:
Is policy modification check failed.

Action:
Contact system administrator

JPS-04089
Could not get policy cache count. Reason {0}

Category:
Security

Cause:
Could not retrieve policy cache count.

Action:
Contact system administrator

JPS-04090
The policy store property {0} is invalid or not defined.

Category:
Requests/Responses

Cause:
The policy store property {0} was invalid or not defined.

Action:
Check the configuration of this property.

JPS-04091
Application {0} is being deployed with policy migration option set to {1}, start policy migration.

Category:
Security

Cause:
Start application policy migration

Action:
No action required

JPS-04092
Application {0} is being deployed with policy migration option set to neither OVERWRITE nor MERGE, skip policy migration.

Category:
Security

Cause:
Skip application policy migration

Action:
No action required

JPS-04093
Application policy migration for application {0} is completed successfully.

Category:
Security

Cause:
Complete application policy migration

Action:
No action required

JPS-04094
Start removing application policies for Application {0}.

Category:
Security

Cause:
Start application policy removal

Action:
No action required

JPS-04095
Application policy removal for application {0} is completed successfully.

Category:
Security

Cause:
Complete application policy removal

Action:
No action required

JPS-04096
Application policies for application {0} was NOT removed in application undeployment with jps.policystore.removal set to OFF.

Category:
Security

Cause:
Skip application policy removal

Action:
No action required

JPS-04097
Application {0} is being deployed without existing application policies found in static deployment, start policy migration.

Category:
Security

Cause:
Start application policy migration in static deployment

Action:
No action required

JPS-04098
Start codebase policy migration for application {0}.

Category:
Security

Cause:
Start codebase policy migration

Action:
No action required

JPS-04099
Codebase policy migration for {0} is completed successfully.

Category:
Security

Cause:
Complete codebase policy migration

Action:
No action required

JPS-04100
Application Role "{0}" already exists.

Category:
Security

Cause:
Encountered two roles with identical names.

Action:
Modify a role to have a distinct name.

JPS-04101
Cannot create application role "{0}".

Category:
Security

Cause:
Failed to complete persist operation while creating an application role.

Action:
Refer to the base exception in logs to resolve the issue.

JPS-04102
Cannot create application role. Cause: Invalid Argument -- Multiple role categories supplied for single application role

Category:
Security

Cause:
Persist operation failed because more than one role category supplied for create role

Action:
Ensure supplied parameters are correct.

JPS-04110
Cannot delete application role "{0}". Cause: Application role not found.

Category:
Security

Cause:
Could not find an application role in the application policy.

Action:
Check the name of the application role.

JPS-04111
Cannot delete application role "{0}".

Category:
Security

Cause:
Could not remove application role from policy store.

Action:
Refer to the base exception in log files and correct the error.

JPS-04112
Cannot delete application role "{0}".

Category:
Security

Cause:
Could not remove application role "{0}" because it may be in use; this role is a member of one or more other application roles (nested role hierarchy).

Action:
Flatten the nested role hierarchy, and then remove the desired role. Alternatively, remove the application role using the option force set to true.

JPS-04113
Cannot delete application role "{0}".

Category:
Security

Cause:
Could not remove application role "{0}" because it may be in use, or contains enterprise groups or enterprise users.

Action:
Remove the enterprise groups and enterprise users from the application role, or remove the application role using the option force set to true.

JPS-04114
Cannot delete application role "{0}".

Category:
Security

Cause:
Could not remove application role "{0}" because it may be in use; this role has one or more permissions granted to it.

Action:
Revoke the permission(s) from the application role, and then remove the role. Alternatively, remove the application role using the option force set to true.

JPS-04120
Cannot add principal to application role.

Category:
Security

Cause:
Encountered an internal policy store error.

Action:
Refer to the base exception in log files and correct the error.

JPS-04121
Cannot add principal to application role "{0}".

Category:
Security

Cause:
Could not find application role in the application policy context.

Action:
Ensure the application role is present in the application policy.

JPS-04122
Cannot add principal to application role; principal(s) "{0}" is already a member of application role "{1}".

Category:
Security

Cause:
Found that principal {0} is already a member of the application role {1}.

Action:
Correct the principal name.

JPS-04123
Cannot add principal to the application role.

Category:
Security

Cause:
Attempted to insert an application role as a member of itself.

Action:
Correct the application role principal name. The containment in the role hierarchy must be cycle-free.

JPS-04124
The application role {0} added to {1} has no GUID defined.

Category:
Requests/Responses

Cause:
The application role {0} added to {1} has no GUID defined.

Action:
Ensure the application role has GUID before adding it as a member of an application role.

JPS-04125
Application Role {0} granted to role category {1} cannot be found in application {2}

Category:
Security

Cause:
Application Role {0} granted to role category {1} cannot be found in application {2}

Action:
Ensure application role exists before assigning it to a role category

JPS-04130
Cannot remove principal from application role.

Category:
Security

Cause:
Encountered an internal policy store error.

Action:
Refer to the base exception in log files and correct the error.

JPS-04131
Cannot remove principal from application role; cannot find application role "{0}" in application policy context.

Category:
Security

Cause:
Could not find the specified application role in the application policy context.

Action:
Correct the application role name.

JPS-04132
Cannot remove principal from application role; principal "{0}" is not member of application role "{1}".

Category:
Security

Cause:
See error message.

Action:
Correct the principal role name.

JPS-04135
Resource name not specified in application {0}.

Category:
Security

Cause:
Resource name not specified in application {0}.

Action:
Ensure the resource name is not null.

JPS-04136
Resource type name not specified in application {0}.

Category:
Security

Cause:
Resource type name not specified in application {0}.

Action:
Ensure the resource type name is not null.

JPS-04137
Permission set name not specified in application {0}.

Category:
Security

Cause:
Permission set name not specified in application {0}.

Action:
Ensure the permission set name is not null.

JPS-04138
Application role name not specified in application {0}.

Category:
Security

Cause:
Application role name not specified in application {0}.

Action:
Ensure the application role name is not null.

JPS-04140
Cannot complete application role search because search expression "{0}" is incorrect.

Category:
Security

Cause:
Found an invalid search pattern.

Action:
Refer to the base exception in log files and correct the error.

JPS-04141
Cannot complete application role search because of internal error {0}.

Category:
Security

Cause:
Encountered an internal policy store error while searching the policy store.

Action:
Refer to the base exception in log files and correct the error.

JPS-04142
Cannot complete application role search because search role attribute "{0}" is incorrect.

Category:
Security

Cause:
Could not complete the search because the application role attribute {0} was invalid.

Action:
Supply a valid role attribute name.

JPS-04143
Cannot find application role "{0}".

Category:
Security

Cause:
Could not find application role in the application policy context.

Action:
Supply the name of an existing application role name.

JPS-04144
Cannot get granted application role for principal "{0}".

Category:
Security

Cause:
Encountered an internal policy store error.

Action:
Refer to the base exception in log files and correct the error.

JPS-04145
Cannot get all application roles for application "{0}".

Category:
Security

Cause:
Encountered an internal policy store error.

Action:
Refer to the base exception in log files and correct the error.

JPS-04146
Cannot complete application role search because search role attribute name is null.

Category:
Security

Cause:
Could not complete the search because the role attribute name was NULL.

Action:
Provide a non-null role attribute name.

JPS-04147
Cannot get members of application role "{0}".

Category:
Security

Cause:
Could not find application role in the application policy context.

Action:
Supply the name of an existing application role name.

JPS-04148
Exception when converting "{0}" to number, msg is "{1}".

Category:
Security

Cause:
Exception when converting {0} to number, msg is {1}

Action:
Only number is allowed

JPS-04150
Cannot alter application role {0} since multiple entries found for the application name:{1} query: {2} and actual result is {3}.

Category:
Security

Cause:
Encountered the policy store error {0}.

Action:
Check the error details to resolve the issue.

JPS-04151
Cannot alter application role.

Category:
Security

Cause:
Could not find application role {0} in the application policy context.

Action:
Provide an existing application role name.

JPS-04153
In Domain {0}, Application {1} is not present.

Category:
Security

Cause:
Application not found in the policystore

Action:
Check the name of the application in the policystore.

JPS-04154
Refresh of application policy failed. Reason {0}

Category:
Security

Cause:
Refresh of application policy failed.

Action:
Check the application policy setup and the provider setup

JPS-04155
Scanning of application policy failed. Reason {0}

Category:
Security

Cause:
Scan of application policy failed.

Action:
Check the application policy setup and the provider setup

JPS-04156
RoleCategory modification attribute "{0}" is invalid.

Category:
Security

Cause:
Invalid RoleCategory modify attribute

Action:
Check whether the attribute you are trying to modify is valid or not.

JPS-04157
RoleCategory "{0}" already exists.

Category:
Security

Cause:
The role category already exists.

Action:
Supply a different role category name.

JPS-04158
RoleCategory {0} does not exist

Category:
Security

Cause:
The role category does not exist.

Action:
Supply a different role category name.

JPS-04159
Role category search value: {0}, is invalid for matcher type: {1}

Category:
Security

Cause:
The role category search query has invalid parameter value

Action:
Modify the search query and supply correct parameter value.

JPS-04160
Cannot find PermissionSet {0} in policy store.

Category:
Security

Cause:
Could not find PermissionSet in policy store.

Action:
Provide the name of a valid PermissionSet.

JPS-04161
Search for PermissionSet {0} by name yielded more than one result.

Category:
Security

Cause:
Found a duplicate PermissionSet name in search context.

Action:
Ensure that all PermissionSet names in the current search context are distinct.

JPS-04162
PermissionSet "{0}" already exists in policy store.

Category:
Security

Cause:
Permission Set already exists.

Action:
Create a PermissionSet with a different name.

JPS-04163
PermissionSet {0} cannot have empty ResourceActions.

Category:
Security

Cause:
PermissionSet {0} has empty ResourceActions.

Action:
Ensure PermissionSet has ResourceActions.

JPS-04164
MemberResource {0} of type {1} not found in application {1}.

Category:
Security

Cause:
MemberResource {0} of type {1} not found in application {1}.

Action:
Ensure the Resource exists in the PolicyStore.

JPS-04165
ResourceType {0} referenced by MemberResource {1} not found in application {2}.

Category:
Security

Cause:
ResourceType {0} referenced by MemberResource {1} not found in application {2}.

Action:
Ensure the ResourceType exists in the PolicyStore.

JPS-04166
MemberResource {0} of type {1} does not have actions defined.

Category:
Security

Cause:
MemberResource {0} of type {1} does not have actions defined.

Action:
Ensure the MemberResource has valid actions.

JPS-04167
MemberResource {0} of type {1} has actions defined.

Category:
Security

Cause:
MemberResource {0} of type {1} has actions defined.

Action:
Ensure the MemberResource does not have actions.

JPS-04168
PermissionSet {0} cannot be created without ResourceActions.

Category:
Security

Cause:
PermissionSet {0} cannot be created without ResourceActions.

Action:
Create a PermissionSet with ResourceActions.

JPS-04169
ResourceAction {0} used to modify PermissionSet {1} has invalid actions for ResourceType {2}.

Category:
Security

Cause:
ResourceAction {0} used to modify PermissionSet {1} has invalid actions for ResourceType {2}.

Action:
Modify PermissionSet using a ResourceAction that has valid actions.

JPS-04173
The resource type {0} is not found in store

Category:
Configuration

Cause:
Unsupported Resource Type {0}.

Action:
Check Resource Type.

JPS-04179
The resource type reference for resource {0} is not found in the application {1}. Hence using the first occurrence

Category:
Security

Cause:
The resource type reference for resource {0} is not found in the application {1}. Hence using the first occurrence.

Action:
Ensure the ResourceType reference exists for every resource.

JPS-04190
Cannot find resource.

Category:
Security

Cause:
Could not find resource in the resource store.

Action:
Modify your search query.

JPS-04191
Cannot find unregistered resource finder for resource type "{0}".

Category:
Security

Cause:
Could not find a registered resource finder for the resource type.

Action:
Provide a resource finder implementation for the resource type, and register it with JPS.

JPS-04192
Cannot load resource finder with provider name "{0}".

Category:
Security

Cause:
Found an incorrect implementation: argumentless public constructor is missing.

Action:
Revisit the implementation to provide an argumentless public constructor.

JPS-04193
Cannot load resource finder with provider name "{0}" and class "{1}".

Category:
Security

Cause:
Could not load resource finder class: error encountered while reading a registered class file for resource finder.

Action:
Check the configuration of the class property in jps-config.xml.

JPS-04194
Cannot initialize resource finder with provider name "{0}" and class name "{1}".

Category:
Security

Cause:
Found an error while initializing a registered class for resource finder.

Action:
Check the configuration of the class property in jps-config.xml.

JPS-04195
Cannot load the resource finder with provider "{0}".

Category:
Security

Cause:
Found an error in external resource finder configuration: a required property was missing.

Action:
Check the configuration of the class property in jps-config.xml.

JPS-04198
Resource {0} in application {1} has a non existent resource type {2}. Ignoring this resource.

Category:
Security

Cause:
Resource {0} in application {1} has a non existent resource type {2}. Ignoring this resource.

Action:
Ensure the ResourceType exists for every resource.

JPS-04200
Cannot grant policy due to a policy store internal error.

Category:
Security

Cause:
Encountered a policy store error.

Action:
Check the error details to resolve the issue.

JPS-04201
Cannot grant permission(s). Grant already exists for grantee {0}.

Category:
Security

Cause:
Permissions already granted to grantee.

Action:
Grant a different set of permissions.

JPS-04202
Cannot revoke policy.

Category:
Security

Cause:
Encountered an internal policy store error while revoking a policy.

Action:
Refer to the base exception in log files and correct the error.

JPS-04203
Cannot revoke permission.

Category:
Security

Cause:
Found that a permission has not been granted.

Action:
Provide the appropriate permission to the grantee.

JPS-04204
Cannot revoke permissions.

Category:
Security

Cause:
Found that permissions have not been granted.

Action:
Provide the appropriate permissions to the grantee.

JPS-04205
Cannot revoke permissions.

Category:
Security

Cause:
Found that permissions have not been granted to principals.

Action:
Provide the appropriate permissions to principals.

JPS-04206
Cannot revoke permissions.

Category:
Security

Cause:
Found that permissions have not been granted to code source.

Action:
Correct the code source grantee.

JPS-04207
Matching Grantee not found: {0}.

Category:
Security

Cause:
Found that permissions have not been granted to principals or code source.

Action:
Correct the list of principals and code source in the grantee, or revoke permissions granted to this grantee.

JPS-04208
Cannot modify policy due to a policy store internal error.

Category:
Security

Cause:
Encountered an internal policy store error while modifying the policy store.

Action:
Refer to the base exception in log files and correct the error.

JPS-04209
Cannot modify property {0}.

Category:
Security

Cause:
Could not modify a property.

Action:
Supply the name of a property that can be modified.

JPS-04210
Modification code {0} is invalid.

Category:
Security

Cause:
Found an unsupported modification code.

Action:
Ensure that the modification code is ADD, REMOVE, or REPLACE.

JPS-04211
Cannot query, update, or delete Object with type "{0}" and name "{1}".

Category:
Security

Cause:
Attempted to query, update, or delete an invalid policy store object.

Action:
Ensure that the object to be queried, updated, or deleted belongs to the appropriate policy domain

JPS-04212
PermissionSet "{0}" is in use, cannot delete.

Category:
Security

Cause:
Permission set already existed.

Action:
Permission set with the same name cannot be created. Use different name.

JPS-04213
Cannot modify a grant with an empty permission entry.

Category:
Security

Cause:
Encountered empty permission entry list while modifying a grant

Action:
Pass a non empty permission entry list while modifying a grant

JPS-04216
Cannot grant/revoke permissions because type "{0} " is not known.

Category:
Security

Cause:
Resource type validation for Permission set failed

Action:
Check whether the grant's permission's resourcetype is provisioned in the policystore.

JPS-04217
Grant/revoke failed for grantee "{0}", permission class "{1}", resource name "{2}", permission actions "{3}", resource type "{4}". Reason: permission actions is not a subset of resource type actions " {5}".

Category:
Security

Cause:
Resource type validation for Permission set failed

Action:
Check whether the actions in the Permission are valid actions for the resource type provisioned in the policy store.

JPS-04218
Grant/revoke failed for grantee "{0}", permission class "{1}", resource Name "{2}", permission actions "{3}", resource type "{4}". Reason: permission class is not equal to resource type matcher class " {5}".

Category:
Security

Cause:
Resource type validation for Permission set failed

Action:
Check whether the matcher class in the Permission is valid for the resource type provisioned in the policy store.

JPS-04219
The action {0} is invalid for resource type {1}.

Category:
Requests/Responses

Cause:
The action {0} is invalid for resource type {1}.

Action:
Check the ResourceActionsEntry parameter.

JPS-04220
Cannot search because the search query "{0}" was empty (has no child query).

Category:
Requests/Responses

Cause:
The search query {0} was empty (has no child query).

Action:
Provide a non-empty search query in.

JPS-04221
Cannot search because the grant search query "{0}" has illegal object type for search property "{1}".

Category:
Security

Cause:
The grant search query {0} has wrong object type in search value for search property {1}.

Action:
Provide an object type corresponding to the search property.

JPS-04222
Cannot search because the search query was null for "{0}" .

Category:
Requests/Responses

Cause:
The search query was null for {0} .

Action:
Provide a non-null search query .

JPS-04223
Access to tenant system policy is not allowed.

Category:
Security

Cause:
Access to tenant system policy is not allowed.

Action:
Access global system policy instead.

JPS-04227
The object name "{0}" is invalid.

Category:
Requests/Responses

Cause:
The object name {0} is invalid.

Action:
Pass a correct object name in.

JPS-04300
Cannot save policy.

Category:
Security

Cause:
Could not save policy. Cause {0}.

Action:
Check the log files and resolve the error.

JPS-04301
Cannot read from policy store. Reason is {0}, {1}

Category:
Security

Cause:
Could not read from the policy store.

Action:
Check the log files and resolve the error.

JPS-04302
Cannot read from policy store.

Category:
Configuration

Cause:
Could not find the location property {1} in instance {0}.

Action:
Ensure the location is set to a valid policy store file.

JPS-04303
Cannot read from policy store.

Category:
Configuration

Cause:
Could not find value for system property '{0}' or for location property '{2}' in instance '{1}'.

Action:
Ensure the location is set to a valid policy store file.

JPS-04304
Policy store instance descriptor {0}, location value {1} is ignored.

Category:
Configuration

Cause:
Could not find value for the system property '{0}', which overrides the descriptor property {1} in the policy store service instance.

Action:
Unset the system property so that the location is picked up from configuration in jps-config.xml.

JPS-04305
Could not determine the work folder for controlled and mixed mode PD.

Category:
Configuration

Cause:
Could not determine the work folder for controlled and mixed mode PD.

Action:
Ensure system property "oracle.security.jps.config" or "domain.home" is set and jps-config.xml is present under ${domain.home}/config/fmwconfig.

JPS-04410
Cannot create JACC module policy context "{0}" for application {1}.

Category:
Security

Cause:
Could not create application policy because found two application module contexts with identical names.

Action:
Ensure that all application module context names are distinct.

JPS-04411
Cannot create application "{0}" JACC module policy context "{1}".

Category:
Security

Cause:
Could not create application module policy; persist operation failed.

Action:
Refer to the base exception in log files and correct the error.

JPS-04412
Cannot delete JACC module "{0}".

Category:
Security

Cause:
Could not find JACC policy context to delete.

Action:
Check the JACC policy context name.

JPS-04413
Cannot delete JACC module policy context "{0}".

Category:
Security

Cause:
Could not delete JACC policy; persist operation failed.

Action:
Refer to the base exception in log files and correct the error.

JPS-04420
Application policy context name is missing from application role {0}.

Category:
Security

Cause:
Could not find application policy context in the application role principal.

Action:
Ensure that the application role principal has an application context.

JPS-04421
Administrator role name is invalid.

Category:
Security

Cause:
Found an invalid administrator role name.

Action:
Correct the name of the administrator role.

JPS-04422
Policy is malformed.

Category:
Security

Cause:
Found system policy that granted permissions to application role(s).

Action:
Grants to application roles are not allowed in a system policy. Remove such grants.

JPS-04423
Application role name "{0}" is invalid.

Category:
Security

Cause:
Found invalid application role name {0}.

Action:
Verify that the application role name conforms with the role name syntax.

JPS-04502
Java SSO Login

Category:
Requests/Responses

Cause:
This was JSSO page title.

Action:
No action needed.

JPS-04503
Enter your single sign-on username and password.

Category:
Requests/Responses

Cause:
User name and password were required for logging into JSSO.

Action:
Enter a valid user name and password.

JPS-04504
Username

Category:
Requests/Responses

Cause:
This was JSSO login user name.

Action:
No action needed.

JPS-04505
Password

Category:
Requests/Responses

Cause:
This was JSSO login user password.

Action:
No action needed.

JPS-04506
Login

Category:
Requests/Responses

Cause:
Submit button.

Action:
Press submit.

JPS-04507
Cancel

Category:
Requests/Responses

Cause:
Cancel button.

Action:
Press cancel to abort login.

JPS-04508
Failed.

Category:
Requests/Responses

Cause:
JSSO login failed.

Action:
Check user name and password used for login.

JPS-04509
The maximum number of login attempts is exceeded. Contact the application administrator, or retry after {0} minutes.

Category:
Requests/Responses

Cause:
Maximum login attempts was exceeded.

Action:
Contact the system administrator.

JPS-04510
Incorrect username or password.

Category:
Requests/Responses

Cause:
User name or password was invalid.

Action:
Check the user name and password used for login.

JPS-04511
Java SSO Application Error.

Category:
Requests/Responses

Cause:
Encountered and internal error.

Action:
Contact the system administrator.

JPS-04512
application error

Category:
Requests/Responses

Cause:
Encountered and internal error.

Action:
Contact the system administrator.

JPS-04513
The Java SSO application is not properly configured.

Category:
Configuration

Cause:
The Java SSO application was not correctly configured.

Action:
Reconfigure the application.

JPS-04514
Configuration error: {0}.

Category:
Configuration

Cause:
The Java SSO application was not correctly configured.

Action:
Reconfigure the application.

JPS-04515
Usage arguments:

Category:
Requests/Responses

Cause:
Defines the keytool usage.

Action:
See error message.

JPS-04516
No key type for algorithm.

Category:
Configuration

Cause:
The algorithm key type was not specified.

Action:
Configure the algorithm key type.

JPS-04517
Key does not match any known algorithm.

Category:
Configuration

Cause:
The given key did not match the corresponding algorithm.

Action:
Reconfigure the algorithm key type.

JPS-04518
The number of JSSO cookies is zero or invalid.

Category:
Requests/Responses

Cause:
Could not find JSSO cookie in header.

Action:
Login again or contact the system administrator.

JPS-04519
The number of Oracle Access Manager cookies is zero or invalid.

Category:
Requests/Responses

Cause:
Could not find Oracle Access Manager cookie in header.

Action:
Login again or contact the system administrator.

JPS-04520
Token type is invalid: expected type is COOKIE_TOKEN, but found {0}.

Category:
Configuration

Cause:
The token type configured was invalid: it should be COOKIE_TOKEN.

Action:
Reconfigure the token type to a valid value.

JPS-04521
The JSSO property {0} is not set.

Category:
Configuration

Cause:
JSSO property was not correctly configured.

Action:
Reconfigure the property to a correct value.

JPS-04522
The authentication type {0} is invalid.

Category:
Configuration

Cause:
JSSO did not support this authentication type.

Action:
Reconfigure the type to a supported type.

JPS-04523
Token is no longer valid.

Category:
Requests/Responses

Cause:
The incoming token was no longer valid.

Action:
Login again.

JPS-04524
Cannot create token from JSSO cookie.

Category:
Requests/Responses

Cause:
Could not create token from the JSSO cookie; cookie may have expired.

Action:
Login again.

JPS-04525
The number of cookies is zero or the invalid number {0}.

Category:
Requests/Responses

Cause:
Could not find at least one cookie in the request.

Action:
Login again.

JPS-04526
Token has invalid version number.

Category:
Requests/Responses

Cause:
Token had invalid version number.

Action:
Login again.

JPS-04527
Token has an invalid format.

Category:
Requests/Responses

Cause:
Token was corrupted or had invalid format.

Action:
Login again.

JPS-04528
An error occurred while encoding JSSO token.

Category:
Configuration

Cause:
Could not encode JSSO token.

Action:
Specify a valid, supported encoding.

JPS-04529
Cannot verify signature in the JSSO token.

Category:
Requests/Responses

Cause:
Could not verify signature: the token was tampered with, or the signature algorithm was invalid.

Action:
Specify a supported signature algorithm.

JPS-04530
Algorithm is unsupported.

Category:
Configuration

Cause:
Specified algorithm was unsupported.

Action:
Check documentation for the list of supported algorithms.

JPS-04531
Error creating cipher.

Category:
Configuration

Cause:
Could not create cipher.

Action:
Check documentation for the list of supported cipher algorithms.

JPS-04532
JSSO logout URL is not configured.

Category:
Configuration

Cause:
The logout URL was not configured or invalid.

Action:
Check the logout URL configuration properties, and reconfigure it to a valid URL.

JPS-04533
JSSO has encountered an unexpected error.

Category:
Requests/Responses

Cause:
An internal error occurred.

Action:
Contact the system administrator.

JPS-04534
JSSO symmetric key is missing.

Category:
Configuration

Cause:
The symmetric key configuration was missing.

Action:
Ensure that the properties "custom.sso.cred.key" and "custom.sso.cred.alias" are configured in the service instance, and that the symmetric key is present in the credential store.

JPS-04535
Identity name is invalid.

Category:
Configuration

Cause:
User identity was invalid or missing.

Action:
Provide a valid user identity.

JPS-04536
The token name {0} is missing in request object.

Category:
Configuration

Cause:
Token name was missing in the request object.

Action:
Ensure that the token name is present in the request object.

JPS-04537
No token name is specified for token collector {0}.

Category:
Configuration

Cause:
Token collector was invalid or missing.

Action:
Configure a valid token collector with the property "idm.token.collector.class".

JPS-04538
The request object class is invalid.

Category:
Configuration

Cause:
The request object class was invalid.

Action:
Ensure that the request object is valid.

JPS-04539
Token collector is not properly initialized.

Category:
Configuration

Cause:
Could not initialize the token collector.

Action:
Ensure that the token collector is correctly configured and initialized.

JPS-04540
The token asserter is not properly initialized.

Category:
Configuration

Cause:
Could not initialize the token asserter.

Action:
Ensure that the token asserter is correctly configured and initialized.

JPS-04541
Cannot find authenticated identity.

Category:
Configuration

Cause:
Authentication failed.

Action:
Provide a valid identity.

JPS-04542
The token collector class {0} is not properly configured in the configuration file.

Category:
Configuration

Cause:
Token collector class was missing.

Action:
Configure a valid token collector class with the property "idm.token.collector.class".

JPS-04543
No login module is configured for application.

Category:
Configuration

Cause:
Could not find configured login module.

Action:
Configure a login module in jps-config.xml.

JPS-04544
The subject of the identity is invalid.

Category:
Configuration

Cause:
Subject was missing.

Action:
Ensure that the valid Subject is present.

JPS-04545
Cannot verify the Subject {0}.

Category:
Configuration

Cause:
Could not verify Subject.

Action:
Check the user credentials.

JPS-04546
The configuration (idm.subject.loginmodule.disabled=true) specifies that the Subject is populated by the token asserter.

Category:
Configuration

Cause:
Could not find Subject asserter.

Action:
Configure an asserter to use a login module that returns a valid Subject.

JPS-04547
The token type {0} is not properly configured in the configuration file.

Category:
Configuration

Cause:
Could not find token type configuration.

Action:
Configure a token type in the service instance with the property "idm.token.type property".

JPS-04548
The token asserter class {0} is not properly configured in the configuration file.

Category:
Configuration

Cause:
Could not find token asserter class configuration.

Action:
Configure a token asseter class in the service instance with the property "idm.token.asserter.class".

JPS-04549
Token is no longer valid.

Category:
Configuration

Cause:
Found invalid or expired token.

Action:
Check that the token is valid and has not expired.

JPS-04550
Token type is invalid: expected type is HEADER_TOKEN, but found {0}.

Category:
Configuration

Cause:
Token type was invalid: it should be HEADER_TOKEN.

Action:
Reconfigure the token type to a valid type.

JPS-04551
The number of OSSO headers is zero or an invalid number.

Category:
Requests/Responses

Cause:
Could not find OSSO header in HTTP request.

Action:
Login again, or contact the system administrator.

JPS-04552
The required Oracle Access Manager property {0} is missing or invalid.

Category:
Configuration

Cause:
A required Oracle Access Manager property was missing or invalid.

Action:
Configure the property "access.sdk.install.path" in the service instance in jps-config.xml.

JPS-04553
The user identity {0} for Oracle Access Manager is invalid.

Category:
Requests/Responses

Cause:
The user identity for Oracle Access Manager was invalid.

Action:
Login again.

JPS-04554
The user password for Oracle Access Manager is invalid.

Category:
Requests/Responses

Cause:
The user password for Oracle Access Manager was invalid.

Action:
Login again.

JPS-04555
The user {0} is not logged in to Oracle Access Manager. The error is {1}.

Category:
Requests/Responses

Cause:
The user was not logged in Oracle Access Manager.

Action:
Login again.

JPS-04556
The user {0} is not authorized to access a resource type authentication in Oracle Access Manager.

Category:
Requests/Responses

Cause:
The user was not logged in Oracle Access Manager.

Action:
Login again.

JPS-04557
Invalid parameter {0} supplied. Cannot be null or empty.

Category:
Requests/Responses

Cause:
Invalid parameter {0} supplied. Cannot be null or empty.

Action:
Ensure the parameter is not null or empty.

JPS-04558
The SSO service is not properly configured: {0}.

Category:
Configuration

Cause:
The SSO service is not properly configured: {0}.

Action:
Check the SSO Service configuration.

JPS-04559
Failed to create the {0} token. Cause: {1}.

Category:
Requests/Responses

Cause:
Failed to create the {0} token. Cause: {1}.

Action:
Re-login.

JPS-04560
SSO provider cannot initiate SSO process: {0}.

Category:
Requests/Responses

Cause:
SSO provider cannot initiate SSO process: {0}.

Action:
Check the SSO Service configuration.

JPS-04561
Invalid parameter {0} supplied. Cannot be null.

Category:
Requests/Responses

Cause:
Invalid parameter {0} supplied. Cannot be null.

Action:
Ensure the parameter is not null.

JPS-04601
Cannot obtain audit service for policy store.

Category:
Security

Cause:
Could not query audit service about audit logging level for policy store messages.

Action:
Ensure that auditing is configured correctly.

JPS-04602
Cannot log policy management event to the audit service.

Category:
Security

Cause:
Could not log policy management audit messages to the audit service.

Action:
Ensure that auditing is configured correctly in your environment and application.

JPS-05500
Cannot create the user manager MBean.

Category:
Configuration

Cause:
Could not create the user manager MBean.

Action:
Check errors in log files and contact the domain administrator.

JPS-05501
Cannot create the role manager MBean.

Category:
Configuration

Cause:
Could not create the role manager MBean.

Action:
Check the log files for errors and contact domain administrator.

JPS-05502
Cannot create the identity store MBean.

Category:
Configuration

Cause:
Could not create the identity store MBean.

Action:
Check log files and contact the domain administrator.

JPS-05513
Failed to determine realms to migrate file {0}. Reason {1}.

Category:
Programmatic

Cause:
Failed determine realms to migrate file {0}. Reason {1}.

Action:
Check log files and try again.

JPS-05521
Invalid jaas.login.controlFlag {0} found for {1} service instance. Valid values should be {2}.

Category:
Requests/Responses

Cause:
Invalid jaas.login.controlFlag {0} found for {1} service instance. Valid values should be {2}.

Action:
Use a valid value.

JPS-05542
Bootstrap credential store context missing

Category:
Compliance

Cause:
Could not find bootstrap credstore context

Action:
Contact aystem administrator

JPS-05546
Bootstrap credential store service missing

Category:
Compliance

Cause:
Could not find bootstrap credstore service

Action:
Contact system administrator

JPS-05626
Bootstrap credential already present in store

Category:
Compliance

Cause:
Credential already present in the store

Action:
use different map name or key name for the credential

JPS-05657
Bootstrap credential store context {0} missing

Category:
Compliance

Cause:
Could not find bootstrap credential store context

Action:
Contact aystem administrator

JPS-05658
Bootstrap credential store service {0} missing from bootstrap credential store context {1}

Category:
Compliance

Cause:
Could not find bootstrap credential store service

Action:
Contact system administrator

JPS-05659
location attribute missing from bootstrap credential store service {0}

Category:
Compliance

Cause:
Could not find location attribute of bootstrap credential store service

Action:
Contact system administrator

JPS-06000
The source context {0} is missing in jps configuration file.

Category:
Configuration

Cause:
While migrating a security store, found that the context, specified as source {0}, did not exist in jps-config.xml.

Action:
Provide a context for source that is present in jps-config.xml.

JPS-06001
The destination context {0} is missing in jps configuration file.

Category:
Configuration

Cause:
While migration of a security store, found that the context, specified as destination {0}, did not exist in jps-config.xml.

Action:
Provide a context for destination that is present in jps-config.xml.

JPS-06002
Cannot clean the destination credential store. Reason {0}.

Category:
Upgrade

Cause:
A codebase grant was found without the required permissions.

Action:
Set the right permissions to the codebase grant.

JPS-06003
Cannot migrate credential folder/key {0}/{1}.Reason {2}.

Category:
Upgrade

Cause:
Cannot migrate this credential.

Action:
Verify that the credential is correctly specified.

JPS-06004
Cannot migrate an unknown user. Reason {0}.

Category:
Upgrade

Cause:
Cannot migrate this user.

Action:
Verify that the user is correctly specified.

JPS-06005
Cannot get password of user {0}. Reason {1}.

Category:
Upgrade

Cause:
Cannot get this user password.

Action:
Verify that the password is correctly specified.

JPS-06006
Cannot migrate user {0}. Reason {1}.

Category:
Upgrade

Cause:
Cannot migrate this user name.

Action:
Verify that the user name is correctly specified.

JPS-06007
Cannot migrate an unknown role. Reason {0}.

Category:
Upgrade

Cause:
Cannot migrate this role.

Action:
Verify that the role is correctly specified.

JPS-06008
Cannot migrate role {0}. Reason {1}.

Category:
Upgrade

Cause:
Cannot migrate this role name.

Action:
Verify that the role name is correctly specified.

JPS-06009
Cannot migrate any member of role {0}. Reason {1}.

Category:
Upgrade

Cause:
Cannot migrate members.

Action:
Verify that the members are correctly specified.

JPS-06010
Cannot migrate an unknown member of role {0}. Reason {1}.

Category:
Upgrade

Cause:
Cannot migrate this member.

Action:
Verify that the member is correctly specified.

JPS-06011
Cannot migrate member {0} of role: {1}. Reason {2}.

Category:
Upgrade

Cause:
Cannot migrate this member name.

Action:
Verify that the member name is correctly specified.

JPS-06012
Cannot migrate a global grant. Reason {0}.

Category:
Upgrade

Cause:
Could not migrate a global grant. Reason {0}.

Action:
Verify that the grant is correctly specified.

JPS-06013
Cannot migrate an application grant. Reason {0}.

Category:
Upgrade

Cause:
Could not migrate an application grant. Reason {0}.

Action:
Verify that the application grant is correctly specified.

JPS-06014
Cannot migrate an indirect password for {0}. Reason {1}.

Category:
Upgrade

Cause:
Could not migrate an indirect password due to an exception.

Action:
Verify that the indirect password is correctly specified.

JPS-06015
Cannot migrate an indirect password for {0} because the specified realm is null.

Category:
Upgrade

Cause:
Could not migrate an indirect password because the given realm was null.

Action:
Provide a non-null realm.

JPS-06016
Cannot migrate an indirect password for {0} because the specified user name is null.

Category:
Upgrade

Cause:
Could not migrate an indirect password because the given user name was null.

Action:
Provide a non-null user name.

JPS-06017
Cannot migrate an indirect password for {0} because the specified realm does not exist.

Category:
Upgrade

Cause:
Could not migrate an indirect password because the input realm does not exist.

Action:
Provide an existing realm.

JPS-06018
Cannot migrate an indirect password for {0} because the specified user does not exist.

Category:
Upgrade

Cause:
Could not migrate an indirect password because the input user does not exist.

Action:
Provide an existing user.

JPS-06019
The identity store associated with context {0} is missing in jps-config.xml.

Category:
Configuration

Cause:
While migration of a policy store, found that the context, specified as containing the associated identity store {0}, did not exist in jps-config.xml.

Action:
Provide a context to associate identity store that is present in jps-config.xml.

JPS-06020
The principal class {0} specified in the source policy store cannot be loaded. Reason {1}.

Category:
Upgrade

Cause:
Could not load a class. Reason {0}.

Action:
Ensure the class is in the class path.

JPS-06021
Cannot migrate the credentials in the folder {0}. Reason: {1}.

Category:
Upgrade

Cause:
Cannot migrate the credentials in this folder.

Action:
Check the folder in the source credential store.

JPS-06022
Cannot determine the folder to be migrated.

Category:
Upgrade

Cause:
The credential store has more than one folder and the folder to be migrated was not defined.

Action:
Specify the folder to be migrated.

JPS-06023
The input file {0} specified for migration or upgrade is not valid.

Category:
Upgrade

Cause:
The file {0} was non-readable, empty, or did not exist.

Action:
Provide a valid file.

JPS-06024
Cannot initialize the destination identity store.

Category:
Upgrade

Cause:
One or more required configuration properties were not be properly defined.

Action:
Check the configuration of the destination identity store.

JPS-06025
There are undefined credential properties for the destination identity store.

Category:
Upgrade

Cause:
One or more required configuration properties for credentials were not defined.

Action:
Check the configuration of the destination identity store.

JPS-06026
Cannot get credentials for the destination identity store from the domain credential store.

Category:
Upgrade

Cause:
Credentials were not found in the domain credential store.

Action:
Ensure that the domain credential store has the appropriate credentials.

JPS-06027
Cannot migrate the specified realm.

Category:
Upgrade

Cause:
The specified realm was not found in the source store.

Action:
Specify a valid realm name.

JPS-06028
The required identity store property {0} required for migration is undefined.

Category:
Other

Cause:
A property required for migration was not configured in the identity store.

Action:
Specify the missing configuration property.

JPS-06029
JAZN properties cannot be read from config file {0}.

Category:
Upgrade

Cause:
JAZN properties could not be read from config file {0}.

Action:
Check the configuration file and try again.

JPS-06030
The required JAZN property {0} could not be read.

Category:
Upgrade

Cause:
A required JAZN property {0} could not be read.

Action:
Check the configuration file and try again.

JPS-06031
No application is configured in the source policy store.

Category:
Upgrade

Cause:
No application was configured in the source policy store.

Action:
Check the source policy store.

JPS-06032
Unable to determine the application policy to migrate.

Category:
Upgrade

Cause:
More than one application was configured in the source policy store.

Action:
Check the source policy store.

JPS-06033
The source credential store contains no credentials.

Category:
Requests/Responses

Cause:
The requested credential was not found in the credential store.

Action:
Ensure that the credential store has the requested credential.

JPS-06034
The folder {0} is missing in the credential store.

Category:
Requests/Responses

Cause:
The requested map name was not found in the credential store.

Action:
Ensure that the credential store contains the requested map name.

JPS-06035
The destination file {0} already exists; the existing LDIF file will not be appended or overwritten.

Category:
Requests/Responses

Cause:
The destination file is already present.

Action:
Delete the destination file, or provide the name of a non-existing file.

JPS-06036
Cannot determine the default realm to migrate file {0}. Reason {1}.

Category:
Programmatic

Cause:
An internal error occurred while determining the default realm.

Action:
Check log files and try again.

JPS-06037
Cannot initialize the source credential store.

Category:
Upgrade

Cause:
The configuration for the credential store was invalid.

Action:
Verify that the credential store configuration is correct and try again.

JPS-06038
Cannot initialize the destination credential store.

Category:
Upgrade

Cause:
The configuration for the credential store was invalid.

Action:
Verify that the credential store configuration is correct and try again.

JPS-06039
Cannot migrate property {0} of user {1}. Reason {2}.

Category:
Upgrade

Cause:
Cannot migrate property {0} for user {1}. Reason {2}.

Action:
Check the log files and retry migrating.

JPS-06040
Cannot migrate property {0} of role {1}. Reason {2}.

Category:
Upgrade

Cause:
Cannot migrate property {0} for role {1}. Reason {2}.

Action:
Check the log files and retry migrating.

JPS-06041
The switch or keyword " {0} " is not applicable to " {1} = {2} ".

Category:
Requests/Responses

Cause:
One or more optional switches or keywords were invalid.

Action:
Refer to the command documentation for the correct usage.

JPS-06042
Invalid scope for migration.

Category:
Requests/Responses

Cause:
Value of scope keyword was invalid.

Action:
Enter only one of the defined values/alias of scope as a value for the keyword scope.

JPS-06043
The source application is undefined but required to migrate application-specific policies.

Category:
Requests/Responses

Cause:
Optional keyword srcApp was not defined.

Action:
Specify, in the parameter srcApp, the value of the application whose policies are to be migrated.

JPS-06044
Cannot create the temporary file {0}.

Category:
Programmatic

Cause:
Could not write the XML file.

Action:
Check permissions or disk space in the java.io.tmpdir directory.

JPS-06045
Cannot parse the file {0}.

Category:
Programmatic

Cause:
Could not parse the XML file.

Action:
Check that the file is present in the java.io.tmpdir directory, and that it contains well-formed XML.

JPS-06046
Cannot delete the file {0}.

Category:
Programmatic

Cause:
The temp file could not be deleted.

Action:
Check that the file is not being accessed by other applications.

JPS-06047
Cannot migrate user credentials of user {0}.

Category:
Configuration

Cause:
The source identity store was configured not to give cleartext password.

Action:
Configure the source identity store to obfuscate password.

JPS-06048
Null values passed in for username or application stripes.

Category:
Programmatic

Cause:
The user name or the application stripe was null.

Action:
The user name must not be null. The list of application names must be null if only global policies are to be extracted.

JPS-06049
Application list is empty. Only global policies will be extracted.

Category:
Programmatic

Cause:
The list of applications was empty.

Action:
Only global policies are collected.

JPS-06050
file {0} was not found

Category:
Programmatic

Cause:
The xml file was not found.

Action:
Check if the file is present in the java.io.tmpdir directory.

JPS-06051
Processing of privilege roles is supported only when migrating an XML Policy store to an LDAP Policy Store.

Category:
Upgrade

Cause:
Processing of privilege roles was supported only when migrating an XML policy store to an LDAP policy store.

Action:
Make sure that the source store is XML-based and the destination store is LDAP-based.

JPS-06052
Error while processing a PermissionSet grant.

Category:
Upgrade

Cause:
Error encountered while processing permissionSet grant.

Action:
Check log files for details.

JPS-06053
Processing privilege roles failed. Cause {0}

Category:
Upgrade

Cause:
The processing of privilege roles failed.

Action:
Check log files for detials.

JPS-06054
Error in creating resourceTypes in destination store. Cause {0}

Category:
Upgrade

Cause:
Error encountered while creating resourceTypes in destination store.

Action:
Check log files for detials.

JPS-06055
Location of the ldif file containing resourceType definitions cannot be null.

Category:
Upgrade

Cause:
Location of the LDIF file containing resourceType definitions was null or not found.

Action:
Provide the absolute path for the resource file.

JPS-06056
Error while reading resource type file {0}.

Category:
Upgrade

Cause:
Error encountered while reading the resource type file {0}.

Action:
Ensure that the file exists and that it has the expected format.

JPS-06057
Resource type name or matcher class cannot be null.

Category:
Upgrade

Cause:
Resource type name or matcher class was null.

Action:
Provide a valid name and matcher class for the resource type.

JPS-06058
Permission class {0} with more than one matching resource type found.

Category:
Upgrade

Cause:
Permission class had more than one matching resource type.

Action:
Ensure that the a permission class has just one matching resource type.

JPS-06059
A grant entry containing {0} as one of principals has multiple principal entries. This entry cannot be processed.

Category:
Upgrade

Cause:
A grant for a privilege role had multiple principals.

Action:
Ensure that the privilege role grant has a single principal.

JPS-06060
The resource type definition file is missing.

Category:
Upgrade

Cause:
The resource type definition file was not found.

Action:
Provide the absolute path location for the resource definition file in LDIF format when using the option procPrivOption.

JPS-06061
The switch or keyword " {0} " is not defined for " {1} = {2} ".

Category:
Requests/Responses

Cause:
One or more optional switches or keywords were invalid.

Action:
Refer to the command documentation for the correct usage.

JPS-06062
Application role {0} corresponding to a member application role not defined.

Category:
Upgrade

Cause:
Application role not defined.

Action:
Check logs for detials.

JPS-06063
No Matching resource type definition found for permission class {0}.

Category:
Upgrade

Cause:
Permission class representing resource granted to a privilleged role does not have corresponding resource type definition.

Action:
Make sure a permission class has one matching resource type.

JPS-06064
Error getting the application role {0} from the source policy store

Category:
Upgrade

Cause:
The application role was either not present or defined multiple times.

Action:
Check the source policy store and make sure that the application role is uniquely defined.

JPS-06065
Report generation failed

Category:
Configuration

Cause:
.

Action:
.

JPS-06066
Invalid value for mode: {0}.

Category:
Security

Cause:
Invalid value for mode: {0}.

Action:
Make sure the value for mode is valid

JPS-06067
{0} config file either not found or not a valid file.

Category:
Upgrade

Cause:
{0} config file either not found or not a valid file

Action:
Make sure to provide a valid config file

JPS-06068
Unable to read configurations from jazn config file : {0}.

Category:
Upgrade

Cause:
Unable to read configurations from jazn data file : {0}.

Action:
Check the jazn data file.

JPS-06069
Provider referred from jazn config file {0} is of type XML and not LDAP.

Category:
Upgrade

Cause:
Provider referred from jps-config file {0} is of type XML and not LDAP.

Action:
Refer to a provider of type LDAP.

JPS-06070
Unable to read policies from policy store.

Category:
Upgrade

Cause:
Unable to read policies from policy store.

Action:
Check the policy store.

JPS-06071
Unable to read global policies from policy store.

Category:
Upgrade

Cause:
Unable to read global policies from policy store.

Action:
Check the policy store.

JPS-06072
Unable to read permissions for grantee {0} from policy store.

Category:
Upgrade

Cause:
Unable to read permissions for grantee {0} from policy store.

Action:
Check the policy store.

JPS-06073
Unable to read realm policies from policy store.

Category:
Upgrade

Cause:
Unable to read realm policies from policy store.

Action:
Check the policy store.

JPS-06074
Unable to read realm policies from realm {0} from policy store.

Category:
Upgrade

Cause:
Unable to read realm policies from realm {0} from policy store.

Action:
Check the policy store.

JPS-06075
Unsupported resource type file format. Use either an ldif file or a jazn-data with only resource type definitions.

Category:
Upgrade

Cause:
Unsupported resource type file format.

Action:
Use either an ldif file or a jazn-data with only resource type definitions.

JPS-06076
A Resource Type referred by {0} is expected to have a matching class {1} but has {2}.

Category:
Upgrade

Cause:
A Resource Type referred by a Permission is expected to have the same matching class as defined in the Permission

Action:
Make sure a permission class has one matching resource type with the same class name.

JPS-06077
A Resource Type referred by {0} is not defined.

Category:
Upgrade

Cause:
A Resource Type referred by a Permission is not defined.

Action:
Make sure a permission class has one matching resource type.

JPS-06078
Cannot migrate keystore/stripe {0}/{1}.Reason {2}.

Category:
Upgrade

Cause:
Cannot migrate the keystore in this stripe.

Action:
Check the keystore and stripe in the source keystore service.

JPS-06079
Cannot determine the stripe to be migrated.

Category:
Upgrade

Cause:
The keystore service has more than one stripes and the stripe to be migrated was not defined.

Action:
Specify the stripe to be migrated.

JPS-06080
The source keystore service contains no keystore within the given application stripe.

Category:
Requests/Responses

Cause:
The requested keystore was not found in the keystore service.

Action:
Ensure that the keystore service has the requested keystore.

JPS-06082
Cannot initialize the source keystore service.

Category:
Upgrade

Cause:
The configuration for the keystore service was invalid.

Action:
Verify that the keystore service configuration is correct and try again.

JPS-06083
Cannot initialize the destination keystore service.

Category:
Upgrade

Cause:
The configuration for the keystore service was invalid.

Action:
Verify that the keystore service configuration is correct and try again.

JPS-06084
Cannot clean the destination keystore service. Reason {0}.

Category:
Upgrade

Cause:
A codebase grant was found without the required permissions.

Action:
Set the right permissions to the codebase grant.

JPS-06085
Resource types not defined for the application {0}.

Category:
Upgrade

Cause:
Resource Types not found for the application {0}.

Action:
Define the resource types for the application {0}.

JPS-06086
Cannot upgrade policies for application {0}.

Category:
Upgrade

Cause:
Exception during policy upgradation.

Action:
Check the Causing exception and fix the error.

JPS-06087

Category:
Compliance

Cause:

Action:

JPS-06518
Keystore {0} in stripe {1} does not exist.

Category:
Configuration

Cause:
Could not perform this operation since the keystore did not exist.

Action:
Specify an existing keystore name for this operation.

JPS-06519
Failed to get/set credential with map {0} and key {1} in bootstrap credstore. Reason {2}

Category:
Configuration

Cause:
Credential store was not available or permissions were not in place.

Action:
Verify credential store is correctly configured and permissions are granted.

JPS-06520
Failed to encode/decode certificate or public key.

Category:
Compliance

Cause:

Action:

JPS-06521
Invalid admin password, operation not permitted

Category:
Configuration

Cause:
Invalid admin password was specified.

Action:
Specify the correct admin password to perform this operation.

JPS-06522
Failed to roll over keystore master key.

Category:
Compliance

Cause:

Action:

JPS-06523
Failed to reset keystore administrator password.

Category:
Compliance

Cause:

Action:

JPS-06524
Failed to read certificates from keystore.

Category:
Compliance

Cause:

Action:

JPS-06525
Failed to list/renew expiring certificates.

Category:
Compliance

Cause:

Action:

JPS-06526
Failed to list policy violations in keystore.

Category:
Compliance

Cause:

Action:

JPS-06527
Invalid keystore name {0}.

Category:
Configuration

Cause:
Invalid keystore name was specified.

Action:
Specify a keystore name that is not null or empty and contains only alphanumeric characters.

JPS-06528
Invalid alias value {0}.

Category:
Configuration

Cause:
Invalid alias value was specified.

Action:
Specify an alias value that is not null or empty and contains only alphanumeric characters.

JPS-06529
Passwords must not be null or empty.

Category:
Configuration

Cause:
Password was specified as null or empty.

Action:
Specify a non null or non empty password for a keystore protected by password.

JPS-06530
Invalid stripe value {0}

Category:
Compliance

Cause:

Action:

JPS-06531
Operation failed, keystore password does not match

Category:
Compliance

Cause:

Action:

JPS-06532
Failed to delete the keystore {0} in stripe {1}

Category:
Compliance

Cause:

Action:

JPS-06533
Algorithm {0} not supported

Category:
Configuration

Cause:
The algorithm was not supported by keystore.

Action:
Check the list of supported algorithms and specify one of them.

JPS-06534
Keystore master key roll-over failed.

Category:
Compliance

Cause:

Action:

JPS-06535
Failed to generate secret key with alias {0} for keystore {1} in stripe {2}

Category:
Compliance

Cause:

Action:

JPS-06536
Failed to import secret key for keystore {0}

Category:
Compliance

Cause:

Action:

JPS-06537
Failed to change password for keystore {0} in stripe {1}

Category:
Compliance

Cause:

Action:

JPS-06538
Cannot set password for trusted certificate entry.

Category:
Compliance

Cause:

Action:

JPS-06539
Operation failed, key password does not match

Category:
Compliance

Cause:

Action:

JPS-06540
Failed to change password for key with alias {0} for keystore {1} in stripe {2}

Category:
Compliance

Cause:

Action:

JPS-06541
Invalid keystore entry type {0}

Category:
Configuration

Cause:
The keystore entry type was invalid for this operation.

Action:
Check the list of supported keystore entry types from documentation.

JPS-06542
Failed to list aliases for keystore {0} in stripe {1}

Category:
Compliance

Cause:

Action:

JPS-06543
Invalid Distinguished Name {0}

Category:
Compliance

Cause:

Action:

JPS-06544
Failed to generate key pair for alias {0} keystore {1} in stripe {2}

Category:
Compliance

Cause:

Action:

JPS-06545
The expected keystore entry with alias "{0}" either does not exist or is not of the specified keystore entry type for keystore "{1}" in stripe "{2}".

Category:
Configuration

Cause:
The alias value either did not exist or did not point to the specified keystore entry type.

Action:
Specify a valid alias value that points to the specified keystore entry type.

JPS-06546
Failed to get secret key with alias {0}

Category:
Compliance

Cause:

Action:

JPS-06547
Failed to get certificate(s) with alias {0} for keystore {1} in stripe {2}

Category:
Compliance

Cause:

Action:

JPS-06548
Failed to export certificate request for key with alias {0} for keystore {1} in stripe {2}

Category:
Compliance

Cause:

Action:

JPS-06549
No corresponding key pair found for this certificate

Category:
Configuration

Cause:
The alias value did not point to the matching key pair for this certificate

Action:
Specify a valid alias value that points to a key pair whose public key matches that of the certificate.

JPS-06550
Failed to parse the certificate chain

Category:
Compliance

Cause:

Action:

JPS-06551
Failed to import the key store entry with alias {0} for keystore {1} in stripe {2}

Category:
Compliance

Cause:

Action:

JPS-06552
Failed to delete the key store entry with alias {0} for keystore {1} in stripe {2}

Category:
Compliance

Cause:

Action:

JPS-06553
Cannot perform this operation on domain trust store

Category:
Configuration

Cause:
The operation was not supported for domain trust store.

Action:
Check product documentation to see the operations permitted on domain trust store.

JPS-06554
Cannot perform this operation on demo CA keystore

Category:
Compliance

Cause:

Action:

JPS-06555
Mismatch between the values of key aliases and key passwords

Category:
Configuration

Cause:
There should be equal number of entries for key aliases and key passwords

Action:
Ensure that key aliases and key passwords are equal in number.

JPS-06556
Keystore to be imported is not valid

Category:
Configuration

Cause:
The keystore file being imported was either empty or of invalid format.

Action:
Ensure that the keystore being imported is of valid format.

JPS-06557
Mismatch between the values of CSF maps and keys

Category:
Configuration

Cause:
There should be equal number of entries for CSF maps and CSF keys

Action:
Ensure that CSF maps and keys are either both null, or are equal in number.

JPS-06558
Mismatch between the values of key alias/password and CSF map/key

Category:
Configuration

Cause:
There should be equal number of entries for key alias/password and CSF map/key

Action:
Ensure that key alias/password and CSF map/key are equal in number.

JPS-06559
Keystore type {0} not supported

Category:
Configuration

Cause:
The keystore type was not supported.

Action:
Check the list of supported keystore types and specify one of them.

JPS-06560
Failed to import the keystore {0} in stripe {1}. Reason {2}

Category:
Compliance

Cause:

Action:

JPS-06561
Failed to export the keystore {0} in stripe {1}. Reason {2}.

Category:
Compliance

Cause:

Action:

JPS-06562
Failed to load the keystore.

Category:
Compliance

Cause:

Action:

JPS-06563
Failed to save the keystore.

Category:
Compliance

Cause:

Action:

JPS-06564
Method not implemented

Category:
Compliance

Cause:

Action:

JPS-06565
Invalid keystore protection parameter

Category:
Configuration

Cause:
The specified keystore protection type was not supported.

Action:
Ensure that the keystore protection type is a password.

JPS-06566
No trusted certificate found with this alias

Category:
Configuration

Cause:
The specified alias did not refer to a trusted certificate.

Action:
Ensure that the alias refers to a trusted certificate in the keystore.

JPS-06567
Unsupported key type

Category:
Configuration

Cause:
The key type was not supported.

Action:
Ensure that key is either private key or secret key.

JPS-06568
Insufficient permissions for this operation. Reason {0}

Category:
Compliance

Cause:

Action:

JPS-06569
Keystore {0} in app stripe {1} does not exist

Category:
Compliance

Cause:

Action:

JPS-06570
Failed to set keystore policy

Category:
Compliance

Cause:

Action:

JPS-06571
Failed to delete keystore policy

Category:
Compliance

Cause:

Action:

JPS-06572
Null policy name/value not allowed

Category:
Compliance

Cause:

Action:

JPS-06573
Failed to list keystore policies

Category:
Compliance

Cause:

Action:

JPS-06574
Invalid key parameters

Category:
Compliance

Cause:

Action:

JPS-06575
Certificate import failed as the public key in the certificate did not match the one in the keystore.

Category:
Configuration

Cause:
The public key in the certificate does not match the one in the keystore.

Action:
Ensure that the certificate is imported into the alias used for generating certificate request.

JPS-06576
Failed to read {0} with alias {1}.

Category:
Configuration

Cause:
Failed to read {0} with alias {1}.

Action:
Contact the administrator.

JPS-06577
Failed to create private key {0}.

Category:
Configuration

Cause:
Failed to create private key {0}.

Action:
Contact the administrator.

JPS-06578
Cert with alias {0} was invalid.

Category:
Configuration

Cause:
Cert with alias {0} was invalid.

Action:
Contact the administrator.

JPS-06579
Failed to read keystore data.

Category:
Configuration

Cause:
Failed to read keystore data.

Action:
Contact the administrator.

JPS-06580
Failed to check keystore integrity.

Category:
Configuration

Cause:
Failed to check keystore integrity.

Action:
Contact the administrator.

JPS-06581
Failed to load certificates from the keystore.

Category:
Configuration

Cause:
Failed to load certificates from the keystore.

Action:
Contact the administrator.

JPS-06582
Failed to get trusted certs.

Category:
Configuration

Cause:
Failed to get trusted certs

Action:
Contact the administrator.

JPS-06583
Failed to check if audit is enabled.

Category:
Configuration

Cause:
Keystore audit events logging was not enabled.

Action:
Check the audit configuration to ensure auditing enabled.

JPS-06584
Failed to log audit record.

Category:
Configuration

Cause:
Keystore audit event logging failed.

Action:
Contact the administrator.

JPS-06585
Created keystore {0} in stripe {1}

JPS-06606
Could not create keystore service instance. Reason {0}

Category:
Compliance

Cause:
Could not create keystore service instance

Action:
Contact system administrator

JPS-06607
The keystore service DN {0} is missing in the store; the target DN must be pre-configured.

Category:
Requests/Responses

Cause:
The expected keystore DN {0} was missing.

Action:
Configure this DN during the bootstrap process.

JPS-06608
The farm DN property {0} is invalid or not defined.

Category:
Requests/Responses

Cause:
The farm name property {0} was invalid or not defined.

Action:
Check the configuration of this property.

JPS-06609
The keystore is not initialized.

Category:
Configuration

Cause:
The keystore was not loaded.

Action:
Load the keystore before trying this operation.

JPS-06610
Keystore {0} did not exist.

Category:
Compliance

Cause:

Action:

JPS-06611
The keystore service instance {0} was not initialized.

Category:
Configuration

Cause:
Keystore service was not completely initialized.

Action:
Wait until data source is available and try again later.

JPS-06612
The properties for keystore {0} in stripe {1} were read successfully

Category:
Compliance

Cause:

Action:

JPS-06613
Supported key sizes could not be determined for this algorithm.

Category:
Compliance

Cause:

Action:

JPS-06614
Operation not supported - unable to delete key store {0} in stripe {1}.

Category:
Configuration

Cause:
Deletion of domain trust store or the demo CA key store was not permitted.

Action:
Choose a different key store.

JPS-06615
Operation not supported - unable to delete alias {0} in key store {1} in stripe {2}.

Category:
Configuration

Cause:
Deletion of demo CA key was not permitted.

Action:
Choose a different key alias.

JPS-06616
Missing certificate chain.

Category:
Configuration

Cause:
Certificate chain was null.

Action:
Specify a valid certificate chain.

JPS-06617
Successfully retrieved the attribute {0} from the keystore {1} in stripe {2}.

Category:
Compliance

Cause:

Action:

JPS-06618
Failed to retrieve attribute {0} from the keystore {1} in stripe {2}.

Category:
Compliance

Cause:

Action:

JPS-06619
Key store file keystores.xml integrity check failed. Location: {0}

Category:
Configuration

Cause:
File keystore.xml has been manually edited.

Action:
Restore the keystore file to the last working backup and try again.

JPS-06620
Key store file integrity checker initialization failed. Reason {0}

Category:
Configuration

Cause:
Problem using the bootstrap credential store service.

Action:
Check the bootstrap credential store configuration.

JPS-06621
Cannot change password of a permission protected key store

Category:
Compliance

Cause:

Action:

JPS-06622
Cannot change key password of a permission protected key store

Category:
Compliance

Cause:

Action:

JPS-06623
Invalid KSS URI: {0}

Category:
Compliance

Cause:

Action:

JPS-06624
Cannot synchronize centralized key store(s) from stripe {0} to bootstrap key store(s). Reason {1}

Category:
Configuration

Cause:

Action:

JPS-06625
Invalid component type {0}

Category:
Configuration

Cause:

Action:

JPS-06626
Could not get bootstrap key store service. Reason {0}

Category:
Compliance

Cause:
Could not get bootstrap key store service.

Action:
Verify key store service is correctly configured and initialized.

JPS-06627
Invalid keystore provider type. Value {0}

Category:
Configuration

Cause:
Value of keystore.provider.type is invalid.

Action:
Assign a valid value to keystore.provider.type.

JPS-06628
Key alias {0} corresponds to neither a key nor a trusted certificate in the imported keystore.

Category:
Configuration

Cause:
Given key alias corresponds to neither a key nor a trusted certificate.

Action:
Given key alias should correspond to either a key or a trusted certificate.

JPS-06629
No alias specified so skipping import/export

Category:
Configuration

Cause:
Key aliases should not be null or empty string.

Action:
Ensure that key aliases are neither null nor empty string.

JPS-06630
Import of entry with alias: {0} into appStripe:{1} keystore:{2} skipped as it already exists in the keystore.

Category:
Configuration

Cause:
Alias already exists in the keystore. Alias overwriting while importing not supported.

Action:
Alias to be imported shouldn't pre-exist in the key store.

JPS-06631
Certificate import failed as the minimum number of certificates expected is {0}

Category:
Configuration

Cause:
K required were not given.

Action:
Ensure that minimum number of certificates are imported.

JPS-06632
Invalid key store attribute {0}

Category:
Compliance

Cause:

Action:

JPS-06633
Cannot synchronize component key store(s) under stripe {0} into corresponding wallets. Reason {1}

Category:
Configuration

Cause:

Action:

JPS-06634
One or more of keystores inside application stripe {0} are not permission protected.

Category:
Compliance

Cause:
One or more of keystores inside the application stripe are not permission protected.

Action:
Ensure that all keystores in the application stripe are permission protected.

JPS-06635
Either or both of stripe name {0} and keystore format {1} is null or empty string.

Category:
Compliance

Cause:
Either or both of stripe name and keystore format is null or empty string.

Action:
Ensure that stripe name and keystore format are both non-empty string.

JPS-06636
Application stripe {0} does not exist in keystore.

Category:
Compliance

Cause:
Given application stripe doesn't exist in keystore.

Action:
Provide name of an application stripe that is already existing in keystore.

JPS-06637
Trusted certificate with Subject DN {0} is missing from trust store of keystore.

Category:
Compliance

Cause:
A trusted certificate is missing from trust store of keystore.

Action:
Ensure that the trusted certificate is present in trust store of keystore.

JPS-06638
KeyStore Entry required were not given.

Category:
Configuration

Cause:
KeyStore Entry required were not given.

Action:
Provide KeyStore Entry as input.

JPS-06639
The following aliases were encountered in the keystore: {0}

Category:
Compliance

Cause:

Action:

JPS-06640
Empty alias specified for importing wallet keystore, so skipping import

Category:
Configuration

Cause:
Key aliases of wallet keystore to import should not be empty string.

Action:
Ensure that key aliases of wallet keystore to import are not empty string.

JPS-06641
Invalid keySize format : {0}

Category:
Compliance

Cause:
Cannot set key entry for non-existent stripe and keystore

Action:
This operation is not supported

JPS-06642
Can not determine the JAVA/JRE home,so could not find the cacerts file.

Category:
Compliance

Cause:
Neither environnment variable JAVA_HOME nor system property java.home is specified.

Action:
Ensure that either environnment variable JAVA_HOME or system property java.home is specified.

JPS-06643
JDK cacerts file {0} in use.

Category:
Compliance

Cause:

Action:

JPS-06644
Failed to import JDK cacerts to system/publiccacerts.

Category:
Compliance

Cause:
Importing JDK CA cert failed.

Action:
check log for more details.

JPS-06645
JDK cacerts {0} does not exist.

Category:
Compliance

Cause:
JDK cacerts file {0} does not exist.

Action:
Check the location of JDK cacerts files.

JPS-06646
Private or Secret key found in Trust Store

Category:
Compliance

Cause:

Action:

JPS-06647
Aggregation of two trust stores failed

Category:
Compliance

Cause:
There is a private or secret key entry in the truststore

Action:
Remove the private or secret key entries from the truststore

JPS-06655
The keysize for algorithm {0} can not be less than {1}, but {2} is being used .

Category:
Compliance

Cause:
Keysize is not allowed for specific algorithm

Action:
Use a higher key size for this algorithm.

JPS-06656
Using algorithm {0} is not permitted.

Category:
Compliance

Cause:
The algorithm is not allowed.

Action:
Use a stronger algorithm.

JPS-06657
The format of Subject Alternative Name certificate extension is invalid: {0}.

Category:
Requests/Responses

Cause:
The format of Subject Alternative Name certificate extension is invalid.

Action:
Correct the format of Subject Alternative Name certificate extension.

JPS-06658
Invalid secret key value.

Category:
Configuration

Cause:
Invalid secet key.

Action:
Check the value of secret key.

JPS-06659
Invalid private key value.

Category:
Configuration

Cause:
Invalid private key.

Action:
Check the value of private key.

JPS-06660
Invalid certificate value.

Category:
Configuration

Cause:
Invalid certificate.

Action:
Check the value of certificate.

JPS-06661
Invalid private key or certificate.

Category:
Configuration

Cause:
Invalid private key or certificate.

Action:
Check the value of private key and certificate.

JPS-06662
Import secret key success.

Category:
Compliance

Cause:

Action:

JPS-06663
Import private key and certificate success.

Category:
Compliance

Cause:

Action:

JPS-06664
Import secret key failure.

Category:
Compliance

Cause:

Action:

JPS-06665
Import private key and certificate failure.

Category:
Compliance

Cause:

Action:

JPS-06666
Invalid key password value.

Category:
Configuration

Cause:
Invalid key password.

Action:
Check the value of key password.

JPS-07000
Provide a valid jps configuration file.

Category:
Security

Cause:
The jps configuration file was invalid.

Action:
Refer to the log files for details and correct the error.

JPS-07001
Provide a valid application name.

Category:
Security

Cause:
Application ID was invalid.

Action:
Refer to the log files for details and correct the error.

JPS-07002
Provide a valid jazn-data file. .

Category:
Security

Cause:
The jazn-data file was invalid.

Action:
Refer to the log files for details and correct the error.

JPS-07003
Provide a valid folder name.

Category:
Security

Cause:
The patch delta folder was invalid.

Action:
Provide a valid folder for generating patch delta files.

JPS-07004
ApplicationPolicy object is null/empty.

Category:
Security

Cause:
ApplicationPolicy object was null

Action:
Make sure to create a not null ApplicationPolicy object

JPS-07005
The "{0} " jazn data file does not exists.

Category:
Security

Cause:
Jazn data file does not exists.

Action:
Make sure to provide an existing jazn-data file.

JPS-07006
"{0}" Not a folder. Please provide a valid folder.

Category:
Security

Cause:
Not a folder.

Action:
Make sure to provide a valid folder.

JPS-07007
"{0}" folder does not exists

Category:
Security

Cause:
The folder does not exists.

Action:
Make sure to provide an existing folder.

JPS-07008
The {0} jps configuration file does not exist.

Category:
Security

Cause:
The jps configuration file does not exists.

Action:
Make sure to provide an existing jps configuration file.

JPS-07009
The "{0}" folder for generating patch delta files does not exist.

Category:
Security

Cause:
The folder to generate the patch delta files does not exists.

Action:
Make sure to provide an existing folder.

JPS-07010
The AppRole "{0}" cannot be created. Cause {1} .

Category:
Security

Cause:
The approle could not be created.

Action:
Refer to the log files for details and correct the error.

JPS-07011
The AppRole object is null while persisting to Addition Safe Changes.

Category:
Security

Cause:
The required parameter was null.

Action:
Ensure to provide a valid AppRole Object.

JPS-07012
The ResourceType object is null while persisting to Addition Safe Changes.

Category:
Security

Cause:
The required parameter was null.

Action:
Enusre to provide a valid ResourceType Object.

JPS-07013
The AppRole list is null/empty while persisting to Addition Safe Changes.

Category:
Security

Cause:
The required parameter was null.

Action:
Ensure to provide a valid AppRole List.

JPS-07014
The Resource object is null while persisting to Addition Safe Changes.

Category:
Security

Cause:
The required parameter was null.

Action:
Ensure to pass a valid Resource object.

JPS-07015
The PermissionSet object is null while persisting to Addition Safe Changes.

Category:
Security

Cause:
The required parameter was null.

Action:
Ensure to provide a valid PermissionSet object.

JPS-07016
The Association object is null while persisting to Addition Safe Changes.

Category:
Security

Cause:
The required parameter was null.

Action:
Ensure to provide a valid Association object.

JPS-07017
Internal Error.

Category:
Security

Cause:
That was an internal error.

Action:
Refer to the log files for details and correct the error.

JPS-07018
Application Role: "{0}" cannot be added. Reason {1} .

Category:
Security

Cause:
Policy store reported an error.

Action:
Check the Reason and fix the problem.

JPS-07504
Trust Service Keystore initialization failed.

Category:
Security

Cause:
Keystore is is missing or not configured correctly

Action:
Check the keystore and ensure that necessary certificates and keys are present

JPS-07505
Trust service provider protocol {0}

Category:
Security

Cause:
Trust Service provider protocol information

Action:
No action required

JPS-07506
Token context creation failed.

Category:
Security

Cause:
Incorrct protocol or associated provider configuration.

Action:
Check protocol and associated provider configuration

JPS-07507
Token issue operation

Category:
Security

Cause:
Trust service token issue opertion.

Action:
No action required

JPS-07508
Token issue operation failed.

Category:
Security

Cause:
Trust service token issue opertion failed.

Action:
Check provider configuration

JPS-07509
Invalid token operation

Category:
Security

Cause:
Invalid Trust Service token opertion.

Action:
Check invoked operation name

JPS-07510
Token validate operation.

Category:
Security

Cause:
Trust Service validate token opertion.

Action:
No action required

JPS-07511
Validate operation failed.

Category:
Security

Cause:
Trust service token validate opertion failed.

Action:
Check provider configuration

JPS-07512
Missing token issuer identity.

Category:
Security

Cause:
Token issuer identity missing.

Action:
Provide token issuer identity

JPS-07513
Invalid subject confirmation method.

Category:
Security

Cause:
Invalid subject confirmation method.

Action:
Provide correct subject confirmation method

JPS-07514
Token audience restriction condition check failed.

Category:
Security

Cause:
Invalid token audience condition.

Action:
Check the audience condition

JPS-07515
Token signature validation failed.

Category:
Security

Cause:
Invalid token signature.

Action:
Check token integrity and verify signature using correct certificate

JPS-07516
Invalid token.

Category:
Security

Cause:
Invalid token.

Action:
Check token integrity.

JPS-07517
Input token is not an instance of GenericToken class.

Category:
Security

Cause:
Input token is not an instance of GenericToken class.

Action:
Check the token object class

JPS-07518
Input token is not an instance of UsernameToken class

Category:
Security

Cause:
Input token is not an instance of UsernameToken class.

Action:
Check the token object class

JPS-07519
Setting subject conformation method failed.

Category:
Security

Cause:
Invalid token object.

Action:
Check the token object

JPS-07520
Token signing failed.

Category:
Security

Cause:
Token signing key is unavailable.

Action:
Check the keystore and verify that signing key is present

JPS-07521
Token signature is not available.

Category:
Security

Cause:
Unsigned token.

Action:
No action required.

JPS-07522
Token is not valid yet {0}

Category:
Security

Cause:
Token is not valid yet.

Action:
Check the token validity start date.

JPS-07523
Token has expired {0}

Category:
Security

Cause:
Token has expired.

Action:
Check the token validity end date.

JPS-07524
Certificate is unavailable {0}

Category:
Security

Cause:
Certificate is not available.

Action:
Check the keystore and ensure that the certificate is present.

JPS-07525
Private key is unavailable

Category:
Security

Cause:
Private key is not available.

Action:
Check the keystore and ensure that the private key is present.

JPS-07526
Initializing provider

Category:
Security

Cause:
Provider is initiliazing.

Action:
None

JPS-07527
Shutting down provider

Category:
Security

Cause:
Provider is shutting down.

Action:
None

JPS-07528
Received unknown token type {0}

Category:
Security

Cause:
Received token type is unknown.

Action:
Check the provided token.

JPS-07529
Received unknown token class {0}

Category:
Security

Cause:
Token class is unknown.

Action:
Check the token class.

JPS-07530
Invalid token type or token not found

Category:
Security

Cause:
Invalid token authentication type specified.

Action:
Check the token authentication type.

JPS-07531
Input token is not an instance of {0}

Category:
Security

Cause:
Specified insance is not correct.

Action:
Check the instance type validity.

JPS-07532
Instance of {0} is invalid

Category:
Security

Cause:
Specified instance is invalid.

Action:
Check the specified instance and ensure that it is correct

JPS-07533
Received empty token byte array

Category:
Security

Cause:
Given token is empty.

Action:
Check the token content and ensure that it is not empty.

JPS-07534
Trust service configuration is not valid

Category:
Security

Cause:
Invalid configuration parameters.

Action:
Check the configuration parameters.

JPS-07535
Using {0} Trust service configuration

Category:
Security

Cause:
Configuration type used by Trust Service

Action:
None

JPS-07536
Token credential missing

Category:
Security

Cause:
Token signing or validation credential missing.

Action:
Provide correct credential.

JPS-07537
Token signature missing

Category:
Security

Cause:
Token signature missing.

Action:
Check the token for integrity.

JPS-07538
The input token is not specified

Category:
Security

Cause:
Input token not provided.

Action:
Check if the token has been provided.

JPS-07539
Token signing method is not specified

Category:
Security

Cause:
Token signing algorithm parameter missing.

Action:
Check the token signing algorithm parameter.

JPS-07540
Token signing method is invalid

Category:
Security

Cause:
Token signing algorithm parameter invalid

Action:
Check the specified token signing algorithm.

JPS-07541
Token signing private key is not specified

Category:
Security

Cause:
Token signing private key missing.

Action:
Check the token signing private key parameter.

JPS-07542
Token signing certificate is not specified

Category:
Security

Cause:
Token signing certificate missing.

Action:
Check the token signing certificate parameter.

JPS-07543
Token signing credential is not specified

Category:
Security

Cause:
Token signing credential missing.

Action:
Check the token signing credential parameter.

JPS-07544
The specified token type is invalid

Category:
Security

Cause:
The token type is not supported.

Action:
Check the token type parameter.

JPS-07545
Invalid TokenContext class

Category:
Security

Cause:
Internal Error. The correct TokenContext class is not created.

Action:
Provide the correct TokenProvider class in trust configurations.

JPS-07546
Token cannot be issued for virtual or anonymous user

Category:
Security

Cause:
Trust token cannot be issued for anonymous or virtual users

Action:
Ensure usage of Trust service is limited to users present in configured identity store.

JPS-07600
Application policy for stripe name {0} not found. Nothing to undeploy

Category:
Security

Cause:
No associated application policies

Action:
Check application policy setup or contact system administrator

JPS-07601
Complete staging offline deployment for application {0} in {1}

Category:
Security

Cause:
Complete staging offline deployment for application {0} in {1}

Action:
No action required

JPS-07602
Removal of application policy failed. Reason: {0}.

Category:
Security

Cause:
Exception in removing application policy

Action:
Check application policy setup or contact system administrator

JPS-07603
Cannot purge changelog. Reason {0}.

Category:
Security

Cause:
Purge changelog failed.

Action:
Check policystore configuration.

JPS-07604
Wrong policy combining algorithm name {0} is used.

Category:
Security

Cause:
wrong policy combining algorithm name was used

Action:
Check combining algorithm name being used

JPS-07605
Unsupported policy combining algorithm name {0} is used.

Category:
Security

Cause:
Unsupported policy combining algorithm name was used

Action:
Check combining algorithm name being used

JPS-07606
Cannot clean applications. Reason {0}.

Category:
Security

Cause:
Clean applications failed.

Action:
Refer to the log files for details and correct the error.

JPS-07607
{0} is used in source, but it is not supported by destination policy store.

Category:
Security

Cause:
Source contains policy artifacts that is not supported by destination policy store

Action:
Make sure source only contain policy artifacts which are compatible with destination policy store

JPS-07608
ERROR:not allowed to modify seed policy store {0}.

Category:
Security

Cause:
ERROR:not allowed to modify seed policy store {0}.

Action:
Refer to the log files for details and correct the error.

JPS-07609
AttributeName {0} supplied should start with alphabet or an underscore. Name cannot contain characters other than alphanumeric, underscore, colon, dot and hyphen.

Category:
Security

Cause:
AttributeName {0} supplied should start with alphabet or an underscore. Name cannot contain characters contain other than alphanumeric, underscore, colon, dot and hyphen.

Action:
Ensure attribute name is of correct datatype.

JPS-07610
Function Name {0} supplied should start with alphabet or an underscore. Name cannot contain characters other than alphanumeric, underscore, colon, dot and hyphen.

Category:
Security

Cause:
Function Name {0} supplied should start with alphabet or an underscore. Name cannot contain characters contain other than alphanumeric, underscore, colon, dot and hyphen.

Action:
Ensure function name is of correct datatype.

JPS-08000
Subject object {0} is not supported.

Category:
Security

Cause:
Specified Object type is not supported by the provider for Subject.

Action:
Check the document for supported object types.

JPS-08001
Action object {0} is not supported.

Category:
Security

Cause:
Specified Object type is not supported by the provider for Action.

Action:
Check the document for supported object types.

JPS-08002
Resource object {0} is not supported.

Category:
Security

Cause:
Specified Object type is not supported by the provider for Resource.

Action:
Check the document for supported object types.

JPS-08003
Environment object {0} is not supported.

Category:
Security

Cause:
Specified Object type is not supported by the provider for Environment.

Action:
Check the document for supported object types.

JPS-08004
Invalid resource string: {0}.

Category:
Security

Cause:
The resource string is invalid.

Action:
Check the document for the resource string format.

JPS-08005
Subject cannot be null.

Category:
Security

Cause:
The subject is null.

Action:
Use a valid subject.

JPS-08006
Action cannot be null.

Category:
Security

Cause:
The action is null.

Action:
Use a valid action.

JPS-08007
Resource cannot be null.

Category:
Security

Cause:
The resource is null.

Action:
Use a valid resource.

JPS-08008
Action list cannot be null or empty.

Category:
Security

Cause:
The action list is null or empty.

Action:
Use a valid action list.

JPS-08009
Resource list cannot be null or empty.

Category:
Security

Cause:
The resource list is null or empty.

Action:
Use a valid resource list.

JPS-08010
The size of action list and resource list is different.

Category:
Security

Cause:
The size of action list and resource list is different.

Action:
The size of action list should be identical to the size of resource list.

JPS-08011
Subject object {0} is not a valid subject on platform {1}.

Category:
Security

Cause:
The subject object is not a valid subject on current platform.

Action:
Use a valid subject.

JPS-08012
Scope cannot be null or empty.

Category:
Security

Cause:
Scope is null or empty.

Action:
Use a valid scope.

JPS-08013
Query Type cannot be null.

Category:
Security

Cause:
Query Type is null.

Action:
Use a valid Query Type.

JPS-08014
Invalid scope string: {0}.

Category:
Security

Cause:
The scope string is invalid.

Action:
Check the document for the scope string format.

JPS-08015
Invalid search scope string: {0}.

Category:
Security

Cause:
The search scope in scope string is invalid.

Action:
Check the document for the scope string format.

JPS-08016
An error has occurred while processing the PepResponse result.

Category:
Security

Cause:
An error has occurred while processing the PepResponse results.

Action:
Check the policy setup and client code.

JPS-08017
Invalid resource string: {0}. Please provide a fully qualified resource string.

Category:
Security

Cause:
Fully qualified resource string is required.

Action:
Please specify application ID, resource type and resource name.

JPS-08018
The configured policy provider {0} does not implement AzPolicy interface.

Category:
Security

Cause:
The configured policy provider does not implement AzPolicy interface.

Action:
You must configure policy provider that implements AzPolicy interface, e.g. by calling Policy.setPolicy().

JPS-08019
Requested operation is not supported.

Category:
Security

Cause:
Requested operation is not supported.

Action:
Do not invoke unsupported operation.

JPS-08020
The authorization service instance is invalid.

Category:
Security

Cause:
The authorization service instance is invalid.

Action:
Check the service instance and ensure that is a supported authorization service instance.

JPS-08021
The input configuration parameter is invalid.

Category:
Security

Cause:
The input configuration parameter is invalid.

Action:
Check the configuration parameter validity.

JPS-08022
Incorrect authorization service instance type.

Category:
Security

Cause:
Incorrect authorization service instance type.

Action:
Check the authorization service instance type.

JPS-08023
The environment parameter is missing.

Category:
Security

Cause:
The environment paramater is missing.

Action:
Check the environment paramater.

JPS-08024
Policy context parameter is missing.

Category:
Security

Cause:
Policy context parameter is missing.

Action:
Check the policy context paramater.

JPS-08025
Session context parameter is missing.

Category:
Security

Cause:
Session context parameter is missing.

Action:
Check the session paramater.

JPS-08026
Database connection parameter is missing.

Category:
Security

Cause:
Database connection parameter is missing or not a right type.

Action:
Check the database connection paramater.

JPS-08027
Security predicate parameter is missing.

Category:
Security

Cause:
Security predicate parameter is missing.

Action:
Check the security predicate paramater.

JPS-08028
Cannot find appName attribute in resource collection.

Category:
Security

Cause:
Can't find appName attribute in resource collection.

Action:
Add appName attribute to resource collection.

JPS-08029
Privilege parameter is missing or not a right type

Category:
Security

Cause:
Privilege parameter is missing or not a right type.

Action:
Check the privilege paramater.

JPS-08030
DB object parameter is missing or not a right type.

Category:
Security

Cause:
DB object parameter is missing or not a right type.

Action:
Check the DB object paramater.

JPS-08031
Client env parameter is not a right type.

Category:
Security

Cause:
Client env parameter is not a right type.

Action:
Check the client env paramater.

JPS-08032
Client env parameter has unsupported value.

Category:
Security

Cause:
Client env parameter has unsupported value.

Action:
Check the client env paramater.

JPS-08033
Check privilege mode parameter has unsupported value.

Category:
Security

Cause:
Check privilege mode parameter has unsupported value.

Action:
Check the Check privilege paramater.

JPS-08034
Value of parameter {0} should be type {1}, but has a wrong type {2}.

Category:
Security

Cause:
Invalid parameter type

Action:
Check the paramater.

JPS-08035
Type of RAS parameter value is not supported.

Category:
Security

Cause:
Type of RAS parameter value is not supported.

Action:
Do not use unsupported type for RAS parameter value.

JPS-08036
Invalid data type in Subject collection, it only accepts RuntimeAttribute.

Category:
Security

Cause:
Invalid data type in Subject collection, it only accepts RuntimeAttribute.

Action:
Use RuntimeAttribute in Subject collection.

JPS-08037
Invalid data type in Action collection, it only accepts RuntimeAttribute.

Category:
Security

Cause:
Invalid data type in Action collection, it only accepts RuntimeAttribute.

Action:
Use RuntimeAttribute in Action collection.

JPS-08038
Invalid data type in Resource collection, it only accepts RuntimeAttribute.

Category:
Security

Cause:
Invalid data type in Resource collection, it only accepts RuntimeAttribute.

Action:
Use RuntimeAttribute in Resource collection.

JPS-08500
Component audit definition {0} already exists.

Category:
Security

Cause:
Component audit definition {0} already exists.

Action:
Check given component type.

JPS-08501
Failed to create component audit definition {0}. Reason: {1}.

Category:
Security

Cause:
Failed to create component audit definition {0}. Reason: {1}.

Action:
See error message.

JPS-08502
Failed to search database mapping table for component {0}. Reason: {1}.

Category:
Security

Cause:
Failed to search database mapping table for component {0}. Reason: {1}.

Action:
See error message.

JPS-08503
Cannot search audit definition for component {0}. Reason: {1}.

Category:
Security

Cause:
Cannot search audit definition for component {0}. Reason: {1}.

Action:
See error message.

JPS-08504
Failed to search generic attribute groups. Reason: {0}.

Category:
Security

Cause:
Failed to search generic attribute groups. Reason: {0}.

Action:
See error message.

JPS-08505
Failed to create database mapping table for component {0}. Reason: {1}.

Category:
Security

Cause:
Failed to create database mapping table for component {0}. Reason: {1}.

Action:
See error message.

JPS-08506
Failed to create filter config for component {0}. Reason: {1}.

Category:
Security

Cause:
Failed to create filter config for component {0}. Reason: {1}.

Action:
See error message.

JPS-08507
Component audit definition {0} does not exist.

Category:
Security

Cause:
Component audit definition {0} does not exist.

Action:
Check given component type.

JPS-08508
Failed to search filter config for component {0}. Reason: {1}.

Category:
Security

Cause:
Failed to search filter config for component {0}. Reason: {1}.

Action:
See error message.

JPS-08509
Failed to update filter config for component {0}. Reason: {1}.

Category:
Security

Cause:
Failed to update filter config for component {0}. Reason: {1}.

Action:
See error message.

JPS-08510
The expected audit store DN {0} was missing.

Category:
Security

Cause:
The expected audit store DN {0} was missing.

Action:
Configure this DN during the bootstrap process.

JPS-08511
Audit store was not fully initialized until data source is available.

Category:
Security

Cause:
Audit store was not fully initialized until data source is available.

Action:
Wait and retry later.

JPS-08512
Failed to retrieve value. Reason: {0}.

Category:
Security

Cause:
Failed to retrieve value. Reason: {0}.

Action:
See error message.

JPS-08513
Failed to search component types. Reason: {0}.

Category:
Security

Cause:
Failed to search component types. Reason: {0}.

Action:
See error message.

JPS-08514
Failed to search system XLF. Reason: {0}.

Category:
Security

Cause:
Failed to search system XLF. Reason: {0}.

Action:
See error message.

JPS-08515
Failed to search XLF for component {0}. Reason: {1}.

Category:
Security

Cause:
Failed to search XLF for component {0}. Reason: {1}.

Action:
See error message.

JPS-08516
Failed to search system definition. Reason: {0}.

Category:
Security

Cause:
Failed to search system definition. Reason: {0}.

Action:
See error message.

JPS-08517
System audit definition already exists.

Category:
Security

Cause:
System audit definition already exists.

Action:
See error message.

JPS-08518
Failed to create system audit definition. Reason: {0}.

Category:
Security

Cause:
Failed to create system audit definition. Reason: {0}.

Action:
See error message.

JPS-08519
Error in creating filter tree. Reason: {0}.

Category:
Security

Cause:
Error in creating filter tree. Reason: {0}.

Action:
See error message.

JPS-08520
Audit definition {0} is invalid.

Category:
Security

Cause:
Audit definition {0} is invalid.

Action:
See error message.

JPS-08521
Attribute mapping table {0} for component type {1} is invalid.

Category:
Security

Cause:
Attribute mapping table {0} for component type {1} is invalid.

Action:
See error message.

JPS-08522
Filter config {0} for component type {1} is invalid.

Category:
Security

Cause:
Filter config {0} for component type {1} is invalid.

Action:
See error message.

JPS-08523
Component type value {0} is invalid.

Category:
Security

Cause:
Component type value {0} is invalid.

Action:
See error message.

JPS-08524
System definition {0} is invalid.

Category:
Security

Cause:
System definition {0} is invalid.

Action:
See error message.

JPS-08525
Audit definition for component type {0} not found.

Category:
Security

Cause:
Audit definition for component type {0} not found.

Action:
See error message.

JPS-08526
XLF for component type {0} not found.

Category:
Security

Cause:
XLF for component type {0} not found.

Action:
See error message.

JPS-08527
Attribute mapping table for component type {0} not found.

Category:
Security

Cause:
Attribute mapping table for component type {0} not found.

Action:
See error message.

JPS-08528
Filter config for component type {0} not found.

Category:
Security

Cause:
Filter config for component type {0} not found.

Action:
See error message.

JPS-08529
Generic attribute groups not found.

Category:
Security

Cause:
Generic attribute groups not found.

Action:
See error message.

JPS-08530
Failed to search audit definition in audit store. Reason: {0}.

Category:
Configuration

Cause:
Failed to search audit definition in audit store. Reason: {0}.

Action:
Ensure that the audit store configuration for audit service are correct in jps-config.xml.

JPS-08531
Failed to create audit metadata in audit store. Reason: {0}.

Category:
Configuration

Cause:
Failed to create audit metadata in audit store. Reason: {0}.

Action:
Ensure that the audit store configuration for audit service are correct in jps-config.xml.

JPS-08532
Audit definition "{0}" in destination store does not match the one in source store.

Category:
Configuration

Cause:
Audit definition "{0}" in destination store does not match the one in source store.

Action:
See error message.

JPS-08533
Component XLF for audit definition "{0}" in destination store does not match the one in source store.

Category:
Configuration

Cause:
Component XLF for audit definition "{0}" in destination store does not match the one in source store.

Action:
See error message.

JPS-08534
Generic attribute groups in destination store do not match those in source store.

Category:
Configuration

Cause:
Generic attribute groups in destination store does not match the one in source store.

Action:
See error message.

JPS-08535
Attribute group "{0}" in destination store does not match the one in source store.

Category:
Configuration

Cause:
Attribute group "{0}" in destination store does not match the one in source store.

Action:
See error message.

JPS-08536
Audit filter config for audit definition "{0}" in destination store does not match the one in source store.

Category:
Configuration

Cause:
Audit filter config for audit definition "{0}" in destination store does not match the one in source store.

Action:
See error message.

JPS-08537
Attribute mapping table for audit definition "{0}" in destination store does not match the one in source store.

Category:
Configuration

Cause:
Attribute mapping table for audit definition "{0}" in destination store does not match the one in source store.

Action:
See error message.

JPS-08538
Event definitions for audit definition "{0}" in destination store does not match the one in source store.

Category:
Configuration

Cause:
Event definitions for audit definition "{0}" in destination store does not match the one in source store.

Action:
See error message.

JPS-08539
Event category "{0}" in destination store does not match the one in source store.

Category:
Configuration

Cause:
Event category "{0}" in destination store does not match the one in source store.

Action:
See error message.

JPS-08540
Level list for audit definition "{0}" in destination store does not match the one in source store.

Category:
Configuration

Cause:
Level list for audit definition "{0}" in destination store does not match the one in source store.

Action:
See error message.

JPS-08541
Filter preset definition list for audit definition "{0}" in destination store does not match the one in source store.

Category:
Configuration

Cause:
Filter preset definition list for audit definition "{0}" in destination store does not match the one in source store.

Action:
See error message.

JPS-08542
Attribute "{0}" in attribute group "{1}" in the destination store does not match the one in source store.

Category:
Configuration

Cause:
Attribute "{0}" in attribute group "{1}" in the destination store does not match the one in source store.

Action:
See error message.

JPS-08543
Custom filter preset definition in filter config of audit definition "{0}" in the destination store does not match the one in source store.

Category:
Configuration

Cause:
Custom filter preset definition in filter config of audit definition "{0}" in the destination store does not match the one in source store.

Action:
See error message.

JPS-08544
Failed to remove component definition "{0}". Reason: {1}.

Category:
Security

Cause:
Failed to remove component definition "{0}". Reason: {1}.

Action:
See error message.

JPS-08545
Failed to update component definition "{0}". Reason: {1}.

Category:
Security

Failed to update component definition "{0}". Reason: {1}.

Action:
See error message.

JPS-08546
Filter preset definition "{0}" in filter config of audit definition "{1}" in the destination store does not match the one in source store.

Category:
Configuration

Cause:
Filter preset definition "{0}" in filter config of audit definition "{1}" in the destination store does not match the one in source store.

Action:
See error message.

JPS-08547
Filter category "{0}" of filter preset definition "{1}" in filter config of audit definition "{2}" in the destination store does not match the one in source store.

Category:
Configuration

Cause:
Filter category "{0}" of filter preset definition "{1}" in filter config of audit definition "{2}" in the destination store does not match the one in source store.

Action:
See error message.

JPS-08548
Cannot register to audit service for component "{0}".

Category:
Security

Cause:
Cannot register component definition "{0}" to audit service. Reason {1}.

Action:
See error message.

JPS-08549
Audit registration service not available.

Category:
Security

Cause:
Audit registration service not available.

Action:
See error message.

JPS-08550
Audit loader startup failed. Cause: "{0}".

Category:
Security

Cause:
Audit loader startup failed.

Action:
See error message.

JPS-08551
Failed to upgrade audit event definition due to incompatible data mapping. Component type: "{0}".

Category:
Security

Cause:
Failed to upgrade audit event definition due to incompatible data mapping. Component type: "{0}".

Action:
See error message.

JPS-08552
Upgrade audit event definition with incompatible data mapping. Component type: "{0}".

Category:
Security

Cause:
Upgrade audit event definition with incompatible data mapping. Component type: "{0}".

Action:
See error message.

JPS-08553
Failed to load opss_audit_registration.xml. Reason "{0}".

Category:
Security

Cause:
Failed to load opss_audit_registration.xml, Reason "{0}".

Action:
See error message.

JPS-08554
Failed to register Component type "{0}" due to malformed version number in event definition.

Category:
Security

Cause:
Failed to register Component type "{0}" due to malformed version number in event definition.

Action:
See error message.

JPS-08555
During provisioning operations, subscriptions will not be accepted

Category:
Security

Cause:

Action:

JPS-08556
Component type value null is invalid.

Category:
Security

Cause:
Component type value null is invalid.

Action:
Use the appropriate componentType while doing registration of component to AuditStore

JPS-08557
Component events definition file is invalid. Reason - "{0}".

Category:
Security

Cause:
Component events definition file is invalid. Reason - "{0}".

Action:
Correct the events definition file based on reason

JPS-08558
Failed to rollback audit registration failure for component "{0}" , Reason "{1}".

Category:
Security

Cause:
Failed to rollback audit registration failure for component "{0}" , Reason "{1}".

Action:
See error message.

JPS-08559
No matching system event definition for EventRef "{0}" , regarded as a custom Event.

Category:
Security

Cause:
No matching system event definition for EventRef "{0}" , regarded as a custom Event.

Action:
See error message.

JPS-09000
Resource type {0} already in use for {1}.

Category:
Security

Cause:
Resource type was already in use.

Action:
Use a different resource type name.

JPS-09001
Resource matching class name is missing. A subtype must not have its own matching algorithm.

Category:
Security

Cause:
Resource matching class name was missing.

Action:
A subtype must not have its own matching algorithm.

JPS-09002
The parameter {0} of type {1} does not exist.

Category:
Security

Cause:
This parameter did not exist.

Action:
See the log files for more details.

JPS-09003
For the parameter {0} more than expected values found for the Application name:{1}, Policy Domain:{2}, Query Parameter:{3}, Actual results: {4}

Category:
Security

Cause:
More then expected values for given parameter found.

Action:
See the log files for more details.

JPS-09004
For type {0} the modification is not allowed for {1}.

Category:
Security

Cause:
Modify operation was not allowed.

Action:
See the log files for more details.

JPS-09005
For the parameter {0} the given value {1} is invalid.

Category:
Security

Cause:
The value for the given parameter was invalid.

Action:
Provide the valid value for the given paramter.

JPS-09006
Resource {0} already in use for {1}.

Category:
Security

Cause:
Resource was already in use.

Action:
Use a different resource name.

JPS-09007
RoleCategory {0} cannot be deleted

Category:
Security

Cause:
The role category is referenced by one or more application roles.

Action:
Modify the application role(s) definition that reference this role category by removing the role category for the application role.

JPS-09008
Application policy for application {0} does not exist.

Category:
Security

Cause:
Application policy did not exist.

Action:
The application policy must exist. Check the policy store.

JPS-09009
Only limited set of properties are supported for resource action search. See the documentation for more details.

Category:
Security

Cause:
The property user to search resource action was invalid.

Action:
Only limited set of properties are supported for resource action search. See the documentation for more details.

JPS-09010
Cannot create permission set {0} with a non existent resource type {1}.

Category:
Security

Cause:
Permission set could not be created without resource type.

Action:
Resource type must be pre-defined to create the permission set.

JPS-09011
Cannot create permission set {0} with a non existent resource {1}.

Category:
Security

Cause:
Permission set could not be created without resource.

Action:
Resource must be pre-defined to create the permission set.

JPS-09012
Search value cannot be null. It can be null only if MATCHER is ANY.

Category:
Security

Cause:
Search value was null. It could be null only if MATCHER is ANY.

Action:
Verify the search value for the given query.

JPS-09013
This application roles {0} does not belong to this application {1}.

Category:
Security

Cause:
This application role did not belong to this application.

Action:
Ensure this application role belongs to this application.

JPS-09014
The application role {0} cannot have null name or unique name for the application {1}.

Category:
Security

Cause:
The name or unique name of this application role was null or invalid.

Action:
Ensure the name or unique name of this application role is valid.

JPS-09015
Application role does not exist in current application.

Category:
Security

Cause:
Application role was not found in current application.

Action:
Ensure the application role belongs to this application.

JPS-09016
Unknown policy store service type {0}.

Category:
Configuration

Cause:
Unknown policy store service type {0}.

Action:
Correct the policy store configuration.

JPS-09017
Policy entry {0} cannot be found.

Category:
Configuration

Cause:
Policy entry {0} cannot be found.

Action:
Correct the policy entry.

JPS-09018
Policy object {0} cannot be found.

Category:
Configuration

Cause:
Policy object {0} cannot be found.

Action:
Correct the policy object.

JPS-09019
{0} could not be cached.

Category:
Configuration

Cause:
{0} did not be cached.

Action:
Ensure the Resource has valid actions.

JPS-09020
Principal entry class "{0}", name "{1}" cannot be created.

Category:
Configuration

Cause:
Principal entry class "{0}", name "{1}" cannot be created.

Action:
Ensure that the principal entry class is correct and entry value is valid.

JPS-09021
Permission entry class "{0}", target "{1}", action "{2}" cannot be created.

Category:
Configuration

Cause:
Permission entry class "{0}", target "{1}", action "{2}" cannot be created.

Action:
Ensure that the permission entry class is correct and entry value is valid.

JPS-09022
Resource entry type "{0}", resource "{1}" cannot be created.

Category:
Configuration

Cause:
Resource entry type "{0}", resource "{1}" cannot be created.

Action:
Ensure that the resource entry class is correct and entry value is valid.

JPS-09023
Resource type entry name "{0}", matcher class "{1}", provider "{2}" cannot be created.

Category:
Configuration

Cause:
Resource type entry name "{0}", matcher class "{1}", provider "{2}" cannot be created.

Action:
Ensure that the resource type entry class is correct and entry value is valid.

JPS-09024
Resource action entry type "{0}", name "{1}" cannot be created.

Category:
Configuration

Cause:
Resource action entry type "{0}", name "{1}" cannot be created.

Action:
Ensure that the resource action entry class is correct and entry value is valid.

JPS-09025
Permission set entry (name: "{0}", actions: "{1}") cannot be created.

Category:
Configuration

Cause:
Permissionset entry name "{0}", actions "{1}" cannot be created.

Action:
Ensure that the permissionset entry class is correct and entry value is valid.

JPS-09026
Role category entry name "{0}" cannot be created.

Category:
Configuration

Cause:
Role category entry name "{0}" cannot be created.

Action:
Ensure that the role category entry class is correct and entry value is valid.

JPS-09027
Grantee DN was missing for principal {0}.

Category:
Configuration

Cause:
Grantee DN was missing for principal {0}.

Action:
Check principal value.

JPS-09028
Failed to get permission for principal {0}. Reason: {1}.

Category:
Configuration

Cause:
Failed to get permission for principal {0}. Reason: {1}.

Action:
Check principal value.

JPS-09029
Total Time to getPermissions in the Application {0} with {1} number of Grantees is: {2} ms.

Category:
Configuration

Cause:
Total Time to getPermissions in the Application {0} with {1} number of Grantees is: {2} ms.

Action:
Check log for details.

JPS-09030
Code signer data {0} cannot be migrated due to limitation in the destination policy store.

Category:
Configuration

Cause:
Code signer data {0} cannot be migrated due to limitation in the destination policy store.

Action:
Check log for details.

JPS-09031
Failed to read java policies for Application: {0}. Reason: {1}.

Category:
Configuration

Cause:
Failed to read java policies for Application: {0}. Reason: {1}.

Action:
Check log for details.

JPS-09032
Only one of permission array {0} and permission entry list {1} can be null or non-null.

Category:
Configuration

Cause:
Only one of permission array {0} and permission entry list {1} can be null/non-null.

Action:
Ensure one of permission array or permission entry list values is null or non-null.

JPS-09033
No grantee found for grantee entry {0}.

Category:
Configuration

Cause:
No grantee found for grantee entry {0}.

Action:
Ensure the grantee exist in the policy store.

JPS-09034
Modification on single-value attribute {0} but contains multiple attribute values.

Category:
Configuration

Cause:
Modification on single-value attribute {0} but contains multiple attribute values.

Action:
Check modification details.

JPS-09035
Failed to create DN for {0}. Reason: {1}.

Category:
Configuration

Cause:
Failed to create DN for {0}. Reason: {1}.

Action:
Check DN name.

JPS-09036
Failed to read JACC policy {0}. Reason: {0}.

Category:
Configuration

Cause:
Failed to read JACC policy {0}. Reason: {0}.

Action:
Check LDAP configuration to resolve this error.

JPS-09037
No application DN found for name {0} under farm {1}.

Category:
Configuration

Cause:
No application DN found for name {0} under farm {1}.

Action:
Check DN name.

JPS-09038
Resource type {0} does not exist for resource {1}

Category:
Security

Cause:
This resource type does not exist.

Action:
Provide a valid resource type.

JPS-09041
Expression component provided for RuleExpressionEntry must not be null.

Category:
Programmatic

Cause:
Expression component provided for RuleExpressionEntry must not be null.

Action:
Check value of ExpressionComponent.

JPS-09042
Invalid expression component provided to RuleExpressionEntry.

Category:
Programmatic

Cause:
Invalid expression component provided to RuleExpressionEntry.

Action:
Check value of ExpressionComponent.

JPS-09043
Function entry for an expression must not be null.

Category:
Programmatic

Cause:
Function entry for an expression must not be null.

Action:
Check value of FunctionEntry.

JPS-09044
Expression component of type {0} not supported.

Category:
Programmatic

Cause:
Expression component of type {0} not supported.

