

Oracle® Fusion Middleware
Reference for Oracle Identity Management
11g Release 1 (11.1.1)
E10035-06

February 2013

Primary Author: John Spencer

Contributing Author: Ellen Desmond

Contributors: Olfat Aly, Krishna Chander, Giriraj Chauhan, Margaret Chou, Quan Dinh, Maud Jamati-Bartlett, Vinoth Janakiraman, Buddhika Kottahachchi, Pierre-Ephrem Madiot, Vishal Mishra, Venkat Medam, Vishal Parashar, Karthi Purushothaman, Lakshmi Ramadoss, Loganathan Ramasamy, Ramaprakash Sathyanarayan, Daniel Shih, Olaf Stullich, Vidhya Subramanian, Dipankar Thakuria, Arun Theebaprakasam, Vinay Thulasidas, Satishkumar Venkatasamy, Mark Wilcox, Frances Wu

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate failsafe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information on content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services.

Part I Command-Line Tool Reference

1 Command-Line Tools Overview

1.1 Using Passwords with Command-Line Tools	1-1
1.2 Configuring Your Environment	1-2
1.3 Oracle Identity Management Command-Line Tool Categories.....	1-2

2 Oracle Internet Directory Administration Tools

2.1 oidpasswd	2-1
2.1.1 Syntax for oidpasswd.....	2-2
2.1.2 Arguments for oidpasswd.....	2-2
2.1.3 Tasks and Examples for oidpasswd.....	2-2
2.1.3.1 Changing the Password to the Oracle Internet Directory Database	2-3
2.1.3.2 Creating Wallets for Directory Database and Replication Server Passwords	2-3
2.1.3.3 Unlocking the Superuser Account	2-3
2.1.3.4 Resetting the Superuser Password.....	2-4
2.1.3.5 Managing Superuser Access Control Points	2-4
2.1.4 Related Command-Line Tools for oidpasswd.....	2-4
2.2 oidctl	2-5
2.2.1 Syntax for oidctl	2-5
2.2.2 Arguments for oidctl	2-5
2.2.2.1 OIDLDAPD Flags	2-6
2.2.2.2 OIDREPLD Flags	2-7
2.2.3 Tasks and Examples for oidctl	2-7
2.2.3.1 Creating an Oracle Internet Directory Instance in an Existing Component	2-8
2.2.3.2 Deleting an Oracle Internet Directory Instance in a Component	2-8
2.2.3.3 Starting an Oracle Internet Directory Server Instance	2-8
2.2.3.4 Stopping an Oracle Internet Directory Server Instance	2-8
2.2.3.5 Restarting an Oracle Internet Directory Server Instance	2-8

2.2.3.6	Starting a Directory Replication Server Instance	2-9
2.2.3.7	Stopping a Directory Replication Server Instance	2-9
2.2.3.8	Starting and Stopping a Server Instance on a Virtual Host or Cluster Node	2-9
2.2.3.9	Reporting the Status of Each Server.....	2-9
2.2.3.10	Reporting Diagnostics.....	2-10
2.2.3.11	Reporting Server Manageability Information	2-10
2.2.4	Related Command-Line Tools for oidctl	2-11
2.3	oiddiag.....	2-11
2.3.1	Syntax for oiddiag.....	2-12
2.3.2	Arguments for oiddiag	2-12
2.3.3	Tasks and Examples for oiddiag	2-13
2.3.3.1	Collecting All Diagnostic Information	2-13
2.3.3.2	Collecting Selected Diagnostic Information	2-13
2.3.3.3	Collecting Stack Trace Information.....	2-14
2.4	oidmon.....	2-14
2.4.1	Syntax for oidmon	2-14
2.4.2	Arguments for oidmon	2-14
2.4.3	Tasks and Examples for oidmon	2-14
2.4.3.1	Starting Oracle Internet Directory Monitor	2-15
2.4.3.2	Starting Oracle Internet Directory Monitor on a Virtual Host or Cluster Node	2-15
2.4.3.3	Stopping Oracle Internet Directory Monitor	2-15
2.4.4	Related Command-Line Tools for oidmon	2-15
2.5	opmnctl.....	2-15
2.5.1	Syntax for opmnctl	2-15
2.5.2	Arguments for opmnctl	2-16
2.5.2.1	Commands.....	2-16
2.5.2.2	WebLogic Administration Server Properties	2-17
2.5.2.3	Instance Properties	2-17
2.5.2.4	OPMN Configuration Properties	2-17
2.5.2.5	Component Properties for Oracle Internet Directory	2-18
2.5.2.6	Oracle Internet Directory Component Configuration Properties	2-18
2.5.3	Tasks and Examples for opmnctl	2-19
2.5.3.1	Creating an Oracle Internet Directory Component.....	2-19
2.5.3.2	Registering an Oracle Instance	2-20
2.5.3.3	Unregistering an Oracle Instance	2-20
2.5.3.4	Updating the Component Registration of an Oracle Instance	2-20
2.5.3.5	Deleting an Oracle Internet Directory Component	2-20
2.5.3.6	Stopping All Oracle Internet Directory Server Components	2-21
2.5.3.7	Starting All Oracle Internet Directory Server Components	2-21
2.5.3.8	Stopping a Specific Oracle Internet Directory Server Component	2-21
2.5.3.9	Starting a Specific Oracle Internet Directory Server Component	2-21
2.5.3.10	Getting Status Information.....	2-21
2.5.4	Related Command-Line Tools for opmnctl	2-22
2.6	oidstats.sql.....	2-22
2.6.1	Syntax for oidstats.sql	2-22
2.6.2	Arguments for oidstats.sql	2-22
2.6.3	Tasks and Examples for oidstats.sql	2-22

2.6.3.1	Running the Oracle Internet Directory Database Statistics Collection Tool.....	2-22
2.6.4	Related Command-Line Tools for oidstats.sql	2-23
2.7	oidcred	2-23
2.7.1	Syntax for oidcred.....	2-23
2.7.2	Arguments for oidcred.....	2-23
2.7.3	Tasks and Examples for oidcred.....	2-23
2.8	oidrealm	2-23
2.8.1	Syntax for oidrealm	2-23
2.8.2	Arguments for oidrealm	2-24
2.8.3	Example for oidrealm.....	2-24

3 Oracle Internet Directory Data Management Tools

3.1	bulkdelete.....	3-2
3.1.1	Syntax for bulkdelete	3-2
3.1.2	Arguments for bulkdelete	3-2
3.1.3	Tasks and Examples for bulkdelete	3-3
3.1.3.1	Deleting All Entries in a Naming Context and Making Them Tombstone Entries	3-3
3.1.3.2	Completely Deleting All Entries in a Naming Context	3-3
3.1.3.3	Deleting Entries in Multiple Naming Contexts.....	3-3
3.1.4	Related Command-Line Tools for bulkdelete	3-3
3.2	bulkload.....	3-3
3.2.1	Syntax for bulkload	3-5
3.2.2	Arguments for bulkload	3-6
3.2.3	Tasks and Examples for bulkload	3-7
3.2.3.1	Loading Data in Bulk Mode.....	3-7
3.2.3.2	Loading Data for Multiple Nodes in a Replicated Environment	3-8
3.2.3.3	Loading Data in Incremental Mode.....	3-8
3.2.3.4	Verifying Indexes.....	3-8
3.2.3.5	Recreating Indexes	3-8
3.2.3.6	Recovering Data After a Load Error	3-8
3.2.4	Related Command-Line Tools for bulkload	3-9
3.3	bulkmodify.....	3-9
3.3.1	Syntax for bulkmodify	3-10
3.3.2	Arguments for bulkmodify	3-10
3.3.3	Tasks and Examples for bulkmodify	3-11
3.3.3.1	Updating an Attribute for Multiple Entries at Once	3-11
3.3.4	Limitations of bulkmodify.....	3-11
3.3.5	Related Command-Line Tools for bulkmodify	3-12
3.4	catalog.....	3-12
3.4.1	Syntax for catalog	3-13
3.4.2	Arguments for catalog	3-13
3.4.3	Tasks and Examples for catalog	3-14
3.4.3.1	Indexing a Single Attribute	3-14
3.4.3.2	Indexing Multiple Attributes	3-14
3.4.3.3	Removing an Attribute from the List of Indexed Attributes	3-14
3.4.3.4	Indexing an Attribute Using the IOT Option	3-14

3.4.4	Related Command-Line Tools for catalog	3-14
3.5	ldapadd.....	3-15
3.5.1	Syntax for ldapadd	3-15
3.5.2	Arguments for ldapadd	3-15
3.5.3	Tasks and Examples for ldapadd	3-18
3.5.3.1	Adding Data to the Directory Using an LDIF File.....	3-18
3.5.3.2	Adding Data to the Directory Using a DSML File	3-18
3.5.3.3	Previewing an Add Operation	3-18
3.5.4	Related Command-Line Tools for ldapadd	3-19
3.6	ldapaddmt.....	3-19
3.6.1	Syntax for ldapaddmt	3-19
3.6.2	Arguments for ldapaddmt	3-19
3.6.3	Tasks and Examples for ldapaddmt	3-22
3.6.3.1	Adding Concurrent Entries to the Directory Using an LDIF File	3-22
3.6.4	Related Command-Line Tools for ldapaddmt	3-22
3.7	ldapbind	3-22
3.7.1	Syntax for ldapbind	3-22
3.7.2	Arguments for ldapbind	3-22
3.7.3	Tasks and Examples for ldapbind	3-24
3.7.3.1	Validating Authentication Credentials	3-24
3.7.4	Related Command-Line Tools for ldapbind	3-24
3.8	ldapcompare	3-24
3.8.1	Syntax for ldapcompare.....	3-24
3.8.2	Arguments for ldapcompare.....	3-24
3.8.3	Tasks and Examples for ldapcompare.....	3-26
3.8.3.1	Comparing Attribute Values for an Entry	3-27
3.8.4	Related Command-Line Tools for ldapcompare.....	3-27
3.9	ldapdelete.....	3-27
3.9.1	Syntax for ldapdelete	3-27
3.9.2	Arguments for ldapdelete	3-27
3.9.3	Tasks and Examples for ldapdelete	3-29
3.9.3.1	Deleting a Single Entry	3-29
3.9.3.2	Deleting Multiple Entries Using an LDIF File.....	3-29
3.9.4	Related Command-Line Tools for ldapdelete	3-29
3.10	ldapmoddn.....	3-30
3.10.1	Syntax for ldapmoddn	3-30
3.10.2	Arguments for ldapmoddn	3-30
3.10.3	Tasks and Examples for ldapmoddn	3-32
3.10.3.1	Changing the RDN of an Entry	3-32
3.10.3.2	Moving an Entry.....	3-32
3.10.4	Related Command-Line Tools for ldapmoddn	3-32
3.11	ldapmodify.....	3-32
3.11.1	Syntax for ldapmodify	3-32
3.11.2	Arguments for ldapmodify	3-33
3.11.3	Tasks and Examples for ldapmodify	3-35
3.11.3.1	Modifying the Directory Schema	3-36
3.11.3.2	Modifying an Entry	3-36

3.11.3.3	Indexing an Attribute.....	3-36
3.11.4	Related Command-Line Tools for ldapmodify	3-37
3.12	ldapmodifymt.....	3-37
3.12.1	Syntax for ldapmodifymt	3-37
3.12.2	Arguments for ldapmodifymt	3-37
3.12.3	Tasks and Examples for ldapmodifymt	3-40
3.12.3.1	Modifying Multiple Entries Concurrently.....	3-40
3.12.4	Related Command-Line Tools for ldapmodifymt	3-40
3.13	ldapsearch	3-40
3.13.1	Syntax for ldapsearch.....	3-40
3.13.2	Arguments for ldapsearch.....	3-41
3.13.3	Tasks and Examples for ldapsearch.....	3-45
3.13.3.1	Performing a Base Object Search.....	3-45
3.13.3.2	Performing a One-Level Search.....	3-45
3.13.3.3	Performing a Subtree Search.....	3-46
3.13.3.4	Searching for Attribute Values of Entries	3-46
3.13.3.5	Searching for Operational Attributes of Entries	3-46
3.13.3.6	Searching for Entries with Attribute Options	3-46
3.13.3.7	Searching for All User Attributes and Specified Operational Attributes.....	3-47
3.13.3.8	Searching for Entries (More Examples).....	3-47
3.13.3.9	Attribute Case in ldapsearch Output.....	3-48
3.13.4	Related Command-Line Tools for ldapsearch.....	3-48
3.14	ldifmigrator.....	3-48
3.14.1	Syntax for ldifmigrator	3-48
3.14.2	Arguments for ldifmigrator	3-48
3.14.3	Tasks and Examples for ldifmigrator	3-50
3.14.3.1	Using the Data Migration Tool in Lookup Mode	3-50
3.14.3.2	Overriding Data Migration Values in Lookup Mode	3-50
3.14.3.3	Using the Data Migration Tool by Supplying Your Own Values	3-50
3.14.3.4	Loading and Reconciling Data Using the Data Migration Tool	3-51
3.14.4	Related Command-Line Tools for ldifmigrator	3-51
3.14.5	Error Messages for ldifmigrator	3-51
3.15	ldifwrite.....	3-52
3.15.1	Syntax for ldifwrite.....	3-53
3.15.2	Arguments for ldifwrite.....	3-53
3.15.3	Tasks and Examples for ldifwrite.....	3-54
3.15.3.1	Converting All Entries under a Naming Context to an LDIF File	3-54
3.15.3.2	Converting a Partial Naming Context to an LDIF File	3-54
3.15.3.3	Converting Entries that Match Criteria to an LDIF File	3-54
3.15.4	Related Command-Line Tools for ldifwrite.....	3-55
3.16	upgradecert.pl	3-55
3.16.1	Syntax for upgradecert.pl.....	3-55
3.16.2	Arguments for upgradecert.pl.....	3-55
3.16.3	Tasks and Examples for upgradecert.pl.....	3-56
3.16.3.1	Upgrading User Certificates Stored in the Directory from Releases Prior to 10.1.2... 3-56	
3.16.4	Related Command-Line Tools for upgradecert.pl.....	3-56

4 Oracle Internet Directory Replication Management Tools

4.1	ManageHiq.retry and ManageHiq.purge.....	4-1
4.1.1	Syntax for ManageHiq.retry and ManageHiq.purge	4-2
4.1.2	Examples for ManageHiq.retry	4-2
4.1.3	Examples for ManageHiq.purge	4-2
4.2	oidcmprec.....	4-3
4.2.1	Syntax for oidcmprec	4-3
4.2.2	Arguments for oidcmprec	4-4
4.2.3	Tasks and Examples for oidcmprec	4-18
4.2.3.1	Comparing and Reconciling Individual Entries in Two Directories	4-18
4.2.3.2	Comparing and Reconciling Subtrees in Two Directories	4-18
4.2.3.3	Comparing and Reconciling Entire Directories	4-19
4.2.3.4	Performing User-Defined Compare and Reconcile Operations	4-20
4.2.3.5	Merging Two Directories	4-20
4.2.3.6	Including and Excluding Attributes	4-20
4.2.3.7	Using a Filter	4-21
4.2.3.8	Overriding Default Conflict Resolution Rules	4-21
4.2.3.9	Using a Parameter File.....	4-21
4.2.3.10	Using a Parameter File in XML Format.....	4-22
4.2.3.11	Generating Change Logs	4-23
4.2.3.12	Performing Directory Schema Operations.....	4-23
4.3	remtool.....	4-23
4.3.1	Syntax for remtool	4-24
4.3.2	Terminology Used in remtool Argument Descriptions	4-24
4.3.3	Arguments for remtool	4-24
4.3.4	The remtool -asr2ldap Operation	4-27
4.3.4.1	Syntax for remtool -asr2ldap	4-27
4.3.4.2	Arguments for remtool -asr2ldap	4-27
4.3.4.3	Tasks and Examples for remtool -asr2ldap	4-27
4.3.4.3.1	Converting an Advanced Replication Agreement to an LDAP-Based Agreement 4-27	
4.3.5	The remtool -addnode Operation.....	4-28
4.3.5.1	Syntax for remtool -addnode	4-28
4.3.5.2	Arguments for remtool -addnode.....	4-28
4.3.5.3	Tasks and Examples for remtool -addnode.....	4-28
4.3.5.3.1	Adding a New Node to an Oracle Database Advanced Replication-based DRG 4-28	
4.3.6	The remtool -asrcleanup Operation	4-30
4.3.6.1	Syntax for remtool -asrcleanup	4-30
4.3.6.2	Arguments for remtool -asrcleanup	4-30
4.3.6.3	Tasks and Examples for remtool -asrcleanup	4-30
4.3.6.3.1	Cleaning Up an Oracle Database Advanced Replication-based DRG Setup 4-31	
4.3.7	The remtool -asrrectify Operation.....	4-31
4.3.7.1	Syntax for remtool -asrrectify	4-32
4.3.7.2	Arguments for remtool -asrrectify	4-32
4.3.7.3	Tasks and Examples for remtool -asrrectify	4-32

4.3.7.3.1	Detecting and Correcting Errors in an Advanced Replication-Based DRG Setup	4-32
4.3.8	The remtool -asrsetup Operation	4-33
4.3.8.1	Syntax for remtool -asrsetup	4-33
4.3.8.2	Arguments for remtool -asrsetup	4-33
4.3.8.3	Tasks and Examples for remtool -asrsetup	4-34
4.3.8.3.1	Creating an Oracle Database Advanced Replication-based DRG	4-34
4.3.9	The remtool -asrverify Operation	4-36
4.3.9.1	Syntax for remtool -asrverify	4-36
4.3.9.2	Arguments for remtool -asrverify	4-36
4.3.9.3	Tasks and Examples for remtool -asrverify	4-37
4.3.9.3.1	Detecting Errors in an Oracle Database Advanced Replication-Based DRG Setup	4-37
4.3.10	The remtool -backupmetadata Operation	4-38
4.3.10.1	Syntax for remtool -backupmetadata	4-38
4.3.10.2	Arguments for remtool -backupmetadata	4-38
4.3.10.3	Tasks and Examples for remtool -backupmetadata	4-39
4.3.10.3.1	Adding the Metadata of a Pilot Replica to a Master Replica	4-39
4.3.10.3.2	Backing Up the Metadata of a Pilot Replica to an LDIF File	4-40
4.3.11	The remtool -chgpwd Operation	4-40
4.3.11.1	Syntax for remtool -chgpwd	4-40
4.3.11.2	Arguments for remtool -chgpwd	4-40
4.3.11.3	Tasks and Examples for remtool -chgpwd	4-40
4.3.11.3.1	Changing the Administrator Password for an Advanced Replication-based DRG	4-40
4.3.12	The remtool -delnode Operation	4-41
4.3.12.1	Syntax for remtool -delnode	4-41
4.3.12.2	Arguments for remtool -delnode	4-41
4.3.12.3	Tasks and Examples for remtool -delnode	4-41
4.3.12.3.1	Removing a RMS Node from an Advanced Replication-Based DRG	4-42
4.3.13	The remtool -dispasrerr Operation	4-43
4.3.13.1	Syntax for remtool -dispasrerr	4-43
4.3.13.2	Arguments for remtool -dispasrerr	4-43
4.3.13.3	Tasks and Examples for remtool -dispasrerr	4-43
4.3.13.3.1	Displaying Errors for an Oracle Database Advanced Replication-based DRG	4-43
4.3.14	The remtool -dispqstat Operation	4-44
4.3.14.1	Syntax for remtool -dispqstat	4-44
4.3.14.2	Arguments for remtool -dispqstat	4-44
4.3.14.3	Tasks and Examples for remtool -dispqstat	4-45
4.3.14.3.1	Displaying Queue Statistics for an Advanced Replication-Based DRG	4-45
4.3.15	The remtool -paddnode Operation	4-45
4.3.15.1	Syntax for remtool -paddnode	4-46
4.3.15.2	Arguments for remtool -paddnode	4-46
4.3.15.3	Tasks and Examples for remtool -paddnode	4-46
4.3.15.3.1	Adding a Read-Only Replica to a DRG	4-46
4.3.15.3.2	Adding a Partial Replica to a DRG	4-48
4.3.16	The remtool -pdisplay Operation	4-49

4.3.16.1	Arguments to remtool -pdisplay	4-50
4.3.17	The remtool -pchgmaster Operation.....	4-50
4.3.17.1	Syntax for remtool -pchgmaster	4-50
4.3.17.2	Arguments for remtool -pchgmaster	4-50
4.3.17.3	Tasks and Examples for remtool -pchgmaster	4-50
4.3.17.3.1	Breaking a Supplier Agreement and Creating a New One for a Consumer	4-50
4.3.17.3.2	Changing the Primary Node.....	4-52
4.3.18	The remtool -pchgpwd Operation	4-52
4.3.18.1	Syntax for remtool -pchgpwd	4-52
4.3.18.2	Arguments for remtool -pchgpwd.....	4-53
4.3.18.3	Tasks and Examples for remtool -pchgpwd.....	4-53
4.3.18.3.1	Changing the Replication DN Password Used for LDAP-Based Replication.....	4-53
4.3.19	The remtool -pchgwalpwd Operation	4-53
4.3.19.1	Syntax for remtool -pchgwalpwd	4-54
4.3.19.2	Arguments for remtool -pchgwalpwd	4-54
4.3.19.3	Tasks and Examples for remtool -pchgwalpwd	4-54
4.3.19.3.1	Changing the Replication DN Password in the Oracle Internet Directory Wallet	4-54
4.3.20	The remtool -pcleanup Operation	4-54
4.3.20.1	Syntax for remtool -pcleanup	4-54
4.3.20.2	Arguments for remtool -pcleanup	4-55
4.3.20.3	Tasks and Examples for remtool -pcleanup	4-55
4.3.20.3.1	Cleaning Up an Incomplete or Flawed LDAP-based DRG Setup.....	4-55
4.3.20.3.2	Cleaning Up Specific LDAP Agreements	4-56
4.3.21	The remtool -pdelnode Operation.....	4-57
4.3.21.1	Syntax for remtool -pdelnode	4-57
4.3.21.2	Arguments for remtool -pdelnode.....	4-57
4.3.21.3	Tasks and Examples for remtool -pdelnode.....	4-57
4.3.21.3.1	Deleting a Read-Only Replica from a DRG	4-57
4.3.22	The remtool -pdispqstat Operation.....	4-58
4.3.22.1	Syntax for remtool -pdispqstat	4-58
4.3.22.2	Arguments for remtool -pdispqstat	4-58
4.3.22.3	Tasks and Examples for remtool -pdispqstat.....	4-58
4.3.22.3.1	Display queue statistics for LDAP-based replicas.....	4-59
4.3.23	The remtool -pilotreplica Operation	4-59
4.3.23.1	Syntax for remtool -pilotreplica.....	4-59
4.3.23.2	Arguments for remtool -pilotreplica	4-59
4.3.23.3	Tasks and Examples for remtool -pilotreplica	4-59
4.3.23.3.1	Beginning Pilot Mode for a Replica	4-60
4.3.23.3.2	Ending Pilot Mode for a Replica	4-60
4.3.24	The remtool -presetpwd Operation	4-60
4.3.24.1	Syntax for remtool -presetpwd.....	4-60
4.3.24.2	Arguments for remtool -presetpwd.....	4-60
4.3.24.3	Tasks and Examples for remtool -presetpwd.....	4-60
4.3.24.3.1	Resetting the Replication DN Password for a Single Directory	4-60
4.3.25	The remtool -pthput Operation	4-61

4.3.25.1	Syntax for remtool -pthput.....	4-61
4.3.25.2	Arguments for remtool -pthput.....	4-61
4.3.25.3	Tasks and Examples for remtool -pthput.....	4-61
4.3.25.3.1	Listing DRG Information at Intervals.....	4-61
4.3.26	The remtool -pverify Operation	4-62
4.3.26.1	Syntax for remtool -pverify	4-62
4.3.26.2	Arguments for remtool -pverify.....	4-62
4.3.26.3	Tasks and Examples for remtool -pverify.....	4-63
4.3.26.3.1	Verify Replication Configuration for an LDAP-Based DRG	4-63
4.3.27	The remtool -resumeasr Operation.....	4-65
4.3.27.1	Syntax for remtool -resumeasr	4-65
4.3.27.2	Arguments for remtool -resumeasr	4-65
4.3.27.3	Tasks and Examples for remtool -resumeasr	4-65
4.3.27.3.1	Resuming Replication Activity for an Advanced Replication-Based DRG	4-65
4.3.28	The remtool -suspendasr Operation	4-66
4.3.28.1	Syntax for remtool -suspendasr.....	4-66
4.3.28.2	Arguments for remtool -suspendasr	4-66
4.3.28.3	Tasks and Examples for remtool -suspendasr.....	4-66
4.3.28.3.1	Suspending Replication Activity for an Advanced Replication-Based DRG	4-66
4.3.29	The -psuspendrepl and -presumerepl Operations.....	4-67
4.3.29.1	Syntax for -psuspendrepl and -presumerepl.....	4-67
4.3.29.2	Arguments to -psuspendrepl and -presumerepl	4-67
4.3.29.3	Tasks for -psuspendrepl and -presumerepl.....	4-67
4.3.30	The -bind Connection Argument	4-68
4.3.31	The -connect Connection Argument.....	4-68
4.3.32	Related Command-Line Tools for remtool	4-68

5 Oracle Directory Integration Platform Tools

5.1	manageDIPServerConfig	5-1
5.1.1	Syntax for manageDIPServerConfig	5-1
5.1.2	Arguments for manageDIPServerConfig.....	5-2
5.1.3	Tasks and Examples for manageDIPServerConfig.....	5-3
5.2	manageSyncProfiles.....	5-3
5.2.1	Syntax for manageSyncProfiles	5-3
5.2.2	Arguments for manageSyncProfiles	5-4
5.2.3	Tasks and Examples for manageSyncProfiles	5-7
5.3	syncProfileBootstrap.....	5-8
5.3.1	Syntax for syncProfileBootstrap	5-8
5.3.2	Arguments for syncProfileBootstrap	5-8
5.3.3	Tasks and Examples for syncProfileBootstrap	5-9
5.4	expressSyncSetup.....	5-10
5.4.1	Syntax for expressSyncSetup	5-10
5.4.2	Arguments for expressSyncSetup	5-10
5.4.3	Tasks and Examples for expressSyncSetup	5-11
5.5	provProfileBulkProv.....	5-12
5.5.1	Syntax for provProfileBulkProv	5-12

5.5.2	Arguments for provProfileBulkProv	5-12
5.5.3	Tasks and Examples for provProfileBulkProv	5-13
5.6	oidprovtool	5-13
5.6.1	Syntax for oidprovtool	5-14
5.6.2	Arguments for oidprovtool	5-14
5.6.3	Tasks and Examples for oidprovtool	5-18
5.6.3.1	Creating a Provisioning Profile	5-18
5.6.3.2	Modifying a Provisioning Profile.....	5-19
5.6.3.3	Deleting a Provisioning Profile.....	5-19
5.6.3.4	Disabling a Provisioning Profile.....	5-19
5.7	dipStatus.....	5-19
5.7.1	Syntax for dipStatus	5-19
5.7.2	Arguments for dipStatus	5-19
5.7.3	Examples for dipStatus	5-20
5.8	schemasync	5-20
5.8.1	Syntax for schemasync.....	5-21
5.8.2	Arguments for schemasync.....	5-21
5.8.3	Tasks and Examples for schemasync.....	5-22
5.8.3.1	Synchronizing the Schema between Oracle Internet Directory and a Third-Party Directory 5-22	
5.8.4	Related Command-Line Tools for schemasync.....	5-22

Part II Schema Reference

6 LDAP Schema Overview

6.1	Overview of Directory Schema	6-1
6.1.1	Object Classes	6-1
6.1.2	Attributes	6-2
6.1.3	LDAP Controls.....	6-5
6.2	Overview of Oracle Identity Management Schema Elements	6-8
6.2.1	System Operational Schema Elements	6-9
6.2.1.1	Directory Schema.....	6-9
6.2.1.2	Access Control.....	6-9
6.2.1.3	Change Logs.....	6-9
6.2.1.4	Password Policy.....	6-9
6.2.2	Oracle Internet Directory Configuration Schema Elements.....	6-9
6.2.2.1	Oracle Internet Directory Server	6-10
6.2.2.2	Oracle Context.....	6-10
6.2.2.3	Oracle Network Services	6-10
6.2.2.4	Garbage Collection	6-11
6.2.2.5	Attribute Uniqueness	6-11
6.2.3	Audit and Error Logging Schema Elements	6-11
6.2.4	Server Manageability Schema Elements	6-12
6.2.5	Oracle Directory Replication Schema Elements.....	6-12
6.2.6	Oracle Directory Integration and Provisioning Schema Elements.....	6-12
6.2.6.1	Applications	6-13
6.2.6.2	Change Logs.....	6-13

6.2.6.3	Events and Objects	6-13
6.2.6.4	Plug-ins and Interfaces	6-13
6.2.6.5	Server Configuration.....	6-14
6.2.6.6	Profiles.....	6-14
6.2.6.7	Schema	6-15
6.2.6.8	Active Directory Users.....	6-15
6.2.7	Oracle Delegated Administration Services Schema Elements	6-15
6.2.8	Oracle Application Server Certificate Authority and PKI Schema Elements	6-15
6.2.9	Application Schema Elements	6-16
6.2.10	Resource Schema Elements	6-16
6.2.11	Plug-in Schema Elements	6-16
6.2.12	Directory User Agents Schema Elements.....	6-17
6.2.13	User, Group, and Subscriber Schema Elements.....	6-17
6.2.13.1	Groups.....	6-17
6.2.13.2	Dynamic Groups.....	6-17
6.2.13.3	Users	6-17
6.2.14	Password Policy Schema Elements	6-18
6.2.15	Password Verifier Schema Elements	6-18

7 LDAP Object Class Reference

7.1	Standard LDAP Object Classes	7-1
7.2	Oracle Identity Management Object Class Reference	7-3
7.2.1	duaConfigProfile.....	7-3
7.2.2	orclADGroup.....	7-4
7.2.3	orclADUser	7-4
7.2.4	orclApplicationEntity	7-4
7.2.5	orclAppSpecificUserInfo.....	7-5
7.2.6	orclAppUserEntry	7-5
7.2.7	orclAuditOC	7-6
7.2.8	orclCertIdMapping.....	7-6
7.2.9	orclChangeSubscriber	7-7

Preface

The *Oracle Fusion Middleware Reference for Oracle Identity Management* provides reference information about the command-line tools and LDAP directory schema elements for Oracle Identity Management. This Preface contains the following topics:

- [Audience](#)
- [Documentation Accessibility](#)
- [Related Documents](#)
- [Conventions](#)

Audience

Oracle Fusion Middleware Reference for Oracle Identity Management is intended for anyone who performs administration tasks for Oracle Identity Management components. You should be familiar with either the UNIX operating system or the Microsoft Windows operating system in order to understand the command-line syntax and examples. You also must be familiar with the Lightweight Directory Access Protocol (LDAP).

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Related Documents

For more information, see the following manuals in the Oracle Identity Management 11g Release 1 (11.1.1) documentation set:

- *Oracle Fusion Middleware Installation Guide for Oracle Identity Management*
- *Oracle Fusion Middleware Getting Started with Oracle Identity Management*

- *Oracle Fusion Middleware Administrator's Guide for Oracle Internet Directory*
- *Oracle Fusion Middleware Administrator's Guide for Oracle Directory Integration Platform*
- *Oracle Fusion Middleware Application Developer's Guide for Oracle Identity Management*
- *Oracle Fusion Middleware Developer's Guide for Oracle Adaptive Access Manager*

If you are using Oracle Delegated Administration Services or Oracle Single Sign-On 10g (10.1.4.3.0) or later, please refer to the following documents in the Oracle Application Server 10g (10.1.4.0.1) library:

- *Oracle Identity Management Guide to Delegated Administration*
- *Oracle Application Server Single Sign-On Administrator's Guide*

Conventions

The following text conventions are used in this document:

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
<i>italic</i>	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
<code>monospace</code>	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

Part I

Command-Line Tool Reference

Part 1 of the *Oracle Fusion Middleware Reference for Oracle Identity Management* contains information about the command-line tools for Oracle Identity Management.

Part I contains the following chapters:

- [Chapter 1, "Command-Line Tools Overview"](#)
- [Chapter 2, "Oracle Internet Directory Administration Tools"](#)
- [Chapter 3, "Oracle Internet Directory Data Management Tools"](#)
- [Chapter 4, "Oracle Internet Directory Replication Management Tools"](#)
- [Chapter 5, "Oracle Directory Integration Platform Tools"](#)

Command-Line Tools Overview

This chapter provides useful information about using the command-line tools available for Oracle Identity Management. It contains the following topics:

- [Section 1.1, "Using Passwords with Command-Line Tools"](#)
- [Section 1.2, "Configuring Your Environment"](#)
- [Section 1.3, "Oracle Identity Management Command-Line Tool Categories"](#)

1.1 Using Passwords with Command-Line Tools

Many command-line tools require you to authenticate by providing a password. In some cases, you can provide the password in either of two ways:

- In response to a prompt from the command.
- Following an option on the command line

For security reasons, avoid supplying a password on the command line whenever possible. A password typed on the command line is visible on your screen and might appear in output from the `ps` command or in log files. When you supply a password at a prompt, it is not visible on the screen, in output from the `ps` command, or in log files.

The LDAP tools have been modified to disable the options `-w password` and `-P password` when the environment variable `LDAP_PASSWORD_PROMPTONLY` is set to `TRUE` or `1`. If you use `-q` or `-Q`, respectively, the command prompts you for the user password or wallet password. Set this environment variable whenever possible. This feature affects the behavior of the following tools:

- [ldapadd](#) (LDAP Data Add Tool)
- [ldapaddmt](#) (Multi-Threaded LDAP Data Add Tool)
- [ldapbind](#) (Authentication Validation Tool)
- [ldapcompare](#) (Attribute Comparison Tool)
- [ldapdelete](#) (LDAP Data Deletion Tool)
- [ldapmoddn](#) (LDAP DN/RDN Modification Tool)
- [ldapmodify](#) (LDAP Data Modification Tool)
- [ldapmodifymt](#) (Multi-Threaded LDAP Data Modification Tool)
- [ldapsearch](#) (LDAP Search Tool)

Note: When you use the `-q` or `-Q` option and redirect or pipe the output of an LDAP command, you do not see the prompt on the command line. The command still accepts the password you provide. If there is no wallet password and you are using the `-Q` option, when prompted for the password, hit Enter.

If you use the `-w password` option with an LDAP tool when the environment variable `LDAP_PASSWORD_PROMPTONLY` is set to true, you see the following error message, followed by command usage help.

```
Command-line passwords are disabled for LDAP commands.  
Use -q option instead of -w <password>. You are prompted for the password.*
```

Similarly, If you use the `-P password` option with an LDAP tool when the environment variable `LDAP_PASSWORD_PROMPTONLY` is set to true, you see the following error message, followed by command usage help.

```
Command-line passwords are disabled for LDAP commands.  
Use -Q option instead of -P <password>. You are prompted for the password.
```

1.2 Configuring Your Environment

Before you begin using the Oracle Identity Management command-line tools, you must configure your environment. This involves setting the appropriate environment variables.

The syntax and examples provided in this guide require that you have the following environment variables set:

- `ORACLE_HOME` - The location of non-writable files in your Oracle Identity Management installation.
- `ORACLE_INSTANCE` - The location of writable files in your Oracle Identity Management installation.
- `NLS_LANG` (*APPROPRIATE_LANGUAGE.AL32UTF8*) - The default language set at installation is `AMERICAN_AMERICA`.
- `WLS_HOME` - The location where the WebLogic Server is installed. This environment variable is required for Oracle Directory Integration Platform commands but not Oracle Internet Directory commands.
- `PATH` - The following directory locations should be added to your `PATH`:

```
ORACLE_HOME/bin
```

```
ORACLE_HOME/ldap/bin
```

```
ORACLE_HOME/ldap/admin
```

1.3 Oracle Identity Management Command-Line Tool Categories

The Oracle Identity Management command-line tools are organized into the following categories:

- [Oracle Internet Directory Administration Tools](#)
- [Oracle Internet Directory Data Management Tools](#)
- [Oracle Internet Directory Replication Management Tools](#)

- [Oracle Directory Integration Platform Tools](#)

Oracle Internet Directory Administration Tools

This chapter describes the following command-line tools used to administer Oracle Internet Directory:

- `oidpasswd` (Database Password Utility)
- `oidctl` (Oracle Internet Directory Control)
- `oiddiag` (Oracle Internet Directory Server Diagnostic Tool)
- `oidmon` (Oracle Internet Directory Monitor)
- `opmnctl` (Oracle Process Manager and Notification Server Control)
- `oidstats.sql` (Oracle Internet Directory Database Statistics Collection Tool)
- `oidcred` (Oracle Internet Directory Credential Management Tool)
- `oidrealm` (Oracle Internet Directory Realm Creation Tool)

Note: The term "instance" refers to an Oracle instance in `opmnctl` documentation. The term "instance" refers to an Oracle Internet Directory instance in `oidctl` documentation.

2.1 oidpasswd

The Oracle Internet Directory Database Password Utility (`oidpasswd`) is used to:

- Change the password to the Oracle Internet Directory database.
Oracle Internet Directory uses a password when connecting to an Oracle database. The default for this password matches the value you specified during installation for the Oracle Fusion Middleware administrator's password. You can change this password by using the OID Database Password Utility.
- Create wallets for the Oracle Internet Directory database password and the Oracle directory replication server password.
- Unlock or reset the directory superuser account, namely, `cn=orcladmin`.
- Reset an access control point (ACP) so that the subtree is accessible by the Oracle Internet Directory superuser.
- Manage the restricted superuser ACL.

2.1.1 Syntax for oidpasswd

```
oidpasswd [connect=connect_string] [change_oiddb_pwd=true | create_wallet=true |  
unlock_su_acct=true | reset_su_password=true | manage_su_acl=true]
```

2.1.2 Arguments for oidpasswd

connect=*connect_string*

Required. The directory database connect string. If you already have a `tnsnames.ora` file configured, then this is the net service name specified in that file, which is located by default in `ORACLE_HOME/config`. (You can set the `TNS_ADMIN` environment variable if you want to use a different location.)

change_oiddb_pwd=true | unlock_su_acct=true | reset_su_password=true | manage_su_password=true

Required. The operation you want to perform. Depending on the operation you choose, the Oracle Internet Directory Database Password Utility prompts you for additional information. The following choices are available:

- `change_oiddb_pwd=true` - Changes the password to the Oracle Internet Directory database. You are prompted to provide the current database password, enter a new database password, and confirm the new password.

Note: In an Oracle Real Application Clusters (Oracle RAC) environment, if you update the password on one Oracle RAC node, then you must update the wallet on the other Oracle RAC nodes. Refer to "About Changing the ODS Password on an Oracle RAC System" in the *Oracle Application Server High Availability Guide* for more information.

- `create_wallet=true` - Create a wallet named `oidpwdlldap1` for the Oracle Internet Directory database password, and a wallet, named `oidpwr sid` , for the Oracle directory replication server password.

The `sid` is obtained from the connected database.

You must provide the ODS password to authenticate yourself to the ODS database before the ODS wallet can be generated. Note that the default ODS password is the same as that for the Oracle Fusion Middleware administrator.

- `unlock_su_acct=true` - Unlocks a superuser account that has been locked.
- `reset_su_password=true` - Resets the password for the Oracle Internet Directory superuser account. You are prompted to provide the Oracle Internet Directory database password, enter a new superuser password, and confirm the new superuser password.
- `manage_su_acl=true` - Manages the restricted superuser ACL.

2.1.3 Tasks and Examples for oidpasswd

Using Oracle Internet Directory Database Password Utility, you can perform the following tasks:

- [Changing the Password to the Oracle Internet Directory Database](#)
- [Creating Wallets for Directory Database and Replication Server Passwords](#)

- [Unlocking the Superuser Account](#)
- [Resetting the Superuser Password](#)
- [Managing Superuser Access Control Points](#)

2.1.3.1 Changing the Password to the Oracle Internet Directory Database

The following example shows how to change the Oracle Internet Directory database password, assuming the database is on the same machine.

Example:

```
oidpasswd
current password: oldpassword
new password: newpassword
confirm password: newpassword
password set.
```

The Oracle Internet Directory Database Password Utility prompts you for the current password. Type the current password, then the new password, then a confirmation of the new password.

Notes:

- User responses are not echoed to the screen when you enter a password.
 - Whenever you change the password to the Oracle Internet Directory database by using the OID Database Password Utility, you should also run the `oidemdpasswd` utility. This enables the Oracle Enterprise Manager Daemon (a component of Oracle Enterprise Manager) to properly cache that password and contact the ODS schema upon starting up. Once you have run the `oidemdpasswd` utility, you can monitor Oracle Internet Directory processes from the Oracle Enterprise Manager.
-
-

2.1.3.2 Creating Wallets for Directory Database and Replication Server Passwords

The following example shows how to create wallets for the Oracle Internet Directory database password and the Directory Replication server password.

Example:

```
oidpasswd connect=db create_wallet=true
```

The argument `create_wallet=true` is mandatory in this case. Except for the connect string, no other option can be specified.

2.1.3.3 Unlocking the Superuser Account

The following example shows how to unlock the Oracle Internet Directory superuser account, `cn=orcladmin`.

Example:

```
oidpasswd connect=db unlock_su_acct=true
```

The argument `unlock_su_acct` is mandatory. Except for connect string, no other option can be specified.

2.1.3.4 Resetting the Superuser Password

If you forget the Oracle Internet Directory superuser password, you can use the `oidpasswd` tool to reset it. You must provide the Oracle Internet Directory database password. When you first install Oracle Internet Directory, the superuser password and Oracle Internet Directory database password are the same. After installation, however, you can change the Oracle Internet Directory superuser password using `ldapmodify`. You can change the Oracle Internet Directory superuser password using the `oidpasswd` tool separately.

The following example shows how to reset the Oracle Internet Directory superuser password. The `oidpasswd` tool prompts you for the Oracle Internet Directory database password.

Example:

```
oidpasswd connect=dbs1 reset_su_password=true
OID DB user password: oid_db_password
    password: new_su_password
confirm password: new_su_password
OID super user password reset successfully
```

2.1.3.5 Managing Superuser Access Control Points

When an access control point (ACP) is set with an access control item (ACI) that has the keyword `DenyGroupOverride`, neither the Oracle Internet Directory superuser nor members of `DirectoryAdminGroup` can access the subtree under that ACP. If necessary, you can use the `oidpasswd` tool to reset that ACP so that the subtree is accessible by the Oracle Internet Directory superuser.

The following example shows how to reset a restricted ACP. The `oidpasswd` utility prompts you to enter the Oracle Internet Directory database password and to choose which superuser restricted ACPs to reset.

Example:

```
oidpasswd conn=dbs1 manage_su_acl=true
OID DB user password: oid_db_password
```

```
The super user restricted ACP list
[1] o=oracle,c=us
[2] ou=personnel,o=oracle,c=us
```

```
Enter 'resetall' or the number(s) of the ACP to be reset separated by [,]
resetall
```

Once you have reset some ACPs so that the superuser can access them, you can use `ldapmodify` to make the subtrees inaccessible to the superuser again.

2.1.4 Related Command-Line Tools for oidpasswd

- See "[ldapmodify](#)" on page 3-32.
- See "[oidmon](#)" on page 2-14.

2.2 oidctl

Oracle Internet Directory Control Utility (`oidctl`) is a command-line tool for starting and stopping Oracle Identity Management server instances. In 11g Release 1 (11.1.1), it is typically used only to configure, start, and stop the Oracle Directory Replication Server.

Notes:

- You must set the environment variables `ORACLE_INSTANCE`, `ORACLE_HOME`, `INSTANCE_NAME` and `COMPONENT_NAME` before you run the `oidctl` command. Alternatively, you can pass the instance name and component name in the command line as `name=instanceName, componentname=componentName`.
 - Best practice is to create new Oracle Internet Directory instances by creating new Oracle Internet Directory components with `opmnctl createcomponent`. See "[opmnctl](#)" on page 2-15. You should only use `oidctl` to create an instance if you plan to run Oracle Internet Directory in standalone mode and never use Oracle Enterprise Manager Fusion Middleware Control.
 - The term "instance" refers to an Oracle Internet Directory instance in `oidctl` command documentation.
-
-

The commands issued by Oracle Internet Directory Control Utility are interpreted and executed by the Oracle Internet Directory Monitor process. Before starting a server instance with this utility, make sure that the Monitor process is running. See "[oidmon](#)" on page 2-14.

2.2.1 Syntax for oidctl

```
oidctl [connect=connect_string] { server=OIDLDAPD | OIDREPLD }
instance=instance_number [name=instance_name] [componentname=component_name]
[host=host_name] [flags="flagname=value ..." ] [
{start | stop | add | delete | status [-diag | -odiag interval]}
```

2.2.2 Arguments for oidctl

connect=connect_string

Required. The directory database connect string. If you already have a `tnsnames.ora` file configured, then this is the net service name specified in that file, which is located by default in `ORACLE_INSTANCE/config`. (You can set the `TNS_ADMIN` environment variable if you want to use a different location.)

server=server

Required. The options are:

- `OIDLDAPD` — Oracle Internet Directory server
- `OIDREPLD` — Directory Replication server

instance=instance_number

Required. The numerical value of the instance. The value must be greater than 0 but less than 100.

host=host_name

Optional. Name of the logical host where the server is located or will be added. If you are using this argument, make sure `oidmon` is also started with the `host=host_name` parameter. If `oidmon` is started by `opmn`, then make sure the `hostname` parameter exists in the file `ORACLE_INSTANCE/config/OPMN/opmn/opmn.xml`.

name=instance_name

Optional. Name of the instance to be used. The default is `inst1`.

componentname=component_name

Optional. Name of the component to be used. The default is `oid1`.

flags="flagname=value | -flag value ..."

The flags argument is needed only while starting the server. If the flags consist of UNIX-style keywords, then the keyword-value pairs must be separated by spaces.

- "OIDLDAPD Flags" on page 2-6
- "OIDREPLD Flags" on page 2-7

start | stop | restart | add | delete | status

Required. The operation to perform on the given server process.

- `start` — Start the server=*server* instance=*instance_number* [*name=instance_name* *componentName=component_name*]
- `stop` — Stop the server=*server* instance=*instance_number* [*name=instance_name* *componentName=component_name*]
- `add` — Add the instance-specific configuration entry and start the server instance.
- `delete` — Stop the server instance and delete the instance-specific configuration entry
- `status [-diag | -opdiag]` — Report the status of running server instances. Use `-diag` with *status* to get diagnostic information. Use `-opdiag`, followed by *interval*, an integer value, with *status* to get the operation count for each operation for each Oracle Internet Directory component.

2.2.2.1 OIDLDAPD Flags

In 11g Release 1 (11.1.1), the recommended tool for creating instances and managing the LDAP server is `opmnctl`, not `oidctl`. See "[opmnctl](#)" on page 2-15. You should only use `oidctl` for these purposes if you plan to run Oracle Internet Directory in standalone mode and never use Oracle Enterprise Manager Fusion Middleware Control.

-l true | false

Optional. Turns replication change logging on or off. Use `true` to enable change logging. Use `false` to disable change logging. The default is `true`.

-p ldap_port

Optional. Specifies the LDAP port that this Oracle Internet Directory server instance will use. If not specified the default 3060 is used.

-server number_of_processes

The number of server processes to start on this port.

-sport *ssl_port*

Optional. Specifies the LDAPS port that this Oracle Internet Directory server instance will use. If not specified the default 3133 is used.

-work *maximum_threads*

The maximum number of worker threads for this server.

2.2.2.2 OIDREPLD Flags**-p *directory_port_number***

Required for a start operation. Port number used to connect to Oracle Internet Directory server. The default is 3060.

-h *directory_hostname*

Required for a start operation. The host name of the Oracle Internet Directory server to which the replication server connects. If not specified, `localhost` is used.

-m *true | false*

Optional. Use `true` to enable conflict resolution. Use `false` to disable conflict resolution. The default value is `true`.

-sizelimit *transaction_size*

Optional. The number of changes applied in each replication update cycle. If not specified the value from the Oracle Internet Directory server size limit configuration parameter, which has a default of 1024.

2.2.3 Tasks and Examples for oidctl

In 11g Release 1 (11.1.1), `oidctl` is used primarily to manage the replication server. The recommended tool for creating instances and managing the LDAP server is `opmnctl`, not `oidctl`. See "[opmnctl](#)" on page 2-15. You should only use `oidctl` for these purposes if you plan to run Oracle Internet Directory in standalone mode and never use Oracle Enterprise Manager Fusion Middleware Control.

Before using Oracle Internet Directory Control, make sure that Oracle Internet Directory Monitor is running. To verify this on UNIX, enter the following at the command-line:

```
ps -ef | grep oidmon
```

See "[oidmon](#)" on page 2-14 for more information about Oracle Internet Directory Monitor.

Using Oracle Internet Directory Control, you can perform the following tasks:

- [Starting an Oracle Internet Directory Server Instance](#)
- [Stopping an Oracle Internet Directory Server Instance](#)
- [Restarting an Oracle Internet Directory Server Instance](#)
- [Starting a Directory Replication Server Instance](#)
- [Stopping a Directory Replication Server Instance](#)
- [Starting and Stopping a Server Instance on a Virtual Host or Cluster Node](#)
- [Reporting the Status of Each Server](#)

- [Reporting Diagnostics](#)
- [Reporting Server Manageability Information](#)

2.2.3.1 Creating an Oracle Internet Directory Instance in an Existing Component

To create another Oracle Internet Directory instance within an existing component, type

```
oidctl connect=connect_string server=oidldapd inst=new_instance_number \
  name=instanceName componentname=componentName \
  flags=port=non_ssl_port sport=ssl_port add
```

The name and componentname arguments are required unless the environment variables INSTANCE_NAME and COMPONENT_NAME have been set. Typically, the inst value of the original instance is 1, the second instance you create is 2, and so forth.

As an example:

```
oidctl connect=oiddb server=oidldapd inst=2 "flags=port=5678 sport=5679" add
```

2.2.3.2 Deleting an Oracle Internet Directory Instance in a Component

To delete one Oracle Internet Directory instance within a component, type

```
oidctl connect=connect_string server=oidldapd inst=new_instance_number \
  name=instanceName componentname=componentName \
  flags=port=non_ssl_port sport=ssl_port delete
```

Typically, the inst value of the original instance is 1, the second instance you create is 2, and so forth.

2.2.3.3 Starting an Oracle Internet Directory Server Instance

When starting an Oracle Internet Directory server, you must supply the instance, server=OIDLDAPD, and start arguments. All other arguments are optional.

Before starting a new instance of OIDLDAPD, run the command:

```
oidctl connect=connstr status
```

to make sure oidmon is running and that the instance number and ports that you intend to use are not already in use.

Example:

```
oidctl connect=dba1 server=OIDLDAPD instance=2 flags="-p 3133 \
  -debug 1024 -l false" start
```

2.2.3.4 Stopping an Oracle Internet Directory Server Instance

Example:

```
oidctl connect=dba1 server=OIDLDAPD instance=2 stop
```

2.2.3.5 Restarting an Oracle Internet Directory Server Instance

A restart operation is useful when you want to refresh the server cache immediately, or when you have changed a configuration set entry and want your changes to take effect on an active server instance. When the Oracle Internet Directory server restarts, it maintains the same arguments it had before it stopped.

For example, if you changed a configuration set that was being referenced by an active instance of Oracle Internet Directory server, you could update it by restarting that server instance. You do not need to supply the `configset` argument again, as it is maintained from the prior start operation.

Example:

```
oidctl connect=dbs1 server=OIDLDAPD instance=1 restart
```

To restart all active instances on a node, do not specify the `instance` argument. Note that a server is momentarily unavailable to client requests during a restart.

2.2.3.6 Starting a Directory Replication Server Instance

When starting an Oracle Directory Replication server, you must supply the information it needs to connect to the Oracle Internet Directory server. You cannot use the `add` option when starting a replication server.

Example:

```
oidctl connect=dbs1 server=OIDREPL instance=1 flags="-p 3060 \  
-h ldaphost.example.com -d 1024" start
```

This command uses the same instance-specific configuration entry as `instance=1`.

2.2.3.7 Stopping a Directory Replication Server Instance

Example:

```
oidctl connect=dbs1 server=OIDREPLD instance=1 stop
```

2.2.3.8 Starting and Stopping a Server Instance on a Virtual Host or Cluster Node

Use the `host` argument to specify a virtual host name when starting an Oracle Internet Directory server or Oracle Internet Directory Replication server on a virtual host or a Oracle Application Server Identity Management Cluster Node.

When communicating with the directory server, the directory replication server uses the virtual host name. Further, the `replicaID` attribute that represents the unique replication identification for the Oracle Internet Directory node is generated once. It is independent of the host name and hence requires no special treatment in Oracle Application Server Cold Failover Cluster (Identity Management).

When communicating with the directory server, the Directory Integration Platform server uses the virtual host name.

The following example shows how to start an Oracle Internet Directory server (OIDLDAPD) on a virtual host. The same syntax can be used to also start a directory replication server (OIDREPLD) on a virtual host.

Example:

```
oidctl connect=dbs1 host=vhost.company.com server=OIDLDAPD instance=1 \  
configset=2 [flags="..."] start
```

2.2.3.9 Reporting the Status of Each Server

The `status` argument is used to report the status of each server running on the node.

Example:

```
oidctl connect=dbs1 status
```

2.2.3.10 Reporting Diagnostics

Use the `-diag` flag with the `status` argument to get detailed diagnostic information that can be useful in resolving performance issues.

The `-diag` flag causes `oidctl` to print information about each LDAP operation as it executes, including the time it spends in the database layer.

For example:

```
oidctl connect=dbs1 status -diag
```

```
oidctl : ORACLE_INSTANCE is not set, defaulting to /ade/rsathyan_
ldmain5/oracle/ldap/
```

```
oidctl : INSTANCE_NAME is not set, defaulting to inst1
```

```
oidctl : COMPONENT_NAME is not set, defaulting to oid1
```

```

+-----+
| Process      | PID   | InstName | CompName | Inst# | Port | Sport |
+-----+
| oidmon       | 12838 | inst1    | oid1     |      |     |      |
+-----+

  CPU Time        :          0 (ms)
+-----+

```

2.2.3.11 Reporting Server Manageability Information

When you run `oidctl` with `status -opdiag interval`, `oidctl` reads the shared memory contents for all servers in the running instances associated with the OIEMON in that environment and aggregates the operation count of each type for each OID component. It repeatedly displays current and total operation counts on the standard output at `interval` seconds. `oidctl` resets all the current values of operation count

in the shared memory so that the directory server starts from zero for each type of operation for the next cycle.

For example:

```
$ oidctl status -opdiag 15
oidctl : ORACLE_INSTANCE is not set, defaulting to
/ade/myOID/oracle/ldap/
oidctl : INSTANCE_NAME is not set, defaulting to inst1
oidctl : COMPONENT_NAME is not set, defaulting to oid1

+-----+
+-----+
|Printing completed LDAP operation counts ...
|
+-----+
ComponentName: oid1      Current   Total
          Bind Count    : 0       0
          Add Count     : 0       0
          Delete Count  : 0       0
          Modify Count  : 0       0
          ModRdn Count  : 0       0
          Compare Count : 0       0
          Search Count  : 0       0
          Extended Count: 0       0
.
+-----+
+-----+
```

2.2.4 Related Command-Line Tools for oidctl

- See "[oidmon](#)" on page 2-14

2.3 oiddiag

The Oracle Internet Directory Server Diagnostic command-line tool (`oiddiag`) collects diagnostic information that helps triage issues reported on Oracle Internet Directory. It is available as `oiddiag` for use on UNIX and Linux platforms and as `oiddiag.bat` for Windows. The tool connects to the database used as the directory store (also called Metadata Repository) of Oracle Internet Directory and reads the information. The tool makes no recommendations on potential fixes to issues. Rather, it collects information to help Support and Development understand a problem and determine its solution. The tool can collect four types of diagnostic information:

- Directory information tree (DIT)
- Data consistency
- Server manageability statistics
- System and process information

If you use either the `collect_all=true` or the `collect_sub=true` arguments, you are prompted to supply the following information:

- The fully domain-qualified database host name
- The database listener port number
- The database service name

- The ODS database user password
- Whether the Oracle Database connection uses SSL or not. Only NoSSL Authentication (Encryption only) is supported.

You can find the hostname, port number and service name in the file `tnsnames.ora`, located by default in `ORACLE_INSTANCE/config`. For example, in the following `tnsnames.ora` file, the hostname, port number and service names are, respectively, `sun16.example.com`, `1521`, and `orcl.example.com`:

```
ORCL =
  (DESCRIPTION =
    (ADDRESS = (PROTOCOL = TCP)(HOST = sun16.example.com)(PORT = 1521))
    (CONNECT_DATA =
      (SERVER = DEDICATED)
      (SERVICE_NAME = orcl.example.com)
    )
  )
```

Note: You must set the `ORACLE_HOME` environment variable before executing the `OIDDIAG` tool.

2.3.1 Syntax for oiddiag

```
oiddiag {listdiags=true [targetfile=filename]} | {collect_all=true
[outfile=filename]} | {collect_sub=true [infile=filename] [outfile=filename]} |
{audit_report=true [outfile=file_name]}
```

2.3.2 Arguments for oiddiag

listdiags=true

Writes a list of available diagnostics that can be collected. The list is written to an output file, which is `ORACLE_INSTANCE/diagnostics/logs/OID/tools/oiddiag.txt` by default. You should run a `listdiags` command before running a `collect_sub` command. The `collect_sub` command uses the file that is output by `listdiags`. You can edit this file as needed to contain only the diagnostic items you want.

targetfile=filename

This is the location of the output file where the diagnostic tool writes the list of available diagnostics when `listdiags=true` is given. If not specified, the tool writes the list to `ORACLE_INSTANCE/diagnostics/logs/OID/tools/oiddiag.txt`.

collect_all=true

Collect all of the diagnostic information available and writes it to an output file. You are prompted to provide the Oracle Internet Directory database host name, listener port, net service name, and password.

outfile=filename

The name of the output file that the diagnostic information is written to. If not specified, the default output file is written to `ORACLE_INSTANCE/diagnostics/logs/OID/tools/oiddiag/timestamp.log`. The timestamp format is `YYYYMMDDHHmmss`.

collect_sub=true

Collects a subset of diagnostic information (based on the diagnostics specified in the input file) and writes it to an output file. You are prompted to provide the Oracle Internet Directory database host name, listener port, net service name, and password.

You should run a `listdiags` command before running a `collect_sub` command. The `collect_sub` command uses the file that is output by `listdiags`. You can edit this file as needed to contain only the diagnostic items you want.

infile=filename

A file that contains the list of diagnostic items for which you want to output information. By default, the diagnostic tool looks for this file in `ORACLE_INSTANCE/diagnostics/logs/OID/tools/oiddiag.txt`, which is the default target file location of the `listdiags` command. You can edit this file as needed to contain only the diagnostic items you want.

audit_report=true

Generates standard reports for Secure Events Tracking and writes them to an output file.

2.3.3 Tasks and Examples for oiddiag

Using the Oracle Internet Directory diagnostic tool, you can perform the following tasks:

- [Collecting All Diagnostic Information](#)
- [Collecting Selected Diagnostic Information](#)
- [Collecting Stack Trace Information](#)

2.3.3.1 Collecting All Diagnostic Information

The following example shows how to collect all available diagnostic information and write it to the specified output file.

Example:

```
oiddiag collect_all=true outfile=~ /myfiles/oid.log
```

2.3.3.2 Collecting Selected Diagnostic Information

To collect a subset of diagnostic data, you must first run the `oiddiag` tool with the `listdiags` argument. This outputs a list of available diagnostics, which you can then edit. This list is then passed in to the `collect_sub` command to determine the diagnostics for which to collect output. The following example uses the default file locations of `ORACLE_INSTANCE/diagnostics/logs/OID/tools/oiddiag.txt` (for the list) and `ORACLE_INSTANCE/diagnostics/logs/OID/tools/oiddiagtimestamp.log` (for the output file).

Example:

```
oiddiag listdiags=true
oiddiag collect_sub=true
```

2.3.3.3 Collecting Stack Trace Information

An important type of information that the `oiddiag` tool collects is the stack trace data for Oracle Internet Directory processes. Examining the stack trace is useful if you are experiencing slow response times or if your system stops responding. Because Oracle Internet Directory is usually started as a `setuid-root` program, you must log in as the root user before you can use the `oiddiag` tool to trace the stack for any Oracle Internet Directory processes. The root user must belong to the same operating system group that the Oracle operating system user belongs to. The following example logs in as the root user and changes to the `dba` group before executing the `oiddiag` tool:

```
su
newgrp dba
oiddiag collect_all=true
```

2.4 oidmon

In 11g Release 1 (11.1.1), you typically manage Oracle Internet Directory by using Oracle Enterprise Manager Fusion Middleware Control or the command-line utility `opmnctl`. Both `opmnctl` and Fusion Middleware Control use the Oracle Process Manager and Notification Server to issue commands to the Oracle Internet Directory Monitor, `oidmon`, which initiates, monitors, and terminates directory server processes.

2.4.1 Syntax for oidmon

```
oidmon [connect=connect_string] [host=hostname] [sleep=seconds] start | stop
```

2.4.2 Arguments for oidmon

connect=connect_string

Required. The directory database connect string. If you already have a `tnsnames.ora` file configured, then this is the net service name specified in that file, which is located by default in `ORACLE_INSTANCE/config`. (You can set the `TNS_ADMIN` environment variable if you want to use a different location.)

host=hostname

Optional. Enables you to specify a virtual host name for the server or the name of an Oracle Application Server Identity Management Cluster Node. If not given, the default of `localhost` is used.

sleep=seconds

Optional. The number of seconds after which Oracle Internet Directory Monitor should check for new requests from Oracle Internet Directory Control and for requests to restart any server instances that may have stopped. The default is 10 seconds.

start | stop

Required. The operation to perform (start or stop the Monitor process).

2.4.3 Tasks and Examples for oidmon

Using Oracle Internet Directory Monitor, you can perform the following tasks:

- [Starting Oracle Internet Directory Monitor](#)
- [Starting Oracle Internet Directory Monitor on a Virtual Host or Cluster Node](#)

- [Stopping Oracle Internet Directory Monitor](#)

2.4.3.1 Starting Oracle Internet Directory Monitor

You should start Oracle Internet Directory Monitor before using Oracle Internet Directory Control.

Example:

```
oidmon connect=dbs1 sleep=15 start
```

2.4.3.2 Starting Oracle Internet Directory Monitor on a Virtual Host or Cluster Node

Use the `host` argument to specify a virtual host name when starting an Oracle Internet Directory Monitor on a virtual host or a Oracle Application Server Identity Management Cluster Node.

Example:

```
oidmon connect=dbs1 host=virtualhostname.company.com start
```

2.4.3.3 Stopping Oracle Internet Directory Monitor

Stopping Oracle Internet Directory Monitor also stops all other Oracle Internet Directory processes. The `oidmon` tool does not remove server instance information from the `ODS_PROCESS` table. When an `oidmon start` operation is executed, it starts all the server processes it had stopped previously.

Example:

```
oidmon connect=dbs1 stop
```

2.4.4 Related Command-Line Tools for oidmon

- See "[oidctl](#)" on page 2-5

2.5 opmnctl

The Oracle Process Manager and Notification Server Control Utility (`opmnctl`) enables you to manage system components, such as Oracle Internet Directory, in an integrated way.

The term "instance" refers to an Oracle instance in `opmnctl` command descriptions.

Notes:

- This section only discusses how to use the OPMN Control Utility to manage Oracle Internet Directory components. For detailed information on how to use the OPMN Control Utility, see *Oracle Fusion Middleware Oracle Process Manager and Notification Server Administrator's Guide*.
 - Arguments to `opmnctl` are case-sensitive. Be sure to type them exactly as shown. For example, `-adminUsername` must have only the letter U in upper case.
-
-

2.5.1 Syntax for opmnctl

```
opmnctl startproc ias-component=componentName
```

```
opmnctl stopproc ias-component=componentName

opmnctl createcomponent [admin_server_properties] [instance_properties]
[opmn_properties] [component_properties] [component_configuration_properties]

opmnctl deletecomponent [admin_server_properties] [instance_properties]
[opmn_properties] [component_properties] [component_configuration_properties]

opmnctl registerinstance [admin_server_properties] [instance_properties]
[component_configuration_properties]

opmnctl unregisterinstance [admin_server_properties] [instance_properties]
[component_configuration_properties]

opmnctl updatecomponentregistration [admin_server_properties] [instance_
properties] [component_configuration_properties]

opmnctl status [-l]
```

2.5.2 Arguments for opmnctl

Arguments for `opmnctl` consist of commands and several types of properties. This section describes the following types of arguments:

- [Commands](#)
- [WebLogic Administration Server Properties](#)
- [Instance Properties](#)
- [OPMN Configuration Properties](#)
- [Component Properties for Oracle Internet Directory](#)
- [Oracle Internet Directory Component Configuration Properties](#)

Note: Arguments to `opmnctl` are case-sensitive. Be sure to type them exactly as shown. For example, `-adminUsername` must have only the letter `U` in upper case.

2.5.2.1 Commands

The command indicates the operation to perform. The following commands are relevant to Oracle Internet Directory:

startproc

Starts server process

stopproc

Stops server process

createcomponent

Creates a component and automatically registers the component with a WebLogic domain, as long as the instance is in a registered state.

deletecomponent

Deletes a component

registerinstance

Registers an Oracle instance that was not previously registered with a domain. This scenario occurs if you chose **Configure Without a Domain** during installation of Oracle Internet Directory or if you created an Oracle instance from the command line and did not register the instance.

unregisterinstance

Unregisters an Oracle instance that was previously registered with a domain.

status [-l]

Shows the status of components. Add the `-l` option for detailed information.

updatecomponentregistration

Registers an existing Oracle Internet Directory component that was not previously registered with a domain. This scenario occurs if you created a new component in an Oracle instance using `opmnctl createcomponent` and did not register the component.

2.5.2.2 WebLogic Administration Server Properties

The following administration server properties are relevant to Oracle Internet Directory:

-adminHost

The WebLogic Administration Server host name

-adminPort

The WebLogic Administration Server port. The default is 7001.

-adminUsername

The WebLogic administrator user name.

-adminPasswordFile

A text file containing the WebLogic administrator password. You are prompted for the administrator password if this parameter is missing. Best security practice is to provide the password in response to a prompt. If you must use a file containing the password in clear text, protect it with file permissions and delete it when it is no longer needed.

2.5.2.3 Instance Properties

You do not need to specify instance properties with the `opmnctl` command, as long as you invoke the command as `ORACLE_INSTANCE/bin/opmnctl`.

2.5.2.4 OPMN Configuration Properties

No OPMN configuration properties are required with the `opmnctl` commands shown in this chapter.

2.5.2.5 Component Properties for Oracle Internet Directory

The following component properties are relevant to Oracle Internet Directory.

-componentType

For Oracle Internet Directory, this is always `OID`. This is required for `createcomponent`.

-componentName

The name of an Oracle Internet Directory component, such as `oid1`. The component name must be unique within the Oracle instance.

2.5.2.6 Oracle Internet Directory Component Configuration Properties

These arguments are specific to Oracle Internet Directory

-Db_info

Specifies the name, TNS port, and service name of the Oracle Database associated with this Oracle Internet Directory component, in the format:

```
DBHostName: TNSPORT: DBSERVICE
```

For example:

```
linux12.example.com:1521:orcl.example.com
```

When you are using the `createcomponent` command, the

DBHostName: Port: DBSvcName argument to the `-DB_info` parameter must be the same as that provided during installation. If it is not, the command fails. You can find this value in the file `ORACLE_INSTANCE/config/tnsnames_copy.ora`.

If the Oracle Database is based on Real Application Clusters, the argument to the `-DB_info` parameter is of the form:

```
DBHostName1: Port1^DBHostName2: Port2@DBSvcName
```

-Ods_Password_File

Optional. The file that contains the ODS password in cleartext. You are prompted for the ODS password if this parameter is missing. Best security practice is to provide the password in response to a prompt. If you must use a file containing the password in clear text, protect it with file permissions and delete it when it is no longer needed.

-Sm_Password_File

Optional. The file that contains the ODSSM password in cleartext. You are prompted for the ODSSM password if this parameter is missing. Best security practice is to provide the password in response to a prompt. If you must use a file containing the password in clear text, protect it with file permissions and delete it when it is no longer needed.

-Namespace

Required only for the first Oracle Internet Directory component in an instance. The Oracle Internet Directory namespace. For example: "`dc=us, dc=example, dc=com`".

-Admin_Password_File

Optional. The file that contains the password for the Oracle Internet Directory superuser account `cn=orcladmin`. You are prompted for the Oracle Internet Directory superuser password if this parameter is missing.

-Port

Optional. The non-SSL port for this Oracle Internet Directory component. The command uses a default available port if this parameter is missing.

-Sport

Optional. The SSL port for this Oracle Internet Directory component. The command uses a default available port if this parameter is missing.

2.5.3 Tasks and Examples for opmnctl

Using the OPMN Control Utility, you can perform the following Oracle Internet Directory server management tasks:

- [Creating an Oracle Internet Directory Component](#)
- [Unregistering an Oracle Instance](#)
- [Updating the Component Registration of an Oracle Instance](#)
- [Deleting an Oracle Internet Directory Component](#)
- [Stopping All Oracle Internet Directory Server Components](#)
- [Starting All Oracle Internet Directory Server Components](#)
- [Stopping a Specific Oracle Internet Directory Server Component](#)
- [Starting a Specific Oracle Internet Directory Server Component](#)
- [Getting Status Information](#)

2.5.3.1 Creating an Oracle Internet Directory Component

This command creates a component and registers it with a WebLogic domain, as long as the instance is in a registered state:

```
opmnctl createcomponent
  -componentType OID
  -componentName oid2
  -adminHost myhost
  -adminPort 7001
  -DB_info "linux12.example.com:1521:orcl.example.com"
  -Namespace "dc=domain_component1,dc=domain_component2..."
```

The `DBHostName:Port:DBSvcName` argument to the `-DB_info` parameter must be the same as that provided during installation. If it is not, the command fails. You can find this value in the file `ORACLE_INSTANCE/config/tnsnames_copy.ora`

If the Oracle Database is based on Real Application Clusters, the argument to the `-DB_info` parameter is of the form:

```
DBHostName1:Port1^DBHostName2:Port2@DBSvcName
```

The `opmnctl` command prompts for the WebLogic administrator's user name if you do not supply it. It also prompts for the passwords if you do not supply password file names on the command line. The `opmnctl` command also uses available ports if you do not specify `-Port` or `-Sport`

2.5.3.2 Registering an Oracle Instance

This example registers an Oracle instance with a WebLogic server:

```
ORACLE_INSTANCE/bin/opmnctl registerinstance \  
-adminHost myhost \  
-adminPort 7001 \  
-adminUsername weblogic
```

You are prompted for the WebLogic administrator's user name and password.

2.5.3.3 Unregistering an Oracle Instance

This example unregisters an Oracle instance with a WebLogic server:

```
ORACLE_INSTANCE/bin/opmnctl unregisterinstance \  
-adminHost myhost \  
-adminPort 7001 \  
-adminUsername weblogic
```

You are prompted for the WebLogic administrator's user name and password if you do not supply them.

2.5.3.4 Updating the Component Registration of an Oracle Instance

You must update the registration of an Oracle Internet Directory component in a registered Oracle instance whenever you change any of the configuration attributes `orclhostname`, `orclsslport`, or `orclnonsslport` in the instance-specific configuration entry, or if you change the password for the EMD administrator. If you do not update the component registration, you will be unable to use Fusion Middleware Control or `wlst` to manage that component.

This example updates the component registration of an Oracle instance that has been registered.

```
ORACLE_INSTANCE/bin/opmnctl updatecomponentregistration \  
-adminHost myhost \  
-adminPort 7001 \  
-adminUsername weblogic \  
-componentType OID \  
-componentName oid2 \  
-Port 6589 \  
-Sport 3032
```

You are prompted for the WebLogic administrator's user name and password if you do not supply them.

The default administrative port on the WebLogic Administration Server is 7001.

You must supply both a non-SSL port and an SSL port.

2.5.3.5 Deleting an Oracle Internet Directory Component

This example deletes an Oracle Internet Directory component that has been registered with a WebLogic server:

```
ORACLE_INSTANCE/bin/opmnctl deletecomponent \  
-adminHost myhost \  
-adminPort 7001 \  
-adminUsername weblogic \  
-componentType OID \  
-componentName oid2
```

You are prompted for the WebLogic administrator's user name and password if you do not supply them.

2.5.3.6 Stopping All Oracle Internet Directory Server Components

The following example shows how to stop all running directory server processes (Oracle Internet Directory and Oracle Directory Replication server).

```
ORACLE_INSTANCE/bin/opmnctl process-type=OID stop
```

2.5.3.7 Starting All Oracle Internet Directory Server Components

The following example shows how to start all directory server components.

```
$ORACLE_INSTANCE/bin/opmnctl startproc componentType=OID
```

2.5.3.8 Stopping a Specific Oracle Internet Directory Server Component

The following example shows how to stop a specific Oracle Internet Directory component.

```
ORACLE_INSTANCE/bin/opmnctl stopproc componentName=oid1
```

2.5.3.9 Starting a Specific Oracle Internet Directory Server Component

The following example shows how to start a specific Oracle Internet Directory component.

```
ORACLE_INSTANCE/bin/opmnctl startproc componentName=oid1
```

2.5.3.10 Getting Status Information

The following example shows the status information provided by `opmnctl`.

```
$ opmnctl status -l
```

```
Processes in Instance: asinst_2
```

```
-----+-----+-----+-----+-----+-----+
+-----+-----+
ias-component          | process-type   |      pid | status  |      uid | memused
|  uptime | ports          |              |         |          |
+-----+-----+-----+-----+-----+-----+
+-----+-----+
oid2                   | oidldapd      |   24760 | Alive   | 988238800 | 102744
| 0:01:12 | N/A           |              |         |          |
oid2                   | oidldapd      |   24756 | Alive   | 988238799 | 55052
| 0:01:12 | N/A           |              |         |          |
oid2                   | oidmon        |   24745 | Alive   | 988238796 | 48168
| 0:01:14 | LDAPS:6789,LDAP:6788
oid1                   | oidldapd      |   21590 | Alive   | 988238048 | 103716
| 19:51:48 | N/A           |              |         |          |
oid1                   | oidldapd      |   21586 | Alive   | 988238047 | 54420
| 19:51:49 | N/A           |              |         |          |
oid1                   | oidmon        |   21577 | Alive   | 988238046 | 48168
| 19:51:49 | LDAPS:3133,LDAP:3060
```

2.5.4 Related Command-Line Tools for opmnctl

- See "oidmon" on page 2-14
- See "oidctl" on page 2-5

2.6 oidstats.sql

Use the Oracle Internet Directory Database Statistics Collection Tool (`oidstats.sql`) to analyze the various database ods (Oracle Directory Server) schema objects to estimate the statistics. It is located in the following directory: `ORACLE_HOME/ldap/admin/`. You must run this utility whenever there are significant changes in directory data—including the initial load of data into the directory.

If you load data into the directory by any means other than the bulk load tool (`bulkload`), then you must run the Oracle Internet Directory Database Statistics Collection tool after loading. Statistics collection is essential for the Oracle Optimizer to choose an optimal plan in executing the queries corresponding to the LDAP operations. You can run Oracle Internet Directory Database Statistics Collection tool at any time, without shutting down any of the Oracle Internet Directory processes.

Note: If you do not use the bulkload utility to populate the directory, then you must run the `oidstats.sql` tool to avoid significant search performance degradation.

2.6.1 Syntax for oidstats.sql

```
sqlplus ods/ods_password@connect_string @oidstats.sql
```

2.6.2 Arguments for oidstats.sql

If you do not supply the ODS password on the command line, `sqlplus` prompts for it. Note that the default ODS password is the same as that for the Oracle Application Server administrator. (For security reasons, avoid supplying a password on the command line whenever possible. A password typed on the command line is visible on your screen. When you supply a password at a prompt, it is not visible on the screen.)

connect_string

Required. The connect string for the ODS database. This is the network service name set in the `tnsnames.ora` file, which is located by default in `$ORACLE_INSTANCE/config`. (You can set the `TNS_ADMIN` environment variable if you want to use a different location.)

2.6.3 Tasks and Examples for oidstats.sql

You can perform the following task using the `oidstats.sql` tool:

- [Running the Oracle Internet Directory Database Statistics Collection Tool](#)

2.6.3.1 Running the Oracle Internet Directory Database Statistics Collection Tool

Example:

```
sqlplus ods@dbs1 @oidstats.sql
```

2.6.4 Related Command-Line Tools for oidstats.sql

- See "bulkload" on page 3-3.

2.7 oidcred

The Oracle Internet Directory Credential Management Tool is used to add, update, or delete a credential that has been created in the Credential Store Framework. It determines the instance name from the *opmn.xml* file

2.7.1 Syntax for oidcred

```
oidcred user_name option [InstancePath]
```

2.7.2 Arguments for oidcred

The `oidcred` command takes the following arguments:

user_name

Required. Value can be `odssm` or `emd`.

option

Required. Value can be `update` or `delete`. The `update` option adds the credential if it does not exist or updates it if it exists.

InstancePath

Required if `ORACLE_INSTANCE` environment is not set. Path of Oracle Instance directory.

If not specified on the command line, `oidcred` uses `ORACLE_INSTANCE` environment variable if set.

2.7.3 Tasks and Examples for oidcred

Update the password for user `odssm` in the Credential Store Framework.

```
oidcred odssm update /scratch/mydir/fmw_home/asinst_1
Enter password:
Confirm password:
Password set in CSF
```

2.8 oidrealm

The Oracle Internet Directory realm tool is used to create multiple realms in Oracle Internet Directory. The individual realms can be managed separately, so you can use `oidrealm` as a replacement for Delegated Administration Services.

The `oidrealm` tool supports creation, but not deletion, of a realm. A procedure for deleting a realm is provided in Note 604884.1, which is available on My Oracle Support at <https://support.oracle.com/>

2.8.1 Syntax for oidrealm

On UNIX or Linux:

```
oidrealm oid_host oid_port DN [-SSL]
```

On Windows:

```
oidrealm.bat oid_host oid_port DN [-SSL]
```

Note: If you specify an SSL port, that port must be configured in SSL No Authentication Mode, that is, `orclsslauthentication` must be 1. For more information, see the section on SSL authentication modes in *Oracle Fusion Middleware Administrator's Guide for Oracle Internet Directory*.

2.8.2 Arguments for oidrealm

oid_host

Name of host where Oracle Internet Directory is running.

oid_port

Specifies the port number to use, which can be either SSL or non-SSL

DN

DN of realm to add

[-SSL]

Specifies that the port is an SSL port. Only no-auth mode is supported.

2.8.3 Example for oidrealm

```
$ oidrealm myhost.example.com 3133 'dc=newrealm,dc=com' -SSL
Enter OID Admin Password: password

Oracle Internet Directory Data Management Tools

This chapter describes the following command-line tools used to administer the entries and data stored in Oracle Internet Directory:

- `bulkdelete`
- `bulkload`
- `bulkmodify`
- `catalog`
- `ldapadd` (LDAP Data Add Tool)
- `ldapaddmt` (Multi-Threaded LDAP Data Add Tool)
- `ldapbind` (Authentication Validation Tool)
- `ldapcompare` (Attribute Comparison Tool)
- `ldapdelete` (LDAP Data Deletion Tool)
- `ldapmoddn` (LDAP DN/RDN Modification Tool)
- `ldapmodify` (LDAP Data Modification Tool)
- `ldapmodifymt` (Multi-Threaded LDAP Data Modification Tool)
- `ldapsearch` (LDAP Search Tool)
- `ldifwrite` (Data Export Tool)
- `ldifmigrator` (Data Migration Tool)
- `upgradecert.pl` (Certificate Upgrade Tool)

Notes:

- The bulk tools do not support attribute uniqueness.
 - If your schemas were created during installation of a version prior to 11g Release 1 (11.1.1.6.0), you must add datafiles to the `OLTS_CT_STORE` and `OLTS_ATTRSTORE` tablespaces if you intend to add more than a million entries to Oracle Internet Directory. Perform this step prior to the `bulkload` or `ldapadd` operation. For details, see the section "Creating Datafiles and Adding Datafiles to a Tablespace" in *Oracle Database Administrator's Guide*.
-
-

3.1 bulkdelete

The `bulkdelete` command-line tool enables you to delete one or more subtrees efficiently. It can be used when both an Oracle Internet Directory server and Oracle Directory Replication servers are in operation. It uses a SQL interface to benefit performance. For this release, the `bulkdelete` tool runs on only one node at a time.

This tool does not support filter-based deletion. That is, it deletes an entire subtree below the root of the subtree. If the base DN is a user-added DN, rather than a DN created as part of the installation of the directory, it is included in the delete. You must restrict LDAP activity against the subtree during deletion.

Note: The `bulkdelete` command requires that the environment variable `ORACLE_INSTANCE` be set.

3.1.1 Syntax for bulkdelete

```
bulkdelete connect=connect_string {[basedn=Base_DN] | [file=file_name]}  
[cleandb="TRUE" | "FALSE"] [size=transaction_size] [encode=character_set]  
[debug="TRUE" | "FALSE"] [threads=num_of_threads] [verbose="TRUE" | "FALSE"]
```

3.1.2 Arguments for bulkdelete

connect

Required. The directory database connect string. If you already have a `tnsnames.ora` file configured, then this is the net service name specified in that file, which is located by default in `ORACLE_INSTANCE/config`. (You can set the `TNS_ADMIN` environment variable if you want to use a different location.)

basedn | file

Required. The base DN of the subtree to be deleted, for example, `"dc=company, dc=com"`. Enclose the DN in quotation marks. You can also specify multiple base DNs by putting them in a file and specifying the file name and path with the `file` argument.

cleandb

Optional. This is used to specify whether the deleted entries would be tombstoned or deleted completely from the database. The default (`cleandb="TRUE"`) is to delete the entries completely.

size

Optional. The number of entries to be committed as a part of one transaction.

encode

Optional. The native character set encoding. Defaults to the character set of the user's terminal. Each supported character set has a unique acronym, for example, `WE8MSWIN1252`, `JA16SJIS`, or `AL32UTF8`.

debug

Optional. The debug option reports the logging level. This is useful in case the command runs into errors. The output is logged to the `bulkdelete.log` file. This file can be found under `ORACLE_INSTANCE/diagnostics/logs/OID/tools`.

threads

Optional. The number of threads to create. The default value is the number of CPUs on the machine plus one.

verbose

Optional. This is used to run the command in verbose mode.

3.1.3 Tasks and Examples for bulkdelete

The following examples show how to delete one or more subtrees from the directory:

- [Deleting All Entries in a Naming Context and Making Them Tombstone Entries](#)
- [Completely Deleting All Entries in a Naming Context](#)
- [Deleting Entries in Multiple Naming Contexts](#)

3.1.3.1 Deleting All Entries in a Naming Context and Making Them Tombstone Entries

Example:

```
bulkdelete connect="dbs1" basedn="cn=OracleContext" cleandb="FALSE"
```

3.1.3.2 Completely Deleting All Entries in a Naming Context

Example:

```
bulkdelete connect="dbs1" basedn="cn=OracleContext"
```

3.1.3.3 Deleting Entries in Multiple Naming Contexts

This example uses a file that contains a list of DN's to delete.

Example:

```
bulkdelete connect="dbs1" file="~/myfiles/dn.txt"
```

3.1.4 Related Command-Line Tools for bulkdelete

- See ["bulkload"](#) on page 3-3
- See ["bulkmodify"](#) on page 3-9
- See ["ldapdelete"](#) on page 3-27

3.2 bulkload

The `bulkload` command-line tool is useful for loading large number of entries into a directory server. It uses Oracle SQL*Loader to load the directory entries. The `bulkload` tool expects the input file to be in LDAP Data Interchange Format (LDIF). See [Appendix A, "LDIF File Format"](#) for the correct format and syntax of an LDIF file.

Intermediate files used by `bulkload` are stored in `ORACLE_INSTANCE/OID/load` by default.

Note: The `bulkload` command requires that the environment variable `ORACLE_INSTANCE` be set.

Using bulkload with Replication

When you add data to a node that is part of a Directory Replication Group (DRG), you can use either bulk tools or LDAP tools, depending on the circumstances. The following rules apply:

- When you add new entries to all nodes in the DRG, you can use either bulk tools or LDAP tools. For more than 20K entries, bulk tools are significantly faster. If you use LDAP tools, add the entries to only one node in the DRG and let replication propagate the entries. If you use bulk tools, generate the intermediate file only once from the LDIF file and use that intermediate file to load the entries onto all the nodes in the DRG.
- When you copy existing entries from one node to another in the same replication group, use bulk tools. Use the `bulkload` option `restore=true` when you upload the data.
- If the LDIF file contains operational attributes, which it does when created with `ldifwrite`, use `bulkload` to add the entries.
- If the replication agreement is a partial replication agreement, use `ldifwrite` with the base DN as the replication agreement DN to write the entries to the LDIF file. Then use `bulkload` with the `restore=true` option to load the data.

Overview of the Bulk Loading Tool Operations

The Bulk Loading Tool performs its operations in the following phases:

1. Check

In the check phase, all entries of LDIF files are verified for valid LDAP schema and duplicate entries. The Bulk Loading Tool reports any errors, which must be corrected before proceeding.

2. Generate

In the generate phase, the LDIF input is converted into intermediate files that can be used by `SQL*Loader` to load the data into the Oracle Internet Directory directory store.

3. Load

The Intermediate files generated in generate phase are loaded into the Oracle Internet Directory directory store. The Bulk Loading Tool supports two types of loading of data:

■ Incremental Mode Loading

Incremental mode enables you to append data to existing directory data. Loading in this mode is faster than other add methods, but slower than bulk mode loading.

Use this mode when you want to append a small amount of data. Here, small amount is a relative number. It depends upon existing data in directory, the amount of data to be loaded, and the hardware capabilities to handle the load.

In this mode, the Bulk Loading Tool does not drop and rebuild catalog indexes. Instead, it uses `SQL*Loader` in insert mode to add data to the database and update indexes through inserts.

■ Bulk Mode Loading

In bulk mode, you must be able to add or append large number of entries to a directory. By default, the Bulk Loading Tool runs in bulk mode. Bulk mode is faster than incremental mode.

In bulk mode, all Oracle Internet Directory server instances should be stopped. In this mode, the Bulk Loading Tool drops existing indexes and re-creates them after loading of data. For data loading, it uses SQL*Loader direct-path mode.

Notes:

- Running the `bulkload -load` operation sets the server mode to read-write. If you require a different mode, reset it after performing the `load` operation.
- At the start of the load operation, `bulkload` determines the current configured value of `orclRIenabled`, then disables referential integrity. At the end of load phase, `bulkload` returns `orclRIenabled` to its original value. If any referential integrity violations occurred, however, referential integrity is disabled, and you see the message:

```
There is a violation of Referential Integrity and hence it is
Disabled now. Run the OIDDIAG tool with diagnostic option to
collect the Entries which have dangling DN attribute values and
Fix the violation
Fix the violation and then set orclRIenabled to the desired value.
```

4. Index Creation

After the load is complete, the indexes are re-created if the load was done in bulk mode. Also, the Bulk Loading Tool provides an option just to re-create all indexes. This is useful in case if previous index creation was unsuccessful for some reason.

5. Directory Data Recovery

A failure in the load phase can leave directory data in an inconsistent state. The Bulk Loading Tool can revert back to original state that existed prior to the invocation of `bulkload`.

Before Using the `bulkload` Tool

Before running the `bulkload` tool:

1. Stop your Oracle Internet Directory server instance(s) before loading data in bulk mode.
2. Take a cold backup of the Oracle Internet Directory database.
3. If loading data in incremental mode, you do not need to stop the directory server, although you must put the directory server in read-modify mode. Read-modify mode restricts add, delete, and modify DN operations.
4. If loading an LDIF file with data from an older version of Oracle Internet Directory, see the *Oracle Fusion Middleware Upgrade Planning Guide* for any special instructions about upgrading `orclguids` before you begin.

3.2.1 Syntax for `bulkload`

```
bulkload [connect=connect_string]
{[check="TRUE"|"FALSE" [file=ldif_file]] [generate="TRUE"|"FALSE"
[append="TRUE"|"FALSE"]] [restore="TRUE"|"FALSE"]] [thread=num_of_threads]
file=ldif_file]
[load="TRUE"|"FALSE" [append="TRUE"|"FALSE"]] [threads=num_of_threads]]
```

```
[index="TRUE"|"FALSE"] [missing="TRUE"|"FALSE"] [recover="TRUE"|"FALSE"]}
[encode=character_set] [debug="TRUE"|"FALSE"] [verbose="TRUE"|"FALSE"]
```

3.2.2 Arguments for bulkload

connect

Optional. The directory database connect string. If you already have a `tnsnames.ora` file configured, then this is the net service name specified in that file, which is located by default in `ORACLE_INSTANCE/config`. (You can set the `TNS_ADMIN` environment variable if you want to use a different location.) For loading data in single node, specify its connect string—for example `orcl`. For loading data in multiple nodes, specify connect strings of all nodes—for example:

```
bulkload connect="orcl1,orcl2,orcl3"
```

check | generate | load | recover | index | missing

Required. The operation to perform. The operations are:

- `check` - Checks the LDIF file provided for schema inconsistencies and for duplicate entry DNs. You must provide the full path or relative path and file name of an LDIF file. You can optionally specify the number of threads. The `check` and `generate` operations can be issued at the same time.
- `generate` - Creates intermediate files suitable for loading entries into Oracle Internet Directory using `SQL*Loader`. You must provide the full path or relative path and file name of an LDIF file from which to generate entries. You can optionally specify the number of threads. The `check` and `generate` operations can be issued at the same time.

Note:

After the `generate` operation, the directory is left in the read-modify mode until you perform the `load` operation.

`bulkload` updates the mode to read-only when performing a load operation.

- `load` - Loads the files generated in the `generate` operation into the database. You can use the `append` option to specify if the data needs to be appended to the existing directory data. For load to succeed, the LDAP server must be stopped. You can optionally specify the number of threads. If you set the `ldplonly` option to "TRUE", then the data is loaded in parallel but index creation takes place in serial mode. You must run a `generate` operation before a `load` operation.
- `recover` - In case of a failure during a `load` operation, recovers the directory with the original data. You cannot use any other option when using the `recover` option.
- `index` - Recreates indexes on all catalog tables.
- `missing` - Creates only missing indexes on catalog tables.

file

Required for the `check` and `generate` operations. The fully qualified path or relative path and file name of the LDIF file that contains the entries you want to load.

threads

Optional for the `check`, `generate`, and `load` operations. The number of threads to create. The default value is the number of CPUs on the machine plus one.

restore

Optional with the `check` and `generate` operations. Assumes operational attributes, such as `orclguid`, `creatorsname`, and `createtimestamp`, are already present in the specified LDIF file. Duplicate operational attribute values are not created in the output SQL*Loader files.

When the `restore` option is set to `TRUE`, then the operational attributes specified in the LDIF file are honored. If `restore` option is not specified or it is set to `FALSE`, then the operational attributes might not be retained, depending on the type of attribute. Best practice is to avoid having operational attributes in the LDIF file when the `restore` option value is `FALSE`.

append

Optional with the `generate` and `load` operations. Loads entries in incremental mode rather than bulk mode, which is the default. Incremental mode appends data to existing directory data, and is intended for loading small amounts of data.

encode

Optional. The native character set encoding. Defaults to the character set of the user's terminal. Each supported character set has a unique acronym, for example, `WE8MSWIN1252`, `JA16SJIS`, or `AL32UTF8`.

debug

Optional. The `debug` option turns debugging on or off. Turning debugging on (`debug="TRUE"`) is useful when the command runs into errors. The output is logged to the `bulkload.log` file. This file can be found under `ORACLE_INSTANCE/diagnostics/logs/OID/tools`.

verbose

This is used to run the command in verbose mode.

3.2.3 Tasks and Examples for bulkload

Using the `bulkload` tool, you can perform the following tasks:

- [Loading Data in Bulk Mode](#)
- [Loading Data for Multiple Nodes in a Replicated Environment](#)
- [Loading Data in Incremental Mode](#)
- [Verifying Indexes](#)
- [Recreating Indexes](#)
- [Recovering Data After a Load Error](#)

3.2.3.1 Loading Data in Bulk Mode

The typical usage scenario is to load directory data after Oracle Internet Directory installation. First check the LDIF file for schema errors and generate the intermediate files. Next, load the data into the Oracle Internet Directory store.

The following example shows how to run the `bulkload` tool. The tool is first run with the `check` and `generate` options. The `check` option checks the input for schema and data consistency violations. The `generate` option generates the input files for SQL*Loader. Next, the command is run with the `load` option to load the data into the directory.

Example:

```
bulkload connect="orcl" check="TRUE" generate="TRUE" file="~/myfiles/data.ldif"
bulkload connect="orcl" load="TRUE"
```

3.2.3.2 Loading Data for Multiple Nodes in a Replicated Environment

When you load the same data into multiple nodes in a replicated network, ensure that the `orclGUID` parameter (global ID) is consistent across all the nodes. You can accomplish this by generating the bulk load data file once only (using the `generate` argument), and then using the same data file to load the other nodes (using the `load` argument).

3.2.3.3 Loading Data in Incremental Mode

If you must add directory entries to an Oracle Internet Directory store already containing some user LDIF data, use the `append` argument to denote incremental mode. This mode is normally faster than other methods of adding entries to the directory. However, be sure that the directory server instances are in read-modify mode before you begin. The following example shows how to run `bulkload` in incremental mode.

Example:

```
bulkload connect="orcl" check="TRUE" generate="TRUE" load="TRUE" append="TRUE"
file="~/myfiles/data.ldif"
```

3.2.3.4 Verifying Indexes

You can verify existing indexes in the directory using the `check` option along with the `index` option.

Example:

```
bulkload connect="orcl" check="TRUE" index="TRUE"
```

3.2.3.5 Recreating Indexes

The `load` operation either updates or creates the indexes. However, due to issues like improper sizing, the indexes may not be updated or created properly. For this reason, the `bulkload` tool enables you to re-create all the indexes.

Example:

```
bulkload connect="orcl" index="TRUE"
```

3.2.3.6 Recovering Data After a Load Error

Due to issues like improper disk sizing, the `load` operation may fail. If this happens, then directory data can be inconsistent. For this reason, `bulkload` enables you to recover the directory data to the state that existed prior to the invocation of `bulkload`.

Example:

```
bulkload connect="orcl" recover="TRUE"
```

3.2.4 Related Command-Line Tools for bulkload

- See "[bulkdelete](#)" on page 3-2
- See "[bulkmodify](#)" on page 3-9
- See "[ldapadd](#)" on page 3-15
- See "[ldapaddmt](#)" on page 3-19

3.3 bulkmodify

The `bulkmodify` command-line tool enables you to modify a large number of existing entries in an efficient way.

Note: The `bulkmodify` command requires that the environment variable `ORACLE_INSTANCE` be set.

The `bulkmodify` tool supports the following:

- Subtree based modification
- LDAP search filter. For example, the filter could be `objectclass=*`, `objectclass=oneclass`, or `'(&(sn=Baileys)(cn=Kalid Baileys))'`.
- Attribute value addition and replacement. It modifies all matched entries in bulk.

The `bulkmodify` tool performs schema checking on the specified attribute name and value pair during initialization. All entries that meet the following criteria are modified:

- They are under the specified subtree.
- They meet the LDAP filter condition.
- They contain the attribute to be modified as either mandatory or optional.

The directory server and directory replication server may be running concurrently while bulk modification is in progress, but the bulk modification does not affect the replication server. You must perform bulk modification against all replicas.

Note:

LDIF file based modification is not supported by `bulkmodify`. This type of modification requires per-entry-based schema checking, and therefore the performance gain over the existing `ldapmodify` tool is insignificant.

Make sure that when `bulkmodify` is invoked, server side entry cache is disabled.

You must restrict user access to the subtree during bulk modification. If necessary, access control item (ACI) restriction can be applied to the subtree being updated by `bulkmodify`.

You cannot use `bulkmodify` to add a value to single-valued attributes that already contain one value. If a second value is added, you must alter the directory schema to make that attribute multi-valued.

The `bulkmodify` tool does not allow `add` or `replace` operations on the following attributes:

- `dn` (use `ldapmoddn` instead)
- `cn` (use `ldapmodify` instead)
- `userpassword` (use `ldapmodify` instead)
- `orclpassword` (use `ldapmodify` instead)
- `orclentrylevelaci` (use `ldapmodify` instead)
- `orclaci` (use `ldapmodify` instead)
- `orclcertificatehash`
- `orclcertificatematch`
- any binary attribute
- any operational attribute

It does not allow `replace` operation on the attribute `objectclass`.

It does not allow `add` for single-valued attributes.

3.3.1 Syntax for bulkmodify

```
bulkmodify connect=connect_string basedn=Base_DN
{[add="TRUE"|"FALSE"]|[replace="TRUE"|"FALSE"]} attribute=attribute_name
value=attribute_value [filter=filter_string] [size=transaction_size]
[threads=num_of_threads] [debug="TRUE"|"FALSE"] [encode=character_set]
[verbose="TRUE"|"FALSE"]
```

3.3.2 Arguments for bulkmodify

connect

Required. The directory database connect string. If you already have a `tnsnames.ora` file configured, then this is the net service name specified in that file, which is located by default in `ORACLE_INSTANCE/config`. (You can set the `TNS_ADMIN` environment variable if you want to use a different location.)

basedn

Required. The DN of the subtree to be modified. Enclose the DN in quotes.

add | replace

Required. The operation to be performed on the attribute. Specifies whether you want to add an attribute value or replace an attribute value.

attribute

Required. The name of a single attribute for which a value needs to be added or replaced.

value

Required. The single attribute value to add or replace. If the value contains spaces, enclose it in quotes.

filter

Optional. A filter string that contains a single attribute. Defaults to `objectclass=*`.

size

Optional. The number of entries to be committed as part of one transaction. Defaults to 100.

threads

Optional. The number of threads to create. The default value is the number of CPUs on the machine plus one.

debug

Optional. The debug option reports the logging level. This is useful in case the command runs into errors. The output is logged to the `bulkmodify.log` file. This file can be found under `ORACLE_INSTANCE/diagnostics/logs/OID/tools`.

encode

Optional. The native character set encoding. Defaults to the character set of the user's terminal. Each supported character set has a unique acronym, for example, `WE8MSWIN1252`, `JA16SJIS`, or `AL32UTF8`.

verbose

This is used to run the command in verbose mode.

3.3.3 Tasks and Examples for bulkmodify

Using the `bulkmodify` tool, you can perform the following task:

- [Updating an Attribute for Multiple Entries at Once](#)

3.3.3.1 Updating an Attribute for Multiple Entries at Once

The following example shows how to modify an attribute for several entries using a filter. This command adds the telephone number 408-123-4567 to the entries of all employees who have Anne Smith as their manager.

Example:

```
bulkmodify connect="orcl" basedn="c=US" add="TRUE" attribute="telephoneNumber"
value="408-123-4567" filter="manager=Anne Smith"
```

3.3.4 Limitations of bulkmodify

`bulkmodify` has the following limitations:

- `bulkmodify` does not distinguish between attributes with or without subtypes, when performing the `replace` operation. `bulkmodify` replaces the attribute value irrespective of whether the attribute contains subtypes.
- `bulkmodify` allows the RDN to be modified without modifying the DN. If an attribute is part of a DN, then the attribute value is modified but the DN entry in the directory is not modified.

- `bulkmodify` does not perform an object class check when performing an `add` operation. When adding a new attribute to a directory entry, `bulkmodify` does not verify if the entry has the required object class to support the attribute.

3.3.5 Related Command-Line Tools for `bulkmodify`

- See "[bulkdelete](#)" on page 3-2
- See "[bulkload](#)" on page 3-3
- See "[ldapmodify](#)" on page 3-32
- See "[ldapmodifymt](#)" on page 3-37

3.4 catalog

Oracle Internet Directory uses indexes to make attributes available for searches. When Oracle Internet Directory is installed, the `cn=catalogs` entry lists available attributes that can be used in a search. You can index only those attributes that have:

- An equality matching rule
- Matching rules supported by Oracle Internet Directory (see "[Matching Rules](#)" on page 6-4)

As of Oracle Internet Directory 11g Release 1 (11.1.1.6.0) a new autocatalog feature is enabled by default in fresh installs. You can also enable it if you have upgraded from a previous release. When this feature is enabled, Oracle Internet Directory automatically invokes the `catalog` command to index attributes when you search for them. If the autocatalog feature is not enabled, and you want to use previously uncataloged attributes in search filters, you must add them to the catalog entry, as in previous releases.

If the autocatalog feature is not enabled, and you want to use additional attributes in search filters, then you must add them to the catalog entry. You can do this at the time you create the attribute by using Oracle Directory Services Manager. However, if the attribute already exists, then you can index it only by using `ldapmodify` or the Catalog Management Tool (`catalog`).

Notes:

- As of Oracle Internet Directory 11g Release 1 (11.1.1.6.0), you can use the LDAP tool `ldapmodify` to create and drop indexes from attributes. The `ldapmodify` tool actually invokes `catalog`, and you can still use `catalog` for this purpose.
 - The `catalog` command requires that the environment variable `ORACLE_INSTANCE` be set.
 - The `catalog` command cannot index more than 1000 attributes at a time. If more than 1000 attributes are present in the file, the tool throws an error. If you need to index more than 1000 attributes, use multiple files.
-
-

Before running `catalog`, be sure that the directory server is either stopped or in read-only mode.

Caution: Do not use the catalog `delete="TRUE"` argument on indexes created by the Oracle Internet Directory base schema. Removing indexes from base schema attributes can adversely impact the operation of Oracle Internet Directory.

3.4.1 Syntax for catalog

```
catalog connect=connect_string {[add="TRUE"|"FALSE"]} [delete="TRUE"|"FALSE"]}
{[attribute=attribute_name]|[file=file_name]} [logging="TRUE"|"FALSE"]}
[threads=num_of_threads] [debug="TRUE"|"FALSE"]} [iot="TRUE"|"FALSE"]}
[verbose="TRUE"|"FALSE"]
```

3.4.2 Arguments for catalog

connect

Required. The directory database connect string. If you already have a `tnsnames.ora` file configured, then this is the net service name specified in that file, which is located by default in `ORACLE_INSTANCE/config`. (You can set the `TNS_ADMIN` environment variable if you want to use a different location.)

add | delete

Required. The operation to perform. The `add` argument indexes the specified attribute. The `delete` argument drops the index for the specified attribute.

attribute | file

Required. The attribute or attributes to catalog. Use the `attribute` argument to specify a single attribute name on the command-line. Use the `file` argument to provide the full path and file name of a file that contains a list of several attribute names.

logging

Optional. This option is used to decide if redo logs are generated when a catalog is created.

threads

Optional. The number of threads to create. The default value is the number of CPUs on the machine plus one.

debug

Optional. The debug option reports the logging level. This is useful in case the command runs into errors. The output is logged to the `catalog.log` file. This file can be found under `ORACLE_INSTANCE/diagnostics/logs/OID/tools`.

iot

Optional. If set to `TRUE`, this option causes an Index Organized Table (IOT) to be created for the specified attribute without creating an additional index. The IOT option improves both read and write performance for a normal LDAP operation and reduces the storage as well. Use the IOT option when you expect lot of updates for the cataloging attribute. The default is `FALSE`.

verbose

Optional. This option specifies whether the command should be run in verbose mode.

3.4.3 Tasks and Examples for catalog

Using the `catalog` tool, you can perform the following tasks:

- [Indexing a Single Attribute](#)
- [Indexing Multiple Attributes](#)
- [Removing an Attribute from the List of Indexed Attributes](#)
- [Indexing an Attribute Using the IOT Option](#)

3.4.3.1 Indexing a Single Attribute

The following example shows how to index a single attribute. The `catalog` tool prompts you for the Oracle Internet Directory superuser password.

Example:

```
catalog connect="orcl" add="TRUE" attribute="orclGender"
```

3.4.3.2 Indexing Multiple Attributes

The following example shows how to index multiple values at once by supplying a file that contains a list of attribute names. The `catalog` tool prompts you for the Oracle Internet Directory superuser password.

Example:

```
catalog connect="orcl" add="TRUE" file="~/myfiles/attrs.txt"
```

3.4.3.3 Removing an Attribute from the List of Indexed Attributes

The following example shows how to remove a single attribute from the list of indexed attributes. The `catalog` tool prompts you for the Oracle Internet Directory superuser password.

Example:

```
catalog connect="orcl" delete="TRUE" attribute="orclGender"
```

3.4.3.4 Indexing an Attribute Using the IOT Option

The following example indexes the specified attribute and creates an IOT table to improve performance by not creating an additional index. The `catalog` tool prompts you for the Oracle Internet Directory superuser password.

Example:

```
catalog connect="orcl" attribute="orclGender" add="TRUE" iot="TRUE"
```

3.4.4 Related Command-Line Tools for catalog

- N/A

3.5 ldapadd

The `ldapadd` command-line tool enables you to add entries, their object classes, attributes, and values to the directory. To add attributes to an existing entry, use the `ldapmodify` command, explained in "[ldapmodify](#)" on page 3-32.

See Also: For information on using attribute aliases with `ldapadd` refer to the "Attribute Aliases In the Directory" section in *Oracle Fusion Middleware Administrator's Guide for Oracle Internet Directory*

3.5.1 Syntax for ldapadd

```
ldapadd -h oid_hostname -D "binddn" -q | -w password [-Y "proxy_dn"]
[-p ldap_port] [-V ldap_version] {-f ldif_filename | -X dsm1_filename}
[-b] [-n] [-c [-o log_file_name]] [-M] [-v] [-O ref_hop_limit] [-i 1|0]
[-k|-K] [-U SSL_auth_mode {-W wallet_location -Q | -P wallet_password}]
[-d debug_level] [-E character_set]
```

3.5.2 Arguments for ldapadd

-h *oid_hostname*

Required. The host name or IP address of the Oracle Internet Directory server.

-D "*binddn*"

Required. The DN of the Oracle Internet Directory user needed to bind to the directory (for example, `cn=orcladmin`).

-q

Required unless `-w` is used. Causes the command to prompt for the user password needed to bind to the directory. A password supplied at the command prompt is not visible on the screen.

-w *password*

Required unless `-q` is used. The user password needed to bind to the directory. Avoid supplying a password on the command line whenever possible. A password typed on the command line is visible on your screen. The `-w password` option is disabled when `LDAP_PASSWORD_PROMPTONLY` is set to true. See "[Using Passwords with Command-Line Tools](#)" on page 1-1.

-Y "*proxy_dn*"

Optional. The DN of a proxy user. After binding to the directory, the add operation is performed as this user.

-p *ldap_port*

Optional. The port number used to connect to the Oracle Internet Directory server. Defaults to port 3060.

-V *ldap_version*

Optional. The version of the LDAP protocol to use. Allowed values are 2 or 3. Defaults to 3 (LDAP v3).

-f *ldif_filename* | -X *dsml_filename*

Required. The full path and file name of the input file that contains the data you want to import.

Use the `-f` argument to supply an LDIF file. See [Appendix A, "LDIF File Format"](#) on page A-1 for information on formatting an LDIF file.

Use the `-X` argument to supply a Directory Service Markup Language (DSML) file. See ["Adding Data to the Directory Using a DSML File"](#) on page 3-18 for more information about formatting a DSML file.

-b

Optional. Use this option if your input file has binary file names in it, which are preceded by the forward slash character. The tool retrieves the actual values from the file referenced.

-n

Optional. Enables you to preview what would occur in an operation without actually performing the operation.

-c

Optional. Proceeds in spite of errors. All errors are reported. If the `-c` argument is not used, the tool stops when an error occurs.

-o *log_file_name*

Optional. Used with the `-c` argument. Writes the LDIF entries with errors to a log file. Specify the full path and name of the log file.

-M

Optional. Instructs the tool to send the `ManageDSAIT` control to the server. The `ManageDSAIT` control instructs the server not to send referrals to clients. Instead a referral entry is returned as a regular entry.

-v

Optional. Runs the tool in verbose mode.

-O *ref_hop_limit*

Optional. The number of referral hops that a client should process. Defaults to 5.

-i 1 | 0

Optional. Specifies whether to bind as the current user when following referrals. 1 means bind as the current user, 0 means bind anonymously. The default is 0 (zero).

-k | -K

Optional. The `-k` argument authenticates using Kerberos authentication instead of simple authentication. To enable this option, you must compile with KERBEROS defined. You must already have a valid ticket granting ticket. Use the `-K` argument if you want to only perform the first step of the Kerberos bind.

-U *SSL_auth_mode*

Optional. The SSL authentication mode:

- 1 for no authentication required.

- 2 for one way authentication required. You must also supply a wallet location and wallet password.
- 3 for two way authentication required. You must also supply a wallet location and wallet password.

-W *wallet_location*

Required if using one way or two way SSL authentication (-U 2 | 3). The location of the wallet file that contains the server's SSL certificates.

Example for UNIX:

```
-W "file:/home/my_dir/my_wallet"
```

Example for Microsoft Windows:

```
-W "file:C:\my_dir\my_wallet"
```

-Q

Required, unless -P is used, if using one way or two way SSL authentication (-U 2 | 3). Causes the command to prompt for the wallet password for the wallet specified in the -W argument. A password supplied at the command prompt is not visible on the screen.

-P *wallet_password*

Required, unless -Q is used, if using one way or two way SSL authentication (-U 2 | 3). The wallet password for the wallet specified in the -W argument. Avoid supplying a password on the command line whenever possible. A password typed on the command line is visible on your screen. The -P *wallet_password* option is disabled when LDAP_PASSWORD_PROMPTONLY is set to true. See ["Using Passwords with Command-Line Tools"](#) on page 1-1.

-d *debug_level*

Optional. If not specified the default of 0 (not enabled) is used. Debug levels are additive. Add the numbers representing the functions that you want to activate, and use the sum of those in the command-line option. For example, to trace search filter processing (512) and active connection management (256), enter 768 as the debug level (512 + 256 = 768). Debug levels are as follows:

- 1 — Heavy trace debugging
- 128 — Debug packet handling
- 256 — Connection management, related to network activities
- 512 — Search filter processing
- 1024 — Entry parsing
- 2048 — Configuration file processing
- 8192 — Access control list processing
- 491520 — Log of communication with the database
- 524288 — Schema related operations
- 4194304 — Replication specific operations
- 8388608 — Log of entries, operations and results for each connection
- 16777216 — Trace function call arguments

- 67108864 — Number and identity of clients connected to this server
- 117440511 — All possible operations and data

-E character_set

Optional. The native character set encoding. Defaults to the character set of the user's terminal. Each supported character set has a unique acronym, for example, WE8MSWIN1252, JA16SJIS, or AL32UTF8.

3.5.3 Tasks and Examples for ldapadd

Using the ldapadd tool, you can perform the following tasks:

- [Adding Data to the Directory Using an LDIF File](#)
- [Adding Data to the Directory Using a DSML File](#)
- [Previewing an Add Operation](#)

3.5.3.1 Adding Data to the Directory Using an LDIF File

You can use ldapadd to add entries or schema information to the directory from an LDIF file. The file must be correctly formatted. See [Appendix A, "LDIF File Format"](#) on page A-1 for information about formatting an LDIF file.

Example:

```
ldapadd -h myhost.company.com -D "cn=orcladmin" -q -p 3060 \
  -f ~/myfiles/input.ldif -v
```

3.5.3.2 Adding Data to the Directory Using a DSML File

You can use ldapadd to add entries or schema information to the directory from a Directory Service Markup Language (DSML) file that contains <addRequest> elements. For more information about the formatting DSML files, visit the OASIS Web site at <http://www.oasis-open.org>. The following example shows a sample DSML entry for a user.

Example:

```
<addRequest dn="CN=Alice,OU=HR,DC=Example,DC=COM">
  <attr name="objectclass"><value>top</value></attr>
  <attr name="objectclass"><value>person</value></attr>
  <attr name="objectclass"><value>organizationalPerson</value></attr>
  <attr name="sn"><value>Johnson</value></attr>
  <attr name="givenName"><value>Alice</value></attr>
  <attr name="title"><value>Software Design Engineer</value></attr>
</addRequest>
```

Once you have a correctly formatted DSML file, you can add data to the directory using ldapadd and supplying the DSML file as the input file.

Example:

```
ldapadd -h myhost.company.com -D "cn=orcladmin" -q -p 3060 \
  -X ~/myfiles/input.xml -v
```

3.5.3.3 Previewing an Add Operation

Use the `-n` argument with an ldapadd command to preview the results of an add operation before actually adding any data to the directory.

Example:

```
ldapadd -h myhost.company.com -D "cn=orcladmin" -q -p 3060 \
-X ~/myfiles/input.xml -v -n
```

3.5.4 Related Command-Line Tools for ldapadd

- See "ldapaddmt" on page 3-19
- See "ldapmodify" on page 3-32
- See "bulkload" on page 3-3

3.6 ldapaddmt

The `ldapaddmt` tool performs the same functionality as the `ldapadd` command. It enables you to add entries, their object classes, attributes, and values to the directory. However, it also supports multiple threads for adding entries concurrently.

While it is processing entries, `ldapaddmt` logs errors in the `add.log` file within the current directory.

Note: Increasing the number of concurrent threads improves the rate at which entries are created, but consumes more system resources.

3.6.1 Syntax for ldapaddmt

```
ldapaddmt -h oid_hostname -D "binddn" -q | -w password -T number_threads
[-p ldap_port] [-V ldap_version] {-f ldif_filename | -X dsml_filename} [-b] [-c]
[-M] [-O ref_hop_limit] [-k|-K] [-U SSL_auth_mode {-W wallet_location -Q | -P
wallet_password}] [-d debug_level] [-E character_set]
```

3.6.2 Arguments for ldapaddmt

-h *oid_hostname*

Required. The host name or IP address of the Oracle Internet Directory server.

-D "*binddn*"

Required. The DN of the Oracle Internet Directory user needed to bind to the directory (for example, `cn=orcladmin`).

-q

Required unless `-w` is used. Causes the command to prompt for the user password needed to bind to the directory. A password supplied at the command prompt is not visible on the screen.

-w *password*

Required unless `-q` is used. The user password needed to bind to the directory. Avoid supplying a password on the command line whenever possible. A password typed on the command line is visible on your screen. The `-w password` option is disabled when `LDAP_PASSWORD_PROMPTONLY` is set to true. See "Using Passwords with Command-Line Tools" on page 1-1.

-T *number_threads*

Required. The number of threads for concurrently processing entries.

-p ldap_port

Optional. The port number used to connect to the Oracle Internet Directory server. Defaults to port 3060.

-V ldap_version

Optional. The version of the LDAP protocol to use. Allowed values are 2 or 3. Defaults to 3 (LDAP v3).

-f ldif_filename | -X dsml_filename

Required. The full path and file name of the input file that contains the data you want to import.

Use the `-f` argument to supply an LDIF file. See [Appendix A, "LDIF File Format"](#) on page A-1 for information on formatting an LDIF file.

Use the `-X` argument to supply a Directory Service Markup Language (DSML) file. See ["Adding Data to the Directory Using a DSML File"](#) on page 3-18 for more information about formatting a DSML file.

-b

Optional. Use this option if your input file has binary file names in it, which are preceded by the forward slash character. The tool retrieves the actual values from the file referenced.

-c

Optional. Proceeds in spite of errors. All errors are reported. If the `-c` argument is not used, the tool stops when an error occurs.

-M

Optional. Instructs the tool to send the `ManageDSAIT` control to the server. The `ManageDSAIT` control instructs the server not to send referrals to clients. Instead a referral entry is returned as a regular entry.

-O ref_hop_limit

Optional. The number of referral hops that a client should process. Defaults to 5.

-k | -K

Optional. The `-k` argument authenticates using Kerberos authentication instead of simple authentication. To enable this option, you must compile with `KERBEROS` defined. You must already have a valid ticket granting ticket. Use the `-K` argument if you want to only perform the first step of the Kerberos bind.

-U SSL_auth_mode

Optional. The SSL authentication mode:

- 1 for no authentication required.
- 2 for one way authentication required. You must also supply a wallet location and wallet password.
- 3 for two way authentication required. You must also supply a wallet location and wallet password.

-W *wallet_location*

Required if using one way or two way SSL authentication (-U 2 | 3). The location of the wallet file that contains the server's SSL certificates.

Example for UNIX:

```
-W "file:/home/my_dir/my_wallet"
```

Example for Microsoft Windows:

```
-W "file:C:\my_dir\my_wallet"
```

-Q

Required, unless -P is used, if using one way or two way SSL authentication (-U 2 | 3). Causes the command to prompt for the wallet password for the wallet specified in the -W argument. A password supplied at the command prompt is not visible on the screen.

-P *wallet_password*

Required, unless -Q is used, if using one way or two way SSL authentication (-U 2 | 3). The wallet password for the wallet specified in the -W argument. Avoid supplying a password on the command line whenever possible. A password typed on the command line is visible on your screen. The -P *wallet_password* option is disabled when LDAP_PASSWORD_PROMPTONLY is set to true. See ["Using Passwords with Command-Line Tools"](#) on page 1-1.

-d *debug_level*

Optional. If not specified the default of 0 (not enabled) is used. Debug levels are additive. Add the numbers representing the functions that you want to activate, and use the sum of those in the command-line option. For example, to trace search filter processing (512) and active connection management (256), enter 768 as the debug level (512 + 256 = 768). Debug levels are as follows:

- 1 — Heavy trace debugging
- 128 — Debug packet handling
- 256 — Connection management, related to network activities
- 512 — Search filter processing
- 1024 — Entry parsing
- 2048 — Configuration file processing
- 8192 — Access control list processing
- 491520 — Log of communication with the database
- 524288 — Schema related operations
- 4194304 — Replication specific operations
- 8388608 — Log of entries, operations and results for each connection
- 16777216 — Trace function call arguments
- 67108864 — Number and identity of clients connected to this server
- 117440511 — All possible operations and data

-E character_set

Optional. The native character set encoding. Defaults to the character set of the user's terminal. Each supported character set has a unique acronym, for example, WE8MSWIN1252, JA16SJIS, or AL32UTF8.

3.6.3 Tasks and Examples for ldapaddmt

Using the `ldapaddmt` tool, you can perform the following task:

- [Adding Concurrent Entries to the Directory Using an LDIF File](#)

3.6.3.1 Adding Concurrent Entries to the Directory Using an LDIF File

You can use `ldapaddmt` to add concurrent entries or schema information to the directory from an LDIF file. The file must be correctly formatted. See [Appendix A, "LDIF File Format"](#) on page A-1 for information about formatting an LDIF file.

Example:

```
ldapaddmt -h myhost.company.com -D "cn=orcladmin" -q -T 5 -p 3060 \  
-f ~/myfiles/input.ldif -v
```

3.6.4 Related Command-Line Tools for ldapaddmt

- See "[ldapadd](#)" on page 3-15
- See "[bulkload](#)" on page 3-3

3.7 ldapbind

The `ldapbind` command-line tool enables you to see whether you can authenticate a client to a server.

3.7.1 Syntax for ldapbind

```
ldapbind -h oid_hostname -D "binddn" -q | -w password [-p ldap_port] \  
[-V ldap_version] [-n] [-O "auth"] [-Y "DIGEST-MD5|EXTERNAL"] \  
[-R SASL_realm] [-U SSL_auth_mode {-W wallet_location -Q | -P wallet_password}] \  
[-E character_set]
```

3.7.2 Arguments for ldapbind

-h oid_hostname

Required. The host name or IP address of the Oracle Internet Directory server.

-D "binddn"

Required. The DN of the Oracle Internet Directory user needed to bind to the directory (for example, `cn=orcladmin`).

-q

Required unless `-w` is used. Causes the command to prompt for the user password needed to bind to the directory. A password supplied at the command prompt is not visible on the screen.

-w *password*

Required unless `-q` is used. The user password needed to bind to the directory. Avoid supplying a password on the command line whenever possible. A password typed on the command line is visible on your screen. The `-w password` option is disabled when `LDAP_PASSWORD_PROMPTONLY` is set to true. See ["Using Passwords with Command-Line Tools"](#) on page 1-1.

-p *ldap_port*

Optional. The port number used to connect to the Oracle Internet Directory server. Defaults to port 3060.

-V *ldap_version*

Optional. The version of the LDAP protocol to use. Allowed values are 2 or 3. Defaults to 3 (LDAP v3).

-O "auth"

Optional. Specifies SASL security properties. The security property supported is `-O "auth"`. This security property is for DIGEST-MD5 SASL mechanism. It enables authentication with no data integrity or data privacy.

-Y "DIGEST-MD5 | EXTERNAL"

Optional. Specifies a Simple Authentication and Security Layer (SASL) mechanism. The following mechanisms are supported:

- DIGEST-MD5
- EXTERNAL - The SASL authentication in this mechanism is done on top of two-way SSL authentication. In this case the identity of the user stored in the SSL wallet is used for SASL authentication.

-R *SASL_realm*

Optional. A SASL realm.

-U *SSL_auth_mode*

Optional. The SSL authentication mode:

- 1 for no authentication required.
- 2 for one way authentication required. You must also supply a wallet location and wallet password.
- 3 for two way authentication required. You must also supply a wallet location and wallet password.

-W *wallet_location*

Required if using one way or two way SSL authentication (`-U 2 | 3`). The location of the wallet file that contains the server's SSL certificates.

Example for UNIX:

```
-W "file:/home/my_dir/my_wallet"
```

Example for Microsoft Windows:

```
-W "file:C:\my_dir\my_wallet"
```

-Q

Required, unless `-P` is used, if using one way or two way SSL authentication (`-U 2 | 3`). Causes the command to prompt for the wallet password for the wallet specified in the `-W` argument. A password supplied at the command prompt is not visible on the screen.

-P *wallet_password*

Required, unless `-Q` is used, if using one way or two way SSL authentication (`-U 2 | 3`). The wallet password for the wallet specified in the `-W` argument. Avoid supplying a password on the command line whenever possible. A password typed on the command line is visible on your screen. The `-P wallet_password` option is disabled when `LDAP_PASSWORD_PROMPTONLY` is set to true. See ["Using Passwords with Command-Line Tools"](#) on page 1-1.

-E *character_set*

Optional. The native character set encoding. Defaults to the character set of the user's terminal. Each supported character set has a unique acronym, for example, `WE8MSWIN1252`, `JA16SJIS`, or `AL32UTF8`.

3.7.3 Tasks and Examples for ldapbind

Using the `ldapbind` tool, you can perform the following task:

- [Validating Authentication Credentials](#)

3.7.3.1 Validating Authentication Credentials

The following example shows how to validate the authentication credentials used to bind to the directory server when using SSL.

Example:

```
ldapbind -h myhost.company.com -D "cn-orcladmin" -q -p 3133 \  
-U 2 -W "file:/home/my_dir/my_wallet" -Q
```

3.7.4 Related Command-Line Tools for ldapbind

- N/A

3.8 ldapcompare

The `ldapcompare` command-line tool enables you to compare an attribute value that you specify on the command line to the attribute value in a directory entry.

3.8.1 Syntax for ldapcompare

```
ldapcompare -h oid_hostname -D "binddn" -q | -w password [-Y "proxy_dn"]  
[-p ldap_port] -a attribute_name -b "base" -v "attribute_value"  
[-U SSL_auth_mode {-W wallet_location -Q | -P wallet_password}]  
[-d debug_level] [-E character_set]
```

3.8.2 Arguments for ldapcompare

-h *oid_hostname*

Required. The host name or IP address of the Oracle Internet Directory server.

-D "binddn"

Required. The DN of the Oracle Internet Directory user needed to bind to the directory (for example, cn=orcladmin).

-q

Required unless `-w` is used. Causes the command to prompt for the user password needed to bind to the directory. A password supplied at the command prompt is not visible on the screen.

-w password

Required unless `-q` is used. The user password needed to bind to the directory. Avoid supplying a password on the command line whenever possible. A password typed on the command line is visible on your screen. The `-w password` option is disabled when `LDAP_PASSWORD_PROMPTONLY` is set to true. See ["Using Passwords with Command-Line Tools"](#) on page 1-1.

-Y "proxy_dn"

Optional. The DN of a proxy user. After binding to the directory, the add operation is performed as this user.

-p ldap_port

Optional. The port number used to connect to the Oracle Internet Directory server. Defaults to port 3060.

-a attribute_name

Required. The attribute for which to perform the comparison of values.

-b "base"

Required. The DN of the entry for which to perform the comparison.

-v "attribute_value"

Required. The attribute value that you want to compare to the value in the entry.

-U SSL_auth_mode

Optional. The SSL authentication mode:

- 1 for no authentication required.
- 2 for one way authentication required. You must also supply a wallet location and wallet password.
- 3 for two way authentication required. You must also supply a wallet location and wallet password.

-W wallet_location

Required if using one way or two way SSL authentication (`-U 2 | 3`). The location of the wallet file that contains the server's SSL certificates.

Example for UNIX:

```
-W "file:/home/my_dir/my_wallet"
```

Example for Microsoft Windows:

```
-W "file:C:\my_dir\my_wallet"
```

-Q

Required, unless `-P` is used, if using one way or two way SSL authentication (`-U 2 | 3`). Causes the command to prompt for the wallet password for the wallet specified in the `-W` argument. A password supplied at the command prompt is not visible on the screen.

-P *wallet_password*

Required, unless `-Q` is used, if using one way or two way SSL authentication (`-U 2 | 3`). The wallet password for the wallet specified in the `-W` argument. Avoid supplying a password on the command line whenever possible. A password typed on the command line is visible on your screen. The `-P wallet_password` option is disabled when `LDAP_PASSWORD_PROMPTONLY` is set to true. See ["Using Passwords with Command-Line Tools"](#) on page 1-1.

-d *debug_level*

Optional. If not specified the default of 0 (not enabled) is used. Debug levels are additive. Add the numbers representing the functions that you want to activate, and use the sum of those in the command-line option. For example, to trace search filter processing (512) and active connection management (256), enter 768 as the debug level (512 + 256 = 768). Debug levels are as follows:

- 1 — Heavy trace debugging
- 128 — Debug packet handling
- 256 — Connection management, related to network activities
- 512 — Search filter processing
- 1024 — Entry parsing
- 2048 — Configuration file processing
- 8192 — Access control list processing
- 491520 — Log of communication with the database
- 524288 — Schema related operations
- 4194304 — Replication specific operations
- 8388608 — Log of entries, operations and results for each connection
- 16777216 — Trace function call arguments
- 67108864 — Number and identity of clients connected to this server
- 117440511 — All possible operations and data

-E *character_set*

Optional. The native character set encoding. Defaults to the character set of the user's terminal. Each supported character set has a unique acronym, for example, `WE8MSWIN1252`, `JA16SJIS`, or `AL32UTF8`.

3.8.3 Tasks and Examples for ldapcompare

Using `ldapcompare` you can perform the following task:

- [Comparing Attribute Values for an Entry](#)

3.8.3.1 Comparing Attribute Values for an Entry

The following example shows how to check an entry for a person named *Anne Smith* to see if her *title* is *Manager*.

Example:

```
ldapcompare -h myhost.company.com -D "cn=orcladmin" -q -p 3060 -a title \
  -b "cn=Anne Smith,ou=Sales,o=IMC,c=US" -v "Manager"
```

3.8.4 Related Command-Line Tools for ldapcompare

- N/A

3.9 ldapdelete

The `ldapdelete` command-line tool enables you to remove entire entries from the directory.

See Also: For information on using attribute aliases with `ldapdelete` refer to the "Attribute Aliases In the Directory" section in *Oracle Fusion Middleware Administrator's Guide for Oracle Internet Directory*

3.9.1 Syntax for ldapdelete

```
ldapdelete -h oid_hostname -D "binddn" -q | -w password [-Y proxy_dn]
[-p ldap_port] [-V ldap_version] {-f ldif_filename | "entry_dn"}
[-n] [-M] [-v] [-O ref_hop_limit] [-k|-K]
[-U SSL_auth_mode {-W wallet_location -Q | -P wallet_password}] [-E character_set]
```

3.9.2 Arguments for ldapdelete

-h *oid_hostname*

Required. The host name or IP address of the Oracle Internet Directory server.

-D "*binddn*"

Required. The DN of the Oracle Internet Directory user needed to bind to the directory (for example, `cn=orcladmin`).

-q

Required unless `-w` is used. Causes the command to prompt for the user password needed to bind to the directory. A password supplied at the command prompt is not visible on the screen.

-w *password*

Required unless `-q` is used. The user password needed to bind to the directory. Avoid supplying a password on the command line whenever possible. A password typed on the command line is visible on your screen. The `-w password` option is disabled when `LDAP_PASSWORD_PROMPTONLY` is set to true. See "[Using Passwords with Command-Line Tools](#)" on page 1-1.

-Y "*proxy_dn*"

Optional. The DN of a proxy user. After binding to the directory, the add operation is performed as this user.

-p ldap_port

Optional. The port number used to connect to the Oracle Internet Directory server. Defaults to port 3060.

-V ldap_version

Optional. The version of the LDAP protocol to use. Allowed values are 2 or 3. Defaults to 3 (LDAP v3).

-f ldif_filename | "entry_dn"

Required. The full path and file name of the input file that contains the entry DN's you want to delete, or a single entry DN supplied on the command-line.

Use the `-f` argument to supply an LDIF file. See [Appendix A, "LDIF File Format"](#) on page A-1 for information on formatting an LDIF file.

To delete one entry, supply the DN of the entry in quotes.

-n

Optional. Enables you to preview what would occur in an operation without actually performing the operation.

-M

Optional. Instructs the tool to send the ManageDSAIT control to the server. The ManageDSAIT control instructs the server not to send referrals to clients. Instead a referral entry is returned as a regular entry.

-v

Optional. Runs the tool in verbose mode.

-O ref_hop_limit

Optional. The number of referral hops that a client should process. Defaults to 5.

-k | -K

Optional. The `-k` argument authenticates using Kerberos authentication instead of simple authentication. To enable this option, you must compile with KERBEROS defined. You must already have a valid ticket granting ticket. Use the `-K` argument if you want to only perform the first step of the Kerberos bind.

-U SSL_auth_mode

Optional. The SSL authentication mode:

- 1 for no authentication required.
- 2 for one way authentication required. You must also supply a wallet location and wallet password.
- 3 for two way authentication required. You must also supply a wallet location and wallet password.

-W wallet_location

Required if using one way or two way SSL authentication (`-U 2 | 3`). The location of the wallet file that contains the server's SSL certificates.

Example for UNIX:

```
-W "file:/home/my_dir/my_wallet"
```

Example for Microsoft Windows:

```
-W "file:C:\my_dir\my_wallet"
```

-Q

Required, unless `-P` is used, if using one way or two way SSL authentication (`-U 2 | 3`). Causes the command to prompt for the wallet password for the wallet specified in the `-W` argument. A password supplied at the command prompt is not visible on the screen.

-P *wallet_password*

Required, unless `-Q` is used, if using one way or two way SSL authentication (`-U 2 | 3`). The wallet password for the wallet specified in the `-W` argument. Avoid supplying a password on the command line whenever possible. A password typed on the command line is visible on your screen. The `-P wallet_password` option is disabled when `LDAP_PASSWORD_PROMPTONLY` is set to true. See ["Using Passwords with Command-Line Tools"](#) on page 1-1.

-E *character_set*

Optional. The native character set encoding. Defaults to the character set of the user's terminal. Each supported character set has a unique acronym, for example, `WE8MSWIN1252`, `JA16SJIS`, or `AL32UTF8`.

3.9.3 Tasks and Examples for ldapdelete

Using `ldapdelete` you can perform the following tasks:

- [Deleting a Single Entry](#)
- [Deleting Multiple Entries Using an LDIF File](#)

3.9.3.1 Deleting a Single Entry

The following example shows how to delete an entry for a person named *Anne Smith*.

Example:

```
ldapdelete -h myhost.company.com -D "cn=orcladmin" -q \  
-p 3060 "cn=Anne Smith,ou=Sales,o=IMC,c=US"
```

3.9.3.2 Deleting Multiple Entries Using an LDIF File

The following example shows how to delete many entries at once by supplying an LDIF file that contains the DNs of the entries to delete. See [Appendix A, "LDIF File Format"](#) on page A-1 for information about formatting an LDIF file.

Example:

```
ldapdelete -h myhost.company.com -D "cn=orcladmin" -q -p 3060 \  
/home/mydir/delete.ldif -f
```

3.9.4 Related Command-Line Tools for ldapdelete

- See [bulkdelete](#) on page 3-2

3.10 ldapmoddn

The `ldapmoddn` command-line tool enables you to change the RDN of an entry, or to move an entry to a new parent node in the directory tree.

See Also: For information on using attribute aliases with `ldapmoddn` refer to the "Attribute Aliases In the Directory" section in *Oracle Fusion Middleware Administrator's Guide for Oracle Internet Directory*

3.10.1 Syntax for ldapmoddn

```
ldapmoddn -h oid_hostname -D "binddn" -q | -w password [-p ldap_port]
[-V ldap_version] -b "base_dn" {-R "new_rdn"|-N "new_parent"}
[-r] [-M] [-O ref_hop_limit]
[-U SSL_auth_mode {-W wallet_location -Q | -P wallet_password}] [-E character_set]
```

3.10.2 Arguments for ldapmoddn

-h *oid_hostname*

Required. The host name or IP address of the Oracle Internet Directory server.

-D "*binddn*"

Required. The DN of the Oracle Internet Directory user needed to bind to the directory (for example, `cn=orcladmin`).

-q

Required unless `-w` is used. Causes the command to prompt for the user password needed to bind to the directory. A password supplied at the command prompt is not visible on the screen.

-w *password*

Required unless `-q` is used. The user password needed to bind to the directory. Avoid supplying a password on the command line whenever possible. A password typed on the command line is visible on your screen. The `-w password` option is disabled when `LDAP_PASSWORD_PROMPTONLY` is set to true. See ["Using Passwords with Command-Line Tools"](#) on page 1-1.

-p *ldap_port*

Optional. The port number used to connect to the Oracle Internet Directory server. Defaults to port 3060.

-V *ldap_version*

Optional. The version of the LDAP protocol to use. Allowed values are 2 or 3. Defaults to 3 (LDAP v3).

-b "*base_dn*"

Required. The DN of the entry to be moved to a new parent DN or have its RDN updated.

-R "*new_rdn*" | -N "*new_parent*"

Required. The action to perform. Use the `-R` argument to change the RDN of the entry. Use the `-N` argument to move the entry to a new parent node in the directory tree.

-r

Optional. Specifies that the old RDN is not retained as a value in the modified entry. If not included, the old RDN is retained as an attribute in the modified entry.

-M

Optional. Instructs the tool to send the ManageDSAIT control to the server. The ManageDSAIT control instructs the server not to send referrals to clients. Instead a referral entry is returned as a regular entry.

-O *ref_hop_limit*

Optional. The number of referral hops that a client should process. Defaults to 5.

-U *SSL_auth_mode*

Optional. The SSL authentication mode:

- 1 for no authentication required.
- 2 for one way authentication required. You must also supply a wallet location and wallet password.
- 3 for two way authentication required. You must also supply a wallet location and wallet password.

-W *wallet_location*

Required if using one way or two way SSL authentication (-U 2 | 3). The location of the wallet file that contains the server's SSL certificates.

Example for UNIX:

```
-W "file:/home/my_dir/my_wallet"
```

Example for Microsoft Windows:

```
-W "file:C:\my_dir\my_wallet"
```

-Q

Required, unless -P is used, if using one way or two way SSL authentication (-U 2 | 3). Causes the command to prompt for the wallet password for the wallet specified in the -W argument. A password supplied at the command prompt is not visible on the screen.

-P *wallet_password*

Required, unless -Q is used, if using one way or two way SSL authentication (-U 2 | 3). The wallet password for the wallet specified in the -W argument. Avoid supplying a password on the command line whenever possible. A password typed on the command line is visible on your screen. The -P *wallet_password* option is disabled when LDAP_PASSWORD_PROMPTONLY is set to true. See ["Using Passwords with Command-Line Tools"](#) on page 1-1.

-E *character_set*

Optional. The native character set encoding. Defaults to the character set of the user's terminal. Each supported character set has a unique acronym, for example, WE8MSWIN1252, JA16SJIS, or AL32UTF8.

3.10.3 Tasks and Examples for ldapmoddn

Using the `ldapmoddn` command-line tool, you can perform the following tasks:

- [Changing the RDN of an Entry](#)
- [Moving an Entry](#)

3.10.3.1 Changing the RDN of an Entry

The following example shows how to change the RDN of an entry from *Mary Smith* to *Mary Jones*.

Example:

```
ldapmoddn -h myhost.company.com -D "cn=orcladmin" -q -p 3060 \
  -b "cn=Mary Smith,dc=Americas,dc=IMC,dc=com" -R "cn=Mary Jones" -r
```

3.10.3.2 Moving an Entry

The following example shows how to move an entry to another parent node in the directory subtree. The entry with the RDN of *Mary Smith* is moved from the *dc=Americas* parent node to the *dc=Australia* parent node.

Example:

```
ldapmoddn -h myhost.company.com -D "cn=orcladmin" -q -p 3060 \
  -b "cn=Mary Smith,dc=Americas,dc=IMC,dc=com" -N "dc=Australia,dc=IMC,dc=com"
```

3.10.4 Related Command-Line Tools for ldapmoddn

- See ["ldapmodify"](#) on page 3-32

3.11 ldapmodify

The `ldapmodify` command-line tool enables you to add, delete, or replace attributes for entries by supplying an LDIF file as input. You can also delete or add entries using `ldapmodify`.

See [Appendix A, "LDIF File Format"](#) on page A-1 for more information about the correct formatting of LDIF files.

See Also: For information on using attribute aliases with `ldapmodify` refer to the "Attribute Aliases In the Directory" section in *Oracle Fusion Middleware Administrator's Guide for Oracle Internet Directory*

3.11.1 Syntax for ldapmodify

```
ldapmodify -h oid_hostname -D "binddn" [-Y "proxy_dn"] -q | -w password
[-p ldap_port] [-V ldap_version] {-f ldif_filename | -X dsml_filename}
[-a] [-b] [-c [-o log_file_name]] [-n] [-v] [-M] [-O ref_hop_limit]
[-i 1|0] [-k|-K]
[-U SSL_auth_mode {-W wallet_location -Q | -P wallet_password}]
[-E character_set] [-d debug_level]
```

3.11.2 Arguments for ldapmodify

-h *oid_hostname*

Required. The host name or IP address of the Oracle Internet Directory server.

-D "*binddn*"

Required. The DN of the Oracle Internet Directory user needed to bind to the directory (for example, `cn=orcladmin`).

-Y "*proxy_dn*"

Optional. The DN of a proxy user. After binding to the directory, the add operation is performed as this user.

-q

Required unless `-w` is used. Causes the command to prompt for the user password needed to bind to the directory. A password supplied at the command prompt is not visible on the screen.

-w *password*

Required unless `-q` is used. The user password needed to bind to the directory. Avoid supplying a password on the command line whenever possible. A password typed on the command line is visible on your screen. The `-w password` option is disabled when `LDAP_PASSWORD_PROMPTONLY` is set to true. See ["Using Passwords with Command-Line Tools"](#) on page 1-1.

-p *ldap_port*

Optional. The port number used to connect to the Oracle Internet Directory server. Defaults to port 3060.

-V *ldap_version*

Optional. The version of the LDAP protocol to use. Allowed values are 2 or 3. Defaults to 3 (LDAP v3).

-f *ldif_filename* | -X *dsml_filename*

Required. The full path and file name of the input file that contains the data you want to import.

Use the `-f` argument to supply an LDIF file. See [Appendix A, "LDIF File Format"](#) on page A-1 for information on formatting an LDIF file.

Use the `-X` argument to supply a Directory Service Markup Language (DSML) file. See ["Adding Data to the Directory Using a DSML File"](#) on page 3-18 for more information about formatting a DSML file.

-a

Optional. Denotes that the LDIF or DSML input file has new entries to be added.

-b

Optional. Use this option if your input file has binary file names in it, which are preceded by the forward slash character. The tool retrieves the actual values from the file referenced.

-c

Optional. Proceeds in spite of errors. All errors are reported. If the `-c` argument is not used, the tool stops when an error occurs.

-n

Optional. Enables you to preview what would occur in an operation without actually performing the operation.

-v

Optional. Runs the tool in verbose mode.

-o *log_file_name*

Optional. Used with the `-c` argument. Writes the LDIF entries with errors to a log file. Specify the full path and name of the log file.

-M

Optional. Instructs the tool to send the `ManageDSAIT` control to the server. The `ManageDSAIT` control instructs the server not to send referrals to clients. Instead a referral entry is returned as a regular entry.

-O *ref_hop_limit*

Optional. The number of referral hops that a client should process. Defaults to 5.

-i 1 | 0

Optional. Specifies whether to bind as the current user when following referrals. 1 means bind as the current user, 0 means bind anonymously. The default is 0 (zero).

-k | -K

Optional. The `-k` argument authenticates using Kerberos authentication instead of simple authentication. To enable this option, you must compile with `KERBEROS` defined. You must already have a valid ticket granting ticket. Use the `-K` argument if you want to only perform the first step of the Kerberos bind.

-U *SSL_auth_mode*

Optional. The SSL authentication mode:

- 1 for no authentication required.
- 2 for one way authentication required. You must also supply a wallet location and wallet password.
- 3 for two way authentication required. You must also supply a wallet location and wallet password.

-W *wallet_location*

Required if using one way or two way SSL authentication (`-U 2 | 3`). The location of the wallet file that contains the server's SSL certificates.

Example for UNIX:

```
-W "file:/home/my_dir/my_wallet"
```

Example for Microsoft Windows:

```
-W "file:C:\my_dir\my_wallet"
```

-Q

Required, unless `-P` is used, if using one way or two way SSL authentication (`-U 2 | 3`). Causes the command to prompt for the wallet password for the wallet specified in the `-w` argument. A password supplied at the command prompt is not visible on the screen.

-P *wallet_password*

Required, unless `-Q` is used, if using one way or two way SSL authentication (`-U 2 | 3`). The wallet password for the wallet specified in the `-w` argument. Avoid supplying a password on the command line whenever possible. A password typed on the command line is visible on your screen. The `-P wallet_password` option is disabled when `LDAP_PASSWORD_PROMPTONLY` is set to true. See ["Using Passwords with Command-Line Tools"](#) on page 1-1.

-E *character_set*

Optional. The native character set encoding. Defaults to the character set of the user's terminal. Each supported character set has a unique acronym, for example, `WE8MSWIN1252`, `JA16SJIS`, or `AL32UTF8`.

-d *debug_level*

Optional. If not specified the default of 0 (not enabled) is used. Debug levels are additive. Add the numbers representing the functions that you want to activate, and use the sum of those in the command-line option. For example, to trace search filter processing (512) and active connection management (256), enter 768 as the debug level ($512 + 256 = 768$). Debug levels are as follows:

- 1 — Heavy trace debugging
- 128 — Debug packet handling
- 256 — Connection management, related to network activities
- 512 — Search filter processing
- 1024 — Entry parsing
- 2048 — Configuration file processing
- 8192 — Access control list processing
- 491520 — Log of communication with the database
- 524288 — Schema related operations
- 4194304 — Replication specific operations
- 8388608 — Log of entries, operations and results for each connection
- 16777216 — Trace function call arguments
- 67108864 — Number and identity of clients connected to this server
- 117440511 — All possible operations and data

3.11.3 Tasks and Examples for ldapmodify

Using the `ldapmodify` command-line tool, you can perform the following tasks:

- [Modifying the Directory Schema](#)
- [Modifying an Entry](#)
- [Indexing an Attribute](#)

3.11.3.1 Modifying the Directory Schema

First, you must prepare your LDIF file to define the new schema elements you want to add. See ["LDIF Format for Adding Schema Elements"](#) on page A-5 for examples. Once you have a properly formatted LDIF file, you can use the `ldapmodify` tool to import the new schema definitions into the directory schema.

Example:

```
ldapmodify -h myhost.company.com -D "cn=orcladmin" -q -p 3060 \
-f /home/myfiles/modify.ldif -v
```

3.11.3.2 Modifying an Entry

To modify the attributes or attribute values for an entry, you must first prepare your LDIF file correctly. See ["LDIF Format for Modifying Entries"](#) on page A-4 for examples. Once you have a properly formatted LDIF file, you can use the `ldapmodify` tool to import the changes.

Example:

```
ldapmodify -h myhost.company.com -D "cn=orcladmin" -q \
-p 3060 -f /home/myfiles/modify.ldif -v
```

3.11.3.3 Indexing an Attribute

You can add or drop an attribute in the `catalog` entry by using `ldapmodify`.

As of Oracle Internet Directory 11g Release 1 (11.1.1.6.0) a new autocatalog feature is enabled by default in fresh installs. You can also enable it if you have upgraded from a previous release. When this feature is enabled, Oracle Internet Directory automatically invokes the `catalog` command to index attributes when you search for them. If the autocatalog feature is not enabled, and you want to use previously uncataloged attributes in search filters, you must add them to the catalog entry, as in previous releases.

To add an attribute, import an LDIF file by using `ldapmodify`. For example, to index the attribute `displayName`, import the following LDIF file by using `ldapmodify`:

Example:

```
dn: cn=catalogs
changetype: modify
add: orclindexedattribute
orclindexedattribute: displayName
```

Type a command similar to the following at the system prompt:

```
ldapmodify -D "cn=orcladmin" -q -h host -p port -f ldif_file_name
```

To index the attribute, the `ldapmodify` command invokes the Catalog Management tool, `catalog`. For information about that tool, see [Section 3.4, "catalog"](#)

To drop an index from an attribute by using `ldapmodify`, specify `delete` in the LDIF file. For example:

```
dn: cn=catalogs
changetype: modify
delete: orclindexedattribute
orclindexedattribute: displayName
```

3.11.4 Related Command-Line Tools for ldapmodify

- See ["ldapadd"](#) on page 3-15
- See ["ldapdelete"](#) on page 3-27
- See ["ldapmoddn"](#) on page 3-30

3.12 ldapmodifymt

The `ldapmodifymt` command-line tool is similar to `ldapmodify` in that it enables you to add, delete, or modify entries by supplying an LDIF file as input. However, `ldapmodifymt` runs in multi-threaded mode allowing you to operate on multiple entries concurrently.

See [Appendix A, "LDIF File Format"](#) on page A-1 for more information about the correct formatting of LDIF files.

3.12.1 Syntax for ldapmodifymt

```
ldapmodifymt -h oid_hostname -D "binddn" -q | -w password [-p ldap_port]
[-V ldap_version] -T number_of_threads {-f ldif_filename | -X dsml_filename}
[-a] [-b] [-c [-o log_file_name]] [-M] [-O ref_hop_limit] [-k|-K]
[-U SSL_auth_mode {-W wallet_location -Q | -P wallet_password}]
[-E character_set] [-d debug_level]
```

3.12.2 Arguments for ldapmodifymt

-h *oid_hostname*

Required. The host name or IP address of the Oracle Internet Directory server.

-D "*binddn*"

Required. The DN of the Oracle Internet Directory user needed to bind to the directory (for example, `cn=orcladmin`).

-q

Required unless `-w` is used. Causes the command to prompt for the user password needed to bind to the directory. A password supplied at the command prompt is not visible on the screen.

-w *password*

Required unless `-q` is used. The user password needed to bind to the directory. Avoid supplying a password on the command line whenever possible. A password typed on the command line is visible on your screen. The `-w password` option is disabled when `LDAP_PASSWORD_PROMPTONLY` is set to true. See ["Using Passwords with Command-Line Tools"](#) on page 1-1.

-p *ldap_port*

Optional. The port number used to connect to the Oracle Internet Directory server. Defaults to port 3060.

-V *ldap_version*

Optional. The version of the LDAP protocol to use. Allowed values are 2 or 3. Defaults to 3 (LDAP v3).

-T *number_threads*

Required. The number of threads for concurrently processing entries.

-f *ldif_filename* | -X *dsml_filename*

Required. The full path and file name of the input file that contains the data you want to import.

Use the `-f` argument to supply an LDIF file. See [Appendix A, "LDIF File Format"](#) on page A-1 for information on formatting an LDIF file.

Use the `-X` argument to supply a Directory Service Markup Language (DSML) file. See ["Adding Data to the Directory Using a DSML File"](#) on page 3-18 for more information about formatting a DSML file.

-a

Optional. Denotes that the LDIF file has entries to be added.

-b

Optional. Use this option if your input file has binary file names in it, which are preceded by the forward slash character. The tool retrieves the actual values from the file referenced.

-c

Optional. Proceeds in spite of errors. All errors are reported. If the `-c` argument is not used, the tool stops when an error occurs.

-o *log_file_name*

Optional. Used with the `-c` argument. Writes the LDIF entries with errors to a log file. Specify the full path and name of the log file.

-M

Optional. Instructs the tool to send the `ManageDSAIT` control to the server. The `ManageDSAIT` control instructs the server not to send referrals to clients. Instead a referral entry is returned as a regular entry.

-O *ref_hop_limit*

Optional. The number of referral hops that a client should process. Defaults to 5.

-k | -K

Optional. The `-k` argument authenticates using Kerberos authentication instead of simple authentication. To enable this option, you must compile with `KERBEROS` defined. You must already have a valid ticket granting ticket. Use the `-K` argument if you want to only perform the first step of the Kerberos bind.

-U *SSL_auth_mode*

Optional. The SSL authentication mode:

- 1 for no authentication required.
- 2 for one way authentication required. You must also supply a wallet location and wallet password.
- 3 for two way authentication required. You must also supply a wallet location and wallet password.

-W *wallet_location*

Required if using one way or two way SSL authentication (-U 2 | 3). The location of the wallet file that contains the server's SSL certificates.

Example for UNIX:

```
-W "file:/home/my_dir/my_wallet"
```

Example for Microsoft Windows:

```
-W "file:C:\my_dir\my_wallet"
```

-Q

Required, unless -P is used, if using one way or two way SSL authentication (-U 2 | 3). Causes the command to prompt for the wallet password for the wallet specified in the -W argument. A password supplied at the command prompt is not visible on the screen.

-P *wallet_password*

Required, unless -Q is used, if using one way or two way SSL authentication (-U 2 | 3). The wallet password for the wallet specified in the -W argument. Avoid supplying a password on the command line whenever possible. A password typed on the command line is visible on your screen. The -P *wallet_password* option is disabled when LDAP_PASSWORD_PROMPTONLY is set to true. See ["Using Passwords with Command-Line Tools"](#) on page 1-1.

-E *character_set*

Optional. The native character set encoding. Defaults to the character set of the user's terminal. Each supported character set has a unique acronym, for example, WE8MSWIN1252, JA16SJIS, or AL32UTF8.

-d *debug_level*

Optional. If not specified the default of 0 (not enabled) is used. Debug levels are additive. Add the numbers representing the functions that you want to activate, and use the sum of those in the command-line option. For example, to trace search filter processing (512) and active connection management (256), enter 768 as the debug level (512 + 256 = 768). Debug levels are as follows:

- 1 — Heavy trace debugging
- 128 — Debug packet handling
- 256 — Connection management, related to network activities
- 512 — Search filter processing
- 1024 — Entry parsing
- 2048 — Configuration file processing
- 8192 — Access control list processing
- 491520 — Log of communication with the database
- 524288 — Schema related operations
- 4194304 — Replication specific operations
- 8388608 — Log of entries, operations and results for each connection
- 16777216 — Trace function call arguments

- 67108864 — Number and identity of clients connected to this server
- 117440511 — All possible operations and data

3.12.3 Tasks and Examples for ldapmodifymt

Using the `ldapmodifymt` command-line tool, you can perform the following task:

- [Modifying Multiple Entries Concurrently](#)

3.12.3.1 Modifying Multiple Entries Concurrently

To modify multiple entries at once, you must first prepare your LDIF file correctly. See [Appendix A, "LDIF File Format"](#) on page A-1 for examples. Once you have a properly formatted LDIF file, you can use the `ldapmodifymt` tool to import the changes.

The following example uses five concurrent threads to modify the entries specified in the file `/home/myfiles/modify.ldif`.

Example:

```
ldapmodify -h myhost.company.com -D "cn=orcladmin" -w password -p 3060 \  
-T 5 -f /home/myfiles/modify.ldif -v
```

3.12.4 Related Command-Line Tools for ldapmodifymt

- See "[ldapaddmt](#)" on page 3-19
- See "[ldapmodify](#)" on page 3-32

3.13 ldapsearch

The `ldapsearch` command-line tool enables you to search for and retrieve specific entries in the directory.

The LDAP filter that you use to search for entries must be compliant with the Internet Engineering Task Force (IETF) standards as specified in RFC 2254. Refer to the IETF Web site at <http://www.ietf.org> for more information about the standard filter format. Oracle Internet Directory supports all elements of RFC 2254 except for extensible matching.

Note: Various UNIX shells interpret some characters—for example, asterisks (*)—as special characters. Depending on the shell you are using, you might need to escape these characters.

See Also: For information on using attribute aliases with `ldapsearch` refer to the "Attribute Aliases In the Directory" section in *Oracle Fusion Middleware Administrator's Guide for Oracle Internet Directory*

3.13.1 Syntax for ldapsearch

```
ldapsearch -h oid_hostname -D "binddn" -q | -w password [-Y "proxy_dn"]  
[-p ldap_port] [-V ldap_version] -b "basedn" {-s base|one|sub} {"filter_string"  
attributes}|-f input_file) [-F separator] [-T [-]sort_attribute] [-j page_size]  
[-A] [-a never|always|search|find] [-S] [-R] [-i 1|0] [-t] [-u] [-L|-X] [-B] [-M]  
[-v] [-n] [-l time_limit] [-z size_limit] [-O ref_hop_limit] [-U SSL_auth_mode  
{-W wallet_location -Q | -P wallet_password}] [-d debug_level]  
[-E character_set][-c]
```

3.13.2 Arguments for ldapsearch

-h *oid_hostname*

Required. The host name or IP address of the Oracle Internet Directory server.

-D "*binddn*"

Required. The DN of the Oracle Internet Directory user needed to bind to the directory (for example, cn=orcladmin).

-q

Required unless `-w` is used. Causes the command to prompt for the user password needed to bind to the directory. A password supplied at the command prompt is not visible on the screen.

-w *password*

Required unless `-q` is used. The user password needed to bind to the directory. Avoid supplying a password on the command line whenever possible. A password typed on the command line is visible on your screen. The `-w password` option is disabled when `LDAP_PASSWORD_PROMPTONLY` is set to true. See ["Using Passwords with Command-Line Tools"](#) on page 1-1.

-Y "*proxy_dn*"

Optional. The DN of a proxy user. After binding to the directory, the add operation is performed as this user.

-p *ldap_port*

Optional. The port number used to connect to the Oracle Internet Directory server. Defaults to port 3060.

-V *ldap_version*

Optional. The version of the LDAP protocol to use. Allowed values are 2 or 3. Defaults to 3 (LDAP v3).

-b "*basedn*"

Required. The base DN for the search.

-s *base | one | sub*

Required. The scope of the search within the DIT. The options are:

- `base` - Retrieves a particular directory entry. Along with this search depth, you use the search criteria bar to select the attribute `objectClass` and the filter `Present`.
- `one` - Limits your search to all entries beginning one level down from the root of your search.
- `sub` - Searches entries within the entire subtree, including the root of your search.

"*filter_string*" [*attributes*] | -f *input_file*

Required. Supply a single filter on the command-line within quotes followed by the attribute names whose values you want returned. Separate attributes with a space. If you do not list any attributes, all attributes are retrieved.

By default, `ldapsearch` does not return operational attributes. If you add the character "+" to the list of attributes in the search request, however, `ldapsearch` returns all operational attributes.

You can also supply an input file with the `-f` argument that contains a sequence of search operations to perform.

In the output, the attribute names are shown in lower case if the attribute `orclReqattrCase` is 0 in the instance-specific config entry. If `orclReqattrCase` is set to 1, the attribute names in the output are shown in the same case in which they were entered on the command line. See "[Attribute Case in ldapsearch Output](#)" on page 3-48.

-F separator

Optional. Enables you to choose a separator to use between attribute names and values in the search output. The default is = (equal sign).

-T [-]sort_attribute

Optional. Instructs the tool to send a sort request to the server. The server returns entries sorted on the attribute, `sort_attribute`. A dash (-) before `sort_attribute` instructs the tool to sort the entries in reverse order.

-j page_size

Optional. Instructs the tool to send a page request to the server. The server returns paged entries with pages of size, `page_size`.

-A

Optional. Retrieves attribute names only (no values).

-a never | always | search | find

Optional. Specifies alias dereferencing. An alias entry in an LDAP directory is an entry that points to another entry. Following an alias pointer is known as dereferencing an alias. The options are:

- `never` - Never dereference alias entries. Choose this option to improve search performance if there are no alias entries in the directory that require dereferencing.
- `always` - Always dereference aliases. This selection is the default.
- `search` - Dereference alias entries subordinate to a specified search base, but do not dereference an alias search base entry.
- `find` - Dereference an alias entry for a specified search base, but do not dereference alias entries subordinate to the search base.

-S attr

Optional. Sorts the results by the attribute specified.

-R

Optional. Disables the automatic following of referrals.

-i 1 | 0

Optional. Specifies whether to bind as the current user when following referrals. 1 means bind as the current user, 0 means bind anonymously. The default is 0 (zero).

-t

Optional. Writes files to /tmp.

-u

Optional. Includes user-friendly names in the output.

-L | -X

Optional. Prints entries in LDIF (-L) or DSML format (-X).

With the -L option, all attributes, including binary attributes are printed in LDAP Data Interchange Format (LDIF). Binary attributes are transformed into printable characters using BASE64 encoding.

See Also: [Appendix A, "LDIF File Format"](#) for a description of LDAP Data Interchange Format.

-B

Optional. Allows printing of non-ASCII values. Binary attributes are printed as is, without encoding. The complete value might not be printed, as it might contain non-printable characters.

-M

Optional. Instructs the tool to send the ManageDSAIT control to the server. The ManageDSAIT control instructs the server not to send referrals to clients. Instead a referral entry is returned as a regular entry.

-n

Optional. Enables you to preview what would occur in an operation without actually performing the operation.

-v

Optional. Runs the tool in verbose mode.

-l *time_limit*

Optional. The maximum time in seconds to wait for an ldapsearch command to complete.

-z *size_limit*

Optional. The maximum number of entries to return.

-O *ref_hop_limit*

Optional. The number of referral hops that a client should process. Defaults to 5.

-U *SSL_auth_mode*

Optional. The SSL authentication mode:

- 1 for no authentication required.
- 2 for one way authentication required. You must also supply a wallet location and wallet password.
- 3 for two way authentication required. You must also supply a wallet location and wallet password.

-W *wallet_location*

Required if using one way or two way SSL authentication (-U 2 | 3). The location of the wallet file that contains the server's SSL certificates.

Example for UNIX:

```
-W "file:/home/my_dir/my_wallet"
```

Example for Microsoft Windows:

```
-W "file:C:\my_dir\my_wallet"
```

-Q

Required, unless -P is used, if using one way or two way SSL authentication (-U 2 | 3). Causes the command to prompt for the wallet password for the wallet specified in the -W argument. A password supplied at the command prompt is not visible on the screen.

-P *wallet_password*

Required, unless -Q is used, if using one way or two way SSL authentication (-U 2 | 3). The wallet password for the wallet specified in the -W argument. Avoid supplying a password on the command line whenever possible. A password typed on the command line is visible on your screen. The -P *wallet_password* option is disabled when LDAP_PASSWORD_PROMPTONLY is set to true. See ["Using Passwords with Command-Line Tools"](#) on page 1-1.

-d *debug_level*

Optional. If not specified the default of 0 (not enabled) is used. Debug levels are additive. Add the numbers representing the functions that you want to activate, and use the sum of those in the command-line option. For example, to trace search filter processing (512) and active connection management (256), enter 768 as the debug level (512 + 256 = 768). Debug levels are as follows:

- 1 — Heavy trace debugging
- 128 — Debug packet handling
- 256 — Connection management, related to network activities
- 512 — Search filter processing
- 1024 — Entry parsing
- 2048 — Configuration file processing
- 8192 — Access control list processing
- 491520 — Log of communication with the database
- 524288 — Schema related operations
- 4194304 — Replication specific operations
- 8388608 — Log of entries, operations and results for each connection
- 16777216 — Trace function call arguments
- 67108864 — Number and identity of clients connected to this server
- 117440511 — All possible operations and data

-E character_set

Optional. The native character set encoding. Defaults to the character set of the user's terminal. Each supported character set has a unique acronym, for example, WE8MSWIN1252, JA16SJIS, or AL32UTF8.

-C

Optional. ldapsearch -C option causes ldapsearch to traverse a hierarchy and report direct memberships. The ldapsearch -C option essentially includes the CONNECT_BY control (2.16.840.1.113894.1.8.3) in the request sent to the client. ldapsearch doesn't have any means to pass values with a control. So, it sends the CONNECT_BY control without values. In this case the default values are assumed, that is, the hierarchy-establishing attribute name is obtained from the filter, and the number of levels is 0. Thus, the -C option can only be used to fetch *all containers of a containee* queries, for example, fetch all groups of a user, fetch all employees of a manager and so forth. Also, all levels of the hierarchy are traversed. For more information, see [Section 6-2, "Request Controls Supported by Oracle Internet Directory."](#)

See Also: The "Performing Hierarchical Searches" section in Oracle Fusion Middleware Application Developer's Guide for Oracle Identity Management

3.13.3 Tasks and Examples for ldapsearch

Using the ldapsearch command-line tool, you can perform the following tasks:

- [Performing a Base Object Search](#)
- [Performing a One-Level Search](#)
- [Performing a Subtree Search](#)
- [Searching for Attribute Values of Entries](#)
- [Searching for Operational Attributes of Entries](#)
- [Searching for Entries with Attribute Options](#)
- [Searching for All User Attributes and Specified Operational Attributes](#)
- [Searching for Entries \(More Examples\)](#)
- [Attribute Case in ldapsearch Output](#)

3.13.3.1 Performing a Base Object Search

The following example performs a base-level search on the directory from the root.

- -b specifies base DN for the search, root in this case.
- -s specifies whether the search is a base search (base), one level search (one) or subtree search (sub).
- "objectclass=*" specifies the filter for search.

Example:

```
ldapsearch -p 3060 -h myhost -b "" -s base -v "objectclass=*" 
```

3.13.3.2 Performing a One-Level Search

The following example performs a one level search starting at "ou=HR, ou=Americas, o=IMC, c=US".

Example:

```
ldapsearch -p 3060 -h myhost -b "ou=HR, ou=Americas, o=IMC, c=US" -s one \  
-v "objectclass=*"
```

3.13.3.3 Performing a Subtree Search

The following example performs a subtree search and returns all entries having a DN starting with "cn=us".

Example:

```
ldapsearch -p 3060 -h myhost -b "c=US" -s sub -v "cn=Person*"
```

3.13.3.4 Searching for Attribute Values of Entries

The following example returns only the DN attribute values of the matching entries:

Example:

```
ldapsearch -p 3060 -h myhost -b "c=US" -s sub -v "objectclass=*" dn
```

The following example retrieves only the distinguished name along with the surname (sn) and description (description) attribute values:

Example:

```
ldapsearch -p 3060 -h myhost -b "c=US" -s sub -v "cn=Person*" dn sn description
```

The following example retrieves the distinguished name (dn), surname (sn), and description (description) attribute values. The entries are sorted by surname (sn). There are 10 entries returned per page.

Example:

```
ldapsearch -p 3060 -h myhost -b "c=US" -s sub -v "cn=Person*" dn sn description \  
-T sn -j 10
```

3.13.3.5 Searching for Operational Attributes of Entries

The following example returns only operational attributes:

```
$ ldapsearch -h adc2190517 -p 3060 -D cn=orcladmin -w welcome -b "c=uk" -L -s base \  
"(objectclass=*)" +
```

3.13.3.6 Searching for Entries with Attribute Options

The following example retrieves entries with common name (cn) attributes that have an option specifying a language code attribute option. This particular example retrieves entries in which the common names are in French and begin with the letter R.

Example:

```
ldapsearch -p 3060 -h myhost -b "c=US" -s sub "cn;lang-fr=R*"
```

Suppose that, in the entry for John, no value is set for the cn;lang-it language code attribute option. In this case, the following example does not return John's entry:

Example:

```
ldapsearch -p 3060 -h myhost -b "c=us" -s sub "cn;lang-it=Giovanni"
```

3.13.3.7 Searching for All User Attributes and Specified Operational Attributes

The following example retrieves all user attributes and the `createtimestamp` and `orclguid` operational attributes:

Example:

```
ldapsearch -p 3060 -h myhost -b "ou=Benefits,ou=HR,ou=Americas,o=IMC,c=US" \
-s sub "cn=Person*" "*" createtimestamp orclguid
```

The following example retrieves entries modified by Anne Smith:

Example:

```
ldapsearch -h sun1 \
-b "" "(&(objectclass=*)(modifiersname=cn=Anne Smith))"
```

The following example retrieves entries modified between 01 April 2001 and 06 April 2001:

Example:

```
ldapsearch -h sun1 -b "" \
"(&(objectclass=*)(modifytimestamp >= 20000401000000) \
(modifytimestamp <= 20000406235959))"
```

Note: Because `modifiersname` and `modifytimestamp` are not indexed attributes, use `catalog` to index these two attributes. Then, restart the Oracle directory server before issuing the two previous `ldapsearch` commands.

3.13.3.8 Searching for Entries (More Examples)

Each of the following examples searches on port 3060 of host `sun1`, and searches the whole subtree starting from the DN `"ou=hr,o=acme,c=us"`.

The following example searches for all entries with any value for the `objectclass` attribute.

```
ldapsearch -p 3060 -h sun1 -b "ou=hr, o=acme, c=us" -s subtree "objectclass=*"
```

The following example searches for all entries that have `orcl` at the beginning of the value for the `objectclass` attribute.

```
ldapsearch -p 3060 -h sun1 -b "ou=hr, o=acme, c=us" -s subtree "objectclass=orcl*"
```

The following example searches for entries where the `objectclass` attribute begins with `orcl` and `cn` begins with `foo`.

```
ldapsearch -p 3060 -h sun1 -b "ou=hr, o=acme, c=us" \
-s subtree "(&(objectclass=orcl*)(cn=foo*))"
```

The following example searches for entries in which `cn` begins with `foo` or `sn` begins with `bar`.

```
ldapsearch -p 3060 -h sun1 -b "ou=hr, o=acme, c=us" \
-s subtree "(|(cn=foo*)(sn=bar*))"
```

The following example searches for entries in which `employeenumber` is less than or equal to 10000.

```
ldapsearch -p 3060 -h sun1 -b "ou=hr, o=acme, c=us" \
```

```
-s subtree "employeenumber<=10000"
```

3.13.3.9 Attribute Case in Ldapsearch Output

In the output from the `ldapsearch` command, the attribute names are shown in lower case if the attribute `orclReqattrCase` in the instance-specific configuration entry is 0. If `orclReqattrCase` is set to 1, the attribute names in the output are shown in the same case in which they were entered on the command line.

Example:

```
ldapsearch -h localhost -p 389 -b "dc=oracle,dc=com" -s base -L "objectclass=*" DC
```

If `orclReqattrCase` is 0 the output looks like this:

```
dn: dc=oracle,dc=comdc: oracle
```

If `orclReqattrCase` is 1, the output looks like this:

```
dn: dc=oracle,dc=comDC: oracle
```

3.13.4 Related Command-Line Tools for Ldapsearch

- See ["ldapcompare"](#) on page 3-24
- See ["catalog"](#) on page 3-12

3.14 Idifmigrator

The Oracle Internet Directory Data Migration Tool (`ldifmigrator`) is used to convert LDIF files output from other directories or application-specific repositories into a format recognized by Oracle Internet Directory. The Data Migration Tool takes as input an LDIF file containing substitution variables, and outputs an LDIF file suitable for loading into Oracle Internet Directory.

See ["LDIF Format for Migrating Entries"](#) on page A-6 for the correct format of the LDIF input file for this tool.

3.14.1 Syntax for Idifmigrator

```
ldifmigrator "input_file=filename" "output_file=filename"
[-lookup -h oid_hostname -D "binddn" -w password [-p ldap_port]
[subscriber=subscriberDN]] ["s_VariableName1=replacement_value"
"s_VariableName2=replacement_value"...]
[-load -reconcile SAFE|SAFE_EXTENDED|NORMAL]
```

3.14.2 Arguments for Idifmigrator

"input_file=filename"

The full path and file name of the LDIF file that contains directory entry data and one or more substitution variables.

"output_file=filename"

The full path and file name of the output file produced by the `ldifmigrator` tool.

-lookup

If this flag is specified, then values of certain substitution variables are obtained by looking up the correct values in the directory server. See "[Substitution Variables for Migration Input Files](#)" on page A-6 for a list of substitution variables that can be looked up.

-h *oid_hostname*

Required if the `-lookup` flag is used. The host name or IP address of the Oracle Internet Directory server.

-D "*binddn*"

Required if the `-lookup` flag is used. The DN of the Oracle Internet Directory user needed to bind to the directory (for example, `cn=orcladmin`).

-q

Required unless `-w` is used. Causes the command to prompt for the user password needed to bind to the directory. A password supplied at the command prompt is not visible on the screen.

-w *password*

Required unless `-q` is used. The user password needed to bind to the directory. Avoid supplying a password on the command line whenever possible. A password typed on the command line is visible on your screen. The `-w password` option is disabled when `LDAP_PASSWORD_PROMPTONLY` is set to true. See "[Using Passwords with Command-Line Tools](#)" on page 1-1.

`subscriber=subscriberDN`

Optional. The subscriber whose attribute values is used in place of the substitution variables. If not specified, then the default identity management realm specified in the Root Oracle Context is used.

`"s_VariableName=replacement_value"`

Optional. You can specify a value for a substitution variable on the command-line. See "[Substitution Variables for Migration Input Files](#)" on page A-6 for instructions on adding a substitution variable to the input LDIF file. The `ldifmigrator` tool replaces all occurrences of the variable with the value you specify.

-load

Optional. Loads the data output by the `ldifmigrator` tool directly into Oracle Internet Directory. If an entry is already present in the directory then that directory entry is logged to the file. The addition of the directory entries could fail for other reasons as well, for instance not enough permission to add or parent entry not being present.

-reconcile `SAFE | SAFE_EXTENDED | NORMAL`

Optional. The `-reconcile` option enables you to specify different modes if the tool tries to load data for entries that already exist, or modify attributes of entries that may have conflicts. The following modes are available:

- **SAFE** - This mode only adds new entries that don't exist or appends new attributes to existing entries.

- **SAFE-EXTENDED** - This mode only adds new entries that don't exist or appends new attributes to existing entries. If you try to add a new value for existing attributes, then it adds it to the existing set of values.
- **NORMAL** - This mode applies all directives as intended, overwriting any conflicting attributes or entries with the data specified in the `ldifmigrator` output.

See ["Reconcile Options for Migrated Entries"](#) on page A-8 for more information about LDIF directives supported by the `-reconcile` option.

3.14.3 Tasks and Examples for `ldifmigrator`

Using the `ldifmigrator` command-line tool, you can perform the following tasks:

- [Using the Data Migration Tool in Lookup Mode](#)
- [Overriding Data Migration Values in Lookup Mode](#)
- [Using the Data Migration Tool by Supplying Your Own Values](#)
- [Loading and Reconciling Data Using the Data Migration Tool](#)

See ["LDIF Format for Migrating Entries"](#) on page A-6 for examples of correctly formatted LDIF input files for use with the Data Migration Tool.

3.14.3.1 Using the Data Migration Tool in Lookup Mode

In this example, Oracle Internet Directory server is present in the environment, and the migration tool looks up the directory server to figure out certain substitution variables specified in the LDIF input file.

Example:

```
$ldifmigrator "input_file=sample.dat" "output_file=sample.ldif" \
  -lookup "host=ldap.acme.com" "subscriber=acme" \
  "s_UserOrganization=Development"
```

3.14.3.2 Overriding Data Migration Values in Lookup Mode

In some cases, you want to use the lookup mode but would also like to override the values of one or more of the pre-defined substitution variables. This can be done by specifying the override value in the command-line. The following command line shows how one can set the `UserNicknameAttribute` to `cn` overriding the default of `uid`:

Example:

```
$ldifmigrator "input_file=sample.dat" "output_file=sample.ldif" \
  -lookup "host=ldap.acme.com" "subscriber=acme" \
  "s_UserOrganization=Development" "s_UserNicknameAttribute=cn"
```

3.14.3.3 Using the Data Migration Tool by Supplying Your Own Values

The following example shows how you can specify your own values for substitution variables found in the LDIF input file, rather than using lookup mode.

Example:

```
$ldifmigrator "input_file=sample.dat" "output_file=sample.ldif" \
  "s_UserContainerDN=cn=Users,o=Acme,dc=com" \
  "s_UserNicknameAttribute=uid" "s_UserOrganization=Development"
```

3.14.3.4 Loading and Reconciling Data Using the Data Migration Tool

The Data Migration Tool gives you the option of loading the data directly into Oracle Internet Directory. Use the `-load` and `-reconcile` options to load data and safely reconcile any conflicts.

Example:

```
$ldifmigrator "input_file=sample.dat" "output_file=sample.ldif" \
  -lookup "host=ldap.acme.com" "subscriber=acme" \
  "s_UserOrganization=Development"
-load -reconcile SAFE
```

3.14.4 Related Command-Line Tools for ldifmigrator

- See "[ldapadd](#)" on page 3-15
- See "[ldapmodify](#)" on page 3-32
- See "[ldifwrite](#)" on page 3-52

3.14.5 Error Messages for ldifmigrator

The Data Migration Tool can display these error messages:

Table 3–1 Error Messages of the Data Migration Tool

Message	Reason	Remedial Action
Environment variable ORACLE_HOME not defined	ORACLE_HOME is not defined.	Set the environment variable ORACLE_HOME
Environment variable ORACLE_INSTANCE not defined	ORACLE_INSTANCE is not defined.	Set the environment variable ORACLE_INSTANCE
Error while parsing the input parameters. Please verify	Not all the required parameters are provided. The required parameters are Input_File, Output_File and at least one substitution variable	Specify the input parameters properly. Use the <code>-help</code> option to print the usage.
Input_File parameter not specified. Please specify	Input_File parameter is a mandatory parameter.	Specify the input parameters properly. Use the <code>-help</code> option to print the usage.
Output_File parameter not specified. Please specify	Output_File parameter is a mandatory parameter.	Specify the input parameters properly. Use the <code>-help</code> option to print the usage.
The specified input file does not exist	The specified file location is invalid.	Check the input file path
Check the input file. Zero byte input file	The input file does not contain any entries.	Provide a valid file with pseudo LDIF entries
Cannot create the output file. Output file already exists	The output file already exists	Check the Output_File flag
Access denied, cannot read from the input file	The specified input file does not have read permission	Check the read permission of the input file.
Access denied, cannot create the output file	You do not have permission to create the output file.	Check the permission of the directory under which the output file needs to be created.
Directory server name not specified. When <code>-lookup</code> option is used the host parameter should be specified	When the <code>-lookup</code> option is specified, the host parameter is mandatory.	Specify the host parameter.

Table 3–1 (Cont.) Error Messages of the Data Migration Tool

Message	Reason	Remedial Action
Bind Dn parameter name not specified. When -lookup option is used the dn parameter should be specified	When the <code>-lookup</code> option is specified, the DN parameter is mandatory.	Specify the DN parameter.
The port number specified is invalid	The port number should be a numeric value.	Check the port number parameter
Unable to establish connection to directory. Please verify the input parameters: host, port, dn & password	The directory server may not be running on the specified host and port, or credentials may be invalid.	Check the host, port, DN and password parameters. Check <code>ORACLE_INSTANCE/diagnostics/logs/OID/tools/</code> .
Naming exception occurred while retrieving the subscriber information from the directory. Please verify the input parameters	The specified identity management realm does not exist in the directory	Check the realm parameter
Not all the substitution variables are defined in the directory server specified	If the identity management realm entry does not contain the required attributes, then this error occurs.	Check the realm entry in the directory
Error occurred while migrating LDIF data to Oracle Internet Directory	This might occur if something goes wrong in the middle of a process—for example, a failure of the directory server or disk.	Report the error message to the administrator

When an error condition occurs, the log messages are logged to this file:

`ORACLE_INSTANCE/ldap/install/LDIFMig_YYYY_MM_DD_HH_SS.log`.

3.15 ldifwrite

The `ldifwrite` command-line tool enables you to convert to LDIF all or part of the information residing in an Oracle Internet Directory. Once you have converted the information, you can load it into a new node in a replicated directory or another node for backup storage.

Note: The `ldifwrite` command requires that the environment variable `ORACLE_INSTANCE` be set.

Note: The `ldifwrite` tool output does not include operational data of the directory itself—for example, `cn=subschemasubentry`, `cn=catalogs`, and `cn=changelog` entries. To export these entries into LDIF format, use `ldapsearch` with the `-L` flag.

The `ldifwrite` tool performs a subtree search, including all entries below the specified DN, including the DN itself.

Using ldifwrite with Replication

When you add data to a node that is part of a Directory Replication Group (DRG), you can use either bulk tools or LDAP tools, depending on the circumstances. The following rules apply:

- When you add new entries to all nodes in the DRG, you can use either bulk tools or LDAP tools. For more than 20K entries, bulk tools are significantly faster. If you use LDAP tools, add the entries to only one node in the DRG and let replication propagate the entries. If you use bulk tools, generate the intermediate file only once from the LDIF file and use that intermediate file to load the entries onto all the nodes in the DRG.
- When you copy existing entries from one node to another in the same replication group, use bulk tools. Use the `bulkload` option `restore=true` when you upload the data.
- If the LDIF file contains operational attributes, which it does when created with `ldifwrite`, use `bulkload` to add the entries.
- If the replication agreement is a partial replication agreement, use `ldifwrite` with the base DN as the replication agreement DN to write the entries to the LDIF file. Then use `bulkload` with the `restore=true` option to load the data.

3.15.1 Syntax for `ldifwrite`

```
ldifwrite connect=connect_string basedn=Base_DN ldiffile=LDIF_Filename
[filter=LDAP_Filter] [threads=num_of_threads] [debug="TRUE"|"FALSE"]
[encode=character_set] [verbose="TRUE"|"FALSE"]
```

3.15.2 Arguments for `ldifwrite`

connect

Required. The directory database connect string. If you already have a `tnsnames.ora` file configured, then this is the net service name specified in that file, which is located by default in `ORACLE_INSTANCE/config`. (You can set the `TNS_ADMIN` environment variable if you want to use a different location.)

basedn

Required. The base DN of the subtree to be written out in LDIF format.

If the base DN is a replication agreement entry, then you can back up part of the naming context based on the LDAP naming context configuration. Specify the replication agreement DN in this case.

ldiffile

Required. The full path and file name of the output LDIF file.

filter

Optional. This is the LDAP filter to be used. You can specify a filter to select entries that match a particular criteria. Only these entries would be written to the LDIF file.

threads

Optional. The number of threads used to read from the directory store and write to the LDIF output file. The default is the number of CPUs plus one.

debug

Optional. The debug option reports the logging level. This is useful in case the command runs into errors. The output is logged to the `ldifwrite.log` file. This file can be found under `ORACLE_INSTANCE/diagnostics/logs/OID/tools`.

encode

Optional. The native character set encoding. Defaults to the character set of the user's terminal. Each supported character set has a unique acronym, for example, WE8MSWIN1252, JA16SJIS, or AL32UTF8.

verbose

3.15.3 Tasks and Examples for ldifwrite

Using the `ldifwrite` command-line tool, you can perform the following tasks

- [Converting All Entries under a Naming Context to an LDIF File](#)
- [Converting a Partial Naming Context to an LDIF File](#)
- [Converting Entries that Match Criteria to an LDIF File](#)

3.15.3.1 Converting All Entries under a Naming Context to an LDIF File

The following example writes all the entries under `ou=Europe,o=imc,c=us` into the `output1.ldif` file.

The LDIF file and the intermediate file are always written to the current directory.

The `ldifwrite` tool includes the operational attributes of each entry in the directory, including `createtimestamp`, `creatorsname`, and `orclguid`.

When prompted for the Oracle Internet Directory password, enter the password of the ODS database user account.

Example:

```
ldifwrite connect="nldap" basedn="ou=Europe, o=imc, c=us" ldiffile="output1.ldif"
```

3.15.3.2 Converting a Partial Naming Context to an LDIF File

The following example uses the following naming context objects defined in partial replication:

```
dn: cn=includednamingcontext000001, cn=replication namecontext,
orclagreementid=000001, orclreplicaid=node replica identifier, cn=replication
configuration
orclincludednamingcontexts: c=us
orclxcludednamingcontexts: ou=Americas, c=us
orclxcludedattributes: userpassword
objectclass: top
objectclass: orclreplnamectxconfig
```

In this example, all entries under `c=us` are backed up except `ou=Americas, c=us`. The `userpassword` attribute is also excluded.

Example:

```
ldifwrite connect="nldap" basedn="cn=includednamingcontext000001, \
cn=replication namecontext,orclagreementid=000001, \
orclreplicaid=node replica identifier,cn=replication configuration" \
ldiffile="output2.ldif"
```

3.15.3.3 Converting Entries that Match Criteria to an LDIF File

The following example writes entries under `ou=users,o=test,c=us` that have `sn="Stuart"` to an output LDIF file, `output3.ldif`.

Example:

```
ldifwrite connect="nldap" basedn="ou=users, o= test, c=us" filter="sn=xyz"
ldiffile="output3.ldif"
```

3.15.4 Related Command-Line Tools for ldifwrite

- "ldapsearch" on page 3-40
- "ldifmigrator" on page 3-48
- "bulkload" on page 3-3

3.16 upgradecert.pl

Starting with Release 10.1.2, a certificate hash value can be used to bind to Oracle Internet Directory. The introduction of this hash value requires that user certificates issued before Release 10.1.2 be updated in the directory. This is a post-upgrade step and it is required only if user certificates are provisioned in the directory. The `upgradecert.pl` tool is used for this purpose.

Before running the `upgradecert.pl` tool:

1. Make sure that the Oracle Internet Directory server instance is up and running.
2. Check that you are running Perl 5.6 or later. Run this command:

```
perl -version
```
3. Make sure that the environment variable `PERL5LIB` is set to the proper PERL library location.
4. Check that you can run `ldapmodify` and `ldapsearch` from your command prompt.
5. Determine whether you have enough disk space to run the tool. The amount of disk space required depends upon the number of certificates stored.

3.16.1 Syntax for upgradecert.pl

```
perl ORACLE_HOME/ldap/bin/upgradecert.pl -h oid_hostname -D "binddn"
-w password [-p ldap_port] [-t temp_dir]
```

3.16.2 Arguments for upgradecert.pl**-h *oid_hostname***

Required. The host name or IP address of the Oracle Internet Directory server.

-D "*binddn*"

Required. The DN of the Oracle Internet Directory user needed to bind to the directory (for example, `cn=orcladmin`).

-q

Required unless `-w` is used. Causes the command to prompt for the user password needed to bind to the directory. A password supplied at the command prompt is not visible on the screen.

-w password

Required unless `-q` is used. The user password needed to bind to the directory. Avoid supplying a password on the command line whenever possible. A password typed on the command line is visible on your screen. The `-w password` option is disabled when `LDAP_PASSWORD_PROMPTONLY` is set to true. See ["Using Passwords with Command-Line Tools"](#) on page 1-1.

-t temp_dir

Optional. The location of the temporary working directory. This is where the log file is found. The default is `$ORACLE_INSTANCE/diagnostics/logs/OID/tools` if the `ORACLE_INSTANCE` environment variable is set. If this variable is not set, the default is the current directory.

3.16.3 Tasks and Examples for upgradecert.pl

Using the `upgradecert.pl` tool, you can perform the following task:

- [Upgrading User Certificates Stored in the Directory from Releases Prior to 10.1.2](#)

3.16.3.1 Upgrading User Certificates Stored in the Directory from Releases Prior to 10.1.2

Example:

```
perl ORACLE_HOME/ldap/bin/upgradecert.pl -h myhost.company.com \  
-D "cn=orcladmin" -w password
```

3.16.4 Related Command-Line Tools for upgradecert.pl

- N/A

Oracle Internet Directory Replication Management Tools

This chapter describes the following command-line tools used to administer Oracle Internet Directory replication:

- [ManageHiq.retry](#) and [ManageHiq.purge](#) (Human Intervention Queue Management Tools)
- [oidcmprec](#) (Oracle Internet Directory Compare and Reconcile Tool)
- [remtool](#) (Replication Environment Management Tool)

See Also: The replication chapters in *Oracle Fusion Middleware Administrator's Guide for Oracle Internet Directory*.

4.1 ManageHiq.retry and ManageHiq.purge

When a replication conflict arises, the Oracle Internet Directory replication server places the change in the retry queue and tries to apply it from there for a specified number of times. If it fails after the specified number of retries, the replication server puts the change in the human intervention queue. From there, the replication server repeats the change application process at less frequent intervals while awaiting your action.

At this point, you must:

1. Examine the change in the human intervention queue.
2. Reconcile the conflicting changes using the Compare and Reconcile Tool (see "[oidcmprec](#)" on page 4-3)
3. Either place the change back into the retry queue, by using `ManageHiq.retry`, or into the purge queue, by using `ManageHiq.purge`.

Note: The Oracle Internet Directory server parameter `orclSizeLimit`, which is 1000 by default, limits the number of entries that the human intervention queue manipulation tools can process. If you have more than 1000 entries in the human intervention queue, you must increase `orclSizeLimit`, or some entries will never be processed. Setting the parameter `orclSizeLimit` very high impacts server performance, because `orclSizeLimit` also controls the maximum number of entries to be returned by a search. The DN containing `orclSizeLimit` is

```
cn=componentname,cn=osldldapd,cn=subconfigsentry
```

4.1.1 Syntax for ManageHq.retry and ManageHq.purge

You invoke `ManageHq.retry` and `ManageHq.purge` as PL/SQL commands at the SQL prompt, as follows:

```
$ sqlplus /nologSQL> connect ods;
SQL> Enter password
SQL> Set serveroutput ON
SQL> exec ManageHq.retry(SupplierNode, EqualChgNo, StartChgNo, EndChgNo)
SQL> exit
```

```
$ sqlplus /nologSQL> connect ods;
SQL> Enter password
SQL> Set serveroutput ON
SQL> exec (ManageHq.purgeSupplierNode, EqualChgNo, StartChgNo, EndChgNo)
SQL> exit
```

You must set server output ON to display the success or error message. The arguments are:

EqualChgNo—The change number to be moved to the retry queue.

StartChgNo—The starting number. All the change numbers after this should be moved to the retry queue.

EndChgNo—The ending change. All change numbers less than or equal to this change number that should be moved to the retry queue.

4.1.2 Examples for ManageHq.retry

Move the changelog on node1, for change numbers between 300 and 1000 and supplier node2, to the retry queue.

