Oracle® Fusion Middleware

Services Reference for Oracle WebCenter Content 11g Release 1 (11.1.1)

E11011-06

July 2013

Documentation for administrators and developers that provides information about Oracle WebCenter Content services, which are functions and procedures performed by Content Server, Inbound Refinery, Records, and more.

Oracle Fusion Middleware Services Reference for Oracle WebCenter Content, 11g Release 1 (11.1.1)

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information on content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services.

Preface

This guide provides detailed information about Oracle WebCenter Content services, which are functions or procedures performed by the Oracle WebCenter Content Server and predefined components.

Audience

This guide is intended for developers who use services to customize the software and for application developers who access Oracle WebCenter Content Server functions.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at

http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc.

Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit

http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info or visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs if you are hearing impaired.

Related Documents

For more information, see the following documents in the Oracle WebCenter Content documentation set:

- Oracle Fusion Middleware Administering Oracle WebCenter Content
- Oracle Fusion Middleware Managing Oracle WebCenter Content
- Oracle Fusion Middleware Developing with Oracle WebCenter Content
- Oracle Fusion Middleware Configuration Reference for Oracle WebCenter Content

Further details about Oracle WebCenter Content Server services and their use can be found in *The Definitive Guide to Stellent Content Server Development* by Brian Huff, 2006, Apress, Berkeley, CA.

Conventions

The following text conventions are used in this document:

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
italic	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
monospace	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

What's New in This Guide

The following topics introduce the new and changed services for Oracle WebCenter Content and other significant changes that are described in this guide, and provides pointers to additional information.

New and Changed Features for 11g Release 1 (11.1.1.8.0)

The following are new and changed services for Oracle WebCenter Content 11g Release 1 (11.1.1).

- COPY_REVISION, a new service that copies one document revision, creating a new rev class from it.
- FLD_BROWSE, includes additional optional parameters and returned data information to support the user interface.
- FLD_SUBSCRIBE, a new service that allows a user to subscribe to a folder.
- FLD_TEST_USER_CAPABILITIES, a new service that tests the capability of a user to perform an operation on a document, folder, or library.
- FLD_UNSUBSCRIBE, a new service that allows a user to unsubscribe a folder.
- GET_DISPLAY_FIELDS, a new service that returns information about custom metadata fields, including Dynamic Tree, for different Content Server pages.
- GET_FIELD_LENGTHS, a new service that returns maximum length information for length constrained fields.
- GET_USER_INFO, includes the new UserLocaleLanguageMap ResultSet, which returns information on available locales for the user.
- GET_USERDOCPROFILES, a new service that returns information about the checkin and search profiles available to the current user.
- RESTORE_REVISION, a new service that restores the document revision corresponding to the supplied dID as a new (latest) revision.

New and Changed Features for 11g Release 1 (11.1.1.7.0)

Changes include the following:

• This document is the new edition of the formerly titled *Oracle WebCenter Content Services Reference Guide*.

Introduction to Oracle WebCenter Content Services

This chapter provides an introduction to Oracle WebCenter Content services, which are functions or procedures performed by Oracle WebCenter Content Server, Oracle WebCenter Content: Inbound Refinery, Oracle WebCenter Content: Records, and other Oracle WebCenter Content features.

Calling an Oracle WebCenter Content service (making a service request) is the only way to communicate with the Oracle WebCenter Content system or access the Content Server database. This guide describes service usage and syntax, and provides detailed descriptions and examples of commonly used and predefined Oracle WebCenter Content services.

The information contained in this guide is based on 11g Release 1 (11.1.1). The information is subject to change as the product technology evolves and as hardware and operating systems are created and modified. Due to the technical nature of browsers, databases, Web servers, and operating systems, Oracle cannot warrant compatibility with all versions and features of third-party products.

Note: For more information about customizing and integrating the Oracle WebCenter Content system, see Oracle Fusion Middleware *Developing with Oracle WebCenter Content.*

This chapter covers the following topics:

- Section 1.1, "Contents"
- Section 1.2, "Oracle WebCenter Content Terminology"

1.1 Contents

This guide is arranged according to Oracle WebCenter Content functionality or component, making it easier for you to find information about specific services. Services that are used extensively have an extended description. In addition, frequently-used services are marked with an asterisk (*) in introductory lists in each chapter.

- Chapter 2, "Using Services," explains how Oracle WebCenter Content services work and provides examples of how Content Server services can be called externally from custom applications.
- Chapter 3, "Customizing Services," explains the structure of Oracle WebCenter Content services, provides an example of how services, queries, and templates

- work together, and describes how to create a service resource for use with a custom component.
- Chapter 4, "Core Content Server Services," describes core Content Server services, grouped by common usage.
- Chapter 5, "Workflow Services," describes workflow services used with Content
- Chapter 6, "Archive Services," describes archiving services used with Content
- Chapter 7, "Contribution Folders Services," describes services used with contribution folders (supported by the Folders_g component) in Content Server.
- Chapter 8, "Folders Services," describes services used with folders (supported by the FrameworkFolders component) in Content Server.
- Chapter 9, "Records Services," describes services used with Oracle WebCenter Content: Records.
- Chapter 10, "Physical Content Management Services," describes services used with Physical Content Manager.
- Chapter 11, "Extended User Attributes Services," describes services used with Extended User Attributes in Content Server.
- Chapter 12, "Folios Services," describes services used with Folios in Content Server.
- Chapter 13, "Link Manager Services," describes services used with Link Manager.
- Chapter 14, "Virtual Content Repository Services," describes services used by applications that work with the Virtual Content Repository (VCR) service provider interfaces.
- Appendix A, "Actions," describes the actions used by individual services.

1.2 Oracle WebCenter Content Terminology

- Oracle WebCenter Content documentation uses the following terms when referring to variables in the directories associated with the Oracle WebCenter Content and Content Server configuration:
 - *IdcHomeDir*: This variable refers to the ucm/idc directory in the Oracle WebCenter Content home where the Oracle WebCenter Content server media is located. The server media can run Oracle WebCenter Content Server, Oracle WebCenter Content: Inbound Refinery, or Oracle WebCenter Content: Records software. This is essentially a read-only directory. The default location is WCC_ ORACLE_HOME/ucm/idc. The variable portion of the default location can be changed, but the path cannot be changed from ucm/idc.
 - *DomainHome*: This variable refers to the user-specified directory where an Oracle WebCenter Content application is deployed to run on an Oracle WebLogic Server application server. The DomainHome/ucm/short-product-id/bin directory contains the intradoc.cfg file and executables. The default location for DomainHome is MW_HOME/user_projects/domains/base_domain, but you can change the path and domain name (base_domain) during the deployment of an Oracle WebCenter Content application to an application server.

- *short-product-id*: This variable refers to the type of Oracle WebCenter Content server deployed to an application server. This name is used as the context root (default HttpRelativeWebRoot configuration value). Possible values include:
 - cs (Oracle WebCenter Content Server)
 - ibr (Oracle WebCenter Content: Inbound Refinery)
 - urm (Oracle WebCenter Content: Records)
- *IntradocDir*: This variable refers to the root directory for configuration and data files specific to an Oracle WebCenter Content instance that is part of an Oracle WebCenter Content application deployed to an application server. This Idoc Script variable is configured for one type of Oracle WebCenter Content instance: Content Server (cs), Inbound Refinery (ibr), or Records (urm). This directory can be located elsewhere, but the default location is DomainHome/ucm/short-product-id. The specified directory must be an absolute path to the instance directory and must be unique to a particular server or node. The directory includes a bin/directory, which contains the startup files (intradoc.cfg and executables).

Using Services

This chapter discusses how to use Oracle WebCenter Content services and provides an example of a custom service.

This chapters covers the following topics:

- Section 2.1, "Overview of Services"
- Section 2.2, "Custom Application Example"
- Section 2.3, "Redirecting Template Page for Response Output"

2.1 Overview of Services

A service is a function or procedure that is performed by the Oracle WebCenter Content system. Calling an Oracle WebCenter Content service (making a service request) is the only way a client can communicate with the Oracle WebCenter Content system or access the Oracle WebCenter Content Server database.

This section covers the following topics:

- Section 2.1.1, "Service Requests and Responses"
- Section 2.1.2, "Page Retrieval"
- Section 2.1.3, "Search Services"
- Section 2.1.4, "Integration Methods"
- Section 2.1.5, "Calling Services Using Persistent URLs"
- Section 2.1.6, "Customizing Locale Parameters"

2.1.1 Service Requests and Responses

Any service can be called either externally (from outside the Oracle WebCenter Content system) or internally (within the Oracle WebCenter Content system itself). Typically, client services are called externally, while administrative services are called internally. When a service is requested, any applicable parameters are passed to the service. The service uses its attributes and actions to execute the request based on the specified parameters. The service then returns a response either externally or internally, as applicable. This section covers the following topics:

- Section 2.1.1.1, "Internal Service Requests"
- Section 2.1.1.2, "External Service Requests"
- Section 2.1.1.3, "Request Parameters"
- Section 2.1.1.4, "Date and Time Formatting"

Section 2.1.1.5, "Case Sensitivity Considerations"

2.1.1.1 Internal Service Requests

Although any service can be called internally, typically only administrative services are called internally. Internal service requests are made from within Oracle WebCenter Content itself, and results are returned only to Oracle WebCenter Content. For example, you can use the START_SEARCH_INDEX service to update or rebuild the search index automatically in a background thread.

2.1.1.2 External Service Requests

Any external program or HTML page can call any Oracle WebCenter Content service to request information from the Oracle WebCenter Content system or perform a specified function, such as full-text and metadata searching, library services, workflow services, subscription notifications, and content conversion capabilities. Typically, only client services are called externally (administrative services are typically called internally). For example, when you click a **Search** link on a Content Server web page, the standard search page is delivered to your web browser by the GET_DOC_PAGE service using the following URL segment:

IdcService=GET_DOC_PAGE&Action=GetTemplatePage&Page=STANDARD_QUERY_PAGE

External requests are sent from a client (for example, a web browser) to the Web server using one of many protocols. The service call must include any parameters that the service requires. The Web server routes the service request to the Oracle WebCenter Content system, along with any required and optional parameters. The Oracle WebCenter Content system then executes the service using the provided parameters. In the case of search services, this involves sending a search request to the search engine. The Oracle WebCenter Content system then returns the results to the Web server, and the Web server returns the results to the web browser client.

Web Browser Client Search Engine Search Search Request Response Request Response Service Response Core Server WWW Server Service Request

Figure 2–1 External Requests and Responses Between Content Management System Elements

2.1.1.3 Request Parameters

A service request must include every parameter that the service requires. For example, when calling the DOC_INFO service to obtain information about a content item, the service call must provide the dID (generated content item revision identifier) to the service. The following segment shows how this would be done through a persistent URL:

http://cs.example.com/cs/idcplg? IdcService=DOC INFO&dID=194

2.1.1.4 Date and Time Formatting

Default date and time formatting for Content Server are determined using the Localization tab on the System Properties utility interface. The general format for date and time is:

MM/DD/{yy} {hh:mm[:ss] {aa} [zzz]} !mAM, PM!zTimezoneCity

- The date/time format is a grouping of Y, D, M for Year, Day, and Month, and h, m, and s for hours, minutes, and seconds. The number of times the letter repeats designates the minimum number of digits used (for example, YY/MM/DD hh:mm could designate 04/12/09 12:12 or MM/DD/YYYY hh:mm:ss would be 09/12/2004 04:12:33).
- The a represents the meridian symbol (for example, AM or PM).
- The m represents minutes.
- Braces ({ }) indicate that the item is optional when in the input data, but will always appear in the output.
- The exclamation mark (!) is used to separate additional date format specifications. For example, !mXXX,YYY could designate the meridian symbols (where XXX is the symbol meaning "before noon" and YYY is the symbol meaning "after noon"). Everything after the exclamation point passes the meridian and time zone symbols along with the date format.

2.1.1.5 Case Sensitivity Considerations

Case sensitivity is important when calling standard Oracle WebCenter Content services.

- **Parameters:** Parameters are case sensitive. For example, when specifying the IdcService parameter you must use IdcService, not IDCSERVICE.
- Parameter values: Parameter values are typically case sensitive. The value for the IdcService parameter is always case sensitive, and the convention used for standard Oracle WebCenter Content services is all capital letters. For example, when specifying the value for the IdcService parameter you must use DOC_INFO, not Doc_Info.
- Databases: The database you are using with Oracle WebCenter Content might affect the case sensitivity of parameters and parameter values. For example, some databases do not have case-sensitive column names and other databases are case-insensitive by default. So a database may have stored "DDOCNAME", but the value that the Oracle WebCenter Content system expects is still "dDocName". Also, some databases store values in uppercase, but they perform case-insensitive queries. For example, if you store the dDocName "BouncyCaps", a query for "bouncycaps" would find that row.

2.1.2 Page Retrieval

When a web page is requested from the Oracle WebCenter Content system, one of the following page types is returned:

- static page: The content of a static web page is pre-formatted, and does not change from one request to the next. In a typical Oracle WebCenter Content web site, the only static page is the guest home page (for example, DomainHome/ucm/cs/weblayout/portal.htm).
- **dynamic page:** A dynamic web page is assembled at the time of the Web server request, using Oracle WebCenter Content services and templates to determine the content and formatting. For example, each user's portal design page is generated using an Oracle WebCenter Content service called GET_PORTAL_PAGE and a template called PNE_PORTAL_DESIGN_PAGE.

2.1.3 Search Services

A search request is a special kind of Oracle WebCenter Content service. When the Oracle WebCenter Content system receives a search request, it sends the request on to the search engine using a search engine API. This allows different search engines to be used with the Oracle WebCenter Content system.

2.1.4 Integration Methods

Service requests can be made by any external program or HTML page using a wide variety of protocols. The Oracle WebCenter Content system can be integrated with other enterprise applications using a wide variety of integration methods. One common integration method is to reference content that is managed within the Oracle WebCenter Content system by persistent URL. For more information, see Section 2.1.5, "Calling Services Using Persistent URLs."

The following are other possible integration methods:

- Oracle WebLogic Server Web Services (WS) using integrated WebLogic JAXP and SAML support
- Oracle WebCenter Content Web services component for the Content Server and Remote Intradoc Client (RIDC) component for clients
- Java API (IdcCommand) integration using the IdcCommand Java Command Utility
- Java Server Page (JSP) integration from a JSP running in Oracle WebCenter Content, a JSP through the Oracle WebCenter Content JavaBean, or a JSP through the Oracle WebCenter Content Enterprise JavaBean (EJB) deployed on your J2EE application server
- Java 2 Enterprise Edition API (J2EE) integration by deploying the Oracle WebCenter Content Enterprise JavaBean on your J2EE-compliant application server
- Simple Object Access Protocol (SOAP) integration using the SOAP protocol
- Virtual Folders integration using the Folders_g component
- Web Distributed Authoring and Versioning (WebDAV) integration using the WebDAV component
- Component Object Model (COM) integration using the ActiveX utility or the IntradocClient OCX component

Note: For more detailed information on available integration methods, see Oracle WebCenter Content Developer's Guide for Content Server.