Action:
Check value of ExpressionComponent.

JPS-09045
Minimum number of input parameters must be less than maximum number of input parameters

Category:
Programmatic

Cause:
Minimum number of input parameters must be less than maximum number of input parameters

Action:
Check parameters to constructor of VarArgsInfo.

JPS-09046
The Matcher {0} in the search query is invalid

Category:
Programmatic

Cause:
The matcher in the search query is invalid

Action:
Provide a valid Search Matcher in the query.

JPS-09047
The Property {0} in the search query is invalid

Category:
Programmatic

Cause:
The search property in the query is invalid

Action:
Provide a valid Search property in the query.

JPS-09048
The search value is invalid

Category:
Programmatic

Cause:
The search value in the query is invalid

Action:
Provide a valid Search value in the query.

JPS-09049
Null value provided for {0}

Category:
Programmatic

Cause:
Invalid value provided to DataType object.

Action:
Provide a non-null value

JPS-09050
Host name {0} is invalid for DNS name

Category:
Programmatic

Cause:
Invalid value provided as DNS host.

Action:
Provide a valid value

JPS-09051
Invalid data. Lower DNS port {0} is greater than higher port {1}.

Category:
Programmatic

Cause:
Lower port is greater than upper range.

Action:
Provide a valid value

JPS-09052
Unknown format, can not parse valid date from string {0}.

Category:
Programmatic

Cause:
Unknown format for date string.

Action:
Provide a valid value

JPS-09053
Invalid string {0} for fractional seconds.

Category:
Programmatic

Cause:
Invalid string for fractional seconds.

Action:
Provide a valid value

JPS-09054
Invalid string {0} for hour offset.

Category:
Programmatic

Cause:
Invalid string for hour offset.

Action:
Provide a valid value

JPS-09055
Invalid string {0} for minute offset.

Category:
Programmatic

Cause:
Invalid string for minute offset.

Action:
Provide a valid value

JPS-09056
Negative value {0} not allowed.

Category:
Programmatic

Cause:
Negative value not aloowed.

Action:
Provide a valid value

JPS-09057
Invalid string {0} for dayTimeDuration. Cannot parse.

Category:
Programmatic

Cause:
Invalid string format for dayTimeDuration

Action:
Provide a valid value

JPS-09058
Invalid string {0} for RFC822 name.

Category:
Programmatic

Cause:
RFC822Name cannot end with @.

Action:
Provide a valid value

JPS-09059
Invalid string {0} for RFC822 domain.

Category:
Programmatic

Cause:
Invvalid RFC822 domain name.

Action:
Provide a valid value

JPS-09060
Invalid string {0} for yearMonthDuration.

Category:
Programmatic

Cause:
Invalid string format for yearMonthDuration

Action:
Provide a valid value

JPS-09061
Invalid string {0} for OpssTime, must be a number.

Category:
Programmatic

Cause:
Invalid string for time field, must be a number.

Action:
Provide a valid value

JPS-09062
Invalid value {0}, must be between lower range {1} and upper range {2}.

Category:
Programmatic

Cause:
Value provided for data type not in required range.

Action:
Provide a valid value

JPS-09063
Invalid inputted Hex Binary value {0}.

Category:
Programmatic

Cause:
Invalid value provided for OpssHexBinary data type.

Action:
Provide a valid value

JPS-09064
Invalid extension manager, cannot be used to find constraint attributes and functions.

Category:
Programmatic

Cause:
Internal error: invalid extension manager cannot be used to find constraint attributes or functions.

Action:
Provide correct function.

JPS-09400
Attribute key cannot be null.

Category:
Requests/Responses

Cause:
Attribute key was null.

Action:
Provide a valid attribute key.

JPS-09401
Name of attribute key cannot be null.

Category:
Requests/Responses

Cause:
Name of attribute key was null.

Action:
Provide a valid name of attribute key.

JPS-09402
Attribute service instance not found in the default context.

Category:
Configuration

Cause:
Attribute service instance not found in the default JpsContext.

Action:
Configure an attribute service instance in the default JpsContext.

JPS-09500
Template name is not initialized, please follow the document for method execution order

Category:
Requests/Responses

Cause:
Template name is not initialized.

Action:
Ensure that execution order is followed as per document

JPS-09501
Either template name or target store or target key or credential object is passed as NULL, {0} is not inserted

Category:
Requests/Responses

Cause:
Either template name or target store or target key or credential objcet is passed as NULL, corresponding credential/key object is not inserted

Action:
Ensure that all the parameters are passed to insert credential/key object

JPS-09502
Error occurred when initializing security artifacts. Reason {0}

Category:
Requests/Responses

Cause:
Security Artifact initialization failed

Action:
Check the logs

JPS-09503
Error occurred when cleaning the environment, please clean it manually

Category:
Requests/Responses

Cause:
Error occurred while cleaning the environment

Action:
Please clean it manually

JPS-09504
Error occurred when processing credentials for template {0}. Reason {1}

Category:
Requests/Responses

Cause:
Failed while processing credentials

Action:
Check the logs

JPS-09505
Error occurred when processing keys for template {0}. Reason {1}.

Category:
Requests/Responses

Cause:
Failed while processing keys

Action:
Check the logs

JPS-09506
Error occurred when commiting changes, calling abort method to clean up the environment

Category:
Requests/Responses

Cause:
Failed while commiting changes

Action:
Please check the logs

JPS-09507
No templates are processed, please call processXXX() methods

Category:
Requests/Responses

Cause:
No templates are processed, please call processXXX() methods

Action:
Please call processXXX() methods before calling end() method

JPS-09508
No artifacts found for template {0}

Category:
Requests/Responses

Cause:
No templates specified in component-security-info.xml file

Action:
Please add new template in component-security-info.xml file

JPS-09509
No processing mode specified for template {0}

Category:
Requests/Responses

Cause:
No processing mode specified for a template

Action:
Please add processing mode for a template in component-security-info.xml file

JPS-09510
No credentials found for template {0}

Category:
Requests/Responses

Cause:
No credentials are available to seed into OPSS security store for template {0}

Action:
Please check the logs or corresponding credential data file in template

JPS-09511
Not able to instantiate credential store object for credential store {0}

Category:
Requests/Responses

Cause:
Scratch directory credential store initialization failed

Action:
Please check the logs

JPS-09512
Not able to instantiate key store service object for key stores {0}

Category:
Requests/Responses

Cause:
Scratch directory key store initialization failed

Action:
Please check the logs

JPS-09513
Not able to get the handle for bootstrap cwallet.sso {0}

Category:
Requests/Responses

Cause:
Not able to get the handle for bootstrap wallet

Action:
Please check the logs

JPS-09514
Credential already exist for map {0} and key {1}

Category:
Requests/Responses

Cause:
Credentials already exist in the Opss CredentialStore Implementation

Action:
Pass credentials with unique map and key name

JPS-09515
CIE CredentialsInfo object should not be null

Category:
Requests/Responses

Cause:
Passed CIE CredentialStoreInfo object is NULL

Action:
Please pass valid CIE credential object

JPS-09516
CIE KeystoreInfo object should not be null

Category:
Requests/Responses

Cause:
Passed CIE KeystoresInfo object is NULL

Action:
Please pass valid CIE key store object

JPS-09517
CIE PrivateKeyInfo object should not be null

Category:
Requests/Responses

Cause:
Passed CIE PrivateKeyInfo object is NULL

Action:
Please pass valid CIE private key object

JPS-09518
Alias '"{0}'" already exist in key store {1}

Category:
Requests/Responses

Cause:
Alias already exist in the Opss key store Implementation

Action:
Please key object with unique alias

JPS-09519
Error occurred when processing audit data for template {0}. Reason {1}

Category:
Requests/Responses

Cause:
Failed while processing audit data

Action:
Check the logs

JPS-09520
Error occurred when processing authorization data for template {0}. Reason {1}.

Category:
Requests/Responses

Cause:
Failed while processing authorization data

Action:
Check the logs

JPS-09521
More than one application stripe {0} found in authorization data file {1}.

Category:
Requests/Responses

Cause:
More than one application stripe in authorization data file

Action:
Ensure that the authorization file does not have more than one application stripe

JPS-09522
Authorization data file {0} is not present.

Category:
Requests/Responses

Cause:
No authorization data file found.

Action:
Verify if the file is present

JPS-09523
No keys found for template {0}

Category:
Requests/Responses

Cause:
No keys are available to seed into OPSS security store for template {0}

Action:
Please check the logs or corresponding keystore data file in template

JPS-09524
More than one component types found in audit store data file {0} for template {1}.

Category:
Requests/Responses

Cause:
More than one component types in audit store data file

Action:
Ensure that the audit store file does not have more than one component type

JPS-09525
Invalid target store is configured in component-security-info.xml. Target store could only be 'SEED' or 'CUSTOMER'.

Category:
Requests/Responses

Cause:
Invalid target store is configured in component-security-info.xml.

Action:
Ensure that target store is 'SEED' or 'CUSTOMER'.

JPS-09600
File {0} is cannot be found. Check if the specified file is expected in the specified location.

Category:
Configuration

Cause:
File {0} cannot be found.

Action:
Check if the specified file exists and accessible in the specified location.

JPS-09601
The value "{0}" is invalid for {1}.

Category:
Configuration

Cause:
An invalid value was provided for this configuration.

Action:
Provide the correct value.

JPS-09602
Fail to find default JPS Context in {0}.

Category:
Configuration

Cause:
Fail to find default JPS Context in the jps-config.xml.

Action:
Check content of jps-config.xml.

JPS-09603
SecurityContext.getSharedSecretStore and getSharedSecretStorePassword return inconsistent values.

Category:
Configuration

Cause:
SecurityContext.getSharedSecretStore and getSharedSecretStorePassword return inconsistent values.

Action:
Both shared secret store name and password are required for configuring a domain with shared database security store.

JPS-09604
JDBC Information {0} is missing for configuring security store to database.

Category:
Configuration

Cause:
JDBC Information is missing for configuring security store to database.

Action:
Check if all required jdbc information is supplied.

JPS-09605
Fail to find JPS Context with id {0} in {1}.

Category:
Configuration

Cause:
Fail to find the specific JPS Context in the jps-config.xml.

Action:
Check content of jps-config.xml.

JPS-09606
Error encountered while importing encryption key in shared database security store.

Category:
Configuration

Cause:
Error encoutered while seeding encryption key in shared database security store.

Action:
Check if encryption key is exported and imported properly.

JPS-09607
OpssSecurityConfiguration is in invalid state.

Category:
Configuration

Cause:
OpssSecurityConfiguration is in invalid state, it has not been initialized properly

Action:
If creating expanded domain, check if database is up and all the required datasource information are provided.

JPS-09608
OpssSecurityConfiguration is in invalid state, start method is not invoked prior to other methods.

Category:
Configuration

Cause:
OpssSecurityConfiguration is in invalid state - start() method is not invoked by CIE prior to other methods

Action:
Check if CIE is invoking OpssSecurityConfiguration in proper order.

JPS-09609
Failed to initialize OPSS security context based on SecurityContext object from CIE.

Category:
Configuration

Cause:
Failed to initialize OPSS security context based on SecurityConext object passed from CIE.

Action:
Check the logs.

JPS-09610
Error during updating audit loader repositoryType. Exception {0}

Category:
Configuration

Cause:
Failed to update audit loader repository type to DB.

Action:
Check the logs.

JPS-09611
Error updating audit loader credential in bootstrap wallet. Exception {0}

Category:
Configuration

Cause:
Failed to add audit loader credentials to bootstrap wallet

Action:
Check the logs.

JPS-09612
JDBC password for {0} is missing for configuring security store to database.

Category:
Configuration

Cause:
JDBC password is missing for configuring security store to database.

Action:
Check if jdbc password is supplied.

JPS-09613
JDBC username for {0} is missing for configuring security store to database.

Category:
Configuration

Cause:
JDBC username is missing for configuring security store to database.

Action:
Check if jdbc username is supplied.

JPS-09614
The supplied password for property {0} is invalid.

Category:
Configuration

Cause:
The supplied password for property {0} is invalid.

Action:
Please provide valid password.

JPS-09615
Update jps configuration file(s) failed for service {0}. Exception {1}

Category:
Configuration

Cause:
Update jps configuration file(s) failed for service {0}.

Action:
Check log file for errors.

JPS-09616
The schema {0} is already in use for security store(s). Please create a new schema.

Category:
Configuration

Cause:
The schema {0} is already in use for security store(s).

Action:
Please create a new schema.

JPS-09617
Failed to create a domain with shared security store because no security store was found in the database schema {0}.

Category:
Configuration

Cause:
Failed to create a domain with shared security store because no security store was found in the database schema {0}.

Action:
Please check if a security store is configured properly for the database schema.

JPS-09618
Data migration failed for configurator {0}

Category:
Configuration

Cause:
Failed to migrate data for configurator {0}.

Action:
Please check the logs and check if a security store is configured properly for the database schema.

JPS-09619
Jps test service failed for configurator

Category:
Configuration

Cause:
Jps test service failed for configurator.

Action:
Please check the logs and check if a security store is configured properly for the database schema.

JPS-09620
Failed to rollback data.

Category:
Configuration

Cause:
Failed to rollback data.

Action:
Please check the logs

JPS-09621
No entry found for artifact type {0} in component-security-info.xml file of template {1}.

Category:
Requests/Responses

Cause:
Artifact is not registered in component-security-info.xml file of template, but artifact data is present as part of template.

Action:
Please register missing artifact in component-security-info.xml file

JPS-09622
Error during configuring DB security store. Exception {0}.

Category:
Configuration

Cause:
Error occured during configuring DB security store.

Action:
Check the logs

JPS-09623
Error during updating JPS configuration in shared DB security store. Exception {0}.

Category:
Configuration

Cause:
Error updating JPS configuration in shared DB security store.

Action:
Check the logs

JPS-09624
JDBC database name for {0} is missing for configuring security store to database.

Category:
Configuration

Cause:
JDBC database name is missing for configuring security store to database.

Action:
Check if jdbc database is supplied.

JPS-09625
Jps test service completed for configurator.

Category:
Configuration

Cause:
Jps test service completed for configurator.

Action:
No action required.

JPS-09626
Rolling back of data for configurator is completed.

Category:
Configuration

Cause:
Rolling back of data for configurator is completed.

Action:
No action required

JPS-09627
Trying to rollback data for configurator.

Category:
Configuration

Cause:
Trying to rollback data for configurator.

Action:
No action required

JPS-09630
Failed to seed MDS credential to bootstrap cwallet file with specified key/map {0}.

Category:
Configuration

Cause:
Failed to seed MDS credential to bootstrap cwallet file.

Action:
Check the logs

JPS-09631
Failed to create tenant config profile {0} in MDS.

Category:
Configuration

Cause:
Failed to create tenant config profiles in MDS.

Action:
Check the logs

JPS-09632
More than one config-security-file.xml are round in templates.

Category:
Configuration

Cause:
More than one config-security-file.xml in templates are found.

Action:
Check the logs

JPS-09633
Start to provisioning partition {0} with OPSS resource group. Parameters: {1}.

Category:
Configuration

Cause:
Start to provisioning a partition with OPSS resource group.

Action:
No action required

JPS-09634
Rollback partition provisioning.

Category:
Configuration

Cause:
Rollback partition provisioning.

Action:
No action required

JPS-09635
Partition provisioning with OPSS resource group is completed.

Category:
Configuration

Cause:
Successfully provisioning a partition with OPSS resource group.

Action:
No action required

JPS-10000
There was an internal error in the policy store.

Category:
Security

Cause:
The opearion is not allowed for multivalued attribute.

Action:
The opearion is not allowed for multivalued attribute.Supply a valid opearion

JPS-10001
Exception happened while decoding value: {0}.

Category:
Security

Cause:
The encoding format is not correct.

Action:
Check encoding format of String value.

JPS-10002
Container is not ready. Reason: {0}.

Category:
Security

Cause:
Container is not ready.

Action:
Wait for container to start up successfully.

JPS-10003
Null search value is not allowed, unless the matcher is ANY.

Category:
Security

Cause:
Query value is null but the matcher is not ANY.

Action:
Do not use null query value if the matcher is not ANY.

JPS-10004
The search value {0} is invalid.

Category:
Security

Cause:
Query value is invalid.

Action:
Use an valid query value.

JPS-10005
Access denied. {0}

Category:
Security

Cause:
Access to policy store is denied.

Action:
Do not perform such operation on policy store.

JPS-10050
The application {0} cannot be found at runtime due to {1}.

Category:
Security

Cause:
Corresponding runtime application does not exist.

Action:
Check if policy is properly distributed.

JPS-10051
Policy object "{0}" already exists in application policy "{1}".

Category:
Security

Cause:
Policy object with same name exists in this application policy.

Action:
Try a different name.

JPS-10052
The list of runtime events is NULL.

Category:
Security

Cause:
The list of runtime events is NULL

Action:
Please contact the security administrator.

JPS-10053
The runtime events is NULL.

Category:
Security

Cause:
The runtime event is NULL

Action:
Please contact the security administrator.

JPS-10100
The policy domain "{0}" does not exist.

Category:
Security

Cause:
The policy domain does not exist

Action:
Check the policy domain name.

JPS-10102
The policy domain "{0}" already exists.

Category:
Security

Cause:
The policy domain exists

Action:
Create a policy domain with a different name.

JPS-10151
Application role {0} does not exist

Category:
Security

Cause:
The application role does not exist.

Action:
Provide correct application role.

JPS-10152
Application Role {0} is used.

Category:
Security

Cause:
Application Role is used.

Action:
Remove the objects which use this application role.

JPS-10153
Application role {0} does not belong to current application.

Category:
Security

Cause:
Application role does not belong to current application policy.

Action:
Modify the application role with application role manager from correct application policy.

JPS-10154
Class {0} is not supported.

Category:
Security

Cause:
The principal class specified is not supported.

Action:
Provide correct principal class.

JPS-10155
The application role attribute {0} is not supported for app role search.

Category:
Security

Cause:
The application role attribute specified is not supported.

Action:
Provide supported attribute.

JPS-10156
Error occurred while fetching the application role {0}.

Category:
Security

Cause:
The internal error occured while fetching the application role.

Action:
Refer to the log files for details and correct the error.

JPS-10157
More than one results found for given Application role:{0}, Application name {1}, query:{2} and Actual result: {3}.

Category:
Security

Cause:
More than one results found for application name.

Action:
Refer to the log files for details and correct the error.

JPS-10158
Invalid parameter.

Category:
Security

Cause:
Invalid parameter value.

Action:
Please check the values are of required type.

JPS-10159
Application Role {0} has an invalid unique name

Category:
Security

Cause:
Application role has an invalid unique name

Action:
See the log files for more details.

JPS-10160
The Application role {0} does not belong to application. The application role dn {1} and unique name {2} are not matching.

Category:
Security

Cause:
The Application role does not belong to application contex.

Action:
See the log files for more details.

JPS-10161
Internal error- More than one grantee entries found.

Category:
Security

Cause:
Internal error- More than one grantee entries found.

Action:
See the log files for more details.

JPS-10162
Grantee DN was missing

Category:
Security

Cause:
Grantee DN was missing

Action:
See the log files for more details.

JPS-10163
Internal error while revoking the permissions. Number of permissions to revoke (or delete) {0} : though only {1} permission(s) would be revoked (or deleted) if this operation were to proceed

Category:
Security

Cause:
Internal error while revoking the permissions.

Action:
See the log files for more details.

JPS-10164
Only one of permission list and permission entry list can be null/non-null.

Category:
Security

Cause:
Only one of permission list and permission entry list can be null/non-null

Action:
See the log files for more details.

JPS-10165
MATCHER.ANY not allowed for this kind of search operation

Category:
Security

Cause:
MATCHER.ANY not allowed for this kind of search operation

Action:
Search is not allowed for the MATCHER.ANY

JPS-10166
Error occurred during performing the operation {0}.

Category:
Security

Cause:
Error occured during performing the operation.

Action:
See the log files for more details.

JPS-10167
Obligation does not exist for the policy domain {0}.

Category:
Security

Cause:
Obligation does not exist for the policy domain {0}.

Action:
See the log files for more details.

JPS-10168
Error occurred while preparing the principal in {0} method of {1} class : {2}. In standalone mode, weblogic specific jars should not be in classpath. Please check the classpath and try again.

Category:
Security

Cause:
Fail to resolve principal.

Action:
Check classpath which may contain weblogic specific jars.

JPS-10169
Default SystemAdminRole should be granted to at least one principal.

Category:
Security

Cause:
Revoking last member of default admin role SystemAdmin

Action:
Keep at least one member of default admin role SystemAdmin

JPS-10200
Administration role {0} already exists

Category:
Security

Cause:
Cannot have two administration roles with the same name.

Action:
Provide a new name to the administration role.

JPS-10201
Administration role {0} does not exist

Category:
Security

Cause:
Administration role is not found.

Action:
Check the administration role name.

JPS-10202
Administration role {0} is used

Category:
Security

Cause:
Administration role is used.

Action:
Remove administration role members first.

JPS-10203
Administration role {0} does not belong to current context

Category:
Security

Cause:
Administration role does not belong to current context.

Action:
Use it in correct context.

JPS-10204
Cannot create admin role with default name {0}

Category:
Security

Cause:
Cannot create admin role with reserved name.

Action:
Use another name for admin role.

JPS-10205
Cannot delete default admin role {0}

Category:
Security

Cause:
Cannot delete default admin role.

Action:
Check the admin role name for deletion.

JPS-10206
Cannot grant {0}, {1} to admin role because its super admin role has no such privilege

Category:
Security

Cause:
Cannot grant privileges to admin role whose super role has not.

Action:
Check the admin resource action to grant.

JPS-10207
Admin resource {0} is not for this scope {1}

Category:
Security

Cause:
This admin resource is not for this scope

Action:
Check the admin resource to grant.

JPS-10208
Cannot change rights of default admin role {0}

Category:
Security

Cause:
Cannot change righs of default admin role for a scope

Action:
Check the admin role name.

JPS-10209
The value for the SEARCH_PROPERTY.PRINCIPAL does implement the java.security.Principal interface. It is of type "{0}".

Category:
Security

Cause:
The search by value is not an instance of java.security.Principal

Action:
Supply an object of type java.security.Principal

JPS-10210
The value for the SEARCH_PROPERTY.PRINCIPAL_NAME is not of type java.lang.String. It is of type "{0}".

Category:
Security

Cause:
The search by value is not an instance of java.lang.String

Action:
Supply an object of type java.lang.String

JPS-10211
Administration role cannot have more than one grantee for parameter Application:{0}, policy Domain:{1}, Query Parameter:{2}, Actual results:{3}.

Category:
Security

Cause:
The admin role cannot have more than one grantee entry.

Action:
Check only one grantee entry available to admin role.

JPS-10250
Resource type reference should not be null.

Category:
Security

Cause:
The parameter resource type reference is null.

Action:
Use a valid object.

JPS-10251
The resource type reference is invalid.

Category:
Security

Cause:
The current resource type reference is invalid.

Action:
Use a valid resource type reference.

JPS-10252
The resource type "{0}" already exists.

Category:
Security

Cause:
The resource type has existed.

Action:
Make sure the resource type does not exist.

JPS-10253
The super resource type {0} does not exist.

Category:
Security

Cause:
The resource type is referring an invalid super resource type.

Action:
Make sure the super resource type exist.

JPS-10254
The resource type {0} should not have its own matcher since it has super type.

Category:
Security

Cause:
The resource type has both its own matching algorithm and super type.

Action:
Remove matching algorithm if the resource type should have super type. Otherwise, remove super type.

JPS-10255
Resource type search context should not be null.

Category:
Security

Cause:
The resource type context could not be gotten.

Action:
Make sure the application policy is available.

JPS-10256
Could not get an available data manager.

Category:
Security

Cause:
The data manager is invalid.

Action:
Make sure policy store and related configuration are correct.

JPS-10257
The modification operator {0} is invalid.

Category:
Security

Cause:
The operator in ModificationItem is invalid.

Action:
Make sure the operation is one of DirContext.ADD_ATTRIBUTE, DirContext.REPLACE_ATTRIBUTE and DirContext.REMOVE_ATTRIBUTE.

JPS-10258
The property name {0} is unknown.

Category:
Security

Cause:
The attribute ID in ModificationItem is undefined.

Action:
Make sure the attribute ID is a valid one.

JPS-10259
The name of resource type could not be modified.

Category:
Security

Cause:
Resource type name could not be modified.

Action:
Do not put resource type name in ModificationItem.

JPS-10260
The super type of resource type could not be modified.

Category:
Security

Cause:
The super type of resource type could not be modified.

Action:
Do not put super type in ModificationItem.

JPS-10261
The matching algorithm of resource type could not be modified.

Category:
Security

Cause:
The matching algorithm of resource type could not be modified.

Action:
Do not put matching algorithm in ModificationItem

JPS-10262
The action delimiter of resource type could not be modified.

Category:
Security

Cause:
The action delimiter of resource type could not be modified.

Action:
Do not put action delimiter in ModificationItem.

JPS-10263
The operation REPLACE_ATTRIBUTE could not be used to the allowed actions of resource type.

Category:
Security

Cause:
The operation REPLACE_ATTRIBUTE could not be used to the allowed actions of resource type.

Action:
Use REMOVE_ATTRIBUTE and ADD_ATTRIBUTE in ModificationItem.

JPS-10264
The property {0} of resource type is single, could not have more than one value.

Category:
Security

Cause:
The property could not have more than one value.

Action:
First remove the existing value before adding new one.

JPS-10265
Could not add or replace the property {0} since there is no value provided.

Category:
Security

Cause:
There is no value provided when trying to add or replace an property.

Action:
Provide the new value.

JPS-10266
The value data type of property {0} should be String.

Category:
Security

Cause:
The value data type of property is not String.

Action:
Use a String object as value.

JPS-10267
The resource type {0} does not exist.

Category:
Security

Cause:
The resource type does not exist.

Action:
Make sure the resource type exist.

JPS-10268
The resource type {0} is in use, could not be deleted.

Category:
Security

Cause:
The resource type could not be deleted without cascade since it is in use.

Action:
Cascade delete it or first remove all referring objects.

JPS-10269
The operation REPLACE_ATTRIBUTE could not be used to the resource type attribute

Category:
Security

Cause:
The operation REPLACE_ATTRIBUTE could not be used to the resource type attribute

Action:
Use REMOVE_ATTRIBUTE and ADD_ATTRIBUTE in ModificationItem.

JPS-10270
The resource type attribute {0} is used in policy(-ies) and can not be deleted.

Category:
Security

Cause:
The resource type attribute being deleted was used in one or morepolicies and could not be deleted.

Action:
Before deleting the resource attribute, make sure it is not used.

JPS-10271
The resource matcher class of resource type {0} could not be modified to {1}.

Category:
Security

Cause:
The resource type matcher class was changed while modifying.

Action:
Keep matcher class unchanged.

JPS-10272
Permission Class not found in the classpath: {0}

Category:
Security

Cause:
The permission class was not found in the class path.

Action:
Make sure that the permission class is part of the class path for the program.

JPS-10273
Permission class expected to be either oracle.security.jps.ResourcePermission or extending oracle.security.jps.AbstractTypedPermission but found {0} Resource Type: {1} is sharing permission class with Resource Type: {2}

Category:
Security

Cause:
The Permission class is not either ResourcePermission or Abstracted Permission

Action:
The Permission class for the resource type must be a Resource permission

JPS-10274
Permission should be associated with a Resource Type. Permission Name: {0}

Category:
Security

Cause:
The permission should have a resource type associated with it

Action:
Make sure that the permission has a resource type associated with it

JPS-10275
Resource Type Matcher Class and Permissions do not match. {0} and {1} do not match

Category:
Security

Cause:
Resource Type Matcher Class and Permissions do not match.

Action:
Make sure that the Matcher Class and Permissions match.

JPS-10276
Cannot determine the Resource Type from the permission {0}

Category:
Security

Cause:
Cannot determine the Resource Type from the permission.

Action:
Make sure that there is a resource type associated with the permission class

JPS-10277
Allowed attributes can not be modified.

Category:
Security

Cause:
Allowed attributes can not be modified.

Action:
Make sure not modifying allowed attributes

JPS-10278
Requested modification to the resource type {0} is not allowed.

Category:
Security

Cause:
Requested modification to the resource type is not allowed.

Action:
Make sure not to make certain type of changes to the resource type when it is used by resources

JPS-10279
The custom resource matcher class of resource type {0} could not be modified to {1}.

Category:
Security

Cause:
The custom resource matcher class was changed while modifying the resource type.

Action:
Keep custom resource matcher class unchanged.

JPS-10280
The resource attribute {0} does not exist in the resource type {1}.

Category:
Security

Cause:
The resource attribute does not exist in the resource type.

Action:
Check all the valid resource attributes in the resource type.

JPS-10400
Resource reference should not be null.

Category:
Security

Cause:
The parameter resource reference is null.

Action:
Use a valid object.

JPS-10401
The resource reference is invalid.

Category:
Security

Cause:
The current resource reference is invalid.

Action:
Use a valid resource reference.

JPS-10402
The resource {0} does not exist.

Category:
Security

Cause:
The resource does not exist.

Action:
Make sure the resource exist.

JPS-10403
Could not get an available data manager.

Category:
Security

Cause:
The data manager is invalid.

Action:
Make sure policy store and related configuration are correct.

JPS-10404
The resource type {0} does not exist.

Category:
Security

Cause:
The resource type does not exist.

Action:
Make sure the resource type exist.

JPS-10405
The resource "{0}" with type "{1}" already exists in current application policy.

Category:
Security

Cause:
The resource to be created has existed.

Action:
Make sure the resource does not exist.

JPS-10406
The modification operator {0} is invalid.

Category:
Security

Cause:
The operator in ModificationItem is invalid.

Action:
Make sure the operation is one of DirContext.ADD_ATTRIBUTE, DirContext.REPLACE_ATTRIBUTE and DirContext.REMOVE_ATTRIBUTE.

JPS-10407
The property name {0} is unknown.

Category:
Security

Cause:
The attribute ID in ModificationItem is undefined.

Action:
Make sure the attribute ID is a valid one.

JPS-10408
The name and type of resource could not be modified.

Category:
Security

Cause:
The name and type of resource could not be modified.

Action:
Do not put resource name and type in ModificationItem.

JPS-10409
The property {0} of resource is single, could not have more than one value.

Category:
Security

Cause:
The property could not have more than one value.

Action:
First remove the existing value before adding new one.

JPS-10410
Could not add or replace the property {0} since there is no value provided.

Category:
Security

Cause:
There is no value provided when trying to add or replace an property.

Action:
Provide the new value.

JPS-10411
The resource {0} is in use, could not be deleted.

Category:
Security

Cause:
The resource could not be deleted without cascade since it is in use.

Action:
Cascade delete it or first remove all referring objects.

JPS-10412
The resource attribute {0} already exists in the current entry.

Category:
Security

Cause:
The resource attribute could not be added since it already exists.

Action:
Remove duplicate resource attributes.

JPS-10413
The resource action {0} already exists in the current entry.

Category:
Security

Cause:
The resource action could not be added since it already exists.

Action:
Remove duplicate resource actions

JPS-10414
The resource attribute {0} could not be deleted since it does not exist.

Category:
Security

Cause:
The resource attribute could not be deleted since it does not exist.

Action:
Check if the resource attribute exists.

JPS-10415
The resource action {0} could not be deleted since it does not exist.

Category:
Security

Cause:
The resource action could not be deleted since it does not exist.

Action:
Check if the resource action exists

JPS-10416
Resource {0} does not belong to the context.

Category:
Security

Cause:
The resource does not belong to current context

Action:
Pass in correct resource.

JPS-10417
Resource query across different resource type is not allowed.

Category:
Security

Cause:
Resource query across different resource type is not allowed

Action:
Pass in correct query parameter.

JPS-10418
Cannot delete a resource that has one more child resources.

Category:
Security

Cause:
Can not detele a resource that has one or more child resources

Action:
Delete all child resources and then try again.

JPS-10419
Resource hierarchy type change is not allowed.

Category:
Security

Cause:
Resource hierarchy type change is not allowed.

Action:
Check the resource hierarchy type

JPS-10420
Resource name must begin with the resource name delimiter.

Category:
Security

Cause:
Resource name must begin with the resource name delimiter

Action:
Add resource name delimiter in the begining of the resource name.

JPS-10421
The given all action key word exists in actions.

Category:
Security

Cause:
The given all action value already exists

Action:
Check the input all action value and check for duplicate values.

JPS-10422
The resource attribute {0} is used in policy(-ies) and can not be deleted.

Category:
Security

Cause:
The resource attribute is used in policy(-ies) and can not be deleted.

Action:
Before deleting the resource attribute, make sure it is not used.

JPS-10423
The action {0} is used by the {1} and can not be deleted.

Category:
Security

Cause:
The action is used by the permissionSet/permission and can not be deleted.

Action:
Check if the action is used in any PermissionSet/Permission before deleting.

JPS-10424
The resourceType {0} of hierarchy type is invalid as its parent is null.

Category:
Security

Cause:
The heirarical resourcetype's parent is null.

Action:
Make sure to provide a valid name for the heirarical resourcetype

JPS-10425
The resource attribute {0} contains duplicate value {1}.

Category:
Security

Cause:
The resource attribute already contains this value.

Action:
Remove duplicate resource attributes values.

JPS-10426
Cannot set all actions keyword for resource type with non-null matcher class.

Category:
Security

Cause:
All actions keyword cannot be set to resource type with matcher class

Action:
Do not set all actions keyword for a resource type with a matcher class.

JPS-10427
The resource name expression "{0}" is not a valid Java regular expression.

Category:
Security

Cause:
Regular expression provided for resource name expression is invalid.

Action:
Check that the resource name expression is a valid Java regular expression.

JPS-10428
The resource {0} of type {1} does not exist.

Category:
Security

Cause:
The resource of the resource type does not exist.

Action:
Make sure the resource of the resource type exists.

JPS-10429
The value data type of property {0} should be String and not {1}.

Category:
Security

Cause:
The value data type of property is not String.

Action:
Use a String object as value.

JPS-10430
The Resource name {0} has an invalid format

Category:
Security

Cause:
Too many delimiters in the resurce name

Action:
Limit the number of delimiters in the beginning and middle of resource name to one.

JPS-10431
Wrong isSingle property for the attribute {0}; expected {1}, but {2}.

Category:
Security

Cause:
Wrong isSingle property of resource attribute

Action:
Ensure isSingle property of the attribute in resource is the same as the definiton in resource type

JPS-10432
Wrong DataType property for the attribute {0}; expected {1}, but {2}.

Category:
Security

Cause:
Wrong DataType property of resource attribute

Action:
Ensure DataType property of the attribute on resource is the same as the definition in resource type

JPS-10451
Permission set {0} does not belong to the context.

Category:
Security

Cause:
The permission set does not belong to current context

Action:
Pass in correct permission set.

JPS-10452
Permission set {0} has ResourceActionsEntry with null ResourceEntry and null ResourceNameExpression.

Category:
Security

Cause:
Both ResourceEntry and Resource name expression of ResourceActionsEntry is null

Action:
Pass in correct ResourceActionsEntry.

JPS-10454
No resources or actions have been identified by the permission set.

Category:
Security

Cause:
No resources or actions have been identified by the permissionset.

Action:
Ensure that the permission set is created with valid resource actions.

JPS-10455
Type of the resource does not define matcher java permission class.

Category:
Security

Cause:
Resource is not protected by a Java Permission.

Action:
Ensure that the permission set is created with valid resource object.

JPS-10456
ResourceExpression and ResourceAction cannot be specified at the same time.

Category:
Security

Cause:
ResourceExpression and ResourceAction cannot be specified at the same time.

Action:
PermissionSet ResourceAction should contain either Resource expression or ResoruceEntry.

JPS-10457
Not able to perform operation due to invalid parameter. Cause: "{0}".

Category:
Security

Cause:
Not able to perform operation due to invalid parameter. Cause: {0}.

Action:
Ensure that the operation is called with valid parameters.

JPS-10458
ResourceExpression and ResourceAction cannot be null at the same time.

Category:
Security

Cause:
ResourceExpression and ResourceAction cannot be null at the same time.

Action:
PermissionSet ResourceAction should contain either Resource expression or ResoruceEntry.

JPS-10459
The modified permission set {0} contains resources of multiple resource types. It is not permitted as there is policy(-ies) that references that permission set and uses resource attributes.

Category:
Security

Cause:
The modified permission set contained resources of multiple resource types. It was not permitted if there was a policy that referenced that permission set and used resource attributes.

Action:
Fix the permission set or modify the policy(-ies).

JPS-10460
The permission set search query {0} is not supported

Category:
Security

Cause:
The permission set search query is not supported.

Action:
Use supported query scenario.

JPS-10463
Requested actions: " {0} " are not a subset of valid actions: " {1}" for the given resource: " {2} " and type: " {3} ".

Category:
Security

Cause:
Invalid resource actions for the given resource.

Action:
Ensure that the actions in the resource-actions are a valid subset of the actions defined by the resource type.

JPS-10464
Error occurred while getting the permission set entry for permission set search query {0}.

Category:
Security

Cause:
Error occured while getting the permission set entry for permission set search query.

Action:
See the log files for more details.

JPS-10465
Permission set {0} has ResourceActionsEntry with null expression in ResourceNameExpression.

Category:
Security

Cause:
Expression in ResourceNameExpression of ResourceActionsEntry is null

Action:
Pass in correct ResourceActionsEntry with non-null Resource name expression.

JPS-10466
Resource {0} has no Resource Actions, but Resource Type {1} has resource actions.

Category:
Security

Cause:
Empty resource actions for the given Resource, but Resource type has actions.

Action:
Ensure that the actions in the resource-actions are not null or empty since the resource type has actions.

JPS-10467
Permission set {0} has ResourceActionsEntry with null expression in ResourceNameExpression.

Category:
Security

Cause:
Expression in ResourceNameExpression of ResourceActionsEntry is null

Action:
Pass in correct ResourceActionsEntry with non-null Resource name expression.

JPS-10468
Duplicate permission " {0} " in policy store.

Category:
Security

Cause:
Duplicate permission in policy store.

Action:
Check the policy store and ensure that there is no duplicate permission.

JPS-10469
Cannot remove all the ResourceActionsEntrys in PermissionSet.

Category:
Security

Cause:
Try to remove all the ResourceActionsEntrys in existing PermissionSet.

Action:
Check the updated resource actions, make sure PermissionSet does not have up empty resource actions.

JPS-10470
The resource type name "{0}", does not match the resourceType in the encoded target name: "{1}". Permission class is "{2}"

Category:
Security

Cause:
Invalid resource type in permission target.

Action:
Refer to the log files for details.

JPS-10471
Resource type is missing in the target name: "{0}", for permission: "{1}"

Category:
Security

Cause:
Resource type missing in permission target.

Action:
Refer to the log files for details.

JPS-10472
Target "{0}" is missing the prefix "=resourceName=". Unable to determine the resource name for permission: "{1}"

Category:
Security

Cause:
Target name missing in permission target.

Action:
Refer to the log files for details.

JPS-10473
The target name "{0}" is invalid. Should start with "{1}"

Category:
Security

Cause:
Target name encoding is not correct.

Action:
Refer to the log files for details.

JPS-10474
The parameter: "{0}", value: "{1}" cannot be null

Category:
Security

Cause:
Permission target is null.

Action:
Refer to the log files for details.

JPS-10475
The permission actions: "{0}" are not a subset of valid actions defined in resource type: "{1}"

Category:
Security

Cause:
Permission actions do not match with valid resource type actions.

Action:
Refer to the log files for details.

JPS-10476
The resource name can not be null

Category:
Security

Cause:
Invalid resource name in permission target.

Action:
Refer to the log files for details.

JPS-10500
The target policy, {0}, does not exist.

Category:
Security

Cause:
The policy object does not exist.

Action:
Check if the target policy exists.

JPS-10501
Policy query contains unrecognizable information.

Category:
Security

Cause:
Policy query contains unrecognizable information.

Action:
Check the policy query object.

JPS-10502
Policy rule information is missing.

Category:
Security

Cause:
Policy rule information is missing.

Action:
Check if policy rule information exists in policy repository.

JPS-10503
Obligation information is missing.

Category:
Security

Cause:
Obligation information is missing.

Action:
Check if obligation information exists in policy repository.

JPS-10504
Permission set information is missing.

Category:
Security

Cause:
Permission set information is missing.

Action:
Check if permission set information exists in policy repository.

JPS-10505
Grantee information is missing.

Category:
Security

Cause:
Grantee information is missing.

Action:
Check if grantee information exists in policy repository.

JPS-10506
The policy rule, {0}, does not exist.

Category:
Security

Cause:
The policy rule does not exist.

Action:
Check the policy rule name passed in.

JPS-10507
The condition string is in wrong format, {0}.

Category:
Security

Cause:
Condition string is in wrong format.

Action:
Check condition string in policy repository.

JPS-10508
Policy condition contains an unknown function, {0}.

Category:
Security

Cause:
Policy condition contains an unknown function.

Action:
Check condition string in policy repository.

JPS-10509
Policy condition parsing error.

Category:
Security

Cause:
Policy condition parsing error.

Action:
Check condition string in policy repository.

JPS-10510
The expression, {0}, is unknown.

Category:
Security

Cause:
The policy expression is unknown.

Action:
Check condition string in policy repository.

JPS-10511
The data type, {0}, is unknown.

Category:
Security

Cause:
The data type is unknown

Action:
Check condition string in policy repository.

JPS-10512
A ResourceActionsEntry should contain either resource entry or resource name expression.

Category:
Security

Cause:
The ResourceActionsEntry object does not contain resource infomation.

Action:
Check ResourceActionsEntry passed in.

JPS-10513
The search value type {0} is not supported for {1}.

Category:
Security

Cause:
Query criteria type does not support.

Action:
Pass in a correct query value.

JPS-10514
Cannot add PermissionSet to PolicyEntry if it has ResourceType.

Category:
Security

Cause:
Resource type is already defined in PolicyEntry.

Action:
clear resource type of PolicyEntry before adding PermissionSetEntry.

JPS-10515
Cannot set ResourceType to PolicyEntry if it has PermissionSet.

Category:
Security

Cause:
Permission Set is already defined in PolicyEntry.

Action:
clear Permission Set of PolicyEntry before setting Resource Type.

JPS-10516
Cannot add Rule if there is rule already in PolicyEntry

Category:
Security

Cause:
Add rule to policy when the policy already has rule.

Action:
Delete existing rule before adding new rule to policy.

JPS-10517
Delete rule not existing in PolicyEntry

Category:
Security

Cause:
rule does not belong to the PolicyEntry.

Action:
Check the rule before deleting rule from PolicyEntry.

JPS-10518
Delete permission set not existing in PolicyEntry

Category:
Security

Cause:
permission set does not belong to the PolicyEntry.

Action:
Check the permission set before deleting permission set from PolicyEntry.

JPS-10519
Delete obligation not existing in PolicyEntry

Category:
Security

Cause:
obligation does not belong to the PolicyEntry.

Action:
Check the obligation before deleting obligation from PolicyEntry.

JPS-10520
Delete Principal not existing in PolicyEntry

Category:
Security

Cause:
principal does not belong to the PolicyEntry.

Action:
Check the principal before deleting principal from PolicyEntry.

JPS-10521
The obligation {0} already exists.

Category:
Security

Cause:
The obligation already exists in the policy entry.

Action:
Check ObligationEntry passed in.

JPS-10522
The parameters passed in is invalid, we expect {0}, but {1} is passed in.

Category:
Security

Cause:
The parameter passed in the function is not valid.

Action:
Pass in correct parameters.

JPS-10523
The function return type is invalid, we expect OpssBoolean, but {0} is passed in.

Category:
Security

Cause:
The return type of the function is not valid.

Action:
Pass in a function with OpssBoolean return type.

JPS-10524
The query with search property {0}, comparator type {1} and matcher {2} is not supported.

Category:
Security

Cause:
Such query is not supported.

Action:
Pass in a supported query value.

JPS-10525
The attribute assignment {0} could not be added since it already exists.

Category:
Security

Cause:
The attribute assignment could not be added since it already exists.

Action:
Remove duplicate attribute assignments.

JPS-10526
The permission set {0} could not be added since it already exists.

Category:
Security

Cause:
The permission set could not be added since it already exists.

Action:
Remove duplicate permission sets.

JPS-10527
The principal {0} could not be added since it already exists.

Category:
Security

Cause:
The principal could not be added since it already exists.

Action:
Remove duplicate principals.

JPS-10528
The Policy {0} referenced multiple resource types and resource attribute is used in policy condition or obligation.

Category:
Security

Cause:
Policies that used resource attributes in their conditions or obligations could not refrence one or more permission sets that contain resources of multiple types.

Action:
Split the policy to reference only one resource type in each policy.

JPS-10529
The resource attribute {0} used in policy condition or obligation is invalid resource attribute of type {1}.

Category:
Security

Cause:
The resource attribute used in policy condition was invalid for the referenced resource type

Action:
Fix the policy condition to use only valid attributes for the given resource type.

JPS-10530
Cannot create a policy {0} with AdminRole(s) {1}.

Category:
Security

Cause:
Cannot create a policy with AdminRoleEntry(s).

Action:
Remove the AdminRole principals from the principal list.

JPS-10531
Cannot grant permission to AdminRole(s) {0}.

Category:
Security

Cause:
Cannot grant permission to AdminRoleEntry(s).

Action:
Remove the AdminRole principals from the principal list.

JPS-10532
Cannot grant AdminRole {0} to another AdminRole {1}.

Category:
Security

Cause:
Cannot grant AdminRole to another AdminRole.

Action:
Change to grant AdminRole to either enterprise role or user.

JPS-10533
Cannot revoke AdminRole {0} from another AdminRole {1}.

Category:
Security

Cause:
Cannot revoke AdminRole from another AdminRole.

Action:
Change to revoke AdminRole from either enterprise role or user.

JPS-10534
Cannot grant AdminRole {0} to an AppRole {1}.

Category:
Security

Cause:
Cannot grant AdminRole to an AppRole.

Action:
Change to grant AdminRole to either enterprise role or user.

JPS-10535
Cannot revoke AdminRole {0} from an AppRole {1}.

Category:
Security

Cause:
Cannot revoke AdminRole from an AppRole.

Action:
Change to revoke AdminRole from either enterprise role or user.

JPS-10536
AdminRole {0} cannot be managed outside of the AdminManager.

Category:
Security

Cause:
AdminRole cannot be managed outside of AdminManager.

Action:
Use AdminManager for all AdminRole related administrative tasks.

JPS-10537
Cannot modify grant permission to AdminRole(s) {0}.

Category:
Security

Cause:
Cannot modify grant permission to AdminRoleEntry(s).

Action:
Remove the AdminRole principals from the principal list.

JPS-10538
Cannot revoke permission from AdminRole(s) {0}.

Category:
Security

Cause:
Cannot revoke permission from AdminRoleEntry(s).

Action:
Remove the AdminRole principals from the principal list.

JPS-10539
Basic policy cannot have {0} information.

Category:
Security

Cause:
Basic policy cannot have {0} information.

Action:
Remove the information from basic policy.

JPS-10540
Basic policy cannot have ResourceActionsEntry without ResourceEntry.

Category:
Security

Cause:
Basic policy cannot have ResourceActionsEntry without ResourceEntry.

Action:
Use ResourceActionsEntry with ResourceEntry for basic policy.

JPS-10541
Basic policy cannot use Resource {0} without Resource Matcher Class.

Category:
Security

Cause:
Basic policy cannot use Resource {0} without Resource Matcher Class.

Action:
Use Resource with Resource Matcher Class for basic policy.

JPS-10542
Default TransformerFactory cannot be located.

Category:
Security

Cause:
The TransformerFactory cannot be loaded

Action:
Check the environment

JPS-10543
Failed to retrieve Transformer.

Category:
Security

Cause:
The TransformerFactory cannot generate a Transformer.

Action:
Check the environment

JPS-10544
The policy "{0}" already exists.

Category:
Security

Cause:
The role policy object exists.

Action:
Create a role policy with a different name.

JPS-10545
The application role {0} could not be added since it already exists.

Category:
Security

Cause:
The application role could not be added since it already exists.

Action:
Remove duplicate application role.

JPS-10546
The resource {0}, {1} could not be added since it already exists.

Category:
Security

Cause:
The resource could not be added since it already exists.

Action:
Remove duplicate resource.

JPS-10547
The resource name expression {0}, {1} could not be added since it already exists.

Category:
Security

Cause:
The resource name expression could not be added since it already exists.

Action:
Remove duplicate resource name expression.

JPS-10548
The policy rule {0} already exists.

Category:
Security

Cause:
The policy rule already exists.

Action:
Create policy rule with different name.

JPS-10549
The policy rule {0} is in use, could not be deleted.

Category:
Security

Cause:
The policy rule could not be deleted without cascade since it is in use.

Action:
Cascade delete it or first remove all referring objects.

JPS-10550
Attribute "{0}" already exists

Category:
Security

Cause:
Cannot have two attributes with the same name.

Action:
Provide a new name to the attribute.

JPS-10551
Attribute {0} does not exist

Category:
Security

Cause:
Attribute not found.

Action:
Check the attribute name.

JPS-10552
Attribute {0} is used.

Category:
Security

Cause:
Attribute is already used.

Action:
Remove the objects which use this attribute.

JPS-10553
Attribute {0} does not belong to current application.

Category:
Security

Cause:
Attribute does not belong to current application policy.

Action:
Modify the attribute with extension manager from correct application policy.

JPS-10554
The name of Attribute in policy repository is missing

Category:
Security

Cause:
Attribute in policy store has no name.

Action:
Check the underline policy repository.

JPS-10555
The type of Attribute in policy repository is missing

Category:
Security

Cause:
Attribute in policy store has no type.

Action:
Check the underline policy repository.

JPS-10556
The category of Attribute in policy repository is missing

Category:
Security

Cause:
Attribute in policy store has no category.

Action:
Check the underline policy repository.

JPS-10557
Cannot overwrite a built-in attribute, {0}.

Category:
Security

Cause:
Try to overwrite a built-in attribute.

Action:
Do not overwrite a built-in function.

JPS-10558
Cannot modify a built-in attribute, {0}.

Category:
Security

Cause:
Try to modify a built-in attribute.

Action:
Do not modify a built-in attribute.

JPS-10559
Cannot delete a built-in attribute, {0}.

Category:
Security

Cause:
Try to delete a built-in attribute.

Action:
Do not delete a built-in attribute.

JPS-10581
Cannot overwrite a built-in function, {0}.

Category:
Security

Cause:
Try to overwrite a built-in function.

Action:
Do not overwrite a built-in function.

JPS-10582
The function does not exist, {0}.

Category:
Security

Cause:
The function does not exist.

Action:
Check the function name passed in.

JPS-10583
The function is in use, {0}.

Category:
Security

Cause:
The function is in use.

Action:
Cannot delete a function in use.

JPS-10584
The function is used in some policies, your changes on return type may lead to unpredictable issues.

Category:
Security

Cause:
The function is in use.

Action:
Cannot change return type of a function in use.

JPS-10585
The function is used in some policies, your changes on parameter types may lead to unpredictable issues.

Category:
Security

Cause:
The function is in use.

Action:
Cannot change parameter types of a function in use.

JPS-10586
Cannot modify a built-in function, {0}.

Category:
Security

Cause:
Try to modify a built-in function.

Action:
Do not modify a built-in function.

JPS-10587
Cannot delete a built-in function, {0}.

Category:
Security

Cause:
Try to delete a built-in function.

Action:
Do not delete a built-in function.

JPS-10588
The function "{0}" already exists.

Category:
Security

Cause:
The function exists.

Action:
Create a function with a different name.

JPS-10589
Cascade delete is not supported.

Category:
Security

Cause:
Cascade delete not supported.

Action:
Set the cascade delete parameter to false.

JPS-10590
Cannot find the function entry for function name {0}.

Category:
Security

Cause:
Cannot find the function entry for function name.

Action:
Check function entry in policy repository.

JPS-10591
Cannot find the expression type for expression {0}.

Category:
Security

Cause:
Cannot find the expression type for the expression.

Action:
Check expression in policy repository.

JPS-10592
Operation {1} is not allowed for multi valued attribute {0}

Category:
Security

Cause:
The category of Attribute is Invalid.

Action:
The category of Attribute is Invalid. Supply a valid Attribute category

JPS-10600
Failed to initialize PD instance.

Category:
Security

Cause:
Failed to initialize PD instance.

Action:
Refer to the base exception in logs to resolve the issue.

JPS-10601
Failed to initialize PolicyDistributionManager instance.

Category:
Security

Cause:
Failed to initialize PolicyDistributionManager instance.

Action:
Refer to the base exception in logs to resolve the issue.

JPS-10602
PD has not been initialized.

Category:
Security

Cause:
PD has not been initialized.

Action:
Check if OPSS policy store provider has been initialized successfully.

JPS-10603
FAILURE: Retry {0} failed after {1} times retries due to following exception {2}.

Category:
Security

Cause:
PD operation failed to retry.

Action:
Check connectivity to backend repository.

JPS-10604
The operation is not allowed for non-controlled mode application {0}.

Category:
Security

Cause:
Can not distribute policy for non-controlled policy distribution mode application

Action:
Refer to the log files for details.

JPS-10605
Failed to distribute policy for catch exception.

Category:
Security

Cause:
Distribute policy failed for catch exception

Action:
Refer to the log files for details.

JPS-10606
Failed to distribute policy to PDP {0} for catch exception {1}.

Category:
Security

Cause:
Failed to distribute policy to pdp for catch exception

Action:
Refer to the log files for details.

JPS-10607
Invalid cache key {0} in {1} cache.

Category:
Security

Cause:
Invalid cache key

Action:
Refer to the log files for details.

JPS-10608
Failed to copy files from active directory {0} to update directory {1}.

Category:
Security

Cause:
Failed to copy cache file from active directory to update directory

Action:
Refer to the log files for details.

JPS-10609
Failed to write state.chk file.

Category:
Security

Cause:
Failed to write state.chk file

Action:
Refer to the log files for details.

JPS-10610
Failed to update local cache since distributed payload for application {0} is empty.

Category:
Security

Cause:
Failed to update local cache since distributed payload is empty

Action:
Refer to the log files for details.

JPS-10611
Invalid distribution state {0} in step {1}.

Category:
Security

Cause:
Invalid distribution state

Action:
Refer to the log files for details.

JPS-10612
Local cache file verification failed, so redistribute all binding applications

Category:
Security

Cause:
Failed to verify local cache file, so need to redistribution all binding applications

Action:
Refer to the log files for details.

JPS-10613
Failed to parse PD port number, do not start PD registration web service.

Category:
Security

Cause:
Failed to parse PD port number, do not start PD registration web service.

Action:
Refer to the log files for details.

JPS-10614
Failed to start PD registration web service for catch exception.

Category:
Security

Cause:
Failed to start PD registration web service for catch exception.

Action:
Refer to the log files for details.

JPS-10615
Catch exception.

Category:
Security

Cause:
Catch interrupt exception in start registration service thread.

Action:
Refer to the log files for details.

JPS-10616
Failed to find local host name, do not start PD registration web service.

Category:
Security

Cause:
Failed to find local host name, do not start PD registration web service.

Action:
Refer to the log files for details.

JPS-10617
Failed to start PD push policy web service for catch exception.

Category:
Security

Cause:
Failed to start PD registration web service for catch exception.

Action:
Refer to the log files for details.

JPS-10618
Invalid SSL configuration.

Category:
Security

Cause:
Invalid SSL configuration, please check log for details

Action:
Refer to the log files for details.

JPS-10619
Failed to initialize cipher {0} for local cache encryption/decryption.

Category:
Security

Cause:
Failed to initialize cipher for local cache encryption/decryption.

Action:
Refer to the log files for details.

JPS-10620
Exception reported in registration thread.

Category:
Security

Cause:
Catch interrupt exception in start registration service thread.

Action:
Refer to the log files for details.

JPS-10621
PD Lock not found

Category:
Security

Cause:
PD Lock node not found.

Action:
Refer to the log files for details.

JPS-10622
Invalid PD Lock update time {0}.

Category:
Security

Cause:
Invalid PD Lock update time stamp.

Action:
Refer to the log files for details.

JPS-10623
PD is running in another Admin, please distribute policy after the process finished.

Category:
Security

Cause:
PD is running in another Admin, please distribute policy after the process finished.

Action:
Refer to the log files for details.

JPS-10624
Failed to connect primary server, try secondary server.

Category:
Security

Cause:
Failed to connect primary server, try secondary server.

Action:
Refer to the log files for details.

JPS-10625
Failed to read from the local cache. The cache will be removed. Reason: {0}

Category:
Security

Cause:
Failed to read from the local cache. The cache will be removed.

Action:
Refer to the log files for details.

JPS-10626
Encryption/Decryption of the local cache file using the algorithm {0} is not supported.

Category:
Security

Cause:
The specified algorithm for local cache encryption/decryption is not supported.

Action:
Please check PDP service configuration in jps-config.xml file.

JPS-10627
The key length used to initialize cipher {0} is not valid. Expected key length is {1} bits, but raw key length is {2} bits.

Category:
Security

Cause:
The key length used to initialize cipher is not valid.

Action:
Refer to the log files for details.

JPS-10628
Retry {0} for the {1} times.

Category:
Security

Cause:
Retry {0} for the {1} times.

Action:
No actions are required

JPS-10629
SUCCESS: Retry {0} successfully after {1} times retries.

Category:
Security

Cause:
SUCCESS: Retry {0} successfully after {1} times retries.

Action:
No actions are required

JPS-10630
The default DB policy store is missing for mixed mode.

Category:
Security

Cause:
The default DB policy store is missing for mixed mode.

Action:
Configure one DB policy store instance.

JPS-10631
Failed to distribute policy to Real Application Security Database, target RAS database {0}, exception {1}.

Category:
Security

Cause:
Failed to distribute policy to Real Application Security Database

Action:
Refer to the log files for details.

JPS-10632
Failed to obtain the datasource for Real Application Security Database, target RAS database {0}, exception {1}

Category:
Security

Cause:
Failed to obtain the datasource for Real Application Security Database

Action:
Refer to the log files for details.

JPS-10633
Failed to fetch the information from the intermediate table, target RAS database {0}, exception {1}"

Category:
Security

Cause:
Failed to fetch the information from the intermediate table

Action:
Refer to the log files for details.

JPS-10634
Failed to prepare data for distributing policy to Real Application Security Database, application name {0}, exception {1}.

Category:
Security

Cause:
Failed to prepare data for distributing policy to Real Application Security Database

Action:
Refer to the log files for details.

JPS-10635
Failed to update the intermediate table in the policy store database, target RAS database {0}, exception {1}.

Category:
Security

Cause:
Failed to update the intermediate table in the policy store database

Action:
Refer to the log files for details.

JPS-10636
Incorrect Real Application Security PDP address format.

Category:
Security

Cause:
Incorrect Real Application Security PDP address format

Action:
Refer to the log files for details. The correct format should start with "ras:"

JPS-10700
The value of attribute {0} should be unique

Category:
Security

Cause:
The unique attribute has duplicated values.

Action:
Keep attribute value unique.

JPS-10701
Data Source lookup failure. It is safe to ignore the warning during Websphere server starts up. If you still get the warning after WebSphere server starts up, check your configuration.

Category:
Security

Cause:
Websphere data source lookup failure.

Action:
Safe to ignore during WebSphere starts up.

JPS-10702
The datasource {0} is not found.

Category:
Security

Cause:
Given datasource jndi name is not found.

Action:
Check datasource jndi name.

JPS-10750
Application Policy unique name: "{0}" is invalid

Category:
Security

Cause:
The application policy unique name is invalid

Action:
Refer to the log files for details.

JPS-10751
The version number of Application policy : "{0}" is invalid

Category:
Security

Cause:
The application policy version number is invalid

Action:
Refer to the log files for details.

JPS-10752
The policy entry unique name: "{0}" is invalid

Category:
Security

Cause:
The policy entry unique name is invalid

Action:
Refer to the log files for details.

JPS-10800
The role policy object "{0}" does not exist.

Category:
Security

Cause:
The role policy object does not exist.

Action:
Check if the target role policy exists.

JPS-10801
The role policy object "{0}" already exists.

Category:
Security

Cause:
The policy object exists.

Action:
Create a policy with a different name.

JPS-10802
Application role hierarchy cannot participate in a role mapping policy.

Category:
Security

Cause:
One or more principals in the role mapping policy are of type: ApplicationRole or AnonymousRole or AuthenticatedRole or and AdminRole.

Action:
Identify the principal type in the incomming principals, and ensure only a user or group principal type is supplied.

JPS-10803
At least one of the Resource(s)/Resource Name Expression(s) used in Role Policy are permission based. This is not allowed.

Category:
Security

Cause:
At least one of the Resource(s)/Resource Name Expression(s) used in Role Policy are permission based. This is not allowed.

Action:
Ensure that resource(s)/resource name expression(s) are not permission based.

JPS-10804
The advice {0} already exists.

Category:
Security

Cause:
The advice already exists in the policy entry.

Action:
Check AdviceEntry passed in.

JPS-10850
The SM Config Tool is used to configure the Security Modules for Oracle Entitlements Server Here are the various options that it will accept -smType <java, wls, ws, rmi, was, jboss> -smConfigId <config id of sm is always required> -serverLocation <in case of was, wls, jboss, this is the location of the server> -pdServer OES Admin Server hostName -pdPort SSL Port for OES Admin Server -pdClientPort SSL Port for WLS SM client -serverNodeName - server node name of websphere -serverName - server instance name of websphere -serverUserName - user name of application server -serverPassword - password of application server -prpFileName - path for the prp file used.

Can not add codesource, principals, resource actions or permission sets to {0}: "{1}" which has XACML3 target

Category:
Security

Cause:
Adding codesource, principals, resource actions or permissin sets to policy, policy set or rule which has XACML3 target

Action:
Refer to the log files for details.

JPS-11008
Can not add XACML3 target to {0}: "{1}" which has codesource, principals, resource actions or permission sets

Category:
Security

Cause:
Adding XACML3 target to policy, policy set or rule which has codesource, principals, resource actions or permissin sets

Action:
Refer to the log files for details.

JPS-11009
Policy set "{0}" already exists

Category:
Security

Cause:
The policy set entry with specified name already exists in the policy store

Action:
Refer to the log files for details.

JPS-12000
No such Configuration Profile "{0}" exists in the system.

Category:
Configuration

Cause:
The specified configuration profile is not registered with configuration service.

Action:
Check the name, or try listing the registered profiles.

JPS-12001
Cannot create ContextConfiguration, A JPS Context with name "{0}" already exists in the system.

Category:
Configuration

Cause:
A jpsContext with the specified contextId exists in the system.

Action:
Use another unique contextId.

JPS-12002
Could not Construct the ConfigurationManagementService: Configuration Context Descriptor NOT FOUND in jps-config.xml or specifies an invalid Configuration serviceInstance descriptor.

Category:
Configuration

Cause:
A jpsContext by the name "ConfigContext" that references a Configuration Service Instance Descriptor is missing from jps-config.xml.

Action:
Check the MultiTenancy Enablement steps and/or scripts.

JPS-12003
Could not Construct ConfigurationManagementService from its Descriptor in jps-config.xml, due to empty/missing configuration data in the Descriptor.

Category:
Configuration

Cause:
The configuration jpsContext does seem to contain a <serviceInstanceRef> pointing to the ConfigurationManagementService instance descriptor.

Action:
Check the MultiTenancy Enablement steps and/or scripts.

JPS-12004
No such JpsContext "{0}" exists in jps-config.xml.

Category:
Configuration

Cause:
A jpsContext with the specified contextId does not exists in the system.

Action:
Check jps-config.xml of the domain.

JPS-12005
A ContextConfiguration with "{0}" "{1}" already exists in the system.

Category:
Data

Cause:
A ContextConfiguration with the specified name already exists.

Action:
Use another unique name.

JPS-12006
No Registered ContextConfiguration with "{0}" "{1}" exists in the system.

Category:
Data

Cause:
The specified configuration profile is not registered with configuration service.

Action:
Check the name, or try listing the registered profiles.

JPS-12007
Cannot delete ContextConfiguration "{0}" in "{1}" state.

Category:
Data

Cause:
A ContextConfiguration in ACTIVE state cannot be deleted.

Action:
DeActivate the context and then try deleting it.

JPS-12008
Cannot DeActivate ContextConfiguration "{0}" as it is in state "{1}".

Category:
Data

Cause:
A ContextConfiguration ACTIVE state (only) can be DeActivated. DeActivation from other states is illegal.

Action:
Make sure the context configuration is ACTIVE and then try deactivating it.

JPS-12009
Cannot Activate ContextConfiguration "{0}" as it is in state "{1}".

Category:
Data

Cause:
A ContextConfiguration must be in COMPLETE or INACTIVE state for Activation to succeed.

Action:
Check to make sure the state of the Context is COMPLETE or INACTIVE.

JPS-12010
Cannot Update ContextConfiguration "{0}" as it is in state "{1}".

Category:
Data

Cause:
A ContextConfiguration must be in CREATED or INACTIVE state before it can be UPDATED.

Action:
Check to make sure the state of the Context is CREATED or INACTIVE. A configuration in COMPLETE or ACTIVE states cannot be updated

JPS-12011
OPSS Runtime Cannot fetch Configuration for context "{0}", The context does not exist or is not in ACTIVE state.

Category:
Data

Cause:
OPSS Runtime failed to fetch the Configuration for the context. Either the context does not exist or is not in ACTIVE state. The Runtime can only view ContextConfigurations in ACTIVE state

Action:
Check to make sure the Context exists and is in ACTIVE state.

JPS-12012
Cannot initialize Configuration Store : One of DataSource/JDBC-URL/FilePath for MetaDataStore should be Configured in the Configuration Service Descriptor.

Category:
Configuration

Cause:
The configuration serviceInstance descriptor does not seem to contain a property for DataSource/JDBC-URL/FilePath for connecting to the Configuration Store.

Action:
Check MultiTenancy enablement steps/scripts.

JPS-12013
File based Configuration Store should be used only for Development and not in Production.

Category:
Configuration

Cause:
File based Configuration Store should be used only for Testing and not in Production.

Action:
Nothing to do if this is a Test Environment, else check Multi-Tenancy enablement steps.

JPS-12014
Map/Key name(s) for Credential required to bind to MetaDataStore with JDBC-URL not configured in the Configuration Service.

Category:
Configuration

Cause:
A Password Credential is required when JDBC-URL is used to connect to the Configuration Store.

Action:
Check to see that the Configuration serviceInstance descriptor contains properties for the Map and Key name of the credential.

JPS-12015
Property JPS_CONFIG_PATH not set for use by PersistenceManager.

Category:
Process

Cause:
Internal Error/Bug: The Configuration Management Service is expected to set a property JPS.CONFIGSERVICE.PATH for use by the PersistenceManager.

Action:
Report Bug on Oracle OPSS with relevant logs.

JPS-12016
Internal Error: Unable to locate ContextConfiguration named "{0}" in the Configuration Profile "{1}".

Category:
Process

Cause:
Internal Error/Bug: The Configuration Service is in a state where it thinks the specified contextId should exist under the specified profileId, but the persisted information in the store does not match the expectation.

Action:
Report Bug on Oracle OPSS with relevant logs.

JPS-12017
Invalid Xpath expression , specified XPath "{0}" does not evaluate to a "{1}".

Category:
Data

Cause:
The XPath expression specified in Customization spec does not point to the intended element in the Configuration Profile document.

Action:
Check the XPath expression against the structure of the configuration Profile being referenced..

JPS-12018
Invalid Location Override in Global Scope. Location Override can be specified for ServiceInstances only.

Category:
Data

Cause:
The Location Override in Customization spec is only applicable to a serviceInstance attribute and cannot be applied to an element in Global Scope.

Action:
Check the XPath expression.

JPS-12019
Cannot apply "{0}" overrides on element of type "{1}", expected an element of type "{2}", check the Element XPath specified in the customization.

Category:
Data

Cause:
The XPath expression specified in Customization spec does not point to the intended element in the Configuration Profile document.

Action:
Check the XPath expression against the structure of the configuration Profile being referenced..

JPS-12020
Cannot modify values of existing ExtendedProperty elements during customization.

Category:
Data

Cause:
Cannot modify values of existing ExtendedProperty elements during customization.

Action:
This is an Unsupported Customization spec, change the customization instructions supplied to the Configuration Management Service.

JPS-12021
Cannot create ContextConfiguration "{0}", No such profile "{1}" exists in the system.

Category:
Data

Cause:
Cannot create ContextConfiguration as the referenced Configuration Profile does not seem to exist.

Action:
Check the name of the specified profile.

JPS-12022
MetaDataObject "{0}" not found. Ensure ContextConfiguration "{1}" exists or first create it.

Category:
Configuration

Cause:
The PersistenceManager is unable to find the MetaDataObject corresponding to the specified contextId.

Action:
Check the name of the context or make sure it is registered with the Configuration Service.

JPS-12023
Mutable MetadataObject "{0}" cannot be obtained from MetadataStore specified since there are pending writes to other MetadataStores. Do flushChanges/cancelChanges on MDSSession to proceed.

Category:
Process

Cause:
Internal Error/Bug : The persistence manager is in a state where it is trying to perform multiple updates to the profile document concurrently.

Action:
Report a Bug on Oracle OPSS with relevant logs.

JPS-12024
A profile with name "{0}" already exists.

Category:
Data

Cause:
A configuration profile with the given name already exists.

Action:
Try using a unique profileId.

JPS-12025
Cannot Delete Profile "{0}" ,Named ContextConfigurations exist under the profile.

Category:
Data

Cause:
A configuration profile which has named ContextConfiguration's referencing it cannot be deleted.

Action:
Try deleting the ContextConfiguration's before attempting to delete the profile.

JPS-12026
No such ContextConfiguration "{0}" exists in the system.

Category:
Data

Cause:
The specified ContextConfiguration is not registered with the Configuration Service.

Action:
Check the name or try listing the registered ContextConfigurations.

JPS-12027
Required PasswordCredential at Map = "{0}",Key = "{1}" was not found in Specified Bootstrap CredentialStore.

Category:
Configuration

Cause:
A required PasswordCredential does not exist at the specified map, and key in the supplied bootstrap credential store.

Action:
Check the bootstrap credential store.

JPS-12028
Malformed jps-config.xml : stale service instance reference "{0}" from JpsContext.

Category:
Configuration

Cause:
The PersistenceManager found a STALE <serviceInstanceRef> that does not exist in the jps-config.xml.

Action:
Check the jps-config.xml of the Profile or the Out-of-the-Box jps-config.xml as appropriate.

JPS-12029
Cannot set Name for ContextConfiguration "{0}" in state "{1}", deactivate it first.

Category:
Data

Cause:
Cannot set contextName for a ContextConfiguration in ACTIVE.

Action:
DeActivate it first and then set a Name for it.

JPS-12030
Cannot setContextName, ConfigurationContext "{0}" is already Named "{1}", unset the Name first.

Category:
Data

Cause:
A ContextConfiguration that is already has a Name cannot be Named again.

Action:
Unset the current Name first and then set a new Name for it.

JPS-12031
Cannot unset Name for ContextConfiguration "{0}" in state "{1}", deactivate it first.

Category:
Data

Cause:
Cannot unset the contextName for a ContextConfiguration in ACTIVE state.

Action:
DeActivate the Context first and then unset the contextName.

JPS-12032
Error in initializing JAXBContext.

Category:
Configuration

Cause:
Internal Error: JAXB context initialization in PersistenceManager Failed.

Action:
Report a Bug on Oracle OPSS with relevant logs.

JPS-12033
Invalid profile jps-config.xml document, does not contain a required element "{0}".

Category:
Configuration

Cause:
Internal Error: the profile document does not contain a mandatory element.

Action:
Check the jps-config.xml that was used as a Configuration Profile.

JPS-12034
MDSPersistenceManager Cannot handle Persistence of Element "{0}".

Category:
Configuration

Cause:
Unsupported operation : The persistence manager configured with the Configuration Service does not handle persistence of the specified element.

Action:
Report a Bug on Oracle OPSS with relevant logs.

JPS-12035
Cannot setContextName for ConfigurationContext "{0}" to Name "{1}", as the Name is already assigned to "{2}".

Category:
Data

Cause:
Names used for ContextConfiguration must be unique, an attempt is being made to set the same Name for more than one ContextConfiguration.

Action:
Use a different unique Name.

JPS-12036
ContextConfiguration "{0}" does not have any name set for it, Naming a ContextConfiguration is mandatory before its configuration STATE can be set to COMPLETE.

Category:
Data

Cause:
An attempt is being made to set the STATE of an Un-Named ContextConfiguraton to COMPLETE.

Action:
Use the setContextName(contextId) method to set a Name.

JPS-12037
Service configuration update done for Configurator.

Category:
Data

Cause:
Service configuration update done for Configurator.

Action:
No action required.

JPS-12038
Failed to check if audit is enabled.

Category:
Configuration

Cause:
Configuration management events logging was not enabled.

Action:
Check the audit configuration to ensure auditing enabled.

JPS-12039
Failed to log audit record.

Category:
Configuration

Cause:
Configuration management audit event logging failed.

Action:
Contact the administrator.

JPS-12040
Missing Property set props.db.1.

Category:
Configuration

Cause:
No Prorperty Set props.db.1 in jps-config.xml

Action:
Check the jps-config.xml.

JPS-12100
The expiry time should be in format {0}

Category:
Configuration

Cause:
Invalid input

Action:
Correct the input.

JPS-12101
The filter value is {0} invalid

Category:
Configuration

Cause:
Invalid input

Action:
Correct the input.

JPS-12102
One of the attributes {0} is undefined

Category:
Configuration

Cause:
Invalid input

Action:
Correct the input.

JPS-12103
Parameter {0} is missing

Category:
Configuration

Cause:
Missing Parameter

Action:
Correct the input.

JPS-12104
Alias {0} did not exist or point to a key

Category:
Configuration

Cause:
Alias did not exist or point to a key

Action:
Correct the input Alias.

JPS-12105
Tenant with id {0} does not exist.

Category:
Configuration

Cause:
Tenant does not exist

Action:
Correct the tenant id.

JPS-12106
The param {0} is invalid - null or empty.

Category:
Configuration

Cause:
Tenant config parameter passed to the API is invalid

Action:
Make sure all parameters are valid

JPS-12107
The param {0} was supplied a restricted value {1}.

Category:
Configuration

Cause:
Tenant config parameter value passed to the API is restricted

Action:
Make sure no restricted values are used

JPS-12109
It is invalid that both of "{0}" and "{1}" are null or empty.

Category:
Configuration

Cause:
Invalid input

Action:
Correct the input, make sure at least one of them is not null or empty

JPS-12110
It is invalid that both of "{0}" and "{1}" have value.

Category:
Configuration

Cause:
Invalid input

Action:
Correct the input, make sure only one of them is not null or empty

JPS-12111
It is invalid that "{0}" is less than "{1}".

Category:
Configuration

Cause:
Invalid input

Action:
Correct the input, make sure the data is reasonable

JPS-12112
It is invalid that "{0}" is less than or equal to "{1}".

Category:
Configuration

Cause:
Invalid input

Action:
Correct the input, make sure the data is reasonable

JPS-12113
Property "{0}" cannot be updated/modified.

Category:
Configuration

Cause:
Unmodifiable property

Action:
Correct the input, make sure the data is reasonable

JPS-12114
Cannot specifify resource name delimiter for non-hierachical resource type

Category:
Configuration

Cause:
Invalid input

Action:
Correct the input, make sure the data is reasonable

JPS-12115
"{0}" is an invalid resource name delimiter character. Valid characters are [/ \ $ # : ; , ! . - _ @ |]

Category:
Configuration

Cause:
Invalid input

Action:
Correct the input, make sure the data is reasonable

JPS-12116
For the attribute "{0}", "{1}" is not a valid value.

Category:
Configuration

Cause:
Invalid input

Action:
Correct the input, make sure the data is reasonable

JPS-12117
Cannot set multiple values to a single value attribute "{0}".

Category:
Configuration

Cause:
Set multi values to a single value attribute

Action:
Correct the input, make sure the data is reasonable

JPS-20000
GlobalPolicy can not be created by MAPI methods

Category:
Programmatic

Cause:
GlobalPolicy can not be created by MAPI methods.

Action:
Set up policy store using reassociation or upgrading

JPS-20001
GlobalPolicy can not be deleted by MAPI methods.

Category:
Programmatic

Cause:
GlobalPolicy can not be deleted by MAPI methods.

Action:
GlobalPolicy is a built-in stripe, can not be deleted

JPS-20002
GlobalPolicy can not be returned from the method.

Category:
Programmatic

Cause:
GlobalPolicy can not be returned from the method.

Action:
Gets GlobalPolicy from the method getGlobalPolicy

JPS-20003
Cannot add global role to application role

Category:
Security

Cause:
Attempted to add a global role {0} to members of an application role or grant a global role {0} to an applicaton role

Action:
Do not add a global role to members of an application role and do not grant a global role to an application role.

JPS-20004
Principals can not contain global role.

Category:
Security

Cause:
Principals contain global role {0}

Action:
Remove global role from principals.

JPS-20005
Cannot delete global role "{0}".

Category:
Security

Cause:
Global role "{0}" is referenced in a Policy defined in an Application.

Action:
Make sure the global role is not referenced in any application policy,then remove it.

JPS-20006
Authorization policy is not supported in global policy.

Category:
Security

Cause:
Authorization policy is not supported in global policy.

Action:
Do not create authorization policies in global policy.

JPS-20007
Permission grant is not supported in global policy

Category:
Security

Cause:
Permission grant is not supported in global policy.

Action:
Do not grant permissions in global policy

JPS-20008
{0} : {1} in global policy which are referenced in application have been changed but not distributed

Category:
Security

Cause:
{0} : {1} in global policy which are referenced in application have been changed but not distributed.

Action:
Distribute global policy firstly

JPS-20010
Attribute name {0} already exist in {1}.

Category:
Programmatic

Cause:
Attribute name {0} already exist in {1}

Action:
Choose another name

JPS-20011
Function name {0} already exist in {1}.

Category:
Programmatic

Cause:
Function name {0} already exist in {1}

Action:
Choose another name

JPS-20012
Global attribute {0} is used in application {1}.

Category:
Programmatic

Cause:
Global attribute {0} is used in application policy {1}

Action:
Make sure the global attribute is not used in any applications including global policy

JPS-20013
Global function {0} is used in application {1}.

Category:
Programmatic

Cause:
Global function {0} is used in application policy {1}

Action:
Make sure the global function is not used in any applications including global policy

JPS-20014
Policy domain is not supported in global policy

Category:
Security

Cause:
Policy domain is not supported in global policy.

Action:
Do not use policy domain in global policy

JPS-20020
Resource type name {0} already exists in application {1}.

Category:
Programmatic

Cause:
Resource type name {0} already exists in application {1}

Action:
Choose another name

JPS-20021
Global resource type {0} is used in application {1}.

Category:
Programmatic

Cause:
Resource type {0} is used in application {1}

Action:
Make sure global resource type is not used in any application

JPS-20022
Global policy can not be unbound from SM

Category:
Programmatic

Cause:
Global policy can not be unbound from SM

Action:
Do not unbind global policy from SM

JPS-20050
Combining algorithm {0} not found.

Category:
Programmatic

Cause:
Combining algorithm not found.

Action:
Make sure the used combining algorithm exists.

JPS-20051
Exception in converting execution frequency {0}, message is {1}

Category:
Programmatic

Cause:
Exception in converting value of algorithm execution frequency.

Action:
Make sure the execution frequency is valid.

JPS-20052
Exception in converting algorithm usage {0}, message is {1}

Category:
Programmatic

Cause:
Exception in converting value of algorithm usage.

Action:
Make sure the usage is valid.

JPS-20053
A combining algorithm must be provided if policy is using more than one rule.

Category:
Programmatic

Cause:
Policy uses multiple rules, but no combining algorithm provided.

Action:
Provide a combining algorithm.

JPS-20054
A acl match type must be provided if policy is a RAS one.

Category:
Programmatic

Cause:
RAS policy has no acl match type to be provided.

Action:
Provide a ACL Match Type.

JPS-20055
A list of RAS policy rule must be provided if policy is a RAS one.

Category:
Programmatic

Cause:
RAS policy has no policy rule to be provided.

Action:
Provide policy rule(s).

JPS-20056
A list of RAS resource must be provided if policy is a RAS one.

Category:
Programmatic

Cause:
RAS policy has no resource to be provided.

Action:
Provide resource(s).

JPS-20060
Number of input parameters to the function and provided value types for them are not of same size.

Category:
Programmatic

Cause:
Number of input parameters to the function and provided value types for them are not of same size.

Action:
Parameter value types, if provided, must be provided for all input parameters

JPS-20061
Value collection added to expression is null.

Category:
Programmatic

Cause:
Value collection added to expression is null.

Action:
Provide a non-nulll collection of values to expression.

JPS-20062
Value collection passed to input parameter when a single object is expected.

Category:
Programmatic

Cause:
Value collection passed to input parameter when a single object is expected.

Action:
Provide a single object as input parameter.

JPS-20063
Wrong type of collection passed as input parameter; expected type is {0}, provided {1}.

Category:
Programmatic

Cause:
Wrong type of collection passed as input parameter; expected type is {0}, provided {1}.

Action:
Provide correct type of collection as function input parameter.

JPS-20064
Function {0} is unknown.

Category:
Programmatic

Cause:
Function {0} is unknown.

Action:
Provide correct function.

JPS-20070
In mixed mode, PDP configuration id could not be null

Category:
Programmatic

Cause:
PDP configuration id is missing.

Action:
Specify the PDP configuration id

JPS-20100
Rules {0} for policy {1} is in use by other policies. It will not be deleted.

Category:
Security

Cause:
Rule {0} of policy {1} is shared by other policies.

Action:
Provide correct Rule.

JPS-20101
Policy {0} is referred by one or more policy sets. It can not be deleted if cascading is set to false.

Category:
Security

Cause:
Policy {0} is referred by other policie sets.

Action:
Either use cascading delete or remove references from policy sets.

JPS-20102
Rule {0} used in policy is not sharable. The policy will not be created or updated.

Category:
Security

Cause:
Rule {0} used in policy is not sharable.

Action:
Provide correct Rule.

JPS-20103
Policy can not have both private rules and sharable rules.

Category:
Security

Cause:
Policy can not have both private rules and sharable rules.

Action:
Provide correct Rule.

JPS-20104
Exclusive rule {0} can not be deleted explicitly.

Category:
Security

Cause:
Exclusive rule {0} can not be deleted explicitly.

Action:
Delete the referred policy.

JPS-20105
The permission {0} has no target name.

Category:
Programmatic

Cause:
Permission has no target name.

Action:
Make sure the usage is valid.If not revoke the permission.

JPS-20200
Adding attributes to data security resource type {0} is not allowed.

Category:
Security

Cause:
Attributes present in Data Security Resource Type.

Action:
Remove Attributes present in Data Security Resource Type.

JPS-20201
Adding matcher class to data security resource type {0} is not allowed.

Category:
Security

Cause:
Matcher Class present in Data Security Resource Type.

Action:
Remove Matcher Class present in Data Security Resource Type.

JPS-20202
Hierarchical data security resource type {0} is not allowed.

Category:
Security

Cause:
Data Security Resource Type is Hierarchial.

Action:
Change Data Security Resource Type to Flat. It cannot be Hierarchial.

JPS-20203
Adding both actions and action collection references to data security resource type {0} is not allowed.

Category:
Security

Cause:
Both Actions and Action Collection References are added to Data Security Resource Type.

Action:
Add either Actions or Action Collection References to Data Security Resource Type.

JPS-20204
Adding null data security information object to data security resource type {0} is not allowed.

Category:
Security

Cause:
Null data security information object found for data security resource type.

Action:
Add data security information object to data security resource type.

JPS-20205
Data source name is required for a data security resource type {0}.

Category:
Security

Cause:
Data security information object found for data security resource type has no data source name.

Action:
Provide valid data source name for data security information object for data security resource type.

JPS-20206
Invalid value for data source type of data security resource type {0}.

Category:
Security

Cause:
Data security information object found for data security resource type has invalid data source type.

Action:
Data Security information object found for data security resource type has invalid data source type

JPS-20207
Constraint required for data security resource type {0} as data source type is virtual.

Category:
Security

Cause:
Virtual data source type requires data source constraint to be present.

Action:
Provide valid data source constraint for virtual data source.

JPS-20208
Actions List cannot contain actions that are inherited by default for resource type {0}.

Category:
Security

Cause:
Actions list in resource type contains default inherited data security actions.

Action:
Remove default data security actions from data security resource type.

JPS-20209
Duplicate column definition (same column names) not allowed in data source of resource type {0}.

Category:
Security

Cause:
Duplicate column definition (same names) in secured data source in resource type.

Action:
Remove duplicate column definition from secured data source.

JPS-20210
Action collection reference name {1} referred in resource type {0} not found in policy store.

Category:
Security

Cause:
Action collection reference in resource type not found in the policy store.

Action:
Either create action collection in store or remove the reference from resource type.

JPS-20220
Data Security Resource Type should be present for Data Security Resource {0}.

Category:
Security

Cause:
No RAS resource type present for RAS resource OR is not of type RAS resource type.

Action:
Add RAS resource type for RAS resource.

JPS-20221
For data security resource {0} SQL predicate or XML expression is required.

Category:
Security

Cause:
Both SQL predicate and XML expression missing in data security resource.

Action:
Add either SQL Predicate or XML expression to data security resource.

JPS-20240
Multiple rules not allowed for triton policy {0}.

Category:
Security

Cause:
Multiple rules in triton data security policy.

Action:
Add only one rule to triton data security policy.

JPS-20241
Data security policy {0} has invalid type {1} and category {2}.

Category:
Security

Cause:
Invalid policy category and type combination.

Action:
Provide valid policy category and type combination.

JPS-20242
RAS policy only takes resources with same resource type.

Category:
Security

Cause:
RAS Policy have resources with different resource types.

Action:
Provide resources just with same resource type for RAS policy.

JPS-20243
For RASParameterValue, only EXACT matcher is supported.

Category:
Security

Cause:
Search RAS Policy by RASParameterValue ONLY support MATCHER.EXACT.

Action:
Use MATCHER.EXACT for search by RASParameterValue.

JPS-20244
For RASParameterValue, only EQUALITY comparator is supported.

Category:
Security

Cause:
Search RAS Policy by RASParameterValue ONLY support COMPARATOR.EQUALITY.

Action:
Use COMPARATOR.EQUALITY for search by RASParameterValue.

JPS-20260
RAS Resource type name referred in RAS policy set {0} is Null.

Category:
Security

Cause:
RAS resource type reference in RAS policy set is Null.

Action:
Either create given resource type in store beforehand or use an existing one.

JPS-20261
Data security policy set {0} has invalid type {1} and category {2}.

Category:
Security

Cause:
Invalid policy set category and type combination.

Action:
Provide valid policy set category and type combination.

JPS-20262
Policy set {0} is an ACL protecting an Attribute Collection and cannot be deleted.

Category:
Security

Cause:
Attempt to delete ACL that is protecting an Attribute Collection.

Action:
Check that the ACL is not protecting any Attribute Collection.

JPS-20263
RAS Policy set only takes policies whose ras resources are of same ras resource type.

Category:
Security

Cause:
RAS policy set only takes policies whose ras resources are of same ras resource type.

Action:
Use ras policies with same ras resource type for ras policy set.

JPS-20264
The length of RAS {0} name plus the length of RAS application name can not exceed 29.

Category:
Security

Cause:
The length of RAS artifact name plus the length of ras application name exceeds 29.

Action:
Shorten the RAS artifact name

JPS-20265
The name of RAS {0} is allowed to consist of only alphanumeric characters and the special characters $, _, and #, and MUST begin with a letter.

Category:
Security

Cause:
The RAS artifact name is allowed to consist of only alphanumeric characters and the special characters $, _, and #, and MUST begin with a letter.

Action:
Change the RAS artifact name

JPS-20300
The action or implied action "{0}" already exists in action collection "{1}" or its parent(s).

Category:
Security

Cause:
Duplicate action or implied action found in action collection or one of its parents.

Action:
Verify the action and implied action lists of this action collection and its parents.

JPS-20301
The action collection "{0}" is already referenced in action collection "{1}" or its parent(s).

Category:
Security

Cause:
Duplicate action collection reference found in action collection or one of its parents.

Action:
Verify the action collection reference lists of this action collection and its parents.

JPS-20302
The action collection "{0}" already exists in application policy "{1}".

Category:
Security

Cause:
Action collection already exists in the application.

Action:
Verify the action collection in the application or try modify operation.

JPS-20303
The action collection "{0}" was not found in application policy "{1}".

Category:
Security

Cause:
Action collection not found in application.

Action:
Verify the action collection is present in the application.

JPS-20304
The action collection "{0}" is in use by another policy object.

Category:
Security

Cause:
Action collection is in use by another policy object.

Action:
Verify the usages of the action collection.

JPS-20305
Create, modify & delete operations are not permitted on built-in action collection "{0}".

Category:
Security

Cause:
The action collection being deleted, created or modified is built-in in the database.

Action:
Use a different name for the action collection.

JPS-20306
Action {0} referred in implied action {1} is not defined in action collection {2} or any of its parents.

Category:
Security

Cause:
The mapping specified for given implied action is not found in action collection or its parents.

Action:
Check the implied actions mappings.

JPS-20307
The action or implied action "{0}" already exists in implied action "{1}".

Category:
Security

Cause:
The mapping specified for given implied action contains duplicate actions.

Action:
Check the implied actions mappings.

JPS-20308
The implied action "{0}" refers to itself.

Category:
Security

Cause:
The mapping specified for given implied action contains reference to itself.

Action:
Check the implied actions mappings.

JPS-20320
"{0}" is not a RAS target database.

Category:
Security

Cause:
The SM is not a RAS target database.

Action:
make sure the name corresponds to a RAS target database

JPS-20321
"{0}" is not a RAS application.

Category:
Security

Cause:
The application is not a RAS application.

Action:
make sure the name corresponds to a RAS application

JPS-20322
"{0}" is not found or it is not a RAS target database.

Category:
Security

Cause:
RAS target database not found

Action:
make sure the name corresponds to a RAS target database

JPS-20350
All of handlerSchemaName, handlerPackageName and handlerFunctionName must be present or must be null in an attribute collection.

Category:
Security

Cause:
Atleast one of schema name, package name or function name of handler function is null.

Action:
Verify the schema name, package name and function name of handler function.

JPS-20351
The attribute "{0}" already exists in attribute collection "{1}".

Category:
Security

Cause:
Duplicate attribute found in attribute collection.

Action:
Verify the attribute list of this attribute collection and its parents.

JPS-20352
Attributes in attribute collection must be of category DYNAMIC.

Category:
Security

Cause:
Category of added attribute was wrong.

Action:
Verify the added attribute is of category DYNAMIC.

JPS-20353
The attribute collection "{0}" already exists in application policy "{1}".

Category:
Security

Cause:
Attribute collection already exists in the application.

Action:
Verify the attribute collection in the application or try modify operation.

JPS-20354
The attribute collection "{0}" was not found in application policy "{1}".

Category:
Security

Cause:
Attribute collection not found in application.

Action:
Verify the attribute collection is present in the application.

JPS-20355
Attributes in attribute collection must be single-valued.

Category:
Security

Cause:
Multi-valued attributes not supported.

Action:
Verify the added attribute(s) are all single-valued.

JPS-20356
The ACE(Policy Rule) "{0}" is not present in the application.

Category:
Security

Cause:
ACE(policy rule) protecting Attribute collection not found in application.

Action:
Verify the ACE(Policy Rule) is present in the application.

JPS-20357
The attributes in an attribute collection "{0}" is null or empty.

Category:
Security

Cause:
RASAttribute list is null or empty

Action:
Make sure RASAttribute list is not null or empty.

JPS-20400
The definition for attribute "{0}" exists in the application policy with wrong category. Expected: {1}, Found: {2}

Category:
Security

Cause:
Attribute definition exists in application with different category than expected.

Action:
Verify the attribute definition in the application.

JPS-20401
The definition for attribute "{0}" exists in the application policy with wrong type. Expected: {1}, Found: {2}

Category:
Security

Cause:
Attribute definition exists in application with different type than expected.

Action:
Verify the attribute definition in the application.

JPS-20403
Attribute designator functionality is not supported for this schema version.

Category:
Security

Cause:
Attribute designator functionality is not supported for this schema version.

Action:
Don't use designator functionality or upgrade to newer version.

JPS-20411
Invalid match function. Match function for a constraint must take two input parameters, provided function requires {0} input parameters.

Category:
Security

Cause:
Match function for constraint does not take 2 input parameters.

Action:
Provide a corret match function for constraint.

JPS-20412
Invalid match function. Both input parameters to a match function must be of same data type; provided function takes input parameters of type {0} and {1}.

Category:
Security

Cause:
Match function for constraint musts take two input parameters of same data type.

Action:
Provide a correct match function for constraint.

JPS-20413
Invalid match function. First parameter for a match function must be a single value.

Category:
Security

Cause:
Match function for a constraint cannot take bag or set of values.

Action:
Provide a correct match function for constraint.

JPS-20414
Mismatch of attribute category in constraint. Expected {0}, actual {1}.

Category:
Security

Cause:
Category of attribute provided to the constraint must either be dynamic or match the constraint type.

Action:
Provide attribute with correct category type to the constraint.

JPS-20415
The data type {0} of attribute "{1}" does not match data type {2} of function second parameter passed to AttributeValueAssertion.

Category:
Security

Cause:
Attribute data type and expected function parameter data type are different.

Action:
Verify the data type of attribute entry passed to AttributeValueAssertion.

JPS-20416
Data type of value and expected input parameter type of function provided for attribute value assertion does not match. Expected type {0}, provided {1}

Category:
Security

Cause:
Data type of value and expected input parameter type of function provided for attribute value assertion does not match.

Action:
Provide value with correct data type to the constraint.

JPS-20417
Constraints are only supported for TargetEntry and SimpleTargetEntry

Category:
Security

Cause:
Constraints are supported only for TargetEntry and SimpleTargetEntry.

Action:
If a constraint must be used, add it using a TargetEntry or SimpleTargetEntry.

JPS-20420
Function Element is not supported as return type of a function.

Category:
Security

Cause:
Function Element is not supported as return type of a function.

Action:
Provide some other return type.

JPS-20421
Data type for a Function Element input parameter must be OpssString.

Category:
Security

Cause:
Data type for a Function Element input parameter must be OpssString.

Action:
Provide correct data type.

JPS-20422
Function Element not supported for this version of policystore.

Category:
Security

Cause:
Function element not supported for this schema version.

Action:
Don't use function element or upgrade.

JPS-20423
AttributeAssignment can not be defined using a Function Element.

Category:
Security

Cause:
Attribute assignment cannot be defined using a function element.

Action:
Don't use function element.

JPS-20500
Quoted name for {0}, must be terminated by double-quote (").

Category:
Security

Cause:
Quoted id for triton entity needs to be terminated with double-quote(").

Action:
Verify the id provided.

JPS-20501
Length of {0} name must be between 1 and 30 characters (excluding the quotes ("), in case of quoted identifier), but was {1}

Category:
Security

Cause:
Id for triton entity has invalid length.

Action:
Verify the id provided.

JPS-20502
Quoted name for {0} contains invalid character "{1}" at position {2}. Quoted names must not contain null character(\0) or double-quote(") within the name

Category:
Security

Cause:
Quoted id for triton entity has invalid character.

Action:
Verify the id provided.

JPS-20503
Unquoted name for {0} contains invalid character "{1}" at position {2}. Unquoted names must begin with an alphabet. They may contain a letter, digit, underscore(_), dollar($), hash(#), or dot(.) symbols at other positions.

Category:
Security

Cause:
Unquoted id for triton entity has invalid character.

Action:
Verify the id provided.

JPS-20504
The name "{0}" is an implicit object name in the database and cannot be used as a name for {1}.

Category:
Security

Cause:
Id provided for triton entity is an implicit object name in the database.

Action:
Verify the id provided.

JPS-20505
The value "{0}" is of an unsupported type.

Category:
Security

Cause:
Parameter value is using an invalid type.

Action:
Verify the parameter value provided.

JPS-20521
A simple target must have at least one resource action entry or permission set reference.

Category:
Security

Cause:
A simple target must have at least one resource action entry or permission set reference.

Action:
Provide resource actions or permission sets.

JPS-20600
MetaData-Provisioned is true, but no meta data found in policy object {0}.

Category:
Programmatic

Cause:
MetaData-Provisioned is true, but no meta data found in policy object {0}.

Action:
Check the policy store, make sure it is in an consistent state.

JPS-20601
Provided version "{0}" is invalid. Only alphabetic characters, digits, underscores, and dots are allowed.

Category:
Programmatic

Cause:
Provided version {0} is invalid. Only alphabetic characters, digits, underscores, and dots are allowed.

Action:
Provide a valid version.

JPS-20602
Provided meta data {0} is invalid. Reason: {1}

Category:
Programmatic

Cause:
Provided meta data {0} is invalid. Reason: {1}.

Action:
Provide a valid meta data.

JPS-90600
Security Module with the configuration id {0} already exists.

Category:
Security

Cause:
Security Module with the configuration id {0} already exists.

Action:
Provide a unique configuration id.

JPS-90601
Failed to create Security Module with the configuration id {0}, with error {1}

Category:
Security

Cause:
Failed to create Security Module with the configuration id {0}, with error {1}

Action:
Check error message for further details.

JPS-90602
Security Module with the configuration id {0} not found.

Category:
Security

Cause:
Security Module with the configuration id {0} not found.

Action:
Make sure the configuration id is valid.

JPS-90603
AuditService is improperly configured.

Category:
Security

Cause:
Audit Service is not initializable.

Action:
Configure an audit server for audit trails

JPS-90604
Security Module with the configuration id {0} successfully created.

Category:
Security

Cause:
Security Module with the configuration id {0} successfully created.

Action:
Audit message, no action required

JPS-90605
Security Module with the configuration id {0} successfully modified.

Category:
Security

Cause:
Security Module with the configuration id {0} successfully modified.

Action:
Audit message, no action required

JPS-90606
Security Module with the configuration id {0} successfully deleted.

Category:
Security

Cause:
Security Module with the configuration id {0} successfully deleted.

Action:
Audit message, no action required

JPS-90607
Security Module with the configuration id {0} successfully retrieved.

Category:
Security

Cause:
Security Module with the configuration id {0} successfully retrieved.

Action:
Audit message, no action required

JPS-90608
Failed to modify Security Module with the configuration id {0}, with error {1}

Category:
Security

Cause:
Failed to modify PIP with the configuration id {0}, with error {1}

Action:
Check error message for further details.

JPS-90620
PIP with the configuration id {0} already exists.

Category:
Security

Cause:
PIP with the configuration id/name {0} already exists.

Action:
Provide a unique configuration id/name.

JPS-90621
Failed to create PIP with the configuration id {0}, with error {1}

Category:
Security

Cause:
Failed to create PIP with the configuration id {0}, with error {1}

Action:
Check error message for further details.

JPS-90622
PIP with the configuration id {0} not found.

Category:
Security

Cause:
PIP with the configuration id/name {0} not found.

Action:
Make sure the configuration id/name is valid.

JPS-90623
PIP with the configuration id {0} successfully created.

Category:
Security

Cause:
PIP with the configuration id {0} successfully created.

Action:
Audit message, no action required

JPS-90624
PIP with the configuration id {0} successfully modified.

Category:
Security

Cause:
PIP with the configuration id {0} successfully modified.

Action:
Audit message, no action required

JPS-90625
PIP with the configuration id {0} successfully deleted.

Category:
Security

Cause:
PIP with the configuration id {0} successfully deleted.

Action:
Audit message, no action required

JPS-90626
PIP with the configuration id {0} successfully retrieved.

Category:
Security

Cause:
PIP with the configuration id {0} successfully retrieved.

Action:
Audit message, no action required

JPS-90627
Failed to modify PIP with the configuration id {0}, with error {1}

Category:
Security

Cause:
Failed to modify PIP with the configuration id {0}, with error {1}

Action:
Check error message for further details.

JPS-90630
Application Policy with the configuration id {0} not found.

Category:
Security

Cause:
Application with the id {0} not found.

Action:
Make sure the Appplication Policy is valid.

JPS-90631
SM Binding with the configuration id {0} and application name {1} successfully retrieved.

Category:
Security

Cause:
SM Binding with the configuration id {0} and application name {1} successfully retrieved.

Action:
Audit message, no action required

JPS-90632
SM with the configuration id {0} to application bindings retrieved.

Category:
Security

Cause:
SM with the configuration id {0} to application bindings retrieved.

Action:
Audit message, no action required

JPS-90633
SM with the configuration id {0} and application name {1} successfully unbound.

Category:
Security

Cause:
SM with the configuration id {0} and application name {1} successfully unbound.

Action:
Audit message, no action required

JPS-90634
PIP Binding with the configuration id {0} and application name {1} successfully retrieved.

Category:
Security

Cause:
PIP Binding with the configuration id {0} and application name {1} successfully retrieved.

Action:
Audit message, no action required

JPS-90635
PIP with the configuration id {0} to application bindings retrieved.

Category:
Security

Cause:
PIP with the configuration id {0} to application bindings retrieved.

Action:
Audit message, no action required

JPS-90636
PIP with the configuration id {0} and application name {1} successfully unbound.

Category:
Security

Cause:
PIP with the configuration id {0} and application name {1} successfully unbound.

Action:
Audit message, no action required

JPS-90637
Failed to create SM binding with the configuration id {0}, with error {1}

Category:
Security

Cause:
Failed to create SM binding with the configuration id {0}, with error {1}

Action:
Check error message for further details.

JPS-90638
Failed to create PIP binding with the configuration id {0}, with error {1}

Category:
Security

Cause:
Failed to create PIP binding with the configuration id {0}, with error {1}

Action:
Check error message for further details.

JPS-90639
Application {0} already bound to configuration {1}

Category:
Security

Cause:
Application {0} already bound to configuration {1}

Action:
No need to bind again

JPS-90640
Failed to unbind SM configuration

Category:
Security

Cause:
Failed to unbind SM with the configuration id {0}, with error {1}

Action:
Check error message for further details.

JPS-90641
Failed to unbind PIP Configuration

Category:
Security

Cause:
Failed to unbind PIP with the configuration id {0}, with error {1}

Action:
Check error message for further details.

JPS-90642
The non-controlled policy distribution mode application {0} can not be bound to SM configuration

Category:
Security

Cause:
The non-controlled policy distribution mode application can not be bound to SM configuration

Action:
Bind controlled policy distribution mode application

18
MDS-00001 to MDS-92010

MDS-00001
exception in Metadata Services layer

Category:
Programmatic

Cause:
An exception occurred in the Metadata Services layer.

Action:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action.

MDS-00002
unexpected internal error

Category:
Programmatic

Cause:
An unexpected internal error occurred.

Action:
Contact Oracle Support Services.

MDS-00003
error connecting to the database

Category:
Configuration

Cause:
A database connection to the metadata repository could not be established.

Action:
Contact the database administrator or system administrator to get the problem resolved.

MDS-00005
unable to find XML element or text "{0}"

Category:
Programmatic

Cause:
The XML element with the given local name or the text node containing the given data could not be located by traversing through the document while applying customizations to a metadata object. The internal in-memory MDocument structure may be corrupted.

Action:
Retry the operation. Contact Oracle Support Services if the problem persists.

MDS-00008
Attribute "{0}" is not allowed for element {1} namespace {2} in metadata object {3}.

Category:
Programmatic

Cause:
An attempt was made to add an attribute to an element that does not conform to the element"s schema definition.