```
exec Managehiq.retry('node2_orcl', 0, 300, 1000)
```

Move all the changelogs on node1 for supplier node2_orcl to the retry queue.

```
exec Managehiq.retry('node2_orcl', 0, 0, 0)
```

or

```
exec Managehiq.retry('node2_orcl')
```

4.1.3 Examples for ManageHq.purge

Purge the changelog on node1 where the change number is 2152 and the supplier is node2 (supplierNode = node2_orcl)

```
exec Managehiq.purge('node2_orcl', 2152)
```

Purge the changelog on node1 where the change number is greater than 200 and the supplier is node2_orcl

```
exec Managehiq.purge('node2_orcl', 0, 200)
```

Or

```
exec Managehiq.purge('node2_orcl', 0, 200, 0)
```

Purge the changelog on node1 where the change number is less than 2000 and the supplier is node2_orcl

```
exec Managehiq.purge('node2_orcl', 0, 0, 2000)
```

4.2 oidcprec

The Compare and Reconcile Tool allows you to compare one Oracle Internet Directory with another, detect conflicts or discrepancies, and optionally resolve them. The directories being compared can be standalone directories or part of the same replication group. You can compare two individual entries, subtrees, or entire directories. You can also compare directory schema.

See Also: The section "Comparing and Reconciling Inconsistent Data by Using oidcprec" in *Oracle Fusion Middleware Administrator's Guide for Oracle Internet Directory*.

The oidcprec tool can detect and resolve the following conflict scenarios:

- Entry only in source directory (entos)
- Entry only in destination directory (entod)
- Attribute only in source directory (atros)
- Attribute only in destination directory (atrod)
- Single-valued attribute differs (svatrdif)
- Multi-valued attribute differs (mvatrdif)
- Entry DN differs (dndif)

The oidcprec tool can also detect and resolve the following schema conflict scenarios:

- Object class definition exists only in source directory (odefos)
- Object class definition exists only in destination directory (odefod)
- Object class definition different in source and destination directory (odefdif)
- Attribute definition exists only in source directory (adefos)
- Attribute definition exists only in destination directory (adefod)
- Attribute definition different in source and destination directory (adefdif)

4.2.1 Syntax for oidcprec

```
oidcprec operation=compare | reconcile | merge | merge_dryrun | userdefinedcr
        source=host:port
```

```

destination=host:port

oidcmprec [ xmlparamfile=file_containing_parameters_in_XML_format]

```

4.2.2 Arguments for oidcmprec

operation=compare | reconcile | merge | merge_dryrun | userdefinedcr

Required. The operation to perform. The operation argument can take the following values:

- `compare`: Compares the two directories, reports conflicts, and logs the changes that must be applied to the destination directory to resolve conflicts.
- `reconcile`: Compares the two directories, resolves conflicts, and logs the changes applied to the destination directory to resolve conflicts.
- `merge`: Compares the two directories and synchronizes them, updates both the source and destination directories. The source directory wins in case of a conflict.
- `merge_dryrun`: Performs a dry run of the merge operation. Logs all changes that must be made to synchronize the source and destination directories.
- `userdefinedcr`: Performs a user-defined `compare` and `reconcile` operation. Allows the user to choose the conflict resolution rules.

By default, the `oidcmprec` tool excludes operational attributes during comparison. That is, `oidcmprec` does not compare the operational attributes values in source and destination directory entries. During reconciliation of user defined attributes however, operational attributes might be changed.

`source=host:port`

Required. The connection string used to bind to the source Oracle Internet Directory node. You are prompted for the replication DN password. If you do not supply the hostname or port information on the command-line, the tool prompts you for the information. The connection string is composed of the following elements:

- The host name of the directory server that acts as the source directory
- The LDAP listening port of the directory server

`destination=host:port`

Required. The connection string used to bind to the source Oracle Internet Directory node. You are prompted for the replication DN password. If you do not supply the hostname or port information on the command-line, the tool prompts you for the information. The connection string is composed of the following elements:

- The host name of the directory server that acts as the destination directory
- The LDAP listening port of the directory server

`base=" 'dn1' 'dn2' 'dn3' ..."`

Required. Specifies the Distinguished Names (DNs) from where the comparison operation begins. The `scope` argument determines if child entries and subtrees of the base DN would be compared as well.

`ssslport=true | false`

Optional. Specifies whether the source directory port is SSL or not. The default value is `false`. To specify this in an XML parameter file, use the `isSSLPort` parameter. See the example in ["Using a Parameter File in XML Format"](#) on page 4-22.

`dsslport=true | false`

Optional. Specifies whether the destination port is SSL or not. The default value is `false`. To specify this in an XML parameter file, use the `isSSLPort` parameter. See the example in ["Using a Parameter File in XML Format"](#) on page 4-22.

`dns2exclude=" 'edn1' 'edn2' 'edn3' ..."`

Optional. Specifies DN that are to be excluded from the comparison operation. These DN must be child entries or subtrees of the DN specified in the `base` argument.

scope=base | subtree | onelevel

Optional. Specifies whether the child entries and subtrees of a base DN are also compared. The `scope` argument can take the following values:

- `base`: Only the DNs specified in the `base` argument are compared. This is the default value.
- `subtree`: Directory information trees (DITs) identified by the DNs specified in the `base` argument are compared.
- `onelevel`: Only the immediate children of the DNs specified in the `base` argument are compared.

filter=filter_that_conforms_to_RFC_2254

Optional. Only the entries that match the filter conditions are compared. The filter must be in the same format you would specify for `ldapsearch`. That is, it must conform to RFC 2254.

threads=number_of_worker_threads

Optional. Specifies the number of worker threads that should be created. Worker threads are responsible for comparing entries, and reconciling the differences. One worker thread is created, by default.

If the `scope` is `base`, then the `threads` argument is ignored and it spawns one worker thread and one DN thread.

dnthreads=number_of_dn_threads

Optional. Specifies the number of DN threads that should be created. DN threads are responsible for collecting all DNs that must be compared.

One DN thread is created, by default. The total number of DN threads and worker threads cannot exceed " $6 * \text{Number of CPUs} - 2$ ". If the total number of DN threads and worker threads exceeds the maximum value, the tool reduces both values proportionately to " $6 * \text{Number of CPUs} - 2$ ".

exclattr=space_separated_list_of_attributes_to_be_excluded | inclattr=space_separated_list_of_attributes_to_be_included

Optional. Specifies the list of attributes to be excluded or included for comparison. You can either specify a list of attributes to be excluded, using `exclattr`, or specify a list of attributes to be included, using `inclattr`.

All attributes are included by default, except the following operational attributes:

- `creatorsname`
- `createtimestamp`
- `modifiersname`
- `modifytimestamp`
- `orclentrydn`
- `orclnormdn`

Notes:

- The `exclattr` and `inclattr` attributes cannot be used together, except when you use "*" for `inclattr`.
 - By default, the `oidcmprec` tool excludes operational attributes during comparison. That is, `oidcmprec` does not compare the operational attributes values in source and destination directory entries. During reconciliation of user defined attributes however, operational attributes might be changed.
-
-

The option allows limited pattern matching. You can use `attributename*` to match all attributes starting with `attributename`. You can also use `attributename;*` to match all subtypes of `attributename`.

compareby=tool | ldapserver

Optional. Specifies whether the `compare` operation is performed by the `tool` or `ldapserver`. A `compare` operation performed by the `tool` is several times faster than a `compare` operation performed by `ldapserver`.

filename=file_name

Optional. Specifies a base name for the report files that would be generated by the tool. Do not specify an extension with the file name. The tool generates the following files:

- `file_name.rpt`: This file contains the DNs of all entries compared and the compare results. This file is known as the `rpt` file.
- `file_name.s2d.ldif`: This file contains all changes that were applied (or to be applied) to the destination directory. `s2d` stands for source directory to destination directory. This file is known as the `s2d` file.
- `file_name.d2s.ldif`: This file contains all changes that were applied (or to be applied) to the source directory. `d2s` stands for destination directory to source directory. This file is known as the `d2s` file.
- `file_name.eos.rpt`: This file lists DNs of entries that exist only in the source directory. `eos` stands for entries available only in the source directory. This file is known as the `eos` file.
- `file_name.eod.rpt`: This file lists DNs of entries that exist only in the destination directory. `eod` stands for entries available only in the destination directory. This file is known as the `eod` file.
- `file_name.dif.rpt`: This file lists the DNs that are different in the source and destination directories along with the names of the DN attributes that differ. This file is known as the `dif` file.
- `file_name.err`: This file contains all the error messages. It is known as the `err` file.

genchlog=d[efault] | t[rue] | f[alse]

Optional. Determines whether a change log is created for the changes made by the `oidcmprec` tool. The `genchlog` argument can have the following values:

- `default`: The OID server settings decide whether a change log is generated or not. Change logs are generated if the root entry's `orclDiprepository` attribute is set to `true`. A value of `false` means that change logs are not generated. The

same rule applies for both the source and destination directories. `default` is the default value for `gechglog`.

- `true`: Change logs are always generated irrespective of the settings on the source and destination directories.
- `false`: Change logs are never generated irrespective of the settings on the source and destination directories.

reconaver=t[true] | f[false]

Optional. Determines whether attribute version reconciliation support is provided. The default value is `false`. Source and destination directory versions must be greater than 11.1.1.0.0 or directories must have the appropriate patch.

verbose=t[true] | f[false]

Optional. Determines whether the `rpt` file is shown on the screen. The default value is `false`. When set to `true`, `verbose` displays the report file on the screen as it is generated. When `verbose` is set to `false`, the tool shows its progress on the screen by displaying the count of entries it has processed.

force=t[true] | f[false]

Optional. Determines whether the tool prompts the user for confirmation before performing the specified operation. The default value is `false`. When set to `true`, the tool does not prompt the user for confirmation before performing the specified operation.

contonerr=t[true] | f[false]

Optional. Determines whether the tool shall continue when it encounters an error. The `contonerr` argument can have the following values:

- `true`: The tool continues to process other entries even if there is an error. This is the default value for `contonerr`.
- `false`: The tool stops if it encounters an error.

Note: If the tool encounters a critical error, it stops irrespective of the value passed to `contonerr`.

logrpt=t[true] | f[false]

Optional. Controls whether the tool generates the `file_name.rpt` file. The `logrpt` argument can have the following values:

- `true`: The tool generates the file. This is the default.
- `false`: The tool does not generate the file.

logs2d=t[true] | f[false]

Optional. Controls whether the tool generates the `file_name.s2d.ldif` file. The `logs2d` argument can have the following values:

- `true`: The tool generates the file. This is the default.
- `false`: The tool does not generate the file.

logd2s=t[true] | f[false]

Optional. Controls whether the tool generates the *file_name.d2s.ldif* file. The `logs2d` argument can have the following values:

- `true`: The tool generates the file. This is the default.
- `false`: The tool does not generate the file.

logeos=t[true] | f[false]

Optional. Controls whether the tool generates the *file_name.eos.rpt* file. The `logeos` argument can have the following values:

- `true`: The tool generates the file. This is the default.
- `false`: The tool does not generate the file.

logeod=t[true] | f[false]

Optional. Controls whether the tool generates the *file_name.eod.rpt* file. The `logeod` argument can have the following values:

- `true`: The tool generates the file. This is the default.
- `false`: The tool does not generate the file.

logdif=t[true] | f[false]

Optional. Controls whether the tool generates the *file_name.dif.rpt* file. The `logdif` argument can have the following values:

- `true`: The tool generates the file. This is the default.
- `false`: The tool does not generate the file.

logerr=t[true] | f[false]

Optional. Controls whether the tool generates the *file_name.err* file. The `logdif` argument can have the following values:

- `true`: The tool generates the file. This is the default.
- `false`: The tool does not generate the file.

qlogfreq=frequency

Optional. The tool can dump the total number of entries loaded by the tool in memory and the number of entries in each of `oidcmprec`'s various queues. The entry counts are logged in the file `oidcmprec.log`. Use the `qlogfreq` argument to specify how frequently `oidcmprec` logs this information. Possible values are from 1 to 5000. The lower the value, the shorter the interval. For frequent entry counts, use a value between 5 and 10.

help=t[true] | f[false]

Optional. When set to `true`, the tool displays help on the `oidcmprec` command. The default value is `false`.

entos=ignore | add | del | log2add | log2del | log

Optional. Specifies the conflict resolution rule to use in case an entry exists only in the source directory. The following values are allowed:

- `ignore`: Ignore the conflict and take no action
- `add`: Add the entry to the peer directory

- del: Delete the entry from the directory
- log2add: Same as add except that the change is logged to an LDIF file and not directly effected in the peer directory
- log2del: Same as del except that the change is logged to an LDIF file and not directly effected in the directory
- log: Log the conflict in the report file and take no other action

The default value depends on the operation specified. [Table 4–1](#) shows the default values of the `entos` argument, corresponding to the operations specified.

Table 4–1 Default Values for the `entos` Argument

Operation	Default Value
compare	log2add
reconcile	add
merge	add
merge_dryrun	log2add
userdefinedcr	ignore

entod=ignore | add | del | log2add | log2del | log

Optional. Specifies the conflict resolution rule to use in case an entry exists only in the destination directory. The values allowed are the same as the `entos` argument.

The default value depends on the operation specified. [Table 4–2](#) shows the default values of the `entod` argument, corresponding to the operations specified.

Table 4–2 Default Values for the `entod` Argument

Operation	Default Value
compare	log2delete
reconcile	delete
merge	add
merge_dryrun	log2add
userdefinedcr	ignore

atros=ignore | add | del | log2add | log2del | usenewer | log2usenewer | useolder | log2useolder | usesmallguid | log2usesmallguid | usebigguid | log2usebigguid | log

Optional. Specifies the conflict resolution rule to use in case an attribute exists only in the source directory. The following values are allowed:

- ignore: Ignore the conflict and take no action
- add: Add the attribute to the corresponding entry in the peer directory
- del: Delete the attribute from the directory
- log2add: Same as add, except that the change is logged into an LDIF file and not directly effected in the peer directory.
- log2del: Same as del except that the change is logged into an LDIF file and not directly effected in the directory.

- `usenewer`: Check the `modifytimestamp` value to determine if the attribute should be deleted from the directory or added to the peer directory. The directory with the newer `modifytimestamp` value wins. If the `modifytimestamp` values are the same, then the source directory wins.
- `log2usenewer`: Same as `usenewer` except that the change is logged into an LDIF file and not directly effected in the directory.
- `useolder`: Check the `modifytimestamp` value to determine if the attribute should be deleted from the directory or added to the peer directory. The directory with the older `modifytimestamp` value wins. If the `modifytimestamp` values are the same, then the source directory wins.
- `log2useolder`: Same as `useolder` except that the change is logged to an LDIF file and not directly effected in the directory.
- `usesmallguid`: Check the GUID value to determine if the attribute should be deleted from the directory or added to the peer directory. The directory with the smaller GUID value wins. The GUID values would be the same in the same replication group. This rule is intended for nonreplication environments. If the GUID values are the same in both directories, then the source directory wins.
- `log2usesmallguid`: Same as `usesmallguid` except that the change is logged into an LDIF file and not directly effected in the directory.
- `usebigguid`: Check the GUID value to determine if the attribute should be deleted from the directory or added to the peer directory. The directory with the bigger GUID value wins. The GUID values would be the same in the same replication group. This rule is intended for nonreplication environments. If the GUID values are the same in both directories, then the source directory wins.
- `log2usebigguid`: Same as `usebigguid` except that the change is logged into an LDIF file and not directly effected in the directory.
- `log`: Log the conflict in the report file and take no other action.

The default value depends on the operation specified. [Table 4–3](#) shows the default values of the `atros` argument, corresponding to the operations specified.

Table 4–3 Default Values for the `atros` Argument

Operation	Default Value
<code>compare</code>	<code>log2add</code>
<code>reconcile</code>	<code>add</code>
<code>merge</code>	<code>add</code>
<code>merge_dryrun</code>	<code>log2add</code>
<code>userdefinedcr</code>	<code>ignore</code>

`atrod=ignore | add | del | log2add | log2del | usenewer | log2usenewer | useolder | log2useolder | usesmallguid | log2usesmallguid | usebigguid | log2usebigguid | log`

Optional. Specifies the conflict resolution rule to use in case an attribute exists only in the destination directory. The values allowed are the same as the `atros` argument.

The default value depends on the operation specified. [Table 4–4](#) shows the default values of the `atrod` argument, corresponding to the operations specified.

Table 4–4 Default Values for the *atrod* Argument

Operation	Default Value
compare	log2delete
reconcile	delete
merge	add
merge_dryrun	log2add
userdefinedcr	ignore

svatrdif=ignore | usesrc | log2usesrc | usedest | log2usedest | usenewer | log2usenewer | useolder | log2useolder | usesmallguid | log2usesmallguid | usebigguid | log2usebigguid | log

Optional. Specifies the conflict resolution rule to use when a single-valued attribute for an entry is different in the two directories. The following values are allowed for the `svatrdif` argument:

- `ignore`: Ignore the conflict and take no action
- `usesrc`: Replace the value of the attribute in the destination directory with the value of the attribute in the source directory
- `log2usesrc`: Same as `usesrc`, except that the change is logged into an LDIF file and not directly effected in the destination directory
- `usedest`: Replace the value of the attribute in the source directory with the value of the attribute in the destination directory
- `log2usedest`: Same as `usedest` except that the change is logged into an LDIF file and not directly effected in the source directory
- `usenewer`: If the `modifystamp` value of the attribute in the source directory is newer than the destination directory, then update the attribute value in the destination directory. If the `modifystamp` value of the attribute in the destination directory is newer, then change the attribute value in the source directory. If the `modifystamp` values in both directories are the same, then the source directory wins.
- `log2usenewer`: Same as `usenewer` except that the change is logged into an LDIF file and not directly effected in the directory.
- `useolder`: If the `modifystamp` value of the attribute in the source directory is older than the destination directory, then update the attribute value in the destination directory. If the `modifystamp` value of the attribute in the destination directory is older, then change the attribute value in the source directory. If the `modifystamp` values in both directories are the same, then the source directory wins.
- `log2useolder`: Same as `useolder` except that the change is logged into an LDIF file and not directly effected in the directory.
- `usesmallguid`: If the source directory entry's GUID is smaller than the destination directory entry's GUID, then update the attribute in the destination directory. If the destination directory entry's GUID is smaller, then update the attribute in the source directory. If the GUID values are the same, then the source directory wins. This rule is meant for nonreplication environments, as the GUID values would be the same in the same replication group.

- `log2usesmallguid`: Same as `usesmallguid` except that the change is logged into an LDIF file and not directly effected in the directory.
- `usebigguid`: If the source directory entry's GUID is bigger than the destination directory entry's GUID, then update the attribute in the destination directory. If the destination directory entry's GUID is bigger, then update the attribute in the source directory. If the GUID values are the same, then the source directory wins. This rule is meant for nonreplication environments, as the GUID values would be the same in the same replication group.
- `log2usebigguid`: Same as `usebigguid` except that the change is logged into an LDIF file and not directly effected in the directory.
- `log`: Log the conflict in the report file and take no other action

The default value depends on the operation specified. [Table 4–5](#) shows the default values of the `svatrdif` argument, corresponding to the operations specified.

Table 4–5 Default Values for the `svatrdif` Argument

Operation	Default Value
<code>compare</code>	<code>log2usesrc</code>
<code>reconcile</code>	<code>usesrc</code>
<code>merge</code>	<code>usesrc</code>
<code>merge_dryrun</code>	<code>log2usesrc</code>
<code>userdefinedcr</code>	<code>ignore</code>

`mvatrdif=ignore | usesrc | log2usesrc | usedest | log2usedest | merge | log2merge | usenewer | log2usenewer | useolder | log2useolder | usesmallguid | log2usesmallguid | usebigguid | log2usebigguid | log`

Optional. Specifies the conflict resolution rule to use when a multivalued attribute for an entry is different in the two directories. The values allowed are the same as the `svatrdif` argument. This argument also has other values that do not exist for the `svatrdif` argument. The following are values specific to the `mvatrdif` argument:

- `merge`: The missing attribute values in the destination directory are added from the source directory and those missing in the source directory are added from the destination directory.
- `log2merge`: Same as `merge` except that the changes are logged into an LDIF file and not directly effected in the directory.

The default value depends on the operation specified. [Table 4–6](#) shows the default values of the `mvatrdif` argument, corresponding to the operations specified.

Table 4–6 Default Values for the `mvatrdif` Argument

Operation	Default Value
<code>compare</code>	<code>log2usesrc</code>
<code>reconcile</code>	<code>usesrc</code>
<code>merge</code>	<code>merge</code>
<code>merge_dryrun</code>	<code>log2merge</code>
<code>userdefinedcr</code>	<code>ignore</code>

dndif=ignore | usesrc | log2usesrc | usedest | log2usedest | log

Optional. Specifies the conflict resolution rule to use when an entry has different DNs in the source and destination directories. The following values are allowed for the `dndif` argument:

- `ignore`: Ignore the conflict and take no action
- `usesrc`: Change the DN of the entry in the destination directory to that of the source directory
- `log2usesrc`: Same as `usesrc` except that the change is logged into an LDIF file, and not directly effected in the destination directory
- `usedest`: Change the DN of the entry in the source directory to that of the destination directory
- `log2usedest`: Same as `usedest` except that the change is logged into an LDIF file, and not directly effected in the source directory

The default value depends on the operation specified. [Table 4-7](#) shows the default values of the `mvatrdif` argument, corresponding to the operations specified.

Table 4-7 Default Values for the `mvatrdif` Argument

Operation	Default Value
<code>compare</code>	<code>log2usesrc</code>
<code>reconcile</code>	<code>usesrc</code>
<code>merge</code>	<code>log2usesrc</code>
<code>merge_dryrun</code>	<code>usesrc</code>
<code>userdefinedcr</code>	<code>ignore</code>

odefos=ignore | add | log2add | del | log2del | log

Optional. Specifies the conflict resolution rule to use when an object class definition exists only in the source directory. The following values are allowed for the `odefos` argument:

- `ignore`: Ignore the conflict and do not take any action
- `add`: Add the object class definition to the peer directory
- `log2add`: Same as `add` except that the changes are logged into an LDIF file and not directly effected in the directory.
- `del`: Delete the object class definition from the directory
- `log2del`: Same as `del` except that the changes are logged into an LDIF file and not directly effected in the directory
- `log`: Log the conflict in the report file and take no other action

The default value depends on the operation specified. [Table 4-8](#) shows the default values of the `odefos` argument, corresponding to the operations specified.

Table 4-8 Default Values for the `odefos` Argument

Operation	Default Value
<code>compare</code>	<code>log2add</code>
<code>reconcile</code>	<code>add</code>
<code>merge</code>	<code>add</code>

Table 4–8 (Cont.) Default Values for the odefos Argument

Operation	Default Value
merge_dryrun	log2add
userdefinedcr	ignore

odefod=ignore | add | log2add | del | log2del | log

Optional. Specifies the conflict resolution rule to use when an object class definition exists only in the destination directory. The values allowed for the odefod argument are the same as the odefos argument.

The default value depends on the operation specified. [Table 4–9](#) shows the default values of the odefod argument, corresponding to the operations specified.

Table 4–9 Default Values for the odefod Argument

Operation	Default Value
compare	log2del
reconcile	del
merge	add
merge_dryrun	log2add
userdefinedcr	ignore

odefdif=ignore | usesrc | log2usesrc | usedest | log2usedest | merge | log2merge | log

Optional. Specifies the conflict resolution rule to use when an object class definition is different in the source and destination directories. The following values are allowed for the odefdif argument:

- ignore: Ignore the conflict and take no action
- usesrc: Replace the object class definition in the destination directory with the object class definition in the source directory
- log2usesrc: Same as usesrc except that the changes are logged in an LDIF file and not directly effected in the destination directory
- usedest: Replace the object class definition in the source directory with the object class definition in the destination directory
- log2usedest: Same as usedest except that the changes are logged in an LDIF file and not directly effected in the source directory
- merge: Merge the object class definitions. This involves adding optional and mandatory attributes available in one directory to the other directory
- log2merge: Same as merge except that the changes are logged into an LDIF file and not directly effected in the directory
- log: Log the conflicts in the report file and take no other action

The default value depends on the operation specified. [Table 4–10](#) shows the default values of the odefdif argument, corresponding to the operation specified.

Table 4–10 Default Values for the odefdif Argument

Operation	Default Value
compare	log2usesrc
reconcile	usesrc
merge	merge
merge_dryrun	log2merge
userdefinedcr	ignore

adefos=ignore | add | log2add | del | log2del | log

Optional. Specifies the conflict resolution rule to use when an attribute definition exists only in the source directory. The following values are allowed for the `adefos` argument:

- `ignore`: Ignore the conflict and do not take any action
- `add`: Add the attribute definition to the peer directory
- `log2add`: Same as `add` except that the changes are logged into an LDIF file and not directly effected in the directory.
- `del`: Delete the attribute definition from the directory
- `log2del`: Same as `del` except that the changes are logged into an LDIF file and not directly effected in the directory
- `log`: Log the conflict in the report file and take no other action

The default value depends on the operation specified. [Table 4–11](#) shows the default values of the `adefos` argument, corresponding to the operation specified.

Table 4–11 Default Values for the adefos Argument

Operation	Default Value
compare	log2add
reconcile	add
merge	add
merge_dryrun	log2add
userdefinedcr	ignore

adefod=ignore | add | log2add | del | log2del | log

Optional. Specifies the conflict resolution rule to use when an attribute definition exists only in the destination directory. The values allowed for the `adefod` argument are the same as the `adefos` argument.

The default value depends on the operation specified. [Table 4–12](#) shows the default values of the `adefod` argument, corresponding to the operation specified.

Table 4–12 Default Values for the adefod Argument

Operation	Default Value
compare	log2del
reconcile	del
merge	add

Operation	Default Value
merge_dryrun	log2add
userdefinedcr	ignore

adefdif=ignore | usesrc | log2usesrc | usedest | log2usedest | log

Optional. Specifies the conflict resolution rule to use when an attribute definition is different in the source and destination directories. The following values are allowed for the adefdif argument:

- ignore: Ignore the conflict and take no action
- usesrc: Replace the attribute definition in the destination directory with the attribute definition in the source directory
- log2usesrc: Same as usesrc except that the changes are logged in an LDIF file and not directly effected in the destination directory
- usedest: Replace the attribute definition in the source directory with the attribute definition in the destination directory
- log2usedest: Same as usedest except that the changes are logged in an LDIF file and not directly effected in the source directory
- log: Log the conflicts in the report file and take no other action

The default value depends on the operation specified. [Table 4–13](#) shows the default values of the adefdif argument, corresponding to the operation specified.

Table 4–13 Default Values for the adefdif Argument

Operation	Default Value
compare	log2usesrc
reconcile	usesrc
merge	usesrc
merge_dryrun	log2usesrc
userdefinedcr	ignore

paramfile=filename that contains the above parameters

Optional. Specifies a parameter file to supply argument values. A parameter file can be used to supply arguments that are normally entered at the command line. The file should contain `argument=value` pairs either separated by whitespace characters or entered on separate lines. If an argument is contained in the parameter file and also supplied through the command line, then the command line value overrides the parameter file value for that argument.

xmlParamFile=file containing parameters in XML format

Optional. Specifies an XML parameter file to supply argument values. If an argument is contained in the parameter file and also supplied through the command line, then the command line value overrides the parameter file value for that argument.

4.2.3 Tasks and Examples for oidcmprec

This section provides examples for tasks that can be performed using the `oidcmprec` command. The following examples discuss various operations that can be performed with the `oidcmprec` tool:

- [Comparing and Reconciling Individual Entries in Two Directories](#)
- [Comparing and Reconciling Subtrees in Two Directories](#)
- [Comparing and Reconciling Entire Directories](#)
- [Performing User-Defined Compare and Reconcile Operations](#)
- [Merging Two Directories](#)
- [Including and Excluding Attributes](#)
- [Overriding Default Conflict Resolution Rules](#)
- [Using a Parameter File](#)
- [Generating Change Logs](#)
- [Performing Directory Schema Operations](#)

4.2.3.1 Comparing and Reconciling Individual Entries in Two Directories

This example compares the DN, "cn=Anne Smith, cn=users, dc=uk, dc=acme, dc=com", in the source and destination directories. The default conflict resolution rules for the `compare` operation are used. You are prompted for the source directory and destination directory passwords.

Example

```
oidcmprec base="'cn=Anne Smith,cn=users,dc=uk,dc=acme,dc=com' " \
operation=compare \
source=myhost1.acme.com:3060 \
destination=myhost2.acme.com:3060
```

```
Enter replication DN password of the source directory      :
Enter replication DN password of the destination directory :
```

The following example compares the DN, cn=Anne Smith, cn=users, dc=uk, dc=acme, dc=com, in the source and destination directories. It resolves the conflicts that are detected. The default conflict resolution rules for the `reconcile` operation are used.

Example

```
oidcmprec base="'cn=Anne Smith,cn=users,dc=uk,dc=acme,dc=com' " \
operation=reconcile \
source=myhost1.acme.com:3060 \
destination=myhost2.acme.com:3060
```

4.2.3.2 Comparing and Reconciling Subtrees in Two Directories

This example compares the naming context, dc=com, in the two directories. The `scope` attribute has been set to `subtree`. This allows the entire directory information tree (DIT) under the base DN, dc=com, to be compared. The `threads` and `dnThreads` arguments specify the number of worker threads and DN threads. The `cmpres` file is used to store the report for the operation.

Example

```
oidcmprec base="dc=com" \
          operation=compare scope=subtree \
          source=myhost1.mycom.com:3060 \
          destination=myhost2.mycom.com:3060 \
          threads=5 dnthreads=2 filename=cmpres
```

The following example performs the reconcile operation on two subtrees namely, `dc=com` and `dc=org`. The `dns2exclude` argument is used to exclude the `c=us, dc=mycom, dc=com` and `c=uk, dc=myorg, dc=org` subtrees from the operation.

Example

```
oidcmprec base="dc=com' 'dc=org'" \
          dns2exclude="c=us, dc=mycom, dc=com' c=uk, dc=myorg, dc=org'"
          operation=reconcile scope=subtree \
          source=myhost1.mycom.com:3060 \
          destination=myhost2.mycom.com:3060 \
```

4.2.3.3 Comparing and Reconciling Entire Directories

The following example compares a directory residing on `host1` with another directory residing on `host2`. The `base` argument is set to "" and the `scope` argument is set to `subtree`.

Example

```
oidcmprec operation=compare source=host1:3060 \
          destination=host2:3070 \          base="" "" scope=subtree
```

The following example reconciles a directory residing on `myhost1` with another directory residing on `myhost2`. Entire directories are compared except the DN, `c=us, dc=mycom, dc=com`.

Example

```
oidcmprec base="" "" \
          dns2exclude="c=us, dc=mycom, dc=com"
          operation=reconcile scope=subtree \
          source=myhost1.mycom.com:3060 \
          destination=myhost2.mycom.com:3060 \
          threads=5 dnthreads=2 file=cmpres
```

Note: When you compare entire directories, the following DNs and their subtrees are excluded:

- root DSE entry
- cn=auditlog
- cn=baseschema
- cn=catalogs
- cn=events
- cn=oracle internet directory
- cn=replication configuration
- cn=server configuration
- cn=subconfigsubentry
- cn=subregistrysubentry
- cn=subschemasubentry

You can include these entries by specifying them explicitly in the base argument.

4.2.3.4 Performing User-Defined Compare and Reconcile Operations

This example makes use of user-defined values for the `-entos`, `-entod`, `-atros`, `-svatrdif`, `-mvatrdif`, and `-dndif` arguments. Conflict resolution arguments not specified on the command line, like `-atrod`, are set to ignore.

Example

```
oidcmprec operation=userdefinedcr scope=subtree \  
base="'dc=com' 'dc=org'" \  
source=myhost1.mycom.com:3060 \  
destination=myhost2.mycom.com:3060 \  
entos=add entod=ignore atros=add \  
svatrdif=usesrc mvatrdif=usesrc dndif=ignore \  
threads=5 dnthreads=2 file=myreconcile
```

4.2.3.5 Merging Two Directories

This example synchronizes the `dc=com` subtree in two directories. The merge operation updates both the source and destination directories.

Example

```
oidcmprec operation=merge scope=subtree base="'dc=com'" \  
source=myhost1.mycom.com:3060 \  
destination=myhost2.mycom.com:3060 \  
file=merge
```

4.2.3.6 Including and Excluding Attributes

The following example performs a compare operation. It uses the `exclattr` argument to exclude the `orclguid`, `category`, `userpassword`, and `authpassword` attributes. The example makes use of wildcard pattern matching to exclude the `authpassword` attribute subtypes.

Example

```
oidcmprec operation=compare scope=subtree base="'dc=com' 'dc=org'" \
source=myhost1.mycom.com:3060 \
destination=myhost2.mycom.com:3060 \
exclattr="userpassword authpassword authpassword;* orclguid category"
threads=5 dnthreads=2 file=compare
```

The following example makes use of the `inclattr` argument to include the `userpassword`, `cn`, `sn` `givenname`, and `mail` attributes.

Example

```
oidcmprec operation=compare scope=subtree base="'dc=com'" \
source=myhost1.mycom.com:3060 \
destination=myhost2.mycom.com:3060 \
inclattr="userpassword cn sn givenname mail"
file=cmp
```

The following example includes all attributes for the compare operation except `orclguid`, `creatorsname`, and `modifiersname` attributes.

Example

```
oidcmprec operation=compare scope=subtree base="'dc=com'" \
source=myhost1.mycom.com:3060 \
destination=myhost2.mycom.com:3060 \
inclattr="*" exclattr="orclguid creatorsname modifiersname"
file=compare
```

4.2.3.7 Using a Filter

The following example restricts the comparison to entries that match the filter `(cn=*)`.

Example

```
oidcmprec source=stadd54:3060 destination=stadd54:3060 \
base="" scope=sub operation=compare file=test \
filter="(cn=*)"
```

4.2.3.8 Overriding Default Conflict Resolution Rules

This example performs a compare operation on two directories. It overrides the default conflict resolution rules used for the `dndif` and `mvatrdif` arguments. The conflict resolution rule for these arguments is set to `ignore`.

Example

```
oidcmprec source=host1:3060 destination=host2:3070 \
base="" scope=subtree file=temp operation=compare \
dndif=ignore mvatrdif=ignore
```

4.2.3.9 Using a Parameter File

This example performs a compare operation on two directories. It uses a parameter file, `comp_param` to specify command-line arguments. The `dnThreads` argument is specified both in the file and at the command line. The command-line value of `dnThreads` overrides the value specified in the parameter file.

Example

```
oidcmprec paramfile=comp_param dnthreads=3
```

The following displays the parameter file that is used:

```
#####
#Parameter file for compare and reconcile tool
#Creator   : John
#Date      : 21-Mar-2006
#File Name : comp_param
#####
operation=compare
source=stajj13:3060
destination=stajj13:3070
base="cn=oraclecontext"
base="c=uk,dc=mycom,dc=com"
base="c=us,dc=mycom,dc=com"
verbose=false
force=true
threads=6
dnthreads=2
exclattr="orclguid userpassword authpassword authpassword;*"
filename=cmp2006Feb01
```

4.2.3.10 Using a Parameter File in XML Format

This example performs a compare operation on two directories.

Example

```
oidcmprec xmlParameterFile=param.xml
```

The following is an example of an XML parameter file:

```
<?xml version="1.0" standalone="yes" ?>
- <input>
  <operation>compare</operation>
- <source>
  <host>stadd54</host>
  <port>3060</port>
  <password>password</password>
  <isSSLPort>>false</isSSLPort>
</source>
- <destination>
  <host>stadd54</host>
  <port>3060</port>
  <password>password</password>
  <isSSLPort>>true</isSSLPort>
</destination>
  <base>cn=oraclecontext</base>
  <base>o=apple</base>
  <dns2exclude>cn=test instance,cn=oraclecontext</dns2exclude>
  <dns2exclude>ou=support,o=apple</dns2exclude>
  <scope>subtree</scope>
  <filter />
  <threads>1</threads>
  <dnthreads>1</dnthreads>
  <inclattr />
  <exclattr />
  <compareby>tool</compareby>
  <filename>test</filename>
  <genchglog>default</genchglog>
  <force>>true</force>
```

```

<verbose>>false</verbose>
<contonerr>>true</contonerr>
- <!--
<entod>ignore</entod>
<entos>ignore</entos>
<atros>ignore</atros>
<atrod>ignore</atrod>
<svatrdif>ignore</svatrdif>
<mvatrdif>ignore</mvatrdif>
<dndif>ignore</dndif>
<adefos>ignore</adefos>
<adefod>ignore</adefod>
<adefdif>ignore</adefdif>
<odefos>ignore</odefos>
<odefod>ignore</odefod>
<odefdif>ignore</odefdif>

-->
</input>

```

Substitute the password for *password* in the example. Because the file contains a password, ensure that it is not readable by unauthorized users.

4.2.3.11 Generating Change Logs

The following example uses the `genchglog` argument to ensure that change logs are generated for the operation. When `genchglog` is set to `true`, change logs are generated at both the source and destination directories.

Example

```

oidcmprec operation=merge scope=subtree base="'dc=com' " \
source=myhost1.mycom.com:3060 \
destination=myhost2.mycom.com:3060 \
inclattr="*" exclattr="orclguid creatorsname modifiersname"
file=merge genchglog=true

```

4.2.3.12 Performing Directory Schema Operations

The following example includes the schema for the selected operation by adding the `cn=subschemasubentry` DN to the base argument.

Example

```

oidcmprec operation=merge scope=subtree \
base="'dc=com' 'cn=subschemasubentry'" \
source=myhost1.mycom.com:3060 \
destination=myhost2.mycom.com:3060 \
inclattr="*" exclattr="orclguid creatorsname modifiersname" \
file=merge genchglog=false

```

4.3 remtool

The Replication Environment Management Tool is used to manage Oracle Internet Directory replication configuration activities.

More specifically, the Replication Environment Management tool:

- Configures Oracle Database Advanced Replication-based multimaster replication.

- Scans the replication environment and verifies an Oracle Database Advanced Replication-based directory replication group (DRG).
- Rectifies any problems in an Oracle Database Advanced Replication-based DRG. If the tool cannot rectify a problem, it reports the point or points of failure, which you can then fix manually.
- Reports queue statistics, deferred transactions errors, and administrative request errors of an Oracle Database Advanced Replication-based DRG.
- Reconfigures the Oracle Database Advanced Replicationbased DRG.
- Configures LDAP-based replication.
- Reconfigures an LDAP-based directory replication group (DRG).
- Monitors replication progress in a DRG.

See Also: The section "Managing and Monitoring Replication by Using the Command Line" in *Oracle Fusion Middleware Administrator's Guide for Oracle Internet Directory*.

4.3.1 Syntax for remtool

```
remtool operation [connection_argument] [-v]
operation := { -addnode      | -asrsetup    | -chgpwd     | -delnode    |
               -asrcleanup  | -asrverify  | -asrrectify | -asrdisplay |
               -dispqstat   | -suspendasr | -resumeasr  | -asr2ldap   |
               -dispasrerr  | -paddnode   | -pdelnode   | -pcleanup   |
               -pchgpwd     | -pdisplay   | -pchgmaster [ -multimaster] |
               -pchgwlpwd   | -pdispqstat | -pverify    | -presepwd   |
               -psuspendrepl -fromnode host1:port1 [-tonode host2:port2] |
               -presumerepl -fromnode host1:port1 [-tonode host2:port2] |
               -pthput [-interval time_in_seconds] [-file filename] }

connection_argument := { -bind supplier_hostname:ldap_port |
                        -connect repl_admin_name@net_service_name }
```

4.3.2 Terminology Used in remtool Argument Descriptions

In an Oracle Database Advanced Replication-based Directory Replication Group (DRG), one node must be identified as the Master Definition Site (MDS). This is the group master. All other nodes in the DRG are termed Remote Master Sites (RMS).

ODS.ASR_CHG_LOG and ODS.ODS_CHG_STAT are tables in Oracle Internet Directory's underlying database that store changelog information. The directory uses change logs to keep track of entries that are being replicated or that are being synchronized by the Oracle Directory Integration and Provisioning.

4.3.3 Arguments for remtool

operation

Required. The name of the operation to perform using `remtool`. See the appropriate operation documentation for command-specific syntax, arguments, and usage. The following operations are available:

- `-addnode` - Adds a new node to an Oracle Database Advanced Replication-based directory replication group (DRG). See ["The remtool -addnode Operation"](#) on page 4-28 for more information about this operation.

- `-asrsetup` - Creates a new directory replication group (DRG) by configuring Oracle Database Advanced Replication. See "[The remtool -asrsetup Operation](#)" on page 4-33 for more information about this operation.
- `-chgpwd` - Changes the replication administrator's database account password on all nodes of an Oracle Database Advanced Replication-based DRG. See "[The remtool -chgpwd Operation](#)" on page 4-40 for more information about this operation.
- `-delnode` - Deletes a node from an existing Oracle Database Advanced Replication-based DRG. See "[The remtool -delnode Operation](#)" on page 4-41 for more information about this operation.
- `-asrcleanup` - Cleans up the set up of an Oracle Database Advanced Replication-based DRG. See "[The remtool -asrcleanup Operation](#)" on page 4-30 for more information about this operation.
- `-asrverify` - Verifies the setup of Oracle Database Advanced Replication-based DRG, and reports any problems found. See "[The remtool -asrverify Operation](#)" on page 4-36 for more information about this operation.
- `-asrrectify` - Verifies the setup of Oracle Database Advanced Replication-based DRG, and corrects any problems found. See "[The remtool -asrverify Operation](#)" on page 4-36 for more information about this operation.
- `-asrdisplay` - Display all replica details in the replication group for an Oracle Database Advanced Replication-based setup.
- `-dispqstat` - Displays the queue statistics of all nodes in an Oracle Database Advanced Replication-based DRG. See "[The remtool -dispqstat Operation](#)" on page 4-44 for more information about this operation.
- `-suspendasr` - Suspends replication activity for an Oracle Database Advanced Replication-based DRG. See "[The remtool -suspendasr Operation](#)" on page 4-66 for more information about this operation.
- `-resumeasr` - Resumes replication activity for an Oracle Database Advanced Replication-based DRG. See "[The remtool -resumeasr Operation](#)" on page 4-65 for more information about this operation.
- `-asr2ldap` - Converts an existing Oracle Database Advanced Replication-based agreement to an LDAP multimaster agreement.
- `-dispasrerr` - Displays all deferred transaction errors and administrative request errors for an Oracle Database Advanced Replication-based DRG. See "[The remtool -dispasrerr Operation](#)" on page 4-43 for more information about this operation.
- `-paddnode` - Adds a partial replica to an LDAP-based DRG. See "[The remtool -paddnode Operation](#)" on page 4-45 for more information about this operation.
- `-pdelnode` - Deletes a partial replica from an LDAP-based DRG. See "[The remtool -pdelnode Operation](#)" on page 4-57 for more information about this operation.
- `-pcleanup` - Cleans up the partial replication setup of an LDAP-based DRG. See "[The remtool -pcleanup Operation](#)" on page 4-54 for more information about this operation.
- `-pchgpwd` - Changes the password of a replication DN for a replica in an LDAP-based DRG. See "[The remtool -pchgpwd Operation](#)" on page 4-52 for more information about this operation.

- `-pdisplay` - Displays all replica details in a partial replication group. See "[The remtool -pdisplay Operation](#)" on page 4-49 for more information about this operation.
- `pchgmaster` - Breaks agreement with an old LDAP-based supplier (master copy of the naming context) and reestablishes agreement with a new supplier. See "[The remtool -pchgmaster Operation](#)" on page 4-50 for more information about this operation.
- `-pchgwalpwd` - Changes the wallet password of a replication DN for a replica in an LDAP-based DRG. See "[The remtool -pchgwalpwd Operation](#)" on page 4-53 for more information about this operation.
- `-pdispqstat` - Displays the queue statistics for a directory replication group (DRG) that uses LDAP-based replication. See "[The remtool -pdispqstat Operation](#)" on page 4-58 for more information about this operation.
- `-pverify` - Verifies the replication configuration for a DRG node that uses LDAP-based replication. See "[The remtool -pverify Operation](#)" on page 4-62 for more information about this operation.
- `-presetpwd` - Resets the password of a replication DN for a replica in an LDAP-based DRG. See "[The remtool -presetpwd Operation](#)" on page 4-60 for more information about this operation.
- `-pilotreplica` - Begins or ends pilot mode for a replica. See "[The remtool -pilotreplica Operation](#)" on page 4-59 for more information about this operation.
- `-backupmetadata` - Adds the metadata of a pilot replica to a master replica or backs up the metadata of a pilot replica into a file. This operation must be executed at the pilot replica. See "[The remtool -backupmetadata Operation](#)" on page 4-38 for more information about this operation.
- `-psuspendrepl -fromnode host1:port1 [-tonode host2:port2]` - Only used during rolling upgrade. For more information, see the appendix "Performing a Rolling Upgrade" in *Oracle Fusion Middleware Administrator's Guide for Oracle Internet Directory*.
- `-presumerepl -fromnode host1:port1 [-tonode host2:port2]` - Only used during rolling upgrade. For more information, see the appendix "Performing a Rolling Upgrade" in *Oracle Fusion Middleware Administrator's Guide for Oracle Internet Directory*.
- `-pthput [-interval time_in_seconds] [-file filename]` - Enables you to monitor replication progress in a directory replication group. See [The remtool -pthput Operation](#) for more information.

connection_argument

The connection information to be supplied to `remtool`. The following connection details are available:

- `-bind` - Used with LDAP-based replication operations to specify the hostname and port of the supplier. See "[The -bind Connection Argument](#)" on page 4-68 for more information.
- `-connect` - Used with Oracle Database Advanced Replication-based replication options to specify the connection string for the master definition site (MDS) or the Remote Master Site (RMS). See "[The -connect Connection Argument](#)" on page 4-68 for more information.

-v

Optional. Runs the command in verbose mode. Shows detailed output for the command on the screen and also logs all operations in the `remtool.log` file created in `ORACLE_INSTANCE/OID/log`.

4.3.4 The remtool -asr2ldap Operation

If there is an existing Oracle Database Advanced Replication-based agreement between two or more nodes, you can convert this agreement to an LDAP multimaster agreement by using the `asr2ldap` operation.

4.3.4.1 Syntax for remtool -asr2ldap

```
remtool -asr2ldap
```

4.3.4.2 Arguments for remtool -asr2ldap

The tool prompts you for information, as shown in the example.

4.3.4.3 Tasks and Examples for remtool -asr2ldap

Using the `asr2ldap` operation, you can perform the following tasks:

- [Converting an Advanced Replication Agreement to an LDAP-Based Agreement](#)

4.3.4.3.1 Converting an Advanced Replication Agreement to an LDAP-Based Agreement

Example:

```
remtool -asr2ldap
```

The results are:

```
Enter replication administrator's name      : repadmin
```

```
Enter replication administrator's password :
```

```
Enter global name of MDS                   : inst1.regress.rdbms.dev.example.com
```

```
Directory Replication Group (DRG) details :
```

```
-----
Instance Host Name      Global Name              Version      ReplicaId      Site
Name                                                            Type
-----
tst1    stacu14      INST1.REGRESS.RDBMS.DEV OID 11.1.1.0.  stacu14_tst1  MDS
tst12   stacu14      INST2.REGRESS.RDBMS.DEV OID 11.1.1.0.  stacu14_tst12 RMS
-----
```

```
Do you want to continue? [y/n] : y
```

```
-----
Migrating ASR agreement to LDAP MM agreement...
```

```
Enter "SYSTEM" user password for "INST2.REGRESS.RDBMS.DEV.EXAMPLE.COM" database at
"stacu14" host :
```

```
Enter "SYSTEM" user password for "INST1.REGRESS.RDBMS.DEV.example.com" database at
"stacu14" host :
```

```
-----
ASR setup has been cleaned
```

```
up.-----
```

4.3.5 The remtool -addnode Operation

The addnode operation adds a new node to an existing directory replication group (DRG). You must first create the DRG using "[The remtool -addnode Operation](#)" on page 4-28. The following usage rules apply to this operation:

- The node to be added must be empty.
- You must know the SYSTEM user password of the new node.
- Oracle Internet Directory processes on the master definition site (MDS) and other remote master sites (RMSs) must be down.
- After the addnode operation is complete, Oracle Internet Directory processes can be restarted.

4.3.5.1 Syntax for remtool -addnode

```
remtool -addnode [-connect repl_admin_name@net_service_name] [-v]
```

4.3.5.2 Arguments for remtool -addnode

The tool also prompts you for the database global name (as defined in the tnsnames.ora file) and SYSTEM password for each node to be added.

-connect repl_admin_name@net_service_name

For more information, see "[The -connect Connection Argument](#)" on page 4-68.

4.3.5.3 Tasks and Examples for remtool -addnode

Using the addnode operation you can perform the following tasks:

- [Adding a New Node to an Oracle Database Advanced Replication-based DRG](#)

4.3.5.3.1 Adding a New Node to an Oracle Database Advanced Replication-based DRG In this example, MY_HOST3.MY_COMPANY.COM is added to a DRG consisting of MY_HOST1.MY_COMPANY.COM and MY_HOST2.MY_COMPANY.COM.

Example:

```
remtool -addnode -v -connect repadmin@MY_HOST1.MY_COMPANY.COM
```

The results are:

```
MY_HOST1.MY_COMPANY.COM is Master Definition Site (MDS). Connected to MDS.
```

```
MY_HOST2.MY_COMPANY.COM is Remote Master Site (RMS). Connected to RMS.
```

```
Directory Replication Group (DRG) details :
```

```
-----
Instance Host Name      Global Name              Version      ReplicaId    Site
Name                                                            Type
-----
rid2      my_host      MY_HOST1.MY_COMPANY.COM  OID 10.1.2.0.0  my_host_rid1  MDS
rid2      my_host      MY_HOST2.MY_COMPANY.COM  OID 10.1.2.0.0  my_host_rid2  RMS
-----
```

```
Do you want to continue? [y/n] : y
```

WARNING:

```
Make sure that the replication administrator database
account does not exist already in the new node to be
added to the DRG. If the account exists, that
```

account will be dropped and will be created newly.

 Enter global name of new node to be added : MY_HOST3.MY_COMPANY.COM

Enter SYSTEM user password of new node to be added :

Adding a new node...

4.3.6 The remtool -asrcleanup Operation

The `asrcleanup` operation cleans up an existing Oracle Database Advanced Replication-based setup. You must know the system password of all nodes taking part in the directory replication group (DRG) to run this operation.

4.3.6.1 Syntax for remtool -asrcleanup

```
remtool -asrcleanup [-connect repl_admin_name@net_service_name] [-v]
```

4.3.6.2 Arguments for remtool -asrcleanup

The tool prompts you for the SYSTEM user password for each MDS and RMS node in the DRG

-connect repl_admin_name@net_service_name

For more information, see "[The -connect Connection Argument](#)" on page 4-68.

4.3.6.3 Tasks and Examples for remtool -asrcleanup

Using the `asrcleanup` operation you can perform the following tasks:

- [Cleaning Up an Oracle Database Advanced Replication-based DRG Setup](#)

4.3.6.3.1 Cleaning Up an Oracle Database Advanced Replication-based DRG Setup In this example, setup is cleaned up for a DRG consisting of MY_HOST1.MY_COMPANY.COM and MY_HOST2.MY_COMPANY.COM. The tool prompts you to enter the system password for each site.

Example:

```
remtool -asrcleanup -v
```

The results are:

```
Enter replication administrator's name      : repadmin

Enter replication administrator's password  :
Enter global name of MDS                   : my_host1.my_company.com

MY_HOST1.MY_COMPANY.COM is Master Definition Site (MDS). Connected to MDS.
MY_HOST2.MY_COMPANY.COM is Remote Master Site (RMS). Connected to RMS.
Directory Replication Group (DRG) details :
```

Instance Name	Host Name	Global Name	Version	Replicaid	Site Type
rid1	my_host	MY_HOST1.MY_COMPANY.COM	OID 10.1.2.0.0	my_host_rid1	MDS
rid2	my_host	MY_HOST2.MY_COMPANY.COM	OID 10.1.2.0.0	my_host_rid2	RMS

```

COMPANY.COM...
Enter "SYSTEM" user password for "MY_HOST1.MY_COMPANY.COM" database at "my_host"
host :
MY_HOST1.MY_COMPANY.COM : Dropping replication administrator repadmin...

ASR setup has been cleaned up.
```

4.3.7 The remtool -asrrectify Operation

The `asrrectify` operation is used for detecting and rectifying problems in an Oracle Database Advanced Replication-based DRG setup. It reports on errors and corrects

them. Oracle Corporation recommends that, before running this operation, you stop Oracle Internet Directory servers. To use the `asrrectify` operation, all nodes in the DRG must be up and running. The operation fails if any of the nodes are not running. If necessary, the `asrrectify` operation prompts for the SYSTEM user password.

4.3.7.1 Syntax for `remtool -asrrectify`

```
remtool -asrrectify [-connect repl_admin_name@net_service_name] [-v]
```

4.3.7.2 Arguments for `remtool -asrrectify`

The tool may also prompt you for the SYSTEM user password for each MDS and RMS node in the DRG.

-connect repl_admin_name@net_service_name

For more information, see "[The -connect Connection Argument](#)" on page 4-68.

4.3.7.3 Tasks and Examples for `remtool -asrrectify`

Using the `asrrectify` operation you can perform the following tasks:

- [Detecting and Correcting Errors in an Advanced Replication-Based DRG Setup](#)

4.3.7.3.1 Detecting and Correcting Errors in an Advanced Replication-Based DRG Setup In this example, setup errors are deducted and rectified in a DRG consisting of `MY_HOST1.MY_COMPANY.COM` and `MY_HOST2.MY_COMPANY.COM`. The tool detects that a user has changed global name of `MY_HOST2.MY_COMPANY.COM` to `NEWNAME.MY_COMPANY.COM` after setting up Advanced Replication. It rectifies this error first before continuing with other checks.

Example:

```
remtool -asrrectify -v -conn repadmin@my_host1.my_company.com
```

The results are:

```
MY_HOST1.MY_COMPANY.COM is Master Definition Site (MDS). Connected to MDS.
Enter "SYSTEM" user password for "MY_HOST2.MY_COMPANY.COM" database at "my_host"
host :
NEWNAME.MY_COMPANY.COM : Renaming global name to MY_HOST2.MY_COMPANY.COM (instance
name : rid2, hostname : my_host)
CORRECTED:
MY_HOST2.MY_COMPANY.COM : Global name of database "rid2" at host "my_host" has
been changed to MY_HOST2.MY_COMPANY.COM.
MY_HOST2.MY_COMPANY.COM is Remote Master Site (RMS). Connected to RMS.
CORRECTED:
MY_HOST2.MY_COMPANY.COM : Global name of database "rid2" at host "my_host" has
been changed to MY_HOST2.MY_COMPANY.COM.
Directory Replication Group (DRG) details :
```

```

```

4.3.8 The remtool -asrsetup Operation

The `asrsetup` operation is used to create a new Oracle Database Advanced Replication-based directory replication group (DRG). A DRG consists of a master definition site (MDS) and one or more remote master sites (RMS).

Before you begin, stop all Oracle Internet Directory server processes on the MDS and RMS sites. After the setup operation is completed, you can restart all Oracle Internet Directory processes and replication server processes.

4.3.8.1 Syntax for remtool -asrsetup

```
remtool -asrsetup [-v]
```

4.3.8.2 Arguments for remtool -asrsetup

Only the optional `-v` argument is specified on the command-line. The tool prompts you for the following information.

- The database global name of the MDS (as defined in the `tnsnames.ora` file).
- A replication administrator password for the MDS

- The SYSTEM password for the MDS
- The database global for each RMS (as defined in the `tnsnames.ora` file).
- The SYSTEM password for each RMS

4.3.8.3 Tasks and Examples for `remtool -asrsetup`

Using the `asrsetup` operation you can perform the following tasks:

- [Creating an Oracle Database Advanced Replication-based DRG](#)

4.3.8.3.1 Creating an Oracle Database Advanced Replication-based DRG In this example, a DRG is created consisting of `MY_HOST1.MY_COMPANY.COM` and `MY_HOST2.MY_COMPANY.COM`.

Example:

```
remtool -asrsetup -v
```

The results are as follows:

```
-----
ASR Setup for OID Replication
WARNING:
Make sure that the replication administrator that you
enter below does not exist already in any of the nodes
that will be part of the DRG to be created now. If the
user exists, that user will be dropped and will be
created newly.

4.3.9 The remtool -asrverify Operation

This `asrverify` operation detects and reports on problems found in an Oracle Database Advanced Replication-based directory replication group (DRG). This operation reports errors, but does not correct them. To run this operation, all nodes in the DRG must be up and running. You do not have to stop your Oracle Internet Directory server processes to run this operation.

The `asrverify` operation fails or report errors for the following situations. You can use the `asrrectify` operation to correct these errors. See "[The remtool -asrverify Operation](#)" on page 4-36 for more information about that operation.

- If, by mistake, the replication administrator account is dropped in any of the nodes, the `asrverify` operation fails. Use `asrrectify` to re-create the replication administrator account and add it back to the DRG.
- If, by mistake, the password for the replication administrator account has changed on any of the nodes in the DRG, the `asrverify` operation fails. Use `remtool asrrectify` to change the replication administrator account and add it back to the DRG.
- If the global database name of any node has changed after Advanced Replication setup, `asrverify` reports an error and does not proceed further. Use `asrrectify` to revert back to the previous global name and rectify other issues.

4.3.9.1 Syntax for remtool -asrverify

```
remtool -asrverify [-connect repl_admin_name@net_service_name] [-v]
```

4.3.9.2 Arguments for remtool -asrverify

-connect repl_admin_name@net_service_name

For more information, see "[The -connect Connection Argument](#)" on page 4-68.

4.3.9.3 Tasks and Examples for remtool -asrverify

Using the `asrverify` operation you can perform the following tasks:

- [Detecting Errors in an Oracle Database Advanced Replication-Based DRG Setup](#)

4.3.9.3.1 Detecting Errors in an Oracle Database Advanced Replication-Based DRG Setup

In this example, errors are found in a DRG consisting of two nodes.

Example:

```
remtool -asrverify -v -conn repadmin@my_host1.my_company.com
```

The results are:

```
MY_HOST1.MY_COMPANY.COM is Master Definition Site (MDS). Connected to MDS.
MY_HOST2.MY_COMPANY.COM is Remote Master Site (RMS). Connected to RMS.

MY_HOST2.MY_COMPANY.COM : Replication support is not available for TABLE ODS.ODS_CHG_STAT.

4.3.10 The remtool -backupmetadata Operation

The backupmetadata operation adds the metadata of a pilot replica to the master replica, or backs up the metadata of a pilot replica into a file.

Note: The -backupmetadata option does not work if anonymous bind is disabled at the pilot replica or master replica.

4.3.10.1 Syntax for remtool -backupmetadata

```
remtool -backupmetadata -replica pilot_hostname:port {-master master_hostname:port
| -bkup file_name}
```

4.3.10.2 Arguments for remtool -backupmetadata

-replica *pilot_hostname:port*

Required. The connection string for the pilot replica. You are prompted for the password for the replication DN of the pilot replica. The string is comprised of the following elements:

- The host name where the pilot replica's LDAP server is running.
- The pilot replica's LDAP listening port, for example 3060.

-master *master_hostname:port*

Either -master or -bkup argument is required. (You can provide both arguments.) The connection string for the master replica. You are prompted for the password for

the replication DN of the master replica. The string is comprised of the following elements:

- The host name where the master replica's LDAP server is running.
- The master replica's LDAP listening port, for example 3060.

-bkup file_name

Either `-master` or `-bkup` argument is required. (You can provide both arguments.) The full path and file name of the LDIF output file. The metadata entries are written to this file in LDIF format.

4.3.10.3 Tasks and Examples for remtool -backupmetadata

Using the `backupmetadata` operation you can perform the following tasks:

- [Adding the Metadata of a Pilot Replica to a Master Replica](#)
- [Backing Up the Metadata of a Pilot Replica to an LDIF File](#)

4.3.10.3.1 Adding the Metadata of a Pilot Replica to a Master Replica This example shows how to add the metadata entries from a pilot replica to a master replica.

Example:

```
remtool -backupmetadata -replica mypilot.company.com:3060 \
  -master mymaster.company.com:3060 -bkup /myfiles/backup.ldif
```

In this example, a backup file was specified with `-bkup`. The command output is:

```
Backup of metadata will be stored in /myfiles/backup.ldifMetadata copied
successfully.
```

Example:

```
remtool -backupmetadata -replica mypilot.company.com:3060 \
  -master mymaster.company.com:3060
```

In this example, no backup file was specified, so `remtool` uses the default location. The command output is:

```
Backup of metadata will be stored in
ORACLE_INSTANCE/diagnostics/logs/OID/tools/ocbkup.replicaid_pilot.TO.replicaid_
master.timestamp.ldif.
Metadata copied successfully.
```

The output contains the expanded path `ORACLE_INSTANCE`.

Note: If Oracle Delegated Administration Services is not configured, then you might see an error message similar to this when you run `remtool` with the `-backupmetadata` option:

```
Failed to add "orclApplicationCommonName=ias.acme.com,
cn=IAS Instances, cn=IAS, cn=Products, cn=OracleContext"
as "uniquemember" to entry "cn=Associated Mid-tiers,
orclapplicationcommonname=DASApp, cn=DAS,cn=products,
cn=OracleContext at replica ldap://myhost:3060
```

Please ignore this error message.

4.3.10.3.2 Backing Up the Metadata of a Pilot Replica to an LDIF File This example shows how to back up the metadata entries for a pilot replica into an LDIF file.

Example:

```
remtool -backupmetadata -replica mypilot.company.com:3060 \
  -bkup /home/myfiles/obckup.ldif
```

The output from this command is:

```
Backup of metadata will be stored in /home/myfiles/obckup.ldif
```

```
Metadata copied successfully
```

4.3.11 The remtool -chgpwd Operation

The `chgpwd` operation is used to change the replication administrator password for an Oracle Database Advanced Replication-based directory replication group (DRG) that has already been setup using `asrsetup`.

The replication administrator password is the same for all nodes in an Advanced Replication DRG. This operation changes the password for all nodes in the DRG.

4.3.11.1 Syntax for remtool -chgpwd

```
remtool -chgpwd [-connect repl_admin_name@net_service_name] [-v]
```

4.3.11.2 Arguments for remtool -chgpwd

The tool also prompts you to enter the new password for the replication administrator.

-connect repl_admin_name@net_service_name

For more information, see "[The -connect Connection Argument](#)" on page 4-68.

4.3.11.3 Tasks and Examples for remtool -chgpwd

Using the `chgpwd` operation you can perform the following task:

- [Changing the Administrator Password for an Advanced Replication-based DRG](#)

4.3.11.3.1 Changing the Administrator Password for an Advanced Replication-based DRG In this example, the password of the replication administrator of a DRG consisting of `MY_HOST1.MY_COMPANY.COM` and `MY_HOST2.MY_COMPANY.COM` is changed.

Example:

```
remtool -chgpwd -v -conn repadmin@MY_HOST1.MY_COMPANY.COM
```

The results are:

```
MY_HOST1.MY_COMPANY.COM is Master Definition Site (MDS). Connected to MDS.
MY_HOST2.MY_COMPANY.COM is Remote Master Site (RMS). Connected to RMS.
Directory Replication Group (DRG) details :

4.3.12 The remtool -delnode Operation

The `delnode` operation removes a remote master site (RMS) node from an existing directory replication group (DRG). You must first create the DRG using "[The remtool -arsetup Operation](#)" on page 4-33. The following usage rules apply to this operation:

- You can only delete RMS nodes from a DRG, not the master definition site (MDS).
- Oracle Internet Directory processes on the master definition site (MDS) and other remote master sites (RMSs) in the DRG must be stopped before running the operation.
- If the RMS node being deleted is down when the `delnode` operation is invoked, it is selected for deletion.
- After the `delnode` operation is complete, Oracle Internet Directory processes can be restarted.

4.3.12.1 Syntax for remtool -delnode

```
remtool -delnode [-connect repl_admin_name@net_service_name] [-v]
```

4.3.12.2 Arguments for remtool -delnode

The tool also prompts you for the global database name (as defined in the `tnsnames.ora` file of the RMS node to be deleted from the DRG.

-connect repl_admin_name@net_service_name

For more information, see "[The -connect Connection Argument](#)" on page 4-68.

4.3.12.3 Tasks and Examples for remtool -delnode

Using the `delnode` operation you can perform the following task:

- [Removing a RMS Node from an Advanced Replication-Based DRG](#)

4.3.12.3.1 Removing a RMS Node from an Advanced Replication-Based DRG In this example, MY_HOST3.MY_COMPANY.COM is removed from a DRG consisting of MY_HOST1.MY_COMPANY.COM, MY_HOST2.MY_COMPANY.COM and MY_HOST3.MY_COMPANY.COM

Example:

```
remtool -delnode -v -conn repadmin@MY_HOST1.MY_COMPANY.COM
```

The results are:

```
MY_HOST1.MY_COMPANY.COM is Master Definition Site (MDS). Connected to MDS.
MY_HOST2.MY_COMPANY.COM is Remote Master Site (RMS). Connected to RMS.
MY_HOST3.MY_COMPANY.COM is Remote Master Site (RMS). Connected to RMS.
Directory Replication Group (DRG) details :
```

```

4.3.13 The remtool -dispasrerr Operation

The `dispasrerr` operation displays errors for an Oracle Database Advanced Replication-based directory replication group (DRG). It shows both administrative request errors and deferred transaction errors.

4.3.13.1 Syntax for remtool -dispasrerr

```
remtool -dispasrerr [-connect repl_admin_name@net_service_name] [-v]
```

4.3.13.2 Arguments for remtool -dispasrerr

-connect repl_admin_name@net_service_name

For more information, see "[The -connect Connection Argument](#)" on page 4-68.

4.3.13.3 Tasks and Examples for remtool -dispasrerr

Using the `dispasrerr` operation you can perform the following task:

- [Displaying Errors for an Oracle Database Advanced Replication-based DRG](#)

4.3.13.3.1 Displaying Errors for an Oracle Database Advanced Replication-based DRG In this example, the tool reports Advanced Replication errors for a DRG consisting of `MY_HOST1.MY_COMPANY.COM` and `MY_HOST2.MY_COMPANY.COM`.

Example:

```
remtool -dispasrerr -v -conn repadmin@my_host1.my_company.com
```

`MY_HOST1.MY_COMPANY.COM` is Master Definition Site (MDS). Connected to MDS.

`MY_HOST2.MY_COMPANY.COM` is Remote Master Site (RMS). Connected to RMS.

Directory Replication Group (DRG) details :

```

-----
Instance Host Name      Global Name              Version      ReplicaId      Site

No deferred transaction errors were found at MY_HOST2.MY_COMPANY.COM

4.3.14 The remtool -dispqstat Operation

The `dispqstat` operation displays the queue statistics for a directory replication group (DRG) that uses Oracle Database Advanced Replication. This operation cannot be used for DRGs that use LDAP-based replication. If a DRG uses both Advanced and LDAP-based replication, this operation displays queue statistics for nodes that use Advanced Replication only.

4.3.14.1 Syntax for remtool -dispqstat

```
remtool -dispqstat [-connect repl_admin_name@net_service_name] [-v]
```

4.3.14.2 Arguments for remtool -dispqstat

-connect repl_admin_name@net_service_name

The connection string for the master definition site (MDS) or the Remote Master Site (RMS). You are prompted for the password for the replication administrator. If you do not supply an argument on the command-line, the tool prompts you for the information. The connect string is composed of the following elements:

- The name of the replication administrator.
- The net service name of the MDS or RMS. If you have a `tnsnames.ora` file configured, then this is the net service name specified in that file, which is located by default in `ORACLE_INSTANCE/config`. (You can set the `TNS_ADMIN` environment variable if you want to use a different location.)

4.3.14.3 Tasks and Examples for remtool -dispqstat

Using the `dispqstat` operation you can perform the following tasks:

- [Displaying Queue Statistics for an Advanced Replication-Based DRG](#)

4.3.14.3.1 Displaying Queue Statistics for an Advanced Replication-Based DRG In this example, queue statistics for an Oracle Database Advanced Replication-based DRG consisting of `MY_HOST1.MY_COMPANY.COM` and `MY_HOST2.MY_COMPANY.COM` are reported.

Example:

```
remtool -dispqstat -v -conn repadmin@my_host1.my_company.com
```

The results are:

```
MY_HOST1.MY_COMPANY.COM is Master Definition Site (MDS). Connected to MDS.
MY_HOST2.MY_COMPANY.COM is Remote Master Site (RMS). Connected to RMS.
Directory Replication Group (DRG) details :
```

Instance Name	Host Name	Global Name	Version	Replicaid	Site Type
rid1	my_host	MY_HOST1.MY_COMPANY.COM	OID 10.1.2.0.0	my_host_rid1	MDS
rid2	my_host	MY_HOST2.MY_COMPANY.COM	OID 10.1.2.0.0	my_host_rid2	RMS

Queue Statistics :

Supplier	Consumer	New	Retry	Purge	HIQ	Change #
MY_HOST1.MY CO	MY_HOST1.MY CO	3	9	10	6	2003
MY_HOST1.MY CO	MY_HOST2.MY CO	2	7	8	5	2001
MY_HOST2.MY CO	MY_HOST1.MY CO	2	8	5	8	2002
MY_HOST2.MY CO	MY_HOST2.MY CO	2	10	7	8	2000

Legends

```
New: No. of new change logs
Retry: No. of change logs in retry queue
Purge: No. of change logs in purge queue
HIQ: No. of change logs in Human Intervention Queue (HIQ)
Change # : Last applied change log no.
```

4.3.15 The remtool -paddnode Operation

The `paddnode` operation adds a replica or partial replica to a directory replication group (DRG). This operation has the following usage rules:

- The supplier node (the master copy) can be part of a DRG that uses Advanced Replication, LDAP-based replication, or both.
- If you want to specify a supplier node that uses Advanced Replication, you must bind using that node's connection information.
- The new replica to be added should not be a member of any DRG.
- A consumer node (the destination of replication updates) can be any node that uses LDAP-based replication.
- After adding a replica, you can choose the naming context(s) to participate in replication, or choose the entire directory by selecting * (asterisk). Choosing

specific naming contexts replicates only that portion of the directory. Choosing the entire directory replicates all directory data except for directory-specific entries (DSE).

- The `cn=oraclecontext` naming context is included for replication whether or not any naming contexts are specified by the user.

4.3.15.1 Syntax for `remtool -paddnode`

```
remtool -paddnode [-bind supplier_hostname:ldap_port] [-v]
```

4.3.15.2 Arguments for `remtool -paddnode`

You are prompted for the password for the replication DN on the consumer node. You are prompted for the following arguments if you do not specify them:

- **Consumer Host Name of Host Running OID Server** - The host name of the Oracle Internet Directory server where you want to create the replica. This node can be added to the DRG as a read-only or updateable replica.
- **Consumer Port** - The LDAP listening port of the consumer node.

In addition, the tool prompts you for the following information:

- **Replica ID of Supplier** - If the DRG contains multiple nodes that can be used as the supplier, you are prompted to enter the replica ID of the one you want to use.
- **Naming Context** - For a partial replica, you can enter the name(s) of the naming context you want to replicate. To select the entire directory, enter * (asterisk). To select none, enter e (end).

-bind *supplier_hostname:ldap_port*

See "[The -bind Connection Argument](#)" on page 4-68 for information.

4.3.15.3 Tasks and Examples for `remtool -paddnode`

Using the `paddnode` operation you can perform the following tasks:

- [Adding a Read-Only Replica to a DRG](#)
- [Adding a Partial Replica to a DRG](#)

4.3.15.3.1 Adding a Read-Only Replica to a DRG In this example, directory server `ldap://my_host:3060` is added as a replica to directory server `ldap://my_host:3040`, which is part of the DRG consisting of `ldap://my_host:3040` and `ldap://my_host:3080`, which both use LDAP-based replication.

Example:

```
remtool -paddnode -v -bind my_host:3040
```

The results are:

Directory Replication Group (DRG) details :

```
-----

```

4.3.16 The remtool -pdisplay Operation

The pdisplay operation displays all replica details in a partial replication group.

4.3.16.1 Arguments to remtool -pdisplay

-bind supplier_hostname:ldap_port

See "[The -bind Connection Argument](#)" on page 4-68 for information.

4.3.17 The remtool -pchgmaster Operation

The `pchgmaster` operation is used to break the agreement with the old supplier and reestablish the agreement with a new supplier. This operation is part of configuring replication failover.

See Also: "Configuring Replication Failover" in *Oracle Internet Directory Administrator's Guide* for details on performing the replication failover process

The `pchgmaster` operation has the following usage rules:

1. If you do not supply consumer directory details using the `-bind` option, then you are prompted to specify consumer details.
2. If the consumer details are valid, then `remtool` identifies all nodes in the DRG, if any, and displays their details.
3. You are next prompted for the retiring and new supplier details.
4. After the change master operation completes successfully, you might need to use `remtool -pcleanup -agrmt` on the old supplier to remove the old agreement. This would be the case if the old supplier was offline during the change master operation. See "[The remtool -pcleanup Operation](#)" on page 4-54 for details about the `pcleanup` operation.

4.3.17.1 Syntax for remtool -pchgmaster

```
remtool -pchgmaster [-bind replica_hostname:ldap_port] [ multimaster ] [-v]
```

4.3.17.2 Arguments for remtool -pchgmaster

The tool prompts you for the host names and port numbers of the retiring supplier and the new supplier.

-bind replica_hostname:port_number

See "[The -bind Connection Argument](#)" on page 4-68 for information.

-multimaster

This suboption causes `changeMaster` to change the primary replica in a multimaster agreement.

4.3.17.3 Tasks and Examples for remtool -pchgmaster

Using the `pchgmaster` operation, you can perform the following tasks:

- [Breaking a Supplier Agreement and Creating a New One for a Consumer](#)

4.3.17.3.1 Breaking a Supplier Agreement and Creating a New One for a Consumer In this example, the supplier of directory server `ldap://my_host:3060` is changed from directory server `ldap://my_host:3040` to directory server `ldap://my_host:3080`.

Example:

```
remtool -pchmaster -v -bind my_host:3060
```

The results are:

Directory Replication Group (DRG) details :

```
-----

```

Directory Replication Group (DRG) details :

```

-----
S1  ReplicaId          Directory Information  Supplier Information  Repl.
No.                                     my_host_rid3         Type
-----
001 my_host_rid2      my_host:3060          my_host_rid3         RW
002 my_host_rid3      my_host:3080          my_host_rid1         RW
                        my_host_rid2
003 my_host_rid1      my_host:3040          my_host_rid3         RW
-----

```

Change master of my_host_rid2 to my_host_rid3 successfully.

4.3.17.3.2 Changing the Primary Node In this example, the primary node in a three-node LDAP multimaster agreement is changed from stacu14_tst1 to stacu14_tst13

Example:

```
remtool -pchgmaster -multimaster
```

The result is:

Directory Replication Group (DRG) details :

```

-----
S1  ReplicaId          Directory Information  Supplier Information  Repl.
No.                                     stacu14_tst13       Type
-----
001 stacu14_tst1      stacu14:3069          stacu14_tst13       RW
                        stacu14_tst12
002 stacu14_tst13      stacu14:3089          stacu14_tst12       RW
                        stacu14_tst1
003 stacu14_tst12      stacu14:3079          stacu14_tst13       RW
                        stacu14_tst1
-----

```

Enter new primary replica ID : stacu14_tst13

Changed primary replica from stacu14_tst1 to stacu14_tst13 successfully.

4.3.18 The remtool -pchgpwd Operation

This `pchgpwd` operation changes the replication DN password for an Oracle Internet Directory server. The password is changed in both the directory and in wallet.

If the replica is taking part in replication, the password is changed in other replicas for the local replica's replication DN. Note that, unlike Advanced Replication, the replication DN password for each replica can be different.

The operation must be run on the host of the Oracle Internet Directory server whose password you are changing in order to update the wallet password at the same time. You can also update the wallet password separately using "[The remtool -pchgpwalpwd Operation](#)" on page 4-53.

4.3.18.1 Syntax for remtool -pchgpwd

```
remtool -pchgpwd [-bind oid_hostname:ldap_port] [-v]
```

4.3.18.2 Arguments for remtool -pchgpwd

In addition to the arguments specified on the command-line, the tool also prompts you for the new replication DN password for the host specified in the bind connection string.

-bind *supplier_hostname:ldap_port*

See "[The -bind Connection Argument](#)" on page 4-68 for information.

4.3.18.3 Tasks and Examples for remtool -pchgpwd

Using the pchgpwd operation you can perform the following tasks:

- [Changing the Replication DN Password Used for LDAP-Based Replication](#)

4.3.18.3.1 Changing the Replication DN Password Used for LDAP-Based Replication In this example, the replication DN password of the Oracle Internet Directory server `ldap://my_host:3040` is changed.

Example:

```
remtool -pchgpwd -v -bind my_host:3040
```

The results are:

```
Directory Replication Group (DRG) details :
```

```
-----
Sl  ReplicaId      Directory Information  Supplier Information  Repl.
No.                                     Type
-----
001 my_host_rid1   my_host:3040          --                    RW
002 my_host_rid3   my_host:3080          my_host_rid1         RO
-----
```

```
-----
Replication DN password of ldap://my_host:3040 (my_host_rem) associated with
database 'rid' will be changed.
```

```
Do you want to continue? [y/n] : y
```

```
Enter new password of replication DN      :
```

```
Reenter new password of replication DN    :
```

```
-----
ldap://my_host:3040 [my_host_rid1] : Modifying entry cn=replication
dn,orclreplicaid=my_host_rem,cn=replication configuration...
```

```
ldap://my_host:3080 [my_host_rid3] : Modifying entry cn=replication
dn,orclreplicaid=my_host_rem,cn=replication configuration...
```

```
-----
Password has been changed.
-----
```

4.3.19 The remtool -pchgwlpwd Operation

The pchgwlpwd operation is used to change the replication DN password only in the wallet of an Oracle Internet Directory server. It sets the wallet password to the same replication DN password stored in the Oracle Internet Directory repository for the host specified in the bind connection string.

4.3.19.1 Syntax for remtool -pchgwlpwd

```
remtool -pchgwlpwd [-bind oid_hostname:ldap_port] [-v]
```

4.3.19.2 Arguments for remtool -pchgwlpwd

-bind supplier_hostname:ldap_port

See "[The -bind Connection Argument](#)" on page 4-68 for information.

4.3.19.3 Tasks and Examples for remtool -pchgwlpwd

Using the `pchgwlpwd` operation you can perform the following task:

- [Changing the Replication DN Password in the Oracle Internet Directory Wallet](#)

4.3.19.3.1 Changing the Replication DN Password in the Oracle Internet Directory Wallet In this example, the replication DN password for Oracle Internet Directory server `ldap://my_host:3040` is set in wallet to match the password in the repository.

Example:

```
remtool -pchgwlpwd -v -bind my_host:3040
```

The results are:

Directory Replication Group (DRG) details :

```
-----
Sl  ReplicaId          Directory Information  Supplier Information  Repl.
No.
-----
001 my_host_rid1      my_host:3040          --                    RW
002 my_host_rid3      my_host:3080          my_host_rid1         RO
-----
```

```
-----
Replication DN password of ldap://my_host:3040 (my_host_rid1) associated with
database 'rid' will be set in wallet.
```

```
Do you want to continue? [y/n] : y
```

4.3.20 The remtool -pcleanup Operation

The `pcleanup` operation is used to clean up an LDAP-based directory replication group (DRG) setup. It cleans up a replica which has incomplete or flawed LDAP-based DRG setup. It only cleans up the replica identified by the bind connection string.

If replication configuration information is corrupted, or the replication DN entry is not available, then the tool prompts for the Oracle Internet Directory superuser DN and password.

This operation only cleans up LDAP-based DRG setup. For clean up of an Oracle Database Advanced Replication-based DRG setup, see "[The remtool -asrcleanup Operation](#)" on page 4-30.

4.3.20.1 Syntax for remtool -pcleanup

```
remtool -pcleanup [-bind oid_hostname:ldap_port] [-agrmt] [-v]
```

4.3.20.2 Arguments for remtool -pcleanup

-bind *supplier_hostname:ldap_port*

See "The [-bind Connection Argument](#)" on page 4-68 for information.

-agrmt

Optional. Use this option to clean up dead LDAP agreements at a node. Dead agreements might exist if:

- A node in the DRG was offline when you ran `remtool -pcleanup`.
- The node being deleted was offline when you ran `remtool -delnode`.
- The supplier node was offline when you ran `remtool -pchgmaster`.

Alternatively, in the first two cases, you could run `remtool -pcleanup` (without `-agrmt`) to delete all the agreements.

4.3.20.3 Tasks and Examples for remtool -pcleanup

Using the `pcleanup` operation you can perform the following tasks:

- [Cleaning Up an Incomplete or Flawed LDAP-based DRG Setup](#)
- [Cleaning Up Specific LDAP Agreements](#)

4.3.20.3.1 Cleaning Up an Incomplete or Flawed LDAP-based DRG Setup In this example, the tool cleans up the replication setup of a DRG that has three replicas taking part in LDAP based replication.

Example:

```
remtool -pcleanup -v -bind my_host:3040
```

The results are:

Directory Replication Group (DRG) details :

Sl No.	Replicaid	Directory Information	Supplier Information	Repl. Type
001	my_host_rid1	my_host:3040	--	RW
002	my_host_rid3	my_host:3080	my_host_rid1	RO
003	my_host_rid2	my_host:3060	my_host_rid1	RO

```
DRG identified by replica ldap://my_host:3040 (my_host_rid1) will be cleaned up.
Do you want to continue? [y/n] : y
```

```

-----
Replica ldap://my_host:3040(my_host_rid1) has been cleaned up.
-----

```

4.3.20.3.2 Cleaning Up Specific LDAP Agreements In this example, the agreement between directory servers `ldap://my_host:3040` and `ldap://my_host:3060` is cleaned up. The agreement between directory servers `ldap://my_host:3040` and `ldap://my_host:3080` is also cleaned up.

Example:

```
remtool -pcleanup -v -agrmt -bind my_host:3040
```

Directory Replication Group (DRG) details :

Sl No.	Replicaid	Directory Information	Supplier Information	Repl. Type
001	my_host_rid1	my_host:3040	my_host_rid2 my_host_rid3	RW
002	my_host_rid3	my_host:3080	my_host_rid1	RW
003	my_host_rid2	my_host:3060	my_host_rid1	RW

```

Enter replica ID of replica(s) for which its(their) agreement(s) with replica
ldap://my_host:3040 (my_host_rid1) will be cleaned up.

```

```
Enter replica ID [Enter "e" to end selection] : my_host_rid2
```

```
Enter replica ID [Enter "e" to end selection] : my_host_rid3
```

```
Enter replica ID [Enter "e" to end selection] : e
```

```
-----
Agreement(s) with the following replica(s) would be cleaned up:
```

```
0. my_host_rid2
```

```
1. my_host_rid3
```

```
Do you want to continue? [y/n] : y
```

```

-----
Successfully cleaned up agreement between my_host_rid1 and my_host_rid2.
Successfully cleaned up agreement between my_host_rid1 and my_host_rid3.
-----
Replica ldap://my_host:3040(my_host_rid1) has been cleaned up.
-----

```

4.3.21 The remtool -pdelnnode Operation

The `pdelnnode` operation deletes an LDAP-based replica or partial replica from a directory replication group (DRG). To delete an Oracle Database Advanced Replication-based replica, used the ["The remtool -pdelnnode Operation"](#) on page 4-57.

4.3.21.1 Syntax for remtool -pdelnnode

```
remtool -pdelnnode [-bind hostname:ldap_port] [-v]
```

4.3.21.2 Arguments for remtool -pdelnnode

In addition to the arguments specified on the command-line, the tool prompts you for the following information:

- The replica ID of the replica to be deleted - The replica ID of the LDAP-based replica you want to delete.

-bind hostname:ldap_port

See ["The -bind Connection Argument"](#) on page 4-68 for information.

4.3.21.3 Tasks and Examples for remtool -pdelnnode

Using the `pdelnnode` operation you can perform the following tasks:

- ["Deleting a Read-Only Replica from a DRG"](#) on page 4-57

4.3.21.3.1 Deleting a Read-Only Replica from a DRG In this example, replica `ldap://my_host:3080` is removed from the DRG. This DRG consists of three replicas: `ldap://my_host:3040`, `ldap://my_host:3060`, and `ldap://my_host:3080`, of which `ldap://my_host:3040` and `ldap://my_host:3060` uses Advanced Replication and `ldap://my_host:3040` and `ldap://my_host:3080` uses LDAP-based replication. To delete replica `ldap://my_host:3080`, user has to give bind details of either `ldap://my_host:3040` or `ldap://my_host:3080`.

Example:

```
remtool -pdelnnode -v -bind my_host:3040
```

```
-----
Directory Replication Group (DRG) details :
```

Sl No.	Replicaid	Directory Information	Supplier Information	Repl. Type
001	my_host_rid1	my_host:3040	my_host_rid2	RW
002	my_host_rid2	--	my_host_rid1	RW
003	my_host_rid3	my_host:3080	my_host_rid1	RO

```
-----
Enter replicaid of the replica to be deleted : my_host_rid3
```

```

-----
ldap://my_host:3040 [my_host_rid1] : Modifying entry ...
ldap://my_host:3040 [my_host_rid1] : Deleting entry
orclagreementid=000002,orclreplicaid=my_host_rid1,cn=replication configuration...
ldap://my_host:3040 [my_host_rid1] : Deleting entry orclreplicaid=my_host_
rem3,cn=replication configuration...
ldap://my_host:3080 [my_host_rid3] : Modifying entry orclreplicaid=my_host_
rem3,cn=replication configuration...
ldap://my_host:3080 [my_host_rid3] : Modifying entry ...
ldap://my_host:3080 [my_host_rid3] : Deleting entry orclreplicaid=my_host_
rem,cn=replication configuration...
-----
Replica ldap://my_host:3080(my_host_rid3) has been deleted from this DRG.
-----
Directory Replication Group (DRG) details :

-----
Sl  Replicaid          Directory Information  Supplier Information  Repl.

-----

```

4.3.22 The remtool -pdispqstat Operation

The `pdispqstat` operation displays the queue statistics for a directory replication group (DRG) that uses LDAP-based replication. This operation cannot be used for DRGs that use ASR-based (advanced) replication. If a DRG uses both ASR and LDAP-based replication, the `pdispqstat` operation displays queue statistics for nodes that use LDAP-based replication only.

Note: The `dispqstat` operation is used to display the queue statistics for a DRG that uses ASR-based replication.

See Also: ["The remtool -dispqstat Operation"](#) on page 4-44 for more details on displaying the queue statistics for a DRG that uses ASR-based replication

4.3.22.1 Syntax for remtool -pdispqstat

```
remtool -pdispqstat [-bind hostname:ldap_port] [-v]
```

4.3.22.2 Arguments for remtool -pdispqstat

-bind hostname:ldap_port

See ["The -bind Connection Argument"](#) on page 4-68 for information.

4.3.22.3 Tasks and Examples for remtool -pdispqstat

Using the `pdispqstat` operation, you can perform the following tasks:

- [Display queue statistics for LDAP-based replicas](#)

4.3.22.3.1 Display queue statistics for LDAP-based replicas In this example, queue statistics for a DRG consisting of directory servers `ldap://my_host:3040` and `ldap://my_host:3060` are displayed.

Example:

```
remtool -pdispqstat -v -bind my_host:3040
```

Directory Replication Group (DRG) details :

```
-----
Sl  ReplicaId          Directory Information    Supplier Information    Repl.

4.3.23 The remtool -pilotreplica Operation

The `pilotreplica` operation begins or ends pilot mode for a replica.

4.3.23.1 Syntax for remtool -pilotreplica

```
remtool -pilotreplica {begin|end} -bind hostname:ldap_port [-bkup file_name]
```

4.3.23.2 Arguments for remtool -pilotreplica

begin | end

Required. Begin or end pilot mode.

-bind hostname:ldap_port

See "[The -bind Connection Argument](#)" on page 4-68 for information.

-bkup file_name

Name of backup file in which entries modified after pilot mode is started are to be stored in LDIF format.

4.3.23.3 Tasks and Examples for remtool -pilotreplica

Using the `pilotreplica` operation you can perform the following tasks:

- [Beginning Pilot Mode for a Replica](#)
- [Ending Pilot Mode for a Replica](#)

4.3.23.3.1 Beginning Pilot Mode for a Replica

Example:

```
remtool -pilotreplica begin -bind myhost:3060
```

4.3.23.3.2 Ending Pilot Mode for a Replica

Example:

```
remtool -pilotreplica end -bind myhost:3060
```

4.3.24 The remtool -presetpwd Operation

This `presetpwd` operation resets the replication DN password for the given Oracle Internet Directory server in both the directory repository and wallet. It does not reset the passwords for any other directories of the directory replication group (DRG) of which this directory is a member.

You need the Oracle Internet Directory superuser DN and password to reset the replication DN password.

4.3.24.1 Syntax for remtool -presetpwd

```
remtool -presetpwd -bind hostname:ldap_port [-v]
```

4.3.24.2 Arguments for remtool -presetpwd

You are prompted for the new replication DN password. In addition to the password and arguments supplied on the command-line, the tool prompts you for the following information:

- The superuser DN, for example `cn=orcladmin`.
- The superuser password.

-bind *hostname:ldap_port*

See "[The -bind Connection Argument](#)" on page 4-68 for information.

4.3.24.3 Tasks and Examples for remtool -presetpwd

Using the `presetpwd` operation you can perform the following tasks:

- [Resetting the Replication DN Password for a Single Directory](#)

4.3.24.3.1 Resetting the Replication DN Password for a Single Directory In this example, the replication DN password is reset for replica `my_host:3040`.

Example:

```
remtool -presetpwwd -v -bind my_host:3040
```

The results are:

```
Enter superuser DN                : cn=orcladmin
Enter superuser password          :
-----
Replication DN password of ldap://my_host:3040 (my_host_rem) associated with
database 'rid1' will be reset.
Do you want to continue? [y/n] : y
```

```

Enter new password of replication DN      :
Reenter new password of replication DN   :
-----
ldap://my_host:3040 [my_host_rid1] : Modifying entry cn=replication
dn,orclreplicaid=my_host_rid1,cn=replication configuration...
-----
Password has been changed.
-----

```

4.3.25 The remtool -pthput Operation

The `-pthput` option enables you to monitor replication progress in a directory replication group. The tool binds to the specified node and collects information about all the nodes in the directory replication group. It displays this information at intervals of specified duration.

4.3.25.1 Syntax for remtool -pthput

```
remtool -pthput [-bind hostname:ldap_port_number] [-interval time_in_seconds]
[-file filename]
```

4.3.25.2 Arguments for remtool -pthput

-bind hostname:ldap_port_number

See "[The -bind Connection Argument](#)" on page 4-68 for information.

-interval time_in_seconds

The interval for displaying information. This is an optional parameter. Provide its value in seconds. Its default value is 60 seconds.

-file filename

The file to write information to. This is an optional argument. If you specify a file argument, the output shown on the command line is logged to that file. Otherwise, the output is logged to a file name based on the timestamp.

4.3.25.3 Tasks and Examples for remtool -pthput

Using the `-pthput` option, you can perform the following tasks:

- [Section 4.3.25.3.1, "Listing DRG Information at Intervals"](#)

4.3.25.3.1 Listing DRG Information at Intervals In the following example, *time_in_seconds* is the value specified by the optional `-interval` parameter.

```

-----
Directory Replication Group (DRG) details :
-----

adc2101322_nldap32 0	adc2101322_nldap3	0	47342	0

4.3.26 The remtool -pverify Operation

The `pverify` operation verifies the replication configuration for a directory replication group (DRG) that uses LDAP-based replication. This operation cannot be used for a DRG that uses ASR based replication. If a DRG uses both ASR and LDAP-based replication, then this option verifies the replication configuration between nodes that use LDAP-based replication only.

The `pverify` operation has the following usage rules:

- This option only verifies agreements that involve the node specified in the command argument.
- The `remtool_VERIFY_LOG.rpt` report contains the verification results.

