

# BEA WebLogic RFID Edge Server™

## Release Notes

Version 3.0  
May 7, 2007

# Contents

## 1. WebLogic RFID Edge Server Known Issues

- What's New in WebLogic RFID Edge Server 3.0. . . . . 1-1
- Known Problems . . . . . 1-2

# WebLogic RFID Edge Server Known Issues

The following sections describe the new features and document known problems in WebLogic RFID Edge Server 3.0.

- [“What’s New in WebLogic RFID Edge Server 3.0”](#) on page 1-1
- [“Known Problems”](#) on page 1-2

## What’s New in WebLogic RFID Edge Server 3.0

- See [New Features in This Release](#) in the *Product Overview*

## Known Problems

The following section describes problems that were found in WebLogic RFID Edge Server 3.0. Entries include a description of the problem, and a workaround or solution where appropriate.

Change Request Number	Description and Workaround
CR321475	<p data-bbox="366 388 1237 440">Readers written against the pre-public driver interfaces in releases prior to Edge Server 3.0 must be updated.</p> <p data-bbox="366 458 628 480"><b>Workaround or Solution:</b></p> <p data-bbox="366 498 677 520">You must rename the following:</p> <ul data-bbox="366 534 1174 1159" style="list-style-type: none"> <li data-bbox="366 534 1174 557">• AbstractDispatchingPollingPhysicalReader ==&gt; AbstractPollingPhysicalDevice</li> <li data-bbox="366 574 919 597">• AbstractPhysicalReader ==&gt; AbstractPhysicalDevice</li> <li data-bbox="366 614 1053 637">• AbstractPollingPhysicalReader ==&gt;AbstractPollingPhysicalDevice</li> <li data-bbox="366 654 650 677">• Antenna ==&gt; DeviceUnit</li> <li data-bbox="366 694 878 716">• AntennaCapabilities ==&gt; DeviceUnitCapabilities</li> <li data-bbox="366 734 811 756">• AntennaObserver =&gt; DeviceUnitObserver</li> <li data-bbox="366 774 771 796">• AntennaReport =&gt; DeviceUnitReport</li> <li data-bbox="366 814 811 836">• AntennaRequest ==&gt; DeviceUnitRequest</li> <li data-bbox="366 854 758 876">• PhysicalReader ==&gt; PhysicalDevice</li> <li data-bbox="366 894 784 916">• PollingAntenna ==&gt; PollingDeviceUnit</li> <li data-bbox="366 933 865 956">• PollingLogicalReader =&gt; PollingLogicalDevice</li> <li data-bbox="366 973 1067 996">• PollingPhysicalReaderScheduler =&gt; PollingPhysicalDeviceScheduler</li> <li data-bbox="366 1013 1040 1036">• ReaderConfigurationException =&gt; DeviceConfigurationException</li> <li data-bbox="366 1053 758 1076">• ReaderObserver =&gt; DeviceObserver</li> <li data-bbox="366 1093 650 1116">• ReaderUtil =&gt; DeviceUtil</li> <li data-bbox="366 1133 825 1156">• SimplePollingPhysicalReaderScheduler =&gt;</li> <li data-bbox="366 1173 784 1196">• SimplePollingPhysicalDeviceScheduler</li> </ul> <p data-bbox="366 1213 1237 1265">In addition, related method names were changed. For example, the method getAntenna is now getDeviceUnit.</p> <p data-bbox="366 1282 1237 1334">A number of classes and methods have been deprecated in favor of the new SDK. New drivers should use only the classes and methods described in the SDK Javadoc.</p>

