✗ Not supported

This section provides the following information:

- [Configuration Requirements](#)
- [Known Issues](#)

Related Information

- For information about supported database configurations, Web servers, and browsers, plus support for interoperability tools and WebLogic Platform product support information, see [WebLogic Platform 7.0 Supported Configurations](#).
- For details about Sun Solaris 9, visit Sun's Solaris Web page at: <http://www.sun.com/software/solaris>.
- For Sun's support services information site, see <http://www.sun.com/service/warrantiescontracts>. If you have a support contract for the use of Solaris platforms, you may be able to obtain support for general Java issues (for example, JVM problems).

- You can run WebLogic software on Solaris using the SDK available from Sun Microsystems at: <http://java.sun.com/products/?frontpage-main>. BEA recommends using the latest available versions of the JVMs supported by BEA, except where noted otherwise in our *Supported Configurations* document.

Configuration Requirements

Table 1-1 Requirements for 7.0 SP7 on Sun Solaris 9 on SPARC

Operating System Version and Patches	Solaris 9
Chip Architecture and Minimum Processor Speed	UltraSPARC (168 MHz)
SDK	<p>Fully-supported</p> <p>Sun Java 2 SDK 1.4.2_10 and all later service packs of 1.4.2 with the Java HotSpot™ Client and Server VMs (32-bit)</p> <ul style="list-style-type: none"> • Supports the Java HotSpot™ Client and Server VMs. • WebLogic Integration and WebLogic Portal are configured to use the Sun Java 2 SDK 1.4.2_10 with the Java HotSpot Server VM. For details, see “Using the HotSpot Virtual Machine” in “Performance Tuning” in “System Administration” in the <i>WebLogic Portal Administration Guide</i> at the following URL: http://e-docs.bea.com/wlp/docs70/admin/sysadmin.htm
Design and Development Tools	<p>Supports WebLogic Server development tools.</p> <p>For more information about WebLogic Platform design and development tools support, see “Supported Configurations for Design and Development Tools in Version 7.0 SP7” in <i>Supported Configurations for WebLogic Platform 7.0</i>.</p>
RAM	512 MB required; 1 GB recommended
Disk Space	For any components of WebLogic Platform or for the full WebLogic Platform product, see Disk Space Requirements .
Performance Pack	Included

RAM	512 MB required; 1 GB recommended	
Disk Space	For any components of WebLogic Platform or for the full WebLogic Platform product, see Disk Space Requirements .	
Performance Pack	Included	
Node Manager	Java	
BEA jDrivers for Oracle	For this Oracle client version:	The following shared libraries are provided:
	Oracle 8.1.7	<ul style="list-style-type: none"> • lib/solaris/oci817_8/libweblogicoci38.so • lib/solaris/oci817_8/libweblogicoxa38.so
	Oracle 9.2.0	<ul style="list-style-type: none"> • lib/solaris/oci920_8/libweblogicoci38.so • lib/solaris/oci920_8/libweblogicoxa38.so

Known Issues

- We have encountered the following problem: some Solaris JVMs report an incorrect IP number. The IP number reported for the machine is the first number in the `/etc/hosts` file. Unfortunately, this number is frequently `127.0.0.1`, the standard loopback network address for the machine. This problem affects licenses granted for specific IP numbers. We have also observed this problem in a cluster where an HTTP request is passed by a Web server or another WebLogic Server via the `HttpClusterServlet`, to a WebLogic Server running on a Solaris machine with this configuration problem. The `127.0.0.1` IP number is carried with the server’s response. Subsequent calls to that machine time out because the IP number is incorrect. To determine whether you have this problem on your Solaris computer, run the following command:

```
command java utils.netAddresses
```

If you see `127.0.0.1` in the output, ask the system administrator to move the computer’s network IP address to the beginning of the `/etc/hosts` file.

- For information about suggested values for some Solaris TCP and VM-related tunable parameters, see “[Operating System Tuning](#)” in *BEA WebLogic Server 7.0 Performance and Tuning*.

For more information about known issues with any components of this release, see the appropriate *Release Notes* document. For a complete list of *Release Notes* supporting WebLogic Platform 7.0, see:

Can be used to run WebLogic Server RMI or Web Services clients that remotely connect to a server running in a separate VM. • It is not supported by WebLogic Portal or WebLogic Integration clients and development tools. Is is also not supported by running server instances of WebLogic Server or other WebLogic Platform components.