2.1.5 Calling Services Using Persistent URLs

In this integration method, all of the necessary information for the service call is sent to the Content Server through the URL. The following example shows a typical URL; in this case, it is the URL for the Home page:

http://cs.example.com/cs/idcplg? IdcService=GET_DOC_PAGE&Action=GetTemplatePage&Page=HOME_PAGE

- http://cs.example.com/ is the web address of the Content Server instance.
- **cs/idcplg** is the path to the Web server filter.
- IdcService=GET_DOC_PAGE tells the Content Server to execute the GET_DOC_ PAGE service.
- **Action=GetTemplatePage** tells the Content Server to return the results using a specified template page. This parameter is specific to the GET_DOC_PAGE service example.
- Page=HOME_PAGE tells the Content Server which template page to use. This parameter is specific to the GET_DOC_PAGE service example.
- The question mark (?) indicates the end of the Web server path and the beginning of Content Server parameters.
- Ampersands (&) are used as separators between Content Server parameters.
- You can include certain Idoc Script variables in a URL to affect page display at the time of the page request. This is useful for troubleshooting or for customizing your Content Server pages.

Troubleshooting Examples

- IsJava=1
- IsPageDebug=1

Customization Examples

- StdPageWidth=1000
- dDocType=HRForm

Example

The following example describes the steps that occur when a persistent URL is used to request a dynamic page from the Content Server.

When a user clicks the Administration link in the navigation area, a request for the GET_ADMIN_PAGE service is sent to the Web server. The URL of the Administration link contains the following commands:

IdcService=GET_ADMIN_PAGE&Action=GetTemplatePage&Page=ADMIN_LINKS

The Web server recognizes this request as a Content Server function and sends the specific request to the Content Server.

- 3. When the Content Server has processed the request, it passes the result back to the Web server. In the case of the Administration link, the GET_ADMIN_PAGE service:
 - Provides a login prompt if the user is not currently logged in.
 - Verifies that the user has *admin* permission.
 - Assembles the Administration page using the ADMIN_LINKS template.
 - Returns the assembled web page to the Web server.
- The Web server delivers the results of the Content Server service to the originating web browser client.

Example

The following example describes the steps that occur when a persistent URL is used to perform a search request.

When a user clicks the Search button on the standard Search page, a request for the GET_SEARCH_RESULTS service is sent to the Web server. The URL for the search request specifies the service to execute, the search criteria, and the result parameters:

```
IdcService=GET_SEARCH_RESULTS&QueryText=oracle&ftx=1
&AdvSearch=True&ResultCount=25&SortField=dInDate&SortOrder=Desc
```

- 2. The Web server recognizes the request as a Content Server function, and sends the specific request to the Content Server.
- **3.** Content Server passes the request to the search engine.
- The search engine returns the search results to Content Server.
- **5.** Based on the user login and security permissions, Content Server assembles the search results page and returns it to the Web server.
- **6.** The Web server delivers the results to the originating web browser client.

2.1.6 Customizing Locale Parameters

When using the Content Server in a client server operation mode, you can use several parameters to improve the handling of locale-sensitive data, helping to avoid date and encoding incompatibility problems.

In the following descriptions, it is assumed that an HDA formatted request is being made to the Content Server using an operation such as IdcClient, IdcCommandUX, IdcServerBean, or a custom server communication.

The following parameters are available:

UserDateFormat: Specifies the date/time format for dates in the incoming request and any dates produced in the response to the request. If not specified, the response format always uses the login user's date locale. If that is unavailable, it uses the Content Server locale date. Do not use the ODBC date/time format used internally by the Content Server for Archiver batch load files; that can create time zone ambiguity errors.

```
UserDateFormat=M/D/YYYY hh:mm[:ss]{aa}!mAM,PM!zUTC
```

blDateFormat: Specifies the format of dates in the body of the incoming request. It does not affect the format of the response. If set, this overrides values set with UserDateFormat. If not specified, the incoming request format uses the login

user's locale date format. If that is unavailable, it uses the Content Server locale date format. This parameter is not available except if one of the headers that precedes the request is a REQUEST_METHOD header with a POST value. GET style requests do not support this parameter.

ClientEncoding: Specifies the character encoding to be used in the response. If no HDA header line exists with either the charset or jcharset specification, this parameter also dictates the encoding used to decode the body of the request.

ClientEncoding=cp1252

- HEADER_ENCODING: Used in the header that precedes the body of the HDA request. This allows the requesting agent to specify the encoding of headers. This functionality is useful for dictating the encoding of the HTTP_INTERNETUSER and REMOTE USER header entities.
- blFieldTypes: Specifies a field type (date or message) during the translation of a response. A 'message' is a formatted string, usually an error message, that has not been localized. You can use this parameter to ensure that ODBC formatted fields are parsed and returned in the format specified by blDateFormat or UserDateFormat and will be applied even if the field is only in the response and not in the request. If the field types are not specified in biFieldTypes, then fields are treated like plain strings and no localization is performed on them.

The only fields that typically need such translation are ones created by customized extensions of Content Server behavior (such as those created using Idoc Script, for example). This is only available for POST style requests (REQUEST_METHOD header with value POST). This is normally used to specify additional date fields and is best used in combination with UserDateFormat or blDateFormat to indicate that a field needs special handling as a date.

blFieldTypes=xNewDate date, xComment message

extraFieldTypes: Specifies a field type during the translation of a response to HDA formatted requests, used in place of blFieldTypes. It is best used inside an Idoc Script expression that is executed when fulfilling a Content Server request. It cannot be used in Idoc Script when generating the format of the response because the response is in a data format (such as HDA). It can, however, be used in other places where Idoc Script is evaluated when executing the logic of a request, such as the processing of an HCSP form, or determining the effects of a document profile.

extraFieldTypes=xNewDate date, xComment message

convertDatabaseDate: Ensures that blFieldTypes or extraFieldTypes are used to convert the ODBC date format to the desired response date format. This variable is necessary when using the blFieldTypes or extraFieldTypes variables.

If this variable is not set, the ODBC date formats may not be converted to the desired response date format. ODBC dates can still be converted even if this variable is not set. This occurs if the Content Server determines that the response needs a full coercion from one date format to another. This typically happens only if the incoming date format is different from the outgoing date format.

convertDatabaseDate=1

SuppressResultLocalization: Suppresses localization conversions performed before the response is sent back. Conversions done on incoming data can still be performed.

This parameter is useful to prevent messages from being localized or dates being fully converted. An example of usage is when the response is to be forwarded to another Content Server instance to be processed or when the data is to be persistently stored and replayed back to the original Content Server instance as needed.

SuppressResultLocalization=1

All of the parameters that affect date and message processing can be used with this parameter, but the other parameters are only used when the data is replayed against another Content Server instance or the current Content Server instance.

Note: The operation making the HDA request may set values for these parameters; therefore, users may find that the values they set do not change the behavior as expected.

2.1.7 Forcing Authentication Challenges

It is sometimes necessary that a user be re-authenticated for a Content Server service or for other activities. For example, during a workflow, it might be necessary to acquire a *digital signature* for a user at a specific step in the workflow process. This can be done using the isRepromptLogin configuration variable. For more details on this variable, see Oracle Fusion Middleware Configuration Reference for Oracle WebCenter Content.

To force re-authentication of any service, perform the following steps:

- Add checkForRevalidateLogin as a service definition function.
- Add revalidateLoginID as a parameter to the service call being made, with a randomly generated value.

These two actions cause the Content Server to refuse to accept the currently supplied credentials until the AllowedLoginID cookie is set with the same value as the parameter to revalidateLoginID. The cookie is set during the redundant challenge to the current credentials.

Note that this clears the current credentials so the user will need to login again to access any Content Server functionality.

2.2 Custom Application Example

This example application calls five services and defines six private functions.

- Services Called
- **Private Functions**
- Sample Code

2.2.1 Services Called

These services are called and a serialized HDA string is built for each:

- CHECKOUT_BY_NAME
- CHECKIN_UNIVERSAL
- DOC_INFO
- GET_FILE

These parameters for CHECKIN_UNIVERSAL are defined:

- doFileCopy
- dDocName
- dDocTitle
- dDocType
- dSecurityGroup
- dDocAuthor
- dDocAccount
- primaryFile

The GET_TABLE service is called and this parameter is defined:

tableName

2.2.2 Private Functions

These private functions are defined:

- getNativeFilePath
- checkOutByName
- checkinUniversal
- getDocInfo
- getFile
- parseResultSet

2.2.3 Sample Code

This sample is in Visual Basic.

```
' Defines a private function.
Private Function getNativeFilePath() As String
Dim idccmd As IdcCommandX
Dim str As String
Dim res
Dim dID As String, dExtension As String, dDocType As String, dDocAccount As String
dID = "2"
dExtension = "pdf"
dDocType = "acc"
dDocAccount = ""
' Builds a serialized HDA string.
str = "@Properties LocalData" + vbCrLf
str = str + "dID=" + dID + vbCrLf
str = str + "dExtension=" + dExtension + vbCrLf
str = str + "dDocType=" + dDocType + vbCrLf

2.3 Redirecting Template Page for Response Output

Sometimes it is desirable to display a page other than the default (change the delivery mechanism for the response template) after executing a CGI request (either a GET or a POST). For example, you might want to redirect the page after a login or after executing a search. One way to do this is by modifying the service call through the component architecture, and specifying a different template page. Another more flexible way to do this as needed is to specify the urlTemplate parameter, to redirect the response page to a HCSP or HCST, and reformat the results in any way you want.

This section covers the following topics:

Section 2.3.1, "Basic Concepts"

- Section 2.3.2, "Creating a HCST Page"
- Section 2.3.3, "Reformatting the Search Results Page"
- Section 2.3.4, "Additional Options"

2.3.1 Basic Concepts

You should be somewhat familiar with Idoc Script and with Dynamic Server Pages (HCST, HCSP, HCSF) before attempting this exercise. You should also be somewhat familiar with Content Server feature and component architecture. It would also be helpful to be familiar with HTML FORM objects. For more information see Oracle WebCenter Content Developer's Guide for Content Server and Oracle Fusion Middleware Configuration Reference for Oracle WebCenter Content.

2.3.2 Creating a HCST Page

As an example, we will create a HCST page that can be used as a URL template to reformat the search results. We could also create a HCSP, but for simplicity, we will use a HCST. We will name the file *test_result.hcst*, and have it contain the following text:

```
<ht.ml>
/td>
<$loop SearchResults$>
bgcolor="#E5E7D4"<$endif$>>
<a href="<$URL$>"><$dDocName$></a>
<$dDocTitle$> (<$dDocAuthor$>)
<$if doShade$><$doShade=""$><$else$><$doShade="1"$><$endif$>
<$endloop$>
</html>
```

Next, we should check this file into the Content Server instance. For simplicity, we will check it into the Public security group, with a content type of ADACCT, and the Content ID test_result. Its URL will then be something like this:

```
http://myhost/oracle/groups/public/documents/document/test_
result.hcst
```

2.3.3 Reformatting the Search Results Page

To test our new template, we will start by going to a search page. Enter in any search criteria and click Search. You should see the standard search page with your results contained in it.

Now, add this text to the end of the URL that brought you to the search results page:

```
&urlTemplate=/oracle/groups/public/documents/adacct/test_result.hcst
```

You should now see the same search results formatted in a minimalist HTML page. Note how the full URL is not used, but just the URL relative to your host computer.

If you would like the default search page to always format pages with this template, you can change the HTML FORM object on the search page to also have this field:

```
<input type=hidden name='urlTemplate'</pre>
```

```
value='/oracle/groups/public/documents/document/test_result.hcst'>
```

This can be done by creating a component that modifies the include query_ results_options to contain the sample HTML. Alternatively, the value for urlTemplate can be calculated dynamically on the search page with JavaScript, to redirect to different pages based on the metadata entered by the user.

2.3.4 Additional Options

In addition to urlTemplate, you can also use the parameters docTemplateName, docTemplateID, or RedirectUrl to change the result page. These all have different behavior, as follows:

urlTemplate: Set to the full relative URL of the host page you want to use. For example:

```
IdcService=DOC_INFO&urlTemplate=/idc1/groups/public/documents/adacct/test_
result.hcst
```

Because RedirectURL doesn't work with all service calls, and pre-6.0 versions of Content Server software have minor data pollution bugs with docTemplateName and docTemplateID, it is usually safest to use urlTemplate. However, if you change the Content Type or the Security Group of your template, then the URL will no longer be valid and will need to be updated. Also, this parameter is not recommended for overriding the template used for a 'POST' service.

- **docTemplateName**: Set to a dDocName of a template (for example, *test_result*). This parameter behaves like urlTemplate, but finds the location of the latest released web-viewable for a document with dDocName of *docTemplateName*.
- **docTemplateID**: Set to a dID of a specific revision of a template (for example, 100). Like docTemplateName, but finds the Web-viewable of a specific dID revision.
- **RedirectUrl**: Set to the last part of a CGI URL back into the Content Server (for example, IdcService=DOC_INFO&dID=<\$dID\$>). This is only for the few dozen 'POST' services that execute the action prepareRedirect, such as CHECKIN_NEW and SUBMIT_HTML_FORM.
- By using a redirect after each HTML 'POST', the response page can be safely refreshed by the end user without reissuing the post. In the definition of each of these services there is a 3:prepareRedirect:...:0:null line. The RedirectUrl overrides the results of the prepareRedirect method and allows a different URL to be used as the location for redirects. The RedirectUrl can have Idoc Script in it that will be executed just before the redirect is issued. This can create complex Idoc Script nesting, because the RediretUrl assignment will typically occur in a resource includes. For example:

```
... Standard Idoc form beginning ...
<input type=edit name=myparam value=''>
<input type=hidden name=RedirectUrl</pre>
value='<$httpCgiPath$>?<$xml('IdcService=MY_RESPONSE_TEMPLATE&dID=<$dID$>&
myparam=<$myparam$>')$>'>
... Standard Idoc form closure ...
```

Much of the Idoc Script is nested inside an Idoc literal string. This delays the execution of the script until the redirect URL is being computed. That allows the RedirectUrl to pick up the value of myparam even though the user has still to select its value.

A single quote is used on the outside and a double quote on the inside. This reduces confusion and because both HTML and Idoc Script support both single and double

quotes for quoting, it is sometimes a good idea to switch between the two for nesting constructs.

Note the usage of the *xml* function. This guarantees that the input field's value is a well-formed HTML literal string construct. In this particular case, it is not needed. But for more complex constructs it can be helpful.

Redirecting Template Page for Response Output	Redirecting	Template	Page for	r Response	Output

Customizing Services

This chapter discusses the basic structure of Oracle WebCenter Content services to aid in customizing services.

This chapter covers the following topics:

- Section 3.1, "Service Structure Overview"
- Section 3.2, "Service Example"
- Section 3.3, "Creating a Service Resource"

3.1 Service Structure Overview

This section describes how standard services are implemented in Oracle WebCenter Content Server. For information about calling services from other programs, see the chapter about integration methods in Oracle Fusion Middleware Developing with Oracle *WebCenter Content.*

A service resource is defined in an HTM file using a ResultSet table with the following three columns:

- Section 3.1.1, "Name"
- Section 3.1.2, "Attributes"
- Section 3.1.3, "Actions"

The standard Content Server services are defined in the StandardServices table in the IdcHomeDir/resources/core/tables/std_services.htm file. You can also find special-purpose services in the workflow.htm file in the same directory.

Services depend on other resource definitions to perform their functions.

- Any service that returns HTML requires a template to be specified. A common exception is the PING_SERVER service, which does not return a page to the browser.
- Most services use a query. A common exception is the SEARCH service, which sends a request directly to the search collection.

Merge rules are not required for a service resource. However, the service resource must be listed as a table in the ResourceDefinition ResultSet.

The table row displayed in Figure 3–1 is an example of a service definition.

Figure 3–1 Example of a Service Definition

<@table StandardServices@> Scripts For Standard Services			
Name	Attributes	Actions	
DELETE_DOC	DocService 4 MSG_PAGE mill documents !csUnableToDelete Item(dDocName)	5:QdocInfo:DOC_INFO:6:!csUnableToDeleteItem(dDocName)!csRevisionNoLongerExists 3:checkParametersAgainstResultSet:DOC_INFO,dRevClassID,!csRevClassIDMismatch, dDocName,!csDocNameMismatch:0:!csUnableToDeleteItem(dDocName) 3:checkSecurity:DOC_INFO:0:mull 3:checkWorkflow:WF_INFO,isNotActiveBasic, DOC_INFO:0:!csUnableToDeleteItem(dDocName)!csItemIsInWorkflow(dWfName) 3:docHistoryInfo:Delete Document,IdocHistory:1:mull 5:QrevisionsByClass:REVISIONS:0:!csDeleteUnableToAccessRevList(dDocName) 3:markDocDeleted::0:!csUnableToDeleteItem(dDocName) 3:doWorkflowAction:deleteCriteriaDoc:0:mull 3:deleteDoc:REVISIONS:0:mull 3:deleteDocumentSubscription:deleteDoc,REVISIONS:8:mull 3:setStatusMessage:delete_doc:0:mull	
<@end@>			

3.1.1 Name

The Name column in the StandardServices table defines the name for each service. For client-side service requests, this is the name called in Section 2.1.5, "Calling Services Using Persistent URLs". For standard web requests, this is almost always the URL to the Content Server web page.

Figure 3–2 The Name Column of the DELETE_DOC Service Definition

<@table StandardServices@> Scripts For Standard Services				
Name	Attributes Actions			
d elete _doc	!csUnableToDelete	5:QdocInfo:DOC_INFO:6:!csUnableToDeleteItem(dDocName)!csRevisionNoLongerExists 3:checkParametersAgainstResultSet:DOC_INFO,dRevClassID,!csRevClassIDMismatch, dDocName,!csDocNameMismatch:0:!csUnableToDeleteItem(dDocName) 3:checkSecurity:DOC_INFO:0:mull 3:checkWorkflow:WF_INFO,isNotActiveBasic, DOC_INFO:0:!csUnableToDeleteItem(dDocName)!csItemIsInWorkflow(dWfName) 3:docHistoryInfo:Delete Document,IdocHistory:1:mull 5:QrevisionsByClass:REVISIONS:0:!csDeleteUnableToAccessRevList(dDocName) 3:markDocDeleted::0:!csUnableToDeleteItem(dDocName) 3:doWorkflowAction:deleteCriteriaDoc:0:mull 3:deleteDoc:REVISIONS:0:mull 3:deleteDocumentSubscription:deleteDoc,REVISIONS:8:mull 3:setStatusMessage:delete_doc:0:mull		
<@end@>				

3.1.2 Attributes

The Attributes column in the StandardServices table defines aspects of each service, as discussed in the following sections:

- Section 3.1.2.1, "Service Class"
- Section 3.1.2.2, "Access Level"
- Section 3.1.2.3, "Template Page"
- Section 3.1.2.4, "Service Type"
- Section 3.1.2.5, "Subjects Notified"

Section 3.1.2.6, "Error Message"

MSG_ DELETE_DOC docum		Actions 5:QdocInfo:DOC_INFO:6:!csUnableToDeleteItem(dDocName)!csRevisionNoLongerExists 3:checkParametersAgainstResultSet:DOC_INFO,dRevClassID,!csRevClassIDMismatch, dDocName,!csDocNameMismatch:0:!csUnableToDeleteItem(dDocName)
MSG_ DELETE_DOC docum		3:checkParametersAgainstResultSet:DOC_INFO,dRevClassID,!csRevClassIDMismatch,
Item(d	-PAGE mill ments nableToDelete (dDocName)	3:checkSecurity:DOC_INFO:0:mill 3:checkWorkflow:WF_INFO,isNotActiveBasic, DOC_INFO:0:lcsUnableToDeleteItem(dDocName)!csItemIsInWorkflow(dWfName) 3:docHistoryInfo:Delete Document,IdocHistory:1:mill 5:QrevisionsByClass:REVISIONS:0:lcsDeleteUnableToAccessRevList(dDocName) 3:markDocDeleted::0:lcsUnableToDeleteItem(dDocName) 3:doWorkflowAction:deleteCriteriaDoc:0:mill 3:deleteDoc:REVISIONS:0:mill 3:deleteDocumentSubscription:deleteDoc,REVISIONS:8:mill 3:setStatusMessage:delete_doc:0:mill

3.1.2.1 Service Class

The *service class* attribute specifies the Java class object that the service can access. The classpath prefix intradoc.service is assumed unless a full path is given. The service class determines, in part, what actions can be performed by the service. The possible service classes are:

Service Class	Description
ArchiveService	Performs functions related to archiving.
BatchService	Performs functions related to batch loading.
ChunkedService	Performs functions related to HTTP file chunking for the upload and download of applets.
DocService	Performs actions on documents. Examples are checkin, checkout, document information, and subscription services.
DocProfileService	Performs actions on document profiles, such as adding, editing, and deleting profiles.
FileService	Retrieves files from the Content Server.
IndexerService	Performs functions related to indexing for search engine maintenance.
ListBoxService	Downloads lists from the Content Server. For example, lists of users, dependent choice lists, and so forth.
LocaleService	Performs functions specific to a user's location or environment (for example, used in internationalization to identify a user's location and provide string files in the appropriate language).
MetaService	Manages metadata fields.
PageHandlerService	Manages Library Web pages (created by Web Layout Editor).
PageRequestService	Retrieves an HTML page.
ProjectService	Manages Publisher projects.

Service Class	Description	
ProviderManagerService	Manages providers (an Application Programming Interface, or API, that establishes connection to outside entities).	
SchemaService	Manages the server-side publishing of JavaScript files of database tables, such as option lists.	
SearchService	Performs functions related to searching.	
Service	Performs a general service.	
UserService	Manages users.	
WorkflowService	Manages workflows.	
WorkflowTemplateService	Manages workflow templates.	
intradoc.admin.AdminService	Performs functions through the Admin Server. Generally called internally by the Content Server itself. These services are very complicated, and failing to call them correctly can result in the loss or corruption of Content Server data. Therefore, it is strongly recommends that you <i>do not</i> use or modify these services.	

In the example of the DELETE_DOC service, the service class is DocService:

DocService 4 MSG_PAGE null documents !csUnableToDeleteItem(dDocName)

3.1.2.2 Access Level

The service security model is similar to the document security model used throughout the Content Server. The *access level* attribute assigns permission levels to the service. Any user attempting to execute the service must have at least this permission.

Security access is stored as bit flags. Generally only one privilege out of READ, WRITE, DELETE, or ADMIN is assigned to a service. The access level number is the sum of the following possible bit flags:

Bit Flag	Permission	Description
1	READ_PRIVILEGE	Read permission is required for the security group referenced in the service.
2	WRITE_PRIVILEGE	Write permission is required for the security group referenced in the service.
4	DELETE_PRIVILEGE	Delete permission is required for the security group referenced in the service.
8	ADMIN_PRIVILEGE	Admin permission is required for the security group referenced in the service.
16	GLOBAL_PRIVILEGE	The service calls the global security check to determine if the current user has permission to execute the service. The check validates if the <i>admin</i> role is required or if the user only needs a given permission (Read, Write, or Delete) on at least one security group.
32	SCRIPTABLE_SERVICE	Scriptable services don't require parameter input, so they can be called with the executeService function on dynamic server pages.

If a service is acting on a document, the user must have READ, WRITE, DELETE, or ADMIN permission (in that order) for that document's security group to execute the service. For example, to subscribe to a document the user only needs READ permission for that document's security group. However, to check in a new document the user would also need WRITE permission for that document's security group.

If the service does not act on a specific document (such as GET_USER_INFO, CHECKIN NEW FORM, and so forth), the GLOBAL PRIVILEGE bit flag should be set along with at least one more permission bit flag. The user must have that level of permission in at least one security group to execute the service

Note: A service should never just specify the GLOBAL_PRIVILEGE bit flag alone. At least one more permission bit flag should be specified.

SCRIPTABLE_SERVICE permission means that the service can be executed through the executeService IdocScript function. This should be restricted to read-only services, such as GET_SEARCH_RESULTS, GET_USER_INFO, and so forth.

The following is a complete list of all access levels and their meanings:

- 0: no access allowed
- 1: Read permission required
- 2: Write permission required
- 3: Read/write permission required
- 4: Delete permission required
- 8: Admin permission required
- 16: Global permission required
- 17: Global and read permission required
- 18: Global and write permission required
- 19: Global and read/write permission required
- 23: Global, read/write/delete permission required
- 24: Global, admin permission required
- 32: Scriptable permission required
- 33: Scriptable and read permission required
- 34: Scriptable and write permission required
- 40: Scriptable and admin permission required
- 49: Scriptable and global, read permission required
- 50: Scriptable, global, write permission required
- 51: Scriptable, global, read/write permission required
- 56: Scriptable, global, admin permission required

In the example of the DELETE_DOC service, the access level is 4, meaning that the user must have DELETE_PRIVILEGE to execute the service:

DocService 4 MSG PAGE null documents !csUnableToDeleteItem(dDocName)

As another example, the access level for the ADD_ALIAS service is 24, meaning that the user must have ADMIN_PRIVILEGE and GLOBAL_PRIVILEGE to execute the service:

ADD_ALIAS UserService 24 null null aliases !csUnableToAddAlias

For details about user accounts and roles permissions see Oracle Fusion Middleware Administering Oracle WebCenter Content.

3.1.2.3 Template Page

The *template page* attribute specifies the template that displays the results of the service. If the results of the service do not require presentation (such as the PageHandlerService type), this attribute is null.

Templates are a combination of HTML and Idoc Script. The Idoc Script is used to format the HTML and display the data in the response. The template page name is mapped to an HTM file in the

IdcHomeDir/components/Folders/resources/templates/templates.hda file:

- Most template pages are mapped in the IntradocTemplates ResultSet.
- Search template pages are mapped in the SearchResultTemplates ResultSet.

In the example of the DELETE DOC service, the template page that presents the results of the service is MSG_PAGE, which is mapped to the msg_page.htm file:

DocService 4 MSG PAGE null documents !csUnableToDeleteItem(dDocName)

3.1.2.4 Service Type

The *service type* attribute specifies if the service is to be executed as a SubService inside another service. You cannot call a second service from a main service unless the second service is a SubService.

Service Type	Description	
SubService	The service is a SubService that is executed only inside another service.	
null	The service is not a SubService.	

For example, the UPDATE_DOCINFO service executes the UPDATE_DOCINFO_SUB, which has the service type of SubService.

In the example of the DELETE_DOC service, the service is not a SubService, so the service type is null:

DocService 4 MSG_PAGE null documents !csUnableToDeleteItem(dDocName)

3.1.2.5 Subjects Notified

The subjects notified attribute specifies the subjects (subsystems) to be notified by the service. If a service changes one or more subjects, it must notify the remote sources (such as database tables) that cached information has been updated.

For example, if you do an IsJava=1 call for any service, you will always see changedSubjects and refreshSubjects in the response. These subjects are used to notify the client when the state of the Content Server instance has changed. For example, they notify the client when a new user is added to the system, when a new document has been checked in, when custom metadata has been changed, and so on.

This allows external applications to refresh their data when the Content Server state changes. It is also the underlying mechanism behind keeping the Content Server administration applets up-to-date with the number of users, document types, and documents in the system. For example, if you launch the Repository Manager and then check in a new document, you will (in a few seconds) see that item appear in the applet.

The subjects notified string is a comma-delimited list of changed subjects. (If no subjects are notified, this attribute is null.) For example, the value of the subjects notified attribute for the EDIT_METADEF service is metadata, dynamic queries. This service modifies a metadata field, and subsequently informs the system that the metadata and dynamicqueries subjects have changed.

Possible subjects are:

Subject	Must be notified of changes to:	
accounts	Predefined accounts	
aliases	User aliases	
collections	Archiver collections	
config	Global configuration information	
docformats	File formats	
doctypes	Content Types	
documents	New content items, revised content items, or updated content item metadata	
dynamicqueries	Dynamic queries that retrieve the list of metadata fields from the database	
indexerstatus	Indexer status	
indexerwork	Content items; specifies that an indexing update cycle is required	
metadata	Metadata fields	
metaoptlists	Metadata field option lists	
pagelist	Library (Web Layout Editor) pages	
renditions	Additional renditions (from XML Converter, Thumbnails, and so forth)	
reports	Report data sources	
schema	Schema definitions	
searchapi	Connection to the indexing search engine	
subscriptiontypes	Subscription types	
templates	Search result templates (which are configured from Web Layout Editor)	
usermetaoptlists	User information field option lists	
users	User information	
wfscripts	Workflow event scripts	
wftemplates	Workflow templates	
workflows	Workflows	

In the example of the DELETE_DOC service, the documents subject is the only subject notified:

DocService 4 MSG_PAGE null documents !csUnableToDeleteItem(dDocName)

3.1.2.6 Error Message

The *error message* attribute defines the error message that is returned by the service if no action error message overrides it. This can be either an actual text string or a reference to a locale-sensitive string. For more information, see Oracle Fusion Middleware Developing with Oracle WebCenter Content.

In the example of the DELETE_DOC service, the error message is a localized string:

DocService 4 MSG_PAGE null documents !csUnableToDeleteItem(dDocName)

3.1.3 Actions

The Actions column defines one or more steps taken to process the service. An action is an operation to be performed as part of a service script. Actions can execute SQL statements, perform a query, run code, cache the results of a query, or load an option list. The data returned by one action can alter the behavior of later actions.

An action is defined as a list of colon-separated segments, using the following format:

type:name:parameters:control mask:error message

See the following sections for more information:

- Section 3.1.3.1, "Action Type"
- Section 3.1.3.2, "Action Name"
- Section 3.1.3.3, "Action Parameters"
- Section 3.1.3.4, "Action Control Mask"
- Section 3.1.3.5, "Action Error Message"

Note: In an HTM resource file that defines services, the
br> tags in the Actions column are for browser display purposes only, so they are optional. However, the
tag must occur immediately after the list of actions, without a line break in between.

Figure 3–4 The Actions Column of the DELETE_DOC Service Definition

<@table StandardServices@> Scripts For Standard Services			
Name	Attributes	Actions	
DELETE_DOC	documents !csUnableToDelete Item(dDocName)	5:QdocInfo:DOC_INFO:6:lcsUnableToDeleteItem(dDocName)!csRevisionNoLongerExists 3:checkParametersAgainstResultSet:DOC_INFO,dRevClassID,!csRevClassIDMismatch, dDocName,!csDocNameMismatch:0:!csUnableToDeleteItem(dDocName) 3:checkSecurity:DOC_INFO:0:mull 3:checkWorkflow:WF_INFO,isNotActiveBasic, DOC_INFO:0:!csUnableToDeleteItem(dDocName)!csItemIsInWorkflow(dWfName) 3:docHistoryInfo:Delete Document,IdocHistory:1:mull 5:QrevisionsByClass:REVISIONS:0:!csDeleteUnableToAccessRevList(dDocName) 3:markDocDeleted::0:!csUnableToDeleteItem(dDocName) 3:doWorkflowAction:deleteCriteriaDoc:0:mull 3:deleteDoc:REVISIONS:0:mull 3:deleteDocumentSubscription:deleteDoc,REVISIONS:8:mull 3:setStatusMessage:delete_doc:0:mull	
<@end@>			

3.1.3.1 Action Type

The first segment of an action statement defines the type of action.

- **Action Type #**: used to identify the action type in the service resource file.
- **Component Wizard Identifier**: used to identify the action type in the Component Wizard. In the service resource file, the action type is represented as a number.
- **Java Constant**: used to identify the action type in Java code.

The possible action types are:

Action Type #	Component Wizard Identifier	Java Constant	Description
1	Select query	QUERY_TYPE	Executes a predefined SQL database query to retrieve information (read-only action) and then immediately discards the results. For example, a select query might be used to see if a specific dDocName (Content ID) already exists in the database. The query is specified by the Action Name of the action.
2	Execute query	EXECUTE_TYPE	Executes a predefined SQL database query to delete, add, or update information in the database.
3	Java method	CODE_TYPE	Specifies a code module that is a part of the Java class implementing the service.
4	Load option list	OPTION_TYPE	Loads an option list stored in the system. This is a deprecated action type.
5	Select cache query	CACHE_RESULT_TYPE	Executes an SQL database query to retrieve information (read-only action) and then stores the results for later use. For example, a select cache query might be used to find all users subscribed to a content item and save the list for display to consumers. The query is specified by the Action Name of the action.

In the example of the first action of the DELETE_DOC service, the action is a *Select cache query* type (5):

 $\textbf{5}: \texttt{QdocInfo:DOC_INFO:6:!csUnableToDeleteItem(dDocName)!csRevisionNoLongerExists}$

3.1.3.2 Action Name

The second segment of an action statement defines the name of the action.

- For the Java method action type, the action name is the Java method.
- For the *Load option list* action type, the action name is the option list.
- For the *Select query*, *Execute query*, and *Select cache query* action types, the action name is the query name. For standard Content Server services, typically uses a prefix to identify the action performed on the database. The possible prefixes for queries are:

Query Prefix	Description	
Q	Query (retrieve) information from the database (read-only action).	
D	Delete information from the database.	
I	Insert (add) information in the database.	
U	Update information in the database.	

In the example of the first action of the DELETE_DOC service, the name of the action is *QdocInfo*. This specifies that a read-only query (Q) will be performed on the database:

5:QdocInfo:DOC_INFO:6:!csUnableToDeleteItem(dDocName)!csRevisionNoLongerExists

3.1.3.3 Action Parameters

The third segment of an action statement specifies the parameters that the action requires. If no parameters are required, this segment is left empty (two colons appear in place of the parameters).

- If the action requires parameters, enter the parameters as a comma-delimited list.
- For the Select cache query action type, the first parameter is the name that the action assigns to the ResultSet returned from the query. This ResultSet can then be referenced in the template page.
- For the *Load option list* action type, the parameters are optional. However, if parameters are given, the first parameter is the key under which the option list is loaded, and the second parameter is the selected value for display on an HTML page.

In the example of the first action of the DELETE_DOC service, the ResultSet that is returned from the service query will be named *DOC_INFO*:

5:QdocInfo:DOC_INFO:6:!csUnableToDeleteItem(dDocName)!csRevisionNoLongerExists

3.1.3.4 Action Control Mask

The fourth segment of an action statement is an optional bit flag that controls the results of queries to the Content Server database.

- **Control Mask Bit Flag:** Used to identify the control mask in the service resource file. The control mask number used in the service resource file represents the sum of the bit flags for all controls being applied. For standard Content Server services, the control mask bit flag is typically used instead of the control mask string value.
- Control Mask String Value: Used to identify the control mask in the service resource file. For multiple control masks, the string values are placed in a

- comma-delimited list. For custom services, the string value is used instead of the control mask bit flag.
- **Component Wizard Identifier**: Used to identify the control mask in the Component Wizard. In the service resource file, the control mask is represented by either the sum of its bit flags (standard Content Server services), or a comma-delimited list of bit flag string values (custom services).
- **Java Constant**: Used to identify the control mask in the Java code.

The possible control masks are:

Control Mask Bit Flag	Control Mask String Value	Component Wizard Identifier	Java Constant	Description
0	-	-	-	No control is applied.
1	ignoreError	Ignore error	CONTROL_IGNORE_ERROR	Do not terminate the service on error.
2	mustExist	Check result non-empty	CONTROL_MUST_EXIST	At least one record must be returned by the query, or the action fails. Used only for the <i>Select query</i> and <i>Select cache query</i> action types.
4	beginTran	Begin transaction	CONTROL_BEGIN_TRAN	Starts a database transaction.
8	commitTran	Commit transaction	CONTROL_COMMIT_TRAN	Concludes a database transaction.
16	mustNotExist	Check result empty	CONTROL_MUST_NOT_EXIST	Query must not return any rows, or the action fails. Used only for the <i>Select query</i> and <i>Select cache query</i> action types.
32	retryQuery	Retry query	CONTROL_RETRY QUERY	When the action type is set to <i>Execute query</i> and the query fails, the error will be logged. After three seconds, the query will be run again. If the query fails three times, the service will fail. Used mostly for checking in content. No longer used.
64	doNotLog	Do not log	CONTROL_DO_NOT_LOG	When the action type is set to <i>Select query</i> and the query fails, the service will fail. However, the error will NOT be logged in the system logs. Used internally by when developing components as a debug flag for testing.

Note: The *Check result non-empty* and *Check result empty* control masks are used only for the Select query and Select cache query action types. See Section 3.1.3.1, "Action Type."

In the example of the first action of the DELETE_DOC service, the control mask value is 6, which means that at least one record must be returned by the query (2), and the action starts a database transaction (4):

5:QdocInfo:DOC_INFO:6:!csUnableToDeleteItem(dDocName)!csRevisionNoLongerExists

If this was a custom service created using the Component Wizard, the sum of the control mask bit flags would be replaced by a comma-delimited list of the bit flag string values:

```
5:QdocInfo:DOC_INFO:mustExist, beginTran:!csUnableToDeleteItem(dDocName)
!csRevisionNoLongerExists
```

3.1.3.5 Action Error Message

The fifth segment of an action statement defines the error message to be displayed if this action fails. This can be either an actual text string or a reference to a locale-sensitive string. For more information, see Oracle Fusion Middleware Developing with Oracle WebCenter Content.

- An action error message overrides the error message provided as an attribute of the service.
- If the error message for an action is not null, it becomes the error message for the remainder of the actions in the service.
- If the error message for an action is null, the error message remains unchanged from the previous action.
- String references are preceded by an exclamation point.

In the example of the first action of the DELETE DOC service, the error message is a combination of two localized strings:

5:QdocInfo:DOC_INFO:6:!csUnableToDeleteItem(dDocName)!csRevisionNoLongerExists

3.2 Service Example

The DOC_INFO service provides a good example of how services, queries, and templates work together. This section covers the following topics:

- Section 3.2.1, "DOC_INFO Service Definition"
- Section 3.2.2, "DOC_INFO Attributes"
- Section 3.2.3, "DOC_INFO Actions"
- Section 3.2.4, "DOC_INFO Template"

3.2.1 DOC INFO Service Definition

This section shows details of the DOC_INFO service definition from the *IdcHomeDir*/resources/core/tables/std_services.htm file.

The following is an example of the DOC_INFO service definition, displayed in a text editor:

```
<@table StandardServices@>
<caption><strong>Scripts For Standard Services</strong></caption>
   NameAttributesActions
<t.r>
  DOC_INFO
   DocService
     33
     DOC INFO
     null1
     null<br>
```

```
!csUnableToGetRevInfo
   >5:QdocInfo:DOC_INFO:2:!csItemNoLongerExists2
3:mapNamedResultSetValues:DOCINFO,dStatus,dStatus,dDocTitle,dDocTitle:0:null
       3:checkSecurity:DOC_INFO:0:!csUnableToGetRevInfo2(dDocName)
       3:getDocFormats:QdocFormats:0:null
       3:getURLAbsolute::0:null
       3:getUserMailAddress:dDocAuthor,AuthorAddress:0:null
       3:getUserMailAddress:dCheckoutUser,CheckoutUserAddress:0:null
       3:getWorkflowInfo:WF_INFO:0:null
       3:getDocSubscriptionInfo:QisSubscribed:0:null
       5:QrevHistory:REVISION_HISTORY:0:!csUnableToGetRevHistory(dDocName)
<@end@>
```

Figure 3-5 Example of the DOC_INFO Service Definition

«@table StandardServices@> Scripts For Standard Services				
Name	Attributes	Actions		
DOC_INFO	DocService 33 DOC_INFO mill mill !csUnableToGetRevInfo	5:QdocInfo:DOC_INFO:2:!csItemNoLongerExists2 3:mapNamedResultSetValues:DOC_INFO,dStatus,dStatus,dDocTitle,dDocTitle:0:mill 3:checkSecurity:DOC_INFO:0:!csUnableToGetRevInfo2(dDocName) 3:getDocFormats:QdocFormats:0:mill 3:getURLAbsolute::0:mill 3:getUserMailAddress:dDocAuthor,AuthorAddress:0:mill 3:getUserMailAddress:dCheckoutUser,CheckoutUserAddress:0:mill 3:getWorkflowInfo:WF_INFO:0:mill 3:getDocSubscriptionInfo:QisSubscribed:0:mill 5:QrevHistory:REVISION_HISTORY:0:!csUnableToGetRevHistory(dDocName)		

3.2.2 DOC_INFO Attributes

The following table describes the attributes of the DOC_INFO service:

Attribute	Value	Description
Service class	DocService	This service is providing information about a content item.
Access level	33	1 = The user requesting the service must have Read permission on the content item.
		32 = This service can be executed with the executeService Idoc Script function.
Template page	DOC_INFO	This service uses the DOC_INFO template (doc_info.htm file). The results from the actions will be merged with this template and presented to the user.
Service type	null	This service is not a SubService.
Subjects notified	null	No subjects are affected by this service.

Attribute	Value	Description
Error Message	!csUnableToGetRevInfo	If this service fails on an English Content Server system, it returns the error message string:
		Unable to retrieve information about the revision

3.2.3 DOC INFO Actions

The DOC_INFO service executes the following ten actions.

3.2.3.1 Action 1 Definition and Description

Action 1 takes the following form:

- Action 1 5:QdocInfo:DOC_INFO:2:!csItemNoLongerExists2
- 5: Select cache query action that retrieves information from the database using a query.
- **QDocInfo**: This action retrieves content item information using the QDocInfo query in the query.htm file.
- **DOC_INFO**: The result of the query is assigned to a ResultSet called DOC_INFO and stored for later use.
- 2: The Check result non-empty control mask specifies that the query must return a record, or the action fails.
- !csItemNoLongerExists2: If this action fails on an English Content Server system, it returns the error message string:

This content item no longer exists

3.2.3.2 Action 2 Definition and Description

Action 2 takes the following form:

Action 2:

3:mapNamedResultSetValues:DOCINFO,dStatus,dStatus,dDocTitle,dDocTitle:0:nu

- 3: Java method action specifying a module that is a part of the Java class implementing the service.
- mapNamedResultSetValues: This action retrieves the values of dStatus and dDocTitle from the first row of the DOC_INFO ResultSet and stores them in the local data. (This increases speed and ensures that the correct values are used.)
- DOC_INFO,dStatus,dStatus,dDocTitle,dDocTitle: Parameters required for the mapNamedResultSetValues action.
- **0** : No control mask is specified.
- **null**: No error message is specified.

3.2.3.3 Action 3 Definition and Description

Action 3 takes the following form:

- Action 3: 3:checkSecurity:DOC_INFO:0:!csUnableToGetRevInfo2(dDocName)
- 3: Java method action specifying a module that is a part of the Java class implementing the service.

- checkSecurity : This action retrieves the data assigned to the DOC_INFO ResultSet and evaluates the assigned security level to verify that the user is authorized to perform this action.
- **DOC_INFO**: ResultSet that contains the security information to be evaluated by the *checkSecurity* action.
- **0**: No control mask is specified.
- !csUnableToGetRevInfo2(dDocName): If this action fails on an English Content Server system, it returns the error message string:

Unable to retrieve information for '{dDocName}.'

3.2.3.4 Action 4 Definition and Description

Action 4 takes the following form:

- **Action 4**: 3:getDocFormats:QdocFormats:0:null
- 3: Java method action specifying a module that is a part of the Java class implementing the service.
- **getDocFormats**: This action retrieves the file formats for the content item using the *QdocFormats* query in the query.htm file. A comma-delimited list of the file formats is stored in the local data as dDocFormats.
- **QdocFormats**: Specifies the query used to retrieve the file formats.
- **0** : No control mask is specified.
- **null**: No error message is specified.

3.2.3.5 Action 5 Definition and Description

Action 5 takes the following form:

- Action 5: 3:getURLAbsolute::0:null
- 3: Java method action specifying a module that is a part of the Java class implementing the service.
- getURLAbsolute: This action resolves the URL of the content item and stores it in the local data as DocUrl.
- **blank**: This action takes no parameters.
- **0** : No control mask is specified.
- **null**: No error message is specified.

3.2.3.6 Action 6 Definition and Description

Action 6 takes the following form:

- $\textbf{Action 6:} \ 3: get User Mail Address: d Doc Author, Author Address: 0: null$
- 3: Java method action specifying a module that is a part of the Java class implementing the service.
- getUserMailAddress: This action resolves the e-mail address of the content item author.
- dDocAuthor, AuthorAddress: This action passes dDocAuthor and AuthorAddress as parameters.
- **0**: No control mask is specified.

null: No error message is specified.

3.2.3.7 Action 7 Definition and Description

Action 7 takes the following form:

- Action 7: 3:getUserMailAddress:dCheckoutUser,CheckoutUserAddress:0:null
- 3: Java method action specifying a module that is a part of the Java class implementing the service.
- getUserMailAddress: This action resolves the e-mail address of the user who has the content item checked out.
- dCheckoutUser,CheckoutUserAddress: This action passes dCheckoutUser and CheckoutUserAddress as parameters.
- **0** : No control mask is specified.
- **null**: No error message is specified.

3.2.3.8 Action 8 Definition and Description

Action 8 takes the following form:

- **Action 8:** 3:getWorkflowInfo:WF_INFO:0:null
- 3: Java method action specifying a module that is a part of the Java class implementing the service.
- **getWorkflowInfo**: This action evaluates whether the content item is part of a workflow. If the WF_INFO ResultSet exists, workflow information is merged into the DOC_INFO template.
- **WF_INFO**: This action passes WF_INFO as a parameter.
- **0**: No control mask is specified.
- **null**: No error message is specified.

3.2.3.9 Action 9 Definition and Description

Action 9 takes the following form:

- Action 9: 3:getDocSubscriptionInfo:QisSubscribed:0:null
- 3: Java method action specifying a module that is a part of the Java class implementing the service.
- **getDocSubscriptionInfo**: This action evaluates if the current user has subscribed to the content item:
 - If the user is subscribed, an **Unsubscribe** button is displayed.
 - If the user is not subscribed, a **Subscribe** button is displayed.
- **QisSubscribed**: Specifies the query used to retrieve the subscription information.
- **0** : No control mask is specified.
- null: No error message is specified.

3.2.3.10 Action 10 Definition and Description

Action 10 takes the following form:

Action 10:

5:QrevHistory:REVISION_HISTORY:0:!csUnableToGetRevHistory(dDocName)

- 5: Select cache query action that retrieves information from the database using a
- **QrevHistory**: This action retrieves revision history information using the *QrevHistory* query in the query.htm file.
- **REVISION_HISTORY**: The result the query is assigned to a ResultSet called REVISION_HISTORY. The DOC_INFO template loops on this ResultSet to present information about each revision.
- **0** : No control mask is specified.
- !csUnableToGetRevHistory(dDocName) : If this action fails on an English Content Server system, it returns the error message string:

```
Ubpnable to retrieve revision history for ''{dDocName}.''
```

3.2.4 DOC_INFO Template

The template page for the DOC_INFO service is the DOC_INFO template. It is important to know what is happening between the files so that you can understand the interactions between the template page and the actions performed in a service.

The definition for the content that the doc_info.htm template contains is located in the IdcHomeDir/components/Folders/resources/std_page.htm file. Code from both files appear in the following markup section:

Markup from the IdcHomeDir/resources/core/templates/doc_info.htm file:

```
<!DOCTYPE HTML PUBLIC "-//IETF//DTD HTML//EN">
<html>
<head>
<$include std_info_html_head_declarations$>
</head>
<$include info_body_def$>
<$include info_page_content$>
</body>
</html>
```

Markup from the IdcHomeDir/components/Folders/resources/std_ page.htm file that defines what will appear in the doc_info.htm template:

```
<@dynamichtml info_page_content@>
<$include std_page_begin$>
<$include std_header$>
<!-- Do a loop on DOC_INFO so that all substitution tags will use DOC_INFO as
their first place to find their values. Otherwise their is confusion between
this result set and the REVISION_HISTORY table that comes later. For example
'dStatus' is a value in both tables-->
<$loop DOC_INFO$>
<$if AllowPrimaryMetaFile and isTrue(AllowPrimaryMetaFile) and</pre>
isTrue(dFormat like "*idcmeta*")$>
<$showPrimaryMetaFileFields = "1"$>
<$endif$>
<$include doc_info_notify_data$>
>
```

```
<caption align=top><h4 class=pageTitle><$pageTitle$></caption>
<$include special_checkin_fields1$>
<$include std_revision_label_field$>
<$include std_document_type_field$>
<$include std_document_title_field$>
<$include author_checkin_field$>
<$include std_meta_fields$>
<$include security_checkin_fields$>
<$include checkout_author_info_field$>
<$if IsStagingDoc$>
<$include doc_date_fields$>
<$endif$>
<$fieldName = "dStatus", fieldCaption = "Status"$><$include std_displayonly_</pre>
field$>
<$if HasOriginal$>
<$fieldName = "dDocFormats", fieldCaption = "Formats"$><$include std_display_</pre>
<$endif$>
<$include workflow_list_for_doc$>
<$if HasUrl$>

3.3 Creating a Service Resource

There are two ways to create a service resource for use with a custom component:

- Section 3.3.1, "Creating a Custom Service Manually"
- Section 3.3.3, "Creating a Custom Service using Component Wizard"

Note: For more information about custom components, see *Oracle Fusion Middleware Developing with Oracle WebCenter Content.*

3.3.1 Creating a Custom Service Manually

To create a custom service resource manually:

- Section 3.3.2, "Define the service in an HTM file".
- Section 3.3.2.1, "Load the service in the custom component HDA file".

3.3.2 Define the service in an HTM file

The HTM file must include a table that is identical in structure to the StandardServices table. See Section 3.1, "Service Structure Overview."

Make a copy of the std_services.htm file, place it in your custom component's /resources directory, and rename the file to avoid confusion. For example:

/custom/my_component/resources/my_services.htm

- Change the name of the StandardServices table to a new name. For example: <@table MyServices@>
- **2.** Delete all of the rows in the table except for a service that is similar to the one you want to create.
- **3.** Edit the entries in the Name, Attributes, and Actions columns.
- **4.** Save and close the file.

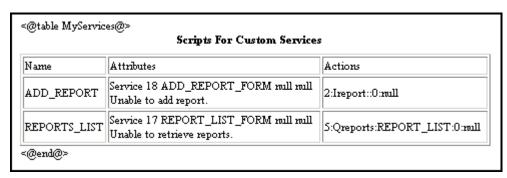

For example, the following HTM file shows two custom services named ADD_ REPORT and REPORTS_LIST:

Here is an example of a custom services HTM file, displayed in a text editor.

```
<HTML>
<HEAD>
<META HTTP-EQUIV='Content-Type' content='text/html; charset=iso-8859-1'>
<TITLE>Custom Scripted Services</TITLE>
</HEAD>
<BODY>
<@table MyServices@>
<caption><strong>Scripts For Custom Services
```

```
</strong></caption>
<t.r>
NameAttributesActions
ADD REPORT
Service
18
ADD_REPORT_FORM
null
null<br>>
Unable to add report.
2:Ireport::0:null
</t.r>
REPORTS_LIST
Service
17
REPORT_LIST_FORM
null
null<br>
Unable to retrieve reports.
5:Qreports:REPORT_LIST:0:null
<@end@>
<br><br><br>>
</BODY>
</HTML>
```

Figure 3-6 Example of Custom Services HTM File, Displayed in a Web Browser

3.3.2.1 Load the service in the custom component HDA file

- 1. Open the component definition (glue) file of the custom component in a text editor. For example, DomainHome/ucm/cs/custom/my_component/my_ component.hda.
- 2. Add the new HTM file to the ResourceDefinition ResultSet. For example:

```
@ResultSet ResourceDefinition
type
filename
tables
loadOrder
service
resources/my_services.htm
MyServices
```

1 @end

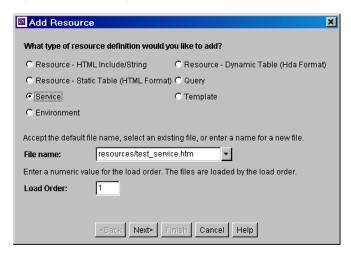

3. Save the file.

3.3.3 Creating a Custom Service using Component Wizard

To create a service resource using the Component Wizard:

- In the Component Wizard, open the component the resource will be created for.
- On the Resource Definition tab, click **Add**.

Figure 3-7 Defining a New Custom Service

- In the Add Resource window, select the **Service** option.
- Enter the file name for the resource file. The default file name is resources/componentname_service.htm.

If a resource file has been created for services, you can append the new service table to the existing file by selecting the file name. Any changes you make to the load order will apply to the entire resource file.

To create a new resource file with a different file name, enter the file name. For example, *my_services.htm*.

If you want the new resource file to be loaded in a particular order, enter the number in the Load Order field.

Note: Unless you have a particular reason for the resource file to be loaded after other resources, you should leave the load order set to 1.

4. Click Next.

Figure 3-8 Defining a New Service Table

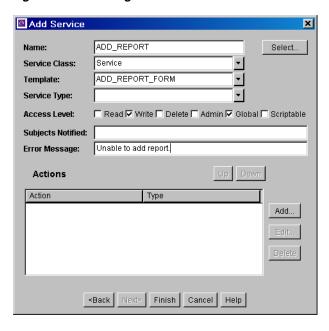

In the Add Service Table Information, enter a name for the service table.

It is a good idea to leave the name of the component as a prefix. For example, My_{\perp} Component_Services.

Each service table in a component must have a unique name, even if the tables are in different resource files.

2. Click Next.

Figure 3-9 Defining Service Attributes

- In the Add Service window, enter the service attributes directly, or start with an existing service definition as follows:
 - Click **Select**. A list of commonly used services is displayed.
 - Select the **Show** All check box to show the entire list of predefined services.
 - Select a service from the list. To view details about a service, highlight the service name and click Preview.

Tip: To view the online help for the selected service, click the **Help** button on the Preview Information for Service service_name dialog.

d. Click **OK**. The service attributes and actions are filled in.

Note: If you do not change the name of the service and this component is loaded last, the custom service will override the standard service and any other custom services with the same name.

- **e.** Edit the service attributes as necessary.
- Enter the actions as necessary.
 - Actions must appear in the Actions list in order of execution. Use the **Up** and **Down** buttons to move the selected action.
 - To add an action, click **Add**. Enter the action definition and click **OK**.
 - To edit an action, select the action and click **Edit**. Modify the action definition and click OK.
 - To remove an action, select the action and click **Delete**.

Figure 3-10 Defining an Action

- 1. Click Finish.
- A dialog box prompts you to launch the text editor to continue editing. Click **Yes** to open the resource file in the text editor. Click No to return to the Component Wizard.

The service resource file now appears in the Custom Resource Definition list, and the service table appears in the Table Name list in the right pane.

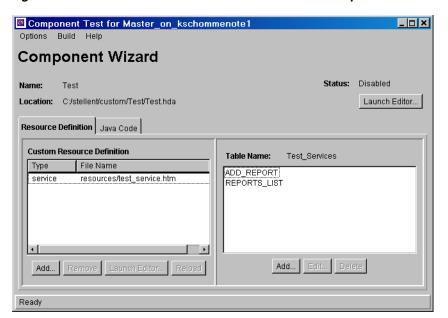

Figure 3–11 Custom Service Resource Defined in the Component Wizard

Core Content Server Services

This chapter describes the core services available for Oracle WebCenter Content Server. The services are divided according to Service Class.

This chapter covers the following topics:

- Section 4.1, "About Core Content Server Services"
- Section 4.2, "General Services (Core Content Server)"
- Section 4.3, "Doc Services (Core Content Server)"
- Section 4.4, "Doc Profile Services (Core Content Server)"
- Section 4.5, "File Services (Core Content Server)"
- Section 4.6, "Indexer Services (Core Content Server)"
- Section 4.7, "Internal Services (Core Content Server)"
- Section 4.8, "Meta Services (Core Content Server)"
- Section 4.9, "Miscellaneous Services (Core Content Server)"
- Section 4.10, "Page Handler/Page Request Services (Core Content Server)"
- Section 4.11, "Provider Manager Services (Core Content Server)"
- Section 4.12, "Schema Services (Core Content Server)"
- Section 4.13, "Search Services (Core Content Server)"
- Section 4.14, "User Services (Core Content Server)"
- Section 4.15, "Collaboration Services (Core Content Server)"

4.1 About Core Content Server Services

Information about what is an Oracle WebCenter Content service and how services can be used is provided in Section 2, "Using Services." Information about basic services structure, attributes, actions, and a service example is provided in Section 3, "Customizing Services." You should be familiar with this information before customizing current services or creating new services

The locations for specific core Content Server services are listed within each individual service.

Note: The most commonly used services have more extensive descriptions.

Important: All services have at least one required parameter. The IdcService parameter takes the name of the service as its argument. If other parameters are required, they are noted in the description of the service.

4.2 General Services (Core Content Server)

General services are used throughout the Content Server and are often not tied to a specific functionality. Frequently used services are marked with an asterisk (*) in the following list.

