# About This Document

This document explains how to install the BEA WebLogic Commerce Server and WebLogic Personalization Server 3.2 software.

This document contains the following chapters:

- **Chapter 1, “Preparing to Install,”** explains the prerequisites to installing WebLogic Commerce Server and WebLogic Personalization Server.
- **Chapter 2, “Installing WebLogic Commerce Server,”** documents the procedure for installing WebLogic Commerce Server and WebLogic Personalization Server on supported Microsoft Windows systems and supported Unix systems.
- **Chapter 3, “Post-Installation Considerations,”** includes installation verification steps and licensing considerations.

## What You Need to Know

This document is intended for administrators involved in setting up an e-commerce site using BEA WebLogic Commerce Server and WebLogic Personalization Server. It assumes a familiarity with the product platform and related Web technologies.

---

# e-docs Web Site

BEA product documentation is available on the BEA corporate Web site. From the BEA Home page, click on Product Documentation or go directly to the “e-docs” Product Documentation page at <http://e-docs.bea.com>.

## How to Print the Document

You can print a copy of this document from a Web browser, one file at a time, by using the File—>Print option on your Web browser.

A PDF version of this document is available on the WebLogic Commerce Server and WebLogic Personalization Server documentation Home page on the e-docs Web site (and also on the documentation CD). You can open the PDF in Adobe Acrobat Reader and print the entire document (or a portion of it) in book format. To access the PDFs, open the documentation Home page, click the PDF files button and select the document you want to print.

If you do not have the Adobe Acrobat Reader, you can get it for free from the Adobe Web site at <http://www.adobe.com/>.

## Contact Us!

Your feedback on the BEA WebLogic Commerce Server and WebLogic Personalization Server documentation is important to us. Send us e-mail at **[docsupport@bea.com](mailto:docsupport@bea.com)** if you have questions or comments. Your comments will be reviewed directly by the BEA professionals who create and update the product documentation.

In your e-mail message, please indicate that you are using the documentation for the BEA WebLogic Commerce Server and WebLogic Personalization Server 3.2 release.

Please do not use the docsupport@bea.com email account to report software problems. If you have any questions about this version of the product software, or if you have problems installing and running BEA WebLogic Commerce Server and WebLogic Personalization Server, contact BEA Customer Support through BEA WebSupport at **www.bea.com**. You can also contact Customer Support by using the contact information provided on the Customer Support Card, which is included in the product package.

When contacting Customer Support, be prepared to provide the following information:

- Your name, e-mail address, phone number, and fax number
- Your company name and company address
- Your machine type and authorization codes
- The name and version of the product you are using
- A description of the problem and the content of pertinent error messages

## Documentation Conventions

The following documentation conventions are used throughout this document.

<b>Convention</b>	<b>Item</b>
<b>boldface text</b>	Indicates terms defined in the glossary.
Ctrl+Tab	Indicates that you must press two or more keys simultaneously.
<i>italics</i>	Indicates emphasis or book titles.

---

Convention	Item
monospace text	<p>Indicates code samples, commands and their options, data structures and their members, data types, directories, and file names and their extensions. Monospace text also indicates text that you must enter from the keyboard.</p> <p><i>Examples:</i></p> <pre>#include &lt;iostream.h&gt; void main ( ) the pointer psz chmod u+w * \tux\data\ap .doc tux.doc BITMAP float</pre>
<b>monospace boldface text</b>	<p>Identifies significant words in code.</p> <p><i>Example:</i></p> <pre>void <b>commit</b> ( )</pre>
<i>monospace italic text</i>	<p>Identifies variables in code.</p> <p><i>Example:</i></p> <pre>String <i>expr</i></pre>
UPPERCASE TEXT	<p>Indicates device names, environment variables, and logical operators.</p> <p><i>Examples:</i></p> <pre>LPT1 SIGNON OR</pre>
{ }	<p>Indicates a set of choices in a syntax line. The braces themselves should never be typed.</p>
[ ]	<p>Indicates optional items in a syntax line. The brackets themselves should never be typed.</p> <p><i>Example:</i></p> <pre>buildobjclient [-v] [-o name ] [-f file-list]... [-l file-list]...</pre>
	<p>Separates mutually exclusive choices in a syntax line. The symbol itself should never be typed.</p>

---

---

Convention	Item
...	<p>Indicates one of the following in a command line:</p> <ul style="list-style-type: none"><li>■ That an argument can be repeated several times in a command line</li><li>■ That the statement omits additional optional arguments</li><li>■ That you can enter additional parameters, values, or other information</li></ul> <p>The ellipsis itself should never be typed.</p> <p><i>Example:</i></p> <pre>buildobjclient [-v] [-o name ] [-f file-list]... [-l file-list]...</pre>
.	<p>Indicates the omission of items from a code example or from a syntax line.</p> <p>The vertical ellipsis itself should never be typed.</p>

---

# 1 Preparing to Install

BEA WebLogic Commerce Server and WebLogic Personalization Server 3.2 are sophisticated software products. They should not be installed without proper planning.

This topic includes the following sections:

- Checking the Product Box
- Overview of System Requirements
- Required Order of the Installations
- Where to Find Migration Information

**Note:** Please see the Release Notes for information about applying the latest Service Pack of WebLogic Commerce Server and WebLogic Personalization Server 3.2.

## Checking the Product Box

This section applies only if you ordered the WebLogic Commerce Server 3.2 and WebLogic Personalization Server 3.2 software packaged in a BEA product box, instead of via the BEA download site.

The product box includes the following items:

- A CD that contains:
  - The software installation procedure for supported Windows systems, `WLCS_320.exe`

# 1 *Preparing to Install*

---

- The software installation procedure for supported UNIX systems, `WLCS_320.bin`, for customers who have a windowing environment available on a UNIX system
  - The software installation procedure for supported UNIX systems, `WLCS_320.zip`, for customers who do not have a windowing environment available on a UNIX system
  - The documentation installation procedure for supported Windows systems, `WLCS_320_DOC.exe`
  - The documentation installation procedure for supported UNIX systems, `WLCS_320_DOC.bin`
- A printed copy of the *Release Notes*
  - A printed copy of the *Installation Guide* (this document)
  - The quick reference Customer Support Agreement
  - BEA software license agreement
  - A 3.5-inch diskette that contains the product license you purchased. The license file name is `WebLogicCommerceLicense.xml`

A separate BEA box that contains the BEA WebLogic Server 5.1 software is mailed to you. You will receive the BEA WebLogic Server 5.1 license either on a diskette, or in an email attachment.

If you are reading the printed versions of the WebLogic Commerce Server and WebLogic Personalization Server 3.2 *Installation Guide* and *Release Notes* documents that came in the BEA product box, note that more recent versions might exist on the BEA Product Documentation Web site. For details, see “Check E-docs for the Latest Documentation” on page 1-3.

# Overview of System Requirements

This section presents general information about the WebLogic Commerce Server system requirements.

## Check E-docs for the Latest Documentation

If you are reading a local, online copy of the documentation, or a printed version of the Installation Guide or Release Notes, note that more recent versions of these documents might exist on the BEA E-docs Web site. When you are looking for the most recent information about system requirements and supported platforms, it is important that you check the E-docs site instead of a local version of the documentation. If you have Internet access, please see:

- <http://edocs.bea.com/wlcs/docs32/install/index.htm> for the latest Installation Guide
- <http://edocs.bea.com/wlcs/docs32/relnotes/index.htm> for the latest Release Notes
- <http://edocs.bea.com/wlcs/docs32/relnotes/relnotes.htm#platforms> for the latest Supported Platforms section in the Release Notes

## Platforms

Currently, WebLogic Commerce Server is available for Microsoft Windows NT 4.0 with SP5 systems, Windows 2000 systems, and Sun Solaris 7 systems. For the latest details, see the [Supported Platforms](#) section of the *Release Notes*.

**Note:** For Windows NT and Windows 2000, it is strongly recommended that you be logged into the PC as a user with administrative privileges prior to installation.

# Memory and Disk Space

The product requires at least 128 MB of memory (RAM) to install and run. The system will run much better with more RAM, though.

The software installation requires approximately 200 MB of free disk space during the installation, on Windows or UNIX systems.

When the installation completes, the installed software files comprise less than 130 MB. This count is an estimate and might be different on your system.

There is a separate installation kit for the product's documentation files that you can install after you complete the software installation. The documentation files require approximately 60 MB of additional disk space.

