Cause: An attempt was made to create a default layout with a layout style that does not match the data model.

Action: Either change the data model to match the selected layout style or select a different layout style to match the data model. For more information, see the Oracle Reports online help.

Level: 1

Type: ERROR

Impact: Data

REP-01101: Group {0} has an invalid repeat direction.

Cause: An attempt was made to create a default layout, but the selected layout style requires a different repeat direction for one of the groups. Some layout styles place restrictions on the repeat directions that can be selected for groups.

Action: Either change the repeat direction to meet the layout style requirements or select a different layout style.

Level: 1

Type: ERROR

Impact: Other

REP-01102: The default layout cannot fit onto page of size {0}.

Cause: Oracle Reports Builder tried to create the default layout selected but could not fit the entire layout on the page because the page is not wide enough.

Action: If possible, increase the Page Width on the Report Property Inspector or rearrange objects such that the layout will fit on the page. Otherwise, make the report multiple pages wide.

Level: 1

Type: ERROR

Impact: Other

REP-01103: No column is selected in group {0}.

Cause: While trying to create a default layout, a column was not selected for a selected group. Consequently, Oracle Reports Builder cannot build a default layout because one or more of the dimensions of the layout have no value.

Action: In the Report Wizard, select at least one column from each selected group.

Level: 1

Impact: Other

REP-01106: no field is generated for column {0}.

Cause: When the default layout was created, a field was not generated for the column in the message. The most likely cause is that a summary was not placed in the data model correctly. For example, the source of a summary column may have been specified to be a column in a group above the summary's group, which is not allowed.

Action: Debug the data model and redefault the layout.

Level: 1

Type: ERROR

Impact: Other

REP-01107: The across or down group in cross product group {0} is missing.

Cause: An attempt was made to create a default layout by selecting a Style of Matrix in the Report Wizard, but all of the dimension groups of the cross product group were assigned repeat directions of Down or Across. Each repeat direction should be assigned to the dimension groups in the cross product.

Action: Redisplay the Report Wizard and reassign the repeat directions of the dimension groups, making sure that each direction is assigned among the groups.

Level: 1

Type: ERROR

Impact: Other

REP-01108: The default layout cannot fit even in region extending to page boundaries.

Cause: An attempt was made to create a default layout that would be too large to fit within the defined height and width of a report page.

Action: Go back to the Report Wizard and reduce the values of default settings (for example, shorten some field widths). Alternatively, increase the size of a report page using the Report Property Inspector. Then re-create the default layout.

Level: 1

Type: ERROR

Impact: Other

REP-01110: The matrix across group in cross product group {0} is missing.

Cause: An attempt was made to create a default layout by selecting a Style of Matrix or Matrix with Group in the Report Wizard, but all of the dimension groups of the cross product group were assigned repeat directions of Down.

Level: 1

Type: ERROR

Impact: Other

REP-01111: The matrix down group in cross product group {0} is missing.

Cause: An attempt was made to create a default layout by selecting a Style of Matrix or Matrix with Group in the Report Wizard, but all of the dimension groups of the cross product group were assigned repeat directions of Across.

Action: Change the repeat direction of one of the cross product group to Matrix.

Level: 1

Type: ERROR

Impact: Other

REP-01113: No groups or reports level columns have been selected.

Cause: While trying to create a default layout, no groups or report level columns were selected. Consequently, Oracle Reports Builder cannot build a default layout because one or more of the dimensions of the layout have no value.

Level: 1

Type: ERROR

Impact: Other

REP-01115: The full template layout cannot be shown because it does not fit onto the page.

Cause: The template layout could not be shown properly because it is too large to fit within the defined height and width of the report page. This does not mean that the template is invalid in any way.

Action: To show the template layout, temporarily enlarge the width and height of the report page. To do this, select the template in the Navigator and open the Property Inspector. Increase the Width and Height properties under the Report heading. Do not forget to reset the Width and Height properties before saving the template.

REP-01205: There is a loop in the positional dependency tree.

Cause: Explicit anchors were created such that an object is indirectly anchored to itself. For example, if object A was anchored to object B, object B to object C, and object C to object A, this error displays.