This section describes these services:

- ADD_DOC_ACCOUNT
- ADD_DOCEXTENSION
- ADD DOCFORMAT
- ADD_DOCTYPE
- APPLET_DOCINFO
- CONFIG_INFO
- DELETE_DOC_ACCOUNT
- DELETE_DOCEXTENSION
- DELETE_DOCFORMAT
- DELETE_DOCTYPE
- EDIT_DOCEXTENSION
- EDIT_DOCFORMAT
- EDIT_DOCTYPE
- EDIT_TRACE_OPTIONS
- GET_DATARESULTSET
- GET_DOCEXTENSIONS
- GET_DOCFORMATS
- GET_DOCTYPES
- GET_FIELD_LENGTHS
- GET_FILELIST
- **GET_METADEFS**
- GET_RESULT_OPTIONS
- GET_SYSTEM_AUDIT_INFO
- **GET_TABLE**
- GET_USER_METADEFS
- JAVA_PROPERTIES
- LM_BUILD_WEB_STRING_FILES
- LM_LOAD_LAYOUTS

- LM_LOAD_LAYOUTS_SUB
- LOAD_DOC_ENVIRONMENT
- *LOGIN
- MERGE TABLE
- *PING_SERVER
- QUERY_DOC_ACCOUNTS
- SOAP_FAULT

4.2.1 ADD_DOC_ACCOUNT

Service used to create a new account. The most likely error is an account name that is not unique.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

dDocAccount: The security account for the content item.

Example

IdcService=ADD_DOC_COLLECTION dDocAccount=newaccount

4.2.2 ADD DOCEXTENSION

Service that adds a file extension to an existing file. The most likely error is when a matching file with that extension already exists in the system.

Additional Required Service Parameters

- dExtension: The file extension such as *hcsf*, *doc*, *txt*.
- dFormat: The formatting process used to create the web-viewable version of the content. For example, application/hcsf or application/doc.

Example

IdcService=ADD_DOCEXTENSION dExtension=doc dFormat=application/doc

4.2.3 ADD DOCFORMAT

Service that creates a new file format. The most likely error is when the file format already exists in the system.

Location: IdcHomeDir3

Additional Required Service Parameters

- dFormat: The formatting process used to create the web-viewable version of the content. For example, application/hcsf or application/doc.
- dConversion: The conversion algorithm is determined by the parameter dConversion.

If the conversion type is not *Passthru* or *NoConversion* (default value) and the content is not web-viewable or has a publish state, the content gets added to the queue to get

converted. Otherwise, the server looks for the web-viewable (if applicable) and the vault file and updates the processing state to say that the file has already been converted.

If the file mime-type is *application/FDF*, the server sets the conversion to *exchange-fdf*.

dDescription: The file format description.

Example

IdcService=ADD DOCFORMAT dFormat=application/doc dDescription=msword dConversion=PASSTHRU

4.2.4 ADD DOCTYPE

Used to create a new content item type. The most likely error is when the content item type name is not unique.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dDocType: The new content item Type.
- dDescription: Description of the new type.
- dGif: The file name of the GIF image that is displayed as an icon to represent the new doc type. Include the .gif extension.

Example

IdcService=ADD_DOCTYPE dDocType=MYTEST dDescription=My Description. dGif=adeng.gif

4.2.5 APPLET DOCINFO

Service that retrieves content item information. The most likely error is when the content item no longer exists in the system.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dID: The generated content item revision ID.

Example

IdcService=APPLET_DOCINFO dID=47

4.2.6 CONFIG_INFO

Service that retrieves configuration information from the Content Server's Admin Server. The service retrieves configuration information for the currently active component.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.2.7 DELETE_DOC_ACCOUNT

Service that deletes an existing account.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dDocAccount: The account name.

Example

IdcService=DELETE_DOC dDocAccount=mainaccount

4.2.8 DELETE DOCEXTENSION

Service that deletes an existing file extension.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dExtension: The file extension, such as *hcsf*, *doc*, *txt*.

Example

IdcService=DELETE DOCEXTENSION dExtension=hcsf

4.2.9 DELETE_DOCFORMAT

Service that deletes an existing document format.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

dFormat: The name of the MIME format. For example, application/hcsf or application/doc.

Example

IdcService=DELETE_DOCFORMAT dFormat=application/hcsf

4.2.10 DELETE_DOCTYPE

Service that deletes an existing content item type. The most likely errors are when the specified file type does not exist or when a file of that type still exists in the system.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dDocType: The content item type.

Example

IdcService=DELETE DOCTYPE dDocType=TEST

4.2.11 EDIT_DOCEXTENSION

Service that modifies an existing file extension.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dExtension: The file extension such as *doc*, *txt*, or *pdf*.
- dFormat: The formatting process used to create the web-viewable version of the content. For example, application/hcsf or application/doc.

Example

IdcService=EDIT_DOCEXTENSION dExtension=hcsf dFormat=application/hcsf

4.2.12 EDIT DOCFORMAT

Service that modifies an existing content item format. This service is called from the Configuration Manager applet.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dFormat: The formatting process used to create the web-viewable version of the content. For example, application/hcsf or application/doc.
- dDescription: The format description.
- dConversion: The conversion algorithm is determined by this parameter.

If the conversion type is not Passthru or NoConversion (default value) and the content is not web-viewable or has a publish state, the content gets added to the queue to get converted. Otherwise, the server looks for the web-viewable (if applicable) and the vault file and updates the processing state to say that the file has already been converted.

If the file mime-type is *application/FDF*, the server sets the conversion to exchange-fdf.

Example

IdcService=EDIT_DOCFORMAT dFormat=application/hcsf dDescription=hypercontent dConversion=PASSTHRU

4.2.13 EDIT DOCTYPE

Service that modifies an existing content item type.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

- dDocType: The content item type.
- dDescription: The type description.
- dGif: The file name of the GIF image that is displayed as an icon to represent the type. Include the .gif extension.

Example

IdcService=EDIT_DOCTYPE dDocType=MY_TEST dDescription=edit testing dGif=admkt.gif

4.2.14 EDIT TRACE OPTIONS

Service that retrieves trace options on the System Audit Info page.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.2.15 GET_DATARESULTSET

This service executes a Select query against the database. The query is built from the dataSource parameter. The service returns the following information:

- The result set containing the results of the query.
- An indication if the results were truncated. If the dataSource was defined so it cannot exceed the maximum number of rows and if the query returns more than the maximum allowed, the copyAborted key is set to 1 (true). This indicates that the returned result set only contains a subset of the query.

Any query that tries to select against certain core Content Server tables have a security clause applied. In particular, Documents, Revisions, and Users tables have extra security clauses applied.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dataSource: A Select query with a potential WHERE clause and ORDER BY clause that is provided by the caller. The dataSource is a Content Server resource, defined in the DataSources table (see the resource.htm file for the standard list of dataSources.)

Optional Service Parameters

- where Clause: The WHERE clause to the Select query.
- orderClause: If set to *true*, orders the query by clause.
- resultName: specifies the name to use for the result set of the query.

4.2.16 GET_DOCEXTENSIONS

Service that returns a list of all content item extensions and the file format each extension is mapped to. Returns the properties information and ExtensionFormatMap ResultSet.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.2.17 GET DOCFORMATS

Service that returns a list of all content item formats and their associated conversion methods and descriptions. Returns the properties information and DocFormats ResultSet.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.2.18 GET_DOCTYPES

Service that returns a list of all content item types, their descriptions, and their associated GIF images. Returns the properties information and DocTypes ResultSet.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.2.19 GET_FIELD_LENGTHS

Service that returns maximum length information for length constrained fields.

Location: IdcHomeDir/resources/core/tables/std services.htm

Optional Service Parameter

tableNames: A comma-delineated list of tables to investigate. If a list is not specified, tableNames is set to list the document and folder tables (DocMeta, Documents, Revisions, Folder Folders, Folder Files).

Results

- ResultSet:
 - FIELD LENGTH: Result set with field maximum number of characters. This ResultSet contains two columns:
 - fieldName: The name of the field.
 - fieldLength: The maximum number of characters allowed for the field.

4.2.20 GET_FILELIST

An administrative service that retrieves a file listing in a directory matching a specified filter. The directory is specified by an ID, not by the user. The service then maps the ID to a directory.

In practice, this service is only used to retrieve the content type GIF list for the Configuration Manager applet. This list is located in the /weblayout/images/docgifs directory. The results are returned in the value specified in the fileListName parameter as an option list.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

- directoryID: The directory identifier. Possible values include docgifs, images, templates, resources.
- fileFilter: Wild card filter to use to select the files.
- fileListName: Option list which holds the values returned.

4.2.21 GET METADEFS

Service that returns a list of all custom metadata fields and their attributes. Returns the properties information and MetaFieldInfo ResultSet.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.2.22 GET_RESULT_OPTIONS

Service that returns information from the search results templates.

Note: As of version 3.5.3, the Content Server no longer uses this service. It remains in the std_services.htm file as legacy code for reverse compatibility.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.2.23 GET_SYSTEM_AUDIT_INFO

Service that retrieves system audit information for the Content Server.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.2.24 GET TABLE

Service that exports a database table to a result set in an HDA file.

If the specified table is not found, the service fails. It is up to the calling program receiving the HDA data to store this result set for later usage.

The most likely error is a table name that does not exist.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

tableName: The name of table to export.

Example

IdcCommand command file format:

IdcService=GET_TABLE tableName=Users

HDA format:

@Properties LocalData IdcService=GET_TABLE tableName=Users @end

4.2.25 GET_USER_METADEFS

Service that returns a list of all user information fields and their attributes. Returns the properties information and ResultSet.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.2.26 JAVA PROPERTIES

Service that returns information about the Java Resource Environment in use.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.2.27 LM_BUILD_WEB_STRING_FILES

Service that publishes strings to a static .js file.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.2.28 LM_LOAD_LAYOUTS

Service that loads user interface layouts from the

DomainHome/ucm/cs/weblayout/common/layouts directory. Calls LM_LOAD_ LAYOUTS_SUB.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.2.29 LM_LOAD_LAYOUTS_SUB

SubService used to call layouts from the

DomainHome/ucm/cs/weblayout/common/layouts directory.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.2.30 LOAD_DOC_ENVIRONMENT

This SubService loads the template page configuration information for the content item environment.

Location: IdcHomeDir/resources/core/tables/std services.htm

4.2.31 LOGIN

Service that forces a login and executes an HTML page request. This is one of many ways to authenticate the user with the Web server.

Access Level: N/A (0)

Location: IdcHomeDir/resources/core/templates/std_services.htm

Additional Required Service Parameters

- Action: The action to execute. Usually GetTemplatePage.
- Page: The name of the page template.
- Auth: Required only when logging in from a browser interface. For example:

Auth=Internet

The other possible value is Intranet, which is used for NTLM logins.

Results

- Local Data:
 - dUser
 - RedirectParams
 - StatusMessage
- Response Template: null (default redirect to HOME_PAGE)

Used By

- Resource Includes:
 - pne_nav_userprofile_links
 - subscription_action_script
 - home_page_static_content
- Templates:

- QUERY_NOTIFICATION (query_notification_mail.htm)
- SELF_REGISTER_PROMPT_LOGIN (self_register_prompt_login.htm)
- (std_home_page.htm)
- Standard Navigation: commonNav.js

Example

Displays the home page when you login to the Content Server:

IdcService=LOGIN

Action=prepareRedirect Page=HOME_PAGE

4.2.32 MERGE TABLE

Service that merges a result set with an existing database table. All errors are logged to the Content Server log.

Important: By default, this service is not error tolerant and does not execute the merge in a transaction. Consequently, if the is Error Tolerant or isTransactional optional parameters are not set to true and if the service encounters an error, it terminates where the error occurred and does not roll back the already updated and inserted rows. In this situation, if you do not specify constraints and rerun the merge table, the merge fails in Microsoft SQL Server and Content Server due to constraint violations.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

tableName: The name of the database table to merge into. The result set must have the same name as this table.

Important: The ResultSet definition for the table containing the rows to insert or update must also be specified.

Optional Service Parameters

constraintKeys: Specifies a comma-delimited list of column names used as unique identifiers. The service initially does a look up with these constraints. If the row is found, the service does an update. Otherwise, a new row is inserted.

If this parameter is not defined, the service attempts to insert the rows.

- isDeleteTable: If true, the service deletes the table before attempting the merge. The delete is performed in a transaction with the merge, if is Transactional is true. By default, this value is *false*.
- isErrorTolerant: If true, does not terminate when errors are encountered during the merge. By default, this value is *false*.
- isTransactional: If true, the merge is performed in a transaction. If an error occurs during the merge and is Error Tolerant is false, the merge terminates and rolls back all the changes. By default, this value is *false*.

Example

IdcCommand command file format:

```
# Merge new entries into the Alias table
IdcService=MERGE_TABLE
tableName=Alias
constraintKeys=dAlias
# Rows to be updated or inserted
@ResultSet Alias
dAlias
dAliasDescription
MyAlias
Just a test alias
@end
<<EOD>>
# Delete the alias table and insert new rows, do a rollback if something fails.
IdcService=MERGE TABLE
tableName=Alias
isTransactional=true
isDeleteTable=true
# Rows to be updated or inserted
@ResultSet Alias
dAlias
dAliasDescription
MyAlias
Just a test alias
@end
<<EOD>>
```

HDA format (Example 1):

```
@Properties LocalData
IdcService=MERGE_TABLE
tableName=Alias
constraintKeys=dAlias
@ResultSet Alias
2
dAlias
dAliasDescription
MyAlias
Just a test alias
@end
```

HDA format defining a table name and ResultSet and inserting a new row into the database (inserts new row into Users table):

```
@Properties LocalData
IdcService=MERGE_TABLE
tableName=Users
@end
@ResultSet Users
dName
dUserAuthType
user15
```

LOCAL @end

4.2.33 PING_SERVER

Service that evaluates if a connection to the Content Server instance exists and returns status information. It also forces users to log in if they are not already logged in.

Tip: Execute a PING_SERVER request before calling other services to ensure that there is a connection to the Content Server instance and that you are logged in as a user authorized to execute commands.

Access Level: N/A (0)

Location: IdcHomeDir/resources/core/tables/std_services.htm

Results

- Local Data:
 - dUser
 - StatusMessage
- Response Template: null

Used By

- Applets:
 - **Batch Loader**
 - Configuration Manager
 - Page Builder
- Templates:
 - SUBSCRIBE_FORM (subscribe_form.htm)
 - SUBSCRIPTION_LIST (subscription_list.htm)
 - UNSUBSCRIBE_FORM (unsubscribe_form.htm)

Example

HDA format:

@Properties LocalData IdcService=PING_SERVER IsJava=1 Auth=Internet @end

Sample return information:

```
Content-type: text/html
Content-Length: 421
```

<?hda version="6.0 SNAP-020207" jcharset=Cp1252 encoding=iso-8859-1?>

@Properties LocalData dUser=sysadmin blFieldTypes=StatusMessage message

```
refreshSubMonikers=
StatusMessage=You are logged in as 'sysadmin'.
loadedUserAttributes=1
blDateFormat=M/d{/yy} {h:mm[:ss] {aa}[zzz]}!tAmerica/Chicago!mAM,PM
changedSubjects=
refreshSubjects=
Auth=Internet
refreshMonikers=
changedMonikers=
IdcService=PING_SERVER
IsJava=1
@end
```

4.2.34 QUERY_DOC_ACCOUNTS

Service that returns a list of all accounts in the Content Server.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.2.35 SOAP_FAULT

Service used to process failed SOAP requests.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.3 Doc Services (Core Content Server)

Doc services perform actions on documents, such as checkin, checkout, subscription actions, and accessing document information. Frequently used services are marked with an asterisk (*) in the following list.