# Windowing and Non-windowing Environments for the Installation Kits

WebLogic Commerce Server 3.2 provides a number of installation kits on the BEA Download site:

- `WLCS_320.exe`, the product software kit for supported Windows NT and Windows 2000 systems. This kit uses InstallAnywhere.
- `WLCS_320.bin`, the product software kit for supported UNIX systems that have a windowing environment. This kit uses InstallAnywhere.
- `WLCS_320.zip`, the product software kit for supported UNIX systems that do not have a windowing environment. This kit presents a text-based installation script.
- `WLCS_320_DOC.exe`, the documentation kit for supported Windows NT and Windows 2000 systems. This kit uses InstallAnywhere.
- `WLCS_320_DOC.bin`, the documentation kit for supported UNIX systems. This kit gives you the option of launching a graphical or console-based installation. This kit uses InstallAnywhere. To launch the console version for UNIX systems that do not have a windowing environment, add the parameter `-i console` on the command line. See the next chapter for details.

The `WLCS_320.exe` and `WLCS_320.bin` software kits, and the `WLCS_320_DOC.exe` and `WLCS_320_DOC.bin` documentation kits, use InstallAnywhere and require a windowing environment. In addition, the installation procedures require the Java 2 SDK, version 1.3.0.

## Servers

WebLogic Commerce Server requires the following software products:

- BEA WebLogic Server 5.1, with Service Pack 6 (SP6).

WebLogic Commerce Server is currently certified to work with SP6 of WebLogic Server. If you have already installed WebLogic Server 5.1 but are not yet running SP6, please visit the BEA Download Web page at <http://www.bea.com/download.html>. On the download page for WebLogic Server, select Service Pack 6 from the pull-down menu and download the file.

**Notes:** After the service pack file has been downloaded to the target system, unzip or tar the file to a temporary directory. Read the instructions in the `readme*.*` files and the WebLogic Server Release Notes.

**We recommend that you install the full WebLogic Server service pack. Do not perform a partial SP6 installation of selected files. After the full installation of SP6 for WebLogic Server, there is one additional step that is needed for WebLogic Commerce Server. Copy the `weblogic-tags-510.jar` file from the SP6 kit to the `c:\weblogic\lib` directory.**

- The Java 2 SDK 1.3.0 with the Java HotSpot Server VM.
- A Web browser (Internet Explorer 4.0 and above, or Netscape Communicator 4.5 and above)

## Databases

WebLogic Commerce Server requires a database and a JDBC driver for the database. This release has been certified for Cloudscape 3.5 and Oracle 8i databases. As of this writing:

- NT systems are certified with Oracle 8.1.6 databases and the WebLogic OCI drivers
- Solaris 7 systems are certified with Oracle 8.1.5 databases and the WebLogic OCI drivers.

For the latest details about the supported database version numbers and drivers, see the Supported Platforms section of the Release Notes at <http://edocs.bea.com/wlcs/docs32/relnotes/relnotes.htm#platforms>.

An evaluation version of Cloudscape is distributed with the product as part of the example implementations. By default, the database type used by the sample applications is a Cloudscape database. For information about switching to the use of an Oracle database, see the [Deployment Guide](#).

## Required Order of the Installations

Install the software in the following order:

1. The Java 2 SDK 1.3.0

See the Supported Platforms section of the Release Notes for information about the specific Java 2 SDK versions that are required for each platform.

2. For Windows NT and Windows 2000 systems, the Java HotSpot Server VM. (The Java 2 SDK for Solaris already includes HotSpot.)

For download information, please see <http://java.sun.com/products/hotspot/2.0/download.html>.

3. WebLogic Server 5.1 with SP6

See the *BEA WebLogic Server Installation Guide* at <http://www.weblogic.com/docs51/install/index.html> for complete instructions the WebLogic Server installation procedure.

4. WebLogic Commerce Server 3.2 software kit, as described in this guide.
5. WebLogic Commerce Server 3.2 documentation kit, as described in this guide.

# Where to Find Migration Information

Migration information is available in the “[Migration Guide](#)” in the online documentation.

**Important:** Also see the [Schema Migration Information](#) section of the [Release Notes](#).

# **1** *Preparing to Install*

---

---

# 2 Installing WebLogic Commerce Server

This chapter includes the following sections:

- Before You Begin
- Installing the Software on Windows Systems
- Using WLCS\_320.bin to Install on a UNIX System That Has a windowing Environment
- Using WLCS\_320.zip to Install on a UNIX System That Does Not Have a windowing Environment
- Installing the Separate Documentation Kit
- Uninstalling the Software

**Note:** For information about applying the latest Service Pack of WebLogic Commerce Server and WebLogic Personalization Server 3.2, please see the [Release Notes](#).

In this chapter, the variable `WL_COMMERCE_HOME` is used to represent the WebLogic Commerce Server 3.2 installation directory.

# Before You Begin

Before you start the installation procedure, read the product Release Notes and all of Chapter 1, "Preparing to Install." Also refer to the following checklist:

- Make sure you have already installed the Java 2 SDK 1.3.0 for your target system's platform.
- On Windows NT and Windows 2000 systems, make sure you have already installed the Java HotSpot Server VM for the Java 2 SDK 1.3.0. You can download it from the Sun Microsystems Web site. Although the following URL might change, try <http://java.sun.com/products/hotspot/2.0/download.html>. (The Java 2 SDK for Solaris systems already includes the Java HotSpot Server VM.)

To determine if the Java HotSpot Server VM is installed, please follow these steps:

Open the command window. Navigate to the WLCS install directory (for example, `c:\WebLogicCommerceServer3.2`).

Set the environment by running `bin\win32\set-environment`. Now check the Java HotSpot Server VM installation by entering:

```
%JDK_HOME%\bin\java -server -version
```

You should see the following output:

```
java version "1.3.0"  
Java(TM) 2 Runtime Environment, Standard Edition (build  
1.3.0-C)  
Java HotSpot(TM) Server VM (build 2.0fcs-E, mixed mode)
```

If instead you get an error message, or the last line includes "Client" instead of "Server," reinstall the HotSpot Server VM for the Java 2 SDK v.1.3.0.

- Make sure that you have already installed BEA WebLogic Server 5.1 and its Service Pack 6 (SP6). After SP6 the service pack file has been downloaded to the target system, unzip or tar the file to a temporary directory. Read the instructions in the `readme*. * files` and the WebLogic Server Release Notes. **We recommend that you install the full WebLogic Server service pack. Do not perform a partial SP6 installation of selected files. After the full installation**

of SP6 for WebLogic Server, there is one additional step that is needed for WebLogic Commerce Server. Copy the `weblogic-tags-510.jar` file from the SP6 kit to the `c:\weblogic\lib` directory.

- Check that the disk for your intended target installation directory has at least 200 MB of free space for the software kit, and an additional 60 MB for the separate documentation kit.
- Plan ahead to determine a new target location for the installed WebLogic Commerce Server 3.2 and WebLogic Personalization Server 3.2 software. The 3.2 installation will not affect data from previous versions of the products. However, you must install the 3.2 software in a new directory. Do not install the 3.2 software in a directory that contains prior versions of WebLogic Commerce Server, WebLogic Personalization Server, WebLogic Portal, WebLogic Application Solutions, or BEA JumpStart.

For more information, see the Supported Platforms section of the *Release Notes* at <http://e-docs.bea.com/wlcs/docs32/relnotes/relnotes.htm#platforms>.

## Installing the Software on Windows Systems

This section explains how to install the WebLogic Commerce Server software on a Windows system. For more information about the supported Windows platforms, see the Supported Platforms section of the *Release Notes* at <http://e-docs.bea.com/wlcs/docs32/relnotes/relnotes.htm#platforms>. The installation shown in this section is on a Windows NT 4.0 SP5 system.

**Warning:** If you are re-installing the WebLogic Commerce Server 3.2 software on the target system, make sure you first create backup copies of any files that you customized, such as the `weblogiccommerce.properties` file and `weblogic.properties` file in the `%WL_COMMERCE_HOME%` directory.

1. Start the installation by opening the software installation package for Windows systems, `WLCS_320.exe`.

InstallAnywhere displays its startup screen, and then displays the splash screen for WebLogic Commerce Server and WebLogic Personalization Server. You can

select the language of the button text and other InstallAnywhere instructions on screens displayed during the installation.

Figure 2-1 shows the splash screen.