Action:
If the Bean API is being used, then determine if the beans need to be regenerated. Otherwise, inspect the element definition for valid attributes.

MDS-00010
DuplicateRefException. In document {0} there are multiple elements with the same ID {1}.

Category:
Programmatic

Cause:
Either an element was being added with an ID that already existed within the document, or a pre-existing document had multiple elements with the same ID.

Action:
Change the ID of the elements so that there is no ID duplication.

MDS-00011
unable to create configuration object or MDSInstance due to invalid configuration information: {0}

Category:
Configuration

Cause:
The MDS configuration was invalid.

Action:
Refer to the MDS specification and correct the configuration.

MDS-00012
invalid value "{0}" for attribute {1} (type = "{2}") in metadata object {3}

Category:
Data

Cause:
The value provided for the named attribute was invalid. For example, this error could occur if a named JNDI connection name is incorrect.

Action:
Provide a valid attribute value.

MDS-00013
no metadata found for metadata object "{0}"

Category:
Data

Cause:
MDS was unable to locate the given metadata object.

Action:
Confirm the name and location of the metadata object, its existence in the configured metadata stores, and that it is in an accessible namespace.

MDS-00015
Translation ignored in document "{0}": element with localRef "{1}" not found

Category:
Data

Cause:
A translation could not be applied because the underlying element to be translated was not found.

Action:
If the element is expected, check the base document and any customizations to locate it.

MDS-00016
Ignoring customization for instruction type "{0}" in metadata object "{1}" for customization layer "{2}"/"{3}": not finding element with local reference "{4}"

Category:
Data

Cause:
A customization was not applied because the underlying element to be customized was not found.

Action:
If the element is expected, examine the base document and any customizations to locate the element.

MDS-00017
Customization instruction generated for "{0}" uses local reference(s) : "{1}" which is not upgrade safe.

Category:
Data

Cause:
The customization instruction contained a local reference that was not deemed safe for an upgrade operation.

Action:
Ensure that the local reference used in the customization instruction would be safe during an upgrade operation.

MDS-00018
Fixed customization for instruction type "{0}" in metadata object "{1}" for customization layer "{2}"/"{3}": not able to find the referenced element with local reference "{4}", inserted the customized element at the best possible location.

Category:
Data

Cause:
A customization was fixed because the referenced element was not found.

Action:
Correct the customized element's position if needed.

MDS-00019
Customization document contains an invalid instruction "{0}".

Category:
Data

Cause:
A customization document that was being applied contained an unrecognized instruction.

Action:
Retry the operation. If necessary, either remove the customization document, or edit it to correct or remove the offending instruction.

MDS-00020
Layer value "{0}" contains an invalid character.

Category:
Data

Cause:
Using a layer value that has an invalid character.

Action:
Layer value should conform to MDS naming standards.

MDS-00029
Invalid namespace: The namespace "{0}" has not been registered with the MetadataManager.

Category:
Configuration

Cause:
An attempt was made to access a document in an unknown location or namespace.

Action:
Ensure that the namespace reported is registered in the MDS configuration.

MDS-00032
cannot parse the input file: {0}

Category:
Data

Cause:
An exception occurred while parsing the file.

Action:
Record the accompanying error and contact the developers of the application.

MDS-00033
cannot load the input file: {0}

Category:
Files

Cause:
An exception occurred while loading the file.

Action:
Record the accompanying error and contact the developers of the application.

MDS-00034
cannot write to the output file: {0}

Category:
Files

Cause:
An attempt to write to the output file failed.

Action:
Record the accompanying error and contact the developers of the application.

MDS-00035
cannot load the class: {0}.

Category:
Configuration

Cause:
The class file could not be loaded.

Action:
Ensure the class is available on the classpath so that it can be loaded by the application.

MDS-00036
cannot instantiate the class: {0}

Category:
Configuration

Cause:
An exception occurred while instantiating a class.

Action:
Record the accompanying error and contact the developers of the application.

MDS-00037
cannot access the class: {0}

Category:
Configuration

Cause:
An attempt was made to access an inaccessible class file.

Action:
Record any accompanying errors and contact the developers of the application.

MDS-00039
error while attempting to parse the document {0} using SAX.

Category:
Data

Cause:
A SAX parsing exception occurred while trying to parse a document.

Action:
Record the accompanying error and contact the developers of the application.

MDS-00040
There are no namespaces registered.

Category:
Configuration

Cause:
The operation attempted requires at least one registered namespace.

Action:
Correct the MDS configuration to include the required namespace schemas.

MDS-00041
invalid classpath entry "{0}"

Category:
Configuration

Cause:
An entry on the application's classpath did not exist or was invalid.

Action:
Correct the application's classpath to remove the invalid entry.

MDS-00042
Classpath "{0}" does not contain any valid directories or jar files.

Category:
Configuration

Cause:
The application's classpath contained no valid entries.

Action:
Correct the application's classpath.

MDS-00043
A name pattern mapping for path {0} already exists.

Category:
Configuration

Cause:
The MDS configuration had duplicate namespace mappings.

Action:
The MDS configuration must be corrected to remove the duplicate namespace mappings.

MDS-00044
Metadata for MetadataObject with name {0} already exists in the configured store.

Category:
Configuration

Cause:
An attempt was made to create a new Metadata Object. However an object with the same MDSReference already existed.

Action:
The name or location of one of the objects must be changed.

MDS-00047
Use the flushChanges method on the MDSSession to commit the changes.

Category:
Programmatic

Cause:
Commit was disabled in the PTransaction that was being used.

Action:
Use the flushChanges method on the MDSSession to commit the changes.

MDS-00054
The file to be loaded {0} does not exist.

Category:
Configuration

Cause:
An attempt was made to load a persistent document using a URL but the underlying document was not found in the store.

Action:
Check that the document name is correct and that the store is correctly configured.

MDS-00058
Invalid Metadata Path: Metadata Path cannot be null.

Category:
Configuration

Cause:
The path used to create a FileMetadataStore was empty. It must point to a directory.

Action:
Correct the metadata store definition in the application configuration to specify a metadata path.

MDS-00068
Element with local name = {0}, namespace = {1} is not expected under Parent Element = {2} in document location = {3}

Category:
Configuration

Cause:
While parsing a document, a request was made to locate a type definition whose usage is either not defined or is not expected for the parent element within the schema definition.

Action:
Check the xml source and any customizations to be applied and ensure that the element with the given namespace is defined and in the correct location as specified by the schema definition.

MDS-00084
Parameter {0} is invalid.

Category:
Programmatic

Cause:
The supplied parameter was not of the expected type.

Action:
Ensure the parameter is of the expected type.

MDS-00085
Parameter {0} is missing.

Category:
Programmatic

Cause:
The named parameter was not supplied.

Action:
Ensure that the named parameter is supplied. If transferring documents ensure a parameter file name is supplied.

MDS-00089
Parameter {0} must have a value.

Category:
Programmatic

Cause:
A required parameter was null.

Action:
Ensure that the indicated parameter is not null when the method is called.

MDS-00090
Error in JNDI lookup operation on MDSInstance name {0}, JNDI name {1}: object found {2} is an instance of class {3} classloader {4}, expected an instance of class {5} classloader {6}.

Category:
Programmatic

Cause:
An object of an unexpected type was found, and it was bound to the JNDI context as the MDSInstance.

Action:
Make sure no user-written code is binding anything to the same JNDI name. If the error occurs again try restarting the application. If the error still occurs, contact Oracle Support Services.

MDS-00091
Unable to customize {0}, empty or null value for tip customization layer {1}

Category:
Configuration

Cause:
The customization layer configured as the tip, has a null or empty value.

Action:
Ensure that a valid value is supplied for the tip customization layer.

MDS-00092
DuplicateNodeException. The same bean instance {0} already exists in document {1}.

Category:
Programmatic

Cause:
An element was being added that already exists as the same bean instance within the document.

Action:
Either create a new bean instance or remove the duplicate before attempting to insert in the document.

MDS-00093
List of values provided for customization layer {0} was empty or null.

Category:
Programmatic

Cause:
The list of customization layer values was either empty or null.

Action:
Ensure that a valid list of layer values for the customization layer is provided.

MDS-00094
List of CustLayerUsage objects provided was empty or null.

Category:
Programmatic

Cause:
The list of CustLayerUsage objects was either empty or null.

Action:
Ensure that a valid list of CustLayerUsage objects is provided.

MDS-00095
The support to transfer customization documents based on the CustConfig and excluding customization documents of specific customization layers is not yet available.

Category:
Programmatic

Cause:
CustOption is created to transfer customization documents based on the CustConfig and to exclude customization documents of specific customization layers which is not yet supported in MDS Transfer.

Action:
Ensure CustOption is not created to use CustConfig and to exclude customization documents of specific customization layers.

MDS-00111
The value of the property {0} for the component {1} must be set to the default value.

Category:
Data

Cause:
The indicated component property did not have a default value.

Action:
Ensure the component property is given a default value.

MDS-00153
invalid value for indicator

Category:
Data

Cause:
The production of merged XML failed.

Action:
Verify the validity of XML documents and any schemas. If necessary forward these on to Oracle Support Services with the exception message and stack trace.

MDS-00154
The ContentHandler {0} does not implement org.xml.sax.ext.LexicalHandler.

Category:
Programmatic

Cause:
MergedXML was passed a ContentHandler that does not implement org.xml.sax.ext.LexicalHandler.

Action:
Use a ContentHandler that implements org.xml.sax.ext.LexicalHandler.

MDS-00155
unable to create a JSP file for document {0}

Category:
Files

Cause:
Oracle MDS was unable to create a JSP source document.

Action:
Examine the MDS base document, as well as any customizations and translations. If necessary, forward these to Oracle Support Services.

MDS-00156
unable to create a JSP output directory {0}

Category:
Files

Cause:
MDS-JSP integration failed because a problem was encountered while creating a directory.

Action:
Verify that you have permission to create this directory.

MDS-00157
unable to write to JSP file {0}

Category:
Files

Cause:
MDS-JSP integration failed because a problem was encountered while trying to write to a file.

Action:
Verify that you have permission to create this file.

MDS-00158
invalid directory: {0}

Category:
Files

Cause:
MDS-JSP integration failed. An attempt was made to write to an invalid directory.

Action:
Verify the value of the invalid directory.

MDS-00159
Invalid value "{0}" for {1} attribute (type = "{2}") in document {3}.

Category:
Programmatic

Cause:
An attempt was made to read or write an invalid attribute value.

Action:
Double-check the value and attribute type.

MDS-00160
no local name has been specified for a resource

Category:
Programmatic

Cause:
An attempt was made to create a resource without giving it a name.

Action:
Verify that the resource that was created is given a local name.

MDS-00161
no local name has been specified

Category:
Programmatic

Cause:
An attempt was made to create a resource without giving it a local name.

Action:
Verify that the resource that was created is given a local name.

MDS-00162
invalid attribute value

Category:
Programmatic

Cause:
An attempt was made to give to an invalid value to an attribute.

Action:
Verify that the attribute has a valid value.

MDS-00163
property value missing from element

Category:
Programmatic

Cause:
An element was missing a property value.

Action:
Ensure that each parameter used to create the element has a property value.

MDS-00164
There is a concurrent "{1}" operation on the document "{0}".

Category:
Data

Cause:
The document on which modification was being attempted had been updated by another user after it was retrieved.

Action:
Retrieve the document again.

MDS-00165
metadata Object "{0}" has changed

Category:
Data

Cause:
The creation, updating, or renaming of a metadata object failed due to conflicting changes made by another user.

Action:
Retrieve the document containing the metadata object again.

MDS-00166
unable to locate the unique identifier, {0}:{1}, that has been configured for the element {2}

Category:
Programmatic

Cause:
The element that required a unique identifier was created without one.

Action:
Add a unique identifier attribute to the element.

MDS-00167
Invalid local name for mapping "{0}" - an empty string is not allowed.

Category:
Programmatic

Cause:
A local name was given a null or empty value.

Action:
Supply a valid local name.

MDS-00168
MDS object {0} is being used after it or its MDSInstance or PManager has been released.

Category:
Session

Cause:
An MDS object was used after it or its MDSInstance or PManager had been released

Action:
Create a new MDSInstance and re-create the MDS object.

MDS-00169
The MDS instance is not ready for use because metadata deployment is in progress (status is "{0}"). Deployment messages so far are: "{1}".

Category:
Programmatic

Cause:
The MDS instance cannot be used until metadata deployment has finished.

Action:
Try again later after metadata deployment has completed.

MDS-00170
The MDS instance is not usable because metadata deployment failed with status "{0}".

Category:
Configuration

Cause:
Metadata deployment failed with the given status.

Action:
Please fix the error and redeploy the application's metadata using the importMAR operation on MDS Application Runtime MBean. Also, refer to the error messages that describe the cause exception in the application logs for more information on the actual reason for failure.

MDS-00171
Document "{0}" already has unsaved updates on another instance of this metadata object in this session.

Category:
Data

Cause:
An attempt was made to update metadata using more than one instance of the same metadata object at the same time in the same session.

Action:
Save the changes on the metadata object that already has updates before attempting to update it via another metadata object, or make further modifications on the metadata object on which updates have already been made.

MDS-00172
The value "{0}" of local unique attribute {1} on the {2} element that is being inserted or updated in document {3}, is already used by a sibling element.

Category:
Data

Cause:
An attempt was made to have two local unique attributes with the same value on elements that share the same parent.

Action:
Use a different value for the local unique attribute on the element that is being inserted or updated.

MDS-00173
Attribute {0} of element {1} in document {2} has a null value.

Category:
Data

Cause:
The value of the named attribute was null.

Action:
Provide a non-null value for the attribute or remove the attribute.

MDS-00174
A tenant scoped MDSInstance {0} is being requested with a null TenantId.

Category:
Session

Cause:
A tenant scoped MDSInstance was requested passing null for TenantId.

Action:
Supply a non null TenantId or request an unscoped MDSInstance.

MDS-00176
The operation on MDSInstance {0} cannot be performed as it is not tenant scoped.

Category:
Session

Cause:
The operation performed on the MDSInstance was invalid with a TenantId because it was not a tenant scoped MDSInstance.

Action:
Perform the operation on an MDSInstance initialized for multitenant operation.

MDS-00177
The operation on resource {0} cannot be performed as it is not configured to be owned by the current tenant scope.

Category:
Session

Cause:
The operation performed was illegal as the resource being created, updated or deleted has global scope and the current scope is tenant or the resource has tenant scope and the current tenant is global.

Action:
Check that the configuration of the namespaces and CustomizationClasses is correct and that the correct customization class list is being used.

MDS-00178
Multitenant MDSInstance {0} cannot be returned as a non-multitenant MDSInstance was requested with the current persistence configuration.

Category:
Session

Cause:
The configuration at the time the MDSInstance was requested did not match with the configuration when it was originally created.

Action:
Request an MDSInstance appropriate to the configuration.

MDS-00179
The requested MDSInstance {0} cannot be returned for TenantId {1} as it was originally created with multitenant enabled = {2}.

Category:
Session

Cause:
The configuration at the time the MDSInstance was requested did not match with the configuration when it was originally created.

Action:
Request an MDSInstance appropriate to the original configuration.

MDS-00180
Only a single tenant cache configuration is allowed.

Category:
Session

Cause:
The number of TenantCacheConfigs was not 1.

Action:
Pass a single tenant cache configuration object. Although the constructor for the TenantCacheConfigs class takes an array this is reserved for future use.

MDS-00181
Only a single tenant document cache configuration is allowed.

Category:
Session

Cause:
The number of TenantDocumentCacheConfigs was not 1.

Action:
Pass a single tenant document cache configuration object. Although the constructor for the TenantDocumentCacheConfigs class takes an array this is reserved for future use.

MDS-00182
Tenant cache configuration information cannot be requested for the global tenant.

Category:
Session

Cause:
Tenant cache configuration information was being requested for the global tenant.

Action:
Do not request the tenant cache configuration for the global tenant - use getCacheConfig directly from MDSConfig

MDS-00183
Tenant document cache configuration information cannot be requested for the global tenant.

Category:
Session

Cause:
Multitenant document cache information was being requested for the global tenant.

Action:
Do not request the tenant document cache configuration for the global tenant - use getDocumentCacheConfig from NamespaceConfig

MDS-00184
The relationship from {0} to {1} is invalid because the latter is configured as a global resource and cannot be referenced from a tenant resource because the corresponding relationship is defined with cascade delete enabled.

Category:
Session

Cause:
Relationships with cascade delete enabled were spanning tenant boundaries.

Action:
Reconfigure the relationship with cascade delete disabled or ensure the parent reference is within the same tenant scope.

MDS-00185
The relationship from {0} to {1} is invalid because the latter is configured as a global resource and cannot be referenced from a tenant resource because the corresponding relationship is defined with enforced integrity.

Category:
Session

Cause:
Relationships with defined referential integrity were spanning tenant boundaries.

Action:
Reconfigure the relationship without referential integrity or ensure the parent reference is within the same tenant scope.

MDS-00186
A {0} element is already present in the parent {1} element in document {2}, but with the QNameLUID identification mechanism only one is allowed.

Category:
Data

Cause:
An attempt was made to have two or more elements with same QName under same parent while QNameLUID identification mechanism is used.

Action:
Remove duplicate instances of elements with same QName

MDS-00187
The existing {0} element in the parent {1} element in document {2} is automatically removed, and new customized {0} element of "{3}"/"{4}" customization layer is inserted since with the QNameLUID identification mechanism, only one is allowed.

Category:
Data

Cause:
An attempt was made to have two or more elements with same QName under same parent while QNameLUID identification mechanism is used.

Action:
Removed duplicate instances of elements with same QName

MDS-00188
The relationship from {0} to {1} is invalid because the latter is configured as a tenant resource and cannot be referenced from a global resource.

Category:
Session

Cause:
An attempt was made to reference a tenant resource from a global resource.

Action:
Ensure all references from global resources are also global.

MDS-00189
The existing {0} element with unique id {1} in the parent {2} element in document {3} is automatically removed, and new customized {0} element with unique id {1} of "{4}"/"{5}" customization layer is inserted since {0} element is type-annotated to overwrite duplicates.

Category:
Data

Cause:
An attempt was made to have two or more elements with same QName under same parent having the same unique ID value while overwriteDuplicate mechanism is used.

Action:
Removed duplicate instances of elements with same QName having the same unique ID value

MDS-00190
A call to {0} on the current MDSSession does not specify the correct transaction key

Category:
Session

Cause:
The current MDS Session was created using a transaction key and the subsequent operation was either being attempted passing no key or a different one from that originally used.

Action:
If the MDS Session is created using a transaction key, then use the MDSSession API's that take a transaction key and use the same key.

MDS-00191
An exception occurred in PChangeListener {0}

Category:
Session

Cause:
The MetadataStoreCommunicator was attempting to notify the listener when an exception occurred.

Action:
Check the HandlePChanges method of the listener.

MDS-00192
Validation of {0} caused a NullPointerException: check there is an MDS bean object set on the MDS bean MO

Category:
Data

Cause:
This error most typically occurs when a Bean MO has been created but no bean object has been set on it.

Action:
Check that an MDS bean is set on this MO. Failing that, examine the stack for clues for alternative causes.

MDS-00193
Document with the MDSReference {0} contains an ID attribute with an invalid value: {1}

Category:
Data

Cause:
The value of the ID attribute is invalid according to the schema definition.

Action:
Ensure that the ID conforms to the schema definition .

MDS-00194
Auditing is disabled for component {0}.

Category:
Configuration

Cause:
There was an error registering the audit event definition(s) for the component.

Action:
Ensure that the audit event definitions for the component are valid and that the audit service is functional.

MDS-00195
The custom audit event of type "{0}" that was associated with "{1}" is not audited because the MDS object was unmodified since the last time the changes in the MDSSession were committed.

Category:
Programmatic

Cause:
MDS object associated with the event was unmodified since the last time the changes in the MDSSession were committed. A custom audit event is discarded if the associated MDSObject is not modified.

Action:
No action required.

MDS-00196
The MDSSession referenced by the audit component "{0}" is invalid.

Category:
Programmatic

Cause:
The MDS audit support instance is being used even after the MDSSession that was used to created it is no longer referenced.

Action:
Fetch the audit support instance from the MDSSession and retry the operation.

MDS-00197
An internal error occurred when processing MetadataObject {0} with document {1}.

Category:
Session

Cause:
An error occurred in the LayeredCache processing.

Action:
Check for log messages. If the problem persists, clear the MDS cache and contact Oracle Support Services.

MDS-00198
The requested object is deleted in the current PTransaction

Category:
Data

Cause:
The requested document was deleted in an earlier part of the PTransaction and not replaced.

Action:
Review whether the document needed to be deleted or replace with a new version.

MDS-00199
The requested object is deleted in the current MDSSession

Category:
Data

Cause:
The requested document was deleted in an earlier part of the MDSSession and not replaced.

Action:
Review whether the document needed to be deleted or replace with a new version.

MDS-00200
Reference not found in Document

Category:
Data

Cause:
Unable to locate the reference within the named Metadata Object.

Action:
Check that the reference is correct.

MDS-00201
PDocument not found in MetadataStore : {0}

Category:
Data

Cause:
The requested persistence document was not found in the given MetadataStore.

Action:
Check that the requested name is correct and that the store is mapped to the namespace correctly .

MDS-00202
The Document was not found on the classpath

Category:
Data

Cause:
The requested document was not found on the classpath.

Action:
Check that the document is available on the classpath as a resource .

MDS-00203
An error occurred while attempting to process Element "{0}" from customization document {1} because the change conflicts with information in the base document or changes made by a prior customization

Category:
Data

Cause:
An error occurred during parsing of a customization - see cause.

Action:
Check for any conflicts between the customization and recent changes to the base document or other customizations being applied.

MDS-00204
Remove customization fails on element with local reference "{0}" in document "{1}"

Category:
Programmatic

Cause:
An attempt to remove a customization from an element has failed.

Action:
Reproduce the customization document without the desired customization.

MDS-00205
Unexpected error in ChangeEventParseEngine

Category:
Programmatic

Cause:
An error in the ChangeEventParseEngine.

Action:
Check for log messages. If the problem persists, contact Oracle Support Services.

MDS-00206
Unexpected error while collecting ElementTipCustInfo for a customized element

Category:
Programmatic

Cause:
An error occurred while gathering ElementTipCustInfo for a customized element.

Action:
Check for log messages. If the problem persists, contact Oracle Support Services.

MDS-00207
Cached Object {0} was removed from the MDS cache by thread {1} while being read. Retrying the read.

Category:
Session

Cause:
An object being accessed by MDS was removed from the cache before it could be used to return the requested data.

Action:
The notification can occur if there are concurrent updates to objects cached by MDS. If the notification persists review the MDS cache configuration.

MDS-00208
Root node deleted but not replaced.

Category:
Programmatic

Cause:
The root node of an XML document was deleted, but no replacement node was inserted.

Action:
Insert a replacement root node after deleting the root node.

MDS-00209
Exception adding logging data: " {0}".

Category:
Programmatic

Cause:
An exception was raised in the MDS diagnostic log processing.

Action:
Examine logs for the full exception stack and underlying cause.

MDS-00210
The TenantId supplied {0} does not match the current tenant context: {1}.

Category:
Session

Cause:
A TenantId was supplied to MDS that does not match the TenantId provided by the context.

Action:
Remove the TenantId from the deprecated API or correct the TenantId supplied.

MDS-00211
Action is not allowed on a tenant-specific MetadataStoreCommunicator.

Category:
Programmatic

Cause:
An attempt was made to invoke a method that is not allowed on a non-global tenant

Action:
This change has to be made in a global tenant context.

MDS-00212
Unable to execute a task in the DOMAIN partition in application {0} because the application in the DOMAIN partition is not currently in RUNNING state, or this is a Java SE application that has not initialized MDS in the DOMAIN context.

Category:
Session

Cause:
A task runner was required but unable to be found.

Action:
Ensure that the MDS application lifecycle listener is configured, or that MDS is initialized in the global tenant context before running in any other tenant context.

MDS-00213
It was not possible to lock the cached RootNode with root key {0}.

Category:
Session

Cause:
An error occurred in the LayeredCache processing due to cache contention on a specific object.

Action:
Check for log messages. If the problem persists, clear the MDS cache and contact Oracle Support Services.

MDS-00214
Error encountered while processing root node replacement customization instruction in tip customization layer document.

Category:
Programmatic

Cause:
The customization instructions in tip customization document might be corrupted.

Action:
Check for log messages. If the problem persists, contact Oracle Support Services.

MDS-00215
TenantId is not supported. Please use equivalent ServiceId api.

Category:
Programmatic

Cause:
An attempt was made to invoke MDS deprecated APIs with TenantId.

Action:
Replace TenantId based API with ServiceId based API.

MDS-00216
Notification Manager for MDSInstance {0} was unable to get an application scoped executor for dispatching events in the application context - using a global executor instead.

Category:
Session

Cause:
An attempt was made to get an application scoped executor outside of an application.

Action:
Check if the request should be running within the scope of an application.

MDS-00217
Notification Manager for MDSInstance {0} was unable to get an application scoped contextual proxy for dispatching global events in the tenant context - using a global contextual proxy instead.

Category:
Session

Cause:
An attempt was made to get an application scoped contextual proxy outside of an application.

Action:
Check if the request should be running within the scope of an application.

MDS-00218
Cannot create ServiceId with null Service UUID.

Category:
Configuration

Cause:
An attempt was made to create an MDS ServiceId with a null value.

Action:
Check lifecycle-config.xml and ensure that each 'service' element contains an 'id' attribute defined with a UUID value.

MDS-00219
Invalid resource passed to MDSFaceletsHelper: {0}.

Category:
Programmatic

Cause:
An invalid resource was passed to MDSFaceletsHelper.

Action:
Check exception message. Consider enabling oracle.mds.jrf logging for additional diagnostics.

MDS-00220
Document {0} to be loaded does not exist for label {1}.

Category:
Configuration

Cause:
An attempt was made to load a persistent document using a URL but the underlying document was not found in the DB MetadataStore.

Action:
Check that the document name is correct and that the DB MetadataStore and Label are correctly configured.

MDS-00221
Specified label {0} does not exist in {1} store.

Category:
Configuration

Cause:
The specified label did not exist in the metadata store.

Action:
Verify that the label name is correct and that the label exists in the metadata store, and then retry the operation.

MDS-00222
Invalid value "{0}" for {1} attribute (type = "{2}").

Category:
Programmatic

Cause:
An attempt was made to read or write an invalid attribute value.

Action:
Double-check the value and attribute type.

MDS-00223
Unable to retrieve pinned Customization Class value from Unified Sandbox For CustomizationClass : {0} with Name {1}.

Category:
Runtime

Cause:
An attempt was made to read a customization value with AutoMergeOverrideValue.PINNED, but no value was retreived from the Unified Sandbox.

Action:
Ensure Unified Sandbox is able to return a pinned value for this Customization Class.

MDS-00224
Customization of {0} Location: {1} is not permitted due to a package level restriction in the cust-restriction-library-config element of the mds-library-config.xml at jar/zip level.

Category:
Runtime

Cause:
A jar level restriction on customization has been specified for objects in this package in the cust-restriction-library-config element of the mds-library-config.xml file.

Action:
Check if customization of this object should be allowed and correct the entries in cust-restriction-library-config at the jar/zip level.

MDS-00225
Updating immutable StreamedObject "{0}" is not allowed.

Category:
Programmatic

Cause:
The StreamedObject being updated was immutable.

Action:
Ensure that the StreamedObject to be updated is mutable.

MDS-00226
Unable to determine the MDSContext while processing cached MDS content : {0}

Category:
Runtime

Cause:
An attempt was made to access an MDSContext but an MDSContext is not presently available to this thread.

Action:
Check for logged diagnostic messages, clear the MDS cache and if the problem persists contact Oracle Support Services.

MDS-00227
Failure in MDS Java Flight Recorder integration processing.

Category:
Configuration

Cause:
A failure occurred in MDS JFR integration processing.

Action:
Examine the exception for clues. Check the JVM FlightRecorder options.

MDS-00228
No MOParseListener instance provided to MOParseListenersBuilder to build MOParseListeners instance.

Category:
Programmatic

Cause:
An attempt was made to build MOParseListeners instance using MOParseListenersBuilder without providing any instances of MOParseListener.

Action:
Provide at least one instance of MOParseListener before building MOParseListeners instance using MOParseListenersBuilder.

MDS-00229
DuplicateRefException occurred while attempting to process prior customization layer.

Category:
Data

Cause:
There exists two or more elements with same id value in base document and/or prior customization layers.

Action:
Fix elements with duplicate id value in prior customization layers before processing tip customization layer.

MDS-00230
Unexpected metadata object parse error.

Category:
Programmatic

Cause:
An unexpected metadata object parse error occurred.

Action:
Check DupIdInsertResolver instance usage.

MDS-00231
ReplaceProcessingOption NOT a valid available ProcessingOption.

Category:
Data

Cause:
An attempt was made to use DupIdElementsFilter.REPLACE_PO to fetch collection of DupIdElementInfo instances while ReplaceProcessingOption is NOT a valid available ProcessingOption.

Action:
Ensure to use DupIdElementsFilter associated to valid available ProcessingOption.

MDS-00232
Selected resolution is NOT amongst one of the available ProcessingOptions.

Category:
Data

Cause:
An attempt was made to use a resolution which is NOT amongst one of the available ProcessingOptions.

Action:
Ensure to use resolution which is amongst one of the available ProcessingOptions.

MDS-00233
Selected resolution is NOT amongst one of the available CustApplyOptions.

Category:
Data

Cause:
An attempt was made to use a resolution which is NOT amongst one of the available CustApplyOptions.

Action:
Ensure to use resolution which is amongst one of the available CustApplyOptions.

MDS-00234
RestrictedSession in CustClassContext should not be null

Category:
Data

Cause:
An attempt was made to create an instance of CustClassContext without specifying a value for RestrictedSession.

Action:
Ensure a non null value is provided to CustClassContext.Builder.withRestrictedSession.

MDS-00235
MOReference {0} and MetadataObject {1} are not consistent.

Category:
Data

Cause:
An attempt was made to create a CustClassContext with both a MetadataObject and an MOReference which did not relate to the same MetadataObject.

Action:
Ensure that MetadataObject and MOReference are consistent.

MDS-00236
Customization of {0} is not allowed because it is not explicitly allowed by any extended metadata entry, file type or package restriction.

Category:
Configuration

Cause:
An attempt was made to customize a StreamedObject that was not customizable.

Action:
If the attempted customization is valid, the customization restrictions need to be modified to provide this ability. The customization restrictions can be defined in: An extended metadata file, the FileTypeConfig or MDSLibraryConfig. Also check the customization policy for the MDS session in use and the customization configuration.

MDS-00237
Timed out trying to obtain a lock on the cache.

Category:
Session

Cause:
It was not possible to obtain a lock on a WeakCache after waiting 30 seconds.

Action:
Consider using a diagnostic tool such as jconsole to identify the thread that is not relinquishing this lock.

MDS-00238
Document {0} is not configured as a customizable StreamedObject.

Category:
Configuration

Cause:
The Streamed Object requested has not been configured for customization.

Action:
Ensure customization-type attribute in cust-config is set to FULL_REPLACE and that the content-type is BINARY_STREAM.

MDS-00239
Layer-specific retrieval on immutable StreamedObject "{0}" is not allowed.

Category:
Programmatic

Cause:
The StreamedObject on which a LSOLayerRetrieval method was called is immutable.

Action:
Ensure that the StreamedObject is mutable before calling LSOLayerRetrieval methods.

MDS-00240
A rest request to update a resource requires If-Match.

Category:
Session

Cause:
A rest request to update a resource was issued without specifying an ETag in the If-Match Header.

Action:
Reissue the request with a valid If-Match Content header.

MDS-00241
A rest request to update a resource specified an out of date ETag.

Category:
Session

Cause:
A rest request to update a resource specified an out of date ETag in the If-Match content Header, possibly due to the resource having been updated by another session.

Action:
Re-request the resource to obtain an up to date Etag and reissue the update.

MDS-00242
A rest request to update a resource occurred outside a unified sandbox.

Category:
Session

Cause:
The MDSSession obtained from the ADFContext was not running within a unified sandbox.

Action:
Session options on the ADFContext should use a unified sandbox.

MDS-00243
The document {0} is not within the current unified sandbox.

Category:
Session

Cause:
The document's namespace is not configured to be contained within the active unified sandbox.

Action:
Verify that the document should be updateable and amend the unified sandbox configuration accordingly.

MDS-00244
There is no current ADFContext.

Category:
Session

Cause:
The operation requires that an ADFContext be present on the current thread.

Action:
Verify that the ADFContext is configured correctly.

MDS-00245
A Customization already exists for {0} for the current layer

Category:
Session

Cause:
An attempt was made to create a new customization when one already exists.

Action:
GET the existing customization and modify via PUT.

MDS-00246
A Customization does not exist for {0} for the current layer

Category:
Session

Cause:
An attempt was made to get an existing custimization which does not exist.

Action:
Check the naming of your resource and retry the operation.

MDS-00247
No tip customization layer defined while retrieving details for {0}

Category:
Session

Cause:
Customization Layers have not been defined on the current MDSSession.

Action:
Check the customization config for your environment.

MDS-00248
No support to object-merge VBCS base document.

Category:
Data

Cause:
VBCS base document requires object-merge.

Action:
Remove conflicting VBCS base document available in sandbox and retry sandbox refresh operation.

MDS-00249
No support to object-merge VBCS base document and/or its associated non-tip layer extensions.

Category:
Data

Cause:
VBCS base document or its associated non-tip layer extensions requires object-merge.

Action:
Remove conflicting VBCS base document and/or its associated non-tip layer extensions available in sandbox and retry sandbox refresh operation.

MDS-00500
No metadata store is configured to save the document {0}.

Category:
Configuration

Cause:
An attempt was made to save a document, when no writable store was configured.

Action:
Provide a writable metadata store to save the document.

MDS-00501
Document {0} cannot be deleted because no metadata store is configured.

Category:
Configuration

Cause:
An attempt to delete a document failed because there was no writable store configured.

Action:
To delete the document, provide a writable metadata store.

MDS-00503
The metadata path "{0}" does not contain any valid directories.

Category:
Data

Cause:
Either the metadata path was empty or directories on the metadata path did not exist.

Action:
Ensure that the metadata path is not empty and that the directories on the metadata path exist.

MDS-00504
failure to create document {0} because metadata store "{1}" is read-only

Category:
Data

Cause:
An attempt to create a document on a read-only metadata store failed.

Action:
To create the document, provide a writable metadata store.

MDS-00505
failure to save document {0} because metadata store "{1}" is read-only

Category:
Data

Cause:
An attempt to save a document to a read-only metadata store failed.

Action:
To save the document, provide a writable metadata store.

MDS-00506
failure to get child resources of package {0} because package does not exist in metadata store

Category:
Data

Cause:
Child resources for the package were not found because specified package did not exist in the metadata store.

Action:
Verify that the package exists in the metadata store, and then retry the operation.

MDS-00507
failure to delete document {0} because metadata store "{1}" is read-only

Category:
Data

Cause:
An attempt to delete a document from a read-only metadata store failed.

Action:
To delete the document, provide a writable metadata store and retry the operation.

MDS-00508
There is no content to be read for {0}.

Category:
Data

Cause:
An attempt was made to read empty metadata.

Action:
Verify that the metadata has valid content, and then retry the operation.

MDS-00509
failure to delete document {0} with file {1}

Category:
Data

Cause:
An error occurred while the document was being deleted.

Action:
Verify that the document exists and then retry the operation, or provide a document that exists in the store.

MDS-00510
failure to read document {0} because it is not found in the metadata path "{1}"

Category:
Data

Cause:
The document to be read was not found.

Action:
Verify that the metadata path is correct and that the document exists in the metadata path.

MDS-00511
failure to create document {0} at file {1}

Category:
Files

Cause:
An error occurred while creating the document in the file store.

Action:
Retry the operation. Also, refer to the error messages that describe the cause exception in the application logs for more information on the actual reason for failure.

MDS-00512
failure to create document {0} because file {1} already exists

Category:
Files

Cause:
An attempt was made to create a file that already existed in the metadata store.

Action:
Provide a different name for the file to be created, or delete the existing file first, and then retry the operation.

MDS-00513
failure to create package {0} because directory {1} already exists

Category:
Files

Cause:
An attempt to create a package failed because a directory by the same name already existed.

Action:
Provide a different name for the package to be created and retry the operation.

MDS-00514
failure to save document {0} to file {1}

Category:
Files

Cause:
An error occurred while saving the document to a file.

Action:
Retry the operation. Also, refer to the error messages that describe the cause exception in the application logs for more information on the actual reason for failure.

MDS-00515
failure to create document {0} in the metadata repository

Category:
Data

Cause:
An error occurred while the document was being created in the metadata repository.

Action:
Retry the operation. Also, refer to the error messages that describe the cause exception in the application logs for more information on the actual reason for failure.

MDS-00516
failure to create document {0} because it already exists in the metadata repository

Category:
Data

Cause:
An error occurred while the document was being created in the metadata repository because the document already existed.

Action:
Provide a different name or delete the existing document first, and then retry the operation.

MDS-00517
failure to create package {0} because it already exists in the metadata repository

Category:
Data

Cause:
An error occurred while the package was being created in the metadata repository because the package already existed.

Action:
Provide a different package name or delete the existing package first, and then retry the operation.

MDS-00518
failure to create package {0} in the metadata repository

Category:
Data

Cause:
An error occurred while the package was being created in the metadata repository.

Action:
Retry the operation. Also, refer to the error messages that describe the cause exception in the application logs for more information on the actual reason for failure.

MDS-00519
failure to delete document {0} from the metadata repository

Category:
Data

Cause:
An error occurred while the document was being deleted from the metadata repository.

Action:
Retry the operation. Also, refer to the error messages that describe the cause exception in the application logs for more information on the actual reason for failure.

MDS-00520
failure to read document {0} because it is not in the metadata repository

Category:
Data

Cause:
The document was not read because it did not exist in the metadata repository.

Action:
Verify that the document name is correct and that it exists in the metadata repository, and then retry the operation.

MDS-00521
error while reading document {0} from metadata repository

Category:
Data

Cause:
An error occurred while the document was being read from the metadata repository.

Action:
Retry the operation. Also, refer to the error messages that describe the cause exception in the application logs for more information on the actual reason for failure.

MDS-00522
failure to save document {0} to the metadata repository

Category:
Data

Cause:
An error occurred while the document was being saved to the metadata repository.

Action:
Retry the operation. Also, refer to the error messages that describe the cause exception in the application logs for more information on the actual reason for failure.

MDS-00526
failure to generate SAX parsing events for document {0}

Category:
Programmatic

Cause:
An error occurred while parsing the XML document.

Action:
Verify that the XML document is well-formed. Refer to the error messages that describe the cause exception in the application logs for more information on the actual reason for failure.

MDS-00531
failure to write to "{0}" because output to "{1}:" protocol is not supported

Category:
Programmatic

Cause:
An attempt to write modified metadata to a URL failed because the protocol is not supported.

Action:
Retry writing modified metadata to a supported protocol.

MDS-00533
Exception: {3} Attribute "{0}" with an invalid MDS reference "{1}" in document "{2}" is not stored as a typed dependency in the database repository.

Category:
Data

Cause:
An error occurred while adding a typed dependency from the specified attribute.

Action:
Refer to the error messages that describe the cause exception in the application logs for more information on the actual reason for failure.

MDS-00534
Exception: {3} Sub-object {0} in document {2} has invalid value "{1}" for unique identifier; typed dependencies from this sub-object are not stored in the database repository.

Category:
Programmatic

Cause:
An error occurred because the component had an invalid ID.

Action:
Provide the correct ID value for the application metadata. Also, refer to the error messages that describe the cause exception in the application logs for more information on the actual reason for failure.

MDS-00535
cannot change TypeManager associated with a PManager after it is initialized

Category:
Programmatic

Cause:
An attempt was made to associate TypeManager with PManager after it was initialized.

Action:
Contact Oracle Support Services.

MDS-00536
cannot change FileTypeManager associated with a PManager after it is initialized

Category:
Programmatic

Cause:
An attempt was made to associate FileTypeManager with PManager after it was initialized.

Action:
Contact Oracle Support Services.

MDS-00537
unable to rename {0} to {1}

Category:
Data

Cause:
An error occurred during a rename operation.

Action:
Retry the rename operation. Also, refer to the error messages that describe the cause exception in the application logs for more information on the actual reason for failure.

MDS-00538
failure to rename document {0} because metadata store "{1}" is read-only

Category:
Data

Cause:
An error occurred during rename operation because the metadata store was configured as read-only.

Action:
To rename a document, provide a store that can be written to, that is not read-only.

MDS-00539
A document can be renamed only within its source store. The new name {1} in this rename operation does not map to the same store as the old name {0}.

Category:
Programmatic

Cause:
An error occurred during a rename operation. An invalid new name for the rename operation caused the renamed document to be stored in another metadata store.

Action:
Provide a new, valid document name that maps to the same metadata store that contains the original document.

MDS-00541
SAX events cannot be generated for non-XML document {0}.

Category:
Programmatic

Cause:
An attempt was made to generate SAX events for non-XML documents.

Action:
Retry the operation. Also, refer to the error messages that describe the cause exception in the application logs for more information on the actual reason for failure.

MDS-00547
The read operation is not supported for packages from Web content from the servlet context.

Category:
Programmatic

Cause:
A read operation was attempted for packages from Web content, which is not supported.

Action:
The read operation is not supported, therefore no action is required.

MDS-00550
Updates across multiple stores are not allowed in the same transaction.

Category:
Programmatic

Cause:
An attempt was made to perform updates across multiple stores in the same transaction.

Action:
Verify that the document is being saved to the same store on which it exists.

MDS-00551
failure to delete package {0} because it is not empty

Category:
Data

Cause:
An attempt was made to delete a package that was not empty.

Action:
Delete the contents of the package to be deleted first, and then retry the operation.

MDS-00552
failure to delete package {0} with directory {1}

Category:
Files

Cause:
An error occurred while deleting the directory for the package.

Action:
Ensure no files from the directory are opened in other applications and retry the operation. Also, refer to the error messages in the application logs for more information on the actual reason for failure.

MDS-00554
Package {0} cannot be found in the specified store.

Category:
Programmatic

Cause:
The requested operation was not completed because the package name that was supplied was invalid.

Action:
Provide a valid package name and retry the operation.

MDS-00555
The partitionName {0} is invalid.

Category:
Programmatic

Cause:
The requested operation was not completed because the partition name that was supplied was invalid.

Action:
Provide a valid partition name and retry the operation.

MDS-00557
Resource {0} is already locked or is being modified.

Category:
Session

Cause:
An attempt was made to modify a document that was already being modified by another user.

Action:
Retry modifying the document after the lock is released by the other users. Also, refer to the error messages in the application logs for more information on the actual reason for failure.

MDS-00558
The partitionName {0} is not available.

Category:
Programmatic

Cause:
No partition with that name existed.

Action:
Provide a partition name that exists.

MDS-00559
A partition with name {0} already exists.

Category:
Programmatic

Cause:
The name provided for creating a new partition was already in use by another partition.

Action:
Provide a different name for the new partition.

MDS-00560
The MDS repository is incompatible with the archive. The repository version is {0} whereas archive version is {1}.

Category:
Upgrade

Cause:
The MDS repository was not compatible with the archive provided.

Action:
Upgrade the target MDS repository or use a compatible archive for the operation.

MDS-00561
The create operation is not supported for metadata stores of type "{0}".

Category:
Configuration

Cause:
An attempt was made to create a new document or package in a read-only metadata store.

Action:
Reconfigure the application to use a writable metadata store.

MDS-00562
The delete operation is not supported for metadata stores of type "{0}".

Category:
Configuration

Cause:
An attempt was made to delete a document from a read-only metadata store.

Action:
Reconfigure the application to use a writable metadata store.

MDS-00563
The save operation is not supported for metadata stores of type "{0}".

Category:
Configuration

Cause:
An attempt was made to save a document to a read-only metadata store.

Action:
Reconfigure the application to use a writable metadata store.

MDS-00564
GUID feature is not supported for metadata stores of type "{0}".

Category:
Configuration

Cause:
An attempt was made to get a document by GUID from a metadata store that does not support GUIDs.

Action:
Reconfigure the application to use a metadata store that supports GUIDs, such as DBMetadataStore.

MDS-00565
The rename operation is not supported for metadata stores of type "{0}".

Category:
Configuration

Cause:
An attempt was made to rename a document or package in a read-only store.

Action:
Reconfigure the application to use a writable metadata store.

MDS-00566
The DOM content is NULL for {0}.

Category:
Data

Cause:
DOM document content provided was null.

Action:
Provide valid DOM content and retry the operation.

MDS-00567
The metadata changes for document "{0}" cannot be written in the underlying store because read-only mode is enabled in the configuration.

Category:
Configuration

Cause:
An attempt to change metadata was made while changes were disabled for maintenance operations.

Action:
Reconfigure the application to not specify read-only mode in the configuration and use a writable metadata store to persist metadata changes.

MDS-00568
MetadataStore initialization failure because "{0}" is invalid

Category:
Files

Cause:
The URL store mapping was invalid.

Action:
Provide a valid URL store mapping.

MDS-00569
unable to read document {0} from "{1}"

Category:
Data

Cause:
There was an error reading the document from the configured metadata store.

Action:
Retry the operation. If the problem persists, verify that the document exists in the configured metadata store.

MDS-00570
The name or content exceeds the MDS repository schema size for {0}.

Category:
Data

Cause:
The metadata name or the content exceeded the schema size.

Action:
Reduce the length of the metadata name or content, and then retry the operation. Refer to the documentation for the allowed sizes for names and content.

MDS-00571
The bean content is NULL for {0}.

Category:
Data

Cause:
The bean content was null.

Action:
Provide valid bean content, and then retry the operation.

MDS-00572
failure to get the ConnectionManager because the DBContext is null

Category:
Programmatic

Cause:
The DBContext value is null. Also, using any MetadataStore, PManager, or MDSInstance that has already been released might lead to this error.

Action:
Do not use any metadata store, PManager, or MDSInstance that is already released.

MDS-00573
The metadata store is already associated with a PManager.

Category:
Programmatic

Cause:
The PConfig provided for creating the PManager or MDSInstance was already used by another PManager or MDSInstance.

Action:
Provide a new PConfig when creating the PManager or MDSInstance.

MDS-00574
The document {0} does not exist in the configured metadata store.

Category:
Data

Cause:
The document being locked did not exist in the configured metadata store.

Action:
Ensure that the document to be locked exists, and that the name of the document is correct.

MDS-00575
failure to acquire write lock for {0}

Category:
Data

Cause:
An attempt to acquire a write lock for a document failed.

Action:
Refer to the cause exception message in application logs for details on the actual cause of the failure.

MDS-00576
failure to process {0} because metadata store "{1}" is read-only

Category:
Configuration

Cause:
An attempt was made to modify metadata in a read-only metadata store.

Action:
Provide a writable metadata store to allow modification of the document.

MDS-00577
Could not acquire read/write lock for {0} within the default waiting time interval

Category:
Files

Cause:
Read/Write lock could not be obtained for a file within the waiting time interval.

Action:
Try the operation again after some time.

MDS-00578
Failed to process document {0} due to a critical error writing to the repository

Category:
Configuration

Cause:
A critical error occurred while the metadata document was being written to the repository.

Action:
Contact the application administrator with cause exception message details to resolve the repository error.

MDS-00579
The document {0} does not have version {1} in the repository.

Category:
Data

Cause:
Specified version does not exist for the document.

Action:
Provide an existing version for the document.

MDS-00580
operation failed for {0} because no metadata-store was defined in the configuration for metadata-store-usage {0}.

Category:
Configuration

Cause:
incomplete configuration, no metadata-store was defined for the metadata-store-usage

Action:
Define the metadataStore for the empty metadata-store-usage.

MDS-00581
error deleting partition {0} in file repository {1}

Category:
Configuration

Cause:
The directory represented by the file repository or partition is read only.

Action:
Verify that the metadata path to the repository and partition exist and are writable.

MDS-00582
The MetadataStore {0} is writable but does override getMetadataStoreCommunicator() method.

Category:
Programmatic

Cause:
Configuration used a MetadataStore that was writable but not supporting MetadataStoreCommunicator interface.

Action:
Override getMetadataStoreCommunicator() in the MetadataStore class to return an appropriate MetadataStoreCommunicator instance.

MDS-00583
Could not release read/write lock for {0} because the lock was not found.

Category:
Files

Cause:
Read/Write lock could not be released because it was already removed from the lock cache.

Action:
Contact Oracle Support Services.

MDS-00584
The MDS repository's database platform is different that of the archive. The repository's database platform is {1} whereas the archive's platform is {0}.

Category:
Data

Cause:
The MDS repository platform was not compatible with the archive provided.

Action:
Use a platform compatible archive for the operation.

MDS-00585
Failure to create deployment lineage because metadata store "{0}" is read-only

Category:
Configuration

Cause:
An attempt was made to create deployment lineage in a read-only metadata store. Deployment lineage in repository represents Application name and MAR module name.

Action:
Configure a metadata store that supports deployment management, typically a DBMetadataStore.

MDS-00586
ArchiveMetadataStore is restricted to be used with MDS Transfer operation only. Reading or writing files in ArchiveMetadataStore is not supported outside of transfer.

Category:
Configuration

Cause:
An attempt was made to read or write files in ArchiveMetadataStore outside of transfer.

Action:
ArchiveMetadataStore is not supported outside of transfer. Either use this ArchiveMetadataStore for MDS transfer operation or use some other MetadataStore to store your files.

MDS-00588
Cannot replace the original archive file {0} with the final archive file {1} because the final archive file could not be renamed to {0}.

Category:
Data

Cause:
The final archive file could not be renamed to the original archive file name.

Action:
Look at the cause exception for more details and take corresponding actions.

MDS-00589
Error occurred while creating the final archive file {0}.

Category:
Data

Cause:
Some exception occurred while creating the final archive.

Action:
Look at the cause exception for more details and take corresponding actions.

MDS-00590
Error occurred while opening or closing the input/output stream for archive file {0}.

Category:
Data

Cause:
Some exception occurred while opening or closing the input/output stream for archive file.

Action:
Look at the cause exception for more details and take corresponding actions.

MDS-00591
"{0}" operation is not supported in ArchiveMetadataStore.

Category:
Data

Cause:
An unsupported operation has been attempted in ArchiveMetadataStore.

Action:
Look at the ArchiveMetadataStore javadoc for supported operations.

MDS-00592
Error occurred while initializing FileMetadataStore connection for the temporary directory.

Category:
Data

Cause:
An error occurred while initializing the FileMetadataStore connection for the temporary directory.

Action:
Look at the cause exception for more details and take corresponding actions.

MDS-00593
Unable to read the file {0} from archive {1}.

Category:
Data

Cause:
Some I/O Exception occurred while reading the given file from archive.

Action:
Look at the cause exception for more details and take corresponding actions.

MDS-00594
Unable to write the file {0} to archive {1}.

Category:
Data

Cause:
Some I/O Exception occurred while writing the given file to archive.

Action:
Look at the cause exception for more details and take corresponding actions.

MDS-00595
The parent directory {0} given in archive file path does not exist. Cannot create ArchiveMetadataStore for the archive file {1}.

Category:
Data

Cause:
The parent directory mentioned in archive file path does not exist.

Action:
Provide valid parent directory in archive file path to create ArchiveMetadataStore.

MDS-00596
Failure to read document {0} because it is not found in "{1}"

Category:
Data

Cause:
The document to be read was not found.

Action:
Verify that the document exists in the ArchiveMetadataStore before reading the document.

MDS-00597
Failure to open the archive file {0}. Cannot create ArchiveMetadataStore for the archive file {0}.

Category:
Data

Cause:
Could not open the given archive file.

Action:
Try creating ArchiveMetadata store with a valid archive file.

MDS-00598
Cannot create an intermediary archive during export to the archive file {0}.

Category:
Data

Cause:
Either the intermediary archive file could not be created in the default temporary-file directory or an I/O error occurred.

Action:
Look at the cause exception for more details and take action accordingly.

MDS-00599
Cannot obtain a connection to the Archive Metadata Store for archive file {0}.

Category:
Programmatic

Cause:
There was a problem obtaining a connection to the Archive Metadata Store.

Action:
Retry the operation. Also, refer to the error messages that describe the cause exception in the application logs for more information on the actual reason for failure.

MDS-00601
The XLIFF document has invalid target language {0}.

Category:
Data

Cause:
The target language specified was either null or empty.

Action:
Specify a valid target language and retry the operation.

MDS-00703
The name {0} is not a valid name under package {1} because {2} resource not considered child of the package.

Category:
Data

Cause:
A specified child resource was not a child of the package.

Action:
Specify a valid child resource name, and then retry the operation.

MDS-00704
invalid value {0} for property {1} on component {2}

Category:
Configuration

Cause:
An invalid property value was provided.

Action:
Provide a valid property value and retry.

MDS-00771
A component with {0} "{1}" already exists.

Category:
Data

Cause:
The specified component already existed.

Action:
Retry the operation. Also, refer to the error messages that describe the cause exception in the application logs for more information on the actual reason for failure.

MDS-00907
unable to save document "{0}" because either a document or package of the same name already exists

Category:
Data

Cause:
A document or package with the same name already existed in the repository, perhaps because it was just created by another user.

Action:
Retry the operation. If necessary, choose another name for the object being saved.

MDS-00908
unable to create package "{0}" because a document or package of the same name already exists

Category:
Data

Cause:
A document or package with the same name already existed in the repository, perhaps because it was just created by another user.

Action:
Retry the operation. If necessary choose another name for the object being saved.

MDS-00910
unable to save the document because of corrupt MDS database sequences or other internal errors.

Category:
Data

Cause:
The database sequence used for generating the unique document ID was corrupt or some other internal errors caused violation of unique constraints.

Action:
Retry the operation after deploying metadata to another MDS database repository partition. If that still fails, contact Oracle Support Services.

MDS-00911
Document with name "{0}" and version {1} [Low CN={2}, High CN={3}] does not exist in the repository.

Category:
Data

Cause:
The document was not found in the MDS repository.

Action:
Specify a correct name for the document and retry the operation. Check if the document is deleted by another user.

MDS-00912
MDS repository is incompatible with the middle tier. Repository version "{0}" is older than minimum repository version "{1}" required.

Category:
Upgrade

Cause:
The MDS repository was older than minimum version required by the middle tier.

Action:
Upgrade the MDS repository to the required version.

MDS-00913
MDS repository is incompatible with the middle tier. MDS version "{0}" is older than minimum MDS version "{1}".

Category:
Upgrade

Cause:
The MDS version was older than the minimum required version for using the MDS repository.

Action:
Upgrade the MDS library to the required version.

MDS-00914
unable to save document "{0}" because either an already deleted document or package with conflicting name or type already exists

Category:
Data

Cause:
A document or package with the same name or a parent package of incorrect type already existed in the repository as a deleted version.

Action:
Delete the conflicting resource from repository or check if the new resource is invalid. If necessary, choose another name for the object being saved.

MDS-00915
MDS repository is incompatible with the middle tier for dumping or restoring metadata.

Category:
Upgrade

Cause:
The MDS repository was older than minimum version required by the middle tier to dump or restore metadata.

Action:
Retry the operation after upgrading the MDS repository to newer version or use compatible middle tier to perform the operation.

MDS-00916
MetadataStore configured for {0} does not support deployment management.

Category:
Configuration

Cause:
The metadata store configured for the resource did not support deployment management.

Action:
Deployment management is supported in MDS repository version 11.1.1.4.0 (11gR1 PS3 patchset) onwards. Upgrade the repository to this version or later.

MDS-00918
Connection details for the MDS repository are incomplete. The values for "{0}" are invalid

Category:
Configuration

Cause:
The MDS repository connection details were invalid or missing.

Action:
Specify correct values for the MDS repository details in the configuration and retry the operation.

MDS-00919
Internal error: The database context for this repository appears to be corrupt.

Category:
Configuration

Cause:
The database context was invalid.

Action:
Verify that the repository details are correct in the configuration.

MDS-00922
The ConnectionManager "{0}" cannot be instantiated.

Category:
Configuration

Cause:
There was an error instantiating the ConnnectionManager class

Action:
Contact Oracle Support Services.

MDS-00923
Unable to create sandbox "{0}"

Category:
Data

Cause:
An error occurred during creation of sandbox.

Action:
Look in the error message log for the exact reason for the failure.

MDS-00928
Invalid document reference, package "cust" should appear before package "trans" in the names of customization translation documents.

Category:
Data

Cause:
An internal MDS document (one in package mdssys) was found with an invalid name, or an attempt was made to create a name object with such an invalid name.

Action:
Avoid using package or document names containing path element "mdssys" which is reserved for internal MDS use. If necessary, remove such invalid documents from the metadata store.

MDS-00929
unable to look up name "{0}" in JNDI context

Category:
Configuration

Cause:
The implementation class to use for initial context was not found.

Action:
Verify that environment properties are configured using system properties or application resources files.

MDS-00930
The JNDI location details for the registered datasource are incomplete.

Category:
Configuration

Cause:
JNDI location details were found to be incomplete.

Action:
Provide complete JNDI location information in the configuration.

MDS-00931
The database version is {0}.{1}, but MDS requires at least {2}.{3}.

Category:
Upgrade

Cause:
The database version is older than the minimum database version required for hosting MDS repository.

Action:
Upgrade the database to the minimum required version. Contact the database administrator for assistance.

MDS-00932
unknown database vendor {0}

Category:
Installation

Cause:
The database vendor could not be identified.

Action:
Verify that the MDS repository is hosted on supported database vendors.

MDS-00933
cannot create data source using URL "{0}"

Category:
Configuration

Cause:
An error occurred while creating the data source using the specified URL.

Action:
Verify that the URL specified is correct and retry the operation.

MDS-00934
XDB is not supported on database platform {0}.

Category:
Programmatic

Cause:
An attempt was made to store XML metadata in a non-XDB database.

Action:
Verify that the correct MDS repository is being used.

MDS-00935
Unable to complete operation even after maximum connection retries ({0}).

Category:
High Availability

Cause:
An error occurred while performing operation.

Action:
Ensure that the database is running. Retry the operation later.

MDS-00936
Fast Connection Failover is not supported on the underlying database connection ({0}).

Category:
High Availability

Cause:
The underlying database connection did not support fast connection failover, and retry-connection was set to true in either the config file, or programmatically.

Action:
Either stop and then restart the database connection and configure it to allow fast connection failover, or do not attempt to set retry-connection to true.

MDS-00937
A local transaction operation like commit or rollback cannot be used in a global transaction on connection "{0}".

Category:
Configuration

Cause:
The database connection was configured for global transactions, but MDS was not configured to support global transactions.

Action:
Reconfigure the database connection to use local transactions. Change "tx-level" attribute on the MDS datasource to "local".

MDS-00938
Unable to get an ADF library class loader

Category:
Data

Cause:
MDS expects to retrieve a resource from an ADF library, but is unable to obtain an ADF library classloader.

Action:
Consider whether the resource should be repackaged in an ADF library rather than an ordinary jar.

MDS-01059
document with the name {0} missing in the source metadata store

Category:
Data

Cause:
The document to be transferred did not exist in the source metadata store.

Action:
Verify that the document name is correct, and that it exists in the source metadata store.

MDS-01061
Listener {0} cannot be instantiated.

Category:
Configuration

Cause:
The listener class did not exist.

Action:
Verify that the name of the listener class is correct. Ensure that the class is available on the class path.

MDS-01104
finding no documents for processing that match the pattern provided

Category:
Data

Cause:
No documents were found on the source metadata store that matched the pattern provided, or that matched the document name.

Action:
Provide another pattern or document name, or provide another metadata store in which to look for the documents.

MDS-01105
invalid label {0}

Category:
Data

Cause:
The label specified for the source metadata store did not exist.

Action:
Verify that the label name is correct, or provide a label that exists in the source metadata store.

MDS-01106
The TransferTypeRestriction {0} cannot be associated with given TransferType {1}.

Category:
Programmatic

Cause:
The given TransferTypeRestriction cannot be associated with the specified TransferType.

Action:
Ensure that given TransferTypeRestriction is valid for the specified TransferType.

MDS-01107
Post transfer label cannot be created in target store.

Category:
Data

Cause:
Post transfer label cannot be created in the target store. Examine the cause exception messages to find the root cause of it.

Action:
Examine any accompanying messages to decide if further action is required.

MDS-01108
TransferType cannot be null for ExtendedTransferType.

Category:
Data

Cause:
TransferType provided to create ExtendedTransferType was null.

Action:
Provide valid TransferType to create ExtendedTransferType.

MDS-01109
The target archive configured in ArchiveMetadataStore already exists. Cannot export the documents into an existing archive file.

Category:
Data

Cause:
The target archive already exists. Exporting the documents into an existing archive is not allowed.

Action:
Export the documents into a non existing archive file.

MDS-01110
Sandbox export operation allowed only from a database metadata store to an archive metadata store.

Category:
Configuration

Cause:
Either source metadata store is not a database or the target metadata store is not an archive in sandbox export operation.

Action:
Configure source metadata store to be a database and target metadata store to be an archive in sandbox export operation.

MDS-01111
Sandbox import operation allowed only from Archive Metadata Store to a Database Metadata store.

Category:
Configuration

Cause:
Either source metadata store is not an archive metadata store or the target metadata store is not a database in sandbox import operation.

Action:
Configure source metadata store to be an archive metadata store and target metadata store to be a database in sandbox import operation.

MDS-01112
Transfer unit list in a Sandbox export/import operation should have at least one transfer unit.

Category:
Data

Cause:
Transfer unit list in Sandbox export/import operation empty.

Action:
Ensure that there is at least one transfer unit to be transferred in sandbox export/import operation.

MDS-01113
Sandbox metadata file required for import to a new sandbox operation.

Category:
Data

Cause:
Sandbox metadata file missing in source Archive metadata store in import to a new sandbox operation.

Action:
Import to a new sandbox only from an archive store whose contents were exported from a sandbox and contain sandbox metadata document.

MDS-01114
Sandbox with same name as the one imported in a sandbox import operation exists on the target metadata store.

Category:
Programmatic

Cause:
Sandbox with same name already exists on the target metadata store and the flag to force creation of sandbox is not set to true.

Action:
Pass true for forceSBCreation to TransferParams.createForSandboxImport() or destroy sandbox already existing with same name on the target metadata store in sandbox import operation.

MDS-01115
Source sandbox in a sandbox export operation does not contain metadata.

Category:
Programmatic

Cause:
Source sandbox in export operation was not created with metadata.

Action:
Export from a Sandbox that was created with metadata.

MDS-01116
Existing target sandbox in import operation does not contain metadata.

Category:
Programmatic

Cause:
Target sandbox in an import into an existing sandbox operation was not created with metadata.

Action:
Import into an existing sandbox that was created with metadata.

MDS-01117
Sandbox archive imported into an existing sandbox.

Category:
Programmatic

Cause:
The archive imported into an existing sandbox contains sandbox metadata.

Action:
Import only regular archives(that do not contain sandbox metadata) into an existing sandbox.

MDS-01118
Sandbox export operation not supported because the source MDS database repository is of older version that does not support this feature.

Category:
Configuration

Cause:
Sandbox metadata is needed to transfer documents from sandbox. Source store being used does not support storing metadata for sandbox.

Action:
Sandbox metadata is supported in MDS repository version 11.1.1.4.0 (11gR1 PS3 patchset) onwards. Upgrade the repository to this version or later.

MDS-01119
Sandbox import operation not supported because the target MDS database repository is of older version that does not support this feature.

Category:
Configuration

Cause:
Sandbox metadata is needed to transfer documents from sandbox. But target store being used does not support storing metadata for sandbox.

Action:
Sandbox metadata is supported in MDS repository version 11.1.1.4.0 (11gR1 PS3 patchset) onwards. Upgrade the repository to this version or later.

MDS-01120
Sandbox transfer unit list creation not supported because the source MDS database repository is of older version that does not support this feature.

Category:
Configuration

Cause:
Sandbox metadata is needed to transfer documents from sandbox. Source store being used does not support storing metadata for sandbox.

Action:
Sandbox metadata is supported in MDS repository version 11.1.1.4.0 (11gR1 PS3 patchset) onwards. Upgrade the repository to this version or later.

MDS-01121
Document "mds-transfer-config.xml" cannot be read by MDSTransfer.

Category:
Data

Cause:
The /meta-inf/mds-transfer-config.xml document cannot be read from source store. Refer to cause exception for more information on the actual reason for failure.

Action:
Look for messages that describe the cause exception, and then take the appropriate action.

MDS-01122
Metadata Object Name "{0}" specified in the mds-transfer-config.xml to preserve user updated documents in target repository is not a valid metadata object name.

Category:
Data

Cause:
Metadata object name specified in /meta-inf/mds-transfer-config.xml to preserve user updated documents in target repository is not a valid metadata object name.

Action:
Make sure the document name specified in mds-transfer-config.xml is a valid metadata object name but not a special document name.

MDS-01123
The metadata path "{0}" specified in the mds-transfer-config.xml to preserve user updated documents in target repository is not a valid metadata path.

Category:
Data

Cause:
The metadata path specified in /meta-inf/mds-transfer-config.xml to preserve the user updated documents in target repository is not a valid metadata path.

Action:
Make sure the metadata path specified in mds-transfer-config.xml is a valid metadata path.

MDS-01150
Reference is null or empty.

Category:
Programmatic

Cause:
A reference value was null or empty.

Action:
Use a valid reference value that is not empty or null.

MDS-01151
Id/LocationPath reference is null or missing.

Category:
Programmatic

Cause:
An Id/LocationPath reference value was null or empty.

Action:
Use a valid Id/LocationPath reference value that is not empty or null.

MDS-01153
invalid LocationPath expression "{0}"

Category:
Programmatic

Cause:
The LocationPath expression was invalid.

Action:
Use a valid LocationPath format. The LocationPath expression should follow the format "/text()" or "/text()[x]", where 'x' is the index of "text block".

MDS-01154
invalid LocationPath expression "{0}"

Category:
Programmatic

Cause:
The node index in the LocationPath expression was invalid.

Action:
Change the node index in the LocationPath expression to a number greater than or equal to 1.

MDS-01158
Expecting a base document. Reference "{0}" is a special document.

Category:
Programmatic

Cause:
A base document was expected, but the reference was a special document.

Action:
Use a valid base document.

MDS-01159
Expecting absolute document reference. Reference "{0}" has local element reference portion.

Category:
Programmatic

Cause:
The supplied reference was not the expected type.

Action:
Ensure the reference is of the expected type.

MDS-01160
Expecting absolute document reference. Reference "{0}" is a relative reference to the document.

Category:
Programmatic

Cause:
The supplied reference was not the expected type.

Action:
Ensure the reference is of the expected type.

MDS-01161
Reference "{0}" has an invalid character "{1}".

Category:
Programmatic

Cause:
The supplied reference did not follow the MDS naming standard.

Action:
Use valid characters for the reference.

MDS-01162
Reference "{0}" has an invalid XML attribute character.

Category:
Programmatic

Cause:
The supplied reference did not follow the MDS naming standard.

Action:
Use valid characters for the reference.

MDS-01163
invalid reference "{0}"

Category:
Programmatic

Cause:
The supplied reference did not follow the MDS naming standard.

Action:
Ensure that the reference follows the MDS naming standard.

MDS-01164
invalid reference "{0}" for a translation document

Category:
Programmatic

Cause:
The supplied reference did not have the expected document extension (.xlf).

Action:
Use the correct extension, .xlf, for the translation document.

MDS-01165
invalid reference "{0}" for a customization document

Category:
Programmatic

Cause:
The supplied reference did not have the expected document extension (.xml or .lso).

Action:
Use the correct extension for the customization document, .xml for MetadataObject or .lso for StreamedObject.

MDS-01166
invalid reference "{0}" for a metadata extension document

Category:
Programmatic

Cause:
The supplied reference did not have the expected document extension (.rdf).

Action:
Use the correct extension, .rdf, for the metadata extension document.

MDS-01167
There is no namespace declaration for the prefix "{1}" used in LocationPath expression "{0}".

Category:
Programmatic

Cause:
The LocationPath expression was incomplete.

Action:
Use a valid LocationPath format.

MDS-01168
Partition name "{0}" starts or ends with character "{1}". Partition name cannot contain leading or trailing spaces, ".", "-"

Category:
Configuration

Cause:
The supplied partition name contained leading or trailing spaces, ".", "-".

Action:
Ensure that the partition name follows the MDS naming standard for partitions.

MDS-01169
Partition name "{0}" has an invalid character "{1}".

Category:
Configuration

Cause:
The supplied partition name did not follow the MDS naming standard.

Action:
Use valid characters for the partition name.

MDS-01170
Partition name is null or empty.

Category:
Configuration

Cause:
Partition name value was null or empty.

Action:
Use a valid partition name that is not empty or null.

MDS-01171
The ID prefix generated by concatenating the layer name "{0}" and layer value "{1}" is not a valid MDS ID.

Category:
Programmatic

Cause:
The ID prefix generated by concatenating the layer name with layer value did not follow the MDS ID naming standard.

Action:
Ensure that the ID prefix generated by concatenating the layer name with layer value follows the MDS ID naming standard.

MDS-01200
This operation is not supported.

Category:
Programmatic

Cause:
An MDS query operation was attempted, but this particular operation is not supported.

Action:
Note the stack backtrace and context of the operation, and contact Oracle Support Services.

MDS-01201
An invalid parameter cannot be used when constructing a query condition.

Category:
Programmatic

Cause:
An invalid parameter was passed to the class ConditionFactory.

Action:
Note the stack backtrace and context of the operation, and contact Oracle Support Services.

MDS-01205
A SQL error is occurring when performing the query: "{0}" with binds {1}.

Category:
Programmatic

Cause:
An MDS query on a database store led to a SQL error.

Action:
Note the stack backtrace and context of the operation, including the reported SQL query and error, and contact Oracle Support Services.

MDS-01206
The array size for the query must be greater than zero.

Category:
Programmatic

Cause:
An MDS query specified a fetch unit size that was not positive.

Action:
Note the stack backtrace and context of the operation and contact Oracle Support Services.

MDS-01207
The namespace mapping for the prefix "{0}" specified in the location path, is missing.

Category:
Configuration

Cause:
During XPath evaluation, the namespace prefix was used, but the prefix was not mapped to a namespace.

Action:
Note the stack backtrace and context of the operation and contact Oracle Support Services.

MDS-01208
MDS query condition produces more than {0} characters of SQL where clause.

Category:
Programmatic

Cause:
An MDS query condition was so large that it would produce a very large SQL statement.

Action:
Note the stack backtrace and context of the operation, and contact Oracle Support Services.

MDS-01209
The exclusion CustLayerFilter for layer {0} cannot contain another exclusion CustLayerFilter.

Category:
Programmatic

Cause:
An exclusion CustLayerFilter is nested in another exclusion CustLayterFilter.

Action:
Do not include an exclusion CustLayerFilter inside another exclusion CustLayerFitler.

MDS-01250
The file path "{0}" does not exist.

Category:
Files

Cause:
An invalid path was provided.

Action:
Retry the operation with a valid file path.

MDS-01251
The parameter file {0} has no namespace on the document element.

Category:
Data

Cause:
A namespace was missing from the parameter file provided.

Action:
Provide a parameter file with valid namespace information.

MDS-01252
The parameter file {0} must have either {1} or {2} definition.

Category:
Data

Cause:
No source stores or target stores information were provided in the parameter file.

Action:
Check the parameter file to have source and target store information and retry.

MDS-01253
The parameter file {0} must not have both {1} and {2} definitions.

Category:
Data

Cause:
An attempt was made to transfer from source directory to target directory. Both source and target as directories is not supported.

Action:
Provide correct source and target definition. Either source or target should be a metadata store.

MDS-01254
The parameter file {0} contains same store definition for sourceStore and targetStore.

Category:
Data

Cause:
An attempt was made to transfer from and to the same store. The definition for sourceStore cannot be the same as the definition for targetStore.

Action:
Provide correct source and target information. Change either source or target store definition.

MDS-01255
The property {0} has not been supplied.

Category:
Data

Cause:
The required property was missing from the parameter file.

Action:
Check the parameter file and supply the required property. Refer to the MDS documentation for the correct syntax. A sample parameter file is also part of documentation.

MDS-01258
The value {0} for property {1} is invalid.

Category:
Data

Cause:
An invalid property value was provided in the parameter file.

Action:
Provide a valid property value. Refer to the MDS documentation for the correct syntax. A sample parameter file is also part of documentation.

MDS-01259
The metadata store "{0}" cannot be instantiated.

Category:
Data

Cause:
An error occurred during the instantiation of the class for the metadata store.

Action:
Verify that correct values are provided in the parameter file. Refer to the error messages in application logs that describe the cause exception for more information on the actual reason for failure.

MDS-01260
failure to process command-line arguments

Category:
Data

Cause:
Invalid command-line parameters were provided.

Action:
Provide valid command-line parameters, and retry the operation. Refer to the MDS documentation for syntax of the tool parameters, or run the tool without parameters in order to get the Help message.

MDS-01262
failure of transfer operation on a read-only target metadata store

Category:
Configuration

Cause:
The target metadata store used for transfer was read-only, for example a classpath store.

Action:
Provide a writable target metadata store.

MDS-01263
operation failure on the resource {0} because source metadata store is read-only

Category:
Configuration

Cause:
An attempt was made to delete, create, update or get a mutable metadata object from a read-only source metadata store.

Action:
Provide a writable source metadata store.

MDS-01264
The given element must contain either "customization" or "translation" configuration.

Category:
Configuration

Cause:
A customization or a translation configuration was missing for an element.

Action:
Examine the transfer parameter file for valid MDS configuration.

MDS-01265
Invalid parameter file {0}. Reason: <{1}:{2}> {3}

Category:
Files

Cause:
Parameter file provided was not valid.

Action:
Provide a valid parameter file. Refer to the MDS documentation for the correct syntax. A sample parameter file is also part of documentation. Refer to sample parameter for correct syntax.

MDS-01266
The associated customization document is missing for a given customization class {0} for the given document name {1}.

Category:
Data

Cause:
The associated customization document for the given customization class did not exist.

Action:
If the associated customization document was to be transferred, verify that it exists. Otherwise, no action is required.

MDS-01267
The associated translation document is not found for a given locale {0} for the given document name {1}.

Category:
Data

Cause:
Associated translation document did not exist for the given locale.

Action:
If the associated translation document was expected to be transferred, verify if it exists, otherwise, no action required.

MDS-01268
The associated extended metadata document for the given document name {0} is missing.

Category:
Data

Cause:
No associated extended metadata document for the given document name existed.

Action:
If the document was to be transferred, verify that the document exists. Otherwise, no action is required.

MDS-01270
Opening and closing parentheses do not match.

Category:
Configuration

Cause:
Either an opening or closing parentheses was missing.

Action:
Check and correct the namespace mappings provided. Each opening parentheses should have an equivalent closing parentheses and vice versa.

MDS-01271
Cannot get the dependency registry

Category:
Configuration

Cause:
An error occurred while getting the dependency registry.

Action:
Retry the operation. If the problem persists, look for messages that describe the cause exception for more information on the actual reason for failure.

MDS-01272
unable to read mds-webapp-config.xml file

Category:
Files

Cause:
The mds-webapp-config.xml file was invalid.

Action:
Confirm that the mds-webapp-config.xml file for the application is well formed, and valid.

MDS-01273
The operation on the resource {0} failed because source metadata store mapped to the namespace {1} is read only.

Category:
Configuration

Cause:
An attempt was made to delete, create, update or get a mutable metadata object from a readonly source metadata store.

Action:
Provide a writable source metadata store.

MDS-01301
Element "{1}", namespace "{0}" is not a valid child under parent "{3}", namespace "{2}".

Category:
Programmatic

Cause:
An attempt was made to add, insert or replace a child element of the wrong type.

Action:
Check the schema definition and ensure that the child element is the correct type.

MDS-01302
failure to load schema file "{0}"

Category:
Data

Cause:
An exception occurred in the XMLEF layer during processing of the schema definitions.

Action:
Look for messages that describe the cause exception, and then take the appropriate action.

MDS-01303
failure to register grammar from schema file "{0}"

Category:
Data

Cause:
An exception occurred in the XMLEF layer during addition of schema definitions.

Action:
Look for messages that describe the cause exception, and then take the appropriate action.

MDS-01305
failure to locate schema file "{0}".

Category:
Configuration

Cause:
The schema definition file was not found.

Action:
Verify that the schema file name is correct, and that it is in the correct location.

MDS-01306
Grammar from a Web application can be added only once.

Category:
Configuration

Cause:
There were multiple method calls to add grammar from a web application.

Action:
Verify that a grammar definition has already been added for the given MDSInstance and ServletContext. If it has then remove the calls to add it multiple times.

MDS-01307
no schema files for processing

Category:
Programmatic

Cause:
No schema files were found against which beans can be generated.

Action:
Pass an existing schema file to the bean generator.

MDS-01308
Event "{0}" is not supported.

Category:
Programmatic

Cause:
An attempt was made to use event types that are not supported for the selected content model.

Action:
Use only the event types that are allowed for the selected content model.

MDS-01309
ContentModelPipeline is empty.

Category:
Programmatic

Cause:
The contentModelPipeline contained an empty or null builder list.

Action:
A list of one or more valid builders must be available in the ContentModelPipeline.

MDS-01310
Invalid ContentModelPipeline. Missing {0}.

Category:
Programmatic

Cause:
The expected builder was not available in builder list of the ContentModelPipeline.

Action:
Valid builders must be supplied to the ContentModelPipeline.

MDS-01311
The DOM tree does not support the DOM event model.

Category:
Programmatic

Cause:
This DOM Document did not implement EventTarget interface.

Action:
Verify whether the Oracle XML Developer's Kit is used.

MDS-01312
Change-list transaction state is invalid.

Category:
Programmatic

Cause:
The current change-list transaction state is invalid for the customization operation performed.

Action:
Ensure Change-list to be in valid transaction state to perform the necessary customization operation.

MDS-01313
The argument for document cannot be null.

Category:
Data

Cause:
The argument for DocumentName was null.

Action:
Provide a valid DocumentName.

MDS-01314
TypeAnnotationProvider cannot be null.

Category:
Data

Cause:
The argument for TypeAnnotationProvider was null.

Action:
Provide a valid TypeAnnotationProvider.

MDS-01316
Support for XPath is not implemented yet.

Category:
Configuration

Cause:
Support for XPath has not been implemented yet.

Action:
Provide a valid Configurable ID.

MDS-01319
JAXP support is not available. Falling back to using Oracle XML Developer's Kit for parsing the document {0}.

Category:
Configuration

Cause:
JAXP support was not available.

Action:
None.

MDS-01320
Modifying the prefix declaration for {0} from "{1}" to "{2}" in document {3} through customizations is not supported.

Category:
Programmatic

Cause:
An attempt was made to change an existing prefix declaration.

Action:
Avoid attempts to change existing prefix declarations.

MDS-01321
Node type should be one of ImmutableModelNode.ELEMENT or ImmutableModelNode.TEXT or ImmutableModelNode.CDATA.

Category:
Data

Cause:
The node was not of the type ImmutableModelNode.ELEMENT or ImmutableModelNode.TEXT or ImmutableModelNode.CDATA.

Action:
Ensure the node type is one of the following types: ImmutableModelNode.ELEMENT or ImmutableModelNode.TEXT or ImmutableModelNode.CDATA.

MDS-01322
Value "{0}" does not satisfy "{1}" type.

Category:
Data

Cause:
The data type conversion failed.

Action:
Verify that the expected XSD built-in simple data type and the passed-in string value are convertible.

MDS-01323
Value "{0}" has an incorrect number of characters for a base64Binary.

Category:
Data

Cause:
The value did not represent a valid Base64Binary.

Action:
Verify that the input value is valid.

MDS-01324
Unknown XML schema built-in type "{0}"

Category:
Data

Cause:
An attempt was made to use an unknown XML schema built-in type.

Action:
Use only valid XML schema built-in types.

MDS-01325
unable to load type definition "{0}"

Category:
Configuration

Cause:
Could not load this type definition because the specified location did not exist.

Action:
Ensure that the specified location for the type definition exists.

MDS-01326
Loading of type definition from element "{0}" is not supported.

Category:
Configuration

Cause:
An attempt was made to load a type definition from the specified element that is not supported in the MDS configuration.

Action:
Examine the schema definition to ensure that the entry specified in type definition is correct.

MDS-01327
unable to load data from "{0}" into {1}

Category:
Configuration

Cause:
An error occurred while loading the content of this configuration element.

Action:
Examine the schema definition to ensure that the content of this configuration element is correct.

MDS-01328
unable to load element "{0}" into {1}

Category:
Configuration

Cause:
An error occurred while loading this configuration element.

Action:
Examine the schema definition to ensure this configuration element is correctly specified in the MDS configuration.

MDS-01329
unable to load element "{0}"

Category:
Configuration

Cause:
An error occurred while loading this configuration element.

Action:
Examine the schema definition to ensure this configuration element is correctly specified in the MDS configuration.

MDS-01330
unable to load MDS configuration document

Category:
Files

Cause:
An I/O or parsing error occurred while loading the MDS configuration document.

Action:
Verify that the URL is correct, and ensure that the document contains valid MDS configuration information.

MDS-01331
unable to load MDS configuration document "{0}"

Category:
Files

Cause:
An error occurred in loading the content of MDS configuration document.

Action:
Verify that the URL is correct, and ensure that the document contains valid MDS configuration information.

MDS-01332
Class {0} is not a subclass or implementation of {1}.

Category:
Configuration

Cause:
The class specified in the configuration information did not extend the required class, or implement the required interface.

Action:
Ensure that the class specified in the configuration information extends the correct class, or implements the correct interface.

MDS-01333
missing element "{0}"

Category:
Configuration

Cause:
This element was missing from the MDS configuration information.

Action:
Ensure that the element is specified in the configuration information.

MDS-01334
missing element "{0}" in document "{1}"

Category:
Configuration

Cause:
This element was missing from the MDS configuration information.

Action:
Ensure that this element is specified in the configuration document.

MDS-01335
namespace "{0}" mapped to metadata-store-usage "{1}" but its definition was not found in MDS configuration.

Category:
Configuration

Cause:
Metadata-store-usage element that was referenced by a namespace not found in MDS configuration.

Action:
Ensure that this element is specified in MDS configuration.

MDS-01336
No XML element is provided to create {0}.

Category:
Configuration

Cause:
A null XML element was passed to the constructor of this configuration object.

Action:
Ensure that a valid XML element is provided to create a new instance of this configuration.

MDS-01337
No URL is provided to create {0}.

Category:
Configuration

Cause:
A null URL was passed to the constructor of this configuration object.

Action:
Ensure that a valid URL is provided to create a new instance of this configuration.

MDS-01340
More than one metadata store can be resolved for the namespace "{0}".

Category:
Configuration

Cause:
There were multiple namespace to metadata store mappings in the persistence configuration that satisfied the request for the metadata store of a given namespace.

Action:
Correct the namespace mapping in persistence configuration to ensure that the namespace is mapped to only one metadata store.

MDS-01341
Namespace mapping for "{0}" is overridden by namespace mapping for "{1}"; and they conflict.

Category:
Configuration

Cause:
A conflicting mapping to this namespace has already been defined in the persistence configuration.

Action:
Correct persistence configuration to ensure that there is no conflicting mapping to this namespace.

MDS-01342
No metadata store is mapped to the namespace "{0}".

Category:
Configuration

Cause:
No namespace mapping could be found in the persistence configuration for the specified namespace.

Action:
Ensure that a correct namespace is passed into the method concerned, or alter the application configuration to define the specified namespace.

MDS-01343
There is a duplicate file extension mapping for "{0}".

Category:
Configuration

Cause:
A mapping to this file extension has already been defined in the file type configuration.

Action:
Remove the duplicate file extension mapping from the file type configuration.

MDS-01344
cannot create {0} due to null parameter

Category:
Configuration

Cause:
A null parameter was passed to the constructor of this configuration object.

Action:
Ensure that a valid parameter is provided to create a new instance of this configuration.

MDS-01346
The given namespace path "{0}" is not a valid path.

Category:
Configuration

Cause:
An invalid path was provided to create a namespace.

Action:
Ensure that a valid path is provided to create a namespace.

MDS-01347
Base restriction is supported only for classpath store or servlet context store: namespace "{0}" mapped to "{1}".

Category:
Configuration

Cause:
The base restriction was specified for a metadata store other than the classpath metadata store and servlet context store.

Action:
Correct the namespace mapping in the configuration to ensure that the base restriction is specified only for the classpath store or servlet context store.

MDS-01348
unable to save configuration document to "{0}"

Category:
Files

Cause:
An I/O error occurred while writing the configuration to a file.

Action:
Check the file system and ensure that the file location is writable.

MDS-01349
unable to read existing configuration document "{0}" to be updated

Category:
Files

Cause:
An I/O or parsing error occurred while reading the configuration file.

Action:
Ensure that the configuration file does exist and has valid contents.

MDS-01350
Adding namespace "{0}" mapped to "{1}" conflicts with existing namespace "{2}" mapped to "{3}".

Category:
Configuration

Cause:
An attempt was made to add a new namespace that conflicted with an existing namespace because it mapped to a different repository.

Action:
Ensure that the new namespace does not map to a different repository if the new namespace is a super-namespace or sub-namespace of existing namespaces.

MDS-01351
Adding namespace "{0}" with "{1}" restriction conflicts with existing namespace "{2}" with "{3}" restriction.

Category:
Configuration

Cause:
An attempt was made to add a new namespace that conflicted with an existing namespace in the namespace restriction.

Action:
Ensure that the new namespace does not conflict with existing namespaces in the namespace restriction if the new namespace is a super-namespace or sub-namespace of existing namespaces.

MDS-01352
Customization configuration with granular mapping "{0}" is unsupported; only the slash, "/", is allowed.

Category:
Configuration

Cause:
An attempt was made to add an invalid namespace mapping of the customization configuration. Only one namespace to customization class list mapping is currently allowed, and that namespace has to be a slash (/).

Action:
Ensure that only the slash (/) is specified in the namespace mapping of the customization configuration.

MDS-01353
unable to retrieve customization layer values from "{0}"

Category:
Files

Cause:
An I/O or parsing error occurred while reading the specified file to retrieve customization layer values.

Action:
Ensure that the file does exist and has valid contents.

MDS-01355
Both TypeConfig parameters contain Grammar Providers. Only one Grammar Provider is allowed.

Category:
Configuration

Cause:
A Grammar Provider was specified in multiple type configuration sources.

Action:
Ensure that only one Grammar Provider is specified in the type Configuration.

MDS-01356
Both TypeConfig parameters contain Metadata Providers. Only one Metadata Provider is allowed.

Category:
Configuration

Cause:
A Metadata Provider was specified in multiple type configuration sources.

Action:
Ensure that only one Metadata Provider is specified in the type Configuration.

MDS-01357
MDS configuration is not compatible with JAXB 1.0.

Category:
Configuration

Cause:
JAXB 1.0 jar file (xml.jar) was found on the classpath before any JAXB 2.0 jar files.

Action:
Ensure that JAXB 2.0 jar files appear on the classpath before JAXB 1.0 jar file (xml.jar).

MDS-01358
Invalid MDS configuration. Configuring multiple metadata stores as the default repository for customizations.

Category:
Configuration

Cause:
Multiple metadata stores were configured as the default repository for customizations in the MDS configuration.

Action:
Ensure that only a single metadata store is configured as the default repository for customizations.

MDS-01359
The namespace used (http://xmlns.oracle.com/mds/config_10_1_3_001) in the configuration document is deprecated. Update the configuration document to use "http://xmlns.oracle.com/mds/config" as the namespace.

Category:
Configuration

Cause:
The namespace used (http://xmlns.oracle.com/mds/config_10_1_3_001) in the configuration document is deprecated.

Action:
Update the configuration document to use "http://xmlns.oracle.com/mds/config" as the namespace.

MDS-01360
Invalid MDS configuration. The attribute file-type-extension on the file-type element is missing for file type configuration.

Category:
Configuration

Cause:
The attribute file-type-extension was not specified on the file-type element for file type configuration.

Action:
Ensure that a valid file-type-extension attribute is specified for every file-type element.

MDS-01361
cannot add XSD grammar

Category:
Configuration

Cause:
An attempt was made to add XSD grammar made by passing in a SchemaGrammarProvider.

Action:
Ensure that the grammar provider is obtained using oracle.jdeveloper.webapp.runtime.WebAppDesignContext.

MDS-01362
Failed to auto-purge MDS repository: "{0}".

Category:
Other

Cause:
MetadataStore was scheduled for auto-purge after the MDSInstance was released

Action:
Try later and contact support if persists.

MDS-01363
Failed to lookup datasource with JNDI name "{0}" configured for the DBMetadataStore, defaulting to use ClassPathMetadataStore.

Category:
Configuration

Cause:
Application was configured with DBMetadataStore using JNDI datasource and JNDI lookup failed when running outside application server.

Action:
No action required if defaulting to ClasspathMetadataStore is acceptable. Otherwise, use appropriate configuration such as FileMetadataStore.

MDS-01364
Namespace mapping for "{0}" is overlapping with namespace mapping for "{1}"; the first mapping is redundant.

Category:
Configuration

Cause:
Redundant namespace mappings defined in the persistence configuration.

Action:
Correct persistence configuration to ensure that there is no overlapping redundant mapping.

MDS-01365
Multiple metadata stores found with deploy-target attribute set to true, only one allowed per configuration.

Category:
Configuration

Cause:
Multiple metadata stores were configured as the deployment target.

Action:
Ensure that only a single metadata store is configured for deployment.

MDS-01366
Cannot find a metadata store with deploy-target attribute set to true

Category:
Configuration

Cause:
A single metadata store must be configured as a deploy target. None was found.

Action:
Ensure that a single metadata store is configured for deployment.

MDS-01367
Failed to create {0}. Invalid MDS configuration specified in: "{1}"

Category:
Configuration

Cause:
Declarative MDS configuration is invalid.

Action:
Specify correct mds configuration information and try creating the configuration again.

MDS-01368
Variable "{0}" used in configuration document is not defined either as system property or as environment variable.

Category:
Configuration

Cause:
This variable was not defined.

Action:
Ensure that this variable is defined before loading the configuration.

MDS-01369
Variable declaration in "{0}" in configuration document is incorrect.

Category:
Configuration

Cause:
Variable did not either start with "${" or it did not end with "}".

Action:
Ensure that the configuration variable is correctly declared in the form ${var}.

MDS-01370
MetadataStore configuration for metadata-store-usage "{0}" is invalid.

Category:
Configuration

Cause:
MetadataStore class or some of its properties were not valid.

Action:
Ensure that the MetadataStore class exists and all required properties are valid. See message of the cause exception for more information on the actual reason for failure.

MDS-01371
ADF security is not configured in "{0}", password cannot be securely processed.

Category:
Configuration

Cause:
ADF security configuration was not found in the config file.

Action:
Set the password using JDeveloper to ensure required configuration is generated.

MDS-01373
unable to retrieve password.

Category:
Configuration

Cause:
unable to retrieve the password due to exception in security layer.

Action:
See message of the cause exception for more information on the actual reason for failure.

MDS-01374
unable to save password.

Category:
Configuration

Cause:
unable to save the password due to exception in security layer.

Action:
See message of the cause exception for more information on the actual reason for failure.

MDS-01375
No password defined for DBMetadataStore in configuration file or in the wallet file.

Category:
Configuration

Cause:
DBMetadataStore uses JDBC based configuration but no password specified.

Action:
Set the password for the DBMetadataStore using JDeveloper.

MDS-01376
Unable to get database connection from data source "{1}" configured with JNDI name "{0}".

Category:
Configuration

Cause:
Failed to retrieve a database connection from the data source either because the data source is not configured correctly or the database details are not correct.

Action:
Test the data source to check if it is correctly configured and if the database can be accessed. See message of the cause exception for more information on the actual reason for failure.

MDS-01377
Unable to get database connection from data source configured with JNDI name "{0}".

Category:
Configuration

Cause:
Failed to retrieve a database connection from the data source either because the data source is not configured correctly or the database details are not correct.

Action:
Test the data source to check if it is correctly configured and if the database can be accessed. See message of the cause exception for more information on the actual reason for failure.

MDS-01378
metadata-store-usage attribute should not be set on namespace "{0}" defined in mds-config.xml.

Category:
Configuration

Cause:
metadata-store-usage attribute was set on the specified namespace in mds-component-config, but this namespace is always assumed to map to deploy-target metadata store.

Action:
Ensure that the metadata-store-usage attribute is removed on specified namespace in mds-config.xml.

MDS-01379
Tenant scope "{0}" is not valid for namespace "{1}" with namespace restriction "{2}".

Category:
Configuration

Cause:
Tenant scope configured for the namespace is not supported with the configured namespace restriction.

Action:
Resolve the conflict between tenant scope and namespace-restriction in the application configuration.

MDS-01380
Tenant scoped base metadata in package "{0}" can not have global customization layer "{1}".

Category:
Configuration

Cause:
Tenant scope GLOBAL on the specified customization layer conflicts with tenant scope TENANT on the base namespace.

Action:
Resolve the conflicts between the tenant scope on the base namespace and that on the customization layer.

MDS-01381
Customization layer "{0}" has been configured more than once with the same tenant scope.

Category:
Configuration

Cause:
Duplicate configuration for the same customization layer was found.

Action:
Remove the duplicate customization layer configuration from adf-config.xml of the application or component config (mds-config.xml) on classpath.

MDS-01382
Customization layer "{0}" has been configured more than once with conflicting tenant scopes.

Category:
Configuration

Cause:
Conflicting tenant scope configurations was found for the same customization layer.

Action:
Remove the incorrect customization layer configuration from adf-config.xml of the application or component config (mds-config.xml) on classpath.

MDS-01383
Sandbox name should be provided for registering a sandbox change listener.

Category:
Configuration

Cause:
No sandbox name was provided for registering the sandbox change listener.

Action:
Provide a valid sandbox name when registering the sandbox change listener.

MDS-01384
Sandbox change listener is not found when registering the lifecycle listener for sandbox {0}.

Category:
Configuration

Cause:
The SendboxChangeListener being registered was null.

Action:
Provide a valid sandbox change listener when registering the lifecycle listener for the sandbox.

MDS-01385
Tenant scope "{0}" as base tenant scope is not valid for namespace "{1}".

Category:
Configuration

Cause:
The specified tenant scope type could not be configured as base tenant scope for the namespace.

Action:
Use the correct base tenant scope parameter to create the namespace.

MDS-01386
Multitenant application can not be configured with metadata store "{0}" that does not support multitenancy.

Category:
Configuration

Cause:
A metadata store that does not support multitenancy was configured for a multitenant enabled application.

Action:
Configure a metadata store such as DBMetadataStore that supports multitenancy.

MDS-01387
Tenant with id "{0}" is not allowed to change the autopurge settings; only the global admin can change this configuration.

Category:
Configuration

Cause:
A tenant cannot change the autopurge configuration..

Action:
Only a global admin can change the autopurge configuration.

MDS-01388
Unable to set cache size to {0} KiloBytes.

Category:
Programmatic

Cause:
The cache size requested was invalid either because it was negative or it was too large for the Java Object Cache.

Action:
Check that the specified size is >0 and within the limit for the cache implementation.

MDS-01389
content-type cannot be specified for content-config mapping [File extension={0}, Path to match={1}] since isStreamed is set to true.

Category:
Configuration

Cause:
Conflicting settings between content-type and isStreamed were found in content-config.

Action:
Change content-options to use content-type without causing conflict.

MDS-01390
An audit event name for component "{0}" is not specified.

Category:
Configuration

Cause:
An audit event was defined, but a name for the event was not specified.

Action:
Give the audit event a valid name.

MDS-01391
"{0}" is not a valid audit event name.

Category:
Configuration

Cause:
An invalid audit event name was found. An audit event name should start with a letter and contain only letters and digits.

Action:
Specify a valid name for the audit event.

MDS-01392
Conflicting definitions were found for the audit event with name "{0}" and audit-component "{1}".

Category:
Configuration

Cause:
Conflicting audit event definitions were found in audit-component element.

Action:
Remove or modify one of the conflicting audit events.

MDS-01393
Multiple audit events named "{0}" are defined for component "{1}".

Category:
Configuration

Cause:
Duplicate audit events were found in audit-component element.

Action:
Remove or modify one of the duplicate audit events.

MDS-01394
The repository-name property element is not specified for a metadata-store element that does not have the class-name property.

Category:
Configuration

Cause:
The repository-name property element was not specified for a metadata-store element. It is required when the class-name property is not specified on the metadata-store element to support look up of the repository details.

Action:
Specify the repository name in a child property element of the metadata-store element or specify the class-name property for the metadata-store element in the configuration file.

MDS-01395
Unable to look up the details of the specified repository {0} for the metadata-store configuration.

Category:
Configuration

Cause:
The specified repository was not registered in the domain or the repository was not configured properly.

Action:
Ensure that the specified repository for the metadata-store is configured and registered properly in the domain.

MDS-01396
metadata-store-usage attribute is not set on namespace "{0}" defined in mds-config.xml.

Category:
Configuration

Cause:
metadata-store-usage attribute was missing on the specified namespace in mds-component-config.

Action:
Ensure that the metadata-store-usage attribute is set on the specified namespace in mds-config.xml.

MDS-01397
Multiple audit events with display name "{0}" are defined for component "{1}".

Category:
Configuration

Cause:
More than one audit event was found with the same display name in audit-component element.

Action:
Ensure that the display names are unique for all audit events of a component.

MDS-01398
Namespace "{0}" is mapped to both metadata store "{1}" and metadata store "{2}".

Category:
Configuration

Cause:
There were multiple metadata stores mapped to a given namespace in the persistence configuration.

Action:
Correct the namespace mapping in persistence configuration to ensure that the namespace is mapped to only one metadata store.

MDS-01399
A DBMetadataStore store is being registered with a PManager with multitenant enabled set to {1} but an equal store is already registered with a PManager with multitenant enabled set to {0}.

Category:
Configuration

Cause:
The DBMetadataStore store being registered cannot be used for both multitenant and non multitenant operations at the same time.

Action:
Ensure that the same physical store is not used for both multitenant and non multitenant operations.

MDS-01400
Read-only extended metadata resource "{0}" is not writable.

Category:
Programmatic

Cause:
An attempt was made to update a read-only extended metadata resource.

Action:
Ensure that the metadata object is mutable before getting the extended metadata.

MDS-01401
Updating a node in one document "{1}" using a node from a different document "{0}" is not allowed.

Category:
Programmatic

Cause:
The node being added or inserted was from a different metadata object. They must be from the same base document.

Action:
Ensure that the node being inserted is from the correct metadata object.

MDS-01402
Updating immutable MetadataObject "{0}" is not allowed.

Category:
Programmatic

Cause:
The MetadataObject being updated was immutable.

Action:
Ensure that the MetadataObject to be updated is mutable.

MDS-01403
Updating a mutable MElement in MetadataObject "{0}" using an immutable MElement: "{1}" is not allowed.

Category:
Programmatic

Cause:
An attempt was made to update a mutable MElement using an immutable MElement.

Action:
Verify that the child MElement being used for the update is mutable.

MDS-01404
Customization to replace root node of {0} is not allowed.

Category:
Programmatic

Cause:
An attempt was made to replace the root node as part of a customization.

Action:
Replace the root node in the base document, or modify the existing root node instead.

MDS-01450
missing GUID

Category:
Programmatic

Cause:
The application removed an object's GUID while editing its XML metadata content.

Action:
Fix the application so it does not tamper with MDS GUIDs.

MDS-01451
GUIDs do not match.

Category:
Programmatic

Cause:
The application altered an object's GUID while editing its XML metadata content.

Action:
Fix the application so it does not tamper with MDS GUIDs.

MDS-01452
GUID is null.

Category:
Programmatic

Cause:
An attempt was made to retrieve a metadata object or document by GUID, but the given GUID was null.

Action:
Fix the application so it passes a valid GUID to the method in question.

MDS-01455
multiple GUIDs on metadata object {0}

Category:
Programmatic

Cause:
The application set multiple GUID values while editing an object's XML metadata content.

Action:
Fix the application so it does not tamper with MDS GUIDs.

MDS-01456
invalid GUID on metadata object {0}

Category:
Programmatic

Cause:
The application set an object's GUID to an invalid value while editing its XML metadata content.

Action:
Fix the application so it does not tamper with MDS GUIDs.

MDS-01457
GUID feature not available

Category:
Programmatic

Cause:
The application attempted to retrieve an object by GUID from a metadata store that does not yet support this.

Action:
Fix the application so it does not attempt this, or configure the application to use a different type of metadata store.

MDS-01458
GUID must not be present.

Category:
Programmatic

Cause:
The application set an object's GUID value while editing its XML metadata content.

Action:
Fix the application so it does not tamper with MDS GUIDs.

MDS-01460
GUIDs on DOM Document do not match.

Category:
Programmatic

Cause:
The application set an object's GUID to a different value while editing its XML metadata content.

Action:
Fix the application so it does not tamper with MDS GUIDs.

MDS-01461
unable to create document {0} in the metadata repository; a document with the same name or GUID already exists

Category:
Data

Cause:
An attempt was made to import or create a document with a name or GUID that is already used by an existing document.

Action:
Delete the document in the MDS repository prior to import or creation.

MDS-01462
GUID feature is not supported in the classpath store.

Category:
Programmatic

Cause:
The application attempted to retrieve an object by GUID from the classpath metadata store that does not support this.

Action:
Fix the application so it does not attempt retrieval by GUID, or configure the application to use a different type of metadata store.

MDS-01464
unable to save GUIDRegister {0}

Category:
Files

Cause:
The GUID register (GUID index files) could not be written.

Action:
Verify that the application has write permission for the given file, and that the disk is not full.

MDS-01465
unable to remove node {0} from the GUIDRegister

Category:
Data

Cause:
The given node was not removed from the GUID register, possibly because it was not found.

Action:
Delete the GUID register files, restart the application and try the operation again. If that fails, contact Oracle Support Services.

MDS-01466
unable to create GUIDRegister directory {0}

Category:
Files

Cause:
The owning directories for the GUID register (GUID index files) were not created.

Action:
Verify that you have permission to create the parent directories for the given file name.

MDS-01468
A different GUID is already registered for document {0}.

Category:
Data

Cause:
The GUID register has become corrupted.

Action:
Delete the GUID register files and restart the application (the files will then be re-created).

MDS-01469
unable to remove old GUIDRegister store path {0}

Category:
Files

Cause:
Old GUID register files were not deleted.

Action:
Verify that you have permission to delete these files.

MDS-01470
more than one GUID is registered for document {0}

Category:
Data

Cause:
The GUID register has become corrupted.

Action:
Delete the GUID register files and restart the application (the files will then be re-created).

MDS-01471
more than one document is registered for GUID {0}

Category:
Data

Cause:
The GUID register has become corrupted.

Action:
Delete the GUID register files and restart the application (the files will then be re-created).

MDS-01472
GUID is missing in file {0}

Category:
Data

Cause:
No GUID was found in the given file but the metadata object type definition indicated there should be one.

Action:
Re-create the metadata object or correct its type definition not to require a GUID.

MDS-01500
The MDSObject {0} is an XML document and cannot be loaded using StreamedObject API.

Category:
Programmatic

Cause:
An attempt was made to load an XML document via StreamedObject API.

Action:
Retry the operation using MetadataObject API or use a non-XML document.

MDS-01501
The MDSObject {0} is not an XML document and cannot be loaded from MetadataObject API.

Category:
Programmatic

Cause:
An attempt was made to load a streamed object (non-XML document) using MetadataObject API.