---

<b>Change Request Number</b>	<b>Description and Workaround</b>
CR320241	<p>The system returns license verification errors when attempting to deploy the Edge Server from a WAR file when running WebLogic Server 10.0.</p> <p><b>Workaround or Solution:</b></p> <ol style="list-style-type: none"><li>1. Edit the <code>startWebLogic.cmd</code> or <code>.sh</code> file that is under the <code>/bin</code> directory of WebLogic Server you are using (for example, <code>/wlsinstalls/wls1000/user_projects/domains/base_domain/bin</code>).</li><li>2. Add the <code>-Dbea.home=<i>yourbeahome</i></code> to the java command that starts WebLogic server: <pre data-bbox="341 656 1163 765">\${JAVA_HOME}/bin/java \${JAVA_VM} \${MEM_ARGS} \${JAVA_OPTIONS} -Dweblogic.Name=\${SERVER_NAME} -Djava.security.policy=\${WL_HOME}/server/lib/weblogic.policy \${PROXY_SETTINGS} \${SERVER_CLASS}</pre></li></ol>
CR320237	<p>When you attempt to perform operations on a version 2.x Edge Server using a version 3.0 Administration Console, the system returns warnings. Using the Edge Server 3.0 Administration Console to perform operations on an Edge Server 2.x system is not supported.</p>
CR316561	<p>The Administration Console may hang on some Linux systems using NFS.</p> <p><b>Workaround or Solution:</b></p> <p>To work around this problem, unmount the NFS mounted files systems and restart the Administration Console.</p>
CR318779	<p>During initialization of the Alien ALR-9800 driver, the following error message is displayed on the Edge Server console:</p> <pre data-bbox="302 1171 1130 1196">Serial Mananger Instance Failed - Serial Classes Not Present</pre> <p>This message is generated by the Alien RFID library and can be ignored. Driver initialization completes successfully.</p>

---

Change Request Number	Description and Workaround
CR302253	<p>Starting the Edge Server with more configured devices than specified by your license, will result in one of the following problems:</p> <ul style="list-style-type: none"> <li>• If allowBadDate=True (in the edge.props file), the Edge Server starts, but not all devices are configured. Files for devices that are not configured are moved to the /var/edgestate/bad directory.</li> </ul> <p>Before you restart the Edge Server with the correct license, you must copy the files in the /var/edgestate/bad directory to the /var/edgestate directory.</p> <ul style="list-style-type: none"> <li>• If allowBadData=False (in the edge.props file), the Edge Server does not start.</li> </ul> <p>This problems is likely to occur after you have updated your system from a previous release of the Edge Server.</p> <p>To correct the problem, contact BEA support to get a license with the correct device count for your configuration.</p>
CR282951	<p>Occasionally, the ThingMagic Mercury 4 driver returns an "unparsable response" error while reading a tag. Sometimes the reader returns invalid data while reading a Gen2 tag, probably because the tag is not encoded correctly.</p> <p><b>Workaround or Solution:</b></p> <p>Discard the tag.</p>
	<p>The Printronix SL5000r reader driver has the following limitations:</p> <ul style="list-style-type: none"> <li>• Does not support permanent tag locking. In a PCSpec, if you specify permanent locking no tag programming occurs.</li> <li>• Enables writing to kill password, access password, and epc memory banks only.</li> <li>• You cannot write to the access and kill password memory banks without also specifying an epc.</li> <li>• You cannot write to a tag which was locked previously. In a PCSpec, if you specify an existing access password it will be ignored.</li> <li>• In a PCSpec, to specify tag locking, you must also specify a new access password; otherwise, no tag programming occurs.</li> <li>• In a PCSpec, if you specify multiple lock and mask bits, only the last one specified is considered. The workaround is to specify all the lock bits and all the mask bits, each in a single element.</li> <li>• In a PCSpec, if you specify not locking the access password and locking any of the other memory banks, the access password will also be locked.</li> <li>• Short write timeout values will likely result in verification failures.</li> </ul>

---

<b>Change Request Number</b>	<b>Description and Workaround</b>
[vendor issue]	If the network connection to the SATO printer is lost, the Edge Server has difficulty reconnecting to the printer. <b>Workaround or Solution:</b> Restart the printer (power off and on).
[vendor issue]	If the network connection to the Impinj reader is lost, the Edge Server has difficulty reconnecting to the reader. <b>Workaround or Solution:</b> Restart the reader (power off and on).
CR284883	In order to prevent a deadlock, the <code>com.connecterra.aie.readerConcurrency</code> property in <code>edge.props</code> must be 0 (the default) or greater or equal to the number of readers.