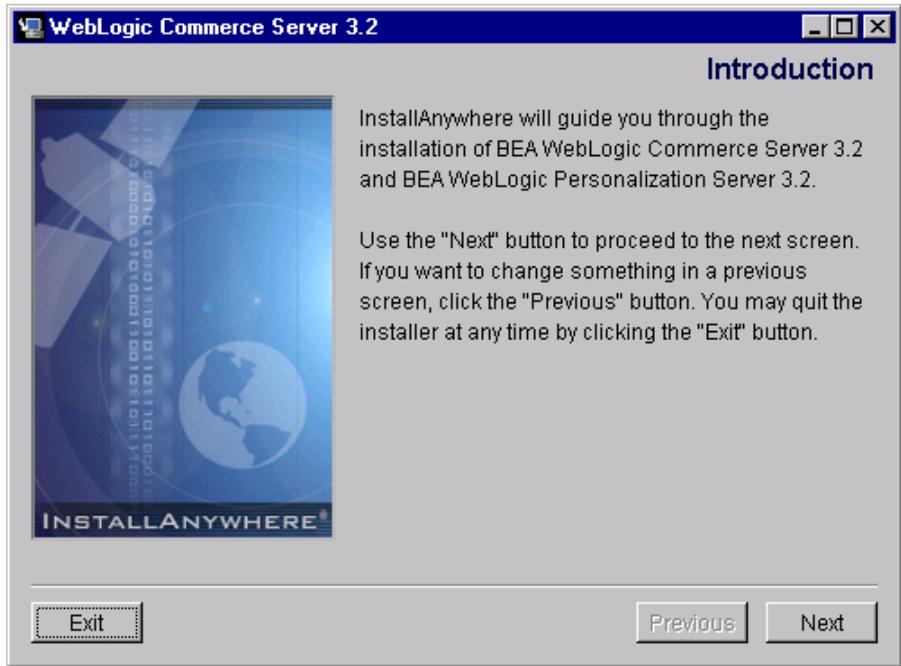

**Figure 2-1 Software Installation Splash Screen**

Select a language for the InstallAnywhere text and click the OK button.

2. InstallAnywhere displays the Welcome screen, as shown in Figure 2-2.

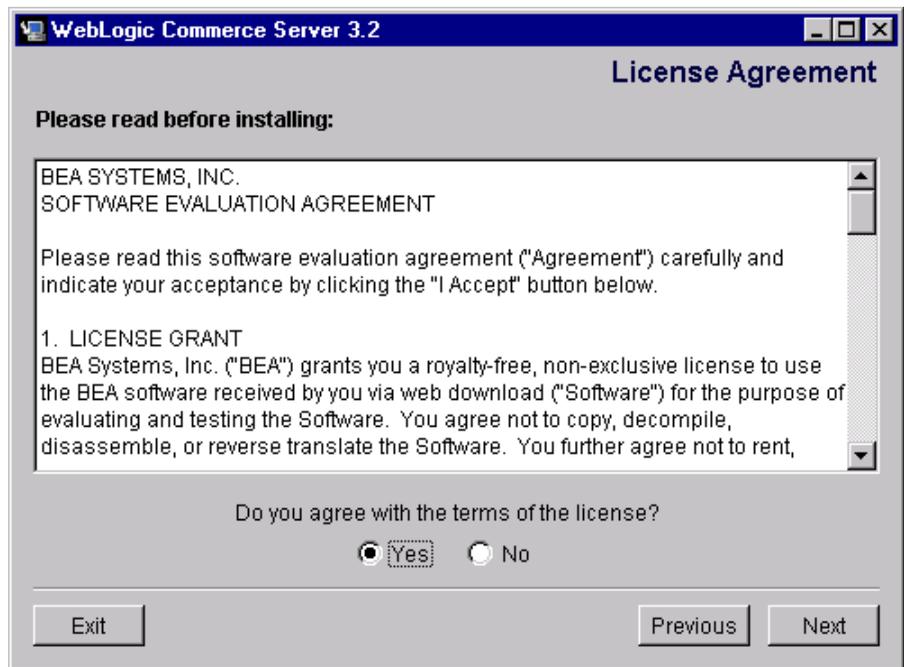

Figure 2-2 Introduction Screen

Click the Next button.

3. InstallAnywhere displays the License Agreement for the WebLogic Commerce Server 3.2 and WebLogic Personalization Server 3.2 software, as shown in Figure 2-3.

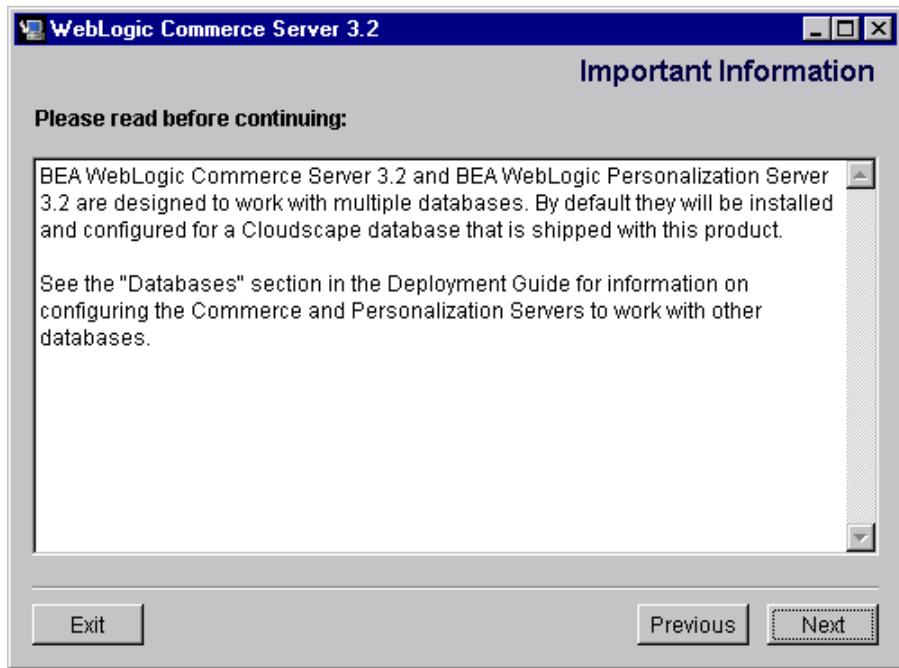

Figure 2-3 License Agreement Screen

Please read the entire license agreement. If you agree, click the Yes radio button and then click the Next button.

4. InstallAnywhere displays important information about the default database configuration. BEA WebLogic Commerce Server and BEA WebLogic Personalization Server are designed to work with multiple databases. By default they are installed and configured for an evaluation Cloudscape database that is shipped with this product. Figure 2-4 shows the screen.

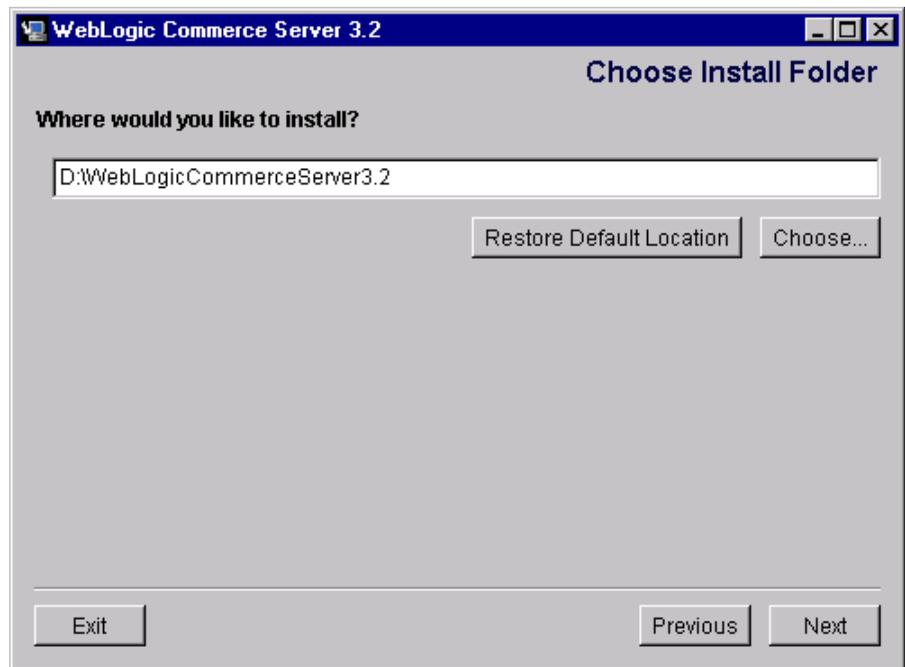

Figure 2-4 Important Information Screen

For information about changing the database type from Cloudscape to Oracle, see the [Deployment Guide](#). To proceed with the installation, click the Next button.

5. On the Choose Install Folder screen, point to the installation directory you want to use. On Windows systems, the default installation directory is `C:\WebLogicCommerceServer3.2`. In Figure 2-5, the installation directory has been changed to `D:\WebLogicCommerceServer3.2`.