Action:
Retry the operation using StreamedObject API or use a document containing valid XML.

MDS-01502
The MDSObject "{0}" is an XML document and cannot be saved using StreamedObject API.

Category:
Programmatic

Cause:
An attempt was made to save an XML document using StreamedObject API.

Action:
Retry the operation using MetadataObject API.

MDS-01503
The content of StreamedObject {0} cannot be read.

Category:
Data

Cause:
An attempt to read the StreamedObject content failed.

Action:
Look at the error message and exception stack in the application logs to determine the reason for the failure.

MDS-01504
The document {0} is either registered as a streamed file type or is a non-XML file extension and cannot be created using MetadataObject API.

Category:
Programmatic

Cause:
An attempt was made to create an MDSObject named with a streamed object (non-XML) extension using MetadataObject API.

Action:
Retry the operation using StreamedObject API.

MDS-01600
The Dependency Analyzer requires a DependencyFilter.

Category:
Programmatic

Cause:
Either no filter was supplied, or the filter supplied was null.

Action:
Supply a non-null filter.

MDS-01601
The relationship role name {0} is a duplicate.

Category:
Programmatic

Cause:
A role name defined in a relationship had already been used.

Action:
Ensure that the toParentRole and toChildRole in a relationship have not already been used by another relationship.

MDS-01602
cannot locate the element type {0} in namespace {1} defined for the relationship

Category:
Programmatic

Cause:
The element type did not exist in the given namespace.

Action:
Ensure that the element type exists in the given namespace.

MDS-01604
The relationship from {0} to {1} is invalid because the latter is not a valid MDS reference.

Category:
Programmatic

Cause:
An invalid MDS reference was specified as the parent.

Action:
Ensure the parent reference is a valid MDS reference.

MDS-01605
The relationship from {0} to {1} is invalid because the latter does not exist.

Category:
Programmatic

Cause:
No parent element was found matching the MDS reference supplied.

Action:
Ensure that the parent reference in the relationship points to an existing element.

MDS-01606
The relationship from {0} to {1} is invalid because the latter is of incorrect type.

Category:
Programmatic

Cause:
The child element referenced a parent of the wrong type.

Action:
Ensure that the parent type matches the one stipulated in the relationship definition.

MDS-01607
The relationship from {0} to {1} is invalid because type information is not available for the latter.

Category:
Configuration

Cause:
No type definition could be found for the parent.

Action:
Ensure that the parent type information is available.

MDS-01608
The relationship from {0} to {1} is invalid because the latter maps to a different store.

Category:
Configuration

Cause:
The parent and child objects in the relationship have been mapped to different stores.

Action:
Ensure that the parent maps to the same store as the child object.

MDS-01609
The document {0} contains relationships that do not conform to the relationship definition.

Category:
Programmatic

Cause:
Constraints in this document's relationship definitions were violated.

Action:
Ensure that the relationships conform to the constraints in the relationship definition.

MDS-01610
Some of the changes in the MDS session are not valid.

Category:
Data

Cause:
A change was made in the MDS session that was not valid.

Action:
Check the changes made and ensure each of them is valid.

MDS-01611
not saving changes in MDS session because some changes are not valid

Category:
Data

Cause:
A change made in the MDS session was not valid.

Action:
Check all the changes made and ensure that all changes are valid.

MDS-01612
The object {0} cannot be deleted because it is referenced by {1}.

Category:
Programmatic

Cause:
An attempt was made to delete an element that was being referenced by a child object.

Action:
Remove the child reference to this object so the object can be deleted.

MDS-01613
The object {0} cannot be deleted because of relationship integrity constraints.

Category:
Programmatic

Cause:
An attempt was made to delete an object that was still being referenced.

Action:
Remove the child references to the metadataObject so that it can be deleted.

MDS-01614
Rename is not allowed because integrity checking is not turned on in the object {1} in MetadataObject {0}.

Category:
Configuration

Cause:
Integrity checking was switched off so it was not possible to check whether the rename would have broken any relationship integrity constraints.

Action:
Ensure that integrity checking is turned on.

MDS-01615
failure to rename {0} because there is no reference attribute in MetadataObject {1}, element {2}

Category:
Data

Cause:
A child object could not reference the renamed object as its current reference was invalid.

Action:
Confirm that all the references in the child object are valid.

MDS-01620
The untyped dependency with the following registration details cannot be inserted: {0}, {1}, {2}, {3}.

Category:
Data

Cause:
The dependency could not be registered in the database repository due to a SQL exception.

Action:
Correct the cause of the SQL exception and retry the untyped dependency registration.

MDS-01621
The untyped dependency information for {0} could not be removed.

Category:
Data

Cause:
An attempt to remove untyped dependency information failed either because the document was invalid or there was a SQL exception.

Action:
Verify that the document and its dependencies are valid, or correct the cause of any SQL exceptions.

MDS-01622
There is no analyzer to unregister.

Category:
Configuration

Cause:
No analyzers were supplied to be unregistered.

Action:
Supply the DependencyAnalyzer to be unregistered.

MDS-01630
invalid operation in a customized context on an element that could participate in a relationship: {0}

Category:
Programmatic

Cause:
Within a customized context there was an attempt to insert an element without first deleting it as part of a composite move.

Action:
Within the customized context, do not attempt inserts on elements without first deleting them as part of a composite move.

MDS-01631
In a customized context, an element that could participate in a relationship as a child cannot be modified. The reference is {0} on {1}.

Category:
Programmatic

Cause:
Within a customized context, an attribute being customized could have been a parent reference within a relationship.

Action:
Do not attempt to modify or remove an attribute that could be a parent reference within a relationship.

MDS-01633
In a customized context, an element that could participate in a relationship cannot be deleted: {0}.

Category:
Programmatic

Cause:
Within a customized context an attempt was made to delete an element that could participate in a relationship.

Action:
Do not attempt to delete an entity while in a customized context.

MDS-01634
In {0}, a {1} element that participates in a relationship lacks a configurable ID.

Category:
Programmatic

Cause:
An operation was attempted on a participant in a relationship that lacked a configurable ID.

Action:
Add a configurable ID to the element on which it is missing. If necessary, refer to the element's schema definition to identify the configurable ID attribute.

MDS-01635
Skipping the relationship validation for {0} in the metadata object {1} because the element contains an invalid MDS reference.

Category:
Programmatic

Cause:
Validation of the object's relationships was not performed because the element contained an invalid MDS reference.

Action:
Correct the MDS references in the MetadataObject specified.

MDS-01700
MElementBeanImpl._setSimpleChild cannot be called on a non-simpleType element: name={0}, namespace{1}

Category:
Configuration

Cause:
An attempt was made to set a bean element to a simple type, but the definition in the schema was not a simple type. The generated beans may not have matched the registered schema.

Action:
Regenerate the beans from the schema definitions and ensure that the correct versions are on the classpath. Check that the schemas are registered with the MDS instance.

MDS-01701
Cannot set the value on an element that is not based on a simpleType: name={0}, namespace={1}

Category:
Configuration

Cause:
An attempt was made to set an element to a simple type, but the definition in the schema was not a simple type.

Action:
Regenerate the beans from the schema definitions and ensure that the correct versions are on the classpath. Check that the schemas are registered with the MDS instance.

MDS-01702
The method getBean() is not valid for metadata object {0} - it is allowed on only bean metadata objects.

Category:
Configuration

Cause:
An attempt was made to access the metadata object using the bean API but the metadata object was not a bean metadata object. The schema for the root element may not have been registered with MDS, or the beans were not available on the classpath.

Action:
Regenerate the beans from the schema definitions and ensure that the correct versions are on the classpath. Check that the schemas are registered with the MDS instance.

MDS-01703
error unmarshalling bean element: name={0}, namespace={1} in metadata object {2} - no object factory can be found or jaxb.properties cannot be found

Category:
Configuration

Cause:
An element was found in the metadata object that did not have a corresponding bean class. The schema for the element may not have been registered with MDS, or the beans were not available on the classpath.

Action:
Regenerate the beans from the schema definitions and ensure that the correct versions are on the classpath. Check that the schemas are registered with the MDS instance.

MDS-01705
error unmarshalling bean element: name={0}, namespace={1} in metadata object {2} - object factory class {3} does not have the expected unmarshal() method

Category:
Data

Cause:
The bean object factory found for the element did not appear to have been generated by the MDS bean generation tool.

Action:
Regenerate the beans from the schema definitions and ensure that the correct versions are on the classpath. Check that the schemas are registered with the MDS instance.

MDS-01706
error unmarshalling bean element: name={0}, namespace={1} in metadata object {2} - object factory class {3} failure in unmarshal() method

Category:
Programmatic

Cause:
An unexpected exception occurred while creating a bean object for the element.

Action:
Contact the developers of the application, providing the cause exception.

MDS-01707
Error generating relationship method {0} for relationship defined on attribute {1}: incorrect parentType definition

Category:
Programmatic

Cause:
There was an error in the relationship definition.

Action:
Check the parentType definition on the relationship

MDS-01708
No schema definition found in namespace "{0}" for element of type "{1}". {2} will not be retrievable as an MDS Bean MO.

Category:
Configuration

Cause:
The schema for the generated MDS bean is not found.

Action:
Add the schema for this namespace and element type to the type definitions for the MDSInstance.

MDS-01800
Sandbox is not supported for {0} configured on {1}.

Category:
Configuration

Cause:
An underlying metadata store did not support the sandbox feature.

Action:
Provide a metadata store that supports sandbox feature.

MDS-01801
Document name {0} should not refer to the raw sandbox resource name.

Category:
Programmatic

Cause:
A resource name pointed directly to a resource in the sandbox component.

Action:
Provide a logical document name to resolve the issue.

MDS-01802
A sandbox by name {0} already exists in the {1} store.

Category:
Configuration

Cause:
A sandbox with the same name already existed in the store.

Action:
Use a different name or destroy the existing sandbox before reusing the same name.

MDS-01803
Sandbox Persistence manager cannot be constructed using an instance of SandboxPManager.

Category:
Programmatic

Cause:
An attempt was made to construct an instance of sandbox persistence manager using an instance of SandboxPManager.

Action:
Contact Oracle Support Services.

MDS-01804
Sandbox {0} configured with {1} namespace, {2} store and {3} label from mainline is not compatible with {4} label created on {5} namespace.

Category:
Programmatic

Cause:
A label was used that is different from the mainline label associated with the sandbox.

Action:
Use a label that is compatible with the sandbox and retry the operation.

MDS-01805
Sandbox {0} missing in {1}.

Category:
Data

Cause:
The specified sandbox was not found in the underlying metadata store.

Action:
Provide the name of an existing sandbox, or create a new sandbox if necessary.

MDS-01806
failure to remove {0} from {1}, because it is not a valid document in the sandbox

Category:
Data

Cause:
The specified document to be removed was not found in the sandbox.

Action:
Verify that the document exists in the sandbox.

MDS-01807
failure to delete sandbox {0}

Category:
Programmatic

Cause:
An error occurred while deleting the sandbox.

Action:
Refer to the error messages that describe the cause exception in the application logs for more information on the actual reason for failure.

MDS-01808
SandboxUsage with the sandbox name set to {0} does not return any namespaces.

Category:
Programmatic

Cause:
No namespaces were found on the SandboxUsage.

Action:
Configure the SandboxUsage with namespaces that are associated with the sandbox.

MDS-01809
failure to list sandboxes matching {0}

Category:
Programmatic

Cause:
An error occurred while listing or querying the sandboxes.

Action:
Look for error messages to determine the actual cause of the failure.

MDS-01810
failure to refresh sandboxes to target label {0}

Category:
Programmatic

Cause:
Target label is older than the current source label.

Action:
Specify a target label which is later than current label.

MDS-01811
failure to list sandboxes matching customization for {0}, layer: {1}, value: {2}

Category:
Programmatic

Cause:
An error occurred while listing or querying the sandboxes.

Action:
Look for error messages to determine the actual cause of the failure.

MDS-01812
sandbox name {0} exceeds the maximum limit of {1} characters

Category:
Programmatic

Cause:
Sandbox name is more than the supported size.

Action:
Use a shorter sandbox name.

MDS-01813
sandbox metadata for {0} cannot be saved because it is being updated by another user.

Category:
Programmatic

Cause:
More than one user is updating the sandbox metadata at the same time.

Action:
Get the sandbox metadata again and retry saving after making the changes.

MDS-01814
sandbox metadata for {0} cannot be changed because it is read only.

Category:
Programmatic

Cause:
Sandbox metadata is read only and cannot be updated

Action:
To update get an instance of sandbox and then get the sandbox metadata from the instance

MDS-01815
store configured for sandbox {0} does not support sandbox metadata.

Category:
Programmatic

Cause:
Sandbox metadata is not supported on the repository.

Action:
Sandbox metadata is supported in MDS repository version 11.1.1.4.0 (11gR1 PS3 patchset) onwards. Upgrade the repository to this version or later to use this feature.

MDS-01816
{0} is not a valid name for a sandbox.

Category:
Programmatic

Cause:
The specified sandbox name is either an MDS reserved package part name or contains invalid characters.

Action:
Ensure that the specified sandbox name is neither an MDS reserved package part name nor does it contain invalid characters as per the MDS Resource name specification.

MDS-01817
sandbox {0} is either active or published to mainline. The undo/finalize operation cannot continue.

Category:
Programmatic

Cause:
The sandbox is either applied or is in the active state.

Action:
Check that the sandbox is in the intermediary state

MDS-01818
sandbox {0} is either being refreshed or applied and is in intermediary state. No further updates except sandbox finalize/undo operation are allowed.

Category:
Programmatic

Cause:
The sandbox is in intermediary state and no further updates can be done to the sandbox.

Action:
The only allowed operations in the intermediary state are: finalize and undo.

MDS-01819
Lock on sandbox {0} cannot be taken. A concurrent management operation may be in progress.

Category:
Programmatic

Cause:
A management operation on the sandbox is in progress and has locked the sandbox.

Action:
Retry the operation after a while.

MDS-01820
Metadata for sandbox {0} is not available. The sandbox management operation cannot proceed without sandbox metadata.

Category:
Programmatic

Cause:
Sandbox was created without metadata.

Action:
Use the management APIs that are available for sandboxes without metadata.

MDS-01821
Lifecycle change notifications for the sandbox {0} cannot be sent out because the change type is not defined.

Category:
Other

Cause:
The sandbox lifecycle change does not have a valid change type.

Action:
Contact Oracle Support Services.

MDS-01900
None of the configured metadata stores support versioning.

Category:
Configuration

Cause:
The underlying metadata store did not support versioning.

Action:
Configure a metadata store that supports versioning, and retry the operation.

MDS-01901
specifying multiple labels for a namespace not allowed

Category:
Configuration

Cause:
Multiple labels were provided for a namespace that pointed to a metadata store.

Action:
Provide a single label to map to a namespace and retry the operation.

MDS-01902
Label or namespace is invalid.

Category:
Programmatic

Cause:
Either the namespace or the label was invalid.

Action:
Verify that the namespace and the label are correct, and retry the operation.

MDS-01903
Specified label {0} does not exist for {1} namespace.

Category:
Configuration

Cause:
The specified label did not exist in the metadata store mapped to the namespace.

Action:
Verify that the label name is correct and that the label exists, and then retry the operation.

MDS-01906
A label with same name {0} already exists.

Category:
Programmatic

Cause:
An attempt was made to create a label that already existed.

Action:
Create a label with a different name, and then retry the operation.

MDS-01907
The label {1} is already configured for the store "{0}", so the same store cannot be configured with another label "{2}".

Category:
Configuration

Cause:
An attempt was made to map a label for a store when a label-to-store mapping already existed for that store.

Action:
De-associate the existing label mapped to the store first, and then retry the operation.

MDS-01908
failure to delete versions of the document {0}

Category:
Programmatic

Cause:
An error had occurred while versions were being deleted.

Action:
Refer to the error messages that describe the cause exception in the application logs for more information on the actual reason for failure.

MDS-01909
No namespaces are specified for creating label {0}.

Category:
Programmatic

Cause:
No namespace information was found for creating a label.

Action:
Provide a namespace for creating a label, and retry the operation.

MDS-01910
The namespace {0} is already registered with the label {1}, so the super/sub namespace {2} cannot be assigned with the label {3}.

Category:
Programmatic

Cause:
An attempt was made to associate multiple labels with a namespace, or an attempt was made to associate multiple namespaces with a single label.

Action:
Associate a single label with a single namespace, and retry the operation.

MDS-01911
failure of the metadata purge operation for the requested repository partition

Category:
Programmatic

Cause:
An error occurred during a purge operation.

Action:
Retry the operation. Also, refer to the error messages that describe the cause exception in the application logs for more information on the actual reason for failure.

MDS-01912
MetadataStore configured for {0} does not support versioning.

Category:
Configuration

Cause:
The metadata store configured for the resource did not support versioning.

Action:
Configure a metadata store that supports versioning or verify that the resource name is correct.

MDS-01913
A deployment lineage with same application name "{0}" and deployment module name "{1}" already exists.

Category:
Programmatic

Cause:
An attempt was made to create a lineage that already existed.

Action:
Create a lineage with a different application or MAR name, and then retry the operation.

MDS-01914
The application name and deployment module name cannot be null to create DeploymentInfo.

Category:
Programmatic

Cause:
An attempt was made to create DeploymentInfo with null values.

Action:
Make sure that the values for application name and deployment module name are non-null.

MDS-02001
Absolute path as metadata-path for the file metadata-store configuration is not supported for SaaS deployment.

Category:
Configuration

Cause:
Configuring an absolute directory in SaaS Multitenant application will violate metadata isolation across tenants.

Action:
Ensure that relative path specified as metadata-path for the file metadata-store.

MDS-02002
RelativeToLocation for the file metadata-store configuration is not supported for SaaS deployment.

Category:
Configuration

Cause:
Configuring an absolute directory in SaaS Multitenant application will violate metadata isolation across tenants.

Action:
Ensure that relative path is specified as metadata-path for the Metadata Store and RelativeToLocation is null

MDS-02003
Package name {0} in cust-restriction-config in {1} is invalid.

Category:
Configuration

Cause:
An invalid package name was encountered whilst loading the component configuration.

Action:
Ensure that a valid package name is specified

MDS-02004
Cannot configure [Path to match={0}] as Layered Stream Objects since path's content-type is not BINARY_STREAM.

Category:
Configuration

Cause:
customization-type attribute in cust-config can be set to FULL_REPLACE only when content-config configures the path as BINARY_STREAM.

Action:
Change content-type to use BINARY_STREAM or remove customization-type configuration.

MDS-02005
Cannot configure [Path to match={0}] as Layered Stream Objects since path is configured for stream storage in content-config using isStreamed option.

Category:
Configuration

Cause:
cust-type is not supported with isStreamed as isStreamed attribute is deprecated.

Action:
Remove isStreamed and configure content-type to use BINARY_STREAM or remove cust-type configuration.

MDS-02006
streamBuilder class not specified for path {0}.

Category:
Configuration

Cause:
The streamBuilder class cannot be null if customization-type is configured as 'extension'.

Action:
Ensure that the streamBuilder class is supplied when configuring customization-type as 'extension'.

MDS-02007
streamBuilder can only be specified with customization-type 'extension' for path {0}.

Category:
Configuration

Cause:
streamBuilder is only valid for 'extension' customization-type.

Action:
Ensure that the streamBuilder class is only supplied when configuring customization-type as 'extension'.

MDS-02024
Setting or modifying the unique (or locally unique) identifier "{0}" of an existing element with localRef "{1}" through customizations is not supported.

Category:
Programmatic

Cause:
An attempt was made to customize unique (or locally unique) identifier.

Action:
Remove any customization that is attempting to modify the unique (or locally unique) identifier of an XML element.

MDS-02025
The requested change is incompatible with changes already pending on the MDS session.

Category:
Programmatic

Cause:
An attempt was made to perform a change operation on the MDS session which would update the same MetadataObject part as another change operation that has been done. For example, if you change a customization of a metadata object then attempt to delete all of its customizations, the latter operation will fail because it conflicts with the former. You must save the former change first before doing the second.

Action:
Save the changes that have already been made on the session (by calling flushChanges), then retry the failed operation.

MDS-02100
Illegal permission target: "{0}" - must begin with {1}.

Category:
Programmatic

Cause:
An attempt was made to create an MDS permission class with an incorrect syntax.

Action:
Permission classes are usually created internally by MDS but may be created by the application directly. Contact the developers of the application to confirm that this is not an application error and if not contact Oracle Support Services.

MDS-02101
Illegal permission action: "{0}" - unknown action.

Category:
Programmatic

Cause:
An attempt was made to create an MDS permission class with an incorrect syntax.

Action:
Permission classes are usually created internally by MDS but may be created by the application directly. Contact the developers of the application to confirm that this is not an application error and if not contact Oracle Support Services.

MDS-02102
Illegal permission action: "{0}" - customize action takes 0 or 2 parameters.

Category:
Programmatic

Cause:
An attempt was made to create an MDS permission class with an incorrect syntax.

Action:
Permission classes are usually created internally by MDS but may be created by the application directly. Contact the developers of the application to confirm that this is not an application error and if not contact Oracle Support Services.

MDS-02201
type validation failure for the metadata object "{0}"

Category:
Programmatic

Cause:
The content of the metadata object was not valid against the registered XSDs.

Action:
Ensure that the metadata object content is valid with respect to the registered XSDs.

MDS-02202
Content of the metadata object "{0}" is not valid.

Category:
Programmatic

Cause:
The content was not valid either with respect to the registered XSDs or with the registered relationships.

Action:
Check the content of the metadata object and correct the content as necessary to make it valid.

MDS-02203
type validation error for the metadata object "{0}" at the node "{1}": {2}

Category:
Programmatic

Cause:
A validation error occurred at the specified node.

Action:
Check the content at the specified node for compliance with registered XSDs and relationships.

MDS-02204
type validation warning for the metadata object "{0}" at the node "{1}": {2}

Category:
Programmatic

Cause:
A validation warning occurred at the specified node.

Action:
Check the content at the specified node for compliance with registered XSDs.

MDS-02301
The rename unit is invalid because either "{0}" or "{1}" is reused in the rename plan.

Category:
Programmatic

Cause:
The resource name provided in the rename plan was used more than once.

Action:
Provide distinct names for source and target names while renaming.

MDS-02302
subobjects "{1}" not found in metadata object "{0}"

Category:
Programmatic

Cause:
The specified subobjects were not found in the metadata object.

Action:
Look in the error message log for details.

MDS-02303
The given rename plan syntax is invalid

Category:
Configuration

Cause:
The rename plan syntax specified was invalid.

Action:
Look in the error message log for details.

MDS-02304
RenameOperation failed for StreamedObject "{0}" because subobjects were specified for this streamed object.

Category:
Programmatic

Cause:
Streamed objects do not support subobjects.

Action:
Remove the RenameObject that contains reference to the streamed object and subobject references from the RenamPlan.

MDS-02401
The operation {0} on the {1} node is not allowed.

Category:
Configuration

Cause:
An attempt was made to customize a node that was not customizable.

Action:
If the attempted customization is valid, the customization restrictions need to be modified to provide this ability. The customization restrictions can be defined in: the XML schema definition, standalone XML file or an extended metadata file. Also check the customization policy for the MDS session in use and the customization configuration.

MDS-02402
The type definition for {1} does not allow customization of {0}.

Category:
Configuration

Cause:
An attempt was made to customize a node that was not customizable.

Action:
If the attempted customization is valid, the customization restrictions need to be modified to provide this ability. The customization restrictions can be defined in: the XML schema definition, standalone XML file, tag library definition file, or an extended metadata file. Also check the customization policy for the MDS session in use and the customization configuration.

MDS-02404
The subelement {1} in the MDX document does not allow customization of {0}.

Category:
Configuration

Cause:
An attempt was made to customize a node that was not customizable.

Action:
Check the customization restriction information which can be located in the schema definition, standalone xml file or an extended metadata file. Also check the customization policy for the MDSSession in use and the customization configuration.

MDS-02405
The attribute {2} in element {1} in the MDX document does not allow customization of {0}.

Category:
Configuration

Cause:
An attempt was made to customize a node that was not customizable.

Action:
If the attempted customization is valid, the customization restrictions need to be modified to provide this ability. The customization restrictions can be defined in: the XML schema definition, standalone XML file or an extended metadata file. Also check the customization policy for the MDS session in use and the customization configuration.

MDS-02406
Customization of {0} is not allowed because it is not explicitly allowed by any type definition nor any extended metadata entry.

Category:
Configuration

Cause:
An attempt was made to customize a node that was not customizable.

Action:
If the attempted customization is valid, the customization restrictions need to be modified to provide this ability. The customization restrictions can be defined in: the XML schema definition, standalone XML file or an extended metadata file. Also check the customization policy for the MDS session in use and the customization configuration.

MDS-02407
Customization of {0} is not allowed because the local reference was not found in the document.

Category:
Programmatic

Cause:
An enquiry about the customizability of a node supplied a local reference that wasn't found in the document.

Action:
Ensure that the local reference applies to the document.

MDS-02408
The operation {0} on the {1} node is not allowed because the metadata object reference was not found in the change event.

Category:
Programmatic

Cause:
A document change is not allowed because the metadata object reference was null.

Action:
Ensure that the change document exists.

MDS-02500
Cannot find a valid MDSSession object for accessing the MDS document using ORAMDS URL

Category:
Programmatic

Cause:
A valid MDSSession object was not set before accessing the document using the "oramds:///" protocol.

Action:
Use the MDSURLHelper.setMDSSession() method to set a valid MDSSession object before accessing MDS documents using the oramds protocol.

MDS-02501
cannot load the ORAMDS URL "{0}" because MDS session could not be created or resolved

Category:
Programmatic

Cause:
An error occurred while creating or resolving an MDS session object.

Action:
Look for messages describing the cause exception in the error message log for more information on the actual reason for failure.

MDS-02600
configuration migration failure because the configuration document contains more than one mds-config element

Category:
Programmatic

Cause:
The given configuration document contained more than one mds-config element.

Action:
Correct the configuration document to contain a single mds-config element.

MDS-02601
configuration migration failure because it contains more than one persistence-config element

Category:
Programmatic

Cause:
The configuration document contained more than one persistence-config element.

Action:
Correct the configuration document to contain a valid persistence-config element.

MDS-02602
configuration migration failure because it contains more than one metadata-stores element

Category:
Programmatic

Cause:
The configuration document contained more than one metadata-stores element

Action:
Correct the configuration document to be a valid 10.1.3 configuration document.

MDS-02603
configuration migration failure because it contains an invalid metadata-store element

Category:
Programmatic

Cause:
The configuration document contained an invalid metadata-store element.

Action:
Correct the configuration document to be a valid 10.1.3 configuration document.

MDS-02700
The resource "{0}" cannot be updated by tenant "{1}".

Category:
Programmatic

Cause:
The given resource could not be updated by the current tenant because it was not available in current tenant's scope.

Action:
Verify that the resource is being updated in the same scope of the tenant who updates the resource.

MDS-02702
Tenant scoped PManager instance cannot be created for tenant {0} because given PManager instance does not have multitenancy enabled.

Category:
Configuration

Cause:
The PManager instance used here did not have multitenancy enabled but an attempt was made to create tenant scoped PManager instance.

Action:
Verify that the PManager instance being passed has multitenancy support enabled.

MDS-02703
Tenant scoped PManager cannot be created for tenant "null".

Category:
Configuration

Cause:
The PManager instance used here had multitenancy support enabled but an attempt was made to create tenant scoped PManager instance with "null" tenant.

Action:
Create scoped PManager instance for valid tenant id.

MDS-02704
Cannot create tenant scoped PManager instance using another tenant scoped PManager instance.

Category:
Programmatic

Cause:
An attempt was made to create tenant scoped PManager using another scoped PManager instance.

Action:
Create a tenant scoped PManager using an unscoped PManager instance.

MDS-02705
Cannot create PContext using an unscoped PManager instance.

Category:
Programmatic

Cause:
Creating PContext using an unscoped PManager instance was not allowed.

Action:
Use PManager instance that is scoped for a tenant to create PContext.

MDS-02706
Cannot create PTransaction using an unscoped PManager instance.

Category:
Programmatic

Cause:
Creating PTransaction using an unscoped PManager instance was not allowed.

Action:
Use PManager instance that is scoped for a tenant to create PTransaction.

MDS-02707
PContext with tenant id {0} cannot be used in scoped PManager with tenant id {1}.

Category:
Programmatic

Cause:
Tenant id attached to PContext and the tenant id of tenant scoped PManager to which it was passed did not match.

Action:
Create PContext from the tenant scoped PManager to which it is passed.

MDS-02708
PManager instance is being used after it has been released.

Category:
Programmatic

Cause:
PManager instance was being used after it had been released.

Action:
Create a new PManager.

MDS-02709
Configuration change operation "{0}" on scoped PManager is not allowed for the tenant {1}. Only global tenant is allowed to change the configuration settings in PManager.

Category:
Programmatic

Cause:
A non global tenant attempted to change configurations in scoped PManager.

Action:
Use global tenant scoped PManager to change the configuration settings.

MDS-02710
Operation "{0}" is not allowed in unscoped PManager.

Category:
Programmatic

Cause:
A tenant aware operation was invoked in an unscoped PManager instance.

Action:
Use a global or tenant scoped PManager to do the operation.

MDS-02711
No tenant operations are allowed on MetadataStoreConnection not associated with any tenant id.

Category:
Programmatic

Cause:
A tenant aware operation was invoked in MetadataStoreConnection to database store which did not have any tenant id attached.

Action:
Create a new MetadataStoreConnection with a valid tenant id.

MDS-02712
The operation {0} is not allowed in this MetadataStoreConnection to database store because the MetadataStoreConnection is not attached to any tenant id.

Category:
Programmatic

Cause:
A tenant aware operation was invoked in MetadataStoreConnection to database store which did not have any tenant id attached.

Action:
Create a new MetadataStoreConnection with a valid tenant id.

MDS-02713
PContext associated with tenant {0} cannot be used with MetadataStoreConnection associated with different tenant {1}. Operation {2} failure.

Category:
Programmatic

Cause:
The tenant id attached to PContext and MetadataStoreConnection did not match.

Action:
Use PContext with same tenant id as the one attached to metadata store connection.

MDS-02714
Creating metadata store connection for tenant {0} is not allowed in non multitenant application.

Category:
Programmatic

Cause:
An attempt was made to create metadata store connection for non global tenant in non multitenant application.

Action:
Use global tenant id to create metadata store connection.

MDS-02715
No tenant scoped PManager instances can be created on already released PManager instance.

Category:
Programmatic

Cause:
An attempt was made to create a tenant scoped PManager instance on already released PManager instance.

Action:
Create new PManager instance using a PConfig then try creating scoped PManager instance.

MDS-02720
Cannot rename the document {0} to {1} as the new tenant scope does not match the original tenant scope.

Category:
Programmatic

Cause:
The new name for the document was configured to a different tenant scope to the old document name.

Action:
Provide a new valid document name that maps to the same tenant scope as the original document.

MDS-02721
PResource {0} for tenant {1} cannot be used with MetadataStoreConnection that is associated with different tenant {2}. Operation {3} failure.

Category:
Programmatic

Cause:
The tenant ids of the PResource and the MetadataStoreConnection did not match.

Action:
Use PResource with same tenant id of the one attached to metadata store connection.

MDS-02722
Mar Lineage can be created by global tenant only. Creating MAR lineage is not supported for tenant {0}.

Category:
Programmatic

Cause:
A non-global tenant attempted to create MAR lineage which is not supported. MAR lineage creation is allowed only for global tenant currently.

Action:
Create MAR lineage from global tenant context.

MDS-02723
Operation "{0}" is not supported in Sandbox currently.

Category:
Programmatic

Cause:
Unsupported operation was invoked in Sandbox instance.

Action:
This operation is not supported in Sandbox currently.

MDS-02724
The ResourceName that is attached to tenant scope {0} is not allowed in SandboxPTransaction that is attached to the different tenant scope {1}. Operation {2} failure.

Category:
Programmatic

Cause:
Tenant scope for ResourceName and SandboxPTransaction did not match.

Action:
Use ResourceName with same tenant scope of the one attached to SandboxPTransaction.

MDS-02725
The Label {0} that is attached to tenant {1} is not allowed in MetadataStoreConnection that is attached to different tenant {2}. Operation {3} failure.

Category:
Programmatic

Cause:
Tenant id for Label and MetadataStoreConnection did not match.

Action:
Use label with same tenant id of the one attached to MetadataStoreConnection.

MDS-02726
The tenant {0} that is attached to PDocument {1} is not allowed in SandboxPTransaction that is attached to different tenant {2}. Operation {3} failure.

Category:
Programmatic

Cause:
Tenant id for PDocument and SandboxPTransaction did not match.

Action:
Use PDocument with same tenant id of the one attached to SandboxTransaction.

MDS-02727
The tenant {0} that is attached to Label {1} is not allowed in SandboxPTransaction that is attached to different tenant {2}. Operation {3} failure.

Category:
Programmatic

Cause:
Tenant id for Label and SandboxPTransaction did not match.

Action:
Use label with same tenant id of the one attached to SandboxPTransaction.

MDS-02728
The tenant {0} that is attached to {1} {2} is not allowed in Sandbox that is attached to different tenant {3}. Operation {4} failure.

Category:
Programmatic

Cause:
Tenant id attached and Sandbox did not match.

Action:
Use tenant id same as the one attached to Sandbox.

MDS-02729
The tenant scope {0} that is attached to {1} is not allowed in Sandbox that is attached to the different tenant scope {2}. Operation {3} failure.

Category:
Programmatic

Cause:
Tenant scope attached and Sandbox did not match.

Action:
Use tenant scope same as the one attached to Sandbox.

MDS-02730
Error in deprovisioning the tenant {0}. Unable to delete the resources in {1}.

Category:
Configuration

Cause:
Tenant resources might be on read-only store.

Action:
Verify that tenant resources exist on a writable store.

MDS-02731
Tenant specific operations cannot be done in multitenant disabled environment for tenant {0}.

Category:
Programmatic

Cause:
An attempt was made to do tenant specific operations in Multitenant disabled environment.

Action:
Enable the multitenant feature.

MDS-02732
TenantId cannot be created for the value "{0}".

Category:
Programmatic

Cause:
TenantId could not be created with negative values or a value with more than 18 digits.

Action:
Use positive values with max of 18 digits in decimal format to create a valid TenantId object.

MDS-02733
Rename across multiple tenant stripes is not supported on this store.

Category:
Programmatic

Cause:
The store does not support writing to multiple tenant stripes or multitenancy is not enabled.

Action:
Enable the multitenant feature.

MDS-02734
Unable to get TenantInfo for TenantId "{0}" from tenant management system.

Category:
Configuration

Cause:
Tenant is not yet provisioned or was deprovisioned from the POD.

Action:
Check tenant provisioning system to ensure tenant is provisioned.

MDS-02735
Label "{0}" cannot be deleted since it is attached to sandbox(es): "{1}".

Category:
Programmatic

Cause:
An attempt was made to delete a label that is attached to active sandbox(es).

Action:
Make sure that there are no sandboxes attached to label to be deleted. Refer to FMW Enterprise Manager MDS repository home page to check labels that are attached to a sandbox.

MDS-02736
Failed to update purge configuration value for tenant {0}.

Category:
Programmatic

Cause:
An error occurred while updating purge configuration.

Action:
Retry the operation. Also, refer to the error messages that describe the cause exception in the application logs for more information on the actual reason for failure.

MDS-02737
Prevented potential duplicate tip version for document "{0}". Original request was to update document with PATH_DOC_ID={1}, PATH_VERSION={2} and PATH_LOW_CN={3}, updated latest tip version having PATH_DOC_ID={4}, PATH_VERSION={5} PATH_LOW_CN={6} to avoid duplicate tip version.

Category:
Programmatic

Cause:
MDS detected code flow which could have lead to duplicate tip issue.

Action:
Previous tip document is replaced forcefully with new content, validate content of the document.

MDS-02738
Database based metadata repository initialization failure because of invalid MDS database schema at "[{0}]".

Category:
Configuration

Cause:
Configured Database details refer to invalid or non-MDS schema.

Action:
Configure a valid MDS database schema created using Repository Creation Utility

MDS-02739
MDS Partition with ID {0} does not exist in the database repository

Category:
Programmatic

Cause:
This could be caused by deleting the partition while still being used by application.

Action:
Ensure partition is deleted only when not in use. To resolve the current issue, restart the application or server.

MDS-02740
MDS repository version for tenant "{0}" is not same as Global MDS repository version. Repository version for tenant is "{1}" whereas GLOBAL repository version is "{2}".

Category:
Configuration

Cause:
MDS Repository version for Tenant is not same as Global MDS repository version

Action:
Upgrade the MDS repository to the required version so that Global and Tenant repository versions are same.

MDS-02741
The metadata changes cannot be written to underlying store because read-only mode is enabled in the configuration.

Category:
Configuration

Cause:
An attempt to change metadata was made while changes were disabled for maintenance operations.

Action:
Reconfigure the application to not specify read-only mode in the configuration and use a writable metadata store to persist metadata changes.

MDS-02742
Instance of {0} is being used after it has been released.

Category:
Programmatic

Cause:
Instance of a MDS object was used after it was released.

Action:
Create a new instance.

MDS-02743
Error deleting partition {0} in repository {1}.

Category:
Configuration

Cause:
The directory or partition doesn't exist.

Action:
Verify that the metadata path or partition for the repository exists.

MDS-02744
Failed to delete directory {0}.

Category:
Programmatic

Cause:
The specified directory was invalid, read only or was in use and could not be deleted.

Action:
Check exception message in logs for the exception stack and underlying cause.

MDS-02745
Unable to get database connection from data source "{0}" for store id "{1}".

Category:
Configuration

Cause:
Failed to retrieve a database connection from the data source either because the data source is not configured correctly or the database details are not correct.

Action:
Check if the data source is configured correctly and the database is accessible. See message of the cause exception for more information on the actual reason for failure.

MDS-02746
Invalid store id.

Category:
Programmatic

Cause:
Store id is null or empty.

Action:
Provide a valid store id.

MDS-02747
Invalid data source.

Category:
Programmatic

Cause:
Data source cannot be null.

Action:
Provide a valid data source.

MDS-02800
The label "{0}" cannot be provided as null for label based transfer.

Category:
Configuration

Cause:
The label was provided as null for label based transfer.

Action:
Provide valid label name for label based transfer.

MDS-02801
Document {0} with scope {1} cannot be transferred by tenant {2}.

Category:
Programmatic

Cause:
The given document could not be transferred from source store by current tenant because the document was not in the scope of current tenant.

Action:
Ensure that document being transferred mapped to current tenant scope.

MDS-02802
Transfer is not supported for multitenant MDSInstance with file store.

Category:
Configuration

Cause:
Either source or target MDSInstance has multitenancy enabled and configured with file store.

Action:
Use a non multitanant MDSInstance with file store.

MDS-02803
List of patterns to select the MOs are either empty or null.

Category:
Programmatic

Cause:
List of MOPatterns are empty or null.

Action:
Ensure that valid list of MOPatterns are provided.

MDS-02804
Layer name "{0}" configured in CustLayerFilter to remove customizations, contains patterns.

Category:
Programmatic

Cause:
Layer name contains patterns.

Action:
Ensure that layer name doesn't contain any patterns.

MDS-02805
Import Metadata With Exact Copy is allowed only from archive.

Category:
Configuration

Cause:
Source MetadataStore was not not archive.

Action:
Use an archive as source store.

MDS-02806
Source archive is invalid because it is missing the export criteria metadata file.

Category:
Configuration

Cause:
MetadataFile containing the export criteria was missing in the source archive

Action:
Import from an archive which has metadata file.

MDS-02807
Import Metadata With Exact Copy is allowed only to Database repository

Category:
Configuration

Cause:
Target MetadataStore was not Database repository

Action:
Use Database repository as target for import.

MDS-02808
Category with which Export Criteria is written in the archive file is different from the one which is used to get ExportCriteriaReader

Category:
Configuration

Cause:
Wrong category was used to get Export Criteria Reader.

Action:
Use right category..

MDS-02809
Import Metadata With Exact copy operation is not supported when export criteria used to generate source archive contains fromLabel or toLabel conditions.

Category:
Configuration

Cause:
Export parameters fromLabel or toLabel were specified to generate archive that was acting as source for Import Metadata With Exact Copy Operation.

Action:
Use an archive MetadataStore that was exported without fromLabel or toLabel specified.

MDS-02810
Transfer operation with TransferType "{0}" has been aborted and rolled back because too many documents failed.

Category:
Other

Cause:
Operation failed for high number of documents.

Action:
Check the server logs to identify root cause, rerun the operation after correcting the issue in the system environment.

MDS-02811
Wrong TransferType {0} is passed in for Sandbox {1}

Category:
Configuration

Cause:
TransferType and TransferParams which is created for Sandbox transfer doesn't match.

Action:
Supply the right TransferType.

MDS-02812
Parameter {0} has null values in it.

Category:
Programmatic

Cause:
Parameter contains null values.

Action:
Ensure that the indicated parameter does not contain null values when the method is called.

MDS-02813
Parameter TransferOptions must be set when transferBaseDocument is set to false.

Category:
Programmatic

Cause:
Filtering out base documents is supported only when TransferOptions is set.

Action:
Ensure that TransferOptions is set when transferBaseDocument is set to false.

MDS-02814
Parallel Transfer of chunk {0} performed by thread {1} failed.

Category:
Other

Cause:
Error occured while transferring the chunk.

Action:
Check the server logs to identify root cause, rerun the operation after correcting the issue in the system environment.

MDS-02815
Parallel Transfer of one or more chunks timedout. Please retry transfer.

Category:
Other

Cause:
Timeout occured while transferring the chunk.

Action:
Check the server logs to identify root cause, rerun the operation after correcting the issue in the system environment.

MDS-05786
Unable to deploy the metadata archive: {0}.

Category:
Configuration

Cause:
Metadata archive (MAR) is corrupt.

Action:
Validate that the metadata archive (MAR) is valid and readable.

MDS-05787
Partition name is not specified in adf-config.xml file.

Category:
Configuration

Cause:
A property with name partition-name was not found as a child of the metadata-store element.

Action:
Specify the target partition as a child property of the metadata-store element in adf-config.xml.

MDS-05788
Unable to find the JNDI datasource in the file adf-config.xml.

Category:
Configuration

Cause:
A property with name jndi-datasource was not found as a child of the metadata-store element.

Action:
Specify the JNDI datasource a child property of the metadata-store element in adf-config.xml.

MDS-05789
Unable to deploy the metadata archive.

Category:
Configuration

Cause:
Metadata archive (MAR) was not found.

Action:
Ensure that the metadata archive (MAR) is packaged with the application.

MDS-05790
The metadata store definition is either missing or incorrectly specified in the application configuration.

Category:
Configuration

Cause:
The metadata store definition is either missing or incorrectly configured in the file adf-config.xml.

Action:
Ensure that the metadata store definition is present and contains the correct repository configuration

MDS-05791
An error occurred during the deployment of the metadata archive (MAR) {0}.

Category:
Configuration

Cause:
Details are usually given in the cause exception. Look for messages describing the cause exception and take the appropriate action.

Action:
Ensure that the metadata store configuration is correct.

MDS-05792
Unable to load MDS configuration from "{0}"

Category:
Configuration

Cause:
The MDS configuration is either not defined or incorrect.

Action:
Ensure that the MDS configuration is correctly defined.

MDS-05793
Metadata path {2} for partition {1} of MDS file repository {0} specified in adf-config.xml is either invalid or unreachable.

Category:
Configuration

Cause:
The metadata path named in the error message for the MDS file repository partition cited in the error message was either invalid or unreachable.

Action:
Ensure that the MDS file repository named in the error message is registered and that the metadata partition cited in the error message is configured with a valid metadata path in adf-config.xml.

MDS-05794
Unable to load MDS persistence configuration from "{0}"

Category:
Configuration

Cause:
The MDS persistence configuration is either not defined or incorrect.

Action:
Ensure that the MDS persistence configuration is correctly defined.

MDS-05795
Invalid value "{0}" specified in the content-config of the application's configuration

Category:
Configuration

Cause:
Only restriction type CUSTOMIZATIONS is supported in content-config.

Action:
Ensure that the MDS persistence configuration is correctly defined.

MDS-10001
Error:

Category:
Data

Cause:
An error occurred. Details are usually given in the accompanying messages.

Action:
Look for messages describing the cause and take the appropriate action.

MDS-10003
The specified {0} argument is null or empty.

Category:
Programmatic

Cause:
A required program argument was null or empty.

Action:
Record any accompanying exception messages and contact Oracle Support Services.

MDS-10009
The transfer of the document {0} is not successful.

Category:
Data

Cause:
Document transfer failed

Action:
Examine any accompanying messages to decide if further action is required.

MDS-10010
Deleting the document {0} is not successful.

Category:
Data

Cause:
Document deletion failed

Action:
Examine any accompanying messages to decide if further action is required.

MDS-10011
The operation on {0} has been rolled back. Total number of documents failed during the operation is {1}.

Category:
Data

Cause:
The transfer was rolled back

Action:
Examine any accompanying messages to decide if further action is required.

MDS-10012
The operation has failed.

Category:
Data

Cause:
The operation has failed.

Action:
Examine any accompanying messages to decide if further action is required.

MDS-10013
{0} operation started.

Category:
Data

Cause:
Transfer started.

Action:
Transfer started, no action required.

MDS-10014
{0} is completed. Total number of documents successfully processed : {1}, total number of documents failed : {2}.

Category:
Data

Cause:
Transfer complete.

Action:
Check any accompanying messages to decide if any action is required.

MDS-10015
Failure occurred while committing the {0} operation. The operation has been rolled back.

Category:
Data

Cause:
Failure occurred while committing the operation.

Action:
Examine any accompanying messages to decide if further action is required.

MDS-10016
The operation on {0} has been rolled back. The post transfer label {1} could not be created.

Category:
Data

Cause:
Failure occurred when creating the post transfer label.

Action:
Examine any accompanying messages to decide if further action is required.

MDS-10017
The target store does not support deployment management. Given application name "{0}" and deployment module name "{1}" could not be persisted as deployment information in store.

Category:
Data

Cause:
The target store does not support deployment management.

Action:
No action required. The documents will be transferred without the deployment information attached. If you want to store deployment information as well, configure a metadata store that supports deployment management, typically a DB store.

MDS-10018
The transfer restriction {0} is not supported in target store. All the documents will be transferred to target store.

Category:
Data

Cause:
Given transfer restriction is not supported in target store.

Action:
No action required. The given restriction will not be applied to the transfer, all the documents will be transferred to target store.

MDS-10019
The deployment information for application name "{0}" and module name "{1}" ignored since transfer operation is of type "{2}".

Category:
Data

Cause:
The deployment information will not be processed in transfer operation type other than "Deployment".

Action:
No action required. Given deployment information will not be processed in the current transfer operation.

MDS-10020
Querying checksum data from target repository to avoid transferring unchanged documents.

Category:
Data

Cause:
To apply transfer restriction CHANGED, transfer queries the target repository to check whether documents being transferred already exist with same content.

Action:
No action required.

MDS-10022
Query to get the checksum of the documents from target repository completed successfully.

Category:
Data

Cause:
To apply transfer restriction CHANGED, transfer queries the target repository to check whether documents being transferred already exist with same content.

Action:
No action required.

MDS-10023
No valid exclusion rules are specified in mds-transfer-config.xml to preserve documents in target store.

Category:
Data

Cause:
No valid namespaces or metadata object names specified in /meta-inf/mds-transfer-config.xml to preserve the documents in target store.

Action:
No action required.

MDS-10024
Preparing the list of documents to be excluded during transfer as per the configuration given in mds-transfer-config.xml.

Category:
Data

Cause:
To preserve the documents in target store as specified in the given /meta-inf/mds-transfer-config.xml, MDSTransfer prepares the list of documents to be excluded by looking at source and target stores.

Action:
No action required.

MDS-10025
Following metadata paths are configured in mds-transfer-config.xml to preserve existing documents under this metadata path in target repository. Configured metadata paths are as follows {0}:

Category:
Other

Cause:
Some metadata paths are configured in mds-transfer-config.xml to preserve existing documents in target repository.

Action:
No action required.

MDS-10026
Following Metadata object names are configured in mds-transfer-config.xml to preserve existing metadata objects with same name in target repository. Configured metadata object names are {0}:

Category:
Other

Cause:
Some metadata object names are configured in mds-transfer-config.xml to preserve existing documents in target repository.

Action:
No action required.

MDS-10027
To preserve documents in target store, the following documents from source store are marked as excluded by transfer {0}.

Category:
Other

Cause:
To preserve documents in target store, some documents from source store are marked as excluded by transfer.

Action:
No action required.

MDS-10030
Sandbox {0} created as part of Import operation is not destroyed after import failed.

Category:
Other

Cause:
A Critical Write error on database side has occurred. Look for specific exception in the log file.

Action:
Destroy unused sandbox from metadata repository. Contact application administrator for assistance.

MDS-10031
Value provided in {0} in CustLayerUsage or CustLayerFilter is not properly encoded.Passed in value will considered as it is without interpreting intended encoded value

Category:
Data

Cause:
Passed in value is not proper hexadecimal encoded value

Action:
No action required.

MDS-10032
Transfer operation with transfer type {0} ignoring document {1} because MDSInstance {2} reported it as not existing.

Category:
Programmatic

Cause:
MDSTransfer is configured to ignore such document.

Action:
No action required.

MDS-10033
Transfer operation with transfer type {0} has been rolled back because {1} documents failed with exceptions.

Category:
Other

Cause:
Operation failed for large number of documents due to exceptions.

Action:
Check the server logs to identify root cause, rerun the operation after correcting the issue in the system environment.

MDS-10034
Polling for store {0} failed - {1}. Polling will retry when the polling interval has elapsed.

Category:
Other

Cause:
The polling query was unable to run. If this is a temporary condition, polling should recover automatically once the error condition is resolved.

Action:
Polling will be retried. If problem persists enable tracing for oracle.mds.dbstore to get full stack trace and check datasources.

MDS-10035
Parallel transfer requested but not feasible, configure oracle.mds.transfer logger to FINEST to get more details.

Category:
Other

Cause:
Parallel transfer not supported for given transfer invocation.

Action:
Configure oracle.mds.transfer logger to FINEST to get more details.

MDS-11001
The type information for "{0}" is not obtainable though the document exists in the MetadataStore.

Category:
Data

Cause:
Could not get type information for a document, a possibly non-wellformed XML document.

Action:
Examine the document

MDS-11002
The type information for "{0}" is not obtainable because of exception "{1}"

Category:
Data

Cause:
Failed to get type information because an exception was raised.

Action:
Examine the exception and the document.

MDS-11003
Failed to force timestamp advance on file {0}: original timestamp = {1}, new timestamp = {2}.

Category:
Data

Cause:
Failed to advance the timestamp on a file which is being saved.

Action:
Examine the file and its permissions.

MDS-11006
Directory {0} does not exist.

Category:
Files

Cause:
The value of a name condition package did not have a corresponding file system directory.

Action:
Check if the directory was expected and determine why it is not present.

MDS-11007
Skipping directory {0} because {1} does not match the condition.

Category:
Programmatic

Cause:
The query considered the given directory, but it could only contain documents that would not match the query.

Action:
If you expected results from the directory, check that the query is correctly specified.

MDS-11008
Skipping directory {0} because it is a filestore root.

Category:
Files

Cause:
The query considered the directory, but it was another root path of the metadata store. This can arise when file store configuration includes multiple root paths and one of these is contained in another.

Action:
If you expected results from the directory, check that the file store is configured correctly.

MDS-11009
Skipping directory {0} because {1} is not a valid package name.

Category:
Programmatic

Cause:
The query skipped the directory because the corresponding package name is invalid.

Action:
If you expected results from the directory, check the directory name for validity.

MDS-11010
Document cache {0} exceeds its maximum number of entries {1}, so the cache is cleared.

Category:
Configuration

Cause:
The document cache exceeded its defined maximum size so it was cleared. If memory allows, the cache should be large enough for all documents for optimum performance but this is not required.

Action:
Edit the adf-config.xml file and increase the size of the document cache.

MDS-11011
Attempting to get failover connection to retry the operation because the database connection failed.

Category:
Configuration

Cause:
The connection to the database failed.

Action:
No action is required. The database is configured with FCF so failover will be attempted.

MDS-11012
Cache collision has been detected when adding key {0}, label set {1}, sandbox name {2}, scope {3}.

Category:
Programmatic

Cause:
The described document was being added to the cache, but it was already present. This can be caused by an incorrect miss in the preceding lookup, or very rarely by the document having been just inserted by another thread.

Action:
If this occurs frequently, contact Oracle Support Services.

MDS-11013
Cannot store the object of type {0} in the Java Object Cache because the cache or cache region is full

Category:
Configuration

Cause:
A CacheFullException or RegionFullException was reported when attempting to store an object in the Java Object Cache.

Action:
Consider increasing the size of the configured MDS Cache by modifying the cache-config entry in adf-config.xml.

MDS-11014
Purge-Repos Diagnostics [auto-purge, partition-name, partition-id, tenant-id, #versions purged]: [{0}, {1}, {2}, {3}, {4}].

Category:
Other

Cause:
An auto-purge occurred on a metadata-store.

Action:
No action required.

MDS-11016
MDS JSP Integration has been configured in Developer Mode to allow changes to files to be detected. Do not use this mode for production or performance testing.

Category:
Configuration

Cause:
Developer Mode is configured as a servlet initialization parameter either explicitly or because the application is being run within JDeveloper.

Action:
No action required.

MDS-11017
Started creating the final archive file at {0}.

Category:
Other

Cause:
ArchiveMetadataStore has started to create final archive file with all the changes done on the archive file so far.

Action:
No action required.

MDS-11018
The final archive file has been created successfully. The archive file is available at {0}.

Category:
Other

Cause:
ArchiveMetadataStore has created final archive file with all the changes done on the archive file so far.

Action:
No action required.

MDS-11019
The default CharSet {0} is not a unicode character set. File names with non-ASCII characters may not operate as expected. Check locale settings.

Category:
Configuration

Cause:
The Java default CharSet is used to convert file names to and from Java Strings. When this CharSet is a non-unicode character encoding, filenames that contain non-ASCII characters may not be correctly mapped to Java characters.

Action:
Check the locale environment variable settings for the process that is running the JVM that MDS is running in to ensure that a UTF encoding is being used. For example, the LC_ALL and LANG settings may be relevant.

MDS-11020
Cannot delete the intermediary archive file {0}.

Category:
Other

Cause:
The intermediary archive file could not be deleted.

Action:
Try deleting the file outside of MDS.

MDS-11023
MDS Remote Notifications: Coherence is not configured to use unicast and no cluster name is specified so remote notification is not enabled.

Category:
Configuration

Cause:
MDS remote notification only works if the Coherence configuration specifies unicast or a cluster name.

Action:
Unicast can be set by either specifying a unicast-listener in your Coherence cluster-config or by system property tangosol.coherence.wk. A cluster-name can be set either as part of a member-identity in your cluster-config or by system property tangosol.coherence.cluster.

MDS-11026
Ignoring the duplicate MDS component configuration file URL "{0}" found on the classpath.

Category:
Configuration

Cause:
A duplicate URL for an MDS component configuration file was found on the classpath.

Action:
No action required.

MDS-11027
Some metadata is configured to be stored as xml-stream. However it will be ignored because no metadata store configured for this application supports storing metadata in that form.

Category:
Configuration

Cause:
xml-stream content type was configured for some metadata content, but no metadataStore supports the feature.

Action:
No action required if not using xml-stream content type is acceptable. Otherwise, to enhance MDS repository performance, ensure that the metadata store supports xml-stream feature.

MDS-11028
Some metadata is configured to be stored as xml-stream. However it will be ignored because the corresponding metadata store, with class name: {0}, repository name: {1}, partition name: {2}, does not support storing metadata in that form.

Category:
Configuration

Cause:
xml-stream content type was configured for some metadata content, but the metadata store did not support the feature.

Action:
No action required if not using xml-stream content type is acceptable. Otherwise, to enhance MDS repository performance, ensure that the metadata store supports xml-stream feature.

MDS-11029
MetadataStore configuration for metadata-store-usage "{0}" is invalid. However the MetadataStore is ignored because it is not referenced by any namespace mapping.

Category:
Configuration

Cause:
MetadataStore class or some of its properties were not valid.

Action:
Ensure that the MetadataStore class exists and all required properties are valid.

MDS-11030
Failed to get schema version from registry for repository "{0}" because of exception: {1}

Category:
Configuration

Cause:
Either the DataSource definition for the repository is no longer valid or the MDS schema is not created using RCU.

Action:
Ensure the DataSource connection is valid or the schema is created using RCU.

MDS-11032
Registered grammar using remote schema "{0}". In design time (JDev) environment, it is recommended to use local resources.

Category:
Configuration

Cause:
Remote schema was referred with http URI. In design time environment, recommendation is to use local resources.

Action:
Replace it with local copy of schema.

MDS-11033
Duplicate mappings between namespace "{0}" and metadata store "{1}" are found in the persistence configuration.

Category:
Configuration

Cause:
There were more than one namespace to metadata store mappings for a given namespace in the persistence configuration.

Action:
Correct the namespace mapping in persistence configuration to ensure that the namespace is mapped to only one metadata store.

MDS-11034
The name {0} derived from JNDI will be registered as an MDS repository instead of the DataSource with the same name.

Category:
Configuration

Cause:
A JDBC DataSource and a JNDI have conflict in naming a MDS repository in the domain. MDS repository names must be unique within a domain.

Action:
Find out which application is referencing the repository and the JNDI name. Resolve the naming conflict by removing the DataSource with same name only if it is unused.

MDS-11100
MetadataObject.getBaseMO() found a mismatched CacheAccess in the cache. [refNoGUID={0}, guidRef={1}, mdxLookupKey={2}, isLabelledRead={3}, baseDocLabel={4}, setSandboxName={5}, cacheAccess={6}, doc={7}, name={8}, GUID={9}].

Category:
Other

Cause:
CacheAcces does not match the the given MOReference/Guid combination. The metadata object will not be cached.

Action:
Check the MOName and guid are correct and there are no duplicate Guids in the metadata store.

MDS-11101
MetadataObject.getBaseMO() recursing too deep. [refNoGUID={0}, guidRef={1}, mdxLookupKey={2}, isLabelledRead={3}, baseDocLabel={4}, setSandboxName={5}, cacheAccess={6}, doc={7}].

Category:
Other

Cause:
CacheAcces does not match the the given MOReference/Guid combination. The metadata object will not be cached.

Action:
Check the data in the metadata store to determine the cause.

MDS-11102
The MDS session was created by the ADF framework with a transaction key for its "single flush" feature, and the call to {0} is restricted to that framework. This call does not use that transaction key and although working now, will fail with an exception in future. To find the originator of the call, set the log level for logger "oracle.mds.transkey" to FINEST. Note that the ADF framework manages the MDS session created for the request so an explicit call to {0} should be removed.

Category:
Other

Cause:
A call was made to a restricted method on the MDS session and that call should be removed as it is liable to fail in later releases.

Action:
Identify the caller and ensure that the call to this method is removed.

MDS-11103
Failed to register dump classes.

Category:
Other

Cause:
Failed to register dump classes with DFW.

Action:
Contact Oracle Support Services.

MDS-11104
Content config mapping with path {0} contains reserved keyword "mdssys/cust/", use restrictionType="CUSTOMIZATIONS" instead.

Category:
Configuration

Cause:
The path of the content config mapping contains reserved keyword "mdssys/cust/".

Action:
Change the content config mapping to use restrictionType="CUSTOMIZATIONS"

MDS-11107
Unable to read "{0}" property value : "{1}". Cause : {2}

Category:
Configuration

Cause:
The property value contains invalid characters.

Action:
Correct the property value and retry.

MDS-11108
Invalid value supplied in "{0}" property value : "{1}".

Category:
Configuration

Cause:
The property value contains values that reduce the cache size to less than the minimum allowed.

Action:
Ensure the property values do not reduce the cache size to less than the minimum allowed.

MDS-11109
Successfully read property "{0}"="{1}" and generated "{2}".

Category:
Configuration

Cause:
Cache weightings successfully read.

Action:
No action required if the generated values are correct.

MDS-11110
customization-type will be ignored for mapping [Path to match={1}] because content-type is not configured in content-config.

Category:
Configuration

Cause:
content-type configuration is missing for mapping [Path to match={1}].

Action:
content-type must be configured as BINARY_STREAM (along with customization-type as FULL_REPLACE) for storing customizations as Layered Stream Object.

MDS-11111
Both ContentConfig and FileTypeConfig are configuring Content Type for file extension {0}, ContentType {1} from ContentConfig will override ContentType {2} from FileTypeConfig for path {3}.

Category:
Configuration

Cause:
ContentType configured in both Content Config and FileTypeConfig.

Action:
Correct the configuration to avoid the conflict.

MDS-90013
The metadata partition with name "{0}" does not exist in the metadata repository "{1}".

Category:
Topology

Cause:
The metadata partition with the specified name was not found in the metadata repository.

Action:
Create a metadata partition with the specified name in the metadata repository before trying this operation.

MDS-90014
cannot update the metadata because the application is read-only

Category:
Topology

Cause:
No metadata update was made because the ReadOnlyMode attribute was enabled.

Action:
Disable the ReadOnlyMode attribute of the target application configuration.

MDS-90015
The metadata repository with name "{0}" does not exist.

Category:
Topology

Cause:
The metadata repository with the specified name was not found.

Action:
Verify that the repository name is spelled correctly. If the repository does not exist, create one with the specified name and try again.

MDS-90016
There are no applications deployed to partition "{0}".

Category:
Topology

Cause:
An attempt was made to perform this operation on a partition that is not associated with a deployed application.

Action:
Specify a partition that is associated with a deployed application.

MDS-90017
The application to be used for this operation is not specified.

Category:
Topology

Cause:
Could not determine which application configuration to use for this operation since there is more than one application deployed to partition "{0}".

Action:
Specify an application that is deployed to partition "{0}" to be used for this operation.

MDS-90018
Application "{1}" is not deployed to partition "{0}".

Category:
Topology

Cause:
The specified application was not deployed to the specified partition.

Action:
Specify an application that is deployed to the partition.

MDS-90019
cannot set the user property on the driver: {0}

Category:
Topology

Cause:
A problem occurred while setting the user property on the driver.

Action:
Ensure that the database server is running properly.

MDS-90020
Metadata store cannot be assigned to server "{0}".

Category:
Topology

Cause:
A problem occurred while assigning resource to the server.

Action:
Ensure that the server is running properly.

MDS-90021
Metadata path {0} is invalid.

Category:
Topology

Cause:
The path used to create a FileMetadataStore was invalid. It must point to a directory.

Action:
Correct the metadata path.

MDS-90022
The host name of the database repository cannot be empty.

Category:
Topology

Cause:
The host name of the database repository was empty or null.

Action:
Use a valid host name.

MDS-90023
The database name of the database repository cannot be empty.

Category:
Topology

Cause:
The database name of the database repository was empty or null.

Action:
Use a valid database name.

MDS-90024
The user name of the database repository cannot be empty.

Category:
Topology

Cause:
The user name of the database repository was empty or null.

Action:
Use a valid user name.

MDS-90025
The password of the database repository cannot be empty.

Category:
Topology

Cause:
The password of the database repository was empty or null.

Action:
Use a valid password.

MDS-90026
The server name cannot be empty.

Category:
Topology

Cause:
The server name was empty or null.

Action:
Use a valid server name.

MDS-90027
cannot find server "{1}" to register the metadata repository "{0}"

Category:
Topology

Cause:
The server name was invalid.

Action:
Use a valid server name.

MDS-90028
Metadata repository with name "{0}" already exists.

Category:
Topology

Cause:
Metadata repository with the specified name already exists.

Action:
Verify that the repository name is spelled correctly. If the repository already exists, create one with a different name and try again.

MDS-90029
The metadata db repository with name "{0}" does not exist.

Category:
Topology

Cause:
The metadata db repository with the specified name was not found.

Action:
Verify that the db repository name is spelled correctly.

MDS-90030
The metadata file repository with name "{0}" does not exist.

Category:
Topology

Cause:
The metadata file repository with the specified name was not found.

Action:
Verify that the file repository name is spelled correctly.

MDS-90031
The JDBC resource of metadata db repository "{0}" cannot be found.

Category:
Topology

Cause:
The JDBC resource was not found.

Action:
Verify that the metadata db repository is set up correctly.

MDS-90032
The metadata store of metadata file repository "{0}" cannot be found.

Category:
Topology

Cause:
The metadata store was not found.

Action:
Verify that the metadata file repository is set up correctly.

MDS-90033
unknown DB vendor code: "{0}"

Category:
Topology

Cause:
The DB vendor code is invalid.

Action:
Use a valid DB vendor code, such as 0 (ORACLE), 1 (MSSQL), or 2 (IBMDB2).

MDS-90034
The source directory or archive "{0}" for importing metadata is invalid.

Category:
Topology

Cause:
The directory or archive location used to import metadata was invalid. It must point to a valid, existing directory or archive.

Action:
Correct the source directory or archive location.

MDS-90035
The target directory or archive "{0}" for exporting metadata is invalid.

Category:
Topology

Cause:
The directory or archive location used to export metadata was invalid. It must point to a valid location.

Action:
Correct the target directory or archive file location.

MDS-90036
The application does not have a valid MAR file path.

Category:
Topology

Cause:
The MAR path used to import MAR was invalid. It must point to a valid, existing MAR file.

Action:
Make sure the MAR file exists and is located in the correct directory of the application.

MDS-90037
The archive "{0}" does not contain valid contents.

Category:
Topology

Cause:
The archive used to import metadata was invalid. It must be to a valid, existing zip or jar file.

Action:
Make sure the archive is valid.

MDS-90038
The database authentication alias "{0}" already exists. To reuse the same authentication alias, try the operation again without specifying user and password.

Category:
Topology

Cause:
An attempt was made to configure a database authentication alias that already existed in Websphere server.

Action:
Delete the existing authentication alias and try again, or specify a new authentication alias, or reuse the existing authentication alias by not specifying user and password.

MDS-90039
The database authentication alias "{0}" cannot be found. To create the authentication alias, try the operation again with user and password specified.

Category:
Topology

Cause:
An attempt was made to use a database authentication alias that was not configured in Websphere server.

Action:
Make sure the specified database authentication alias is properly configured in Websphere server, or automatically create the authentication alias by specifying user and password.

MDS-90040
failed to connect to database

Category:
Topology

Cause:
An error occurred when trying to connect to database.

Action:
Make sure the database connection details are correct. Look at the cause exception for more details.

MDS-90041
Customization layer values are not supported for "excludeCustFor" parameter.

Category:
Topology

Cause:
One or more customization layer values was specified for "excludeCustFor" parameter.

Action:
Make sure there are no customization layer values specified for "excludeCustFor" parameter.

MDS-90042
"{0}" is not a valid tenant name.

Category:
Configuration

Cause:
The specified tenant was not provisioned in the specified partition and repository.

Action:
Specify a valid tenant name.

MDS-90043
This operation cannot be performed by the tenant named "{0}". It can only be invoked by the "{1}" tenant.

Category:
Configuration

Cause:
The specified tenant was not provisioned in the partition and repository provided.

Action:
Execute this operation as GLOBAL tenant.

MDS-90044
This operation cannot be performed because the WebLogic edit session has been locked by a different user.

Category:
Configuration

Cause:
The WebLogic edit session has been locked by a different user.

Action:
Retry the operation after the edit session lock is released.

MDS-90045
MDS dump operation "{0}" failed.

Category:
Data

Cause:
Exception occurred during the execution of the command.

Action:
Provide the required parameters for the command.

MDS-90046
MDS Application runtime MBean for application "{0}" running in server "{1}" is not available. "{2}" operation failure.

Category:
Configuration

Cause:
MDS Application runtime MBean was not available in the server.

Action:
Ensure the MDS Application runtime MBean for the application is available in the server. Ensure application name is correct.

MDS-90047
The target archive name "{0}" is invalid. It must point to a local file name with a valid archive extension.

Category:
Data

Cause:
The archive location used for mds dump operation was invalid.

Action:
Ensure target archive name is a valid local file name with valid archive extension.

MDS-90048
The dump argument "{0}" is invalid. It cannot be an empty string.

Category:
Data

Cause:
A request to execute dump was made with an invalid argument.

Action:
Ensure valid values are given for the dump arguments.

MDS-90049
Exclusion of documents during exportMetadata is not supported for seeded documents.

Category:
Data

Cause:
It was invalid to specify excludeDocs while not setting excludeSeededDos to true.

Action:
Either set excludeSeededDocs to true, or unspecify excludeDocs.

MDS-90050
ExportParameters can not be null for {0} operation.

Category:
Data

Cause:
ExportParameters with null value was not allowed.

Action:
Specify a valid ExportParameters argument.

MDS-90051
ImportParameters can not be null for {0} operation.

Category:
Data

Cause:
ImportParameters with null value was not allowed.

Action:
Specify a valid ImportParameters argument.

MDS-90052
Cannot deregister metadata repository "{0}" because it is based on a JNDI name of a consolidated data source.

Category:
Data

Cause:
The deregistration of a metadata repository that is based on a JNDI name of a consolidated data source is not allowed.

Action:
Perform deregistration operation on a metadata repository that is based on a non-consolidated data source only.

MDS-90053
Import Metadata With Exact copy operation is not supported when export operation used to generate source archive uses programmatic TransferListener.

Category:
Data

Cause:
Export parameter transferListener was specified to generate archive that was acting as source for Import Metadata With Exact Copy Operation.

Action:
Use an archive MetadataStore that was exported without programmatic TransferListener specified.

MDS-90054
The resource group "{0}" cannot not be found in "{1}" partition.

Category:
Data

Cause:
The specified resource group was not found in the current domain partition.

Action:
Verify that the specified resource group is defined in the current domain partition.

MDS-90055
The resource group must be specified to register a metadata repository at "{0}" partition.

Category:
Data

Cause:
The resource group was not specified to register a metadata repository at partition scope.

Action:
Specify a resource group for registering a metadata repository at the domain partition containing that resource group.

MDS-90056
{0} can not be null for {1} operation.

Category:
Data

Cause:
Null value was not allowed.

Action:
Specify a valid argument.

MDS-90057
The document name used in exportDocVersions operation is invalid.

Category:
Data

Cause:
Document pattern or empty document name was used.

Action:
Use the exact full document path.

MDS-90058
{0} operation is not permitted in Weblogic domain configured with consolidate schema or datasource.

Category:
Configuration

Cause:
It was unneccesary to register or deregister a metadata DB repository in consolidate Weblogic domain.

Action:
Use pre-configured metadata DB repository.

MDS-90059
A Metadata Archive (MAR) with the name {0} was found either packaged with the EAR or in directories listed in {1}.

Category:
Configuration

Cause:
Metadata Archive (MAR) names must be unique. Two or more metadata archives were found with the same name.

Action:
Use pre-configured metadata DB repository.

MDS-90060
A required JRF patch to support MSI-D was not applied in this env.

Category:
Other

Cause:
A JRF patch to enhance support for WebLogic Server MSI-D feature is missing in this env.

Action:
Apply the JRF Patch corresponding to the WLS MSI-D feature.

MDS-90061
The path denoted by "{0}" does not represent a Metadata Archive (MAR).

Category:
Other

Cause:
The path to a Metadata Archive (MAR) must represent a file with a "mar" extension.

Action:
Ensure that the Metadata Archive (MAR) path refers to a file with a "mar" extension in the application's EAR file.

MDS-90143
"{0}" is not a valid component name.

Category:
Configuration

Cause:
The specified component name is invalid.

Action:
Specify a valid audit component name that uses only letters.

MDS-90144
Error registering audit event definitions for component "{0}".

Category:
Configuration

Cause:
The audit event definitions could not be registered.

Action:
Refer to the error messages that describe the cause exception in the application logs for more information on the actual reason for failure.

MDS-90145
Error occurred when raising audit event "{0}" for component "{1}".

Category:
Configuration

Cause:
The audit event was not registered or an unknown error occurred in the auditing system.

Action:
Refer to the error messages that describe the cause exception in the application logs for more information on the actual reason for failure.

MDS-90146
Error occurred when checking if "{0}" is auditable.

Category:
Configuration

Cause:
An unknown error occurred when checking if auditing is enabled for the component "{0}".

Action:
Refer to the error messages that describe the cause exception in the application logs for more information on the actual reason for failure.

MDS-90147
Error occurred when checking if the component "{0}" is auditable.

Category:
Configuration

Cause:
An unknown error occurred when checking if auditing is enabled for the event "{1}" defined for the component "{0}".

Action:
Refer to the error messages that describe the cause exception in the application logs for more information on the actual reason for failure.

MDS-90148
The custom audit event of type "{0}" was not audited because the event was not auditable according to the current audit policy.

Category:
Programmatic

Cause:
The custom audit event was either undefined in the audit configuration or it was not auditable according to the audit policy in effect.

Action:
Check the audit policy in effect.

MDS-90149
The custom audit event of type "{0}" was not audited because the MDSSession was not associated with a sandbox.

Category:
Programmatic

Cause:
The custom audit event was not audited because the current MDSSession was not associated with a Sandbox.

Action:
Use this API only when the custom audit event is intended to be raised in a sandbox context.

MDS-90243
Content auto merge failed for MO part "{0}" with change type "{1}" because its type is not registered for auto merge.

Category:
Programmatic

Cause:
The specified MOType is not registered for auto merge functionality.

Action:
Register the MOType for auto merge functionality.

MDS-90244
Content auto merge failed for MO part "{0}" with change type "{1}" because its base document is not accessible for read from any configured metadata stores.

Category:
Programmatic

Cause:
Base document is not accessible for read.

Action:
Make sure base document is available for read through any of configured metadata stores.

MDS-90245
Content auto merge failed for MO part "{0}" with change type "{1}" because both base and customization MOParts have conflicts and base MOPart is not a stub.

Category:
Programmatic

Cause:
Base MOPart is not a stub document.

Action:
This is unsupported case. Contact Oracle Support Services.

MDS-90246
Content auto merge failed for MO part "{0}" with change type "{1}" because mainline contains conflicting change type "{2}" for the same MOPart.

Category:
Programmatic

Cause:
There were conflicting changes for MetadataObject between sandbox and mainline and cannot be resolved by content auto merge.

Action:
Contact Application Administrator to resolve these conflicts manually or perform the changes again in a new sandbox.

MDS-90247
Content auto merge failed for MOPart "{0}" with change type "{1}", because conflicts identified for metadata object include changes for non tip or non configured customization layer "{2}".

Category:
Programmatic

Cause:
Conflicts detected for given metadata object include changes for non tip or non configured customization layer.

Action:
This is unsupported case. Contact Oracle Support Services.

MDS-90248
Content auto merge failed for MetadataObject "{0}".

Category:
Programmatic

Cause:
Content auto merge failed for specified MO.

Action:
Please check each MOPart exception for detailed reasons.

MDS-90249
Content auto merge failed for MetadataObject "{0}", because the MO constitutes more than one customization MOPart for the customization layer "{2}".

Category:
Programmatic

Cause:
Customization layer yields multiple layer values.

Action:
This is unsupported case. Contact Oracle Support Services.

MDS-90251
Conflict resolution hook annotation is missing for MOType {0}.

Category:
Configuration

Cause:
Conflict resolution policy was set to "callback" for the document type but associated Conflict resolution hook annotation configuration is missing.

Action:
Record the accompanying error and contact the developers of the application.

MDS-90252
Conflict resolution policy is either found missing or it's value is not set to "callback" for MOType {0}

Category:
Configuration

Cause:
Conflict resolution hook annotation was found in document type but conflict resolution policy configuration was either not supplied or the value was not set to "callback".

Action:
Record the accompanying error and contact the developers of the application.

MDS-90253
AutoMergePluginContext is null for AutoMergePlugin class {0}

Category:
Programmatic

Cause:
AutoMergePluginContext was found as null in AutoMergePlugin instance.

Action:
Record the accompanying error and contact the developers of the application.

MDS-90254
Unable to get AutoMergePlugin for MOType "{0}", Parameter AutoMergePluginContext must have a value.

Category:
Programmatic

Cause:
Parameter AutoMergePluginContext was null.

Action:
Record the accompanying error and contact the developers of the application.

MDS-90255
Conflict resolution hook class "{0}" cannot be instantiated for MOType "{1}"

Category:
Configuration

Cause:
An exception occurred while instantiating conflict resolution hook class.

Action:
Record the accompanying error and contact the developers of the application.

MDS-90256
Unable to get AutoMergePlugin instance from AutoMergePluginFactory for MOType "{0}".

Category:
Programmatic

Cause:
AutoMergePluginFactory returned null for AutoMergePlugin.

Action:
Record the accompanying error and contact the developers of the application.

MDS-90257
Unable to get AutoMergePluginFactory instance from ConflictResolutionHook for MOType "{0}".

Category:
Programmatic

Cause:
ConflictResolutionHook returned null for AutoMergePluginFactory.

Action:
Record the accompanying error and contact the developers of the application.

MDS-90258
Conflict resolution hook class "{0}" cannot be instantiated to get merge handler for MOType "{1}"

Category:
Configuration

Cause:
An exception occurred while instantiating conflict resolution hook class to get merge handler.

Action:
Record the accompanying error and contact the developers of the application.

MDS-90259
Unable to get MergeHandler instance from MergeHandlerFactory for MOType "{0}".

Category:
Programmatic

Cause:
MergeHandlerFactory returned null for MergeHandler.

Action:
Record the accompanying error and contact the developers of the application.

MDS-90260
Unable to get MergeHandlerFactory instance from ConflictResolutionHook for MOType "{0}".

Category:
Programmatic

Cause:
MergeHandlerFactory returned null for MergeHandlerFactory.

Action:
Record the accompanying error and contact the developers of the application.

MDS-90343
Sandbox "{0}" Apply operation failed for MO part "{1}" since conflict were identified with mainline changes for MO Part "{2}" that violates the relationship and dependency constraints.

Category:
Programmatic

Cause:
Sandbox changes violate some dependency constraints with mainline changes.

Action:
Contact Application Administrator to resolve these conflicts manually or perform the changes again in a new sandbox.

MDS-90344
Sandbox "{0}" apply operation with content auto merge failed.

Category:
Programmatic

Cause:
Sandbox apply operation with auto merge failed.

Action:
Please check each MO exception for detailed reasons.

MDS-90345
Failure to get conflicts for sandbox

Category:
Programmatic

Cause:
Target label is older than the sandbox mainline label.

Action:
Specify a target label which is later than current label.

MDS-90346
Invalid SandboxUsage. The sandbox name "{0}" in sandboxUsage does not match with Sandbox instance being operated upon.

Category:
Programmatic

Cause:
Wrong sandbox name used while retrieving MDSSession for conflict resolution.

Action:
Use right SandboxUsage that was used earlier for making the sandbox changes.

MDS-90347
Retry refresh operation on Sandbox "{0}" failed as it detected some unexpected mainline changes on MDSSession which is intended for conflict resolution, for following documents : {1}

Category:
Programmatic

Cause:
Unexpected mainline changes detected on MDSSession that was retrieved for conflict resolution during sandbox refresh operation.

Action:
Cancel mainline document changes from the MDSSession and retry the refresh operation.

MDS-90348
This operation cannot continue as Refresh is in progress for Sandbox {0}.

Category:
Programmatic

Cause:
Some other refresh operation might be in progress.

Action:
Cancel or End the in-progress refresh before trying this operation.

MDS-90349
This operation cannot continue as Refresh operation is either not initiated OR already ended for Sandbox {0}.

Category:
Programmatic

Cause:
Sandbox beginRefresh() hasn't been called.

Action:
Invoke the beginRefresh() first before this operation.

MDS-90350
This operation cannot continue as in progress refresh transaction is not yet completed for Sandbox {0}.

Category:
Programmatic

Cause:
Sandbox refresh operation hasn't ended using endRefresh() call.

Action:
Invoke the endRefresh() before trying this operation.

MDS-90351
Tip customization layer name and value are not defined for refresh operations for Sandbox {0}.

Category:
Programmatic

Cause:
Tip customization layer name and value are not defined.

Action:
Define tip customization layer name and value to perform sandbox refresh.

MDS-90352
Refresh operation cannot be ended since there are pending conflicts to resolve for Sandbox {0}.

Category:
Programmatic

Cause:
There are pending conflicts to resolve.

Action:
Resolve the pending conflicts and try the operation again.

MDS-90353
Sandbox name is null or empty.

Category:
Programmatic

Cause:
Sandbox name was null or empty.

Action:
Use a valid sandbox name that is not empty or null.

MDS-90500
Count of unresolved merge conflict(s) - {0}

Category:
Data

Cause:
One or more unresolved merge conflict(s) exists.

Action:
For more details, use getUnresolvedMergeConflicts() method on MOPartChangeContentAutoMergeException instance.

MDS-90501
Unexpected content auto-merge error

Category:
Programmatic

Cause:
An unexpected content auto-merge error occurred.

Action:
Please resolve the conflict before attempting auto-merge operation again.

MDS-90502
Invalid input documents for content auto-merge operation.

Category:
Data

Cause:
Invalid documents are provided to perform content auto-merge operation.

Action:
Provide valid documents.

MDS-90503
Limited support available for XSD content auto-merge operation.

Category:
Programmatic

Cause:
Unable to auto-merge changes being made by the request or by another user done to XSD metadata object.

Action:
Please resolve the conflict before attempting auto-merge operation again.

MDS-90504
No support to auto-merge updates done to elements with brittle local reference.

Category:
Data

Cause:
Updates done on elements with brittle local reference.

Action:
Resolve the conflict before attempting auto-merge operation again.

MDS-90505
Auto-merge synchronous XML tree walk failure occurred while handling following merge conflict - * {0}

Category:
Data

Cause:
An error occurred in the MDSDocumentAutoMergePlugin.

Action:
Check for log messages. If the problem persists, contact Oracle Support Services.

MDS-90506
No support to auto-merge move operation

Category:
Data

Cause:
Encountered move operation while performing content auto-merge operation.

Action:
Resolve the conflict before attempting auto-merge operation again.

MDS-90507
Type annotation "automerge" for child-list order preference on element with local reference "{0}" in metadata object "{1}" does not have valid value. Valid values are "childListOrderNotImportant" and "childListOrderImportant"

Category:
Data

Cause:
Child-list of the underlying element was modified as part of content auto-merge operation.

Action:
Provide valid value for "automerge" type-annotation. Valid values are "childListOrderNotImportant" and "childListOrderImportant".

MDS-90508
Type annotation automergeChildListOrderDefault set on element definition of root element in metadata object "{0}" does not have valid value. Valid values are "childListOrderNotImportant" and "childListOrderImportant".

Category:
Data

Cause:
Invalid value provided for automergeChildListOrderDefault type-annotation.

Action:
Provide valid value for automergeChildListOrderDefault type-annotation. Valid values are "childListOrderNotImportant" and "childListOrderImportant".

MDS-90540
Unable to automerge changes done to attribute on element "{0}" with local reference "{1}" since attribute "{2}" is inserted with different values "{3}" in the current transaction and "{4}" in another transaction.

Category:
Data

Cause:
Encountered element attribute automerge conflict while performing content automerge.

Action:
Resolve the conflict before attempting automerge operation again.

MDS-90541
Unable to automerge changes done to attribute on element "{0}" with local reference "{1}" since attribute "{2}" is updated with different values "{3}" in the current transaction and "{4}" in another transaction.

Category:
Data

Cause:
Encountered element attribute automerge conflict while performing content automerge.

Action:
Resolve the conflict before attempting automerge operation again.

MDS-90542
Unable to automerge changes done to attribute on element "{0}" with local reference "{1}" since attribute "{2}" is deleted in the current transaction but updated with value "{3}" in another transaction.

Category:
Data

Cause:
Encountered element attribute automerge conflict while performing content automerge.

Action:
Resolve the conflict before attempting automerge operation again.

MDS-90543
Unable to automerge changes done to attribute on element "{0}" with local reference "{1}" since attribute "{2}" is updated with value "{3}" in the current transaction but deleted in another transaction.

Category:
Data

Cause:
Encountered element attribute automerge conflict while performing content automerge.

Action:
Resolve the conflict before attempting automerge operation again.

MDS-90550
Unable to automerge changes done to text content of element "{0}" with local reference "{1}" since its text content is inserted with different values "{2}" in the current transaction and "{3}" in another transaction.

Category:
Data

Cause:
Encountered text content element automerge conflict while performing content automerge.

Action:
Resolve the conflict before attempting automerge operation again.

MDS-90551
Unable to automerge changes done to text content of element "{0}" with local reference "{1}" since its text content is updated with different values "{2}" in the current transaction and "{3}" in another transaction.

Category:
Data

Cause:
Encountered text content element automerge conflict while performing content automerge.

Action:
Resolve the conflict before attempting automerge operation again.

MDS-90552
Unable to automerge changes done to text content of element "{0}" with local reference "{1}" since its text content is deleted in the current transaction but updated with value "{2}" in another transaction.

Category:
Data

Cause:
Encountered text content element automerge conflict while performing content automerge.

Action:
Resolve the conflict before attempting automerge operation again.

MDS-90553
Unable to automerge changes done to text content of element "{0}" with local reference "{1}" since its text content is updated with value "{2}" in the current transaction but deleted in another transaction.

Category:
Data

Cause:
Encountered text content element automerge conflict while performing content automerge.

Action:
Resolve the conflict before attempting automerge operation again.

MDS-90560
Unable to automerge insertion of element "{0}" with local reference "{1}" under parent element "{2}" with local reference "{3}" since its fragment contents differ in the current transaction and in another transaction.

Category:
Data

Cause:
Encountered element insertion automerge conflict while performing content automerge.

Action:
Resolve the conflict before attempting automerge operation again.

MDS-90561
Unable to automerge insertion of merge-unit "{0}" with local reference "{1}" under parent element "{2}" with local reference "{3}" since its fragment contents differ in the current transaction and in another transaction.

Category:
Data

Cause:
Encountered merge-unit insertion automerge conflict while performing content automerge.

Action:
Resolve the conflict before attempting automerge operation again.

MDS-90562
Unable to automerge updates done to element "{0}" with local reference "{1}" under parent element "{2}" with local reference "{3}" since its fragment contents differ in the current transaction and in another transaction.

Category:
Data

Cause:
Encountered element update automerge conflict while performing content automerge.

Action:
Resolve the conflict before attempting automerge operation again.

MDS-90563
Unable to automerge updates done to merge-unit "{0}" with local reference "{1}" under parent element "{2}" with local reference "{3}" since its fragment contents differ in the current transaction and in another transaction.

Category:
Data

Cause:
Encountered merge-unit update automerge conflict while performing content automerge.

Action:
Resolve the conflict before attempting automerge operation again.

MDS-90564
Unable to automerge changes done to element "{0}" with local reference "{1}" under parent element "{2}" with local reference "{3}" since it is deleted in the current transaction but its fragment contents are updated in another transaction.

Category:
Data

Cause:
Encountered element automerge conflict while performing content automerge.

Action:
Resolve the conflict before attempting automerge operation again.

MDS-90565
Unable to automerge changes done to merge-unit "{0}" with local reference "{1}" under parent element "{2}" with local reference "{3}" since it is deleted in the current transaction but its fragment contents are updated in another transaction.

Category:
Data

Cause:
Encountered merge-unit automerge conflict while performing content automerge.

Action:
Resolve the conflict before attempting automerge operation again.

MDS-90566
Unable to automerge changes done to element "{0}" with local reference "{1}" under parent element "{2}" with local reference "{3}" since its fragment contents are updated in the current transaction but this element is deleted in another transaction.

Category:
Data

Cause:
Encountered element automerge conflict while performing content automerge.

Action:
Resolve the conflict before attempting automerge operation again.

MDS-90567
Unable to automerge changes done to merge-unit "{0}" with local reference "{1}" under parent element "{2}" with local reference "{3}" since its fragment contents are updated in the current transaction but this merge-unit is deleted in another transaction.

Category:
Data

Cause:
Encountered merge-unit automerge conflict while performing content automerge.

Action:
Resolve the conflict before attempting automerge operation again.

MDS-90568
Unable to automerge changes done to element "{0}" with local reference "{1}" since it is deleted in the current transaction but moved under a different parent in another transaction.

Category:
Data

Cause:
Encountered element automerge conflict while performing content automerge.

Action:
Resolve the conflict before attempting automerge operation again.

MDS-90569
Unable to automerge insertion of element with local reference "{0}" in the current transaction since it is inserted under a different parent in another transaction.

Category:
Data

Cause:
Encountered element automerge conflict while performing content automerge.

Action:
Resolve the conflict before attempting automerge operation again.

MDS-90570
Unable to automerge insertion of root element "{0}" with local reference "{1}" since its fragment contents differ in the current transaction and in another transaction.

Category:
Data

Cause:
Encountered element insertion automerge conflict while performing content automerge.

Action:
Resolve the conflict before attempting automerge operation again.

MDS-90571
Unable to automerge insertion of root merge-unit "{0}" with local reference "{1}" since its fragment contents differ in the current transaction and in another transaction.

Category:
Data

Cause:
Encountered merge-unit insertion automerge conflict while performing content automerge.

Action:
Resolve the conflict before attempting automerge operation again.

MDS-90572
Unable to automerge updates done to root element "{0}" with local reference "{1}" since its fragment contents differ in the current transaction and in another transaction.

Category:
Data

Cause:
Encountered element update automerge conflict while performing content automerge.

Action:
Resolve the conflict before attempting automerge operation again.

MDS-90573
Unable to automerge updates done to root merge-unit "{0}" with local reference "{1}" since its fragment contents differ in the current transaction and in another transaction.

Category:
Data

Cause:
Encountered merge-unit update automerge conflict while performing content automerge.

Action:
Resolve the conflict before attempting automerge operation again.

MDS-90574
Unable to automerge changes done to element "{0}" with local reference "{1}" since it is moved under a different parent in the current transaction but deleted in another transaction.

Category:
Data

Cause:
Encountered element automerge conflict while performing content automerge.

Action:
Resolve the conflict before attempting automerge operation again.

MDS-90590
Unable to automerge updates done to element "{0}" with local reference "{1}" since its child order differs between the current transaction and another transaction.

Category:
Data

Cause:
Encountered child order conflict while performing content automerge.

Action:
Resolve the conflict before attempting automerge operation again.

MDS-91001
MDS domain runtime MBean is not available. "{0}" operation failure.

Category:
Configuration

Cause:
MDS domain runtime MBean was not available in the server.

Action:
Ensure the MDS domain runtime MBean is available in the server.

MDS-91002
MDS Application runtime MBean for "{0}" is not available. "{1}" operation failure.

Category:
Configuration

Cause:
MDS Application runtime MBean was not available in the server.

Action:
Ensure the MDS Application runtime MBean for the application is available in the server.

MDS-91003
Multiple MDSAppRuntimeMBean exist for "{0}". To execute the command, parameter "applicationVersion" is required. "{1}" operation failure.

Category:
Configuration

Cause:
Multiple MDSAppRuntimeMBean for the application were found in the server.

Action:
Provide the 'applicationVersion' parameter.

MDS-91004
MDS domain runtime MBean commands can be executed only from the Admin server. "{0}" operation failure.

Category:
Configuration

Cause:
WLST was not connected to the Admin server.

Action:
Connect to an Admin server before executing the command.

MDS-91005
No connection to a "{0}" server exists. The operation "{1}" can be executed only in the online mode.

Category:
Configuration

Cause:
Command was executed in the offline mode.

Action:
Ensure WLST is connected to the server.

MDS-91006
Expecting a "{0}" for parameter "{1}" but encountering "{2}". "{3}" operation failure.

Category:
Data

Cause:
Parameter type passed to the command was not correct.

Action:
Ensure the correct type of parameters are passed to the command.

MDS-91007
dbVendor should be one of ORACLE, MSSQL, IBMDB2, or MYSQL. "{0}" operation failure.

Category:
Data

Cause:
dbVendor value was not correct.

Action:
Ensure the dbVendor value is one of ORACLE, MSSQL, IBMDB2, or MYSQL.

MDS-91008
The "{0}" parameter is required. Provide a valid value and retry the operation.

Category:
Data

Cause:
Required parameter for the command was not given.

Action:
Provide the required parameters for the command.

MDS-91009
Operation "{0}" failure.

Category:
Data

Cause:
Exception occurred during the execution of the command.

Action:
Provide the required parameters for the command.

MDS-91010
The "adf-config" element is not available in the given archive file. "{0}" operation failure.

Category:
Configuration

Cause:
The "adf-config" element is not available in the given archive file.

Action:
Ensure the "adf-config" element is available in the adf-config.xml of the given archive file.

MDS-91011
No "mds-config" element exists in the adf-config.xml of the given archive. "{0}" operation failure.

Category:
Configuration

Cause:
No mds-config element existed in the adf-config.xml file of the archive file.

Action:
Ensure the "mds-config" element is available in the adf-config.xml file.

MDS-91012
Metadata repository connection type value should be either "File" or "DB". "{0}" operation failure.

Category:
Data

Cause:
Metadata repository connection type value is not correct.

Action:
Ensure the metadata repository connection type value is either 'File' or 'DB'.

MDS-91013
For the metadata repository''s DB connection type, JNDI location is a required parameter. "{0}" operation failure.

Category:
Data

Cause:
JNDI location not provided for DB connection type.

Action:
Provide the JNDI location string while updating the repository connection to DB.

MDS-91014
For the metadata repository''s File connection type, path location is a required parameter. "{0}" operation failure.

Category:
Data

Cause:
The path value was not provided for File connection type.

Action:
Provide the path location string while updating the repository connection to File.

MDS-91015
All parameters are required to update shared metadata repository configuration in adf-config.xml. At present, source archive has no connection details for the namespace "{0}". "{1}" operation failure.

Category:
Data

Cause:
Complete connection information was not provided to set the shared repository for the given namespace.

Action:
Provide complete connection information in case the adf-config.xml file does not have any metadata repository connection information for the given namespace already.

MDS-91016
All parameters are required to define new application metadata repository configuration in adf-config.xml. The source archive configuration does not contain any application metadata repository at present. "{0}" operation failure.

Category:
Data

Cause:
Complete connection information was not provided to set the application target repository.

Action:
Provide complete connection information in case the adf-config.xml does not have any metadata repository connection information for the application target repository already.

MDS-91017
The given namespace "{0}" to set the shared repository is not valid. Ensure that the namespace is available in the adf-config.xml file and it is not a sub-namespace of any other namespace. "{1}" operation failure.

Category:
Data

Cause:
The namespace provided to set the shared repository details is not valid.

Action:
Ensure that the namespace is available in the adf-config.xml file and it is not a subnamespace of any other namespace in that file.

MDS-91018
No namespaces are mapped to any shared repository in the source archive adf-config.xml configuration file. Shared repository details cannot be set. "{0}" operation failure.

Category:
Configuration

Cause:
No namespaces were mapped to any shared repository in the source archive adf-config.xml configuration file.

Action:
To set the shared repository connections, ensure at least one namespace is mapped to shared repository in the source archive adf-config.xml file.

MDS-91019
Multiple MDSAppRuntimeMBean exist for application "{0}". Ensure that the "application" "node" and "server" parameters are correct. "{1}" operation failure.

Category:
Configuration

Cause:
Multiple MDSAppRuntimeMBean for the application were found in the server.

Action:
Ensure that the "application" "node" and "server" parameters are correct.

MDS-91020
MDS Application runtime MBean for "{0}" is not available in server "{2}". Ensure server name and application name are correct. "{1}" operation failure.

Category:
Configuration

Cause:
MDS Application runtime MBean was not available in the server.

Action:
Ensure the MDS Application runtime MBean for the application is available in the server. Ensure the server name and the application name are correct.

MDS-91021
Multiple MDSAppRuntimeMBean exist for "{0}" in server "{2}". To execute the command, parameter "applicationVersion" is required. "{1}" operation failure.

Category:
Configuration

Cause:
Multiple MDSAppRuntimeMBean for the application were found in the server.

Action:
Provide the 'applicationVersion' parameter.

MDS-91022
Parameter "{0}" cannot be an empty string. "{1}" operation failure.

Category:
Data

Cause:
The parameter is not allowed to be an empty string.

Action:
Ensure the parameter has a correct value.

MDS-91023
Parameter "{0}" contains at least one empty element. "{1}" operation failure.

Category:
Data

Cause:
The parameter is not allowed to contain one or more empty elements.

Action:
Ensure every element specified in the parameter is correct.

MDS-91024
Parameters "{0}" and "{1}" cannot be specified at the same time.

Category:
Data

Cause:
The two parameters are not allowed to be specified at the same time.

Action:
Remove one of the parameters.

MDS-92000
Oracle Metadata Services schema upgrade is invalid.

Category:
Upgrade

Cause:
Specified Metadata Services schema was updated but is invalid.

Action:
Restore the Metadata Services schema from a backup and retry. Check the error messages in log file. Correct the problem before running the Assistant again.

MDS-92001
The upgrade is not supported from Oracle Metadata Services schema version of {0}.

Category:
Upgrade

Cause:
An unsupported base schema version was being upgraded.

Action:
Refer to the Oracle Metadata Services Upgrade Guide for supported versions to upgrade.

MDS-92002
Error in upgrading Oracle Metadata Services schema.

Category:
Upgrade

Cause:
An unexpected error occurred during Oracle Metadata Services schema upgrade.

Action:
Check the error messages in log file. Correct the problem before running the Assistant again. Contact Oracle Support Services if you are unable to correct the problem.

MDS-92003
Error occurred while verifying the character set in target Metadata Services schema

Category:
Upgrade

Cause:
A SQL error occurred while verifying the character set in target Metadata Services schema.

Action:
Check the error messages in log file. Correct the problem before running the Assistant again. Contact Oracle Support Services if you are unable to correct the problem.

MDS-92004
Error occurred while closing the resources during Metadata Services schema upgrade

Category:
Upgrade

Cause:
A SQL error occurred while closing the resources during Metadata Services schema upgrade.

Action:
Check the error messages in log file. Correct the problem before running the Assistant again. Contact Oracle Support Services if you are unable to correct the problem.

MDS-92005
Error occurred while closing Metadata Services schema upgrade log files.

Category:
Upgrade

Cause:
An unexpected error occurred while closing Metadata Services schema upgrade log files.

Action:
Check the error messages in log file. Correct the problem before running the Assistant again. Contact Oracle Support Services if you are unable to correct the problem.

MDS-92006
Oracle Metadata Service schema status is invalid.

Category:
Upgrade

Cause:
Specified Oracle Metadata Services database schema was invalid.

Action:
Check the error messages in log file. Correct the problem before running the Assistant again. Contact Oracle Support Services if you are unable to correct the problem.

MDS-92007
Error occurred while verifying the user privileges in target Metadata Services schema

Category:
Upgrade

Cause:
A SQL error occurred while verifying the user privileges in target Metadata Services schema.

Action:
Check the error messages in log file. Correct the problem before running the Assistant again. Contact Oracle Support Services if you are unable to correct the problem.

MDS-92008
The logon DBA user does not have sufficient privileges to upgrade the target Metadata Services schema user

Category:
Upgrade

Cause:
The logon DBA user needs to have grant execute privilege on specific DBMS packages to other users for upgrading the schema user privileges in target Metadata Services schema.

Action:
Logon as SYSDBA or other DBA users with sufficient privileges to grant execute on DBMS packages to other users and run the Assistant again.

MDS-92009
Oracle Metadata Services schema is not enabled for EBR.

Category:
Upgrade

Cause:
Specified Oracle Metadata Services database schema was not enabled for EBR.

Action:
Specify an Oracle Metadata Service schema that is enabled for EBR or Specify an upgrade for Oracle database type.

MDS-92010
Unable to continue due to an unexpected error

Category:
Upgrade

Cause:
An unexpected error occurred.

Action:
See the secondary error message for additional details.

19
NG-1010 to NG-2170

NG-1010
The archive location must be provided using the -archiveLoc option

Category:
Configuration

Cause:
The archive location option (-archiveLoc) was not provided.

Action:
include the -archiveLoc option during the execution.

NG-1020
The archive location must specify a file that does not exist but {0} already exists

Category:
Configuration

Cause:
The Archive jar that will be created, already exists and cannot be override.

Action:
Change the name of the archive jar or delete/move the file that already exists.

NG-1030
The Oracle Home location {0} does not exist

Category:
Configuration

Cause:
The ORACLE_HOME variable contains a location that does not exist.

Action:
Change the ORACLE_HOME variable to a valid location that exist.

NG-1040
Disk space insufficient

Category:
Memory

Cause:
The location provided to create the archive jar does not have enough disk space to create the file.

Action:
Release some disk space or change the location.

NG-1050
{0} cannot be accessed for write

Category:
Files

Cause:
When appending each file to the archive jar, the permissions file is being generated and the file is not accessible during that process.

Action:
Verify that the location provided has write permissions to create the archive.

NG-1060
Could not create the {0} file

Category:
Files

Cause:
The properties file cannot be written into the temporary location

Action:
Verify that the location provided has write permissions to create the properties file.

NG-1070
{0} could not be append to jar

Category:
Files

Cause:
When appending each installed OUI file to the archive jar one file was not able to be appended.

Action:
Verify that the location provided has write permissions to create the archive.

NG-1080
Manifest could not be created in {0}

Category:
Files

Cause:
To make the jar executable, a manifest is required to be append into the archive, if the Manifest creation was not possible will throw this message.

Action:
Verify that the location provided has write permissions to create the archive.

NG-1090
Manifest could not be append to jar

Category:
Files

Cause:
Appending the temporary manifest into the archive jar will throw an error if the jar is not accesible.

Action:
Verify that the location provided has write permissions to create the archive.

NG-1100
Clone permissions file could not be append to jar

Category:
Files

Cause:
Appending the temporary permissions file into the archive jar will throw an error if the jar is not accesible.

Action:
Verify that the location provided has write permissions to create the archive.

NG-1110
Unable to append executable classes to {0}

Category:
Files

Cause:
Appending the required executable classes into the archive jar will throw an error if the jar is not accesible.

Action:
Verify that the location provided has write permissions to create the archive.

NG-1120
Clone main class file could not be append to jar

Category:
Files

Cause:
Appending the main class into the archive jar will throw an error if the jar is not accesible.

Action:
Verify that the location provided has write permissions to create the archive.

NG-1130
Could not retrieve top level products from {0}

Category:
Files

Cause:
When using the option -includeDirs if one of the directories does not exists will send this message.

Action:
Verify that all the directories provided for option -includeDirs exist.

NG-1140
Unable to append files in directory {0} to jar {1}

Category:
Files

Cause:
If while appending files into the archive jar there was a problem reading the directory will throw this message.

Action:
Read the exception thrown for more details.

NG-1150
Could not process elements in directory {0} while appending to jar {1}

Category:
Files

Cause:
If while appending files into the archive jar there was a problem will throw this message.

Action:
Read the exception thrown for more details.

NG-1160
The archive location cannot be created inside the Oracle Home

Category:
Files

Cause:
The location where the archive will be created should not be inside the oracle home that will be clone.

Action:
Change the location of the archive to a place outside of the Oracle Home.

NG-2010
Oracle home is required

Category:
Configuration

Cause:
When the mandatory ORACLE_HOME variable was not provided.

Action:
Provide mandatory ORACLE_HOME variable.

NG-2015
Oracle home is already registered in the inventory

Category:
Configuration

Cause:
The mandatory ORACLE_HOME variable provided is already registered in inventory.

Action:
The Oracle Home provided should be change to a new one that is not registered in the inventory.

NG-2020
The output Oracle Home should be an empty directory

Category:
Configuration

Cause:
The mandatory ORACLE_HOME variable should be an empty directory not an already existing Oracle Home.