Table 6-1 Requirements for 7.0 SP2 on Sun Solaris 9 on SPARC (Continued)

Design and Development Tools	Supports WebLogic Server development tools. For more information about WebLogic Platform design and development tools support, see “Supported Configurations for Design and Development Tools in Version 7.0 SP2” in <i>Supported Configurations for WebLogic Platform 7.0</i> .	
RAM	512 MB required; 1 GB recommended	
Disk Space	For any components of WebLogic Platform or for the full WebLogic Platform product, see Disk Space Requirements .	
Performance Pack	Included	
Node Manager	Java	
BEA jDrivers for Oracle	For this Oracle client version:	The following shared libraries are provided:
	Oracle 8.1.7	<ul style="list-style-type: none"> • lib/solaris/oci817_8/libweblogicoci38.so • lib/solaris/oci817_8/libweblogiccoxa38.so
	Oracle 9.0.1	<ul style="list-style-type: none"> • lib/solaris/oci901_8/libweblogicoci38.so • lib/solaris/oci901_8/libweblogiccoxa38.so
	Oracle 9.2.0	<ul style="list-style-type: none"> • lib/solaris/oci920_8/libweblogicoci38.so • lib/solaris/oci920_8/libweblogiccoxa38.so

Known Issues

- If you have problems with OutOfMemory errors and the JVM crashing with JDK 1.3, try setting: `-XX:MaxPermSize=128m`. For WebLogic Integration, use the following setting: `-XX:MaxPermSize=256m`.
- We have encountered the following problem: some Solaris JVMs report an incorrect IP number. The IP number reported for the machine is the first number in the `/etc/hosts` file. Unfortunately, this number is frequently `127.0.0.1`, the standard loopback network address for the machine. This problem affects licenses granted for specific IP numbers. We have also observed this problem in a cluster where an HTTP request is passed by a Web server or another WebLogic Server via the `HttpClusterServlet`, to a WebLogic Server running on a Solaris machine with this configuration problem. The `127.0.0.1` IP number is carried with the server’s response. Subsequent calls to that machine time out because the

IP number is incorrect. To determine whether you have this problem on your Solaris computer, run the following command:

```
command java utils.netAddresses
```

If you see 127.0.0.1 in the output, ask the system administrator to move the computer's network IP address to the beginning of the `/etc/hosts` file.

- For information about suggested values for some Solaris TCP and VM-related tunable parameters, see “[Operating System Tuning](#)” in *BEA WebLogic Server 7.0 Performance and Tuning*.

For more information about known issues with any components of this release, see the appropriate *Release Notes* document. For a complete list of *Release Notes* supporting WebLogic Platform 7.0, see:

<http://e-docs.bea.com/platform/docs70/interm/relnotes.html>

Sun Solaris 9 on SPARC with WebLogic Server 7.0 SP1

Product Components Supported on this Configuration

	WebLogic Server	WebLogic Workshop	WebLogic Integration	WebLogic Portal
Run-time	✓	✗	✗	✗
Design/Dev Tools*	✓	✗	✗	✗

* For design and development tools support, see the "Configuration Requirements" section below.

✓ Supported
✗ Not supported

This section provides the following information:

- [Configuration Requirements](#)
- [Known Issues](#)

Related Information

- For information about supported database configurations, Web servers, and browsers, plus support for interoperability tools and WebLogic Platform product support information, see [WebLogic Platform 7.0 Supported Configurations](#).
- For details about Sun Solaris 9, visit Sun's Solaris Web page at: <http://www.sun.com/solaris>.
- For Sun's support services information site, see <http://www.sun.com/service/support>. If you have a support contract for the use of Solaris platforms, you may be able to obtain support for general Java issues (for example, JVM problems).

- You can run WebLogic software on Solaris using the SDK available from Sun Microsystems at: <http://java.sun.com/products/?frontpage-main>. BEA recommends using the latest available versions of the JVMs supported by BEA, except where noted otherwise in our *Supported Configurations* document.

Configuration Requirements

Table 7-1 Requirements for WebLogic Server 7.0 SP1 on Sun Solaris 9 on SPARC

Operating System Version and Patches	Solaris 9	If you are planning to use the Sun Java 2 SDK 1.3.1_03 with the Solaris operating system, you must install the latest Sun Java 2 SDK 1.3.1_03 patches. For additional information, see: http://java.sun.com/j2se/1.3/install-solaris-patches.html
Chip Architecture and Minimum Processor Speed	UltraSPARC (168 MHz)	
SDK	Sun Java 2 SDK 1.3.1_04 and all later service packs of 1.3.1	Supports the Java HotSpot™ Client and Server VMs
	Sun Java 2 SDK 1.3.1_06	Supported on WebLogic Server only
Design and Development Tools	Supports WebLogic Server development tools. For more information about WebLogic Platform design and development tools support, see “ Supported Configurations for Design and Development Tools in Version 7.0 SP1 ” in <i>Supported Configurations for WebLogic Platform 7.0</i> .	
RAM	512 MB required; 1 GB recommended	
Disk Space	For any components of WebLogic Platform or for the full WebLogic Platform product, see Disk Space Requirements .	
Performance Pack	Included	
Node Manager	Java