Figure 2-5 Choose Install Folder Screen

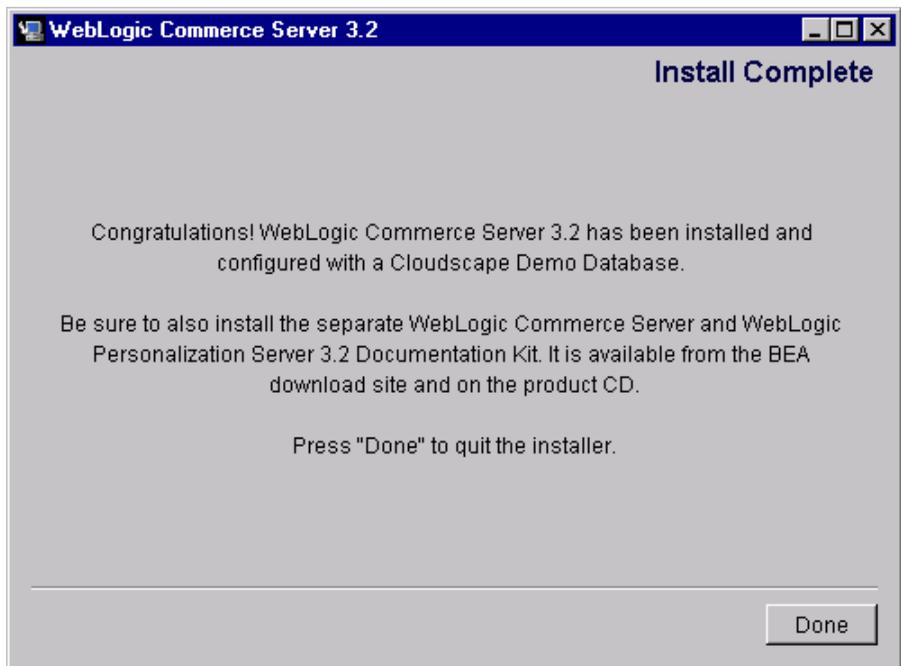

**Note:** The WebLogic Commerce Server 3.2 software installation will not affect data from previous versions of the products. However, you must install the 3.2 software in a new directory. Do not install the 3.2 software in a directory that contains prior versions of WebLogic Commerce Server, WebLogic Personalization Server, WebLogic Portal, WebLogic Application Solutions, or BEA JumpStart.

WebLogic Commerce Server 3.2 needs about 200 MB of disk space to perform the software installation. When the installation completes, the installed files comprise less than 130 MB. This count is an estimate and might be different on your system. The count does not include the size of the product's documentation files. For more information about installing the documentation, see "Installing the Separate Documentation Kit" on page 2-17.

After you select the target installation folder, click the Next button.

6. InstallAnywhere automatically detects your Java 2 SDK (JDK) 1.3.0 installation. If it does not find it, the installer asks you to point to the directory that contains it. If you are prompted, specify the location of the Java 2 SDK 1.3.0 directory; then click the Install button to continue the WebLogic Commerce Server installation.
7. InstallAnywhere automatically detects your WebLogic Server installation directory. If it does not find it, the installer asks you to point to the directory that contains it.
8. InstallAnywhere then transfers the files to your Windows system.
9. After the installation completes, InstallAnywhere displays the Install Complete screen. Figure 2-6 shows the screen.

**Figure 2-6 Install Complete Screen**

Notice the message about installing the separate documentation kit after you complete the software installation. Click the Done button to complete the

software installation. See the section “Installing the Separate Documentation Kit” on page 2-17 for information about installing the documentation files.

### Do Not Forget the License File

After the software installation completes and before you start the server, copy the `WebLogicCommerceLicense.xml` license file you downloaded or purchased to the `%WL_COMMERCE_HOME%\license` directory. For more information, see Chapter 3, “Post-Installation Considerations.”

## Using WLCS\_320.bin to Install on a UNIX System That Has a windowing Environment

This section explains how to install the WLCS and WLPS 3.2 software on a supported UNIX system that has a windowing environment. This section shows the installation using the `WLCS_320.bin` kit.

For installations on UNIX systems that **do not** have a windowing environment, see the section “Using `WLCS_320.zip` to Install on a UNIX System That Does Not Have a windowing Environment” on page 2-13.

For more information about the supported UNIX platform(s), see the Supported Platforms section of the *Release Notes* at <http://e-docs.bea.com/wlcs/docs32/relnotes/relnotes.htm#platforms>. The installation shown in this section is on a Sun Solaris 7 system.

Before you start the installation, note that the installation requires a Java Virtual Machine (JVM) in your path. That is, the `<JDKHome>/bin` directory must be in the path. This requirement should not be confused with the JDK Home that is specified during the installation. On the Choose JDK screen of the installer, be sure to enter the JDK Home directory without the `/bin` directory on the end.

**Warning:** If you are re-installing the WebLogic Commerce Server 3.2 software on the target UNIX system, make sure you first create backup copies of any files that you customized, such as the `weblogiccommerce.properties` file and `weblogic.properties` file in the 3.2 `$WL_COMMERCE_HOME` directory.

The `WLCS_320.bin` installation procedure uses InstallAnywhere and requires a windowing environment. For installations on UNIX systems, invoke the WebLogic Commerce Server 3.2 installation program on a machine that is running a windowing environment. Or run the WebLogic Commerce Server 3.2 installation program on a system that has a windowing environment, and specify a target installation directory on a UNIX workstation that may or may not have the windowing environment.

1. Start the installation by opening the software installation package for UNIX systems, `WLCS_320.bin`. For example:

```
$ sh WLCS_320.bin
```

The installation program finds the Java Virtual Machines (JVMs) that are available to your workstation and prompts you to choose one.

2. Select a JVM to run the InstallAnywhere installation application.
3. InstallAnywhere displays the splash screen for WebLogic Commerce Server and WebLogic Personalization Server. You can select the language of the button text and other InstallAnywhere instructions on screens displayed during the installation. The splash screen is identical to the one shown in Figure 2-1 in the Windows section of this chapter.

Select a language for the InstallAnywhere text and click the OK button.

4. InstallAnywhere displays the Welcome screen. Click the Next button.
5. InstallAnywhere displays the License Agreement for the WebLogic Commerce Server 3.2 and WebLogic Personalization Server 3.2 software. Please read the entire license agreement. If you agree, click the Yes radio button and then click the Next button.
6. InstallAnywhere displays important information about the default database configuration. BEA WebLogic Commerce Server and BEA WebLogic Personalization Server are designed to work with multiple databases. By default they are installed and configured for an evaluation Cloudscape database that is shipped with this product.

For information about changing the database type from Cloudscape to Oracle, see the [Deployment Guide](#). To proceed with the installation, click the Next button.

7. On the Choose Install Folder screen, point to the WebLogic Commerce Server 3.2 installation directory. On UNIX systems, the default installation directory is `/WeblogicCommerceServer3.2`.

**Note:** The WebLogic Commerce Server 3.2 software installation will not affect data from previous versions of the products. However, you must install the 3.2 software in a new directory. Do not install the 3.2 software in a directory that contains prior versions of WebLogic Commerce Server, WebLogic Personalization Server, WebLogic Portal, WebLogic Application Solutions, or BEA JumpStart.

WebLogic Commerce Server 3.2 needs about 200 MB of disk space to perform the software installation. When the installation completes, the installed files comprise less than 130 MB. This count is an estimate and might be different on your system.

The count does not include the size of the product's documentation files, which can be installed after the software installation completes. The documentation files comprise an additional 60 MB of disk space (including all the Javadoc) and are packaged in a separate installation kit, `WLCS_320_DOC.bin`. For more information, see the section "Installing the Separate Documentation Kit" on page 2-17.

After you select the target installation folder, click the Next button.

8. InstallAnywhere prompts you to indicate where you have installed BEA WebLogic Server 5.1 software. After you identify the location of the WebLogic Server 5.1 installation directory, click the Next button.
9. InstallAnywhere prompts you to indicate where you have installed the Java 2 SDK (still commonly known as the JDK), version 1.3.0. After you identify the location of the Java 2 SDK 1.3.0 on the target system, click the Next button.
10. InstallAnywhere displays a progress screen and then an Install Complete screen. On the last screen, notice the message about installing the separate documentation kit after you complete the software installation. Click the Done

button to complete the software installation. See the section “Installing the Separate Documentation Kit” on page 2-17 for information about installing the documentation files.

## Do Not Forget the License File

After the software installation completes and before you start the server, copy the `WebLogicCommerceLicense.xml` license file you downloaded or purchased to the `$WL_COMMERCE_HOME/license` directory. For more information, see Chapter 3, “Post-Installation Considerations.”

# Using WLCS\_320.zip to Install on a UNIX System That Does Not Have a windowing Environment

This section explains how to use the `wlcs_320.zip` kit to install the WLCS and WLPS 3.2 software on a UNIX system that **does not** have a windowing environment.

For installations on UNIX systems that do have a windowing environment, see the section “Using WLCS\_320.bin to Install on a UNIX System That Has a windowing Environment” on page 2-10.