Action:
Change The Oracle Home provided to an empty location.

NG-2030
The output Oracle Home should be an absolute path

Category:
Configuration

Cause:
The mandatory ORACLE_HOME variable should specified as an absolute path.

Action:
Change ORACLE_HOME to an absolute path.

NG-2040
Archive location must be specified

Category:
Configuration

Cause:
The mandatory -archiveLoc option was not provided.

Action:
During the execution include the option -archiveLoc with the path to the archive file.

NG-2050
Problem loading archiveLoc {0}

Category:
Files

Cause:
The archive jar cannot be open for extraction.

Action:
Read the exception thrown for more details.

NG-2060
Problem creating required directories {0}

Category:
Files

Cause:
When there is a problem creating the path in the provided ORACLE_HOME directory.

Action:
Verify that the location provided for extraction has write permissions.

NG-2070
The package to extract should have an extension .jar

Category:
Configuration

Cause:
When the -archiveLoc does not end with ".jar" extension.

Action:
Change the option -archiveLoc to use a proper ".jar" file.

NG-2080
Problem opening archiveLoc {0}

Category:
Files

Cause:
If the extraction jar does not have permissions to be opened.

Action:
Read the exception thrown for more details.

NG-2090
Problem during extraction {0}

Category:
Files

Cause:
When one of the jar entries cannot be extracted into the Oracle Home.

Action:
Verify that the location provided for extraction has write permissions.

NG-2100
Problem loading next jar {0}

Category:
Files

Cause:
When the archive is created using the -maxArchiveSize option will create multiple jars, if one of the jar files does not have the permissions to open it will fail.

Action:
Change all the jar permissions so they can be extrated. Check the thrown exception to check which files need to be changed.

NG-2110
Disk space insufficient

Category:
Memory

Cause:
The location provided to create the Oracle Home does not have enough disk space to extract the files.

Action:
Release some disk space or change the location where the Oracle Home will be extracted.

NG-2120
Incompatible java version

Category:
Other

Cause:
The JAVA version required in the original Oracle Home is not compatible with the java version in the system where will be extracted.

Action:
Verify the Java version used during the creation of the archive inside the jar MANIFEST and use that version for extraction.

NG-2130
Problem extracting permissions file {0}

Category:
Files

Cause:
There is a permissions file in the archive to set the permissions as in the original Oracle Home, this will fail if there is a problem while updating those permissions.

Action:
Verify if you have permissions in the folder where the Oracle Home will be extracted to change the permissions of the files.

NG-2140
Failure to execute prerequisites phase. Review options -prereqConfigLoc and -entryPoint

Category:
Process

Cause:
When the process of prerequisites was not able to complete correctly.

Action:
Verify the log and check you are in compliance with all the prerequisites for the extracted Oracle Home

NG-2150
There was an error while parsing the command line, please check log for more details

Category:
Configuration

Cause:
The parameters provided for applyCloneArchive are incorrect. Please validate the options for applyCloneArchive.

Action:
Execute the jar with -help options and validate that all the options are valid.

NG-2160
Prerequisites file is missing

Category:
Configuration

Cause:
The -prereqConfigLoc provided is pointing to an incorrect prerequisite location.

Action:
Validate the -prereqConfigLoc contains the prerequisite files to validate during the Oracle Home creation.

NG-2170
There was an error during prerequisites initialization {0}

Category:
Process

Cause:
While preparing the arguments to create the prereq process there was an error in the arguments.

Action:
Read the exception thrown for more details.

20
OAM-00001 to OAM-36105

OAM-00001
Cannot parse the session token.

Category:
Other

Cause:
The session token appears to be invalid.

Action:
For more details, start logging at the FINE level.

OAM-00002
Error occurred while handling the request.

Category:
Other

Cause:
An internal error occurred.

Action:
For more details, start logging at the FINE level.

OAM-00003
Request-Response handler configuration is incomplete.

Category:
Other

Cause:
A request handler mapping was missing.

Action:
Add the missing handler mapping to the configuration.

OAM-00004
Cannot initialize the Diagnostic Engine.

Category:
Other

Cause:

Action:

OAM-00005
Cannot locate the custom login page.

Category:
Other

Cause:
The custom login page was not found.

Action:
Verify the configuration.

OAM-00006
Cannot locate the configuration of the custom login page.

Category:
Other

Cause:
The custom custom login page was not specified in the configuration.

Action:
Add the custom login page location to the configuration.

OAM-00007
Cannot edit the custom login page

Category:
Other

Cause:
The file permissions of the custom login page do not allow write access.

Action:
Change the file permissions to allow write access.

OAM-00008
Cannot close the custom login page

Category:
Other

Cause:
The source code of the custom login page does not support closing of the login page.

Action:
Check the custom login page source code.

OAM-00009
Unable to parse the redirection URL

Category:
Other

Cause:
An error occurred while parsing the redirect URL due to bad encoding or invalid format.

Action:
For more details, start logging at the FINE level.

OAM-000010
Cannot add query params to map for logout redirection

Category:
Other

Cause:
URLDecoder throwing UnsupportedEncodingException

Action:
Check the AMLogoutResponseHandler - getQueryMap method code.

OAM-000011
Cannot parse the request token sent from client with User Agent {0} and IP Address {1}.

Category:
Other

Cause:
The request token appears to be invalid.

Action:
For more details, start logging at the FINE level.

OAM-000012
Cannot construct the request token.

Category:
Other

Cause:
Could not create OAM request token.

Action:
For more details, start logging at the FINE level.

OAM-000013
Cannot construct OAM session token.

Category:
Other

Cause:
Could not create SSO Session token.

Action:
For more details, start logging at the FINE level.

OAM-000014
{0} set in {1} must be an integer greater-than or equal to zero.

Category:
Other

Cause:
SwitchGetToPostLimit was set incorrectly for the authentications scheme.

Action:
Correct the SwitchGetToPostLimit challenge parameter within the authentication scheme.

OAM-02001
Retrieve SSO session operation failed.

Category:
Other

Cause:
Cannot retrieve the SSO session from the request context. Session might have expired.

Action:
For more details, start logging at the FINE level.

OAM-02002
Error while processing the submitted credentials.

Category:
Other

Cause:
An internal error occurred.

Action:
For more details, start logging at the FINE level.

OAM-02003
Error while processing credential collection.

Category:
Other

Cause:
An internal error occurred.

Action:
Check the authentication scheme configuration.

OAM-02004
Error while processing authorization request.

Category:
Other

Cause:
An internal error occurred.

Action:
For more details, start logging at the FINE level.

OAM-02005
Error while parsing the SSO session token.

Category:
Other

Cause:
Error while parsing the SSO session token. Wrong session token format.

Action:
Retry. If the error persists verify the key roll-over configuration.

OAM-02006
Insufficient authentication level to access the resource.

Category:
Other

Cause:
An insufficient authentication level was used to access the resource.

Action:
Step up the authentication level by re-authenticating to the required level.

OAM-02007
Insufficient privileges. Authorization Denied.

Category:
Other

Cause:
Insufficient privileges.

Action:
Check the authorization permissions.

OAM-02008
Password expired. Authentication failed.

Category:
Other

Cause:
Insufficient privileges.

Action:
Check the authorization permissions.

OAM-02009
Password reset required. Authentication failed.

Category:
Other

Cause:
Insufficient privileges.

Action:
Check the authorization permissions.

OAM-02010
User account is locked. Authentication failed.

Category:
Other

Cause:
Insufficient privileges.

Action:
Check the authorization permissions.

OAM-02011
No user account found. Authentication failed.

Category:
Other

Cause:
Insufficient privileges.

Action:
Check the authorization permissions.

OAM-02012
No user name password combination found. Authentication failed.

Category:
Other

Cause:
Insufficient privileges.

Action:
Check the authorization permissions.

OAM-02013
Password Policy action not supported by the client. Authentication failed.

Category:
Other

Cause:
Insufficient privileges.

Action:
Check the authorization permissions.

OAM-02052
SME Adapter initialization Failed.

Category:
Other

Cause:
SME adapter initialization failed.

Action:
Verify the SME configuration.

OAM-02053
Component {1} initialization Failed.

Category:
Other

Cause:
Component initialization failed.

Action:
Verify the server configuration.

OAM-02054
SSO session creation failed.

Category:
Other

Cause:
Session Management Engine error.

Action:
Check Session Management Engine error logs.

OAM-02055
Retrieve SSO session operation failed.

Category:
Other

Cause:
Session might be expired.

Action:
If the problem persists contact the administrator.

OAM-02056
An error occurred while parsing the server token.

Category:
Other

Cause:
TPE token parsing failed.

Action:
check Token Processing Engine logs.

OAM-02057
Wrong Flow Controller configuration for {1}

Category:
Other

Cause:
Wrong Flow controller configuration

Action:
Check flow controller class name and configuration.

OAM-02058
Event Flow goes in infinite loop.

Category:
Other

Cause:
Wrong configuration or too many allowed login attempts.

Action:
Check event flow configuration and login attempt configuration.

OAM-02059
Flow Controller Cannot handle Event

Category:
Other

Cause:
Wrong Flow controller configuration

Action:
Check error log more details.

OAM-02060
Flow Controller :{0} Cannot handle Event :{1}

Category:
Other

Cause:
Wrong Flow controller configuration

Action:
Check event to flow controller mapping.

OAM-02061
Event Handler error.

Category:
Other

Cause:
Wrong event handler configuration

Action:
Check error log more details.

OAM-02062
Event Handler cannot handle the event.

Category:
Other

Cause:
Wrong event handler configuration

Action:
Check event to event handler controller mapping.

OAM-02063
Event Handler :{0} Cannot handle Event :{1}

Category:
Other

Cause:
Wrong event handler configuration

Action:
Check event to event handler controller mapping.

OAM-02064
Authentication Error during policy matching.

Category:
Other

Cause:
Authentication Error

Action:
Check error log more details.

OAM-02065
Configuration Service Adapter initialization Failed.

Category:
Other

Cause:
SConfiguration Service failed.

Action:
Verify the system configuration file

OAM-02066
Event Factory is not configured create the requested event.

Category:
Other

Cause:
Wrong event factory configuration

Action:
Check error log more details.

OAM-02067
Wrong event configuration. No event handler specified for event {0}.

Category:
Other

Cause:
Wrong event factory configuration

Action:
Check error log more details.

OAM-02068
Error occurred while configuring the request cache.

Category:
Other

Cause:
Wrong request cache handler class configuration.

Action:
Check error log more details.

OAM-02069
Error occurred while loading cache handler for class Name {0}

Category:
Other

Cause:
Wrong request cache handler class configuration.

Action:
Check error log more details.

OAM-02070
An error occurred while loading server aliases.

Category:
Other

Cause:
TPE token parsing failed.

Action:
check system configuration if the aliases are set up properly logs.

OAM-02071
No host configuration found for the alias {0}.

Category:
Other

Cause:
TPE token parsing failed.

Action:
check system configuration if the aliases are set up properly logs.

OAM-02072
Ignoring failure during Identity Store operation.

Category:
Other

Cause:
Operation to read or update user attribute in Identity Store resulted in exception.

Action:
Check the availability of configured Identity Store.

OAM-02073
Error while checking if the resource is protected or not.

Category:
Other

Cause:
TPE token parsing failed.

Action:
check system configuration if the aliases are set up properly logs.

OAM-02074
Error while checking if the resource {0} is protected or not.

Category:
Other

Cause:
TPE token parsing failed.

Action:
check system configuration if the aliases are set up properly logs.

OAM-02075
Component {0} initialized successfully.

Category:
Other

Cause:
None

Action:
None

OAM-02076
{0} Engine initialized successfully.

Category:
Other

Cause:
None

Action:
None

OAM-02077
SSO Engine initialized Successfully.

Category:
Other

Cause:
None

Action:
None

OAM-02078
Processing Event {0}

Category:
Other

Cause:
None

Action:
None

OAM-02079
SSO session created with session ID {0} for request ({1})

Category:
Other

Cause:
None

Action:
None

OAM-02080
Cache data sync:{0} for request {1};

Category:
Other

Cause:
None

Action:
None

OAM-02081
Created {0} : {1}

Category:
Other

Cause:
None

Action:
None

OAM-02082
Diagnostic Engine Registration failed for Controller Collector.

Category:
Other

Cause:
Diagnostic Engine Registration failed.

Action:
None

OAM-02083
Diagnostic Engine Registration failed for Credential Collector Controller.

Category:
Other

Cause:
Diagnostic Engine Registration failed.

Action:
None

OAM-02084
Credential collection process success.

Category:
Other

Cause:

Action:
None

OAM-02085
Successfully validated the submitted credentials.

Category:
Other

Cause:

Action:
None

OAM-02086
{0}: processing Event:{1}.

Category:
Other

Cause:

Action:
None

OAM-02087
Policy ID : {0}

Category:
Other

Cause:

Action:
None

OAM-02088
Scheme result : {0}

Category:
Other

Cause:

Action:
None

OAM-02089
Is Resource Protected status : {0}

Category:
Other

Cause:

Action:
None

OAM-02090
Status : {0}

Category:
Other

Cause:

Action:
None

OAM-02091
Challenge URL : {0}

Category:
Other

Cause:

Action:
None

OAM-02092
Session Updation Failed

Category:
Other

Cause:

Action:
None

OAM-02093
Session response name {0} is reserved for OAM Server. Value for this response will not be updated in session.

Category:
Other

Cause:
A session response is configured with name that is internally reserved for OAM Server

Action:
Please change the name of the session response not to conflict with OAM Server reserved names

OAM-02094
Assert credential process success.

Category:
Other

Cause:
None

Action:
None

OAM-02095
Assert credential process failed.

Category:
Other

Cause:
None

Action:
None

OAM-02096
An error occurred while building the DAP token {0}.

Category:
Other

Cause:
Constructing the outgoing DAP token failed.

Action:
Check the key and parameters in token.

OAM-02097
An error occurred while decrypting the DAP token {0}.

Category:
Other

Cause:
Decrypting the incoming DAP token failed.

Action:
Check the key configuration.

OAM-02098
Cannot parse the DAP token.

Category:
Other

Cause:
Error occured while parsing the token.

Action:
Check the configuration.

OAM-02099
{0}: Event processing finished :{1} with status {2}.

Category:
Other

Cause:

Action:
None

OAM-02100
User account is disabled. Authentication failed.

Category:
Other

Cause:
Insufficient privileges.

Action:
Check the authorization permissions.

OAM-02101
An error occurred while creating impersonation session

Category:
Other

Cause:
Impersonation session creation failed

Action:
Check the create impersonation session event

OAM-02102
An error occurred in retrieving the grant

Category:
Other

Cause:
Unable to retrieve the grants

Action:
Check the grant permissions

OAM-02103
An error occurred in end impersonate session

Category:
Other

Cause:
Unable to do end impersonate session

Action:
Check the end impersonate session event

OAM-02104
An error occurred while creating subject for impersonatee

Category:
Other

Cause:
Authentication Exception thrown while creating subject for impersonatee

Action:
Check the createSubject method in SSOEngineController

OAM-02105
An error occurred in end impersonate session

Category:
Other

Cause:
Policy Manager Exception thrown while creating subject for impersonatee

Action:
Check the createSubject method in SSOEngineController

OAM-02106
An error occurred while terminating session

Category:
Other

Cause:
Unable to terminate session

Action:
Check the terminate session event

OAM-02107
An error occurred while enumerating session

Category:
Other

Cause:
Unable to enumerate session

Action:
Check the enumerate sessions event

OAM-02108
An error occurred while updating session attributes

Category:
Other

Cause:
Unable to update session

Action:
Check the update session attributes event

OAM-02109
An excluded resource is configured for OSSO agent.

Category:
Other

Cause:
Excluded resource configured for OSSO agents.

Action:
Update the MOD OSSO configuration to include the excluded resource in the public list.

OAM-02110
Event flow controller is executed in infinite loops.

Category:
Other

Cause:
Wrong configuration.

Action:
Check event flow controller configuration.

OAM-04001
Configuration parameter type mismatch. Param {0}. Expected type {1}. Actual type {2}

Category:
Other

Cause:
The configuration parameter type was invalid.

Action:
Validate the configuration parameter.

OAM-04002
Unsupported value for config parameter. Parameter {0} . Value {1}. {2}

Category:
Other

Cause:
The specified configuration parameter was not valid.

Action:
Validate the configuration parameter.

OAM-04003
OAM proxy started. Listening on port {0}.

Category:
Other

Cause:
The OAM proxy has started listening on the specified port.

Action:

OAM-04004
Read configuration parameter {0} = {1}.

Category:
Other

Cause:
The OAM proxy has loaded its configuration.

Action:

OAM-04005
Client connection accepted.

Category:
Other

Cause:
A client TCP/IP connection was accepted.

Action:

OAM-04006
Client connection closed. Connection id {0}.

Category:
Other

Cause:
A client TCP/IP connection was closed.

Action:

OAM-04007
Message received from client. Message {0}, Host : {1} Port : {2}.

Category:
Other

Cause:
A message was received from a client on the NAP channel.

Action:

OAM-04008
Message sent to client. Message {0}, Host : {1} Port : {2}.

Category:
Other

Cause:
A message was sent to a client on the NAP channel.

Action:

OAM-04009
New Outbound connection created with OAM Access Server.

Category:
Other

Cause:
An outbound connection was created with an OAM 10g server.

Action:

OAM-04010
Message received on outbound channel from OAM Access server. Message {0}, Host : {1} Port : {2}.

Category:
Other

Cause:
A message was received from an OAM 10g server.

Action:

OAM-04011
Message sent on outbound channel to OAM 10g Access server. Message {0}, Host : {1} Port : {2}.

Category:
Other

Cause:
A message was sent to an OAM 10g server.

Action:

OAM-04012
Outbound connection closed.

Category:
Other

Cause:
A connection with an OAM 10g server was closed.

Action:

OAM-04013
Unexpected message received from client. Message {0}

Category:
Other

Cause:
An unexpected message was received when a simple mode handshake message from the client was expected.

Action:
Check the NAP mode configuration of the WebGate and the Server.

OAM-04014
Malformed message received from client. Details {0}

Category:
Other

Cause:
The length of message received from client was less than 0.

Action:
Restart the WebGate if the message is being received repeatedly.

OAM-04015
Outbound connection to Access Server not found.

Category:
Other

Cause:
An internal error occurred.

Action:
For more details, start logging at the FINE level.

OAM-04016
Session ID is missing in AmResponse

Category:
Other

Cause:
The session ID was not present in the OAM token.

Action:
Retry the request.

OAM-04017
OAM proxy end point activation failed. Exception:

Category:
Other

Cause:
The specified listening port is not available, or is aldready being used.

Action:
Restart the server or contact the system administrator.

OAM-04018
Required configuration parameter missing. Required {0}

Category:
Other

Cause:
The required configuration parameters were missing.

Action:
Verify the configuration.

OAM-04019
Work manager JNDI lookup failed. Exception:

Category:
Other

Cause:
An internal error occurred.

Action:
For more details, start logging at the FINE level.

OAM-04020
Exception encountered while processing the request message:

Category:
Other

Cause:
An internal error occurred.

Action:
For more details, start logging at the FINE level.

OAM-04021
NMP initialization failed.

Category:
Other

Cause:
The NAP handshake with the client failed or an unsupported application was trying to connect to the OAM proxy.

Action:
Verify the client version.

OAM-04022
SSL configuration is not specified for SIMPLE or CERT mode

Category:
Other

Cause:
The SSL configuration was required but not supplied for the SIMPLE or CERT mode.

Action:
Verify the SSL Configuration and rerun the operation.

OAM-04023
SSL handshake failed. Exception:

Category:
Other

Cause:
The NAP handshake with a client was not successful.

Action:
Check the client configuration.

OAM-04024
Exception in outbound message processing. Cause {0} . Message details {1}

Category:
Other

Cause:
An internal error occurred.

Action:
For more details, start logging at the FINE level.

OAM-04025
Error in connecting to Access server. {0}

Category:
Other

Cause:
An internal error occurred.

Action:
For more details, start logging at the FINE level.

OAM-04026
Error in NAP handshake with AAA server {0}

Category:
Other

Cause:
An internal error occurred.

Action:
For more details, start logging at the FINE level.

OAM-04027
Cannot create Executor instance

Category:
Other

Cause:
An internal error occurred.

Action:
For more details, start logging at the FINE level.

OAM-04028
Outbound Resource Adapter initialization error. {0}

Category:
Other

Cause:
An internal error occurred.

Action:
For more details, start logging at the FINE level.

OAM-04029
Error in generating AMEvent. Details {0}

Category:
Other

Cause:
An internal error occurred.

Action:
For more details, start logging at the FINE level.

OAM-04030
Partner lookup failed. Partner id {0}

Category:
Other

Cause:
The retrieval of partner metadata during client authentication was not successful.

Action:
Check if the partner is registered with the Access Server.

OAM-04031
NAP version mismatch during the NAP handshake. Client Message {0}

Category:
Other

Cause:
An unsupported NAP version was sent by the client.

Action:
Check the client configuration and version. Older clients may need to be upgraded.

OAM-04032
PAT API error. Details {0}

Category:
Other

Cause:
An internal error occurred.

Action:
For more details, start logging at the FINE level.

OAM-04033
Error in retrieving secret information. {0} {1}

Category:
Other

Cause:
An internal error occurred.

Action:
For more details, start logging at the FINE level.

OAM-04034
Token Cache Enabled.

Category:
Other

Cause:
Information message indicating that the token cache is enabled.

Action:

OAM-04035
Error while reading token cache size from configuration.

Category:
Other

Cause:
The cache configuration was invalid.

Action:
Fix cache configuration and rerun the operation.

OAM-04036
Channel security mode is different as specified in configuration {0}

Category:
Other

Cause:
The agent tried to communicate in a mode different from its configuration.

Action:
Check the agent mode. This may be a security issue if the configuration mode of agent is correct.

OAM-04037
Exception encountered while processing the HTTP message in OAM proxy:

Category:
Other

Cause:
An internal error occurred.

Action:
For more details, start logging at the FINE level.

OAM-04038
OAM proxy configuration parameter SSOOnlyMode is set to true. OAM proxy will skip authorization.

Category:
Other

Cause:
OAM proxy configuration parameter SSOOnlyMode is set to true.

Action:

OAM-04039
Agent {0} not privileged to invoke OPCODE {1}

Category:
Other

Cause:
Agent is not privileged to invoke the operation.

Action:
Check the agent configuration.

OAM-04040
Target Resource is not as expected. Target Resource {0} WebGate resource {1}

Category:
Other

Cause:
Target resource is not as expected. This issue may occur in session scope operations.

Action:
Runtime check failure. Check server logs.

OAM-04041
Failed to retrieve valid session from OAM Identity Assertion. Assertion {0}

Category:
Other

Cause:
Either invalid assertion was specified or session corresponding to assertion is invalid.

Action:
Please see logs for more details.

OAM-04042
Failed to check token issuance policy. Resource: {0}. Requestor: {1}

Category:
Other

Cause:
Evaluation of Token Issuance Policy failed.

Action:
Check Token Issuance Policy.

OAM-04043
Request is not processed. Access management service is disabled.

Category:
Other

Cause:
Access management service is not enabled on server.

Action:
Enable the access management service. Set oam proxy global parameter "10gCompatibleGetHostIdentifiersSupport" to true.

OAM-06001
Cannot parse the session token.

Category:
Other

Cause:
The session token is invalid or the wrong decryption key is present in the configuration.

Action:
Verify the key roll-over configuration.

OAM-10001
Cannot load the configuration file.

Category:
Other

Cause:
The configuration file location was invalid.

Action:
Verify the location of the configuration file.

OAM-10002
Cannot initialize the PAT Adapter.

Category:
Other

Cause:
The PAT configuration was invalid.

Action:
Verify the PAT configuration.

OAM-10003
Cannot initialize the Cache Handlers.

Category:
Other

Cause:
The request cache handler configuration was invalid.

Action:
Verify the request cache handler configuration.

OAM-10004
Cannot initialize the Controller.

Category:
Other

Cause:
The configuration for Controller events was invalid.

Action:
Verify the Controller configuration.

OAM-10005
Cannot initialize the Controller.

Category:
Other

Cause:
The configuration for the Flow controllerd was invalid.

Action:
Verify the Controller configuration.

OAM-10006
Cannot initialize the Controller.

Category:
Other

Cause:
The configuration for the Flow Mapping was invalid.

Action:
Verify the Controller configuration.

OAM-10007
Cannot initialize the Controller.

Category:
Other

Cause:
The configuration for the Event Handlers was invalid.

Action:
Verify the Controller configuration.

OAM-10008
Cannot initialize the Controller.

Category:
Other

Cause:
The configuration for the Event UI was invalid.

Action:
Verify the Controller configuration.

OAM-10009
Cannot initialize the Controller.

Category:
Other

Cause:
The Event Handler configuration was invalid.

Action:
Verify the Controller configuration.

OAM-10010
Cannot initialize the Controller.

Category:
Other

Cause:
The Event Factory configuration was invalid.

Action:
Verify the Controller configuration.

OAM-10011
An invalid Cookie Domain

Category:
Other

Cause:
The cookie domain was invalid.

Action:
Verify the configuration file.

OAM-10012
Cannot load audit configuration.

Category:
Other

Cause:
The audit configuration was invalid.

Action:
Verify the audit configuration.

OAM-10013
Cannot load audit configuration.

Category:
Other

Cause:
Mismatch between logger and resource configuration.

Action:
Verify the audit configuration.

OAM-10014
Invalid done URL specified during logout - {0}.

Category:
Other

Cause:
Done URL specified during logout is not in proper URL format.

Action:
Verify the done URL.

OAM-10015
Cache Info :: operation="{0}" paramName="{1}", paramDetail="{2}".

Category:
Other

Cause:
Displayed when the cache is operating.

Action:
None.

OAM-10016
Cache entry expired.

Category:
Other

Cause:
Displayed on expiry of the cached element.

Action:
None.

OAM-10017
Cannot intialize the server key.

Category:
Other

Cause:
Unable to retrieve server key from configuration.

Action:
Verify the configuration.

OAM-10018
No credcollect req resp handler specified

Category:
Other

Cause:
No credcollect req resp handler specified

Action:
Verify configuration cred collect req resp handler

OAM-12001
Cannot load audit configuration.

Category:
Other

Cause:
The specified configuration file does not exist, or the audit configuration is invalid.

Action:
Check the server error logs.

OAM-12002
User name value specified for special user is invalid.

Category:
Other

Cause:
The input value format is invalid, or exceeds 30 characters.

Action:
Correct the input value.

OAM-12003
Maximum directory size specified is invalid.

Category:
Other

Cause:
The input value format is invalid, is less than 1 or exceeds 1024.

Action:
Correct the input value.

OAM-12004
Maximum file size specified is invalid.

Category:
Other

Cause:
The input value format is invalid, is less than 1 or exceeds 1024.

Action:
Correct the input value.

OAM-12005
Map of audit events is invalid.

Category:
Other

Cause:
The audit event configuration is missing, or invalid.

Action:
Verify the configuration.

OAM-12006
Invalid path for audit event definitions file.

Category:
Other

Cause:
The audit event definitions file location is incorrect.

Action:
Verify the configuration.

OAM-12007
Invalid path for audit bustop directory.

Category:
Other

Cause:
The audit bustop location is missing, or invalid.

Action:
Verify the configuration.

OAM-12501
Getting ServerTokenMapper for: {0}.

Category:
Other

Cause:
Getting ServerTokenMapper for {0}

Action:
None

OAM-12502
Server Token Not available in the Response.

Category:
Other

Cause:
Server Token Not available in the Response.

Action:
None

OAM-12503
10g SSO_ID Token set {0} .

Category:
Other

Cause:
10g SSO_ID Token set.

Action:
None

OAM-12504
10g SSO_ID Decrypted successfully : {0}

Category:
Other

Cause:
10g SSO_ID Decrypted successfully.

Action:
None

OAM-12505
Removing the SSO_ID Cookie at Logout.

Category:
Other

Cause:
Removing the SSO_ID Cookie at Logout.

Action:
None

OAM-12506
"Creating session token with values - " + "Domain: {0}, Version: {1}, Age: {2}, Secure: {3}, " + "Value: {4}";

Category:
Other

Cause:
Created Session Token with values

Action:
None

OAM-12507
Token Version not found.

Category:
Other

Cause:
Token Version not found.

Action:
Validate the config to include the Token Version.

OAM-12508
10g SSO_ID Decryption failed.

Category:
Other

Cause:
10g SSO_ID Decryption failed.

Action:
Verify if the 10gSSO Server Key is present in the config

OAM-12509
Could not get token mapper for token for {0}.

Category:
Other

Cause:
Could not get token mapper for token.

Action:
Validate the config to include the Token Version.[v1.2, v1.4]

OAM-12510
10g SSO_ID Token NOT created.

Category:
Other

Cause:
10g SSO_ID Token NOT created.

Action:
Verify if the 10gSSO Server Key/Token Version is present in the config

OAM-12511
Error while creating SSO Transport token.

Category:
Other

Cause:
Error while creating Transport Token

Action:
Validate the config to check for the 10g SSO Server Key

OAM-12512
Cannot retrieve the 10g SSO Key

Category:
Other

Cause:
Cannot retrieve the 10g SSO Key

Action:
Validate the config to check for the 10g SSO Server Key

OAM-12513
Diagnostic Engine Failed to Start

Category:
Other

Cause:
Diagnostic Engine Failed

Action:
None

OAM-12514
Request Handling Error

Category:
Other

Cause:
Request Handling Error

Action:
None

OAM-12515
Session Token Not Found

Category:
Other

Cause:
Session Token Not Found

Action:
None

OAM-12516
10g SSO Server Config Details Missing

Category:
Other

Cause:
10g SSO Server Config Details Missing

Action:
Add the Config details to oam-config.xml

OAM-12517
OSSO 10g Server coexist token version configured does not match runtime token version

Category:
Other

Cause:
10g SSO Server coexist token version and runtime token versions does not match.

Action:
Update the OSSO 10g coexist token version to match the runtime version

OAM-14001
Unregistration of OAM Management MBean failed.

Category:
Other

Cause:
An internal error occurred.

Action:
Check the OAM Server logs.

OAM-14002
OAM Server configuration update failed.

Category:
Other

Cause:
Failed to update OAM Policy or System Configuration.

Action:
Check the OAM Server MBean logs.

OAM-14003
Invalid HostIdentifier configuration for AppDomain {0} in OAM Policy.

Category:
Other

Cause:
Definition of HostIdentifier for application domain was invalid.

Action:
Re-check Application Domain configuration in OAM Policy.

OAM-14005
Validation of a input parameter failed.

Category:
Other

Cause:
One of the input parameter value was illegal.

Action:
Check the OAM Server MBean logs.

OAM-14007
Cannot retrieve OAM Server configuration for {0}.

Category:
Other

Cause:
Cannot retrieve data from OAM System configuration.

Action:
Check the OAM Server MBean logs.

OAM-14008
Partner configuration for {0} already exist in system config.

Category:
Other

Cause:
A partner is already configured.

Action:
Delete existing partner or create partner with a different id.

OAM-14009
Application Domain not found in OAM Policy {0}.

Category:
Other

Cause:
None

Action:
None

OAM-14100
Host Information is already registered in OAM HostIdentifier with host {0} and port {1}.

Category:
Other

Cause:
None

Action:
None

OAM-14101
Starting Enable OIM Configuration.

Category:
Other

Cause:
None

Action:
None

OAM-14102
Starting Disable OIM Configuration.

OAM-14106
Completed validation of Input values.

Category:
Other

Cause:
None

Action:
None

OAM-14107
Successfully updated OAM Partner data.

Category:
Other

Cause:
None

Action:
None

OAM-14108
Successfully updated OAM Configuration.

Category:
Other

Cause:
None

Action:
None

OAM-14109
Enables OIM Integration.

Category:
Other

Cause:
None

Action:
None

OAM-14110
Disables OIM Integration.

Category:
Other

Cause:
None

Action:
None

OAM-14111
Registration of OAM Management MBean failed.

Category:
Other

Cause:
An internal error occurred.

Action:
Check the OAM Server logs.

OAM-14112
Gets the manage server host, NAP port.

Category:
Other

Cause:
None

Action:
None

OAM-14113
Updates OIM host and port.

Category:
Other

Cause:
None

Action:
None

OAM-14114
Error in getting the OAM server info.

Category:
Other

Cause:

OAM-16001
Cannot parse the session token.

Category:
Other

Cause:

Action:

OAM-18001
User Identity Store Configuration is not valid.

Category:
Other

Cause:
The user identity store configuration was missing, or was invalid.

Action:
Verify the user identity store configuration.

OAM-18002
Error while reading User Identity Store Configuration.

Category:
Other

Cause:
An internal error occurred.

Action:
For more details, start foundation config logging at FINE level.

OAM-18003
Error while reading User Identity Store Configuration attribute "{0}".

Category:
Other

Cause:
An internal error occurred.

Action:
For more details, start foundation config logging at FINE level.

OAM-18004
User Identity Store name passsed as NULL during user identity store read operation.

Category:
Other

Cause:
User Identity Store name passsed to read operation was null.

Action:
Rerun with actual object.

OAM-18005
User Identity Store ID passsed as blank during user identity store read operation.

Category:
Other

Cause:
User Identity Store ID passsed to read operation was blank.

Action:
Rerun with a valid ID.

OAM-18006
Map of Properties passed as NULL during user identity store create operation.

Category:
Other

Cause:
Map of Properties passed to create operation was null.

Action:
Rerun by passing Map of properties.

OAM-18007
Empty Map of Properties passed during user identity store create operation.

Category:
Other

Cause:
Map of Properties passed to create operation was empty.

Action:
Rerun by passing Map of properties.

OAM-18008
NULL passed during user identity store modify operation.

Category:
Other

Cause:
Object passed to modify operation was null.

Action:
Rerun with actual object.

OAM-18009
Validation Failure - an User Identity Store named "{0}" already exists.

Category:
Other

Cause:
User Identity Store names must be unique.

Action:
Choose a different name for this User Identity Store.

OAM-18010
Exception while encrypting the credetial for User Identity Store.

Category:
Other

Cause:
Exception while encrypting the crendential for User Idenity Store.

Action:
For more details, start foundation config logging at FINE level.

OAM-18011
Validation Failure - User Identity Store "{0}" is referred in following authentication schemes : "{1}".

Category:
Other

Cause:
User Identity Store is referred in authentication schemes.

Action:
Delete or change the reference of this User Identity Store from the authentication schemes that refer to it.

OAM-18012
Exception while processing the User Identity Store properties.

Category:
Other

Cause:
An internal error occurred, Unknown type found while processing.

Action:
For more details, start foundation config logging at FINE level.

OAM-18013
Exception while processing the User Identity Store properties.

Category:
Other

Cause:
An internal error occurred, type found as NULL while processing.

Action:
For more details, start foundation config logging at FINE level.

OAM-18014
Validation Failure - NULL Value passed for property "{0}".

Category:
Other

Cause:
Value found as NULL for a property.

Action:
Rerun with the value of property set.

OAM-18015
Server Configuration is not valid.

Category:
Other

Cause:
The server configuration was missing, or was invalid.

Action:
Verify the server configuration.

OAM-18016
Cannot initialize the Data Sources Manager.

Category:
Other

Cause:
Configuration store instance found null.

Action:
For more details, start logging at the FINE level.

OAM-18017
Cannot initialize the Authentication Modules Manager.

Category:
Other

Cause:
An internal error occurred.

Action:
For more details, start logging at the FINE level.

OAM-18018
Cannot initialize the Server Manager.

Category:
Other

Cause:
An internal error occurred.

Action:
For more details, start logging at the FINE level.

OAM-18019

Action:

OAM-18027
Read All : {0}.

Category:
Other

Cause:

Action:

OAM-18028
After Read All : {0} : list is : {1}.

Category:
Other

Cause:

Action:

OAM-18029
Validation Failure : "{0}" attributes missing in User Identity Store.

Category:
Other

Cause:
The required attributes were not present in the user identity store.

Action:
Add the attributes to the user identity store and rerun the operation.

OAM-18030
Validation Failure : "{0}" attributes missing in OAM Server Instance.

Category:
Other

Cause:
The required attributes were not specified for the server instance.

Action:
Add the attributes to the server instance and rerun the operation.

OAM-18031
Validation Failure : "{0}" attributes missing in {1} Authentication Module.

Category:
Other

Cause:
The required attributes were not specified for the authentication module.

Action:
Add the attributes to the authentication module and rerun the operation.

OAM-18032
Validation Failure - Object not found for deletion.

Category:
Other

Cause:
The object supplied for deletion has been deleted, or does not exist.

Action:
Use the correct data and rerun the operation.

OAM-18033
Validation Failure : {0} Module cannot be deleted. (Referred in Scheme).

Category:
Other

Cause:
The module was being referred to in a scheme.

Action:
Remove the reference from the scheme and then delete the module.

OAM-18034
Authentication module configuration is not valid.

Category:
Other

Cause:
The authentication module configuration was missing, or was invalid.

Action:
Verify the authentication module configuration.

OAM-18035
Validation Failure - a server Instance named "{0}" already exists.

Category:
Other

Cause:
Same name used for creating a new server instance.

Action:

OAM-18036
OAM Server name passed as NULL during oam server update operation.

Category:
Other

Cause:
An internal error occurred.

Action:

OAM-18037
OAM Server id passed as NULL during oam server update operation.

Category:
Other

Cause:
User Identity Store name passed to read operation was null.

Action:

OAM-18038
The response cookie configuration for update is invalid.

Category:
Other

Cause:
Invalid OSSO Proxy configuration found during configuration update.

Action:
Check the parameter passed during OSSO-Proxy configuration update.

OAM-18039
The global response cookie configuration cannot be deleted.

Category:
Other

Cause:
The global OSSO response cookie configuration delete is not allowed.

Action:
Check the parameter passed during OSSO-Proxy configuration update.

OAM-18040
Error while reading {0} Authentication Module Configuration.

Category:
Other

Cause:
An internal error occurred.

Action:
For more details, start foundation config logging at FINE level.

OAM-18041
Error while reading OAM Server Instance Configuration.

Category:
Other

Cause:
An internal error occurred.

Action:
For more details, start foundation config logging at FINE level.

OAM-18042
The Unique ID for server is null.

Category:
Other

Cause:
An internal error occurred.

Action:
For more details, start foundation config logging at FINE level.

OAM-18043
The OAM server is null.

Category:
Other

Cause:
An internal error occurred.

Action:
For more details, start foundation config logging at FINE level.

OAM-18044
Error while reading {0} OAM Server Instance Configuration.

Category:
Other

Cause:
An internal error occurred.

Action:
For more details, start foundation config logging at FINE level.

OAM-18045
OAM Server name passsed as NULL during server read operation.

Category:
Other

Cause:
User Identity Store name passsed to read operation was null.

Action:
Rerun with actual object.

OAM-18046
OAM Server ID passsed as blank during server read operation.

Category:
Other

Cause:
User Identity Store ID passsed to read operation was blank.

Action:
Rerun with a valid ID.

OAM-18047
Error while reading Kerberos Authentication Module Configuration.

Category:
Other

Cause:
An internal error occurred.

Action:
For more details, start foundation config logging at FINE level.

OAM-18048
The Unique Authn module ID is null.

Category:
Other

Cause:
An internal error occurred.

Action:
For more details, start foundation config logging at FINE level.

OAM-18049
The authn module is null.

Category:
Other

Cause:
An internal error occurred.

Action:
For more details, start foundation config logging at FINE level.

OAM-18050
Error while reading LDAP Authentication Module Configuration.

Category:
Other

Cause:
An internal error occurred.

Action:
For more details, start foundation config logging at FINE level.

OAM-18051
Error while reading X509 Authentication Module Configuration.

Category:
Other

Cause:
An internal error occurred.

Action:

OAM-24016
Unable to fetch the Server details

Category:
Other

Cause:
The WLST command execution failed.

Action:
For more details, start logging at the FINE level.

OAM-24021
TAP Redirect URL is invalid, Registration failed.

Category:
Other

Cause:
The WLST command execution failed.

Action:
For more details, start logging at the FINE level.

OAM-24022
Unable to contact the TAP Redirect URL, Registration failed.

Category:
Other

Cause:
The WLST command execution failed.

Action:
For more details, start logging at the FINE level.

OAM-24023
TAP Redirect URL is null, Registration failed.

Category:
Other

Cause:
The WLST command execution failed.

Action:
For more details, start logging at the FINE level.

OAM-24024
Exception fetching the authentication scheme, Registration failed.

Category:
Other

Cause:
The WLST command execution failed.

Action:
For more details, start logging at the FINE level.

OAM-24025
TAP Key generation error.

Category:
Other

Cause:
The WLST command execution failed.

Action:
For more details, start logging at the FINE level.

OAM-24026
TAP Key store generation error.

Category:
Other

Cause:
The WLST command execution failed.

Action:
For more details, start logging at the FINE level.

OAM-24027
TAP Partner Registration Successful.

Category:
Other

Cause:
The WLST command execution failed.

Action:
For more details, start logging at the FINE level.

OAM-24028
Error while retrieving keystore password using MBean connection.

Category:
Other

Cause:
Error while retrieving keystore password using MBean connection.

Action:
Error while retrieving keystore password using MBean connection.

OAM-24029
One of the mandatory values is null

Category:
Other

Cause:
The WLST command execution failed.

Action:
For more details, start logging at the FINE level.

OAM-24030
Closing the stream failed.

Category:
Other

Cause:
The WLST command execution failed.

Action:
For more details, start logging at the FINE level.

OAM-24031
Error in wrap and unwrap.

Category:
Other

Cause:
The WLST command execution failed.

Action:
For more details, start logging at the FINE level.

OAM-24032
Osso proxy cookie value is empty.

Category:
Other

Cause:
The WLST command execution failed.

Action:
For more details, start logging at the FINE level.

OAM-24033
Cannot find LdapProperties file

Category:
Other

Cause:
The WLST command execution failed.

Action:
For more details, start logging at the FINE level.

OAM-24034
TAP Scheme not available to update TAPRedirect URL

Category:
Other

Cause:
The WLST command execution failed.

Action:
For more details, start logging at the FINE level.

Cause:
An internal error occurred.

Action:
For more details, start remote registration logging at FINE level.

OAM-30009
Application domain with the same name already exists. Registration failed. Try again after providing a unique application domain(agent name).

Category:
Other

Cause:
Application domain name is not unique.

Action:
Try again after providing a unique application domain(agent name).

OAM-30010
Anonymous authentication scheme does not exist so initial public authn policy cannot be created. Registration failed.

Category:
Other

Cause:
An internal error occurred as anonymous scheme does not exist.

Action:
For more details, start remote registration logging at FINE level.

OAM-30011
The host:port is not unique. A different host identifier with name : "{0}" already exists for this host:port.

Category:
Other

Cause:
AgentBaseUrl specified is already registered under a different hostidentifier name.

Action:
Try again after entering a unique agentBaseUrl value.

OAM-30012
Error in encrypting the secret key. Registration failed.

Category:
Other

Cause:
An internal error occurred. Error in encrypting the secretkey.

Action:
Try again after checking server configuration.

OAM-30013
Error in generating the secret key. Registration failed: {0}

Category:
Other

Cause:
An internal error occurred. Error in creating the secretkey.

Action:

OAM-30014
GlobalPassphrase retrieved from server configuration is null. Registration failed.

Category:
Other

Cause:
An internal error occurred. Error in retrieving globalPassphrase.

Action:

OAM-30015
Error in decrypting the encrypted globalPassphrase. Registration failed.

Category:
Other

Cause:
An internal error occurred. Error in decrypting the retrieved globalPassphrase.

Action:

OAM-30016
Error in obfuscating the decrypted globalPassphrase. Registration failed.

Category:
Other

Cause:
An internal error occurred. Error in obfuscating the decrypted globalPassphrase.

Action:

OAM-30017
Internal error occurred. One of the mandatory response parameters is null. Registration failed.

Category:
Other

Cause:
An internal error occurred. One or more of the mandatory response fields is empty.

Action:

OAM-30018
Internal error occurred. No response generated, due to either bad input or backend failure. See log file for details.

Category:
Other

Cause:
An internal error occurred. No response generated due to backend failure.

Action:
See log file for details.

OAM-30019
Exception encountered either while creating or writing to the native config file : {0}

Category:
Other

Cause:
An internal error occurred during creation of native config file

Action:

OAM-30020
Exception encountered while writing to the output password file : {0}

Category:
Other

Cause:
An internal error occurred during creation of output password.xml file

Action:

OAM-30021
Error in obfuscating the OSSO agent's output config file (osso.conf). Registration failed.

Category:
Other

Cause:
An internal error occurred. Error in obfuscating the created osso.conf config file.

Action:

OAM-30022
Error in creating the credential store (wallet) : {0}

Category:
Other

Cause:
An internal error occurred. Error in creating the creating the credential store (wallet).

Action:

OAM-30023
Error in storing the secretKey in the credential store (wallet): {0}

Category:
Other

Cause:
An internal error occurred. Error in storing the secretkey in the credential store (wallet).

Action:

OAM-30024
Error occurred while parsing the XML file. Error message is : "{0}" at column number : "{1}" and at line number : "{2}"

Category:
Other

Cause:
The XML file provided is invalid or not well-formed.

Action:
Try again after verifying syntax and well-formedness of the XML as per the schema.

OAM-30025
Malformed registration request xml string : "{0}" - {1}

Category:
Other

Cause:
The XML request string generated is malformed.

Action:
Internal error during parsing. Check the input request xml and try again.

OAM-30026
{0}

Category:
Other

Cause:

Action:

OAM-30027
Error in unmarshalling operation : {0}

Category:
Other

Cause:
Error in unmarshalling the XML data.

Action:
Try again after verifying syntax and well-formedness of the XML as per the schema.

OAM-30028
Error in setting the validation schema : {0}

Category:
Other

Cause:
Error in setting the validation schema

Action:

OAM-30029
Error in setting the validation event handler : {0}

Category:
Other

Cause:
Error in setting the validation event handler

Action:

OAM-30030
Error in marshalling operation : {0}

Category:
Other

Cause:
Error in marshalling the data.

Action:

OAM-30031
The character encoding being used is not supported : {0}

Category:
Other

Cause:
Internal error. Unsuppported character encoding being used.

Action:

OAM-30032
Exception encountered while writing to the certificate file : "{0}". Error message is: {1}

Category:
Other

Cause:
An internal error occurred during creation of output password.xml file

Action:

OAM-30033
Certificates could not be retrieved from the server location. Registration failed: {0}

Category:
Other

Cause:
An internal error occurred. Error in retrieving the certificates.

Action:

OAM-30034
Error while reading the certificate file stream. Registration failed: {0}

Category:
Other

Cause:
An internal error occurred. Error in retrieving the certificates.

Action:

OAM-30035
Server instance is not running for the security mode specified: "{0}".

Category:
Other

Cause:
Server instance not running for the security mode specified.

Action:

OAM-30036
Internal server error. No server instances are running.

Category:
Other

Cause:
Internal server error occurred. No server instances exist.

Action:

OAM-30037
Server instance is not running for the security mode specified: "{0}". Try again using a different security mode.

Category:
Other

Cause:
Server instance not running for the security mode specified

Action:
Try again using a different security mode

OAM-30038
Internal server error. There are no server instances running. Registration failed. Please try again later.

Category:
Other

Cause:

Action:

OAM-30039
Default security mode picked up for agent is: "{0}".

Category:
Other

Cause:

Action:

OAM-30040
Could not retrieve the timeout cookie name and timeout cookie key information from the server configuration. Registration failed.

Category:
Other

Cause:
An internal error occurred. Error in retrieving timeout cookie name and timeout cookie key for the agent.

Action:

OAM-30041
Error while generating the cipher key or mask for the agent. Registration failed: {0}

Category:
Other

Cause:
An internal error occurred. Error in generating the cipher key or mask for the agent.

Action:

OAM-30042
Error in decrypting the secret key while passing back in the response. Registration failed.

Category:
Other

Cause:
An internal error occurred. Error in decrypting the secretkey while passing back in the response.

Action:

OAM-30043
Agent type in the request is either null or unidentified. Please try again after verifying the agent type.

Category:
Other

Cause:
Agent type that is passed in the request object is invalid.

Action:
Try again after checking the agent type that is specified.

OAM-30044
Internal error while encrypting/obfuscating the password. Registration failed: {0}

Category:
Other

Cause:
An internal error occurred. Error in encrypting/obfuscating the password.

Action:

OAM-30045
The hostIdentifier string: "{0}" has already been added to an existing hostIdentifier called: "{1}". Try again after deleting the host entry from the existing hostIdentifier or registering with a new hostIdentifier name.

Category:
Other

Cause:
The hostIdentifier string specified is already registered under a different hostidentifier name.

Action:
Try again after deleting the host entry from the existing hostIdentifier or registering with a new hostIdentifier name.

OAM-30046
{0} mode failed. Agent does not exist.

Category:
Other

Cause:
Agent is not found.

Action:

OAM-30047
Agent is found, but application domain does not exist. Agent could be in different application domain.

Category:
Other

Cause:
The Application Domain is not found.

Action:
For validation, application domain name is agent name.

OAM-30048
Url is not valid. Ensure that URL is of the format http://example.domain.com:port or https://example.domain.com:port, where port number is optional.

Category:
Other

Cause:
Url is not valid.

Action:

OAM-30049
Exception encountered while creating the logout.html script file : {0}

Category:
Other

Cause:
An internal error occurred while creating the logout.html script file

Action:

OAM-30050
In DELETEMODE, agent profile deleted successfully, however, artifacts output directory was not present or could not be deleted for the agent name: "{0}" at the output folder location: "{1}". Please delete the folder manually.

Category:
Other

Cause:

Action:

OAM-30051
In DELETEMODE, agent profile and artifacts output directory was successfully deleted for the agent name: "{0}" at the server side output folder location: "{1}".

Category:
Other

Cause:

Action:

OAM-30052
Exception encountered while updating agent profile. Update of agent failed. {0}

Category:
Other

Cause:
An internal error occurred while updating agent profile

Action:

OAM-30053
Application domain does not exist. Policy update failed.

Category:
Other

Cause:
The Application Domain is not found.

Action:
Verify that the application domain you want to update exists and then try again.

OAM-30054
Host identifier does not exist or is empty. {0} mode failed.

Category:
Other

Cause:
The Hostidentifier is not found.

Action:
Verify that the hostidentifier you want to update exists and then try again.

OAM-30055
The host: "{0}" and port: "{1}" is already present under the hostIdentifier: "{2}" and was not added again.

Category:
Other

Cause:
The hostPortVariation specified is already registered under an existing hostidentifier name, so it will not be added again.

Action:

OAM-30056
Application domain already exists. policyCreate mode failed. Use policyUpdate mode to update existing application domains.

Category:
Other

Cause:
For policyCreate mode, application Domain already exists.

Action:
Try again using policyUpdate mode to update existing application domains.

OAM-30057
Create policy resource exception. {0} URI={1}

Category:
Other

Cause:
create resource failed. resouce/uri format is not valid.

Action:

OAM-30058
Agent name {0} exceeds maximum allowed length of {1} characters.

Category:
Other

Cause:
The name of the agent being created was too long.

Action:
Try again using a shorter name.

OAM-30059
The user-specified managed server name/id: "{0}" does not exist. Registration failed. Please try again after specifying valid server name.

Category:
Other

Cause:
The user-specified managed server name/id is invalid.

Action:
Try again after providing a valid server name.

OAM-30060
Internal server error. The location "{0}" is invalid or does not exist in configuration. Registration failed.

Category:
Other

Cause:
Internal server error. The specified location in the config file is invalid or not existing.

Action:

OAM-30061
isFusionAppRegistration flag was set to: "{0}" and SSOOnlyMode field was set to true.

Category:
Other

Cause:

Action:

OAM-30062
isFusionAppRegistration flag was set to: "{0}" and denyOnNotProtected field was set to false(0).

Category:
Other

Cause:

Action:

OAM-30063
Agent type mismatch: Incoming agent request is of type: "{0}" , but the existing agent profile type in the server is: "{1}". Registration failed. Please try again after using agent name of the same type.

Category:
Other

Cause:
Incoming agent type does not match with the agent type already registered in the server.

Action:
Verify that the agentName belongs to the same type and try again.

OAM-30064
Agent version mismatch: Incoming agent request is of the correct type: "{0}" , but the version is: "{1}" , while the existing agent version in the server is: "{2}". Registration failed. Please try again after using agent name of the same version.

Category:
Other

Cause:
Incoming agent type is the same, however, does not match the agent version already registered in the server.

Action:
Verify that the agentName belongs to the same version and try again.

OAM-30065
Registration failed. Error in finding or reading the template file {0} for agent:{1} of type:{2}. - {3}

Category:
Other

Cause:
An internal error occurred: the template file was not found or could not be opened.

Action:

OAM-30066
Warning: The host:port variation - {0}:{1} is not present under the hostIdentifier - {2} and so was not deleted.

Category:
Other

Cause:
The host:port variation is not present under the given hostIdentifier

Action:
Verify that the host:port variation you are passing is actually present

OAM-30067
Warning: HostIdentifier {0} cannot be empty, so added this host:port entry back to it - {1}:{2}

Category:
Other

Cause:
The hostIdentifier cannot be empty, so cannot delete all host:port entries under it

Action:
Adds the last entry being deleted back to the hostIdentifier

OAM-30068
Warning: None of the given host:port variations are present for the hostIdentifier- {0} , so nothing to delete.

Category:
Other

Cause:
None of the specified host:port variations are present under the hostIdentifier

Action:
Check the host:port variations list being passed and try again

OAM-30069
Notification: The initial protected authn policy is created.

ODI-1200
Session start failure: the request is incorrectly formed.

Category:
Other

Cause:
A malformed request was sent to the agent.

Action:
Verify the request format and parameters sent to the agent.

ODI-1201
Session start failure on agent {0}: JDBC connection error occurs while connecting to the master repository.

Category:
Other

Cause:
An incorrect connection was used for the master repository database, or repository database was down.

Action:
Verify the master repository connection information and the status of the master repository database.

ODI-1202
Session start failure on agent {0}: data source for master repository does not contain a master repository.

Category:
Other

Cause:
The master repository connection information pointed to a database schema that did not contain a master repository.

Action:
Verify the master repository connection information.

ODI-1203
Session start failure on agent {0}: the master repository is in an invalid state.

Category:
Other

Cause:
The master repository was in a state that did not allow connections. This is the case if an upgrade was being performed.

Action:
Verify the state of the master repository.

ODI-1204
Session start failure on agent {0}: the master repository version {1} is not compatible with the agent version {2}.

Category:
Other

Cause:
The master repository was upgraded but not this agent, or the agent was upgraded but not the master repository.

Action:
Upgrade the master repository version or the agent version.

ODI-1205
Session start failure on agent {0}: an authentication error occurred while connecting to the master repository.

Category:
Other

Cause:
An incorrect ODI user or password was specified for this master repository.

Action:
Verify the ODI user and password used for connecting.

ODI-1206
Session start failure on agent {0}: the agent is not defined in the topology for master repository.

Category:
Other

Cause:
The session was not found in the master repository.

Action:
Verify that a session with this ID exists in the repository.

ODI-1207
Session start failure on agent {0}: JDBC connection error occurs while connecting to the work repository {1}.

Category:
Other

Cause:
An incorrect connection was used for the work repository database, or repository database was down.

Action:
Verify the work repository connection information and the status of the work repository database.

ODI-1208
Session start failure on agent {0}: database schema {1} does not contain a work repository.

Category:
Other

Cause:
The work repository connection information pointed to a database schema that did not contain a work repository.

Action:
Verify the work repository connection information.

ODI-1209
Session start failure on agent {0}: work repository {1} is in an invalid state.

Category:
Other

Cause:
The work repository was in a state that did not allow connections. This is the case if an upgrade was being performed.

Action:
Verify the state of the work repository.

ODI-1210
Session start failure on agent {0}: work repository {1} version {2} is not compatible with the agent version {3}.

Category:
Other

Cause:
The work repository was upgraded but not this agent, or the agent was upgraded but not the work repository.

Action:
Upgrade the work repository version or the agent version.

ODI-1211
Session start failure on agent {0}: work repository {1} is not bound to the master repository.

Category:
Other

Cause:
The work repository specified in the request was not found in the list of work repositories attached to this master.

Action:
Verify that work repository name matches an existing one.

ODI-1212
Session preparation failure: scenario {0} does not exist in work repository {1}.

Category:
Other

Cause:
The session request was received, but the agent was unable to find the named scenario in the work repository.

Action:
Verify that the scenario name matches an existing scenario name in the work repository.

ODI-1213
Session preparation failure: scenario {0} version {1} does not exist in work repository {2}.

Category:
Other

Cause:
The session request was received, and the scenario existed in the work repository, but not with the specified version.

Action:
Ensure that the scenario version matches an existing scenario version in the work repository.

ODI-1214
Session preparation failure: context {0} does not exist in the master repository.

Category:
Other

Cause:
The session request was received, but the agent was unable to find the context in the master repository.

Action:
Ensure that the context matches an existing context code in the Topology.

ODI-1215
Session preparation failure: privileges are insufficient to run scenario {0}.{1} in repository {2}.

Category:
Other

Cause:
User privileges were not sufficient for running this scenario in this repository.

Action:
Ensure that the user has sufficient privileges for this task.

ODI-1216
Session preparation failure: insufficient privileges to use Context {0} ({1}).

Category:
Other

Cause:
User privileges were not sufficient for using this context.

Action:
Ensure that the user has sufficient privileges for this task.

ODI-1217
Session {0} ({1}) fails with return code {2}.

Category:
Other

Cause:
The session finished in an error state.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer.

ODI-1218
Session preparation failure: database error occurs while connecting to the master repository.

Category:
Other

Cause:
The agent received a database error from the master repository while creating the session.

Action:
Verify the state of the master repository database.

ODI-1219
Session preparation failure: database error while connecting to work repository {0}.

Category:
Other

Cause:
The agent received a database error from the work repository while creating the session.

Action:
Verify the state of the work repository database.

ODI-1220
Session preparation failure: an unexpected exception occurred.

Category:
Other

Cause:
The remote agent faced an unexpected error while attempting to create the session.

Action:
Contact Oracle Support Services. Provide the error message, a description of the action causing this fault, and the exception stack trace in the log files (with the logging level set to debug mode).

ODI-1221
Unable to restart session {0}: session is not found in work repository {1}.

Category:
Other

Cause:
The session to restart did not exist in the repository. This session may have been deleted, or an incorrect session ID or work repository was supplied.

Action:
Verify that a session with this ID exists in the repository.

ODI-1222
Session start failure on agent {0}: logical schema {1} cannot be found in the master repository.

Category:
Other

Cause:
The object to be executed referred to a logical schema not present in the master repository.

Action:
Ensure that the logical schema configuration exists in your master repository.

ODI-1223
Database error while connecting to the master repository.

Category:
Other

Cause:
The connection for the master repository database was incorrect, or the repository database was down.

Action:
Verify the master repository connection information and the status of the master repository database.

ODI-1224
Database error while connecting to work repository {0}

Category:
Other

Cause:
The connection for the work repository database was incorrect, or the repository database was down.

Action:
Verify the work repository connection information and the status of the master repository database.

ODI-1225
An unexpected exception occurred.

Category:
Other

Cause:
The agent faced an unexpected exception.

Action:
Contact Oracle Support Services. Provide the error message, a description of the action causing this fault, and the exception stack trace in the log files (with the logging level set to debug mode).

ODI-1226
Step {0} fails after {1} attempt(s).

Category:
Other

Cause:
This is an execution warning. The session step failed to execute after the maximum number of retries. If step failure was not handled in the package design, the session finished in an error state.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer.

ODI-1227
Task {0} fails on the source connection {1}.

Category:
Other

Cause:
This is an execution warning. The command on the source for this task finished with an error.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer.

ODI-1228
Task {0} fails on the target connection {1}.

Category:
Other

Cause:
This is an execution warning. The command on the target for this task finished with an error.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer.

ODI-1229
An error occurred while performing a {0} operation on model code {1}.

Category:
Other

Cause:
This is an execution warning. The operation specified failed on the model.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer.

ODI-1231
An error occurred while performing a {0} operation on datastore {1}.

Category:
Other

Cause:
This is an execution warning. The operation specified failed on the datastore.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer.

ODI-1232
Procedure {0} execution fails.

Category:
Other

Cause:
This is an execution warning. The procedure execution failed.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer.

ODI-1233
Error while evaluating variable the following expression: {0} {1} {2}

Category:
Other

Cause:
This is an execution warning. The variable evaluation failed.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer.

ODI-1235
Error while incrementing variable {0} to value {1}

Category:
Other

Cause:
This is an execution warning. The variable increment failed.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer.

ODI-1236
Error while refreshing variable {0}.

Category:
Other

Cause:
This is an execution warning. The variable refresh failed.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer.

ODI-1237
Error while setting variable {0} to value {1}.

Category:
Other

Cause:
This is an execution warning. The set variable operation failed.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer.

ODI-1238
Flow {0} fails because the maximum number of allowed errors ({1} rows) is exceeded during the flow check. This flow loads target table {2}.

Category:
Other

Cause:
This is an execution warning. The interface failed because the number of errors detected in the flow exceeded the value defined in the interface.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer. Review the erroneous records for this interface in the error table.

ODI-1239
Flow {0} fails because the maximum percentage of allowed errors ({1} %) is exceeded during the flow check. This flow loads target table {2}.

Category:
Other

Cause:
This is an execution warning. The interface failed because the percentage of errors detected in the flow exceeded the value defined in the interface.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer. Review the erroneous records for this interface in the error table.

ODI-1240
Flow {0} fails while performing a {1} operation. This flow loads target table {2}.

Category:
Other

Cause:
This is an execution warning. The interface failed because one of the statements returned an error return code.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer.

ODI-1241
Oracle Data Integrator tool execution fails.

Category:
Other

Cause:
This is an execution warning. The tool execution failed.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer.

ODI-1242
Operating system command execution fails.

Category:
Other

Cause:
This is an execution warning. Execution of the operating system command failed.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer.

ODI-1243
Session {0} ({1}) fails because work repository {2} went down.

Category:
Other

Cause:
Work repository database went down while session was being executed.

Action:
Verify the state of the work repository database. The session must be restarted.

ODI-1244
Session {0} {1} was prepared successfully but fails because work repository {2} went down before execution could begin.

Category:
Other

Cause:
Work repository database went down while session was starting its execution.

Action:
Verify the state of the work repository database. The session must be restarted.

ODI-1245
Session preparation failure: work repository {0} went down during session preparation.

Category:
Other

Cause:
Work repository went down while session was being prepared.

Action:
Verify the state of the work repository database. The session must be restarted.

ODI-1246
The Logical Schema has not been set for {0}.

Category:
Other

Cause:
Because the logical schema had not been set, the object could not be executed.

Action:
Verify the object that you are trying to execute, and set the logical schema for this object.

ODI-1247
Session {0} {1} was prepared successfully but fails because master repository went down before execution could begin.

Category:
Other

Cause:
Master repository database went down while session was starting its execution.

Action:
Verify the state of the master repository database. The session must be restarted.

ODI-1248
Session preparation failure by Agent {0}: master repository went down during session preparation.

Category:
Other

Cause:
Master repository went down while session was being prepared.

Action:
Verify the state of the master repository database. The session must be restarted.

ODI-1249
Session {0} ({1}) fails because master repository went down.

Category:
Other

Cause:
Master repository database went down while session was being executed.

Action:
Verify the state of the master repository database. The session must be restarted.

ODI-1250
Session {0} ({1}) could not be stopped by Agent {2} because session {0} {1} already completed execution.

Category:
Other

Cause:
The session has already completed and cannot be stopped.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer.

ODI-1251
Session ({0}) could not be stopped by Agent {1} because session ({0}) was not found in work repository {2}.

Category:
Other

Cause:
The session was not found in the work repository.

Action:
Verify that a session with this ID exists in the repository.

ODI-1252
Session ({0}) could not be stopped by Agent {1}: insufficient privileges to access session.

Category:
Other

Cause:
User privileges were not sufficient for accessing this session in this agent.

Action:
Ensure that the user has sufficient privileges for this task.

ODI-1253
Session {0} ({1}) could not be stopped by Agent {2}: an unknown error occurred.

Category:
Other

Cause:
An unexpected Exception occurred.

Action:
Verify your Agent configuration and make sure other operations on Agent are working correctly.

ODI-1254
Session {0} ({1}) could not be stopped by Agent {2}: a JDBC error occurred on work repository {3}.

Category:
Other

Cause:
The agent had incorrect connection for the work repository database, or repository database was down.

Action:
Verify the work repository connection information and the status of the work repository database.

ODI-1255
Session {0} ({1}) could not be stopped by Agent {2}: insufficient privileges to stop the session.

Category:
Other

Cause:
User privileges were not sufficient for stopping this session in this agent.

Action:
Ensure that the user has sufficient privileges for this task.

ODI-1256
Session {0} ({1}) stopped (Normal) by user {2}.

Category:
Other

Cause:
Session was stopped by the user.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer.

ODI-1257
Session {0} ({1}) stopped (Immediate) by user {2}.

Category:
Other

Cause:
Session was stopped by the user.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer.

ODI-1258
Session {0} ({1}) stopped (Abort) by user {2}.

Category:
Other

Cause:
Session was aborted by the user.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer.

ODI-1259
Session Task {0} stopped (Normal) by user {1}.

Category:
Other

Cause:
Task was stopped by the user.

Action:
Review the task execution details in the Operator Navigator or Repository Explorer.

ODI-1260
Session Task {0} stopped (Immediate) by user {1}.

Category:
Other

Cause:
Task was stopped by the user.

Action:
Review the task execution details in the Operator Navigator or Repository Explorer.

ODI-1261
Session Task {0} stopped (Abort) by user {1}.

Category:
Other

Cause:
Task was aborted by the user.

Action:
Review the task execution details in the Operator Navigator or Repository Explorer.

ODI-1262
Session {0} ({1}) could not be stopped by Agent {2}: a JDBC error occurred on master repository.

Category:
Other

Cause:
The agent had incorrect connection for the master repository database, or repository database was down.

Action:
Verify the master repository connection information and the status of the master repository database.

ODI-1263
Step {0} stopped (Normal) by user {1}.

Category:
Other

Cause:
Step was stopped by the user.

Action:
Review the step execution details in the Operator Navigator or Repository Explorer.

ODI-1264
Step {0} stopped (Immediate) by user {1}.

Category:
Other

Cause:
Step was stopped by the user.

Action:
Review the step execution details in the Operator Navigator or Repository Explorer.

ODI-1265
Step {0} stopped (Abort) by user {1}.

Category:
Other

Cause:
Step was aborted by the user.

Action:
Review the step execution details in the Operator Navigator or Repository Explorer.

ODI-1266
Agent {0} detected Session as stale session and set to error status.

Category:
Other

Cause:
The agent detected a stale session and the session status was set to error status.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer.

ODI-1267
Session ({0}) could not be stopped by Agent {1} because stop type {2} provided in the request is an invalid stop type.

Category:
Other

Cause:
The agent attempted to stop a session with an invalid stop type.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer.

ODI-1268
Agent {0} does not support stopping asynchronous child sessions.

Category:
Other

Cause:
The agent attempted to stop an asynchronous child session and this is not supported.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer.

ODI-1269
Session {0} ({1}) could not be stopped by Agent {2}: session is being run by another Agent with the same name.

Category:
Other

Cause:
The agent attempted to stop a session that is being run by a different agent.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer.

ODI-1270
Session {0} ({1}) could not be stopped by Agent {2}: session {0} ({1}) is being run by {3} Agent which is not a listener Agent.

Category:
Other

Cause:
The agent attempted to stop a session that is being run by the internal agent and this is not supported.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer.

ODI-1271
The asynchronous jndi name cannot be null for asynchronous jobs. The ESS job status cannot be updated.

Category:
Other

Cause:
The agent attempted to set the status of the asynchronous ESS job and its jndi name was not set.

Action:
Review the jndi name supplied to the Enterprise Scheduler job.

ODI-1272
The Logical Schema has not been set on {0} for {1}.

Category:
Other

Cause:
The logical schema for this object has not been set.

Action:
Verify that the logical schema has been set in the Topology.

ODI-1273
The selected technology {0} is not supported on source for {1}.

Category:
Other

Cause:
The selected technology is not supported for this object.

Action:
Verify that the object has a valid technology.

ODI-1274
Agent Exception

Category:
Other

Cause:
An error was detected by the agent when performing an operation.

Action:
Review the underlying exception for more details.

ODI-1275
An error occurred while performing a {0} operation on submodel step {1} of the model code {2}.

Category:
Other

Cause:
This is an execution warning. The operation specified failed on the submodel operation.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer.

ODI-1276
An error occurred while executing the OnConnect command on JDBC connection created for data server {0} with transaction label {1}.

Category:
Other

Cause:
An error was occurred while executing the OnConnect command on the JDBC connection created to the data server.

Action:
Review the underlying exception and update the OnConnect command definition configured for the data server.

ODI-1277
An error occurred while executing the OnDisconnect command on JDBC connection created for data server {0} with transaction label {1}.

Category:
Other

Cause:
An error was occurred while executing the OnDisconnect command on the JDBC connection created to the data server.

Action:
Review the underlying exception and update the OnDisconnect command definition configured for the data server.

ODI-1278
Load plan instance {0}, run {1} does not exist in work repository {2}.

Category:
Other

Cause:
The Load Plan Instance run does not exist in the repository. This Load Plan Instance run may have been deleted, or an incorrect instance ID/run number or work repository was supplied.

Action:
Verify that a load plan instance run with this instance ID and run number exists in the repository.

ODI-1279
The Source Logical Schema {0} and Context {1} of the task {2} are not mapped to any Physical Schema.

Category:
Other

Cause:
The Logical Schema to Physical Schema Mapping is not defined for the Context used.

Action:
For the Context used define the Logical Schema to Physical Schema Mapping in the Topology.

ODI-1280
The Target Logical Schema {0} and Context {1} of the task {2} are not mapped to any Physical Schema.

Category:
Other

Cause:
The Logical Schema to Physical Schema Mapping is not defined for the Context used.

Action:
For the Context used define the Logical Schema to Physical Schema Mapping in the Topology.

ODI-1281
Source Technology {0} of task {1} is not of JDBC Type. When both Source and Target commands are specified, the Source Technology should be of JDBC type.

Category:
Other

Cause:
When Source and Target commands are specified, the Source Technology should always be of JDBC type.

Action:
Make Sure that you modify your Procedure or KM to either use a JDBC Source Technology or edit your step to use only the Target command.

ODI-1282
Invalid log level {0} is specified. A valid log level value is between {1} and {2}.

Category:
Other

Cause:
Invalid log level specified for scenario/session invocation or for session restart.

Action:
Please specify a valid log level.

ODI-1283
Owb preparation failure: Owb object {0} of type {1} in location {2} does not exist in Owb repository {3}.

Category:
Other

Cause:
The session request was received, but the agent was unable to find the named Owb object in the Owb repository.

Action:
Verify that the Owb object name matches an existing Owb object in the location in the Owb repository.

ODI-1284
Session {0} ({1}) with Owb audit Id {2} fails.

Category:
Other

Cause:
The session finished in an error state.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer.

ODI-1285
Session {0} ({1}) Retreival of audit for auditId {2} failed in the {3} phase {4}. Please use OWB Design Client or Browser for further information.

Category:
Other

Cause:
An error was raised during the retreival of the Owb audit data.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer. Also please use OWB Design Client or Browser for further information.

ODI-1286
Session {0} ({1}) could not find Owb job for this session.

Category:
Other

Cause:
The session being aborted is not an Owb Job.

Action:
Review the session being aborted in the Operator Navigator or Repository Explorer.

ODI-1287
Session {0} ({1}) with Owb audit Id {2} is in an invalid state to be aborted.

Category:
Other

Cause:
The session being aborted is not in a state that can be aborted.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer. Also please use OWB Design Client or Browser for further information.

ODI-1288
Session {0} ({1}) with Owb audit Id {2} abort fails.

Category:
Other

Cause:
The session abort finished in an error state.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer. Also please use OWB Design Client or Browser for further information.

ODI-1289
Agent {0} detected Session as stale session and set to error status. Please use OWB Design Client or Browser for further information.

Category:
Other

Cause:
The agent detected a stale OWB session and the session status was set to error status.

Action:
Review the session execution details in the OWB Design Client or Browser.

ODI-1290
Session {0} ({1}) Loading of audit for auditId {2} failed in the {3} phase {4}.

Category:
Other

Cause:
An error was raised during the loading of the Owb audit data.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer. Also please use OWB Design Client or Browser for further information.

ODI-1291
Workspace {0} cannot be resolved to a physical workspace using context {1}.

Category:
Other

Cause:
The context does not contain a mapping for the logical workspace.

Action:
Review the mappings defined in the context.

ODI-1292
An execution context cannot be determined for this job.

Category:
Other

Cause:
An execution context cannot be determined for this job.

Action:
Use the Context to provide an explicit context for this execution.

ODI-1293
Exception occurred during spawning of ECID to child session.

Category:
Other

Cause:
Spawning of ECID from parent session to child session failed.

Action:
Review the exception raised to get more detail.

ODI-1294
Unwrapping of a wrapped ECID [{0}] failed.

Category:
Other

Cause:
Unwrapping of ECID failed.

Action:
Review the exception raised and the format of wrapped ECID to get more detail on unwrap failure

ODI-1295
Cleanup of Session {0} ({1}) raised the following {2} messages: {3}

Category:
Other

Cause:
Messages were raised during the Cleanup phase.

Action:
Review the messages raised during the Cleanup and you may need to perform some manual cleanup.

ODI-1296
The Cleanup Tool encountered the following {0} nested errors when executing the Cleanup tasks: {1}

Category:
Other

Cause:
Messages were raised during the Cleanup tool execution.

Action:
Review the messages raised during the Cleanup and you may need to perform some manual cleanup.

ODI-1297
Parallel task "{0}" failed; {1} child task(s) in error; Failed child tasks: {2}

Category:
Other

Cause:
null

Action:
null

ODI-1298
Serial task "{0}" failed because child task "{1}" is in error.

Category:
Other

Cause:
null

Action:
null

ODI-1299
A task "{0}" from one of the parallel branches has failed. Hence aborting the current branch

Category:
Other

Cause:
null

Action:
null

ODI-1300
ASYNC_JNDI_NAME cannot be null for async job.

Category:
Other

Cause:

Action:

ODI-1301
Unable to submit Job Definition: {0}

Category:
Other

Cause:

Action:

ODI-1302
Logical Agent {0} must be mapped to a Physical Agent in the ContextCode {1}

Category:
Other

Cause:

Action:

ODI-1303
RuntimeSessionfactory must not be null.

Category:
Other

Cause:

Action:

ODI-1304
Unable to find request for ID {0}

Category:
Other

Cause:

Action:

ODI-1305
jobDefinitionId must not be null

Category:
Other

Cause:

Action:

ODI-1306
scheduleDefinitionId must not be null

Category:
Other

Cause:

Action:

ODI-1307
ContextCode is null, cannot lookup physical agent

Category:
Other

Cause:

Action:

ODI-1308
SchedulingService object was created without an EntityManager, cannot lookup physical agent

Category:
Other

Cause:

Action:

ODI-1309
Unable to find logical agent : {0}.

Category:
Other

Cause:

Action:

ODI-1310
Unable to find context : {0}.

Category:
Other

Cause:

Action:

ODI-1311
JobDefinition with name {0} already exists.

Category:
Other

Cause:
JobDefinition already exists.

Action:
Check JobDefinition name.

ODI-1312
Schedule with name {0} already exists.

Category:
Other

Cause:
Schedule already exists.

Action:
Check Schedule name.

ODI-1313
Unable to find job definition for ID {0}.

Category:
Other

Cause:
Wrong ID.

Action:
Check ID.

ODI-1314
Unable to find job definition with name {0}.

Category:
Other

Cause:
Wrong name.

Action:
Check name.

ODI-1315
Unable to update job definition.

Category:
Other

Cause:
Exception during updating.

Action:
Check cause exception details.

ODI-1316
Unable to remove job request.

Category:
Other

Cause:
Exception was thrown.

Action:
Check cause exception details.

ODI-1317
Unable to find scheduler definition with name {0}.

Category:
Other

Cause:
Wrong name.

Action:
Check name.

ODI-1318
jobDefnition is required to have a not null ID.

Category:
Programmatic

Cause:
Metadata Object ID is null.

Action:
Check job definition.

ODI-1319
Error while refreshing variable {0}. Null/Empty refresh query is provided.

Category:
Other

Cause:
This is an execution warning. The variable refresh failed.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer.

ODI-1320
Session start/restart failure on agent {0}: the session {1} is not in status WAITING, ERROR or WARNING

Category:
Other

Cause:
The session cannot be started/restarted because it is not in status WAITING, ERROR or WARNING

Action:
Verify that a session with this ID exists in the repository and status WAITING, ERROR or WARNING.

ODI-1350
Credential map key "{0}" not found in credential map "{1}".

Category:
Other

Cause:

Action:

ODI-1351
An unexpected error was thrown during execution of the scenario "{0} - {1}"

Category:
Other

Cause:

Action:

ODI-1352
An unexpected error was thrown during job execution

Category:
Other

Cause:

Action:

ODI-1353
RequestId={0} Scenario={1} : Agent URL must be specified. The Job Definition must include the LocalAgent or the job submission must include a physical agent url ({2}) parameter.

Category:
Other

Cause:

Action:

ODI-1354
Load plan must be asynchronous

Category:
Other

Cause:

Action:

ODI-1355
username "{0}" from credential map "{1}" does not match currentSubjectName "{2}"

Category:
Other

Cause:

Action:

ODI-1356
Credential map key parameter "{0}" not found.

Category:
Other

Cause:

Action:

ODI-1357
Error resolving ADF connection for connectionId="{0}".

Category:
Other

Cause:

Action:

ODI-1400
Agent {0} start failure: JDBC connection error occurs while connecting to the master repository.

Category:
Other

Cause:
The master repository information was incorrect, or the repository database was down.

Action:
Verify the master repository connection information and the status of the master repository database.

ODI-1401
Agent {0} start failure: data source for master repository did not contain a master repository.

Category:
Other

Cause:
The master repository connection information pointed to a database schema that did not contain a master repository.

Action:
Verify the master repository connection information.

ODI-1402
Agent {0} start failure: the master repository is in an invalid state.

Category:
Other

Cause:
The master repository was in a state that did not allow connections. This is the case when an upgrade is being performed.

Action:
Verify the state of the master repository.

ODI-1403
Agent {0} start failure: the master repository version {1} is not compatible with the agent version {2}.

Category:
Other

Cause:
The master repository was upgraded but not this agent, or the agent was upgraded but not the master repository.

Action:
Upgrade the master repository version or the agent version.

ODI-1404
Agent {0} start failure: an authentication error occurred while connecting to the master repository.

Category:
Other

Cause:
An incorrect ODI user or password was specified for this master repository.

Action:
Verify the ODI user and password used for connecting.

ODI-1405
Agent {0} start failure: the agent is not defined in the topology for master repository.

Category:
Other

Cause:
This agent was not declared in the topology.

Action:
Add this physical agent in the list of agents in the ODI topology.

ODI-1406
Agent {0} started with warning: JDBC connection error occurs while connecting to the work repository {1}.

Category:
Other

Cause:
The work repository information was incorrect, or the repository database was down.

Action:
Verify the work repository connection information and the status of the work repository database.

ODI-1407
Agent {0} started with warning: connection details of {1} do not contain a work repository.

Category:
Other

Cause:
The work repository connection information pointed to a database schema that did not contain a work repository.

Action:
Review the work repository connection information and revise it as necessary.

ODI-1408
Agent {0} started with warning: work repository {1} is in an invalid state.

Category:
Other

Cause:
The work repository was in a state that did not allow connections. This is the case when an upgrade is being performed.

Action:
Verify the state of the work repository.

ODI-1409
Agent {0} started with warning: work repository {1} version {2} is not compatible with the agent version {3}.

Category:
Other

Cause:
The work repository was upgraded but not this agent, or the agent was upgraded but not the work repository.

Action:
Upgrade the work repository version or the agent version.

ODI-1410
Agent {0} started with warning: work repository {1} is not bound to the master repository.

Category:
Other

Cause:
The work repository specified in the request was not found in the list of work repositories attached to this master.

Action:
Ensure that work repository name matches an existing one.

ODI-1411
Agent {0} started with warning: a database error occurs while cleansing stale sessions.

Category:
Other

Cause:
The agent encountered a database error while attempting to close stale sessions.

Action:
Review the status of the sessions for this agent, and manually remove the stale sessions.

ODI-1412
Agent {0} started with warning: an unexpected error occurs while cleaning stale sessions.

Category:
Other

Cause:
The agent encountered an unexpected error while attempting to close stale sessions.

Action:
Contact Oracle Support Services. Provide the error message, a description of the action causing this fault, and the exception stack trace in the log files (with the logging level set to debug mode). Verify the status of the sessions for this agent, and manually remove the stale sessions.

ODI-1413
Request is incorrectly formed.

Category:
Other

Cause:
A malformed request was sent to the agent.

Action:
Review the request format and parameters sent to the agent.

ODI-1414
Error connecting to agent {0}: a JDBC error occurs while connecting to the master repository.

Category:
Other

Cause:
The remote agent had incorrect connection for the master repository database, or repository database was down.

Action:
Verify the master repository connection information and the status of the master repository database.

ODI-1415
Error connecting to agent {0}: data source for master repository did not contain a master repository.

Category:
Other

Cause:
The master repository connection information for the remote agent pointed to a database schema that did not contain a master repository.

Action:
Review the master repository connection information and revise it as necessary.

ODI-1416
Error connecting to agent {0}: the master repository is in an invalid state.

Category:
Other

Cause:
The master repository was in a state that did not allow connections from the remote agent. This is the case when an upgrade is being performed.

Action:
Verify the state of the master repository.

ODI-1417
Error connecting to agent {0}: the master repository version {1} is not compatible with the agent version {2}.

Category:
Other

Cause:
The master repository was upgraded but not the remote agent, or the remote agent was upgraded but not the master repository.

Action:
Upgrade the master repository version or the agent version.

ODI-1418
Error connecting to agent {0}: an authentication error occurs while connecting to the master repository.

Category:
Other

Cause:
An incorrect ODI user or password was specified for this master repository.

Action:
Verify the ODI user and password used for connecting.

ODI-1419
Warning connecting to Agent {0}: JDBC connection error occurs while connecting to the work repository {1}.

Category:
Other

Cause:
The remote agent had incorrect connection for the work repository database, or the repository database was down.

Action:
Verify the work repository connection information and the status of the work repository database.

ODI-1420
Warning connecting to Agent {0}: connection details of {1} do not contain a work repository.

Category:
Other

Cause:
The work repository connection information for the remote agent pointed to a database schema that did not contain a work repository.

Action:
Verify the work repository connection information.

ODI-1421
Warning connecting to Agent {0}: work repository {1} is in an invalid state.

Category:
Other

Cause:
The work repository was in a state that did not allow connections from the remote agent. This is the case when an upgrade is being performed.

Action:
Verify the state of the work repository.

ODI-1422
Warning connecting to Agent {0}: work repository {1} version {2} is not compatible with the agent version {3}.

Category:
Other

Cause:
The work repository was upgraded but not the remote agent, or the remote agent was upgraded but not the work repository.

Action:
Upgrade the work repository version or the agent version.

ODI-1423
Warning connecting to Agent {0}: work repository {1} is not bound to the master repository.

Category:
Other

Cause:
The work repository specified in the request was not found in the list of work repositories attached to the master.

Action:
Verify that work repository name matches an existing one.

ODI-1424
Agent host or port cannot be reached using {0}.

Category:
Other

Cause:
Incorrect host or port information was provided, or the agent was not started on the remote host.

Action:
Correct the host or port information or start the agent.

ODI-1425
Agent application cannot be reached using {0}.

Category:
Other

Cause:
An incorrect application name was provided for this agent, or the agent application was not started on the host.

Action:
Correct the application name used in the URL or verify the agent status.

ODI-1426
Agent {0} is not defined in the topology for the master repository.

Category:
Other

Cause:
This agent was not declared in the topology.

Action:
Add this physical agent to the list of agents in the ODI topology.

ODI-1427
invalid parameters

Category:
Other

Cause:
Invalid parameters were supplied in the request.

Action:
Check the parameters that were supplied as part of the request. Ensure that parameter names and cases are correct.

ODI-1428
internal error

Category:
Other

Cause:
An agent internal error occurred.

Action:
Contact Oracle Support Services. Provide the error message, a description of the action causing this fault, and the exception stack trace in the log files (with the logging level set to debug mode).

ODI-1429
The user {0} is not authorized to perform request {1} on Agent {2}.

Category:
Other

Cause:
The user had insufficient privileges for performing this request against the remote agent.

Action:
Amend the user privileges.

ODI-1430
Agent {0} cannot clean the stale sessions in work repository {1} due to a database error.

Category:
Other

Cause:
The remote agent faced a database error while attempting to close stale sessions.

Action:
Examine the status of the sessions for this agent, and manually remove the stale sessions.

ODI-1431
Agent {0} cannot clean the stale sessions in work repository {1} because the work repository {1} is still down.

Category:
Other

Cause:
The remote agent was not able to connect to the work repository while attempting to close stale sessions.

Action:
Determine the status of the repository. Once this repository is running, manually remove the stale sessions.

ODI-1432
Agent {0} cannot clean the stale sessions in work repository {1} due to an unexpected error.

Category:
Other

Cause:
The remote agent faced an unexpected error while attempting to close stale sessions.

Action:
Contact Oracle Support Services. Provide the error message, a description of the action causing this fault, and the exception stack trace in the log files (with the logging level set to debug mode). Determine the status of the sessions for this agent, and manually remove the stale sessions.

ODI-1433
The Internal agent does not support cleaning stale sessions from multiple work repositories.

Category:
Other

Cause:
Empty string value was passed for the work repository name in the Clean Stale Sessions request sent to the Internal Agent.

Action:
Specify a non-empty valid work repository name in the Clean Stale Sessions request sent to the Internal Agent. If you want to clean the stale sessions across the work repositories, perform this operation on a Remote physical Agent.

ODI-1434
Agent {0} start failure: error while trying to use JMX Port {1}.

Category:
Other

Cause:
JMX Registry was unable to use the given port.

Action:
Specify a different port by using the command-line parameter JMXPORT.

ODI-1435
Storage space for the IDs of some object types is low in Repository {0}. When no storage space is available, it will not be possible to create obects of these types. Consider creating a new repository for the following object types (Object Type: Number Remaining) {1}.

Category:
Other

Cause:
Storage space was low for some IDs in this repository.

Action:
Consider creating a new repository.

ODI-1436
Error retrieving ID statistics for repository {0}.

Category:
Other

Cause:
The ID statistics for this repository could not be verified.

Action:
Verify the statistics for this repository manually.

ODI-1437
Error retrieving information from the credential store map.

Category:
Other

Cause:
Could not retrieve information from the credential store map.

Action:
Verify that the credentials have been entered correctly into the credential store map.

ODI-1438
Agent {0} cannot be stopped by user {1}: a JDBC error occurred on master repository {2}.

Category:
Other

Cause:
Some SQL Exception occurred on the Master Repository.

Action:
Verify that other operations on the Agent are working correctly.

ODI-1439
Agent {0} cannot be stopped by user {1}: a JDBC error occurred on work repository {2}.

Category:
Other

Cause:
Some SQL Exception occurred on the Work Repository.

Action:
Verify that other operations on the Agent are working correctly.

ODI-1440
Agent {0} cannot be stopped by user {1}: an unknown error occurred.

Category:
Other

Cause:
An unexpected Exception occurred.

Action:
Verify your Agent configuration and make sure other operations on Agent are working correctly.

ODI-1441
Unable to connect to the master repository at JBDC URL={0} with USER={1}.

Category:
Other

Cause:
An SQLException occurred while creating connection to the master repository with the given parameters.

Action:
Verify your Agent configuration and make sure the master repository connection parameters are correct.

ODI-1442
Unable to load JBDC Driver {0} configured for master repository connection.

Category:
Other

Cause:
ClassNotFoundException occurred while loading the driver class.

Action:
Verify your Agent configuration and make sure the driver specified for master repository connection is correct and the corresponding jar is present under driver folder.

ODI-1443
Error while starting agent : {0}

Category:
Other

Cause:
Error occurred while starting the embedded web container.

Action:
Verify your Agent configuration and make sure that the specified ports are available.

ODI-1444
The master repository signature specified by the client {0} does not match the master repository signature of the agent {1}.

Category:
Other

Cause:
The client and the agent are not using the same master repository

Action:
Verify the client and the agent are using the same master repository. Verify that the client is calling the correct agent.

ODI-1445
Invalid HTTP/S URL retrieved from the JRF utility : {0}

Category:
Other

Cause:
JRF utility has returned an invalid HTTP/S URL for the agent.

Action:
Verify if ODI agent's dependent modules are successfully deployed on the container.

ODI-1446
Agent {0} is already running on port {1}.

Category:
Other

Cause:
This agent is already running.

Action:
Stop the agent before attempting to start it.

ODI-1447
Agent {0} failed to start. {1}.

Category:
Other

Cause:
The agent failed to start.

Action:
See the nodemanager and agent log for further information.

ODI-1448
Failed to execute command {1} for agent {0}.

Category:
Other

Cause:
A command failed to execute on the agent.

Action:
Review the agent log for further information.

ODI-1449
Injection risk detected for command {0}. Command not executed.

Category:
Other

Cause:
The command was not executed because it contained characters that pose an injection risk.

Action:
Adjust the command to eliminate characters that pose an injection risk.

ODI-1450
ODI does not support soft restart.

Category:
Other

Cause:
The process management softRestart method was invoked, but it is not supported.

Action:
Do not invoke the softRestart method.

ODI-1451
Using localhost for hostname because of {0} when trying to get hostname.

Category:
Other

Cause:
An exception was thrown while trying to get the actual host name for the local host.

Action:
No action is required as the exception is caught and the host name is defaulted to localhost.

ODI-1452
Agent {0} cannot be started, {1} is already in use by another agent.

Category:
Other

Cause:
An attempt was made to restart the agent, but it is currently in use.

Action:
Wait for other dependent agents to complete before restarting this agent.

ODI-1453
Agent {0} cannot be started, {1} is already in use by another process.

Category:
Other

Cause:
An attempt was made to restart the agent, but it is currently in use.

Action:
Wait for dependent processes to complete before restarting this agent.

ODI-1454
Agent {0} cannot be started at {1}. Unexpected http response = {2}.

Category:
Other

Cause:
The agent cannot be started. It is possible that another processes is already running on the agent port.

Action:
Review the http response to determine the process running on the agent port.

ODI-1455
System componenent creation failed: instanceName={0}, cause={1}

Category:
Other

Cause:
An exception prevented the ODI component from being created.

Action:
Review the exception to determine the cause.

ODI-1456
getServerConfiguration() failed. domainDir={0}, dirPath={1}, instanceName={2}, cause={3}

Category:
Other

Cause:
An exception was thrown while setting the ODI configuration parameters.

Action:
Review the exception text at the end of the message to determine the cause.

ODI-1457
getDBConfiguration() failed. domainDir={0}, dirPath={1}, datasourceName={2}, cause={3}

Category:
Other

Cause:
An exception was thrown while setting the ODI database configuration parameters.

Action:
Review the exception text at the end of the message to determine the cause.

ODI-1458
ODI configuration files found, but a corresponding instance is not configured. dirPath={0}. Cause={1}

Category:
Other

Cause:
An exception was thrown while retrieving database configuration parameters from a file.

Action:
Review the exception text at the end of the message to determine the file name and exception cause.

ODI-1459
Failed to retrieve master repository name and timestamp for agent {0}. Using the values from instance.properties. Cause={1}

Category:
Other

Cause:
An exception was thrown while attempting to read metadata for the master repository.

Action:
Review the exception text at the end of the message to determine the cause.

ODI-1460
Unable to insert into table {0} for concurrent execution control. Exceptions due to competing insertions can happen and are handled to continue execution. Other exceptions likely indicate a runtime problem. Error message: {1}

Category:
Other

Cause:
An exception was raised when inserting a record into the concurrent execution control table.

Action:
Exceptions due to competing insertions can happen and are handled to continue execution. Other exceptions likely indicate a runtime problem.

ODI-1461
{0} job status has changed unexpectedly from {1} to {2} while waiting for its turn to run under concurrent execution control.

Category:
Other

Cause:
The status of a job was likely changed outside of the control of the runtime agent while the job was waiting for its turn to run under concurrent execution control by the agent.

Action:
The job may have been changed outside of the agent, and the agent skipped the job execution. Start the job again if it was not executed.

ODI-1462
{0} job [{1}] should be the last one in the following waiting {0} list: {2}

Category:
Other

Cause:
The job may have been changed or deleted outside of the runtime agent while the job was waiting for its turn to run under concurrent execution control by the agent.

Action:
The job may have been changed or deleted outside of the agent, and the agent skipped the job execution. Start the job again if it was not executed.

ODI-1463
{0} job [{1}] blocked by the following {0} job(s) due to potential concurrent execution condition: {2}{3}

Category:
Other

Cause:
The job was under concurrent execution control with Raise Error violation behavior, and there were existing runnable and/or waiting jobs submitted ahead of the job.

Action:
Start the job when other concurrently running and waiting jobs are completed, or change the job's violation behavior to Wait To Execute before starting the job.

ODI-1464
There is no Hadoop Dataserver selected for PigDataServer- {0} from topology.

Category:
Other

Cause:
Repository Error.

Action:
Verify the dataservers in topology and associate a Hadoop dataserver to Pig dataserver when in Mapreduce mode .

ODI-1465
Error while trying to read values of DataServer- {0} from topology.

Category:
Other

Cause:
Repository Error.

Action:
Verify the dataservers in topology and if needed, associate a Hadoop dataserver to Pig dataserver when in Mapreduce mode.

ODI-1466
Error occurred previewing file on agent {0}

Category:
Other

Cause:
Error previewing file on the agent

Action:
Verify that file configuration is valid. Verify that file is available

ODI-1467
Error occurred trying to find URL of ODI scripting JAR {0}

Category:
Other

Cause:
Error getting the URL of ODI scripting language JAR

Action:
Verify that the path is valid

ODI-1500
SQL Exception when accessing work repository {0} while executing load plan instance {1} - {2}

Category:
Other

Cause:
A SQLException was thrown when trying to update the work repository

Action:
The same set of updates will be attempted later, potentially from a different agent

ODI-1501
Cannot find variable "{0}" in the definition of load plan instance {1}.

Category:
Other

Cause:
The start/restart load plan request contained startup values for variables that are not defined in the load plan

Action:
User error or problem in the IDE invocation code

ODI-1502
Load plan instance {0} is in an inconsistent state: {1}

Category:
Other

Cause:
Indicates a problem in the ODI code, like a wrapped IllegalStateException

Action:
null

ODI-1503
Load plan logs for instance {0}, run {1} are corrupted: {2}

Category:
Other

Cause:
Indicates a problem in the ODI code, it is a wrapped IllegalStateException

Action:
null

ODI-1504
Trying to update variables during execution of step "{0}" (load plan instance {1}, run {2}), as part of the exception handler for step "{3}", but variable updates during exception handlers are not supported.

Category:
Other

Cause:
null

Action:
null

ODI-1505
Current value "{0}" of variable "{1}" (while evaluating When clause "{2}") is not a valid value of type {3} (load plan instance {4}, run {5}).

Category:
Other

Cause:
null

Action:
null

ODI-1506
"Comparison value of step "{2}" ("{0}") is not a valid value of type {3} (load plan instance {4}, variable tested "{1}").

Category:
Other

Cause:
null

Action:
null

ODI-1507
Load Plan Instance restart called for instance {0}, but no previous runs were found.

Category:
Other

Cause:
null

Action:
null

ODI-1508
Load Plan Instance start called for instance {0}, but previous runs have been found.

Category:
Other

Cause:
null

Action:
null

ODI-1509
Load Plan Instance {0} cannot be restarted because the previous run ({1}) status "{2}" is not in "{3}" status.

Category:
Other

Cause:
null

Action:
null

ODI-1510
The same load plan instance {0} simultaneously started by two agents.

Category:
Other

Cause:
null

Action:
null

ODI-1511
Step "{0}" should have already been marked as started before adding value for variable "{1}" (load plan instance {2}, run {3}).

Category:
Other

Cause:
null

Action:
null

ODI-1512
Variable "{0}" is defined as having datatype "{1}" in Load Plan instance {2}, but as having type "{3}" in scenario "{4}" (version {5}), Load Plan instance step "{6}".

Category:
Other

Cause:
null

Action:
null

ODI-1513
Error reading load plan information for session number {0}: "{1}"

Category:
Other

Cause:
null

Action:
null

ODI-1514
Error trying to stop load plan, instance {0} not found.

Category:
Other

Cause:
null

Action:
null

ODI-1515
Load Plan instance {0} could not be stopped by agent {1} because stop type ({2}) provided in the request is invalid.

Category:
Other

Cause:
null

Action:
null

ODI-1516
Can not start load plan: load plan with name "{0}" does not exist in work repository {1}.

Category:
Other

Cause:
null

Action:
null

ODI-1517
Load Plan instance {0}, run {1} could not be stopped because that run is already completed (with status "{2}").

Category:
Other

Cause:
null

Action:
null

ODI-1518
Parallel step "{0}" failed; {1} child step(s) in error, which is more than the maximum number of allowed errors ({3}) defined for the parallel step. Failed child steps: {2}

Category:
Other

Cause:
null

Action:
null

ODI-1519
Serial step "{0}" failed because child step "{1}" is in error.

Category:
Other

Cause:
null

Action:
null

ODI-1520
Case-When/Else step "{0}" failed because child step "{1}" is in error.

Category:
Other

Cause:
null

Action:
null

ODI-1521
Case step "{0}" failed; the selected child "{1}" is in error.

Category:
Other

Cause:
null

Action:
null

ODI-1522
Run Scenario step failed during invocation. Error message was: {0}

Category:
Other

Cause:
null

Action:
null

ODI-1523
Exception handler for step "{0}" failed, because the root exception serial step "{1}" is in error.

Category:
Other

Cause:
null

Action:
null

ODI-1524
Physical agent {0} could not be found.

Category:
Other

Cause:
null

Action:
null

ODI-1525
Physical agent not found for logical agent name "{0}" and context "{1}" while executing step "{2}".

Category:
Other

Cause:
null

Action:
null

ODI-1526
Error encountered while trying to start scenario "{1}{2}" (step "{3}"): {0}

Category:
Other

Cause:
null

Action:
null

ODI-1527
Error refreshing variable "{0}": the associated SQL query returned no results.

Category:
Other

Cause:
null

Action:
null

ODI-1528
Error refreshing variable "{0}": {1}

Category:
Other

Cause:
null

Action:
null

ODI-1529
Refresh of variable "{0}" failed : {1} {2}

Category:
Other

Cause:
null

Action:
null

ODI-1530
Load plan instance was stopped by user request.

Category:
Other

Cause:
null

Action:
null

ODI-1531
Timeout triggered while executing step "{0}".

Category:
Other

Cause:
null

Action:
null

ODI-1532
Timeout triggered on a parent step "{0}" while executing step "{1}".

Category:
Other

Cause:
null

Action:
null

ODI-1533
Error refreshing variable "{0}": could not get a connection to the logical schema "{1}" using context {2}.

Category:
Other

Cause:
null

Action:
null

ODI-1534
Could not get SQL query text for variable "{0}" while trying to refresh it.

Category:
Other

Cause:
null

Action:
null

ODI-1535
Can not continue load plan instance {0}, run {1}, because the instance has been deleted.

Category:
Other

Cause:
null

Action:
null

ODI-1536
Load plan instance {0}, run {1} failed to launch scenario: scenario {2} does not exist in work repository {3}.

Category:
Other

Cause:
null

Action:
null

ODI-1537
Load plan instance {0}, run {1} failed to launch scenario: Version {3} of scenario {2} does not exist in work repository {4}.

Category:
Other

Cause:
null

Action:
null

ODI-1538
Unexpected Exception occurred while executing Load plan instance {0}, run {1}.

Category:
Other

Cause:
null

Action:
null

ODI-1539
Agent {0} cannot continue load plan processing for instance {1}, run {2} on work repository {3}.

Category:
Other

Cause:
null

Action:
null

ODI-1540
Agent {0} start failure: error while trying to use Http Port {1}.

Category:
Other

Cause:
Http service was unable to use the given port.

Action:
Specify a different port by using the command-line parameter PORT.

ODI-1541
Load Plan start failure on agent {0}: ODI User and Password not specified.

Category:
Other

Cause:
ODI user and password are not set.

Action:
Please specify ODI user and password.

ODI-1542
Start Scenario failure on agent {0}: ODI User and Password not specified.

Category:
Other

Cause:
ODI User and password are not set.

Action:
Please specify ODI user and password.

ODI-1543
RuntimeAgent cannot be used inside an opened transaction, it must be used outside a TransactionTemplate

Category:
Other

Cause:
null

Action:
null

ODI-1544
None of the agents in Load Balancing list is able to handle this execution ({0}).

Category:
Other

Cause:
null

Action:
null

ODI-1545
Missing odi supervisor credentials in credential store map [{0}] with key [{1}].

Category:
Other

Cause:
Could not retrieve information from the credential store map.

Action:
Verify that the credentials have been entered correctly into the credential store map.

ODI-1546
The dbms_lock acquisition with lock handle {0} timed out.

Category:
Other

Cause:
null

Action:
null

ODI-1547
The Agent detected deadlock on dbms_lock acquisition with lock handle {0}.

Category:
Other

Cause:
null

Action:
null

ODI-1548
The dbms_lock acquisition failed with illegal lock handle {0}.

Category:
Other

Cause:
null

Action:
null

ODI-1549
The dbms_lock acquisition with lock handle {0} failed with illegal params error. The parameters are {1}.

Category:
Other

Cause:
null

Action:
null

ODI-1550
The dbms_lock acquisition with lock handle {0} failed with unknown return code {1}

Category:
Other

Cause:
null

Action:
null

ODI-1551
The dbms_lock acquisition failed with a sql exception {0}. Please check if the work repository db user {1} has EXECUTE privilege on DBMS_LOCK package.

Category:
Other

Cause:
null

Action:
null

ODI-1552
The dbms_lock release failed with illegal lock handle {0}.

Category:
Other

Cause:
null

Action:
null

ODI-1553
The dbms_lock release for lock handle {0} failed with invalid parameters.

Category:
Other

Cause:
null

Action:
null

ODI-1554
The dbms_lock release for lock handle {0} failed because you do not own the lock.

Category:
Other

Cause:
null

Action:
null

ODI-1555
The dbms_lock release for lock handle {0} failed with an unknown return code {1}.

Category:
Other

Cause:
null

Action:
null

ODI-1556
The lock acquisition failed. The lock is already locked by other connection object.

Category:
Other

Cause:
null

Action:
null

ODI-1557
Error refreshing variable "{0}": the associated SQL query returned a NULL value.

Category:
Other

Cause:
null

Action:
null

ODI-1558
The session {0} corresponding to the load plan step {1} of load plan instance {2}, run {3} is not found. We assume this step to be in error status.

Category:
Other

Cause:
null

Action:
null

ODI-1559
Load Plan Instance {0} cannot be restarted because the context {1} was not found in the work repository {2}.

Category:
Other

Cause:
null

Action:
null

ODI-1560
Load Plan {0} cannot be started because the context {1} was not found in the work repository {2}.

Category:
Other

Cause:
null

Action:
null

ODI-1561
Load Plan {0} cannot be started because the user {1} does not have view privileges to the execution context {2}.