4.3.26.1 Syntax for remtool -pverify

```
remtool -pverify [-bind hostname:ldap_port_number] [-hiqmax hiqmax] [-tbtmax  
tbtmax] [-v]
```

4.3.26.2 Arguments for remtool -pverify

-bind hostname:ldap_port_number

See "[The -bind Connection Argument](#)" on page 4-68 for information.

-hiqmax hiqmax

The maximum number of change logs in the Human Intervention Queue (HIQ) after which warnings are generated.

-tbtmax tbtmax

The maximum number of logs to be transported (tbt) after which warnings are generated.

4.3.26.3 Tasks and Examples for remtool -pverify

Use the `pverify` operation to perform the following tasks:

- [Verify Replication Configuration for an LDAP-Based DRG](#)

4.3.26.3.1 Verify Replication Configuration for an LDAP-Based DRG In this example, the replication configuration for a DRG comprising of directory servers `ldap://my_host:3040`, `ldap://my_host:3060`, and `ldap://my_host:3080` is verified.

Example

```
remtool -pverify -v -bind my_host:3040
```

```
Node ID: my_host_rid1 Test Category: Connection
```

     Check: HIQ passed

Test: Filtering (my_host_rid1 to my_host_rid3)
     Check: Format passed
     Check: Configuration failed

```

Verify replication configuration for my_host_rid1 successfully.

Refer to remtool_VERIFY_LOG.rpt for details.

2 checks failed.

4.3.27 The remtool -resumeasr Operation

The `resumeasr` operation resumes replication activity for an Oracle Database Advanced Replication-based directory replication group (DRG) that was previously suspended using the "[The remtool -suspendasr Operation](#)" on page 4-66.

4.3.27.1 Syntax for remtool -resumeasr

```
remtool -resumeasr [-connect repl_admin_name@net_service_name] [-v]
```

4.3.27.2 Arguments for remtool -resumeasr

-connect repl_admin_name@net_service_name

For more information, see "[The -connect Connection Argument](#)" on page 4-68.

4.3.27.3 Tasks and Examples for remtool -resumeasr

Using the `resumeasr` operation you can perform the following tasks:

- [Resuming Replication Activity for an Advanced Replication-Based DRG](#)

4.3.27.3.1 Resuming Replication Activity for an Advanced Replication-Based DRG In this example, replication activity of DRG consisting of MY_HOST1.MY_COMPANY.COM and MY_HOST2.MY_COMPANY.COM is resumed.

Example:

```
remtool -resumeasr -v -conn repadmin@MY_HOST1.MY_COMPANY.COM
```

The results are:

```

MY_HOST1.MY_COMPANY.COM is Master Definition Site (MDS). Connected to MDS.
MY_HOST2.MY_COMPANY.COM is Remote Master Site (RMS). Connected to RMS.
Directory Replication Group (DRG) details :

```

```

-----
Instance Host Name      Global Name              Version      ReplicaId      Site
Name                                                           Type
-----
rid1      my_host      MY_HOST1.MY_COMPANY.COM 9.0.4.0.0 my_host_rid1  MDS
rid2      my_host      MY_HOST2.MY_COMPANY.COM 9.0.4.0.0 my_host_rid2  RMS
-----

```

```

Altering replication status...

MY_HOST1.MY_COMPANY.COM : Resuming replication activity...
-----
Replication status has been altered successfully.
-----

```

4.3.28 The remtool -suspendasr Operation

The `suspendasr` operation suspends Oracle Database Advanced Replication activity for a directory replication group (DRG) that uses it for replication. While Advanced Replication activity is suspended, replication does not take place.

4.3.28.1 Syntax for remtool -suspendasr

```
remtool -suspendasr [-connect repl_admin_name@net_service_name] [-v]
```

4.3.28.2 Arguments for remtool -suspendasr

-connect repl_admin_name@net_service_name

The connection string for the master definition site (MDS) or the Remote Master Site (RMS). You are prompted for the password for the replication administrator. If you do not supply an argument on the command-line, the tool prompts you for the information. The connect string is composed of the following elements:

- The name of the replication administrator.
- The net service name of the MDS or RMS. If you have a `tnsnames.ora` file configured, then this is the net service name specified in that file, which is located by default in `ORACLE_INSTANCE/config`. (You can set the `TNS_ADMIN` environment variable if you want to use a different location.)

4.3.28.3 Tasks and Examples for remtool -suspendasr

Using the `suspendasr` operation you can perform the following tasks:

- ["Suspending Replication Activity for an Advanced Replication-Based DRG"](#)

4.3.28.3.1 Suspending Replication Activity for an Advanced Replication-Based DRG In this example, replication activity of a DRG consisting of `MY_HOST1.MY_COMPANY.COM` and `MY_HOST2.MY_COMPANY.COM` is suspended.

Example:

```
remtool -suspendasr -v -conn repadmin@my_host1.my_company.com
```

The results are:

```

MY_HOST1.MY_COMPANY.COM is Master Definition Site (MDS). Connected to MDS.
MY_HOST2.MY_COMPANY.COM is Remote Master Site (RMS). Connected to RMS.
Directory Replication Group (DRG) details :

```

```

-----
Instance Host Name      Global Name              Version      ReplicaId      Site
Name                                                           Type
-----
rid      my_host      MY_HOST1.MY_COMPANY.COM  OID 10.1.2.0.0  my_host_rid1  MDS
rid2     my_host      MY_HOST2.MY_COMPANY.COM  OID 10.1.2.0.0  my_host_rid2  RMS
-----

```

```

Altering replication status...

MY_HOST1.MY_COMPANY.COM : Quiescing replication activity...
-----
Replication status has been altered successfully.
-----

```

4.3.29 The -psuspendrepl and -presumerepl Operations

The `-psuspendrepl` and `-presumerepl` operations provide rolling upgrade support for multimaster replication DRGs by suspending and resuming replication, respectively.

4.3.29.1 Syntax for -psuspendrepl and -presumerepl

```
remtool -psuspendrepl -fromnode host1:port1 [-tonode host2:port2]
```

```
remtool -presumerepl -fromnode host1:port1 [-tonode host2:port2]
```

Note: You must apply all required patches before starting the rolling upgrade procedure.

4.3.29.2 Arguments to -psuspendrepl and -presumerepl

-fromnode host1:port1

Specifies the host and port of the node from which replication is to be suspended.

-tonode host2:port2

Specifies the host and port of the node to which replication is to be suspended

If you do not specify the `-tonode` parameter with `-psuspendrepl` or `-presumerepl`, `remtool` displays the replicaids of all the replicas and prompts you for the replica to which to replication is to be suspended or resumed. To suspend or resume replication to all the replicas, enter `all`.

For example:

```
remtool -psuspendrepl -fromnode :5060/ods
```

```

-----
Directory Replication Group (DRG) details :
-----
Sl  ReplicaId          Directory Information  Supplier Information  Repl  OID
Version.
No.                                     Type
-----
001 adc2101322_gps3    adc2101322:3060      adc2170827_sldap2    RW    111140
002 adc2170827_sldap2  adc2170827:3070      adc2101322_gps3      RW    111140
-----
Enter replicaId of the replica to be suspended[Enter "all" to select all
replicas]:

```

4.3.29.3 Tasks for -psuspendrepl and -presumerepl

The procedure for rolling upgrade can be summarized as follows:

1. Stop the replication server on the replica to be upgraded.
2. Run `remtool -psuspendrepl`.
3. Stop Oracle Internet Directory on the replica to be upgraded.
4. Upgrade the replica.
5. Start Oracle Internet Directory on the upgraded replica.
6. Run `remtool -presumerepl`.
7. Start the replication server on the upgraded replica.

See Also: The appendix "Performing a Rolling Upgrade" in *Oracle Fusion Middleware Administrator's Guide for Oracle Internet Directory* for more details and an example of rolling upgrade.

4.3.30 The `-bind` Connection Argument

This argument is used with LDAP-based operations to supply the host and port of the supplier. The syntax is:

```
bind supplier_hostname:ldap_port
```

You are prompted for the replication DN password. If you omit either the hostname or port or both, `remtool` uses the local host name or default port (3060) or both as arguments. If you omit the `-bind` argument, you are prompted for the missing information.

4.3.31 The `-connect` Connection Argument

This argument is used with Oracle Database Advanced Replication-based operations to specify connection string for the master definition site (MDS) or the Remote Master Site (RMS). The syntax is:

```
-connectrepl_admin_name@net_service_name
```

You are prompted for the replication DN password. If you do not supply an argument on the command-line, the tool prompts you for the information.

4.3.32 Related Command-Line Tools for `remtool`

- See "[oidctl](#)" on page 2-5
- See "[opmnctl](#)" on page 2-15

Oracle Directory Integration Platform Tools

This chapter describes the following command-line tools used to administer Oracle Directory Integration Platform:

- [manageDIPServerConfig](#)
- [manageSyncProfiles](#)
- [syncProfileBootstrap](#)
- [expressSyncSetup](#)
- [provProfileBulkProv](#)
- [oidprovtool](#) (Provisioning Registration Tool)
- [dipStatus](#)
- [schemasync](#)

Notes:

- Best security practice is to provide a password only in response to a prompt from the command.
 - You must set the environment variables `WLS_HOME` and `ORACLE_HOME` before executing any of the Oracle Directory Integration Platform commands.
 - The Oracle WebLogic Managed Server where Oracle Directory Integration Platform is deployed must be configured for SSL to execute the Oracle Directory Integration Platform commands in SSL mode. Refer to the *Configuring SSL* chapter in *Oracle Fusion Middleware Securing Oracle WebLogic Server* for more information.
-
-

5.1 manageDIPServerConfig

The Manage DIP Server Configuration utility, `manageDIPServerConfig`, allows you to manage the Oracle Directory Integration Platform server configuration.

5.1.1 Syntax for manageDIPServerConfig

manageDIPServerConfig

```
manageDIPServerConfig {get | set} -h HOST -p PORT -D wlsuser -attribute {sslmode | refreshinterval | quartzthreadcount | quartzdbretryinterval | oidhostport | keystorelocation} [-ssl -keystorePath PATH_TO_KEYSTORE -keystoreType TYPE]
```

`[-value ATTRIBUTE_VALUE] [-help]`

5.1.2 Arguments for manageDIPServerConfig

get | set

Operation to perform.

- **get**: Displays the current value of the config parameter in DIP configuration file
- **set**: Updates the value of the config parameter in DIP configuration file.

-h | -host

Oracle WebLogic Server host where Oracle Directory Integration Platform is deployed

-p | -port

Listen port of Oracle WebLogic Managed Server where Oracle Directory Integration Platform application is deployed.

-D | -wlsuser

WebLogic Server login ID.

Note: You are prompted for the Oracle WebLogic Server login password. You cannot provide the password as a command-line argument. Best security practice is to provide a password only in response to a prompt from the command. If you must execute `manageDIPServerConfig` from a script, you can redirect input from a file containing the Oracle WebLogic Server login password. Use file permissions to protect the file and delete it when it is no longer necessary.

-attr | -attribute

Identifies the attribute that `manageDIPServerConfig` performs the operation on. The following is a list and description of the attributes `manageDIPServerConfig` can perform operations on:

- **sslmode**: The SSL mode Oracle Directory Integration Platform uses to connect to Oracle Internet Directory. Supported values are 1 and 2. Use 1 to connect to Oracle Internet Directory using SSL Mode 1 (No Authentication). Use 2 to connect to Oracle Internet Directory using SSL Mode 2 (Server Only Authentication).
- **refreshinterval**: The time interval (amount of time in seconds) that controls how often the Oracle Directory Integration Platform server refreshes profile configuration details.
- **quartzthreadcount**: Controls how many profiles can be scheduled in parallel. The default value is 15. If you have more than 15 profiles, increase the `quartzthreadcount` attribute accordingly.
- **quartzdbretryinterval**: Controls how often Oracle Directory Integration Platform's Quartz scheduler attempts to reconnect to the Oracle Internet Directory database.

- `oidhostport`: Identifies the host and port of the Oracle Internet Directory associated with Oracle Directory Integration Platform. Specify values for the `oidhostport` attribute in the form of `host:port`.
- `keystorelocation`: Specifies the absolute path to the Java Keystore (JKS) based on the host where Oracle Directory Integration Platform is deployed. When you specify the value for the `keystorelocation` attribute, be sure you use the appropriate path separators (that is, `/` for UNIX and Linux platforms, and `\` for Windows platforms).

-ssl

Executes the command in SSL mode.

Note: The Oracle WebLogic Managed Server where Oracle Directory Integration Platform is deployed must be configured for SSL to execute this command in SSL mode. Refer to the *Configuring SSL* chapter in *Oracle Fusion Middleware Securing Oracle WebLogic Server* for more information.

-keystorePath

The full path to the keystore.

-keystoreType

The type of the keystore identified by `-keystorePath`. For example:

```
-keystorePath jks or -keystorePath PKCS12
```

-val | -value

The value to set for the attribute This parameter is required with the set operation.

-help

Provides usage help for the command.

5.1.3 Tasks and Examples for manageDIPServerConfig

```
manageDIPServerConfig get -h myhost.mycompany.com -p 7005 -D weblogic \
  -attr sslmode
```

```
manageDIPServerConfig set -h myhost.mycompany.com -p 7005 -D weblogic \
  -attr sslmode -val 2
```

5.2 manageSyncProfiles

The Manage Synchronization Profiles utility, `manageSyncProfiles`, allows you to manage synchronization profiles.

5.2.1 Syntax for manageSyncProfiles

managSyncProfiles

```
manageSyncProfiles {activate | deactivate | copy | deregister | get | isexists |
  update | testProfile | validateProfile | validateMapRules | register |
  updatechgnum | associateProfile | dissociateProfile | getAllAssociatedProfiles |
```

```
getAssociatedProfile | list } -h HOST -p PORT -D wlsuser [-ssl -keystorePath  
PATH_TO_KEYSTORE -keystoreType TYPE] [-profile] [-newProfile]  
[-associateProfile][-file] [-params 'prop1 val1 prop2 val2 ...']  
[-conDirHost] [-conDirPort] [-conDirBindDn] [-mode] [-conDirType] [-conDirSSL]  
[-profileStatus] [-help]
```

5.2.2 Arguments for manageSyncProfiles

Operations

activate

Changes a profile state to ENABLE

deactivate

Changes a profile state to DISABLE

copy

Copies an existing profile *profile* to profile *newProfile*

deregister

Deletes an existing profile from OID.

get

Gets the profile details from OID.

isexists

Checks if the profile *profile* exists in OID.

update

Modifies an existing profile *profile* in OID.

testProfile

Changes the state of a disabled profile *profile* to TEST and schedules the profile for testing to ensure the profile successfully performs synchronization. After executing the manageSyncProfiles command with the testProfile operation, the results of the test are available in the following log file, where *DOMAIN_HOME* represents the Oracle WebLogic Server Domain home and *ORACLE_WEBLOGIC_MANAGED_SERVER_NAME* represents the name of the managed server where Oracle Directory Integration Platform is deployed:

```
DOMAIN_HOME/servers/ORACLE_WEBLOGIC_MANAGED_SERVER_NAME/logs/ORACLE_WEBLOGIC_  
MANAGED_SERVER_NAME.log
```

Note: The testProfile operation cannot schedule profiles that are in ENABLE state for testing.

validateProfile

Validates the syntax of the values in the specified profile for correctness.

validateMapRules

Validates the map rules provided.

register

Creates a new profile in OID.

updatechgnum

Updates the last applied change number in the profile to latest.

associateProfile

Associates *associateProfileName* with *profileName* to prevent information back flow.

dissociateProfile

Dissociates an associated profile to *profileName*

getAllAssociatedProfiles

Lists all the profiles to which profile *profileName* is associated.

getAssociatedProfile

Displays the profile name associated with profile *profileName*.

list

Displays all profiles registered in OID.

Options**-h | host**

Oracle WebLogic Server host where Oracle Directory Integration Platform is deployed.

-p | -port

Listen port of Oracle WebLogic Managed Server where Oracle Directory Integration Platform application is deployed.

-D | wlsuser

Oracle WebLogic Server login ID

Note: You are prompted for the Oracle WebLogic Server login password. You cannot provide the password as a command-line argument. Best security practice is to provide a password only in response to a prompt from the command. If you must execute a command from a script, you can redirect input from a file containing the Oracle WebLogic Server login password. Use file permissions to protect the file and delete it when it is no longer necessary. If you must provide more than one password to `manageSyncProfiles`, put each on a separate line in the file, in the following order: connected directory bind DN password, then Oracle WebLogic Server login password.

-ssl

Executes the command in SSL mode.

Note: The Oracle WebLogic Managed Server where Oracle Directory Integration Platform is deployed must be configured for SSL to execute this command in SSL mode. Refer to the *Configuring SSL* chapter in *Oracle Fusion Middleware Securing Oracle WebLogic Server* for more information.

-keystorePath

The full path to the keystore.

-keystoreType

The type of the keystore identified by `-keystorePath`. For example:

`-keystorePath jks` or `-keystorePath PKCS12`

-pf | -profile

The name of the synchronization profile to use when performing the operation.

-newpf | -newProfile

The name of the new profile which will be a copy of *profile*.

-assopf

The name of the profile that will be associated with *profile*

-f | -file

The full path and file name of the profile properties file containing the properties. See the "Example Properties File for Synchronization Profiles" appendix in *Oracle Fusion Middleware Administrator's Guide for Oracle Directory Integration Platform* for an example of such a file.

-params

A value is of the form `prop1 val1 prop2 val2 ...` where `prop` is the name of a profile property and `val` is the new value for that property. This keyword is used only for modification of a profile. You can specify as many key values as required

-conDirHost

Host where connected directory server is running.

-conDirPort

Port at which connected directory server listens.

-conDirBindDn

Connected directory server bind DN.

Examples:

- Active Directory
administrator@idm2003.net
- Sun ONE or iPlanet
cn=Directory Manager
- Oracle Internet Directory

cn=orcladmin

Note: You are prompted for the connected directory bind DN password. You cannot provide the password as a command-line argument. Best security practice is to provide a password only in response to a prompt from the command. If you must execute `manageSyncProfiles` from a script, you can redirect input from a file containing the connected directory bind DN password. Use file permissions to protect the file and delete it when it is no longer necessary. If you must provide more than one password to `manageSyncProfiles`, put each on a separate line in the file, in the following order: connected directory bind DN password, then Oracle WebLogic Server login password.

-mode

Synchronization mode map rules to be used: `import` or `export`

-conDirType

Connected directory type. Supported values are `ActiveDirectory`, `EDirectory`, `iPlanet`, `OpenLDAP`, `ADAM`, `Tivoli`, `ExchangeServer2003`, and `OID`.

-conDirSSL

SSL mode value used to connect connected directory server

-prfSt | -profileStatus

Displays status for the profile. Used only with the `list` operation.

-help

Provides command usage help.

5.2.3 Tasks and Examples for `manageSyncProfiles`

```
manageSyncProfiles register -h myhost.mycompany.com -p 7005 -D weblogic \
  -f /opt/ldap/odip/iPlImport.profile
```

```
manageSyncProfiles deregister -h myhost.mycompany.com -p 7005 \
  -D weblogic -pf myProfile
```

```
manageSyncProfiles updatechgnum -h myhost.mycompany.com -p 7005 \
  -D weblogic -pf myProfile
```

```
manageSyncProfiles activate -h myhost.mycompany.com -p 7005 \
  -D weblogic -pf myProfile
```

```
manageSyncProfiles deactivate -h myhost.mycompany.com -p 7005 \
  -D weblogic -pf myProfile
```

```
manageSyncProfiles get -h myhost.mycompany.com -p 7005 \
  -D weblogic -pf myProfile
```

```
manageSyncProfiles testProfile -h myhost.mycompany.com -p 7005 \
  -D weblogic -pf myProfile
```

```
manageSyncProfiles associateprofile -h myhost.mycompany.com -p 7005 \  
-D weblogic -pf myProfile -assopf myProfile1  
  
manageSyncProfiles dissociateprofile -h myhost.mycompany.com -p 7005 \  
-D weblogic -pf myProfile  
  
manageSyncProfiles getAllAssociatedProfiles -h myhost.mycompany.com -p 7005 \  
-D weblogic -pf myProfile  
  
manageSyncProfiles getAssociatedProfile -h myhost.mycompany.com -p 7005 \  
-D weblogic -pf myProfile  
  
manageSyncProfiles update -h myhost.mycompany.com -p 7005 \  
-D weblogic -pf myProfile -f /opt/ldap/odip/iPlImport.profile  
  
manageSyncProfiles validateMapRules -h myhost.mycompany.com -p 7005 \  
-D weblogic -f /opt/ldap/odip/iPlImport.map -conDirHost server.example.com \  
-conDirPort 8000 -conDirBindDn administrator@idm2003.net -mode IMPORT \  
-conDirType IPLANET  
  
manageSyncProfiles isexists -h myhost.mycompany.com -p 7005 -D weblogic \  
-pf myProfile  
  
manageSyncProfiles copy -h myhost.mycompany.com -p 7005 -D weblogic \  
-pf myProfile -newpf yourProfile  
  
manageSyncProfiles list -h myhost.mycompany.com -p 7005 -D weblogic -profileStatus
```

5.3 syncProfileBootstrap

The Synchronization Profile Bootstrap utility, `syncProfileBootstrap`, performs the initial migration of data between a connected directory and Oracle Internet Directory for a synchronization profile.

5.3.1 Syntax for syncProfileBootstrap

syncProfileBootstrap

```
syncProfileBootstrap -h HOST -p PORT -D wlsuser {-file FILENAME | -profile  
-PROFILE_NAME} [-ssl -keystorePath PATH_TO_KEYSTORE -keystoreType TYPE]  
[-loadParallelism INTEGER] [-loadRetry INTEGER] [-help]
```

5.3.2 Arguments for syncProfileBootstrap

-h | -host

Oracle WebLogic Server host where Oracle Directory Integration Platform is deployed.

-p | -port

Listen port of Oracle WebLogic Managed Server where Oracle Directory Integration Platform application is deployed.

-D | wlsuser

Oracle WebLogic Server login ID

Note: You are prompted for the Oracle WebLogic Server login password. You cannot provide the password as a command-line argument. Best security practice is to provide a password only in response to a prompt from the command. If you must execute `syncProfileBootstrap` from a script, you can redirect input from a file containing the Oracle WebLogic Server login password. Use file permissions to protect the file and delete it when it is no longer necessary.

-f | -file

Bootstrap properties file.

-pf | -profile

The name of the synchronization profile to use when performing the operation.

-ssl

Executes the command in SSL mode.

Note: The Oracle WebLogic Managed Server where Oracle Directory Integration Platform is deployed must be configured for SSL to execute this command in SSL mode. Refer to the *Configuring SSL* chapter in *Oracle Fusion Middleware Securing Oracle WebLogic Server* for more information.

-keystorePath

The full path to the keystore.

-keystoreType

The type of the keystore identified by `-keystorePath`. For example:

```
-keystorePath jks or -keystorePath PKCS12
```

-lp | -loadParallelism

Indicator that loading to Oracle Internet Directory is to take place in parallel by using multiple threads. For example, `-loadparallelism 5` means that 5 threads are to be created, each of which tries to load the entries in parallel to Oracle Internet Directory.

-lr | -loadRetry

The number of times the retry should be made (when the load to the destination fails) before marking the entry as bad entry.

-help

Provides command usage help.

5.3.3 Tasks and Examples for syncProfileBootstrap

```
manageSyncProfileBootstrap -h myhost.mycompany.com -p 7005 -D weblogic \
  -pf myProfile -lp 5
```

```
manageSyncProfileBootstrap -h myhost.mycompany.com -p 7005 -D weblogic \
  -f /opt/ldap/odip/bootstrap.properties -lr 3
```

5.4 expressSyncSetup

The Express Synchronization Setup utility, `expressSyncSetup`, creates import and export synchronizations profiles.

5.4.1 Syntax for expressSyncSetup

expressSyncSetup

```
expressSyncSetup -h HOST -p PORT -D wlsuser -pf PROFILE
-conDirType CONNECTED_DIRECTORY_TYPE -conDirURL CONNECTED_DIRECTORY_URL
-conDirBindDN CONNECTED_DIRECTORY_BIND_DN -conDircontainer SYNC_CONTAINER
[-ssl -keystorePath PATH_TO_KEYSTORE -keystoreType TYPE] [-enableProfiles {true |
false}] [-help]
```

5.4.2 Arguments for expressSyncSetup

-h | -host

Oracle WebLogic Server host where Oracle Directory Integration Platform is deployed.

-p | -port

Listen port of Oracle WebLogic Managed Server where Oracle Directory Integration Platform application is deployed.

-D | wlsuser

Oracle WebLogic Server login ID

Note: You are prompted for the Oracle WebLogic Server login password. You cannot provide the password as a command-line argument. Best security practice is to provide a password only in response to a prompt from the command. If you must execute `expressSyncSetup` from a script, you can redirect input from a file containing the Oracle WebLogic Server login password. Use file permissions to protect the file and delete it when it is no longer necessary. If you must provide more than one password to `expressSyncSetup`, put each on a separate line in the file, in the following order: connected directory bind DN password, then Oracle WebLogic Server login password.

-pf | -profile

Profile name.

-conDirType

Connected directory type. Supported values are `ActiveDirectory`, `EDirectory`, `iPlanet`, `OpenLDAP`, `ADAM`, `Tivoli`, `ExchangeServer2003`, and `OID`.

-conDirUrl

URL where the connected directory is running. The format is *host:port*.

-conDirBindDN

Connected directory server bind DN. For example:

```
administrator@idm2003.net
cn=orcladmin,cn=Directory Manager
```

Note: You are prompted for the connected directory bind DN password. You cannot provide the password as a command-line argument. Best security practice is to provide a password only in response to a prompt from the command. If you must execute `expressSyncSetup` from a script, you can redirect input from a file containing the connected directory bind DN password. Use file permissions to protect the file and delete it when it is no longer necessary. If you must provide more than one password to `expressSyncSetup`, put each on a separate line in the file, in the following order: connected directory bind DN password, then Oracle WebLogic Server login password.

-conDirContainer

The synchronization container. For example:

```
ou=sales,dc=us,dc=com
OU=Groups,DC=imtest,DC=com
CN=Users,DC=imtest,DC=com
```

-ssl

Executes the command in SSL mode.

Note: The Oracle WebLogic Managed Server where Oracle Directory Integration Platform is deployed must be configured for SSL to execute this command in SSL mode. Refer to the *Configuring SSL* chapter in *Oracle Fusion Middleware Securing Oracle WebLogic Server* for more information.

-keystorePath

The full path to the keystore.

-keystoreType

The type of the keystore identified by `-keystorePath`. For example:
`-keystorePath jks` or `-keystorePath PKCS12`

-enableProfiles

Specify `true` to enable created profiles, `false` if not.

-help

Provides command usage help.

5.4.3 Tasks and Examples for `expressSyncSetup`

```
expressSyncSetup -h myhost.mycompany.com -p 7005 -D weblogic -pf myProfile \  

  -conDirType ACTIVE DIRECTORY -conDirUrl server.mycompany.com:5432 \  

  -conDirBindDN administrator@idm2003.net -conDirContainer ou=sales,dc=us,dc=com \  

  -enableProfiles false \  

  \
```

```
expressSyncSetup -help
```

5.5 provProfileBulkProv

The Provisioning Profile Bulk utility, `provProfileBulkProv`, performs initial migration of data from an LDIF file to Oracle Internet Directory for a provisioning profile.

5.5.1 Syntax for provProfileBulkProv

provProfileBulkProv

```
provProfileBulkProv -h HOST -p PORT -D wlsuser -file LDIF_FILE -realm REALM_DN  
[-ssl -keystorePath PATH_TO_KEYSTORE -keystoreType TYPE]  
[-encoding INPUT_ENCODING] [-help]
```

5.5.2 Arguments for provProfileBulkProv

-h | -host

Oracle WebLogic Server host where Oracle Directory Integration Platform is deployed.

-p | -port

Listen port of Oracle WebLogic Managed Server where Oracle Directory Integration Platform application is deployed.

-D | -wlsuser

Oracle WebLogic Server login ID

Note: You are prompted for the Oracle WebLogic Server login password. You cannot provide the password as a command-line argument. Best security practice is to provide a password only in response to a prompt from the command. If you must execute `provProfileBulkProv` from a script, you can redirect input from a file containing the Oracle WebLogic Server login password. Use file permissions to protect the file and delete it when it is no longer necessary.

-f | -file

LDIF file containing the data to be migrated.

-realm

The realm in which the users are to be provisioned.

-ssl

Executes the command in SSL mode.

Note: The Oracle WebLogic Managed Server where Oracle Directory Integration Platform is deployed must be configured for SSL to execute this command in SSL mode. Refer to the *Configuring SSL* chapter in *Oracle Fusion Middleware Securing Oracle WebLogic Server* for more information.

-keystorePath

The full path to the keystore.

-keystoreType

The type of the keystore identified by `-keystorePath`. For example:

`-keystorePath jks` or `-keystorePath PKCS12`

-encoding

Input file encoding.

-help

Provides command usage help.

5.5.3 Tasks and Examples for provProfileBulkProv

```
provProfileBulkprov -h myhost.mycompany.com -p 7005 -D weblogic \
-f /opt/ldap/odip/users.ldif -realm cn=aaaa,ou=bbbb,dc=cccc
```

5.6 oidprovtool

Provisioning enables you to ensure that an application is notified of directory changes, such as changes to user or group information. Such changes can affect whether the application allows a user access to its processes and resources.

When you install an application that you want to provision, you must create a provisioning integration profile by using the Provisioning Registration Tool (`oidprovtool`).

You can use the Provisioning Registration Tool to:

- Create a new provisioning profile. A new provisioning profile is created and set to the enabled state so that Oracle Directory Integration Platform can process it.
- Disable an existing provisioning profile.
- Enable a disabled provisioning profile.
- Modify an existing provisioning profile.
- Delete an existing provisioning profile.
- Get the current status of a given provisioning profile.
- Clear all of the errors in an existing provisioning profile.

The Provisioning Registration Tool shields the location and schema details of the provisioning profile entries from the callers of the tool. From the callers' perspective, the combination of an application and a realm uniquely identify a provisioning profile. The constraint in the system is that there can be only one provisioning profile for each application for each realm.

Once a profile is created, its mode—that is, INBOUND, OUTBOUND, or BOTH—cannot be changed by using the `modify` operation. To change the mode, you must delete, then re-create, the profile.

The Oracle directory integration platform server automatically monitors provisioning profile configuration changes in Oracle Internet Directory, including the creation, modification, and deletion of provisioning profiles. For this reason, you do not need to manually enable or disable a provisioning profile.

Note: For improved security, do not supply a password on the command line. The `oidprovtool` command prompts you for a password if you do not supply one on the command line.

5.6.1 Syntax for oidprovtool

oidprovtool

```
oidprovtool operation=[create|modify] ldap_host=oid_hostname ldap_port=port
ldap_user_dn="bindDN" ldap_user_password=password
[profile_mode=INBOUND|OUTBOUND|BOTH]
[application_dn="DN" application_type=type [application_name=name]
[application_display_name=display name] organization_dn=DN
[application_isdasvisible=TRUE|FALSE] [manage_application_defaults=TRUE|FALSE]
[enable_bootstrap=TRUE|FALSE] [user_data_location=DN]
[default_provisioning_policy=PROVISIONING_REQUIRED|PROVISIONING_NOT_REQUIRED]
interface_name=SCHEMA.PACKAGE [interface_type=PLSQL|JAVA]
interface_version=1.1|2.0|3.0 interface_connect_info=connection_string
schedule=number_seconds lastchangenumber=number
max_prov_failure_limit=number
max_events_per_schedule=number max_events_per_invocation=number
event_mapping_rules="OBJECT_TYPE:FILTER:DOMAIN"
event_permitted_operations="OBJECT:DOMAIN:OPERATION(attributes,...)"
event_subscription="USER|GROUP:DOMAIN:OPERATION(attributes,...)"
max_events_per_schedule=number max_retries=number profile_group=number
profile_status=ENABLED | DISABLED profile_debug=debug_level

oidprovtool {operation=enable|disable|delete|status|reset}
application_dn=DN [organization_dn=DN] [ldap_host=oid_hostname] [ldap_port=port]
[ldap_user_dn=bindDN] [ldap_user_password=password] [profile_debug=debug_level]
```

5.6.2 Arguments for oidprovtool

operation=create | modify | enable | disable | delete | status | reset

Required. The operation to perform using `oidprovtool`. You can only perform one operation at a time. The operations are:

- `create`—Creates a new provisioning profile.
- `modify`—Modifies the given properties of an existing provisioning profile.
- `enable`—Enables a provisioning profile.
- `disable`—Disables a provisioning profile.
- `delete`—Deletes a provisioning profile.
- `status`—Shows the current status of a given provisioning profile.
- `reset`—Clears all errors for a provisioning profile.

ldap_host=oid_hostname

Optional. The host name of the Oracle Internet Directory server. If not provided then the name of the local host is used.

ldap_port=port

Optional. The LDAP listening port of Oracle Internet Directory. The default is 3060.

ldap_user_dn=bindDN

Required. The DN of the superuser or a user that has sufficient permissions to perform provisioning subscription operations. The default is `cn=orcladmin`.

ldap_user_password=password

Optional. The user password used to bind to the directory. If you do not specify the password on the command line, you are prompted for it. Best security practice is to provide the password in response to a prompt.

profile_mode=OUTBOUND | INBOUND | BOTH

Optional for the `create` operation only. The direction of the provisioning events. The default is `OUTBOUND` (data is provisioned from Oracle Internet Directory to the application).

application_dn=DN

Required. The distinguished name of the application to which the provisioning subscription belongs. The combination of the application DN and organization DN uniquely identifies a provisioning profile. For example, here is the application DN for Portal:

```
"orclApplicationCommonName=PORTAL,cn=Portal,cn=Products,cn=OracleContext"
```

application_type=type

Required. The type of application being provisioned.

application_name=name

Optional. The name of the application being provisioned. If not provided, defaults to the distinguished name assigned to `application_dn`.

application_display_name=name

Optional. The display name of the application being provisioned. If not provided, defaults to the value assigned to `application_name`.

organization_dn=DN

Optional. If not provided, defaults to the default identity management realm. The distinguished name of the organization to which the provisioning subscription belongs, for example `"dc=company,dc=com"`. The combination of the application DN and organization DN uniquely identifies a provisioning profile.

application_isdasvisible=TRUE | FALSE

Optional. Determines whether the application is visible as a provisioning-integrated application in the Oracle Internet Directory Provisioning Console. The default value is `TRUE`.

manage_application_default=TRUE | FALSE

Optional. Determines whether the Oracle Internet Directory Provisioning Console manages the application's default values. The default value is TRUE.

enable_bootstrap=TRUE | FALSE

Optional. Indicates whether the application should receive provisioning events for users that existed in Oracle Internet Directory before creating the application's provisioning integration profile. The default value is FALSE.

user_data_location=DN

Optional. Identifies the DN of the container in which to store application-specific user information.

default_provisioning_policy=PROVISIONING_REQUIRED | PROVISIONING_NOT_REQUIRED

Optional. Specifies the application's default provisioning policy. The default value is PROVISIONING_REQUIRED.

interface_name=SCHEMA.PACKAGE

Required for `create` or `modify` operations. The database schema name for the PLSQL package. The format of the value is `schema.package_name`, for example here is the schema and PLSQL package information for Portal:

```
interface_name=PORTAL.WWSEC_OID_SYNC
```

interface_version=1.1 | 2.0 | 3.0

The version of the interface protocol. Allowed values are 1.1, 2.0, or 3.0. The default value is 2.0.

interface_type=PLSQL | JAVA

Optional. The type of interface to which events will be propagated. The default is PLSQL.

interface_connect_info=connection_string

Required for `create` or `modify` operations. To connect to an Oracle database and propagate events, use one of the following formats for the connection string:

- `DBURL=ldap://ldaphost:ldapport/service:username:password` (recommended)
- `host:port:sid:username:password`
- `DBSVC=service:username:password`

schedule=number_seconds

Optional for `create` and `modify` operations only. The number of seconds between executions of this profile. The default is 3600, which means the profile is scheduled to be executed every hour.

lastchangenumber=number

Optional for `create` and `modify` operations on OUTBOUND events only. The last change number in Oracle Internet Directory after which all qualifying events should be provisioned to the application. Defaults to the latest current change number.

max_prov_failure_limit=number

Optional. Determines the number of times the Oracle Provisioning System attempts to provision a user. The default is 1.

max_events_per_schedule=number

Optional for `create` and `modify` operations only. The maximum number of events that the Oracle directory integration platform server sends to an application during one execution of a provisioning profile. The default is 100.

max_events_per_invocation=number

Optional for `create` and `modify` operations only. The maximum number of events that can be packaged and sent to a target in one invocation of the interface.

event_mapping_rules="OBJECT_TYPE:FILTER:DOMAIN"

Required for `create` and `modify` operations on `INBOUND` events only. This rule maps the object type received from the application (using an optional filter condition) to a domain in Oracle Internet Directory A provisioning profile can have multiple mapping rules defined.

The following example shows two mapping rules. The first rule shows that an employee object (EMP) whose locality attribute equals America (l=AMERICA) should be mapped to the domain l=AMER, cn=users, dc=company, dc=com. The second rule shows that an employee object (EMP) should be mapped to the domain cn=users, dc=company, dc=com (no filter conditions).

```
event_mapping_rules="EMP:l=AMERICA:l=AMER,cn=users,dc=company,dc=com"
event_mapping_rules="EMP::cn=users,dc=company,dc=com"
```

event_permitted_operations="OBJECT:DOMAIN:OPERATION(attributes,...)"

Required for `create` and `modify` operations on `INBOUND` events only. This property is used to define the types of events that the application is allowed to send to the Oracle Directory Integration Platform service. A provisioning profile can have multiple permitted operations defined.

For example, if you wanted to permit the application to send events whenever a user object was added or deleted, or when certain attributes were modified, you would have three permitted operations such as this:

```
event_permitted_operations="USER:dc=mycompany,dc=com:ADD(*)"
event_permitted_operations="USER:dc=mycompany,dc=com:MODIFY(cn,sn,mail,password)"
event_permitted_operations="USER:dc=mycompany,dc=com:DELETE(*)"
```

event_subscription="USER | GROUP:DOMAIN:OPERATION(attributes,...)"

Required for `create` and `modify` operations on `OUTBOUND` events only. This property is used to define the types of events that the Oracle Directory Integration Platform service should send to the application. A provisioning profile can have multiple event subscriptions defined.

For example, if you wanted the directory integration server to send events to the application whenever a user or group object was added or deleted, you would have four event subscriptions such as this:

```
event_subscription="GROUP:dc=mycompany,dc=com:ADD(*)"
event_subscription="GROUP:dc=mycompany,dc=com:DELETE(*)"
event_subscription="USER:dc=mycompany,dc=com:ADD(*)"
event_subscription="USER:dc=mycompany,dc=com:DELETE(*)"
```

max_events_per_schedule=number

Optional for `create` and `modify` operations only. The maximum number of events to be provisioned in one schedule. The default is 100.

max_retries=number

Optional for `create` and `modify` operations only. The number of times a failed event should be retried. The default is 5.

profile_group=number

Required for `create` and `modify` operations only. The group number of the profile. Default is "DEFAULT". This is required to address scalability issues when different Oracle Directory Integration Platform server instances will be used to execute different selected groups.

profile_status=ENABLED | DISABLED

Required for the `create` operation only. Determines whether the profile is enabled or disabled. The default is ENABLED.

profile_debug=debug_level

Required. The debug level for the profile.

5.6.3 Tasks and Examples for oidprovtool

Using the Provisioning Registration Tool (`oidprovtool`) you can perform the following tasks:

- [Creating a Provisioning Profile](#)
- [Modifying a Provisioning Profile](#)
- [Deleting a Provisioning Profile](#)
- [Disabling a Provisioning Profile](#)

5.6.3.1 Creating a Provisioning Profile

The following example creates a new provisioning profile that makes Portal aware of updates to the user and group information that is maintained in Oracle Internet Directory.

Example:

```
oidprovtool operation=create ldap_host=myhost.mycompany.com ldap_port=3060 \
ldap_user_dn="cn=orcladmin" application_
dn="orclApplicationCommonName=PORTAL,cn=Portal,cn=Products,cn=OracleContext" \
organization_dn="dc=us,dc=mycompany,dc=com" interface_name=PORTAL.WWSEC_OID_SYNC \
interface_type=PLSQL interface_connect_info=myhost:1521:iasdb:PORTAL:password \
schedule=360 event_subscription="USER:dc=us,dc=mycompany,dc=com:DELETE" \
event_subscription="GROUP:dc=us,dc=mycompany,dc=com:DELETE" \
event_
subscription="USER:dc=us,dc=mycompany,dc=com:MODIFY(orclDefaultProfileGroup,userpa
ssword)" \
event_subscription="GROUP:dc=us,dc=mycompany,dc=com:MODIFY(uniqueMember)" \
profile_mode=OUTBOUND
```

5.6.3.2 Modifying a Provisioning Profile

The following example modifies an existing provisioning profile for the Portal application. It changes the event subscription for the attributes that are provisioned when a user entry is modified.

Example:

```
oidprovtool operation=modify ldap_host=myhost.mycompany.com ldap_port=3060 \
ldap_user_dn="cn=orcladmin" application_
dn="orclApplicationCommonName=PORTAL,cn=Portal,cn=Products,cn=OracleContext" \
organization_dn="dc=us,dc=mycompany,dc=com" \
subscription="USER:dc=us,dc=mycompany,dc=com:MODIFY(orclDefaultProfileGroup,userpa
ssword,mail,cn,sn)"
```

5.6.3.3 Deleting a Provisioning Profile

The following example disables a provisioning profile for the Portal application.

Example:

```
oidprovtool operation=delete ldap_host=myhost.mycompany.com ldap_port=3060 \
ldap_user_dn="cn=orcladmin" application_
dn="orclApplicationCommonName=PORTAL,cn=Portal,cn=Products,cn=OracleContext" \
organization_dn="dc=us,dc=mycompany,dc=com"
```

5.6.3.4 Disabling a Provisioning Profile

The following example disables a provisioning profile for the Portal application.

Example:

```
oidprovtool operation=disable ldap_host=myhost.mycompany.com ldap_port=3060 \
ldap_user_dn="cn=orcladmin" application_
dn="orclApplicationCommonName=PORTAL,cn=Portal,cn=Products,cn=OracleContext" \
organization_dn="dc=us,dc=mycompany,dc=com"
```

5.7 dipStatus

The `dipStatus` utility allows you to check the status of Oracle Directory Integration Platform and whether it is registered.

5.7.1 Syntax for dipStatus

dipStatus

```
dipStatus -h HOST -p PORT -D wlsuser [-ssl -keystorePath PATH_TO_KEYSTORE
-keystoreType TYPE] [-help]
```

5.7.2 Arguments for dipStatus

-h | -host

Host name of the WebLogic server running the Managed Server where Oracle Directory Integration Platform is deployed.

-p | -port

Listen port of Oracle WebLogic Managed Server where Oracle Directory Integration Platform application is deployed.

-D | -wlsuser

WebLogic Server login ID.

Note: You are prompted for the WebLogic server login password. You cannot provide the password as a command-line argument.

Best security practice is to provide a password only in response to a prompt from the command. If you must execute `dipStatus` from a script, you can redirect input from a file containing the WebLogic Server password. Use file permissions to protect the file and delete it when it is no longer necessary.

-ssl

Executes the command in SSL mode.

Note: The Oracle WebLogic Managed Server where Oracle Directory Integration Platform is deployed must be configured for SSL to execute this command in SSL mode. Refer to the *Configuring SSL* chapter in *Oracle Fusion Middleware Securing Oracle WebLogic Server* for more information.

-keystorePath

The full path to the keystore.

-keystoreType

The type of the keystore identified by `-keystorePath`. For example:
`-keystorePath jks` or `-keystorePath PKCS12`

-help

Provides usage help for the command.

5.7.3 Examples for `dipStatus`

```
dipStatus -h myhost.mycompany.com -p 7005 -D weblogic
```

```
dipStatus -help
```

5.8 schemasync

The `schemasync` utility enables you to synchronize schema elements—namely attributes and object classes—between an Oracle Internet Directory server and a third-party LDAP directory.

The errors that occur during schema synchronization are logged in the following files:

- `ORACLE_HOME/ldap/odi/log/attributetypes.log`
- `ORACLE_HOME/ldap/odi/log/objectclasses.log`

5.8.1 Syntax for schemasync

schemasync

```
schemasync -srchost hostname -srcport port -srcdn bindDN -srcpwd password
-dsthost hostname -dstport port -dstdn bindDN -dstpwd password [-ldap]
```

5.8.2 Arguments for schemasync

-srchost *hostname*

Required. The host name of the source directory server.

-srcport *port*

Required. The LDAP listening port of the source directory server, for example 3060.

-srcdn *bindDN*

Required. The DN of the user used to bind to the source directory. This user must have permissions to modify the directory schema, for example the superuser (cn=orcladmin).

-srcpwd *password*

Optional. The user password used to bind to the source directory. If you do not specify the password on the command line, you are prompted for it. Best security practice is to provide the password in response to a prompt.

-dsthost *hostname*

Required. The host name of the destination directory server.

-dstport *port*

Required. The LDAP listening port of the destination directory server, for example 3060.

-dstdn *bindDN*

Optional. The DN of the user used to bind to the destination directory. This user must have permissions to modify the directory schema, for example the superuser.

-dstpwd *password*

Required. The user password used to bind to the destination directory. If you do not specify the password on the command line, you are prompted for it. Best security practice is to provide the password in response to a prompt.

-ldap

Optional. If specified, then the schema changes are applied directly from the source LDAP directory to the destination LDAP directory. If it is not specified, then the schema changes are placed in the following LDIF files:

- `ORACLE_HOME/ldap/odi/data/attributetypes.ldif`: This file has the new attribute definitions.
- `ORACLE_HOME/ldap/odi/data/objectclasses.ldif`: This file has the new object class definitions.

If you do not specify `-ldap`, then you must use `"ldapmodify"` on page 3-32 to upload the definitions from these two files, first attribute types and then object classes.

5.8.3 Tasks and Examples for schemasync

Using the `schemasync` command-line tool, you can perform the following tasks:

- [Synchronizing the Schema between Oracle Internet Directory and a Third-Party Directory](#)

5.8.3.1 Synchronizing the Schema between Oracle Internet Directory and a Third-Party Directory

The following example shows how to synchronize the schema between Oracle Internet Directory and a third-party directory server.

Example:

```
schemasync -srchost myhost1.mycompany.com -srcport 3060 -srcdn "cn=orcladmin" \  
-dsthost myhost2.mycompany.com -dstport 3060 \  
-dstdn "uid=superuser,ou=people,dc=mycompany,dc=com" -ldap
```

5.8.4 Related Command-Line Tools for schemasync

- See "[ldapmodify](#)" on page 3-32

Part II

Schema Reference

Part II of the *Oracle Fusion Middleware Reference for Oracle Identity Management* contains information about the LDAP schema elements for Oracle Identity Management.

Part II contains the following chapters:

- [Chapter 6, "LDAP Schema Overview"](#)
- [Chapter 7, "LDAP Object Class Reference"](#)
- [Chapter 8, "LDAP Attribute Reference"](#)
- [Chapter 9, "Oracle Adaptive Access Manager Database Schema"](#)

LDAP Schema Overview

This chapter provides an overview of some of the basic concepts of the LDAP directory schema, and provides categorized lists of the schema elements for Oracle Identity Management. This chapter contains the following topics:

- [Section 6.1, "Overview of Directory Schema"](#)
- [Section 6.2, "Overview of Oracle Identity Management Schema Elements"](#)

6.1 Overview of Directory Schema

A directory schema specifies, among other rules, the types of objects that a directory may have and the mandatory and optional attributes of each object type. The Lightweight Directory Access Protocol (LDAP) version 3 defines a schema based on the X.500 standard for common objects found in a network, such as countries, localities, organizations, people, groups, and devices. In the LDAP v3, the schema is available from the directory. That is, it is represented as entries in the directory and its information as attributes of those entries.

6.1.1 Object Classes

An object class is an LDAP directory term that denotes the type of object being represented by a directory entry or record. There are also object classes that define an object's relationship to other objects, such as object class `top` denotes that the object may have subordinate objects under it in a hierarchical tree structure. Some LDAP object classes may be combined to create an entry in the directory. For example, an entry for a user uses the `top`, `person`, `organizationalPerson`, `inetOrgPerson`, and `orclUserV2` object classes.

Required and Allowed Attributes

The definition of an object class includes a list of required attributes (MUST) and allowed attributes (MAY). Required attributes include the attributes that must be present in entries using the object class. Allowed attributes include the attributes that may be present in entries using the object class.

Object Class Types

The X.500 1993 specification requires that object classes be assigned to one of four categories:

- **Structural:** Object classes that can have instances in the directory. Structural classes are used to create directory objects or entries.
- **Abstract:** Template object classes that are used only to derive new structural classes. Abstract classes cannot be instantiated in the directory.

- **Auxiliary:** A list of attributes that can be appended to the definition of a Structural or Abstract class. An Auxiliary class cannot be instantiated in the directory.
- **88 Classes:** Assigning object classes to categories was not required in the X.500 1988 specification. Classes that were defined prior to the X.500 1993 standards, default to the 88 class. Do not define new 88 classes.

Object Class Inheritance

Inheritance, which is also referred to as derivation, is the ability to build new object classes from existing object classes. The new object is defined as a subclass of the parent object. A subclass is a class that inherits from some other class; for example, a subclass inherits structure and content rules from the parent. The parent object becomes a superclass of the new object. A superclass is a class from which one or more other classes inherit information.

6.1.2 Attributes

Directory data is represented as attribute-value pairs. Any piece of information in the directory is associated with a descriptive attribute. For example, the `cn` (`commonName`) attribute is used to store a nickname. A person named William (Bill) Smith can be represented in the directory as:

```
cn: Bill Smith
```

Attribute Name Limitations

The length of an attribute name must not exceed 127 characters. For more information about attribute management, refer to the *Oracle Fusion Middleware Administrator's Guide for Oracle Internet Directory*.

Oracle Internet Directory imposes no limitations on the characters that can be used in attribute names. Other components of Oracle Identity Management, however, do limit the characters that can be used for certain attributes.

Oracle Delegated Administration Services and Oracle Directory Integration Platform prohibit the use of spaces and of any of the following characters in `UserID`: `& ' % ? \ / + = () * ^ , ; | ' ~`

Oracle Application Server Single Sign-On requires that a password should not contain the following characters: `& { } < > " ' ()`

Attribute Syntax

An attribute syntax is the basic building block of an attribute. Every attribute is assigned a syntax that defines the attribute value's data format. For example, attribute syntaxes determine whether an attribute stores an integer, string, or binary data. The syntax also defines the matching rules that control the type of comparison operations you can perform on the attribute value.

Oracle Internet Directory recognizes attribute syntax as specified in RFC 2252, that is, it enables you to associate the attribute syntax described in that document with an attribute. Oracle Internet Directory enforces attribute syntax for the following types:

- DN
- OID (object identifier)
- Telephone Number

The following table describes the attribute syntax most commonly used in Oracle Internet Directory:

Table 6–1 Attribute Syntax Commonly Used in Oracle Internet Directory

Syntax and Object ID	Description
ACI Item 1.3.6.1.4.1.1466.115.121.1.1	Values for this attribute are access control identifier items.
Binary 1.3.6.1.4.1.1466.115.121.1.5	Values for this attribute are binary.
Boolean 1.3.6.1.4.1.1466.115.121.1.7	The attribute can contain only one of two values: true (1) or false (0).
Directory String 1.3.6.1.4.1.1466.115.121.1.15	Values for this attribute are strings which are not case-sensitive.
DN 1.3.6.1.4.1.1466.115.121.1.12	Values for this attribute are DNs (distinguished names).
Generalized Time 1.3.6.1.4.1.1466.115.121.1.24	Values for this attribute are encoded as printable strings. A time zone must be specified (such as GMT).
IA5String 1.3.6.1.4.1.1466.115.121.1.26	International Reference Alphabet Reference Alphabet No. 5 string. Values for this attribute are case-sensitive.
Integer 1.3.6.1.4.1.1466.115.121.1.27	Valid values for this attribute are numbers.
JPEG 1.3.6.1.4.1.1466.115.121.1.28	Valid values for this attribute are JPEG files.
Name 1.3.6.1.4.1.1466.115.121.1.34	Valid values for this attribute are names or optional UIDs.
OID 1.3.6.1.4.1.1466.115.121.1.38	A unique object identifier.
Printable String 1.3.6.1.4.1.1466.115.121.1.44	A string that does NOT allow extended characters. Values for this attribute are not case-sensitive.
Telephone Number 1.3.6.1.4.1.1466.115.121.1.50	Values for this attribute are in the form of telephone numbers.

Attribute Aliases

As of 11g Release 1 (11.1.1), you can create aliases for attribute names. For example, you could create the user-friendly alias `surname` for the attribute `sn`. Once you create an alias for an attribute name, a user can specify the alias instead of the attribute name in an LDAP operation.

You define an alias for an attribute in the LDAP schema definition of the attribute. The directory schema operational attribute `attributeTypes` has been enhanced to allow you to include aliases in the attribute name list. In previous releases, the format for an attribute name list was:

```
attributeTypes=( ObjectIdentifier NAME 'AttributeName' ... )
```

As of 11g Release 1 (11.1.1), you may optionally specify:

```
attributeTypes=( ObjectIdentifier NAME ( 'AttributeName' 'Alias1' 'Alias2' ... )
... )
```

This is consistent with the LDAP protocol as specified by RFC 2251 and RFC 2252. In the attribute name list, the first item is recognized as the name of the attribute and rest of the items in the list are recognized as attribute aliases. For example, to specify the alias surname for the attribute sn, you would change the schema definition for sn from:

```
attributeTypes=( 2.5.4.4 NAME 'sn' SUP name )
```

to:

```
attributeTypes=( 2.5.4.4 NAME ( 'sn' 'surname' ) SUP name )
```

See Also: For more information regarding attribute alias rules, managing attribute aliases using command-line tools, and using attribute aliases refer to the "Attribute Aliases In the Directory" section in *Oracle Fusion Middleware Administrator's Guide for Oracle Internet Directory*

Matching Rules

Matching rules are the rules for matching two attribute values that comply with the same attribute syntax. Oracle Internet Directory recognizes the following matching rule definitions in the schema.

- accessDirectiveMatch
- IntegerMatch
- bitStringMatch
- numericStringMatch
- caseExactMatch
- objectIdentifierFirstComponentMatch
- caseExactIA5Match
- ObjectIdentifierMatch
- caseIgnoreIA5Match
- OctetStringMatch
- caseIgnoreListMatch
- presentationAddressMatch
- caseIgnoreMatch
- protocolInformationMatch
- caseIgnoreOrderingMatch
- telephoneNumberMatch
- distinguishedNameMatch
- uniqueMemberMatch
- generalizedTimeMatch
- generalizedTimeOrderingMatch
- orclpkimatchingrule

Of the matching rules in the previous list, Oracle Internet Directory actually enforces the following when it compares attribute values:

- distinguishedNameMatch
- caseExactMatch
- caseIgnoreMatch
- numericStringMatch
- IntegerMatch
- telephoneNumberMatch
- orclpkimatchingrule

Sizing of Attribute Values

Attribute syntax does not put any specific size constraint on attribute values. You can, however, specify the size of the attribute value when defining the attribute. Some attributes in Oracle Internet Directory may have size constraints defined, however length characteristics of an attribute are not enforced.

For example, this syntax limits the attribute `foo` size to 64, but this size limit is not enforced in Oracle Internet Directory:

```
(object_identifier_of_attribute NAME 'foo' EQUALITY caseIgnoreMatch SYNTAX
'object_identifier_of_syntax{64}' )
```

Single-Valued and Multi-Valued Attributes

By default, most attributes are multi-valued. This means that an entry can contain the same attribute with multiple values. For single-valued attributes, only one instance of the attribute can be specified in an entry. For example, the attribute `orclObjectGUID` attribute can only have one possible value.

Attribute Usage

Attribute Usage defines how the attribute is used in the directory. The attribute usage types are:

- **User applications attribute**—Default attribute usage if not explicitly defined for the attribute.
- **System Operational attribute**—Attributes that control operation of the directory itself.

See Also: "Managing System Operational Attributes" in *Oracle Fusion Middleware Administrator's Guide for Oracle Internet Directory*

Not User Modifiable

Attributes that are designated as "not user modifiable" can only be modified by the directory server. They cannot be modified by any other user or process.

6.1.3 LDAP Controls

As an LDAP Version 3 directory, Oracle Internet Directory extends the standard LDAP operations by using controls. These are extra pieces of information carried along with existing operations, altering the behavior of the operation. When a client application passes a control along with the standard LDAP command, the behavior of the commanded operation is altered accordingly.

The controls supported by Oracle Internet Directory 11g Release 1 (11.1.1) are listed in [Table 6–2, "Request Controls Supported by Oracle Internet Directory"](#) and [Table 6–3, "Response Controls Supported by Oracle Internet Directory"](#).

Table 6–2 Request Controls Supported by Oracle Internet Directory

Object Identifier	Name	Description
2.16.840.1.113894.1.8.39	Computed Attribute Value Uniqueness	<p>Allows computed attribute value uniqueness for an entry-based combination of multiple attribute values. Usually, attribute uniqueness is configured only for a single attribute. An application that requires uniqueness for a combination of attribute values can send this control, and Oracle Internet Directory server ensures that the computed attribute value is unique across the directory during an operation such as <code>ldapadd</code>, <code>ldapmodify -add</code>, or <code>ldapmodify -replace</code>.</p> <p>If an entry with the computed value already exists, Oracle Internet Directory server returns the LDAP error code: <code>LDAP_ALREADY_EXISTS = 0x44</code>.</p> <p>For example, in a multi-tenant environment, the UID attribute of a user must be unique for a specific tenant but not necessarily unique across the directory. An application creates an LDAP entry with a computed attribute named <code>TenantID_UID</code>, where <code>TenantID</code> is the identifier of the tenant and <code>UID</code> is the attribute. The application that creates the LDAP entry sends this control, and if an entry with the computed attribute already value already exists, Oracle Internet Directory server returns the <code>LDAP_ALREADY_EXISTS</code> error code.</p>
2.16.840.1.113730.3.4.9	OID_SEARCH_VLV_REQ_CONTROL	<p>Allows a client to specify that the server return, for a given LDAP search, a contiguous subset of a large search result set. It can be used to go through the search results one page at a time, which allows a client to retrieve results more quickly and prevents the client from needing to store too many search results at a time.</p> <p>The server returns the <code>OID_SEARCH_VLV_RES_CONTROL 2.16.840.1.113730.3.4.10</code>.</p> <p>The <code>OID_SEARCH_VLV_REQ_CONTROL</code> works only in conjunction with the <code>SORT</code> control (<code>ldapsearch -T</code> argument). If you do not include a <code>SORT</code> control, the request returns LDAP error code 53 - Search operation with VLV request control is missing <code>SORT</code> request control.</p> <p>The <code>SORT</code> control can contain any sort specification valid for the server. When the <code>SORT</code> control is used with the <code>OID_SEARCH_VLV_REQ_CONTROL</code>, the server does not return the complete set of sorted search results, but instead returns a contiguous subset of those entries specified in the control using a target entry as a reference point for results.</p> <p>For more information, see "LDAP Extensions for Scrolling View Browsing of Search Results" at http://tools.ietf.org/html/draft-ietf-ldapext-ldapv3-ylv-09.</p>
1.2.840.113556.1.4.319	OID_SEARCH_PAGING_CONTROL	See the "Extensions to the LDAP Protocol" chapter in Oracle Fusion Middleware Application Developer's Guide for Oracle Identity Management
1.2.840.113556.1.4.473	OID_SEARCH_SORTING_REQUEST_CONTROL	See the "Extensions to the LDAP Protocol" chapter in Oracle Fusion Middleware Application Developer's Guide for Oracle Identity Management
2.16.840.1.113730.3.4.2	GSL_MANAGE_DSA_CONTROL	Used to manage referrals, dynamic groups, and alias objects in Oracle Internet Directory. For more information, please see RFC 3296, "Named Subordinate References in Lightweight Directory Access Protocol (LDAP) Directories," at http://www.ietf.org .

Table 6–2 (Cont.) Request Controls Supported by Oracle Internet Directory

Object Identifier	Name	Description
2.16.840.1.113894.1.8.1	OID_RESET_PROXYCONTROL_IDENTITY	Used to perform a proxy switch of an identity on an established LDAP connection. For example, suppose that Application A connects to the directory server and then wishes to switch to Application B. It can simply do a rebind by supplying the credentials of Application B. However, there are times when the proxy mechanism for the application to switch identities could be used even when the credentials are not available. With this control, Application A can switch to Application B provided Application A has the privilege in Oracle Internet Directory to proxy as Application B.
2.16.840.1.113894.1.8.2	OID_APPLYUSEPASSWORD_POLICY	Sent by applications that require Oracle Internet Directory to check for account lockout before sending the verifiers of the user to the application. If Oracle Internet Directory detects this control in the verifier search request and the user account is locked, then Oracle Internet Directory does not send the verifiers to the application. It sends an appropriate password policy error.
2.16.840.1.113894.1.8.3	CONNECT_BY	See the "Extensions to the LDAP Protocol" chapter in Oracle Fusion Middleware Application Developer's Guide for Oracle Identity Management
2.16.840.1.113894.1.8.4	OID_CLIENT_IP_ADDRESS	Intended for a client to send the end user IP address if IP lockout is to be enforced by Oracle Internet Directory.
2.16.840.1.113894.1.8.5	GSL_REQDATTR_CONTROL	Used with dynamic groups. Directs the directory server to read the specific attributes of the members rather than the membership lists.
2.16.840.1.113894.1.8.6	PasswordStatusRequest Control	When packaged as part of the LDAP Bind/Compare operation request, this control causes the server to generate a password policy response control. The actual response control depends on the situation. Cases include imminent password expiration, number of grace logins remaining, password expired, and account locked.
2.16.840.1.113894.1.8.14	OID_DYNAMIC_VERIFIER_REQUEST_CONTROL	The request control that the client sends when it wants the server to create a dynamic password verifier. The server uses the parameters in the request control to construct the verifier.
2.16.840.1.113894.1.8.16	AccountStatusRequestControl	When packaged with the LDAP search operation associated with the authentication process, the Oracle Internet Directory returns a password policy response control to inform the client application of account state related information like account lockout, password expiration etc. The application can then parse and enforce the results.
2.16.840.1.113894.1.8.23	GSL_CERTIFICATE_CONTROL"	Certificate search control. The request control that the client sends to specify how to search for a user certificate. See the appendix "Searching the Directory for User Certificates" in <i>Oracle Fusion Middleware Administrator's Guide for Oracle Internet Directory</i> .
2.16.840.1.113894.1.8.29	EffectivePolicyControl	This control is packaged as part of an LDAP base search, where the base DN is that of the user entry being tested. The entry need not exist in the directory at the time. Passing this control results in the return of the LDAP entry describing the applicable password policy, assuming the entity performing the search has the access rights to view the password policy entry. If the desired password is provided as the optional testPassword parameter, the directory server returns the response control 2.16.840.1.113894.1.8.32.
2.16.840.1.113894.1.8.36	DelSubtreeControl	When this control is sent with a delete operation, it causes the deletion of the entire subtree below the DN provided. Any user having necessary privileges can perform this operation.
1.3.6.1.1.21.2	Transaction Specification Control	This is an LDAPControl indicating association of an operation to a transaction by means of the transaction identifier, which is the value of this control. Its criticality is TRUE.

Table 6–3 Response Controls Supported by Oracle Internet Directory

Object Identifier	Name	Description
2.16.840.1.113730.3.4.10	OID_SEARCH_VLV_RES_CONTROL	The server sends this control in response to an OID_SEARCH_VLV_REQ_CONTROL 2.16.840.1.113730.3.4.9.
2.16.840.1.113894.1.8.7	OID_PASSWORD_EXPWARNING_CONTROL	Password policy control. Response control that the server sends when the pwdExpireWarning attribute is enabled and the client sends the request control. The response control value contains the time in seconds to password expiration.
2.16.840.1.113894.1.8.8	OID_PASSWORD_GRACELOGIN_CONTROL	Password policy control. The response control that the server sends when grace logins are configured and the client sends a request control. The response control value contains the remaining number of grace logins.
2.16.840.1.113894.1.8.9	OID_PASSWORD_MUSTCHANGE_CONTROL	Password policy control. The response control that the server sends when forced password reset is enabled and the client sends the request control. The client must force the user to change the password upon receipt of this control.
2.16.840.1.113894.1.8.15	OID_DYNAMIC_VERIFIER_RESPONSE_CONTROL	The response control that the server sends to the client when an error occurs. The response control contains the error code.
2.16.840.1.113894.1.8.32	PasswordValidationControl	The server sends this in response to control 2.16.840.1.113894.1.8.29 when the desired password is provided as the optional testPassword parameter. A client application can parse the validationResult to determine whether the password can be accepted by the server ("Success") or the reason it has been rejected. The same type of error message generated during a failed LDAP modify operation on userpassword is returned as the value.

6.2 Overview of Oracle Identity Management Schema Elements

This section lists the Oracle Identity Management schema elements by category. Each category contains a list of applicable LDAP object classes and attributes that link to the detailed information for the specified attribute or object class. The schema elements are grouped into the following categories:

- [System Operational Schema Elements](#)
- [Oracle Internet Directory Configuration Schema Elements](#)
- [Audit and Error Logging Schema Elements](#)
- [Server Manageability Schema Elements](#)
- [Oracle Directory Replication Schema Elements](#)
- [Oracle Directory Integration and Provisioning Schema Elements](#)
- [Oracle Delegated Administration Services Schema Elements](#)
- [Oracle Application Server Certificate Authority and PKI Schema Elements](#)
- [Application Schema Elements](#)
- [Resource Schema Elements](#)
- [Plug-in Schema Elements](#)
- [Directory User Agents Schema Elements](#)
- [User, Group, and Subscriber Schema Elements](#)
- [Password Policy Schema Elements](#)

- [Password Verifier Schema Elements](#)

6.2.1 System Operational Schema Elements

System operational schema elements are those used by the directory server. System operational object classes are used by the directory server to create entries that pertain to directory server operations. Certain system operational attributes may be available for use on every entry in the directory, regardless of whether they are defined for the object class of the entry. This section contains the following topics:

- [Directory Schema](#)
- [Access Control](#)
- [Change Logs](#)
- [Password Policy](#)

6.2.1.1 Directory Schema

This section lists the operational attributes and object classes for the directory schema.

Attributes

[attributeTypes](#), [contentRules](#), [ldapSyntaxes](#), [matchingRules](#), [objectClasses](#)

Object Classes

[subschema](#)

6.2.1.2 Access Control

This section lists the operational attributes for access control.

Attributes

[orclACI](#), [orclEntryLevelACI](#)

6.2.1.3 Change Logs

This section lists the operational attributes for change logs.

Attributes

[createTimestamp](#), [creatorsName](#), [modifiersName](#), [modifyTimestamp](#)

6.2.1.4 Password Policy

This section lists the operational attributes for password policy.

Attributes

[orclPwdAccountUnlock](#), [orclPwdIPAccountLockedTime](#), [orclPwdIPFailureTime](#), [orclRevPwd](#), [orclUnsyncRevPwd](#), [pwdAccountLockedTime](#), [pwdChangedTime](#), [pwdExpirationWarned](#), [pwdFailureTime](#), [pwdGraceUseTime](#), [pwdHistory](#), [pwdReset](#)

6.2.2 Oracle Internet Directory Configuration Schema Elements

This section lists the schema elements that pertain to the configuration of Oracle Internet Directory. It contains the following topics:

- [Oracle Internet Directory Server](#)

- Oracle Context
- Oracle Network Services
- Garbage Collection
- Attribute Uniqueness

6.2.2.1 Oracle Internet Directory Server

This section lists the attributes and object classes that pertain to the configuration of Oracle Internet Directory server.

Attributes

namingContexts, orclAnonymousBindsFlag, orclCatalogEntryDN, orclCompatibleVersion, orclCryptoScheme, orclDBType, orclDebugFlag, orclDebugForceFlush, orclDebugOp, orclDIPRepository, orclDirectoryVersion, orclDITRoot, orclEcacheEnabled, orclEcacheMaxEntries, orclEcacheMaxSize, orclEnableGroupCache, orclEventLevel, orclGUPassword, orclHostname, orclIndexedAttribute, orclIpAddress, orclLDAPConnTimeout, orclMatchDnEnabled, orclMaxCC, orclNonSSLPort, orclNormDN, orclNwrvTimeout, orclPKIMatchingRule, orclPrName, orclPrPassword, orclReplAgreements, orclReplicaID, orclSASLAuthenticationMode, orclSASLCipherChoice, orclSASLMechanism, orclsDumpFlag, orclServerMode, orclServerProcs, orclSizeLimit, orclSkewedAttribute, orclSkipRefInSQL, orclSSLAuthentication, orclSSLCipherSuite, orclSSLEnable, orclSSLPort, orclSSLVersion, orclSSLWalletURL, orclStatsDN, orclStatsFlag, orclStatsLevel, orclStatsOp, orclStatsPeriodicity, orclSUAccountLocked, orclSuffix, orclSULoginFailureCount, orclSUName, orclSUPassword, orclTimeLimit, orclTLimitMode, orclUpgradeInProgress

Object Classes

orclDSAConfig, orclIndexOC, orclLDAPInstance, orclLDAPSubConfig, subentry, subregistry

6.2.2.2 Oracle Context

This section lists the attributes and object classes that pertain to the configuration of the Oracle Context.

Attributes

orclCommonAutoRegEnabled, orclCommonContextMap, orclCommonDefaultUserCreateBase, orclCommonGroupCreateBase, orclCommonNamingAttribute, orclCommonNicknameAttribute, orclCommonSASLRealm, orclCommonUserSearchBase, orclDefaultSubscriber, orclProductVersion, orclSubscriberNickNameAttribute, orclSubscriberSearchBase, orclUserObjectClasses, orclVersion

Object Classes

orclCommonAttributes, orclCommonAttributesV2, orclRootContext, orclSchemaVersion

6.2.2.3 Oracle Network Services

This section lists the attributes and object classes that pertain to the configuration of Oracle Network Services.

Attributes

labeledURI, orclActiveEndDate, orclActiveStartdate, orclAssocDB, orclAssocIasInstance, orclEnabled, orclFlexAttribute1, orclIsEnabled, orclMasterNode, orclNetDescName, orclNetDescString, orclOracleHome, orclServiceInstanceLocation, orclServiceMember, orclServiceSubscriptionLocation, orclServiceSubType, orclServiceType, orclSID, orclSuiteType, orclSystemName, orclVersion

Object Classes

orclService, orclServiceInstance, orclServiceInstanceReference, orclServiceRecipient, orclServiceSuite, orclServiceSubscriptionDetail

6.2.2.4 Garbage Collection

This section lists the attributes and object classes that pertain to the configuration of garbage collection.

Attributes

orclPurgeBase, orclPurgeDebug, orclPurgeEnable, orclPurgeFileLoc, orclPurgeFileName, orclPurgeFilter, orclPurgeInterval, orclPurgeNow, orclPurgePackage, orclPurgeStart, orclPurgeTargetAge, orclPurgeTranSize

Object Classes

orclPurgeConfig, tombstone

6.2.2.5 Attribute Uniqueness

This section lists the attributes and object classes that pertain to the configuration of attribute uniqueness.

Attributes

orclUniqueAttrName, orclUniqueEnable, orclUniqueObjectClass, orclUniqueScope, orclUniqueSubtree

Object Classes

orclUniqueConfig

6.2.3 Audit and Error Logging Schema Elements

This section lists the attributes and object classes that pertain to audit logs and error logs.

Attributes

orclAuditAttribute, orclAuditMessage, orclDBConnCreationFailed, orclDNSUnavailable, orclEventTime, orclEventType, orclFDIncreaseError, orclMaxFDLimitReached, orclMaxProcessLimitReached, orclMemAllocError, orclNWCongested, orclNwUnavailable, orclOpResult, orclORA28error, orclORA3113error, orclORA3114error, orclSequence, orclThreadSpawnFailed, orclUserDN

Object Classes

orclAuditOC, orclEventLog, orclEvents, orclSysResourceEvents

6.2.4 Server Manageability Schema Elements

This section lists the schema elements for Oracle Internet Directory server manageability statistics.

Attributes

[orclACLResultsLatency](#), [orclActiveConn](#), [orclActiveThreads](#), [orclAttrACLEvalLatency](#), [orclAuditMessage](#), [orclBERgenLatency](#), [orclIDBLatency](#), [orclDIMEonlyLatency](#), [orclEcacheHitRatio](#), [orclEcacheNumEntries](#), [orclEcacheSize](#), [orclEntryACLEvalLatency](#), [orclEventTime](#), [orclEventType](#), [orclFilterACLEvalLatency](#), [orclFrontLatency](#), [orclGenObjLatency](#), [orclGetNearACLLatency](#), [orclHostname](#), [orclIdleConn](#), [orclIdleThreads](#), [orclInitialServerMemSize](#), [orclIpAddress](#), [orclLDAPInstanceID](#), [orclLDAPPProcessID](#), [orclOpAbandoned](#), [orclOpCompleted](#), [orclOpenConn](#), [orclOpFailed](#), [orclOpInitiated](#), [orclOpLatency](#), [orclOpPending](#), [orclOpResult](#), [orclOpSucceeded](#), [orclOpTimedOut](#), [orclQueueDepth](#), [orclQueueLatency](#), [orclReadWaitThreads](#), [orclSequence](#), [orclServerAvgMemGrowth](#), [orclSMSpec](#), [orclSQLexFetchLatency](#), [orclSQLGenReusedParsed](#), [orclTcpConnToClose](#), [orclTcpConnToShutDown](#), [orclTotFreePhyMem](#), [orclTraceDimensionLevel](#), [orclTraceFileLocation](#), [orclTraceFileSize](#), [orclTraceLevel](#), [orclTraceMode](#), [orclUserDN](#), [orclWriteWaitThreads](#)

Object Classes

[orclGeneralStats](#), [orclHealthStats](#), [orclPerfStats](#), [orclSecRefreshEvents](#), [orclSM](#), [orclTraceConfig](#), [orclUserStats](#)

6.2.5 Oracle Directory Replication Schema Elements

This section lists the schema elements for directory replication.

Attributes

[orclAgreementId](#), [orclChangeLogLife](#), [orclChangeRetryCount](#), [orclCompatibleVersion](#), [orclDirReplGroupAgreement](#), [orclDirReplGroupDSAs](#), [orclExcludedAttributes](#), [orclExcludedNamingContexts](#), [orclHIQSchedule](#), [orclHostname](#), [orclIncludedNamingContexts](#), [orclLastAppliedChangeNumber](#), [orclLDAPConnKeepALive](#), [orclPilotMode](#), [orclPurgeSchedule](#), [orclReplicaDN](#), [orclReplicaID](#), [orclReplicaSecondaryURI](#), [orclReplicaState](#), [orclReplicationProtocol](#), [orclReplicaType](#), [orclReplicaURI](#), [orclReplicaVersion](#), [orclThreadsPerSupplier](#), [orclUpdateSchedule](#), [pilotStartTime](#)

Object Classes

[orclReplAgreementEntry](#), [orclReplInstance](#), [orclReplicaSubentry](#), [orclReplNameCtxConfig](#), [orclReplSubConfig](#)

6.2.6 Oracle Directory Integration and Provisioning Schema Elements

This section lists the schema elements for Oracle Directory Integration and Provisioning. It contains the following topics:

- [Applications](#)
- [Change Logs](#)
- [Events and Objects](#)
- [Plug-ins and Interfaces](#)
- [Server Configuration](#)

- Profiles
- Schema
- Active Directory Users

6.2.6.1 Applications

This section lists the attributes and object classes for Oracle Directory Integration and Provisioning applications.

Attributes

orclApplicationType, orclInterval, orclODIPAgent, orclODIPApplicationName, orclODIPCommand, orclODIPDbConnectInfo, orclODIPEventSubscriptions, orclOwnerGUID, orclStatus, orclVersion

Object Classes

orclODIPApplicationCommonConfig, orclODIPAppSubscription

6.2.6.2 Change Logs

This section lists the attributes and object classes for Oracle Directory Integration and Provisioning change logs.

Attributes

orclLastAppliedChangeNumber, orclSubscriberDisable, serverName, userPassword

Object Classes

orclChangeSubscriber

6.2.6.3 Events and Objects

This section lists the attributes and object classes for Oracle Directory Integration and Provisioning events and objects.

Attributes

orclODIPAttributeMappingRules, orclODIPEventFilter, orclODIPFilterAttrCriteria, orclODIPMustAttrCriteria, orclODIPObjectCriteria, orclODIPObjectEvents, orclODIPObjectName, orclODIPObjectSyncBase, orclODIPOperationMode, orclODIPOptAttrCriteria, orclODIPProvEventCriteria, orclODIPProvEventLDAPChangeType, orclODIPProvEventObjectType, orclODIPProvEventRule, orclODIPProvEventRuleDTD, orclStatus

Object Classes

orclODIPEventContainer, orclODIPObject, orclODIPProvEventDefn, orclODIPProvEventTypeConfig

6.2.6.4 Plug-ins and Interfaces

This section lists the attributes and object classes for Oracle Directory Integration and Provisioning plug-ins and interfaces.

Attributes

orclODIPPluginAddInfo, orclODIPPluginConfigInfo, orclODIPPluginEvents, orclODIPPluginExecData, orclODIPPluginExecName, orclODIPProfileProvSubscriptionMode, orclODIPProfileStatusUpdate,

orclODIPProvInterfaceFilter, orclODIPProfileInterfaceType,
orclODIPProvInterfaceProcessor, orclStatus

Object Classes

orclODIPProvInterfaceDetails, orclODIPPlugin, orclODIPPluginContainer

6.2.6.5 Server Configuration

This section lists the attributes and object classes for configuring the Oracle Directory Integration and Provisioning server.

Attributes

cn, orclCompatibleVersion, orclHostname, orclODIPConfigDNs,
orclODIPConfigRefreshFlag, orclODIPInstanceStatus, orclODIPProfileExecGroupID,
orclODIPSearchCountLimit, orclODIPSearchTimeLimit, orclODIPServerCommitSize,
orclODIPServerDebugLevel, orclODIPServerRefreshIntvl, orclODIPServerSSLMode,
orclODIPServerWalletLoc, orclSSLEnable, orclVersion, seeAlso, userPassword

Object Classes

orclODIPServerConfig, orclODISConfig, orclODIServer, orclODISInstance

6.2.6.6 Profiles

This section the attributes and object classes for Oracle Directory Integration and Provisioning synchronization and provisioning profiles.

Attributes

cn, orclODIPAgentConfigInfo, orclODIPAgentControl, orclODIPAgentExeCommand,
orclODIPAgentHostName, orclODIPAgentName, orclODIPAgentPassword,
orclODIPAttributeMappingRules, orclODIPBootStrapStatus,
orclODIPConDirAccessAccount, orclODIPConDirAccessPassword,
orclODIPConDirLastAppliedChgNum, orclODIPConDirMatchingFilter,
orclODIPConDirURL, orclODIPEncryptedAttrKey, orclODIPInterfaceType,
orclODIPLastExecutionTime, orclODIPLastSuccessfulExecutionTime,
orclODIPOIDMatchingFilter, orclODIPProfileDebugLevel,
orclODIPProfileExecGroupID, orclODIPProfileInterfaceAdditionalInformation,
orclODIPProfileInterfaceConnectInformation, orclODIPProfileInterfaceName,
orclODIPProfileInterfaceType, orclODIPProfileInterfaceVersion,
orclODIPProfileLastAppliedAppEventID, orclODIPProfileLastProcessingTime,
orclODIPProfileLastSuccessfulProcessingTime, orclODIPProfileMaxErrors,
orclODIPProfileMaxEventsPerInvocation, orclODIPProfileMaxEventsPerSchedule,
orclODIPProfileMaxRetries, orclODIPProfileName, orclODIPProfileProcessingErrors,
orclODIPProfileProcessingStatus, orclODIPProfileSchedule,
orclODIPProvisioningAppGUID, orclODIPProvisioningAppName,
orclODIPProvisioningEventMappingRules,
orclODIPProvisioningEventPermittedOperations,
orclODIPProvisioningEventSubscription, orclODIPProvisioningOrgGUID,
orclODIPProvisioningOrgName, orclODIPSchedulingInterval,
orclODIPSynchronizationErrors, orclODIPSynchronizationMode,
orclODIPSynchronizationStatus, orclODIPSyncRetryCount, orclPasswordAttribute,
orclStatus, orclVersion, userPassword

Object Classes

orclODIPIntegrationProfile, orclODIPProfile, orclODIPProvisioningIntegrationProfile, orclODIPProvisioningIntegrationProfileV2, orclODIPProvisioningIntegrationOutBoundProfile, orclODIPProvisioningIntegrationOutBoundProfileV2

6.2.6.7 Schema

This section lists the attributes and object classes for Oracle Directory Integration and Provisioning schema information.

Attributes

orclODIPApplicationsLocation, orclODIPInstancesLocation, orclODIPObjDefnLocation, orclODIPProvProfileLocation, orclODIPRootLocation, orclODIPSchemaVersion, orclODIPServerConfigLocation, orclODIPSyncProfileLocation

Object Classes

orclODIPSchemaDetails

6.2.6.8 Active Directory Users

The following attributes and object classes are used for users that are imported into Oracle Internet Directory from Microsoft Active Directory using Oracle Directory Integration and Provisioning.

Attributes

orclObjectGUID, orclObjectSID, orclSAMAccountName, orclUserPrincipalName

Object Classes

orclADGroup, orclADUser, orclNTUser

6.2.7 Oracle Delegated Administration Services Schema Elements

This section lists the attributes and object classes for Oracle Delegated Administration Services.

Attributes

orclDASAdminModifiable, orclDASAttrDispOrder, orclDASAttrName, orclDASEnableProductLogo, orclDASEnableSubscriberLogo, orclDASIsEnabled, orclDASIsMandatory, orclDASIsPersonal, orclDASLOV, orclDASPublicGroupDNs, orclDASSearchable, orclDASSearchColIndex, orclDASSearchFilter, orclDASSearchSizeLimit, orclDASSelfModifiable, orclDASUIType, orclDASURL, orclDASURLBase, orclDASValidatePwdReset, orclDASViewable

Object Classes

orclDASAppContainer, orclDASAttrCategory, orclDASConfigAttr, orclDASConfigPublicGroup, orclDASLOVVal, orclDASOperationURL, orclDASSubscriberContainer

6.2.8 Oracle Application Server Certificate Authority and PKI Schema Elements

This section lists the attributes and object classes that pertain to public key infrastructure (PKI), certificates, and Oracle Application Server Certificate Authority.

Attributes

[orclCertExtensionAttribute](#), [orclCertExtensionOID](#), [orclCertificateHash](#), [orclCertificateMatch](#), [orclCertMappingAttribute](#), [orclPKINextUpdate](#), [orclPKIValMecAttr](#), [x509issuer](#)

Object Classes

[orclCertIdMapping](#), [orclPKICRL](#), [orclPKIValMecCl](#)

6.2.9 Application Schema Elements

This section lists the attributes and object classes that pertain to applications.

Attributes

[authPassword](#), [description](#), [labeledURI](#), [orclAppFullName](#), [orclApplicationCommonName](#), [orclCategory](#), [orclDBSchemaIdentifier](#), [orclOwnerGUID](#), [orclPasswordVerifier](#), [orclResourceIdentifier](#), [orclTrustedApplicationGroup](#), [orclVersion](#), [protocolInformation](#), [seeAlso](#), [userCertificate;binary](#), [userPassword](#), [userPKCS12](#)

Object Classes

[orclApplicationEntity](#), [orclAppSpecificUserInfo](#), [orclAppUserEntry](#)

6.2.10 Resource Schema Elements

This section lists the attributes and object classes that pertain to resources.

Attributes

[description](#), [displayName](#), [javaClassName](#), [orclConnectionFormat](#), [orclFlexAttribute1](#), [orclFlexAttribute2](#), [orclFlexAttribute3](#), [orclOwnerGUID](#), [orclPasswordAttribute](#), [orclResourceName](#), [orclResourceTypeName](#), [orclResourceViewers](#), [orclUserIDAttribute](#), [orclUserModifiable](#)

Object Classes

[orclResourceDescriptor](#), [orclResourceType](#)

6.2.11 Plug-in Schema Elements

This section lists the attributes and object classes for configuring Plug-ins for Oracle Internet Directory.

Attributes

[orclPluginAttributeList](#), [orclPluginCheckEntryExist](#), [orclPluginEnable](#), [orclPluginEntryProperties](#), [orclPluginIsReplace](#), [orclPluginKind](#), [orclPluginLDAPOperation](#), [orclPluginName](#), [orclPluginPort](#), [orclPluginRequestGroup](#), [orclPluginRequestNegGroup](#), [orclPluginResultCode](#), [orclPluginSASLCallBack](#), [orclPluginSearchNotFound](#), [orclPluginShareLibLocation](#), [orclPluginSubscriberDNList](#), [orclPluginTiming](#), [orclPluginType](#), [orclPluginVersion](#), [userPassword](#)

Object Classes

[orclPluginConfig](#), [orclPluginContainer](#), [orclPluginUser](#)

6.2.12 Directory User Agents Schema Elements

This section lists the attributes and object classes for configuring directory user agents (DUAs).

Attributes

[attributeMap](#), [authenticationMethod](#), [bindTimeLimit](#), [cn](#), [credentialLevel](#), [defaultSearchBase](#), [defaultSearchScope](#), [defaultServerList](#), [followReferrals](#), [objectClass](#), [objectClassMap](#), [preferredServerList](#), [profileTTL](#), [serviceAuthenticationMethod](#), [serviceCredentialLevel](#), [serviceSearchDescriptor](#)

Object Classes

[duaConfigProfile](#)

6.2.13 User, Group, and Subscriber Schema Elements

This section lists the attributes and object classes used for users, groups, and subscribers. It contains the following topics:

- [Groups](#)
- [Dynamic Groups](#)
- [Users](#)

6.2.13.1 Groups

Oracle Internet Directory uses the standard object classes `groupOfNames` and `groupOfUniqueNames` as defined in RFC 2256. In addition to the standard attributes and object classes, the following are also used for groups.

Attributes

[displayName](#), [mail](#), [orclGlobalID](#), [orclIsVisible](#)

Object Classes

[orclGroup](#)

6.2.13.2 Dynamic Groups

This section lists the attributes and object classes for dynamic groups.

Attributes

[labeledURI](#), [mail](#), [orclConnectByAttribute](#), [orclConnectBySearchBase](#), [orclConnectByStartingValue](#)

Object Classes

[orclDynamicGroup](#)

6.2.13.3 Users

Oracle Internet Directory uses the standard object classes `person` and `inetOrgPerson` as defined in RFC 2256. In addition to the standard attributes and object classes, the following are also used for users.

Attributes

[authPassword](#), [c](#), [jpegPhoto](#), [krbPrincipalName](#), [middleName](#), [orclActiveEndDate](#), [orclActiveStartdate](#), [orclContact](#), [orclDateOfBirth](#), [orclDefaultProfileGroup](#), [orclDisplayPersonalInfo](#), [orclGender](#), [orclHireDate](#), [orclHostedCreditCardExpireDate](#), [orclHostedCreditCardNumber](#), [orclHostedCreditCardType](#), [orclHostedDunsNumber](#), [orclHostedPaymentTerm](#), [orclIsEnabled](#), [orclIsVisible](#), [orclMaidenName](#), [orclPassword](#), [orclPasswordHint](#), [orclPasswordHintAnswer](#), [orclPasswordVerifier](#), [orclPKCS12Hint](#), [orclSAMAccountName](#), [orclSearchFilter](#), [orclSubscriberFullName](#), [orclSubscriberType](#), [orclTimeZone](#), [orclTxnMaxOperations](#), [orclVersion](#), [orclWirelessAccountNumber](#), [orclWorkflowNotificationPref](#), [userPKCS12](#)

Object Classes

[orclSubscriber](#), [orclUserV2](#)

6.2.14 Password Policy Schema Elements

This section lists the attributes and object classes that pertain to password policy configuration.

Attributes

[cn](#), [displayName](#), [orclPwdAllowHashCompare](#), [orclPwdAlphaNumeric](#), [orclPwdEncryptionEnable](#), [orclPwdIllegalValues](#), [orclPwdIPLockout](#), [orclPwdIPLockoutDuration](#), [orclPwdIPMaxFailure](#), [orclPwdPolicyEnable](#), [pwdAllowUserChange](#), [pwdCheckSyntax](#), [pwdExpireWarning](#), [pwdFailureCountInterval](#), [pwdGraceLoginLimit](#), [pwdInHistory](#), [pwdLockout](#), [pwdLockoutDuration](#), [pwdMaxAge](#), [pwdMaxFailure](#), [pwdMinAge](#), [pwdMinLength](#), [pwdMustChange](#), [pwdSafeModify](#)

Object Classes

[pwdpolicy](#)

6.2.15 Password Verifier Schema Elements

This section lists the attributes and object classes that pertain to password verifiers.

Attributes

[cn](#), [displayName](#), [orclAppId](#), [orclPwdVerifierParams](#), [owner](#)

Object Classes

[orclPwdVerifierProfile](#)

LDAP Object Class Reference

This chapter contains reference information about the object classes used for Oracle Identity Management. It contains the following topics:

- [Section 7.1, "Standard LDAP Object Classes"](#)
- [Section 7.2, "Oracle Identity Management Object Class Reference"](#)

For a list of object classes grouped by functional categories, see "[Overview of Oracle Identity Management Schema Elements](#)" on page 6-8.

7.1 Standard LDAP Object Classes

Oracle Internet Directory supports the following standard LDAP object classes as defined in the Internet Engineering Task Force (IETF) Requests for Comments (RFC) specifications.

Details of RFC specifications can be found on the IETF Web site at: <http://www.ietf.org>.

Table 7-1 Standard LDAP Object Classes Used By Oracle Internet Directory

Object Class Name	Specification
accessControlSubentry	RFC 1274
account	RFC 1274
alias	RFC 2256
applicationEntity	RFC 2256
applicationProcess	RFC 2256
bootableDevice	RFC 2307
certificationAuthority	RFC 2256
certificationAuthority-V2	RFC 2256
collectiveAttributeSubentry	RFC 3671
country	RFC 2256
crlDistributionPoint	RFC 2256
device	RFC 2256
dmd	RFC 2256
dnsDomain	RFC 1274
documentSeries	RFC 1274

Table 7-1 (Cont.) Standard LDAP Object Classes Used By Oracle Internet Directory

Object Class Name	Specification
domain	RFC 1274
domainRelatedObject	RFC 1274
dsa	RFC 1274
extensibleObject	RFC 2252
friendlyCountry	RFC 1274
groupOfNames	RFC 2256
groupOfUniqueNames	RFC 2256
ieee802Device	RFC 2307
inetOrgPerson	RFC 2798
ipHost	RFC 2307
ipNetwork	RFC 2307
ipProtocol	RFC 2307
ipService	RFC 2307
javaContainer	RFC 2713
javaMarshaledObject	RFC 2713
javaNamingReference	RFC 2713
javaObject	RFC 2713
javaSerializedObject	RFC 2713
labeledURIObject	RFC 2079
locality	RFC 2256
newPilotPerson	RFC 2377
nisDomainObject	RFC 2307
nisKeyObject	RFC 2307
nisMap	RFC 2307
nisNetgroup	RFC 2307
nisObject	RFC 2307
oldQualityLabelledData	RFC 2307
oncRpc	RFC 2307
organization	RFC 2256
organizationalPerson	RFC 2256
organizationalRole	RFC 2256
organizationalUnit	RFC 2256
person	RFC 2256
pilotDSA	RFC 2256
pilotObject	RFC 2256
pilotOrganization	RFC 2256
posixAccount	RFC 2307

Table 7-1 (Cont.) Standard LDAP Object Classes Used By Oracle Internet Directory

Object Class Name	Specification
posixGroup	RFC 2307
referral	RFC 3296
residentialPerson	RFC 2256
room	RFC 1274
shadowAccount	RFC 2307
simpleSecurityObject	RFC 1274
strongAuthenticationUser	RFC 2256

7.2 Oracle Identity Management Object Class Reference

This section contains an alphabetical listing of the Oracle Identity Management object classes. These are the object classes used to create entries pertaining to Oracle Internet Directory, Oracle Directory Integration and Provisioning, Oracle Delegated Administration Services, Oracle Single Sign-On, and Oracle Application Server Certificate Authority. For more information about an attribute or the superior of an object class, click the link of the attribute name or superior object class name.

7.2.1 duaConfigProfile

Description

Configuration profile for a directory user agent (DUA). A DUA is software that accesses the LDAP directory service on behalf of the directory user. The directory user may be a person or another software element.

Object ID

1.3.6.1.4.1.11.1.3.1.2.4

7.2.23 orclDynamicGroup

Description

Object class that is used to create dynamic groups. A dynamic group is one whose membership, rather than being maintained in a list, is computed on the fly, based on rules and assertions you specify. In the case of `orclDynamicGroup` using `labeleduri` attribute, the members of the list are cached.

Object ID

LDAP Attribute Reference

This chapter contains reference information about the LDAP attributes used for Oracle Identity Management. It contains the following topics:

- [Section 8.1, "Standard LDAP Attributes"](#)
- [Section 8.2, "Oracle Identity Management Attribute Reference"](#)

For a list of attributes grouped by functional categories, see "[Overview of Oracle Identity Management Schema Elements](#)" on page 6-8.

8.1 Standard LDAP Attributes

Oracle Internet Directory supports the following standard LDAP attributes as defined in the Internet Engineering Task Force (IETF) Requests for Comments (RFC) specifications.

Details of RFC specifications can be found on the IETF Web site at: <http://www.ietf.org>.

Table 8–1 Standard LDAP Attributes Used By Oracle Internet Directory

8.2 Oracle Identity Management Attribute Reference

This section contains an alphabetical listing of the Oracle Identity Management attributes. These are the attributes used in entries pertaining to Oracle Internet Directory, Oracle Directory Integration Platform, Oracle Delegated Administration Services, and Oracle Single Sign-On.

Note: Oracle Fusion Middleware 11g Release 1 (11.1.1) does not include Oracle Single Sign-On or Oracle Delegated Administration Services. Oracle Internet Directory 11g Release 1 (11.1.1), however, is compatible with Oracle Single Sign-On and Oracle Delegated Administration Services 10g (10.1.4.3.0) or later.

See Also: The chapter on managing system configuration attributes in *Oracle Fusion Middleware Administrator's Guide for Oracle Internet Directory*.

8.2.1 attributeMap

Description

Attribute mappings used by the POSIX naming directory user agent (DUA).

Syntax

1.3.6.1.4.1.1466.115.121.1.26 (IA5 String)

Matching Rule

caseIgnoreIA5Match

Object ID

1.3.6.1.4.1.11.1.3.1.1.9

8.2.2 attributeTypes

Description

Attribute types supported by the directory.

Syntax

1.3.6.1.4.1.1466.115.121.1.3 (Attribute Type Description)

Matching Rule

objectIdentifierFirstComponentMatch

Object ID

2.5.21.5

Other

Directory operational attribute.

8.2.3 authenticationMethod

Description

Identifies the type of authentication method used to contact the directory server agent (DSA).

Syntax

1.3.6.1.4.1.1466.115.121.1.26 (IA5 String)

Matching Rule

caseIgnoreIA5Match

Object ID

1.3.6.1.4.1.11.1.3.1.1.6

Other

Single-valued attribute.

8.2.4 authPassword

Description

Attribute for storing a password to an Oracle component when that password is the same as that used to authenticate the user to the directory, namely, [userPassword](#). The value in this attribute is synchronized with that in the [userPassword](#) attribute.

Several different applications can require the user to enter the same clear text password used for the directory, but each application may hash it with a different algorithm. In this case, the same clear text password can become the source of several different password verifiers.

This attribute is multivalued and can contain all the other verifiers that different applications use for this user's clear text password. If the `userpassword` attribute is modified, then the `authpassword` values for all applications are regenerated.

Syntax

1.3.6.1.4.1.1466.115.121.1.44{128} (Printable String, 128 character maximum)

Matching Rule

octetStringMatch

Object ID

1.3.6.1.4.1.4203.1.3.4

8.2.5 bindTimeLimit**Description**

Maximum time in seconds a POSIX directory user agent (DUA) should allow for a search to complete.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

1.3.6.1.4.1.11.1.3.1.1.4

Other

Single-valued attribute.

8.2.6 c**Description**

Specifies the country associated with a user's address.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.5.4.6

Other

Single-valued attribute.

8.2.7 changeloginfo**Description**

Attribute that provides additional change log information, such as the value of the client IP address. For example:

```
changeloginfo=clientip=:ffff:10.229.116.104
```

Syntax

1.3.6.1.4.1.1466.115.121.1.15

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.1.1.510

Other

Single-valued attribute.

8.2.8 changestatus

Description

The last change number transported by the replication server.

Syntax

DN

Matching Rule

DistinguishedNameMatch

Object ID

2.16.840.1.113894.1.1.22

8.2.9 cn

Description

The common name (nickname) attribute which contains the name of an object. If the object corresponds to a user, it is typically the user's full name. A cn (common name) isn't unique, whereas a dn (distinguished name) is unique.

For example, if ABC corp employs two people with the name John Smith, one in HR and one in Finance then they both would have a cn=John Smith, but they would have unique DNs because the DN would take the form:

```
cn=John Smith, ou=HR, o=ABC or  
cn=John Smith, ou=Finance, o=ABC
```

Where ou= organizational unit, and o=organization

Syntax

1.3.6.1.4.1.1466.115.121.1.44 (Printable String)

Matching Rule

caseIgnoreMatch

Object ID

2.5.4.3

8.2.10 contentRules

Description

Specifies the permissible content of entries of a particular structural object class through the identification of an optional set of auxiliary object classes, mandatory, optional, and precluded attributes.

Syntax

1.3.6.1.4.1.1466.115.121.1.16 (DIT Content Rule Description)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.1004

8.2.11 createTimestamp

Description

The time that the entry was created.

Syntax

1.3.6.1.4.1.1466.115.121.1.24 (Generalized Time)

Matching Rules

generalizedTimeMatch

Object ID

2.5.18.1

Other

Single-valued attribute.

Directory operational attribute.

Not user modifiable.

8.2.12 creatorsName

Description

The DN of the entity (such as a user or an application) that created the entry.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

distinguishedNameMatch

Object ID

2.5.18.3

Other

Single-valued attribute.

Directory operational attribute.

Not user modifiable.

8.2.13 credentialLevel

Description

Identifies the type of credentials a POSIX directory user agent (DUA) should use when binding to the directory server.

Syntax

1.3.6.1.4.1.1466.115.121.1.26 (IA5 String)

Matching Rule

caseIgnoreIA5Match

Object ID

1.3.6.1.4.1.11.1.3.1.1.10

Other

Single-valued attribute.

8.2.14 defaultSearchBase

Description

The default base DN used by a POSIX directory user agent (DUA).

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

distinguishedNameMatch

Object ID

1.3.6.1.4.1.11.1.3.1.1.1

Other

Single-valued attribute.

8.2.15 defaultSearchScope

Description

User defined search scope used by a POSIX directory user agent (DUA).

Syntax

1.3.6.1.4.1.1466.115.121.1.26 (IA5 String)

Matching Rule

N/A

Object ID

1.3.6.1.4.1.11.1.3.1.1.12

Other

Single-valued attribute.

8.2.16 defaultServerList

Description

The IP addresses of the default servers that a directory user agent (DUA) should use in a space separated list. After the servers in [preferredServerList](#) are tried, those default servers on the client's subnet are tried, followed by the remaining default servers, until a connection is made. At least one server must be specified in either [preferredServerList](#) or [defaultServerList](#). This attribute has no default value.

Syntax

1.3.6.1.4.1.1466.115.121.1.26 (IA5 String)

Matching Rule

caseIgnoreIA5Match

Object ID

1.3.6.1.4.1.11.1.3.1.1.0

Other

Single-valued attribute.

8.2.17 description

Description

An optional description for the entry.

Syntax

1.3.6.1.4.1.1466.115.121.1.15{1024} (Directory String, 1024 character maximum)

Matching Rule

caseIgnoreMatch

Object ID

2.5.4.13

8.2.18 displayName

Description

The preferred name used when displaying the entry in the GUI tools.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113730.3.1.241

Other

Single-valued attribute.

8.2.19 followReferrals

Description

Tells a POSIX directory user agent (DUA) if it should follow referrals returned by a directory server agent (DSA) search result.

Syntax

1.3.6.1.4.1.1466.115.121.1.26 (IA5 String)

Matching Rule

caseIgnoreIA5Match

Object ID

1.3.6.1.4.1.11.1.3.1.1.5

Other

Single-valued attribute.

8.2.20 javaClassName

Description

Fully qualified name of a distinguished Java class or interface.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseExactMatch

Object ID

1.3.6.1.4.1.42.2.27.4.1.6

Other

Single-valued attribute.

8.2.21 jpegPhoto

Description

A photograph file in JPEG format.

Syntax

1.3.6.1.4.1.1466.115.121.1.28 (Binary)

Matching Rule

octetStringMatch

Object ID

0.9.2342.19200300.100.1.60

8.2.22 krbPrincipalName

Description

Contains the Kerberos principal name.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

1.3.18.0.2.4.1091

Other

Single-valued attribute.

8.2.23 labeledURI

Description

Uniform Resource Locator (URL).

Syntax

1.3.6.1.4.1.1466.115.121.1.26 (IA5 String)

Matching Rule

caseExactIA5Match

Object ID

1.3.6.1.4.1.250.1.57

8.2.24 ldapSyntaxes

Description

Identifies the LDAP syntaxes implemented in the directory schema.

Syntax

1.3.6.1.4.1.1466.115.121.1.54 (LDAP Syntax Description)

Matching Rule

objectIdentifierFirstComponentMatch

Object ID

1.3.6.1.4.1.1466.101.120.16

Other

Directory operational attribute.

8.2.25 mail

Description

This attribute is defined in RFC 1274. Identifies a user's primary e-mail address (the e-mail address retrieved and displayed by "white-pages" lookup applications).

For example: mail: user.name@example.com

Syntax

1.3.6.1.4.1.1466.115.121.1.26{256} (IA5 String, 256 character maximum)

Matching Rule

caseIgnoreIA5Match

Object ID

0.9.2342.19200300.100.1.3

8.2.26 matchingRules

Description

Identifies the matching rules implemented in the directory schema.

Syntax

1.3.6.1.4.1.1466.115.121.1.30 (Matching Rule Description)

Matching Rule

objectIdentifierFirstComponentMatch

Object ID

2.5.21.4

Other

Directory operational attribute.

8.2.27 middleName**Description**

A user's middle name.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

1.3.6.1.4.1.1466.101.120.34

8.2.28 modifiersName**Description**

The DN of the entity (such as a user or application) that last updated the entry.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

distinguishedNameMatch

Object ID

2.5.18.4

Other

Single-valued attribute.

Directory operational attribute.

Not user modifiable.

8.2.29 modifyTimestamp**Description**

The time the entry was last modified.

Syntax

1.3.6.1.4.1.1466.115.121.1.24 (Generalized Time)

Matching Rule

generalizedTimeMatch

Object ID

2.5.18.2

Other

Single-valued attribute.

Directory operational attribute.

Not user modifiable.

8.2.30 namingContexts

Description

Top-level DN's for the naming contexts contained in this server. You must have superuser privileges to publish a DN as a naming context. There is no default value.

This attribute is part of the root DSE (DSA-Specific Entry). The root DSE contains a number of attributes that store information about the directory server itself.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

N/A

Object ID

1.3.6.1.4.1.1466.101.120.5

Other

DSA operational attribute.

8.2.31 objectClass

Description

The list of object classes from which this object class is derived.

Syntax

1.3.6.1.4.1.1466.115.121.1.38 (Object Identifier)

Matching Rule

objectIdentifierMatch

Object ID

2.5.4.0

8.2.32 objectClasses

Description

Defines the object classes which are in force within a subschema.

Syntax

1.3.6.1.4.1.1466.115.121.1.37 (Object Class Description)

Matching Rule

objectIdentifierFirstComponentMatch

Object ID

2.5.21.6

Other

Directory operational attribute.

8.2.33 objectClassMap**Description**

A mapping from an object class defined by a directory user agent (DUA) to an object class in an alternative schema used in the directory.

Syntax

1.3.6.1.4.1.1466.115.121.1.26 (IA5 String)

Matching Rule

N/A

Object ID

1.3.6.1.4.1.11.1.3.1.1.11

8.2.34 orclACI**Description**

Access control instructions are stored in the directory as attributes of entries. The `orclACI` attribute is an operational attribute; it is available for use on every entry in the directory, regardless of whether it is defined for the object class of the entry. It is used by the directory server to evaluate what rights are granted or denied when it receives an LDAP request from a client.

Syntax

1.3.6.1.4.1.1466.115.121.1.1 (Access Control Item)

Matching Rule

accessDirectiveMatch

Object ID

2.16.840.1.113894.1.1.42

8.2.35 orclACLResultsLatency**Description**

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.129

Other

Single-valued attribute.

8.2.36 orclActivateReplication

Description

Specifies that replication be activated on the replication server designated by `orclOidInstanceName` and `orclOidComponentName`. 1: Start replication server, 0: Stop replication server.

Syntax

Integer

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.616

8.2.37 orclActiveConn

Description

Specifies the number of active connections to the Oracle Internet Directory server, including client LDAP connections and database connections.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.150

Other

Single-valued attribute.

8.2.38 orclActiveEndDate

Description

Specifies the date and time beyond which a user account is no longer active and beyond which the user is not allowed to authenticate.

Syntax

1.3.6.1.4.1.1466.115.121.1.24 (Generalized Time)

Matching Rule

generalizedTimeMatch

Object ID

2.16.840.1.113894.1.1.339

Other

Single-valued attribute.

8.2.39 orclActiveStartdate

Description

Specifies the date and time that a user account is active and the user is allowed to authenticate. If not specified, then the user is considered active immediately.

Syntax

1.3.6.1.4.1.1466.115.121.1.24 (Generalized Time)

Matching Rule

generalizedTimeMatch

Object ID

2.16.840.1.113894.1.1.330

Other

Single-valued attribute.

8.2.40 orclActiveThreads

Description

Specifies the number of active threads on the Oracle Internet Directory server.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.140

Other

Single-valued attribute.

8.2.41 orclAgreementId

Description

Naming attribute for the replication agreement entry.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.26

Other

Single-valued attribute.

8.2.42 orclagreementtype

Description

Replication agreement type: '0-OneWay 1-TwoWay, 2-LDAP Multimaster, 3-ASR Multimaster.

Syntax

Integer

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.511

8.2.43 orclAnonymousBindsFlag

Description

Specifies whether anonymous binds to the directory are allowed or not. If set to 2, anonymous binds are allowed, but only search operations on root DSE entry are allowed for anonymous users. If set to 1, then anonymous binds are allowed. If set to 0 (zero), then anonymous binds are not allowed. The default is 1.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.299

Other

Single-valued attribute.

8.2.44 orclAppFullName

Description

The full name of an application.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.320

8.2.45 orclAppld

Description

The unique identifier of an application entry associated with a password verifier.

Syntax

1.3.6.1.4.1.1466.115.121.1.15{128} (Directory String, 128 characters maximum)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.207

Other

Single-valued attribute.

8.2.46 orclApplicationAddress

Description

The address of the application.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.318

8.2.47 orclApplicationCommonName

Description

The common name (cn) of the application.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.319

8.2.48 orclApplicationType

Description

Identifies the application type, such as Oracle Portal.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.280

Other

Single-valued attribute.

8.2.49 orclAssocDB

Description

Identifies the associated Oracle Database instance with the application or service.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.1007

8.2.50 orclAssocInstance

Description

Identifies the associated Oracle Application Server instance with the application or service.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.1006

8.2.51 orclAttrACLEvalLatency

Description

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.138

Other

Single-valued attribute.

8.2.52 orclAudCustEvents

Description

A comma-separated list of events and category names to be audited. Custom events are only applicable when `orclAudFilterPreset` is `Custom`.

Examples include:

```
Authentication.SUCCESESONLY,  
Authorization(Permission -eq 'CSFPermission')
```

Syntax

IA5 String

Matching Rule

caseExactIAI5Match

Object ID

2.16.840.1.113894.1.1.373

8.2.53 orclAudFilterPreset

Description

Replaces the audit levels used in 10g (10.1.4.0.1) and earlier releases. Values are *None*, *Low*, *Medium*, *All*, and *Custom*.

Syntax

IA5 String

Matching Rule

caseExactIAI5Match

Object ID

2.16.840.1.113894.1.1.372

8.2.54 orclAuditAttribute

Description

Identifies the audit attribute.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.58

8.2.55 orclAuditMessage

Description

Stores an audit message.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.59

8.2.56 orclAudSplUsers

Description

A comma separated list of users for whom auditing is always enabled, even if `orclAudFilterPreset` is `None`.

For example:

```
cn=orcladmin.
```

Syntax

IA5 String

Matching Rule

`caseExactIAI5Match`

Object ID

2.16.840.1.113894.1.1.374

8.2.57 orclBERgenLatency

Description

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

`integerMatch`

Object ID

2.16.840.1.113894.1.1.139

Other

Single-valued attribute.

8.2.58 orclcachenotifyip

Description

Configuration attribute that associates a port number with an IP address in order to allow Oracle Internet Directory servers to communicate with each other in a cluster environment when cached data is changed.

The servers communicate with each other using the the LDAP protocol. For example, the following LDIF file, which you can load using the `ldapmodify` command, associates port number 5678 with IP address 10.10.10.4 for the `oid1` instance:

```
dn: cn=oid1,cn=osldapd,cn=subconfigsubentry
changetype: modify
add: orclcachenotifyip;5678
orclcachenotifyip;5678: 10.10.10.4
```

When orclcachefityip is configured for an Oracle Internet Directory instance, the IP address must be local to the node where the instance is running.

Syntax

1.3.6.1.4.1.1466.115.121.1.44

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.640

8.2.59 orclCatalogEntryDN

Description

Contains the DN of the catalog entry.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

distinguishedNameMatch

Object ID

2.16.840.1.113894.1.1.50

Other

Single-valued attribute.

8.2.60 orclCategory

Description

Identifies the business category of a service or an application entity

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.317

8.2.61 orclCertExtensionAttribute

Description

Holds the OID of a field within an extension field of the client certificate.

Syntax

1.3.6.1.4.1.1466.115.121.1.38 (Object Identifier)

Matching Rule

objectIdentifierMatch

Object ID

2.16.840.1.113894.1.1.711

Other

Single-valued attribute.

8.2.62 orclCertExtensionOID

Description

Holds the extension field OID of the client certificate.

Syntax

1.3.6.1.4.1.1466.115.121.1.38 (Object Identifier)

Matching Rule

objectIdentifierMatch

Object ID

2.16.840.1.113894.1.1.709

Other

Single-valued attribute.

8.2.63 orclCertificateHash

Description

This is a special catalog attribute used for certificate matching. The value of this attribute is computed by calculating a hash of the user certificate when it is added to Oracle Internet Directory.

Syntax

1.3.6.1.4.1.1466.115.121.1.44{128} (Printable String, 128 character maximum)

Matching Rule

octetStringMatch

Object ID

2.16.840.1.113894.1.1.184

Other

Single-valued attribute.

Not user modifiable.

8.2.64 orclCertificateMatch

Description

This is a special catalog attribute used for certificate matching. The value of this attribute contains the correct matching value to use for a user certificate based on the [orclPKIMatchingRule](#) setting.

Syntax

1.3.6.1.4.1.1466.115.121.1.44 (Printable String)

Matching Rule

octetStringMatch

Object ID

2.16.840.1.113894.1.1.183

Other

Single-valued attribute.

Not user modifiable.

8.2.65 orclCertMappingAttribute

Description

Holds the standard field `OID` of the client certificate.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.708

Other

Single-valued attribute.

8.2.66 orclChangeLogLife

Description

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.806

Other

Single-valued attribute.

DSA operational attribute.

8.2.67 orclChangeRetryCount**Description**

The number of processing retry attempts for a replication change-entry before being moved to the human intervention queue. The value for this parameter must be equal to or greater than 1 (one).

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.23

Other

Single-valued attribute.

DSA operational attribute.

8.2.68 orclCommonAutoRegEnabled**Description**

Specifies if auto-registration is enabled or disabled. Allowed values are 0 (disabled) or 1 (enabled).

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.567

Other

Single-valued attribute.

8.2.69 orclCommonContextMap

Description

Stores the common context map.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.904

Other

Single-valued attribute.

8.2.70 orclCommonDefaultUserCreateBase

Description

Identifies the default user creation base where users are created.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.908

Other

Single-valued attribute.

8.2.71 orclCommonGroupCreateBase

Description

Identifies the group creation base under which Oracle Delegated Administration Services creates groups

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.903

8.2.72 orclCommonNamingAttribute

Description

Specifies the name of the attribute that is used as an RDN component when creating a user.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.900

8.2.73 orclCommonNicknameAttribute

Description

Specifies the name of the attribute that uniquely identifies users.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.7.1.7

Other

Single-valued attribute.

8.2.74 orclCommonSASLRealm

Description

Identifies the common SASL realm. This attribute contains a string value specifying a subset of related entries under a subscriber realm.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.7.1.20

Other

Single-valued attribute.

8.2.75 orclCommonUserSearchBase

Description

Identifies the branch that contains user entries.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

distinguishedNameMatch

Object ID

2.16.840.1.113894.7.1.10

8.2.76 orclCommonVerifierEnable

Description

If this attribute is enabled then the common verifier is used for all related applications.
If this attribute is disabled then each application must setup their own verifier profile.

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

booleanMatch

Object ID

2.16.840.1.113894.1.1.214

Other

Single-valued attribute.

8.2.77 orclCommonVerifierEnable

Description

If this attribute is enabled then the common verifier is used for all related applications.
If this attribute is disabled then each application must setup their own verifier profile.

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

booleanMatch

Object ID

2.16.840.1.113894.1.1.214

Other

Single-valued attribute.

8.2.78 orclCompatibleVersion

Description

The Oracle Internet Directory version. Do not modify this attribute. It must be present for Oracle Internet Directory 11.1.1.6 or later to work with the schema. Values can be:

- orclcompatibleversion 11.1.1.6.0
- orclcompatibleversion 11.1.1.7.0

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.1302

Other

Multi-valued attribute.

8.2.79 orclComputedAttribute

Description

Attribute that allows a configurable attribute and its value to be dynamically computed based on one or more specific rules.

See Also: The "Managing Computed Attributes" chapter in the *Oracle Fusion Middleware Administrator's Guide for Oracle Internet Directory* for more information.

Syntax

1.3.6.1.4.1.1466.115.121.1.44

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.628

Other

Multi-valued attribute.

8.2.80 orclconflresolution

Description

Automatically resolve replication conflicts. When this feature is enabled, conflicts in the Human Intervention Queue are automatically moved to the purge queue if the supplier's schema and consumer's schema match.

Syntax

Integer

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.828

8.2.81 orclConnectByAttribute

Description

The attribute type name that you want to use as the filter for a dynamic group query—for example, `manager`.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.1001

Other

Single-valued attribute.

8.2.82 orclConnectBySearchBase

Description

A naming context in the DIT that you want to use as the base for a dynamic group query—for example, `l=us, dc=mycompany, dc=com`. This attribute is currently not used.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.1003

Other

Single-valued attribute.

8.2.83 orclConnectByStartingValue

Description

For a dynamic group query, this specifies the DN of the attribute you specified in the [orclConnectByAttribute](#) attribute—for example, `Anne Smith`.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

distinguishedNameMatch

Object ID

2.16.840.1.113894.1.1.1002

Other

Single-valued attribute.

8.2.84 orclConnectionFormat

Description

Specifies the format used to construct the connect string associated with a resource.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.354

Other

Single-valued attribute.

8.2.85 orclContact

Description

Identifies a contact person for an organization or an application.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.332

Other

Single-valued attribute.

8.2.86 orclCryptoScheme

Description

The hash algorithm used to encrypt passwords that are stored in the directory. Options are: MD4, MD5, No encryption, SHA, SSHA,SHA256, SHA384, SHA512, SSHA256, SSHA384, SSHA512, SMD5, or UNIX Crypt. The default is SSHA.

Syntax

1.3.6.1.4.1.1466.115.121.1.15{128} (Directory String, 128 characters maximum)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.68

Other

Single-valued attribute.

8.2.87 orclDASAdminModifiable

Description

Specifies whether administration of this entry is available through Oracle Delegated Administration Services.

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

booleanMatch

Object ID

2.16.840.1.113894.1.1.324

Other

Single-valued attribute.

8.2.88 orclDASAttrDispOrder

Description

Specifies the display order of an attribute in Oracle Delegated Administration Services.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.341

8.2.89 orclDASAttrName**Description**

Specifies the name of an attribute to show in Oracle Delegated Administration Services.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.340

8.2.90 orclDASEnableProductLogo**Description**

Specifies whether to display a product logo on the Identity Management Realm Configuration window of Oracle Delegated Administration Services. Allowed values are TRUE or FALSE.

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

booleanMatch

Object ID

2.16.840.1.113894.1.1.362

Other

Single-valued attribute.

8.2.91 orclDASEnableSubscriberLogo**Description**

Specifies whether to display a realm logo on the Identity Management Realm Configuration window of Oracle Delegated Administration Services. Allowed values are TRUE or FALSE.

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

booleanMatch

Object ID

2.16.840.1.113894.1.1.361

Other

Single-valued attribute.

8.2.92 orclDASIsEnabled

Description

Specifies whether an attribute is enabled for Oracle Delegated Administration Services. Allowed values are TRUE or FALSE.

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

booleanMatch

Object ID

2.16.840.1.113894.1.1.344

Other

Single-valued attribute.

8.2.93 orclDASIsMandatory

Description

Specifies whether an attribute is mandatory for Oracle Delegated Administration Services. Allowed values are TRUE or FALSE.

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

booleanMatch

Object ID

2.16.840.1.113894.1.1.321

Other

Single-valued attribute.

8.2.94 orclDASIsPersonal

Description

Specifies whether an attribute is personal information to be supplied by a user in Oracle Delegated Administration Services. Allowed values are TRUE or FALSE.

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

booleanMatch

Object ID

2.16.840.1.113894.1.1.326

Other

Single-valued attribute.

8.2.95 orclDASLOV

Description

The list of values to display to users in the UI when the `orclDASUIType=Predefined List`.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreSubStringsMatch

Object ID

2.16.840.1.113894.1.1.328

8.2.96 orclDASPublicGroupDNs

Description

Specifies the DN's of groups available for Oracle Delegated Administration Services.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

distinguishedNameMatch

Object ID

2.16.840.1.113894.1.1.343

8.2.97 orclDASSearchable

Description

Specifies whether or not this attribute is searchable in Oracle Delegated Administration Services. Allowed values are TRUE or FALSE.

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

booleanMatch

Object ID

2.16.840.1.113894.1.1.906

Other

Single-valued attribute.

8.2.98 orclDASSearchColIndex

Description

Indicates the position in the DAS search result table column, if present.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.902

Other

Single-valued attribute.

8.2.99 orclDASSearchFilter

Description

Specifies whether the attribute is searchable through Oracle Delegated Administration Services. Allowed values are TRUE or FALSE.

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

booleanMatch

Object ID

2.16.840.1.113894.1.1.325

Other

Single-valued attribute.

8.2.100 orclDASearchSizeLimit**Description**

The maximum number of entries to return in a Oracle Delegated Administration Services search.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.363

Other

Single-valued attribute.

8.2.101 orclDASelfModifiable**Description**

Specifies whether an attribute is modifiable by the user in Oracle Delegated Administration Services. Allowed values are TRUE or FALSE.

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

booleanMatch

Object ID

2.16.840.1.113894.1.1.322

Other

Single-valued attribute.

8.2.102 orclDASUIType**Description**

Specifies the UI field type for an attribute when displayed in Oracle Delegated Administration Services. Options are:

- Single Line Text
- Multi Line Text
- Predefined List

- Date
- Browse and Select
- Number

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreSubStringsMatch

Object ID

2.16.840.1.113894.1.1.327

Other

Single-valued attribute.

8.2.103 orcidASURL

Description

The corresponding URL of an Oracle Delegated Administration Services unit.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.310

8.2.104 orcidASURLBase

Description

This holds the URL base in install area for Oracle Delegated Administration Services.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.345

8.2.105 orclDASValidatePwdReset

Description

Specifies whether this attribute can be used for password reset validation purposes in Oracle Delegated Administration Services. Allowed values are TRUE or FALSE.

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

booleanMatch

Object ID

2.16.840.1.113894.1.1.905

Other

Single-valued attribute.

8.2.106 orclDASViewable

Description

Specifies whether this attribute is viewable through Oracle Delegated Administration Services. Allowed values are TRUE or FALSE.

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

booleanMatch

Object ID

2.16.840.1.113894.1.1.323

Other

Single-valued attribute.

8.2.107 orclDataPrivacymode

Description

Data Privacy mode. Sensitive attributes encrypted when returned.

0: Disabled, 1: Enabled

Syntax

1.3.6.1.4.1.1466.115.121.1.27

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.890

8.2.108 orclDateOfBirth

Description

Specifies the date on which a user was born.

Syntax

1.3.6.1.4.1.1466.115.121.1.24 (Generalized Time)

Matching Rule

generalizedTimeMatch

Object ID

2.16.840.1.113894.1.1.307

Other

Single-valued attribute.

8.2.109 orclDBConnCreationFailed

Description

Indicates a connection failure to the database in an error log entry.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.155

Other

Single-valued attribute.

8.2.110 orclDBLatency

Description

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.130

Other

Single-valued attribute.

8.2.111 orclDBSchemaIdentifier**Description**

DN of the DB registration entry in OID that an application entity uses.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

distinguishedNameMatch

Object ID

2.16.840.1.113894.1.1.347

8.2.112 orclDBType**Description**

The type of database used. This attribute is part of the root DSE (DSA-Specific Entry). The root DSE contains a number of attributes that store information about the directory server itself.

Syntax

1.3.6.1.4.1.1466.115.121.1.15{128} (Directory String, 128 character maximum)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.1.1.5

Other

Single-valued attribute.

8.2.113 orclDebugFlag**Description**

The debug level associated with a server instance. The default for is 0 (zero). The valid range is 0 to 402653184.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.97

Other

Single-valued attribute.

8.2.114 orclDebugForceFlush

Description

Specifies whether debug messages are to be written to the log file when a message is logged by the directory server. To enable it, set its value to 1. To disable it set it to 0, which is its default value.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.193

Other

Single-valued attribute.

8.2.115 orcldebuglevel

Description

Replication server debug level.

Values are additive:

0: No Debug Log, 2097152: Replication Performance Log, 4194304: Replication Debug Log, 8388608: Function Call Trace, 16777216: Heavy Trace Log

Syntax

Integer

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.3

8.2.116 orclDebugOp

Description

To make logging more focused, limits logged information to particular directory server operations by specifying the debug dimension to those operations. Values for operations are:

- 1 - ldapbind
- 2 - ldapunbind
- 4 - ldapadd
- 8 - ldapdelete
- 16 - ldapmodify
- 32 - ldapmodrdn
- 64 - ldapcompare
- 128 - ldapsearch
- 264 - ldapabandon
- 511 - all operations

To log more than one operation, add the values of their dimensions. For example, if you want to trace ldapbind (1), ldapadd (4) and ldapmodify (16) operations, then the value would be 21 (1 + 4 + 16 = 21).

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.601

Other

Single-valued attribute.

8.2.117 orclDefaultProfileGroup

Description

Holds the DN of the group to designate the default group for a user, such that a default profile can be built for the user based on this attribute value.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

distinguishedNameMatch

Object ID

2.16.840.1.113894.1.1.309

Other

Single-valued attribute.

8.2.118 orclDefaultSubscriber

Description

Identifies the default realm.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

distinguishedNameMatch

Object ID

2.16.840.1.113894.1.1.312

8.2.119 orclDIMEonlyLatency

Description

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.131

Other

Single-valued attribute.

8.2.120 orclDIPRepository

Description

Used to determine if the directory is used as the Oracle Directory Integration and Provisioning repository.

Syntax

1.3.6.1.4.1.1466.115.121.1.15

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.124

Other

Single-valued attribute.

8.2.121 orclDirectoryVersion**Description**

The version of Oracle Internet Directory. This attribute is part of the root DSE (DSA-Specific Entry). The root DSE contains a number of attributes that store information about the directory server itself.

Syntax

1.3.6.1.4.1.1466.115.121.1.15

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.67

Other

Single-valued attribute.

8.2.122 orclDirReplGroupAgreement**Description**

Contains the directory replication group agreement DN.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

N/A

Object ID

2.16.840.1.113894.1.1.25

Other

DSA operational attribute.

8.2.123 orclDirReplGroupDSAs**Description**

For Oracle Database Advanced Replication-based directory replication groups (DRGs), the [orclReplicaID](#) values of all the nodes in the DRG. This list must be identical on all nodes in the group. This attribute is not applicable for LDAP-based replication agreements.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

N/A

Object ID

2.16.840.1.113894.1.1.48

Other

DSA operational attribute.

8.2.124 orclDisplayPersonalInfo

Description

Specifies if the user's personal information should be displayed in white pages queries. Allowed values are TRUE or FALSE.

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

booleanMatch

Object ID

2.16.840.1.113894.1.1.304

Other

Single-valued attribute.

8.2.125 OrclDispThreads

Description

Number of dispatcher threads per server process.

Syntax

Integer

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.613

8.2.126 orclDITRoot

Description

The root of the directory information tree (DIT). This attribute is part of the root DSE (DSA-Specific Entry). The root DSE contains a number of attributes that store information about the directory server itself.

Syntax

1.3.6.1.4.1.1466.115.121.1.15{128} (Directory String, 128 character maximum)

Matching Rule

caseIgnoreMatch, caseIgnoreSubStringsMatch

Object ID

2.16.840.1.113894.1.1.7

Other

Single-valued attribute.

8.2.127 orclDNSUnavailable

Description

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.161

Other

Single-valued attribute.

8.2.128 orclEcacheEnabled

Description

Specifies whether to enable or disable the Entry Cache or Result Set Cache. Values can be:

- 0: Disable both the Entry Cache and Result Set Cache.
- 1: Enable the Entry Cache only (default value).
- 2: Enable both the Entry Cache and Result Set Cache.

If you change the attribute value, restart the Oracle Internet Directory server instance for the new value to take effect.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.400

Other

Single-valued attribute.

8.2.129 orclEcacheHitRatio

Description

Stores the cache hit ratio.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.170

Other

Single-valued attribute.

8.2.130 orclEcacheMaxEntries

Description

Maximum number of entries that can be present in the entry cache. The default is 25,000.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.402

Other

Single-valued attribute.

8.2.131 orclEcacheMaxSize

Description

Maximum number of bytes of RAM that the entry cache can use. The default is 100 MB.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.401

Other

Single-valued attribute.

8.2.132 orclEcacheNumEntries**Description**

The number of entries currently in the entry cache.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.171

Other

Single-valued attribute.

8.2.133 orclEcacheSize**Description**

The current size of the entry cache.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.172

Other

Single-valued attribute.

8.2.134 orclEnabled**Description**

Determines whether an application is enabled or disabled for use.

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

booleanMatch

Object ID

2.16.840.1.113894.1.1.1008

Other

Single-valued attribute.

8.2.135 orclEnableGroupCache**Description**

Whether to cache privilege groups and ACL groups. Using this cache improves the performance of access control evaluation for users.

Use the group cache when a privilege group membership does not change frequently. If a privilege group membership does change frequently, then it is best to turn off the group cache. This is because, in such a case, computing a group cache increases overhead. The default is 1 (enabled). Change to 0 (zero) to disable.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.403

Other

Single-valued attribute.

8.2.136 orclencryptedattributes**Description**

List of attributes to be stored in an encrypted form.

Syntax

1.3.6.1.4.1.1466.115.121.1.15

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.419

8.2.137 orclEntryACLEvalLatency

Description

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.136

Other

Single-valued attribute.

8.2.138 orclEntryLevelACI

Description

Specifies the ACI that holds object level ACL.

Syntax

1.3.6.1.4.1.1466.115.121.1.1 (Access Control Item)

Matching Rule

accessDirectiveMatch

Object ID

2.16.840.1.113894.1.1.143

8.2.139 orclEventLevel

Description

Specifies critical events related to security and system resources to be recorded for server manageability statistics. The default value is 0. [Table 8-2](#) lists the level values.

Table 8-2 Event Levels

Level Value	Critical Event	Information It Provides
1	Superuser login	Super uses bind (successes or failures)
2	Proxy user login	Proxy user bind (failures)
4	Replication login	Replication bind (failures)
8	Add access	Add access violation
16	Delete access	Delete access violation
32	Write access	Write access violation
64	ORA 3113 error	Loss of connection to database

Table 8–2 (Cont.) Event Levels

Level Value	Critical Event	Information It Provides
128	ORA 3114 error	Loss of connection to database
256	ORA 28 error	ORA-28 Error
512	ORA error	ORA errors other an expected 1, 100, or 1403
1024	Oracle Internet Directory server termination count	
2047	All critical events	

For events other than superuser, proxy user, and replication login, set the value of the [orclStatsFlag](#) attribute to 1.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.195

Other

Single-valued attribute.

8.2.140 orclEventTime**Description**

The time that a logged directory event occurred.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.60

8.2.141 orclEventType**Description**

The type of logged directory event.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.57

8.2.142 orclExcludedAttributes**Description**

Specifies an attribute (within the specified naming context) to be excluded from replication. Applies to partial replication only.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

N/A

Object ID

2.16.840.1.113894.1.1.506

Other

DSA operational attribute.

8.2.143 orclExcludedNamingContexts**Description**

For Oracle Database Advanced Replication-based agreements, this attribute specifies one or more subtrees to be excluded from replication.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

N/A

Object ID

2.16.840.1.113894.1.1.47

Other

DSA operational attribute.

8.2.144 orclFDIncreaseError**Description**

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.163

Other

Single-valued attribute.

8.2.145 orclFilterACLEvalLatency

Description

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.137

Other

Single-valued attribute.

8.2.146 orclFlexAttribute1

Description

An additional attribute for storing more information about a resource, service, or component.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch, caseIgnoreSubStringsMatch

Object ID

2.16.840.1.113894.1.1.355

8.2.147 orclFlexAttribute2

Description

An additional attribute for storing more information about a resource, service, or component.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch, caseIgnoreSubStringsMatch

Object ID

2.16.840.1.113894.1.1.356

8.2.148 orclFlexAttribute3**Description**

An additional attribute for storing more information about a resource, service, or component.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch, caseIgnoreSubStringsMatch

Object ID

2.16.840.1.113894.1.1.357

8.2.149 orclFrontLatency**Description**

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.128

Other

Single-valued attribute.

8.2.150 orclGender**Description**

The gender of a user.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.346

Other

Single-valued attribute.

8.2.151 orclgeneratechangelog

Description

Enables change log generation 1-generate change log, 0-Do not generate change log

Syntax

Integer

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.617

8.2.152 orclGenObjLatency

Description

Stores the general object latency.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.133

Other

Single-valued attribute.

8.2.153 orclGetNearACLLatency

Description

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.135

Other

Single-valued attribute.

8.2.154 orclGlobalID**Description**

Specifies the attribute that is used to identify the global ID of a user.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.7.1.8

Other

Single-valued attribute.

8.2.155 orclGUID**Description**

This is the global unique identifier for an entry within Oracle Internet Directory. The value for this attribute is automatically generated when an entry is created and remains constant, even if an entry is moved.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch, caseIgnoreSubStringsMatch

Object ID

2.16.840.1.113894.1.1.37

Other

Single-valued attribute.

Directory operational attribute.

Not user modifiable.

8.2.156 orclGUPassword**Description**

Password for the guest user account in Oracle Internet Directory.

Syntax

1.3.6.1.4.1.1466.115.121.1.15{128} (Directory String, 128 character maximum)

Matching Rule

caseIgnoreMatch, caseIgnoreSubStringsMatch

Object ID

2.16.840.1.113894.1.1.12

Other

Single-valued attribute.

8.2.157 orclHashedAttributes

Description

List of attributes whose values are hashed, using the crypto scheme set in the root DSE attribute `orclcryptoscheme`.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (caseIgnoreSubstringsMatch)

Matching Rule

caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.1.1.376

Other

Multi-valued attribute

Notes:

- Never include the same attribute in both `orclhashedattributes` and `orclencryptedattributes`.
 - Only single-valued attributes can be hashed attributes.
-
-

8.2.158 orclHIQSchedule

Description

The interval, in seconds, at which the directory replication server repeats the change application process.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

N/A

Object ID

2.16.840.1.113894.1.1.98

Other

Single-valued attribute.

DSA operational attribute.

8.2.159 orclHireDate**Description**

Specifies the date on which a user was hired by the organization.

Syntax

1.3.6.1.4.1.1466.115.121.1.24 (Generalized Time)

Matching Rule

generalizedTimeMatch

Object ID

2.16.840.1.113894.1.1.308

Other

Single-valued attribute.

8.2.160 orclHostedCreditCardExpireDate**Description**

The credit card expiration date for a subscriber.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.338

Other

Single-valued attribute.

8.2.161 orclHostedCreditCardNumber**Description**

The credit card number for a subscriber.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.337

Other

Single-valued attribute.

8.2.162 orclHostedCreditCardType

Description

The credit card type for a subscriber.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.336

Other

Single-valued attribute.

8.2.163 orclHostedDunsNumber

Description

The DUNS number of a business subscriber. DUNS (Data Universal Numbering System) is a unique nine character company identification number issued by Dun and Bradstreet Corporation used to identify a US corporate entity.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.334

Other

Single-valued attribute.

8.2.164 orclHostedPaymentTerm

Description

Payment terms for a subscriber account.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.335

Other

Single-valued attribute.

8.2.165 orclHostname**Description**

The host name of the Oracle Internet Directory server.

Syntax

1.3.6.1.4.1.1466.115.121.1.15{128} (Directory String, 128 character maximum)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.41

Other

Single-valued attribute.

8.2.166 orclIdleConn**Description**

The number of open connections that are currently inactive. Oracle Internet Directory tracks the idle connections for server manageability statistics.

Syntax

1.3.6.1.4.1.1466.115.121.1.27

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.151

Other

Single-valued attribute.

8.2.167 orclIdleThreads

Description

The number of Oracle Internet Directory server process threads that are currently inactive. Oracle Internet Directory tracks the idle threads for server manageability statistics.

Syntax

1.3.6.1.4.1.1466.115.121.1.27

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.141

Other

Single-valued attribute.

8.2.168 orclIncludedNamingContexts

Description

The naming context included in a partial replica. For each naming context object, you can specify only one unique subtree.

In partial replication, except for subtrees listed in the [orclExcludedNamingContexts](#) attribute, all subtrees in the specified included naming context are replicated.

Only LDAP-based replication agreements respect this attribute to define one or more partial replicas. If this attribute contains any values in an Oracle Database Advanced Replication-based replication agreement, then it is ignored.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

N/A

Object ID

2.16.840.1.113894.1.1.819

Other

Single-valued attribute.

DSA operational attribute.

8.2.169 orclIndexedAttribute

Description

Attributes that are indexed in the Oracle Internet Directory catalog.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.49

8.2.170 orclInitialServerMemSize**Description**

The memory size of the Oracle Internet Directory server at start up.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.147

Other

Single-valued attribute.

8.2.171 orclinmemfiltprocess**Description**

Search filters to be processed in memory.

Syntax

Printable String

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.608

Other

Multiple-valued attribute.

8.2.172 orclInterval**Description**

Time interval in seconds between executions of Oracle Directory Integration and Provisioning profiles.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch, caseIgnoreSubStringsMatch

Object ID

2.16.840.1.113894.9.1.8

8.2.173 orclIpAddress

Description

The IP address of the Oracle Internet Directory server host.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.186

8.2.174 orclIsEnabled

Description

Whether a user or service subscriber is enabled in Oracle Internet Directory.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.316

Other

Single-valued attribute.

8.2.175 orclIsVisible

Description

This attribute is used to determine if users or groups is visible to applications managed by Oracle Delegated Administration Services, such as Oracle Portal. Oracle Single Sign-On does not use this attribute. Allowed values are TRUE or FALSE.

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

booleanMatch

Object ID

2.16.840.1.113894.1.1.303

Other

Single-valued attribute.

8.2.176 orclLastAppliedChangeNumber**Description**

For Oracle Directory Integration and Provisioning export operations, the last change from Oracle Internet Directory that was applied to the connected directory. The default value is 0. If you have used the Oracle Directory Integration and Provisioning Assistant to bootstrap the connected directory, then this value is set automatically at the end of the bootstrapping process. This is valid only in the export profile.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.69

Other

Single-valued attribute.

8.2.177 orclLastLoginTime**Description**

Last login time of a user

Syntax

1.3.6.1.4.1.1466.115.121.1.24

Matching Rule

generalizedTimeMatch

Object ID

2.16.840.1.113894.1.1.378

Other

Single-valued attribute

8.2.178 orclLDAPConnKeepALive

Description

For replication, whether to keep the LDAP connection to the connected directory alive due to activity. If not set Oracle Internet Directory will drop inactive connections after a period of time. Allowed values are TRUE or FALSE.

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

booleanMatch

Object ID

2.16.840.1.113894.1.1.822

Other

Single-valued attribute.

8.2.179 orclLDAPConnTimeout

Description

The number of minutes before Oracle Internet Directory times out and drops an inactive connection.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.194

Other

Single-valued attribute.

8.2.180 orclLDAPInstanceID

Description

The instance number of a particular Oracle Internet Directory server instance.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.125

Other

Single-valued attribute.

8.2.181 orclLDAPProcessID**Description**

The process ID of a particular Oracle Internet Directory server instance.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.126

Other

Single-valued attribute.

8.2.182 orclMaidenName**Description**

The maiden name of a user.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.306

8.2.183 orclMappedDN**Description**

Holds the required information for generating the mapped identity.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

distinguishedNameMatch

Object ID

2.16.840.1.113894.1.1.704

Other

Single-valued attribute.

8.2.184 orclMaskFilter

Description

LDAP filter specifying entries to be exposed. Others are masked.

Syntax

1.3.6.1.4.1.1466.115.121.1.44 (Printable String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.427

Other

Multivalued, User-modifiable

8.2.185 orclMaskRealm

Description

List of DIT subtrees that are exposed or hidden:

- orclMaskRealm contains the DIT subtrees that are exposed in an instance. This attribute is configured in the instance level. The DN configured and its children are visible in the instance. Other entries in the DIT are masked (hidden) for all LDAP operations.
- orclMaskRealm;disallowed contains the DIT subtrees that are hidden in a container for an entire directory for all LDAP operations. This attribute is configured in the DSA configuration entry.

Syntax

1.3.6.1.4.1.1466.115.121.1.34 (DN)

Matching Rule

distinguishedNameMatch

Object ID

2.16.840.1.113894.1.1.426

Other

Multivalued, User-modifiable

8.2.186 orclMasterNode

Description

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

booleanMatch

Object ID

2.16.840.1.113894.1.1.1010

Other

Single-valued attribute.

8.2.187 orclMatchDnEnabled

Description

If the base DN of a search request is not found, then the directory server returns the nearest DN that matches the specified base DN. Whether the directory server tries to find the nearest match DN is controlled by this attribute. If set to 1, then match DN processing is enabled. If set to 0, then match DN processing is disabled. The default is 1.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.404

Other

Single-valued attribute.

8.2.188 orclMaxCC

Description

The number of connections established by the Oracle Internet Directory server to its backend data base. The default value is 2.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.4

Other

Single-valued attribute.

8.2.189 orclMaxConnInCache**Description**

The number of connection DNs whose privileged groups can be cached is controlled by orclMaxConnInCache in the instance-specific configuration entry. The default value is 100000 identities (connection DNs). Increase the value of orclMaxConnInCache if your installation has more than 25000 users.

See Also: *Oracle Fusion Middleware Administrator's Guide for Oracle Internet Directory* for more information.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.605

Other

Single-valued attribute.

8.2.190 orclMaxTcpldleConnTime**Description**

Frequency in minutes at which the Oracle Internet Directory server calls OCIPing() to send keep alive messages to the Oracle Database. Setting this attribute to a value less than the timeout value of the firewall between Oracle Internet Directory server and its Database (typically 30 minutes) prevents the Database connection from being dropped.

Syntax

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.162

Other

Single-valued attribute.

8.2.199 orclMemberOf

Description

This attribute contains the groups to which the entry belongs. This includes static groups and dynamic groups of objectclass orclDynamicGroup, using labeleduri attribute, which are cached. The membership includes both direct groups and nested groups. The attribute values are computed during search and are not stored. As of Oracle Internet Directory 11g Release 1 (11.1.1.7.0), this attribute can be used in search filters.

orclMemberOf is an operational attribute and is returned by a search only when explicitly requested in the required attributes list.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

distinguishedNameMatch

Object ID

2.16.840.1.113894.1.1.424

Other

Directory operational attribute.

Not user modifiable.

Aliases: memberof, ismemberof.

8.2.200 orclNetDescName

Description

The DN of an Oracle Net Service description entry. Oracle Net directory naming allows net service names to be stored in and retrieved from Oracle Internet Directory.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

distinguishedNameMatch

Object ID

2.16.840.1.113894.3.1.12

Other

Single-valued attribute.

8.2.201 orclNetDescString

Description

The description string for an Oracle Net Service. For example:

```
(DESCRIPTION = (ADDRESS_LIST = (ADDRESS = (PROTOCOL = TCP) (HOST = hostname)(PORT = 1521))) (CONNECT_DATA = (SID = ORCL)))
```

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.3.1.13

Other

Single-valued attribute.

8.2.202 orclNonSSLPort

Description

The non-SSL LDAP listening port for Oracle Internet Directory server.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.102

Other

Single-valued attribute.

8.2.203 orclNormDN

Description

Identifies the normalized DN of an entry.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

distinguishedNameMatch

Object ID

2.16.840.1.113894.1.1.1000

Other

Single-valued attribute.

Directory operational attribute.

Not user modifiable.

8.2.204 orclNWCongested

Description

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.160

Other

Single-valued attribute.

8.2.205 orclNwrwTimeout

Description

Stores the network read/write time out. When an LDAP client initiates an operation, then does not respond to the server for a configured number of seconds, the server closes the connection. The number of seconds is controlled by the attribute orclnwrwtimeout in the DSA configuration entry. The default is 300 seconds.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.603

Other

Single-valued attribute.

8.2.206 orclNwUnavailable

Description

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.159

Other

Single-valued attribute.

8.2.207 orclObjectGUID

Description

Stores Microsoft Active Directory's OBJECTGUID attribute value for users and groups migrated to Oracle Internet Directory from Active Directory.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.901

Other

Single-valued attribute.

8.2.208 orclObjectSID**Description**

Stores Microsoft Active Directory's OBJECTSID attribute value for users and groups migrated to Oracle Internet Directory from Active Directory.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.902

Other

Single-valued attribute.

8.2.209 orclODIPAgent**Description**

The DN of a provisioning profile.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch, caseIgnoreSubStringsMatch

Object ID

2.16.840.1.113894.9.1.6

8.2.210 orclODIPAgentConfigInfo**Description**

Any configuration information that you want the connector to store in Oracle Internet Directory. It is passed by the Directory Integration Platform server to the connector at

time of connector invocation. The information is stored as an attribute and the Directory Integration Platform server does not have any knowledge of its content. When the connector is scheduled for execution, the value of the attribute is stored in the file, `ORACLE_HOME/ldap/odi/conf/profile_name.cfg` that can be processed by the connector.

Upload the file by using:

```
manageSyncProfiles update -h host -p port -D WLS_userid -profile profile_name  
-params "odip.profile.configfile ORACLE_HOME/ldap/odi/conf/profile_name.cfg"
```

or

```
manageSyncProfiles update -h host -p port -D WLS_userid -profile profile_name  
-file properties_file
```

where `properties_file` specifies `odip.profile.configfile=ORACLE_HOME/ldap/odi/conf/profile_name.cfg`.

Do this for both import and export agents.

See [Chapter 5, "Oracle Directory Integration Platform Tools"](#) and the *Oracle Fusion Middleware Administrator's Guide for Oracle Directory Integration Platform* for more information

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.24

8.2.211 orclODIPAgentControl

Description

Whether a synchronization profile is enabled or disabled. Valid values are ENABLE or DISABLE. The default is DISABLE.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.3

Other

Single-valued attribute.

8.2.212 orclODIPAgentExeCommand

Description

The executable name and argument list used by the Directory Integration Platform server to invoke a connector. It can be passed as a command-line argument when the connector is invoked. For example, here is a command to invoke the Oracle HR connector:

```
odihragent OracleHRAgent connect=hrdb login=%orclodipConDirAccessAccount  
pass=%orclodipConDirAccessPassword date=%orclODIPLastSuccessfulExecutionTime
```

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.21

Other

Single-valued attribute.

8.2.213 orclODIPAgentHostName

Description

The host name of the Oracle Directory Integration and Provisioning server where the synchronization profile is run.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.5

Other

Single-valued attribute.

8.2.214 orclODIPAgentName

Description

The name of a third-party synchronization profile.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.1

Other

Single-valued attribute.

8.2.215 orclODIPAgentPassword

Description

Password that the synchronization profile uses to bind to the directory.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.4

Other

Single-valued attribute.

8.2.216 orclODIPApplicationName

Description

The name of an application to which a provisioning subscription belongs.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch, caseIgnoreSubStringsMatch

Object ID

2.16.840.1.113894.9.1.7

8.2.217 orclODIPApplicationsLocation

Description

The DN of the application to which a provisioning subscription belongs.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.918

Other

Single-valued attribute.

8.2.218 orclODIPAttributeMappingRules**Description**

Attribute for storing the mapping rules used by a synchronization profile. Store the mapping rules in a file by using the Directory Integration Platform Assistant. See [Chapter 5, "Oracle Directory Integration Platform Tools"](#) and the *Oracle Fusion Middleware Administrator's Guide for Oracle Directory Integration Platform* for more information about mapping rules.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.41

8.2.219 orclODIPBootStrapStatus**Description**

The bootstrap status of a synchronization profile (the initial migration of data between a connected directory and Oracle Internet Directory).

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.101

Other

Single-valued attribute.

8.2.220 orclODIPCommand**Description**

The command to invoke a provisioning profile.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.9.1.5

8.2.221 orclODIPConDirAccessAccount**Description**

Valid user account in the connected directory to be used by the connector for synchronization. The value is specific to the connected directory with which you are integrating. For instance, for the SunONE synchronization connector, it is the valid bind DN in the SunONE Directory Server. For the Human Resources Connector, it is a valid user identifier in the Oracle Human Resources database. For other connectors, it can be passed as a command-line argument when the connector is invoked.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.22

Other

Single-valued attribute.

8.2.222 orclODIPConDirAccessPassword**Description**

Password to be used by the user specified in the [orclODIPConDirAccessAccount](#) attribute to connect to the connected directory. The value is specific to the third-party directory with which you are integrating. For instance, for the SunONE synchronization connector, it is the valid bind password in the SunONE Directory Server. For the Human Resources Agent, it is the Oracle Human Resources database password.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.23

8.2.223 orclODIPConDirLastAppliedChgNum

Description

For Oracle Directory Integration and Provisioning import operations, the last change from the connected directory that was applied to Oracle Internet Directory. The default value is 0. If you have used the Directory Integration Platform Assistant to bootstrap the connected directory, then this value is set automatically. See [Chapter 5, "Oracle Directory Integration Platform Tools"](#) and the *Oracle Fusion Middleware Administrator's Guide for Oracle Directory Integration Platform* for more information about the bootstrap operation. This is valid only in the import profile.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.65

Other

Single-valued attribute.

8.2.224 orclODIPConDirMatchingFilter

Description

This attribute specifies the filter to apply to the third-party directory change log. It is used in the Oracle Directory Integration and Provisioning import profile. The filter must be set in the import profile when both the import and export integration profiles are enabled, as follows:

```
Modifiersname != connected_directory_account
```

This prevents the same change from being exchanged between the two directories indefinitely. To avoid confusion, make this account specific to synchronization.

See Also: Note 280474.1, "Setting Up Filtering in a DIP Synchronization Profile" available at My Oracle Support (formerly MetaLink) at <http://metalink.oracle.com/>.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.42

8.2.225 orclODIPConDirURL

Description

Connection string required to connect to the third-party connected directory. This value refers to the host name and port number as *host:port:[sslmode]*.

To connect by using SSL, enter *host:port:1*.

Make sure the certificate to connect to the directory is stored in the wallet, the location of which is specified in the file *odi.properties*.

Note: To connect to SunONE Directory Server by using SSL, the server certificate needs to be loaded into the wallet.

See Also: The chapter on Oracle Wallet Manager in *Oracle Database Advanced Security Administrator's Guide*.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.25

Other

Single-valued attribute.

8.2.226 orclODIPConfigDNs

Description

Stores the DN's of integration profiles for a particular configuration set in Oracle Directory Integration Platform.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.72

8.2.227 orclODIPConfigRefreshFlag

Description

Stores a flag which indicates whether any integration profiles have been added, deleted, or modified. Used in association with a configuration set.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.71

Other

Single-valued attribute.

8.2.228 orclODIPDbConnectInfo**Description**

The connection string for the database of a provisioning profile subscriber. The format of the string is `host:port:sid:username:password`.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch, caseIgnoreSubStringsMatch

Object ID

2.16.840.1.113894.9.1.2

8.2.229 orclODIPEncryptedAttrKey**Description**

Stores a key which is used to encrypt and decrypt sensitive data that is transmitted by the Oracle directory integration platform server to other applications.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.215

Other

Single-valued attribute.

8.2.230 orclODIPEventFilter**Description**

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.433

8.2.231 orclODIPEventSubscriptions

Description

Store configuration information for events to which a provisioned-integrated application subscribes.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch, caseIgnoreSubStringsMatch

Object ID

2.16.840.1.113894.9.1.1

8.2.232 orclODIPFilterAttrCriteria

Description

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.605

Other

Single-valued attribute.

8.2.233 orclODIInstancesLocation

Description

Identifies the location in the directory that stores information about instances of the Oracle directory integration platform server.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.913

Other

Single-valued attribute.

8.2.234 orclODIPInstanceStatus**Description**

Stores a flag that indicates whether an instance of the Oracle directory integration platform server should continue running or shut down. This flag provides a means of communication between the OID Monitor, OID Control, and the Oracle directory integration platform server.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.76

Other

Single-valued attribute.

8.2.235 orclODIPInterfaceType**Description**

The data format or protocol used in synchronization with a third-party directory. Supported values are:

- LDIF—Import or export from a LDIF File.
- Tagged—Import or export from a tagged file—a proprietary format supported by the Oracle Directory Integration Platform server, similar to LDIF format.
- LDAP—Import from or export to an LDAP-compliant directory.
- DB —Import from or export to an Oracle Database directory.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.28

Other

Single-valued attribute.

8.2.236 orclODIPLastExecutionTime

Description

Status attribute set to the last time the integration profile was executed by the Oracle Directory Integration and Provisioning server. Its format is `dd-mon-yyyy hh:mm:ss`, where `hh` is the time of day in 24-hour format. This attribute is initialized during profile creation.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.61

Other

Single-valued attribute.

8.2.237 orclODIPLastSuccessfulExecutionTime

Description

Status attribute set to the last time the integration profile was executed successfully by the Oracle Directory Integration and Provisioning server. Its format is `dd-mon-yyyy hh:mm:ss`, where `hh` is the time of day in 24-hour format. This attribute is initialized during profile creation.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.62

Other

Single-valued attribute.

8.2.238 orclODIPMustAttrCriteria

Description

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.603

Other

Single-valued attribute.

8.2.239 orclODIObjectCriteria**Description**

Used in an object definition to identify and classify a particular type of object.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.602

8.2.240 orclODIObjectDefnLocation**Description**

Identifies the location of the various object definitions used by the Oracle directory integration platform server.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.917

Other

Single-valued attribute.

8.2.241 orclODIObjectEvents**Description**

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.432

8.2.242 orclODIPObjectName**Description**

Used in an object definition to store the name of an object.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.601

Other

Single-valued attribute.

8.2.243 orclODIPObjectSyncBase**Description**

The search base in the directory for an object associated with an Oracle Directory Integration and Provisioning synchronization profile.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.431

8.2.244 orclODIPOIDMatchingFilter**Description**

In export profiles, this attribute specifies the filter to apply to the Oracle Internet Directory change log container. It is used in the export profile. It must be set in the export profile when both the import and export integration profiles are enabled, as in the following example:

```
Modifiersname !=orclodipagentname=iPlanetImport,cn=subscriber profile,cn=changelog
subscriber,cn=oracle internet directory
```

This prevents the same change from being exchanged between the two directories indefinitely.

In import profiles, this attribute specifies a key for mapping entries between Oracle Internet Directory and the connected directory. This is useful when the DN cannot be used as the key.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.43

8.2.245 orclODIPOperationMode

Description

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.430

8.2.246 orclODIPOptAttrCriteria

Description

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.604

Other

Single-valued attribute.

8.2.247 orclODIPPluginAddInfo

Description

Additional information that may be needed by an Oracle Directory Integration and Provisioning connector plug-in.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.264

Other

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.223

8.2.256 orclODIPProfileInterfaceConnectInformation

Description

Contains information that is used by the Oracle directory integration platform server on how to connect to a provisioning-integrated application for event propagation.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.222

Other

Single-valued attribute.

8.2.257 orclODIPProfileInterfaceName

Description

Contains a provisioning-integrated application's interface name, which is used by the Oracle directory integration platform server for event propagation. The value assigned to this attribute depends on the interface type.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.220

Other

Single-valued attribute.

8.2.258 orclODIPProfileInterfaceType

Description

Specifies the type of interface to which events is propagated by the Oracle directory integration platform server. Valid values for this attribute are PLSQL or JAVA.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.221

Other

Single-valued attribute.

8.2.259 orclODIPProfileInterfaceVersion

Description

Specifies the provisioning profile version to which events is propagated by the Oracle directory integration platform server.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.224

Other

Single-valued attribute.

8.2.260 orclODIPProfileLastAppliedAppEventID

Description

Contains the number of the last event that was generated by a provisioning-integration application and updated in Oracle Internet Directory by the Oracle directory integration platform server.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.234

Other

Single-valued attribute.

8.2.261 orclODIPProfileLastProcessingTime

Description

The last time the Oracle Directory Integration and Provisioning synchronization profile was executed.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.232

Other

Single-valued attribute.

8.2.262 orclODIPProfileLastSuccessfulProcessingTime**Description**

The last time the Oracle Directory Integration and Provisioning synchronization profile was successfully executed.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.233

Other

Single-valued attribute.

8.2.263 orclODIPProfileMaxErrors**Description**

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.214

Other

Single-valued attribute.

8.2.264 orclODIPProfileMaxEventsPerInvocation

Description

Specifies the maximum number of events that the Oracle directory integration platform server packages and sends to an application during one invocation of a provisioning profile.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.212

Other

Single-valued attribute.

8.2.265 orclODIPProfileMaxEventsPerSchedule

Description

Specifies the maximum number of events that the Oracle directory integration platform server sends to an application during one execution of a provisioning profile.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.213

Other

Single-valued attribute.

8.2.266 orclODIPProfileMaxRetries

Description

The maximum number of times an Oracle Directory Integration and Provisioning profile is retried in the event of an error.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.211

Other

Single-valued attribute.

8.2.267 orclODIPProfileName**Description**

The name of the Oracle Directory Integration and Provisioning profile.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.201

Single-valued attribute.

8.2.268 orclODIPProfileProcessingErrors**Description**

Contains errors raised during event propagation by the Oracle directory integration platform server for a particular provisioning-integrated application.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.231

8.2.269 orclODIPProfileProcessingStatus**Description**

Contains the Oracle directory integration platform server's event propagation status for a particular provisioning-integrated application.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.230

Other

Single-valued attribute.

8.2.270 orclODIPProfileProvSubscriptionMode

Description

The subscription mode for a provisioning profile: INBOUND, OUTBOUND, or BOTH.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.408

8.2.271 orclODIPProfileSchedule

Description

The number of seconds between executions of an Oracle Directory Integration and Provisioning profile. The default is 3600, which means the profile is scheduled to run every hour.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.210

Other

Single-valued attribute.

8.2.272 orclODIPProfileStatusUpdate

Description

Indicates whether the Oracle directory integration platform server should perform a provisioning profile status update while propagating events to a provisioning-integrated application.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.610

Other

Single-valued attribute.

8.2.273 orclODIPProvEventCriteria**Description**

Used with version 2.0 provisioning profiles to convert a change in Oracle Internet Directory to an event before propagating it to a provisioning-integrated application. This attribute is used to identify a particular type of event.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.503

8.2.274 orclODIPProvEventLDAPChangeType**Description**

Used with version 2.0 provisioning profiles to convert a change in Oracle Internet Directory to an event before propagating it to a provisioning-integrated application. This attribute is used to indicate what type of operation in LDAP (add, modify, delete) can cause some type of event.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.502

8.2.275 orclODIPProvEventObjectType**Description**

Used with version 2.0 provisioning profiles to convert a change in Oracle Internet Directory to an event before propagating it to a provisioning-integrated application. This attribute is used to indicate the type of object (i.e whether it is a USER or a GROUP and so forth) based on other qualifying criteria.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.501

Other

Single-valued attribute.

8.2.276 orclODIPProvEventRule

Description

Stores the XML-based rule definitions used by the Oracle directory integration platform server to convert changes in Oracle Internet Directory into events before propagating them to a provisioning-integrated application.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.607

Other

Single-valued attribute.

8.2.277 orclODIPProvEventRuleDTD

Description

Stores the XML DTD for event rule definitions used by the Oracle directory integration platform server to understand and parse event rule definitions.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.606

Other

Single-valued attribute.

8.2.278 orclODIPProvInterfaceFilter

Description

Used with version 3.0 provisioning profiles to identify and classify an object based on the entry's object class. This attribute is used in the object definitions stored in Oracle Internet Directory.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.609

8.2.279 orclODIPProvInterfaceProcessor

Description

Used by the Oracle directory integration platform server to identify the Java classes to use for reading and writing events from and to provisioning-integration applications and for processing event propagation results. The default configurations in this attribute should not be changed.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.608

Other

Single-valued attribute.

8.2.280 orclODIPProvisioningAppGUID

Description

The global unique identifier for the application entry associated with a provisioning profile.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.402

Other

Single-valued attribute.

8.2.281 orclODIPProvisioningAppName**Description**

The distinguished name (DN) of the application to which the provisioning subscription belongs. The combination of the application name and organization name uniquely identifies a provisioning profile, for example, Email.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.401

Other

Single-valued attribute.

8.2.282 orclODIPProvisioningEventMappingRules**Description**

The event mapping rule maps the object type received from the application (using an optional filter condition) to a domain in Oracle Internet Directory. An inbound provisioning profile can have multiple mapping rules defined.

The following example shows a sample mapping rule value. The rule shows that a user object (USER) whose locality attribute equals US (l=US) should be mapped to the domain l=US, cn=users, dc=company, dc=com.

```
USER:l=US:l=US, cn=users, dc=company, dc=com
```

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.406

8.2.283 orclODIPProvisioningEventPermittedOperations

Description

Defines the types of events that the application is allowed to send to the Oracle Directory Integration and Provisioning service. An inbound provisioning profile can have multiple permitted operations defined.

For example, if you wanted to permit the application to send events whenever a user object was added or deleted, or when certain attributes were modified, you would have three permitted operation values such as this:

```
USER:dc=mycompany,dc=com:ADD(*)
USER:dc=mycompany,dc=com:MODIFY(cn,sn,mail,password)
USER:dc=mycompany,dc=com:DELETE(*)
```

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.407

8.2.284 orclODIPProvisioningEventSubscription

Description

Defines the types of events that the Oracle Directory Integration and Provisioning service should send to the application. An outbound provisioning profile can have multiple event subscriptions defined.

For example, if you wanted the directory integration server to send events to the application whenever a user or group object was added or deleted, you would have four event subscription values such as this:

```
GROUP:dc=mycompany,dc=com:ADD(*)
GROUP:dc=mycompany,dc=com:DELETE(*)
USER:dc=mycompany,dc=com:ADD(*)
USER:dc=mycompany,dc=com:DELETE(*)
```

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.405

8.2.285 orclODIPProvisioningOrgGUID

Description

The global unique identifier for the organization entry associated with a provisioning profile.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.404

Other

Single-valued attribute.

8.2.286 orclODIPProvisioningOrgName

Description

The distinguished name (DN) of the organization to which the provisioning subscription belongs, for example `dc=company, dc=com`. The combination of the application DN and organization DN uniquely identifies a provisioning profile. Defaults value is the DN of the default identity management realm.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.403

Other

Single-valued attribute.

8.2.287 orclODIPProvProfileLocation

Description

Contains the DN of the directory container that stores provisioning profiles.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.916

Other

Single-valued attribute.

8.2.288 orclODIPRootLocation**Description**

Refers to the root location in the directory tree where the Oracle Directory Integration Platform configuration is stored.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.912

Other

Single-valued attribute.

8.2.289 orclODIPSchedulingInterval**Description**

Time interval in seconds after which a connected directory is synchronized with Oracle Internet Directory. The default is 600.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.6

Other

Single-valued attribute.

8.2.290 orclODIPSchemaVersion**Description**

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.911

Other

Single-valued attribute.

8.2.291 orclODIPSearchCountLimit

Description

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.511

Other

Single-valued attribute.

8.2.292 orclODIPSearchTimeLimit

Description

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.512

Other

Single-valued attribute.

8.2.293 orclODIPServerCommitSize

Description

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.515

Other

Single-valued attribute.

8.2.294 orclODIPServerConfigLocation**Description**

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.919

Other

Single-valued attribute.

8.2.295 orclODIPServerDebugLevel**Description**

The number that corresponds to the debugging level for the Oracle Directory Integration and Provisioning server.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.516

Other

Single-valued attribute.

8.2.296 orclODIPServerRefreshIntvl

Description

The number of minutes between server refreshes for any changes in Oracle Directory Integration Platform profiles. If not specified, the default of 2 is used.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.514

Other

Single-valued attribute.

8.2.297 orclODIPServerSSLMode

Description

The number of the corresponding SSL mode. The default is 0. The modes are as follows:

- 0 — SSL is not used.
- 1 — SSL is used for encryption only, not for authentication.
- 2 — SSL is used for one-way authentication. With this mode you must also specify the complete path and file name of the server's Oracle Wallet.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.513

Other

Single-valued attribute.

8.2.298 orclODIPServerWalletLoc

Description

The complete path and file name of the Oracle Directory Integration and Provisioning server's Oracle Wallet.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.517

Other

Single-valued attribute.

8.2.299 orclODIPSynchronizationErrors**Description**

Messages explaining the errors if the last execution of the synchronization profile failed. This attribute is updated by Oracle Directory Integration and Provisioning server.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.64

8.2.300 orclODIPSynchronizationMode**Description**

Direction of synchronization between Oracle Internet Directory and the connected directory. Allowed values are: IMPORT or EXPORT.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.2

Other

Single-valued attribute.

8.2.301 orclODIPSynchronizationStatus**Description**

Status of the last execution of a synchronization profile: SUCCESS or FAILURE. Initially, this attribute has the value YET TO BE EXECUTED.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.63

Other

Single-valued attribute.

8.2.302 orclODIPSyncProfileLocation

Description

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.915

Other

Single-valued attribute.

8.2.303 orclODIPSyncRetryCount

Description

Maximum number of times Oracle Directory Integration and Provisioning server tries to run the third-party directory connector in the event of a failure. The default is 5.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.7

Other

Single-valued attribute.

8.2.304 orclOidComponentName

Description

Name of OID component where replication server is started.

Syntax

Directory String

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.832

8.2.305 orclOidInstanceName

Description

Name of instance where replication server is started.

Syntax

Directory String

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.830

8.2.306 orclOpAbandoned

Description

Specifies the number of abandoned LDAP operations.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.168

Other

Single-valued attribute.

8.2.307 orclOpCompleted

Description

Specifies the number of completed LDAP operations.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.166

Other

Single-valued attribute.

8.2.308 orclOpenConn

Description

Specifies the number of open connections to the Oracle Internet Directory server, including client LDAP connections and database connections.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.149

Other

Single-valued attribute.

8.2.309 orclOpFailed

Description

Specifies the number of failed LDAP operations.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.190

Other

Single-valued attribute.

8.2.310 orclOpInitiated**Description**

Specifies the number of initiated LDAP operations.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.165

Other

Single-valued attribute.

8.2.311 orclOpLatency**Description**

Stores operation latency.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.127

Other

Single-valued attribute.

8.2.312 orclOpPending**Description**

Specifies the number of pending LDAP operations.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.167

Other

Single-valued attribute.

8.2.313 orclOpResult

Description

Stores the operation result.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.64

8.2.314 orclOpSucceeded

Description

Specifies the number of successful LDAP operations.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.189

Other

Single-valued attribute.

8.2.315 orclOpTimedOut

Description

Specifies the number of LDAP search operations that timed out.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.169

Other

Single-valued attribute.

8.2.316 orcloptracklevel**Description**

Security event tracking level.

Syntax

Integer

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.180

8.2.317 orcloptrackmaxtotalsize**Description**

Maximum number of bytes of RAM that security events tracking can use for each type of operation.

Syntax

Integer

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.178

8.2.318 orcloptracknumelemcontainers**Description**

Number of in-memory cache containers to be allocated for security event tracking. The `1stlevel` subtype is for setting the number of in-memory cache containers for storing information about users performing operations. The `2ndlevel` subtype, which is applicable only to compare operation, sets the number of in-memory cache containers for information about the users whose userpassword is compared and tracked when detailed compare operation statistics is programmed.

Syntax

Integer

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.181

8.2.319 orclORA28error

Description

Specifies the number of ORA-28 errors encountered by Oracle Internet Directory server.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.182

Other

Single-valued attribute.

8.2.320 orclORA3113error

Description

Specifies the number of ORA-3113 errors encountered by Oracle Internet Directory server.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.157

Other

Single-valued attribute.

8.2.321 orclORA3114error

Description

Specifies the number of ORA-3114 errors encountered by Oracle Internet Directory server.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.158

Other

Single-valued attribute.

8.2.322 orclOracleHome**Description**

The *ORACLE_HOME* location of an Oracle service.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

N/A

Object ID

2.16.840.1.113894.7.1.2

Other

Single-valued attribute.

8.2.323 orclOwnerGUID**Description**

The global unique identifier of the user who owns an application or resource.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.1.1.358

8.2.324 orclPassword**Description**

Identifies an Oracle-specific password for custom authentication schemes like O3Logon for the database server.

Syntax

1.3.6.1.4.1.1466.115.121.1.44 (Printable String)

Matching Rule

caseExactMatch

Object ID

2.16.840.1.113894.7.1.13

8.2.325 orclPasswordAttribute

Description

Specifies the password value to access the resource.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.1.1.353

Other

Single-valued attribute.

8.2.326 orclPasswordHint

Description

Specifies the password hint to be displayed when users forget their password.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.314

Other

Single-valued attribute.

8.2.327 orclPasswordHintAnswer

Description

The answer related to the password hint question stored in [orclPasswordHint](#).

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.315

Other

Single-valued attribute.

Note: `orclPasswordHintAnswer` is hashed using the SHA-1 algorithm. The hexadecimal value of this is Base64 encoded.

Oracle Internet Directory hashes the value only if it is provided as plaintext. Prehashed values are not hashed again.

8.2.328 `orclPasswordVerifier`

Description

Attribute for storing a password to an Oracle component when that password is different from that used to authenticate the user to the directory, namely, `userPassword`. The value in this attribute is not synchronized with that in the `userPassword` attribute.

Like `authPassword`, this attribute is multivalued and can contain all the other verifiers that different applications use for this user's clear text password.

Syntax

1.3.6.1.4.1.1466.115.121.1.44{128} (Printable String, 128 character maximum)

Matching Rule

octetStringMatch

Object ID

2.16.840.1.113894.1.1.210

8.2.329 `orclPilotMode`

Description

Whether to BEGIN or END pilot mode for a replica.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Directory String)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch, equality integermatch

Object ID

2.16.840.1.113894.1.1.824

Other

Single-valued attribute.

8.2.330 orclPKCS12Hint

Description

Password hint for the user's PKCS12 private key store.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.7.1.11

8.2.331 orclPKIMatchingRule

Description

This is used to specify the matching rule for mapping a user's PKI certificate DN to the user's entry DN in Oracle Internet Directory. The following matching rule values are allowed:

- 0 - Exact match. The PKI certificate DN must match the user entry DN.
- 1 - Certificate search. Check to see if the user has a PKI certificate provisioned into Oracle Internet Directory.
- 2 - A combination of exact match and certificate search. If the exact match fails, then a certificate search is performed.
- 3 - Mapping rule only. Use a mapping rule to map user PKI certificate DN to Oracle Internet Directory DN.
- 4 - Try in order: 1 (mapping rule), 2 (certificate search), 3 (exact match).

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.703

Other

Single-valued attribute.

8.2.332 orclPKINextUpdate

Description

The universal time when the certificate revocation list (CRL) should be updated.

Syntax

1.3.6.1.4.1.1466.115.121.1.53 (UTC Time)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.2.1.300.1

8.2.333 orclPKIVaIMecAttr

Description

Contains the certificate validation mechanism supported. Currently, only validation with crls is supported, hence the value of this attribute is CRL.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.2.1.300.2

8.2.334 orclPluginAttributeList

Description

A semicolon-separated attribute name list that controls whether the plug-in takes effect. If the target attribute is included in the list, the plug-in is invoked.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.563

Other

Single-valued attribute.

8.2.335 orclPluginCheckEntryExist

Description

If enabled, then the Plug-in is invoked when the base entry does not exist. This only applies to search operation with scope base.

Allowed values are 0 (disabled) or 1 (enabled).

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.569

Other

Single-valued attribute.

8.2.336 orclPluginEnable

Description

Whether a plug-in is enabled or disabled. Allowed values are 0 (disabled) or 1 (enabled). The default is 0 (disabled).

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.554

Other

Single-valued attribute.

8.2.337 orclPluginEntryProperties

Description

An LDAP search filter that specifies entry criteria that will cause the plug-in to not be invoked. For example, if the following filter is used, the plug-in will not be invoked if the target entry has `objectclass` equal to `inetorgperson` and `sn` equal to `Cezanne`.

```
(&(objectclass=inetorgperson)(sn=Cezanne))
```

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.568

Other

Single-valued attribute.

8.2.338 orclPluginIsReplace**Description**

For plug-ins that use WHEN timing only. 0 is disabled (default). 1 is enabled. This attribute can be set to enabled only if the [orclPluginLDAPOperation](#) attribute value is ldapbind, ldapcompare, or ldapmodify.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.559

Other

Single-valued attribute.

8.2.339 orclPluginBinaryFlexfield**Description**

Custom binary information (Java only)

Syntax

1.3.6.1.4.1.1466.115.121.1.5

Object ID

2.16.840.1.113894.1.1.574

Other

Single-valued attribute.

8.2.340 orclPluginFlexfield**Description**

Custom text information (Java only). To indicate a subtype, specify `orclPluginFlexfield; subtypename`, for example, `orclPluginFlexfield; minPwdLength: 8`

Syntax

1.3.6.1.4.1.1466.115.121.1.15

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.573

Other

Single-Valued attribute.

8.2.341 orclPluginSecuredFlexfield

Description

Syntax

1.3.6.1.4.1.1466.115.121.1.15

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.577

Other

Single-Valued attribute.

8.2.342 orclPluginKind

Description

The kind of plug-in. PL/SQL is the only allowed value.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.562

Other

Single-valued attribute.

8.2.343 orclPluginLDAPOperation

Description

The LDAP operation that this plug-in supplements. Allowed values are:

- ldapcompare
- ldapmodify
- ldapbind
- ldapadd
- ldapdelete
- ldapsearch

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.557

Other

Single-valued attribute.

8.2.344 orclPluginName

Description

The plug-in package name.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.552

Other

Single-valued attribute.

8.2.345 orclPluginPort

Description

The port that the plug-in is using.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.566

Other

Single-valued attribute.

8.2.346 orclPluginRequestGroup

Description

A semicolon-separated group list that controls if the plug-in takes effect. You can use this group to specify who can actually invoke the plug-in. For example, if you specify `orclpluginrequestgroup:cn=security,cn=groups,dc=oracle,dc=com`, when you register the plug-in, then the plug-in will not be invoked unless the ldap request comes from the person who belongs to the group `cn=security,cn=groups,dc=oracle,dc=com`.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.564

Other

Single-valued attribute.

8.2.347 orclPluginRequestNegGroup

Description

A semicolon-separated group list that controls if the plug-in takes effect. You can use this group to specify who cannot invoke the plug-in. For example, if you specify `orclpluginrequestneggroup:cn=security,cn=groups,dc=oracle,dc=com`, when you register the plug-in, then the plug-in will not be invoked if the ldap request comes from the person who belongs to the group `cn=security,cn=groups,dc=oracle,dc=com`.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.571

Other

Single-valued attribute.

8.2.348 orclPluginResultCode**Description**

An integer value to specify the LDAP result code. If this value is specified, then the plug-in is invoked only if the ldap operation is in that result code scenario. This only applies if the value for the [orclPluginTiming](#) attribute is POST.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.565

Other

Single-valued attribute.

8.2.349 orclPluginSASLCallback**Description**

Controls the type of bind used when the LDAP_PLUGIN package connects back to the same Oracle Internet Directory server.

- 1= SASL bind (default).
- 0= Simple bind.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.572

Other

Single-valued attribute.

8.2.350 orclPluginSearchNotFound

Description

This only applies if the value for the [orclPluginTiming](#) attribute is POST. Brings in the external entries if the entry is not found in Oracle Internet Directory. Provides additional plug-in invocation checking and ensures that the plug-in will only be invoked when the entry is not present in Oracle Internet Directory.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.570

Other

Single-valued attribute.

8.2.351 orclPluginShareLibLocation

Description

File location of the program libraries for the plug-in. If this value is not present, then the Oracle Internet Directory server assumes the plug-in language is PL/SQL.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.556

Other

Single-valued attribute.

8.2.352 orclPluginSubscriberDNList

Description

A semicolon-separated DN list that controls if the plug-in takes effect. For example:

```
dc=COM, c=us ; dc=us , dc=oracle , dc=com ; dc=org , dc=us ; o=IMC , c=US
```

If the target DN of an LDAP operation is included in the list, then the plug-in is invoked.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.561

Other

Single-valued attribute.

8.2.353 orclPluginTiming

Description

Specifies when the plug-in is to be invoked in relation to the LDAP operation it supplements. The following values are allowed:

- PRE
- WHEN
- POST

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.558

Other

Single-valued attribute.

8.2.354 orclPluginType

Description

Valid value is `operational` — Operational plug-ins augment existing LDAP operations. The work they perform depends on whether they execute before, after, or in addition to normal directory server operations.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.553

Other

Single-valued attribute.

8.2.355 orclPluginVersion

Description

The supported version number of the plug-in.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.555

Other

Single-valued attribute.

8.2.356 OrclPluginWorkers

Description

Number of plug-in threads per server process.

Syntax

Integer

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.612

8.2.357 orclPrName

Description

Stores a process name.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

distinguishedNameMatch

Object ID

2.16.840.1.113894.1.1.55

Other

Single-valued attribute.

8.2.358 orclProductVersion

Description

Identifies the product version.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.7.1.6

8.2.359 orclPrPassword

Description

Contains a password for the OID proxy user.

Syntax

1.3.6.1.4.1.1466.115.121.1.15{128} (Directory String, 128 character maximum)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.1.1.56

Other

Single-valued attribute.

8.2.360 orclPurgeBase

Description

The base DN in the directory information tree (DIT) where the garbage collection task is applied. This attribute value is reserved for each garbage collector and it must not be modified. Defaults to the RDN of the garbage collector configuration entry DN.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

distinguishedNameMatch

Object ID

2.16.840.1.113894.1.1.805

Other

Single-valued attribute.

8.2.361 orclPurgeDebug

Description

Flag to enable (1) or disable (0) collection of debugging messages. Default value is 0.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.810

Other

Single-valued attribute.

8.2.362 orclPurgeEnable

Description

Flag to enable (1) or disable (0) this garbage collector. Default value is 1.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.1.1.808

Other

Single-valued attribute.

8.2.363 orclPurgeFileLoc

Description

Absolute file directory where the garbage collection log file is saved. Default value is . (period - the current directory).

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.1.1.812

Other

Single-valued attribute.

8.2.364 orclPurgeFileName**Description**

The file name of the garbage collection log file. Default value is `oidgc001.log`.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

`caseIgnoreMatch`, `caseIgnoreSubstringsMatch`

Object ID

2.16.840.1.113894.1.1.811

Other

Single-valued attribute.

8.2.365 orclPurgeFilter**Description**

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

`caseIgnoreMatch`, `caseIgnoreSubstringsMatch`

Object ID

2.16.840.1.113894.1.1.803

Other

Single-valued attribute.

8.2.366 orclPurgeInterval**Description**

Time interval in hours that the garbage collection job is executed again. This can be measured from either the point in time specified in the [orclPurgeStart](#) attribute or from the last time it was run. Default value is 24.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

`integerMatch`

Object ID

2.16.840.1.113894.1.1.801

Other

Single-valued attribute.

8.2.367 orclPurgeNow

Description

Every time this attribute is added or modified to a garbage collection entry, then the submitted job is executed immediately.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.1.1.809

Other

Single-valued attribute.

8.2.368 orclPurgePackage

Description

Specifies the package name for purging directory objects.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.1.1.804

Other

Single-valued attribute.

8.2.369 orclPurgeSchedule

Description

Specifies the schedule for purging directory objects.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integermatch

Object ID

2.16.840.1.113894.1.1.24

Other

Single-valued attribute.

DSA operational attribute.

8.2.370 orclPurgeStart**Description**

The time when the garbage collector starts to run. The format is `yyyymmddhhmmss`. Default value is 12:00 a.m. of the day Oracle Internet Directory is installed.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.1.1.813

Other

Single-valued attribute.

8.2.371 orclPurgeTargetAge**Description**

This attribute enables time-based purging of change log records. Set this to the number of hours after which old change logs are purged. Time-based purging respects the change status of replication, but not the change status of other consumers. When time-based purging is enabled, the change log garbage collector purges all change logs that are not needed by replication and that are at least the specified number of hours old.

The default behavior is change number-based purging, meaning this attribute is NULL or set to a value less than zero. Change number-based purging respects the change status of all change log consumers. That is, it does not purge change logs unless they have been consumed by all consumers. In addition, it does not purge change logs until they are 10 days old.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.800

Other

Single-valued attribute.

8.2.372 orclPurgeTranSize

Description

The number of objects to be purged in one commit transaction. The default value is 1000.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.802

Other

Single-valued attribute.

8.2.373 orclPwdAccountUnlock

Description

It allows a user with the appropriate administration rights and privileges to unlock an already locked account. However, it doesn't necessarily imply that the user affected (that is, who's account was locked) can unlock it by changing this attribute.

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

booleanMatch

Object ID

2.16.840.1.113894.1.1.203

Other

Single-valued attribute.

8.2.374 orclPwdAllowHashCompare

Description

Whether to allow password validations by comparing the hash values of encrypted passwords. Allowed values are TRUE or FALSE.

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

booleanMatch

Object ID

2.16.840.1.113894.1.1.218

Other

Single-valued attribute.

8.2.375 orclPwAlphaNumeric**Description**

Number of numeric characters required in a password. The default value is 1.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.205

Other

Single-valued attribute.

8.2.376 orclPwEncryptionEnable**Description**

If the value is 1, then the user password is stored in reversible encrypted form. If the value is 0, then the user password is stored in plain text.

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

booleanMatch

Object ID

2.16.840.1.113894.1.1.215

Other

Single-valued attribute.

8.2.377 orclPwDIlegalValues

Description

Lists the common words and attribute types whose values cannot be used as a valid password. By default, all words are acceptable password values.

Syntax

1.3.6.1.4.1.1466.115.121.1.15{1024} (Directory String, 1024 character maximum)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.1.1.204

8.2.378 orclPwDIAccountLockedTime

Description

The time when a user account was locked for a specific IP address.

Syntax

1.3.6.1.4.1.1466.115.121.1.24 (Generalized Time)

Matching Rule

generalizedTimeMatch

Object ID

2.16.840.1.113894.1.1.211

Other

Directory operational attribute.

Not user modifiable.

8.2.379 orclPwDIPFailureTime

Description

The time of a password failure.

Syntax

1.3.6.1.4.1.1466.115.121.1.24 (Generalized Time)

Matching Rule

generalizedTimeMatch

Object ID

2.16.840.1.113894.1.1.212

Other

Directory operational attribute.

Not user modifiable.

8.2.380 orclPwDIPLockout**Description**

Whether to enable account lockouts for a specific IP address. The value can be 1 (for true) or 0 (for false).

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

booleanMatch

Object ID

2.16.840.1.113894.1.1.200

Other

Single-valued attribute.

8.2.381 orclPwDIPLockoutDuration**Description**

The number of seconds you want to enforce account lockout for a specific IP address. A user account stays locked even after the lockout duration has passed unless the user binds with the correct password.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.201

Other

Single-valued attribute.

8.2.382 orclPwDIPLMaxFailure**Description**

The maximum number of failed logins from a specific IP address after which the account is locked.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.202

Other

Single-valued attribute.

8.2.383 orclpwdmaxinactivitytime

Description

Maximum period of time in seconds after which an inactive account is automatically locked.

Syntax

1.3.6.1.4.1.1466.115.121.1.27

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.379

Other

Single-valued attribute.

8.2.384 orclPwdMaxRptchars

Description

Maximum number of times a single character type can be repeated in a password.

Syntax

1.3.6.1.4.1.1466.115.121.1.27

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.415

Other

Single-valued attribute.

8.2.385 orclPwMinAlphachars

Description

Minimum number of alphabetic characters required in a password.

Syntax

1.3.6.1.4.1.1466.115.121.1.27

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.411

Other

Single-valued attribute.

8.2.386 orclPwMinSpecialchars

Description

Minimum number of non-alphanumeric characters required in a password.

Syntax

1.3.6.1.4.1.1466.115.121.1.27

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.412

Other

Single-valued attribute.

8.2.387 orclPwMinUppercase

Description

Minimum number of uppercase characters required in a password.

Syntax

1.3.6.1.4.1.1466.115.121.1.27

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.413

Other

Single-valued attribute.

8.2.388 orclpadminlowercase

Description

orclpadminlowercase

Syntax

Minimum number of lowercase characters required in a password.

1.3.6.1.4.1.1466.115.121.1.27

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.414

Other

Single-valued attribute.

8.2.389 orclPwPolicyEnable

Description

Whether to enable or disable the password policy. The value can be 1 (for enable) or 0 (for disable).

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

booleanMatch

Object ID

2.16.840.1.113894.1.1.213

Other

Single-valued attribute.

8.2.390 orclPwTrackLogin

Description

Enables or disables tracking of user's last login time; 1 for enabling and 0 for disabling (default).

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.377

Other

Single-valued attribute

8.2.391 orclPwdVerifierParams**Description**

This attribute contains the values of different password verifier types, such as:

```
orclpwdverifierparams;authpassword: crypto:SASL/MDS $
realm:dc=com
```

```
orclpwdverifierparams;orclpasswordverifier: crypto:ORCLLM
```

```
orclpwdverifierparams;authpassword: crypto:ORCLWEBDAV $
realm:dc=com
```

Syntax

1.3.6.1.4.1.1466.115.121.1.15{256} (Directory String, 256 character maximum)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.1.1.209

8.2.392 orclQueueDepth**Description**

Indicates the queue depth.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.144

Other

Single-valued attribute.

8.2.393 orclQueueLatency

Description

Defines the queue latency.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.145

Other

Single-valued attribute.

8.2.394 orclReadWaitThreads

Description

Specifies the number of Oracle Internet Directory server threads waiting to read from the network.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.142

Other

Single-valued attribute.

8.2.395 orclReqAttrCase

Description

Disables or enables preserving the letter case of required attributes in search result. Allowed values are 0 (disable) or 1 (enable). The default value is 0.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.423

Other

Single-valued attribute

8.2.396 orclrefreshdgrmems**Description**

Refresh Dynamic Group Memberships.

Syntax

1.3.6.1.4.1.1466.115.121.1.27

Matching Rule

integerMatch (Integer)

Object ID

2.16.840.1.113894.1.1.416

Other

Single-valued attribute

8.2.397 orclReplAgreements**Description**

The DNs of the replication agreement entries.

Syntax

1.3.6.1.4.1.1466.115.121.1.34 (Distinguished Name)

Matching Rule

distinguishedNameMatch

Object ID

2.16.840.1.113894.1.1.105

8.2.398 orclReplAttrConfl**Description**

Specifies whether timestamp or attribute version should be honored first during attribute level conflict resolution. 0 (default): timestamp first, 1: version number first

Syntax

1.3.6.1.4.1.1466.115.121.1.27(Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.899

Other

Single valued attribute

8.2.399 orclreplautotune**Description**

Dynamically vary the number of threads assigned to transport and apply tasks based on load. 0: Off, 1: On.

If you set the server to auto tune, you must specify the number of maximum number of threads to be shared between these tasks. Restart server after changing.

Syntax

Integer

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.827

8.2.400 orclReplicaDN**Description**

For LDAP-based replication only. The DN of the consumer replica in the replication agreement.

Syntax

1.3.6.1.4.1.1466.115.121.1.34 (Distinguished Name)

Matching Rule

distinguishedNameMatch

Object ID

2.16.840.1.113894.1.1.817

8.2.401 orclReplicaID**Description**

Naming attribute for the replica subentry. Its value is unique to each directory server node that is initialized at installation. The value of this attribute, assigned during installation, is unique to each directory node, and matches that of the `orclreplicaID` attribute at the root DSE. You cannot modify this value.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.106

Other

Single-valued attribute.

8.2.402 orclReplicaSecondaryURI**Description**

Contains the set of ldapURI formatted addresses that can be used if the [orclReplicaURI](#) values cannot be used.

Syntax

1.3.6.1.4.1.1466.115.121.1.26 (IA5 String)

Matching Rule

caseExactIA5Match

Object ID

2.16.840.1.113894.1.1.815

8.2.403 orclReplicaState**Description**

Defines the state of the replica. Possible values are:

- 0 (boot strapping)
- 1 (online)
- 2 (offline)
- 3 (bootstrap in progress)
- 4 (bootstrap in progress, cn=oraclecontext bootstrap has completed)
- 5 (bootstrap completed, failure detected for one or more naming contexts)
- 6 (database copy based add node)
- 7 (sync schema)
- 8 (boot strap without schema sync)

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.818

Other

Single-valued attribute.

8.2.404 orclreplicationid

Description

Unique identifier of a one-way, two-way, or peer-to-peer replication group

Syntax

Integer

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.509

8.2.405 orclReplicationProtocol

Description

Defines the replication protocol for change propagation to replica. Values are:

- ODS_ASR_1.0 (Oracle Database Advanced Replication-based protocol)
- ODS_LDAP_1.0 (LDAP-based replication)

You cannot modify this attribute.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.1.1.29

Other

Single-valued attribute.

8.2.406 orclReplicationState

Description

Activation state of the replication server. 0-Inactive, 1-Active

Syntax

Integer

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.831

8.2.407 orclReplicaType

Description

Defines the type of replica such as read-only or read/write. Possible values are:

- 0 (Read/Write)
- 1 (Read-Only)

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.816

Other

Single-valued attribute.

8.2.408 orclReplicaURI

Description

Contains information in ldapURI format that can be used to open a connection to this replica.

Syntax

1.3.6.1.4.1.1466.115.121.1.26 (IA5 String)

Matching Rule

caseExactIA5Match

Object ID

2.16.840.1.113894.1.1.814

Other

Single-valued attribute.

8.2.409 orclReplicaVersion

Description

Oracle Internet Directory version of the replica.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.820

Other

Single-valued attribute.

8.2.410 orclreplmaxworkers

Description

Maximum number of worker threads. Required if orclreplautotune is set.

Syntax

Integer

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.826

8.2.411 orclreplusesasl;digest-md5

Description

Use SASL for replication binds. Values are auth, auth-int, and auth-conf.

Syntax

Directory String

Matching Rule

caseIgnoreMatch; caseIgnoreSubstringMatch

Object ID

2.16.840.1.113894.1.1.829

8.2.412 orclResourceIdentifier

Description

Stores the resource identifier.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

distinguishedNameMatch

Object ID

2.16.840.1.113894.1.1.348

8.2.413 orclResourceName

Description

Specifies the name of the resource for which the connection information is being maintained.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.1.1.350

8.2.414 orclResourceTypeName

Description

Specifies the name of the resource, for example, database, XMLPDS, JDBCPS.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.351

8.2.415 orclResourceViewers

Description

Lists the users or groups of users who can view a Resource Access Descriptor.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

distinguishedNameMatch

Object ID

2.16.840.1.113894.1.1.366

8.2.416 orclRevPwd

Description

Reversible encrypted value of the user password. This attribute is generated only if the attribute value of [orclPwdEncryptionEnable](#) in the password policy entry is set to 1. This attribute cannot be queried.

Syntax

1.3.6.1.4.1.1466.115.121.1.44{128} (Printable String, 128 character maximum)

Matching Rule

octetStringMatch

Object ID

2.16.840.1.113894.1.1.216

Other

Directory operational attribute.

Not user modifiable.

8.2.417 orclrienabled

Description

Enables referential integrity. 0: disabled, 1: enabled.

Syntax

1.3.6.1.4.1.1466.115.121.1.27

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.1300

Other

Single-valued attribute

8.2.418 orclrscacheattr

Description

Multi-valued attribute that specifies the Result Set Cache attributes. Default values are:

- dn: cn=dsaconfig,cn=configsets,cn=oracle internet directory
- orclrscacheattr: uid
- orclrscacheattr: mail
- orclrscacheattr: cn
- orclrscacheattr: orclguid

Note: Typically these attributes are not modified for the life of the entry. If an attribute has referential integrity enabled, that attribute should not be used.

Syntax

1.3.6.1.4.1.1466.115.121.1.44

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.624

Other

Multi-valued attribute.

8.2.419 orclSAMAccountName

Description

Stores the value of Active Directory's `SAMAccountName` attribute. In Oracle Internet Directory, this attribute is defined as a directory string type. However, in Active Directory this attribute cannot accept any special or non-printable characters. If any entry is added in Oracle Internet Directory with this attribute, it can only contain a simple text string or synchronization from Oracle Internet Directory to Active Directory will fail.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.903

Other

Single-valued attribute.

8.2.420 orclSASLAuthenticationMode

Description

SASL authentication mode indicates different modes depending on the type of authentication required and the level of security, such as, `auth-only`, `auth-int`, or `auth-conf`.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.700

Other

Single-valued attribute.

8.2.421 orclSASLCipherChoice**Description**

Contains the SASL cipher choice. when the authentication mode is auth-conf, the SASL cipher choices can be 3DES, DES, RC4, RC4-56, or RC4-40.

Syntax

1.3.6.1.4.1.1466.115.121.1.15{128} (Directory String, 128 character maximum)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.1.1.702

8.2.422 orclSASLMechanism**Description**

Indicates the different kinds of SASL mechanisms supported in the LDAP server. Currently, OID supports SASL-EXTERNAL and DIGEST-MD5.

Syntax

1.3.6.1.4.1.1466.115.121.1.15{128} (Directory String, 128 character maximum)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.1.1.701

8.2.423 orclDumpFlag**Description**

Determines whether to generate or stack file (default value 0) or OS level core file (value 1) in case the OID server crashes.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.407

Other

Single-valued attribute.

8.2.424 orclSearchBaseDN**Description**

Contains search base information to be used when performing the directory query for identity mapping.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

distinguishedNameMatch

Object ID

2.16.840.1.113894.1.1.706

Other

Single-valued attribute.

8.2.425 orclSearchFilter**Description**

Contains search filter information to be used when performing the directory query for identity mapping.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.705

Other

Single-valued attribute.

8.2.426 orclSearchScope

Description

Contains search scope information to be used when performing the directory query for identity mapping.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.707

Other

Single-valued attribute.

8.2.427 orclSecondaryUID

Description

Indicates the secondary UID of a user.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.1.1.360

8.2.428 orclSequence

Description

Specifies the sequence number for audit log entries.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.62

8.2.429 orclServerAvgMemGrowth

Description

Specifies the Oracle Internet Directory server process memory growth as a percentage.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.148

Other

Single-valued attribute.

8.2.430 orclServerMode

Description

Specifies if data can be written to the server. Valid values are:

- r (read-only)
- rw (read/write)
- rm (read-modify, that is, to read and modify, but not to add or delete)

The default value is rw.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.151

Other

Single-valued attribute.

8.2.431 orclServerProcs

Description

Number of server processes to start. The default for `configset0` is 1. You cannot use a negative value for this attribute.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.364

Other

Single-valued attribute.

8.2.432 orclServiceInstanceLocation

Description

Specifies the DN of an instance of a service.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseExactMatch

Object ID

2.16.840.1.113894.1.1.1102

Other

Single-valued attribute.

8.2.433 orclServiceMember

Description

Identifies all the service instances that are members of a logical service entity.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

distinguishedNameMatch

Object ID

2.16.840.1.113894.1.1.1005

8.2.434 orclServiceSubscriptionLocation

Description

Specifies the DN where the list of users subscribed to a service is available.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseExactMatch

Object ID

2.16.840.1.113894.1.1.1100

Other

Single-valued attribute

8.2.435 orclServiceSubType**Description**

Identifies the sub-types of a Service e.g. IMAP, SMTP are sub-type of an e-mail service.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.1009

Other

Single-valued attribute

8.2.436 orclServiceType**Description**

Identifies the type of Service e.g. Email, Calendar, and so forth.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.7.1.4

Other

Single-valued attribute

8.2.437 orclSID**Description**

Stores the SID.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.7.1.5

Other

Single-valued attribute

8.2.438 orclsimplemodchglogattributes

Description

List of multivalued attributes that, when changed, cause a simplified change log to be generated.

Syntax

DN

Matching Rule

DistinguishedNameMatch

Object ID

2.16.840.1.113894.1.1.823

8.2.439 orclSizeLimit

Description

Maximum number of entries to be returned by a search.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.10

Other

Single-valued attribute

8.2.440 orclSkewedAttribute

Description

Attribute that contains names of attributes which are skewed. A skewed attribute has very different search response times depending on its value. You can uniform the

response times for searches for such an attribute by adding it as a value of the orclskewedattribute attribute.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.1.1.405

8.2.441 orclSkipRefInSQL

Description

Specifies whether to skip referral in SQL generated for searches. Its default value is 0. Set it to 1 if there are no referral entries in the directory; this will help optimizing search performance.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.410

Other

Single-valued attribute

8.2.442 orclSMSpec

Description

Represents a structural object class that includes common attributes for server manageability object classes.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.1.1.185

8.2.443 orclSQLexefetchLatency

Description

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.132

Other

Single-valued attribute

8.2.444 orclSQLGenReusedParsed

Description

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.134

Other

Single-valued attribute

8.2.445 orclSSLAuthentication

Description

Type of SSL authentication to use for this instance of Oracle Internet Directory server. The default value of 1, specifies no SSL authentication. Different instances can have different values. One-way and two-way SSL authentication requires a wallet. You may use one of the following three values:

- 1 = Neither the client nor the server authenticates itself to the other. No certificates are sent or exchanged. If you selected the SSL Enabled check box on the Credentials tab, and choose this option, then only SSL encryption/decryption is used.
- 32 = One-way authentication. Only the directory server authenticates itself to the client by sending its certificate to the client.

- 64 = Two-way authentication. Both client and server send certificates to each other.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.13

Other

Single-valued attribute

8.2.446 orclSSLCipherSuite**Description**

A cipher suite is a set of authentication, encryption, and data integrity algorithms used for exchanging messages between network nodes. During an SSL handshake, the two nodes negotiate to see which cipher suite they will use when transmitting messages back and forth. The following cipher suites are supported:

Table 8–3 SSL Cipher Suites Supported in Oracle Internet Directory

Cipher Suite	Authentication	Encryption	Data Integrity
SSL_RSA_WITH_3DES_EDE_CBC_SHA	RSA	3DES	SHA
SSL_RSA_WITH_RC4_128_SHA	RSA	RC4	SHA
SSL_RSA_WITH_RC4_128_MD5	RSA	RC4	MD5
SSL_RSA_WITH_DES_CBC_SHA	RSA	DES	SHA
SSL_RSA_EXPORT_WITH_RC4_40_MD5	RSA	RC4_40	MD5
SSL_RSA_EXPORT_WITH_DES40_CBC_SHA	RSA	DES40	SHA
SSL_DH_anon_WITH_3DES_EDE_CBC_SHA	None	3DES	SHA
SSL_DH_anon_WITH_RC4_128_MD5	None	RC4	MD5
SSL_DH_anon_WITH_DES_CBC_SHA	None	DES	SHA
SSL_RSA_WITH_AES_128_CBC_SHA	RSA	AES	SHA
SSL_RSA_WITH_AES_256_CBC_SHA	RSA	AES	SHA

Syntax

1.3.6.1.4.1.1466.115.121.1.15{128} (Directory String, 128 character maximum.)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.1.1.19

8.2.447 orclSSLEnable

Description

Flag for enabling or disabling SSL. Use this flag when you use different instances of the same server for either SSL or non-SSL. Allowed values are:

- 0—for non-secure operation only
- 1—for SSL authentication only
- 2—for both non-secure operation and SSL authentication

The default value is 0.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.14

Other

Single-valued attribute

8.2.448 orclsslinteropmode

Description

Enable SSL interoperability with Oracle legacy applications using no-auth mode.

Starting with Oracle Internet Directory 11g Release 1 (11.1.1.7.0), the default value is disabled (`orclsslinteropmode = 0`), in order to be fully compliant with the JDK SSL.

In no-auth mode, Oracle legacy components developed before 11g Release 1 (11.1.1) such as legacy LDAP C clients can connect with Oracle Internet Directory only by using an instance that has interoperability mode enabled (`orclsslinteropmode = 1`).

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.422

Other

Single-valued attribute

8.2.449 orclSSLPort

Description

The default SSL default port for the directory server. Default value is 3133. When you run the directory in the secure mode, it listens at default port 3133 and accepts only SSL-based TCP/IP connections. (When you run the directory in the normal mode, it listens at default port 389, accepting normal TCP/IP connections.) You might want to change this port when you add multiple LDAP server instances.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.17

Other

Single-valued attribute

8.2.450 orclSSLVersion

Description

SSL version. The default value is 3.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.18

Other

Single-valued attribute

8.2.451 orclSSLWalletURL

Description

Sets the location of the Oracle Wallet. You initially set this value when you create the wallet. If you elect to change the location of the Oracle Wallet, you must change this parameter. You must set the wallet location on both the client and the server. For example, on UNIX, you could set this parameter as follows:

```
file:/home/my_dir/my_wallet
```

On Microsoft Windows, you could set this parameter as follows:

```
file:C:\my_dir\my_wallet
```

Syntax

1.3.6.1.4.1.1466.115.121.1.15{128} (Directory String, 128 character maximum)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.1.1.15

Other

Single-valued attribute

8.2.452 orclStatsDN

Description

Specifies list of user DNs for which to track LDAP operations.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

distinguishedNameMatch

Object ID

2.16.840.1.113894.1.1.187

8.2.453 orclStatsFlag

Description

Enable or disable the Oracle Internet Directory Server Manageability framework. To enable, set this to 1. To disable, set it to 0.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.197

Other

Single-valued attribute.

8.2.454 orclStatsLevel

Description

Level of statistics collection for users. There is only one valid value in this release, 1. Specifying this value collects the number of bind and compare operations against the directory and the user who performed each one.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.199

Other

Single-valued attribute.

8.2.455 orclStatsOp

Description

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.188

Other

Single-valued attribute.

8.2.456 orclStatsPeriodicity

Description

Time interval in minutes for gathering server manageability statistics. The default value is 60.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.198

Other

Single-valued attribute.

8.2.457 orclStatus

Description

Depending on the context of the object that it is applied to, like a service, it indicates if the service is available or not.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.9.1.9

8.2.458 orclSUAccountLocked

Description

Determines whether a superuser account is locked.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.192

Other

Single-valued attribute.

Directory operational attribute.

Not user modifiable.

8.2.459 orclSubscriberDisable

Description

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.100

Other

Single-valued attribute.

8.2.460 orclSubscriberFullName**Description**

Stores the full name of the configured realm.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.333

Other

Single-valued attribute.

8.2.461 orclSubscriberNickNameAttribute**Description**

Stores a name of an attribute that holds the unique identifier of a realm.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.302

Other

Single-valued attribute.

8.2.462 orclSubscriberSearchBase**Description**

Specifies the DIT node that contains all realms.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

distinguishedNameMatch

Object ID

2.16.840.1.113894.1.1.301

8.2.463 orclSubscriberType

Description

Defines the type of realm created.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.331

Other

Single-valued attribute.

8.2.464 orclSuffix

Description

To have the directory server manage part of an LDAP directory, you can specify the highest level parent DN in the server configuration. These DN's are called suffixes. The server can access all objects in the directory that are below the specified suffix in the directory hierarchy. This attribute is part of the root DSE (DSA-Specific Entry). The root DSE contains a number of attributes that store information about the directory server itself.

Syntax

1.3.6.1.4.1.1466.115.121.1.15{128} (Directory String, 128 character maximum)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.1.1.6

Other

Single-valued attribute.

8.2.465 orclSuiteType

Description

Identifies the type of suite e.g ocs, ebiz, and so forth.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.1011

Other

Single-valued attribute.

8.2.466 orclSULoginFailureCount

Description

The number of failed login attempts for the directory superuser.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.191

Other

Single-valued attribute.

Directory operational attribute.

Not user modifiable.

8.2.467 orclSUName

Description

The distinguished name of the directory superuser account, for example, cn=orcladmin.

Syntax

1.3.6.1.4.1.1466.115.121.1.12

Matching Rule

distinguishedNameMatch

Object ID

2.16.840.1.113894.1.1.8

Other

Single-valued attribute.

8.2.468 orclSUPassword

Description

Oracle Internet Directory superuser password.

Syntax

1.3.6.1.4.1.1466.115.121.1.15{128} (Directory String, 128 character maximum)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.1.1.9

Other

Single-valued attribute.

8.2.469 orclSystemName

Description

Identifies the host name on which a particular instance of a service is running.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.7.1.3

Other

Single-valued attribute.

8.2.470 orclTcpConnToClose

Description

Specifies the number of clients for which the Oracle Internet Directory server will close TCP connections.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.153

Other

Single-valued attribute.

8.2.471 orclTcpConnToShutDown**Description**

Specifies the number of clients for which the Oracle Internet Directory server will shut down TCP connections.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.152

Other

Single-valued attribute.

8.2.472 orclThreadSpawnFailed**Description**

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.154

Other

Single-valued attribute.

8.2.473 orclThreadsPerSupplier**Description**

Specifies the number of threads per supplier for the Oracle directory replication server.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integermatch

Object ID

2.16.840.1.113894.1.1.31

Other

DSA operational attribute.

8.2.474 orclTimeLimit

Description

Maximum number of seconds allowed for a search to be completed. The default value is 3600.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.65

Other

Single-valued attribute.

8.2.475 orclTimeZone

Description

Specifies the time zone applicable for a user location.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.311

8.2.476 orclTimeLimitMode

Description

Defines the time limit mode.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.406

Other

Single-valued attribute.

8.2.477 orclTotFreePhyMem**Description**

Stores the total amount of free system physical memory.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.146

Other

Single-valued attribute.

8.2.478 orclTraceDimesionLevel**Description**

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.174

Other

Single-valued attribute.

8.2.479 orclTraceFileLocation

Description

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.1.1.176

Other

Single-valued attribute.

8.2.480 orclTraceFileSize

Description

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.177

Other

Single-valued attribute.

8.2.481 orclTraceLevel

Description

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.173

Other

Single-valued attribute.

8.2.482 orclTraceMode**Description**

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.1.1.175

Other

Single-valued attribute.

8.2.483 orclTrustedApplicationGroup**Description**

Identifies the DN of the group that list all the applications that specific application trusts for Service to Service Authentication.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

distinguishedNameMatch

Object ID

2.16.840.1.113894.1.1.368

8.2.484 orclTraceMode**Description**

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.1.1.175

Other

Single-valued attribute.

8.2.485 orclTxnMaxOperations

Description

Maximum number of operations allowed in a transaction.

Syntax

1.3.6.1.4.1.1466.115.121.1.27

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.381

Other

Single-valued attribute

8.2.486 orclTxnTimeLimit

Description

Maximum allowed time in a transaction (sec).

Syntax

1.3.6.1.4.1.1466.115.121.1.27

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.380

Other

Single-valued attribute

8.2.487 orclUIAccessibilityMode

Description

Set to TRUE to display a user interface that is accessible to people with impaired vision.

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

booleanMatch

Object ID

2.16.840.1.113894.1.1.367

Other

Single-valued attribute.

8.2.488 orclUniqueAttrName**Description**

The name of an attribute that you want to be unique. Autoboost uniqueness means that each entry must have a unique value for this attribute type.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.500

Other

Single-valued attribute.

8.2.489 orclUniqueEnable**Description**

Disables or enables attribute uniqueness constraints. Allowed values are 0 (disable) or 1 (enable). The default value is 0.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.508

Other

Single-valued attribute.

8.2.490 orclUniqueObjectClass**Description**

Specifies an object class filter for an attribute uniqueness constraint entry. This means the attribute specified in [orclUniqueAttrName](#) must be unique in an instance of this object class.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.503

Other

Single-valued attribute.

8.2.491 orclUniqueScope**Description**

The scope of the attribute uniqueness constrain in the DIT. Allowed values are:

- `base`—Searches the root entry only
- `onelevel`—Searches one level only
- `sub`—Searches the entire directory

The default value is `sub`.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.501

Other

Single-valued attribute.

8.2.492 orclUniqueSubtree**Description**

When multiple attribute uniqueness constraints have the same values in [orclUniqueAttrName](#), [orclUniqueScope](#) and [orclUniqueObjectClass](#), but different values in [orclUniquesubtree](#), the union of subtree scopes specified by those attribute uniqueness constraints is checked.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.502

Other

Single-valued attribute.

8.2.493 orclUnsyncRevPwd**Description**

This attribute stores a password that is not synchronized with the entry in the userpassword.

Syntax

1.3.6.1.4.1.1466.115.121.1.44{128} (Printable String, 128 character maximum)

Matching Rule

octetStringMatch

Object ID

2.16.840.1.113894.1.1.217

Other

Directory operational attribute.

Not user modifiable.

8.2.494 orclUpdateSchedule**Description**

Replication update interval for new changes and those being retried. The value is in seconds.

Syntax

1.3.6.1.4.1.1466.115.121.1.27

Matching Rule

integermatch

Object ID

2.16.840.1.113894.1.1.30

Other

Directory operational attribute.

Not user modifiable.

Single-valued attribute.

8.2.495 orclUpgradelnProgress

Description

Indicates whether rolling upgrade is in progress.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.104

Other

Single-valued attribute.

8.2.496 orclUserDN

Description

The distinguished name (DN) of the user who performed an operation.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

distinguishedNameMatch

Object ID

2.16.840.1.113894.1.1.61

8.2.497 orclUserIDAttribute

Description

Specifies the attribute to use as the user identifier value when accessing the resource.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.16.840.1.113894.1.1.352

Other

Single-valued attribute.

8.2.498 orclUserModifiable

Description

Specifies if the data is modifiable by the user that this resource access descriptor entry is created for.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

1.2.3.4.5.6.1.11

8.2.499 orclUserObjectClasses

Description

A list of the object classes that comprise a user entity.

Syntax

1.3.6.1.4.1.1466.115.121.1.15

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.329

8.2.500 orclUserPrincipalName

Description

This is the Kerberos user principal name for Microsoft Active Directory users.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.8.1.904

Other

Single-valued attribute.

8.2.501 orclVersion

Description

The release version of the Oracle Internet Directory server.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.7.1.1

Other

Single-valued attribute.

8.2.502 orclWirelessAccountNumber

Description

Stores the wireless account number of a user.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.365

Other

Single-valued attribute.

8.2.503 orclWorkflowNotificationPref

Description

Identifies workflow notification preferences for a user.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

Object ID

2.16.840.1.113894.1.1.313

8.2.504 orclWriteWaitThreads

Description

Specifies the number of Oracle Internet Directory server threads waiting to write to the network.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.143

Other

Single-valued attribute.

8.2.505 owner

Description

Specifies the distinguished name (DN) of some object which has some responsibility for the associated object.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

distinguishedNameMatch

Object ID

2.5.4.32

8.2.506 pilotStartTime

Description

The time stamp of when pilot mode was started for a replica.

Syntax

1.3.6.1.4.1.1466.115.121.1.24 (Generalized Time)

Matching Rule

generalizedTimeMatch

Object ID

2.16.840.1.113894.1.1.825

Other

Single-valued attribute.

Directory operational attribute.

Not user modifiable.

8.2.507 preferredServerList

Description

The IP addresses of the preferred servers that a directory user agent should use in a space separated list. The servers in this list are tried in order before those in the [defaultServerList](#) until a successful connection is made. This has no default value. At least one server must be specified in either `preferredServerList` or `defaultServerList`.

Syntax

1.3.6.1.4.1.1466.115.121.1.26 (Printable String)

Matching Rule

caseIgnoreIA5Match

Object ID

1.3.6.1.4.1.11.1.3.1.1.2

Other

Single-valued attribute.

8.2.508 profileTTL

Description

The time to live before a client directory user agent (DUA) should re-read this configuration profile. The values for `profileTTL` can be zero, to indicate no expiration, or a positive integer combined with one of the following letters to indicate the unit of measure:

d: indicates days

h: indicates hours

m: indicates minutes

s: indicates seconds

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

1.3.6.1.4.1.11.1.3.1.1.7

Other

Single-valued attribute.

8.2.509 protocolInformation

Description

This attribute is used in conjunction with the `presentationAddress` attribute, to provide additional information to the Open System Interconnection (OSI) network service.

Syntax

1.3.6.1.4.1.1466.115.121.1.42 (Protocol Information)

Matching Rule

`protocolInformationMatch`

Object ID

2.5.4.48

8.2.510 pwdAccountLockedTime

Description

The time stamp of when a user's account was locked.

Syntax

1.3.6.1.4.1.1466.115.121.1.24 (Generalized Time)

Matching Rule

`generalizedTimeMatch`

Object ID

1.3.6.1.4.1.42.2.27.8.1.17

Other

Single-valued attribute.

Directory operational attribute.

No user modification.

8.2.511 pwdAllowUserChange

Description

Reserved for future use.

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

`booleanMatch`

Object ID

1.3.6.1.4.1.42.2.27.8.1.14

Other

Single-valued attribute.

8.2.512 pwdChangedTime

Description

The time stamp indicating when the user's current password was created or modified.

Syntax

1.3.6.1.4.1.1466.115.121.1.24 (Generalized Time)

Matching Rule

generalizedTimeMatch

Object ID

1.3.6.1.4.1.42.2.27.8.1.16

Other

Single-valued attribute.

Directory operational attribute.

No user modification.

8.2.513 pwdCheckSyntax

Description

A value of 1 (default) means passwords are checked for syntax errors. A value of 0 means syntax checking is disabled.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

1.3.6.1.4.1.42.2.27.8.1.5

Other

Single-valued attribute.

8.2.514 pwdExpirationWarned

Description

The time stamp when the first password expiration warning was sent to the user.

Syntax

1.3.6.1.4.1.1466.115.121.1.24 (Generalized Time)

Matching Rule

generalizedTimeMatch

Object ID

1.3.6.1.4.1.42.2.27.8.1.18

Other

Directory operational attribute.

No user modification.

8.2.515 pwdExpireWarning**Description**

The number of seconds before a password expires that a warning should be sent to the user. The user will see the warning when they attempt to log on during the warning period. If the user does not modify the password before it expires, the user is locked out until the password is changed by the administrator. The default value is 0, which means no warnings are sent.

For this feature to work, the client application must support it.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

1.3.6.1.4.1.42.2.27.8.1.7

Other

Single-valued attribute.

8.2.516 pwdFailureCountInterval**Description**

The number of seconds after which the password failure times are purged from the user entry. If this attribute is not present, or if it has a value of 0, then failure times are never purged. The default value is 0.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

1.3.6.1.4.1.42.2.27.8.1.12

Other

Single-valued attribute.

8.2.517 pwdFailureTime

Description

The time stamp of consecutive failed login attempts by the user.

Syntax

1.3.6.1.4.1.1466.115.121.1.24 (Generalized Time)

Matching Rule

generalizedTimeMatch

Object ID

1.3.6.1.4.1.42.2.27.8.1.19

Other

Directory operational attribute.

No user modification.

8.2.518 pwdGraceLoginLimit

Description

Maximum number of grace logins allowed after a password expires. The default value is 0 (no grace logins allowed). The recommended value is 3.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

1.3.6.1.4.1.42.2.27.8.1.8

Other

Single-valued attribute.

8.2.519 pwdGraceLoginTimeLimit

Description

Number of seconds after account lockout to allow grace logins.

Syntax

1.3.6.1.4.1.1466.115.121.1.27(Integer)

Matching Rule

integerMatch

Object ID

2.16.840.1.113894.1.1.418

Other

Single-valued attribute.

8.2.520 pwdGraceUseTime**Description**

The time stamps of each grace login for a user.

Syntax

1.3.6.1.4.1.1466.115.121.1.24 (Generalized Time)

Matching Rule

generalizedTimeMatch

Object ID

1.3.6.1.4.1.42.2.27.8.1.21

Other

Directory operational attribute.

No user modification.

8.2.521 pwdHistory**Description**A history of a user's previous passwords. The number of passwords stored in the history is determined by the [pwdInHistory](#) attribute.**Syntax**

1.3.6.1.4.1.1466.115.121.1.44{128} (Printable String, 128 character maximum)

Matching Rule

octetStringMatch

Object ID

1.3.6.1.4.1.42.2.27.8.1.20

Other

Single-valued attribute.

Directory operational attribute.

No user modification.

8.2.522 pwdInHistory

Description

Number of previous passwords to be stored in the password history ([pwdHistory](#)). If a user attempts to reuse one of the passwords stored in the history, then the password is rejected. The default value is 0 (no previous passwords stored in the history).

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

1.3.6.1.4.1.42.2.27.8.1.4

Other

Single-valued attribute.

8.2.523 pwdLockout

Description

Specification for whether users are locked out of the directory after the number of consecutive failed bind attempts specified by [pwdMaxFailure](#). If the value of this policy attribute is TRUE, then users are locked out. If this attribute is not present, or if the value is FALSE, then users are not locked out and the value of [pwdMaxFailure](#) is ignored. By default, account lockout is enforced.

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

booleanMatch

Object ID

1.3.6.1.4.1.42.2.27.8.1.9

Other

Single-valued attribute.

8.2.524 pwdLockoutDuration

Description

The number of seconds a user is locked out of the directory if both of the following are true:

- Account lockout is enabled.
- The user has been unable to bind successfully to the directory for at least the number of times specified by [pwdMaxFailure](#).

You can set user lockout for a specific duration, or until the administrator resets the user's password. A default value of 0 (zero) means that the user is locked out forever. A user account stays locked even after the lockout duration has passed unless the user binds with the correct password.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

1.3.6.1.4.1.42.2.27.8.1.10

Other

Single-valued attribute.

8.2.525 pwdMaxAge

Description

The maximum number of seconds that a given password is valid. If this attribute is not present, or if the value is 0 (zero), then the password does not expire. By default, the passwords expire in 60 days.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

1.3.6.1.4.1.42.2.27.8.1.3

Other

Single-valued attribute.

8.2.526 pwdMaxFailure

Description

The number of consecutive failed bind attempts after which a user account is locked. If this attribute is not present, or if the value is 0 (zero), then the account is not locked due to failed bind attempts, and the value of the password lockout policy is ignored. The default is 4.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

1.3.6.1.4.1.42.2.27.8.1.11

Other

Single-valued attribute.

8.2.527 pwdMinAge**Description**

This attribute holds the number of seconds that must elapse between modifications to the password. If this attribute is not present, 0 seconds is assumed.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

1.3.6.1.4.1.42.2.27.8.1.2

Other

Single-valued attribute.

8.2.528 pwdMinLength**Description**

The minimum number of characters required in a password. The default is 5. The value for this attribute must be at least 1.

Syntax

1.3.6.1.4.1.1466.115.121.1.27 (Integer)

Matching Rule

integerMatch

Object ID

1.3.6.1.4.1.42.2.27.8.1.6

Other

Single-valued attribute.

8.2.529 pwdMustChange**Description**

Indicator of whether users must change their passwords after the first login, or after the password is reset by the administrator. Enabling this option requires users to change their passwords even if user-defined passwords are disabled. By default, users need not change their passwords after reset. Allowed values are 1 (true) or 0 (false).

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

booleanMatch

Object ID

1.3.6.1.4.1.42.2.27.8.1.13

Other

Single-valued attribute.

8.2.530 pwdpolicysubentry**Description**

DN of the password policy applicable at the subtree rooted at this DN.

Syntax

1.3.6.1.4.1.1466.115.121.1.34

Matching Rule

distinguishedNameMatch

Object ID

2.16.840.1.113894.1.1.417

8.2.531 pwdReset**Description**

Indicator that the password has been reset and must be changed by the user on first authentication. Allowed values are TRUE or FALSE.

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

booleanMatch

Object ID

1.3.6.1.4.1.42.2.27.8.1.22

Other

Single-valued attribute.

Directory operational attribute.

Not user modifiable.

8.2.532 pwdSafeModify

Description

Indicator of whether user must supply old password with new one when modifying password. By default, the old password is not required. Allowed values are TRUE or FALSE.

Syntax

1.3.6.1.4.1.1466.115.121.1.7 (Boolean)

Matching Rule

booleanMatch

Object ID

1.3.6.1.4.1.42.2.27.8.1.15

Other

Single-valued attribute.

8.2.533 ref

Description

A named reference. Values placed in the attribute must conform to the specification given for the [labeledURI](#) attribute (RFC 2079).

Syntax

1.3.6.1.4.1.1466.115.121.1.26 (IA5 String)

Matching Rule

caseExactIA5Match

Object ID

2.16.840.1.113730.3.1.34

Other

DSA operational attribute.

8.2.534 seeAlso

Description

Specifies the distinguished names of other directory objects which may be other aspects (in some sense) of the same real world object.

Syntax

1.3.6.1.4.1.1466.115.121.1.12 (Distinguished Name)

Matching Rule

distinguishedNameMatch

Object ID

2.5.4.34

8.2.535 serverName**Description**

The name of the server involved in an Oracle Directory Integration and Provisioning change subscription.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

caseIgnoreMatch

caseignoresubstringsmatch

Object ID

2.16.840.1.113894.1.1.34

8.2.536 serviceAuthenticationMethod**Description**

The authentication method for the service.

Syntax

1.3.6.1.4.1.1466.115.121.1.15 (Directory String)

Matching Rule

N/A

Object ID

1.3.6.1.4.1.11.1.3.1.1.15

8.2.537 serviceCredentialLevel**Description**

The credential level to be used by a service. The default value for all services is NULL. The supported credential levels are `anonymous` or `proxy`.

Syntax

1.3.6.1.4.1.1466.115.121.1.26 (IA5 String)

Matching Rule

N/A

Object ID

1.3.6.1.4.1.11.1.3.1.1.13

8.2.538 serviceSearchDescriptor

Description

Defines how and where an LDAP naming service client should search for information for a particular service. Contains a service name, followed by one or more semicolon-separated base-scope-filters.

Syntax

1.3.6.1.4.1.1466.115.121.1.26 (IA5 String)

Matching Rule

caseExactIA5Match

Object ID

1.3.6.1.4.1.11.1.3.1.1.8

8.2.539 sn

Description

The surname or last name of a user.

Syntax

1.3.6.1.4.1.1466.115.121.1.15{32768} (Directory String, 32768 character maximum)

Matching Rule

caseIgnoreMatch, caseIgnoreSubstringsMatch

Object ID

2.5.4.4

8.2.540 supportedcontrol

Description

List of controls supported by directory server.

Syntax

OID

Object ID

1.3.6.1.4.1.1466.101.120.13

8.2.541 supportedextension

Description

List of extended operation supported

Syntax

9.2 Details of Each Class

9.2.1 VCryptAccount

Description: These are the vcrypt accounts.

Database table name : VCRYPT_ACCOUNTS

Primary Keys : acctId (ACCT_ID)

Name	DB name	DB type	Java type	Description	Length	Enum values
acctId	ACCT_ID (PK)	BIGINT	Long	Id for this account	16	-
acctName	ACCT_NAME	TEXT	String	Name of this account	4000	-

Name	DB name	DB type	Java type	Description	Length	Enum values
acctStatus	ACCT_STATUS	INT	int	Status of this account.	2	STATUS_ACTIVE STATUS_INACTIVE STATUS_DELETED
acctType	ACCT_TYPE	INT	int	Type of this account.	-	-
groupId	GROUP_ID	BIGINT	Long	Group Id to which account belongs to	16	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this account was created	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
acctContact	ACCT_CONTACT	TEXT	String	Contact information for this account.	4000	-
notes	NOTES	TEXT	String	Notes for this account	4000	-

9.2.2 VCryptAccountHist

Description: These are the vcrypt accounts shadow table.

Database table name : VCRYPT_ACCOUNTS_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	BIGINT	Date	Active from time.	-
toTime	TO_TIME	BIGINT	Date	Active from time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
acctId	ACCT_ID	BIGINT	Long	Id for this account	16
acctName	ACCT_NAME	TEXT	String	Name of this account	4000
acctStatus	ACCT_STATUS	INT	int	Status of this account.	2
acctType	ACCT_TYPE	INT	int	Type of this account.	-
groupId	GROUP_ID	BIGINT	Long	Group Id to which account belongs to	16
acctContact	ACCT_CONTACT	TEXT	String	Contact information for this account.	4000
notes	NOTES	TEXT	String	Notes for this account	4000

9.2.3 VCryptUserGroup

Description: This contains the user group details.

Database table name : VCRYPT_USER_GROUPS

Primary Keys : userGroupId (GROUP_ID)

Name	DB name	DB type	Java type	Description	Length	Enum values
userGroupId	GROUP_ID (PK)	BIGINT	Long	Id for the UserGroup	16	-
groupName	GROUP_NAME	TEXT	String	Name of the group	4000	-
description	DESCRIPTION	TEXT	String	Description for this group.	4000	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this user.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time.	-	-
groupType	USERGROUP_TYPE_CODE	INT	int	Type of the User group	-	-
status	USERGROUP_STATUS_CODE	INT	int	Status of the User group	2	STATUS_ACTIVE STATUS_DISABLED STATUS_DELETED
notes	NOTES	TEXT	String	Note	4000	-

9.2.4 VCryptUserRole

Description: This contains the user role details.

Database table name : VCRYPT_USER_ROLES

Primary Keys : roleId (ROLE_ID)

Name	DB name	DB type	Java type	Description	Length	Enum values
roleId	ROLE_ID (PK)	BIGINT	Long	Id for the UserRole	16	-
roleName	ROLE_NAME	TEXT	String	Name of the role	4000	-
description	DESCRIPTION	TEXT	String	Description for this role.	4000	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this user.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time.	-	-
roleType	ROLE_TYPE_CODE	INT	int	Type of the User role	-	-
status	USERROLE_STATUS_CODE	INT	int	Status of the role	2	STATUS_ACTIVE STATUS_DISABLED STATUS_DELETED
notes	NOTES	TEXT	String	Note	4000	-

9.2.5 VCryptUserGroupRoleMap

Description: This contains mapping of roles to user groups.

Database table name : VCRYPT_USERGROUP_ROLE_MAPS

Primary Keys : mapId (MAP_ID)

Name	DB name	DB type	Java type	Description	Length
mapId	MAP_ID (PK)	BIGINT	Long	Id for the map	16
groupId	GROUP_ID	BIGINT	Long	Group Id.	16
roleId	ROLE_ID	BIGINT	Long	Role Id.	16

9.2.6 VCryptUser

Description: This contains the user details.

Database table name : VCRYPT_USERS

Primary Keys : userId (USER_ID)

Name	DB name	DB type	Java type	Description	Length	Enum value
userId	USER_ID (PK)	BIGINT	Long	Id for the User	16	-
externalUserId	EXT_USER_ID	VARCHAR	String	User id used by the external system	255	-
loginId	LOGIN_ID	VARCHAR	String	Login id of the User	255	-
groupId	GROUP_ID	BIGINT	Long	Group Id.	16	-
acctId	ACCT_ID	BIGINT	Long	Account Id to which this user belongs to	16	-
userName	USER_NAME	VARCHAR	String	Name of the User	255	-
userEmail	USER_EMAIL	VARCHAR	String	Email address of the User.	255	-
password	PASSWORD	VARCHAR	String	Password for the User	255	-
pin	PIN	VARCHAR	String	Password for the User	255	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this user.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
statusUpdateTime	STATUS_UPDATE_TIME	DATETIME	Date	Date/Time when the status was updated.	-	-
userType	USER_TYPE_CODE	INT	int	Type of the User	2	USER_USER
authMode	AUTH_MODE_CODE	INT	int	Mode of authorization	2	-
authType	AUTH_TYPE_CODE	INT	int	Type of authorization	2	AUTH_TYPE_NORMAL AUTH_TYPE_VCRYPT AUTH_TYPE_PERSONALIZED_VCRYPT

Details of Each Class

Name	DB name	DB type	Java type	Description	Length	Enum value
status	USER_STATUS_CODE	INT	int	Status of the User	2	STATUS_PENDING_ACTIVATION STATUS_ACTIVE STATUS_DISABLED STATUS_DELETED
isPinEnabled	IS_PIN_ENABLED	CHAR	boolean	Whether PIN is enabled for this user	-	-
isADA	IS_ADA	CHAR	boolean	Is ADA	-	-
isLocked	IS_LOCKED	CHAR	boolean	Is this user locked.	-	-
lockedTime	LOCKED_TIME	DATETIME	Date	Date/Time when this user was locked.	-	-
passwordStatus	PASSWORD_STATUS	INT	int	Status of the password	2	-
passwordUpdateTime	PASSWORD_UPDATE_TIME	DATETIME	Date	Date/Time when the password was last updated.	-	-
passwordHistory	PASSWORD_HISTORY	TEXT	String	List of password which was used by this user.	4000	-
pinStatus	PIN_STATUS	INT	int	Status of the pin	2	-
pinUpdateTime	PIN_UPDATE_TIME	DATETIME	Date	Date/Time when the pin was last updated.	-	-
pinHistory	PIN_HISTORY	TEXT	String	List of pin which was used by this user.	4000	-
imagePath	IMAGE_PATH	VARCHAR	String	Path to the image file	255	-
personalNote	PERSONAL_NOTE	TEXT	String	Personalized note	4000	-
imageStatus	IMAGE_STATUS	INT	int	Status of the image	4	-
phraseStatus	PHRASE_STATUS	INT	int	Status of the phrase	4	-
questionStatus	QUESTION_STATUS	INT	int	Status of the question	4	-
currentQAId	CURRENT_QA_ID	BIGINT	Long	The Id of the current question given to the user	-	-
defaultLocaleId	DEFAULT_LOCALE_ID	BIGINT	Long	Default locale for the user	16	-
phraseLocaleId	PHRASE_LOCALE_ID	BIGINT	Long	Locale for the phrase	16	-
notes	NOTES	TEXT	String	Note	4000	-

9.2.7 VCryptUserHist

Description: This contains the user details.

Database table name : VCRYPT_USERS_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
userId	USER_ID	BIGINT	Long	Id for the User	16
externalUserId	EXT_USER_ID	VARCHAR	String	User id used by the external system	255
loginId	LOGIN_ID	VARCHAR	String	Login id of the User	255
groupId	GROUP_ID	BIGINT	Long	Group Id.	16
acctId	ACCT_ID	BIGINT	Long	Account Id to which this user belongs to	16
userName	USER_NAME	VARCHAR	String	Name of the User	255
userEmail	USER_EMAIL	VARCHAR	String	Email address of the User.	255
password	PASSWORD	VARCHAR	String	Password for the User	255
pin	PIN	VARCHAR	String	Password for the User	255
statusUpdateTime	STATUS_UPDATE_TIME	DATETIME	Date	Date/Time when the status was updated.	-
userType	USER_TYPE_CODE	INT	int	Type of the User	2
authMode	AUTH_MODE_CODE	INT	int	Mode of authorization	2
authType	AUTH_TYPE_CODE	INT	int	Type of authorization	2
status	USER_STATUS_CODE	INT	int	Status of the User	2
isPinEnabled	IS_PIN_ENABLED	CHAR	boolean	Whether PIN is enabled for this user	-
isADA	IS_ADA	CHAR	boolean	Is ADA	-
isLocked	IS_LOCKED	CHAR	boolean	Is this user locked.	-
lockedTime	LOCKED_TIME	DATETIME	Date	Date/Time when this user was locked.	-
passwordStatus	PASSWORD_STATUS	INT	int	Status of the password	2
passwordUpdateTime	PASSWORD_UPDATE_TIME	DATETIME	Date	Date/Time when the password was last updated.	-
passwordHistory	PASSWORD_HISTORY	TEXT	String	List of password which was used by this user.	4000
pinStatus	PIN_STATUS	INT	int	Status of the pin	2
pinUpdateTime	PIN_UPDATE_TIME	DATETIME	Date	Date/Time when the pin was last updated.	-
pinHistory	PIN_HISTORY	TEXT	String	List of pin which was used by this user.	4000
imagePath	IMAGE_PATH	VARCHAR	String	Path to the image file	255

Name	DB name	DB type	Java type	Description	Length
personalNote	PERSONAL_NOTE	TEXT	String	Personalized note	4000
imageStatus	IMAGE_STATUS	INT	int	Status of the image	4
phraseStatus	PHRASE_STATUS	INT	int	Status of the phrase	4
questionStatus	QUESTION_STATUS	INT	int	Status of the question	4
currentQAId	CURRENT_QA_ID	BIGINT	Long	The Id of the current question given to the user	-
defaultLocaleId	DEFAULT_LOCALE_ID	BIGINT	Long	Default locale for the user	16
phraseLocaleId	PHRASE_LOCALE_ID	BIGINT	Long	Locale for the phrase	16
notes	NOTES	TEXT	String	Note	4000

9.2.8 VQuestionCategory

Description: Question category

Database table name : V_Q_CATEGORY

Primary Keys : categoryId (CATEGORY_ID)

Name	DB name	DB type	Java type	Description	Length	Enum values
categoryId	CATEGORY_ID (PK)	BIGINT	Long	Id for the category	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
versionNumber	VERSION_NUM	INT	int	Version Number	-	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
name	CATEGORY_NAME	TEXT	String	Name of the category	4000	-
nameRBKey	NAME_RBKEY	TEXT	String	Resource bundle key for the name	4000	-
description	DESCRIPTION	TEXT	String	Description	4000	-
categoryType	CATEGORY_TYPE	INT	int	The type for this category.	6	-
categoryStatus	STATUS	INT	int	The status for this category.	6	STATUS_ACTIVE STATUS_DISABLED STATUS_DELETED
notes	NOTES	TEXT	String	Note against this question	4000	-

9.2.9 VQuestionCategoryHist

Description: User Question shadow table

Database table name : V_Q_CATEGORY_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-

Name	DB name	DB type	Java type	Description	Length
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
categoryId	CATEGORY_ID	BIGINT	Long	Id for the category	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionNumber	VERSION_NUM	INT	int	Version Number	-
name	CATEGORY_NAME	TEXT	String	Name of the category	4000
nameRBKey	NAME_RBKEY	TEXT	String	Resource bundle key for the name	4000
description	DESCRIPTION	TEXT	String	Description	4000
categoryType	CATEGORY_TYPE	INT	int	The type for this category.	6
categoryStatus	STATUS	INT	int	The status for this category.	6
notes	NOTES	TEXT	String	Note against this question	4000

9.2.10 VCryptUserQuestion

Description: User Question

Database table name : V_USER_QUESTIONS

Primary Keys : questionId (QUESTION_ID)

Name	DB name	DB type	Java type	Description	Length	Enum values
questionId	QUESTION_ID (PK)	BIGINT	Long	Id for the question	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
versionNumber	VERSION_NUM	INT	int	Version Number	-	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
questionType	QUESTION_TYPE	INT	int	The type for this question.	2	TYPE_SYSTEM TYPE_USER
questionStatus	QUESTION_STATUS	INT	int	The status for this question.	2	STATUS_ACTIVE STATUS_DISABLED STATUS_DELETED
categoryId	QUESTION_CATEGORY	BIGINT	Long	Category of the question	16	-
localeId	LOCALE_ID	BIGINT	Long	Locale for this question	16	-
question	QUESTION	TEXT	String	Question	4000	-
help	HELP	TEXT	String	Help for the validation	4000	-
errorText	ERROR_TEXT	TEXT	String	Error text for the validation	4000	-
notes	NOTES	TEXT	String	Note against this question	4000	-

9.2.11 VCryptUserQuestionHist

Description: User Question shadow table

Database table name : V_USER_QUESTIONS_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
questionId	QUESTION_ID	BIGINT	Long	Id for the question	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionNumber	VERSION_NUM	INT	int	Version Number	-
questionType	QUESTION_TYPE	INT	int	The type for this question.	2
questionStatus	QUESTION_STATUS	INT	int	The status for this question.	2
question	QUESTION	TEXT	String	Question	4000
categoryId	QUESTION_CATEGORY	BIGINT	Long	Category of the question	16
localeId	LOCALE_ID	BIGINT	Long	Locale for this question	16
help	HELP	TEXT	String	Help for the validation	4000
errorText	ERROR_TEXT	TEXT	String	Error text for the validation	4000
notes	NOTES	TEXT	String	Note against this question	4000

9.2.12 VCryptQuestionGlobalValidation

Description: Global question validation

Database table name : V_Q_GLOBAL_VALID

Primary Keys : mapId (MAP_ID)

Name	DB name	DB type	Java type	Description	Length	Enum values
mapId	MAP_ID (PK)	BIGINT	Long	Id for the map	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
versionNumber	VERSION_NUM	INT	int	Version Number	-	-
validationId	VALIDATION_ID	BIGINT	Long	Id for the validation	16	-
status	STATUS	INT	int	The status for this validation.	2	STATUS_ACTIVE STATUS_DISABLED STATUS_DELETED
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-

9.2.13 VCryptQuestionGlobalValidationHist

Description: Question validation map history

Database table name : V_Q_GLOBAL_VALID_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
mapId	MAP_ID	BIGINT	Long	Id for the map	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionNumber	VERSION_NUM	INT	int	Version Number	-
validationId	VALIDATION_ID	BIGINT	Long	Id for the validation	16
status	STATUS	INT	int	The status for this validation.	2

9.2.14 VCryptQuestionValidationMap

Description: Question validation map

Database table name : V_Q_VALIDATION_MAP

Primary Keys : mapId (MAP_ID)

Name	DB name	DB type	Java type	Description	Length
mapId	MAP_ID (PK)	BIGINT	Long	Id for the map	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionNumber	VERSION_NUM	INT	int	Version Number	-
questionId	QUESTION_ID	BIGINT	Long	Id for the question	16
validationId	VALIDATION_ID	BIGINT	Long	Id for the validation	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-

9.2.15 VCryptQuestionValidationMapHist

Description: Question validation map history

Database table name : V_Q_VALIDATION_MAP_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
mapId	MAP_ID	BIGINT	Long	Id for the map	16

Name	DB name	DB type	Java type	Description	Length
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionNumber	VERSION_NUM	INT	int	Version Number	-
questionId	QUESTION_ID	BIGINT	Long	Id for the question	16
validationId	VALIDATION_ID	BIGINT	Long	Id for the validation	16

9.2.16 VCryptValidation

Description: Validation

Database table name : V_VALIDATION

Primary Keys : validationId (VALIDATION_ID)

Name	DB name	DB type	Java type	Description	Length
validationId	VALIDATION_ID (PK)	BIGINT	Long	Id for the validation	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionNumber	VERSION_NUM	INT	int	Version Number	-
name	NAME	TEXT	String	Name	4000
nameRBKey	NAME_RBKEY	TEXT	String	Resource bundle key for the name	4000
validationScope	VALID_SCOPE	INT	int	What is the scope of the this validation. Whether it works on individual questions or on all the questions. E.g. to support validations like, no 2 answers can be the same.	4
help	HELP	TEXT	String	Help for the validation	4000
errorText	ERROR_TEXT	TEXT	String	Error text for the validation	4000
validationScheme	VALIDATION_SCHEME	INT	int	Validation scheme	-
validationScript	VALIDATION_SCRIPT	TEXT	String	Validation script. This is interpreted based on the validation scheme	4000
javaClass	JAVA_CLASS	TEXT	String	Java class path	4000
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-
description	DESCRIPTION	TEXT	String	Description of the object	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
notes	NOTES	TEXT	String	Notes	4000

9.2.17 VCryptValidationHist

Description: Validation map history

Database table name : V_VALIDATION_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
validationId	VALIDATION_ID	BIGINT	Long	Id for the validation	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionNumber	VERSION_NUM	INT	int	Version Number	-
name	NAME	TEXT	String	Name	4000
nameRBKey	NAME_RBKEY	TEXT	String	Resource bundle key for the name	4000
validationScope	VALID_SCOPE	INT	int	What is the scope of the this validation. Whether it works on individual questions or on all the questions. E.g. to support validations like, no 2 answers can be the same.	4
help	HELP	TEXT	String	Help for the validation	4000
errorText	ERROR_TEXT	TEXT	String	Error text for the validation	4000
validationScheme	VALIDATION_SCHEME	INT	int	Validation scheme	-
validationScript	VALIDATION_SCRIPT	TEXT	String	Validation script. This is interpreted based on the validation scheme	4000
javaClass	JAVA_CLASS	TEXT	String	Java class path	4000
description	DESCRIPTION	TEXT	String	Description of the object	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
notes	NOTES	TEXT	String	Notes	4000

9.2.18 VCryptGlobalAnswerHint

Description: Global answer hint

Database table name : *V_GLOBAL_ANS_HINT*

Primary Keys : mapId (*MAP_ID*)

Name	DB name	DB type	Java type	Description	Length	Enum values
mapId	MAP_ID (<i>PK</i>)	BIGINT	Long	Id for the map	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
versionNumber	VERSION_NUM	INT	int	Version Number	-	-
answerHintId	ANS_HINT_ID	BIGINT	Long	Id for the answer hint	16	-

Name	DB name	DB type	Java type	Description	Length	Enum values
status	STATUS	INT	int	The status for this validation.	2	STATUS_ACTIVE STATUS_DISABLED STATUS_DELETED
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this hint.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-

9.2.19 VCryptGlobalAnswerHintHist

Description: Global answer hint. Shadow table

Database table name : *V_GLOBAL_ANS_HINT_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
mapId	MAP_ID	BIGINT	Long	Id for the map	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionNumber	VERSION_NUM	INT	int	Version Number	-
answerHintId	ANS_HINT_ID	BIGINT	Long	Id for the answer hint	16
status	STATUS	INT	int	The status for this validation.	2

9.2.20 VCryptQuestionAnswerHintMap

Description: Question answer hint map

Database table name : *V_Q_ANS_HINT_MAP*

Primary Keys : mapId (*MAP_ID*)

Name	DB name	DB type	Java type	Description	Length
mapId	MAP_ID (<i>PK</i>)	BIGINT	Long	Id for the map	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionNumber	VERSION_NUM	INT	int	Version Number	-
questionId	QUESTION_ID	BIGINT	Long	Id for the question	16
answerHintId	ANS_HINT_ID	BIGINT	Long	Id for the answer hint	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-

9.2.21 VCryptQuestionAnswerHintMapHist

Description: Question answer hint map history

Database table name : *V_Q_ANS_HINT_MAP_HIST*

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
mapId	MAP_ID	BIGINT	Long	Id for the map	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionNumber	VERSION_NUM	INT	int	Version Number	-
questionId	QUESTION_ID	BIGINT	Long	Id for the question	16
answerHintId	ANS_HINT_ID	BIGINT	Long	Id for the answer hint	16

9.2.22 VCryptAnswerHint**Description:** Answer Hint**Database table name :** V_ANS_HINT**Primary Keys :** answerHintId (ANS_HINT_ID)

Name	DB name	DB type	Java type	Descriptions	Length
answerHintId	ANS_HINT_ID (PK)	BIGINT	Long	Id for the answer hint	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionNumber	VERSION_NUM	INT	int	Version Number	-
name	NAME	TEXT	String	Name	4000
nameRBKey	NAME_RBKEY	TEXT	String	Resource bundle key for the name	4000
answerHintScheme	ANS_HINT_SCHEME	INT	int	Answer Hint scheme	-
answerHintScript	ANS_HINT_SCRIPT	TEXT	String	Answer Hint script. This is interpreted based on the answer hint scheme	4000
javaClass	JAVA_CLASS	TEXT	String	Java class path	4000
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-
description	DESCRIPTION	TEXT	String	Description of the object	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
notes	NOTES	TEXT	String	Notes	4000

9.2.23 VCryptAnswerHintHist**Description:** Answer Hint map history**Database table name :** V_ANS_HINT_HIST**Primary Keys :** logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
answerHintId	ANS_HINT_ID	BIGINT	Long	Id for the answer hint	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionNumber	VERSION_NUM	INT	int	Version Number	-
name	NAME	TEXT	String	Name	4000
nameRBKey	NAME_RBKEY	TEXT	String	Resource bundle key for the name	4000
answerHintScheme	ANS_HINT_SCHEME	INT	int	Answer Hint scheme	-
answerHintScript	ANS_HINT_SCRIPT	TEXT	String	Answer Hint script. This is interpreted based on the answer hint scheme	4000
javaClass	JAVA_CLASS	TEXT	String	Java class path	4000
description	DESCRIPTION	TEXT	String	Description of the object	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
notes	NOTES	TEXT	String	Notes	4000

9.2.24 VCryptUserQA

Description: User Question/Answer

Database table name: *V_USER_QA*

Primary Keys: qaId (*QA_ID*)

Name	DB name	DB type	Java type	Description	Length	Enum values
qaId	QA_ID (<i>PK</i>)	BIGINT	Long	Id for the question/answer	16	-
userId	USER_ID	BIGINT	Long	Id of the user.	16	-
questionId	QUESTION_ID	BIGINT	Long	Id for the question	16	-
qaStatus	QA_STATUS	INT	int	The status for this question/answer.	2	STATUS_ACTIVE STATUS_DISABLED STATUS_DELETED
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
answer	ANSWER	TEXT	String	Answer to the question	4000	-
answerHint	ANSWER_HINT	TEXT	String	Hint for the answer	4000	-

9.2.25 VCryptUserQAHist

Description: User Question/Answer shadow table

Database table name : *V_USER_QA_HIST*

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
qaId	QA_ID	BIGINT	Long	Id for the question/answer	16
userId	USER_ID	BIGINT	Long	Id of the user.	16
questionId	QUESTION_ID	BIGINT	Long	Id for the question	16
qaStatus	QA_STATUS	INT	int	The status for this question/answer.	2
answer	ANSWER	TEXT	String	Answer to the question	4000
answerHint	ANSWER_HINT	TEXT	String	Hint for the answer	4000

9.2.26 VCryptScoringPolicy**Description:** Scoring Policy**Database table name :** V_SCORING_POLICY**Primary Keys :** policyId (POLICY_ID)

Name	DB name	DB type	Java type	Description	Length
policyId	POLICY_ID (PK)	BIGINT	Long	Id for the policy	16
policyType	POLICY_TYPE	INT	int	Policy type	-
runtimeType	RUNTIME_TYPE	INT	int	Type of runtime	6
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionNumber	VERSION_NUM	INT	int	Version Number	-
minFinalScore	MIN_FINAL_SCORE	INT	int	Minimum final score to return success	-
notes	NOTES	TEXT	String	Note	4000
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-

9.2.27 VCryptScoringPolicyHist**Description:** Scoring Policy shadow table**Database table name :** V_SCORING_POLICY_HIST**Primary Keys :** logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256

Name	DB name	DB type	Java type	Description	Length
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
policyId	POLICY_ID	BIGINT	Long	Id for the policy	16
policyType	POLICY_TYPE	INT	int	Policy type	-
runtimeType	RUNTIME_TYPE	INT	int	Type of runtime	6
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionNumber	VERSION_NUM	INT	int	Version Number	-
minFinalScore	MIN_FINAL_SCORE	INT	int	Minimum final score to return success	-
notes	NOTES	TEXT	String	Note	4000

9.2.28 VCryptScoreAttributes

Description: Score attributes

Database table name : *V_SCORE_ATTR*

Primary Keys : attrId (*ATTR_ID*)

Name	DB name	DB type	Java type	Description	Length
attrId	ATTR_ID (<i>PK</i>)	BIGINT	Long	Id for the attribute	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionNumber	VERSION_NUM	INT	int	Version Number	-
policyId	POLICY_ID	BIGINT	Long	Id for the policy to which this belongs to	16
attrType	ATTR_TYPE	INT	int	Attribute type	-
score	SCORE	INT	int	Default score for this policy	-
weight	WEIGHT	INT	int	Weight for this profile	-
notes	NOTES	TEXT	String	Note	4000
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-

9.2.29 VCryptScoreAttributesHist

Description: Score Attributes for shadow table

Database table name : *V_SCORE_ATTR_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15

Name	DB name	DB type	Java type	Description	Length
attrId	ATTR_ID	BIGINT	Long	Id for the attribute	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionNumber	VERSION_NUM	INT	int	Version Number	-
policyId	POLICY_ID	BIGINT	Long	Id for the policy to which this belongs to	16
attrType	ATTR_TYPE	INT	int	Attribute type	-
score	SCORE	INT	int	Default score for this policy	-
weight	WEIGHT	INT	int	Weight for this profile	-
notes	NOTES	TEXT	String	Note	4000

9.2.30 VMonitorData

Description: This contains the monitor data.

Database table name : *V_MONITOR_DATA*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Id for finger print	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time of this finger print.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date/Time of the last update.	-
monitorType	MONITOR_TYPE	INT	int	Monitor type	5
fingerPrintId	FPRINT_ID	BIGINT	Long	Id for the finger print	16
dataValue	DATA_VALUE	TEXT	String	Data value for the finger print	4000
count	MONITOR_COUNT	INT	int	Monitor count	-
beginTime	BEGIN_TIME	DATETIME	Date	Date/Time for begin time.	-
endTime	END_TIME	DATETIME	Date	End time.	-
runningTime	RUNNING_TIME	BIGINT	long	Running time	20
elapsedTime	ELAPSED_TIME	BIGINT	long	Elapsed time in micro seconds	20
minTime	MIN_TIME	BIGINT	long	Minimum time taken for processing in micro seconds	20
maxTime	MAX_TIME	BIGINT	long	Maximum time taken for processing in micro seconds	20
hour	AGGR_HOUR	DATETIME	Date	Hour for this aggregate	-
day	AGGR_DAY	DATETIME	Date	Day for this aggregate	-
week	AGGR_WEEK	DATETIME	Date	Week for this aggregate	-
month	AGGR_MONTH	DATETIME	Date	Week for this aggregate	-
quarter	AGGR_QUARTER	DATETIME	Date	Week for this aggregate	-
year	AGGR_YEAR	DATETIME	Date	Year for this aggregate	-
serverId	SERVER_ID	TEXT	String	Server Id	4000

9.2.31 VBharosaConfig

Description: Bharosa Config

Database table name : *V_B_CONFIG*

Primary Keys : configId (CONFIG_ID)

Name	DB name	DB type	Java type	Description	Length
configId	CONFIG_ID (PK)	BIGINT	Long	Id for the config	16
versionNumber	VERSION_NUM	INT	int	Version Number	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
name	CONFIG_NAME	TEXT	String	Name of the attribute	4000
value	CONFIG_VALUE	TEXT	String	Value of the attribute	4000
configType	CONFIG_TYPE	INT	int	The type of this config.	5
isEncrypted	IS_SECURE	CHAR	boolean	Is this property encrypted	-
description	DESCRIPTION	TEXT	String	Description	4000
notes	NOTES	TEXT	String	Notes	4000

9.2.32 VBharosaConfigHist

Description: Bharosa Config shadow

Database table name : V_B_CONFIG_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
configId	CONFIG_ID	BIGINT	Long	Id for the config	16
versionNumber	VERSION_NUM	INT	int	Version Number	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
name	CONFIG_NAME	TEXT	String	Name of the attribute	4000
value	CONFIG_VALUE	TEXT	String	Value of the attribute	4000
configType	CONFIG_TYPE	INT	int	The type of this config.	5
isEncrypted	IS_SECURE	CHAR	boolean	Is this property encrypted	-
description	DESCRIPTION	TEXT	String	Description	4000
notes	NOTES	TEXT	String	Notes	4000

9.2.33 VBharosaEnum

Description: User Defined Enums

Database table name : V_B_ENUM

Primary Keys : enumId (ENUM_ID)

Name	DB name	DB type	Java type	Description	Length
createTime	CREATE_TIME	DATETIME	Date	Create Date/Time.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Update Date/Time.	-
enumId	ENUM_ID (<i>PK</i>)	BIGINT	Long	Id for the enum	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
name	LABEL	TEXT	String	Name of the User Def Enum.	4000
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000
description	DESCRIPTION	TEXT	String	Description of the object	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
propertyName	PROP_NAME	TEXT	String	Property name for this enum	4000
notes	NOTES	TEXT	String	Notes	4000

9.2.34 VBharosaEnumHist

Description: Bharosa Config shadow

Database table name : *V_B_ENUM_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Descriptions	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
enumId	ENUM_ID	BIGINT	Long	Id for the enum	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
name	LABEL	TEXT	String	Name of the User Def Enum.	4000
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000
description	DESCRIPTION	TEXT	String	Description of the object	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
propertyName	PROP_NAME	TEXT	String	Property name for this enum	4000
notes	NOTES	TEXT	String	Notes	4000

9.2.35 VBharosaEnumElement

Description: Element in User Defined Enums

Database table name : *V_B_ENUM_ELMNT*

Primary Keys : elementId (*ELEMENT_ID*)

Name	DB name	DB type	Java type	Description	Length
createTime	CREATE_TIME	DATETIME	Date	Create Date/Time.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Update Date/Time.	-

Name	DB name	DB type	Java type	Description	Length
elementId	ELEMENT_ID (PK)	BIGINT	Long	Id for the enum	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
enumId	ENUM_ID	BIGINT	Long	Id for the Enum	16
name	LABEL	TEXT	String	Name of the Element.	4000
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000
description	DESCRIPTION	TEXT	String	Description of the object	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
propertyName	PROP_NAME	TEXT	String	Property name for this enum	4000
numericValue	NUM_VALUE	INT	int	Numeric value of the element	-
stringValue	STR_VALUE	TEXT	String	String value of the element	4000
isEnabled	IS_ENABLED	CHAR	boolean	Is this element enabled	-
notes	NOTES	TEXT	String	Notes	4000

9.2.36 VBharosaEnumElementHist

Description: Shadow object for BharosaEnumElement

Database table name : *V_B_ENUM_ELMNT_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
elementId	ELEMENT_ID	BIGINT	Long	Id for the enum	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
enumId	ENUM_ID	BIGINT	Long	Id for the Enum	16
name	LABEL	TEXT	String	Name of the Element.	4000
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000
description	DESCRIPTION	TEXT	String	Description of the object	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
propertyName	PROP_NAME	TEXT	String	Property name for this enum	4000
numericValue	NUM_VALUE	INT	int	Numeric value of the element	-
stringValue	STR_VALUE	TEXT	String	String value of the element	4000
isEnabled	IS_ENABLED	CHAR	boolean	Is this element enabled	-
notes	NOTES	TEXT	String	Notes	4000

9.2.37 VBharosaEnumElementAttribute

Description: Element attribute in User Defined Enums

Database table name : *V_B_ENUM_ELMNT_ATTR*

Primary Keys : attributeId (*ATTR_ID*)

Name	DB name	DB type	Java type	Description	Length
createTime	CREATE_TIME	DATETIME	Date	Create Date/Time.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Update Date/Time.	-
attributeId	ATTR_ID (<i>PK</i>)	BIGINT	Long	Id for the enum	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
elementId	ELEMENT_ID	BIGINT	Long	Id for the Enum	16
attributeName	ATTR_NAME	TEXT	String	Name of the attribute.	4000
attributeValue	ATTR_VALUE	TEXT	String	Value of the attribute	4000
propertyName	PROP_NAME	TEXT	String	Property name for this attribute	4000
notes	NOTES	TEXT	String	Notes	4000

9.2.38 VBharosaEnumElementAttributeHist

Description: Enum Element attribute shadow

Database table name : *V_B_ENUM_ELMNT_ATTR_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
attributeId	ATTR_ID	BIGINT	Long	Id for the enum	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
elementId	ELEMENT_ID	BIGINT	Long	Id for the Enum	16
attributeName	ATTR_NAME	TEXT	String	Name of the attribute.	4000
attributeValue	ATTR_VALUE	TEXT	String	Value of the attribute	4000
propertyName	PROP_NAME	TEXT	String	Property name for this attribute	4000
notes	NOTES	TEXT	String	Notes	4000

9.2.39 VBharosaLocale

Description: Bharosa Locale

Database table name : *V_B_LOCALE*

Primary Keys : localeId (*LOCALE_ID*)

Name	DB name	DB type	Java type	Description	Length
localeId	LOCALE_ID (<i>PK</i>)	BIGINT	Long	Id for the Locale	16
versionNumber	VERSION_NUM	INT	int	Version Number	-
createTime	CREATE_TIME	DATETIME	Date	Create Date/Time for this object.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
name	LOCALE_NAME	TEXT	String	Name of the Locale	4000
nameRBKey	NAME_RBKEY	TEXT	String	Resource bundle key for the name	4000
language	LANGUAGE	TEXT	String	Language of the Locale	4000
country	COUNTRY	TEXT	String	Country of the Locale	4000
variant	VARIANT	TEXT	String	Variant of the Locale	4000
localeKey	LOCALE_KEY	TEXT	String	This is the concatenation of all the elements	4000
notes	NOTES	TEXT	String	Notes	4000

9.2.40 VBharosaLocaleHist

Description: Bharosa Locale shadow

Database table name : *V_B_LOCALE_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
localeId	LOCALE_ID	BIGINT	Long	Id for the locale	16
versionNumber	VERSION_NUM	INT	int	Version Number	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
name	LOCALE_NAME	TEXT	String	Name of the Locale	4000
nameRBKey	NAME_RBKEY	TEXT	String	Resource bundle key for the name	4000
language	LANGUAGE	TEXT	String	Language of the Locale	4000
country	COUNTRY	TEXT	String	Country of the Locale	4000
variant	VARIANT	TEXT	String	Variant of the Locale	4000
localeKey	LOCALE_KEY	TEXT	String	This is the concatenation of all the elements	4000
notes	NOTES	TEXT	String	Notes	4000

9.2.41 VBharosaConfigRB

Description: Bharosa Config with resource bundle

Database table name : *V_B_CONFIG_RB*

Primary Keys : configId (*CONFIG_ID*)

Name	DB name	DB type	Java type	Description	Length
configId	CONFIG_ID (<i>PK</i>)	BIGINT	Long	Id for the config	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-
name	CONFIG_NAME	TEXT	String	Name of the attribute	4000
value	CONFIG_VALUE	TEXT	String	Value of the attribute	4000
localeId	LOCALE_ID	BIGINT	Long	Locale for this property	16

9.2.42 VPattern

Description: This represents a pattern

Database table name : *V_PATTERN*

Primary Keys : patternId (*PATTERN_ID*)

Name	DB name	DB type	Java type	Description	Length	Enum values
createTime	CREATE_TIME	DATETIME	Date	Create Date/Time for this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
patternId	PATTERN_ID (<i>PK</i>)	BIGINT	Long	Id for the pattern	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
name	LABEL	TEXT	String	Name of the pattern.	4000	-
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000	-
description	DESCRIPTION	TEXT	String	Description of the pattern	4000	-
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000	-
trxDefId	TRX_DEF_ID	BIGINT	Long	Id for the Transaction type id	16	-
evalRuntime	EVAL_RUNTIME	INT	int	Defines when the pattern will be evaluated. E.g real-time, batch-mode, asyn-mode, etc	6	-
status	STATUS	INT	int	The status for this pattern.	2	STATUS_ACTIVE STATUS_DISABLED STATUS_DELETED

Name	DB name	DB type	Java type	Description	Length	Enum values
notes	NOTES	TEXT	String	Notes	4000	-

9.2.43 VPatternHist

Description: VPattern shadow class

Database table name : *V_PATTERN_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
patternId	PATTERN_ID	BIGINT	Long	Id for the pattern	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
name	LABEL	TEXT	String	Name of the pattern.	4000
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000
description	DESCRIPTION	TEXT	String	Description of the pattern	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
trxDefId	TRX_DEF_ID	BIGINT	Long	Id for the Transaction type	16
evalRuntime	EVAL_RUNTIME	INT	int	Defines when the pattern will be evaluated. E.g real-time, batch-mode, asyn-mode, etc	6
status	STATUS	INT	int	The status for this pattern.	2
notes	NOTES	TEXT	String	Notes	4000

9.2.44 VPatternEntity

Description: These are the entities which are associated with the Pattern.

Database table name : *V_PATTERN_ENTITY*

Primary Keys : patternEntityId (*PAT_ENT_ID*)

Name	DB name	DB type	Java type	Description	Length	Enum values
createTime	CREATE_TIME	DATETIME	Date	Create Date/Time for this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
patternEntityId	PAT_ENT_ID (<i>PK</i>)	BIGINT	Long	Id for this pattern and entity map	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-

Name	DB name	DB type	Java type	Description	Length	Enum values
name	LABEL	TEXT	String	Name of the pattern and entity mapping	4000	-
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000	-
description	DESCRIPTION	TEXT	String	Description of the pattern and entity mapping	4000	-
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000	-
patternId	PATTERN_ID	BIGINT	Long	Id for the pattern this maps to.	16	-
trxEntityDefMapId	TRX_ENT_DEF_MAP_ID	BIGINT	Long	Id to the transaction entity definition map	16	-
status	STATUS	INT	int	The status for this mapping.	2	STATUS_ACTIVE STATUS_DISABLED STATUS_DELETED
notes	NOTES	TEXT	String	Notes	4000	-

9.2.45 VPatternEntityHist

Description: VPatternEntity shadow class

Database table name : *V_PATTERN_ENTITY_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
patternEntityId	PAT_ENT_ID	BIGINT	Long	Id for this pattern and entity map	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
name	LABEL	TEXT	String	Name of the pattern and entity mapping	4000
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000
description	DESCRIPTION	TEXT	String	Description of the pattern and entity mapping	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
patternId	PATTERN_ID	BIGINT	Long	Id for the pattern this maps to.	16

Name	DB name	DB type	Java type	Description	Length
trxEntityDefMapId	TRX_ENT_DEF_MAP_ID	BIGINT	Long	Id to the transaction entity definition map	16
status	STATUS	INT	int	The status for this mapping.	2
notes	NOTES	TEXT	String	Notes	4000

9.2.46 VPatternParam

Description: This contains the information about the pattern params and the comparison or math operations that can be applied to the parameters when calculating membership to patterns

Database table name : *V_PATTERN_PARAM*

Primary Keys : paramId (*PARAM_ID*)

Name	DB name	DB type	Java type	Description	Length	Enum values
createTime	CREATE_TIME	DATETIME	Date	Create Date/Time for this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
paramId	PARAM_ID (<i>PK</i>)	BIGINT	Long	Id for the param	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
name	LABEL	TEXT	String	Name of the pattern and entity mapping	4000	-
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000	-
description	DESCRIPTION	TEXT	String	Description of the pattern and entity mapping	4000	-
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000	-
patternId	PATTERN_ID	BIGINT	Long	Id for the pattern this maps to.	16	-
status	STATUS	INT	int	The status for this mapping.	2	STATUS_ACTIVE STATUS_DISABLED STATUS_DELETED
orderNumber	ORDER_NUMBER	INT	int	Order number. This is used to create the grammar for prompts	-	-
compareOperator	COMPARE_OPER	INT	int	Comparison operator	-	-
paramKey	PARAM_KEY	TEXT	String	Key to the parameter	4000	-
paramType	PARAM_TYPE	INT	int	Type of the parameter	-	-
paramValue	PARAM_VALUE	TEXT	String	Param value	4000	-
beginRange	BEGIN_RANGE	INT	Integer	Begin value for the range	10	-

Name	DB name	DB type	Java type	Description	Length	Enum values
endRange	END_RANGE	INT	Integer	End value for the range	10	-
maxRange	MAX_RANGE	INT	Integer	Max value for the range	10	-
rangeIncrementStep	RANGE_INCR_STEP	INT	Integer	Increment step for range	10	-
notes	NOTES	TEXT	String	Notes	4000	-

9.2.47 VPatternParamHist

Description: VPatternParam shadow class

Database table name : V_PATTERN_PARAM_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
paramId	PARAM_ID	BIGINT	Long	Id for the param	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
name	LABEL	TEXT	String	Name of the pattern and entity mapping	4000
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000
description	DESCRIPTION	TEXT	String	Description of the pattern and entity mapping	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
patternId	PATTERN_ID	BIGINT	Long	Id for the pattern this maps to.	16
status	STATUS	INT	int	The status for this mapping.	2
orderNumber	ORDER_NUMBER	INT	int	Order number. This is used to create the grammar for prompts	-
compareOperator	COMPARE_OPER	INT	int	Comparison operator	-
paramKey	PARAM_KEY	TEXT	String	Key to the parameter	4000
paramType	PARAM_TYPE	INT	int	Type of the parameter	-
paramValue	PARAM_VALUE	TEXT	String	Param value	4000
beginRange	BEGIN_RANGE	INT	Integer	Begin value for the range	10
endRange	END_RANGE	INT	Integer	End value for the range	10
maxRange	MAX_RANGE	INT	Integer	Max value for the range	10
rangeIncrementStep	RANGE_INCR_STEP	INT	Integer	Increment step for range	10
notes	NOTES	TEXT	String	Notes	4000

9.2.48 VPatternEntityOperation

Description: This table stores data about the operations that be applied to the entities (observables) in the pattern. This table essentially keeps data about the profiling that needs to be collected for the entity. So we can have one to many relationship between pattern_entity table and this table

Database table name : *V_PAT_ENT_OPER*

Primary Keys : operationId (*OPER_ID*)

Name	DB name	DB type	Java type	Description	Length	Enum values
createTime	CREATE_TIME	DATETIME	Date	Create Date/Time for this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
operationId	OPER_ID (<i>PK</i>)	BIGINT	Long	Id for the operation	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
name	LABEL	TEXT	String	Name of the operation	4000	-
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000	-
description	DESCRIPTION	TEXT	String	Description of the operation	4000	-
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000	-
patternEntityId	PAT_ENT_ID	BIGINT	Long	Id for the pattern entity map.	16	-
operationType	OPER_TYPE	INT	int	Type of the operation.	5	-
status	STATUS	INT	int	The status for this mapping.	2	STATUS_ACTIVE STATUS_DISABLED STATUS_DELETED
notes	NOTES	TEXT	String	Notes	4000	-

9.2.49 VPatternEntityOperationHist

Description: VPatternEntityOperation shadow class

Database table name : *V_PAT_ENT_OPER_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
operationId	OPER_ID	BIGINT	Long	Id for the operation	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
name	LABEL	TEXT	String	Name of the operation	4000

Name	DB name	DB type	Java type	Description	Length
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000
description	DESCRIPTION	TEXT	String	Description of the operation	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
patternEntityId	PAT_ENT_ID	BIGINT	Long	Id for the pattern entity map.	16
operationType	OPER_TYPE	INT	int	Type of the operation.	5
status	STATUS	INT	int	The status for this mapping.	2
notes	NOTES	TEXT	String	Notes	4000

9.2.50 VCryptFingerPrint

Description: This contains the finger prints.

Database table name : *V_FPRINTS*

Primary Keys : fingerprintId (*FPRINT_ID*)

Name	DB name	DB type	Java type	Description	Length
fingerprintId	FPRINT_ID (<i>PK</i>)	BIGINT	Long	Id for finger print	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time of this finger print.	-
fingerprintType	FPRINT_TYPE	INT	int	Type of finger printing	6
patternId	PATTERN_ID	BIGINT	Long	Id for the pattern this maps to.	16
hashValue	HASH_VALUE	TEXT	String	Hash value for the finger print	512
dataValue	DATA_VALUE	TEXT	String	Data value for the finger print	4000

9.2.51 VCryptFPNameValue

Description: Name value pairs in the finger print

Database table name : *V_FP_NV*

Primary Keys : nameValueId (*FP_NV_ID*)

Name	DB name	DB type	Java type	Description	Length
nameValueId	FP_NV_ID (<i>PK</i>)	BIGINT	Long	Id for name value	16
fingerprintId	FPRINT_ID	BIGINT	Long	Id for the finger print	16
name	ATTR_NAME	VARCHAR	String	Name of the attribute	64
value	ATTR_VALUE	TEXT	String	Value of the attribute	256

9.2.52 VCryptFPMap

Description: Map for finger print

Database table name : *V_FP_MAP*

Primary Keys : mapId (*MAP_ID*)

Name	DB name	DB type	Java type	Description	Length
mapId	MAP_ID (PK)	BIGINT	Long	Id for map	16
fingerPrintId	FPRINT_ID	BIGINT	Long	Id for the finger print	16
fingerPrintType	FPRINT_TYPE	INT	int	Type of finger printing	6
name	ATTR_NAME	VARCHAR	String	Name of the attribute	64
value	ATTR_VALUE	TEXT	String	value of the attribute	256

9.2.53 VCryptUserLog

Description: User Log

Database table name :VCRYPT_USER_LOGS

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length	Enum values
logId	LOG_ID (PK)	BIGINT	Long	Id for the message	16	-
userId	USER_ID	BIGINT	Long	Id of the user if available.	16	-
authSessionId	SESSION_ID	BIGINT	Long	Id to group discrete operations for a session.	16	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-	-
logType	LOG_TYPE_CODE	INT	int	The type for this log.	2	TYPE_OTHER TYPE_CREATE TYPE_UPDATE TYPE_DELETE
message	MESSAGE	TEXT	String	Message for this log.	4000	-
messageDetail	MESSAGE_DETAIL	TEXT	String	Message detail	4000	-
notes	NOTES	TEXT	String	Note against this message	4000	-

9.2.54 VCryptPinReset

Description: Pin reset log

Database table name :VCRYPT_PIN_RESETS

Primary Keys : resetId (RESET_ID)

Name	DB name	DB type	Java type	Description	Length	Enum values
resetId	RESET_ID (PK)	BIGINT	Long	Id for the reset	16	-
userId	USER_ID	BIGINT	Long	Id of the user if available.	16	-
newPin	NEW_PIN	VARCHAR	String	New pin for the user	255	-
requestTime	REQUEST_TIME	DATETIME	Date	Date/Time of the request.	-	-
resetStatus	RESET_STATUS_CODE	INT	int	Status of the reset	2	STATUS_NONE STATUS_NOTIFIED STATUS_RETRIEVED STATUS_OBSOLETE STATUS_EXPIRED

Name	DB name	DB type	Java type	Description	Length	Enum values
magicKey	MAGIC_KEY	TEXT	String	Magic key sent to the client.	256	-
notes	NOTES	TEXT	String	Note	4000	-

9.2.55 VCryptPinRetrieval

Description: Pin retrieval

Database table name : VCRYPT_PIN_RETRIEVALS

Primary Keys : retrievalId (*RETRIEVE_ID*)

Name	DB name	DB type	Java type	Description	Length	Enum values
retrievalId	RETRIEVE_ID (<i>PK</i>)	BIGINT	Long	Id for the retrieval	16	-
resetId	RESET_ID	BIGINT	Long	Id for the User	16	-
retrieveTime	RETRIEVE_TIME	DATETIME	Date	Date/Time of the retrieval.	-	-
retrieveStatus	RETRIEVE_STATUS_CODE	INT	int	Status of this retrieval	2	STATUS_NONE STATUS_SUCCESS STATUS_REJECTED
rejectReason	REJECT_REASON_CODE	INT	int	Reason of rejection	2	REJECT_NONE REJECT_EXPIRED REJECT_DUPLICATE_REQUEST REJECT_INVALID_USER REJECT_INVALID_PASSWORD REJECT_INVALID_SECURITY_ANSWER
notes	NOTES	TEXT	String	Note	4000	-

9.2.56 VCryptAuthSessionGroup

Description: VCrypt Session

Database table name : VCRYPT_AUTH_SESSION_GROUPS

Primary Keys : sessionGroupId (*SESSION_GROUP_ID*)

Name	DB name	DB type	Java type	Description	Length	Enum values
sessionGroupId	SESSION_GROUP_ID (<i>PK</i>)	BIGINT	Long	Id for the session group	16	-
sessionType	SESSION_TYPE	INT	int	Type of the authentication session. It could be for login, pin reset or on-demand in session authentication	-	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this session group.	-	-
authStatus	AUTH_STATUS	INT	int	Status of the this authentication session group.	3	AUTH_PENDING AUTH_SUCCESS AUTH_FAILED

9.2.57 VCryptAuthSession

Description: VCrypt Session

Database table name : VCRYPT_AUTH_SESSIONS

Primary Keys : sessionId (*SESSION_ID*)

Name	DB name	DB type	Java type	Description	Length
sessionId	SESSION_ID (<i>PK</i>)	BIGINT	Long	Id for the session	16
sessionGroupId	SESSION_GROUP_ID	BIGINT	Long	Id of the session group.	16
userId	USER_ID	BIGINT	Long	Id of the user if available.	16
clientType	CLIENT_TYPE_CODE	INT	int	Type of the client used	2
clientVersion	CLIENT_VERSION	VARCHAR	String	Version of the client	64
authCount	AUTH_COUNT	INT	int	How many times the same session was used for authentication.	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this session.	-
requestData	REQUEST_DATA	TEXT	String	Data sent by the user.	4000
sessionData	SESSION_DATA	TEXT	String	Data sent to the user.	4000
host	HOST	TEXT	String	IP or hostname of the user	4000
fingerPrintId	FPRINT_ID	BIGINT	Long	Log id for the finger print	16
notes	NOTES	TEXT	String	Note against this message	4000

9.2.58 VCryptAuthAttempt

Description: VCrypt statistics

Database table name : VCRYPT_AUTH_ATTEMPTS

Primary Keys : attemptId (*ATTEMPT_ID*)

Name	DB name	DB type	Java type	Description	Length	Enum values
attemptId	ATTEMPT_ID (<i>PK</i>)	BIGINT	Long	Id for the message	16	-
userId	USER_ID	BIGINT	Long	Id of the user if available.	16	-
loginId	LOGIN_ID	VARCHAR	String	Login Id provided by the user.	255	-
authSessionId	SESSION_ID	BIGINT	Long	Id to group discrete operations for a session.	16	-
authAttemptCount	ATTEMPT_COUNT	INT	int	Count of authentication attempts for this authentication session.	-	-
authStatus	AUTH_STATUS	INT	int	Status of the this authentication.	3	AUTH_PENDING, AUTH_SUCCESS, AUTH_FAILED

Name	DB name	DB type	Java type	Description	Length	Enum values
authReason	AUTH_REASON	INT	int	Reason for the status code. This code is dependent on the status code of the authStatus.	-	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date/Time of the last update.	-	-
startTime	STARTTIME	DATETIME	Date	Start time.	-	-
timer1	TIMER1	BIGINT	long	First timer.	16	-
timer2	TIMER2	BIGINT	long	Second timer.	16	-
timer3	TIMER3	BIGINT	long	Third timer.	16	-
timer4	TIMER4	BIGINT	long	Fourth timer.	16	-
timer5	TIMER5	BIGINT	long	Fifth timer.	16	-
total	TOTAL	BIGINT	long	Total of all timers. This is a redundant column, but useful in queries	16	-
requestData	REQUEST_DATA	TEXT	String	Data sent by the user.	4000	-
requestResult	REQUEST_RESULT	TEXT	String	Data sent to the user.	4000	-
remoteIPAddr	REMOTE_IP_ADDR	BIGINT	String	The IP address from where the client connected	15	-
fingerPrintId	FPRINT_ID	BIGINT	Long	Log id for the finger print	16	-
notes	NOTES	TEXT	String	Note against this message	4000	-

9.2.59 VCryptSystemMessage

Description: SystemMessage

Database table name : VCRYPT_SYS_MESSAGES

Primary Keys : messageId (MESSAGE_ID)

Name	DB name	DB type	Java type	Description	Length
messageId	MESSAGE_ID (PK)	BIGINT	Long	Message id	16
userName	USER_NAME	TEXT	String	User Name	4000
systemMessage	SYSTEM_MESSAGE	TEXT	String	System message	4000
messageTime	MESSAGE_TIME	DATETIME	Date	Date/Time for this message.	-

9.2.60 VSystemLogs

Description: System log messages

Database table name : V_SYS_LOGS

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Id for the log	16

Name	DB name	DB type	Java type	Description	Length
adminLoginId	ADMIN_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date/Time of the last update.	-
logType	LOG_TYPE	INT	int	Log type	5
logSubType	LOG_SUB_TYPE	INT	int	Log sub type	5
logMessage	LOG_MESSAGE	TEXT	String	Log message	4000
logData	LOG_DATA	TEXT	String	Log data. This is a opaque object.	-
notes	NOTES	TEXT	String	Note against this rule	4000

9.2.61 VCryptDBPatch

Description: Class which has the list of db patches applied

Database table name : VCRYPT_DB_PATCHES

Primary Keys : patchId (PATCH_ID)

Name	DB name	DB type	Java type	Description	Length	Enum values
patchId	PATCH_ID (PK)	BIGINT	Long	Patch id	16	-
patchDescription	PATCH_DESC	TEXT	String	Description of the patch	4000	-
patchVersion	PATCH_VERSION	VARCHAR	String	Patch version	64	-
patchStatus	STATUS	INT	int	Patch status	2	PATCH_SUCCESS, PATCH_FAILURE, PATCH_PARTIAL
patchDate	PATCH_DATE	DATETIME	Date	Date/Time when the patch was applied.	-	-
notes	NOTES	TEXT	String	Note for this patch	4000	-

9.2.62 VActionLogSession

Description: Session for the action logs

Database table name : V_ACTION_LOG_SESS

Primary Keys : sessionId (SESSION_ID)

Name	DB name	DB type	Java type	Description	Length
sessionId	SESSION_ID (PK)	BIGINT	Long	Id for this session	16
parentSessionId	PARENT_SESSION_ID	BIGINT	Long	Id for the parent session	16
sessionType	SESSION_TYPE	INT	int	Type of this session	3
adminLoginId	ADMIN_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
adminUserRole	ADMIN_USER_ROLE	VARCHAR	String	Role of the administrator.	64
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-

Name	DB name	DB type	Java type	Description	Length
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date/Time of the last update.	-
notes	NOTES	TEXT	String	Notes	4000

9.2.63 VActionLog

Description: Action logs

Database table name : *V_ACTION_LOGS*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Id for this log	16
sessionId	SESSION_ID	BIGINT	Long	Id for this session	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date/Time of the last update.	-
category	CATEGORY	INT	int	Category of the action	3
action	ACTION	INT	int	Action performed	3
accessType	ACCESS_TYPE	INT	int	Access type	3
data	DATA	TEXT	String	Data for this action	4000
notes	NOTES	TEXT	String	Notes	4000

9.2.64 VTUserSession

Description: This contains the user session

Database table name : *VT_USER_SESS*

Primary Keys : userSessionId (*SESS_ID*)

Name	DB name	DB type	Java type	Description	Length
userSessionId	SESS_ID (<i>PK</i>)	BIGINT	Long	Id of the session	16
requestId	REQUEST_ID	TEXT	String	Id of the external user session	256
extSessionId	EXT_SESSION_ID	TEXT	String	External session id	512
userId	USER_ID	BIGINT	Long	Id of the user.	16
channelType	CHANNEL_TYPE	INT	int	Type of the channel used for this session. Channel could online, CC phone challenge, IVR, etc	5
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-
executeTime	EXEC_TIME	TIMESTAMP	Date	The time when this request was processed.	-
authClientType	AUTH_CLIENT_TYPE_CODE	INT	int	Type of the client used by the user for authentication	5

Name	DB name	DB type	Java type	Description	Length
authStatus	AUTH_STATUS	INT	int	Status of the authentication.	3
postProcessStatus	POST_PROCESS_STATUS	INT	int	Status of the post processing	5
postProcessResult	POST_PROCESS_RESULT	INT	int	Status of the post processing	5

9.2.65 VCryptTrackerUserNodeLog

Description: This logs all the activities for the nodes.

Database table name : VCRYPT_TRACKER_USERNODE_LOGS

Primary Keys : userNodeLogId (*USER_NODE_LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
userNodeLogId	USER_NODE_LOG_ID (<i>PK</i>)	BIGINT	Long	Log id of the user for a given node	16
requestId	REQUEST_ID	TEXT	String	Id of the request. This is used to co-relate the post authentication request.	256
extSessionId	EXT_SESSION_ID	TEXT	String	External session id	512
clientDeviceId	CLIENT_DEVICE_ID	TEXT	String	Id of the device which is generated by the application.	256
remoteIPAddr	REMOTE_IP_ADDR	BIGINT	String	The IP address from where the client connected	15
baseIPAddr	BASE_IP_ADDR	BIGINT	String	This is the base IP address for quick search	15
nodeId	NODE_ID	BIGINT	Long	Id of the nodeId.	16
nodeHistoryId	TRACKER_NODE_HISTORY_ID	BIGINT	Long	Id of the Tracker Node History (if available).	16
userId	USER_ID	TEXT	String	User Id of the user if available.	256
loginId	USER_LOGIN_ID	TEXT	String	Login Id of the user if available.	256
groupId	USER_GROUP_ID	TEXT	String	GroupId of the user if available.	256
subGroupId	USER_SUB_GROUP_ID	TEXT	String	Sub GroupId of the user if available.	256
authStatus	AUTH_STATUS	INT	int	Status of the authentication.	3
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-
executeTime	EXEC_TIME	TIMESTAMP	Date	The time when this request was processed.	-
isRegistered	IS_REGISTERED	CHAR	boolean	Whether this node is registered.	-
digitalSigCookie	SENT_DIG_SIG_COOKIE	VARCHAR	String	Digital signature cookie that was sent by the UI	128

Name	DB name	DB type	Java type	Description	Length
expectedDigitalSigCookie	EXPECTED_DIG_SIG_COOKIE	VARCHAR	String	Digital signature cookie that was expected by the server from the UI for this node	128
secureCookie	SENT_SECURE_COOKIE	VARCHAR	String	Secure cookie that was sent by the UI	128
expectedSecureCookie	EXPECTED_SECURE_COOKIE	VARCHAR	String	The secure cookie that was expected by the server from the UI for this node	128
authClientType	AUTH_CLIENT_TYPE_CODE	INT	int	Type of the client used by the user for authentication	2
authClientVersion	CLIENT_VERSION	VARCHAR	String	Version of the client used for authentication	24
digitalClientType	DIGITAL_CLIENT_TYPE_CODE	INT	int	Type of the client used by the digital cookie client	2
digitalClientVersion	DIGITAL_CLIENT_VERSION	VARCHAR	String	Version of the client used by the digital cookie client	24
secureClientType	SECURE_CLIENT_TYPE_CODE	INT	int	Type of the client used by the secure cookie client	2
secureClientVersion	SECURE_CLIENT_VERSION	VARCHAR	String	Version of the client used by the secure cookie client	24
digitalFingerPrintId	DIGITAL_FP_ID	BIGINT	Long	Finger print id of the digital cookie request	16
fingerPrintId	FPRINT_ID	BIGINT	Long	Log id for the finger print	16
loadDuration	LOAD_DURATION	INT	int	Time taken to load the page	8
deviceScore	DEVICE_SCORE	INT	int	Score for the device for this login	-
preAuthScore	PREAUTH_SCORE	INT	int	Pre Authentication score	-
postAuthScore	POST_SCORE	INT	int	Post Authentication score	-
preAuthAction	PREAUTH_ACTION	TEXT	String	Pre Authentication action	256
postAuthAction	POST_ACTION	TEXT	String	Post Authentication action	256
cityScore	CITY_SCORE	INT	int	Score for the city for this login	-
stateScore	STATE_SCORE	INT	int	Score for the state for this login	-
countryScore	COUNTRY_SCORE	INT	int	Score for the country for this login	-
postProcessStatus	POST_PROCESS_STATUS	INT	int	Status of the post processing	5
postProcessResult	POST_PROCESS_RESULT	INT	int	Status of the post processing	5
loginFlag	LOGIN_FLAG	INT	int	Flagging this authentication	3

Name	DB name	DB type	Java type	Description	Length
isDeviceDerived	IS_DEVICE_DERIVED	CHAR	boolean	Is the device identified using derived mechanism.	-
notes	NOTES	VARCHAR	String	Note against this node	255

9.2.66 VTSessionFPMap

Description: Session finger print mapping

Database table name :VT_SESS_FP_MAP

Primary Keys : mapId (MAP_ID)

Name	DB name	DB type	Java type	Description	Length
mapId	MAP_ID (PK)	BIGINT	Long	Map id	16
userNodeLogId	USER_NODE_LOG_ID	BIGINT	Long	Id of the user node log.	16
requestId	REQUEST_ID	TEXT	String	Id of the request.	256
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-
clientType	CLIENT_TYPE	INT	int	Client type	5
fingerPrintId	FP_ID	BIGINT	Long	Finger print id	16

9.2.67 VCryptTrackerNode

Description: This represents a node/computer

Database table name :VCRYPT_TRACKER_NODE

Primary Keys : nodeId (NODE_ID)

Name	DB name	DB type	Java type	Description	Length
nodeId	NODE_ID (PK)	BIGINT	Long	Node id for this node	16
nodeVersion	NODE_VERSION	INT	int	This keeps track of how many times this node got updated.	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this node.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-
relatedNodeId	RELATED_NODE_ID	BIGINT	Long	Related node.	16
relationType	RELATION_TYPE	INT	int	Type of the relation	5
digitalSigCookie	DIG_SIG_COOKIE	VARCHAR	String	Digital signature cookie	128
secureCookie	SECURE_COOKIE	VARCHAR	String	Secure cookie	128
remoteIPAddr	REMOTE_IP_ADDR	BIGINT	String	The IP address from where the client connected	15
remoteHost	REMOTE_HOST	TEXT	String	The host name from where the client connected	256
fingerPrintId	FPRINT_ID	BIGINT	Long	Log id for the finger print	16
digitalFingerPrintId	DIGITAL_FP_ID	BIGINT	Long	Finger print id of the digital cookie request	16
deviceStatus	STATUS	INT	int	Status of this device	3

Name	DB name	DB type	Java type	Description	Length
deviceScore	DEVICE_SCORE	INT	int	Score for the device for this login	6
isDeviceDerived	IS_DEVICE_DERIVED	CHAR	boolean	Is the device identified using derived mechanism.	-
secureCookieState	IS_COOKIE_DISABLED	INT	int	Is the secure cookie disabled for this device or in learn mode.	1
flashCookieState	IS_FLASH_DISABLED	INT	int	Is the flash cookie disabled for this device or in learn mode.	1
notes	NOTES	VARCHAR	String	Note against this message	255
cache	CACHE	TEXT	String	Cache	4000

9.2.68 VCryptTrackerNodeHistory

Description: This keeps the history of the a node/computer

Database table name : *VCRYPT_TRACKER_NODE_HISTORY*

Primary Keys : nodeHistoryId (*NODE_HISTORY_ID*)

Name	DB name	DB type	Java type	Description	Length
nodeHistoryId	NODE_HISTORY_ID (<i>PK</i>)	BIGINT	Long	Id for this row	16
nodeId	NODE_ID	BIGINT	Long	Id of the nodeId.	16
nodeVersion	NODE_VERSION	INT	int	This keeps track of how many times this node got updated.	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this node.	-
digitalSigCookie	DIG_SIG_COOKIE	VARCHAR	String	Digital signature cookie	128
secureCookie	SECURE_COOKIES	VARCHAR	String	Secure cookie	128
remoteIPAddr	REMOTE_IP_ADDR	BIGINT	String	The IP address from where the client connected	15
remoteHost	REMOTE_HOST	TEXT	String	The host name from where the client connected	256
fingerPrintId	FPRINT_ID	BIGINT	Long	Log id for the finger print	16
digitalFingerPrintId	DIGITAL_FP_ID	BIGINT	Long	Finger print id of the digital cookie request	16
isSecureCookieConfirmed	IS_SECURE_CONFIRMED	CHAR	boolean	Whether the secure cookie is confirmed to be written	-
isFlashCookieConfirmed	IS_FLASH_CONFIRMED	CHAR	boolean	Whether the flash cookie is confirmed to be written	-
deviceScore	DEVICE_SCORE	INT	int	Score for the device for this login	-
isDeviceDerived	IS_DEVICE_DERIVED	CHAR	boolean	Is the device identified using derived mechanism.	-
notes	NOTES	VARCHAR	String	Note against this node	255

9.2.69 VTUser

Description: This maintains the list of the users using the tracker

Database table name : *VT_USER*

Primary Keys : localUserId (*LOCAL_USER_ID*)

Name	DB name	DB type	Java type	Description	Length
localUserId	LOCAL_USER_ID (<i>PK</i>)	BIGINT	Long	Id of the user	16
extUserId	EXT_USER_ID	VARCHAR	String	External user id	255
loginId	LOGIN_ID	VARCHAR	String	Login id of the user	255
groupId	USERGROUP_ID	BIGINT	Long	Id of the group to which user belongs to.	16
isValid	IS_VALID	CHAR	boolean	The user is considered valid if the user had authenticated successfully atleast once.	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-
firstLoginTime	FIRST_LOGIN_TIME	DATETIME	Date	First time login for this user.	-
notes	NOTES	VARCHAR	String	Notes for this user	255
cache	CACHE	TEXT	String	Cache	4000

9.2.70 VTInvalidUser

Description: This maintains the list of invalid users

Database table name : *VT_INVALID_USERS*

Primary Keys : userId (*USER_ID*)

Name	DB name	DB type	Java type	Description	Length
userId	USER_ID (<i>PK</i>)	BIGINT	Long	Id of the user	16
loginId	LOGIN_ID	VARCHAR	String	Login id of the user	255
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-
loginCount	LOGIN_COUNT	INT	int	Total login count for this user	10
imagePath	IMAGE_PATH	TEXT	String	Image path	512

9.2.71 VTSessionActionMap

Description: This maintains the actions for each session

Database table name : *VT_SESSION_ACTION_MAP*

Primary Keys : mapId (*MAP_ID*)

Name	DB name	DB type	Java type	Description	Length
mapId	MAP_ID (<i>PK</i>)	BIGINT	Long	Map Id	16

Name	DB name	DB type	Java type	Description	Length
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-
requestId	REQUEST_ID	TEXT	String	Id of the request. This is used to co-relate the post authentication request.	256
trxId	TRX_ID	BIGINT	Long	Id for the transaction for this log	16
runtimeType	RUNTIME_TYPE	INT	int	Type of runtime	6
action	ACTION	TEXT	String	Actions for this runtime and session	256
originalAction	ORIGINAL_ACTION	TEXT	String	This was the original action, which got overridden finally	256
overrideReason	OVERRIDE_REASON	INT	int	Override reason	-
actionList	ACTION_LIST	TEXT	String	List of action.	256
score	SCORE	INT	int	Score for this runtime and runtime. The same score will appear for all the rows for this transaction	-
isFinalAction	IS_FINAL_ACTION	CHAR	boolean	Is this final action	-

9.2.72 VTUserGroup

Description: This contains the user group details.

Database table name :VT_USER_GROUPS

Primary Keys : localUserGroupId (*LOCAL_GROUP_ID*)

Name	DB name	DB type	Java type	Description	Length	Enum values
localUserGroupId	LOCAL_GROUP_ID (PK)	BIGINT	Long	Id for the UserGroup	16	-
extUserGroupId	EXT_USERGROUP_ID	VARCHAR	String	External User group id	255	-
description	DESCRIPTION	TEXT	String	Description for this group.	2000	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this user.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
userListId	USER_LIST_ID	BIGINT	Long	Id of the userList	16	-
status	USERGROUP_STATUS_CODE	INT	int	Status of the User group	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED
notes	NOTES	TEXT	String	Note	4000	-

9.2.73 VTUserDeviceMap

Description: This maintains the list of devices the user is using

Database table name :VT_USER_DEVICE_MAP

Primary Keys : mapId (MAP_ID)

Name	DB name	DB type	Java type	Description	Length
mapId	MAP_ID (PK)	BIGINT	Long	Map id	16
userId	USER_ID	BIGINT	Long	Id of the user.	16
nodeId	NODE_ID	BIGINT	Long	Id of the nodeId.	16
requestId	REQUEST_ID	TEXT	String	Id of the request which last updated this row	256
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-
lastUsedTime	LAST_USED_TIME	DATETIME	Date	Last used time for this device.	-
lastAuthStatus	LAST_AUTH_STATUS	INT	int	Last authentication status for the user using this device.	3
isSecure	IS_SECURE	CHAR	boolean	Is this node secure for this user.	-
totalCount	TOTAL_COUNT	INT	int	Total authentication count for this user/device	10
successCount	SUCCESS_COUNT	INT	int	Total success count for this user/device	10
failedCount	FAILED_COUNT	INT	int	Total failed count for this user/device	10
cache	CACHE	TEXT	String	Cache	4000
secureCookieState	IS_COOKIE_DISABLED	INT	int	Is the secure cookie disabled for this device or in learn mode.	1
flashCookieState	IS_FLASH_DISABLED	INT	int	Is the flash cookie disabled for this device or in learn mode.	1
fingerPrintId	FPRINT_ID	BIGINT	Long	Finger print of secure cookie	16
digitalFingerPrintId	DIGITAL_FP_ID	BIGINT	Long	Finger print id of the digital cookie request	16

9.2.74 VTEntityOne

Description: EntityOne details

Database table name :VT_ENTITY_ONE

Primary Keys : entityId (ENTITY_ID)

Name	DB name	DB type	Java type	Description	Length
entityId	ENTITY_ID (PK)	BIGINT	Long	Id of the entity	16
extEntityId	EXT_ENTITY_ID	VARCHAR	String	External entity id	255
entityName	ENTITYNAME	TEXT	String	Name of the entity	4000
entityKey	ENTITY_KEY	TEXT	String	Key for the entity	4000
entityType	ENTITY_TYPE	INT	int	Type of the entity	6
entityDefId	ENTITY_DEF_ID	BIGINT	Long	Id for the entity type	16

Name	DB name	DB type	Java type	Description	Length
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-
expiryTime	EXPIRY_TIME	DATETIME	Date	Expiry Date value.	-
renewTime	RENEW_TIME	DATETIME	Date	Renew Date value.	-
notes	NOTES	VARCHAR	String	Notes for this user	255
cache	CACHE	TEXT	String	Cache	4000

9.2.75 VEntityOneProfile

Description: This maintains the entity profile

Database table name :VT_ENTITY_ONE_PROFILE

Primary Keys : profileId (*PROFILE_ID*)

Name	DB name	DB type	Java type	Description	Length
profileId	PROFILE_ID (<i>PK</i>)	BIGINT	Long	Id of the profile	16
entityId	ENTITY_ID	BIGINT	Long	Id of the entity.	16
requestId	REQUEST_ID	TEXT	String	Id of the request which last updated this row	256
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-
profileTypeId	PROFILE_TYPE_ID	BIGINT	Long	-	16
dataDefId	DATA_DEF_ID	BIGINT	Long	Data def id	16
rowOrder	ROW_ORDER	INT	int	Row order	6
dataType	DATA_TYPE	INT	int	Type of data	6
data	DATA	TEXT	String	Data	512
data1	DATA1	TEXT	String	Data one	256
data2	DATA2	TEXT	String	Data two	256
data3	DATA3	TEXT	String	Data three	256
data4	DATA4	TEXT	String	Data four	256
data5	DATA5	TEXT	String	Data five	256
data6	DATA6	TEXT	String	Data six	256
data7	DATA7	TEXT	String	Data seven	256
data8	DATA8	TEXT	String	Data eight	256
data9	DATA9	TEXT	String	Data nine	256
data10	DATA10	TEXT	String	Data ten	256
numData0	NUM_DATA0	BIGINT	Long	Numeric data 0	38
numData1	NUM_DATA1	BIGINT	Long	Numeric data 1	38
numData2	NUM_DATA2	BIGINT	Long	Numeric data 2	38
expirationTime	EXPIRE_TIME	DATETIME	Date	Date/Time when this profile expires	-
totalCount	TOTAL_COUNT	INT	int	Count for this profile	10

9.2.76 VTEntityOneMap

Description: This maintains the list of entities associated with the user

Database table name :VT_USER_ENTITY1_MAP

Primary Keys : mapId (MAP_ID)

Name	DB name	DB type	Java type	Description	Length
mapId	MAP_ID (PK)	BIGINT	Long	Map id	16
entityId	ENTITY_ID	BIGINT	Long	Id of the entity.	16
objectId	MAP_OBJ_ID	BIGINT	Long	Id of the mapped object.	16
objectType	OBJECT_TYPE	INT	int	Type of the object.	6
requestId	REQUEST_ID	TEXT	String	Id of the request which last updated this row	256
status	STATUS	INT	int	Status of the transaction (where applicable)	5
defMapId	DEF_MAP_ID	BIGINT	Long	Id to the definition map	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-
expiryTime	EXPIRY_TIME	DATETIME	Date	Expiry Date value.	-
renewTime	RENEW_TIME	DATETIME	Date	Renew Date value.	-

9.2.77 VTEntityTrxMap

Description: This maintains the list of entities associated with the transaction

Database table name :VT_ENT_TRX_MAP

Primary Keys : mapId (MAP_ID)

Name	DB name	DB type	Java type	Description	Length
mapId	MAP_ID (PK)	BIGINT	Long	Map id	16
trxId	TRX_ID	BIGINT	Long	Id of the transaction.	16
objectId	MAP_OBJ_ID	BIGINT	Long	Id of the mapped object.	16
defMapId	DEF_MAP_ID	BIGINT	Long	Id to the definition map	16
requestId	REQUEST_ID	TEXT	String	Id of the request which last updated this row	256
status	STATUS	INT	int	Status of the transaction (where applicable)	5
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-

9.2.78 VTUserProfile

Description: This maintains the user profile

Database table name :VT_USER_PROFILE

Primary Keys : profileId (PROFILE_ID)

Name	DB name	DB type	Java type	Description	Length
profileId	PROFILE_ID (PK)	BIGINT	Long	Id of the profile	16
userId	USER_ID	BIGINT	Long	Id of the user.	16
requestId	REQUEST_ID	TEXT	String	Id of the request which last updated this row	256
status	STATUS	INT	int	Status of the transaction (where applicable)	5
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-
profileTypeId	PROFILE_TYPE_ID	BIGINT	Long	-	16
dataType	DATA_TYPE	INT	int	Type of data	6
data	DATA	TEXT	String	Data	512
data1	DATA1	TEXT	String	Data one	256
data2	DATA2	TEXT	String	Data two	256
data3	DATA3	TEXT	String	Data three	256
data4	DATA4	TEXT	String	Data four	256
data5	DATA5	TEXT	String	Data five	256
data6	DATA6	TEXT	String	Data six	256
data7	DATA7	TEXT	String	Data seven	256
data8	DATA8	TEXT	String	Data eight	256
data9	DATA9	TEXT	String	Data nine	256
data10	DATA10	TEXT	String	Data ten	256
numData0	NUM_DATA0	BIGINT	Long	Numeric data 0	16
numData1	NUM_DATA1	BIGINT	Long	Numeric data 1	16
numData2	NUM_DATA2	BIGINT	Long	Numeric data 2	16
expirationTime	EXPIRE_TIME	DATETIME	Date	Date/Time when this profile expires	-
totalCount	TOTAL_COUNT	INT	int	Count for this profile	10

9.2.79 VTDeviceProfile

Description: This maintains the device profile

Database table name : VT_DEVICE_PROFILE

Primary Keys : profileId (PROFILE_ID)

Name	DB name	DB type	Java type	Description	Length
profileId	PROFILE_ID (PK)	BIGINT	Long	Id of the profile	16
deviceId	NODE_ID	BIGINT	Long	Id of the nodeId.	16
requestId	REQUEST_ID	TEXT	String	Id of the request which last updated this row	256
status	STATUS	INT	int	Status of the transaction (where applicable)	5
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-

Name	DB name	DB type	Java type	Description	Length
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-
profileTypeId	PROFILE_TYPE_ID	BIGINT	Long	-	16
dataType	DATA_TYPE	INT	int	Type of data	6
data	DATA	TEXT	String	Data	512
data1	DATA1	TEXT	String	Data one	256
data2	DATA2	TEXT	String	Data two	256
data3	DATA3	TEXT	String	Data three	256
data4	DATA4	TEXT	String	Data four	256
data5	DATA5	TEXT	String	Data five	256
data6	DATA6	TEXT	String	Data six	256
data7	DATA7	TEXT	String	Data seven	256
data8	DATA8	TEXT	String	Data eight	256
data9	DATA9	TEXT	String	Data nine	256
data10	DATA10	TEXT	String	Data ten	256
numData0	NUM_DATA0	BIGINT	Long	Numeric data 0	16
numData1	NUM_DATA1	BIGINT	Long	Numeric data 1	16
numData2	NUM_DATA2	BIGINT	Long	Numeric data 2	16
expirationTime	EXPIRE_TIME	DATETIME	Date	Date/Time when this profile expires	-
totalCount	TOTAL_COUNT	INT	int	Count for this profile	10

9.2.80 VTIPProfile

Description: This maintains the location profile

Database table name :VT_IP_PROFILE

Primary Keys : profileId (*PROFILE_ID*)

Name	DB name	DB type	Java type	Description	Length
profileId	PROFILE_ID (<i>PK</i>)	BIGINT	Long	Id of the profile	16
ipAddr	REMOTE_IP_ADDR	BIGINT	String	The IP address from where the client connected	15
requestId	REQUEST_ID	TEXT	String	Id of the request which last updated this row	256
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-
profileTypeId	PROFILE_TYPE_ID	BIGINT	Long	-	16
dataType	DATA_TYPE	INT	int	Type of data	6
data	DATA	TEXT	String	Data	512
data1	DATA1	TEXT	String	Data one	256
data2	DATA2	TEXT	String	Data two	256
data3	DATA3	TEXT	String	Data three	256
data4	DATA4	TEXT	String	Data four	256

Name	DB name	DB type	Java type	Description	Length
data5	DATA5	TEXT	String	Data five	256
data6	DATA6	TEXT	String	Data six	256
data7	DATA7	TEXT	String	Data seven	256
data8	DATA8	TEXT	String	Data eight	256
data9	DATA9	TEXT	String	Data nine	256
data10	DATA10	TEXT	String	Data ten	256
numData0	NUM_DATA0	BIGINT	Long	Numeric data 0	16
numData1	NUM_DATA1	BIGINT	Long	Numeric data 1	16
numData2	NUM_DATA2	BIGINT	Long	Numeric data 2	16
expirationTime	EXPIRE_TIME	DATETIME	Date	Date/Time when this profile expires	-
totalCount	TOTAL_COUNT	INT	int	Count for this profile	10

9.2.81 VTBaseIPProfile

Description: This maintains the location profile

Database table name : VT_BASE_IP_PROFILE

Primary Keys : profileId (*PROFILE_ID*)

Name	DB name	DB type	Java type	Description	Length
profileId	PROFILE_ID (<i>PK</i>)	BIGINT	Long	Id of the profile	16
baseIPAddr	REMOTE_IP_ADDR	BIGINT	String	The IP address from where the client connected	15
requestId	REQUEST_ID	TEXT	String	Id of the request which last updated this row	256
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-
profileTypeId	PROFILE_TYPE_ID	BIGINT	Long	-	16
dataType	DATA_TYPE	INT	int	Type of data	6
data	DATA	TEXT	String	Data	512
data1	DATA1	TEXT	String	Data one	256
data2	DATA2	TEXT	String	Data two	256
data3	DATA3	TEXT	String	Data three	256
data4	DATA4	TEXT	String	Data four	256
data5	DATA5	TEXT	String	Data five	256
data6	DATA6	TEXT	String	Data six	256
data7	DATA7	TEXT	String	Data seven	256
data8	DATA8	TEXT	String	Data eight	256
data9	DATA9	TEXT	String	Data nine	256
data10	DATA10	TEXT	String	Data ten	256
numData0	NUM_DATA0	BIGINT	Long	Numeric data 0	16
numData1	NUM_DATA1	BIGINT	Long	Numeric data 1	16
numData2	NUM_DATA2	BIGINT	Long	Numeric data 2	16

Name	DB name	DB type	Java type	Description	Length
expirationTime	EXPIRE_TIME	DATETIME	Date	Date/Time when this profile expires	-
totalCount	TOTAL_COUNT	INT	int	Count for this profile	10

9.2.82 VTCountryProfile

Description: This maintains the country profile

Database table name :VT_COUNTRY_PROFILE

Primary Keys : profileId (PROFILE_ID)

Name	DB name	DB type	Java type	Description	Length
profileId	PROFILE_ID (PK)	BIGINT	Long	Id of the profile	16
countryId	COUNTRY_ID	BIGINT	Long	Id for the country to which this state belongs to.	16
requestId	REQUEST_ID	TEXT	String	Id of the request which last updated this row	256
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-
profileTypeId	PROFILE_TYPE_ID	BIGINT	Long	-	16
dataType	DATA_TYPE	INT	int	Type of data	6
data	DATA	TEXT	String	Data	512
data1	DATA1	TEXT	String	Data one	256
data2	DATA2	TEXT	String	Data two	256
data3	DATA3	TEXT	String	Data three	256
data4	DATA4	TEXT	String	Data four	256
data5	DATA5	TEXT	String	Data five	256
data6	DATA6	TEXT	String	Data six	256
data7	DATA7	TEXT	String	Data seven	256
data8	DATA8	TEXT	String	Data eight	256
data9	DATA9	TEXT	String	Data nine	256
data10	DATA10	TEXT	String	Data ten	256
numData0	NUM_DATA0	BIGINT	Long	Numeric data 0	16
numData1	NUM_DATA1	BIGINT	Long	Numeric data 1	16
numData2	NUM_DATA2	BIGINT	Long	Numeric data 2	16
expirationTime	EXPIRE_TIME	DATETIME	Date	Date/Time when this profile expires	-
totalCount	TOTAL_COUNT	INT	int	Count for this profile	10

9.2.83 VTStateProfile

Description: This maintains the state profile

Database table name :VT_STATE_PROFILE

Primary Keys : profileId (PROFILE_ID)

Name	DB name	DB type	Java type	Description	Length
profileId	PROFILE_ID (PK)	BIGINT	Long	Id of the profile	16
stateId	STATE_ID	BIGINT	Long	Id for the state to which this state belongs to.	16
requestId	REQUEST_ID	TEXT	String	Id of the request which last updated this row	256
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-
profileTypeId	PROFILE_TYPE_ID	BIGINT	Long	-	16
dataType	DATA_TYPE	INT	int	Type of data	6
data	DATA	TEXT	String	Data	512
data1	DATA1	TEXT	String	Data one	256
data2	DATA2	TEXT	String	Data two	256
data3	DATA3	TEXT	String	Data three	256
data4	DATA4	TEXT	String	Data four	256
data5	DATA5	TEXT	String	Data five	256
data6	DATA6	TEXT	String	Data six	256
data7	DATA7	TEXT	String	Data seven	256
data8	DATA8	TEXT	String	Data eight	256
data9	DATA9	TEXT	String	Data nine	256
data10	DATA10	TEXT	String	Data ten	256
numData0	NUM_DATA0	BIGINT	Long	Numeric data 0	16
numData1	NUM_DATA1	BIGINT	Long	Numeric data 1	16
numData2	NUM_DATA2	BIGINT	Long	Numeric data 2	16
expirationTime	EXPIRE_TIME	DATETIME	Date	Date/Time when this profile expires	-
totalCount	TOTAL_COUNT	INT	int	Count for this profile	10

9.2.84 VTCityProfile

Description: This maintains the city profile

Database table name :VT_CITY_PROFILE

Primary Keys : profileId (PROFILE_ID)

Name	DB name	DB type	Java type	Description	Length
profileId	PROFILE_ID (PK)	BIGINT	Long	Id of the profile	16
cityId	CITY_ID	BIGINT	Long	Id for the city to which this state belongs to.	16
requestId	REQUEST_ID	TEXT	String	Id of the request which last updated this row	256
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-
profileTypeId	PROFILE_TYPE_ID	BIGINT	Long	-	16
dataType	DATA_TYPE	INT	int	Type of data	6

Name	DB name	DB type	Java type	Description	Length
data	DATA	TEXT	String	Data	512
data1	DATA1	TEXT	String	Data one	256
data2	DATA2	TEXT	String	Data two	256
data3	DATA3	TEXT	String	Data three	256
data4	DATA4	TEXT	String	Data four	256
data5	DATA5	TEXT	String	Data five	256
data6	DATA6	TEXT	String	Data six	256
data7	DATA7	TEXT	String	Data seven	256
data8	DATA8	TEXT	String	Data eight	256
data9	DATA9	TEXT	String	Data nine	256
data10	DATA10	TEXT	String	Data ten	256
numData0	NUM_DATA0	BIGINT	Long	Numeric data 0	16
numData1	NUM_DATA1	BIGINT	Long	Numeric data 1	16
numData2	NUM_DATA2	BIGINT	Long	Numeric data 2	16
expirationTime	EXPIRE_TIME	DATETIME	Date	Date/Time when this profile expires	-
totalCount	TOTAL_COUNT	INT	int	Count for this profile	10

9.2.85 VTWFYears

Description: This has the years to capture

Database table name :VT_WF_YEARS

Primary Keys : wfld (WF_ID)

Name	DB name	DB type	Java type	Description	Length
wfld	WF_ID (PK)	BIGINT	Long	wf id	16
objectId	OBJECT_ID	BIGINT	Long	Id of the user.	16
entityDefId	ENTITY_DEF_ID	BIGINT	Long	Id for the entity type	16
fingerPrintId	FPRINT_ID	BIGINT	Long	Log id for the finger print	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-
year1	YEAR_1	INT	int	Year one	6
year2	YEAR_2	INT	int	Year two	6
year3	YEAR_3	INT	int	Year three	6
year4	YEAR_4	INT	int	Year four	6
year5	YEAR_5	INT	int	Year five	6
year6	YEAR_6	INT	int	Year six	6
year7	YEAR_7	INT	int	Year seven	6
year8	YEAR_8	INT	int	Year eight	6

9.2.86 VTWFMonths

Description: This has the months to capture

Database table name :VT_WF_MONTHS

Primary Keys : wfld (WF_ID)

Name	DB name	DB type	Java type	Description	Length
wfld	WF_ID (PK)	BIGINT	Long	wf id	16
objectId	OBJECT_ID	BIGINT	Long	Id of the user.	16
entityDefld	ENTITY_DEF_ID	BIGINT	Long	Id for the entity type	16
fingerPrintId	FPRINT_ID	BIGINT	Long	Log id for the finger print	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-
month1	MONTH_1	INT	int	Month one	6
month2	MONTH_2	INT	int	Month two	6
month3	MONTH_3	INT	int	Month three	6
month4	MONTH_4	INT	int	Month four	6
month5	MONTH_5	INT	int	Month five	6
month6	MONTH_6	INT	int	Month six	6
month7	MONTH_7	INT	int	Month seven	6
month8	MONTH_8	INT	int	Month eight	6
month9	MONTH_9	INT	int	Month nine	6
month10	MONTH_10	INT	int	Month ten	6
month11	MONTH_11	INT	int	Month eleven	6
month12	MONTH_12	INT	int	Month twelve	6
month13	MONTH_13	INT	int	Month thirteen	6

9.2.87 VTWFDays

Description: This has the days to capture

Database table name :VT_WF_DAYS

Primary Keys : wfld (WF_ID)

Name	DB name	DB type	Java type	Description	Length
wfld	WF_ID (PK)	BIGINT	Long	wf id	16
objectId	OBJECT_ID	BIGINT	Long	Id of the user.	16
entityDefld	ENTITY_DEF_ID	BIGINT	Long	Id for the entity type	16
fingerPrintId	FPRINT_ID	BIGINT	Long	Log id for the finger print	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-
day1	DAY_1	INT	int	Day one	6
day2	DAY_2	INT	int	Day two	6
day3	DAY_3	INT	int	Day three	6
day4	DAY_4	INT	int	Day four	6

Name	DB name	DB type	Java type	Description	Length
day5	DAY_5	INT	int	Day five	6
day6	DAY_6	INT	int	Day six	6
day7	DAY_7	INT	int	Day seven	6
day8	DAY_8	INT	int	Day eight	6
day9	DAY_9	INT	int	Day nine	6
day10	DAY_10	INT	int	Day ten	6
day11	DAY_11	INT	int	Day eleven	6
day12	DAY_12	INT	int	Day twelve	6

hour18	HOUR_18	INT	int	Hour eighteen	6
hour19	HOUR_19	INT	int	Hour nineteen	6
hour20	HOUR_20	INT	int	Hour twenty	6
hour21	HOUR_21	INT	int	Hour twenty one	6
hour22	HOUR_22	INT	int	Hour twenty two	6
hour23	HOUR_23	INT	int	Hour twenty three	6
hour24	HOUR_24	INT	int	Hour twenty four	6
hour25	HOUR_25	INT	int	Hour twenty five	6

9.2.89 VTransactionLog

Description: This is the transaction log

Database table name :VT_TRX_LOGS

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log id	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time of this transaction.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-
userId	USER_ID	BIGINT	Long	Id of the user.	16
requestId	REQUEST_ID	TEXT	String	Id of the login session.	256
extTransactionId	EXT_TRX_ID	VARCHAR	String	External transaction id	255
trxDefId	TRX_DEF_ID	BIGINT	Long	Transaction def id	16
transactionType	TRX_TYPE	INT	int	Transaction type	3
status	STATUS	INT	int	Status of the transaction (where applicable)	5

Name	DB name	DB type	Java type	Description	Length
score	SCORE	INT	Integer	Score for this transaction	-
ruleAction	RULE_ACTION	TEXT	String	Action	256
trxFlag	TRX_FLAG	INT	int	Flagging this transaction	3
postProcessStatus	POST_PROCESS_STATUS	INT	int	Status of the post processing	5
postProcessResult	POST_PROCESS_RESULT	INT	int	Status of the post processing	5
transactionData	TRX_DATA	TEXT	String	Transaction data as name value pair.	4000
data1	DATA1	TEXT	String	Data one	256
data2	DATA2	TEXT	String	Data two	256
data3	DATA3	TEXT	String	Data three	256
data4	DATA4	TEXT	String	Data four	256
data5	DATA5	TEXT	String	Data five	256
data6	DATA6	TEXT	String	Data six	256
data7	DATA7	TEXT	String	Data seven	256
data8	DATA8	TEXT	String	Data eight	256
data9	DATA9	TEXT	String	Data nine	256
data10	DATA10	TEXT	String	Data ten	256

9.2.90 VTTrxDATA

Description: This contains the data associated with the transaction

Database table name :VT_TRX_DATA

Primary Keys : trxDataId (TRX_DATA_ID)

Name	DB name	DB type	Java type	Description	Length
trxDataId	TRX_DATA_ID (PK)	BIGINT	Long	Transaction data id	16
trxId	TRX_ID	BIGINT	Long	Id of the transaction.	16
dataDefId	DATA_DEF_ID	BIGINT	Long	Data def id	16
rowOrder	ROW_ORDER	INT	int	Row order	6
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-
data1	DATA1	TEXT	String	Data one	4000
data2	DATA2	TEXT	String	Data two	4000
data3	DATA3	TEXT	String	Data three	4000
data4	DATA4	TEXT	String	Data four	4000
data5	DATA5	TEXT	String	Data five	4000
data6	DATA6	TEXT	String	Data six	4000
data7	DATA7	TEXT	String	Data seven	4000
data8	DATA8	TEXT	String	Data eight	4000
data9	DATA9	TEXT	String	Data nine	4000

Name	DB name	DB type	Java type	Description	Length
data10	DATA10	TEXT	String	Data ten	4000
numData0	NUM_DATA0	BIGINT	Long	Numeric data 0	38
numData1	NUM_DATA1	BIGINT	Long	Numeric data 1	38
numData2	NUM_DATA2	BIGINT	Long	Numeric data 2	38

9.2.91 VTrxDef

Description: Definition of transaction meta data

Database table name : *VT_TRX_DEF*

Primary Keys : *trxDefId (TRX_DEF_ID)*

Name	DB name	DB type	Java type	Description	Length	Enum values
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
trxDefId	TRX_DEF_ID (PK)	BIGINT	Long	Id for transaction definition	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
name	LABEL	TEXT	String	Name for transaction.	4000	-
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000	-
description	DESCRIPTION	TEXT	String	Description of the object	4000	-
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000	-
trxDefKey	TRX_DEF_KEY	TEXT	String	Key name to be used for the transaction e.g bill_pay, etc. This has to be passed in the handleTransactionLog API call. The context map should have an attribute key called transactionType	4000	-
status	STATUS	INT	int	Status	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED
notes	NOTES	TEXT	String	Note for this object	4000	-

9.2.92 VTrxDefHist

Description: This is the object history for VTrxDefHist

Database table name : *VT_TRX_DEF_HIST*

Primary Keys : *logId (LOG_ID)*

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-

Name	DB name	DB type	Java type	Description	Length
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
trxDefId	TRX_DEF_ID	BIGINT	Long	Id for transaction definition	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
name	LABEL	TEXT	String	Name for transaction.	4000
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000
description	DESCRIPTION	TEXT	String	Description of the object	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
trxDefKey	TRX_DEF_KEY	TEXT	String	Key name to be used for the transaction e.g bill_pay, etc. This has to be passed in the handleTransactionLog API call. The context map should have an attribute key called transactionType	4000
status	STATUS	INT	int	Status	2
notes	NOTES	TEXT	String	Note for this object	4000

9.2.93 VTTrxInputDef

Description: Definition of transaction input meta data

Database table name : *VT_TRX_INPUT_DEF*

Primary Keys : *trxDefId (TRX_DEF_ID)*

Name	DB name	DB type	Java type	Description	Length	Enum values
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
trxDefId	TRX_DEF_ID (PK)	BIGINT	Long	Id for transaction definition	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
name	LABEL	TEXT	String	Name for transaction.	4000	-
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000	-
description	DESCRIPTION	TEXT	String	Description of the object	4000	-
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000	-

Name	DB name	DB type	Java type	Description	Length	Enum values
trxDefKey	TRX_DEF_KEY	TEXT	String	Key name to be used for the transaction e.g bill_pay, etc. This has to be passed in the handleTransactionLog API call. The context map should have an attribute key called transactionType	4000	-
status	STATUS	INT	int	Status	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED
notes	NOTES	TEXT	String	Note for this object	4000	-

9.2.94 VTrxInputDefHist

Description: This is the object history for VTrxInputDefHist

Database table name : VT_TRX_INPUT_DEF_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
trxDefId	TRX_DEF_ID	BIGINT	Long	Id for transaction definition	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
name	LABEL	TEXT	String	Name for transaction.	4000
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000
description	DESCRIPTION	TEXT	String	Description of the object	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
trxDefKey	TRX_DEF_KEY	TEXT	String	Key name to be used for the transaction e.g bill_pay, etc. This has to be passed in the handleTransactionLog API call. The context map should have an attribute key called transactionType	4000
status	STATUS	INT	int	Status	2
notes	NOTES	TEXT	String	Note for this object	4000

9.2.95 VEntityDef

Description: Definition of Entity meta data

Database table name :VT_ENTITY_DEF

Primary Keys : entityDefId (ENTITY_DEF_ID)

Name	DB name	DB type	Java type	Description	Length	Enum values
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
entityDefId	ENTITY_DEF_ID (PK)	BIGINT	Long	Id for entity definition	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
name	LABEL	TEXT	String	Name for entity.	4000	-
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000	-
description	DESCRIPTION	TEXT	String	Description of the object	4000	-
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000	-
entityDefKey	ENTITY_DEF_KEY	TEXT	String	Key of the entity. E.g. address, merchant, etc	256	-
status	STATUS	INT	int	Status	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED
keyGenScheme	KEY_GEN_SCHEME	INT	int	Key generation scheme	-	-
keyGenParams	KEY_GEN_PARAMS	TEXT	String	Static params to be passed to the java class for key generation	4000	-
nameGenScheme	NAME_GEN_SCHEME	INT	int	Name generation scheme	-	-
nameGenParams	NAME_GEN_PARAMS	TEXT	String	Static params to be passed to the java class for name generation	4000	-
notes	NOTES	TEXT	String	Note for this object	4000	-

9.2.96 VTEntityDefHist

Description: This is the object history for VTEntityDefHist

Database table name :VT_ENTITY_DEF_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15

Name	DB name	DB type	Java type	Description	Length
entityDefId	ENTITY_DEF_ID	BIGINT	Long	Id for entity definition	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
name	LABEL	TEXT	String	Name for entity.	4000
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000
description	DESCRIPTION	TEXT	String	Description of the object	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
entityDefKey	ENTITY_DEF_KEY	TEXT	String	Key of the entity. E.g. address, merchant, etc	256
status	STATUS	INT	int	Status	2
keyGenScheme	KEY_GEN_SCHEME	INT	int	Key generation scheme	-
keyGenParams	KEY_GEN_PARAMS	TEXT	String	Static params to be passed to the java class for key generation	4000
nameGenScheme	NAME_GEN_SCHEME	INT	int	Name generation scheme	-
nameGenParams	NAME_GEN_PARAMS	TEXT	String	Static params to be passed to the java class for name generation	4000
notes	NOTES	TEXT	String	Note for this object	4000

9.2.97 VTrxDefEntityDefMap

Description: Association between entity and transaction

Database table name : *VT_TRX_ENT_DEFS_MAP*

Primary Keys : mapId (*MAP_ID*)

Name	DB name	DB type	Java type	Description	Length	Enum values
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
mapId	MAP_ID (<i>PK</i>)	BIGINT	Long	Id for map	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
name	LABEL	TEXT	String	Name for the map.	4000	-
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000	-
description	DESCRIPTION	TEXT	String	Description of the object	4000	-
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000	-
trxDefId	TRX_DEF_ID	BIGINT	Long	Parent data def id	16	-
entityDefId	ENTITY_DEF_ID	BIGINT	Long	Parent data def id	16	-
relationType	RELATION_TYPE	TEXT	String	Type of the relation	4000	-
displayOrder	DISP_ORDER	INT	int	Display order	6	-

Name	DB name	DB type	Java type	Description	Length	Enum values
status	STATUS	INT	int	Status	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED
notes	NOTES	TEXT	String	Note for this object	4000	-

9.2.98 VTTrxDefEntityDefMapHist

Description: History for VTTrxDefEntityDefMap

Database table name :VT_TRX_ENT_DEFS_MAP_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
mapId	MAP_ID	BIGINT	Long	Id for map	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
name	LABEL	TEXT	String	Name for the map.	4000
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000
description	DESCRIPTION	TEXT	String	Description of the object	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
trxDefId	TRX_DEF_ID	BIGINT	Long	Parent data def id	16
entityDefId	ENTITY_DEF_ID	BIGINT	Long	Parent data def id	16
relationType	RELATION_TYPE	TEXT	String	Type of the relation	4000
displayOrder	DISP_ORDER	INT	int	Display order	6
status	STATUS	INT	int	Status	2
notes	NOTES	TEXT	String	Note for this object	4000

9.2.99 VTEntityDefEntityDefMap

Description: Association between entity and transaction

Database table name :VT_ENT_DEFS_MAP

Primary Keys : mapId (MAP_ID)

Name	DB name	DB type	Java type	Description	Length
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-
mapId	MAP_ID (PK)	BIGINT	Long	Id for map	16

Name	DB name	DB type	Java type	Description	Length
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
name	LABEL	TEXT	String	Name for the map.	4000
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000
description	DESCRIPTION	TEXT	String	Description of the object	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
entityDefId1	ENTITY_DEF_ID_1	BIGINT	Long	Parent entity def id of object 1	16
entityDefId2	ENTITY_DEF_ID_2	BIGINT	Long	Parent entity def id of object 2	16
relationType	RELATION_TYPE	TEXT	String	Type of the relation	4000
displayOrder	DISP_ORDER	INT	int	Display order	6
notes	NOTES	TEXT	String	Note for this object	4000

9.2.100 VTEntityDefEntityDefMapHist

Description: History for VTEntityDefEntityDefMap

Database table name : VT_ENT_DEFS_MAP_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
mapId	MAP_ID	BIGINT	Long	Id for map	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
name	LABEL	TEXT	String	Name for the map.	4000
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000
description	DESCRIPTION	TEXT	String	Description of the object	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
entityDefId1	ENTITY_DEF_ID_1	BIGINT	Long	Parent entity def id of object 1	16
entityDefId2	ENTITY_DEF_ID_2	BIGINT	Long	Parent entity def id of object 2	16
relationType	RELATION_TYPE	TEXT	String	Type of the relation	4000
displayOrder	DISP_ORDER	INT	int	Display order	6
notes	NOTES	TEXT	String	Note for this object	4000

9.2.101 VTDataDef

Description: Definition of Data meta

Database table name :VT_DATA_DEF

Primary Keys : dataDefId (DATA_DEF_ID)

Name	DB name	DB type	Java type	Description	Length	Enum values
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
dataDefId	DATA_DEF_ID (PK)	BIGINT	Long	Id for data definition	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
name	LABEL	TEXT	String	Name for data def.	4000	-
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000	-
description	DESCRIPTION	TEXT	String	Description of the object	4000	-
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000	-
dataDefKey	DATA_DEF_KEY	TEXT	String	Key of the data. E.g. street_name, zip_code, etc	256	-
status	STATUS	INT	int	Status	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED
dataDefType	DATA_DEF_TYPE	INT	int	Type of data def. Whether it is dynamic or static	5	-
isRequired	IS_REQUIRED	CHAR	boolean	Is this data required by default.	-	-
isAutoCreated	IS_AUTO_CREATED	CHAR	boolean	Whether this auto created.	-	-
notes	NOTES	TEXT	String	Note for this object	4000	-

9.2.102 VTDataDefHist

Description: This is the object history for VTDataDef

Database table name :VT_DATA_DEF_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
dataDefId	DATA_DEF_ID	BIGINT	Long	Id for data definition	16

Name	DB name	DB type	Java type	Description	Length
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
name	LABEL	TEXT	String	Name for data def.	4000
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000
description	DESCRIPTION	TEXT	String	Description of the object	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
dataDefKey	DATA_DEF_KEY	TEXT	String	Key of the data. E.g. street_name, zip_code, etc	256
status	STATUS	INT	int	Status	2
dataDefType	DATA_DEF_TYPE	INT	int	Type of data def. Whether it is dynamic or static	5
isRequired	IS_REQUIRED	CHAR	boolean	Is this data required by default.	-
isAutoCreated	IS_AUTO_CREATED	CHAR	boolean	Whether this auto created.	-
notes	NOTES	TEXT	String	Note for this object	4000

9.2.103 VTDataDefElement

Description: Definition of elements in Data meta

Database table name :VT_DATA_DEF_ELEM

Primary Keys : dataDefElementId (DATA_DEF_ELEM_ID)

Name	DB name	DB type	Java type	Description	Length	Enum values
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
dataDefElementId	DATA_DEF_ELEM_ID (PK)	BIGINT	Long	Id for data definition element	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
defKey	DEF_KEY	TEXT	String	Key to identify this data	256	-
name	LABEL	TEXT	String	Name for column.	4000	-
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000	-
description	DESCRIPTION	TEXT	String	Description of the object	4000	-
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000	-
dataDefId	DATA_DEF_ID	BIGINT	Long	Parent data def id	16	-
dataRow	DATA_ROW	INT	int	Row for this data element	-	-

Name	DB name	DB type	Java type	Description	Length	Enum values

isRequired	IS_REQUIRED	CHAR	boolean	Is this data required by default.	-
nameGenScheme	NAME_GEN_SCHEME	INT	int	Name generation scheme	-
nameGenParams	NAME_GEN_PARAMS	TEXT	String	Static params to be passed to the java class for name generation	4000
isAutoCreated	IS_AUTO_CREATED	CHAR	boolean	Whether this auto created.	-
notes	NOTES	TEXT	String	Note for this object	4000

9.2.105 VTDataDefMap

Description: Map between Objects and Data Def

Database table name : *VT_DATA_DEF_MAP*

Primary Keys : mapId (*MAP_ID*)

Name	DB name	DB type	Java type	Description	Length
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-
mapId	MAP_ID (<i>PK</i>)	BIGINT	Long	Id for map	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
name	LABEL	TEXT	String	Name for the map.	4000
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000
description	DESCRIPTION	TEXT	String	Description of the object	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
dataDefId	DATA_DEF_ID	BIGINT	Long	Parent data def id	16
parentObjectType	PARENT_OBJ_TYPE	INT	int	Type of source object	5
parentObjectId	PARENT_OBJECT_ID	BIGINT	Long	Parent to which datadef belongs to	-
relationType	RELATION_TYPE	TEXT	String	Type of the relation	4000
notes	NOTES	TEXT	String	Note for this object	4000

9.2.106 VTDataDefMapHist

Description: History for VTDataDefMap

Database table name : *VT_DATA_DEF_MAP_HIST*

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
mapId	MAP_ID	BIGINT	Long	Id for map	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
name	LABEL	TEXT	String	Name for the map.	4000
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000
description	DESCRIPTION	TEXT	String	Description of the object	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
dataDefId	DATA_DEF_ID	BIGINT	Long	Parent data def id	16
parentObjectType	PARENT_OBJ_TYPE	INT	int	Type of source object	5
parentObjectId	PARENT_OBJECT_ID	BIGINT	Long	Parent to which datadef belongs to	-
relationType	RELATION_TYPE	TEXT	String	Type of the relation	4000
notes	NOTES	TEXT	String	Note for this object	4000

9.2.107 VTDataDefTranslation

Description: Translation from one element to another, e.g. input transaction to normalized transaction data. Or transaction to entity

Database table name :VT_DATA_DEF_TRANS

Primary Keys : translationId (ELEM_MAP_ID)

Name	DB name	DB type	Java type	Description	Length	Enum values
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
translationId	ELEM_MAP_ID (PK)	BIGINT	Long	Id for data definition element	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
name	LABEL	TEXT	String	Name for this data map.	4000	-
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000	-
description	DESCRIPTION	TEXT	String	Description of the object	4000	-

Name	DB name	DB type	Java type	Description	Length	Enum values
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000	-
translationScheme	TRANS_SCHEME	INT	int	Scheme for translation	-	-
translationParams	TRANS_PARAMS	TEXT	String	Static params to be passed to the java class for translation	4000	-
srcObjectType	SRC_OBJ_TYPE	INT	int	Type of source object	5	-
srcObjectId	SRC_OBJ_ID	BIGINT	Long	Source object id	16	-
destObjectType	DEST_OBJ_TYPE	INT	int	Type of destination object	5	-
destObjectId	DEST_OBJ_ID	BIGINT	Long	Destination object id	16	-
relationType	RELATION_TYPE	TEXT	String	Type of the relation	4000	-
status	STATUS	INT	int	Status	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED
notes	NOTES	TEXT	String	Note for this object	4000	-

9.2.108 VTDataDefTranslationHist

Description: History for VTDataDefTranslation

Database table name : *VT_DATA_DEF_TRANS_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
translationId	ELEM_MAP_ID	BIGINT	Long	Id for data definition element	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
name	LABEL	TEXT	String	Name for this data map.	4000
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000
description	DESCRIPTION	TEXT	String	Description of the object	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
translationScheme	TRANS_SCHEME	INT	int	Scheme for translation	-
translationParams	TRANS_PARAMS	TEXT	String	Static params to be passed to the java class for translation	4000
srcObjectType	SRC_OBJ_TYPE	INT	int	Type of source object	5

Name	DB name	DB type	Java type	Description	Length
srcObjectId	SRC_OBJ_ID	BIGINT	Long	Source object id	16
destObjectType	DEST_OBJ_TYPE	INT	int	Type of destination object	5
destObjectId	DEST_OBJ_ID	BIGINT	Long	Destination object id	16
relationType	RELATION_TYPE	TEXT	String	Type of the relation	4000
status	STATUS	INT	int	Status	2
notes	NOTES	TEXT	String	Note for this object	4000

9.2.109 VTDataDefElementTranslation

Description: Translation from one element to another, e.g. input transaction to normalized transaction data. Or transaction to entity

Database table name : *VT_ELEM_DEF_TRANS*

Primary Keys : destMapId (*DEST_MAP_ID*)

Name	DB name	DB type	Java type	Description	Length	Enum values
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
destMapId	DEST_MAP_ID (PK)	BIGINT	Long	Id for data definition element	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
name	LABEL	TEXT	String	Name for this data map.	4000	-
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000	-
description	DESCRIPTION	TEXT	String	Description of the object	4000	-
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000	-
translationScheme	TRANS_SCHEME	INT	int	Scheme for translation	-	-
translationParams	TRANS_PARAMS	TEXT	String	Static params to be passed to the java class for translation	4000	-
translationId	TRANS_ID	BIGINT	Long	Translation id	16	-
destElementDefId	DEST_ELEMENT_ID	BIGINT	Long	Destination data element id	16	-
status	STATUS	INT	int	Status	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED
notes	NOTES	TEXT	String	Note for this object	4000	-

9.2.110 VTDataDefElementTranslationHist

Description: History for VTDataDefElement

Database table name :VT_ELEM_DEF_TRANS_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
destMapId	DEST_MAP_ID	BIGINT	Long	Id for data definition element	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
name	LABEL	TEXT	String	Name for this data map.	4000
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000
description	DESCRIPTION	TEXT	String	Description of the object	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
translationScheme	TRANS_SCHEME	INT	int	Scheme for translation	-
translationParams	TRANS_PARAMS	TEXT	String	Static params to be passed to the java class for translation	4000
translationId	TRANS_ID	BIGINT	Long	Translation id	16
destElementDefId	DEST_ELEMENT_ID	BIGINT	Long	Destination data element id	16
status	STATUS	INT	int	Status	2
notes	NOTES	TEXT	String	Note for this object	4000

9.2.111 VTTranslationSourceElement

Description: Source columns for the translation

Database table name :VT_TRANS_SRC_ELEM

Primary Keys : srcElementId (SRC_ELEM_ID)

Name	DB name	DB type	Java type	Description	Length	Enum values
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
srcElementId	SRC_ELEM_ID (PK)	BIGINT	Long	Id for data definition element	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
name	LABEL	TEXT	String	Name for this data map.	4000	-

Name	DB name	DB type	Java type	Description	Length	Enum values
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000	-
description	DESCRIPTION	TEXT	String	Description of the object	4000	-
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000	-
translationScheme	TRANS_SCHEME	INT	int	Scheme for translation	-	-
translationParams	TRANS_PARAMS	TEXT	String	Static params to be passed to the java class for translation	4000	-
destMapId	DEST_MAP_ID	BIGINT	Long	Destination map id	16	-
srcElementDefId	SRC_ELEMENT_ID	BIGINT	Long	Source data element id	16	-
sortOrder	SORT_ORDER	INT	int	Row for this data element	-	-
status	STATUS	INT	int	Status	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED
notes	NOTES	TEXT	String	Note for this object	4000	-

9.2.112 VTTranslationSourceElementHist

Description: History for VTTranslationSourceElement

Database table name :VT_TRANS_SRC_ELEM_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
srcElementId	SRC_ELEM_ID	BIGINT	Long	Id for data definition element	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
name	LABEL	TEXT	String	Name for this data map.	4000
nameRBKey	LABEL_RBKEY	TEXT	String	Resource bundle key for the name	4000
description	DESCRIPTION	TEXT	String	Description of the object	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
translationScheme	TRANS_SCHEME	INT	int	Scheme for translation	-

Name	DB name	DB type	Java type	Description	Length
translationParams	TRANS_PARAMS	TEXT	String	Static params to be passed to the java class for translation	4000
destMapId	DEST_MAP_ID	BIGINT	Long	Destination map id	16
srcElementDefId	SRC_ELEMENT_ID	BIGINT	Long	Source data element id	16
sortOrder	SORT_ORDER	INT	int	Row for this data element	-
status	STATUS	INT	int	Status	2
notes	NOTES	TEXT	String	Note for this object	4000

9.2.113 VCountry

Description: Country object

Database table name : VCRYPT_COUNTRY

Primary Keys : countryId (COUNTRY_ID)

Name	DB name	DB type	Java type	Description	Length
countryId	COUNTRY_ID (PK)	BIGINT	Long	Id for this country	16
countryCode	COUNTRY_CODE	VARCHAR	String	Code of the country	64
countryName	COUNTRY_NAME	TEXT	String	Name of the country	4000
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-
continent	CONTINENT	VARCHAR	String	Continent to which this country belongs to	64
notes	NOTES	TEXT	String	Notes for this country	4000

9.2.114 VCountryHist

Description: Country object

Database table name : V_COUNTRY_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
countryId	COUNTRY_ID	BIGINT	Long	Id for this country	16
countryCode	COUNTRY_CODE	VARCHAR	String	Code of the country	64
countryName	COUNTRY_NAME	TEXT	String	Name of the country	4000
continent	CONTINENT	VARCHAR	String	Continent to which this country belongs to	64
notes	NOTES	TEXT	String	Notes for this country	4000

9.2.115 VState

Description: This is the state or region of the country

Database table name :VCRYPT_STATE

Primary Keys : stateId (STATE_ID)

Name	DB name	DB type	Java type	Description	Length
stateId	STATE_ID (PK)	BIGINT	Long	Id for this state	16
countryId	COUNTRY_ID	BIGINT	Long	Id for the country to which this state belongs to.	16
stateCode	STATE_CODE	VARCHAR	String	Code for the state or region	64
stateName	STATE_NAME	TEXT	String	Name of the state	4000
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-
notes	NOTES	TEXT	String	Notes for this state	4000

9.2.116 VStateHist

Description: This is the state or region of the country

Database table name :V_STATE_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
stateId	STATE_ID	BIGINT	Long	Id for this state	16
countryId	COUNTRY_ID	BIGINT	Long	Id for the country to which this state belongs to.	16
stateCode	STATE_CODE	VARCHAR	String	Code for the state or region	64
stateName	STATE_NAME	TEXT	String	Name of the state	4000
notes	NOTES	TEXT	String	Notes for this state	4000

9.2.117 VCity

Description: This is the city object

Database table name :VCRYPT_CITY

Primary Keys : cityId (CITY_ID)

Name	DB name	DB type	Java type	Description	Length
cityId	CITY_ID (PK)	BIGINT	Long	Id for this city	16

Name	DB name	DB type	Java type	Description	Length
stateId	STATE_ID	BIGINT	Long	Id for the state to which this city belongs to.	16
cityCode	CITY_CODE	VARCHAR	String	Code for the city	64
cityName	CITY_NAME	TEXT	String	Name of the city	4000
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-
latitude	LATITUDE	VARCHAR	String	Latitude	20
longitude	LONGITUDE	VARCHAR	String	Longitude	20
timezone	TIMEZONE	VARCHAR	String	Time Zone	20
notes	NOTES	TEXT	String	Notes for this city	4000

9.2.118 VCityHist

Description: This is the city object

Database table name : *V_CITY_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
cityId	CITY_ID	BIGINT	Long	Id for this city	16
stateId	STATE_ID	BIGINT	Long	Id for the state to which this city belongs to.	16
cityCode	CITY_CODE	VARCHAR	String	Code for the city	64
cityName	CITY_NAME	TEXT	String	Name of the city	4000
latitude	LATITUDE	VARCHAR	String	Latitude	20
longitude	LONGITUDE	VARCHAR	String	Longitude	20
timezone	TIMEZONE	VARCHAR	String	Time Zone	20
notes	NOTES	TEXT	String	Notes for this city	4000

9.2.119 VISP

Description: ISP listing

Database table name : *VCRYPT_ISP*

Primary Keys : ispId (*ISP_ID*)

Name	DB name	DB type	Java type	Description	Length
ispId	ISP_ID (<i>PK</i>)	BIGINT	Long	Id for this ISP	16
ispName	ISP_NAME	TEXT	String	Name of the ISP	4000
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-

Name	DB name	DB type	Java type	Description	Length
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-

9.2.120 VISPHist

Description: ISP listing

Database table name : *V_ISP_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
ispId	ISP_ID	BIGINT	Long	Id for this ISP	16
ispName	ISP_NAME	TEXT	String	Name of the ISP	4000

9.2.121 VLocationLookup

Description: Location lookup tables for constants

Database table name : *V_LOC_LOOKUP*

Primary Keys : lookupId (*LOOKUP_ID*)

Name	DB name	DB type	Java type	Description	Length	Enum values
lookupId	LOOKUP_ID (<i>PK</i>)	BIGINT	Long	Lookup ID	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
versionNumber	VERSION_NUM	INT	int	Version Number	-	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time.	-	-
lookupType	LOOKUP_TYPE	INT	int	Type of lookup. E.g. for profiles, etc	-	-
name	NAME	TEXT	String	Name of the lookup	4000	-
description	DESCRIPTION	TEXT	String	Description	4000	-
status	STATUS	INT	int	Status of the lookup	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED

9.2.122 VIPLocationMap

Description: Mapping of the IP range to city, state and country

Database table name : *VCRYPT_IP_LOCATION_MAP*

Primary Keys : ipRangeId (IP_RANGE_ID)

Name	DB name	DB type	Java type	Description	Length
ipRangeId	IP_RANGE_ID (PK)	BIGINT	Long	Id for this range	16
fromIPAddr	FROM_IP_ADDR	BIGINT	String	The from IP address	15
toIPAddr	TO_IP_ADDR	BIGINT	String	The to IP address	15
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-
countryId	COUNTRY_ID	BIGINT	Long	Id for the country to which this state belongs to.	16
stateId	STATE_ID	BIGINT	Long	Id for the state to which this IP range belongs to.	16
cityId	CITY_ID	BIGINT	Long	Id for the city to which this IP range belongs to.	16
metroId	METRO_ID	BIGINT	Long	Id of the metro for this IP	-
ispId	ISP_ID	BIGINT	Long	Id for the ISP to which this IP range belongs to.	16
ipRoutingType	ROUTING_TYPE	INT	Integer	IP routing type	3
connectionType	CONNECTION_TYPE	INT	Integer	Connection type	-
connectionSpeed	CONNECTION_SPEED	INT	Integer	Connection speed	-
topLevelDomain	TOP_LEVEL_DOMAIN	VARCHAR	String	Top level domain	25
secondLevelDomain	SEC_LEVEL_DOMAIN	VARCHAR	String	Second level domain	128
asn	ASN	VARCHAR	String	ASN	25
carrier	CARRIER	VARCHAR	String	Carrier	128
zipCode	ZIP_CODE	VARCHAR	String	Zip code	24
dma	DMA	INT	Integer	U.S. Designated Market Area, AC Nielsen	6
msa	MSA	INT	Integer	Metropolitan Statistical Area	6
pmsa	PMSA	INT	Integer	Primary Metropolitan Statistical Area	6
regionId	REGION_ID	BIGINT	Long	Id the region	16
phoneAreaCode	PHONE_AREA	VARCHAR	String	Phone area code	10
isSplit	IS_SPLIT	CHAR	boolean	Is the IP split. If so, in some queries, we might have to do additional checks.	-
countryCF	COUNTRY_CF	INT	Integer	Confidence factor of the country	4
stateCF	STATE_CF	INT	Integer	Confidence factor of the state	4
cityCF	CITY_CF	INT	Integer	Confidence factor of the city	4
notes	NOTES	VARCHAR	String	Notes for this IP range	255

9.2.123 VIPLocationMapHist

Description: Mapping of the IP range to city, state and country. Shadow table

Database table name : V_IP_LOC_MAP_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
ipRangeId	IP_RANGE_ID	BIGINT	Long	Id for this range	16
fromIPAddr	FROM_IP_ADDR	BIGINT	String	The from IP address	15
toIPAddr	TO_IP_ADDR	BIGINT	String	The to IP address	15
countryId	COUNTRY_ID	BIGINT	Long	Id for the country to which this state belongs to.	16
stateId	STATE_ID	BIGINT	Long	Id for the state to which this IP range belongs to.	16
cityId	CITY_ID	BIGINT	Long	Id for the city to which this IP range belongs to.	16
metroId	METRO_ID	BIGINT	Long	Id of the metro for this IP	-
ispId	ISP_ID	BIGINT	Long	Id for the ISP to which this IP range belongs to.	16
ipRoutingType	ROUTING_TYPE	INT	Integer	IP routing type	3
connectionType	CONNECTION_TYPE	INT	Integer	Connection type	-
connectionSpeed	CONNECTION_SPEED	INT	Integer	Connection speed	-
topLevelDomain	TOP_LEVEL_DOMAIN	VARCHAR	String	Top level domain	25
secondLevelDomain	SEC_LEVEL_DOMAIN	VARCHAR	String	Second level domain	128
asn	ASN	VARCHAR	String	ASN	25
carrier	CARRIER	VARCHAR	String	Carrier	128
zipCode	ZIP_CODE	VARCHAR	String	Zip code	24
dma	DMA	INT	Integer	U.S. Designated Market Area, AC Nielsen	6
msa	MSA	INT	Integer	Metropolitan Statistical Area	6
pmsa	PMSA	INT	Integer	Primary Metropolitan Statistical Area	6
regionId	REGION_ID	BIGINT	Long	Id the region	16
phoneAreaCode	PHONE_AREA	VARCHAR	String	Phone area code	10
isKnownProxy	IS_PROXY	CHAR	boolean	Whether this is a known proxy	-
isSplit	IS_SPLIT	CHAR	boolean	Is the IP split. If so, in some queries, we might have to do additional checks.	-
countryCF	COUNTRY_CF	INT	Integer	Confidence factor of the country	4
stateCF	STATE_CF	INT	Integer	Confidence factor of the state	4
cityCF	CITY_CF	INT	Integer	Confidence factor of the city	4

Name	DB name	DB type	Java type	Description	Length
notes	NOTES	VARCHAR	String	Notes for this IP range	255

9.2.124 VIPLocationMapSplit

Description: Mapping of the split Class C IP ranges

Database table name : *V_IP_LOC_MAP_SPLIT*

Primary Keys : ipRangeId (*IP_RANGE_ID*)

Name	DB name	DB type	Java type	Description	Length
ipRangeId	IP_RANGE_ID (<i>PK</i>)	BIGINT	Long	Id for this range	16
baseIPAddr	BASE_IP_ADDR	BIGINT	String	The from IP address	15
fromIPAddr	FROM_IP_ADDR	BIGINT	String	The from IP address	15
toIPAddr	TO_IP_ADDR	BIGINT	String	The to IP address	15
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-
secondLevelDomain	SEC_LEVEL_DOMAIN	VARCHAR	String	Second level domain	128
notes	NOTES	VARCHAR	String	Notes for this IP range	255

9.2.125 VIPLocationMapSplitHist

Description: Mapping of the split Class C IP ranges. Shadow table

Database table name : *V_IP_LOC_MAP_SPLIT_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
ipRangeId	IP_RANGE_ID	BIGINT	Long	Id for this range	16
baseIPAddr	BASE_IP_ADDR	BIGINT	String	The from IP address	15
fromIPAddr	FROM_IP_ADDR	BIGINT	String	The from IP address	15
toIPAddr	TO_IP_ADDR	BIGINT	String	The to IP address	15
secondLevelDomain	SEC_LEVEL_DOMAIN	VARCHAR	String	Second level domain	128
notes	NOTES	VARCHAR	String	Notes for this IP range	255

9.2.126 VLocationUpdateSession

Description: Location update session

Database table name : *V_LOC_UPD_SESS*

Primary Keys : updateSessionId (*SESS_ID*)

Name	DB name	DB type	Java type	Description	Length
updateSessionId	SESS_ID (<i>PK</i>)	BIGINT	Long	Id for this update session	16
versionNumber	VERSION_NUM	INT	int	Version Number	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-
name	LABEL	TEXT	String	Name	4000
updateType	UPDATE_TYPE	INT	int	Type of the update. e.g. Location load or anonymizer	5
updateStatus	UPDATE_STATUS	INT	int	Status of the update	5
beginTime	BEGIN_TIME	DATETIME	Date	Date/Time for session begin time.	-
endTime	END_TIME	DATETIME	Date	End time.	-
notes	NOTES	TEXT	String	Notes	4000

9.2.127 VLocationUpdateLogs

Description: Location Update Logs

Database table name : *V_UPD_LOGS*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Id for the run log	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-
updateSessionId	UPD_SESS_ID	BIGINT	Long	Id for the update session	16
name	LOG_NAME	TEXT	String	Name for the log	4000
value	LOG_VALUE	TEXT	String	Value of the log	4000
logType	LOG_TYPE	INT	int	The type of the log.	5
notes	NOTES	TEXT	String	Notes	4000

9.2.128 VIPCluster

Description: This class defines an IP cluster. IP cluster is a range of IP addresses grouped as a cluster.

Database table name : *VT_IP_CLUSTER*

Primary Keys : clusterId (*CLUSTER_ID*)

Name	DB name	DB type	Java type	Description	Length
clusterId	CLUSTER_ID (<i>PK</i>)	BIGINT	Long	Id for this row	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-
label	LABEL	TEXT	String	Label for the cluster. This should be unique among all the IP clusters.	4000

Name	DB name	DB type	Java type	Description	Length
fromIPAddr	FROM_IP_ADDR	BIGINT	String	The from IP address	15
toIPAddr	TO_IP_ADDR	BIGINT	String	The to IP address	15
description	DESCRIPTION	TEXT	String	Description for this group.	4000
notes	NOTES	TEXT	String	Note against this node	4000

9.2.129 VIPClusterGroup

Description: This class represents the group of cluster ids. The cluster ids are stored in VIPClusterGroupMap

Database table name : *VT_IP_CLUSTER_GROUP*

Primary Keys : clusterGroupId (*CLUSTER_GROUP_ID*)

Name	DB name	DB type	Java type	Description	Length
clusterGroupId	CLUSTER_GROUP_ID (<i>PK</i>)	BIGINT	Long	Id for this group	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-
label	LABEL	TEXT	String	Label for this cluster group. This should be unique among the IP cluster groups.	4000
description	DESCRIPTION	TEXT	String	Description for this group.	4000
notes	NOTES	TEXT	String	Note against this node	4000

9.2.130 VIPClusterGroupMap

Description: This is used as an element in VIPClusterGroup

Database table name : *VT_IP_CLUSTER_GROUPMAP*

Primary Keys : clusterGroupMapId (*CLUSTER_GROUPMAP_ID*)

Name	DB name	DB type	Java type	Description	Length
clusterGroupMapId	CLUSTER_GROUPMAP_ID (<i>PK</i>)	BIGINT	Long	Id for the group map	16
clusterGroupId	CLUSTER_GROUP_ID	BIGINT	Long	Id for the cluster group	16
clusterId	CLUSTER_ID	BIGINT	Long	Id for the cluster id	16

9.2.131 VRuleVersion

Description: Managing the versions of the rule

Database table name : *VR_VERSION*

Primary Keys : versionId (*VERSION_ID*)

Name	DB name	DB type	Java type	Description	Length
versionId	VERSION_ID (<i>PK</i>)	BIGINT	Long	Id for this version row	16
parentVersionId	PARENT_VERSION_ID	BIGINT	Long	Parent version id	16

Name	DB name	DB type	Java type	Description	Length
versionNumber	VERSION_NUM	INT	int	Number for this version.	10
versionName	VERSION_NAME	TEXT	String	Name for this version.	4000
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-
versionStatus	VERSION_STATUS	INT	int	Status of this version	3
runStatus	RUN_STATUS	INT	int	This is the runtime status, whether it is active run or not	3
editStatus	EDIT_STATUS	INT	int	This is the edit status, whether it is active edit or not	3
notes	NOTES	TEXT	String	Note against this version	4000

9.2.132 VRuleVersionHist

Description: History of rule versions

Database table name :VR_VERSION_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
versionId	VERSION_ID	BIGINT	Long	Id for this version row	16
parentVersionId	PARENT_VERSION_ID	BIGINT	Long	Parent version id	16
versionNumber	VERSION_NUM	INT	int	Number for this version.	10
versionName	VERSION_NAME	TEXT	String	Name for this version.	4000
versionStatus	VERSION_STATUS	INT	int	Status of this version	3
runStatus	RUN_STATUS	INT	int	This is the runtime status, whether it is active run or not	3
editStatus	EDIT_STATUS	INT	int	This is the edit status, whether it is active edit or not	3
notes	NOTES	TEXT	String	Note against this version	4000

9.2.133 VRuleVersionTree

Description: Maintains the version tree

Database table name :VR_VERSION_TREE

Primary Keys : treeId (TREE_ID)

Name	DB name	DB type	Java type	Description	Length
treeId	TREE_ID (<i>PK</i>)	BIGINT	Long	Id for this tree	16
versionId	VERSION_ID	BIGINT	Long	Version Id	16
olderVersionId	OLD_VERSION_ID	BIGINT	Long	Version Id of the ancestor	16
orderNumber	ORDER_NUMBER	INT	int	Order of the tree	3
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-

9.2.134 VRuleVersionMap

Description: Maps all the elements to the version

Database table name : VR_VERSION_MAP

Primary Keys : mapId (*MAP_ID*)

Name	DB name	DB type	Java type	Description	Length
mapId	MAP_ID (<i>PK</i>)	BIGINT	Long	Id for the map	16
versionId	VERSION_ID	BIGINT	Long	Version Id	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-
objectType	OBJECT_TYPE	INT	int	Type of the object. Example, PolicySet, Policy, Model, Rule, RuleMap, ..	3
objectId	OBJECT_ID	BIGINT	Long	Id of the object	16

9.2.135 VRule

Description: This is the rule template

Database table name : VCRYPT_RULE

Primary Keys : ruleId (*RULE_ID*)

Name	DB name	DB type	Java type	Description	Length	Enum values
ruleId	RULE_ID (<i>PK</i>)	BIGINT	Long	Id for this rule	16	-
ruleName	RULE_NAME	TEXT	String	Name for this rule.	4000	-
ruleNameRBKey	RULE_NAME_RBKEY	TEXT	String	Resource bundle key for the rule name	4000	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
versionId	VERSION_ID	BIGINT	Long	Version Id	16	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
minCompatibleVersion	MIN_COMPAT_VER	VARCHAR	String	Minimum compatible version	32	-

Name	DB name	DB type	Java type	Description	Length	Enum values
maxCompatibleVersion	MAX_COMPAT_VER	VARCHAR	String	Maximum compatible version	32	-
description	DESCRIPTION	TEXT	String	Description of the rule	4000	-
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000	-
ruleType	RULE_TYPE	INT	int	Type of the rule.	-	-
ruleStatus	RULE_STATUS	INT	int	Type of the rule.	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED
ruleMetaData	RULE_METADATA	TEXT	String	Meta data describing the attributes and other properties of the rule	-	-
ruleFileData	RULE_FILEDATA	TEXT	String	Content from the rule file	-	-
resultList	RESULT_LIST	TEXT	String	List of possible results stored in XML format	4000	-
defaultScore	DEFAULT_SCORE	INT	int	Default score for this rule template	-	-
defaultWeight	DEFAULT_WEIGHT	INT	int	Default weight for this rule template	-	-
notes	NOTES	TEXT	String	Note against this rule	4000	-

9.2.136 VRuleHist

Description: This is the rule object history

Database table name : VCRYPT_RULE_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
ruleId	RULE_ID	BIGINT	Long	Id for this rule	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionId	VERSION_ID	BIGINT	Long	Version Id	16
ruleName	RULE_NAME	TEXT	String	Name for this rule.	4000
ruleNameRBKey	RULE_NAME_RBKEY	TEXT	String	Resource bundle key for the rule name	4000

Name	DB name	DB type	Java type	Description	Length
minCompatibleVersion	MIN_COMPAT_VER	VARCHAR	String	Minimum compatible version	32
maxCompatibleVersion	MAX_COMPAT_VER	VARCHAR	String	Maximum compatible version	32
description	DESCRIPTION	TEXT	String	Description of the rule	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
ruleType	RULE_TYPE	INT	int	Type of the rule.	-
ruleStatus	RULE_STATUS	INT	int	Type of the rule.	2
ruleMetaData	RULE_METADATA	TEXT	String	Meta data describing the attributes and other properties of the rule	-
ruleFileData	RULE_FILEDATA	TEXT	String	Rule file name	-
resultList	RESULT_LIST	TEXT	String	List of possible results stored in XML format	4000
defaultScore	DEFAULT_SCORE	INT	int	Default score for this rule template	-
defaultWeight	DEFAULT_WEIGHT	INT	int	Default weight for this rule template	-
notes	NOTES	TEXT	String	Note against this rule	4000

9.2.137 VRuleCondition

Description: This is the rule condition template

Database table name : *VR_RULE_CONDN*

Primary Keys : conditionId (*CONDN_ID*)

Name	DB name	DB type	Java type	Description	Length	Enum values
conditionId	CONDN_ID (<i>PK</i>)	BIGINT	Long	Id for this rule condition	16	-
conditionName	CONDN_NAME	TEXT	String	Name for the condition.	4000	-
conditionNameRBKey	CONDN_NAME_RBKEY	TEXT	String	Resource bundle key for the condition name	4000	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
versionId	VERSION_ID	BIGINT	Long	Version Id	16	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
minCompatibleVersion	MIN_COMPAT_VER	VARCHAR	String	Minimum compatible version	32	-
maxCompatibleVersion	MAX_COMPAT_VER	VARCHAR	String	Maximum compatible version	32	-

Name	DB name	DB type	Java type	Description	Length	Enum values
description	DESCRIPTION	TEXT	String	Description of the condition	4000	-
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000	-
conditionType	CONDITION_TYPE	INT	int	Type of the condition.	-	-
conditionStatus	CONDN_STATUS	INT	int	Type of the condition.	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED
conditionData	CONDN_DATA	TEXT	String	Condition expression. If it is Oracle database, then is stored as CLOB.	-	-
resultList	RESULT_LIST	TEXT	String	List of possible results stored in XML format	4000	-
notes	NOTES	TEXT	String	Note against this condition	4000	-

9.2.138 VRuleConditionHist

Description: This is the rule condition history

Database table name : *VR_RULE_CONDN_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
conditionId	CONDN_ID	BIGINT	Long	Id for this rule condition	16
conditionName	CONDN_NAME	TEXT	String	Name for the condition.	4000
conditionNameRBKey	CONDN_NAME_RBKEY	TEXT	String	Resource bundle key for the condition name	4000
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionId	VERSION_ID	BIGINT	Long	Version Id	16
minCompatibleVersion	MIN_COMPAT_VER	VARCHAR	String	Minimum compatible version	32
maxCompatibleVersion	MAX_COMPAT_VER	VARCHAR	String	Maximum compatible version	32
description	DESCRIPTION	TEXT	String	Description of the condition	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
conditionType	CONDITION_TYPE	INT	int	Type of the condition.	-

Name	DB name	DB type	Java type	Description	Length
conditionStatus	CONDN_STATUS	INT	int	Type of the condition.	2
conditionData	CONDN_DATA	TEXT	String	Condition expression. If it is Oracle database, then is stored as CLOB.	-
resultList	RESULT_LIST	TEXT	String	List of possible results stored in XML format	4000
notes	NOTES	TEXT	String	Note against this condition	4000

9.2.139 VRuleConditionScope

Description: Scope for the Rule Condition

Database table name : *VR_RULE_CONDN_SCOPE*

Primary Keys : scopeId (*SCOPE_ID*)

Name	DB name	DB type	Java type	Description	Length	Enum values
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
scopeId	SCOPE_ID (<i>PK</i>)	BIGINT	Long	Id for the Scope	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
conditionId	CONDN_ID	BIGINT	Long	Id of the rule condition	16	-
status	STATUS	INT	int	Status of the scope.	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED
scopeEnumElementValue	SCOPE_ELEM_VALUE	INT	int	Value of the scope enum	-	-

9.2.140 VRuleConditionScopeHist

Description: Shadow table for Rule Condition Scope

Database table name : *VR_RULE_CONDN_SCOPE_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
scopeId	SCOPE_ID	BIGINT	Long	Id for the Scope	16

Name	DB name	DB type	Java type	Description	Length
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
conditionId	CONDN_ID	BIGINT	Long	Id of the rule condition	16
status	STATUS	INT	int	Status of the scope.	2
scopeEnumElementValue	SCOPE_ELEM_VALUE	INT	int	Value of the scope enum	-

9.2.141 VRuleConditionMap

Description: This contains mapping between Rule Template and Rule Conditions

Database table name : *VR_RULE_CONDN_MAP*

Primary Keys : mapId (*MAP_ID*)

Name	DB name	DB type	Java type	Description	Length	Enum values
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
mapId	MAP_ID (<i>PK</i>)	BIGINT	Long	Id for the Map	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
versionId	VERSION_ID	BIGINT	Long	Version Id	16	-
mapName	MAP_NAME	TEXT	String	Name for this instance.	4000	-
mapNameRBKey	MAP_NAME_RBKEY	TEXT	String	Resource bundle key for this instance	4000	-
description	DESCRIPTION	TEXT	String	Description of the map	4000	-
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000	-
ruleId	RULE_ID	BIGINT	Long	Id of the rule template	16	-
conditionId	CONDN_ID	BIGINT	Long	Id of the rule condition	16	-
status	MAP_STATUS	INT	int	Status of the map.	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED
isPreCondition	IS_PRECONDN	CHAR	boolean	Is this a pre condition for the rule to execute	-	-
displayOrder	DISP_ORDER_NUMBER	INT	int	Order of display.	-	-
executionOrder	EXEC_ORDER_NUMBER	INT	int	Order of execution.	-	-
notes	NOTES	TEXT	String	Notes for this object	4000	-

9.2.142 VRuleConditionMapHist

Description: Shadow table for Rule Condition Map

Database table name :VR_RULE_CONDN_MAP_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
mapId	MAP_ID	BIGINT	Long	Id for the Map	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionId	VERSION_ID	BIGINT	Long	Version Id	16
mapName	MAP_NAME	TEXT	String	Name for this instance.	4000
mapNameRBKey	MAP_NAME_RBKEY	TEXT	String	Resource bundle key for this instance	4000
description	DESCRIPTION	TEXT	String	Description of the map	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
ruleId	RULE_ID	BIGINT	Long	Id of the rule template	16
conditionId	CONDN_ID	BIGINT	Long	Id of the rule condition	16
status	MAP_STATUS	INT	int	Status of the map.	2
isPreCondition	IS_PRECONDN	CHAR	boolean	Is this a pre condition for the rule to execute	-
displayOrder	DISP_ORDER_NUMBER	INT	int	Order of display.	-
executionOrder	EXEC_ORDER_NUMBER	INT	int	Order of execution.	-
notes	NOTES	TEXT	String	Notes for this object	4000

9.2.143 VRuleParam

Description: This contains the parameter definition for the given rule template

Database table name :VCRYPT_RULE_PARAMS

Primary Keys : paramId (PARAM_ID)

Name	DB name	DB type	Java type	Description	Length	Enum values
paramId	PARAM_ID (PK)	BIGINT	Long	Id for the parameter	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
ruleId	RULE_ID	BIGINT	Long	Id for the rule	16	-
conditionId	CONDN_ID	BIGINT	Long	Id of the rule condition	16	-

Name	DB name	DB type	Java type	Description	Length	Enum values
versionId	VERSION_ID	BIGINT	Long	Version Id	16	-
paramName	PARAM_NAME	TEXT	String	Name of the parameter	4000	-
paramNameRBKey	PARAM_NAME_RBKEY	TEXT	String	Key to the Resource Bundle for the parameter	4000	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
paramStatus	PARAM_STATUS	INT	int	Status of the parameter.	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED
promptLabel	PROMPT_LABEL	TEXT	String	Label to prompt	4000	-
promptLabelRBKey	PROMPT_LABEL_RBKEY	TEXT	String	Key to the resource bundle for Label	4000	-
description	DESCRIPTION	TEXT	String	Description of the rule parameter	4000	-
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000	-
orderNumber	ORDER_NUMBER	INT	int	Order number. This is used to create the grammar for prompts	-	-
compareOperator	COMPARE_OPER	INT	int	Comparison operator	-	-
javaClass	JAVA_CLASS	TEXT	String	Java class path	4000	-
valueType	VALUE_TYPE	INT	int	Value type	-	-
valueSubType	VALUE_SUB_TYPE	VARCHAR	String	Value sub type	128	-
validations	VALIDATIONS	TEXT	String	Constraints for the parameter	256	-
defaultValue	DEFAULT_VALUE	TEXT	String	Default value	4000	-
notes	NOTES	TEXT	String	Notes for this parameter	4000	-

9.2.144 VRuleParamHist

Description: Shadow table for Rule Param

Database table name : VCRYPT_RULE_PARAMS_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
paramId	PARAM_ID	BIGINT	Long	Id for the parameter	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionId	VERSION_ID	BIGINT	Long	Version Id	16
ruleId	RULE_ID	BIGINT	Long	Id for the rule	16
conditionId	CONDN_ID	BIGINT	Long	Id of the rule condition	16
paramName	PARAM_NAME	TEXT	String	Name of the parameter	4000
paramNameRBKey	PARAM_NAME_RBKEY	TEXT	String	Key to the Resource Bundle for the parameter	4000
paramStatus	PARAM_STATUS	INT	int	Status of the parameter.	2
promptLabel	PROMPT_LABEL	TEXT	String	Label to prompt	4000
promptLabelRBKey	PROMPT_LABEL_RBKEY	TEXT	String	Key to the resource bundle for Label	4000
description	DESCRIPTION	TEXT	String	Description of the rule parameter	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
orderNumber	ORDER_NUMBER	INT	int	Order number. This is used to create the grammer for prompts	-
compareOperator	COMPARE_OPER	INT	int	Comparision operator	-
javaClass	JAVA_CLASS	TEXT	String	Java class path	4000
valueType	VALUE_TYPE	INT	int	Value type	-
valueSubType	VALUE_SUB_TYPE	VARCHAR	String	Value sub type	128
validations	VALIDATIONS	TEXT	String	Constraints for the parameter	256
defaultValue	DEFAULT_VALUE	TEXT	String	Default value	4000
notes	NOTES	TEXT	String	Notes for this paramter	4000

9.2.145 VRuleParamCustom

Description: Customization of Rule Parameters

Database table name : *VR_RULE_PARAM_CUSTOM*

Primary Keys : customId (*CUSTOM_ID*)

Name	DB name	DB type	Java type	Description	Length
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-
customId	CUSTOM_ID (<i>PK</i>)	BIGINT	Long	Id for the customization	16
ruleParamId	PARAM_ID	BIGINT	Long	Id for the rule param	16

Name	DB name	DB type	Java type	Description	Length
ruleConditionMapId	RULE_COND_MAP_ID	BIGINT	Long	Id to the rule condition map	16
paramName	PARAM_NAME	TEXT	String	Name of the parameter	4000
paramNameRBKey	PARAM_NAME_RBKEY	TEXT	String	Key to the Resource Bundle for the parameter	4000
promptLabel	PROMPT_LABEL	TEXT	String	Label to prompt	4000
promptLabelRBKey	PROMPT_LABEL_RBKEY	TEXT	String	Key to the resource bundle for Label	4000
description	DESCRIPTION	TEXT	String	Description of the rule parameter	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
defaultValue	DEFAULT_VALUE	TEXT	String	Default value	4000
notes	NOTES	TEXT	String	Notes for this paramter	4000

9.2.146 VRuleParamCustomHist

Description: Shadow table for VRuleParamCustom

Database table name : *VR_RULE_PARAM_CUSTOM_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
customId	CUSTOM_ID	BIGINT	Long	Id for the customization	16
ruleParamId	PARAM_ID	BIGINT	Long	Id for the rule param	16
ruleConditionMapId	RULE_COND_MAP_ID	BIGINT	Long	Id to the rule condition map	16
paramName	PARAM_NAME	TEXT	String	Name of the parameter	4000
paramNameRBKey	PARAM_NAME_RBKEY	TEXT	String	Key to the Resource Bundle for the parameter	4000
promptLabel	PROMPT_LABEL	TEXT	String	Label to prompt	4000
promptLabelRBKey	PROMPT_LABEL_RBKEY	TEXT	String	Key to the resource bundle for Label	4000
description	DESCRIPTION	TEXT	String	Description of the rule parameter	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
defaultValue	DEFAULT_VALUE	TEXT	String	Default value	4000
notes	NOTES	TEXT	String	Notes for this paramter	4000

9.2.147 VProfile

Description: This is the rule model object

Database table name :VCRYPT_PROFILE**Primary Keys : profileId (PROFILE_ID)**

Name	DB name	DB type	Java type	Description	Length	Enum values
profileId	PROFILE_ID (PK)	BIGINT	Long	Id for this profile	16	-
profileName	PROFILE_NAME	TEXT	String	Name for this profile.	4000	-
profileNameRBKey	PROFILE_NAME_RBKEY	TEXT	String	Key to the resource bundle for Model Name.	4000	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
versionId	VERSION_ID	BIGINT	Long	Version Id	16	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
description	DESCRIPTION	TEXT	String	Description of the profile	4000	-
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000	-
policyType	POLICY_TYPE	INT	int	Type of the policy.	3	-
profileType	PROFILE_TYPE	INT	int	Type of the profile.	6	-
profileScope	PROFILE_SCOPE	INT	int	Scope of the profile. Whether it is System or not	3	-
profileStatus	PROFILE_STATUS	INT	int	Status of the profile.	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED
run_mode	RUN_MODE	INT	int	Whether this model is running in test mode or some other mode	3	-
score	SCORE	INT	int	Score for this profile	-	-
weight	WEIGHT	INT	int	Weight for this profile	-	-
logLevel	LOG_LEVEL	INT	int	Level of logging	6	-
priorityLevel	PRIORITY_LEVEL	INT	int	Priority Level	6	-
scoringType	SCORING_TYPE	INT	int	Type of scoring	3	-
fileName	FILE_NAME	TEXT	String	Name of the file	512	-
notes	NOTES	TEXT	String	Note against this profile	4000	-

9.2.148 VProfileHist

Description: Shadow table for Profile table

Database table name :VCRYPT_PROFILE_HIST

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
profileId	PROFILE_ID	BIGINT	Long	Id for this profile	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionId	VERSION_ID	BIGINT	Long	Version Id	16
profileName	PROFILE_NAME	TEXT	String	Name for this profile.	4000
profileNameRBKey	PROFILE_NAME_RBKEY	TEXT	String	Key to the resource bundle for Model Name.	4000
description	DESCRIPTION	TEXT	String	Description of the profile	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
policyType	POLICY_TYPE	INT	int	Type of the model.	3
profileType	PROFILE_TYPE	INT	int	Type of the profile.	6
profileScope	PROFILE_SCOPE	INT	int	Scope of the profile. Whether it is System or not	3
profileStatus	PROFILE_STATUS	INT	int	Status of the profile.	2
scoringType	SCORING_TYPE	INT	int	Type of scoring	3
fileName	FILE_NAME	TEXT	String	Name of the file	512
run_mode	RUN_MODE	INT	int	Whether this model is running in test mode or some other mode	3
score	SCORE	INT	int	Score for this profile	-
weight	WEIGHT	INT	int	Weight for this profile	-
logLevel	LOG_LEVEL	INT	int	Level of logging	6
priorityLevel	PRIORITY_LEVEL	INT	int	Priority Level	6
notes	NOTES	TEXT	String	Note against this profile	4000

9.2.149 VProfileRuleMap

Description: This is the profileRuleMap object

Database table name :VCRYPT_PROFILE_RULE_MAP

Primary Keys : profileRuleMapId (*PROFILE_RULE_MAP_ID*)

Name	DB name	DB type	Java type	Description	Length	Enum values
profileRuleMapId	PROFILE_RULE_MAP_ID (PK)	BIGINT	Long	Id for this profileRule Map	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
versionId	VERSION_ID	BIGINT	Long	Version Id	16	-
mapName	MAP_NAME	TEXT	String	Name for this instance.	4000	-
mapNameRBKey	MAP_NAME_RBKEY	TEXT	String	Key to the resource bundle for name for this instance.	4000	-
profileId	PROFILE_ID	BIGINT	Long	Id of the profile	16	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
ruleId	RULE_ID	BIGINT	Long	Id rule	16	-
status	MAP_STATUS	INT	int	Type of the profile.	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED
orderNumber	ORDER_NUMBER	INT	int	Order of execution. Rule instances with same value will executed parallelly	-	-
minDeviceScore	MIN_DEVICE_SCORE	INT	int	Minimum score of the device for executing this rule	-	-
maxDeviceScore	MAX_DEVICE_SCORE	INT	int	Maximum score of the device for executing this rule	-	-
minLocationScore	MIN_LOCATION_SCORE	INT	int	Minimum score of the location for executing this rule	-	-
maxLocationScore	MAX_LOCATION_SCORE	INT	int	Maximum score of the location for executing this rule	-	-

Details of Each Class

Name	DB name	DB type	Java type	Description	Length	Enum values
minCityScore	MIN_CITY_SCORE	INT	int	Minimum score of the city for executing this rule	-	-
maxCityScore	MAX_CITY_SCORE	INT	int	Maximum score of the city for executing this rule	-	-
minStateScore	MIN_STATE_SCORE	INT	int	Minimum score of the state for executing this rule	-	-
maxStateScore	MAX_STATE_SCORE	INT	int	Maximum score of the state for executing this rule	-	-
minCountryScore	MIN_COUNTRY_SCORE	INT	int	Minimum score of the country for executing this rule	-	-
maxCountryScore	MAX_COUNTRY_SCORE	INT	int	Maximum score of the country for executing this rule	-	-
exceptionUserGroupId	EXCEPT_USER_GROUP_ID	BIGINT	Long	Exception User Group Id	16	-
score	SCORE	INT	int	Score when this rule is executed	-	-
weight	WEIGHT	INT	int	Weight for this profile	-	-
logLevel	LOG_LEVEL	INT	int	Level of logging	6	-
priorityLevel	PRIORITY_LEVEL	INT	int	Priority Level	6	-
stopOnViolation	STOP_ON_VIOLATION	CHAR	boolean	Whether to stop processing of further rules, if this rule fails.	-	-
onTrueActionListId	ACTION_ID	BIGINT	Long	Id for the action list to be called when the condition is successful	16	-
onFalseActionListId	ON_FALSE_ACTION_LIST_ID	BIGINT	Long	Id for the action list to be called when the condition is successful	16	-
alertId	ALERT_ID	BIGINT	Long	Id for the alert list	16	-

Name	DB name	DB type	Java type	Description	Length	Enum values
notes	NOTES	TEXT	String	Notes for this profile rule map	4000	-

9.2.150 VProfileRuleMapHist

Description: Shadow table for VProfileRuleMap table

Database table name : VCRYPT_PROFILE_RULE_MAP_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
profileRuleMapId	PROFILE_RULE_MAP_ID	BIGINT	Long	Id for this profileRuleMap	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionId	VERSION_ID	BIGINT	Long	Version Id	16
mapName	MAP_NAME	TEXT	String	Name for this instance.	4000
mapNameRBKey	MAP_NAME_RBKEY	TEXT	String	Key to the resource bundle for name for this instance.	4000
profileId	PROFILE_ID	BIGINT	Long	Id of the profile	16
ruleId	RULE_ID	BIGINT	Long	Id rule	16
status	MAP_STATUS	INT	int	Type of the profile.	2
orderNumber	ORDER_NUMBER	INT	int	Order of execution. Rule instances with same value will executed parallely	-
minDeviceScore	MIN_DEVICE_SCORE	INT	int	Minimum score of the device for executing this rule	-
maxDeviceScore	MAX_DEVICE_SCORE	INT	int	Maximum score of the device for executing this rule	-
minLocationScore	MIN_LOCATION_SCORE	INT	int	Minimum score of the location for executing this rule	-
maxLocationScore	MAX_LOCATION_SCORE	INT	int	Maximum score of the location for executing this rule	-
minCityScore	MIN_CITY_SCORE	INT	int	Minimum score of the city for executing this rule	-
maxCityScore	MAX_CITY_SCORE	INT	int	Maximum score of the city for executing this rule	-

Name	DB name	DB type	Java type	Description	Length
minStateScore	MIN_STATE_SCORE	INT	int	Minimum score of the state for executing this rule	-
maxStateScore	MAX_STATE_SCORE	INT	int	Maximum score of the state for executing this rule	-
minCountryScore	MIN_COUNTRY_SCORE	INT	int	Minimum score of the country for executing this rule	-
maxCountryScore	MAX_COUNTRY_SCORE	INT	int	Maximum score of the country for executing this rule	-
exceptionUserGroupId	EXCEPT_USER_GROUP_ID	BIGINT	Long	Exception User Group Id	16
score	SCORE	INT	int	Score when this rule is executed	-
weight	WEIGHT	INT	int	Weight for this profile	-
logLevel	LOG_LEVEL	INT	int	Level of logging	6
priorityLevel	PRIORITY_LEVEL	INT	int	Priority Level	6
stopOnViolation	STOP_ON_VIOLATION	CHAR	boolean	Whether to stop processing of further rules, if this rule fails.	-
onTrueActionListId	ACTION_ID	BIGINT	Long	Id for the action list to be called when the condition is successful	16
onFalseActionListId	ON_FALSE_ACTION_LIST_ID	BIGINT	Long	Id for the action list to be called when the condition is successful	16
alertId	ALERT_ID	BIGINT	Long	Id for the alert list	16
notes	NOTES	TEXT	String	Notes for this profile rule map	4000

9.2.151 VProfileListMap

Description: This is to assign profiles to a list.

Database table name : *VCRYPT_PROFILE_LIST_MAP*

Primary Keys : mapId (*MAP_ID*)

Name	DB name	DB type	Java type	Description	Length	Enum values
mapId	MAP_ID (PK)	BIGINT	Long	Id for this profile list mapping	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
versionId	VERSION_ID	BIGINT	Long	Version Id	16	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Time of update.	-	-
profileId	PROFILE_ID	BIGINT	Long	Id of the profile	16	-
listId	LIST_ID	BIGINT	Long	Id for the list	16	-

Name	DB name	DB type	Java type	Description	Length	Enum values
status	MAP_STATUS	INT	int	Status for this mapping.	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED
notes	NOTES	TEXT	String	Notes for this profile list map	4000	-

9.2.152 VProfileListMapHist

Description: Shadow tables to the VProfileListMap.

Database table name : *VCRYPT_PROFILE_LIST_MAP_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length	Enum values
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16	-
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-	-
mapId	MAP_ID	BIGINT	Long	Id for this profile list mapping	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
versionId	VERSION_ID	BIGINT	Long	Version Id	16	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256	-
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15	-
profileId	PROFILE_ID	BIGINT	Long	Id of the profile	16	-
listId	LIST_ID	BIGINT	Long	Id for the list	16	-
status	MAP_STATUS	INT	int	Status for this mapping.	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED
notes	NOTES	TEXT	String	Notes for this profile list map	4000	-

9.2.153 VRuleParamValue

Description: This contains the values for the parameter of the rule instance

Database table name : *VCRYPT_RULE_PARAM_VALUES*

Primary Keys : paramValueId (*PARAM_VALUE_ID*)

Name	DB name	DB type	Java type	Description	Length	Enum values
paramValueId	PARAM_VALUE_ID (<i>PK</i>)	BIGINT	Long	Id for the param value	16	-
profileRuleMapId	PROFILE_RULE_MAP_ID	BIGINT	Long	Id of the profile rule map	16	-
paramId	PARAM_ID	BIGINT	Long	Id for the param	16	-
ruleConditionMapId	RULE_COND_MAP_ID	BIGINT	Long	Id to the rule condition map	16	-

Name	DB name	DB type	Java type	Description	Length	Enum values
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
versionId	VERSION_ID	BIGINT	Long	Version Id	16	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Time of update.	-	-
valueStatus	PARAM_VALUE_STATUS	INT	int	Status of the parameter value.	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED
valueType	VALUE_TYPE	INT	int	Value type	-	-
intValue	INT_VALUE	INT	int	Integer value	-	-
longValue	LONG_VALUE	BIGINT	long	Long value	-	-
stringValue	STRING_VALUE	TEXT	String	String value	4000	-
booleanValue	BOOLEAN_VALUE	CHAR	boolean	Boolean value.	-	-
dateValue	DATE_VALUE	DATETIME	Date	Date value.	-	-
notes	NOTES	TEXT	String	Notes for this param values	4000	-

9.2.154 VRuleParamValueHist

Description: Shadow table for VRuleParamValue

Database table name : VCRYPT_RULE_PARAM_VALUES_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
paramValueId	PARAM_VALUE_ID	BIGINT	Long	Id for the param value	16
profileRuleMapId	PROFILE_RULE_MAP_ID	BIGINT	Long	Id of the profile rule map	16
paramId	PARAM_ID	BIGINT	Long	Id for the param	16
ruleConditionMapId	RULE_COND_MAP_ID	BIGINT	Long	Id to the rule condition map	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionId	VERSION_ID	BIGINT	Long	Version Id	16
valueStatus	PARAM_VALUE_STATUS	INT	int	Status of the parameter value.	2
valueType	VALUE_TYPE	INT	int	Value type	-

Name	DB name	DB type	Java type	Description	Length
intValue	INT_VALUE	INT	int	Integer value	-
longValue	LONG_VALUE	BIGINT	long	Long value	-
stringValue	STRING_VALUE	TEXT	String	String value	4000
booleanValue	BOOLEAN_VALUE	CHAR	boolean	Boolean value.	-
dateValue	DATE_VALUE	DATETIME	Date	Date value.	-
notes	NOTES	TEXT	String	Notes for this param values	4000

9.2.155 VRuleOverride

Description: This is to over ride any rules that are fired.

Database table name : *VR_OVERRIDE*

Primary Keys : *overrideId (OVER_RIDE_ID)*

Name	DB name	DB type	Java type	Description	Length	Enum values
overrideId	OVER_RIDE_ID (PK)	BIGINT	Long	Id for this object	16	-
profileRuleMapId	PROFILE_RULE_MAP_ID	BIGINT	Long	Id of the profile rule map	-	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this user.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
allowFromTime	ALLOW_FROM_TIME	DATETIME	Date	Date value.	-	-
allowToTime	ALLOW_TO_TIME	DATETIME	Date	Date value.	-	-
objectStatus	OBJECT_STATUS	INT	int	Status of the object.	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED
runtimeType	RUNTIME_TYPE	INT	int	Type of scoring	6	-
overrideType	OVER_RIDE_TYPE	INT	int	Override type.	2	TYPE_COUNT, TYPE_DAY_RANGE, TYPE_PERMANENT
objectType	OBJECT_TYPE	INT	int	What is this rule exception for? Example, user, location, device	6	-
objectValue	OBJECT_VALUE	TEXT	String	Object value	4000	-
maxCountAllowed	MAX_COUNT_ALLOWED	INT	int	How many attempts the user should be allowed.	-	-
fromAction	FROM_ACTION	VARCHAR	String	From action	64	-
toAction	TO_ACTION	VARCHAR	String	To action	64	-
used_count	USED_COUNT	INT	int	Used count.	-	-
requestId	REQUEST_ID	TEXT	String	Id of the login session.	256	-
transactionId	TRX_ID	BIGINT	Long	Id for the session	-	-
notes	NOTES	TEXT	String	Note for this object	4000	-

9.2.156 VRuleOverrideHist

Description: Shadow table for VRuleOverride table.

Database table name :VR_OVERRIDE_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
overrideId	OVER_RIDE_ID	BIGINT	Long	Id for this object	16
profileRuleMapId	PROFILE_RULE_MAP_ID	BIGINT	Long	Id of the profile rule map	-
allowFromTime	ALLOW_FROM_TIME	DATETIME	Date	Date value.	-
allowToTime	ALLOW_TO_TIME	DATETIME	Date	Date value.	-
objectStatus	OBJECT_STATUS	INT	int	Status of the object.	2
runtimeType	RUNTIME_TYPE	INT	int	Type of scoring	6
overrideType	OVER_RIDE_TYPE	INT	int	Override type.	2
objectType	OBJECT_TYPE	INT	int	What type of object is allowed	6
objectValue	OBJECT_VALUE	TEXT	String	Object value	4000
maxCountAllowed	MAX_COUNT_ALLOWED	INT	int	How many attempts the user should be allowed.	-
fromAction	FROM_ACTION	VARCHAR	String	From action	64
toAction	TO_ACTION	VARCHAR	String	To action	64
used_count	USED_COUNT	INT	int	Used count.	-
requestId	REQUEST_ID	TEXT	String	Id of the login session.	256
transactionId	TRX_ID	BIGINT	Long	Id for the session	-
notes	NOTES	TEXT	String	Note for this object	4000

9.2.157 VRuleOverrideLog

Description: Logs to keep track of overrides.

Database table name :VR_OVERRIDE_LOGS

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Id for this object	16
overrideId	OVER_RIDE_ID	BIGINT	Long	Id for this object	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this user.	-

9.2.158 VRuleException

Description: This is to over ride any rules that are fired.

Database table name : *VR_EXCEPTION*

Primary Keys : exceptionId (*OVER_RIDE_ID*)

Name	DB name	DB type	Java type	Description	Length
exceptionId	OVER_RIDE_ID (<i>PK</i>)	BIGINT	Long	Id for this object	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-
overRideId	OVERRIDE_ID	BIGINT	Long	Id of the profile rule map	16
exceptionType	EXCEPTION_TYPE	INT	int	Type of exception. e.g List, rule, etc	3
exceptionName	EXCEPTION_NAME	INT	int	Name of the type. e.g listName, ruleName, etc	3
exceptionValue	EXCEPTION_VALUE	INT	int	Value for the name e.g values for the list	3

9.2.159 VRuleExceptionHist

Description: Shadow table for VRuleException table.

Database table name : *VR_EXCEPTION_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
exceptionId	OVER_RIDE_ID	BIGINT	Long	Id for this object	16
overRideId	OVERRIDE_ID	BIGINT	Long	Id of the profile rule map	16
exceptionType	EXCEPTION_TYPE	INT	int	Type of exception. e.g List, rule, etc	3
exceptionName	EXCEPTION_NAME	INT	int	Name of the type. e.g listName, ruleName, etc	3
exceptionValue	EXCEPTION_VALUE	INT	int	Value for the name e.g values for the list	3

9.2.160 VRuleSetRow

Description: This contains the rows for the rule set/ model. Each row determines how to interpret the result

Database table name : *VR_RULESET_ROW*

Primary Keys : rowId (*RULESET_ROW_ID*)

Name	DB name	DB type	Java type	Description	Length
rowId	RULESET_ROW_ID (<i>PK</i>)	BIGINT	Long	Id for the ruleset row	16

Name	DB name	DB type	Java type	Description	Length
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionId	VERSION_ID	BIGINT	Long	Version Id	16
profileId	PROFILE_ID	BIGINT	Long	Id of the profile	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Time of latest update.	-
rowName	ROW_NAME	TEXT	String	Name for this instance.	4000
rowNameRBKey	ROW_NAME_RBKEY	TEXT	String	Resource bundle key for this instance	4000
description	DESCRIPTION	TEXT	String	Description of the row	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
orderNumber	ORDER_NUMBER	INT	int	Order of evaluation. Evaluation will stop the first time all the	-
resultType	RESULT_TYPE	INT	int	Type of the result. It could be a score or model to execute.	3
scoringType	SCORING_TYPE	INT	int	Type of scoring	3
fileName	FILE_NAME	TEXT	String	Name of the file	512
actionListId	ACTION_LIST_ID	BIGINT	Long	Id of the action list	-
alertListId	ALERT_LIST_ID	BIGINT	Long	Id for the alert list	-
includeAlertsPreference	INCLUDE_ALERTS_PREF	INT	int	Whether to include rule alerts when this override is true	4
includeActionsPreference	INCLUDE_ACTIONS_PREF	CHAR	boolean	Whether to include rule actions when this override is true	4
score	SCORE	INT	int	Score for this row	5
executeProfileId	EXE_PROFILE_ID	BIGINT	Long	Id of the profile to be executed if this	16
notes	NOTES	TEXT	String	Notes for this row	4000

9.2.161 VRuleSetRowHist

Description: Shadow table for VRuleSetRow

Database table name :VR_RULESET_ROW_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
rowId	RULESET_ROW_ID	BIGINT	Long	Id for the ruleset row	16

Name	DB name	DB type	Java type	Description	Length
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionId	VERSION_ID	BIGINT	Long	Version Id	16
profileId	PROFILE_ID	BIGINT	Long	Id of the profile	16
rowName	ROW_NAME	TEXT	String	Name for this instance.	4000
rowNameRBKey	ROW_NAME_RBKEY	TEXT	String	Resource bundle key for this instance	4000
description	DESCRIPTION	TEXT	String	Description of the row	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
orderNumber	ORDER_NUMBER	INT	int	Order of evaluation. Evaluation will stop the first time all the	-
resultType	RESULT_TYPE	INT	int	Type of the result. It could be a score or model to execute.	3
scoringType	SCORING_TYPE	INT	int	Type of scoring	3
fileName	FILE_NAME	TEXT	String	Name of the file	512
actionListId	ACTION_LIST_ID	BIGINT	Long	Id of the action list	-
alertListId	ALERT_LIST_ID	BIGINT	Long	Id for the alert list	-
includeAlertsPreference	INCLUDE_ALERTS_PREF	INT	int	Whether to include rule alerts when this override is true	4
includeActionsPreference	INCLUDE_ACTIONS_PREF	CHAR	boolean	Whether to include rule actions when this override is true	4
score	SCORE	INT	int	Score for this row	5
includeRuleAlerts	INCLUDE_RULE_ALERTS	CHAR	boolean	Whether to include rule alerts when this override is true	-
includeRuleActions	INCLUDE_RULE_ACTIONS	CHAR	boolean	Whether to include rule actions when this override is true	-
executeProfileId	EXE_PROFILE_ID	BIGINT	Long	Id of the profile to be executed if this	16
notes	NOTES	TEXT	String	Notes for this row	4000

9.2.162 VRuleSetColumn

Description: This contains the columns for the rule set/ model.

Database table name :VR_RULESET_COL

Primary Keys : columnId (RULESET_COL_ID)

Name	DB name	DB type	Java type	Description	Length
columnId	RULESET_COL_ID (PK)	BIGINT	Long	Id for the ruleset column	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionId	VERSION_ID	BIGINT	Long	Version Id	16

Name	DB name	DB type	Java type	Description	Length
rowId	ROW_ID	BIGINT	Long	Id of the row	16
profileRuleMapId	PROFILE_RULE_MAP_ID	BIGINT	Long	Id of the profile rule map	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Time of latest update.	-
ruleResult	RULE_RESULT	INT	int	What rule result show be considered	3
minScore	MIN_SCORE	INT	int	Minimum score of the rule to be considered	-
maxScore	MAX_SCORE	INT	int	Maximum score of the rule to be considered	-

9.2.163 VRuleSetColumnHist

Description: Shadow table for VRuleSetColumn

Database table name :VR_RULESET_COL_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
columnId	RULESET_COL_ID	BIGINT	Long	Id for the ruleset column	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionId	VERSION_ID	BIGINT	Long	Version Id	16
rowId	ROW_ID	BIGINT	Long	Id of the row	16
profileRuleMapId	PROFILE_RULE_MAP_ID	BIGINT	Long	Id of the profile rule map	16
ruleResult	RULE_RESULT	INT	int	What rule result show be considered	3
minScore	MIN_SCORE	INT	int	Minimum score of the rule to be considered	-
maxScore	MAX_SCORE	INT	int	Maximum score of the rule to be considered	-

9.2.164 VScoreAction

Description: Mapping actions for scores

Database table name :VR_SCORE_ACTION

Primary Keys : scoreActionId (SCORE_ACTION_ID)

Name	DB name	DB type	Java type	Description	Length
scoreActionId	SCORE_ACTION_ID (<i>PK</i>)	BIGINT	Long	Id for this object	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this user.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Time of latest update.	-
scoreName	SCORE_NAME	TEXT	String	Name for this score action.	4000
scoreNameRBKey	SCORE_NAME_RBKEY	TEXT	String	Resource bundle key for this instance	4000
description	DESCRIPTION	TEXT	String	Description of the row	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
minScore	MIN_SCORE	INT	int	Minimum score	-
maxScore	MAX_SCORE	INT	int	Maximum score	-
runLevel	RUN_LEVEL	INT	int	Level where this mapping should run	5
runTimeType	RUN_TIME_TYPE	INT	int	Runtime type	6
actionListId	ACTION_LIST_ID	BIGINT	Long	Id of the action list	-
alertListId	ALERT_LIST_ID	BIGINT	Long	Id for the alert list	-
notes	NOTES	TEXT	String	Notes for this record	4000

9.2.165 VScoreActionHist

Description: Historing for VScoreAction

Database table name : *VR_SCORE_ACTION_HIST*

Primary Keys : *logId (LOG_ID)*

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
scoreActionId	SCORE_ACTION_ID	BIGINT	Long	Id for this object	16
scoreName	SCORE_NAME	TEXT	String	Name for this score action.	4000
scoreNameRBKey	SCORE_NAME_RBKEY	TEXT	String	Resource bundle key for this instance	4000
description	DESCRIPTION	TEXT	String	Description of the row	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
minScore	MIN_SCORE	INT	int	Minimum score	-
maxScore	MAX_SCORE	INT	int	Maximum score	-
runLevel	RUN_LEVEL	INT	int	Level where this mapping should run	5
runTimeType	RUN_TIME_TYPE	INT	int	Runtime type	6
actionListId	ACTION_LIST_ID	BIGINT	Long	Id of the action list	-

Name	DB name	DB type	Java type	Description	Length
alertListId	ALERT_LIST_ID	BIGINT	Long	Id for the alert list	-
notes	NOTES	TEXT	String	Notes for this record	4000

9.2.166 VMaxBlock

Description: Action/Score override based on threshold of the action. This can be used for gating.

Database table name : *VR_MAX_BLOCKS*

Primary Keys : blockId (*BLOCK_ID*)

Name	DB name	DB type	Java type	Description	Length
blockId	BLOCK_ID (<i>PK</i>)	BIGINT	Long	Id for this object	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this user.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Time of latest update.	-
blockName	BLOCK_NAME	TEXT	String	Name for this block action.	4000
blockNameRBKey	BLOCK_NAME_RBKEY	TEXT	String	Resource bundle key for this instance	4000
description	DESCRIPTION	TEXT	String	Description of the row	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
runTimeType	RUN_TIME_TYPE	INT	int	Runtime type	6
fromAction	FROM_ACTION	VARCHAR	String	From action	64
toAction	TO_ACTION	VARCHAR	String	To action	64
alertListId	ALERT_LIST_ID	BIGINT	Long	Id for the alert list	-
maxCountAllowed	MAX_COUNT_ALLOWED	INT	int	Number of actions .	-
duration	DURATION	INT	int	Duration in minutes	5
notes	NOTES	TEXT	String	Notes for this record	4000

9.2.167 VMaxBlockHist

Description: History for VMaxBlock

Database table name : *VR_MAX_BLOCKS_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
blockId	BLOCK_ID	BIGINT	Long	Id for this object	16
blockName	BLOCK_NAME	TEXT	String	Name for this block action.	4000

Name	DB name	DB type	Java type	Description	Length
blockNameRBKey	BLOCK_NAME_RBKEY	TEXT	String	Resource bundle key for this instance	4000
runTimeType	RUN_TIME_TYPE	INT	int	Runtime type	6
fromAction	FROM_ACTION	VARCHAR	String	From action	64
toAction	TO_ACTION	VARCHAR	String	To action	64
alertListId	ALERT_LIST_ID	BIGINT	Long	Id for the alert list	-
maxCountAllowed	MAX_COUNT_ALLOWED	INT	int	Number of actions .	-
duration	DURATION	INT	int	Duration in minutes	5
notes	NOTES	TEXT	String	Notes for this record	4000

9.2.168 VMaxBlockLogs

Description: Logging for max blocks

Database table name : *VR_MAX_BLOCKS_LOGS*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Id for this object	16
blockId	BLOCK_ID	BIGINT	Long	Id for this object	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this user.	-
localUserId	LOCAL_USER_ID	BIGINT	Long	Id for this object	16
deviceId	DEVICE_ID	BIGINT	Long	Id for this object	16
remoteIPAddr	REMOTE_IP_ADDR	BIGINT	String	The IP address from where the client connected	15
baseIPAddr	BASE_IP_ADDR	BIGINT	String	This is the base IP address for quick search	15

9.2.169 VPolicySetPkg

Description: Policy Set package

Database table name : *V_POLICY_SET_PKG*

Primary Keys : policySetId (*POLICY_SET_ID*)

Name	DB name	DB type	Java type	Description	Length
policySetId	POLICY_SET_ID (<i>PK</i>)	BIGINT	Long	Id for the policy set package	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
name	LABEL	TEXT	String	Name	4000
nameRBKey	LABEL_RBKEY	TEXT	String	Key in the resource bundle for name	4000
description	DESCRIPTION	TEXT	String	Description	4000

Name	DB name	DB type	Java type	Description	Length
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
policySet	RA_POLICY_SET	TEXT	String	Policy set in zip format	-
notes	NOTES	TEXT	String	Notes	4000

9.2.170 VPolicySet

Description: This contains properties for the policy set

Database table name : *VR_POLICY_SET*

Primary Keys : policySetId (*POLICY_SET_ID*)

Name	DB name	DB type	Java type	Description	Length	Enum values
policySetId	POLICY_SET_ID (<i>PK</i>)	BIGINT	Long	Id for the policy set	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
versionId	VERSION_ID	BIGINT	Long	Version Id	16	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Time of latest update.	-	-
name	LABEL	TEXT	String	Name	4000	-
nameRBKey	LABEL_RBKEY	TEXT	String	Key in the resource bundle for name	4000	-
description	DESCRIPTION	TEXT	String	Description	4000	-
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000	-
status	STATUS	INT	int	Status of the policy set.	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED
scoringType	SCORING_TYPE	INT	int	Type of scoring	3	-
fileName	FILE_NAME	TEXT	String	Name of the file	512	-
actionListId	ACTION_LIST_ID	BIGINT	Long	Id of the action list	-	-
alertListId	ALERT_LIST_ID	BIGINT	Long	Id for the alert list	-	-
notes	NOTES	TEXT	String	Notes for this record	4000	-

9.2.171 VPolicySetHist

Description: This contains properties for the policy set

Database table name : *VR_POLICY_SET_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16

Name	DB name	DB type	Java type	Description	Length
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
policySetId	POLICY_SET_ID	BIGINT	Long	Id for the policy set	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionId	VERSION_ID	BIGINT	Long	Version Id	16
name	LABEL	TEXT	String	Name	4000
nameRBKey	LABEL_RBKEY	TEXT	String	Key in the resource bundle for name	4000
description	DESCRIPTION	TEXT	String	Description	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
status	STATUS	INT	int	Status of the policy set.	2
scoringType	SCORING_TYPE	INT	int	Type of scoring	3
fileName	FILE_NAME	TEXT	String	Name of the file	512
actionListId	ACTION_LIST_ID	BIGINT	Long	Id of the action list	-
alertListId	ALERT_LIST_ID	BIGINT	Long	Id for the alert list	-
notes	NOTES	TEXT	String	Notes for this record	4000

9.2.172 VPolicy

Description: This contains properties for the policy

Database table name : VR_POLICY

Primary Keys : policyId (POLICY_ID)

Name	DB name	DB type	Java type	Description	Length	Enum values
policyId	POLICY_ID (PK)	BIGINT	Long	Id for the policy	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
versionId	VERSION_ID	BIGINT	Long	Version Id	16	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Time of latest update.	-	-
name	LABEL	TEXT	String	Name	4000	-
nameRBKey	LABEL_RBKEY	TEXT	String	Key in the resource bundle for name	4000	-
description	DESCRIPTION	TEXT	String	Description	4000	-
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000	-
policyType	POLICY_TYPE	INT	int	Policy type	3	-

Name	DB name	DB type	Java type	Description	Length	Enum values
status	STATUS	INT	int	Status of the policy.	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED
score	SCORE	INT	int	Default score for this policy	-	-
weight	WEIGHT	INT	int	Weight for this profile	-	-
scoringType	SCORING_TYPE	INT	int	Type of scoring	3	-
fileName	FILE_NAME	TEXT	String	Name of the file	512	-
actionListId	ACTION_LIST_ID	BIGINT	Long	Id of the action list	-	-
alertListId	ALERT_LIST_ID	BIGINT	Long	Id for the alert list	-	-
notes	NOTES	TEXT	String	Notes for this record	4000	-

9.2.173 VPolicyHist

Description: Shadow table for policy

Database table name : VR_POLICY_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
policyId	POLICY_ID	BIGINT	Long	Id for the policy	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionId	VERSION_ID	BIGINT	Long	Version Id	16
name	LABEL	TEXT	String	Name	4000
nameRBKey	LABEL_RBKEY	TEXT	String	Key in the resource bundle for name	4000
description	DESCRIPTION	TEXT	String	Description	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
policyType	POLICY_TYPE	INT	int	Policy type	3
status	STATUS	INT	int	Status of the policy.	2
score	SCORE	INT	int	Default score for this policy	-
weight	WEIGHT	INT	int	Weight for this profile	-
scoringType	SCORING_TYPE	INT	int	Type of scoring	3
fileName	FILE_NAME	TEXT	String	Name of the file	512
actionListId	ACTION_LIST_ID	BIGINT	Long	Id of the action list	-
alertListId	ALERT_LIST_ID	BIGINT	Long	Id for the alert list	-

Name	DB name	DB type	Java type	Description	Length
notes	NOTES	TEXT	String	Notes for this record	4000

9.2.174 VPolicySetLog

Description: Logs for rules at PolicySet level

Database table name :VR_POLICYSET_LOGS

Primary Keys : policySetLogId (POLICYSET_LOG_ID)

Name	DB name	DB type	Java type	Description	Length
policySetLogId	POLICYSET_LOG_ID (PK)	BIGINT	Long	Log id	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time of this transaction.	-
requestId	REQUEST_ID	TEXT	String	Id of the login session.	256
transactionLogId	TRX_LOG_ID	BIGINT	Long	Id for the transaction	16
runtimeType	RUNTIME_TYPE	INT	int	Type of scoring	6
policySetId	POLICYSET_ID	BIGINT	Long	Id of PolicySet	16
status	STATUS	INT	int	Execution status for this policy set execution	3
totalTime	TOTAL_TIME	BIGINT	long	Time taken to execute this	10
score	SCORE	INT	int	Type of scoring	5
transactionData	TRX_DATA	TEXT	String	Transaction data as name value pair.	4000
finalAction	FINAL_ACTION	TEXT	String	Final action for this policyset	256
actionList	ACTION_LIST	TEXT	String	List of action.	256
alertIdList	ALERT_ID_LIST	TEXT	String	List of alert id list.	256
alertTemplateIdList	ALERT_TEMPL_ID_LIST	TEXT	String	List of alert template id list.	256

9.2.175 VPolicyLog

Description: Logs for rules at Policy level

Database table name :VR_POLICY_LOGS

Primary Keys : policyLogId (POLICY_LOG_ID)

Name	DB name	DB type	Java type	Description	Length
policyLogId	POLICY_LOG_ID (PK)	BIGINT	Long	Log id	16
policySetLogId	POLICYSET_LOG_ID	BIGINT	Long	Id of Policy Set	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time of this transaction.	-
policyId	POLICY_ID	BIGINT	Long	Id of Policy	16
status	STATUS	INT	int	Execution status for this policy execution	3
totalTime	TOTAL_TIME	BIGINT	long	Time taken to execute this	10
score	SCORE	INT	int	Type of scoring	5
actionList	ACTION_LIST	TEXT	String	List of action.	256

Name	DB name	DB type	Java type	Description	Length
alertIdList	ALERT_ID_LIST	TEXT	String	List of alert id list.	256
alertTemplateIdList	ALERT_TEMPL_ID_LIST	TEXT	String	List of alert template id list.	256

9.2.176 VModelLog

Description: Logs for rules at Model level

Database table name :VR_MODEL_LOGS

Primary Keys : modelLogId (MODEL_LOG_ID)

Name	DB name	DB type	Java type	Description	Length
modelLogId	MODEL_LOG_ID (PK)	BIGINT	Long	Log id	16
policyLogId	POLICY_LOG_ID	BIGINT	Long	Id of Policy	16
parentModelLogId	PARENT_MODEL_LOG_ID	BIGINT	Long	Id of calling model id	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time of this transaction.	-
profileId	MODEL_ID	BIGINT	Long	Id of profile/model	16
scoreRowId	SCORE_ROW_ID	BIGINT	Long	Id of the row score	16
status	STATUS	INT	int	Execution status for this model	3
totalTime	TOTAL_TIME	BIGINT	long	Time taken to execute this	10
score	SCORE	INT	int	Type of scoring	5
actionList	ACTION_LIST	TEXT	String	List of action.	256
alertIdList	ALERT_ID_LIST	TEXT	String	List of alert id list.	256
alertTemplateIdList	ALERT_TEMPL_ID_LIST	TEXT	String	List of alert template id list.	256

9.2.177 VRuleLog

Description: Logs for rules at Rule level

Database table name :VR_RULE_LOGS

Primary Keys : ruleLogId (RULE_LOG_ID)

Name	DB name	DB type	Java type	Description	Length
ruleLogId	RULE_LOG_ID (PK)	BIGINT	Long	Log id	16
modelLogId	MODEL_LOG_ID	BIGINT	Long	Id of model log	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time of this transaction.	-
ruleMapId	RULE_MAP_ID	BIGINT	Long	Id of ruleMap	16
status	STATUS	INT	int	Execution status for this model	3
totalTime	TOTAL_TIME	BIGINT	long	Time taken to execute this	10
score	SCORE	INT	int	Type of scoring	5
actionList	ACTION_LIST	TEXT	String	List of action.	256
alertIdList	ALERT_ID_LIST	TEXT	String	List of alert id list.	256

Name	DB name	DB type	Java type	Description	Length
alertTemplateIdList	ALERT_TEMPL_ID_LIST	TEXT	String	List of alert template id list.	256

9.2.178 VDynamicAction

Description: This is the Dynamic Action

Database table name : *VR_DYN_ACTION*

Primary Keys : actionId (*ACTION_ID*)

Name	DB name	DB type	Java type	Description	Length	Enum values
actionId	<i>ACTION_ID (PK)</i>	BIGINT	Long	Id for this action	16	-
versionNumber	VERSION_NUM	INT	int	Version Number	-	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
dynamicActionName	ACTION_NAME	TEXT	String	Name for this action.	4000	-
dynamicActionNameRBKey	ACTION_NAME_RBKEY	TEXT	String	Key in the resource bundle for name	4000	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
description	DESCRIPTION	TEXT	String	Description of the action	4000	-
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000	-
actionType	ACTION_TYPE	INT	int	Type of the action.	-	-
status	STATUS	INT	int	Status of the object.	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED
javaClass	JAVA_CLASS	TEXT	String	Java class path	4000	-
notes	NOTES	TEXT	String	Note against this action	4000	-

9.2.179 VDynamicActionHist

Description: This is the action object history

Database table name : *VR_DYN_ACTION_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
actionId	ACTION_ID	BIGINT	Long	Id for this action	16
dynamicActionName	ACTION_NAME	TEXT	String	Name for this action.	4000
dynamicActionNameRBKey	ACTION_NAME_RBKEY	TEXT	String	Key in the resource bundle for name	4000
versionNumber	VERSION_NUM	INT	int	Version Number	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
description	DESCRIPTION	TEXT	String	Description of the action	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
actionType	ACTION_TYPE	INT	int	Type of the action.	-
status	STATUS	INT	int	Status of the object.	2
javaClass	JAVA_CLASS	TEXT	String	Java class path	4000
notes	NOTES	TEXT	String	Note against this action	4000

9.2.180 VDynamicActionParam

Description: This contains the parameter definition for the given action

Database table name : VR_DYN_ACT_PAR

Primary Keys : paramId (PARAM_ID)

Name	DB name	DB type	Java type	Description	Length	Enum values
paramId	PARAM_ID (PK)	BIGINT	Long	Id for the parameter	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
actionId	ACTION_ID	BIGINT	Long	Id for the action	16	-
versionNumber	VERSION_NUM	INT	int	Version Number	-	-
paramName	PARAM_NAME	TEXT	String	Name of the parameter	4000	-
paramNameRBKey	PARAM_NAME_RBKEY	TEXT	String	Key in the resource bundle for name of the parameter	4000	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-	-
status	STATUS	INT	int	Status of the parameter.	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED
promptLabel	PROMPT_LABEL	TEXT	String	Label to prompt	4000	-

Name	DB name	DB type	Java type	Description	Length	Enum values
promptLabelRBKey	PROMPT_LABEL_RBKEY	TEXT	String	Key in the resource bundle for label	4000	-
description	DESCRIPTION	TEXT	String	Description of the parameter	4000	-
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000	-
valueType	VALUE_TYPE	INT	int	Value type	-	-
valueSubType	VALUE_SUB_TYPE	VARCHAR	String	Value sub type	128	-
validations	VALIDATIONS	TEXT	String	Constraints for the parameter	4000	-
defaultValue	DEFAULT_VALUE	TEXT	String	Default value	4000	-
notes	NOTES	TEXT	String	Notes for this paramter	4000	-

9.2.181 VDynamicActionParamHist

Description: Shadow table for Action Param

Database table name : *VR_DYN_ACT_PAR_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
paramId	PARAM_ID	BIGINT	Long	Id for the parameter	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
actionId	ACTION_ID	BIGINT	Long	Id for the action	16
versionNumber	VERSION_NUM	INT	int	Version Number	-
paramName	PARAM_NAME	TEXT	String	Name of the parameter	4000
paramNameRBKey	PARAM_NAME_RBKEY	TEXT	String	Key in the resource bundle for name of the parameter	4000
status	STATUS	INT	int	Status of the parameter.	2
promptLabel	PROMPT_LABEL	TEXT	String	Label to prompt	4000
promptLabelRBKey	PROMPT_LABEL_RBKEY	TEXT	String	Key in the resource bundle for label	4000
description	DESCRIPTION	TEXT	String	Description of the parameter	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
valueType	VALUE_TYPE	INT	int	Value type	-
valueSubType	VALUE_SUB_TYPE	VARCHAR	String	Value sub type	128
validations	VALIDATIONS	TEXT	String	Constraints for the parameter	4000

Name	DB name	DB type	Java type	Description	Length
defaultValue	DEFAULT_VALUE	TEXT	String	Default value	4000
notes	NOTES	TEXT	String	Notes for this paramter	4000

9.2.182 VDynamicActionInstance

Description: Instance of dynamic action. This is associated with a VValueList.

Database table name : *VR_DYN_ACTION_INST*

Primary Keys : instanceId (*INSTANCE_ID*)

Name	DB name	DB type	Java type	Description	Length	Enum values
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Time of latest update.	-	-
instanceId	INSTANCE_ID (PK)	BIGINT	Long	Id for the instance	16	-
mapName	MAP_NAME	TEXT	String	Name for this instance.	4000	-
mapNameRBKey	MAP_NAME_ RBKEY	TEXT	String	Resource bundle key for this instance	4000	-
description	DESCRIPTION	TEXT	String	Description of the map	4000	-
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
actionId	ACTION_ID	BIGINT	Long	Id for the action	16	-
runtimeType	RUNTIME_TYPE	INT	int	Type of scoring	6	-
timeToLiveInMilliseconds	TIME_TO_LIVE_ MS	INT	int	How long this action is valid from the time it is schedule. Zero or negative number means for infinite time	-	-
execType	EXEC_TYPE	INT	int	Execution type for this action. E.g. Synchronous or Asynchronous	5	-
execPriority	EXEC_PRIORITY	INT	int	Priority of execution	5	-
actionToTrigger	ACTION_TO_ TRIGGER	INT	Integer	This is the action required to trigger	5	-
finalActionToTrigger	FINAL_ACTION_ TO_TRIGGER	INT	Integer	Final action required to trigger	5	-
minScoreToTrigger	MIN_SCORE	INT	int	Minimum score required for triggering this dynamic action	-	-
maxScoreToTrigger	MAX_SCORE	INT	int	Maximum score required for triggering this dynamic action	-	-
logLevel	LOG_LEVEL	INT	int	Logging/Tracking level for this action instance	5	-

Name	DB name	DB type	Java type	Description	Length	Enum values
status	STATUS	INT	int	Status of the parameter.	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED
notes	NOTES	TEXT	String	Notes for this paramter	4000	-

9.2.183 VDynamicActionInstanceHist

Description: Instance of dynamic action. This is associated with a VValueList.

Database table name : *VR_DYN_ACTION_INST_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
instanceId	INSTANCE_ID	BIGINT	Long	Id for the instance	16
mapName	MAP_NAME	TEXT	String	Name for this instance.	4000
mapNameRBKey	MAP_NAME_RBKEY	TEXT	String	Resource bundle key for this instance	4000
description	DESCRIPTION	TEXT	String	Description of the map	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
actionId	ACTION_ID	BIGINT	Long	Id for the action	16
runtimeType	RUNTIME_TYPE	INT	int	Type of scoring	6
timeToLiveInMilliseconds	TIME_TO_LIVE_MS	INT	int	How long this action is valid from the time it is schedule. Zero or negative number means for infinite time	-
execType	EXEC_TYPE	INT	int	Execution type for this action. E.g. Synchronous or Asynchronous	5
execPriority	EXEC_PRIORITY	INT	int	Priority of execution	5
actionToTrigger	ACTION_TO_TRIGGER	INT	Integer	This is the action required to trigger	5
finalActionToTrigger	FINAL_ACTION_TO_TRIGGER	INT	Integer	Final action required to trigger	5
minScoreToTrigger	MIN_SCORE	INT	int	Minimum score required for triggering this dynamic action	-

Name	DB name	DB type	Java type	Description	Length
maxScoreToTrigger	MAX_SCORE	INT	int	Maximum score required for triggering this dynamic action	-
logLevel	LOG_LEVEL	INT	int	Logging/Tracking level for this action instance	5
status	STATUS	INT	int	Status of the parameter.	2
notes	NOTES	TEXT	String	Notes for this paramter	4000

9.2.184 VDynamicActionParamValue

Description: This contains the values for the parameter of the dynamic action instance

Database table name : *VR_DYN_ACT_PAR_VAL*

Primary Keys : paramValueId (*PARAM_VALUE_ID*)

Name	DB name	DB type	Java type	Description	Length
paramValueId	PARAM_VALUE_ID (PK)	BIGINT	Long	Id for the param value	16
actionInstanceId	INSTANCE_ID	BIGINT	Long	Id of the instance	16
paramId	PARAM_ID	BIGINT	Long	Id for the param	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this oject.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Time of update.	-
valueType	VALUE_TYPE	INT	int	Value type	-
intValue	INT_VALUE	INT	int	Integer value	-
longValue	LONG_VALUE	BIGINT	long	Long value	-
stringValue	STRING_VALUE	TEXT	String	String value	4000
booleanValue	BOOLEAN_VALUE	CHAR	boolean	Boolean value.	-
dateValue	DATE_VALUE	DATETIME	Date	Date value.	-
notes	NOTES	TEXT	String	Notes for this param values	4000

9.2.185 VDynamicActionParamValueHist

Description: History object dynamic action parama value

Database table name : *VR_DYN_ACT_PAR_VAL_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
paramValueId	PARAM_VALUE_ID	BIGINT	Long	Id for the param value	16

Name	DB name	DB type	Java type	Description	Length
actionInstanceId	INSTANCE_ID	BIGINT	Long	Id of the instance	16
paramId	PARAM_ID	BIGINT	Long	Id for the param	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
valueType	VALUE_TYPE	INT	int	Value type	-
intValue	INT_VALUE	INT	int	Integer value	-
longValue	LONG_VALUE	BIGINT	long	Long value	-
stringValue	STRING_VALUE	TEXT	String	String value	4000
booleanValue	BOOLEAN_VALUE	CHAR	boolean	Boolean value.	-
dateValue	DATE_VALUE	DATETIME	Date	Date value.	-
notes	NOTES	TEXT	String	Notes for this param values	4000

9.2.186 VDynamicActionExecLog

Description: Log of dynamic action executions

Database table name :VT_DYN_ACT_EXEC_LOG

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-
updateTime	UPDATE_TIME	DATETIME	Date	Date/Time when this object was updated.	-
requestId	REQUEST_ID	TEXT	String	Id of the request. This is used to co-relate the post authentication request.	256
actionInstanceId	INSTANCE_ID	BIGINT	Long	Id of the instance	16
sessionActionMapId	SESS_ACT_MAP_ID	BIGINT	Long	Id to the session action map (VTSessionActionMap)	16
execStatus	EXEC_STATUS	INT	int	Status of the execution	5
startTime	START_TIME	DATETIME	Date	Date/Time when the execution started	-
totalTime	TOTAL_TIME	BIGINT	long	Time taken to execute this	10
paramData	PARAM_DATA	TEXT	String	Parameter data	4000
notes	NOTES	TEXT	String	Notes for this execution	4000

9.2.187 VAlertTemplate

Description: List containing alert values for rule instance

Database table name :VCRYPT_ALERT_TEMPLATES

Primary Keys : templateId (TEMPLATE_ID)

Name	DB name	DB type	Java type	Description	Length
templateId	TEMPLATE_ID (PK)	BIGINT	Long	Id for the alert template	16
listId	LIST_ID	BIGINT	Long	Id for the list	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionNumber	VERSION_NUM	INT	int	Version Number	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Time of latest update.	-
alertType	ALERT_TYPE	INT	int	Type of alert	-
alertLevel	ALERT_LEVEL	INT	int	Level of alert	-
alertMessage	ALERT_MESSAGE	TEXT	String	Alert message	4000
notes	NOTES	TEXT	String	Notes for this list	4000

9.2.188 VAlertTemplateHist

Description: Shadow table for VAlertTemplate

Database table name :VCRYPT_ALERT_TEMPLATES_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
templateId	TEMPLATE_ID	BIGINT	Long	Id for the alert template	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionNumber	VERSION_NUM	INT	int	Version Number	-
listId	LIST_ID	BIGINT	Long	Id for the list	16
alertType	ALERT_TYPE	INT	int	Type of alert	-
alertLevel	ALERT_LEVEL	INT	int	Level of alert	-
alertMessage	ALERT_MESSAGE	TEXT	String	Alert message	4000
notes	NOTES	TEXT	String	Notes for this list	4000

9.2.189 VValueList

Description: This contains the vector values

Database table name :VCRYPT_VALUE_LIST

Primary Keys : listId (LIST_ID)

Name	DB name	DB type	Java type	Description	Length
listId	LIST_ID (PK)	BIGINT	Long	Id for the list	16

Name	DB name	DB type	Java type	Description	Length
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Time of latest update.	-
listName	LIST_NAME	TEXT	String	Name of the list	4000
listNameRBKey	LIST_NAME_RBKEY	TEXT	String	Resource bundle key for this list name	4000
description	DESCRIPTION	TEXT	String	Description of the map	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
cacheType	CACHE_TYPE	INT	int	Whether this list should be cached	4
listType	LIST_CLASS_CODE	INT	int	What is the type of this list	-
valueType	VALUE_TYPE	INT	int	Type of the value	-
notes	NOTES	TEXT	String	Notes for this list	4000

9.2.190 VValueListHist

Description: Shadow table for VValueList

Database table name : VCRYPT_VALUE_LIST_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
listId	LIST_ID	BIGINT	Long	Id for the list	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
listName	LIST_NAME	TEXT	String	Name of the list	4000
listNameRBKey	LIST_NAME_RBKEY	TEXT	String	Resource bundle key for this list name	4000
description	DESCRIPTION	TEXT	String	Description of the map	4000
descriptionRBKey	DESC_RBKEY	TEXT	String	Resource bundle key for the description	4000
listType	LIST_CLASS_CODE	INT	int	What is the type of this list	-
cacheType	CACHE_TYPE	INT	int	Whether this list should be cached	4
valueType	VALUE_TYPE	INT	int	Type of the value	-
notes	NOTES	TEXT	String	Notes for this list	4000

9.2.191 VStringValueElement

Description: String elements of the list

Database table name :VCRYPT_STRING_VALUE_ELEMENT

Primary Keys : elementId (ELEMENT_ID)

Name	DB name	DB type	Java type	Description	Length
elementId	ELEMENT_ID (PK)	BIGINT	Long	Element Id	16
listId	LIST_ID	BIGINT	Long	Id for the list	16
value	ELEMENT_VALUE	TEXT	String	String value	4000

9.2.192 VLongValueElement

Description: Long elements of the list

Database table name :VCRYPT_LONG_VALUE_ELEMENT

Primary Keys : elementId (ELEMENT_ID)

Name	DB name	DB type	Java type	Description	Length
elementId	ELEMENT_ID (PK)	BIGINT	Long	Element Id	16
listId	LIST_ID	BIGINT	Long	Id for the list	16
value	ELEMENT_VALUE	BIGINT	long	Long value	-

9.2.193 VIntValueElement

Description: Int elements of the list

Database table name :VCRYPT_INT_VALUE_ELEMENT

Primary Keys : elementId (ELEMENT_ID)

Name	DB name	DB type	Java type	Description	Length
elementId	ELEMENT_ID (PK)	BIGINT	Long	Element Id	16
listId	LIST_ID	BIGINT	Long	Id for the list	16
value	ELEMENT_VALUE	INT	int	Int value	-

9.2.194 VDateValueElement

Description: Date elements of the list

Database table name :VCRYPT_DATE_VALUE_ELEMENT

Primary Keys : elementId (ELEMENT_ID)

Name	DB name	DB type	Java type	Description	Length
elementId	ELEMENT_ID (PK)	BIGINT	Long	Element Id	16
listId	LIST_ID	BIGINT	Long	Id for the list	16
value	ELEMENT_VALUE	DATETIME	Date	Date value	-

9.2.195 VRunStatus

Description: This has the run status for critical operations

Database table name :V_RUN_STATUS

Primary Keys : runStatusId (RUN_STATUS_ID)

Name	DB name	DB type	Java type	Description	Length
runStatusId	RUN_STATUS_ID (PK)	BIGINT	Long	Id of the operation	16
runStatusType	RUN_STATUS_TYPE	INT	int	Type of the operation	4
runStatusSubType	RUN_STATUS_SUB_TYPE	VARCHAR	String	Sub type of the operation	64
runStatusValue	RUN_STATUS_VALUE	VARCHAR	String	Run status value	64
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this user.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-

9.2.196 VRunStatusHist

Description: This has the run status for critical operations. Shadow table.

Database table name : V_RUN_STATUS_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
runStatusId	RUN_STATUS_ID	BIGINT	Long	Id of the operation	16
runStatusType	RUN_STATUS_TYPE	INT	int	Type of the operation	4
runStatusSubType	RUN_STATUS_SUB_TYPE	VARCHAR	String	Sub type of the operation	64
runStatusValue	RUN_STATUS_VALUE	VARCHAR	String	Run status value	64

9.2.197 VCacheStatus

Description: Has the last update status of all the caches

Database table name : VCRYPT_CACHE_STATUS

Primary Keys : cacheId (CACHE_ID)

Name	DB name	DB type	Java type	Description	Length
cacheId	CACHE_ID (PK)	BIGINT	Long	Id of the cache	16
cacheType	CACHE_TYPE	INT	int	Type of the cache	-
objectValue	OBJECT_VALUE	VARCHAR	String	Value of the object	255
version	VERSION	INT	int	Version of the cache	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time.	-

9.2.198 VGlobalLookup

Description: Global lookup tables for constants

Database table name : V_G_LOOKUP

Primary Keys : lookupId (*LOOKUP_ID*)

Name	DB name	DB type	Java type	Description	Length	Enum values
lookupId	LOOKUP_ID (<i>PK</i>)	BIGINT	Long	Lookup ID	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
versionNumber	VERSION_NUM	INT	int	Version Number	-	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time.	-	-
lookupType	LOOKUP_TYPE	INT	int	Type of lookup. E.g. for profiles, etc	-	-
name	NAME	TEXT	String	Name of the lookup	4000	-
description	DESCRIPTION	TEXT	String	Description	4000	-
status	STATUS	INT	int	Status of the lookup	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED

9.2.199 VGlobalLookupHist

Description: Global lookup tables for constants. Shadow table

Database table name : *V_G_LOOKUP_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
lookupId	LOOKUP_ID	BIGINT	Long	Lookup ID	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
versionNumber	VERSION_NUM	INT	int	Version Number	-
lookupType	LOOKUP_TYPE	INT	int	Type of lookup. E.g. for profiles, etc	-
name	NAME	TEXT	String	Name of the lookup	4000
description	DESCRIPTION	TEXT	String	Description	4000
status	STATUS	INT	int	Status of the lookup	2

9.2.200 VReportQuery

Description: Report Query

Database table name : *V_REP_QUERY*

Primary Keys : queryId (*QUERY_ID*)

Name	DB name	DB type	Java type	Description	Length	Enum values
queryId	QUERY_ID (PK)	BIGINT	Long	Id of the query	16	-
queryName	QUERY_NAME	TEXT	String	Name of the query	4000	-
description	QUERY_DESC	TEXT	String	Description of the report	4000	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date/Time of the last update.	-	-
query	QUERY	TEXT	String	Query of the report	4000	-
accessType	ACCESS_TYPE	INT	int	Type of access.	2	ACCESS_PUBLIC, ACCESS_PRIVATE
adminLoginId	ADMIN_LOGIN_ID	VARCHAR	String	Id of the admin	30	-

9.2.201 VReportQueryHist

Description: Report Query shadow object

Database table name : V_REP_QUERY_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
queryId	QUERY_ID	BIGINT	Long	Id of the query	16
queryName	QUERY_NAME	TEXT	String	Name of the query	4000
description	QUERY_DESC	TEXT	String	Description of the report	4000
query	QUERY	TEXT	String	Query of the report	4000
accessType	ACCESS_TYPE	INT	int	Type of access.	2
adminLoginId	ADMIN_LOGIN_ID	VARCHAR	String	Id of the admin	30

9.2.202 VReportSchedule

Description: These are the reports which are scheduled

Database table name : V_REP_SCHED

Primary Keys : scheduleId (SCHED_ID)

Name	DB name	DB type	Java type	Description	Length	Enum values
scheduleId	SCHED_ID (PK)	BIGINT	Long	Id of the report	16	-
reportName	REPORT_NAME	TEXT	String	Name of the report	4000	-
description	REPORT_DESC	TEXT	String	Description of the report	4000	-

Name	DB name	DB type	Java type	Description	Length	Enum values
status	SCHEDULE_STATUS	INT	int	Status of the schedule.	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED
fileType	FILETYPE	INT	int	File Type of the report	-	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date/Time of the last update.	-	-
startDate	START_DATE	DATETIME	Date	Date to start this schedule.	-	-
executeTimeInSeconds	EXEC_TIME_SECS	INT	int	Time of the day to run this report.	-	-
endDate	END_DATE	DATETIME	Date	Date to end this schedule.	-	-
intervalType	INTERVAL_TYPE	INT	int	Type of interval.	2	INTERVAL_MIN, INTERVAL_HOUR, INTERVAL_DAY, INTERVAL_WEEK, INTERVAL_MONTH, INTERVAL_QUARTER, INTERVAL_YEAR, INTERVAL_NONE
intervalValue	FILE_TYPE	TEXT	String	Value for the interval	256	-
lastRunTime	LAST_RUN_TIME	DATETIME	Date	Last time the report of run.	-	-
queryId	QUERY_ID	BIGINT	Long	Id of the query	16	-
actionType	ACTION_TYPE	INT	int	Type of action.	2	ACTION_SAVE AND_SEND ACTION_SAVE AND_NOTIFY
emailList	EMAIL_LIST	TEXT	String	Email list	4000	-
notes	NOTES	TEXT	String	Notes	4000	-

9.2.203 VReportScheduleHist

Description: Shadow table for report schedule

Database table name : V_REP_SCHED_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
scheduleId	SCHED_ID	BIGINT	Long	Id of the schedule	16
reportName	REPORT_NAME	TEXT	String	Name of the report	4000

Name	DB name	DB type	Java type	Description	Length
description	REPORT_DESC	TEXT	String	Description of the report	4000
status	SCHEDULE_STATUS	INT	int	Status of the schedule.	2
fileType	FILETYPE	INT	int	File Type of the report	-
startDate	START_DATE	DATETIME	Date	Date to start this schedule.	-
executeTimeInSeconds	EXEC_TIME_SECS	INT	int	Time of the day to run this report.	-
endDate	END_DATE	DATETIME	Date	Date to end this schedule.	-
intervalType	INTERVAL_TYPE	INT	int	Type of interval.	2
intervalValue	FILE_TYPE	TEXT	String	Value for the interval	256
lastRunTime	LAST_RUN_TIME	DATETIME	Date	Last time the report of run.	-
queryId	QUERY_ID	BIGINT	Long	Id of the query	16
actionType	ACTION_TYPE	INT	int	Type of action.	2
emailList	EMAIL_LIST	TEXT	String	Email list	4000
notes	NOTES	TEXT	String	Notes	4000

9.2.204 VReportSaved

Description: This is the saved report.

Database table name : V_REP_SAVED

Primary Keys : savedId (REPORT_SAVED_ID)

Name	DB name	DB type	Java type	Description	Length	Enum values
savedId	REPORT_SAVED_ID (PK)	BIGINT	Long	Id of the saved report	16	-
scheduleId	SCHED_ID	BIGINT	Long	If this was a scheduled report, then the id of the schedule	16	-
reportName	REPORT_NAME	TEXT	String	Name of the report	4000	-
description	REPORT_DESC	TEXT	String	Description of the report	4000	-
filePath	FILE_PATH	TEXT	String	Path for the file	1024	-
fileType	FILETYPE	INT	int	File Type of the report	-	-
status	REPORT_STATUS	INT	int	Status of the schedule.	2	STATUS_SUCCESS, STATUS_ERROR, STATUS_FILE_NOT_FOUND, STATUS_DELETED
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date/Time of the last update.	-	-
processTime	PROCESS_TIME	INT	int	Time taken to process this report.	10	-
queryId	QUERY_ID	BIGINT	Long	Id of the query	-	-
query	QUERY	TEXT	String	Query of the report	4000	-

Name	DB name	DB type	Java type	Description	Length	Enum values
emailList	EMAIL_LIST	TEXT	String	Email list	4000	-
errorMessage	ERROR_MSG	TEXT	String	Error message if failed	4000	-
notes	NOTES	TEXT	String	Notes	4000	-

9.2.205 VReportSavedHist

Description: This is the saved report shadow table.

Database table name : *V_REP_SAVED_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
savedId	REPORT_SAVED_ID	BIGINT	Long	Id of the saved report	16
scheduleId	SCHED_ID	BIGINT	Long	If this was a scheduled report, then the id of the schedule	16
reportName	REPORT_NAME	TEXT	String	Name of the report	4000
description	REPORT_DESC	TEXT	String	Description of the report	4000
filePath	FILE_PATH	TEXT	String	Path for the file	1024
fileType	FILETYPE	INT	int	File Type of the report	-
status	REPORT_STATUS	INT	int	Status of the schedule.	2
processTime	PROCESS_TIME	INT	int	Time taken to process this report.	10
queryId	QUERY_ID	BIGINT	Long	Id of the query	-
query	QUERY	TEXT	String	Query of the report	4000
emailList	EMAIL_LIST	TEXT	String	Email list	4000
errorMessage	ERROR_MSG	TEXT	String	Error message if failed	4000
notes	NOTES	TEXT	String	Notes	4000

9.2.206 VJavaBinaryClass

Description: This contains the binary class code

Database table name : *VR_JAVA_BIN*

Primary Keys : javaClassId (*JAVA_CLASS_ID*)

Name	DB name	DB type	Java type	Description	Length	Enum values
createTime	CREATE_TIME	DATETIME	Date	Date/Time creation of this object.	-	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Time of update.	-	-

Name	DB name	DB type	Java type	Description	Length	Enum values
javaClassId	JAVA_CLASS_ID (<i>PK</i>)	BIGINT	Long	Id for the object	16	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255	-
referenceObjectId	OBJECT_ID	BIGINT	Long	Id to the object it belongs to	-	-
referenceObjectClassName	OBJECT_CLASS_NAME	VARCHAR	String	Class name for the reference objectId	-	-
checkSum	CHECK_SUM	INT	int	Check sum for the class	-	-
javaClassName	JAVA_CLASS_NAME	TEXT	String	Java class name	4000	-
javaClassBinary	JAVA_CLASS_BIN	TEXT	String	This is the class code in binary format	-	-
status	STATUS	INT	int	Status of the parameter.	2	STATUS_ACTIVE, STATUS_DISABLED, STATUS_DELETED
notes	NOTES	TEXT	String	Notes for this param values	4000	-

9.2.207 VJavaBinaryClassHist

Description: History object dynamic action java class

Database table name : VR_JAVA_BIN_HIST

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
javaClassId	JAVA_CLASS_ID	BIGINT	Long	Id for the object	16
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
referenceObjectId	OBJECT_ID	BIGINT	Long	Id to the object it belongs to	-
referenceObjectClassName	OBJECT_CLASS_NAME	VARCHAR	String	Class name for the reference objectId	-
checkSum	CHECK_SUM	INT	int	Check sum for the class	-

Name	DB name	DB type	Java type	Description	Length
javaClassName	JAVA_CLASS_NAME	TEXT	String	Java class name	4000
javaClassBinary	JAVA_CLASS_BIN	TEXT	String	This is the class code in binary format	-
status	STATUS	INT	int	Status of the parameter.	2
notes	NOTES	TEXT	String	Notes for this param values	4000

9.2.208 VAlert

Description: This is the Alert object

Database table name : VCRYPT_ALERT

Primary Keys : alertId (ALERT_ID)

Name	DB name	DB type	Java type	Description	Length
alertId	ALERT_ID (PK)	BIGINT	Long	Id for this alert	16
templateId	TEMPLATE_ID	BIGINT	Long	Id for the alert template	16
sessActionMapId	SESS_ACTION_MAP_ID	BIGINT	Long	Reference to the session action map	16
alertLevel	ALERT_LEVEL	INT	int	Alert level	-
alertType	ALERT_TYPE	INT	int	Alert type	-
alertStatus	ALERT_STATUS	INT	int	Alert status	-
createTime	CREATE_TIME	DATETIME	Date	Create time for this alert.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date/Time of the last update.	-
week	CREATE_WEEK	INT	int	Week the alert was created	-
month	CREATE_MONTH	INT	int	Week the alert was created	-
quarter	CREATE_QUARTER	INT	int	Week the alert was created	-
year	CREATE_YEAR	INT	int	Year the alert was created	-
requestId	REQUEST_ID	TEXT	String	Id of the request. This is used to co-relate the post authentication request.	256
transactionLogId	TRX_LOG_ID	BIGINT	Long	Id of the transaction for whic this alert was created.	16
sourceType	SOURCE_TYPE	INT	int	The type could be from rule or other source like model	4
sourceId	PROFILE_RULE_MAP_ID	BIGINT	Long	Id of the source. It could be ruleMapId or any other id	16
runtimeType	RUNTIME_TYPE	INT	Integer	Type of runtime(if available)	6
nodeId	NODE_ID	BIGINT	Long	Node Id	-
userId	USER_ID	TEXT	String	User Id of the user if available.	256

Name	DB name	DB type	Java type	Description	Length
loginId	USER_LOGIN_ID	TEXT	String	Login Id of the user if available.	256
remoteIPAddr	REMOTE_IP_ADDR	BIGINT	String	The IP address from where the client connected	15
baseIPAddr	BASE_IP_ADDR	BIGINT	String	This is the base IP address for quick search	15
inputList	INPUT_LIST	TEXT	String	Input value list.	4000
probableCause	PROBABLE_CAUSE	VARCHAR	String	Cause of this alert.	128
category	ALERT_SOURCE	VARCHAR	String	Alert category	64
alertMessage	ALERT_MESSAGE	TEXT	String	Alert message	4000
notes	NOTES	TEXT	String	Note for this alert	4000

9.2.209 VCSRCASE

Description: CSR Case

Database table name : V_CASE

Primary Keys : caseId (CASE_ID)

Name	DB name	DB type	Java type	Description	Length
caseId	CASE_ID (PK)	BIGINT	Long	Id for this case	16
extUserId	USER_LOGIN_ID	TEXT	String	External User Id of the user if available.	256
requestId	REQUEST_ID	TEXT	String	Id of the session.	256
lastActionType	LOG_ACCESS_TYPE	INT	int	The last reportable action type for this case	3
caseStatus	CASE_STATUS	INT	int	Status of the case	3
disposition	DISPOSITION	INT	int	Disposition of the case	6
caseType	CASE_TYPE	INT	int	Type of the case	6
createType	CREATE_TYPE	INT	int	How the case got created	6
severityLevel	SEVERITY_LEVEL	INT	int	Severity level for the case	-
ownerGroupId	ADMIN_GROUP_ID	BIGINT	Long	Id for the owner group	16
adminUserId	ADMIN_USER_ID	BIGINT	Long	Admin User Id	16
externalCaseId	EXT_CASE_ID	TEXT	String	Id of the external caseId	256
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date/Time of the last update.	-
expirationTime	EXPIRE_TIME	DATETIME	Date	Date/Time when this case expires	-
notes	NOTES	TEXT	String	Notes	4000

9.2.210 VCSRCASEHIST

Description: CSR Case shadow table

Database table name : V_CASE_HIST

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
caseId	CASE_ID	BIGINT	Long	Id for this case	16
extUserId	USER_LOGIN_ID	TEXT	String	External User Id of the user if available.	256
requestId	REQUEST_ID	TEXT	String	Id of the session.	256
lastActionType	LOG_ACCESS_TYPE	INT	int	The last reportable action type for this case	3
caseStatus	CASE_STATUS	INT	int	Status of the case	3
caseType	CASE_TYPE	INT	int	Type of the case	6
createType	CREATE_TYPE	INT	int	How the case got created	6
disposition	DISPOSITION	INT	int	Disposition of the case	6
severityLevel	SEVERITY_LEVEL	INT	int	Severity level for the case	3
ownerGroupId	ADMIN_GROUP_ID	BIGINT	Long	Id for the owner group	16
adminUserId	ADMIN_USER_ID	BIGINT	Long	Admin User Id	16
externalCaseId	EXT_CASE_ID	TEXT	String	Id of the external caseId	256
expirationTime	EXPIRE_TIME	DATETIME	Date	Date/Time when this case expires	-
notes	NOTES	TEXT	String	Note for this alert	4000

9.2.211 VCaseActionLogSessionMap

Description: Mapping between action log and session

Database table name :V_ACTION_LOG_SESS_MAP

Primary Keys : mapId (MAP_ID)

Name	DB name	DB type	Java type	Description	Length
mapId	MAP_ID (PK)	BIGINT	Long	Id for the map	16
sessionId	SESSION_ID	BIGINT	Long	Id for this session	16
caseId	CASE_ID	BIGINT	Long	Id for this session	16

9.2.212 VCaseMap

Description: Mapping between case and other entities

Database table name :V_CASE_MAP

Primary Keys : mapId (MAP_ID)

Name	DB name	DB type	Java type	Description	Length
createTime	CREATE_TIME	DATETIME	Date	Date/Time of this transaction.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Last update time for this object.	-
mapId	MAP_ID (<i>PK</i>)	BIGINT	Long	Id for the map	16
caseId	CASE_ID	BIGINT	Long	Id for the case	16
objectId	OBJECT_ID	BIGINT	Long	Id of the object.	16
entityDefId	ENTITY_DEF_ID	BIGINT	Long	Id for the entity type	16
relationType	RELATION_TYPE	INT	int	Type of the relationship	6
mapStatus	MAP_STATUS	INT	int	Status of the case map	5
adminSessionId	ADM_SESSION_ID	BIGINT	Long	Id of the admin session	16
notes	NOTES	TEXT	String	Note for this alert	4000

9.2.213 VCaseMapHist

Description: Shadow table for VCaseMap

Database table name : *V_CASE_MAP_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
mapId	MAP_ID	BIGINT	Long	Id for the map	16
caseId	CASE_ID	BIGINT	Long	Id for the case	16
objectId	OBJECT_ID	BIGINT	Long	Id of the object.	16
entityDefId	ENTITY_DEF_ID	BIGINT	Long	Id for the entity type	16
relationType	RELATION_TYPE	INT	int	Type of the relationship	6
mapStatus	MAP_STATUS	INT	int	Status of the case map	5
adminSessionId	ADM_SESSION_ID	BIGINT	Long	Id of the admin session	16
notes	NOTES	TEXT	String	Note for this alert	4000

9.2.214 VAdminUser

Description: Admin User

Database table name : *V_ADMIN_USER*

Primary Keys : adminUserId (*USER_ID*)

Name	DB name	DB type	Java type	Description	Length
adminUserId	USER_ID (<i>PK</i>)	BIGINT	Long	Id for admin user	16
extUserId	USER_LOGIN_ID	TEXT	String	External User Id of the user if available.	256

Name	DB name	DB type	Java type	Description	Length
status	STATUS	INT	int	The status of the admin user.	5
notes	NOTES	TEXT	String	Note for this alert	4000
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date/Time of the last update.	-

9.2.215 VAdminUserHist

Description: Admin User shadow table

Database table name : *V_ADMIN_USER_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
adminUserId	USER_ID	BIGINT	Long	Id for admin user	16
extUserId	USER_LOGIN_ID	TEXT	String	External User Id of the user if available.	256
status	STATUS	INT	int	The status of the admin user.	5
notes	NOTES	TEXT	String	Notes	4000

9.2.216 VAdminUserGroup

Description: Admin User Group

Database table name : *V_ADMIN_USERGROUP*

Primary Keys : adminUserGroupId (*USER_GROUP_ID*)

Name	DB name	DB type	Java type	Description	Length
adminUserGroupId	USER_GROUP_ID (<i>PK</i>)	BIGINT	Long	Id for admin user group	16
extGroupId	EXT_USER_GROUP_ID	TEXT	String	External Grup Id of the user if available.	256
status	STATUS	INT	int	The status of the admin user.	5
notes	NOTES	TEXT	String	Note for this alert	4000
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date/Time of the last update.	-

9.2.217 VAdminUserGroupHist

Description: Admin User Group shadow table

Database table name : *V_ADMIN_USER_GROUP_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
adminUserGroupId	USER_GROUP_ID	BIGINT	Long	Id for admin user group	16
extGroupId	EXT_USER_GROUP_ID	TEXT	String	External Grup Id of the user if available.	256
status	STATUS	INT	int	The status of the admin user.	5
notes	NOTES	TEXT	String	Notes	4000

9.2.218 VAdminUserGroupMap

Description: Admin User Group Map

Database table name : *V_ADMIN_USERGROUP_MAP*

Primary Keys : mapId (*MAP_ID*)

Name	DB name	DB type	Java type	Description	Length
mapId	MAP_ID (<i>PK</i>)	BIGINT	Long	Id for map	16
adminUserId	ADMIN_USER_ID	BIGINT	Long	Admin User Id	16
adminUserGroupId	ADMIN_USERGROUP_ID	BIGINT	Long	Admin User Group Id	16
status	STATUS	INT	int	The status of the admin user.	5
notes	NOTES	TEXT	String	Note for this alert	4000
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date/Time of the last update.	-

9.2.219 VAdminUserGroupMapHist

Description: Admin User Group Map shadow table

Database table name : *V_ADMIN_USERGROUP_MAP_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15

Name	DB name	DB type	Java type	Description	Length
mapId	MAP_ID	BIGINT	Long	Id for map	16
adminUserId	ADMIN_USER_ID	BIGINT	Long	Admin User Id	16
adminUserGroupId	ADMIN_USERGROUP_ID	BIGINT	Long	Admin User Group Id	16
status	STATUS	INT	int	The status of the admin user.	5
notes	NOTES	TEXT	String	Note for this alert	4000

9.2.220 VAdminUserProfile

Description: Admin User Profile

Database table name : *V_ADMIN_USERPROFILE*

Primary Keys : adminUserProfileId (*USER_PROFILE_ID*)

Name	DB name	DB type	Java type	Description	Length
adminUserProfileId	USER_PROFILE_ID (<i>PK</i>)	BIGINT	Long	Id for admin user profile	16
adminUserId	ADMIN_USER_ID	BIGINT	Long	Admin User Id	16
status	STATUS	INT	int	The status of the admin user.	5
name	ATTR_NAME	TEXT	String	Name of the attribute	4000
value	ATTR_VALUE	TEXT	String	Value of the attribute	4000
notes	NOTES	TEXT	String	Note for this alert	4000
createTime	CREATE_TIME	DATETIME	Date	Date/Time when this object was created.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date/Time of the last update.	-

9.2.221 VAdminUserProfileHist

Description: Admin User Profile shadow table

Database table name : *V_ADMIN_USER_PROFILE_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
adminUserProfileId	USER_PROFILE_ID	BIGINT	Long	Id for admin user profile	16
adminUserId	ADMIN_USER_ID	BIGINT	Long	Admin User Id	16
status	STATUS	INT	int	The status of the admin user.	5
name	ATTR_NAME	TEXT	String	Name of the attribute	4000
value	ATTR_VALUE	TEXT	String	Value of the attribute	4000

Name	DB name	DB type	Java type	Description	Length
notes	NOTES	TEXT	String	Note for this alert	4000

9.2.222 VRAConfig

Description: RA Config

Database table name : *VRA_CONFIG*

Primary Keys : configId (*CONFIG_ID*)

Name	DB name	DB type	Java type	Description	Length
configId	CONFIG_ID (<i>PK</i>)	BIGINT	Long	Id for the config	16
versionNumber	VERSION_NUM	INT	int	Version Number	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
name	NAME	TEXT	String	Name	4000
configType	CONFIG_TYPE	INT	int	The type of this config.	5
configStatus	CONFIG_STATUS	INT	int	The status of the config.	5
notes	NOTES	TEXT	String	Notes	4000

9.2.223 VRAConfigHist

Description: RA Config shadow

Database table name : *VRA_CONFIG_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
configId	CONFIG_ID	BIGINT	Long	Id for the config	16
versionNumber	VERSION_NUM	INT	int	Version Number	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
name	NAME	TEXT	String	Name	4000
configType	CONFIG_TYPE	INT	int	The type of this config.	5
configStatus	CONFIG_STATUS	INT	int	The status of the config.	5
notes	NOTES	TEXT	String	Notes	4000

9.2.224 VRAConfigProperty

Description: RA Config Property

Database table name :*VRA_CONFIG_PROP*

Primary Keys : *propertyId (PROPERTY_ID)*

Name	DB name	DB type	Java type	Description	Length
propertyId	PROPERTY_ID (<i>PK</i>)	BIGINT	Long	Id for the property	16
versionNumber	VERSION_NUM	INT	int	Version Number	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
configId	CONFIG_ID	BIGINT	Long	Id of the config	16
name	PROP_NAME	TEXT	String	Name of the attribute	4000
value	PROP_VALUE	TEXT	String	Value of the attribute	4000
propType	PROP_TYPE	INT	int	The type of this property.	5
isEncrypted	IS_SECURE	CHAR	boolean	Is this property encrypted	-
status	STATUS	INT	int	The status of the property.	5
description	DESCRIPTION	TEXT	String	Description	4000
notes	NOTES	TEXT	String	Notes	4000

9.2.225 VRAConfigPropertyHist

Description: RA Config Property shadow

Database table name :*VRA_CONFIG_PROP_HIST*

Primary Keys : *logId (LOG_ID)*

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
propertyId	PROPERTY_ID	BIGINT	Long	Id for the property	16
versionNumber	VERSION_NUM	INT	int	Version Number	-
globalId	GLOBAL_ID	VARCHAR	String	Unique identifier which is used in import and export feature.	255
configId	CONFIG_ID	BIGINT	Long	Id of the config	16
name	PROP_NAME	TEXT	String	Name of the attribute	4000
value	PROP_VALUE	TEXT	String	Value of the attribute	4000
propType	PROP_TYPE	INT	int	The type of this property.	5
isEncrypted	IS_SECURE	CHAR	boolean	Is this property encrypted	-

Name	DB name	DB type	Java type	Description	Length
status	STATUS	INT	int	The status of the property.	5
description	DESCRIPTION	TEXT	String	Description	4000
notes	NOTES	TEXT	String	Notes	4000

9.2.226 VRARunLogs

Description: RA Run Logs

Database table name : *VRA_RUN_LOGS*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Id for the run log	16
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-
serverId	SERVER_ID	TEXT	String	Id of the server	512
raRunSessionId	RUN_SESS_ID	BIGINT	Long	Id for the run session id	16
name	LOG_NAME	TEXT	String	Name for the log	4000
value	LOG_VALUE	TEXT	String	Value of the log	4000
logType	LOG_TYPE	INT	int	The type of the log.	5
notes	NOTES	TEXT	String	Notes	4000

9.2.227 VRASessionSet

Description: RA Session Set

Database table name : *VRA_SESS_SET*

Primary Keys : setId (*SET_ID*)

Name	DB name	DB type	Java type	Description	Length
setId	SET_ID (<i>PK</i>)	BIGINT	Long	Id for this session set	16
versionNumber	VERSION_NUM	INT	int	Version Number	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-
name	NAME	TEXT	String	Name	4000
setType	SET_TYPE	INT	int	The type of this set.	5
beginTime	BEGIN_TIME	DATETIME	Date	Date/Time for session begin time.	-
endTime	END_TIME	DATETIME	Date	End time.	-
dbQuery	DB_QUERY	TEXT	String	DBQuery for this session set	4000
notes	NOTES	TEXT	String	Notes	4000

9.2.228 VRASessionSetHist

Description: RA Session Set

Database table name : *VRA_SESS_SET_HIST*

Primary Keys : logId (LOG_ID)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (PK)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-
accessLoginId	ACCESS_LOGIN_ID	TEXT	String	Id of the administrator.	256
accessIPAddress	ACCESS_IP_ADDR	BIGINT	String	IP address from where the request came from	15
setId	SET_ID	BIGINT	Long	Id for this session set	16
versionNumber	VERSION_NUM	INT	int	Version Number	-
setType	SET_TYPE	INT	int	The type of this set.	5
name	NAME	TEXT	String	Name	4000
beginTime	BEGIN_TIME	DATETIME	Date	Date/Time for session begin time.	-
endTime	END_TIME	DATETIME	Date	End time.	-
dbQuery	DB_QUERY	TEXT	String	DBQuery for this session set	4000
notes	NOTES	TEXT	String	Notes	4000

9.2.229 VRARunSession

Description: RA Run Session

Database table name : VRA_RUN_SESS

Primary Keys : runSessionId (RUN_SESS_ID)

Name	DB name	DB type	Java type	Description	Length
runSessionId	RUN_SESS_ID (PK)	BIGINT	Long	Id for this run	16
versionNumber	VERSION_NUM	INT	int	Version Number	-
createTime	CREATE_TIME	DATETIME	Date	Date/Time for this log.	-
updateTime	UPDATE_TIME	TIMESTAMP	Date	Date value.	-
name	LABEL	TEXT	String	Name	4000
scheduledTime	SCHEDULED_TIME	DATETIME	Date	Date/Time for this to run.	-
runType	RUN_TYPE	INT	int	Type of the run. e.g. Load or Playback	5
runStatus	RUN_STATUS	INT	int	Status of the run	5
raSessionSetId	RA_SESS_SET_ID	BIGINT	Long	Reference to the RA session set	16
policySetPkgId	POLICY_SET_PKG_ID	BIGINT	Long	Reference to the policy set package	16
raScheduleId	RA_SCHED_ID	BIGINT	Long	Id of the RA schedule	16
configId	CONFIG_ID	BIGINT	Long	Id of the config	16
beginTime	BEGIN_TIME	DATETIME	Date	Date/Time for session begin time.	-
endTime	END_TIME	DATETIME	Date	End time.	-
lastProcessedTime	LAST_PROCESSED_TIME	DATETIME	Date	Last processed time stamp	-

Name	DB name	DB type	Java type	Description	Length
lastRequestId	LAST_REQUEST_ID	TEXT	String	Id of the request id that was processed	256
notes	NOTES	TEXT	String	Notes	4000

9.2.230 VRARunSessionHist

Description: RA Session Set

Database table name : *VRA_RUN_SESS_HIST*

Primary Keys : logId (*LOG_ID*)

Name	DB name	DB type	Java type	Description	Length
logId	LOG_ID (<i>PK</i>)	BIGINT	Long	Log Id	16
fromTime	FROM_TIME	DATETIME	Date	Active from time.	-
toTime	TO_TIME	DATETIME	Date	Active to time.	-

expectedDigitalCookie	OLD_DIGITAL_COOKIE	TEXT	String	Expected Digital cookie	256

Part III

Appendixes

This part contains the following appendix:

- [Appendix A, "LDIF File Format"](#)

LDIF File Format

This appendix provides some general information about creating LDAP Data Interchange Files (LDIF) that can be used by the Oracle Internet Directory command-line tools. LDIF files are specially formatted text files that can be used to exchange data between LDAP directory servers, such as Oracle Internet Directory.

This appendix contains the following topics:

- [General LDIF Formatting Rules](#)
- [LDIF Format for Entries](#)
- [LDIF Format for Adding Schema Elements](#)

A.1 General LDIF Formatting Rules

LDIF formats are defined by the Internet Engineering Task Force (IETF) in RFC 2849. Visit the IETF Web site at <http://www.ietf.org/rfc/rfc2849.txt> for more information about LDIF formatting rules. This section explains some general rules for formatting LDIF files.

A.1.1 Line Types and White Space

Each line in an LDIF file must be correctly formatted in order to be read by the Oracle Internet Directory command-line tools. White space and line breaks must be used carefully.

Each line in an LDIF file is terminated with a line feed, which is <LF> on UNIX or <CR><LF> on Windows. In LDIF you can have the following types of lines:

- **Directive Line** - Any line that does not begin with either a SPACE or # (hash). A directive line specifies either some type of data in an entry or an operation to perform.
- **Continuation Line** - A line that begins with a SPACE denotes that the characters following the space are part of the previous line.
- **Blank Line** - Blank lines are used to separate entries and are typically created with the ENTER key.
- **Comment Line** - A comment line begins with a # (hash). Comments are ignored by the Oracle Internet Directory command-line tools.
- **Separator Line** - A line that starts with a - (dash) character is used to end an operation. It denotes that the next line begins a new operation directive.

Unnecessary space characters in the LDIF input file, such as a space at the end of an attribute value, will cause the LDAP operations to fail.

A.1.2 Sequencing of Entries

The sequence of entries in your LDIF file must follow the Directory Information Tree (DIT) from the top down. Parent entries should be listed before their children entries. Any attributes or object classes used in an entry must exist in the schema or be added to the schema before they can be used. Separate entries with a blank line.

A.1.3 Binary Files

Reference binary files, such as photographs, with the absolute address of the file preceded by a / (forward slash).

A.1.4 Non-Printing Characters in Attribute Values

Non-printing characters and tabs are represented in attribute values as base-64 encoding.

A.2 LDIF Format for Entries

The standard format for directory entries is as follows:

```
dn: distinguished_name
changetype: add|delete|modify|modrdn|moddn
attribute_type: attribute_value
...
objectClass: object_class_value
...
```

The dn Directive

The `dn` directive defines the distinguished name (DN) of an entry. It is assumed that all lines below a `dn` directive belong to that entry until you add a space in the LDIF file to denote a separate entry. The following example shows a `dn` directive line:

```
dn: cn=Mary Jones,ou=Sales,dc=company,dc=com
```

The changetype Directive

The `changetype` directive defines the operation you want to perform on the entry. The operations that you specify with the `changetype` directive are:

- `add` - See ["LDIF Format for Adding Entries"](#) on page A-3 for syntax and examples.
- `delete` - See ["LDIF Format for Deleting Entries"](#) on page A-3 for syntax and examples.
- `modify` - ["LDIF Format for Modifying Entries"](#) on page A-4 for syntax and examples.
- `modrdn` - See ["LDIF Format for Modifying the RDN of an Entry"](#) on page A-4 for syntax and examples.
- `moddn` - See ["LDIF Format for Modifying the DN of an Entry"](#) on page A-5 for syntax and examples.

If `changetype` directive is omitted, then an `add` operation is assumed if using `bulkload`, `ldapadd` or `ldapaddmt`. A `delete` operation is assumed if using `bulkdelete` or `ldapdelete`. All other operations must specify a `changetype: directive`.

The *attribute_type* Directive

The *attribute_type* directive is used to specify an attribute type name and value pair. The entry will have an *attribute_type* directive for each attribute in the entry. For example, here is an *attribute_type* directive for the attribute type named *cn* where the value is *Mary Smith*.

```
cn: Mary Smith
```

The *objectClass* Directive

The *objectClass* directive is used to specify the object class that is associated with the entry. If an entry uses multiple object classes, then it will have an *objectClass* directive for each object class used. For example, here are the object classes used to define a user entry.

```
objectClass: orclUserV2
objectClass: organizationalPerson
objectClass: person
objectClass: top
```

Note that if an object class has required attributes, you must supply a value for those attributes using *attribute_type* directives.

A.2.1 LDIF Format for Adding Entries

The following example shows a file entry for an employee. The first line contains the DN. The second line contains the *changetype: add* directive. The lines that follow begin with the name for an attribute type, followed by the value to be associated with that attribute. Note that the *photo* attribute value begins with a forward slash (**) to denote that it is a binary file reference. Use an empty line at the end of the entry as a separator.

```
dn: cn=Suzie Smith,ou=Server Technology,o=Acme, c=US
changetype: add
cn: Suzie Smith
cn: Suzie
sn: Smith
mail: ssmith@us.Acme.com
telephoneNumber: 69332
photo: \${ORACLE_INSTANCE}/empdir/photog/ssmith.jpg
objectClass: organizationalPerson
objectClass: person
objectClass: top
```

A.2.2 LDIF Format for Deleting Entries

When deleting an entry by using *ldapmodify* or *ldapmodifymt*, the LDIF file entry only needs the DN of the entry to be deleted and the *changetype: delete* directive. Use an empty line at the end of the entry as a separator.

```
dn: cn=Suzie Smith,ou=Server Technology,o=Acme, c=US
changetype: delete
```

The *ldapdelete* command only needs a list of DNs. It does not require a *changetype* operator.

A.2.3 LDIF Format for Modifying Entries

When modifying an entry, you must supply the DN of the entry followed by the `changetype: modify` directive. Next you must specify the attributes you want to modify using one of the following directives:

- `add: attribute_type` - Specifies the name of an attribute type for which you want to add a value. The next line should then contain the `attribute_type: value` directive for the value you want to add. For example:

```
add: work-phone
work-phone: 510/506-7000
```

- `delete: attribute_type` - Specifies the name of an attribute type for which you want to delete the value. If the attribute is multi-valued, then you should also supply the `attribute_type: value` directive for the specific value you want to delete, otherwise all values for the attribute are deleted. For example:

```
delete: home-fax
```

- `replace: attribute_type` - Specifies the name of an attribute type for which you want to replace the existing value with a new value. The next line should then contain the `attribute_type: value` directive for the value you want to replace. For example:

```
replace: home-phone
home-phone: 415/697-8899
```

If the attribute is multi-valued then all the current values are replaced with one or more attributes following this directive. If only a single value of a multi-valued attribute needs to be replaced use `delete` then `add`.

If you are making several modifications to an entry, then, between each modification you enter, add a line that contains a hyphen (-) only. For example:

```
dn: cn=Barbara Fritchey,ou=Sales,o=Oracle,c=US
changetype: modify
add: work-phone
work-phone: 650/506-7000
work-phone: 650/506-7001
-
delete: home-fax
-
replace: home-phone
home-phone: 415/697-8899
```

A.2.4 LDIF Format for Modifying the RDN of an Entry

To modify the relative distinguished name (RDN) for an entry, you must supply the DN of the entry followed by the `changetype: modrdn` directive. Next you must specify the new RDN with a `newrdn: directive`, and you can optionally delete or keep the old entry by supplying a `deleteoldrdn: directive`. For example:

```
dn: cn=Sally Smith,ou=people,dc=example,dc=com
changetype: modrdn
newrdn: dn=Sally Smith-Jones
# deletes old RDN entry
deleteoldrdn: 1
```

A.2.5 LDIF Format for Modifying the DN of an Entry

To modify the DN for an entry (move the entry to a new node in the DIT), you must supply the DN of the entry followed by the `changetype: moddn` directive. You must also specify the new parent DN with a `newsuperior: directive`, and you can optionally delete or keep the old entry by supplying a `deleteoldrdn: directive`. For example:

```
dn: cn=Sally Smith,ou=people,dc=example,dc=com
changetype: moddn
# keeps old RDN entry
deleteoldrdn: 0
newsuperior: ou=expeople,dc=example,dc=com
```

A.3 LDIF Format for Adding Schema Elements

Attribute types and object classes must be added to the Oracle Internet Directory schema before they can be used in entries.

Example: Adding an Attribute to the Schema

This example adds a new attribute to the schema called `myAttr`. The LDIF file for this operation is:

```
dn: cn=subschemasubentry
changetype: modify
add: attributetypes
attributetypes: ( 1.2.3.4.5.6.7 NAME 'myAttr' DESC 'New attribute definition'
  EQUALITY caseIgnoreMatch SYNTAX '1.3.6.1.4.1.1466.115.121.1.15' )
```

On the first line, enter the DN specifying where this new attribute is to be located. All attributes and object classes are stored in `cn=subschemasubentry`.

The second and third lines show the proper format for adding a new attribute.

The last line is the attribute definition itself. The first part of this is the object identifier number: `1.2.3.4.5.6.7`. It must be unique among all other object classes and attributes. Next is the `NAME` of the attribute. In this case the attribute `NAME` is `myAttr`. It must be surrounded by single quotes. Next is a description of the attribute. Enter whatever description you want between single quotes. At the end of this attribute definition in this example are optional formatting rules to the attribute. In this case we are adding a matching rule of `EQUALITY caseIgnoreMatch` and a `SYNTAX` of `1.3.6.1.4.1.1466.115.121.1.15` (which is the object ID for the syntax of "Directory String").

When you define schema within an LDIF file, insert a white space between the opening parenthesis and the beginning of the text, and between the end of the text and the ending parenthesis.

Example: Adding an Object Class to the Schema

Before you add the object class, all of the attribute types that the object class uses must be in the schema. If there are new attribute types, then define those first in your LDIF file before defining your object class.

The following example adds a new object class named `myObjectClass` to the schema.

```
dn: cn=subschemasubentry
changetype: modify
add: objectClasses
```

```
objectClasses: ( 1.2.3.4.56789.1.0.200 NAME 'myObjectClass'
  SUP ( top ) STRUCTURAL
  MUST ( cn )
  MAY ( myAttr1 $ myAttr2 $ myAttr3 ) )
```

On the first line, enter the DN specifying where this new object class is to be located. All attributes and object classes are stored in `cn=subschemasubentry`.

The second and third lines show the proper format for adding a new object class.

The last line is the object class definition itself. The first part of this is the object identifier number: `1.2.3.4.56789.1.0.200`. It must be unique among all other object classes and attributes. Next is the `NAME` of the object class. In this case the object class name is `myObjectClass`. It must be surrounded by single quotes. Next is the superior (`SUP`) object classes, which in this case is `top`. `STRUCTURAL` denotes the type of object class. `MUST` and `MAY` denote the required and allowed attributes. Separate attribute names with a dollar sign (`$`).

When you define schema within an LDIF file, insert a white space between the opening parenthesis and the beginning of the text, and between the end of the text and the ending parenthesis. If using line breaks for formatting long lines, make sure to add a space at the beginning of a line to denote that it is a continuation of the previous line.

Example: Adding A New Object Class to an Entry

Before you can use a new object class and the attributes it contains, you must update the entry to use the new object class. The following example shows how to add a new object class to an entry. Note that you must define a value for all of the required attributes of the object class.

```
# Add a new AUXILIARY object class to an existing entry
dn: cn=Robert Smith,ou=people,dc=example,dc=com
changetype: modify
# the object class used for binding
objectclass: inetorgperson
# objectclass being added
objectclass: myObjectClass
# MUST attributes of new object class
myAttr1: some value
myAttr2: my value
myAttr3: a value
```

A.4 LDIF Format for Migrating Entries

This section describes how to properly format an LDIF file for use with the Oracle Internet Directory Migration Tool. The migration tool enables you to take LDIF entries output from other directories or applications and convert the data to use the attributes and values found in Oracle Internet Directory entries. You do this by inserting substitution variables for the data elements you want to convert.

See "[ldifmigrator](#)" on page 3-48 for more information about the Oracle Internet Directory Migration Tool.

A.4.1 Substitution Variables for Migration Input Files

Substitution variables are denoted in the LDIF file by the following syntax:

```
%s_variableName%
```

For example, let's say you have the following LDIF formatted entry that was exported from another application. The subtree where user entries are stored, the user nickname

attribute, and the name of the user's organization are different in Oracle Internet Directory than in the original application. For those elements you want to convert, you would add substitution variables to the file as placeholders.

Example:

```
dn: cn=jdoe, %s_UserContainerDN%
sn: Doe
%s_UserNicknameAttribute%: jdoe
objectClass: inetOrgPerson
objectClass: orclUserV2
title: Member of Technical Staff
homePhone: 415-584-5670
homePostalAddress: 234 Lez Drive$ Redwood City$ CA$ 94402
ou: %s_UserOrganization%
```

When you run the Oracle Internet Directory Migration Tool against this file, it will find the variables and either replace them with the values you define on the command-line or look up the correct values in Oracle Internet Directory.

A.4.1.1 Predefined Substitution Variables

The Oracle Internet Directory Migration Tool recognizes several predefined substitution variables. If running the tool in lookup mode, the values for these variables can be looked up in Oracle Internet Directory. You can use these predefined variables or define variables of your own using the `%s_variableName%` syntax.

Table A-1 Predefined Substitution Variables

Variable Name	Meaning	How OID Migration Tool Determines the Value for This Variable
<code>%s_UserContainerDN%</code>	Distinguished name of the entry under which all users are supposed to be added.	This is assigned the value of the attribute: <code>orclCommonUserSearchBase</code> from the entry <code>cn=Common, cn=Products</code> under the realm-specific Oracle context.
<code>%s_GroupContainerDN%</code>	Distinguished name of the entry under which all public groups are supposed to be added.	This is assigned the value of the attribute: <code>orclCommonGroupSearchBase</code> from the entry <code>cn=Common, cn=Products</code> under the realm-specific Oracle context.
<code>%s_UserNicknameAttribute%</code>	The nickname attribute to be used for user entries in the identity management realm.	This is assigned the value of the attribute: <code>orclCommonNicknameAttribute</code> from the entry <code>cn=Common, cn=Products</code> under the realm-specific Oracle context.
<code>%s_SubscriberDN%</code>	Distinguished name of the LDAP entry corresponding to the identity management realm.	If a simple subscriber name is given, the migration tool will resolve it to a DN using the attribute <code>orclSubscriberSearchBase</code> and the <code>orclSubscriberNickNameAttr</code> from the entry <code>cn=Common, cn=Products</code> under the root Oracle context.

Table A-1 (Cont.) Predefined Substitution Variables

Variable Name	Meaning	How OID Migration Tool Determines the Value for This Variable
%s_SubscriberOracleContextDN%	Distinguished name of the realm-specific Oracle Context.	First the realm DN is computed as described earlier and then the string <code>cn=OracleContext</code> is pre-pended to it.
%s_RootOracleContextDN%	Distinguished name of the Root Oracle Context.	This is currently hard-coded to <code>cn=OracleContext</code> .
%s_CurrentUserDN%	Distinguished name of the User who is loading the LDIF file. This is sometimes required to bootstrap the creation of groups which require at least one member in them.	The migration tool expects this DN to be specified on the command line as part of the authentication information.

A.4.2 Reconcile Options for Migrated Entries

When migrating entries into Oracle Internet Directory from another application, it is possible that there may be conflicts. For example, a user entry may already be defined in Oracle Internet Directory, or have conflicting values with the migrated data. In this case, the reconcile option will control what LDIF `changetype` directives are performed. There are three modes for reconciliation of migrated data:

- **SAFE** - This mode only adds new entries that don't exist or appends new attributes to existing entries. If any other directive besides the following are specified in the LDIF file, they will not be applied.

```
changetype:add

changetype:modify
  add: attribute_name (adds attribute only if it doesn't exist)
```
- **SAFE-EXTENDED** - This mode only adds new entries that don't exist or appends new attributes to existing entries. If you try to add a new value for existing attributes, then it will add it to the existing set of values. If any other directive besides the following are specified in the LDIF file, they will not be applied.

```
changetype:add

changetype:modify
  add: attribute_name (appends values if attribute exists)
```
- **NORMAL** - This mode applies all directives as intended. The following directives are supported:

```
changetype:add

changetype:delete

changetype:modify      add: attribute_name
                      replace: attribute_name
                      delete: attribute_name
```