For more information about the supported UNIX platform(s), see the Supported Platforms section of the *Release Notes* at <http://e-docs.bea.com/wlcs/docs32/relnotes/relnotes.htm#platforms>. The installation shown in this section is on a Sun Solaris 7 system.

## 2 Installing WebLogic Commerce Server

---

**Note:** If you are re-installing the WebLogic Commerce Server 3.2 software on the target UNIX system, make sure you first create backup copies of any files that you customized, such as the `weblogiccommerce.properties` file and `weblogic.properties` file in the `WLCS 3.2 $WL_COMMERCE_HOME` directory.

1. Unjar the `WLCS_320.zip` installation file in a directory. This process creates a directory named `WebLogicCommerceServer3.2`. In the following example, assume that `/kits/bea/wlcs` is a directory that contains the downloaded `WLCS_320.zip` file, and `/apps/bea/wlcs` will be the destination directory.

For example:

```
$ mkdir /apps/bea/wlcs
$ cd /apps/bea/wlcs
$ jar xvf /kits/bea/wlcs/WLCS_320.zip
```

2. Change to the `/WebLogicCommerceServer3.2` directory. Make sure that `install.sh` has execute permissions, and then run `install.sh` to install the product. You need to know the location of the JDK and WebLogic Server to complete the installation. For example:

```
$ pwd
apps/bea/wlcs
$ cd WebLogicCommerceServer3.2
$ pwd
/apps/bea/wlcs/WebLogicCommerceServer3.2
$ chmod 755 install.sh
$ ./install.sh
```

**Please enter the directory where JDK is installed (Version 1.3.0 is supported):**

```
/export/jdk/jdk1.3.0
```

**Please enter the directory where WebLogic is installed (Version 5.1.0 is supported):**

```
/opt/weblogic
```

```
Finding Configuration files...
```

```

#### Configuring ./weblogic.properties.install...
#### Configuring ./weblogiccommerce.properties.install...

$ pwd
/apps/bea/wlcs/WebLogicCommerceServer3.2
$ ls
bin                license
classes            pipeline.properties
db                 rulesheets
dbloader.properties  server
deploy             src
dmsBase            StartCommerce.sh
eval               webflow.properties
install.sh         weblogic.properties
lib                weblogiccommerce.properties
```

## 2 Installing WebLogic Commerce Server

---

3. Copy your `WebLogicCommerceLicense.xml` license file to the new `WebLogicCommerceServer3.2/license` directory. For example:

```
$ pwd
```

```
/apps/bea/wlcs/WebLogicCommerceServer3.2
```

```
$ cp /<directory-containing-license-file>/WebLogicCommerceLicense.xml license
```

4. Set execute permissions for the following files:
  - a. All `*.sh` files
  - b. All `*.so` files
  - c. `WebLogicCommerce_Server3.2/UninstallerData/Uninstaller_Haystack`

Example commands to set execute permissions on the specified files:

```
$ pwd
```

```
/apps/bea/wlcs
```

```
$ cd WebLogicCommerceServer3.2
```

```
$ pwd
```

```
/apps/bea/wlcs/WebLogicCommerceServer3.2
```

```
$ find . -name "*.sh" -exec chmod 755 {} \;
```

```
$ find . -name "*.so" -exec chmod 755 {} \;
```

```
$ chmod 755 ./UninstallerData/Uninstaller_Haystack
```

5. To verify that the permissions were set correctly, enter the following commands:

```
find . -name "*.sh" -exec ls -l {} \;
```

```
find . -name "*.so" -exec ls -l {} \;
```

```
$ ls -l ./UninstallerData/Uninstaller_Haystack
```

6. In the `WebLogicCommerceServer3.2` directory, run the `StartCommerce.sh` procedure to start the server.

See also Chapter 3, “Post-Installation Considerations.”

# Installing the Separate Documentation Kit

This section explains how to install the separate documentation kit on supported Windows and UNIX systems.

## Documentation Kit Names and Target Locations

The documentation kit names are:

- `WLCS_320_DOC.exe` for supported Windows systems
- `WLCS_320_DOC.bin` for supported UNIX systems

Both of the documentation kits give you the option of installing either:

- A standalone set of WLCS documentation files, to be placed in a directory of your choice. If you choose the standalone option, the installation does not require that you have already installed the WLCS software kit on the target system.
- Or an integrated set of WLCS documentation files, to be placed in the following location:
  - `%WL_COMMERCE_HOME%\server\public_html\docs\...` (Windows)
  - `$WL_COMMERCE_HOME/server/public_html/docs/...` (UNIX)

If you choose the integrated option, the documentation installation will also copy a `DocumentMapping.properties` file into the WLCS directories, as explained in the section “The DocumentMapping.properties File” on page 2-18.

# Documentation File Size

The documentation installation requires about 70 MB of temporary, free disk space; on Windows, the installation program uses your %TEMP% directory and on UNIX, the installation program uses /tmp. When the installation completes, the documentation files comprise an additional 60 MB of disk space (including all the Javadoc).

If you do not have adequate temporary disk space, InstallAnywhere exits the installation process.

# The DocumentMapping.properties File

In addition to installing the documentation files on an existing software directory, the Integrated documentation installation option installs a `DocumentMapping.properties` file in:

- %WL\_COMMERCE\_HOME%\classes\com\beasys\commerce\util (Windows)
- \$WL\_COMMERCE\_HOME/classes/com/beasys/commerce/util (UNIX)

The property values in `DocumentMapping.properties`, along with a `DocumentMappingSI.properties` file, are used map calls from the product's administration screens to the documentation files. If the documentation has been installed locally, the `DocumentMapping.properties` file is used. Otherwise, the `DocumentMappingSI.properties` file is used to find the corresponding documentation files on the BEA e-docs Web site. The WLCS software kit installs the `DocumentMappingSI.properties` file.

# Documentation Installation on Windows

The steps to install the documentation kit on a supported Windows system are as follows:

1. Start the installation by opening the documentation installation package, `WLCS_320_DOC.exe`. InstallAnywhere displays its initial screen.

2. InstallAnywhere displays a splash screen for the WebLogic Commerce Server and WebLogic Personalization Server documentation installation. You can select the language of the button text and other InstallAnywhere instructions on screens displayed during the installation. Figure 2-7 shows the splash screen.

**Figure 2-7 Documentation Installation Splash Screen**

Select a language for the InstallAnywhere text and click the OK button.

3. InstallAnywhere presents an introduction screen, as shown in Figure 2-8

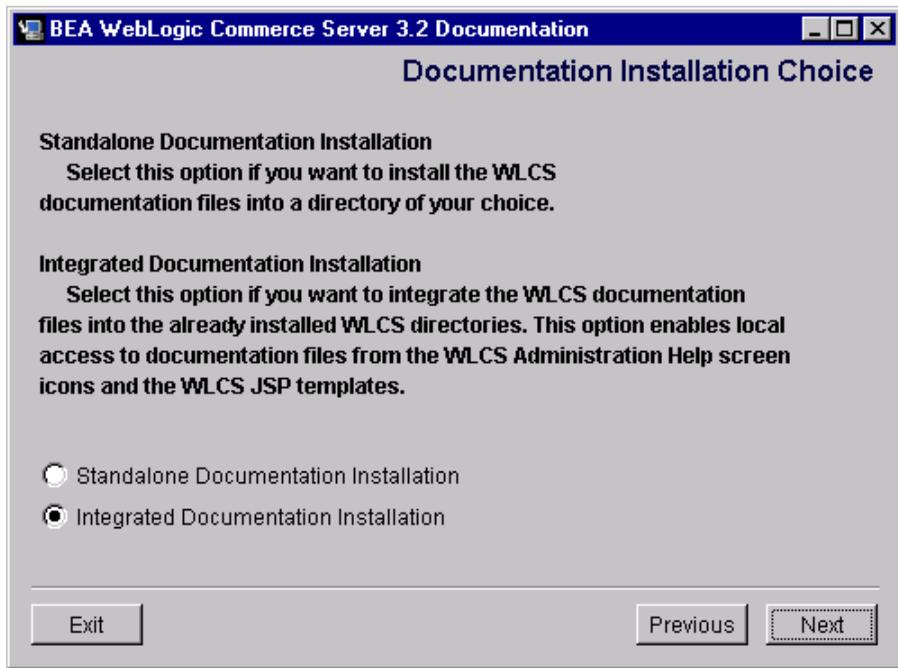

Figure 2-8 Documentation Introduction Screen

To continue the documentation installation, click the Next button.

4. InstallAnywhere then presents two options, as shown in Figure 2-9.

Figure 2-9 Documentation Installation Choice Screen

Select the Standalone Documentation Installation option if you want to install the WLCS documentation files in a directory of your choice. BEA provides this option primarily for customers who want to install the documentation on systems that do not necessarily have the WLCS software installed.