Category:
Other

Cause:
null

Action:
null

ODI-1562
Load Plan Instance {0} cannot be restarted because the user {1} does not have view privileges to the execution context {2}.

Category:
Other

Cause:
null

Action:
null

ODI-1563
Load Plan {0} cannot be started because the user {1} does not have execute privileges to the Load Plan {0}.

Category:
Other

Cause:
null

Action:
null

ODI-1564
Load Plan Instance {0} cannot be restarted because the user {1} does not have restart privileges.

Category:
Other

Cause:
null

Action:
null

ODI-1565
Load Plan {0} cannot be started because an unknown exception occurred.

Category:
Other

Cause:
null

Action:
null

ODI-1566
Load Plan Instance {0} cannot be restarted because an unknown exception occurred.

Category:
Other

Cause:
null

Action:
null

ODI-1567
Load Plan {0} cannot be started because a SQL Exception occurred.

Category:
Other

Cause:
null

Action:
null

ODI-1568
Load Plan Instance {0} cannot be restarted because a SQL Exception occurred.

Category:
Other

Cause:
null

Action:
null

ODI-1569
Error trying to stop load plan, instance {0} run {1} not found.

Category:
Other

Cause:
null

Action:
null

ODI-1570
Load Plan Instance {0}, run {1} cannot be stopped by Agent {2} because User {3} does not have privileges to stop the Load Plan Instance.

Category:
Other

Cause:
null

Action:
null

ODI-1571
Load Plan Instance {0}, run {1} cannot be stopped by Agent {2} because User {3} does not have privileges to stop Sessions.

Category:
Other

Cause:
null

Action:
null

ODI-1572
Load Plan Instance {0}, run {1} cannot be stopped by Agent {2} because a SQL Exception occurred while accessing the Repository.

Category:
Other

Cause:
null

Action:
null

ODI-1573
Load Plan Instance {0}, run {1} cannot be stopped by Agent {2} because an Unknown error has occurred.

Category:
Other

Cause:
null

Action:
null

ODI-1574
Day of week is not specified for the schedule.

Other

Cause:
null

Action:
null

ODI-1575
Invalid value specified for the excluded days of month filter: {0}

Category:
Other

Cause:
null

Action:
null

ODI-1576
LoadPlan Operation {0} on Agent {1} failed with the exception {2}.

Category:
Other

Cause:
null

Action:
null

ODI-1577
Parallel step error triggered on a parent step "{0}" while executing step "{1}".

Category:
Other

Cause:
null

Action:
null

ODI-1578
Invalid load plan log level value specified: {0}. A valid load plan log value is between {1} and {2}.

Category:
Other

Cause:
Invalid load plan log level value was supplied in the request.

Action:
Check that the load plan log level value supplied was valid (1 - 6) for the request.

ODI-1579
Agent {0} start failure: data source for master repository did not contain a master repository using JDBC URL={1} with USER={2}.

Category:
Other

Cause:
The master repository connection information pointed to a database schema that did not contain a master repository.

Action:
Verify the master repository connection information.

ODI-1580
Unable to set the role OWB_USER for this user.

Category:
Other

Cause:
An attempt was made to set the role OWB_USER for the connected user.

Action:
Check that the role exists and the connected user is an OWB user.

ODI-1581
Unable to set the workspace {0} for this user.

Category:
Other

Cause:
An attempt was made to select the OWB workspace for the connected user.

Action:
Check that the workspace exists and the connected user has got privilege to access it.

ODI-1582
Unexpected error when connecting to Owb workspace {0}.

Category:
Other

Cause:
An unexpected error occurred when connecting to workspace.

Action:
Verify that the Owb repository is up and running.

ODI-1583
Owb workspace {0} does not contain components that enable execution from Odi.

Category:
Other

Cause:
A component that is required by ODI has not been found in this workspace.

Action:
Verify that the Owb repository contains the correct patch for ODI.

ODI-1584
Mandatory parameter {0} is missing for https protocol.

Category:
Other

Cause:
A parameter that is required to start ODI agent to enable https protocol is missing.

Action:
Verify that the parameter is specified in odiparams.[sh|bat].

ODI-1585
A Step with Id {0} does not exist in the Session {1}

Category:
Other

Cause:
null

Action:
null

ODI-1586
A Task with Id {0} does not exist in the step {1} of the Session {2}

Category:
Other

Cause:
null

Action:
null

ODI-1587
An execution context cannot be determined for OGG operation {0}.

Category:
Other

Cause:
An execution context cannot be determined for OGG operation.

Action:
null

ODI-1588
The specified operation {0} provided is not supported by this tool.

Category:
Other

Cause:
The operation provided is not supported by this tool.

Action:
Verify the parameters

ODI-1589
The execution of the OdiOggCommand operation {0} failed.

Category:
Other

Cause:
The execution of the OdiOggCommand operation failed.

Action:
null

ODI-1590
The execution of the script failed. {0}

Category:
Other

Cause:
The execution of the script failed in the BSF Engine.

Action:
null

ODI-1591
The ODI agent name {0} specified in the client request does not match with the ODI agent {1} serving the request.

Category:
Other

Cause:
The client and the agent are not using the same physical agent name.

Action:
Verify the client and the agent are using the same agent name. Verify that the client is calling the correct agent.

ODI-1592
Error occurred testing connection to dataserver with agent {0}

Category:
Other

Cause:
Dataserver connection test failed on the agent

Action:
Verify that dataserver connection configuration is valid. Verify that dataserver is available

ODI-1593
The following bind parameters ({0}) in the task command {1} are not bound to any value. All the bind parameters should be bound for the command to be successful.

Category:
Other

Cause:
Either the source command is not providing values for some of the bind parameters in target command or the Odi Variables and/or Odi Sequence meta-data is not generated for the Scenario.

Action:
Verify that either the source command is correct or the Odi Variables and/or Odi Sequences meta-data is generated in the Scenario.

ODI-1594
The connection to the data server {0} failed.

Category:
Other

Cause:
The data server might be down or the data server connectivity settings are not correct.

Action:
Verify that you are able to test the data server using the Studio successfully.

ODI-1595
The command script failed with trace {0}.

Category:
Other

Cause:
There was a failure in the Ftp or Sftp command script.

Action:
Verify the trace and resolve the error in the command script passed to the tool.

ODI-1596
Failed to execute the pig script.

Category:
Other

Cause:
There was a failure in executing Pig script.

Action:
Verify the trace and resolve the error in the command script passed.

ODI-1597
The submitted pig script is empty.

Category:
Other

Cause:
The command did not contain or generate any pig script.

Action:
Verify the trace and resolve the error in the code generation.

ODI-1598
Failed to call method {0}.

Category:
Other

Cause:
Invocation Error.

Action:
Verify the trace and resolve the error in the runtime pig engine.

ODI-1599
The associated Dataserver with ID- {0} is missing for DataServer- {1} from topology.

Category:
Other

Cause:
Repository Error.

Action:
Verify the dataservers in topology and associate a Dataserver to current Dataserver.

ODI-1615
DESCRIPTION Resumes an execution session. See Oracle Data Integrator documentation for the detailed syntax. SYNTAX restartsession.(cmd|sh) "-INSTANCE=<instance_name>" <session_number> [<log_level>] ["-AGENT_URL=<agent_url>" | "-AGENT_NAME=<physical_agent_name>"]

Category:
Other

Cause:

Action:

ODI-1616
DESCRIPTION Starts an agent. See Oracle Data Integrator documentation for the detailed syntax. SYNTAX agent.(cmd|sh) -NAME=<agent name> [-PORT=<port>] [-PROTOCOL=<protocol>] [-JMXPORT=<jmxport>] [-ODI_CONNECTION_RETRY_COUNT=<nn>] [-ODI_CONNECTION_RETRY_DELAY=<nn>] PORT represents the listening port. It should match the port value specified against the physical agent defined in Topology. PROTOCOL represents the listening protocol, HTTP or HTTPS. Its default value is HTTP. NAME represents the name of this physical agent. It should match the name of a physical agent defined in Topology. User must have created an agent with this name using configuration wizard. JMXPORT represents the JMX port used for JMX notifications etc. Its default value is calculated as PORT + 1000, or 20810 if the calculated value is greater than 65535 ODI_CONNECTION_RETRY_COUNT represents the number of times a connection to the ODI Repository will be retried. Its default value is 10 ODI_CONNECTION_RETRY_DELAY represents the number of milliseconds between connection retries to the ODI Repository. Its default value is 7000

Category:
Other

Cause:

Action:

ODI-1617
DESCRIPTION Stops an agent. See Oracle Data Integrator documentation for the detailed syntax. SYNTAX agentstop.(cmd|sh) "-NAME=<agent name>" ["-AGENT_URL=<agent_url>"] ["-IMMEDIATE=<true(default)|false>" ["-MAX_WAIT=<stop timeout in millis>"]]

Category:
Other

Cause:

Action:

ODI-1618
DESCRIPTION Restarts execution of a load plan instance. See Oracle Data Integrator documentation for the detailed syntax. SYNTAX restartloadplan.(cmd|sh) "-INSTANCE=<instance_name>" <load_plan_instance_id> [<log_level>] "-AGENT_URL=<agent_url>" ["-SYNC=(no|yes)"] ["-POLLINT=<msec>"]

Category:
Other

Cause:

Action:

ODI-1619
DESCRIPTION Starts a Oracle Data Integrator command. See Oracle Data Integrator documentation for the detailed syntax. SYNTAX startcmd.(cmd|sh) "-INSTANCE=<instance_name>" <Command Name> ["<command parameter>"]*

Category:
Other

Cause:

Action:

ODI-1620
DESCRIPTION Starts a load plan. See Oracle Data Integrator documentation for the detailed syntax. SYNTAX startloadplan.sh "-INSTANCE=<instance_name>" <load_plan_name> <context_code> [<log_level>] "-AGENT_URL=<agent_url>" ["-SYNC=(no|yes)"] ["-POLLINT=<msec>"] ["-KEYWORDS=<keywords>"] ["<variable>=<value>"]*

Category:
Other

Cause:

Action:

ODI-1621
DESCRIPTION Starts a scenario. See Oracle Data Integrator documentation for the detailed syntax. SYNTAX startscen.(cmd|sh) "-INSTANCE=<instance_name>" <scenario_name> <scenario_version> <context_code> [<log_level>] ["-SESSION_NAME=<session_name>"] ["-KEYWORDS=<keywords>"] ["-AGENT_URL=<agent_url>"] ["-ASYNC=(no|yes)"] ["-DEBUGGABLE=(no|yes)"] ["-SUSPEND_FIRST_STEP=(no|yes)"] ["-DESCENDANTS_DEBUGGABLE=(no|yes)"] ["-BREAK_ON_ERROR=(no|yes)"] ["<variable>=<value>"]* -ASYNC=no is default; -ASYNC=yes is valid only if -AGENT_URL is specified.

Category:
Other

Category:
Programmatic

Cause:
A runtime error has occurred.

Action:
Check the log for details on the error.

ODI-1808
Error {0} has occurred during registration of Agent Service Mbean.

Category:
Programmatic

Cause:
A runtime error has occurred.

Action:
Check the log for details on the error, fix the server and restart the OdiConsole application.

ODI-1809
Error {0} has occurred during registration of Master Repository Service Mbean.

Category:
Programmatic

Cause:
A runtime error has occurred.

Action:
Check the log for details on the error, fix the error and restart the OdiConsole application.

ODI-1810
Error {0} has occurred during registration of Work Repository Service Mbean.

Category:
Programmatic

Cause:
A runtime error has occurred.

Action:
Check the log for details on the error, fix the error and restart the OdiConsole application.

ODI-1811
Error {0} has occurred during registration of Session Service Mbean.

Category:
Programmatic

Cause:
A runtime error has occurred.

Action:
Check the log for details on the error, fix the error and restart the OdiConsole application.

ODI-1812
Error {0} has occurred during registration of Event Service Mbean.

Category:
Programmatic

Cause:
A runtime error has occurred.

Action:
Check the log for details on the error, fix the error and restart the OdiConsole application.

ODI-1813
Error {0} has occurred during registration of Session Search Service Mbean.

Category:
Programmatic

Cause:
A runtime error has occurred.

Action:
Check the log for details on the error, fix the error and restart the OdiConsole application.

ODI-1814
No repository definition found for work repository {0} in repositories.xml. Search will be disabled for this repository.

Category:
Configuration

Cause:
A configuration error has occurred.

Action:
Add the jndi entries for all the work repositories for each of the master repositories in repositories.xml.

ODI-1815
Exception {0} has occurred during Session Search by id.

Category:
Programmatic

Cause:
A runtime error has occurred.

Action:
No action is required. The session id mentioned for search is not available.

ODI-1816
Session status passed {0} is invalid.

Category:
Programmatic

Cause:
A runtime error has occurred.

Action:
Check the log for details on the error.

ODI-1817
Error {0} has occurred while fetching statistics for agents. Statistics shown might not be complete.

Category:
Programmatic

Cause:
A runtime error has occurred.

Action:
Check the log for details on the error.

ODI-1818
Agent Service Mbean is not initialized. Re-initialization of agents in tree is disabled.

Category:
Programmatic

Cause:
A runtime error has occurred.

Action:
Check the log for details on the error, fix the same and restart the OdiConsole application.

ODI-1819
Event Service Mbean is not initialized. Re-initialization of event notification listeners is disabled.

Category:
Programmatic

Cause:
A runtime error has occurred.

Action:
Check log for details on the error, fix the same and restart the OdiConsole application.

ODI-1820
Agent {0} is not up at {1} for reason {2}.

Category:
Programmatic

Cause:
A runtime error has occurred.

Action:
Check the log for details on the error.

ODI-1821
JMXConnector failed to provide MBean server connection.

Category:
Programmatic

Cause:
A runtime error has occurred.

Action:
Check the log for details on the error.

ODI-1822
Error occured while closing JMXConnector.

Category:
Programmatic

Cause:
A runtime error has occurred.

Action:
Check the log for details on the error.

ODI-3000

Choose valid credential file.

ODI-5000
Task {0} ({1}) on logical schema {2} with Context Id {3} fails since scripting technology name could not be discovered.

Category:
Other

Cause:
null

Action:
null

ODI-5001
Session {0} ({1}) could not be stopped by Agent {2}: Session run on an 'Internal' agent cannot be stopped from another process.

Category:
Other

Cause:
Stopping a session being run by an internal agent from another process is not possible.

Action:
Review the session execution details in the Operator Navigator or Repository Explorer.

ODI-5002
Pig Script Execution failure: The following {0} Job(s) - [{1}] reported failed. Please check the resource manager logs for these jobs for the failure reason.

Category:
Other

Cause:
There was a failure in executing Pig script in MapReduce Mode. Some Jobs have been reported failed.

Action:
Verify the Resource Manager trace and resolve the error in the command script passed.

ODI-5003
No associated Hadoop dataserver found for given logical schema {0}.

Category:
Other

Cause:
Repository Error.

Action:
Verify given logical schema is Hadoop dataserver or associated with Hadoop dataserver .

ODI-5004
None of the logical schemas {0} and {1} associated with Hadoop dataserver.

Category:
Other

Cause:
Repository Error.

Action:
Verify given logical schema is Hadoop dataserver or associated with Hadoop dataserver .

ODI-5005
Illegal state. Classloader not found for key: {0} for ODI task with name {1}.

Category:
Other

Cause:
ODI Script Engine Error.

Action:
As a workaround try removing classpaths from the Dataserver assocaited with the task and configure them on the agent instead.

ODI-5006
Unrecoverable OdiAgentException occurred during Load Plan execution. Unable to stop and close Load Plan execution due to exception:

Category:
Other

Cause:
null

Action:
null

ODI-5007
Authentication failed. Cannot advance loadplans without authentication. So pending advancing loadplans will be stopped and closed:

Category:
Other

Cause:
null

Action:
null

ODI-5008
Error occurred previewing file on agent {0}, as file {1} is empty

Category:
Other

Cause:
Error previewing file on the agent, as file is empty

Action:
Verify that file is not empty

ODI-5100
Agent {0} cannot read configuration. Cause: {1}.

Category:
Other

Cause:
The agent configuration cannot be read.

Action:
Review the cause and take appropriate action.

ODI-10005
Repository is expected to be a master repository.

Category:
Other

Cause:
Repository was expected to be a master repository.

Action:
Choose master repository.

ODI-10006
Repository is expected to be enterprise repository.

Category:
Other

Cause:
Repository was expected to be an enterprise repository.

Action:
Choose enterprise repository.

ODI-10007
Object must be in editable state before using set methods.

Category:
Other

Cause:
The object was not in editable state.

Action:
Edit this object.

ODI-10008
Object must be in consult mode before using methods get.

Category:
Other

Cause:
The object was not in consult mode.

Action:
Consult the object.

ODI-10009
Object does not exist in the repository.

Category:
Other

Cause:
The repository did not contains this object.

Action:
Choose another object or create first this one.

ODI-10010
This type of object cannot be updated.

Category:
Other

Cause:
Object could not be updated.

Action:
Do not update this object.

ODI-10011
Invalid object; it has been updated by another user.

Category:
Other

Cause:
Object was updated by another user.

Action:
Refresh the object.

ODI-10012
Object cannot be inserted

Category:
Other

Cause:
Object could not be inserted.

Action:
Check object.

ODI-10013
This import action has been cancelled because it could damage your repository. This is due to an {0} object that has object identifier {1} that is greater than that for the current {0} id sequence. Importing this object would lead to primary key violations in the future.

Category:
Other

Cause:
Import could damage your repository.

Action:
Check identifier sequences.

ODI-10014
Method must be redefined in derived classes. It cannot be called for DwgObject

Category:
Other

Cause:
Method must be redefined in derived classes.

Action:
Call redefined method.

ODI-10015
The work repository {0} is not declared in this master repository, the import process has been cancelled.

Category:
Other

Cause:
Work repository was not declared in this master repository.

Action:
Declare work repository and try again.

ODI-10016
Import aborted.

Category:
Other

Cause:
Import was aborted.

Action:
Check objects and try again.

ODI-10017
This import is forbidden: the text {0} has a different origin in the repository and in the import file.

Category:
Other

Cause:
The text has a different origin in the repository and in the import file.

Action:
Check import file and try again.

ODI-10018
The repository {0} is not coherent between the current repository and the import file.

Category:
Other

Cause:
The repository was not coherent between the current repository and the import file.

Action:
Check import file.

ODI-10019
Impossible to create the directory {0}.

Category:
File

Cause:
I was not possible to create the directory.

Action:
Check your system rights for creating directory; directory's path and name.

ODI-10020
Impossible to replace the file

Category:
File

Cause:
It was not possible to replace the file.

Action:
Check, if you have enough rights for this operation.

ODI-10021
Unspecified save directory.

Category:
Other

Cause:
Directory to save environment information was unspecified.

Action:
Specify the directory for saving the environment information file.

ODI-10022
You must specify all options.

Category:
Other

Cause:
Missed one or more options.

Action:
Specify missed options.

ODI-10023
Invalid license. This license is suitable for {0}.

Security

Cause:
Invalid license.

Action:
Check license.

ODI-10024
Your installation of Oracle Data Integrator is corrupted.

Category:
Other

Cause:
The technology description file contains errors.

Action:
Reinstall Oracle Data Integrator.

ODI-10025
Your installation of Oracle Data Integrator is corrupted.

Category:
Other

Cause:
The technology description file is missing.

Action:
Reinstall Oracle Data Integrator.

ODI-10026
Error while testing the Master Repository technology.

Category:
Other

Cause:
Error occurred while testing the Master Repository technology.

Action:
Check parameters.

ODI-10027
The import is canceled because at least one object is locked by another user.

Category:
Other

Cause:
At least one object was locked by another user.

Action:
Check objects' locks.

ODI-10028
It is forbidden to import a log into a repository having the same ID.

Category:
Other

Cause:
The log had the same ID as repository.

Action:
Check log and/or repository id.

ODI-10029
Version {0} for object {1} already exists.

Category:
Other

Cause:
Version already existed.

Action:
Choose another version.

ODI-10030
DwgBeanWrapper can only wrap DwgObjects

Category:
Other

Cause:
DwgBeanWrapper can only wrap DwgObjects

Action:
Choose correct type of objects.

ODI-10031
Object {0}: {1} is locked by user {2}

Category:
Other

Cause:
Object was locked by another user.

Action:
Wait until object is unlocked.

ODI-10032
You cannot import this object ({0}). A referenced object ({1}) does not exist in the repository.

Category:
Other

Cause:
A referenced object does not exist in the repository.

Action:
Check import file.

ODI-10033
You cannot delete this object because it is locked by another user ({0}).

Category:
Other

Cause:
This object was locked by another user.

Action:
Wait until object is unlocked.

ODI-10034
The technology hosting your master repository does not support Versioning.

Category:
Other

Cause:
The technology did not support versioning.

Action:
Choose another repository or technology.

ODI-10035
{0} : "{1}" (with global id: {5} and internal id: {6}) violates alternate key constraint {2} {3} for values {4}

Category:
Other

Cause:
Object violated alternate key constraint.

Action:
Check object properties and constraint's values.

ODI-10036
Importing object {0} : {1} (with global id: {2} and internal id: {3}) failed.

Category:
Other

Cause:
Import failed.

Action:
Check import file and try again.

ODI-10037
Import-replace for this node is supported for action groups only. The import file is invalid.

Category:
Other

Cause:
Import-replace for this node was supported for action groups only.

Action:
Check import file.

ODI-10038
The interface you are trying to use ({0}) is related to a logical schema ({1}) that no longer exists.

Category:
Other

Cause:
Logical schema was not found.

Action:
Check interface.

ODI-10039
Bad ID for an object representer

Category:
Other

Cause:
Bad ID for an object representer

Action:
Check object`s ID.

ODI-10040
Cannot create directory

Category:
File

Cause:
Directory could not be created.

Action:
Check directory path/name.

ODI-10041
Oracle Data Integrator Remote Object (SnpRemoteObject) must inherit from SnpsFunction.

Category:
Other

Cause:
Oracle Data Integrator Remote Object (SnpRemoteObject) did not inherit from SnpsFunction.

Action:
Use SnpsFunction as parent.

ODI-10042
SnpsQuery must be connected prior to execution

Category:
Other

Cause:
SnpsQuery was not connected.

Action:
Set a connection.

ODI-10043
Security token is a mandatory parameter

Category:
Security

Cause:
Security token was not specified.

Action:
Check security parameters.

ODI-10044
Unable to save the interface. Maximum number of source datastores exceeded.

Category:
Other

Cause:
Maximum number of source datastores was exceeded.

Action:
Contact Oracle Support Services.

ODI-10045
a2.getCargo() not instance of SAPSegment

Category:
Other

Cause:
a2.getCargo() not instance of SAPSegment

Action:
Check SAP Tree.

ODI-10046
No IDoc.

Category:
Other

Cause:
Missed IDoc.

Action:
Check IDoc.

ODI-10047
Repository is not a development work repository

Category:
Other

Cause:
Repository was not a development work repository.

Action:
Choose development work repository.

ODI-10048
No work repository found.

Category:
Other

Cause:
No work repository was found.

Action:
Check your connection settings or database.

ODI-10049
Missing parameter

Category:
Other

Cause:
Parameter was missing.

Action:
Check all parameters.

ODI-10050
Missing parameter at: {0} SQL: {1}

Category:
Other

Cause:
Parameter was missing.

Action:
Check all parameters.

ODI-10051
Some objects cannot be exported because they do not exist in the repository: {0} {1}

Category:
Other

Cause:
Objects did not exist in the repository.

Action:
Check objects state.

ODI-10052
A problem occurred in your repository.

Category:
Other

Cause:
A problem occurred in your repository.

Action:
Contact Oracle Support Services.

ODI-10053
Problem retrieving JCOFunction object. {0}

Category:
Other

Cause:
Problem occurred retrieving JCOFunction object.

Action:
Check JCO Function object.

ODI-10054
Unable to find the XML file corresponding to your technology.

Category:
Other

Cause:
XML file corresponding to your technology was not found.

Action:
Check technology and/or XML file for the technology.

ODI-10055
This ID is already in use in the repository

Category:
Other

Cause:
This ID was already in use in the repository.

Action:
Change ID.

ODI-10056
This repository ID already exists. This repository cannot be created.

Category:
Other

Cause:
Repository ID already existed.

Action:
Change repository ID.

ODI-10057
Unrecognized export type.

Category:
Other

Cause:
Export type was unrecognized.

Action:
Check export type.

ODI-10058
You are trying to import objects from a master repository of an older version into {0} version. This action is forbidden. Master repositories must be upgraded using the upgrade assistant, not using the export/import facility.

Category:
Other

Cause:
You tried to import objects from a master repository of an older version.

Action:
Master repositories must be upgraded using the upgrade assistant, not using the export/import facility.

ODI-10059
Repository is null

Category:
Other

Cause:
Repository was null.

Action:
Check repository.

ODI-10060
Saputil is mandatory.

Category:
Other

Cause:
Saputil was mandatory.

Action:
Check Saputil

ODI-10061
Empty XML Character Set

Category:
Other

Cause:
XML Character Set was empty.

Action:
Fill XML Character Set.

ODI-10062
Unable to find license key {0}. An exception {1} occurred with message: {2}

Category:
Other

Cause:
An exception occurred.

Action:
Check license key.

ODI-10063
Unable to check the license key. An exception {0} occurred with message: {1}

Category:
Other

Cause:
An exception occurred.

Action:
Check license key.

ODI-10064
The interface must have a JMS datastore as a source or target. Another license is required otherwise.

Category:
Other

Cause:
The interface must have a JMS datastore as a source or target.

Action:
Check datastore type and/or license.

ODI-10065
You license does not include these features. Please contact your reseller.

Category:
Other

Cause:
You license does not include these features.

Action:
Please contact your reseller.

ODI-10066
The interface is using a Datastore defined in Model "{0}" which is linked to a logical schema "{1}" that no longer exists.

Category:
Other

Cause:
Logical schema was not found.

Action:
Correct interface.

ODI-10067
Target file already exists.

Category:
File

Cause:
Target file already existed.

Action:
Choose another target file name.

ODI-10068
SnpsConnection: Current Isolation level: {0}. The new Isolation level: {1}, not supported

Category:
Other

Cause:
Isolation level not supported.

Action:
Check isolation level.

ODI-10069
Unsupported XML Character Set: {0}

Category:
Other

Cause:
Unsupported XML Character Set.

Action:
Check XML charset.

ODI-10070
Cannot delete this object. It is being edited or viewed

Category:
Other

Cause:
Object was being edited or viewed.

Action:
Stop edit or view object and try again.

ODI-10071
Cannot delete this object

Category:
Other

Cause:
Could not delete this object.

Action:
Check object state.

ODI-10073
A repository already exists on this data server

Category:
Other

Cause:
A repository already existed on this data server.

Action:
Choose another data server.

ODI-10074
An object with the wrong type was given to an object representative

Category:
Other

Cause:
An object with the wrong type was given to an object representative

Action:
Check object type.

ODI-10075
An object is in an unidentified state {0}

Category:
Other

Cause:
An object is in an unidentified state.

Action:
Check object state.

ODI-10076
A collection object is the wrong class

Category:
Other

Cause:
A collection object is the wrong class.

Action:
Check collection object's class

ODI-10077
Undefined action performed on an object: {0}

Category:
Other

Cause:
An undefined action was performed on an object.

Action:
Check action and object.

ODI-10078
An object will be in an unidentified state (it is in the state "{0}" and "{1}" is currently being performed on it)

Category:
Other

Cause:
An object would have been in an unidentified state.

Action:
Check object state.

ODI-10080
Incorrect License ....

Category:
Other

Cause:
Incorrect License.

Action:
Contact your seller.

ODI-10081
You are not authorized to Insert the Object: {0}: {1} / {2}

Category:
Security

Cause:
You were not authorized to Insert the Object.

Action:
Login with user with right privileges.

ODI-10082
You are not authorized to View the Object: {0}: {1}

Category:
Security

Cause:
You were not authorized to View the Object.

Action:
Login with user with right privileges.

ODI-10083
You are not authorized to Delete the Object: {0}: {1} / {2}

Category:
Security

Cause:
You were not authorized to Delete the Object.

Action:
Login with user with right privileges.

ODI-10084
You are not authorized to Edit the Object: {0}: {1} / {2}

Category:
Security

Cause:
You were not authorized to Edit the Object.

Action:
Login with user with right privileges.

ODI-10085
You cannot consult this object

Category:
Security

Cause:
You could not consult this object.

Action:
Login with user with right privileges.

ODI-10086
You cannot edit this object

Category:
Security

Cause:
You could not edit this object.

Action:
Login with user with right privileges.

ODI-10087
You can only give Supervisor Access Privileges if you are a Supervisor.

Category:
Security

Cause:
You could only give Supervisor Access Privileges if you are a Supervisor.

Action:
Login with user with right privileges.

ODI-10088
Empty Java Character Set.

Category:
Other

Cause:
Java Character Set was empty.

Action:
Fill Java charset.

ODI-10089
You cannot modify another user"s password

Category:
Security

Cause:
You cannot modify another user"s password

Action:
Login with user with right privileges.

ODI-10090
Object {0} {1} is referenced by: {2}. Cannot remove.

Category:
Other

Cause:
Object was referenced by another one.

Action:
Check object"s references.

ODI-10091
not connected

Category:
Other

Cause:
not connected

Action:
Check connection.

ODI-10092
Some objects cannot be exported. They do not exist in the repository.

Category:
Other

Cause:
Objects did not exist in the repository.

Action:
Check objects" state.

ODI-10093
You are importing an object from another repository with the same identifier. It is forbidden.

Category:
Other

Cause:
You tried to import an object from another repository with the same identifier.

Action:
Change repository ID.

ODI-10094
Problem while computing new name.

Category:
Other

Cause:
A problem occurred while computing new name.

Action:
Try again.

ODI-10095
Exception while getting the children list

Category:
Other

Cause:
Exception while getting the children list.

Action:
Try again.

ODI-10096
Error while parsing fields

Category:
Other

Cause:
Error occurred while parsing fields.

Action:
Check fields value.

ODI-10097
Impossible to find text with ID {0} in text list.

Category:
Other

Cause:
Text was not found.

Action:
Check text ID

ODI-10098
No connection available. Check connection parameters.

Category:
Network

Cause:
No connection was available.

Action:
Check connection parameters.

ODI-10099
Object cannot be exported because the file with name {0} could not be created.

Category:
Other

Cause:
Object could not be exported because the file could not be created.

Action:
Check your system rights to write files and file name.

ODI-10100
Empty XML Version

Category:
Other

Cause:
XML version was empty.

Action:
Fill XML Version.

ODI-10101
Invalid XML Version: {0}

Category:
Other

Cause:
XML Version was invalid.

Action:
Check XML version.

ODI-10102
Alias with the name {0} already exists.

Category:
Other

Cause:
Alias already exists.

Action:
Change alias.

ODI-10103
Alias with the name {0} does not exist.

Category:
Other

Cause:
Alias does not exit.

Action:
Check alias name ant try again.

ODI-10104
File {0} is not a Smart Export file and cannot be imported by Smart Import.

Category:
Other

Cause:
Smart Export file not specified for Smart Import.

Action:
Specify a Smart Export file for importing via Smart Import.

ODI-10105
Smart Import file name cannot be null.

Category:
Other

Cause:
Smart Export file name not specified for Smart Import.

Action:
Specify a Smart Export file for importing via Smart Import.

ODI-10106
Smart Import response file name cannot be null.

Category:
Other

Cause:
Smart import response file name not specified for Smart Import.

Action:
Specify a Smart Import response file.

ODI-10107
Smart Import file {0} not found.

Category:
Other

Cause:
File does not exist.

Action:
Specify an existing Smart Export file for importing via Smart Import.

ODI-10108
Smart Import response file {0} not found.

Category:
Other

Cause:
Response file does not exist.

Action:
Specify an existing Smart Import response file.

ODI-10109
File {0} is not a valid Smart Import Response file.

Category:
Other

Cause:
File is not a valid Smart Import response.

Action:
Specify an existing Smart Import response file.

ODI-10110
{0} with the same {1} exists.

Category:
Other

Cause:
An object with the same alternative key value(s) exists.

Action:
Change the alternative key value to be unique.

ODI-10111
{0} <{1}> referenced by {2} <{3}> is missing.

Category:
Other

Cause:
A referenced object does not exist.

Action:
Either import the missing object or change to reference a different object.

ODI-10112
Project code will be changed from <{0}> to <{1}>.

Category:
Other

Cause:
The import will make a change to an existing project code.

Action:
Determine whether the change to project code is desired or not.

ODI-10113
{0} with {1} <{2}> does not exist.

Category:
Other

Cause:
A referenced object does not exist.

Action:
Either import the missing object or change to reference a different object.

ODI-10114
{0} with {1} id <{2}> does not exist.

Category:
Other

Cause:
A referenced object does not exist.

Action:
Either import the missing object or change to reference a different object.

ODI-10115
{0} with the same name <{1}> already exists.

Category:
Other

Cause:
A different object with the same name already exists.

Action:
Either change the name of the object being imported or use match by name to match to the already existing object with the same name.

ODI-10116
Model code will be changed from <{0}> to <{1}>.

Category:
Other

Cause:
The import will make a change to an existing model code.

Action:
Determine whether the change to model code is desired or not.

ODI-10117
Sub-model code will be changed from <{0}> to <{1}>.

Category:
Other

Cause:
The import will make a change to an existing sub-model code.

Action:
Determine whether the change to sub-model code is desired or not.

ODI-10118
A different Physical Schema is already set as the default physical schema for the same data server.

Category:
Other

Cause:

Action:

ODI-10119
A different Context is already set as the default Context.

Category:
Other

Cause:

Action:

ODI-10120
Context code will be changed from <{0}> to <{1}>.

Category:
Other

Cause:
The import will make a change to an existing context code.

Action:
Determine whether the change to context code is desired or not.

ODI-10121
Logical schema name will be changed from <{0}> to <{1}>.

Category:
Other

Cause:
The import will make a change to an existing logical schema name.

Action:
Determine whether the change to logical schema name is desired or not.

ODI-10122
Logical agent name will be changed from <{0}> to <{1}>.

Category:
Other

Cause:
The import will make a change to an existing logical agent name.

Action:
Determine whether the change to logical agent name is desired or not.

ODI-10123
{0} with {1} <{2}> and {3} <{4}> does not exist.

Category:
Other

Cause:
A referenced object does not exist.

Action:
Either import the missing object or change to reference a different object.

ODI-10124
Smart import of file {0} cannot be run due to unfixed critical issues.

Category:
Other

Cause:
Critical issues exist for objects in the Smart Import.

Action:
A fix must be provided for all critical issues before the Smart Import can be run.

ODI-10125
Smart Export file name cannot be null.

Category:
Other

Cause:
Smart Export file name not specified for Smart Export.

Action:
Specify a Smart Export file via Smart Export.

ODI-10126
File {0} already exists.

Category:
Other

Cause:
The file already exists.

Action:
Specify another file name.

ODI-10127
Column position {0} is being used by another object <{1}>.

Category:
Other

Cause:
The position value is already in use.

Action:
Specify a unique position value.

ODI-10128
Multiple primary keys found. Only one primary key can be defined per datastore.

Category:
Other

Cause:
Multiple primary keys defined.

Action:
Delete or match primary keys so that only one is defined.

ODI-10129
Object with id {0} and type {1} is not a smart exportable object.

Category:
Other

Cause:
Smart Export does not support the type of object specified.

Action:
Do not export this object.

ODI-10130
Smart Import Response file {0} is not valid for Smart Export file {1}.

Category:
Other

Cause:
Smart Import Response file was not generated for the Smart Export file being imported.

Action:
Specify a Smart Import response file that belongs to the Smart Export file being imported.

ODI-10131
Entity of type {0} cannot be merged.

Category:
Programmatic

Cause:
Wrong entity type.

Action:
Check entity type.

ODI-10132
Entity of type {0} cannot be removed.

Category:
Programmatic

Cause:
Wrong entity type.

Action:
Check entity type.

ODI-10133
Cannot create a transaction against the extended persistent context [{0}].

Category:
Programmatic

Cause:
Another persistence context is already bound to the current thread.

Action:
Unbound persistence context from current thread.

ODI-10134
You do not have READ permission on at least one object from the collection/list.

Category:
Security

Cause:
Insufficient level of permissions.

Action:
Check your permissions

ODI-10135
Max value ({1}) reached for sequence {0} and reset is not allowed.

Category:
Other

Cause:
Reset is not allowed.

Action:
Check configuration of sequence behaviour.

ODI-10136
Illegal transaction state: transaction synchronization is active but entity manager is not synchronized within the transaction.

Category:
Programmatic

Cause:
Entity manager is not synchronized within the transaction.

Action:
Synchronize entity manager and try again.

ODI-10137
Your program needs to set authentication first.

Category:
Security

Cause:
There is no authentication set.

Action:
Set authentication via odiInstance.getSecurityManager().setGlobalAuthentication(.) or odiInstance.getSecurityManager().setCurrentThreadAuthentication(.), see the SecurityManager API for more detail.

ODI-10138
Unable to create DwgConnectConnection to {0} repository.

Category:
Other

Cause:
Exception during connection.

Action:
Check repository configuration.

ODI-10139
{0} must not be null or empty.

Category:
Configuration

Cause:
Parameter is null or empty.

Action:
Check parameter name.

ODI-10140
{0} must be greater or equal 0.

Category:
Configuration

Cause:
Parameter is negative.

Action:
Check parameter value.

ODI-10141
Unable to create datasource provider from class [{0}].

Category:
Configuration

Cause:
Exception during creation.

Action:
Check configuration.

ODI-10142
Active transaction is required to use the method {0} on the TransactionalOdiEntityManager.

Category:
Programmatic

Cause:
Transaction is not active.

Action:
Check transaction state.

ODI-10143
Error while accessing the {0} repository.

Category:
Network

Cause:
Network problems.

Action:
Check the network connection and the database status.

ODI-10144
OdiInstance is closed.

Category:
Other

Cause:
OdiInstance is closed.

Action:
Check OdiInstance status.

ODI-10145
Limited persistence support.

Category:
Other

Cause:
Limited persistence support.

Action:
Check OdiInstance configuration.

ODI-10146
Cannot create JDBC DataSource for this type of DataServer.

Category:
Programmatic

Cause:
Invalid connection provider.

Action:
Check connection provider.

ODI-10147
Repository type mismatches.

Category:
Configuration

Cause:
Wrong repository type.

Action:
Check repository type.

ODI-10148
Repository is in error install/upgrade state and needs to be repaired. Connection has been disabled.

Category:
Configuration

Cause:
Repository install/upgrade did not complete successfully.

Action:
Check install/upgrade log files and/or ODI user documentation for information on reparation process.

ODI-10149
Local Repository table is empty.

Category:
Configuration

Cause:
Local Repository table is empty.

Action:
Check repository configuration.

ODI-10150
Work repository with ID {0} is not bound to master: Definition in master ID:{0}, Name:{1}, Timestamp:{2} Definition in work ID:{3}, Name:{4}, Timestamp:{5}.

Category:
Configuration

Cause:
Work repository with ID is not bound to master repository.

Action:
Check work and master repositories configuration.

ODI-10151
Unable to get ID for entity {0}.

Category:
Security

Cause:
Wrong entity ID.

Action:
Check entity properties.

ODI-10152
I_OBJECTS for entity class {0} is not found.

Category:
Programmatic

Cause:
Entity type is not mapped to I_OBJECTS.

Action:
Check entity class.

ODI-10153
{0} is denied.

Category:
Security

Cause:
Insufficient level of permissions.

Action:
Check permissions.

ODI-10154
{0} is denied for {1}.

Category:
Security

Cause:
Insufficient level of permissions.

Action:
Check permissions.

ODI-10155
You do not have {0} permission on at least one object from the collection/list.

Category:
Security

Cause:
Insufficient level of permissions.

Action:
Check permissions.

ODI-10156
Impossible to connect to JPS MBean Server.

Category:
Configuration

Cause:
Exception during connection.

Action:
Check configuration.

ODI-10157
{0}: must call preWebLogic() before postWebLogic().

Category:
Programmatic

Cause:
Wrong API usage.

Action:
Call preWebLogic() before postWebLogic().

ODI-10158
The credential with map name {0} and key {1} already exists.

Category:
Programmatic

Cause:
Wrong credential.

Action:
Check credential configuration.

ODI-10159
The user {0} has not required CONNECT profile.

Category:
Security

Cause:
The user has not required profile.

Action:
Grant the user CONNECT profile first.

ODI-10160
Unable to load user.

Category:
Other

Cause:
Exception during user loading.

Action:
Check repository connection.

ODI-10161
Trying to create authentication with Subject parameter which should be applicable when OPSS authentication is used, but ODI shows it is using ODI internal authentication.

Category:
Programmatic

Cause:
ODI internal authentication is used instead of OPSS authentication.

Action:
Check authentication type.

ODI-10162
This OPSS user "{0}" is not registered to Oracle Data Integrator.

Category:
Configuration

Cause:
The user is not registered to ODI.

Action:
Check user name.

ODI-10163
This OPSS user "{0}" has different GUID than the one found in Oracle Data Integrator repository.

Category:
Security

Cause:
OPSS user differs from ODI user in GUID.

Action:
Check user GUID.

ODI-10164
Only supervisor user can invoke this API.

Category:
Security

Cause:
Insufficient level of permissions.

Action:
Check user role.

ODI-10165
The RunAsUser {0} is not a valid user from external user identity store.

Category:
Security

Cause:
User is not valid.

Action:
Check user.

ODI-10166
The RunAsUser: {0} has different GUID in ODI repository and external user identity store.

Category:
Security

Cause:
User from external user identity store differs from ODI user in GUID.

Action:
Check user.

ODI-10167
Authentication is missing.

Category:
Security

Cause:
Authentication is missing.

Action:
Check authentication configuration.

ODI-10168
There is already an Authentication bound to this thread.

Category:
Programmatic

Cause:
There is already an Authentication bound to this thread.

Action:
Check authentication configuration.

ODI-10169
Trying to set authentication object which is not created by this security manager.

Category:
Programmatic

Cause:
Authentication object is not created by this security manager.

Action:
Check authentication configuration.

ODI-10170
There is currently no Authentication bound to this thread.

Category:
Security

Cause:
There is currently no Authentication bound to this thread.

Action:
Check authentication configuration.

ODI-10171
There is already an Authentication bound as global Authentication.

Category:
Programmatic

Cause:
There is already an Authentication bound as global Authentication.

Action:
Check authentication configuration.

ODI-10172
There is currently no global Authentication bound to this SecurityManager.

Category:
Security

Cause:
There is currently no global Authentication bound to this SecurityManager.

Action:
Check authentication configuration.

ODI-10173
You are not authorized to change the password for external user "{0}".

Category:
Security

Cause:
Insufficient level of permissions.

Action:
Check permissions.

ODI-10174
You are not authorized to change the password for user "{0}".

Category:
Security

Cause:
Insufficient level of permissions.

Action:
Check permissions.

ODI-10175
You are not authorized to change the password for external user.

Category:
Security

Cause:
Insufficient level of permissions.

Action:
Check permissions.

ODI-10176
Authentication is needed to change password.

Category:
Security

Cause:
Authentication is missed.

Action:
Authenticate first.

ODI-10177
ODI was not able to load the jdbc driver class "{0}" provided on {1}.

Category:
Other

Cause:
Wrong jdbc driver class.

Action:
Check that the driver class name is correct and that this driver is available to ODI classloader.

ODI-10178
The jdbc URL "{1}" was not accepted by the jdbc driver class "{0}" provided on {2}.

Category:
Other

Cause:
Insufficient jdbc URL.

Action:
Check that the jdbc URL and the driver class name are matching.

ODI-10179
Client requires a repository with version {0} but the repository version found is {1}.

Category:
Other

Cause:
Insufficient repository version.

Action:
Check repository configuration.

ODI-10180
ODI was not able to load the jdbc driver class {0} specified in ODI topology for work repository {1}.

Category:
Other

Cause:
Wrong jdbc driver class.

Action:
Check that the driver class name is correct and that this driver is available to ODI classloader. If the driver class name is incorrect please connect to ODI topology to fix it.

ODI-10181
Uncategorized configuration exception.

Category:
Configuration

Cause:
An unexpected error occurred.

Action:
Check exception cause for details.

ODI-10182
Uncategorized exception during repository access.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Check exception cause for details.

ODI-10183
{0} is an invalid finder class.

Category:
Programmatic

Cause:
Wrong finder class.

Action:
Check finder class.

ODI-10184
Could not get ESS {0}.

Category:
Session

Cause:
Exception during session retrieving.

Action:
Check configuration and try again.

ODI-10185
Operation is not granted.

Category:
Security

Cause:
Current level of permission is not sufficient.

Action:
Check your permissions.

ODI-10186
User {0} is inactive.

Category:
Security

Cause:
There is no GUID defined for this User in ODI repository

Action:
Check user GUID.

ODI-10187
The authentication API is used in wrong way.

Category:
Programmatic

Cause:
The authentication API is used in wrong way.

Action:
Check usage of API.

ODI-10188
Error while login from OPSS.

Category:
Other

Cause:
Exception was thrown during login process.

Action:
Make sure OPSS is configured correctly for this installation.

ODI-10189
The password violates the following rule: "Password policy {0}". Select another password.

Category:
Security

Cause:
Weak password

Action:
Check password policy and correct password.

ODI-10190
The user {0} has its account expired.

Category:
Security

Cause:
Account expired

Action:
Request supervisor for account unlocking.

ODI-10191
Unable to create datasource provider.

Category:
Configuration

Cause:
Exception during creation.

Action:
Check configuration.

ODI-10192
Unable to retrieve user GUID.

Category:
Other

Cause:
Exception during GUID retrieving.

Action:
Check repository connection.

ODI-10193
Unexpected null value in port.

Category:
Programmatic

Cause:
JPS port value is null.

Action:
Check JPS configuration.

ODI-10194
Uncategorized security exception.

Category:
Programmatic

Cause:
An unexpected error occurred.

Action:
Check exception cause for details.

ODI-10195
CsfAccessor is only available for CsfPasswordStorageConfiguration

Category:
Programmatic

Cause:
Password storage configuration is internal.

Action:
Check storage configuration.

ODI-10196
Error while accessing the repository.

Category:
Network

Cause:
Network problems.

Action:
Check the network connection and the database status.

ODI-10197
Instance is not connected to a work repository

Category:
Programmatic

Cause:
Work datasource is null.

Action:
Check work datasource.

ODI-10198
Context with code '{0}' was not found.

Category:
Programmatic

Cause:
Context was not found.

Action:
Check context code.

ODI-10199
Incorrect ODI username or password.

Category:
Security

Cause:
Incorrect ODI username or password.

Action:
Check username and password.

ODI-10200
Work repository {0} was not found.

Category:
Programmatic

Cause:
Wrong repository name or repository is not defined.

Action:
Check repository name.

ODI-10201
The user {0} has its password expired.

Category:
Security

Cause:
Account expired

Action:
Request supervisor for changing password.

ODI-10202
Supervisor privilege is required to setup repository.

Category:
Security

Cause:
Insufficient level of permissions.

Action:
User supervisor account for this operation.

ODI-10203
Transaction state is illegal.

Category:
Programmatic

Cause:
Transaction state is illegal.

Action:
Check transaction state.

ODI-10204
Inappropriate usage of a ODI transaction API.

Category:
Programmatic

Cause:
Inappropriate usage of a ODI transaction API.

Action:
Check ODI transaction API.

ODI-10205
Unexpected rollback.

Category:
Programmatic

Cause:
Attempt to commit a transaction resulted in an unexpected rollback.

Action:
Check transaction.

ODI-10206
Transaction cannot be created.

Category:
Programmatic

Cause:
Exception was thrown during transaction creation.

Action:
Check transaction.

ODI-10207
Uncategorized exception during transaction system usage.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Check exception cause for details.

ODI-10208
Error when changing password for user {0}.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Check exception cause for details.

ODI-10209
Cannot access a closed IOdiEntityManager.

Category:
Programmatic

Cause:
IOdiEntityManager has been closed.

Action:
Check IOdiEntityManager state.

ODI-10210
File {0} does not contain any objects to be imported by Smart Import.

Category:
Other

Cause:
Smart Export file specified for Smart Import is empty.

Action:
Specify a Smart Export file with objects for importing via Smart Import.

ODI-10211
Unsupported Java Character Set: {0}

Category:
Other

Cause:
Unsupported Java Character Set.

Action:
Check Java charset.

ODI-10212
Parent object {0}: "{1}" already has child {2}: "{3}". Technical details: {2} : "{3}" (with global id: {7} and internal id: {8}) violates alternate key constraint {4} {5} for values {6}

Category:
Other

Cause:
Object violated alternate key constraint.

Action:
Check object properties and constraint's values.

ODI-10213
Fixed format file field {0} (starts at {1} ends at {2}) has a file position that overlaps with the file position of field {3} (starts at {4} ends at {5}).

Category:
Other

Cause:
Two fields from a fixed format file have overlapping file positions.

Action:
Modify the file positions or remove a field if the overlapping file positions are not correct.

ODI-10214
Fixed format file fields {0} (starts at {1} ends at {2}) and {3} (starts at {4} ends at {5}) have unused file positions between them.

Category:
Other

Cause:
Two fields from a fixed format file have unused file positions between them.

Action:
Modify the file positions if having unused file positions is not correct.

ODI-10215
It is forbidden to import a log into a repository using any other import mode except "Synonym Mode Insert".

Category:
Other

Cause:
Import mode is not "Synonym Mode Insert".

Action:
Correct import mode.

ODI-10216
Upgrade key cannot be null when importing objects from before ODI 12C.

Category:
Other

Cause:
Upgrade key is not set for import that must upgrade objects to have global ids.

Action:
Specify the upgrade key to be used.

ODI-10217
Permission check failed for instance object {0}.

Category:
Other

Cause:
Permission check failed for instance object.

Action:
Need to grant initial permission for creator on object.

ODI-10218
Invalid WAS_HOME ("{0}") set or WebSphere library jar ({1}) not found under WAS_HOME/plugins.

Category:
Other

Cause:
Wrong WAS_HOME set (or) WebSphere libraries (com.ibm.ws.admin.core.jar, com.ibm.ws.admin.services.jar, com.ibm.ws.runtime.jar) are moved

Action:
Check that the environment-variable WAS_HOME is set properly to point to WebSphere Application Server root. Also, ensure the libraries exist under WAS_HOME/plugins.

ODI-10219
ODI Library for WebSphere access ({0}) not found.

Category:
Other

Cause:
Library could be moved / deleted

Action:
Check that the specified library present

ODI-10220
ODI was unable to find the technology "{0}".

Category:
Other

Cause:
Missing technology.

Action:
Check that this technology is defined in the repository. .

ODI-10221
It is taken {0} second to synchronize Snp_Ent_Principal table content.

Category:
Other

Cause:

Action:

ODI-10222
The compatible Mapping/ReusableMapping {0} can only be modified by 11g SDK.

Category:
Other

Cause:
An attempt was made to modify compatible Mapping using 12c SDK.

Action:
Modify compatible Mapping using 11g Interface SDK.

ODI-10223
A non-legacy compatible import source cannot be imported into a legacy compatible repository.

Category:
Other

Cause:
An attempt was made to import a non-legacy compatible import source into a legacy compatible repository.

Action:
Import a legacy compatible import source or make repository not legacy compatible.

ODI-10224
You are not authorized to create new user.

Category:
Security

Cause:
Only SUPERVISOR could create users.

Action:
Check permissions.

ODI-10225
Invalid wallet password: A valid password must have a minimum length of eight characters and contain alphabetic characters combined with numbers or special characters.

Category:
Security

Cause:
Invalid wallet password.

Action:
Please choose a valid wallet password accordingly.

ODI-10226
Wallet already exists.

Category:
Security

Cause:
Try to create a wallet which already exists.

Action:
Please stop creating a wallet. Instead use the existing one.

ODI-10227
Wallet new password is same as old password.

Category:
Security

Cause:
You provide a new wallet password which is the same as the old one.

Action:
Please choose different wallet password than the old one.

ODI-10228
Repository with id "{0}" or with name "{1}" has been already used in your master repository.

Category:
Configuration

Cause:
Master repository has already work repository with the same name or id.

Action:
Check your master repository and work repository.

ODI-10229
Repository with id "{0}" has been already used in your master repository.

Category:
Configuration

Cause:
Master repository has already work repository with the same id.

Action:
Check your master repository and work repository.

ODI-10230
Repository with name "{0}" has been already used in your master repository.

Category:
Configuration

Cause:
Master repository has already work repository with the same name.

Action:
Check your master repository and work repository.

ODI-10231
Interface {0} cannot be imported because source temporary interface / mapping {1} is not found.

Category:
Other

Cause:
An attempt was made to import an interface with a source temporary interface / mapping that cannot be found in the import source or target repository.

Action:
Import the missing source temporary interface / mapping.

ODI-10232
The password violates the following rule: "New password must be different from old one". Select another password.

Category:
Security

Cause:
Weak password

Action:
Check password policy and correct password.

ODI-10234
Object cannot be imported since it contains non XML files

Category:
Other

Cause:
ZipFolder to be imported should not contain non XML files

Action:
Check ZipFolder to be imported

ODI-10235
No Importable files found

Category:
Other

Cause:
None of XML files imported from ZipFolder

Action:
Check XML files to be imported from Zip Folder

ODI-10236
Object must be replaced with an object of same KM type

Category:
Other

Cause:
KM of different type to the existing KM was selected for import replace.

Action:
Import Replace KM with existing KM type

ODI-10237
Object not replaced

Category:
Other

Cause:
A KM was selected for the Import Replace with a different type to the current KM.

Action:
Select a KM of the same type for import replace.

ODI-10238
Object must be replaced with an object of same type

Category:
Other

Cause:
Different ODI object is used to Import Replace KM

Action:
Import Replace KM with Same type

ODI-10243
Cannot import an export file with parents using regular import and INSERT_UPATE mode. Use smart import instead.

Category:
Other

Cause:
An attempt was made to import an export file created with parent objects using regular import and INSERT_UPATE mode. This would cause all other objects under the parent objects and not in the import file to be deleted.

Action:
Use smart import to import an export file created with parent objects when INSERT_UPDATE functionality is needed.

ODI-10244
Cannot import {0} {1} (with global id: {2} and internal id: {3}) because referenced {4} with global id {5} does not exist.

Category:
Other

Cause:
The referenced object for a foreign key cannot be found in order to set the reference and a missing reference cannot be created.

Action:
Import the missing referenced object before importing the referencing object.

ODI-10245
Cannot import {0} {1} (with global id: {2} and internal id: {3}) belonging to {4} {5} (with global id: {6} and internal id: {7}) because its referenced object is not found in the target repository.

Category:
Other

Cause:
The object was imported in a SYNONYM UPDATE mode and the referenced object was not found in the repository.

Action:
Change the import mode to INSERT_UPDATE or import the file twice first in INSERT MODE and then in UPDATE mode.

ODI-10246
No Exportable objects found in the repository.

Category:
Other

Cause:
No objects are present in the repository for export

Action:
Create repository objects

ODI-10247
Specified project {0} does not exist in the repository.

Category:
Other

Cause:
The repository did not contain the specified project.

Action:
Choose another project or create the project with the specified name.

ODI-10248
{0} : Not an ODI special driver.

Category:
Other

Cause:
Invalid Special driver.

Action:
Check that this technology is part of the special driver list.

ODI-13000
Invalid Directory Path specified - {0}

Category:
Other

Cause:
Invalid directory path. Either the path does not exist or is not a directory

Action:
Provide valid directory path

ODI-13001
Error Fetching Objects From File

Category:
Other

Cause:
Error Fetching Objects From File

Action:
Check The File

ODI-13002
Error Fetching Objects From Version Control System

Category:

Category:
Other

Cause:
Error Listing NonEmpty Branches From Version Control System

Action:
Check The Repository

ODI-13009
Error Listing NonEmpty Tags From Version Control System

Category:
Other

Cause:
Error Listing NonEmpty Tags From Version Control System

Action:
Check The Repository

ODI-13010
Error querying merge objects

Category:
Other

Cause:
Error Fetching SnpObjects

Action:
Check The Repository

ODI-13011
An in progress merge already exists. Only one in progress merge is allowed at a time.

Category:
Other

Cause:
A different in progress merge already exists

Action:
Complete the merge that is in progress before attempting to start another merge.

ODI-13012
In progress merge objects still exist for the merge. All merge objects must be complete before merge status can be set to complete.

Category:
Other

Cause:
In progress merge objects still exist for the merge

Action:
Complete the merge for all in progress merge objects in order to complete the merge.

ODI-13013
This operation is supported only when the object is deleted in SOURCE.

Category:
Other

Cause:
This operation is supported only when the object is deleted in SOURCE.

Action:
Perform delete object operation when object is deleted in SOURCE.

ODI-13014
An object ({0} {1}) identified as new for a merge cannot be added due to:

Category:
Other

Cause:
A different object already exists with the same name which causes the adding of the object to fail.

Action:
Delete or rename the conflicting object in the merge target, or rename the object in the merge source.

ODI-13015
This operation is supported only when the object is added in SOURCE.

Category:
Other

Cause:
This operation is supported only when the object is added in SOURCE.

Action:
Perform delete object operation when object is added in SOURCE.

ODI-13700
Unable to set the role OWB_USER for this user.

Category:
Other

Cause:
An attempt was made to set the role OWB_USER for the connected user.

Action:
Check that the role exists and the connected user is an OWB user.

ODI-13701
Unable to set the workspace {0} for this user.

Category:
Other

Cause:
An attempt was made to select the OWB workspace for the connected user.

Action:
Check that the workspace exists and the connected user has got privilege to access it.

ODI-13702
Unexpected error when connecting to OWB workspace {0}.

Category:
Other

Cause:
An unexpected error occurred when connecting to workspace.

Action:
Verify that the Owb repository is up and running.

ODI-13703
Unexpected error when locating object {0} in OWB workspace {1}.

Category:
Other

Cause:
An unexpected error occurred when locating an object in a workspace

Action:
Verify that the Owb repository is up and running and the object exists.

ODI-13704
Could not locate the physical schema associated with OWB workspace {0} in context {1}.

Category:
Other

Cause:
An error occurred when finding the schema related to an OWB workspace in a context.

Action:
Verify that the OWB workspace is related to a physical schema in the context.

ODI-13800

The selected database was released after this version of Oracle Fusion Middleware. For the most recent list of certified databases, refer to the Supported System Configurations information on the Oracle Technology Network.

Category:
Other

Cause:
Database version is not supported

Action:
Refer to the certification matrix for supported DB versions.

ODI-14120
The database you are connecting is not a supported version. refer to the certification matrix for supported DB versions.

Category:
Other

Cause:
Database version is not supported

Action:
Refer to the certification matrix for supported DB versions.

ODI-14121
The selected Oracle Database 11g Release 2 instance is not certified with this version of Oracle Fusion Middleware. Oracle Fusion Middleware 12c requires Oracle Database 11g Release 2 (11.2.0.3) or higher. For the latest list of certified databases, refer to the Supported System Configurations information on the Oracle Technology Network.

Category:
Other

Cause:
Database version is not supported

Action:
Refer to the certification matrix for supported DB versions.

ODI-14122
The database you are connecting is not a supported version. Enter Database with version equal to or higher than 10.5.3.0. Refer to the certification matrix for supported DB versions

Category:
Other

Cause:
Database version is not supported

Action:
Refer to the certification matrix for supported DB versions.

ODI-14123
DB Init Param Prerequisite failure for innodb_file_format. Its value should be 'Barracuda'.

Category:
Other

Cause:
INNODB_FILE_FORMAT value is not 'Barracuda'.

Action:
Refer to the certification matrix for supported DB init parameters.

ODI-14124
The selected MySQL instance is not certified with this version of Oracle Fusion Middleware. Oracle Fusion Middleware 12c requires MySQL 5.5.14 or higher. For a list of certified databases, refer to the Supported System Configurations information on the Oracle Technology Network.

Category:
Other

Cause:
Database version is not supported

Action:
Refer to the certification matrix for supported DB versions.

ODI-14125
DB Init Param Prerequisite failure for innodb_file_per_table. Its value should be 'ON'

Category:
Other

Cause:
INNODB_FILE_PER_TABLE value is not 'ON'

Action:
Refer to the certification matrix for supported DB init parameters.

ODI-14126
DB Init Param Prerequisite failure for innodb_large_prefix. Its value should be 'ON'.

Category:
Other

Cause:
INNODB_LARGE_PREFIX value is not 'ON'

Action:
Refer to the certification matrix for supported DB init parameters.

ODI-14127
DB Init Param Prerequisite failure for log_bin_trust_function_creators. Its value should be 'ON'.

Category:
Other

Cause:
log_bin_trust_function_creators value is not 'ON'

Action:
Refer to the certification matrix for supported DB init parameters.

ODI-14128
The selected Oracle database is a multitenant container database (CDB). Connecting to a multitenant container database (CDB) is not supported. Instead, connect to a valid pluggble database (PDB).

Category:
Other

Cause:
Database version is not supported

Action:
Refer to the certification matrix for supported DB versions.

ODI-14129
The selected Oracle Database 12c instance is not certified with this version of Oracle Fusion Middleware. Oracle Fusion Middleware 12c requires Oracle Database 12c (12.1.0.1) or higher. For a list of certified databases, refer to the Supported System Configurations information on the Oracle Technology Network

Category:
Other

Cause:
Database version is not supported

Action:
Refer to the certification matrix for supported DB versions.

ODI-14130
The selected Oracle Database 11g Release 1 or Oracle Database 10g instance is not certified with this version of Oracle Fusion Middleware. Oracle Fusion Middleware 12c requires Oracle Database 10g (10.2.0.4) or higher or Oracle Database 11g Release 1 (11.1.0.7) or higher. For the latest list of certified databases, refer to the Supported System Configurations information on the Oracle Technology Network.

Category:
Other

Cause:
Database version is not supported

Action:
Refer to the certification matrix for supported DB versions.

ODI-14131
The database you are connecting is not a supported version. Enter Database with version equal to or higher than 2008 R2. Refer to the certification matrix for supported DB versions.

Category:
Other

Cause:
Database version is not supported

Action:
Refer to the certification matrix for supported DB versions.

ODI-14132
The selected IBM DB2 instance is not certified with this version of Oracle Fusion Middleware. Oracle Fusion Middleware 12c requires IBM DB2 9.7 or higher in 9 series and IBM DB2 10.1 FP2 or higher in 10 series. For a list of certified databases, refer to the Supported System Configurations information on the Oracle Technology Network.

Category:
Other

Cause:
Database version is not supported

Action:
Refer to the certification matrix for supported DB versions.

ODI-14133
User should have sysdba or dba privilages.

Category:
Other

Cause:
User does not have sysdba or dba privilages

Action:
Grant user sysdba or dba privilages.

ODI-14134
The selected Oracle database is not configured to use the AL32UTF8 character set. Oracle strongly recommends using the AL32UTF8 character set for databases that support Oracle Fusion Middleware.

Category:
Other

Cause:
The database you are connecting is with non-AL32UTF8 character set

Action:
Use AL32UTF8 as the database character set.

ODI-14135
Table schema_version_registry$ already exists. Please use correct database.

Category:
Other

Cause:
Table schema_version_registry$ already exists.

Action:
Use correct database.

ODI-14136
Database does not match the requirement.

Category:
Other

Cause:
Database validation failed

Action:
Refer to the certification matrix for supported DB versions.

ODI-14137
Error occurred while validating database {0}.

Category:
Other

Cause:
Database validation failed

Action:
Refer to the certification matrix for supported DB versions.

ODI-14138
Could not perform validation of the database.Please check the database user privileges.

Category:
Other

Cause:
Database validation failed

Action:
Check if database user has sufficient privileges or required table/view/file exist .

ODI-14139
Encryption Standard is not set in Master Repository.

Category:
Security

Cause:
Master Repository configured with invalid or no Encryption Standard.

Action:
Set the Encryption Standard to be used in the Master Repository, with valid value for algorithm ('AES') and key-length ('128' / '256').

ODI-14140
Master key data is not set in Master Repository

Category:
Security

Cause:
Master Repository does not have the master key data.

Action:
Set the Master key data to be used in the Master Repository.

ODI-14141
The provided key is not matching the key-specification. Key must : be of length 8-100, contain at least one alphabet (lower/uppercase), contain at least one numeric-digit (or) a special-character from: [@ # $ % + / =].

Category:
Security

Cause:
The provided key is not matching the key-specification.

Action:
Provide key that matches the key-specification

ODI-14142
The Security Policy currently in force, does not allow the use of AES-256.

Category:
Security

Cause:
The Security Policy in force does not allow using AES-256 Encryption Standard.

Action:
To use AES-256, please replace the security policy files in JRE_HOME/lib/security, with Unlimited Strength Policy Files available at Java SE downloads at http://www.oracle.com/technetwork/java. Refer Java SE documentation for more information.

ODI-14143
Encryption Standard persisted in master repository is not AES-128 or AES-256.

Category:
Security

Cause:
The Encryption Standard configured in the repository is not supported.

Action:
Edit the master repository configuration to set the Encryption Standard as AES-128 or AES-256.

ODI-14144
An Error occurred while parsing the ODI Tool Command

Category:
Security

Cause:
An error occurred while parsing the ODI Tool Command text.

Action:
Refer to stack trace for more details.

ODI-14145
An Error occurred while setting parameter {0} in ODI Tool Command.

Category:
Security

Cause:
Unable to set parameter in ODI Tool Command.

Action:
Refer to stack trace for more details.

ODI-14146
Incorrect Export Key

Category:
Security

Cause:
The Export Key provided is incorrect for the import source

Action:
Provide a valid Export Key that was used during Export of object

ODI-14147
An error occurred while migrating cipher text in object {0} - "{1}" (with Internal ID: {2} and Global ID: {3})

Category:
Security

Cause:
Invalid Cipher content or Invalid Export Key

Action:
If exporting, check if the cipher data present in the object is correct. If importing, check if Export Key is correct.

ODI-14148
An Error occurred while creating Cipher for migration.

Category:
Security

Cause:
An error occurred while creating ODI Cipher.

Action:
Refer to stack trace for more details

ODI-14149
Invalid Encoder/Decoder for Cipher Text Migration.

Category:
Security

Cause:
The ODI Encoder/Decoder is invalid.

Action:
Create valid Encoder/Decoder for Cipher Text Migration.

ODI-14150
An Error occurred while migrating password cipher text

Category:
Security

Cause:
An error occurred while migrating the password cipher text

Action:
Refer to stack trace for more details

ODI-14151
An error occurred while retrieving parameters from ODI Tool Command.

Category:
Security

Cause:
Invalid ODI Tool Command.

Action:
Check ODI Tool Command text.

ODI-14152
Package name is not unique.

Category:

Cause:
Duplicate KM name. KM with the same name already exists.

Action:
Choose another KM name.

ODI-14157
Procedure option name is not unique.

Category:
Other

Cause:
Duplicate procedure option name. Procedure option with the same name already exists.

Action:
Choose another procedure option name.

ODI-14158
A Supervisor user can be updated only by another Supervisor user.

Category:
Security

Cause:
The logged-in user is not a Supervisor user, but trying to update another Supervisor user.

Action:
Login as a user with right privileges.

ODI-14159
An error occurred while validating the Export Key.

Category:
Security

Cause:
An error occurred while validating the export key

Action:
Please check the Logs

ODI-14160
Skipping Data migration on IP Text {0} . Failed with Exception : {1} . Please fix manually.

Category:
Security

Cause:
An error occurred while migrating the password cipher text

Action:
Refer to Error Message for more details

ODI-14161
Duplicate name objects are found in the repository. Please check the upgrade log file.

Category:
Other

Cause:
Some objects with same names are under same parents

Action:
Check the log file for the duplicate name objects. Remove them before upgrade

ODI-14162
User cannot login ODI with blank password. Please contact SUPERVISOR to reset the password.

Category:
Security

Cause:
User cannot login ODI with blank password. Please contact SUPERVISOR to reset the password.

Action:
Please contact SUPERVISOR to reset the password.

ODI-14163
User cannot create master repository through import with blank supervisor password.

Category:
Security

Cause:
User cannot create master repository through import with blank supervisor password.

Action:
Please provide valid supervisor password to the API while create master repository thorugh import.

ODI-14164
Work repository name must not be null or empty

Category:
Other

Cause:
Work repository name is null or empty.

Action:
Check Work repository name.

ODI-14165
The repository is currently locked for sync operation and cannot be modified

Category:
Repository

Cause:
User cannot make any changes as repository is locked for sync.

Action:
Please try after some time.

ODI-14173
The repository is for {0} so you cannot connect to this repository from {1}.

Category:
Security

Cause:
Repository is not valid for the invoking application.

Action:
Connect to this repository use the proper application.

ODI-14174
You are using Oracle Golden Gate Studio which only supports internal authentication mode. But the repositgory is in external authentication mode which cannot be used for Oracle Golden Gate Studio.

Category:
Security

Cause:
The repository is in external authentication mode and it is not valid for Oracle Golden Gate Studio since Oracel Golden Gate Studio only supports internal authentication mode. One possibility could be that this repository is for Oracle Data Integrator.

Action:
Connect to a different repository.

ODI-14175
Cannot delete this user since it is the last supervisor user.

Category:
Security

Cause:
You are trying to delete the last supervisor user which cannot deleted.

Action:
Create another user and make it supervisor user and then you can delete this supervisor user.

ODI-14176
Password cannot be empty for accessing the MBean Server, which is used for External Password Storage.

Category:
Security

Cause:
Password is empty for the accessing the MBean Server.

Action:
Provide MBean server password.

ODI-14177
The external user: {0} does not exist in ODI repository and also has no ODI role granted. The GUID of the user : {1}

Category:
Security

Cause:
The specified external user does not exists in ODI repository and has no ODI role granted.

Action:
Add the external user in ODI repository or grant required ODI roles to the user.

ODI-14178
Schema name and Catalog name is not unique for the dataserver {0}

Category:
Other

Cause:
Duplicate physical schema. Physical Schema with the same schema name and catalog name already exists for this dataserver.

Action:
Choose another schema name and/or catalog name.

ODI-14179
For security reasons, you cannot use odiRef.getJDBCConnection("WORKREP"), since your Work Repository and Master Repository use the same database schema. Please contact your Oracle Data Integrator Administrator to grant you <Create JDBC Connection> permission on Master Repository object from Oracle Data Integrator Studio Security Explorer and try again. Please note that the <Create JDBC Connection> permission is located under Master Repository object in the Objects section from Security Explorer. You can give the permission to a user, say User1, by 1) drag and drop it to the user User1 2) then mark the newly granted permission as Generic Privilege: the newly granted permission <Create JDBC Connection> will be under the tree node User1/Objects/Master Repository, open the editor of the granted permission and select the check box named <Generic Privilege>.

Category:
Other

Cause:
The Work Repository and Master Repository use same database schema and you do not have the required permission granted.

Action:
Please contact your Oracle Data Integrator Administrator to grant you <Create JDBC Connection> permission on Master Repository object from Oracle Data Integrator Studio Security Explorer and try again. Or you also can re-create your Master and Work repositories in different database schema. Please note that the <Create JDBC Connection> permission is located under Master Repository object in the Objects section from Security Explorer. You can give the permission to a user, say User1, by 1) drag and drop it to the user User1 2) then mark the newly granted permission as Generic Privilege: the newly granted permission <Create JDBC Connection> will be under the tree node User1/Objects/Master Repository, open the editor of the permission and select the check box named <Generic Privilege>.

Objects with null global id's are present in repository. Please check the upgrade log file.

Category:
Other

Cause:
Some objects with NULL global id's are present in repository

Action:
Manually Assign GUID to the objects which got NULL value before upgrade.

ODI-14195
Duplicate name objects and objects with null GUID are found in the repository. Please check the upgrade log file.

Category:
Other

Cause:
Some objects with same names are under same parents and some objects with NULL GOLBAL_ID value

Action:
Remove duplicate named objects and manually assign unique GUID to the objects which got NULL value before upgrade.

ODI-14196
BICS Table Operation File Input Stream cannot be obtained.

Category:
Other

Cause:
BICS Table Operation File Path is not provided by user or invalid, hence input stream cannot be obtained.

Action:
Set valid BICS Table Operation File Pat.

ODI-14197
BICS Dataset Operation File Input Stream cannot be obtained.

Category:
Other

Cause:
BICS Dataset Operation File Path is not provided by user or invalid, hence input stream cannot be obtained.

Action:
Set valid BICS Dataset Operation File Pat.

ODI-14198
BICS Target Type is invalid.

Category:
Other

Cause:
Invalid BICS Target Type is provided by user(it should be table or dataset).

Action:
Set valid BICS Target Type.

ODI-14199
Cannot change BICS Operation property: {0}. Value has already been specified and it is immutable object.

Category:
Other

Cause:
User is trying to set value to immutable member which already has value in it.

Action:
Please do not set value of immutable object.

ODI-14200
You can only grant or retrieve enterprise principal member or ODI internal user member on role object. But this is an user object.

Category:
Security

Cause:
The application invoked some API on an user object, instead the API should be invoked on a role object.

Action:
This is an internal error. Please contact Oracle Support Services with details.

ODI-14201
This method is only applicable to Oracle Golden Gate Studio. But your repository is ODI.

Category:
Security

Cause:
The application invoked some API which is only applicable to Oracle Golden Gate Studio. But your application is configured as ODI.

Action:
This is an internal error. Please contact Oracle Support Services with details.

Please use correct Service URL to connect to Oracle Storage Cloud Service

ODI-14227
{0} cannot be NULL. Please provide Valid {0} to connect Oracle Storage Cloud Service

Category:
Other

Cause:
{0} Cannot be NULL

Action:
Please use correct {0} to connect to Oracle Storage Cloud Service

ODI-14229
Failed to connect to Oracle Storage Cloud Service

Category:
Other

Cause:
Failed to Download. File Count not matching with Object count in Container to download

Action:
Failed to Download. Please Check valid File Count matching Object count in Container to download

ODI-14230
Failed to {0}.Please use appropriate Storage Container Type to {0} STANDARD or ARCHIVE File Type

Category:
Other

Cause:
Failed to {0}. Invalid Container Storage Type for STANDARD | ARCHIVE type

Action:
Failed to {0}. Please Correct Storage Container Type accordingly to {0} STANDARD or ARCHIVE File type

ODI-14231
Physical schema {0} is not configured for required field {1}.

Category:
Other

Cause:
Invalid Physical schema value specified.

Action:
Update Physical schema with proper values required for Storage CS.

ODI-14232
{0} directory {1} configured for field {2} for Physical schema {3} does not exists.

Category:
Other

Cause:
Invalid input parameters specified.

Action:
Verify input parameters.

ODI-14233
{0} container {1} configured for field {2} for physical schema {3} does not exist.

Category:
Other

Cause:
Invalid input parameters specified.

Action:
Verify input parameters.

ODI-14234
{0} bucket {1} configured for field {2} for physical schema {3} does not exist.

Category:
Other

Cause:
Invalid input parameters specified.

Action:
Verify input parameters.

ODI-14235
Credential zip {0} does not contain required tnsnames.ora.

Category:
Security

Cause:
Credential zip doesnot have required tnsnames.ora.

Action:
Please add required file tnsnames.ora in credential zip.

ODI-14236
Tnsnames file in {0} does not contain connection information.

Category:
Security

Cause:
TnsNames.ora is empty.

Action:
Please add connection information in tnsnames.ora in credential zip.

ODI-14237
Credential zip {0} can not be found.

Category:
Security

Cause:
Credential zip is not found.

Action:
Please check the location. Retry.

ODI-14238
Credential file {0} is not found at specified location {1}

Category:
SECURITY

Cause:
Credential file is not present.

Action:
Please check if credential file is present in Credential zip.

ODI-14240
Service name : {0} cannot contain '-'. Provide valid Service name.

Category:
Other

Cause:
Invalid input parameters specified.

Action:
Verify input parameters.

ODI-14241
Invalid Service Name. Service : {0} does not exist.

Category:
Other

Cause:
Check Service Name.

Action:
Invalid Service name

ODI-14242
Failed to get list of containers.

Category:
Other

Cause:
Contact Oracle Support Services.

Action:
Contact Oracle Support Services

ODI-14243
Failed to delete the container : {0}.

Category:
Other

Cause:
Contact Oracle Support Services.

Action:
Contact Oracle Support Services

ODI-14244
Failed to create the container : {0}.

Category:
Other

Cause:
Contact Oracle Support Services.

Action:
Contact Oracle Support Services

ODI-14245
Failed to fetch the service : {0}.

Category:
Other

Cause:
Invalid input parameters specified.

Action:
Verify input parameters.

ODI-14246
Failed to perform {0} on Storage CS.

Category:
Other

Cause:
Contact Oracle Support Services.

Action:
Contact Oracle Support Services

ODI-14247
Credential zip {0} is not accessible.

Category:
Security

Cause:
Credential zip is not accessible.

Action:
Verify permission and path accessibility.

ODI-14248
Unable to unzip Credential zip {0}

Category:
Others

Cause:
Error while trying to unzip credential zip.

Action:
Verify zip uploaded.

ODI-14249
Unable to encrypt files during Upload.

Category:
Other

Cause:
Invalid Encryption key provided.

Action:
Verify Encryption key.

ODI-14250
Invalid decrypt key provided.

Category:
Other

Cause:
Invalid Decryption key provided.

Action:
Verify Decryption key.

ODI-14251
Unable to decrypt files during Download.

Category:
Other

Cause:
Invalid Decryption key provided.

Action:
Verify Decryption key.

ODI-14252
Physical schema is not defined for the logical schema {0}.

Category:
Other

Cause:
Invalid input parameters specified.

Action:
Verify input parameters.

ODI-14253
Provided {0} logical schema {1} is not supported.

Category:
Other

Cause:
Invalid Logical schema value specified.

Action:
Update Logical schema with proper values.

ODI-14254
An error occurred while unzipping the DA file to directory {0}.

Category:
Other

Cause:
An error occurred while unzipping the DA file

Action:
Please check permission.

ODI-14255
Import file has repository version {0} newer than current repository version {1}. This import is not supported.

Category:
Other

Cause:
Import file repository version is greater than current repository version.

Action:
Use supported import file.

ODI-15000
BSF Not Present

Category:
Programmatic

Cause:
Bean Scripting Framework manager cannot be found.

Action:
Ensure that class org.apache.bsf.BSFManager is available in the classpath.

ODI-15001
No End Separator for the following text:

Category:
Programmatic

Cause:
No end delimiter found for a delimited text in the expression.

Action:
Add an end delimiter to the delimited text.

ODI-15002
The string to be transformed cannot be null.

Category:
Programmatic

Cause:
Parsing failed for an expression reference tag.

Action:
Fix the expression.

ODI-15003
Error during Code Interpretor creation

Category:
Programmatic

Cause:
Code generator internal error.

Action:
Contact Oracle support.

ODI-15005
The datatype "{0}" does not exist in technology: {1}.

Category:
Programmatic

Cause:
The datatype for a column is not supported by the technology.

Action:
Change the datatype or the technology of the execution location.

ODI-15006
The source datatype is null for the column: {0}, and the technology: {1}

Category:
Programmatic

Cause:
The datatype for a column is null for the technology.

Action:
Change the datatype or the technology of the execution location.

ODI-15007
Syntax not set for 'Create Table' for the datatype: {0} for the technology: {1}.

Category:
Programmatic

Cause:
The execution location technology does not have any "Create Table" syntax set up.

Action:
Edit the technology definition and add "Create Table" syntax.

ODI-15009
No text for the 'Writable Datatype Syntax' for the datatype: {0} in technology: {1}

Category:
Programmatic

Cause:
The datatype does not have a "Writable Datatype Syntax" property value set up for the execution location technology.

Action:
Edit the datatype in the technology to add a "Writable Datatype Syntax".

ODI-15010
No conversion for the datatype {0}, for the source technology {1} and for the target technology {2}

Category:
Programmatic

Cause:
No conversion is defined for the source technology datatype to the target technology datatype.

Action:
Edit the source or target technology datatype to add a conversion from the source to the target datatype.

ODI-15011
The variable does not exist in the database.

Category:
Programmatic

Cause:
A variable is being referenced but it does not exist in the repository.

Action:
Create the variable in the repository.

ODI-15012
Sequence does not exist in database

Category:
Programmatic

Cause:
A sequence is referenced but does not exist in the repository.

Action:
Create the sequence in the repository.

ODI-15013
The table {0} has fatal errors.

Category:
Programmatic

Cause:
The table cannot be processed.

Action:
Check the table for inconsistencies.

ODI-15014
The referenced text does not exist in the database.

Category:
Programmatic

Cause:
The text reference in the expression does not exist in the repository.

Action:
Repository corruption has occurred, contact Oracle support.

ODI-15015
Too much recursion in this text resolution.

Category:
Programmatic

Cause:
The expression text references other text recursively too many times.

Action:
Review the expression and try to simplify.

ODI-15016
Commands Undefined.

Category:
Programmatic

Cause:
KM is missing a block of lines.

Action:
Check the KM.

ODI-15017
Table not selected (null).

Category:
Programmatic

Cause:
Target table not found.

Action:
Check interface for consistency.

ODI-15018
CKM not selected.

Category:
Programmatic

Cause:
The CKM is not selected for the object.

Action:
Select a CKM.

ODI-15019
Missing context

Category:
Programmatic

Cause:
The context object cannot be found.

Action:
Check the context selection.

ODI-15020
No JKM available

Category:
Programmatic

Cause:
JKM has not been set or is not found.

Action:
Set a valid JKM for the interface.

ODI-15021
Journalizing requires a Primary Key on the Table:

Category:
Programmatic

Cause:
Journalizing is enabled, but the target table has no primary key.

Action:
Add a primary key to the target table.

ODI-15022
No RKM Set.

Category:
Programmatic

Cause:
RKM has not been set or is not found.

Action:
Set a valid RKM for the object.

ODI-15023
Cannot perform standard reverse. Choose customized reverse and set RKM.

Category:
Programmatic

Cause:
Standard reverse engineering is not supported for this object.

Action:
Select customized reverse engineering for the object and select an RKM.

ODI-15025
The interface clause text does not exist.

Category:
Programmatic

Cause:
The interface clause refers to text that does not exist.

Action:
Check interface clauses for (join, filter, etc.) for consistency.

ODI-15026
Interface clauses are missing.

Category:
Programmatic

Cause:
The code generator cannot find the clause collection for the interface.

Action:
Check the interface for consistency.

ODI-15027
Interface source tables are missing.

Category:
Programmatic

Cause:
The code generator cannot find the source table collection for the interface.

Action:
Check the interface for consistency.

ODI-15028
Interface result collection is null.

Category:
Programmatic

Cause:
Interface generation method buildSqlCauses as been called with a null results parameter.

Action:
Ensure that a non null Map is passed for the result parameter.

ODI-15029
Interface error clause collection is missing.

Category:
Programmatic

Cause:
Interface generation method buildSqlCauses as been called with a null error clauses parameter.

Action:
Ensure that a non null collection is passed for the error clauses parameter.

ODI-15030
Interface is missing the integration work table collection.

Category:
Programmatic

Cause:
Interface generation method buildSqlCauses as been called with a null work table collection parameter.

Action:
Ensure that a non null collection is passed for the work table parameter.

ODI-15031
Technology not selected.

Category:
Programmatic

Cause:
No technology is selected for the interface target execution location.

Action:
Check the technology selection for the interface target.

ODI-15032
Unknown object in interface source table collection

Category:
Programmatic

Cause:
Interface generation method buildSqlCauses as been called with a source table collection having a non table item.

Action:
Ensure that only table type items are included in the source table collection.

ODI-15033
The expression: {0} does not have an associated column.

Category:
Programmatic

Cause:
The expression should represent a column, but no column is found for the name.

Action:
Fix the expression.

ODI-15034
A scenario with the same name and the same number already exists. Please select other values.

Category:
Programmatic

Cause:
Cannot create a duplicate scenario with the same name and version number as an existing scenario.

Action:
Give the scenario a different name or version.

ODI-15036
Scenario"s name and/or number are missing.

Category:
Programmatic

Cause:
A scenario must have a name and version, but the name or version is missing.

Action:
Set values for name and version for the scenario.

ODI-15037
The interface {0} has fatal errors.

Category:
Programmatic

Cause:
The interface has fatal errors.

Action:
Check and fix interface issues.

ODI-15038
The scenario name substitution pattern {0} is not supported. Please check the user parameter for the scenario naming convention.

Category:
Programmatic

Cause:
Invalid substitution pattern used for scenario name.

Action:
Change the substitution pattern.

ODI-15039
The interface {0} use native sequence. Native sequence are not allowed for Derived Table (sub select statement)

Category:
Programmatic

Cause:
Native sequence was used in a sub-select or derived interface.

Action:
Remove the native sequence usage.

ODI-15040
Errors detected when building SQL clauses.

Category:
Programmatic

Cause:
An error occurred when generating code for the SQL clauses.

Action:
Fix the interface clauses.

ODI-15041
An aggregation function may not be used in a join condition. Please use a separate interface for the aggregation and join the result in this interface.

Category:
Programmatic

Cause:
An aggregation function was used inside a join condition expression.

Action:
Change the join condition to remove the aggregation function.

ODI-15042
Unable to regenerate this scenario. It references an package that does not exist.

Category:
Programmatic

Cause:
The scenario must reference a package, but it doesn't.

Action:
Delete the scenario and create a new one.

ODI-15043
Unable to regenerate this scenario from a Runtime repository.

Category:
Programmatic

Cause:
The scenario must cannot be regenerated from the runtime repository.

Action:
Delete the scenario and create a new one.

ODI-15044
Invalid pScenSource type when calling SnpGeneratorSQLCIT.mainGenScenSourceScenario

Category:
Programmatic

Cause:
The scenario generator has been invoked with an invalid scenario source.

Action:
Ensure that only valid scenario source types are used to generate a scenario.

ODI-15045
Invalid value for KM type.

Category:
Programmatic

Cause:
An invalid value was specified for the KM type.

Action:
Specify a valid value.

ODI-15046
The column cache is null during code generation.

Category:
Programmatic

Cause:
The getSnpCol method has been invoked while the SnpColCache member is null;

Action:
Ensure that SnpGeneratorSQLCIT has been properly initialized before invoking getSnpCol.

ODI-15047
The getSnpCol method has been invoked with a null column ID during code generation.

Category:
Programmatic

Cause:
The getSnpCol method has been invoked with a null column ID.

Action:
Ensure that getSnpCol is only called with valid column ID values.

ODI-15050
Flow Control not possible if no key is declared in your target datastore

Category:
Programmatic

Cause:
Flow control is enabled for the interface, but the target datastore has no primary key defined.

Action:
Define a primary key for the target datastore object, and re-add the target datastore.

ODI-15051
Missing mapping instance for interface.

Category:
Programmatic

Cause:
The target column does not have any mapping.

Action:
Add a mapping expression for the target column.

ODI-15052
The interface is missing a dataset.

Category:
Programmatic

Cause:
There is no dataset for the interface source.

Action:
Check the interface for consistency.

ODI-15054
Scenario generation error: Cannot regenerate the scenario. The physical mapping design used to generated the scenario is not found.

Category:
Programmatic

Cause:
The physical mapping design used to generated the scenario is not found.

Action:
Choose to create or replace the scenario.

ODI-15055
Character "]" missing in: {0}.

Category:
Programmatic

Cause:
A bracketed tag inside a KM line is missing a closing bracket ("]") character.

Action:
Fix the KM line.

ODI-15057
Non-ordered outer join not supported for technology.

Category:
Programmatic

Cause:
Non-ordered outer join syntax disabled for technology.

Action:
Correct join.

ODI-15058
Variable scenario generation error: Logical schema is required.

Category:
Programmatic

Cause:
Variable scenario cannot be generated if logical schema is not set.

Action:
Set the logical schema.

ODI-15059
I_TXT is mandatory.

Category:
Programmatic

Cause:
A call was made to SnpTxtCachedHashMap.getInstance, but the pITxt parameter was null.

Action:
Contact Oracle support.

ODI-15060
The JKM line {0} uses an unsupported execution channel: {1}

Category:
Programmatic

Cause:
A line in the JKM uses an execution channel that is not supported.

Action:
Change the line in the JKM to use a supported channel.

ODI-15061
The JKM line {0} uses an unsupported commit type: {1}

Category:
Programmatic

Cause:
A line in the JKM uses a commit type that is not supported.

Action:
Change the line in the JKM to use a supported commit type.

ODI-15062
Invalid commit type: {0}

Category:
Programmatic

Cause:
An invalid commit type was passed to SnpServiceGenerator.convertCommitType

Action:
Contact Oracle support

ODI-15063
The alternate key {0} is not unique.

Category:
Programmatic

Cause:
An alternate key defined by the repository is found to be non-unique.

Action:
Check the data or the alternate key definitions.

ODI-15064
The primary key {0} is not unique.

Category:
Programmatic

Cause:
A primary key defined by the repository is found to be non-unique.

Action:
Check the data or primary key definitions.

ODI-15065
Join error ({0}) between the table {1} and the table {2}.

Category:
Programmatic

Cause:
A foreign key relationship is not found.

Action:
A foreign key relationship between 2 tables defined in the repository is not valid.

ODI-15066
The column {0} cannot be null.

Category:
Programmatic

Cause:
The column is marked in the repository as not nullable.

Action:
Check the data, or change the not null value.

ODI-15067
The datatype value "{0}" is incorrect.

Category:
Programmatic

Cause:
An invalid datatype has been found.

Action:
The repository table contains an invalid datatype.

ODI-15068
Unknown flexfield code {0}.

Category:
Programmatic

Cause:
An undefined flex field code is being referenced

Action:
Check the flex field references in the KM, and the flex field definitions

ODI-15069
{0} Is not valid without session context.

Category:
Programmatic

Cause:
A current session context does not exist.

Action:
Check session definition.

ODI-15070
Unable to find method object: PythonInterpreter.initialize(Properties, Properties, String[]) method

Category:
Other

Cause:
The python method used by the script is not found.

Action:
Check the KM step.

ODI-15071
Error occurred

Category:
Other

Cause:
An exception was thrown while executing a python script in the KM step.

Action:
Check the cause.

ODI-15072
There is no PK constraint

Category:
Programmatic

Cause:
There is a call to "getPK" in the KM, but no PK is found.

Action:
Check the KM and the PK definitions.

ODI-15073
There is no index

Category:
Programmatic

Cause:
There is a call to "getIndex" in the KM, but no index is found.

Action:
Check the KM and the index definitions.

ODI-15076
no dataset

Category:
Programmatic

Cause:
A KM line is calling "getDataSet", but no data set is found.

Action:
Check the KM or the DataSet definitions.

ODI-15077
No Current Model Set

Category:
Programmatic

Cause:
There is a call to "getModel" in the KM, but no model is found.

Action:
Check the KM and the model definitions.

ODI-15078
There is no Not Null column

Category:
Programmatic

Cause:
There is a call to "getNotNullCol" in the KM, but no not null column is found.

Action:
Check the KM and the not null column definitions.

ODI-15079
There is no current Pop.

Category:
Programmatic

Cause:
There is a call to "getPop" in the KM, but no interface is found.

Action:
Check the KM and the interface definitions.

ODI-15080
There is no Step

Category:
Programmatic

Cause:
There is a call to "getStep" in the KM, but no step is found.

Action:
Check the KM and the step definitions.

ODI-15081
There is no Target Table

Category:
Programmatic

Cause:
There is a call to "getTargetTable" in the KM, but no target table is found.

Action:
Check the KM and the interface target table definitions.

ODI-15083
Multiple Primary Keys have been detected for {0} .

Category:
Programmatic

Cause:
A repository table can only have one primary key defined, but multiple primary keys are defined.

Action:
Edit the table's primary key definitions and remove all but one.

ODI-15084
There is no session

Category:
Programmatic

Cause:
There is a call to "getSession" in the KM, but no session is found.

Action:
Check the KM and the session definitions.

ODI-15085
The value : "({0})" is unknown.

Category:
Programmatic

Cause:
A KM line has a templated call which contains an unknown bracketed property.

Action:
Fix the KM.

ODI-15086
There is no Temporary Index

Category:
Programmatic

Cause:
There is a call to "getTemporaryIndex" in the KM, but no temporary index is found.

Action:
Check the KM and the temporary index definitions.

ODI-15087
There is no current execution context defined.

Category:
Programmatic

Cause:
There is a call to "getContext" in the KM, but no context is found.

Action:
Check the KM and the context definitions.

ODI-15088
Not in designer mode

Category:
Programmatic

Cause:
A KM line has a call to access design information, but the interpretation location is not set to designer.

Action:
Make sure that the interpretation location is set to designer when this line is executed.

ODI-15089
asked '({0})' and available value are between 0 and ({1}).

Category:
Programmatic

Cause:
A KM line is calling "getDataSet", but the specified index is out of range.

Action:
Fix the KM or the DataSet definitions.

ODI-15090
Table "{0}" not found on model "{1}", schema "{2}"

Category:
Programmatic

Cause:
Attempt to initialize data services from a table that cannot be found

Action:
Change data services reference or make sure that table exists

ODI-15091
Impossible to connect to JPS MBean Server

Category:
Other

Cause:
Cannot connect to JPS MBean server.

Action:
Internal Error.

ODI-15092
Unable to generate data service - the column {0} does not exist in the database.

Category:
Programmatic

Cause:
A data service references a column that does not exist

Action:
Fix the data service reference or make sure that the column exists

ODI-15093
Unable to regenerate this scenario. It references a null package.

Category:
Programmatic

Cause:
The scenario must reference a package, but the package is null.

Action:
Delete the scenario and create a new one.

ODI-15094
You must give a name for the published entity for each datastore.

Category:
Other

Cause:
A web services data store does not have a name.

Action:
Give the data store a name.

ODI-15095
Invalid entity for datastore: {0}

Category:
Other

Cause:
A web services data store has an invalid entity.

Action:
Associate the data store with a valid entity.

ODI-15096
Property name must not be null.

Category:
Programmatic

Cause:
The KM line is calling "isColAttrChanged", but the property value is null.

Action:
Internal error, contact Oracle support.

ODI-15097
Unknown value {0} for property

Category:
Programmatic

Cause:
The KM line is making a templated call, but the property value is unknown.

Action:
Fix the KM.

ODI-15098
You must define a data source for the model.

Category:
Other

Cause:
The model used by a web service does not have any data source.

Action:
Define a data source for the model.

ODI-15099
You must specify a JKM for the model.

Category:
Other

Cause:
The model used by a web service does not have an associated JKM.

Action:
Define a JKM for the model.

ODI-15100
You must define a Java package for the model.

Category:
Other

Cause:
The model used by a web service does not have an associated Java package.

Action:
Define a Java package for the model.

ODI-15101
Invalid Java package format: {0}

Category:
Other

Cause:
The Java package associated with a model has an invalid package format.

Action:
Correct the package format for the model.

ODI-15102
You must specify an XML namespace for the model.

Category:
Other

Cause:

Action:

ODI-15103
Invalid namespace: {0}

Category:
Other

Cause:
A model namespace used by a web service is invalid.

Action:
Correct the namespace for the model.

ODI-15104
You must specify an SKM for the model.

Category:
Other

Cause:
A model used by a web service does not have an associated SKM.

Action:
Add an SKM to the model.

ODI-15105
You must specify which schema the model will be deployed to.

Category:
Other

Cause:
No web service deployment schema is specified for the model.

Action:
Specify a schema to which the model will be deployed.

ODI-15106
You must specify a name for the Data Service for the model.

Category:
Other

Cause:
The data service for the model does not have a name.

Action:
Set a valid name for the data service.

ODI-15107
Invalid model code: {0}. It should follow the Java identifiers naming conventions.

Category:
Other

Cause:
The web service model name does not follow the standard Java identifier naming convention.

Action:
Set a valid name for the model.

ODI-15108
Invalid model Data Service name: {0}. It should follow the Java identifiers naming conventions.

Category:
Other

Cause:
The web service model Data Service name does not follow the standard Java identifier naming convention.

Action:
Set a valid name for the model Data Service.

ODI-15109
Invalid web service name for datastore: {0}

Category:
Other

Cause:
The web service model data store has an invalid name.

Action:
Set a valid name for the model data store.

ODI-15110
SKM is empty

Category:
Other

Cause:
The web service SKM has no valid lines.

Action:
Add some lines to the SKM.

ODI-15111
Problem during deployment

Category:
Deployment

Cause:
Internal error.

Action:
Contact Oracle support.

ODI-15113
Reverse table {0} for model {1} already exists.

Category:
Other

Cause:
An attempt was made to reverse engineer a table, but it already exists in the model.

Action:
Move or rename the data store in the model, or skip reverse engineering for the table.

ODI-15116
There is not enough data in the target file to proceed with the reverse-engineering. Please make sure the file has at least one non-empty line and number of rows to skip is correct.

Category:
Other

Cause:
An attempt was made to reverse engineer a target file that is empty, or the number of skipped rows is larger than the number of rows in the file.

Action:
Set the number of skipped lines to a lower value, or add some data to the file.

ODI-15117
Not allowed (OLD and NEW are involved)

Category:
Programmatic

Cause:
The KM line is calling "getColumn", but the ADH action origin is not "NEW" or "OLD".

Action:
Change the ADH action origin.

ODI-15118
Invalid FTP URL

Category:
Network

Cause:
The URL given for a web services FTP connection is not correct.

Action:
Check the URL for the FTP connection.

ODI-15119
Column {0} has no Java datatype.

Category:
Programmatic

Cause:
During RDB model validation, no java data type was found for a column.

Action:
Check the model and ensure that a data type has been specified.

ODI-15120
Column {0} has no String datatype.

Category:
Programmatic

Cause:
During RDB model validation, no string data type was found for a column.

Action:
Check the model and ensure that a data type has been specified.

ODI-15121
Selector must be not null

Category:
Programmatic

Cause:
The ADH selector value must not be null when "getColumn" is called from the KM line.

Action:
Change the ADH selector value.

ODI-15122
Exception getPKColList

Category:
Programmatic

Cause:
An exception was found when calling "getPKColList" during KM execution.

Action:
Fix the KM or the PK definitions.

ODI-15123
There is no AK constraint

Category:
Programmatic

Cause:
There is a call to "getAK" in the KM, but no AK is found.

Action:
Check the KM and the AK definitions.

ODI-15124
Unable to regenerate the following scenario:

Category:
Programmatic

Cause:
Cannot regenerate the scenario.

Action:
Delete the scenario and create a new one.

ODI-15125
Missing DataSet.

Category:
Programmatic

Cause:
The interface is missing a dataset.

Action:
Check interface for consistency.

ODI-15126
The sub-model must be set.

Category:
Programmatic

Cause:
The sub-model is not set for the source or target.

Action:
Check the interface for consistency.

ODI-15127
There is no CK constraint

Category:
Programmatic

Cause:
There is a call to "getCK" in the KM, but no CK is found.

Action:
Check the KM and the CK definitions.

ODI-15128
There is no FK constraint

Category:
Programmatic

Cause:
There is a call to "getFK" in the KM, but no FK is found.

Action:
Check the KM and the FK definitions.

ODI-15129
Selector value must be 'OLD' or 'NEW'

Category:
Programmatic

Cause:
The ADH selector value must be 'OLD' or 'NEW' when "getColumn" is called from the KM line.

Action:
Change the ADH selector value.

ODI-15130
Unknown object in interface source table list

Category:
Programmatic

Cause:
An invalid object was found in the SrcTableList member while processing getSrcTablesList.

Action:
Ensure the SrcTableList is only populated with type SnpTable or SnpSourceTab.

ODI-15131
You must define the name of each web service to be generated for each datastore.

Category:
Other

Cause:
A web service associated with a data store has no name.

Action:
Give a name to the web service.

ODI-15132
Exception getPK

Category:
Programmatic

Cause:
An exception was found when calling "getPK" during KM execution.

Action:
Fix the KM or the PK definitions.

ODI-15135
There is no current index.

Category:
Other

Cause:
The current index can not be found for the property name.

Action:
Check the reference.

ODI-15141
Repository is not a development work repository

Category:
Programmatic

Cause:
When getting a connection used to execute the KM, it was determined that the provided connection information does not point to a development work repository

Action:
Fix the connection information

ODI-15142
[PROPERTY: {0} not found.]

Category:
Programmatic

Cause:
The bracketed property in the KM line (e.g. "[COL_NAME]") is not found.

Action:
Fix the KM line to specify a correct property name.

ODI-15143
Invalid isolation level : {0}

Category:
Programmatic

Cause:
An invalid isolation level value was passed to SnpServiceGenerator.convertIsolationLevel

Action:
Contact Oracle support

ODI-15144
KM not encrypted since it is empty.

Category:
Other

Cause:
KM was not encrypted since it is empty.

Action:
Skip encryption.

ODI-15146
Data Type can't be null

Category:
Programmatic

Cause:
null DataType passed.

Action:
Pass non null DataType.

ODI-15147
The changes on this target column will be lost since it is not saved (it has no mapping text)

Category:
Interface Issue

Cause:
Target column will not be saved.

Action:
Enter mapping text if the column requires to be saved.

ODI-15148
The target datastore is not on the Oracle Technology: this interface cannot be used with the platform compiler

Category:
Interface Issue

Cause:
Target datastore is not on Oracle.

Action:
Move target datastore to an Oracle schema.

ODI-15149
The staging area is not on the Oracle Technology: this interface cannot be used with the platform compiler

Category:
Interface Issue

Cause:
Staging Area is not on Oracle.

Action:
Move Staging Area to an Oracle schema.

ODI-15150
The source datastore is not on the Oracle Technology: this interface cannot be used with the platform compiler

Category:
Interface Issue

Cause:
Source DataStore not on Oracle.

Action:
Use only DataStores located on an Oracle technology.

ODI-15151
Non ordered outer joins cannot be used with the platform compiler

Category:
Interface Issue

Cause:
An outer join is not ordered.

Action:
Make the join ordered.

ODI-15152
Unhandled Action {0}

Category:
Programmatic

Cause:
This shouldn't happen. Programmer added an action in the enum and forgot to add it in switch.

Action:
Add action in switch.

ODI-15153
The column is already the first column and cannot be moved up

Category:
Programmatic

Cause:
Column already first and cannot be moved up.

Action:
Do not try to move first column up.

ODI-15154
The column is already the last column and cannot be moved down

Category:
Programmatic

Cause:
Column already last and cannot be moved down.

Action:
Do not try to move last column down.

ODI-15155
Cannot move a target column to a position that is 0 or negative: {0}

Category:
Programmatic

Cause:
Trying to move a column beyond the boundaries of column positions.

Action:
Use a value between 1 and the number of columns.

ODI-15156
Cannot move a target column to a position beyond the size of the column list: {0} is greater than {1}

Category:
Programmatic

Cause:
Trying to move a column beyond the boundaries of column positions.

Action:
Use a value between 1 and the number of columns.

ODI-15157
Cannot remove the only dataset of interface {0}

Category:
Programmatic

Cause:
Trying to remove the last dataset of an interface is not permitted.

Action:
Make sure there are more than one dataset in the interface before deleting it.

ODI-15159
Cannot move target columns on a non temporary DataStore.

Category:
Programmatic

Cause:
Trying to move columns on a non temporary DataStore.

Action:
Make sure that the target DataStore is temporary before attempting to move target columns.