This section describes these services:

- ASSIGN DOCINFO FORM
- CACHE_CHECKIN_NEW
- CACHE_CHECKIN_SEL
- CACHE_SUBMIT_HTML_FORM
- CACHE_WORKFLOW_CHECKIN
- CHECKIN_ARCHIVE_NO_NOTIFY
- CHECKIN BYNAME
- *CHECKIN_CONFIRM_FORM
- *CHECKIN_LIST
- *CHECKIN_NEW
- *CHECKIN_NEW_FORM
- *CHECKIN_NEW_SUB
- *CHECKIN_SEL
- *CHECKIN SEL FORM
- CHECKIN_SEL_SUB
- *CHECKIN_SIMILAR_FORM
- *CHECKIN_UNIVERSAL

- *CHECKOUT
- CHECKOUT_BY_NAME
- *CHECKOUT_OK
- *CHECKOUT_SUB
- CONTINUE_CHECKIN
- CONTINUE_SUBMIT_HTML_FORM
- COPY_REVISION
- CREATE_SUBSCRIPTION_TYPE
- DELETE_BYCLASS
- DELETE_BYNAME
- DELETE_BYREV
- DELETE_BYREV_REVISION
- DELETE_CHECKIN_CACHE
- DELETE DOC
- *DELETE_REV
- DELETE_REV_EX
- DELETE_SUBSCRIPTION_TYPE
- DOC_FORMATS_WIZARD
- *DOC_INFO
- *DOC_INFO_BY_NAME
- *DOC_INFO_LATESTRELEASE
- *DOC_INFO_SIMPLE
- *DOC_INFO_SIMPLE_BYREV
- *DOC_SUBS_LIST
- EDIT_DOC_FORMATS
- FORM_PROCESS
- FORM_SUBMIT
- GET_CACHED_CHECKIN_INFO
- GET_DOC_CONFIG_INFO
- GET_DOC_SUBSCRIBERS
- GET_DOCUMENT_HISTORY_REPORT
- **GET_ENVIRONMENT**
- *GET_EXPIRED
- GET_PACKAGE_ENVIRONMENT_PAGE
- *GET_UPDATE_FORM
- NOTIFY_INDEXER
- ODMA_DOC_INFO_SIMPLE

- PACKAGE_ENVIRONMENT
- REMOVE_METAFILE_SUB
- REPLACE_METAFILE_SUB
- RESTORE REVISION
- *RESUBMIT_FOR_CONVERSION
- *REV_HISTORY
- SELECTDOC
- *SUBMIT_HTML_FORM
- *SUBSCRIBE
- SUBSCRIBE_DOC_USER
- SUBSCRIBE_EX
- *SUBSCRIBE_FORM
- *SUBSCRIPTION_LIST
- *UNDO CHECKOUT
- UNDO_CHECKOUT_BY_NAME
- *UNSUBSCRIBE
- *UNSUBSCRIBE_FORM
- *UNSUBSCRIBE_FROM_LIST
- UNSUBSCRIBE_FROM_LIST_EX
- UPDATE_BYREV
- *UPDATE_DOCINFO
- *UPDATE_DOCINFO_BYFORM
- UPDATE_DOCINFO_BYREV
- UPDATE_DOCINFO_METAFILE_BYREV
- UPDATE_DOCINFO_STATUS
- UPDATE_DOCINFO_SUB
- UPDATE_SUBSCRIPTION_NOTIFY
- UPDATE_SUBSCRIPTION_TYPE
- UPDATE_SUBSCRIPTION_USED
- UPDATE_METADATA
- VALIDATE_DOCINFO
- *WORK_IN_PROGRESS

4.3.1 ASSIGN_DOCINFO_FORM

Service that retrieves the DOCINFO_FORM and assigns it to content.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.3.2 CACHE_CHECKIN_NEW

Service used with preview. When a user performs a preview during a checkin the information is cached on the server side. This service is modeled after the non-cache version and uses the same parameters as CHECKIN_NEW.

To disallow the check in of empty files, set the following: ValidatePrimaryFileNotEmpty=1

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.3.3 CACHE_CHECKIN_SEL

Service used with preview. When a user performs a preview during a checkin the information is cached on the server side. This service is modeled after the non-cache version and uses the same parameters as CHECKIN_SEL.

To disallow the check in of empty files, set the following: ValidatePrimaryFileNotEmpty=1

Location: IdcHomeDir/resources/core/tables/std services.htm

4.3.4 CACHE SUBMIT HTML FORM

Service used with preview. When a user performs a preview during a checkin the information is cached on the server side. This service is modeled after the non-cache version and uses the same parameters as SUBMIT_HTML_FORM.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.3.5 CACHE WORKFLOW CHECKIN

Service used with preview. When a user performs a preview during a checkin the information is cached on the server side. This service is modeled after the non-cache version and uses the same parameters as WORKFLOW_CHECKIN.

To have the service return an error if the content item file is empty, use the configuration setting ValidatePrimaryFileNotEmpty=1.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.3.6 CHECKIN_ARCHIVE_NO_NOTIFY

A general checkin service used by client applications. It is generally used when the client application knows it will be checking in a large number of files and it does not want the indexer to be initiated by the check-in activity.

NO_NOTIFY indicates that this service does not notify the Content Server subjects that are normally notified during a checkin. This service suppresses the Released Documents subject, which starts the indexer.

The user of this service should notify the indexer subject to proceed to do work by calling the NOTIFY_INDEXER service.

This service is not used by the Archiver.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

For additional parameters, see CHECKIN_ARCHIVE.

Optional Service Parameters

For additional parameters, see CHECKIN_ARCHIVE.

Example

IdcService=CHECKIN_ARCHIVE_NO_NOTIFY Action=insert dDocAuthor=user1 dDocName=test dDocTitle=new content dSecurityGroup=Public primaryFile=c:/test.txt doFileCopy=true

4.3.7 CHECKIN_BYNAME

Service that checks in a content item revision based on the content item name or Content ID.

Location: IdcHomeDir/resources/core/tables/std services.htm

A user must have Admin permission to the content item's security settings to change the security group (*dSecurityGroup*), account (*dDocAccount*), or author (*dDocAuthor*).

- If the content item uses entity security, the user must have at least Write permission granted by the entities, unless the user has Admin rights to the security group being assigned to the document.
- If the content item is in a workflow, the user must be a reviewer/contributor for the current step.
- If metafile generation is enabled (by setting the AllowPrimaryMetaFile or AllowAlternateMetaFile environment variables, or both) and the metafile generation variables (createPrimaryMetaFile and createAlternateMetaFile) are true, a real file cannot be associated with the current content item. Only one metafile can be associated with a content item. If createPrimaryMetaFile is true, createAlternateMetaFile must be false and vice-versa.
- The most likely error is a revision failing to insert or when the refinery was not successfully initiated.

Important: Either the content item name or the content item revision ID must be specified.

To disallow the check in of empty files, set the following: ValidatePrimaryFileNotEmpty=1

Additional Required Service Parameters

- dDocName: The Content ID for the content item.
 - If Content ID auto generation is enabled, this parameter is not required. If dDocName is defined, it overrides the auto generated Content ID.
 - The Content ID cannot contain spaces or invalid characters ;/\?:@&=+"#%<>*~|[].
- dDocAuthor: The content item author (contributor).
- dDocTitle: The content item title.

- dDocType: The content item type.
- dSecurityGroup: The security group such as *Public* or *Secure*.
- dDocAccount: The account for the content item. Required only if accounts are enabled.
- primaryFile: The absolute path to the location of the file as seen from the server. Use the slash as the file separator.

A primary file must be specified unless checking in metadata only. If an alternate file is specified with the primary file, the content refinery converts the alternate file. Otherwise, the primary file is converted.

- If a primary file is not specified, you can use a metafile in its place. Only one metafile can exist for each content item (a primary AND alternate meta file cannot coexist).
- If both a primary and alternate file is specified, their extensions must be different.
- doFileCopy: 1 (*true*): The file is not deleted from the hard drive after checkin.
- 0 (*false*): The file is removed from the hard drive after checkin.
- Required custom fields: Custom metadata fields that are required must also be specified.

Optional Service Parameters

- dID: The generated content item revision ID.
- alternateFile: The alternate file for conversion.
- Only one metafile can exist for each content item (a primary AND alternate meta file cannot coexist.)
 - If an alternate file is specified with the primary file, the content refinery converts the alternate file. Otherwise, the primary file is converted.
- AutoNumberPrefix: This is a configuration entry but can be specified as a parameter. The auto prefix script is evaluated after the revision class ID is generated and before metadata validation.
- createAlternateMetaFile: To enable alternate metafile generation, the Allow Alternate Meta File environment value must be *true* and the parameter createAlternateMetaFile must be true.
- createPrimaryMetaFile: To enable primary metafile generation, the AllowPrimaryMetaFile environment value must be *true* and the parameter createPrimaryMetaFile must be true.
- dConversion: The conversion algorithm is determined by this parameter.

If the conversion type is not Passthru or NoConversion (default value) and the content is not web-viewable or has a publish state, the content gets added to the queue to get converted. Otherwise, the server looks for the web-viewable (if applicable) and the vault file and updates the processing state to say that the file has already been converted.

If the file mime-type is *application/FDF*, the server sets the conversion to *exchange-fdf*.

- dCreateDate: The date the content item was created. By default, this is the current date.
- dExtension: The file extension such as *hcsf*, *doc*, *txt*.

- dFormat: The formatting process used to create the web-viewable version of the content. For example, application/hcsf or application/doc.
- dInDate: The content release date. The date the content item is to be released to the Web. By default, this is the current date.

If the content release date (dInDate) is not specified, the creation date (dCreateDate) is used. This value is auto generated if it is not supplied.

dOutDate: The content expiration date. By default, this is blank and does not specify an expiration date.

If the content expiration date (dOutDate) is not entered, the value remains empty. This is a valid state.

- dPublishState: The publish state. If the content item exists in the system dPublishState must be empty.
- dReleaseState: The release state (used to indicate the Web state of the revision).
- dRevClassID: The revision class ID.
- dRevLabel: The revision label for the content item. If set, the label is used to locate the specified revision.
- dWfType: The workflow type such as *Basic* or *Criteria*.
- IsAutoNumber: This is a configuration entry but can be specified as a parameter. If the configuration variable IsAutoNumber is set to true, the Content ID (dDocName) is generated by concatenating the auto prefix with the revision class ID (dRevClassID, the counter of uniquely differentiated content items), pre-filled with leading zeroes to be six digits long. Auto numbering is not performed if the Content ID (dDocName) is already specified.
- IsEditRev: If set to true, this entry checks if the content revision is in a workflow and enables editing.
- IsWorkflowInfo: This is a configuration entry but can be specified as a parameter. If set to *true*, this entry checks for workflow information and checks allowable actions for the workflow steps.
- webViewableFile: If a content item has a web-viewable file associated with it, the conversion format is the format of the web-viewable file (the parameter webViewableFile:format) and the extension is the web-viewable file's extension (the parameter dWebExtension). Otherwise, the extension and file format are determined by the parameters dExtension and dFormat, respectively. The user can override the file format and extension by setting these additional parameters.
- Optional custom fields: Custom metadata fields that are not required can also be specified.

Example

IdcService=CHECKIN BYNAME dDocName=test1000 dSecurityGroup=public dDocAuthor=sysadmin dDocType=ADENG dDocTitle=another test doFileCopy=true primaryFile=c:/test.txt

4.3.8 CHECKIN_CONFIRM_FORM

Service that returns confirmation upon successful checkin through a browser.

Access Level: Write, Global, Scriptable (50)

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dID: The content ID.
- dDocAuthor: The document author.
- dDocName: The document name.
- dDocTitle: The document title.

Results

- Local Data:
 - dDocAuthor
 - dDocName
 - dDocTitle
 - dID
- Response Template: CHECKIN_CONFIRM (checkin_confirm.htm)

Used By

Redirect service for: CHECKIN_NEW, CHECKIN_SEL, CONTINUE_CHECKIN

4.3.9 CHECKIN LIST

Service that returns a list of checked-out items (those that are not checked in or deleted). The most likely error is when the checkout list cannot be retrieved from the database.

Access Level: Write, Global, Scriptable (50)

Queries Executed: QcheckinCachesForUser

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Optional Service Parameters

- userOnly: When 1 (*true*), returns only items checked out to the current user.
- MaxQueryRows: Controls the number of items returned in the list.

- ResultSets:
 - CHECKIN_LIST (All Fields from Revisions and DocMeta for checked-out revisions.)
 - CHECKIN_CACHES (All Fields from DatedCaches.)
- Local Data:
 - copyAborted
 - DataSource

Response Template: CHECKIN_LIST (checkin_list.htm)

Used By

- Resource Includes:
 - pne_nav_management_links
 - std_doc_man_pages
 - checkin_multiuploadapplet_processing_functions
- Standard Navigation:
 - commonNav.js
 - commonBundle.js
- Other:
 - SoapCustom:Wsdl:CheckIn:Services
 - Redirect service for: DELETE CHECKIN CACHE

4.3.10 CHECKIN NEW

Service that checks in a new content item. This service calls the CHECKIN_NEW_SUB SubService.

Access Level: Write (2)

Location: IdcHomeDir/resources/core/tables/std services.htm

- If you attempt to set the author (dDocAuthor) to someone other than the currently logged in user, you must have Admin permission to the security attributes being assigned to the document.
- If the content uses entity security, the user must have at least Write permission granted by the entities, unless the user has Admin rights to the security group being assigned to the document.
- If metafile generation is enabled (by setting the AllowPrimaryMetaFile or AllowAlternateMetaFile environment variables, or both) and the metafile generation variables (createPrimaryMetaFile and createAlternateMetaFile) are true, a real file cannot be associated with the current content item. Only one metafile can be associated with a content item: if createPrimaryMetaFile is true, createAlternateMetaFile must be *false* and vice-versa.
- The most likely error is when the content item was not properly defined.
- This service executes the SubService CHECKIN_NEW_SUB. This SubService checks in a new content item revision.
- A primary file is required. If you do not want to check in a primary file and want to check in only metadata, an additional parameter must be included and a configuration entry added in Content Server.
- To disallow the checkin of empty files, set the following: ValidatePrimaryFileNotEmpty=1

Required additional parameter (metadata checkin):

createPrimaryMetaFile=true

Required Content Server configuration entry (metadata checkin):

AllowPrimaryMetaFile=true

Additional Required Service Parameters

- dDocName: The Content ID for the content item.
 - If Content ID auto generation is enabled, this parameter is not required. If *dDocName* is defined, it overrides the auto generated Content ID.
 - The Content ID cannot contain spaces or invalid characters ;/\?:@&=+"#%<>*~|[].
- dDocAuthor: The content item author (contributor).
- dDocTitle: The content item title.
- dDocType: The content item Type.
- dSecurityGroup: The security group such as *Public* or *Secure*.
- dDocAccount: The account for the content item. Required only if accounts are enabled.
- primaryFile: The absolute path to the location of the file as seen from the server. Use the slash as the file separator.