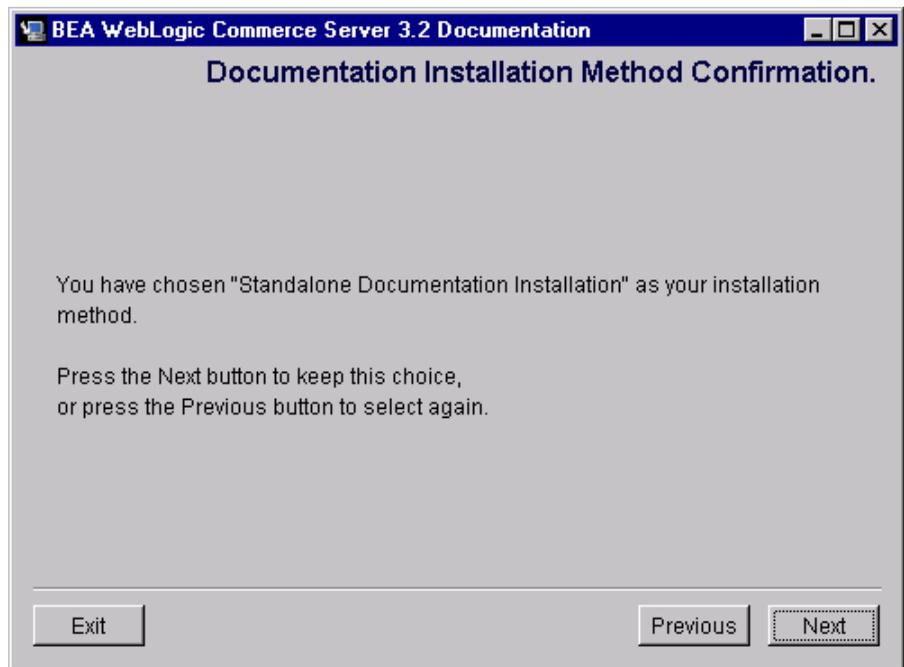

Select the Integrated Documentation Installation option if you want the documentation files to be integrated into the already installed WLCS directories. The files will be placed in:

```
WL_COMMERCE_HOME\server\public_html\docs\...
```

Make your selection in the radio buttons, and then click the Next button.

5. InstallAnywhere displays a confirmation screen about you choice. Figure 2-10 shows the confirmation screen.

**Figure 2-10 Documentation Installation Method Confirmation Screen**

To proceed, click the Next button. Or click the Previous button to return to the selection screen.

6. If you selected the Standalone option, InstallAnywhere will prompt you for a target directory. Specify an existing or new target directory for the documentation files. For standalone installations, click the Install button after you have designated the target directory.
7. InstallAnywhere then copies the documentation files to either the directory you specified (Standalone option), or to  
`WL_COMMERCE_HOME\server\public_html\docs\...` (Integrated option).

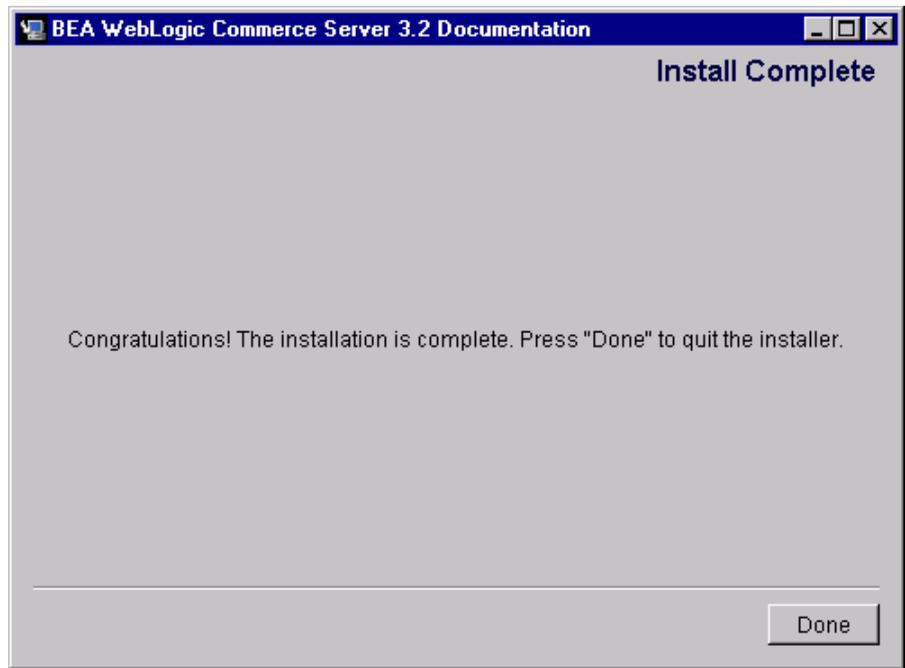

Figure 2-11 shows a sample progress screen.

Figure 2-11 Sample Progress Screen During the Documentation Installation

8. After the documentation installation completes, InstallAnywhere displays the Install Complete screen. Figure 2-12 shows the screen.

**Figure 2-12 Install Complete Screen for the Documentation Kit**

Click the Done button to complete the installation.

After the installation completes, open the index.htm file. Or you can open the documentation home page by selecting the following Start menu option:

Start → Programs → WebLogic Commerce Server 3.2 → Documentation

This Start menu option links to a file-based local URL. That is, the server does not have to be running to view the documentation files.

## Documentation Installation on UNIX

This section explains how to install the documentation files on a supported UNIX system. There are two types of options available with the documentation kit for UNIX systems:

- You can launch a graphical version of the installer if your UNIX system uses a windowing environment, or you can launch a console-based version of the installer by adding the `-i console` parameter to the command line.
- In both the graphical and console installers, you can select a Standalone Documentation Installation or an Integrated Documentation Installation.
  - Select the standalone option if you want to specify a target directory of your choice. If you choose the standalone option, the installation does not require that you have already installed the WLCS software kit on the target system.
  - Select the integrated option if you want the locally installed WLCS documentation files to be placed in:

```
/WebLogicCommerceServer3.2/server/public_html/docs/...
```

If you choose the integrated option, the documentation installation will also copy a `DocumentMapping.properties` file into the WLCS directories, as explained in the section “The DocumentMapping.properties File” on page 2-18.

1. Start the documentation installation by opening the software installation package for UNIX systems. The name of the file on the product CD, and the default name from the BEA download site, is `WLCS_320_DOC.bin`.

To launch the graphical version of the documentation installer, enter:

```
$ sh WLCS_320_DOC.bin
```

To launch the console version of the documentation installer, enter:

```
$ sh WLCS_320_DOC.bin -i console
```

2. The splash screen is displayed.
3. The Introduction screen is displayed.

4. On the next screen, specify whether you want a Standalone installation or Integrated installation.
5. On the next screen, specify either:
  - The `/WebLogicCommerceServer3.2` home directory, if you selected the Integrated option
  - Or an existing or new directory of your choice, if you selected the Standalone option

**Important:** If you selected the Integrated option, make sure you enter the exact capitalization of the WLCS software installation directory name. Notice the capital letters W, L, C, and S in the default name:

`/WebLogicCommerceServer3.2`. If you entered, for example, `/WeblogicCommerceserver3.2`, the installer will install the documentation files in that new directory structure.

6. The installation then copies the documentation files to either the directory you specified (Standalone option), or to `/WebLogicCommerceServer3.2/server/public_html/docs/...` (Integrated option).

After the installation completes, use Netscape to open the `index.htm` file. The server does not have to be running to view the documentation files.

# Uninstalling the Documentation Files

This section explains how to uninstall (remove) the WebLogic Commerce Server 3.2 and WebLogic Personalization Server 3.2 documentation files.

If you installed the documentation files and selected the Integrated option, you may want to uninstall the documentation files before you uninstall the product software files. Because each uninstaller program only knows about the files that it placed on the system, an uninstall of the software files first would leave the documentation files in the `WL_COMMERCE_HOME\server\public_html\docs\...` directory.

The WebLogic Commerce Server documentation kit on the BEA Download Web site may be updated periodically between product releases to contain new or corrected descriptions. Before you install an updated documentation kit, please uninstall the current set of WebLogic Commerce Server documentation files from the release's directory structure. Doing so will ensure that obsolete files are no longer found in the directories.

## Uninstalling the Documentation on Windows Systems

The steps to uninstall (remove) the WebLogic Commerce Server and WebLogic Personalization Server documentation files on Windows systems are as follows:

1. Select the following option on the Start menu:

Start→Programs→WebLogic Commerce Server 3.2→Uninstall  
Commerce Server Documentation

2. Figure 2-14 shows the first documentation uninstall screen:

Figure 2-13 First Documentation Uninstall Screen

Click the Uninstall button to start the removal of WebLogic Commerce Server and WebLogic Personalization Server documentation files from your system.