ODI-15160
Native Sequences may not be supported by the target technology after transforming with the Platform Compiler

Category:
Programmatic

Cause:
Using Native Sequence and Platform Compiler Enabled User Param Set

Action:
Make sure that all target technologies will support native sequences

ODI-15162
The interface {0} use native sequence. Native sequence are not allowed for Derived Table (sub select statement)

Category:
Programmatic

Cause:
Using native sequence in derived sub interface

Action:
Make sure that none sub interface using native sequence

ODI-15200
Tried to retrieve an int with an {0} object

Category:
Programmatic

Cause:
Attempted to read the column from RDB as an integer, but the column type is not integer

Action:
Internal Error: contact Oracle support

ODI-15201
Tried to retrieve a short with an {0} object

Category:
Programmatic

Cause:
Attempted to read the column from RDB as a short type, but the column type is not short

Action:
Internal Error: contact Oracle support

ODI-15202
This resultset accepts only FETCHFORWARD requests

Category:
Programmatic

Cause:
Attempted to set the fetch direction to something other than FETCH_FORWARD for a RDB result set read

Action:
Internal Error: contact Oracle support

ODI-15203
This function is unsupported: the software you are using might not be compatible with this driver.

Category:
Programmatic

Cause:
A jdbc call was made that is not supported by the currently loaded jdbc driver for RDB

Action:
Internal Error: contact Oracle support

ODI-15204
The {0} call is not implemented in this result set class.

Category:
Programmatic

Cause:
A result set call was made that is not implemented by the ODI RDB result set class

Action:
Internal Error: contact Oracle support

ODI-15205
The call is not supported in this result set class.

Category:
Programmatic

Cause:
A result set call was made that is not supported by the ODI RDB result set class

Action:
Internal Error: contact Oracle support

ODI-15206
Unmanaged numeric type {0}

Category:
Programmatic

Cause:
The RDB inserter class was passed a data value of a numeric type that is not handled

Action:
Internal Error: contact Oracle support

ODI-15207
Strange: a PK has multiple lines

Category:
Programmatic

Cause:
When selecting a parent row based on a primary key, multiple rows were returned

Action:
Internal Error: contact Oracle support

ODI-15208
The PK column of the root table has an unknown type: {0}

Category:
Programmatic

Cause:
When unloading data from the RDB, the PK column of the parent table has an unknown type

Action:
Internal Error: contact Oracle support

ODI-15209
Unsupported technology (Driver: {0}, Url: {1})

Category:
Programmatic

Cause:
The jdbc driver is not supported by the ODI RDB

Action:
Internal Error: contact Oracle support

ODI-15210
Unsupported technology: HSQL cannot create FKs after the tables have been created

Category:
Programmatic

Cause:
The Hypersonic SQL engine cannot create FK after the table is already created

Action:
Internal Error: contact Oracle support

ODI-15211
Unsupported technology: HSQL cannot create PKs after the tables have been created

Category:
Programmatic

Cause:
The Hypersonic SQL engine cannot create PK after the table is already created

Action:
Internal Error: contact Oracle support

ODI-15212
Datatype NULL (0) unsupported

Category:
Programmatic

Cause:
The Hypersonic SQL engine does not support the null datatype

Action:
Internal Error: contact Oracle support

ODI-15213
JDBC Datatype '{0}' unsupported

Category:
Programmatic

Cause:
The Hypersonic SQL engine does not support the datatype

Action:
Internal Error: contact Oracle support

ODI-15214
JDBC Datatype '{0}' with length parameter unsupported

Category:
Programmatic

Cause:
The Hypersonic SQL engine does not support the datatype with length

Action:
Internal Error: contact Oracle support

ODI-15215
JDBC Datatype '{0}' with length and scale parameters unsupported

Category:
Programmatic

Cause:
The Hypersonic SQL engine does not support the datatype with scale

Action:
Internal Error: contact Oracle support

ODI-15216
JDBC Datatype '{0}' unsupported

Category:
Programmatic

Cause:
The internal MS Sql Server database does not support the datatype

Action:
Internal Error: contact Oracle support

ODI-15217
JDBC Datatype '{0}' with length parameter unsupported

Category:
Programmatic

Cause:
The internal MS SQL Server database does not support the datatype with length

Action:
Internal Error: contact Oracle support

ODI-15218
JDBC Datatype '{0}' with length and scale parameters unsupported

Category:
Programmatic

Cause:
The internal MS SQL Server database engine does not support the datatype with length and scale

Action:
Internal Error: contact Oracle support

ODI-15219
Please transform your URL into: {0};SelectMethod=cursor

Category:
Programmatic

Cause:
The internal MS SQL Server database engine does not recognize the supplied URL

Action:
Change the format of the connection URL

ODI-15220
need length param

Category:
Programmatic

Cause:
The internal Oracle database does not support the selected type without a length param

Action:
Internal Error: contact Oracle support

ODI-15221
Datatype NULL (0) unsupported

Category:
Programmatic

Cause:
The internal Oracle SQL engine does not support the null datatype

Action:
Internal Error: contact Oracle support

ODI-15222
JDBC Datatype '{0}' unsupported

Category:
Programmatic

Cause:
The internal Oracle database does not support the datatype

Action:
Internal Error: contact Oracle support

ODI-15223
JDBC Datatype '{0}' with length parameter unsupported

Category:
Programmatic

Cause:
The internal Oracle database does not support the datatype with length

Action:
Internal Error: contact Oracle support

ODI-15224
JDBC Datatype '{0}' with length and scale parameters unsupported

Category:
Programmatic

Cause:
The internal Oracle database engine does not support the datatype with length and scale

Action:
Internal Error: contact Oracle support

ODI-15225
No key found on table {0}

Category:
Programmatic

Cause:
The internal database table does not have a key

Action:
Internal Error: contact Oracle support

ODI-15226
The root table {0} has no data

Category:
Programmatic

Cause:
The internal database table does not have any data

Action:
Internal Error: contact Oracle support

ODI-15227
Multiple keys found on table {0}

Category:
Programmatic

Cause:
The internal database table has multiple keys

Action:
Internal Error: contact Oracle support

ODI-15228
*** FATAL *** Table {0} could not be validated

Category:
Programmatic

Cause:
The internal database cannot validate the table

Action:
Internal Error: contact Oracle support

ODI-15229
*** FATAL *** Table {0} could not be found

Category:
Programmatic

Cause:
The internal database cannot find the table

Action:
Internal Error: contact Oracle support

ODI-15230
Could not convert object {0} to a {1}

Category:
Programmatic

Cause:
The internal database cannot convert the datatype of the selected column

Action:
Internal Error: contact Oracle support

ODI-15231
No '=' sign found on line {0} of bundle {1}

Category:
Programmatic

Cause:
The internal database engine encountered a syntax error when reading the property file

Action:
Fix the property file

ODI-15232
The alias {0} for table {1} is already used by another table, when reading bundle {2}

Category:
Programmatic

Cause:
The internal database found a duplicate table alias in a property file

Action:
Fix the property file

ODI-15233
Table {0} is used twice. Make sure that the table names and aliases do not conflict.

Category:
Programmatic

Cause:
The internal database found a duplicate table name in the property bundle

Action:
Fix the property file

ODI-15234
Internal RDB database table {0} not found

Category:
Programmatic

Cause:
The requested table cannot be found in the internal database

Action:
Internal Error: contact Oracle support

ODI-15235
Internal RDB database key {0} not found

Category:
Programmatic

Cause:
The requested key cannot be found in the internal database

Action:
Internal Error: contact Oracle support

ODI-15236
Unknown table {0}

Category:
Programmatic

Cause:
The requested table cannot be found in the internal database

Action:
Correct the model

ODI-15237
Duplicate table

Category:
Programmatic

Cause:
The internal database table is a duplicate table

Action:
Correct the model

ODI-15238
Could not find table although we should have created it!

Category:
Programmatic

Cause:
The newly created table cannot be found

Action:
Internal Error: contact Oracle support

ODI-15239
Only SnpsRDBDiffActionImportDifference are supported for now.

Category:
Programmatic

Cause:
When processing diff actions in a diff operation, an unsupported diff action class was found

Action:
Internal Error: contact Oracle support

ODI-15240
Unknown key {0}

Category:
Programmatic

Cause:
When processing diff actions in a diff operation, a nonexistent key was specified by the diff action

Action:
Internal Error: contact Oracle support

ODI-15241
This type of difference is not managed for now: {0}

Category:
Programmatic

Cause:
When processing diff actions in a diff operation, an unsupported diff action class was found

Action:
Internal Error: contact Oracle support

ODI-15242
Unknown difference type: {0}

Category:
Programmatic

Cause:
When processing diff actions in a diff operation, an unknown diff class was found

Action:
Internal Error: contact Oracle support

ODI-15243
Bad model number: {0}

Category:
Programmatic

Cause:
When processing diff actions in a diff operation, the 2 models that are being compared are internally numbered as model 1 and 2. A model number other than 1 or 2 was used internally in a call to getModel.

Action:
Internal Error: contact Oracle support

ODI-15244
Could not add a key because {0} is not an ID key.

Category:
Programmatic

Cause:
When building a model, the specified key class instance was not an id key

Action:
Internal Error: contact Oracle support

ODI-15245
Unknown key type: {0}

Category:
Programmatic

Cause:
When building a model, an unknown key class was found

Action:
Internal Error: contact Oracle support

ODI-15246
Key {0}.{1} is of unknown type: {2}

Category:
Programmatic

Cause:
When building a model, an unknown key class was found

Action:
Internal Error: contact Oracle support

ODI-15247
The table {0} cannot be found. It is referenced by key: {1}.

Category:
Programmatic

Cause:
When building a model, an table name is referenced by a key, but the table cannot be found

Action:
Check the model

ODI-15248
The column {0} in table {1} cannot be found. It is referenced by key: {2}.

Category:
Programmatic

Cause:
When building a model, an column name is referenced by a key, but the column cannot be found

Action:
Check the model

ODI-15249
An {0} was caught while adding a key which is not an FK. Very strange.

Category:
Programmatic

Cause:
When building a model, an column name is referenced by a key, but the column cannot be found

Action:
Check the model

ODI-15250
The key {0} referenced by table {1} cannot be found.

Category:
Programmatic

Cause:
When building a model, a key name is referenced by a table, but the key cannot be found

Action:
Check the model

ODI-15251
A duplicate key was found: {0}

Category:
Programmatic

Cause:
When dropping a model, a duplicate key was found in the model

Action:
Check the model

ODI-15252
Key already exists: {0}

Category:
Programmatic

Cause:
When updating a model, a duplicate key was found in the model

Action:
Check the model

ODI-15253
Key not found: {0}

Category:
Programmatic

Cause:
When updating a model, the key was not found

Action:
Check the model

ODI-15254
Could not find a constructor with a key name for class {0}

Category:
Programmatic

Cause:
When creating a key class instance, the constructor could not be found

Action:
Internal Error: contact Oracle support

ODI-15255
Could not instantiate an object of class {0}

Category:
Programmatic

Cause:
Could not instantiate the key class

Action:
Internal Error: contact Oracle support

ODI-15256
Could not create an object for class {0} for security reasons

Category:
Programmatic

Cause:
Could not instantiate the key class, due to a security failure

Action:
Check security settings

ODI-15257
Could create an object for class {0} because a {1} occurred saying {2}

Category:
Programmatic

Cause:
Could not instantiate the key class, due to an invocation target exception

Action:
Internal Error: contact Oracle support

ODI-15258
Column {0} not found

Category:
Programmatic

Cause:
The column could not be found

Action:
Internal Error: contact Oracle support

ODI-15259
The key class {0} is not an ID key class.

Category:
Programmatic

Cause:
The specified key class instance was not a SnpsRDBIdKey instance

Action:
Internal Error: contact Oracle support

ODI-15260
Could not add column {0}: Unsupported datatype: {1}

Category:
Programmatic

Cause:
Cannot add the column to the model because the datatype is not supported by the technology

Action:
Correct the model

ODI-15261
Unsupported action: {0}

Category:
Programmatic

Cause:
The action class is not supported by the ODI RDB

Action:
Internal Error: contact Oracle support

ODI-15262
Cannot drop column {0}. It is used in a foreign key!

Category:
Programmatic

Cause:
An attempt was made to drop a column that participates in a foreign key

Action:
Drop the key first, then the column

ODI-15263
Cannot drop column {0}. It is used in a primary key!

Category:
Programmatic

Cause:
An attempt was made to drop a column that participates in a primary key

Action:
Drop the key first, then the column

ODI-15264
Cannot modify this column. It is used in a foreign key!

Category:
Programmatic

Cause:
An attempt was made to modify a column that participates in a foreign key

Action:
Drop the key first, then modify the column

ODI-15265
Cannot modify this column. It is used in a primary key!

Category:
Programmatic

Cause:
An attempt was made to modify a column that participates in a primary key

Action:
Drop the key first, then modify the column

ODI-15268
Table not found: {0}

Category:
Programmatic

Cause:
When attempting to drop a table during an update, the table name is not found

Action:
Check the model

ODI-15270
Key type {0} is not supported here.

Category:
Programmatic

Cause:
The key type is not supported

Action:
Correct the model

ODI-15272
An error occurred while executing a RDB command: {0}

Category:
Programmatic

Cause:
When executing a command action, an exception was thrown

Action:
Check root cause

ODI-15273
{0}: action is not accepted: {1}

Category:
Programmatic

Cause:
Attempt to execute a command action, but it is not accepted

Action:
Check root cause

ODI-15274
Multiple PKs are not allowed on a table

Category:
Programmatic

Cause:
When reverse engineering a primary key, multiple primary keys were found for the table

Action:
Check the model

ODI-15275
An exception ocurred while retrieving a table primary key: {0}

Category:
Programmatic

Cause:
When reverse engineering a table, a primary key could not be retrieved

Action:
Check the model

ODI-15276
An exception occurred while retrieving the indexes of a table: {0}

Category:
Programmatic

Cause:
When reverse engineering a table, the indexes could not be retrieved

Action:
Check the model

ODI-15277
An exception ocurred while retrieving a table foreign keys: {0}

Category:
Programmatic

Cause:
When reverse engineering a table, the foreign keys could not be retrieved

Action:
Check the model

ODI-15278
An exception occurred while retrieving the check constraints of a table: {0}

Category:
Programmatic

Cause:
When reverse engineering a table, the check constraints could not be retrieved

Action:
Check the model

ODI-15279
An exception occurred while retrieving the alternate keys of a table: {0}

Category:
Programmatic

Cause:
When reverse engineering a table, the alternate keys could not be retrieved

Action:
Check the model

ODI-15280
*** FATAL *** Table {0} is duplicate as root

Category:
Programmatic

Cause:
The table is duplicated as the root when determining the root tables of the model

Action:
Check the model

ODI-15281
*** FATAL ** Table {0} is unknown

Category:
Programmatic

Cause:
The root table is unknown

Action:
Check the model

ODI-15282
Table {0} is unknown though it was reversed

Category:
Programmatic

Cause:
The table cannot be found in the ODI model, although it was reversed

Action:
Retry the reverse engineering

ODI-15283
Duplicate declaration for table {0}

Category:
Programmatic

Cause:
The model XML contains a duplicate table declaration

Action:
Fix the XML

ODI-15285
FK {0} references a table with no PK.

Category:
Programmatic

Cause:
The model XML contains a foreign key that references a table with no defined primary key

Action:
Fix the XML

ODI-15286
Unknown PK table for foreign key {0}: please check the name and order of the tables and FK.

Category:
Programmatic

Cause:
The model XML contains a foreign key that references an unknown primary key table

Action:
Fix the XML

ODI-15287
Unknown element: {0}

Category:
Programmatic

Cause:
The model XML contains an unknown element

Action:
Fix the XML

ODI-15288
An {0} error occurred with the following message: {1}

Category:
Programmatic

Cause:
An error occurred when writing the model to a file

Action:
See root cause

ODI-15290
Column {0} was not found in table {1}

Category:
Programmatic

Cause:
The column was not found when building the columns from column names

Action:
Check the model

ODI-15291
*** FATAL *** Could not rename table {0} to {1}

Category:
Programmatic

Cause:
Could not rename table

Action:
Check permissions and security settings

ODI-15292
*** FATAL *** Could not rename table {0} because it was not found in the model!

Category:
Programmatic

Cause:
Could not rename table, because the table to be renamed does not exist

Action:
Check the model

ODI-15293
Unknown FK table for foreign key {0}: please check the name and order of the tables and FK.

Category:
Programmatic

Cause:
The model XML contains a foreign key that references an unknown table

Action:
Fix the XML

ODI-15294
unknown element: {0}

Category:
Programmatic

Cause:
The model XML contains an unknown XML element

Action:
Fix the XML

ODI-15295
Unsupported datatype: {0}

Category:
Programmatic

Cause:
The datatype is unsupported when creating the column from attributes

Action:
Check the model

ODI-15300
A {0} occurred while creating the helper of class {1}. Error message: {2}

Category:
Other

Cause:
INTERNAL ERROR: A helper cannot be created.

Action:
Internal error: contact Oracle support.

Programmatic

Cause:
Exception thrown when creating the data service used for DDL generation and reverse engineering.

Action:
Check the root cause.

ODI-15401
Unknown key {0}

Category:
Programmatic

Cause:
Unknown key encountered when processing diff class instances during DDL generation.

Action:
Check the model.

ODI-15402
Exception thrown in the DDL generation service: {0}

Category:
Programmatic

Cause:
An exception was thrown while generating DDL.

Action:
Check the root cause.

ODI-15403
The method is not supposed to sort something else than the expected actors. Attempting to sort class instances: {0}, {1}

Category:
Programmatic

Cause:
While sorting action commands, the DDL generator service encountered an unknown class instance type.

Action:
Internal Error: contact Oracle support.

ODI-15404
Scenario generation has not been implemented for this container.

Category:
Programmatic

Cause:
During DDL generation, an attempt was made to generate a scenario for an object that does not support it.

Action:
Internal Error: contact Oracle support.

ODI-15405
Scenario generation exception: {0}

Category:
Programmatic

Cause:
An exception was thrown during scenario generation.

Action:
Check root cause.

ODI-15406
Oozie workflow generation exception: {0}

Category:
Programmatic

Cause:
An exception was thrown during Oozie workflow generation.

Action:
Check root cause.

ODI-15407
Oozie workflow generation exception for Task: {0} - Transactions not supported on Oozie engine with commit mode not set. {1} command Transaction Channel: {2}.

Category:
Programmatic

Cause:
Transactions are not supported on Oozie Engine.

Action:
Please refer to documentation on Oozie Engine Execution.

ODI-15500
Column {0} is executed on the target

Category:
Programmatic

Cause:
Possible Cause

Action:
Suggested Action

ODI-15501
Cannot attach a data store to a target mapping because column {0} is not found.

Category:
Programmatic

Cause:
The specified target column was not found.

Action:
Verify that the correct column has been specified.

ODI-15502
Target mapping not found for column {0}

Category:
Programmatic

Cause:
The specified column is not mapped.

Action:
Map the specified column.

ODI-15503
Cannot set the attached datastore because the mapping is not executed on the SOURCE

Category:
Programmatic

Cause:
The mapping has been configured for execution on the target.

Action:
Configure the mapping for execution on the source.

ODI-15504
Unknown indicator type: {0}

Category:
Programmatic

Cause:
An invalid indicator type has been specified.

Action:
Specify one of the following indicator types from the IndicatorType enumeration: CHECK_NOT_NULL, INSERT, UPDATE, or UPDATE_KEY.

ODI-15505
Invalid UD number: {0}

Category:
Programmatic

Cause:
An invalid UD number has been specified.

Action:
Specify a UD number 1 to 10.

ODI-15506
The specified target column was not found: {0}

Category:
Programmatic

Cause:
The specified target column was not found when attempting to remove a column from a temporary data store.

Action:
Only remove columns which exist in the temporary target datastore.

ODI-15507
Column {0} may not be removed. It is used in other mappings, join clauses, or filter clauses

Category:
Programmatic

Cause:
The specified target column is used in other mappings, filters, or joins. This dependency prevents removal of the column.

Action:
Only remove a column after mapping, filter, or join dependencies have been removed.

ODI-15508
Column {0} may not be removed because it is referenced in interface {1}.

Category:
Programmatic

Cause:
The specified target column is referenced in a filter or join clause in another interface. This dependency prevents removal of the column.

Action:
Only remove a column after other references have been removed.

ODI-15509
The specified target column was not found: {0}

Category:
Programmatic

Cause:
The specified target column was not found.

Action:
Verify the column name.

ODI-15510
A column was not found while updating the key

Category:
Programmatic

Cause:
The update key contains a column that does not exist.

Action:
Check the columns of the update key.

ODI-15511
The join must be attached to the datastore to expand a lookup.

Category:
Programmatic

Cause:
The join is not attached to a datastore, so a valid lookup does not exist.

Action:
Only use the lookup expansion, with a pCreateLookup parameter value of false, on valid lookups.

ODI-15512
Cannot transform a normal datastore into a normal lookup.

Category:
Programmatic

Cause:
The data store is already a non-lookup data store.

Action:
Do not use this transformation on a non-lookup data store. If the datastore and join are non-lookup, use a pCreateLookup parameter value of true to create a lookup from a normal join and normal datastore.

ODI-15513
Cannot transform a normal, non-lookup join into a normal join.

Category:
Programmatic

Cause:
The join is already a normal join, not a lookup join, so expansion to a normal, non-lookup join is not possible.

Action:
Do not use this transformation on a normal join. If the datastore and join are non-lookup, use a pCreateLookup parameter value of true to create a lookup from a normal join and normal datastore.

ODI-15514
Cannot transform a lookup datastore into a lookup.

Category:
Programmatic

Cause:
The data store is already designated as a lookup, so transforming to a lookup is not possible.

Action:
Do not use this transformation on a lookup. If the datastore and join are designated for lookup, use a pCreateLookup parameter value of false to expand a lookup to a normal join and normal datastore.

ODI-15515
Cannot transform a lookup join into a lookup.

Category:
Programmatic

Cause:
The join is already designated as a lookup, so transforming to a lookup is not possible.

Action:
Do not use this transformation on a lookup. If the datastore and join are designated for lookup, use a pCreateLookup parameter value of false to expand a lookup to a normal join and normal datastore.

ODI-15516
The join must be attached to the datastore to make a lookup.

Category:
Programmatic

Cause:
The join is not properly attached to data sources, so transforming to a lookup is not possible.

Action:
Designate data sources for the join.

ODI-15517
Cannot add a column with the same name as an existing target column: {0}.

Category:
Programmatic

Cause:
The column being added already exists.

Action:
Add a column with a unique name.

ODI-15518
A dataset is already assigned the order: {0}.

Category:
Programmatic

Cause:
Another dataset has already been assigned the order that is being set.

Action:
Assign a unique order to the dataset.

ODI-15519
The target datastore cannot be changed. Interface {0} is used in interface(s) {1} as a source datastore.

Category:
Programmatic

Cause:
The interface is used as a source datastore of another interface, so the target datastore cannot be changed.

Action:
Create a separate interface to avoid the source datastore dependency in the other interface.

ODI-15520
Temporary interface from another project is not allowed.

Category:
Programmatic

Cause:
The interface is used as a source datastore of another interface, so the target datastore cannot be changed.

Action:
Create a separate interface to avoid the source datastore dependency in the other interface.

ODI-15521
A source datastore with alias {0} already exists.

Category:
Programmatic

Cause:
The datastore alias has already been used.

Action:
Specify a unique alias.

ODI-15522
Cannot transform a join into a CrossJoin or natural join if it does not have both attached datastores set.

Category:
Programmatic

Cause:
The join does not have datastores attached yet.

Action:
Attach both join datastores before transforming to a cross join.

ODI-15523
LKM {0} not accepted for source set {1}

Category:
Programmatic

Cause:
The LKM is not compatible with the source set technology or multi-connection setting.

Action:
Select an LKM which matches the source set technology and multi-connection setting.

ODI-15524
LKM {0} not accepted for staging area to target

Category:
Programmatic

Cause:
The LKM is not compatible with the staging area technology or multi-connection setting.

Action:
Select an LKM which matches the staging technology and multi-connection setting.

ODI-15525
CKM {0} not accepted for target technology

Category:
Programmatic

Cause:
The CKM is not compatible with the target technology.

Action:
Select a CKM which matches the target technology.

ODI-15526
IKM {0} not accepted for staging and target technology

Category:
Programmatic

Cause:
The IKM is not compatible with the staging or target technologies or multi-connection setting.

Action:
Select an IKM which matches the staging and target technologies and multi-connection setting.

ODI-15527
IKM {0} not accepted for target technology

Category:
Programmatic

Cause:
The IKM is not compatible with the target technology or multi-connection setting.

Action:
Select an IKM which matches the target technology and multi-connection setting.

ODI-15528
Mapping expression cannot be set because the target column {0} was not found.

Category:
Programmatic

Cause:
The column was not found when setting the expression for a mapping.

Action:
Specify a valid column for the expression.

ODI-15529
Action was not reversible.

Category:
Programmatic

Cause:
The actions causing an impact are not reversible.

Action:
Avoid the sequence of actions causing the impact.

ODI-15530
The interface does not have a source set.

Category:
Programmatic

Cause:
The interface does not have a source set.

Action:
Add a source set to the interface.

ODI-15531
The execution location parameter for the computeExpression method is invalid.

Category:
Programmatic

Cause:
The execution location parameter for the computeExpression method is invalid.

Action:
Specify an execution location parameter of ExecutionLocation.SOURCE, ExecutionLocation.WORK, or ExecutionLocation.TARGET.

ODI-15532
The pExecutableTextHolder parameter for the getLogicalSchemaForTextHolder method does not have a valid execution location.

Category:
Programmatic

Cause:
The pExecutableTextHolder parameter for the getLogicalSchemaForTextHolder method does not have a valid execution location.

Action:
Specify an execution location parameter of ExecutionLocation.SOURCE, ExecutionLocation.WORK, or ExecutionLocation.TARGET.

ODI-15533
The physical schema could not be mapped from logical schema {0} and context {1}.

Category:
Programmatic

Cause:
The getPhysicalSchema method failed to map and logical schema and context to a physical schema.

Action:
Ensure that logical to physical schema mappings are created or check the logical schema and context parameters.

ODI-15534
Sub interface must not be null.

Category:
Programmatic

Cause:
The pSubInterface parameter passed to the checkSubInterfaceValid method is null.

Action:
A non-null sub interface parameter is required for the checkSubInterfaceValid method.

ODI-15535
The technology {0} of the source temporary interface {1} used as a derived table does not support derived tables.

Category:
Programmatic

Cause:
The pSubInterface parameter passed to the checkSubInterfaceValid method is null.

Action:
A non-null sub interface parameter is required for the checkSubInterfaceValid method.

ODI-15536
Source temporary interface {0} cannot be used as a derived table. Its source datastore {1} defined in logical schema {2} has no associated physical schema in the optimization context {3}.

Category:
Programmatic

Cause:
The temporary interface cannot be used because a physical schema has not been mapped to the logical schema for the source.

Action:
Create a mapping between the logical schema, context, and physical schema for the source data store.

ODI-15537
Source temporary interface {0} cannot be used as a derived table. The logical schema of the target datastore {1} has no associated physical schema in context {2}.

Category:
Programmatic

Cause:
The temporary interface cannot be used because a physical schema has not been mapped to the logical schema for the target.

Action:
Create a mapping between the logical schema, context, and physical schema for the target data store.

ODI-15538
Source temporary interface {0} cannot be used as a derived table. The logical schema of the staging area {1} has no associated physical schema in the optimization context {2}.

Category:
Programmatic

Cause:
The temporary interface cannot be used because a physical schema has not been mapped to the logical schema for the staging area.

Action:
Create a mapping between the logical schema, context, and physical schema.

ODI-15539
Source temporary interface {0} cannot be used as a derived table. Source datastore {1} is not on the same data server as the target.

Category:
Programmatic

Cause:
The temporary interface cannot be used because the source data store is not on the same data server as the target.

Action:
Ensure that the source and target datastores are on the same data server.

ODI-15540
Source temporary interface {0} cannot be used as a derived table. Staging area and target datastores are not in the same data server. You may have forced the target context to a different context than the optimization context.

Category:
Programmatic

Cause:
The temporary interface cannot be used because the staging data store is not on the same data server as the target.

Action:
Ensure that the staging and target datastores are on the same data server.

ODI-15541
Source temporary interface {0} uses a journalized datastore and cannot be used as a derived table.

Category:
Programmatic

Cause:
The temporary interface cannot be used because it uses a journalized datastore.

Action:
Use only non journalized data stores in temporary interfaces.

ODI-15542
Source temporary interface {0} cannot be used as a derived table. All source datastores of this interface should be in the same data server as the target and should not be journalized.

Category:
Programmatic

Cause:
The temporary interface cannot be used because it uses a journalized datastore.

Action:
Use only non journalized data stores in temporary interfaces.

ODI-15543
Another interface with the same name already exists in this folder. Please choose a unique interface name.

Category:
Programmatic

Cause:
Another interface with the same name already exists in this folder.

Action:
Specify a unique interface name.

ODI-15544
The interface must have a name.

Category:
Programmatic

Cause:
The interface does not have a name.

Action:
Specify a unique interface name.

ODI-15545
Temporary target datastore has no name.

Category:
Programmatic

Cause:
The temporary target datastore has no name

Action:
Specify a unique datastore name.

ODI-15546
The interface must have a logical schema.

Category:
Programmatic

Cause:
The interface does not have a logical schema.

Action:
Specify a logical schema for the interface.

ODI-15547
Could not fix a missing reference correctly.

Category:
Programmatic

Cause:
The interface is missing one or more references.

Action:
Recheck target expressions for proper source references.

ODI-15548
The source datastore has already been set.

Category:
Programmatic

Cause:
The source datastore has already been set.

Action:
Only invoke setSourceDataStore once.

ODI-15549
Cannot set the source filter because the source datastore is not set.

Category:
Programmatic

Cause:
The source datastore has not been set prior to setting the filter.

Action:
Set the source datastore prior to setting the filter.

ODI-15550
The target datastore has already been set.

Category:
Programmatic

Cause:
The source datastore has already been set.

Action:
Only invoke setSourceDataStore once.

ODI-15552
A source filter requires a source datastore.

Category:
Programmatic

Cause:
The interface cannot be saved because it contains a filter without a source datastore.

Action:
Create a source datastore before creating a source filter.

ODI-15553
The target datastore must be set.

Category:
Programmatic

Cause:
The target datastore for the interface has not been set.

Action:
Set the target datastore before saving the interface.

ODI-15554
An LKM must be set on the source set.

Category:
Programmatic

Cause:
A loading knowledge module has not been assigned to the source set.

Action:
Set the LKM for the source set before saving the interface.

ODI-15555
Target IKM must be set on the target table.

Category:
Programmatic

Cause:
An integration knowledge module has not been assigned to the target table.

Action:
Set the IKM for the target before saving the interface.

ODI-15556
Unknown generic clause type: {0}

Category:
Programmatic

Cause:
An unknown generic clause class was passed to the createSnpPopClauseFromGenericClause method.

Action:
Pass only generic clause classes for join or filter.

ODI-15557
Unknown execution location type: {0}

Category:
Programmatic

Cause:
An unknown execution location enumeration was passed to the getStringExeDbFromExecutionLocation method.

Action:
Pass only location enumerations of ExecutionLocation.SOURCE, ExecutionLocation.WORK, ExecutionLocation.TARGET.

ODI-15558
There is a conflict between physical schemas

Category:
Programmatic

Cause:
There is a conflict between the various physical schemas used to obtain the data, such as multiple data stores in the same source set connected using different physical schemas.

Action:
Ensure that physical schemas of a source set have consistent connection information.

ODI-15559
Unsupported component: {0}

Category:
Programmatic

Cause:
An unsupported component was passed as a parameter to createDataAccessinfo.

Action:
For the pInterfaceSubComponents parameter, supported components are SourceDataStore, ISourceColumn, TargetMapping, and GenericClause.

ODI-15560
Fatal interface condition: {0}

Category:
Programmatic

Cause:
A fatal issue was discovered while saving or verifying an interface.

Action:
Correct the interface issue before saving it.

ODI-15561
Could not find column {0} which choosing a mapping.

Category:
Programmatic

Cause:
The MappingChooserFirst.chooseMapping method was called with an column name that does not exist.

Action:
Check the column name passed to chooseMapping.

ODI-15562
Source sets cannot be computed because one execution area doesn't have a physical schema. Check the errors on the interface.

Category:
Programmatic

Cause:
Source sets cannot be computed because one execution area doesn't have a physical schema.

Action:
Check the errors on the interface.

ODI-15563
Source sets cannot be computed because the staging area is not properly defined. Check your target datastore and the staging area's physical schema in the Definition tab.

Category:
Programmatic

Cause:
Source sets cannot be computed because the staging area is not properly defined.

Action:
Check your target datastore and the staging area's physical schema in the Definition tab.

ODI-15564
There should be one source set on the interface.

Category:
Programmatic

Cause:
The interface has more than one source set.

Action:
Ensure that only one source set is defined.

ODI-15565
Column {0} not found while setting the update key.

Category:
Programmatic

Cause:
A column specified for the update key does not exist.

Action:
Recheck the column names used to define the update key.

ODI-15566
No target column was found while setting the target data store.

Category:
Programmatic

Cause:
No target column was found while setting the target data store.

Action:
Define columns before setting the target datastore.

ODI-15567
Target column {0} was not found.

Category:
Programmatic

Cause:
No specified target column was not found in the target data store.

Action:
Check the column name parameter in the RealBasicInterfaceCreationHelper.getTargetColumn method call.

ODI-15568
Column {0} not found on datastore {1}.

Category:
Programmatic

Cause:
A referenced column was not found in a source data store.

Action:
Check the source datastore columns and references for a mismatch.

ODI-15570
Cannot add a datastore of type {0} as source.

Category:
Programmatic

Cause:
An invalid datastore type has been specified.

Action:
Specify a datastore of type TargetDataStore, SourceDataStore, or OdiDataStore.

ODI-15571
Unexpected join type {0}

Category:
Programmatic

Cause:
An invalid join type has been specified when setting join properties.

Action:
Specify a join type of INNER, CROSS, or NATURAL.

ODI-15572
Unexpected join state.

Category:
Programmatic

Cause:
An invalid join state has been reached. The expected join type is CROSS or NATURAL.

Action:
Review the error details for further information.v

ODI-15573
Failed to create an interface helper instance.

Category:
Programmatic

Cause:
A general exception was encountered while constructing an interface helper.

Action:
This is an internal error with no recommended user action.

ODI-15574
General exception encountered in the interface helper while preparing to persist.

Category:
Programmatic

Cause:
General exception encountered in the interface helper while preparing to persist.

Action:
This is an internal error with no recommended user action.

ODI-15575
Two journalized datastores have been found. There should be only one.

Category:
Programmatic

Cause:
Two journalized datastores have been found. There should be only one.

Action:
Remove jounalizing from one or more datastores.

ODI-15576
Two journalized filters have been found. There should be only one.

Category:
Programmatic

Cause:
Two journalized filters have been found. There should be only one.

Action:
Remove jounalizing from one or more datastores.

ODI-15577
Unmanaged type: {0}

Category:
Programmatic

Cause:
An invalid element type was passed to the prepareSQLStatement method.

Action:
Pass only valid element types such as GenericClause, SourceDataStore, TargetDataStore, ISourceColumn, TargetMapping, SourceSet, DataSet, or TargetColumn.

ODI-15578
No interface was found in the elements.

Category:
Programmatic

Cause:
No interface could be traced to the elements passed to the prepareSQLStatement method.

Action:
Create an interface.

ODI-15579
No dataset was found in the elements.

Category:
Programmatic

Cause:
No data set could be traced to the elements passed to the prepareSQLStatement method.

Action:
Ensure that a dataset has been created first.

ODI-15580
The target is a temporary table.

Category:
Programmatic

Cause:
The target datastore is a temporary target.

Action:
Use a non-temporary target.

ODI-15581
Cannot build the query because the ordered joins are not correct.

Category:
Programmatic

Cause:
The SQL clause cannot be generated because the ordered joins are not correct.

Action:
Ensure that all joins are correct.

ODI-15582
This operation is not supported on joined file datastores.

Category:
Programmatic

Cause:
Multiple source datastores were found.

Action:
Use only a single source datastore.

ODI-15583
This operation is not supported on multiple file datastores.

Category:
Programmatic

Cause:
More than one source datastore was found.

Action:
Use only a single source datastore.

ODI-15584
Elements are from different interfaces.

Category:
Programmatic

Cause:
The components passed to prepareSQLStatement are from different interfaces.

Action:
Only pass components from the same interface when preparing an SQL statement.

ODI-15585
Elements are from different datasets.

Category:
Programmatic

Cause:
The components passed to prepareSQLStatement are from different data sets.

Action:
Only pass components from the same data set when preparing an SQL statement.

ODI-15586
Unsupported component: {0}

Category:
Programmatic

Cause:
An invalid component type was passed to connectionForData.

Action:
Only pass components of type SourceDataStore, ISourceColumn, TargetMapping, TargetColumn, GenericClause, or TargetDataStore.

ODI-15587
Journalization filter not found for the journalized table.

Category:
Programmatic

Cause:
The journalized table does not have a filter.

Action:
Define a journalizing filter for the table.

ODI-15588
The SQL join clause is not valid for a cross join.

Category:
Programmatic

Cause:
A join clause has been specified for a cross join.

Action:
Remove the join condition or change the join type.

ODI-15589
Cannot change the ON_TARGET indicator on a temporary interface.

Category:
Programmatic

Cause:
An attempt was made to set the ON_TARGET indicator for a temporary datastore.

Action:
Do not change the ON_TARGET indicator for a temporary datastore.

ODI-15590
Unknown indicator type: {0}

Category:
Programmatic

Cause:
An unknown value was passed to the constructor for InterfaceActionOnStagingAreaSetIndicator.

Action:
Use valid values of DISTINCT_ROW, ON_TARGET, or ON_USER_DATABASE_SCHEMA for the pIndicatorType parameter.

ODI-15591
Staging Area is on the target and cannot be switched to another logical schema.

Category:
Programmatic

Cause:
The staging area is on the target and uses the target schema. It cannot be switched.

Action:
Do not attempt to switch the schema, or use a separate staging area.

ODI-15592
GenericClause is of unknown type: {0}

Category:
Programmatic

Cause:
InterfaceActionRemoveGenericClause was constructed with an invalid generic clause.

Action:
Use a generic clause type of JOIN or FILTER.

ODI-15593
Could not set LKM for object of type {0}

Category:
Programmatic

Cause:
An LKM is being set for a TargetDataStore or some other invalid type.

Action:
Only set an LKM for a SourceSet or StagingArea.

ODI-15594
Could not set the CKM for a holder of type {0}

Category:
Programmatic

Cause:
A CKM is being set for a SourceSet, StagingArea, or some other invalid type.

Action:
Only set a CKM for a TargetDataStore.

ODI-15595
Could not set the IKM for a holder of type {0}

Category:
Programmatic

Cause:
An IKM is being set for a SourceSet, StagingArea, or some other invalid type.

Action:
Only set an IKM for a TargetDataStore.

ODI-15596
Invalid KM type: {0}

Category:
Programmatic

Cause:
An invalid object type is being used to set a KM.

Action:
Only set a KM of type LKM, CKM, or IKM.

ODI-15597
Could not set the LKM option for a holder of type {0}

Category:
Programmatic

Cause:
An LKM is being set for a TargetDataStore or some other invalid type.

Action:
Only set an LKM option for a SourceSet or StagingArea.

ODI-15598
Could not set the CKM option for a holder of type {0}

Category:
Programmatic

Cause:
A CKM option is being set for a SourceSet, StagingArea, or some other invalid KM holder type.

Action:
Only set a CKM option for a KM holder of type TagetDataStore.

ODI-15599
Could not set the IKM option for a holder of type {0}

Category:
Programmatic

Cause:
An IKM option is being set for a SourceSet, StagingArea, or some other invalid KM holder type.

Action:
Only set an IKM option for a KM holder of type TagetDataStore.

ODI-15600
Dataset 1 was not found in the list of the interface datasets used with the interface.

Category:
Programmatic

Cause:
The first dataset given as a parameter in the construction of the InterfaceActionSwitchDataSetOrders class is not used in the interface.

Action:
Recheck the datasets being switched for this interface. Both datasets must be used in the interface.

ODI-15601
Dataset 2 was not found in the list of the datasets used with the interface.

Category:
Programmatic

Cause:
The second dataset given as a parameter in the construction of the InterfaceActionSwitchDataSetOrders class is not used in the interface.

Action:
Recheck the datasets being switched for this interface. Both datasets must be used in the interface.

ODI-15602
An unimplemented method has been called.

Category:
Programmatic

Cause:
An unimplemented method has been called.

Action:
Review the error details for information on the specific method call. Implement the method or call an alternative method.

ODI-15603
Cannot create an alias for a datastore of type {0}

Category:
Programmatic

Cause:
The method computeAliasForDataStore was called with an invalid datastore type.

Action:
Only call computeAliasForDataStore for datastores of type TargetDataStore or OdiDataStore.

ODI-15604
A non ordered clause was passed to the buildTreeSet method.

Category:
Programmatic

Cause:
A non ordered clause is passed to the construction of ordered joins trees method.

Action:
Use ordered join clauses with this method.

ODI-15605
Multiple ordered joins in this dataset use the same order number.

Category:
Programmatic

Cause:
One or more join clauses uses the same order number in the call to buildTreeSet.

Action:
Ensure that all clauses of an ordered join have unique order numbers.

ODI-15606
Join references the same table twice (directly or indirectly).

Category:
Programmatic

Cause:
A join clause contains two references to the same table.

Action:
Ensure that the join clause only references one table.

ODI-15607
Join references the same table twice through other joins.

Category:
Programmatic

Cause:
A join clause contains two references to the same table.

Action:
Ensure that the join clause only references one table.

ODI-15608
Subcomponent type of {0} is not supported.

Category:
Programmatic

Cause:
An unsupported type was passed to getIssuesComputer.

Action:
Only pass types of OdiInterface, DataSet, SourceDataStore, Filter, Join, StagingArea, TargetDataStore, SourceSet, TargetMapping, or TargetColumn.

ODI-15609
Invalid KM holder type: {0}

Category:
Programmatic

Cause:
An invalid KM holder type was passed to InterfaceKMHolderFactory.getKMHolderFor

Action:
Only pass KM holder types of SOURCE_SET_LKM, STAGING_AREA_LKM, TARGET_CKM, or TARGET_IKM.

ODI-15610
Component must be a source datastore or a source column.

Category:
Programmatic

Cause:
ReferenceManagerAbstract.getReferencesTo was called with an invalid subcomponent.

Action:
Only pass subcomponent types of SourceDataStore or ISourceColumn.

ODI-15611
Column not found from an xref.

Category:
Programmatic

Cause:
A column referenced in an expression was not found in a datastore. It may have been deleted.

Action:
Ensure that all columns referenced in the expression exist.

ODI-15612
Failed to attach an element of type {0} to a source set.

Category:
Programmatic

Cause:
An invalid type of component was found when attaching elements to a source set.

Action:
Elements being attached to a source set must be of type SourceDataStore, Join, Filter, or TargetMapping.

ODI-15613
Interface must have only one dataset.

Category:
Programmatic

Cause:
This sourceset computer can only handle a single dataset, and more than one was found.

Action:
Ensure that the interface uses only one dataset.

ODI-15614
Interface must have only one source table.

Category:
Programmatic

Cause:
This sourceset computer can only handle a single table, and more than one datastore was found.

Action:
Ensure that multiple tables are contained in a sourceset.

ODI-15615
Interface must not have joins.

Category:
Programmatic

Cause:
This sourceset computer can only handle a single table, and the interface contains a join.

Action:
Ensure that joins are contained in a sourceset.

ODI-15616
Source datastore must be a real table

Category:
Programmatic

Cause:
This sourceset computer can only handle a single, real table.

Action:
Ensure that only a single, real table is used in the sourceset.

ODI-15617
Invalid type for a TextHolder: {0}

Category:
Programmatic

Cause:
The method getExecutableTextHolderFor was called with an invalid TextHolder component type.

Action:
Valid types are TargetMapping, TargetColumn, Filter, and Join.

ODI-15618
Cannot set a source set on a target column.

Category:
Programmatic

Cause:
SetSourceSet was called for a target column, which is not a valid usage. This method is specified for the interface, but is not valid for this class.

Action:
SetSourceSet should never be invoked for this class.

ODI-15619
Inconsistent filter with a clauseType of {0}

Category:
Programmatic

Cause:
The Filter.getFilterType method was called, but the clause type was not a filter type.

Action:
Ensure that the filter has a type of SnpPopClause.CLAUSE_TYPE_FILTER or SnpPopClause.CLAUSE_TYPE_JRN_FILTER.

ODI-15620
Execution location is null. Target technology cannot be determined

Category:
Programmatic

Cause:
The execution filter for the location was not set.

Action:
The execution location should be set in the Filter constructor or by invoking setExecutionLocation.

ODI-15621
Attached dataStore is null. Target technology cannot be determined

Category:
Programmatic

Cause:
The attached datastore for the execution location was not set.

Action:
The datastore should be set in the Filter constructor or by invoking setAttachedDataStore.

ODI-15622
Staging area does not have a logical schema. Target technology cannot be determined

Category:
Programmatic

Cause:
The attached datastore for the execution location was not set.

Action:
The datastore should be set in the Filter constructor or by invoking setAttachedDataStore.

ODI-15623
Invalid technology for the given index type

Category:
Programmatic

Cause:
The technology of the clause and index type do not match.

Action:
Ensure that the index type technology matches the clause technology.

ODI-15624
Inconsistent join with clauseType = {0} and joinType = {1}

Category:
Programmatic

Cause:
The join clause type is invalid.

Action:
This exception is thrown from a deprecated method. Use isCross or isOrdered methods instead.

ODI-15625
Cannot set OdiDataType on a journalized source column

Category:
Programmatic

Cause:
The setDataType method has been invoked for a journalized source column, but the datatype cannot be set for journalized columns.

Action:
Do not invoke this method for a journalized column.

ODI-15626
Cannot set the length on a journalized source column

Category:
Programmatic

Cause:
The setLength method has been invoked for a journalized source column, but the length cannot be set for journalized columns.

Action:
Do not invoke this method for a journalized column.

ODI-15627
Cannot set the scale on a journalized source column

Category:
Programmatic

Cause:
The setScale method has been invoked for a journalized source column, but the scale cannot be set for journalized columns.

Action:
Do not invoke this method for a journalized column.

ODI-15628
Cannot set the data type on a source column

Category:
Programmatic

Cause:
The setDataType method has been invoked for a source column, but the datatype cannot be set for source columns.

Action:
Do not invoke this method for a source column.

ODI-15629
Cannot set the length on a source column

Category:
Programmatic

Cause:
The setLength method has been invoked for a source column, but the length cannot be set for source columns.

Action:
Do not invoke this method for a source column.

ODI-15630
Cannot set the scale on a source column

Category:
Programmatic

Cause:
The setScale method has been invoked for a source column, but the scale cannot be set for source columns.

Action:
Do not invoke this method for a source column.

ODI-15631
Connection information is not available.

Category:
Programmatic

Cause:
The physical schema has not been set.

Action:
Define physical and logical schemas.

ODI-15632
Column {0} may not be removed because it is mapped in interface {1}.

Category:
Programmatic

Cause:
The specified target column is mapped in another interface. This dependency prevents removal of the column.

Action:
Only remove a column after mapping dependencies have been removed.

ODI-15633
Data Type must be set first.

Category:
Programmatic

Cause:
Data Type is null.

Action:
Set Data Type.

ODI-15634
Length is not allowed for the current Data Type

Category:
Programmatic

Cause:
Data Type doesn't support length.

Action:
Check Data Type.

ODI-15635
Scale is not allowed for the current Data Type.

Category:
Programmatic

Cause:
Data Type doesn't support scale.

Action:
Check Data Type.

ODI-15636
Cannot change the column because it's not a temporary column.

Category:
Programmatic

Cause:
Column isn't temporary.

Action:
Check column state.

ODI-15637
Execution location must be either null or target.

Category:
Programmatic

Cause:
Wrong Execution location state.

Action:
Check Execution location.

ODI-15638
Scenario {0} contains invalid characters. Try {1}.

Category:
Other

Cause:
String contains invalid characters.

Action:
Check scenario name.

ODI-15639
Scenario version is not set.

Category:
Programmatic

Cause:
Scenario version is not set.

Action:
Set scenation version.

ODI-15640
No Scenario was found through the Tag : {0}.

Category:
Other

Cause:
No Scenario was found.

Action:
Check tag.

ODI-15641
The refresh SQL statement of a variable cannot contain sequence references when the variable is added to a load plan.

Category:
Programmatic

Cause:
SQL statement contains sequence references.

Action:
Check refresh SQL statement.

ODI-15642
Scenario name must be {0} characters long max.

Category:
Other

Cause:
Scenario name is too long.

Action:
Check name length.

ODI-15643
No Physical Mapping Design from Mapping: {0}.

Category:
Other

Cause:
Cannot find any Physical Mapping Design from Mapping.

Action:
Check there is valid Physical Mapping Design.

ODI-15644
The physical data server for the source code and for sequqnce(s) {0} is not the same, this may result in the same sequence value being used for each row.

Category:
Other

Cause:
The sequence may be remote so a single nextval is calculated and reused per row.

Action:
Make sure the sequence and task have the same data server if you want the sequences to use distinct values per row.

ODI-15645
The physical data server for the target code and for sequence(s) {0} is not the same, this may result in the same sequence value being used for each row.

Category:
Other

Cause:
The sequence may be remote so a single nextval is calculated and reused per row.

Action:
Make sure the sequence and task have the same data server if you want the sequences to use distinct values per row.

ODI-15700
Exception thrown in the Odi shortcut service: {0}

Category:
Programmatic

Cause:
An exception was thrown while materializing a shortcut object.

Action:
Check the root cause.

ODI-16000
Dataset has no sources: {0}

Category:
Programmatic

Cause:
The Dataset has no source or the source is not available.

Action:
Check sources.

ODI-16001
Dataset {0} contains only one source.

Category:
Programmatic

Cause:
The Dataset has only one source.

Action:
Check sources.

ODI-16002
Dataset has added default join condition with cartesian product: {0}

Category:
Programmatic

Cause:
Dataset has added default join condition with cartesian product.

Action:

ODI-16003
Multiple joins in the same dataset have the same order number: {0}

Category:
Programmatic

Cause:
Multiple joins in the same dataset have the same order number.

Action:
Check the order numbers of join components in the dataset.

ODI-16004
ANSI join: {0} has no user-defined order. The default order -1 (meaning "random order") is assigned.

Category:
Programmatic

Cause:
An ANSI join component does not have a join order assigned to it.

Action:
Assign an order number that is not -1.

ODI-16005
Join component inside dataset has no valid source references in the join condition. Join: {0} , condition = {1}.

Category:
Programmatic

Cause:
Join component inside dataset has no valid source references in the join condition.

Action:
Check source references in the join condition.

ODI-16006
Join component inside dataset has only one source references in the join condition, must have at least 2 references. Join: {0}, condition = {1}

Category:
Programmatic

Cause:
Join component inside dataset has only one source references in the join condition, must have at least 2 references.

Action:
Check join condition.

ODI-16008
There is no possible pairwise join order that satisfies both the join condition references and the user order numbers.

Category:
Programmatic

Cause:
There is no possible pairwise join order that satisfies both the join condition references and the user order numbers.

Action:
Check both the join condition references and the user order numbers.

ODI-16009
Lookup component creation is not complete: it misses either driving and/or lookup source information.

Category:
Programmatic

Cause:
Lookup component: {0} in dataset: {1} is incomplete. (Driving source: {2}, lookup source: {3})

Action:
Set the missing driving and/or lookup source on the lookup component.

ODI-16010
Dataset has sources that are not referenced by any join condition. Dataset: {0} , unconnected sources: {1}.

Category:
Programmatic

Cause:
Dataset has sources that are not referenced by any join condition.

Action:
Check sources.

ODI-16011
INTERNAL ERROR: Dataset error when connecting joins in order. Cannot find source for join: {0}, referenced source name: {1}.

Category:
Programmatic

Cause:
Dataset error when connecting joins in order. Cannot find source for join.

Action:
Check sources.

ODI-16012
Cannot find ordered join connection in dataset for: {0}

Category:
Programmatic

Cause:
Cannot find ordered join connection in dataset.

Action:
Check ordered join connection.

ODI-16013
Cannot find a valid pairwise tree of join connections for dataset: {0} unconnected join: {1} ({2})

Category:
Programmatic

Cause:
Cannot find a valid pairwise tree of join connections for dataset.

Action:
Check join connections.

ODI-16014
Cannot find a valid pairwise tree of join connections for dataset: {0}

Category:
Programmatic

Cause:
Cannot find a valid pairwise tree of join connections for dataset.

Action:
Check join connections.

ODI-16015
Missing expression for aggregate component {0}, attribute: {1}

Category:
Programmatic

Cause:
Missing expression for aggregator attribute.

Action:
Check aggregator attribute.

ODI-16016
Could not find an output signature for point: {0}

Category:
Programmatic

Cause:
Could not find an output signature for point.

Action:
Check output signature for the connection point.

ODI-16017
The join component: {0} has more than 2 input connector points. This is not recommended. ANSI SQL join syntax may not be supported.

Category:
Programmatic

Cause:
The join component has more than 2 input connector points. This is not recommended. ANSI SQL join syntax may not be supported.

Action:
Check the join component.

ODI-16018
The join condition for component: {0} only references {1} sources, but there are {2} input connector points. Expression text: {3}

Category:
Programmatic

Cause:
The number of references sources is less than the number of input connector points.

Action:
Check the join condition and input connector points.

ODI-16019
Set component output attribute {0} contains {1} expressions, but there are only {2} input connector points.

Category:
Programmatic

Cause:
The number of input expressions is greater than the number of input connector points.

Action:
Check expressions and input connector points.

ODI-16020
Set component output attribute expression for attribute: {0} does not have a scoping input connector point specified. Set component input expressions must have an associated scoping input connector point.

Category:
Programmatic

Cause:
A scoping input connector point need to be specified.

Action:
Check If set component input expressions have an associated scoping input connector point.

ODI-16021
The immediate downstream node {0} of the AP node {1}, which uses a push style LKM, is not a target.

Category:
Programmatic

Cause:
A push style LKM is assigned to an AP node but its immediate downstream node is not a target.

Action:
Either change the LKM to a pull style LKM or move some physical nodes to source execution unit(s).

ODI-16022
Set component output attribute: {0} does not have an expression that references through input: {1}.

Category:
Programmatic

Cause:
Not all input connector points have been referenced by one expression.

Action:
Check input connector points and expressions.

ODI-16023
Expression cross reference object is null: {0}.

Category:
Programmatic

Cause:
Expression cross reference object is null.

Action:
Check expression cross reference object.

ODI-16024
The expression contains unresolved attribute references. {0} Expression: {1} Unresolved identifiers: {2}.

Category:
Programmatic

Cause:
The expression contains identifiers that were not resolved as attribute references.

Action:
Check all identifiers in the expression for accessibility through a valid input connector point.

ODI-16025
An access point (AP) node has been created in the physical graph, but it does not have any columns: {0}.

Category:
Programmatic

Cause:
ERROR: An access point (AP) node has been created in the physical graph, but it does not have any columns.

Action:
Check access points.

ODI-16026
Cannot move an existing physical node to a different physical design! Node: {0}.

Category:
Programmatic

Cause:
Cannot move an existing physical node to a different physical design! .

Action:
The action attempted is not supported.

ODI-16027
No path exists from physical node: {0} to: {1}.

Category:
Programmatic

Cause:
No path exists between physical nodes.

Action:
Check paths between physical nodes.

ODI-16028
Expression push is not allowed because it would push the expression through projector node: {0}.

Category:
Programmatic

Cause:
Expression push is not allowed because it would push the expression through projector node.

Action:
The action attempted is not supported.

ODI-16029
Expression {0} ({1}) owned by: {2} has blank value, but a non-blank value is required.

Category:
Programmatic

Cause:
Expression has blank value, but a non-blank value is required.

Action:
Check the expression text.

ODI-16030
An attribute expression must reference only one projector or joiner source. Attribute: {0}.

Category:
Programmatic

Cause:
An attribute expression must reference only one projector or joiner source.

Action:
Check attribute expressions.

ODI-16031
The lookup component must have a driver and a lookup source input connection.

Category:
Programmatic

Cause:
The lookup component is not properly connected, it must have 2 input connections.

Action:
Connect the lookup component.

ODI-16032
Unsupported component type: {0}: component: {1} in dataset: {2}.

Category:
Programmatic

Cause:
The dataset does not support the component type.

Action:
Remove the component from the dataset.

ODI-16033
Aggregate filter: {0} is not supported in dataset: {1}.

Category:
Programmatic

Cause:
The dataset does not support aggregate filters.

Action:
Remove the aggregate filter.

ODI-16034
A transparent target LKM was picked for: {0}, but the AP node has more than one downstream target component.

Category:
Programmatic

Cause:
An AP node with a transparent target LKM can only have one downstream target.

Action:
Pick a different LKM.

ODI-16035
Target node {0} has assigned IKM {1}. The IKM will be ignored.

Category:
Programmatic

Cause:
A target node that is loaded by an upstream AP node with a transparent target LKM assigned does not need an IKM assigned, since the loading functionality will be handled by the LKM transparent push.

Action:
Set IKM to null.

ODI-16036
No target connected to AP node: {0} with SQL multi-connect LKM assigned.

Category:
Programmatic

Cause:
An AP node with SQL multi-connect LKM assigned has no target.

Action:
Add a target component.

ODI-16037
Only one target allowed for AP node: {0} with SQL multi-connect LKM assigned.

Category:
Programmatic

Cause:
An AP node with multi-connect LKM assigned cannot have multiple targets.

Action:
Pick different LKM, or remove all but one of the targets in the mapping.

ODI-16038
No extra logical components are allowed downstream from AP node: {0} with SQL multi-connect LKM assigned. The AP node must have a direct connection to target.

Category:
Programmatic

Cause:
An AP node with multi-connect LKM assigned must be connected directly to the target, with no intervening nodes.

Action:
Pick a different LKM, or reconfigure the physical graph such that the AP nodes connects directly to the target.

ODI-16039
The AP node: {0} has a transparent target LKM assigned, but it is not connected directly to the target.

Category:
Programmatic

Cause:
An AP node with transparent target LKM assigned must be connected directly to the target, with no intervening nodes.

Action:
Pick a different LKM, or reconfigure the physical graph such that the AP nodes connects directly to the target.

ODI-16040
Non-ANSI full outer join for component: {0} is not supported.

Category:
Programmatic

Cause:
Full outer join is set to generate non-ANSI syntax.

Action:
Check the box for "Generate ANSI Syntax" under Join properties.

ODI-16041
The manual group by clause is missing a required attribute: {0}

Category:
Programmatic

Cause:
The maual group-by expression is missing one or more attributes required for the SQL group-by clause.

Action:
Edit the manual group-by expression to included the missing attribute.

ODI-16042
The expression for attribute: {0} does not contain an aggregate function, but the group by column setting is NO. Non aggregate attributes should be part of the group-by clause.

Category:
Programmatic

Cause:
The group-by column setting for an attribute is NO, but it should be part of the group-by clause because the expression does not contain an aggregate function.

Action:
If the attribute expression does not contain an aggregate, set the group by column setting to YES.

ODI-16043
The expression for attribute: {0} contains an aggregate function, but the group by column setting is YES. Only non aggregate attributes should be included in the group-by clause.

Category:
Programmatic

Cause:
The group by column setting for an attribute is YES, but it should not be part of the group-by clause because the expression contains an aggregate function.

Action:
If the attribute expression contains an aggregate, set the group by column setting to NO.

ODI-16044
The having clause references aggregate attribute: {0}, but an aggregate function is not specified.

Category:
Programmatic

Cause:
An aggregated attribute is used in a having clause without an aggregate function.

Action:
If the having clause references an aggregated attribute, include the aggregate function used with that attribute.

ODI-16045
Input connector point {0} is not referenced by any attribute expression. That input to the set component is unused.

Category:
Programmatic

Cause:
An input connector point for a set component is unused because no attribute expressions reference attributes scoped through that connector.

Action:
At least one attribute expression should reference an attribute through the input connector in order to use that input to the set.

ODI-16046
Set components must have a minimum of two input connector points.

Category:
Programmatic

Cause:
The set component has less than two input connector points.

Action:
Add an input connector point. Set components must have at least two sources.

ODI-16047
Set component output attribute: {0} must have a non empty expression for input connector point {1}.

Category:
Programmatic

Cause:
The number of input expressions is less than the number of input connector points.

Action:
Specify a non empty expression for each input. Specify null if no attribute reference is used.

ODI-16048
Reusable mapping component: {0} must have a connection for input connector point {1}.

Category:
Programmatic

Cause:
An input connector point is not connected to another map component.

Action:
Connect the input connector point to a source component.

ODI-16049
Reusable mapping component {0} has one or more output connector points, but none are connected or contain target components. DML cannot be generated without a target component connected downstream or within the reusable mapping.

Category:
Programmatic

Cause:
None of the output connector points for the reusable mapping component are connected or contain target components.

Action:
Add a connection for at least one output connector point.

ODI-16050
Native sequence and ORDER BY operation are performed on the same flow. This might not be allowed in some technologies such as Oracle.

Category:
Programmatic

Cause:
Sequence is used before order by, this is now allowed in Oracle.

Action:
Remove sorter component or place sorter in an execution unit different from the sequence expression.

ODI-16051
The Sub select option may not be set for reusable mappings having an input signature.

Category:
Programmatic

Cause:
The reusable mapping component setSubSelect method was called with a value of true, but sub select is not allowed if an input signature is present.

Action:
Avoid calling the setSubSelect method or specify false for the value parameter.

ODI-16052
The Sub select option may not be set for reusable mappings having more than one output signature.

Category:
Programmatic

Cause:
The reusable mapping component setSubSelect method was called with a value of true, but sub select is not allowed if more than one output signature is present.

Action:
Avoid calling the setSubSelect method or specify false for the value parameter.

ODI-16053
Mixed non-ordered (outer) join and ordered join is not supported.

Category:
Programmatic

Cause:
Outer join is set to non-ordered.

Action:
Change the join to ordered join.

ODI-16054
An unparsed identifier, {0}, was found in the aggregate HAVING clause. This identifier was not found in any other aggregate or group by expressions.

Category:
Programmatic

Cause:
An identifier was found in the HAVING clause, but is invalid because it is not present in any aggregation or group by expression.

Action:
Remove this expression from the HAVING clause or use it in one of the aggregate output attribute expressions.

ODI-16055
Reusable mapping {0} for reusable mapping component {1} contains errors or warnings.

Category:
Programmatic

Cause:
A reusable mapping used by this mapping has errors or warnings.

Action:
See following error or warning messages regarding the reusable mapping.

ODI-16056
The driver connection for lookup component {0} is not connected to any source.

Category:
Programmatic

Cause:
A connection has not been made between the source and driving connection of the lookup component.

Action:
Connect a source to the lookup component driver connection.

ODI-16057
The lookup connection for lookup component {0} is not connected to any source.

Category:
Programmatic

Cause:
A connection has not been made between the source and lookup connection of the lookup component.

Action:
Connect a source to the lookup component lookup connection.

ODI-16058
Output signature {0} of reusable mapping {1} is not connected to any input source.

Category:
Programmatic

Cause:
An output signature is not connected to any upstream component.

Action:
Connect the output signature to an upstream component.

ODI-16059
Error adding lines to task container for KM {0}: {1}

Category:
Programmatic

Cause:

Action:

ODI-16060
Error finding helper component KM for AST processing of a node with 11g KM assigned: node={0}, helper KM={1}, error={2}

Category:
Programmatic

Cause:

Action:

ODI-16061
Error when calling generation delegate for component KM {0}: {1}

Category:
Programmatic

Cause:

Action:

ODI-16062
Cannot create node variable binding map for component KM {0}: {1}

Category:
Programmatic

Cause:

Action:

ODI-16063
No target multi-connect IKM found when processing an AP node with a SQL multi-connect LKM assigned.

Category:
Programmatic

Cause:
A multi-connect IKM could not be found for a target.

Action:
Check the target IKM assignment.

ODI-16064
When processing an AP node with SQL multi-connect LKM assigned, the downstream target node does not have a multi-connect IKM assigned.

Category:
Programmatic

Cause:
The IKM assigned to the target is not a multi-connect IKM. If an AP node uses a multi-connect LKM, a multi-connect IKM is required on the target.

Action:
Assign a multi-connect IKM to the target.

ODI-16065
Cannot get an entity manager for the mapping object. The entity manager must be set for the owning mapping or reusable mapping by calling IOdiEntityManager.persist() or Mapping.setEntityManager(), before this operation can be done. Mapping object= {0}

Category:
Programmatic

Cause:
An mapping operation is being performed that requires the mapping to resolve a reference, but the mapping entity manager has not been set.

Action:
Set the entity manager for the mapping, by calling IOdiEntityManager.persist() or Mapping.setEntityManager().

ODI-16066
Target datastore column {0} is a mandatory column and should be mapped.

Category:
Programmatic

Cause:
Missing expression for mandatory target datastore column.

Action:
Check target datastore mandatory column expression.

ODI-16067
The Sub select option may not be set for reusable mappings having no output signature.

Category:
Programmatic

Cause:
The reusable mapping component setSubSelect method was called with a value of true, but sub select is not allowed if no output signature is present.

Action:
Avoid calling the setSubSelect method or specify false for the value parameter.

ODI-16068
A parse error was encountered when parsing the expression: {0}. The default parser supports ANSI SQL delimiters. If a non-standard syntax is desired, use the free-form expression delimiters /%% and %%/ around the expression.

Category:
Programmatic

Cause:
Expression is syntactically incorrect.

Action:
Make sure the expression is well-formed.

ODI-16069
Technology {0} does not support the WHERE clause and cannot process the join.

Category:
Programmatic

Cause:
Technology "Where" indicator is set to false.

Action:
Check the technology setting or remove the join.

ODI-16070
Ordered joins are not supported in technology {0}.

Category:
Programmatic

Cause:
Technology Join Support Ordered indicator is set to false.

Action:
Set join to non-ordered (Generate ANSI syntax = false).

ODI-16071
Cross joins are not supported in technology {0}.

Category:
Programmatic

Cause:
Technology Cross Join indicator is set to false.

Action:
Set join type to non-cross join.

ODI-16072
Natural joins are not supported in technology {0}.

Category:
Programmatic

Cause:
Technology Natural Join indicator is set to false.

Action:
Set join type to non-natural join.

ODI-16073
Non-ordered natural joins are not supported.

Category:
Programmatic

Cause:
Natural Join is set to non-ordered (generate ANSI syntax = false).

Action:
Set 'Generate ANSI syntax' to true.

ODI-16074
Non-ordered joins are not supported in technology {0}.

Category:
Programmatic

Cause:
Join is set to non-ordered (generate ANSI syntax = false).

Action:
Set join to ordered (Generate ANSI syntax = true).

ODI-16075
Non-ordered outer joins are not supported in technology {0}.

Category:
Programmatic

Cause:
Outer Join is set to non-ordered (generate ANSI syntax = false).

Action:
Set 'Generate ANSI syntax' to true.

ODI-16076
Outer joins are not supported in technology {0}.

Category:
Programmatic

Cause:
Join is set to outer join.

Action:
Set join to non-outer join.

ODI-16077
Full outer joins are not supported in technology {0}.

Category:
Programmatic

Cause:
Join is set to full outer join.

Action:
Set join to non-full outer join.

ODI-16078
Inner joins are not supported in technology {0}.

Category:
Programmatic

Cause:
Join is set to inner join.

Action:
Set join to non-inner join.

ODI-16079
Reusable mapping {0} is not compatible with dataset {1}. A reusable mapping within a dataset must have no input signatures and exactly one output signature.

Category:
Programmatic

Cause:
An incompatible reusable mapping is being added to the dataset. The reusable mapping must have no input signatures and exactly one output signature.

Action:
Choose a different compatible reusable mapping or modify the resuable mapping to contain just a single output signature and no input signatures.

ODI-16080
Mapping component type {0} is not supported within a {1}.

Category:
Programmatic

Cause:
An unsupported component is being added to a mapping or composite component.

Action:
Use a supported component.

ODI-16081
Physical Mapping Design {0} cannot be calculated with no optimization context.

Category:
Programmatic

Cause:
The optimization context of the physical design is not set, or it becomes invalid because the referenced context is deleted.

Action:
Check the optimization context of the physical design and specify an appropriate context.

ODI-16082
The physical node {0} cannot be supported by technology {1} on execution unit {2} of mapping {3}.

Category:
Programmatic

Cause:
The physical node cannot be moved to the execution unit because its technology does not support the node.

Action:
Do not move the physical node to this execution unit.

ODI-16083
Input Attribute {0} of reusable mapping component {1} does not have an expression to connect it to any source, but is referenced in the reusable mapping.

Category:
Programmatic

Cause:
An input signature attribute in a reusable mapping is referenced by another component, but the input is not connected in the parent mapping.

Action:
Assign an expression to the reusable mapping component input attribute.

ODI-16084
The proposed connection would create a circular graph.

Category:
Programmatic

Cause:
The proposed connection would create a logical graph which contains a circular path, which connects a source component through some other components and back to itself.

Action:
Fix the connections to get rid of the circular path.

ODI-16085
Cannot set an expression for attribute {0} because the attribute was not found. Available attributes: {1}.

Category:
Programmatic

Cause:
SetAttributeExpressionText was called with an invalid attribute name.

Action:
Specify a valid attribute name.

ODI-16086
Set component {0} input connector point {1}: set operator {2} is not valid for {3} technology.

Category:
Programmatic

Cause:
The set operation chosen for the connector point is not valid for the technology.

Action:
Choose a set operation valid for the technology.

ODI-16087
Generation of set component {0} failed because of an incompatibility with the technology.

Category:
Programmatic

Cause:
The set operation chosen for the connector point is not valid for the technology.

Action:
Choose a set operation valid for the technology.

ODI-16088
Map component {0}, attribute {1} contains an aggregate function. Aggregate functions are only supported by the aggregate component.

Category:
Programmatic

Cause:
An aggregate function is used in the expression of a datastore attribute. The Datastore component does not support aggregate functions and will not generate the required GROUP BY clause.

Action:
Create an aggregate component to contain the aggregate function.

ODI-16089
"Cannot connect to component {0}, no input connector points are available.

Category:
Programmatic

Cause:
An attempt was made to connect to the component, but no input connector points are available.

Action:
Fix the connection graph.

ODI-16090
"Attempt connect a component to itself. from={0}, to= {1}

Category:
Programmatic

Cause:
An attempt was made to connect an output of the component back into an input of the same component.

Action:
Do not connect a component to itself.

ODI-16091
Expression component {0} has no attributes.

Category:
Programmatic

Cause:
An expression has no attributes. Expression components are projectors and must have attributes in order to be referenced by downstream components.

Action:
Add one or more attributes to the expression component.

ODI-16092
Datastore component {0}, attribute {1} is mandatory but not active.

Category:
Programmatic

Cause:
A datastore attribute is mandatory, but has been tagged as non active.

Action:
Set the mandatory attribute to active.

ODI-16093
The subselect option is not valid for reusable mapping component {0} because the reusable mapping contains an expression referencing a native sequence.

Category:
Programmatic

Cause:
The reusable mapping has an expression referencing a native sequence, and the subselect option has been chosen for the reusable mapping component.

Action:
Avoid using the subselect option for reusable mappings having expressions which reference native sequences.

ODI-16094
Physical node {0} is associated with logical schema {1}, but it is not mapped to a physical server in context {2}.

Category:
Programmatic

Cause:
The physical schema of the physical node cannot be resolved, as its logical schema is not mapped in the execution context.

Action:
Associate the logical schema with a physical schema in the context specified.

ODI-16095
"Scenario Generation failed for mapping {0} because no physical design was found.

Category:
Programmatic

Cause:
No physical design was found during scenario generation for a mapping.

Action:
Correct any errors preventing physical design generation.

ODI-16096
A mapping with name {0} already exists in folder {1}.

Category:
Programmatic

Cause:
A mapping with the same name already exist in the same folder.

Action:
Use a different name for the mapping.

ODI-16097
A reusable mapping with name {0} already exists in folder {1}.

Category:
Programmatic

Cause:
A reusable mapping with the same name already exist in the same folder.

Action:
Use a different name for the reusable mapping.

ODI-16098
A reusable mapping with name {0} already exists in global project.

Category:
Programmatic

Cause:
A reusable mapping with the same name already exist in the global project.

Action:
Use a different name for the reusable mapping.

ODI-16099
Name {0} already exists in {1} {2}.

Category:
Programmatic

Cause:
The given name is already used. Object name needs to be unique with the parent object.

Action:
Provide a different name for the object.

ODI-16100
Name cannot be an empty string.

Category:
Programmatic

Cause:
Name of an object cannot be empty.

Action:
Provide a name for the object.

ODI-16101
Name {0} contains invalid characters. Only letters, digits or underscore characters are allowed.

Category:
Programmatic

Cause:
Proposed name contains invalid characters, such as space. Only letters, digits or underscore characters are allowed.

Action:
Provide a different name for the object.

ODI-16102
Name {0} contains invalid characters. Only uppercase letters, digits or underscore characters are allowed, and the first character needs to be a letter.

Category:
Programmatic

Cause:
Proposed name contains invalid characters, such as space. Only uppercase letters, digits or underscore characters are allowed, and the first character needs to be a letter.

Action:
Provide a different name for the object.

ODI-16103
Name {0} is longer than {1} characters.

Category:
Programmatic

Cause:
Proposed name is too long.

Action:
Shorten the proposed name.

ODI-16104
The expression for attribute {0} cannot be resolved because it references an input signature which could not be redirected to an upstream expression. Input connector connections may be incorrect.

Category:
Programmatic

Cause:
An expression references an input signature, but it could not be redirected to an expression upstream of the input signature. Invalid input connector point connections are the most common cause.

Action:
Check all input connector points for correct upstream connections.

ODI-16105
Expression of attribute {0} does not refer to any upstream attribute.

Category:
Programmatic

Cause:
The expression is not set or the input connector point is not properly connected.

Action:
Verify the expression or the connection to the input connector point.

ODI-16106
No columns are set to update column in Target datastore {0}.

Category:
Programmatic

Cause:
The update indicator is not set in target datastore.

Action:
Verify the targetDatastore attribute and set the update indicator.

ODI-16107
The data type for datastore component {0}, attribute {1} is not defined.

Category:
Programmatic

Cause:
The data type of the column to which the datastore attribute is bound is null. This may occur when reverse engineering an unknown data type.

Action:
Add the data type to the technology and set the data type of the column.

ODI-16108
Preset Staging Location explicitly set to target location. This may result in the addition of another execution unit and decreased performance. Consider using the default Preset Staging Location, which is already set to use the target location.

Category:
Programmatic

Cause:
The preset staging location has been explicitly set, instead of using the default value. When an explicit value is set, and execution unit will be created, even if the location is the same as the target location.

Action:
Consider using the default value for the preset staging location.

ODI-16109
Encountered {0} at line {1} column {2}. Was expecting one of: {3}. The default parser supports ANSI SQL delimiters. If a non-standard syntax is desired, use the free-form expression delimiters /%% and %%/ around the expression.

Category:
Programmatic

Cause:
A parser error was encountered when parsing the expression.

Action:
Fix the syntax of the expression.

ODI-16110
Non-ANSI natural join for component: {0} is not supported.

Category:
Programmatic

Cause:
Natural join is set to generate non-ANSI syntax.

Action:
Check the box for "Generate ANSI Syntax" under Join properties.

ODI-16111
Cannot remove {0} connector point for component {1} due to minimum connector point count violation.

Category:
Programmatic

Cause:
Removal of connector point will result in connector point count less than minimum count.

Action:
Do not remove connector point.

ODI-16112
Reusable mapping component {0}, output connector point {1} is not connected.

Category:
Programmatic

Cause:
An output connector point of a reusable mapping component is not connected.

Action:
Check that connections from all output connector points are optional.

ODI-16113
Mapping component {0} has no input or output connections.

Category:
Programmatic

Cause:
An mapping component has not been connected.

Action:
Connect the component to a source and/or target component.

ODI-16114
Error when ordering the components for physical design:{0}, component re-ordering is not valid. A skipped component was not able to be placed in an execution unit because of dependency errors.

Category:
Programmatic

Cause:
When attempting to reorder the component nodes in the physical graph, an eror was found.

Action:
Do not reorder the component.

ODI-16115
Cannot reorder an outer join node around another kind of node.

Category:
Programmatic

Cause:
Cannot reorder an outer join node around another kind of node.

Action:
Cannot reorder an outer join node around another kind of node.

ODI-16116
Cannot reorder a join around another join if one of the joins does not have at least 2 references in its join condition.

Category:
Programmatic

Cause:
Illegal reordering.

Action:
Do not reorder the component.

ODI-16117
Cannot reorder a join around another join if one is generating ANSI and the other is not.

Category:
Programmatic

Cause:
Illegal reordering.

Action:
Do not reorder the component.

ODI-16118
Cannot reorder a join around another join if one is a left or right outer join and the other is not the same type, for non-ANSI joins.

Category:
Programmatic

Cause:
Illegal reordering.

Action:
Do not reorder the component.

ODI-16119
Cannot reorder a join around another join if either one is a left outer or right outer join, for ANSI joins.

Category:
Programmatic

Cause:
Illegal reordering.

Action:
Do not reorder the component.

ODI-16120
Warning: Target Load Order -- Child component is ordered before parent component.

Category:
Programmatic

Cause:
A datastore component with foreign key relationships is ordered before its parent datastore component.

Action:
Change the load order to put parent component before child component or keep the load order knowing that it may result in error in loading due to missing primary record.

ODI-16121
Error: Target Load Order -- Load order is not consistent with processing graph from source to target. Please modify the graph or change the load order.

Category:
Programmatic

Cause:
A target component is ordered before its source component.

Action:
Change the load order to put source component before target component or change the mapping design.

ODI-16122
Cannot create physical design due to mapping validation errors: {0}.

Category:
Programmatic

Cause:
Validation errors.

Action:
Fix the mapping.

ODI-16123
Node pushed upstream causes conflicts due to multiple upstream connections from different execution units. Pushed node={0}.

Category:
Programmatic

Cause:
Illegal node push.

Action:
Do not push the node to this location.

ODI-16124
Not allowed to reorder node {0}: {1}

Category:
Programmatic

Cause:
Illegal node push.

Action:
Do not push the node to this location.

ODI-16125
Not allowed to push node {0} past node {1}: {2}

Category:
Programmatic

Cause:
Illegal node push.

Action:
Do not push the node to this location.

ODI-16126
Physical graph re-ordering is causing a referencing problem for component: {0}.

Category:
Programmatic

Cause:
Illegal node push.

Action:
Do not push the node to this location.

ODI-16127
Cannot reorder component that is not a selector:{0}.

Category:
Programmatic

Cause:
Illegal node push.

Action:
Do not push the node to this location.

ODI-16128
Cannot reorder component that does not have at least one input and output connector point: {0}.

Category:
Programmatic

Cause:
Illegal node push.

Action:
Do not push the node to this location.

ODI-16129
Cannot reorder a component that has multiple downstream targets: {0}.

Category:
Programmatic

Cause:
Illegal node push.

Action:
Do not push the node to this location.

ODI-16130
Cannot reorder an outer join component: {0}.

Category:
Programmatic

Cause:
Illegal node push.

Action:
Do not push the node to this location.

ODI-16131
The node will not be moved.

Category:
Programmatic

Cause:
Illegal node push.

Action:
Do not push the node to this location.

ODI-16132
Cannot reorder node {0} downstream of {1}, since {1} has expression references to {0}.

Category:
Programmatic

Cause:
Illegal node push.

Action:
Do not push the node to this location.

ODI-16133
Cannot reorder node {0} upstream of {1}, since {0} has expression references to {1}.

Category:
Programmatic

Cause:
Illegal node push.

Action:
Do not push the node to this location.

ODI-16134
Cannot set journalizing for datastore component {0}, since its bound datastore is not journalized.

Category:
Programmatic

Cause:
Cannot set journalizing since the bound datastore is not journalized.

Action:
Make sure the bound datastore is CDC enabled.

ODI-16135
File technology has limited capability to serve as a staging area. Consider switching the staging area to another technology, such as in-memory engine.

Category:
Programmatic

Cause:
File technology unit set as staging area.

Action:
Set staging area to non-file technology.

ODI-16136
{0} {1} should not have a {2}. {2} will be ignored.

Category:
Programmatic

Cause:
With Join Type CROSS or NATURAL, the Join Condition will be ignored.

Action:
Check the Join Type. If correct, set the Join Condition to blank.

ODI-16137
IKM {0} is selected for physical node {1}, but the corresponding logical component {2} of reusable mapping {3} is not marked as derived sub-select.

Category:
Programmatic

Cause:
An IKM is used for extraction of a physical node, but derived sub-select is not enabled.

Action:
Change the KM selected for the physical node, or mark the logical component as derived sub-select.

ODI-16138
Internal error occurred during mapping metadata conversion. Please check the original 11g interface to see if it is complete and valid. Only interfaces that pass validation are supported during the upgrade process. If the 11g interface validates properly (in 11g) and then fails to upgrade cleanly, you should contact Oracle Support. The detailed exceptions information can be found in log file.

Category:
Programmatic

Cause:
Internal error occurred or unexpected exception received during mapping metadata conversion.

Action:
Make sure the original 11g interface is valid. If the 11g interface validates properly (in 11g) and then fails to upgrade cleanly, you should contact Oracle Support. The detailed exceptions information can be found in log file.

ODI-16139
Execution unit {0} does not have a location.

Category:
Programmatic

Cause:
The execution unit does not have a logical schema selected for its location.

Action:
Select a logical schema as the location of the execution unit.

ODI-16140
Mapping component {0} must have a connection for input connector point {1}.

Category:
Programmatic

Cause:
An input connector point is not connected to another map component.

Action:
Connect the input connector point to a source component.

ODI-16141
Mapping component {0} must have a connection for output connector point {1}.

Category:
Programmatic

Cause:
An output connector point is not connected to another map component.

Action:
Connect the output connector point to a downstream component.

ODI-16142
Cannot bind a datastore component to file model datastore {0}, use a file component instead.

Category:
Programmatic

Cause:
Attempt to bind a datastore component to a datastore with file technology.

Action:
Use a file component instead, and bind the file object to it.

ODI-16143
Cannot bind a file component to non-file model datastore {0}, use a datastore component instead.

Category:
Programmatic

Cause:
Attempt to bind a file component to a datastore with non-file technology.

Action:
Use a datastore component instead, and bind the file object to it.

ODI-16144
The expression cannot be pushed to execution unit {0} because its references would be out of scope.

Category:
Programmatic

Cause:
Illegal push-to target execution unit for expression.

Action:
Do not push the expression to this execution unit.

ODI-16145
The lookup match nth rows for lookup component {0} should be positive number.

Category:
Programmatic

Cause:
The match nth row property has not been correctly configured for lookup component.

Action:
Correct the match nth row property for lookup component.

ODI-16146
The join condition for component {0} contains a filter expression that does not reference a different schema on each side of the equality operator: {1}. Filter expressions may not behave as expected in joins.

Category:
Programmatic

Cause:
The join condition contains a filter expression. Filter expressions may not be effective in joins, and are inherently problematic in outer joins.

Action:
Move the extra filter condition to a separate filter component to eliminate interaction with the join.

ODI-16147
The join condition for component {0} does not contain an identifiable equality operator to join the input sources: {1}.

Category:
Programmatic

Cause:
The join condition may be missing an equality operator needed to match rows when joining the input sources.

Action:
Check the join expression for a valid equality operator.

ODI-16148
The size of map attribute {0} ({1}) is greater than the size of attribute {2} ({3}), to which it is mapped. Truncation or runtime errors are possible, depending on the technology.

Category:
Programmatic

Cause:
A map attribute is mapped to an attribute of smaller size. This may result in data truncation or DML errors.

Action:
Verify the size of both attributes and make any adjustments necessary to avoid truncation. Add an expression to explicitely truncate the data if necessary.

ODI-16149
For lookup component {0}, the option {1} for non matching rows may only be selected if option {2} is selected for multiple matching rows.

Category:
Programmatic

Cause:
The no match rows property has not been correctly configured for lookup component. It may only be used if the multiple matching rows option specifies all rows.

Action:
Correct the no match rows property for lookup component.

ODI-16150
Multiple non-ANSI outer joins exist within a dataset for the same datastore {0}.

Category:
Programmatic

Cause:
A datastore is outer joined to more than one datastore. This may result in execution errors.

Action:
Create joins outside of datasets.

ODI-16151
The context value {0} for map component {1} does not map to a physical location.

Category:
Programmatic

Cause:
The forced context value of a data storage component, combined with the model and logical schema, does not map to a physical schema. A map physical design cannot be created.

Action:
Use the logical schema editor or SDK to set a physcial schema for the chosen component context.

ODI-16152
Error processing KM target expression for mapping: {0}, KM line: {1}, KM error: {2}

Category:
Programmatic

Cause:
An exception was thrown during KM processing of the target expression for a particular line.

Action:
Review the KM line and error to determine the cause.

ODI-16153
Error processing KM source expression for mapping: {0}, KM line: {1}, KM error: {2}

Category:
Programmatic

Cause:
An exception was thrown during KM processing of the source expression for a particular line.

Action:
Review the KM line and error to determine the cause.

ODI-16154
No expressions have been defined on the attributes for map component {0}.

Category:
Programmatic

Cause:
A target datastore is connected, but none of its attributes have expressions defined.

Action:
Create expressions to map one or more attributes to a source.

ODI-16155
Join or Lookup component {0} is inactive. Components joining sources must be active.

Category:
Programmatic

Cause:
A join or lookup component has been set to inactive. Components which join sources must be active because all sources will not be in scope without the join.

Action:
Set the component to active.

ODI-16156
Join type {0} in {1} cannot be supported due to circular relationships in Dataset {2}.

Category:
Programmatic

Cause:
If a circle of relationships exist in a Dataset, one of the joinis must be reduced to a filter. The join type defined on it could be lost.

Action:
Examine the logic in the Dataset and try to reduce the number of outer joins if possible as the currently specified logic in Dataset cannot be translated to a SQL query.

ODI-16157
Ambiguous expression reference due to split path. {0} Expression: {1}, Available paths: {2}

Category:
Programmatic

Cause:
The connection path to the referenced attribute is split and the reference does not include a path specifier with a sufficient number of connector names to specify an unambiguous path..

Action:
Add a path specifier qualifier to the expression reference.

ODI-16158
Component in path specifier has multiple output connector points. {0} Expression: {1}, Component={2}

Category:
Programmatic

Cause:
A map component specified in the expression path specifier has multiple output connector points.

Action:
A specific connector point must be specified in the path specifier.

ODI-16159
Path specifier contains nonexistent identifier. {0} Expression: {1}, Identifier={2}

Category:
Programmatic

Cause:
An identifier specified in the expression path specifier is not found in the set of upstream components or connector points.

Action:
Fix the path specifier in the expression.

ODI-16160
Path specifier contains out-of-scope identifier. {0} Expression: {1}, Identifier={2}

Category:
Programmatic

Cause:
An identifier specified in the expression path specifier is not found in the set of upstream components or connector points.

Action:
Fix the path specifier in the expression.

ODI-16161
No matching path can be found. {0} Expression: {1}

Category:
Programmatic

Cause:
A path specifier is included in the expression, but it does not match any actual path in the map.

Action:
Fix the path specifier in the expression.

ODI-16162
Final parsing of {0} command {0} failed with exception {1}.

Category:
Programmatic

Cause:
A final parsing of the command was performed and hit an error.

Action:
Report as an ODI bug.

ODI-16163
Cannot parse identifier "{0}" because there are multiple instances of "{1}" in the mapping.

Category:
Programmatic

Cause:
An identifier in the expression can not be parsed because it refers to multiple components.

Action:
Fix the identifier in the expression.

ODI-16164
Internal Error: Cannot find input query select item with matching path specifier for expression cross reference: {0}

Category:
Programmatic

Cause:
The code generator cannot generate code for the map expression cross reference because the upstream query does not include the referenced object, with a matching path specifier.

Action:
Fix the expression.

ODI-16165
An attribute input expression for a set component must reference upstream attributes through only one input connector point. Attribute: {0}.

Category:
Programmatic

Cause:
An attribute input expression for a set component must reference upstream attributes through only one input connector point.

Action:
Check input expressions for the set component.

ODI-16166
Cannot parse the syntax of user defined function or language element {0}: {1}.

Category:
Programmatic

Cause:
The syntax text of the user defined function or language element cannot be parsed by the code generator.

Action:
Check the syntax text of the user defined function or language element.

ODI-16167
The function call {0} does not match the number of parameters defined for user defined function or language element {1}.

Category:
Programmatic

Cause:
The function call in the expression text does not match the number of parameters of the user defined function or language element.

Action:
Check the function call in the expression.

ODI-16168
Invalid parameter syntax in the syntax text of user defined function or language element {0}: {1}.

Category:
Programmatic

Cause:
One of the parameters in the syntax text contains invalid parameter syntax.

Action:
Check the syntax text of the user defined function or language element.

ODI-16169
Invalid parameter syntax in the implementation text of user defined function or language element {0}: {1}.

Category:
Programmatic

Cause:
One of the parameters in the implementation text contains invalid parameter syntax.

Action:
Check the implementation text of the user defined function or language element.

ODI-16170
Cannot locate calling parameter {0} in implementation text from the syntax text of user defined function or language element {1}.

Category:
Programmatic

Cause:
The calling parameter in the implementation text does not match any parameters that are defined in the syntax of the user defined function or language element.

Action:
Check the implementation text of the user defined function or language element.

ODI-16171
KM {0} is not valid for physical node {1}. The default KM is {2}.

Category:
Programmatic

Cause:
The KM being set is not valid for the physical node.

Action:
Set the KM using the default KM or another compatible KM.

ODI-16172
An expression in map component {0} cannot be resolved because it references an input signature which could not be redirected to an upstream expression. Input connector connections may be incorrect.

Category:
Programmatic

Cause:
An expression references an input signature, but it could not be redirected to an expression upstream of the input signature. Invalid input connector point connections are the most common cause.

Action:
Check all input connector points for correct upstream connections.

ODI-16173
Map component {0}, attribute {1} contains an expression which references a window function. Window functions are not valid for technology {2}.

Category:
Programmatic

Cause:
An attribute expression references a window or analytical function, but the technology does not support window functions.

Action:
Check the technology editor for window function support, and change the setting if the technology supports window functions. If not, the window function may not be used in the expression.

ODI-16174
Map component {0}, property {1} contains an expression which references a window function. Window functions are not valid for technology {2}.

Category:
Programmatic

Cause:
A property expression references a window or analytical function, but the technology does not support window functions.

Action:
Check the technology editor for window function support, and change the setting if the technology supports window functions. If not, the window function may not be used in the expression.

ODI-16175
Aggregate component {0}, attribute {1} contains an expression which references a window function. Window functions used within an aggregate component may result in errors or unexpected results.

Category:
Programmatic

Cause:
An attribute expression in an aggregate component references a window or analytical function. Due to rowset cardinality differences between window functions and aggregate functions, window functions may be problematic in the context of an aggregation.

Action:
Use window functions within a separate expression component.

ODI-16176
The filter condition for component {0} references a window function. Window function calls are not valid in filter conditions.

Category:
Programmatic

Cause:
A filter condition references a window or analytical function. Window functions are not valid in filter conditions.

Action:
Use window functions within a separate expression component upstream of the filter component.

ODI-16177
The join condition for component {0} references a window function. Window function calls are not valid in join conditions.

Category:
Programmatic

Cause:
A join condition references a window or analytical function. Window functions are not valid in join conditions.

Action:
Use window functions within a separate expression component upstream of the join component.

ODI-16178
The lookup condition for component {0} references a window function. Window function calls are not valid in lookup conditions.

Category:
Programmatic

Cause:
A lookup condition references a window or analytical function. Window functions are not valid in lookup conditions.

Action:
Use window functions within a separate expression component upstream of the lookup component.

ODI-16179
The subquery filter condition for component {0} references a window function. Window function calls are not valid in subquery filter conditions.

Category:
Programmatic

Cause:
A subquery filter condition references a window or analytical function. Window functions are not valid in subquery filter conditions.

Action:
Use window functions within a separate expression component upstream of the subquery filter component.

ODI-16180
The split condition for component {0}, output connector point {1} references a window function. Window function calls are not valid in split conditions.

Category:
Programmatic

Cause:
A split condition references a window or analytical function. Window functions are not valid in split conditions.

Action:
Use window functions within a separate expression component upstream of the split component.

ODI-16181
The expression for attribute {0}, connector point {1}, references a window function. Window functions may not be referenced in the subquery part of a subquery filter.

Category:
Programmatic

Cause:
An expression for an attribute that participates in the subquery part of a subquery filter references a window or analytical function. Window functions are not valid in expressions which are part of the filter in a subquery filter.

Action:
Use window functions within a separate expression component upstream of the subquery filter component.

ODI-16182
The expression for {0} references a native sequence, which is not supported for technology {1}.

Category:
Programmatic

Cause:
An expression for an attribute or property references a native sequence, but the execution technology does not support native sequences.

Action:
Remove the native sequence reference from the expression.

ODI-16183
Lookup component {0} specifies first, last, or nth row matching, but no order-by modifiers have been set on the attributes.

Category:
Programmatic

Cause:
No order by modifiers have been set for the lookup attributes.

Action:
Set an ASC or DESC order by modifier on one of the lookup attributes.

ODI-16184
Unable to fetch data from datastore {0}. The model {1} does not have a reverse-engineering context set.

Category:
Programmatic

Cause:
Context associated with the logical schema does not exist.

Action:
Check the context associated with the logical schema.

ODI-16185
{0} does not support single row selection from multiple matching rows.

Category:
Programmatic

Cause:
The database technology does not support the analytical functions used to select a particular matching row.

Action:
Select a lookup type which does not select a specified single row.

ODI-16186
Input attribute {0} has no expression, and no default value is defined in the corresponding input signature attribute. The input must have either a connected expression or a default value expression.

Category:
Programmatic

Cause:
The input attribute expression is not set and has no default value defined in the input signature attribute.

Action:
Verify the expression or add a default value in the input signature attribute expression.

ODI-16187
Dimension component {0} is not based on any dimension.

Category:
Programmatic

Cause:
Dimension component is not based on any dimension.

Action:
Dimension component should have base dimension.

ODI-16188
Dimension {1}, or its related structures on which component {0} is based, contains errors.

Category:
Programmatic

Cause:
One or more errors were found in the dimension or related structures that this dimension component is based on. These errors must be resolved.

Action:
Review the dimension and its related structures for possible errors.

ODI-16189
Dimension {1}, or its related structures on which component {0} is based, contains warnings.

Category:
Programmatic

Cause:
One or more warnings were found in the dimension or related structures that this dimension component is based on.

Action:
Review the dimension and its related structures for possible warnings.

ODI-16190
In dimension component {0}, the parent natural key attribute {2} of level {1} does not have expression.

Category:
Programmatic

Cause:
Parent natural key attribute does not have expression.

Action:
Set the expressions for parent natural key attributes.

ODI-16191
In dimension component {0}, the natural key attribute {2} of level {1} does not have expression.

Category:
Programmatic

Cause:
Natural key attribute does not have expression.

Action:
Set the expressions for natural key attributes.

ODI-16192
In dimension component {0}, no updatable attributes for level {1} have an expression. An updatable attribute is a non key attribute.

Category:
Programmatic

Cause:
No updatable attribute has an expression.

Action:
Set the expressions for updatable attributes.

ODI-16193
The value {0} for SCD type 2 gap is not valid.

Category:
Programmatic

Cause:
The value for SCD type 2 gap is not valid.

Action:
Set valid value for SCD type 2 gap.

ODI-16194
The value {0} for SCD type 2 gap unit is not valid.

Category:
Programmatic

Cause:
The value for SCD type 2 gap unit is not valid.

Action:
Set valid value for SCD type 2 gap unit.

ODI-16195
Cube component {0} is not based on any cube.

Category:
Programmatic

Cause:
A cube component must be based on a cube to be viable.

Action:
Associate the cube component to a cube.

ODI-16196
Cube {0}, or its related structures on which component {1} is based, contains errors.

Category:
Programmatic

Cause:
One or more errors were found in the cube or related structures (such as measures, dimensions, bound tables, etc.) that this cube component is based on. These errors must be resolved.

Action:
Review the cube and its related structures, such as dimensions and bound datastores, for possible errors.

ODI-16197
Cube {0}, or its related structures on which component {1} is based, contains warnings.

Category:
Programmatic

Cause:
One or more warnings were found in the cube or related structures (such as measures, dimensions, bound tables, etc.) that this cube component is based on.

Action:
Review the cube and its related structures, such as dimensions and bound datastores, for possible warnings.

ODI-16198
The dimension key attribute {0} in cube component {1} does not have an expression.

Category:
Programmatic

Cause:
The dimension key attribute in the cube component must have an expression.

Action:
Set an expression on each dimension key attribute.

ODI-16199
The null or invalid orphan policy for the base cube {0} is set to "default dimension record", but the "enable source aggregation" property on cube component {1} is set to false.

Category:
Programmatic

Cause:
The default dimension record orphan policy is set for the cube object, but source aggregation is not enabled on cube component.

Action:
If the default dimension record orphan policy is set for the cube object then it is recommended that source aggregation also be enabled on cube component. Otherwise the orphan management processing may produce multiple fact rows with the same default dimension references, which will cause an "unstable rowset" execution error in the database, since the dimension references are used as update match attributes for updating the fact table.

ODI-16200
At least one measure attribute in cube component {0} should have an expression.

Category:
Programmatic

Cause:
At least one measure attribute in the cube component should have an expression.

Action:
Set the expressions on the measure attributes.

ODI-16201
Not a known integration type for component {0}.

Category:
Programmatic

Cause:
The integration type for the cube component is invalid.

Action:
Set a valid integration type for the cube component.

ODI-16202
Not a valid attribute of component {0} or the attribute is not a measure.

Category:
Programmatic

Cause:
The specified attribute is not owned by the cube component or the attribute is not a measure.

Action:
Choose a measure attribute of the cube component.

ODI-16203
Not a valid attribute of component {0} or the attribute is not represented as a dimension natural key identifier.

Category:
Programmatic

Cause:
The specified attribute is not owned by the cube component or the attribute is not a dimension natural key identifier.

Action:
Choose a attribute of the cube component which is represented as a dimension natural key identifier.

ODI-16204
Dimension {0}, or its related structures on which component {1} is based, contains errors.

Category:
Programmatic

Cause:
One or more errors were found in the dimension or related structures that this dimension component is based on. These errors must be resolved.

Action:
Review the dimension and its related structures.

ODI-16205
The source aggregation function is not set for measure attribute: {0}, but the source aggregation is enabled on cube component {1}. Measure attribute will be included into GROUP BY clause.

Category:
Programmatic

Cause:
The source aggregation on the cube component is enabled, but no source aggregation function is specified on the measure attribute.

Action:
Specify a source aggregation function on the measure attribute or disable the source aggregation on the cube component.

ODI-16207
Not a known integration type for component {0}.

Category:
Programmatic

Cause:
Referencing a sequence from a different project is invalid.

Action:
Reset the dimension to use a sequence owned by the same project or a global sequence.

ODI-16208
In dimension {0} level {1}, level attribute {2} is defined as surrogate key, but its type is not NUMERIC.

Category:
Programmatic

Cause:
The level attribute is defined as surrogate key,but its datatype is not NUMERIC.

Action:
If the level attribute is defined as surrogate key, its datatype should be NUMERIC.

ODI-16209
Dimension {0} has some levels that use surrogate key but some that do not.

Category:
Programmatic

Cause:
The dimension has some levels that use surrogate key but some that do not.

Action:
Surrogate key usage must be consistent within a dimension. Modify the dimension to ensure all levels have a surrogate key or no levels have a surrogate key.

ODI-16210
In dimension {0}, level {1} does not use surrogate key and the natural key has more attribute defined.This is not supported by the dimension loading pattern.

Category:
Programmatic

Cause:
The level does not use surrogate key and the natural key has more than one attribute defined. This is currently not supported by the dimension loading pattern.

Action:
If no surrogate key is defined, the natural key should have only one attribute defined. Update the level accordingly.

ODI-16211
Dimension {0} uses surrogate key but is not associated with a sequence.

Category:
Programmatic

Cause:
The dimension uses a surrogate key but is not associated with a sequence.

Action:
Associate the dimension with a sequence or do not use a surrogate key.

ODI-16212
In dimension component {0} no SCD2 trigger attributes in level {1} have assignment expressions.

Category:
Programmatic

Cause:
In dimension component {0} no SCD2 trigger attributes in level {1} have assignment expressions.

Action:
Ensure one or more SCD2 trigger attributes have assignment expressions.

ODI-16213
In dimension {0} levels, both SCD2 and SCD3 parameters coexist.

Category:
Programmatic

Cause:
Some dimension attributes are using both SCD2 and SCD3 parameters across all dimension levels, this is not permitted.

Action:
Ensure that either SCD2 or SCD3 parameters are used across all dimension levels attributes, you cannot mix and match SCD2 and SCD3 parameters.

ODI-16222
In dimension {0} level {1}, level attribute {2} set the surrogate key bound column the same with primary key.

Category:
Programmatic

Cause:
The dimension level's surrogate key is bound to the primary key column. For this dimension pattern, that is not allowed.

Action:
For this dimension pattern, a surrogate key cannot be bound to a primary key column.

ODI-17500
Invalid old password.

Category:
Programmatic

Cause:
Old password did not match current password.

Action:
Provide the correct password.

ODI-17501
Temporary table has no column.

Category:
Other

Cause:
No column have been defined for the temporary table.

Action:
Define a column mapping to the temporary table.

ODI-17502
No next value returned.

Category:
Other

Cause:
No sequence next value was found for given context code.

Action:
Verify sequence definition or context code.

ODI-17503
Internal error: object ConnectConnection

Category:
Other

Cause:
Missed connection.

Action:
Try reconnect.

ODI-17504
An ordered join references the same table twice (directly or indirectly).

Category:
Other

Cause:
A same table was referenced twice by a join.

Action:
Check interface definition.

ODI-17505
An ordered join references the same table twice through another join.

Category:
Other

Cause:
A join was referencing the same table twice through another join.

Action:
Check interface definition.

ODI-17506
Variable has no value

Category:
Other

Cause:
Variable had no value.

Action:
Provide value for variable.

ODI-17507
Key does not exist

Category:
Other

Cause:
Key was unknown.

Action:
Provide a known key.

ODI-17508
No conversion for data type "{0}" from source technology "{1}" to destination technology "{2}"

Category:
Other

Cause:
No data type conversion between technology was found.

Action:
Define corresponding data type conversion.

ODI-17509
Query to access value for specific sequence {0} has failed. Query="{1}"

Category:
Other

Cause:
Query for sequence has failed.

Action:
Check sequence definition.

ODI-17510
Driver does not exist.

Category:
Other

Cause:
Driver was not found.

Action:
Check repository.

ODI-17511
No value to be set to variable "{0}".

Category:
Other

Cause:
No value was returned to be set to the variable.

Action:
Check variable value.

ODI-17512
Sequence is already locked

Category:
Other

Cause:
The sequence was already locked.

Action:
Unlock the sequence.

ODI-17513
Variable "{0}" does not exist.

Category:
Other

Cause:
Variable was not found.

Action:
Check variable.

ODI-17514
Unrecognized Oracle Data Integrator built-in function: {0}

Category:
Other

Cause:
Oracle Data Integrator built-in function was not recognized.

Action:
Check function syntax.

ODI-17515
Invalid loading command (INSERT,UPDATE...).

Category:
Other

Cause:
Loading command was invalid.

