Domain Template Reference for Oracle Identity and Access Management

11g Release 2 (11.1.2)

E35961-01

July 2012

This chapter describes the WebLogic domain and extension templates that are used to configure WebLogic domains for various Fusion Middleware product installations. For most of these templates, you can create or extend domains by selecting the template on the Select Domain Source or Select Extension Source screens of the Oracle Fusion Middleware Configuration Wizard. You can also use the WebLogic Scripting Tool (WLST) in offline mode to create or extend domains using these templates.

This section describes the following Oracle Identity Management (IDM) templates:

Note: The Oracle IDM Common template, which is listed as a dependency for other IDM templates, is an internal template. It is automatically called when you select other IDM templates in Configuration Wizard, or specify an IDM template in a WLST script. Therefore, it is not displayed as a selectable component in Configuration Wizard, and you do not have to specify it in your WLST scripts.