3. The InstallAnywhere Uninstaller displays a progress screen.
4. When the uninstall operation completes, the InstallAnywhere Uninstaller program displays a screen that details which folders could not be removed. Not removing certain directories or files is intentional; InstallAnywhere will not remove any directories that contain files that you modified or added to the `WL_COMMERCE_HOME` directories.

After the uninstall, check any remaining files in the `WL_COMMERCE_HOME` directory structure and decide whether you need to set those files aside for subsequent use.

## Uninstalling the Documentation on UNIX Systems

Follow these steps to uninstall the documentation files on UNIX systems.

1. In the directory that contains the documentation files, navigate to the `UninstallerDataDocs` subdirectory and then run `Uninstall_WLCS_320_DOC`.
2. The InstallAnywhere Uninstaller program displays an informational screen.
3. The InstallAnywhere Uninstaller displays a progress screen.

When the uninstall operation completes, the InstallAnywhere Uninstaller program displays a screen that details which folders could not be removed. Not removing certain directories or files is intentional; InstallAnywhere will not remove any directories that contain files that you modified or added to the `WL_COMMERCE_HOME` directories.

## Uninstalling the Software

This section explains how to uninstall (remove) the WebLogic Commerce Server 3.2 and WebLogic Personalization Server 3.2 software that was installed previously with the `WLCS_320.exe` or `WLCS_320.bin` procedures.

**Note:** This section does not apply if you used the `WLCS_320.zip` install script, which is for supported UNIX systems that do not have a windowing environment.

## Uninstalling the Software on Windows Systems

The steps to uninstall (remove) the WebLogic Commerce Server and WebLogic Personalization Server software on Windows systems are as follows:

1. Shut down the server, if it is running.

2. Create a backup copy of any files you modified in the `WL_COMMERCE_HOME/...` directory structure. The InstallAnywhere Uninstaller program should leave those files on your system after the uninstall; thus, the backup copy is just in case any unexpected errors occur.
3. Select the following option on the Start menu:

Start→Programs→WebLogic Commerce Server 3.2→Uninstall  
Commerce Server

4. Figure 2-14 shows the first uninstall screen:

**Figure 2-14 First Uninstall Screen on Windows**

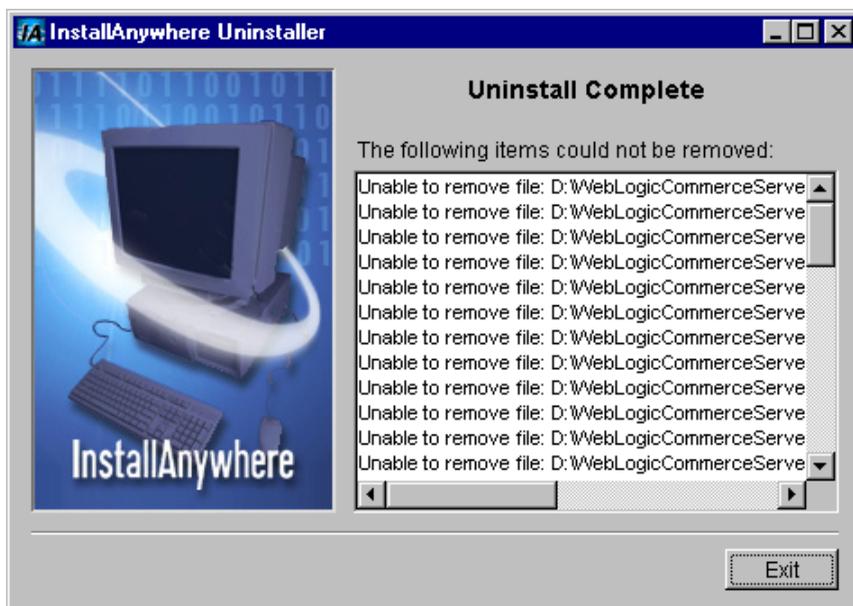

Click the Uninstall button to start the removal of WebLogic Commerce Server and WebLogic Personalization Server files from your system. (InstallAnywhere usually has a delay enabling the display of its Uninstall button as it gathers information.)

5. The InstallAnywhere Uninstaller displays a progress screen, as shown in Figure 2-15.

**Figure 2-15 Progress Screen During the Uninstall**

6. When the uninstall operation completes, the InstallAnywhere Uninstaller program displays a screen that details which folders could not be removed. Not removing certain directories or files is intentional; InstallAnywhere will not remove any directories that contain files that you modified or added to the `WL_COMMERCE_HOME` directories. Figure 2-16 shows a sample screen:

Figure 2-16 Sample Uninstall Results Screen

Click the Exit button.

After the uninstall, check any remaining files in the `WL_COMMERCE_HOME` directory structure and decide whether you need to set those files aside for subsequent use. If desired, remove the `WebLogicCommerceServer3.2` folder from the directory structure.

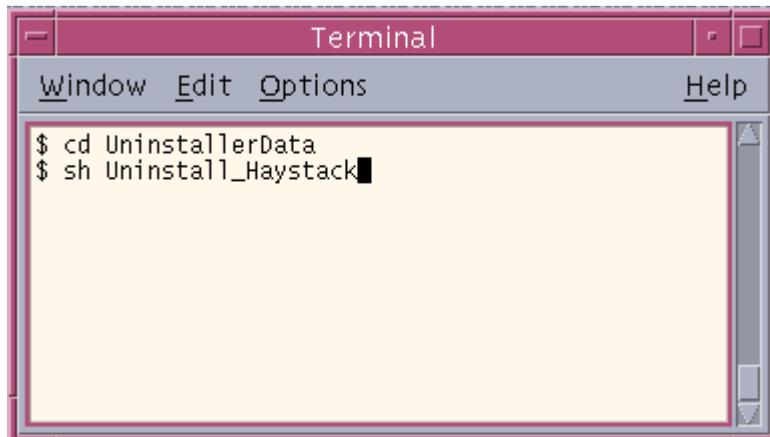

## Uninstalling the Software on UNIX Systems

The steps to uninstall the WebLogic Commerce Server software on UNIX systems is similar to the steps on Windows systems.

**Note:** This section does not apply if you used the `wlcs_320.zip` install script, which is for supported UNIX systems that do not have a windowing environment.

You start by going to the `UninstallerData` directory, and then run the script `Uninstall_Haystack`. Figure 2-17 shows a sample screen.

**Figure 2-17** Running the Uninstall Program on UNIX

1. The Uninstall program displays an informational screen.
2. The InstallAnywhere Uninstaller displays a progress screen.
3. When the uninstall operation completes, the InstallAnywhere Uninstaller program displays a screen that details which folders could not be removed. Not removing certain directories or files is intentional; InstallAnywhere will not remove any directories that contain files that you modified or added to the WL\_COMMERCE\_HOME directories.

---

# 3 Post-Installation Considerations

After you install the WLCS software, the product uses a default configuration that includes the use of a Cloudscape database and sample data. When you need to use a database other than Cloudscape, and when you need to adjust configuration values for resources such as connection pools, servlets, and security parameters, read the new [Deployment Guide](#) in the online WLCS documentation. The Deployment Guide explains how to move beyond the initially installed WLCS configuration.

This chapter contains the following post-installation considerations:

- Licensing WebLogic Commerce Server
- Verifying the Software Installation
- Using the Backup Copy of the Database
- Recreating the Database
- See the Deployment Guide!

## Licensing WebLogic Commerce Server

After you install the product software and before you start the server for the first time, you must copy the `WebLogicCommerceLicense.xml` license file to the following directory, where `WL_COMMERCE_HOME` is the directory in which you installed the WebLogic Commerce Server software:

- `%WL_COMMERCE_HOME%\license` (Windows)
- `$WL_COMMERCE_HOME/license` (UNIX)

When you register to download WebLogic Commerce Server on the BEA download site, you should also download a current evaluation license. If you received the product on a CD, you will receive a license file via e-mail to the e-mail account specified on the purchase order.

**Note:** If you need a new evaluation license, revisit <http://commerce.bea.com>, go through the download process, and download only the evaluation license.

## License Types

WebLogic Commerce Server and WebLogic Personalization Server share a common installation procedure. After the installation completes and the server is started, the license file that you purchased is checked at run-time and determines which features you can use. The type of licenses are:

- WebLogic Commerce Server with WebLogic Personalization Server license, which enables you to use all features.
- WebLogic Personalization Server only license, which enables you to use the portal and personalization features.
- 30-day evaluation license from the BEA download site.