Action:
Check loading command.

ODI-17516
Internal error within the connection list

Category:
Other

Cause:
Internal error within the connection list.

Action:
Try again.

ODI-17517
Error during task interpretation. Task: {0} {1} Text: {2}.

Category:
Other

Cause:
A task interpretation error has occured.

Action:
Check tasks and try again.

ODI-17518
Error while interpreting the user name.

Category:
Other

Cause:
User name interpretation has failed.

Action:
Check user name.

ODI-17519
Error while interpreting the URL

Category:
Other

Cause:
URL interpretation has failed

Action:
Check URL.

ODI-17520
Error while interpreting the password

Category:
Other

Cause:
Password interpretation has failed.

Action:
Check password.

ODI-17521
Error while interpreting the driver

Category:
Other

Cause:
Driver interpretation has failed.

Action:
Check driver.

ODI-17522
Empty column name are not allowed

Category:
Other

Cause:
A empty column name was found.

Action:
Fill column name.

ODI-17523
There is no connection for this logical schema / context pair: {0} / {1}.

Category:
Other

Cause:
No connection was found for this logical schema / context pair.

Action:
Check schema and context assignment.

ODI-17524
Cannot set an empty alias for a source table.

Category:
Other

Cause:
Source table"s alias was empty.

Action:
Fill alias of source table.

ODI-17525
Cannot set an empty source set name.

Category:
Other

Cause:
Source set name was empty.

Action:
Fill alias of a source table.

ODI-17526
Cannot set Longc value in a PopCol having a column

Category:
Other

Cause:
Cannot set Longc value in a PopCol having a column.

Action:
Check interface`s columns.

ODI-17527
Cannot set SourceDt value in a PopCol having a column

Category:
Other

Cause:
Cannot set SourceDt value in a PopCol having a column.

Action:
Check interface`s columns.

ODI-17528
Cannot set Scalec value in a PopCol having a column

Category:
Other

Cause:
Cannot set Scalec value in a PopCol having a column.

Action:
Check interface`s columns.

ODI-17529
Reference check failure

Category:
Other

Cause:
Reference check has failed.

Action:
Check control conditions.

ODI-17530
Incomplete join may result in partial cross join

Category:
Other

Cause:
An incomplete join was found.

Action:
Check joins.

ODI-17531
KM already encrypted.

Category:
Other

Cause:
KM has been already encrypted.

Action:
Skip encryption.

ODI-17532
KM not encrypted.

Category:
Other

Cause:
KM was not encrypted.

Action:
Check KM.

ODI-17533
Clause set to cross join on a technology that does not support cross joins.

Category:
Other

Cause:
Technology did not support cross joins.

Action:
Correct joins.

ODI-17534
Clause set to full join on a technology that does not support full joins.

Category:
Other

Cause:
Technology did not support full joins.

Action:
Correct joins.

ODI-17535
Clause set to outer join on a technology that does not support left outer joins or right outer joins.

Category:
Other

Cause:
Technology did not support left outer joins.

Action:
Correct joins.

ODI-17536
Incomplete clause (Missing order number).

Category:
Other

Cause:
Order number was missing.

Action:
Correct clause.

ODI-17537
Incomplete clause (table1 and/or table2 must be set).

Category:
Other

Cause:
Table1 and/or table2 were undefined.

Action:
Set clause''s table1 and/or table2 tables.

ODI-17538
Filter is not properly set (The table must be defined)

Category:
Other

Cause:
The table must have been set.

Action:
Set filter''s table.

ODI-17539
Clause is ordered on a technology that does not support it

Category:
Other

Cause:
Technology did not support ordering.

Action:
Remove ordering.

ODI-17540
Connection is not set for this source set {0}.

Category:
Other

Cause:
Source set''s connection was not set.

Action:
Set connection.

ODI-17541
Method SnpTrt::getAllTrtOfTypeForTechnosAndProject requires not null parameters for technologies

Category:
Other

Cause:
Method requires not null parameters

Action:
Specify correct parameters.

ODI-17542
Sequence must be locked before using this function

Category:
Other

Cause:
Sequence was not locked.

Action:
Lock sequence and try again.

ODI-17543
Technology does not support joins

Category:
Other

Cause:
Technology did not support joins.

Action:
Check technology and/or joins.

ODI-17544
This Technology does not support the WHERE clause

Category:
Other

Cause:
Technology did not support the WHERE clause

Action:
Check technology and/or clause.

ODI-17545
Technology not set for this source set {0}

Category:
Other

Cause:
Source set''s technology was undefined.

Action:
Set technology.

ODI-17546
Specified variable not found in the Repository

Category:
Other

Cause:
Variable was not found in the Repository.

Action:
Define variable and try again.

ODI-17547
Data type "{0}" for the technology "{1}" does not exist.

Category:
Other

Cause:
Data type for the technology did not exist.

Action:
Check data type and/or technology.

ODI-17548
The file reverse-engineering is only possible for delimited files.

Category:
Other

Cause:
The file reverse-engineering was performed against a not delimited file.

Action:
Use delimited files.

ODI-17549
Source data type "{0}" for the technology "{1}" does not exist.

Category:
Other

Cause:
Source data type was not found.

Action:
Check data type and/or technology.

ODI-17550
Missing default Physical Schema for Data Server "{0}"

Category:
Other

Cause:
Default Physical Schema was undefined.

Action:
Specify default Physical Schema.

ODI-17551
Duplicate clause order numbers

Category:
Other

Cause:
Duplicated order numbers were found.

Action:
Check clause definition.

ODI-17552
Duplicate join order numbers

Category:
Other

Cause:
Duplicated join order numbers were found.

Action:
Check join.

ODI-17553
Exceeded the maximum number of errors allowed.

Category:
Other

Cause:
The maximum number of errors allowed were exceeded.

Action:
Check maximum error numbers.

ODI-17554
Agent "{0}" does not exist.

Category:
Other

Cause:
Agent was not found.

Action:
Check agent definition.

ODI-17555
You cannot unlock this object. Only the lock owners and Supervisors can unlock objects.

Category:
Other

Cause:
An attempt was made to unlock objects that were locked by another user.

Action:
Login as Supervisor or as the lock owners and try again.

ODI-17556
Error during decryption of text.

Category:
Other

Cause:
Text decryption has failed.

Action:
Try again.

ODI-17557
No condition defined for this rule.

Category:
Other

Cause:
No condition have been defined for this rule.

Action:
Define conditions.

ODI-17558
The field for this rule is not specified.

Category:
Other

Cause:
The field was unspecified.

Action:
Specify field for this rule.

ODI-17559
The operator for this rule is not specified.

Category:
Other

Cause:
The operator was unspecified.

Action:
Specify operator for this rule.

ODI-17560
The value to test is not defined.

Category:
Other

Cause:
The value to test was not defined.

Action:
Specify value.

ODI-17561
This operator is not supported.

Category:
Other

Cause:
This operator was not supported.

Action:
Correct operator.

ODI-17562
This operator cannot be used with this field.

Category:
Other

Cause:
The operator could not be used with the given field.

Action:
Correct operator.

ODI-17563
There is no work repository matching the name "{0}".

Category:
Other

Cause:
Work repository was not found.

Action:
Check work repository with the given name exists.

ODI-17564
More than one work repository found with the name "{0}" for this master repository.

Category:
Other

Cause:
More than one work repository with the specified name was found for this master repository.

Action:
Contact Oracle Support Services.

ODI-17565
Scenario has been already encrypted. No encryption was performed.

Category:
Other

Cause:
Scenario has been already encrypted.

Action:
Decrypt and try again.

ODI-17566
Scenario is not encrypted. No decryption was performed.

Category:
Other

Cause:
Scenario was not encrypted.

Action:
Check Scenario.

ODI-17567
A Scenario generated from a Variable cannot be encrypted or decrypted.

Category:
Other

Cause:
An attempt was made to encrypte or decrypte a Scenario generated from a Variable.

Action:
Change Scenario'' source component.

ODI-17568
Could not connect to the database referenced by the context and the logical schema

Category:
Network

Cause:
Connection to the database failed.

Action:
Check context and logical schema.

ODI-17569
Unable to update sequence''s next value.

Category:
Other

Cause:
Updating sequence was not possible.

Action:
Check sequence definition.

ODI-17570
Your text is too long. Please shorten it or choose the ''LONG TEXT'' datatype.

Category:
Other

Cause:
Text was too long.

Action:
Shorten the text or choose the LONG TEXT data type.

ODI-17571
Password does not respect the following rule: "{0}".

Category:
Security

Cause:
The password did not respect the rule.

Action:
Choose another password.

ODI-17572
This SnpFfValuee does not exist.

Category:
Other

Cause:
Value was not found.

Action:
Check FlexField value.

ODI-17573
This SnpFfValuem does not exist.

Category:
Other

Cause:
Value was not found.

Action:
Check FlexField value.

ODI-17574
This SnpFfValuew does not exist.

Category:
Other

Cause:
Value was not found.

Action:
Check FlexField value.

ODI-17575
SnpLicense does not exist.

Category:
Other

Cause:
SnpLicense was not found.

Action:
Check License.

ODI-17576
Unknown actual constraint type for an interface constraint.

Category:
Other

Cause:
Interface constraint type was unknown.

Action:
Check constraint type.

ODI-17577
Unknown variable data type.

Category:
Other

Cause:
Variable data type was unknown.

Action:
Check variable data type.

ODI-17578
Name "{0}" is already used.

Category:
Other

Cause:
Name was already used.

Action:
Use another name or change mode of import.

ODI-17579
Type of clause is not set.

Category:
Other

Cause:
Type of clause was not set.

Action:
Set type of clause.

ODI-17580
Type of join is not set.

Category:
Other

Cause:
Type of join was not set.

Action:
Set type of join.

ODI-17581
A non ordered clause is passed to the construction of ordered joins trees method.

Category:
Other

Cause:
A non ordered clause was passed to the construction of ordered joins trees method.

Action:
Check clauses.

ODI-17582
Missing order number for an ordered clause.

Category:
Other

Cause:
Clause order was not set.

Action:
Set the clause order.

ODI-17583
More than one unique constraint associated to an interface constraint.

Category:
Other

Cause:
More than one unique constraint associated to an interface constraint was found.

Action:
Check constraints.

ODI-17584
URL does not exist.

Category:
Other

Cause:
URL was not found.

Action:
Check URL.

ODI-17585
Key cannot be checked.

Category:
Other

Cause:
Key could not be checked.

Action:
Check key definition.

ODI-17586
Field separator is mandatory for a delimited file.

Category:
Other

Cause:
Field separator was missing.

Action:
Check separator and/or file type.

ODI-17587
Object name "{0}" is too long for the technology "{1}" (Logical schema : "{2}" ; Context Code : "{3}")

Category:
Other

Cause:
Object name was too long.

Action:
Correct object name.

ODI-17588
Unable to load work repository info.

Category:
Other

Cause:
Work repository was not found.

Action:
Contact Oracle Support Services.

ODI-17589
Logical schema has not been specified for sequence "{0}"

Category:
Other

Cause:
Logical schema was not specified.

Action:
Specify logical schema.

ODI-17590
Code {0} for model "{1}" is already used by another model.

Category:
Other

Cause:
An already used code was assigned.

Action:
Change code for model.

ODI-17591
Name "{0}" is already used.

Category:
Other

Cause:
A name already used was assigned.

Action:
Change name.

ODI-17592
Object is not in execution work repository.

Category:
Other

Cause:
Object was not in execution work repository.

Action:
Check object and/or repository.

ODI-17593
Maximum number or source/target technologies exceeded. Current limit is {0}.

Category:
Other

Cause:
Maximum number or source/target technologies was exceeded.

Action:
Check limit and number of technologies.

ODI-17594
Cannot encrypte already encrypted action.

Category:
Other

Cause:
This action has been already encrypted.

Action:
Skip encryption.

ODI-17595
This action is not encrypted.

Category:
Other

Cause:
This action was not encrypted.

Action:
Check parameters and try again.

ODI-17596
Query to retrieve value for native sequence "{0}" has failed Query="{1}"

Category:
Other

Cause:
Query has failed.

Action:
Check query.

ODI-17597
Cannot mix ordered and non-ordered join syntax within a dataset for technology.

Category:
Other

Cause:
Mixed join not allowed within a dataset.

Action:
Change all joins in dataset to same join syntax (either ordered or non-ordered).

ODI-17598
Non-ordered natural join is not supported.

Category:
Other

Cause:
Non-ordered natural join is not supported.

Action:
Change natural join to use ordered syntax.

ODI-17599
Ordered inner join is not supported.

Category:
Other

Cause:
Ordered inner join is disabled for technology.

Action:
Change join type.

ODI-17600
Ordered left outer join is not supported.

Category:
Other

Cause:
Ordered left outer join is disabled for technology.

Action:
Change join type.

ODI-17601
Ordered right outer join is not supported.

Category:
Other

Cause:
Ordered right outer join is disabled for technology.

Action:
Change join type.

ODI-17602
Non-ordered full outer join is not supported.

Category:
Other

Cause:
Non-ordered full outer join is not supported.

Action:
Change full outer join to use ordered syntax.

ODI-17603
Sql error checking a condition. {0}

Category:
Other

Cause:
Sql error checking a condition.

Action:
Correct the Sql in the condition.

ODI-17604
Reference column isn't associated with this instance of reference.

Category:
Programmatic

Cause:
Reference column isn't associated with this instance of reference.

Action:
Check reference column.

ODI-17605
Column is not associated to this datastore.

Category:
Programmatic

Cause:
Datastore doesn't have this column.

Action:
Check datastore and column.

ODI-17606
{0} already belongs to another OdiDataStore.

Category:
Programmatic

Cause:
Object belongs to another datastore.

Action:
Check object and datastore.

ODI-17607
Parameter pReference is not an outbound reference for this OdiDataStore.

Category:
Programmatic

Cause:
Parameter is not an outbound reference for OdiDataStore.

Action:
Check parameter.

ODI-17608
Invalid technology for the given data type.

Category:
Other

Cause:
Invalid technology for the given data type.

Action:
Check technology.

ODI-17609
Invalid data type code.

Category:
Programmatic

Cause:
Invalid data type code.

Action:
Check data type code.

ODI-17610
Found NULL in STEP_TYPE.

Category:
Programmatic

Cause:
Step type is null.

Action:
Check step type.

ODI-17611
STEP_TYPE is not valid.

Category:
Programmatic

Cause:
Step type isn't valid.

Action:
Check step type.

ODI-17612
MultiConnectionSupported is not settable for {0}.

Category:
Programmatic

Cause:
MultiConnectionSupported is not settable.

Action:
Check knowledge module.

ODI-17613
Cannot handle {0} of type {1}.

Category:
Programmatic

Cause:
Cannot handle object.

Action:
Check object's type.

ODI-17614
Unknown key type: {0}.

Category:
Programmatic

Cause:
Unknown key type.

Action:
Check key.

ODI-17615
The command is not an ODI Tool command.

Category:
Other

Cause:
Wrong command.

Action:
Check command.

ODI-17616
No WorkTextOrig was found for ID: {0}.

Category:
Other

Cause:
Invalid ID.

Action:
Check ID.

ODI-17617
Class descriptor for WorkTextOrig [{0}] is null.

Category:
Programmatic

Cause:
Descriptor is null.

Action:
Check class descriptors.

ODI-17618
Unable to deal with an AliasedColumnCrossRef with type {0}.

Category:
Programmatic

Cause:
Incorrect column type.

Action:
Check column type.

ODI-17619
Unexpected CrossRef {0} type.

Category:
Programmatic

Cause:
Incorrect CrossRef type.

Action:
Check CrossRef.

ODI-17620
Object type is not valid.

Category:
Programmatic

Cause:
Object type is not valid.

Action:
Check object type.

ODI-17621
Unable to manage crossRef for object from class [{0}].

Category:
Programmatic

Cause:
Illegal object type.

Action:
Check object type.

ODI-17622
pSqlIndGroup is not a valid group type.

Category:
Programmatic

Cause:
Invalid group type.

Action:
Check type.

ODI-17623
Too many parameters for function {0}, Object {1}, Language {2}.

Category:
Other

Cause:
Too many parameters.

Action:
Check parameters count.

ODI-17624
Missing parameter for function {0}, Object {1}, Language {2}.

Category:
Other

Cause:
Missing parameter.

Action:
Check parameters count.

ODI-17625
Only OdiColumns are currently supported for SnpsExpressionTag.

Category:
Programmatic

Cause:
Wrong column type.

Action:
Check column type.

ODI-17626
Cannot reassign a DataType.

Category:
Programmatic

Cause:
Technology has been assigned yet.

Action:
Check DataType

ODI-17627
Inconsistent connection settings.

Category:
Programmatic

Cause:
Inconsistent connection settings.

Action:
Check connection settings type.

ODI-17628
Unknown IConnectionSettings implementation.

Category:
Programmatic

Cause:
Unknown IConnectionSettings implementation.

Action:
Check settings type.

ODI-17629
Connection Settings for repository server must be instanceof JdbcSettings.

Category:
Programmatic

Cause:
Wrong settings type.

Action:
Check settings type.

ODI-17630
Unknown OptionType.

Category:
Programmatic

Cause:
Unknown OptionType.

Action:
Check option type.

ODI-17631
The given class has no matching OverridenOptionOrig.

Category:
Programmatic

Cause:
The given class has no matching OverridenOptionOrig.

Action:
Check class.

ODI-17632
Unexpected variable type.

Category:
Programmatic

Cause:
Unexpected variable type.

Action:
Check variable type.

ODI-17633
{0} datatype is expected.

Category:
Programmatic

Cause:
Wrong value datatype.

Action:
Check value datatype.

ODI-17634
Parameter must have text; it must not be null or empty.

Category:
Programmatic

Cause:
Wrong parameter value.

Action:
Check parameter.

ODI-17635
Parameter must have text; it must not be null, empty, or blank.

Category:
Programmatic

Cause:
Wrong parameter value.

Action:
Check parameter.

ODI-17636
Parameter {0} must be false.

Category:
Programmatic

Cause:
Wrong parameter value.

Action:
Check parameter.

ODI-17637
Parameter must not be null.

Category:
Programmatic

Cause:
Wrong parameter value.

Action:
Check parameter.

ODI-17638
Parameter {0} must be null.

Category:
Programmatic

Cause:
Wrong parameter value.

Action:
Check parameter.

ODI-17639
Parameter must be null.

Category:
Programmatic

Cause:
Wrong parameter value.

Action:
Check parameter.

ODI-17640
Parameter {0} must have text; it must not be null or empty.

Category:
Programmatic

Cause:
Wrong parameter value.

Action:
Check parameter.

ODI-17641
No {0} matches this IObject: {1}.

Category:
Programmatic

Cause:
IObject is not matched.

Action:
Check class.

ODI-17642
No Entity Class matches this Snp Class: {0}.

Category:
Programmatic

Cause:
No Entity Class matches Snp Class.

Action:
Check Entity Class.

ODI-17643
No Snp Class matches this Entity Class: {0}.

Category:
Programmatic

Cause:
No Snp Class matches Entity Class.

Action:
Check Snp Class.

ODI-17644
Unknown FlexFieldType.

Category:
Programmatic

Cause:
Unknown FlexFieldType.

Action:
Check FlexFieldType type.

ODI-17645
Parameter must be instance of {0}.

Category:
Programmatic

Cause:
Wrong parameter type.

Action:
Check parameter.

ODI-17646
It is forbidden to use a variable of one project in a package of another project.

Category:
Other

Cause:
Variable and package have different parents.

Action:
Check variable and package.

ODI-17647
Unable to create the expression element, Object {0}, Language {1}.

Category:
Other

Cause:
Unable to create the expression element.

Action:
Check expression parameters.

ODI-17648
A mapping cannot be on the target.

Category:
Other

Cause:
A mapping cannot be on the target.

Action:
Check execution location.

ODI-17649
Can't create join between 2 source datastore from different DataSet.

Category:
Other

Cause:
Source datastores are from different DataSet.

Action:
Correct join.

ODI-17650
A {0} was expected as value since {1} is {2}.

Category:
Other

Cause:
Wrong type.

Action:
Check type.

ODI-17651
Parameter {0} must be instance of [{1}].

Category:
Programmatic

Cause:
Wrong parameter class.

Action:
Check parameter class.

ODI-17652
Class {0} is not assignable to {1}.

Category:
Programmatic

Cause:
Inconsistent classes.

Action:
Check classes.

ODI-17653
{0} line isn't found.

Category:
Other

Cause:
Missed line.

Action:
Check line count.

ODI-17654
Parameter {0} must not be null.

Category:
Programmatic

Cause:
Parameter must be not null.

Action:
Check parameter.

ODI-17655
Parameter {0} must be {1} characters long max.

Category:
Programmatic

Cause:
Parameter length is too long.

Action:
Check parameter length.

ODI-17656
Can't define variable override for steps in exception tree.

Category:
Other

Cause:
Step is in exception tree.

Action:
Check step and variable for consistency.

ODI-17657
Cannot add a reference column to an OdiReference with type [{0}].

Category:
Other

Cause:
Reference type isn't ReferenceType.COMPLEX_REFERENCE.

Action:
Check reference type.

ODI-17658
Cannot change the target table because it's not a temporary datastore.

Category:
Other

Cause:
Datastore isn't temporary.

Action:
Check target table and datastore.

ODI-17659
Cannot get the journalized columns of a non-journalized datastore.

Category:
Programmatic

Cause:
Datastore isn't journalized.

Action:
Check datastore.

ODI-17660
Cannot set a clause on the target.

Category:
Other

Cause:
Wrong execution location.

Action:
Check execution location.

ODI-17661
{0} is not supported for this Technology.

Category:
Other

Cause:
Object is not supported for this Technology.

Action:
Check topology.

ODI-17662
Parameter {0} must have text; it must not be null, empty, or blank.

Category:
Programmatic

Cause:
Incorrect parameter.

Action:
Check parameter.

ODI-17663
Parameter {0} must be uppercase.

Category:
Programmatic

Cause:
Parameter is lower case.

Action:
Check parameter case.

ODI-17664
Parameter {0} must not contain whitespaces.

Category:
Programmatic

Cause:
Parameter contains whitespaces.

Action:
Consider to replace whitespace with another symbold (e.g. underscore)

ODI-17665
Column is not associated with this instance of OdiKey.

Category:
Other

Cause:
Column is not associated with instance of OdiKey.

Action:
Check column and OdiKey.

ODI-17666
Column is not present in the key.

Category:
Other

Cause:
Column is not present in the key.

Action:
Check column and key.

ODI-17667
Data type should be set before accessing value.

Category:
Programmatic

Cause:
Illegal method usage.

Action:
Set Data type.

ODI-17668
Datastore already has a Primary Key.

Category:
Other

Cause:
Datastore already has a Primary Key.

Action:
Remove the current primary key before adding a new one.

ODI-17669
{0} must be set before calling method {1}.

Category:
Programmatic

Cause:
Illegal method usage.

Action:
Set actual value.

ODI-17670
Default implementation already exists.

Category:
Programmatic

Cause:
Default implementation already exists.

Action:
Check function implementation.

ODI-17671
{0} must not be negative.

Category:
Programmatic

Cause:
Wrong parameter value.

Action:
Set value to 0 or greater.

ODI-17672
FlexFields isn''t initialized.

Category:
Programmatic

Cause:
FlexFields isn''t initialized.

Action:
Call initFlexFields method first.

ODI-17673
Foreign key column''s datastore must be equals to this reference''s foreign datastore.

Category:
Other

Cause:
Inconsistent datastores.

Action:
Check datastore.

ODI-17674
IncrementValue is not set.

Category:
Programmatic

Cause:
IncrementValue is not set.

Action:
Set IncrementValue with setVariable method.

ODI-17675
Invalid step log's status.

Category:
Other

Cause:
Step status is not RUNNING.

Action:
Check step status.

ODI-17676
Invalid value type.

Category:
Programmatic

Cause:
Invalid value type.

Action:
Check value type.

ODI-17677
Cycle could be defined in {0} hierarchy.

Category:
Other

Cause:
It is forbidden to define cycle in {0} hierarchy.

Action:
Check hierarchy.

ODI-17678
It is forbidden to fill a key with columns from another datastore.

Category:
Other

Cause:
It is forbidden to fill a key with columns from another datastore.

Action:
Check datastore.

ODI-17679
It is forbidden to link two steps from different packages.

Category:
Other

Cause:
Steps are from different packages.

Action:
Check steps and packages.

ODI-17680
Line wasn't found.

Category:
Other

Cause:
Line wasn't found.

Action:
Check procedure lines.

ODI-17681
Maximum number of sessions must be positive.

Category:
Other

Cause:
Wrong value.

Action:
Check maximum number.

ODI-17682
Method is not valid unless MultiConnectionSupported.

Category:
Programmatic

Cause:
MultiConnectionSupported is true.

Action:
Check procedure.

ODI-17683
Model must be in Customized mode.

Category:
Other

Cause:
Wrong model mode.

Action:
Call setReverseType(ReverseType.CUSTOMIZED).

ODI-17684
Name can't be set.

Category:
Other

Cause:
Name is computed.

Action:
Check name.

ODI-17685
No {0} is defined for this model.

Category:
Other

Cause:
Missed definition.

Action:
Define CKM for model.

ODI-17686
No valid {0} name was found from this qualified name.

Category:
Other

Cause:
Valid name wasn't found.

Action:
Check qualified name.

ODI-17687
No valid qualified name was provided.

Category:
Other

Cause:
Name is invalid.

Action:
Check qualified name.

ODI-17688
OdiScenario is undefined.

Category:
Other

Cause:
OdiScenario is undefined.

Action:
Check OdiScenario definition.

ODI-17689
Option must be in the same procedure as line.

Category:
Other

Cause:
Option procedure is inconsistent.

Action:
Check option procedure.

ODI-17690
Package and procedure must be owned by the same project.

Category:
Other

Cause:
Procedure parent is inconsistent.

Action:
Check procedure parent.

ODI-17691
Primary key column's datastore must be equals to this reference's primary datastore.

Category:
Other

Cause:
Column datastore is inconsistent.

Action:
Check datastores.

ODI-17692
Reference column doesn't belong to this reference.

Category:
Programmatic

Cause:
Column is inconsistent.

Action:
Check column.

ODI-17693
Reference's foreign datastore is not equal to this datastore.

Category:
Programmatic

Cause:
Datastores are inconsistent.

Action:
Check datastores.

ODI-17694
Steps can't be moved from one package to another.

Category:
Other

Cause:
Steps can't be moved from one package to another.

Action:
Conside not to move steps.

ODI-17695
The new position is not valid.

Category:
Other

Cause:
The new position is not valid.

Action:
Check new position.

ODI-17696
The option already exists.

Category:
Other

Cause:
The option already exists.

Action:
Check option.

ODI-17697
The option owner has already been set.

Category:
Other

Cause:
The option owner has already been set.

Action:
Check option owner.

ODI-17698
The reference type must be [{0}] in order to define a complex SQL expression.

Category:
Programmatic

Cause:
Wrong reference type.

Action:
Check reference type.

ODI-17699
The reference type must be [{0}] in order to obtain the complex SQL expression.

Category:
Programmatic

Cause:
Wrong reference type.

Action:
Check reference type.

ODI-17700
The string value length should not exceed MAX_SHORT_TEXT_LENGTH since FlexFieldType is SHORT_TEXT.

Category:
Other

Cause:
FlexFieldType is SHORT_TEXT.

Action:
Check FlexFieldType and string value length.

ODI-17701
This OdiLoadPlanInstanceRun is not ESS Job related.

Category:
Other

Cause:
OdiLoadPlanInstanceRun is not ESS Job related.

Action:
Check OdiLoadPlanInstanceRun.

ODI-17702
This session is not ESS Job related.

Category:
Other

Cause:
Session is not ESS Job related.

Action:
Check session.

ODI-17703
This OdiReference must be from type [{0}] in order to access the primary DataStore alias.

Category:
Programmatic

Cause:
Wrong OdiReference type.

Action:
Check OdiReference type.

ODI-17704
This OdiReference must be from type [{0}] in order to set the primary DataStore alias.

Category:
Programmatic

Cause:
Wrong OdiReference type.

Action:
Check OdiReference type.

ODI-17705
This file descriptor is not consistent with the parent model's technology.

Category:
Other

Cause:
File descriptor is not consistent.

Action:
Check file descriptor and parent technology.

ODI-17706
This setVariable is used for increment.

Category:
Programmatic

Cause:
Increment value is set.

Action:
Use method getIncrementValue().

ODI-17707
Unable to add an alien main partition.

Category:
Other

Cause:
Main partition datastore is inconsistent.

Action:
Check main partition.

ODI-17708
Unable to compute name.

Category:
Programmatic

Cause:
Name has been set on this physical schema.

Action:
Do not compute name.

ODI-17709
Parameter must be false.

Category:
Programmatic

Cause:
Wrong parameter value.

Action:
Check parameter.

ODI-17710
Parameter {0} must be true.

Category:
Programmatic

Cause:
Wrong parameter value.

Action:
Check parameter.

ODI-17711
Undefined ODI work repository name.

Category:
Other

Cause:
Undefined repository name.

Action:
Check repository name.

ODI-17712
Variable and Step should be defined in the same Load Plan.

Category:
Other

Cause:
Variable and Step have different parent Load Plans.

Action:
Define variable and step in the same Load Plan.

ODI-17713
VariableDataType should be set before accessing DefaultValue.

Category:
Programmatic

Cause:
VariableDataType is undefined.

Action:
Set VariableDataType.

ODI-17714
You can only set KMs contained in the OdiProject containing of the OdiInterface.

Category:
Other

Cause:
KM has different parent project than OdiInterface.

Action:
Check KM.

ODI-17715
Can't add a null variable to load plan.

Category:
Programmatic

Cause:
Variable is null.

Action:
Check variable value.

ODI-17716
DataTypes must be consistent.

Category:
Other

Cause:
DataTypes is inconsistent.

Action:
Check DataTypes.

ODI-17717
Constraint is not a condition.

Category:
Programmatic

Cause:
Inconsistent constraint type.

Action:
Check parameter.

ODI-17718
Constraint is not a key.

Category:
Programmatic

Cause:
Inconsistent constraint type.

Action:
Check constraint.

ODI-17719
Option is not associated to this procedure.

Category:
Other

Cause:
Option is not associated to this procedure.

Action:
Check option and procedure.

ODI-17720
Constraint is not a reference.

Category:
Programmatic

Cause:
Inconsistent constraint type.

Action:
Check parameter.

ODI-17721
Parameter {0} already belongs to {1}.

Category:
Programmatic

Cause:
Parameter has parent.

Action:
Check parameter.

ODI-17722
Parameter {0} does not belong to this instance of {1}.

Category:
Programmatic

Cause:
Parameter has different parent.

Action:
Check parameter.

ODI-17723
Parameter {0} must belong to this {1}.

Category:
Programmatic

Cause:
Parameter parent is inconsistent.

Action:
Check parameter.

ODI-17724
Parameter {0} can't be moved to an other {1}.

Category:
Other

Cause:
Parameter can't be moved.

Action:
Do not move parameter.

ODI-17725
Parameter {0} must start with {1} prefix.

Category:
Other

Cause:
Parameter has wrong prefix.

Action:
Check parameter prefix.

ODI-17726
Logical Agent {0} must be mapped to a Physical Agent in the ContextCode {1}.

Category:
Other

Cause:
Agent is null.

Action:
Check agents.

ODI-17727
pDataServiceContainer is not a data service.

Category:
Programmatic

Cause:
pDataServiceContainer is not a data service.

Action:
Check pDataServiceContainer.

ODI-17728
Package and interface must be owned by the same project.

Category:
Other

Cause:
Package and interface have different parents.

Action:
Check package and interface.

ODI-17729
Parameter must be true.

Category:
Programmatic

Cause:
Wrong parameter value.

Action:
Check parameter.

ODI-17730
Not legal for shortcut.

Category:
Programmatic

Cause:
Object is shortcut.

Action:
Use getShortcutBaseObject() to access the real object.

ODI-17731
Not legal to construct a shortcut from a datastore in a model with a different technology.

Category:
Programmatic

Cause:
Inconsistent technologies.

Action:
Check model and datastore.

ODI-17732
Odi object Must be shortcut after materialize.

Category:
Programmatic

Cause:
Object isn't shortcut.

Action:
Check object.

ODI-17733
Reference's primary datastore must be not null in order to define a ReferenceColumn.

Category:
Programmatic

Cause:
Primary DataStore is null.

Action:
Check DataStore.

ODI-17734
pDataServiceContainer {0} has no technology defined.

Category:
Programmatic

Cause:
Data Service Container has no technology defined.

Action:
Define technology.

ODI-17735
Reference's foreign datastore is not equals to this datastore.

Category:
Programmatic

Cause:
Reference's foreign datastore is not equals to this datastore.

Action:
Check DataStores.

ODI-17736
You can only set global KMs or KMs contained in the OdiProject containing the OdiInterface.

Category:
Programmatic

Cause:
Wrong KM.

Action:
Check KM and project.

ODI-17737
StepLog and Variable don't belong to the same session.

Category:
Programmatic

Cause:
Inconsistent session.

Action:
Check Session value for StepLog and Variable.

ODI-17738
Unable to find '{0}' as variable used by the scenario '{1}' in version '{2}'.

Category:
Programmatic

Cause:
Variable is null.

Action:
Check variable name.

ODI-17739
Unable to override '{0}' variable for execution. It is marked as read-only for scenario '{1}' in version '{2}'.

Category:
Programmatic

Cause:
Variable is read-only.

Action:
Check variable.

ODI-17740
Error while connecting to the Application Server at URL {0}.

Category:
Network

Cause:
Exception was thrown during connection.

Action:
Ensure that the Application Server is running and accepting requests.

ODI-17741
Datastore isn't used as a lookup source.

Category:
Programmatic

Cause:
Datastore isn't used as a lookup source.

Action:
Check Datastore.

ODI-17742
Parameter {0} must be greater or equal than {1} and less or equal than {2}.

Category:
Programmatic

Cause:
Wrong parameter value

Action:
Check parameter.

ODI-17743
Variable should be related to the same {0}.

Category:
Programmatic

Cause:
Wrong parent for variable.

Action:
Check variable.

ODI-17744
The status can only be switched from ERROR to DONE or from DONE to ERROR.

Category:
Programmatic

Cause:
Wrong status

Action:
Check status.

ODI-17745
Parameter {0} must be greater or equal than {1}.

Category:
Programmatic

Cause:
Wrong parameter value.

Action:
Check parameter.

ODI-17746
Parameter {0} must be greater than {1}.

Category:
Programmatic

Cause:
Wrong parameter value.

Action:
Check parameter.

ODI-17747
Array {0} must not be empty.

Category:
Programmatic

Cause:
Array length is 0.

Action:
Check array.

ODI-17748
Parameter {0} is not relevant to this schedule.

Category:
Programmatic

Cause:
Wrong parameter.

Action:
Check parameter.

ODI-17749
Invalid value was specified. Cannot create {0} with the value {1}.

Category:
Programmatic

Cause:
Invalid value was specified.

Action:
Check value.

ODI-17750
Parent folder already has the release tag set.

Category:
Programmatic

Cause:
Setting the release tag when the parent already has the release tag set.

Action:
Set the release tag in parent.

ODI-17751
Shortcut and the base object are under same folder.

Category:
Programmatic

Cause:
Cannot create shortcut {0} with the base object under same folder {1}.

Action:
Create shortcut in different folder.

ODI-17752
Shortcut and the base object are in different projects.

Category:
Programmatic

Cause:
Cannot create shortcut {0} in project {1} which is different from the project of the base object.

Action:
Create shortcut in same project as the base object.

ODI-17753
Shortcut with same reference object in same folder.

Category:
Programmatic

Cause:
There is other shortcut object with same reference object as {0} in the same folder.

Action:
Create shortcut in different folder.

ODI-17754
Shortcut and the base object are under same model.

Category:
Programmatic

Cause:
Cannot create shortcut {0} with the base object under same model {1}.

Action:
Create shortcut in different model.

ODI-17755
Shortcut with same reference object in same model.

Category:
Programmatic

Cause:
There is other shortcut object with same reference object as {0} in the same model.

Action:
Create shortcut in different model.

ODI-17756
Scenario "{0}", which is referenced by RunScenario step "{1}", has variable "{2}" but LoadPlan does not have variable with the same name.

Category:
Programmatic

Cause:
Missed variable in Load Plan

Action:
Check Load Plan''s variables.

ODI-17757
Scenario "{0}", which is referenced by RunScenario step "{1}", has a newer version "{2}" in the repository

Category:
Programmatic

Cause:
Scenario has newer version.

Action:
Consider to use latest version.

ODI-17758
LoadPlan Variable "{0}" SQL is different than the design repository Variable "{1}" SQL.

Category:
Programmatic

Cause:
Variable's SQL was redefined.

Action:
Check LoadPlan's variable.

ODI-17759
LoadPlan Variable "{0}" LogicalSchema "{1}" is different than the design repository Variable "{2}" LogicalSchema "{3}".

Category:
Programmatic

Cause:
Variable's Logical Schema was redefined.

Action:
Check LoadPlan's variable.

ODI-17760
Exception "{0}" is not used in the Load Plan.

Category:
Programmatic

Cause:
Exception is not used.

Action:
Consider to delete or disable unused exception.

ODI-17761
LoadPlan Variable "{0}" is refreshed at step "{1}", but it has no SQL.

Category:
Programmatic

Cause:
LoadPlan Variable doesn't have refresh SQL.

Action:
Check variable"s SQL or disable variable refreshing.

ODI-17762
Context is specified on a step "{0}", but it"s no longer present in the topology.

Category:
Programmatic

Cause:
Context was removed.

Action:
Check step's context.

ODI-17763
Logical Agent is specified on a step "{0}", but it is no longer present in the topology

Category:
Programmatic

Cause:
Logical Agent was removed.

Action:
Check step's Logical Agent.

ODI-17764
Context "{0}" and Logical agent "{1}" on a step "{2}" does not map to any physical agent.

Category:
Programmatic

Cause:
Physical Agent doesn"t exist.

Action:
Check agents" mapping.

ODI-17765
Scenario variable "{0}" type and LoadPlan variable "{1}" type mismatch.

Category:
Programmatic

Cause:
Variables have different datatype.

Action:
Check variables.

ODI-17766
Scenario "{0}" wasn"t found.

Category:
Programmatic

Cause:
Scenario doesn"t exist

Action:
Check scenario and Load Plan step.

ODI-17767
LoadPlan has variable "{0}", but repository doesn't have variable with the same name.

Category:
Programmatic

Cause:
Variable was deleted.

Action:
Check variables.

ODI-17768
LoadPlan Variable "{0}" has SQL, which could not be validated.

Category:
Programmatic

Cause:
OdiVariableTextGeneratorException during validation.

Action:
Check variable and variable text generator.

ODI-17769
OdiRef: Internal ID {0} of IObjects {1} should not be used when the repository is 12c mode.

Category:
Programmatic

Cause:
Internal ID is used in 12c mode.

Action:
Use Global Id instead of internal id.

ODI-17770
Profile {0} is not assigned to role {1}.

Category:
Security

Cause:
Profile is not assigned to role.

Action:
Check role's profiles.

ODI-17771
Enterprise principal with unique ID/name {0} is not mapped to role {1}.

Category:
Security

Cause:
Enterprise principal is not mapped to role.

Action:
Check role's mapped enterprise principals.

ODI-17772
Parameter {0} should be {1} or {2}.

Category:
Programmatic

Cause:
Wrong parameter value.

Action:
Check parameter value.

ODI-17773
Enterprise User or Role {0} does not exist.

Category:
Security

Cause:
Enterprise principla with such name could be found at LDAP server.

Action:
Check principal name and LDAP server.

ODI-17774
Maximum number of concurrent threads must be positive.

Category:
Other

Cause:
Wrong value.

Action:
Check maximum number provided.

ODI-17775
Maximum number of threads per session can not be negative.

Category:
Other

Cause:
Wrong value.

Action:
Check maximum number provided.

ODI-17776
Maximum number of concurrent threads must not be less than maximum session count.

Category:
Other

Cause:
Wrong value.

Action:
Check maximum numbers provided.

ODI-17777
Maximum number of threads per session must be not greater than maximum number of threads.

Category:
Other

Cause:
Wrong value.

Action:
Check maximum numbers provided.

ODI-17778
Maximum number of cache entries in Session Blueprint queue cannot be negative.

Category:
Other

Cause:
Wrong value.

Action:
Check value.

ODI-17779
Maximum idle time for Session Blueprint in cache cannot be negative.

Category:
Other

Cause:
Wrong value.

Action:
Check value.

ODI-17780
Package and mapping must be owned by the same project.

Category:
Other

Cause:
Package and mapping have different parents.

Action:
Check package and mapping.

ODI-17781
Physical Mapping Design must be owned by the mapping.

Category:
Other

Cause:
Physical Mapping Design is not owned by mapping.

Action:
Check mapping and physical design.

ODI-17782
OdiRef: Internal ID is retrieved in method {0}.{1} for 12c repository.

Category:
Programmatic

Cause:
Internal ID is retrieved in 12c mode.

Action:
Retrieve Global Id instead of internal id.

ODI-17783
Mapping metadata version mismatch. Expected {0}, but was {1}.

Category:
Other

Cause:
Mapping metadata version mismatch.

Action:
Check the expected and actual Mapping metadata version.

ODI-17784
Reusable Mapping metadata version mismatch. Expected {0}, but was {1}.

Category:
Other

Cause:
Reusable Mapping metadata version mismatch.

Action:
Check the expected and actual Reusable Mapping metadata version.

ODI-17785
Option positions in knowledge module must be unique.

Category:
Programmatic

Cause:
Option position undefined or multiple option in knowledge module has same position.

Action:
Modify the position of options to be unique and not null.

ODI-17786
JKM is not Oracle Golden Gate JKM.

Category:
Programmatic

Cause:
Model doesn't have JKM set or JKM is not Oracle Golden Gate JKM.

Action:
Set Oracle Golden Gate JKM for the model.

ODI-17787
Extract and initial extract processes cannot be the same.

Category:
Programmatic

Cause:
Extract and inital extract processes are the same.

Action:
Choose another extract or initial expract process.

ODI-17788
Replicat and initial replicat processes cannot be the same.

Category:
Programmatic

Cause:
Replicat and initial replicat processes are the same.

Action:
Choose another replicat or initial replicat process.

ODI-17789
Positions must be set positive.

Category:
Programmatic

Cause:
Position is not a positive integer.

Action:
Set the position to be a positive integer.

ODI-17790
{0} should be {1}

Category:
Programmatic

Cause:
Type is not correct

Action:
Set the correct type.

ODI-17791
The option group already exists.

Category:
Other

Cause:
The option group already exists.

Action:
Check option group.

ODI-17792
Option group is not associated to the same procedure

Category:
Other

Cause:
Group is not associated to the same procedure

Action:
Check option group.

ODI-17794
Count is larger than permissible value of Integer. Use method : {0}

Category:
Programmatic

Cause:
Return value is larger than permissible value of Integer

Action:
Use method : {0}

ODI-17795
{0} parameter is not valid

Category:
Programmatic

Cause:
Parameter is not correct

Action:
Set the correct parameter.

ODI-17796
{0} is not a valid technology.

Category:
Programmatic

Cause:
Technology is not correct.

Action:
Set the correct technology.

ODI-17797
Logical Agent "{0}" type and Physical Agent "{1}" type mismatch.

Category:
Programmatic

Cause:
Logical Agent and Physical Agent are of different type.

Action:
Check the type of Logical and Physical Agents.

ODI-17798
{0} parameter format is not valid.

Category:
Programmatic

Cause:
Parameter format is not correct.

Action:
Set the parameter with correct format.

ODI-17799
Level attribute {0} bound column: {1} is owned by table {2}, but the level is bound to table {3}

Category:
Programmatic

Cause:
The bound column parent table does not match the bound table for the level or dimension

Action:
Reset the column binding to a column of the bound level table.

ODI-17800
Level attribute {0} bound error column: {1} is owned by table {2}, but the level is bound to error table {3}

Category:
Programmatic

Cause:
The bound error column parent table does not match the bound error table for the level or dimension

Action:
Reset the error column binding to a column of the bound level error table.

ODI-17801
Level attribute {0} bound staging column: {1} is owned by table {2}, but the level is bound to staging table {3}

Category:
Programmatic

Cause:
The bound staging column parent table does not match the bound staging table for the level or dimension

Action:
Reset the staging column binding to a column of the bound level staging table.

ODI-17803
The dimension has an invalid cyclical parent/child level relationship involving {0}.

Category:
Programmatic

Cause:
One of the parent/child relationships reverses the order of another parent/child relationship, this is not allowed.

Action:
Fix the parent/child relationships for the dimension.

ODI-17804
The dimension hierarchy member uses parent ref {0}, which points to a level that is not included in the hierarchy.

Category:
Programmatic

Cause:
A dimension hierarchy must use parent references that allow navigation of the levels that are included in the hierarchy.

Action:
Fix the hierarchy member to use a different parent ref, or add a level to the hierarchy.

ODI-17805
An invalid dimension key for this key reference.

Category:
Programmatic

Cause:
The key reference must point to a dimension key which is belonged to the referenced dimension.

Action:
Use the dimension key belonged to the referenced dimension.

ODI-17806
The dimension key is already used by another key reference.

Category:
Programmatic

Cause:
Each dimension key can only be used by one key reference.

Action:
Set another dimension key that has not been used by any key reference.

ODI-17807
A non-transparent LKM must have a processing type of BOTH.

Category:
Programmatic

Cause:
The setProcessingType method was called for a LKM, and specified and incorrect type. A non-transparent LKM must have processing type of BOTH.

Action:
Change the call to set the correct type.

ODI-17808
Sql join parameter combination is not correct for technology {0}.

Category:
Programmatic

Cause:
Sql Join parameters combination is not correct.

Action:
Set the correct sql join parameter combination.

ODI-17809
When data server contains multiple schemas with same table and column names, physical schema must specify a schema name.

Category:
Other

Cause:
Schema name is not specified while creating the physical schema.

Action:
Please specify the schema name in corresponding physical schema.

ODI-17810
Error during BeanShell evaluation: {0}, Pre-execution code: {1}

Category:
Other

Cause:
Error occurs during BeanShell evaluation of procedure or KM task code.

Action:
Please check the procedure or KM task code in the error message.

ODI-17811
Supplied value {1} for flex field {0} is not a valid format.

Category:
Other

Cause:
Flex field value is not a valid format

Action:
Please provide the correct format.

ODI-17900
Cube {0} does not reference any dimensions.

Category:
Programmatic

Cause:
A cube must reference at least one dimension to be viable.

Action:
Add dimension references to the cube.

ODI-17901
Cube {0} does not have any measures.

Category:
Programmatic

Cause:
A cube must have at least one measure to be viable.

Action:
Define measures for this cube.

ODI-17902
A dimension reference of cube {0} is not associated with a level.

Category:
Programmatic

Cause:
A cube reference to a dimension must be associated with a level to be viable.

Action:
Ensure each dimension reference of the cube is associated with a level.

ODI-17903
Dimension {1} referenced by cube {0} is invalid.

Category:
Programmatic

Cause:
The cube references an invalid dimension.

Action:
Validate the dimensions which are referenced by this cube.

ODI-17904
Cube {0} has multiple references to dimension {1} with no unique role qualifiers.

Category:
Programmatic

Cause:
Role qualifiers are missing or not unique when a cube has multiple references to a dimension.

Action:
Set role qualifiers on the dimension references of the cube and ensure role qualifiers are unique.

ODI-17905
Cube {0} is not bound to a datastore.

Category:
Programmatic

Cause:
A cube must be bound to a datastore to be viable.

Action:
Bind the cube to a datastore.

ODI-17906
Cube {0} with orphan management enabled is not bound to an error datastore.

Category:
Programmatic

Cause:
A cube must be bound to an error datastore to be viable when orphan management is enabled.

Action:
Bind the cube to an error datastore.

ODI-17907
In cube {0}, measure {1} is not bound to a column of the cube bound datastore.

Category:
Programmatic

Cause:
The measure must be bound to a column of the cube bound datastore.

Action:
Bind each measure to a column of the cube bound datastore.

ODI-17908
In cube {0}, measure {1} is not bound to an error column of the cube bound error datastore when orphan management is enabled.

Category:
Programmatic

Cause:
The measure must be bound to an error column of the cube bound error datastore when orphan management is enabled.

Action:
Bind each measure to an error column of the cube bound error datastore.

ODI-17909
Cube {0} is bound to datastore {1}, but measure {2} is bound to column {3} which is owned by datastore {4}.

Category:
Programmatic

Cause:
The measure is bound to a column which is owned by a different datastore to the one bound to the cube.

Action:
Bind each measure to a column which is owned by the cube bound datastore.

ODI-17910
Cube {0} is bound to error datastore {1}, but measure {2} is bound to error column {3} which is owned by datastore {4}.

Category:
Programmatic

Cause:
The measure is bound to an error column which is owned by a different error datastore to the one bound to the cube.

Action:
Bind each measure to an error column which is owned by the cube bound error datastore.

ODI-17911
Cube {0} reference to dimension {1} does not have a key reference.

Category:
Programmatic

Cause:
The cube is missing a key reference for one of the dimensions.

Action:
Ensure the cube references the key for each dimension.

ODI-17912
Cube {0} reference to dimension {1}, level {2} has a surrogate key, but the key reference does not point to this surrogate key.

Category:
Programmatic

Cause:
The cube has a key reference that does not point to the surrogate key of the dimension level.

Action:
Ensure the cube references the surrogate key if the dimension level has a surrogate key.

ODI-17913
In cube {0}, the key reference for dimension {1} is not bound to a column of the cube bound datastore.

Category:
Programmatic

Cause:
The key reference for a dimension must be bound to a column of the cube bound datastore.

Action:
Bind each key reference to a column of the cube bound datastore.

ODI-17914
In cube {0}, the key reference for dimension {1} is not bound to an error column of the cube bound error datastore when orphan management is enabled.

Category:
Programmatic

Cause:
The key reference for a dimension must be bound to an error column of the cube bound error datastore when orphan management is enabled.

Action:
Bind each key reference to an error column of the cube bound error datastore.

ODI-17915
Cube {0} is bound to datastore {1}, but key reference for dimension {2} is bound to column {3} which is owned by datastore {4}.

Category:
Programmatic

Cause:
The key reference for a dimension is bound to a column which is owned by a different datastore to the one bound to the cube.

Action:
Ensure each key reference is bound to a column of the cube bound datastore.

ODI-17916
Cube {0} is bound to an error datastore {1}, but key reference for dimension {2} is bound to an error column {3} which is owned by datastore {4}.

Category:
Programmatic

Cause:
The key reference for a dimension is bound to an error column which is owned by a different datastore to the one bound to the cube.

Action:
Ensure each key reference is bound to an error column of the cube error bound datastore.

ODI-17917
In cube {0}, multiple dimension key references or measures are bound to the same column {1} of the cube bound datastore.

Category:
Programmatic

Cause:
Multiple dimension key references or measures of the cube are bound to a same column of the cube bound datastore.

Action:
Ensure each dimension key reference and each measure is bound to a separate column of the cube bound datastore.

ODI-17918
In cube {0}, multiple dimension key references or measures are bound to the same error column {1} of the cube bound error datastore.

Category:
Programmatic

Cause:
Multiple dimension key references or measures of the cube are bound to a same error column of the cube bound error datastore.

Action:
Ensure each dimension key reference and each measure is bound to a separate error column of the cube bound error datastore.

ODI-17919
There is no primary key to foreign key constraint defined in ODI between the cube table {0} and the dimension table {1}.

Category:
Programmatic

Cause:
ODI looks for primary key and foreign key references between dimension tables and cube tables. For cube table there is no foreign key to the dimension table.

Action:
Define a foreign key on the cube table that references the primary key on the dimension table.

ODI-17920
Dimension {0} does not have any levels.

Category:
Programmatic

Cause:
The dimension does not have any levels.

Action:
Create one or more levels for this dimension.

ODI-17921
In Dimension {0}, level {1} does not have any level attributes.

Category:
Programmatic

Cause:
The level does not have level attributes.

Action:
Create one or more level attributes for this level.

ODI-17922
In datastore {0}, attribute {1} is bound by more than one level attribute or parent reference members: {2}.

Category:
Programmatic

Cause:
One datastore attribute is bound by multiple level attributes or parent reference members; it should only be bound once.

Action:
Rebind the other level attributes or parent reference members to other datastore attributes.

ODI-17923
In Dimension {0}, hierarchy {1} contains either only one level or no levels.

Category:
Programmatic

Cause:
The hierarchy contains only one level or no levels.

Action:
The hierarchy should contain two or more levels.

ODI-17924
Dimension {0} has more than one level but no hierarchy defined.

Category:
Programmatic

Cause:
The dimension has more than one level but no hierarchy defined.

Action:
The dimension can have a single level with no hierarchies or all levels must be contained in at least one hierarchy.

ODI-17925
In dimension {0}, level {1} does not have any natural key.

Category:
Programmatic

Cause:
The level does not have any natural key.

Action:
Create a natural key for this level.

ODI-17927
In dimension {0}, level {1} does not have any updatable attributes. An updatable attribute is defined as level attribute that is not surrogate key or natural key.

Category:
Programmatic

Cause:
The level does not have any updatable attributes.

Action:
Define one or more updatable attributes for this level.

ODI-17929
Dimension {0} flagged as a star implementation is not bound to a datastore.

Category:
Programmatic

Cause:
The dimension flagged as a star implementation must be bound to a datastore.

Action:
Bind the dimension to a datastore.

ODI-17930
Dimension {0} is flagged as a snowflake implementation, but level {1} is not bound to a datastore.

Category:
Programmatic

Cause:
The dimension is flagged as a snowflake implementation, but the level is not bound to a datastore.

Action:
Bind the level to a datastore.

ODI-17931
In dimension {0}, level {1} is not bound to a staging datastore.

Category:
Programmatic

Cause:
The dimension level is not bound to a staging datastore.

Action:
Bind the level to a staging datastore.

ODI-17932
Dimension {0} is flagged as a star implementation and the orphan management is enabled, but the dimension is not bound to an error datastore.

Category:
Programmatic

Cause:
The dimension is flagged as a star implementation and the orphan management is enabled, but the dimension is not bound to an error datastore.

Action:
Bind the dimension to an error datastore.

ODI-17933
Dimension {0} is flagged as a snowflake implementation and the orphan management is enabled, but level {1} is not bound to an error datastore.

Category:
Programmatic

Cause:
The dimension is flagged as a snowflake implementation and the orphan management is enabled, but the level is not bound to an error datastore.

Action:
Bind the level to an error datastore.

ODI-17934
In dimension {0} level {1}, level attribute {2} is not bound to a column of the bound datastore.

Category:
Programmatic

Cause:
The level attribute is not bound to a column of the bound datastore.

Action:
Bind the level attribute to a column of the bound datastore.

ODI-17935
In dimension {0} level {1}, level attribute {2} is not bound to a staging column of the bound staging datastore.

Category:
Programmatic

Cause:
The level attribute is not bound to a staging column of the bound stating datastore.

Action:
Bind the level attribute to a staging column of the bound staging datastore.

ODI-17936
In dimension {0} level {1}, level attribute {2} is not bound to an error column of the bound error datastore.

Category:
Programmatic

Cause:
The level attribute is not bound to an error column of the bound error datastore.

Action:
Bind the level attribute to an error column of the bound error datastore.

ODI-17937
In dimension {0}, level {1} is bound to datastore {2}, but level attribute {3} is bound to column {4} which is owned by datastore {5}.

Category:
Programmatic

Cause:
The level is bound to a datastore, but a level attribute is bound to a column which is owned by another datastore.

Action:
Bind the level attribute to a column which is owned by the datastore that is bound to the level.

ODI-17938
In dimension {0}, level {1} is bound to staging datastore {2}, but level attribute {3} is bound to staging column {4} which is owned by datastore {5}.

Category:
Programmatic

Cause:
The level is bound to a staging datastore, but a level attribute is bound to a staging column which is owned by another datastore.

Action:
Bind the level attribute to a staging column which is owned by the staging datastore that is bound to the level.

ODI-17939
In dimension {0}, level {1} is bound to error datastore {2}, but level attribute {3} is bound to error column {4} which is owned by datastore {5}.

Category:
Programmatic

Cause:
The level is bound to an error datastore, but a level attribute is bound to an error column which is owned by another datastore.

Action:
Bind the level attribute to an error column which is owned by the error datastore that is bound to the level.

ODI-17941
Dimension {0} uses surrogate key but bound datastore {1} does not have primary key constraint.

Category:
Programmatic

Cause:
The dimension uses a surrogate key, but the datastore that is bound to the dimension does not have a primary key constraint.

Action:
Define a primary key constraint for the datastore that is bound to the dimension.

ODI-17942
Dimension {0} uses surrogate key but bound datastore {1} of level {2} does not have primary key constraint.

Category:
Programmatic

Cause:
The dimension uses a surrogate key, but the datastore that is bound to the level does not have a primary key constraint.

Action:
Define a primary key constraint for the datastore that is bound to the level.

ODI-17943
In dimension {0} level {1}, parent reference member {2} is not bound to a column.

Category:
Programmatic

Cause:
In the dimension, the parent ref member is not bound to a column.

Action:
Bind the parent reference member to a column.

ODI-17944
In dimension {0} level {1}, parent reference member {2} is not bound to a staging column.

Category:
Programmatic

Cause:
In dimension, the parent ref member is not bound to a staging column.

Action:
Bind the parent reference member to a staging column.

ODI-17945
In dimension {0} level {1}, parent reference member {2} is not bound to an error column.

Category:
Programmatic

Cause:
In dimension, the parent ref member is not bound to an error column.

Action:
Bind the parent reference member to an error column.

ODI-17946
In dimension {0} level {1} is bound to datastore {2}, but parent reference member {3} is bound to staging column {4} which is owned by datastore {5}.

Category:
Programmatic

Cause:
The level is bound to a datastore, but a parent reference member is bound to a column which is owned by another datastore.

Action:
Bind the parent reference member to a column which is owned by the datastore that is bound to the level.

ODI-17947
In dimension {0} level {1} is bound to staging datastore {2}, but parent reference member {3} is bound to column {4} which is owned by datastore {5}.

Category:
Programmatic

Cause:
The level is bound to a staging datastore, but a parent reference member is bound to a staging column which is owned by another datastore.

Action:
Bind the parent reference member to a staging column which is owned by the staging datastore that is bound to the level.

ODI-17948
In dimension {0} level {1} is bound to error datastore {2}, but parent reference member {3} is bound to error column {4} which is owned by datastore {5}.

Category:
Programmatic

Cause:
The level is bound to an error datastore, but a parent reference member is bound to an error column which is owned by another datastore.

Action:
Bind the parent reference member to an error column which is owned by the error datastore that is bound to the level.

ODI-17949
Dimension {0} is flagged as a snowflake implementation, in level {1}, the bound column of parent reference member {2} does not have foreign key constraint.

Category:
Programmatic

Cause:
The dimension is flagged as a snowflake implementation, in the level, the bound column of a parent reference member {2} does not have a foreign key constraint.

Action:
Define foreign key constraints for the columns that are bound to the parent reference members.

ODI-17950
In dimension {0} parent reference member {1}, the datatype of {3} of referenced level attribute {2} does not match with the datatype {5} of bound column {4}.

Category:
Programmatic

Cause:
For the parent reference member, the datatype of the referenced level attribute does not match with that of the bound column.

Action:
The datatype of the referenced level attribute should match with that of the bound datastore column.

ODI-17953
In dimension {0} parent reference member {1}, the datatype {3} of referenced level attribute {2} does not match with the datatype {5} of bound staging column {4}.

Category:
Programmatic

Cause:
For the parent reference member, the datatype of the referenced level attribute does not match with that of the bound staging column.

Action:
The datatype of the referenced level attribute should match with that of the bound staging datastore column.

ODI-17956
In dimension {0} parent reference member {1}, the datatype {3} of referenced level attribute {2} does not match with the datatype {5} of bound error column {4}.

Category:
Programmatic

Cause:
For the parent reference member, the datatype of the referenced level attribute does not match with that of the bound error column.

Action:
The datatype of the referenced level attribute should match with that of the bound error datastore column.

ODI-17959
Dimension {0} has an invalid cyclical parent/child level relationship involving parent reference {1}.

Category:
Programmatic

Cause:
One of the parent/child relationships reverses the order of another parent/child relationship, this is not allowed.

Action:
Fix the parent/child relationships for the dimension.

ODI-17960
In dimension {0} hierarchy {1}, the hierarchy member for level {2} uses parent reference {3}, which points to level {4} that is not included in this hierarchy.

Category:
Programmatic

Cause:
The hierarchy member uses the parent reference which points to the level that is not included in hierarchy.

Action:
Fix the hierarchy member to use a different parent reference or add a level to the hierarchy.

ODI-17961
In dimension {0} level {1}, the datatype {3} of level attribute {2} is does not match with the datatype {5} of bound column {4}.

Category:
Programmatic

Cause:
The datatype of the level attribute does not match with that of the bound column.

Action:
The datatype of the level attribute should match with that of the bound datastore column.

ODI-17964
In dimension {0} level {1}, the datatype {3} of level attribute {2} does not match with the datatype {5} of bound staging column {4}.

Category:
Programmatic

Cause:
The datatype of the level attribute does not match with that of the bound staging column.

Action:
The datatype of the level attribute should match with that of the bound staging datastore column.

ODI-17967
In dimension {0} level {1}, the datatype {3} of level attribute {2} does not match with the datatype {5} of bound error column {4}.

Category:
Programmatic

Cause:
The datatype of the level attribute does not match with that of the bound error column.

Action:
The datatype of the level attribute should match with that of the bound error datastore column.

ODI-17970
Dimension {0} is flagged as a star implementation, but parent reference {1} member {2} is not bound to the same column {3} as the matching parent level key attribute {4}.

Category:
Programmatic

Cause:
The dimension is star implementation, but one or more parent reference members is not bound to the same column as the matching parent level key attribute.

Action:
Bind the parent reference member to the column which is also bound to the matching parent level key attribute.

ODI-17971
In dimension {0} level {1}, attribute {2} is defined as a surrogate or natural key but is also flagged as having an SCD2 role (e.g. start date or trigger, etc.). This is not allowed.

Category:
Programmatic

Cause:
In SCD type 2, a key attribute cannot be flagged as a date or trigger attribute.

Action:
Do not define a key attribute as an SCD2 flag(e.g. date or trigger).

ODI-17972
In dimension {0}, if any of SCD2 trigger history, SCD2 effective time or SCD2 expiration time is set for a level {1}, then all of them must be set.

Category:
Programmatic

Cause:
In the dimension, if any of SCD2 trigger history, SCD2 effective time or SCD2 expiration time is set for a level, then all of them must be set.

Action:
Set SCD2 trigger history, SCD2 effective time and SCD2 expiration time for the level.

ODI-17973
In dimension {0}, SCD2 is enabled, but surrogate key is not used.

Category:
Programmatic

Cause:
In the dimension, SCD2 is enabled, but surrogate key is not used.

Action:
The dimension should use surrogate key if SCD2 is enabled.

ODI-17974
In dimension {0}, SCD2 is enabled for non-leaf level {1}, but hierarchy versioning is not enabled between level {1} and {2}. The versioning of non-leaf level {1} will not result in the versioning of its corresponding child records in level {2}.

Category:
Programmatic

Cause:
In the dimension, SCD2 is enabled for non-leaf level, but hierarchy versioning is not enabled.

Action:
Enable hierarchy versioning, otherwise the versioning of non-leaf level will not result in the versioning of its corresponding child records.

ODI-17975
In dimension {0} level {1}, a key attribute {2} is flagged as role playing(date or trigger, etc.). This is not allowed.

Category:
Programmatic

Cause:
In SCD type 3, a key attribute cannot be flagged as a date or trigger attribute.

Action:
Do not define a key attribute as an SCD3 flag(e.g. date or trigger).

ODI-17976
In dimension {0} level {1}, the datatype {3} of level attribute {2} does not match with the datatype {5} of SCD3 previous attribute {4}.

Category:
Programmatic

Cause:
In the dimension, the datatype of the level attribute does not match with that of the SCD3 previous attribute.

Action:
The datatype of the level attribute should match with that of the SCD3 previous attribute.

ODI-17979
Parameter {0} already exists

Category:
Programmatic

Cause:
Parameter {0} already exists

Action:
Use setValue() method to update the existing Parameter

ODI-17980
An operation with the name "{0}" already exists in "{1}".

Category:
Programmatic

Cause:
REST operation with same name.

Action:
Check REST operation name.

ODI-17981
REST operation with the name "{0}" does not exists in "{1}".

Category:
Programmatic

Cause:
REST operation does not exist.

Action:
Check REST operation name.

ODI-17982
Base KM type is incorrect.

Category:
Programmatic

Cause:
Base KM type is incorrect.

Action:
Set the Base KM with the correct type.

ODI-17983
It is not allowed for line defined in {0} referencing {1} line.

Category:
Programmatic

Cause:
Either line type is not same or the lines are self referencing.

Action:
Set the correct line.

ODI-17984
Line type is null.

Category:
Programmatic

Cause:
KM line type is null.

Action:
Set the correct line type.

ODI-17985
In dimension {0} level {1}, the attribute {2} is defined as part of the natural key, it cannot also be of type SCD3 at the same time.

Category:
Programmatic

Cause:
In the dimension, a level attribute is set as both natural key and SCD3 at the same time.

Action:
Either remove the SCD3 setting or remove this attribute from the natural key.

ODI-17986
In dimension {0} level {1}, level attribute {2} can not be flagged as an SCD3 previous value for more than one attribute nor as both a previous value and an effective date.

Category:
Programmatic

Cause:
In the dimension, a level attribute is set as an SCD3 previous value for more than one attribute or as both a previous value and as an effective date.

Action:
Correct the multiple SCD3 role uses of this attribute.

ODI-17987
In dimension {0} level {1}, level attribute {2} can not have both a SCD2 setting (date or trigger, etc.) and be used in an SCD3 role (previous value or effective date).

Category:
Programmatic

Cause:
In the dimension, a level attribute has both an SCD2 setting and is used in an SCD3 role.

Action:
Either remove this attribute's SCD2 setting or its uses as an SCD3 role.

ODI-17988
In dimension {0} level {1}, level attribute {2} can not have an SCD2 setting (date or trigger, etc.) and have SCD3 type attributes (previous value or effective date) set for it.

Category:
Programmatic

Cause:
In the dimension, a level attribute has an SCD2 setting and has SCD3 type attributes set for it.

Action:
Either remove this attributes SCD3 type attributes or remove its SCD2 setting.

ODI-17989
In dimension {0} level {1}, level attribute {2} can not be used as an SCD3 role attribute (previous value or effective date) and have SCD3 type attributes at the same time.

Category:
Programmatic

Cause:
In the dimension, a level attribute is used as an SCD3 role attribute and has SCD3 type attributes at the same time.

Action:
Either remove this attribute's SCD3 role usages or the SCD3 type attributes.

ODI-17990
In dimension {0}, level {1}, for level attribute {2} if the SCD3 effective date is set, the previous value must also be set.

Category:
Programmatic

Cause:
In the dimension, a level attribute has the SCD3 effective date set but has no previous value set.

Action:
Either remove this attribute's SCD3 effective date or add the SCD3 previous value.

ODI-17991
In dimension {0} level {1}, level attribute {2} is set as both the surrogate key and the natural key.

Category:
Programmatic

Cause:
In the dimension, can not set one attribute to surrogate key and natrual key both.

Action:
Reset either the surrogate key or the natural key.

ODI-17992
Model {0} is not a Generic Model

Category:
Programmatic

Cause:
Cannot map a Non-Generic Model to a Non-Generic Model

Action:
Provide a Generic Model to map

ODI-17993
Model {0} is not a Non-Generic Model

Category:
Programmatic

Cause:
Cannot map a Generic Model to a Generic Model

Action:
Provide a Non-Generic Model to map

ODI-17994
Invalid Sort by Position value: {0}

Category:
Programmatic

Cause:
Invalid value was provided for Hive Sort By Position

Action:
Provide a value >=1 or null

ODI-17995
This operation is not supported on {0} Technology

Category:
Programmatic

Cause:
This operation is not supported on the Technology of the Data Store

Action:
Please refer to documentation for supported Technologies

ODI-17996
Qualified Knowledge Module name {0} is invalid.

Category:
Programmatic

Cause:
KM qualified name is invalid

Action:
Provide a valid qualified KM Name

ODI-17997
Knowledge Module not found {0}

Category:
Programmatic

Cause:
KM with the given name not found

Action:
Provide a valid KM name

ODI-17998
Knowledge Module Line not found {0}

Category:
Programmatic

Cause:
KM Line with the given name not found

Action:
Provide a valid KM Line name

ODI-17999
Invalid language name or {0} Technology not set for KM.

Category:
Programmatic

Cause:
Language name is invalid or Technology not set for the KM.

Action:
Set valid language name and set KM source or target technology.

ODI-18000
In dimension {0} level {1}, the attribute {2} is defined as the surrogate key, it cannot also be of type SCD3.

Category:
Programmatic

Cause:
In the dimension, a level attribute is set as both surrogate key and SCD3 at the same time.

Action:
Remove the SCD3 setting from the surrogate key

ODI-18001
Cannot add new operation to BICS Physical Schema.

Category:
Programmatic

Cause:
User is trying to add new operation to BICS Physical Schema.

Action:
Adding new operation is not supported, please Contact Oracle support

ODI-18002
Cannot remove operation from BICS Physical Schema.

Category:
Programmatic

Cause:
User is trying to remove existing operation from BICS Physical Schema.

Action:
Removing operation is not supported, please Contact Oracle support

ODI-18003
Cannot delete mandatory property [{0}] from Data Server

Category:
Programmatic

Cause:
User is trying to delete a mandatory property from the Data Server

Action:
Mandatory properties cannot be deleted

ODI-18004
Invalid value specified for Data Server Property [{0}]. Permitted Values are: {1}

Category:
Programmatic

Cause:
User is trying to specify an invalid value for the Data Server property

Action:
Specify valid property value

ODI-18005
Language is not supported by the technology of this KM template or technology is not set for this KM template.

Category:
Programmatic

Cause:
Language is invalid for the technology set or technology not set for this KM template.

Action:
Set a language which is supported by the technology of this KM template.

ODI-18006
There are no unused levels remaining.

Category:
Programmatic

Cause:
No remaining levels to add to the hierarchy.

Action:
All levels are already part of this hierarchy.

ODI-18007
This level has no remaining parent references.

Category:
Programmatic

Cause:
All parent references for this level are already in use.

Action:
An unused parent reference is required in order to define a skip level.

ODI-18008
All attributes available for use in the natural key have already been set as members.

Category:
Programmatic

Cause:
There are no attributes remaining to participate in the natural key.

Action:
An unused attribute is required in order to add a natural key member.

ODI-18009
The line cannot be moved because the "before" or "after" line does not belong to this KM. A resolved base line is passed to the method.

Category:
Other

Cause:
Wrong KM line.

Action:
Check which KM owns the line.

ODI-18010
The "before" or "after" line has been deleted or is null. An invalid 'before' or 'after' line was passed to the move method.

Category:
Other

Cause:
Invalid line.

Action:
Check whether the line is not deleted or null

ODI-18011
Template Name "{0}" is already used with same combination of Technology and Language

Category:
Other

Cause:
A name already used with combination of same technology and Language

Action:
Change name.

ODI-18012
Failed to persist property {0} while persisting data server for Object Storage.

Category:
Other

Cause:
Contact Oracle support.

Action:
Contact Oracle support.

ODI-18013
Failed to retrieve credential information from Wallet for given connection information while creating Data Server

Category:
Security

Cause:
Contact Oracle support.

Action:
Contact Oracle support.

ODI-18014
Wallet file {0} is not found at specified location.

Category:
Security

Cause:
Wallet file is not present.

Action:
Please check Wallet file is present at specified location.

ODI-18015
Incorrect Wallet password.

Category:
Security

Cause:
Provided Wallet password is incorrect.

Action:
Please enter correct Wallet password.

ODI-18016
Wallet file {0} is not accessible .

Category:
Security

Cause:
Wallet file is not accesible.

Action:
Please check Wallet file permission.

ODI-18017
Invalid Credential file type : {0}. Please upload valid Credential file.

Category:
Security

Cause:
Credential file is not valid.

Action:
Please upload valid Credential file.

ODI-18018
Wallet file {0} does not contain credentials for given connection information.

Category:
Security

Cause:
Wallet file doesnot have required information.

Action:
Please add credential information to Wallet file for given connection information.

ODI-18019
Credential file {0} does not contain connection information.

Category:
Security

Cause:
tnsnames.ora file doesnot have required information.

Action:
Please add required connection information.

ODI-18020
Credential file {0} is not accessible.

Category:
Security

Cause:
Credential file doesnot have required permission.

Action:
Please add required permission.

ODI-18021
Failed to perform {0} on Storage CS.

Category:
Other

Cause:
Contact Oracle Support Services.

Action:
Contact Oracle Support Services.

ODI-18022
Regeneration failed. User does not have Regenerate privilege.

Category:
Other

Cause:
User does not have regenerate privilege

Action:
Please grant regenerate privilege.

ODI-20001
ODI-20001: Cannot check the key because the Datastore does not exist in the database.

Category:
Other

Cause:
The Datastore referenced by this key did not exist in the database.

Action:
Ensure the Datastore refers to an existing database table.

ODI-20002
ODI-20002: The selected file is not a valid key file.

Category:
Other

Cause:
An invalid encryption key file was selected.

Action:
Select a valid encryption key file.

ODI-20003
ODI-20003: Cannot edit the condition

Category:
Other

Cause:
General Exception invoking editor.

Action:
This is an internal error with no recommended user action.

ODI-20004
ODI-20004: Cannot edit the reference

Category:
Other

Cause:
General Exception invoking editor.

Action:
This is an internal error with no recommended user action.

ODI-20005
ODI-20005: Cannot edit the variable

Category:
Other

Cause:
General Exception invoking editor.

Action:
This is an internal error with no recommended user action.

ODI-20006
ODI-20006: Cannot display table's data. Data is probably already displayed.

Category:
Other

Cause:
General Exception invoking editor.

Action:
This is an internal error with no recommended user action.

ODI-20007
ODI-20007: Cannot display table's data.

Category:
Other

Cause:
General Exception invoking editor.

Action:
This is an internal error with no recommended user action.

ODI-20008
ODI-20008: You cannot Display this Attribute Data. Data is probably already displayed

Category:
Other

Cause:
General Exception invoking editor.

Action:
This is an internal error with no recommended user action.

ODI-20009
ODI-20009: Cannot display data. The datastore resource name is {0} characters long which is longer than allowed by the technology ({1}). Please review the technology settings in Topology.

Category:
Other

Cause:
The datastore resource name exceeded the limit allowed by its technology.

Action:
Ensure the maximum table name length setting in the corresponding technology is correct. Consider changing the datastore resource name to comply.

ODI-20010
ODI-20010: Cannot display this Attribute Data

Category:
Other

Cause:
General Exception invoking editor.

Action:
This is an internal error with no recommended user action.

ODI-20011
ODI-20011: Cannot perform this action: a Column of this Datastore is currently being edited

Category:
Other

Cause:
Another user may be editing this datastore.

Action:
Wait for the other editing session to be committed.

ODI-20012
ODI-20012: Cannot perform this action: the Datastore containing this Column is currently being modified

Category:
Other

Cause:
Another user may be editing this datastore.

Action:
Wait for the other editing session to be committed.

ODI-20013
ODI-20013: Unable to perform the action because the package is currently being modified

Category:
Other

Cause:
Another user may be editing this package.

Action:
Wait for the other editing session to be committed.

ODI-20014
ODI-20014: Cannot encrypt the Procedure: it is currently being modified

Category:
Other

Cause:
Another user may be editing this procedure.

Action:
Wait for the other editing session to be committed.

ODI-20015
ODI-20015: Cannot initialize the Flexfields values

Category:
Other

Cause:
Another user may be editing the flexfield values.

Action:
Wait for the other editing session to be committed.

ODI-20016
ODI-20016: Unable to add project user functions

Category:
Other

Cause:
An unsupported action was attempted.

Action:
No action required as Project user functions are not a valid selection to be added to a label.

ODI-20017
ODI-20017: Unable to add project sequences

Category:
Other

Cause:
An unsupported action was attempted.

Action:
No action required as Project sequences are not a valid selection to be added to a label.

ODI-20018
ODI-20018: Unable to add project variables

Category:
Other

Cause:
An unsupported action was attempted.

Action:
No action required as Project variables are not a valid selection to be added to a label.

ODI-20019
ODI-20019: Unable to get GBO object

Category:
Other

Cause:
Internal error.

Action:
No action required.

ODI-20020
ODI-20020: Cannot change CKM

Category:
Other

Cause:
Only one CKM is available.

Action:
Import additional CKMs.

ODI-20021
ODI-20021: Cannot change the order of this Command because you do not have 'Edit' privileges on this Object

Category:
Other

Cause:
Insufficient privileges to edit the object.

Action:
Assign additional privileges to edit the object.

ODI-20022
ODI-20022: Could not change the KM

Category:
Other

Cause:
Additional KMs may not be available or installed for the current technology.

Action:
Import additional KMs.

ODI-20024
ODI-20024: Cannot create the cross reference for the condition

Category:
Other

Cause:
Internal error creating cross references for a condition.

Action:
No action required.

ODI-20025
ODI-20025: Cannot create the cross references for the reference

Category:
Other

Cause:
Internal error.

Action:
No action required.

ODI-20026
ODI-20026: Cannot view this Datastore: one of its Columns is currently being edited

Category:
Other

Cause:
The data store is being edited in another session.

Action:
Wait for the other editing session to end.

ODI-20027
ODI-20027: Cannot view this Column: its Datastore is currently being edited

Category:
Other

Cause:
A package step is being edited in another session.

Action:
Wait for the other session to end.

ODI-20028
ODI-20028: Cannot start execution.

Category:
Other

Cause:
Execution cannot be started due to an internal error.

Action:
No required action.

ODI-20029
ODI-20029: Cannot move a line

Category:
Other

Cause:
Internal error.

Action:
No action required.

ODI-20030
ODI-20030: Cannot start the generation. The file is probably already open.

Category:
Other

Cause:
Attempt to open report file for output failed.

Action:
Ensure the specified file is not currently open and the file permissions allow for write access before retrying the operation. Consider choosing a different file for output.

ODI-20031
ODI-20031: Cannot Delete a Command being Edited.

Category:
Other

Cause:
An attempt was made to delete a command being edited.

Action:
Save the edit before deleting.

ODI-20032
ODI-20032: Cannot Delete a Command

Category:
Other

Cause:
Internal error.

Action:
No required action

ODI-20033
ODI-20033: Cannot find the KM description

Category:
Other

Cause:
Internal error.

Action:
No action required.

ODI-20034
ODI-20034: Cannot find the Options list for a Command

Category:
Other

Cause:
Internal error.

Action:
No action required.

ODI-20035
ODI-20035: Could not find a description for the KM

Category:
Other

Cause:
Internal error.

Action:
No action required.

ODI-20036
ODI-20036: Impossible to find the technology name, please check your privileges.

Category:
Other

Cause:
The ODI security permissions were insufficient to allow access to the specified technology.

Action:
Ensure the ODI user security permissions are correct.

ODI-20037
ODI-20037: Cannot find data transferred by the Drag'n'Drop

Category:
Other

Cause:
Internal error.

Action:
No action required.

ODI-20038
ODI-20038: Could not connect

Category:
Other

Cause:
A connection was not established to the selected Logical Schema.

Action:
Ensure the connection data for the Physical Schema of the selected Logical Schema is valid.

ODI-20039
ODI-20039: Incorrect context

Category:
Other

Cause:
A context was not chosen for execution.

Action:
Select an execution context.

ODI-20040
ODI-20040: Problem encountered when determining the context

Category:
Other

Cause:
Internal error.

Action:
No action required.

ODI-20041
ODI-20041: No candidate datastore was found. Please create a mapping which loads data into this datastore.

Category:
Other

Cause:
There were no datastores in the current model usable as candidates for generating OUT mappings.

Action:
Consider creating an mapping to load data into a datastore of the current model.

ODI-20042
ODI-20042: Property key is empty

Category:
Other

Cause:
The Property key for one of the specified Data Server's properties was not specified.

Action:
Ensure a non-empty key value is supplied or remove the property with this key.

ODI-20043
ODI-20043: Invalid property key entered. Property key maximum length is 250 characters

Category:
Other

Cause:
The Property key for one of the specified Data Server's properties had a length greater than 250 characters.

Action:
Ensure a key value with the valid length is supplied or remove the property with this key.

ODI-20044
ODI-20044: Invalid property value entered. Property value maximum length is 250 characters

Category:
Other

Cause:
The Property value for one of this Data Server's properties had a length greater than 250 characters.

Action:
Ensure a value with the valid length is supplied or remove the property with this value.

ODI-20046
ODI-20046: Unable to change an open object

Category:
Other

Cause:
An object is already open in another editor and cannot be modified.

Action:
Close any other editors which may be locking the object.

ODI-20047
ODI-20047: Unable to change Value

Category:
Other

Cause:
Internal error.

Action:
Review the error details for further information.

ODI-20048
ODI-20048: Invalid Value entered. Value maximum length is 250 characters

Category:
Other

Cause:
The Value for one of this object's Flexfields had a length greater than 250 characters.

Action:
Ensure the value supplied has a valid length.

ODI-20049
ODI-20049: You cannot copy a folder into a folder belonging to another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Folders cannot be copied into hierarchy of another projects.

ODI-20050
ODI-20050: You cannot copy a knowledge module into another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Knowledge modules cannot be copied into hierarchy of another projects.

ODI-20051
ODI-20051: You cannot copy a package into a folder belonging to another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Packages cannot be copied into hierarchy of another projects.

ODI-20052
ODI-20052: You cannot copy an interface into a folder belonging to another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Interfaces cannot be copied into hierarchy of another projects.

ODI-20053
ODI-20053: You cannot copy a procedure into a folder belonging to another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Procedures cannot be copied into hierarchy of another projects.

ODI-20054
ODI-20054: You cannot move a folder into a folder belonging to another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Folders cannot be moved into hierarchy of another projects.

ODI-20055
ODI-20055: You cannot move a knowledge module into another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Knowledge modules cannot be moved into hierarchy of another projects.

ODI-20056
ODI-20056: You cannot move a package into a folder belonging to another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Packages cannot be moved into hierarchy of another projects.

ODI-20057
ODI-20057: You cannot move an interface into a folder belonging to another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Interfaces cannot be moved into hierarchy of another projects.

ODI-20058
ODI-20058: You cannot move a procedure into a folder belonging to another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Procedures cannot be moved into hierarchy of another projects.

ODI-20059
ODI-20059: You cannot copy a knowledge module into a package belonging to another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Knowledge modules cannot be copied into packages from another projects.

ODI-20060
ODI-20060: You cannot copy an interface into a package belonging to another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Interfaces cannot be copied into packages from another projects.

ODI-20061
ODI-20061: You cannot copy a procedure into a package belonging to another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Procedures cannot be copied into packages from another projects.

ODI-20062
ODI-20062: You cannot move a knowledge module into a package belonging to another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Knowledge modules cannot be moved into packages from another projects.

ODI-20063
ODI-20063: You cannot move an interface into a package belonging to another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Interfaces cannot be moved into packages from another projects.

ODI-20064
ODI-20064: You cannot move a step into a package belonging to another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Package steps cannot be moved into packages from another projects.

ODI-20065
ODI-20065: You cannot move a procedure into a package belonging to another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Procedures cannot be moved into packages from another projects.

ODI-20066
ODI-20066: You cannot copy a folder into another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Folders cannot be copied into hierarchy of another projects.

ODI-20067
ODI-20067: You cannot copy a procedure into another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Procedures cannot be copied into hierarchy of another projects.

ODI-20068
ODI-20068: You cannot copy a variable into another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Variables cannot be copied into hierarchy of another projects.

ODI-20069
ODI-20069: You cannot move a folder into another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Folders cannot be moved into hierarchy of another projects.

ODI-20070
ODI-20070: You cannot move a sequence into another project. Copy the sequence instead.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Sequences cannot be moved into hierarchy of another projects.

ODI-20071
ODI-20071: You cannot move a procedure into another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Procedures cannot be moved into hierarchy of another projects.

ODI-20072
ODI-20072: You cannot move a variable into another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Variables cannot be moved into hierarchy of another projects.

ODI-20073
ODI-20073: You cannot copy a schedule into a scenario belonging to another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Schedules cannot be copied into hierarchy of another projects.

ODI-20074
ODI-20074: You cannot move a schedule into a scenario belonging to another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Schedules cannot be moved into hierarchy of another projects.

ODI-20075
ODI-20075: You cannot move a folder into one of its subfolders.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Folders cannot be moved into their subfolders.

ODI-20076
ODI-20076: You cannot copy a knowledge module into a package step belonging to another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Knowledge modules cannot be copied into package steps from another projects.

ODI-20077
ODI-20077: You cannot copy an interface into a package step belonging to another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Interfaces cannot be copied into package steps from another projects.

ODI-20078
ODI-20078: You cannot copy a procedure into a package step belonging to another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Procedures cannot be copied into package steps from another projects.

ODI-20079
ODI-20079: You cannot move a knowledge module into a package step belonging to another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Knowledge modules cannot be moved into package steps from another projects.

ODI-20080
ODI-20080: You cannot move an interface into a package step belonging to another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Interfaces cannot be moved into package steps from another projects.

ODI-20081
ODI-20081: You cannot move a step into a package step belonging to another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Steps cannot be moved into package steps from another projects.

ODI-20082
ODI-20082: You cannot move a procedure into a package step belonging to another project.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Procedures cannot be moved into package steps from another projects.

ODI-20083
ODI-20083: Unable to perform the operation. {0} is being edited.

Category:
Other

Cause:
An object is being edited, preventing other operations.

Action:
Save or cancel editing of the object.

ODI-20084
ODI-20084: Only variables from the same project can be placed in a package.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Variables from another projects cannot be placed in packages.

ODI-20085
ODI-20085: Only mappings from the same project can be placed in a package.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Mappings from another project cannot be placed in packages.

ODI-20086
ODI-20086: Only procedures from the same project can be placed in a package.

Category:
Other

Cause:
An unsupported operation was attempted.

Action:
Procedures from another projects cannot be placed in packages.

ODI-20087
ODI-20087: Error while duplicating

Category:
Other

Cause:
Internal error.

Action:
Review the error details for further information.

ODI-20088
ODI-20088: Error while generating the scenario

Category:
Other

Cause:
Internal error.

Action:
Review the error details for further information.

ODI-20089
ODI-20089: Error during parameter initialization

Category:
Other

Cause:
Internal error.

Action:
Review the error details for further information.

ODI-20090
ODI-20090: Error while duplicating

Category:
Other

Cause:
Internal error.

Action:
Review the error details for further information.

ODI-20091
ODI-20091: An unexpected error occurred.

Category:
Other

Cause:
Internal error.

Action:
Review the error details for further information.

ODI-20092
ODI-20092: An error occurred while replacing the version.

Category:
Other

Cause:
Internal error.

Action:
Review the error details for further information.

ODI-20093
ODI-20093: Scenario generation is not allowed for non-saved object

Category:
Other

Cause:
Scenario generation could not be performed because the source object was not saved.

Action:
Ensure the source object is saved before attempting scenario generation for it.

ODI-20094
ODI-20094: Specify the object name to generate Scenario

Category:
Other

Cause:
Scenario generation could not be performed because the source object's name was not specified.

Action:
Ensure the source object's name is specified before attempting scenario generation for it.

ODI-20095
ODI-20095: Marker Group save was cancelled

Category:
Other

Cause:
Marker group save was cancelled by a user.

Action:
No action required.

ODI-20096
ODI-20096: Unable to edit the action line.

Category:
Other

Cause:
Internal error.

Action:
No action required.

ODI-20097
ODI-20097: The line Name is mandatory

Category:
Other

Cause:
A value for the Action Line Name field was not specified.

Action:
Enter a non-empty value for the Action Line Name field.

ODI-20098
ODI-20098: Some Datatype Conversions between current and new Technologies are absent

Category:
Other

Cause:
Changing the selected Model's Technology failed because the Physical Architecture did not provide datatype conversion rules for datatypes used by attributes of datastores belonging to the selected model.

Action:
Ensure datatype conversion rules exist for all datatypes used by attributes of datastores belonging to the selected model or do not use datatypes that cannot be converted.

ODI-20099
ODI-20099: Unable to create execution window

Category:
Other

Cause:
Internal error.

Action:
No action required.

ODI-20100
ODI-20100: Unable to access a join or a filter

Category:
Other

Cause:
Access to a join or filter failed due to insufficient ODI security permissions.

Action:
Ensure the ODI user security permissions are correct for the join or filter object.

ODI-20101
ODI-20101: Unable to find mapping alias

Category:
Other

Cause:
Access to the target mapping failed due to insufficient ODI security permissions.

Action:
Ensure the ODI user security permissions are correct for the target mapping.

ODI-20102
ODI-20102: Unable to find source table alias

Category:
Other

Cause:
Access to the source table failed due to insufficient ODI security permissions.

Action:
Ensure the ODI user security permissions are correct for the source table.

ODI-20103
ODI-20103: Unable to access a target column

Category:
Other

Cause:
Access to the target column failed due to insufficient ODI security permissions.

Action:
Ensure the ODI user security permissions are correct for the target column.

ODI-20105
ODI-20105: "Schema", "Table", "Column" and "Filter" are mandatory fields.

Category:
Other

Cause:
Values for the mandatory "Schema", "Table", "Column" and "Filter" fields were not supplied.

Action:
Ensure values are supplied for these mandatory fields.

ODI-20106
ODI-20106: Schema and Native sequence name are mandatory fields

Category:
Other

Cause:
Values for the mandatory Schema and Native sequence name fields were not supplied.

Action:
Ensure values are supplied for these mandatory fields.

ODI-20107
ODI-20107: A project sequence with the name "{0}" already exists in the project "{1}"

Category:
Other

Cause:
Saving the project sequence failed because the Sequence name was not unique within the Project.

Action:
Ensure the sequence name entered is unique.

ODI-20108
ODI-20108: A global sequence with the name "{0}" already exists

Category:
Other

Cause:
Saving the Global sequence failed because the Global Sequence name was not unique.

Action:
Ensure the sequence name entered is unique.

ODI-20109
ODI-20109: Error while restoring the version

Category:
Other

Cause:
Internal error.

Action:
No action required.

ODI-20110
ODI-20110: No version of this element exist.

Category:
Other

Cause:
The selected version of this object was not found in version repository.

Action:
Create or restore the selected version of the object.

ODI-20111
ODI-20111: Sub-model code cannot be empty.

Category:
Other

Cause:
A value of the mandatory Sub-model code field was not supplied.

Action:
Enter a non-empty value for the Sub-model code field.

ODI-20112
ODI-20112: The path defined in the logical schema is incorrect.

Category:
Other

Cause:
Incorrect path was specified in physical schema which is linked to the logical schema of this datastore in the current context.

Action:
Ensure the path specified in physical schema is correct.

ODI-20113
ODI-20113: The GUID that was supplied does not match the GUID for this user in the external identity store. Please retrieve the correct GUID before saving.

Category:
Other

Cause:
The supplied GUID did not match GUID from external identity store.

Action:
Provide a valid GUID.

ODI-20114
ODI-20114: Error while subscribing

Category:
Other

Cause:
An unexpected error occurred while trying to subscribe a datastore for CDC.

Action:
Review the error details for further information.

ODI-20115
ODI-20115: Error while stopping journalizing

Category:
Other

Cause:
An unexpected error occurred while trying to stop journalizing.

Action:
Review the error details for further information.

ODI-20116
ODI-20116: Aliases are specified and are not unique.

Category:
Other

Cause:
Duplicate Alises were detected.

Action:
Change the name of the join key alias.

ODI-20117
ODI-20117: Error while executing command line.

Category:
Other

Cause:
An unexpected error occurred while trying to open the Report.

Action:
Review the error details for further information.

ODI-20118
ODI-20118: Error while building the menu.

Category:
Other

Cause:
An unexpected error occurred while building a menu.

Action:
Review the error details for further information.

ODI-20119
ODI-20119: Error during generation.

Category:
Other

Cause:
An unexpected error occurred during the report generation.

Action:
Review the error details for further information.

ODI-20120
ODI-20120: Error while journalizing

Category:
Other

Cause:
An unexpected error occurred during journalizing.

Action:
Review the error details for further information.

ODI-20121
ODI-20121: Error while saving the diagram

Category:
Other

Cause:
An unexpected error occurred during the saving the diagram.

Action:
Review the error details for further information.

ODI-20122
ODI-20122: Error while unsubscribing

Category:
Other

Cause:
An unexpected error occurred during the unsubscribing action.

Action:
Review the error details for further information.

ODI-20123
ODI-20123: Error while executing query

Category:
Other

Cause:
An unexpected error occurred during query execution.

Action:
Check the error details for further actions.

ODI-20124
ODI-20124: Operation cancelled by user.

Category:
Other

Cause:
Operation cancelled by user

Action:
Review the other messages for further actions.

ODI-20126
ODI-20126: TreeTableColumn cannot be added

Category:
Other

Cause:
TreeTableColumn with this order number already exists

Action:
Contact Oracle Support Services.

ODI-20127
ODI-20127: This TreeTableColumn cannot be removed.

Category:
Other

Cause:
TreeTableColumn does not exist.

Action:
Contact Oracle Support Services.

ODI-20128
ODI-20128: Could not rollback.

Category:
Other

Cause:
An error occurred during rollback operation.

Action:
Review other messages for further information.

ODI-20129
ODI-20129: Exception occurred.

Category:
Other

Cause:
An unexpected error occurred.

Action:
Review the error details for further information.

ODI-20130
ODI-20130: You must select a folder.

Category:
Other

Cause:
A folder was not selected.

Action:
Select a folder before attempting this action.

ODI-20131
ODI-20131: Cannot retrieve the table list

Category:
Other

Cause:
An error occured while trying to retrieve a list of tables.

Action:
Review the message log for more information. If problem persists contact Oracle Support Services.

ODI-20132
ODI-20132: An interface cannot be moved to another project

Category:
Other

Cause:
An unsupported drag and drop operation was attempted.

Action:
No action required.

ODI-20133
ODI-20133: A procedure cannot be moved to another project

Category:
Other

Cause:
An unsupported drag and drop operation was attempted.

Action:
No action required.

ODI-20134
ODI-20134: A variable cannot be moved to another project

Category:
Other

Cause:
An unsupported drag and drop operation was attempted.

Action:
No action required

ODI-20135
ODI-20135: A step cannot be moved to another package

Category:
Other

Cause:
An unsupported drag and drop operation was attempted.

Action:
No action required

ODI-20138
ODI-20138: An error occured during: dragGesture

Category:
Other

Cause:
An unexpected error occurred while dragging an object.

Action:
Review the message log for more information. If problem persists contact Oracle Support Services.

ODI-20139
ODI-20139: An error occured during: dragEnter

Category:
Other

Cause:
An unexpected error occurred during a drag operation.

Action:
Review the error details for further information.

ODI-20140
ODI-20140: An error occured during: Drop

Category:
Other

Cause:
An unexpected error occurred while dropping an object.

Action:
Review the message log for more information. If problem persists contact Oracle Support Services.

ODI-20141
ODI-20141: Login Creation Error

Category:
Other

Cause:
An unexpected error occurred while creating a new Login.

Action:
Review the error details for further information.

ODI-20142
ODI-20142: Popup Menu Creation Error

Category:
Other

Cause:
An unexpected error occurred while creating a popup menu.

Action:
Review the error details for further information.

ODI-20144
ODI-20144: Error while Deleting

Category:
Other

Cause:
An unexpected error occurred while deleting a tree object.

Action:
Review the error details for further information.

ODI-20145
ODI-20145: Error while Opening splitframe.

Category:
Other

Cause:
An unexpected error occurred opening a frame.

Action:
Review the error details for further information.

ODI-20146
ODI-20146: Error occured during duplication

Category:
Other

Cause:
An unexpected error occurred while duplicating an object.

Action:
Review the error details and message log for more information.

ODI-20148
ODI-20148: An error occured during: drag over the object

Category:
Other

Cause:
An unexpected error occurred while dragging an object over another object.

Action:
Review the error details and message log for more information.

ODI-20149
ODI-20149: Logical schema can't be undefined

Category:
Other

Cause:
A Logical schema was not defined.

Action:
Define a Logical schema.

ODI-20150
ODI-20150: KM or Procedure already encrypted. No encryption was performed.

Category:
Other

Cause:
The requested object has already been encrypted.

Action:
No action required.

ODI-20151
ODI-20151: File is not found. Invalid file location

Category:
Other

Cause:
The specified file could not be located in the file system.

Action:
Ensure file location specified is valid and accessible.

ODI-20152
ODI-20152: Object cannot be deleted

Category:
Other

Cause:
The specified object could not be deleted.

Action:
Ensure the specified object exists and the security permissions permit deletion.

ODI-20153
ODI-20153: The following field is missing: Syntax

Category:
Other

Cause:
User function syntax has not been specified.

Action:
Specify the function syntax.

ODI-20155
ODI-20155: Changing the Logical Schema may require a re-generation of your Mappings. It may be better to modify the Topology information instead.

Category:
Other

Cause:

Action:

ODI-20158
ODI-20158: Datastores distribution failed.

Category:
Other

Cause:
An error occured during the datastore distribution process.

Action:
Review the message details and message log for more information. If this is caused by an external application, then fix the related code; otherwise, contact My Oracle Support.

ODI-20159
ODI-20159: The Attribute {0} is used as a Reference

Category:
Other

Cause:
An attempt was made to delete an attribute referenced by another object.

Action:
Delete the object which references this attribute then retry deleting this attribute.

ODI-20160
ODI-20160: The table {0} does not exist.

Category:
Other

Cause:
An error occured while executing the SQL request

Action:
Review the message details for more information. If this is caused by an external application, then fix the related code; otherwise, contact My Oracle Support.

ODI-20161
ODI-20161: Standard reverse-engineering failed.

Category:
Other

Cause:
An error occured during the standard reverse-engineering process.

Action:
Ensure the technology or driver supports standard reverse-engineering. Otherwise choose Customized Reverse and select an appropriate RKM for the technology.

ODI-20162
ODI-20162: The context is not valid.

Category:
Other

Cause:
A Context was not specified.

Action:
Specify a Context.

ODI-20163
ODI-20163: Unable to add object

Category:
Other

Cause:
An error occurred while dragging and dropping an object.

Action:
Review the message details and message log for more information.

ODI-20164
ODI-20164: The line Name is mandatory

Category:
Other

Cause:
A name was not specified.

Action:
Specify a Line name.

ODI-20165
ODI-20165: The project name {0} is a reserved word.

Category:
Other

Cause:
A reserved word was used as the name of a project.

Action:
Enter a different project name.

ODI-20166
ODI-20166: The project code {0} is a reserved word.

Category:
Other

Cause:
A reserved word was used as the project code.

Action:
Enter a different project code.

ODI-20167
ODI-20167: Logical schema is not set for the current context

Category:
Other

Cause:
A Logical schema was not set for the current context.

Action:
Ensure the Logical Schema is not set to "Undefined" in the Context editor.

ODI-20168
ODI-20168: Logical schema is not set for the current context

Category:
Other

Cause:
A Logical schema was not set for the current context.

Action:
Ensure the Logical Schema is not set to "Undefined" in the Context editor.

ODI-20169
ODI-20169: The field {0} is mandatory.

Category:
Other

Cause:
A mandatory field was not specified.

Action:
Enter a value for this field.

ODI-20170
ODI-20170: You are trying to insert this versioned object but the version was deleted. Please re-create a version for this object.

Category:
Other

Cause:
The requested version of the object did not exist in the repository.

Action:
Recreate the required version of this object.

ODI-20171
ODI-20171: The label already contains a child of {0}. To add {1} to the label, you should delete {2} {3}. It is advised to use the button "synchronize" later to check the label's coherence.

Category:
Other

Cause:
The label already contained the specified object as a child.

Action:
Delete the child object from the label before retrying the addition. Consider using the synchronize option to verify the label's coherence.

ODI-20172
ODI-20172: The label already contains a parent of {0}. To add {1} to the label, you should delete {2} {3}. It is advised to use the button "synchronize" later to check the label's coherence.

Category:
Other

Cause:
The label has already contained the specified object as a parent of {0}.

Action:
Delete the parent object from the label before retrying the addition. Consider using the synchronize option to verify the label's coherence.

ODI-20173
ODI-20173: An error occurred while generating the procedure

Category:
Other

Cause:
An unexpected error occurred while generating a procedure.

Action:
Review the error details for further information.

ODI-20174
ODI-20174: Folder {0} already contains an mapping named {1}

Category:
Other

Cause:
An mapping of the same name already existed in the specified folder.

Action:
Specify another name for the mapping.

ODI-20175
ODI-20175: You cannot give an empty name to an mapping

Category:
Other

Cause:
The Mapping's name was not specified.

Action:
Enter a non-empty value for the mapping's name.

ODI-20176
ODI-20176: You cannot create multiple mappings with the same name

Category:
Other

Cause:
An mapping of the same name already existed.

Action:
Specify a different name for the mapping.

ODI-20177
ODI-20177: You must select a generation folder

Category:
Other

Cause:
The Generation folder was not selected.

Action:
Select a generation folder.

ODI-20180
ODI-20180: You cannot choose an expiration date in the past.

Category:
Other

Cause:
Entered expiration date was in the past.

Action:
Enter valid expiration date.

ODI-20181
ODI-20181: You cannot set an expiration date if there is no password.

Category:
Other

Cause:
No password was entered.

Action:
Enter a password before setting an expiration date.

ODI-20182
ODI-20182: Error while opening window

Category:
Other

Cause:
An unexpected error occurred while opening a window.

Action:
Review the error details for further information.

ODI-20183
ODI-20183: Error while refreshing Label

Category:
Other

Cause:
An unexpected error occurred while refreshing a label.

Action:
Review the error details for further information.

ODI-20184
ODI-20184: The request to retrieve the sequence list has not been defined on the technology.

Category:
Other

Cause:
The query for retrieving sequences has not been defined for the technology.

Action:
Update the technology with the sequence query syntax.

ODI-20185
ODI-20185: Error while opening window

Category:
Other

Cause:
An unexpected error occurred while opening a window.

Action:
Review the error details for further information.

ODI-20186
ODI-20186: Error while saving

Category:
Other

Cause:
An unexpected error occurred while saving an object.

Action:
Review the error details for further information.

ODI-20187
ODI-20187: Error while adding the marker

Category:
Other

Cause:
An unexpected error occurred while adding a marker.

Action:
Review the error details for further information.

ODI-20188
ODI-20188: This object is locked by another user. You cannot edit its markers.

Category:
Other

Cause:
The object was locked by another user.

Action:
Wait until the object is unlocked. Consider contacting the user who has the object locked.

ODI-20189
ODI-20189: You do not have the sufficient privileges to reverse-engineer a model

Category:
Other

Cause:
The model could not be reverse-engineered due to insufficient privileges.

Action:
Ensure the SUPERVISOR or owner of model grants the appropriate permissions.

ODI-20190
ODI-20190: You cannot reverse engineer a model in 'Standard' mode: the model technology assumes RKM to be selected.

Category:
Other

Cause:
No RKM was specified for this model.

Action:
Select an RKM for this model.

ODI-20191
ODI-20191: The model you want to reverse-engineer references a logical schema that no longer exists.

Category:
Other

Cause:
The referenced Logical Schema for the Model was not found.