Action: Remove at least one of the anchors that caused the loop.

Level: 1

Type: ERROR

Impact: Other

Action: Delete the anchor.

Level: 1

Type: ERROR

Impact: Other

REP-01211: Object {0} is larger than its enclosing object {1}.

Cause: An object is larger than its enclosing object. The most likely cause is that an attempt was made to enclose a large object within a small, fixed frame.

Action: Identify the object and the enclosing object and adjust their relative sizes and positions until the proper enclosure is achieved.

Level: 1

Type: ERROR

Impact: Other

REP-01212: Object {0} is not fully enclosed by its enclosing object {1}.

Cause: The possible causes of this error include the following: Case 1: An object is not fully enclosed by the page. That is, the object extends beyond the page boundary. Case 2: A repeating frame that forms a matrix is one or more layers above a repeating frame that it contains. In a matrix layout, repeating frames must be below repeating frames that they contain.

Action: Take the following actions to correct this error: If Case 1: Move or resize the object so that it does not extend outside the page boundary. Alternatively, increase the page size in the Report Property Inspector. If Case 2: Use Arrange>Send to Back, Arrange>Bring to Front, Arrange>Move Backward, and Arrange>Move Forward to arrange repeating frames such that, in terms of layers, the following is true: repeating frames are below repeating frames that they contain and down repeating frames are below across repeating frames.

Level: 1

Impact: Other

REP-01307: Summary column {0} has an invalid product order.

Cause: The possible causes of this error include: Case 1: A summary exists that is not a running summary (that is, its Reset At is not Report), but its Product Order is not a subset of the source column's product order. The source column of the summary must be at least as frequent as the summary, which means that the summary's Product Order should be some subset of the source column's Product Order. Case 2: A running summary (that is, its Reset At is Report) exists with a Product Order that is not a prefix of the source column's Product Order. For example, if the source column's Product Order were A,B,C, then the summary column's Product Order would have to be either A (by itself) or A,B. The summary's Product Order could not be B,A.

Action: Take the following actions to correct this error: If Case 1: Change the Product Order of the summary such that it is a subset of its source column's Product Order. If Case 2: Change the Product Order of the summary such that it is a prefix of the Source column's Product Order.

REP-01309: Report level summary {0} cannot be a percent of total.

Cause: A summary was created at the report-level (that is, a summary outside of all the groups in the data model) with a Function of % of Total. This Function makes no sense for a report-level summary because it will always be 100%.

Action: Delete the summary or move it into a group where it will make sense.

Level: 1

REP-01310: Boilerplate {0} references &{1} which is not a field.

Cause: A boilerplate object has a reference to a field that does not exist. It could be that the field being referenced was deleted or renamed and so this reference in the boilerplate object is now invalid.

Action: Depending on circumstances, remove the reference, replace it with a reference to another field, or create the field that it references.

Type: ERROR

Impact: Other

REP-01311: Object {0} with page-dependent references have been changed to fixed sizing.

Cause: A field or boilerplate object has a reference to a page calculation or a total number of pages variable. (This is known as a forward reference.) Such layout objects must be fixed in size both horizontally and vertically.

REP-01319: Implicit anchoring algorithm cannot uniquely identify the anchoring object {0}. Arbitrarily choosing {1}.

Cause: The specified object (object1) is in the "push path" of two objects and it is equidistant from both objects. As a result, Oracle Reports Builder cannot use its normal criteria (shortest distance) to determine the implicit anchor. In the absence of its normal criteria, Oracle Reports Builder randomly creates an implicit anchor to the specified object (object2). Note that the implicit anchor may vary between runs of the report.

Action: To avoid the random creation of an implicit anchor, explicitly anchor the specified object (object1) to another object.

REP-01340: Passed-in columns do not match report definition {0}.

Cause: Another component (for example, Oracle Forms) passed a query to Oracle Reports Builder and there is a mismatch between the columns passed and the columns expected by Oracle Reports Builder. Possible causes of this error include: Case 1: Oracle Reports Builder was expecting more or fewer columns than the number that was actually passed by the calling application.