If you purchased the WebLogic Personalization Server Only license, attempts to use WebLogic Commerce Server features will result in:

- An appropriately adjusted display of the administration options, with the WebLogic Commerce Server Catalog Management, Order Management, and Payment Management options omitted.
- Or an error on the browser session if you attempt to run the WLCS Webapp. The following error appears in the WebLogic Server console window at run-time if you try to start the WebLogic Commerce Server WLCS Web Application:

```
<T3Services> COMMERCE_SERVER_FRAMEWORK,LOG_FATAL,  
"BEA WebLogic Commerce Server license  
exception.com.beasys.commerce.licensing.  
LicenseException: A License for BEA product <BEA WebLogic Commerce  
Server> has NOT been found."
```

## Verifying the Software Installation

Follow these steps to verify that the software was properly installed.

1. Change to the installation directory and start WebLogic Commerce Server by running `StartCommerce.bat` (`StartCommerce.sh` for UNIX). The default installation path is `c:\WeblogicCommerceServer3.2\StartCommerce.bat` or `/WeblogicCommerceServer3.2/StartCommerce.sh`.

On Windows systems, another way to start the server is to use the Start menu. For example:

Start→Programs→WebLogic Commerce Server 3.2→Start Commerce Server  
WebLogic Commerce Server opens a console window.

2. Review the output in the console window while the server initializes.

By default, WebLogic Commerce Server is configured to use a Cloudscape database that is already built and loaded with sample data. If you configure the server to use an Oracle database or recreate a database, the console output includes a prompt for creating credit card encryption/decryption keys. For

### 3 Post-Installation Considerations

---

information about this prompt, see “The Credit Card Encryption/Decryption Prompt” on page 3-6.

When the server completes its startup process, it displays the following message in the console output:

```
date stamp:<I> <WebLogicServer> WebLogic Server started
```

For example:

```
Fri Jan 12 11:32:01 EDT 2001:<I> <WebLogicServer> WebLogic  
Server started
```

**Note:** As noted in “Required Order of the Installations” on page 1-6, you must download and install Java HotSpot Server VM on Windows NT and Windows 2000 systems before starting the server. The following is a sample error message displayed in the console window during the attempted server startup, if you have not installed the HotSpot Server VM for the Java 2 SDK. The server will not start without HotSpot.

(On Solaris systems, HotSpot is already included in the Java 2 SDK.)

To determine if the Java HotSpot Server VM is installed on Windows NT or Windows 2000, please follow these steps:

Open the command window. Navigate to the WLCS install directory (for example, `c:\WebLogicCommerceServer3.2`).

Set the environment by running `bin\win32\set-environment`. Now check the Java HotSpot Server VM installation by entering:

```
%JDK_HOME%\bin\java -server -version
```

You should see the following output:

```
java version "1.3.0"  
Java(TM) 2 Runtime Environment, Standard Edition (build  
1.3.0-C)  
Java HotSpot(TM) Server VM (build 2.0fcs-E, mixed mode)
```

If instead you get an error message, or the last line includes "Client" instead of "Server," reinstall the HotSpot Server VM for the Java 2 SDK v.1.3.0.

**Note:** If you have problems starting the server, make sure that `WL_COMMERCE_HOME` is set to the directory that contains the installed WLCS software. Also ensure the `DB_CLASSPATH` property points to your database drivers and the `JDK_HOME` points to your JDK. All other settings should work as shipped. For details, see the [Deployment Guide](#), which describes how the variables should be defined.

- Using a browser, try the example applications to make sure the server is working correctly. The example applications use the Cloudscape database and reference implementation DMS that ship with the system; therefore, you should not have to make any configuration changes to test the system. All you need to do is point your browser to the correct URL listed for each application below.

**Note:** Each page loads slowly the first time you access it because the Java compiler has to compile the page source code. Subsequent loads and refreshes of the page go much faster than the initial load.

The examples are deployed as Web applications, sometimes referred to as “Webapps.” In the `WL_COMMERCE_HOME/weblogic.properties` file, the following properties give a name to the Webapps:

```
# Defines the example portal WAR deployment.
weblogic.httpd.webApp.portal=D:/WebLogicCommerceServer3.2/server/
webapps/examples/portal/portal.war

# Defines the wlcs Web Application.
weblogic.httpd.webApp.wlcs=D:/WebLogicCommerceServer3.2/server/
webapps/wlcs/
```

With the server running, the format of the URLs on the local machine are as follows:

```
http://localhost:7501/portal
http://localhost:7501/wlcs
```

The WLCS Webapp includes a set of JSP templates and associated files that you can customize to match the branding and business logic requirements of your site. The JSPs present an electronic store catalog, order processing features, and user registration features. You can start your exploration of this application by reading the [Tour of the JSP Templates](#).

The Acme Portal Webapp is included as a simple example of the WebLogic Personalization Server features. A tour document walks you through the steps required to use personalization services provided by the WebLogic Personalization Server. The tour builds upon the Acme Demo example portal

that ships with the product. To start the tour, see the [WebLogic Personalization Server Tour](#).

4. Using a browser, start the Administration tool. WebLogic Commerce Server and WebLogic Personalization Server share a common, browser-based administration tool. On Windows systems, you can access it when the server is running by selecting **Start** → **Programs** → **WebLogic Commerce Server 3.2** → **Administration Tools (Server must be running)** from the Start menu. Or you can start the administration tool by opening the following URL in your browser:

```
http://<wl-host>:7501/tools
```

When you attempt to open this Web application, you are prompted for a user name and password. The new default login for the administration tool is as follows:

<b>User Name</b>	administrator
<b>Password</b>	password

Do not confuse this password with the administrator password you may have set for the WebLogic Server itself.

## The Credit Card Encryption/Decryption Prompt

After you configure WebLogic Commerce Server to use an Oracle database or recreate a database, the next time you start the server, the console output displays the following prompt:

```
#####
```

```
Credit card encryption/decryption keys were not found.
```

```
Should new keys be created?
```

```
WARNING: DATA ENCRYPTED WITH ANY PREVIOUS KEY WILL BE LOST.  
IF YOU THINK KEYS ARE PRESENT IN THE DATABASE STOP  
THE SERVER (USING CTRL-C) AND VERIFY THE DATABASE
```

```
USING THE CONFIGURATION INFORMATION SPECIFIED IN  
THE "Properties required for the Security Service"  
SECTION OF THE WEBLOGICCOMMERCE.PROPERTIES FILE.
```

```
#####
```

```
If yes enter 'y' or <CTRL-C> to stop the server
```

If your database contains no customer profile data, enter `y`. WebLogic Commerce Server generates a key for you. For more information about credit card encryption/decryption, see “[Credit Card Security Service](#)” in *Order Processing Package*.

If your database does contain customer profile data, enter `CTRL-C`, and contact Customer Support. For information on contacting Customer Support, see “Contacting BEA Customer Support” in the *Release Notes*.

## Using the Backup Copy of the Database

If the Cloudscape version of the Commerce database becomes corrupted, you can use the backup database copy that was created for you. The backup is located in the following directory:

```
WL_COMMERCE_HOME/db/data/CommerceBackup (UNIX)
```

```
WL_COMMERCE_HOME\db\data\CommerceBackup (Windows)
```

The backup Cloudscape database contains the initial set of sample data that was loaded when you either:

- Installed WebLogic Commerce Server
- Or ran the sample Cloudscape database creation script

Using the backup copy of the database is simply a convenience feature and saves you the step of recreating the database by running the `create-all-cloudscape.bat` (Windows) or `create-all-cloudscape.sh` (UNIX) script.

## Recreating the Database

This section explains how to recreate the sample Cloudscape database or Oracle database.

### Recreating the Cloudscape Database

**Note:** If you recreate a database, refer to “The Credit Card Encryption/Decryption Prompt” on page 3-6.

You might need to recreate the default Cloudscape database if your Cloudscape database becomes corrupted or to reset the data in the tables. To recreate the database, run `create-all-cloudscape.bat` (Windows) or `create-all-cloudscape.sh` (UNIX) in the `WL_COMMERCE_HOME/db/cloudscape` directory.

### Recreating the Oracle Database

**Note:** If you recreate a database, refer to the section “The Credit Card Encryption/Decryption Prompt” on page 3-6.

You might need to recreate the Oracle database if your Oracle database becomes corrupted or to reset the data in the tables. To recreate the database, run `create-all-oracle.sql` in the `WL_COMMERCE_HOME\db\oracle` directory.

In order to run the example portal, the final step when you create the database is to run `loadrules.bat` (found in the `WL_COMMERCE_HOME\bin` folder) while the WLCS server is running.

# See the Deployment Guide!

As noted previously, when you need to use a database other than Cloudscape, and when you need to adjust configuration values for resources such as connection pools, servlets, and security parameters, read the new [Deployment Guide](#) in the online WLCS documentation. It explains how to move beyond the initially installed WLCS configuration.

### **3** *Post-Installation Considerations*

---
