Parent-child relationships within a cross product group are used to create nesting in the matrix. As a result, the repeating frames associated with such groups must print in the same direction on the page.

**REP-01306: Summary column {0} has an invalid source.**

**Cause:** An invalid source was specified for the summary column. A summary column's source must be from the same group as the summary column, or from a group below the summary column.

**Action:** Change the source of the summary column to be from the same group as the summary column or from a group below the summary column.

**Level:** 1

**Type:** ERROR

**Impact:** Other

**REP-01307: Summary column {0} has an invalid product order.**

**Cause:** The possible causes of this error include: Case 1: A summary exists that is not a running summary (that is, its Reset At is not Report), but its Product Order is not a subset of the source column's product order. The source column of the summary must be at least as frequent as the summary, which means that the summary's Product Order should be some subset of the source column's Product Order. Case 2: A running summary (that is, its Reset At is Report) exists with a Product Order that is not a prefix of the source column's Product Order. For example, if the source column's Product Order were A,B,C, then the summary column's Product Order would have to be either A (by itself) or A,B. The summary's Product Order could not be B,A.

**Action:** Take the following actions to correct this error: If Case 1: Change the Product Order of the summary such that it is a subset of its source column's Product Order. If Case 2: Change the Product Order of the summary such that it is a prefix of the Source column's Product Order.

**Type:** ERROR

**Impact:** Other

**REP-01311: Object {0} with page-dependent references have been changed to fixed sizing.**

**Cause:** A field or boilerplate object has a reference to a page calculation or a total number of pages variable. (This is known as a forward reference.) Such layout objects must be fixed in size both horizontally and vertically.

**Action:** The layout object's Horizontal and Vertical Elasticity have been set to Fixed by Oracle Reports Builder. Check the output to ensure that the values are not being truncated. If they are, enlarge the layout object so that it is large enough to contain the values.

**REP-01319: Implicit anchoring algorithm cannot uniquely identify the anchoring object {0}. Arbitrarily choosing {1}.**

**Cause:** The specified object (object1) is in the "push path" of two objects and it is equidistant from both objects. As a result, Oracle Reports Builder cannot use its normal criteria (shortest distance) to determine the implicit anchor. In the absence of its normal criteria, Oracle Reports Builder randomly creates an implicit anchor to the specified object (object2). Note that the implicit anchor may vary between runs of the report.

**TOP-00043: Missing class for indicator field value [{0}] of type [{1}].**

**Cause:** TopLink is missing the class for indicator field value classFieldValue of type type. There was no class entry found in the inheritance policy for the indicator field value that was read from the database. It is likely that the method addClassIndicator(Class class, Object typeValue) was not called for the field value. The class and typeValue are stored in a hash table, and later the class is extracted from the hash table by passing typeValue as a key. Because Integer(1) is not equivalent to Float(1), this exception occurs when the type of typeValue is incorrectly specified.

**Action:** Verify the descriptor.

**TOP-00047: The multiple table primary key mapping must be specified when a custom multiple table join is used.**

**Cause:** The multiple table primary key mapping is not specified when a custom multiple table join is used. If multiple tables are specified in the descriptor and the join expression is customized, then the primary keys for all the tables must be specified. If the primary keys are not specified, then the exception occurs.

**Action:** Call the method `addMultipleTablePrimaryKeyFieldName(String fieldNameInPrimaryTable, String fieldNameInSecondaryTable)` on the descriptor to set the primary keys.

**Level:** 1

**Type:** ERROR

**Impact:** Configuration

**TOP-00048: Multiple writable mappings exist for the field [{0}]. Only one may be defined as writable, all others must be specified read-only.**

**Cause:** Multiple writable mappings for the field `fieldName` are defined in the descriptor. Exactly one must be defined as writable; the others must be specified as read-only. When multiple write mappings are defined for the field, `TopLink` is unable to choose the appropriate mapping for writing the value of the field in the database row. Therefore, the exception is raised during the validation process of descriptors. The most common cause of this problem is when the field has direct-to-field mapping, as well as one-to-one mapping. In this case, the one-to-one mapping must either be read-only or a target foreign key reference.

**Action:** Make one of those mappings read-only.

**TOP-04015: Synchronized UnitOfWork does not support the commitAndResume() operation.**

**Cause:** A synchronized UnitOfWork does not support the commitAndResume operation.