A primary file must be specified unless checking in metadata only. If an alternate file is specified with the primary file, the content refinery converts the alternate file. Otherwise, the primary file is converted.

- If a primary file is not specified, you can use a metafile in its place. Only one metafile can exist for each content item (a primary AND alternate meta file cannot coexist).
- If both a primary and alternate file is specified, their extensions must be different.
- Required custom fields: Custom metadata fields that are required must also be specified.

Optional Service Parameters

- alternateFile: The alternate file for conversion.
 - Only one metafile can exist for each content item (a primary AND alternate meta file cannot coexist.)
 - If an alternate file is specified with the primary file, the content refinery converts the alternate file. Otherwise, the primary file is converted.
- AutoNumberPrefix: This is a configuration entry but can be specified as a parameter. The auto prefix script is evaluated after the revision class ID is generated and before metadata validation.
- createAlternateMetaFile: To enable alternate metafile generation, the AllowAlternateMetaFile environment value must be set to true and the parameter createAlternateMetaFile must be set to true.
- createPrimaryMetaFile: To enable primary metafile generation, the AllowPrimaryMetaFile environment value must be *true* and the parameter createPrimaryMetaFile must be set to *true*.
- DirectReleaseNewCheckinDoc: Directs content items being checked in to bypass Inbound Refinery, workflow, and indexing. The default is 0. To enable, set DirectReleaseNewCheckinDoc=1.

This parameter can be used to support a high ingestion rate when transferring content items from an external repository into Content Server storage. Because this setting increases the speed of content checkin, it increases the number of check-ins that Content Server can support at a time. This capability is highly desirable in applications (for example, scanning applications) where large numbers of items are expected to be checked in at once.

Before you enable this setting, take into account the following important considerations.

- A content item checked in this way can only be found by searching with DATABASE.METADATA. However, other content items can still go through regular checkin and be FULLTEXT indexed.
- A rebuild of the index does not cause content checked in with this parameter to go through indexing.
- Content modification (updating or checking in a new revision) causes indexing to occur on a document checked in with this parameter.
- dConversion: The conversion algorithm is determined by this parameter.

If the conversion type is not *Passthru* or *NoConversion* (default value) and the content is not web-viewable or has a publish state, the content gets added to the queue to get converted. Otherwise, the server looks for the web-viewable (if applicable) and the vault file and updates the processing state to say that the file has already been converted.

If the file mime-type is *application/FDF*, the server sets the conversion to exchange-fdf.

- dCreateDate: The date the content item was created. By default, this is the current
- dFormat: The formatting process used to create the web-viewable version of the content item. For example, application/hcsf or application/doc.
- dInDate: The release date. By default, this is the current date. If the content release date (dInDate) is not specified, the creation date (dCreateDate) is used. This value is auto generated if it is not supplied.
- dOutDate: The expiration date. By default, this is blank and does not specify an expiration date. If the content expiration date (dOutDate) is not entered, the value remains empty. This is a valid state.
- dRendition: Used to specify an additional rendition of the content item.
- dRevClassID: The revision class ID.
- dRevisionLabel: The revision label for the content item. If set, the label is used to locate the specified revision.
- IsAutoNumber: This is a configuration entry but can be specified as a parameter. If the configuration variable IsAutoNumber is set to true, the Content ID (dDocName) is generated by concatenating the auto prefix with the revision class ID (dRevClassID, the counter of uniquely differentiated content items), pre-filled with leading zeroes to be six digits long. Auto numbering is not performed if the Content ID (dDocName) is already specified.
- webViewableFile: If a content item has a web-viewable file associated with it, the conversion format is the format of the web-viewable file (the parameter webViewableFile:format) and the extension is the web-viewable file's extension (the parameter dWebExtension). Otherwise, the extension and file format are determined by the parameters dExtension and dFormat, respectively. The user can override the file format and extension by setting these additional parameters.

Optional custom fields: Custom metadata fields that are not required can also be specified.

- Local Data:
 - dAction
 - dActionDate
 - dClbraName
 - dConversion (If refinery-processes, contains information about what conversion occurred.)
 - dCreateDate
 - dDocAccount
 - dDocAuthor
 - dDocID
 - dDocName
 - dDocTitle
 - dDocType
 - dExtension
 - dFileSize
 - dFormat
 - dID: Internal reference to ID for the new content item.
 - dInDate
 - dIsWebFormat
 - dIsPrimary
 - dLocation
 - dOriginalName
 - dOutDate
 - dpAction
 - dpEvent
 - dProcessingState
 - dPublishState
 - dPublishType
 - dRawDocID
 - dReleaseState
 - dRevClassID
 - dRevisionID
 - dRevLabel
 - dRevRank

- dSecurityGroup
- dStatus
- dUser
- dWorkflowState
- isDocProfileUsed
- isEditMode
- isNew
- isStatusChanged
- prevReleaseState
- primaryFile
- StatusCode
- StatusMessage
- VaultfilePath
- WebfilePath
- xClbraAliasList
- xClbraUserList
- Plus any custom metadata related to the item checked in
- Response Templates:
 - REDIRECT_TEMPLATE (redirect_template.htm)
 - Default redirect service: CHECKIN_CONFIRM_FORM

Used By

Resource Includes: std_doc_page_definitions

Example

IdcService=CHECKIN_NEW dDocName=test1111 dDocTitle=test information dDocAuthor=john dSecurityGroup=public primaryFile=c:/test.txt

4.3.11 CHECKIN_NEW_FORM

Service that returns the check-in form for a new content item in a browser. The most likely error is when the content item was not properly defined.

Access Level: Write, Global, Scriptable (50)

Location: IdcHomeDir/resources/core/templates//std_services.htm

- ResultSets:
 - DocFormats (dFormat, dConversion, dDescription)
 - DocTypes (dDocType, dDescription, dGif)

Response Template: CHECKIN_NEW_FORM (checkin_new.htm)

Used By

- Applets:
 - Repository Manager
 - Workflow Admin
 - User Admin
 - Configuration Manager
- Resource Includes:
 - pne_nav_management_links
 - pne_nav_bookmark_links
 - calculate_doc_profile_urls
 - std_doc_man_pages
- Standard Navigation:
 - commonNav.js
 - commonBundle.js

4.3.12 CHECKIN_NEW_SUB

SubService that checks in a new content item revision. Depending on which service calls this SubService, other validation is done, such as determining if this content item belongs in a criteria workflow. Also includes computing of derived fields, adding of renditions, and initiation of refinery processing. A security check against group and account may need to be performed before executing this SubService.

Access Level: SubService (N/A)

Inputs: All standard required fields for content checkin must be provided, plus any optional content metadata.

Queries Executed:

- QnextRevID
- UnextRevID
- Irevision
- **Imeta**
- Idocument
- IdocHistory

Location: IdcHomeDir/resources/core/templates//std_services.htm

- Local Data:
 - dAction
 - dActionDate
 - dClbraName
 - dConversion

- dCreateDate
- dDocAccount
- dDocAuthor
- dDocID
- dDocName
- dDocTitle
- dDocType
- dExtension
- dFileSize
- dFormat
- dID
- dInDate
- dIsPrimary
- dIsWebFormat
- dLocation
- dOriginal Name
- dOutDate
- dpAction
- dpEvent
- dProcessingState
- dPublishState
- dPublishType
- dRawDocID
- dReleaseState
- dRevClassID
- dRevisionID
- dRevLabel
- dRevRank
- dSecurityGroup
- dStatus
- dUser
- dWorkflowState
- isDocProfileUsed
- isEditMode
- is New
- is Status Changed
- prevReleaseState

- primaryFile
- StatusCode
- StatusMessage
- VaultfilePath
- xClbraAliasList
- xClbraUserList
- WebfilePath
- Plus any custom metadata related to the item checked in

Used By

Services: CHECKIN NEW

4.3.13 CHECKIN SEL

Service that checks in a revision to an existing content item. This calls the CHECKIN_ SEL_SUB SubService.

Access Level: Write (2)

Location: IdcHomeDir/resources/core/tables/std_services.htm

- The content item must be checked out for this service to execute.
- If the content item is in a workflow, the user must be a reviewer/contributor for the current step.
- A user must have Admin permission to the content item's security settings to change the security group (dSecurityGroup), account (dDocAccount), or author (dDocAuthor).
- If metafile generation is enabled (by setting the AllowPrimaryMetaFile or AllowAlternateMetaFile environment variables, or both) and the metafile generation variables (createPrimaryMetaFile and createAlternateMetaFile) are true, a real file cannot be associated with the current content item. Only one metafile can be associated with a content item. If createPrimaryMetaFile is *true*, createAlternateMetaFile must be false and vice-versa.
- The content item cannot be in the published state.
- The current user must be the Author of the content item or have Admin permission to check in a revision.
- The most likely error is when the content item is no longer in the system.
- This service executes the SubService CHECKIN_SEL_SUB. This SubService checks in a revision to a content item.
- To disallow the check in of empty files, set the following: ValidatePrimaryFileNotEmpty=1

Additional Required Service Parameters

- dDocName: The Content ID for the content item.
 - If Content ID auto generation is enabled, this parameter is not required. If dDocName is defined, it overrides the auto generated Content ID.
 - The Content ID cannot contain spaces or invalid characters ;/\?:@&=+"#%<>*~|[].

- dDocAuthor: The content item author (contributor).
- dDocTitle: The content item title.
- dDocType: The content item Type.
- dID: The generated content item revision ID.
- dRevLabel: The content item revision label.
- dSecurityGroup: The security group such as *Public* or *Secure*.
- dDocAccount: The account for the content item. Required only if accounts are enabled.
- primaryFile: The absolute path to the location of the file as seen from the server. Use the slash as the file separator. A primary file must be specified unless checking in metadata only. If an alternate file is specified with the primary file, the content refinery converts the alternate file. Otherwise, the primary file is converted.
 - If a primary file is not specified, you can use a metafile in its place. Only one metafile can exist for each content item (a primary AND alternate meta file cannot coexist).
 - If both a primary and alternate file is specified, their extensions must be different.
 - doFileCopy: 1 (*true*): The file is not deleted from the hard drive after checkin. 0 (false): The file is removed from the hard drive after checkin.
- Required custom fields: Custom metadata fields that are required must also be specified.

Optional Service Parameters

- alternateFile: The alternate file for conversion.
- Only one metafile can exist for each content item (a primary AND alternate meta file cannot coexist.)
 - If an alternate file is specified with the primary file, the content refinery converts the alternate file. Otherwise, the primary file is converted.
- createAlternateMetaFile: To enable alternate metafile generation, the AllowAlternateMetaFile environment value must be set to true and the parameter createAlternateMetaFile must be set to true.
- createPrimaryMetaFile: To enable primary metafile generation, the AllowPrimaryMetaFile environment value must be set to *true* and the parameter createPrimaryMetaFile must be set to true.
- dConversion: The conversion algorithm is determined by the parameter dConversion.

If the conversion type is not Passthru or NoConversion (default value) and the content is not web-viewable or has a publish state, the content gets added to the queue to get converted. Otherwise, the server looks for the web-viewable (if applicable) and the vault file and updates the processing state to say that the file has already been converted.

- If the file mime-type is *application/FDF*, the server sets the conversion to exchange-fdf.
- dCreateDate: The date the content item was created. By default, this is the current date.

- dFormat: The formatting process used to create the web-viewable version of the content. For example, application/hcsf or application/doc.
- dInDate: The content release date. The date the content item is to be released to the Web. By default, this is the current date. If the content release date (dInDate) is not specified, the creation date (dCreateDate) is used. This value is auto generated if it is not supplied.
- dOutDate: The content expiration date. By default, this is blank and does not specify an expiration date. If the content expiration date (dOutDate) is not entered, the value remains empty. This is a valid state.
- dPublishState: The publish state. If the content item exists in the system dPublishState must be empty.
- dRevClassID: The revision class ID.
- AutoNumberPrefix: This is a configuration entry but can be specified as a parameter. The auto prefix script is evaluated after the revision class ID is generated and before metadata validation.
- IsAutoNumber: This is a configuration entry but can be specified as a parameter. If the configuration variable IsAutoNumber is set to *true*, the Content ID (dDocName) is generated by concatenating the auto prefix with the revision class ID (dRevClassID, the counter of uniquely differentiated content items), pre-filled with leading zeroes to be six digits long. Auto numbering is not performed if the Content ID (dDocName) is already specified.
- IsWorkflowInfo: This is a configuration entry but can be specified as a parameter. If set to true, this entry checks for workflow information and checks allowable actions for the workflow steps.
- webViewableFile: If a content item has a web-viewable file associated with it, the conversion format is the format of the web-viewable file (the parameter webViewableFile:format) and the extension is the web-viewable file's extension (the parameter dWebExtension). Otherwise, the extension and file format are determined by the parameters dExtension and dFormat, respectively. The user can override the file format and extension by setting these additional parameters.
- RedirectUrl: Used to display another page after a topic file has been changed. If omitted, the user is redirected to the Content Server home page.
- Optional custom fields: Custom metadata fields that are not required can also be specified.

Results

- Local Data:
 - dConversion: If refinery-processed, this contains information about what conversion occurred.
 - dID: Internal reference ID for the new content item.
 - IsWorkflow: Returns 1 (*true*) if item entered workflow upon checkin.
- Response Templates:
 - REDIRECT_TEMPLATE (redirect_template.htm)
 - Default redirect service: CHECKIN_CONFIRM_FORM

Used By

Resource Includes: std_doc_page_definitions

Example

IdcService=CHECKIN_SEL dDocName=test_000036 dDocTitle=my test dDocAuthor=sysadmin dDocType=ADENG dSecurityGroup=Public dID=49 dRevLabel=1 doFileCopy=1

4.3.14 CHECKIN_SEL_FORM

Service that returns the check-in form for a content item revision in a browser. It loads the current content information for the item. The form page is displayed with old metadata information.

The most likely error is when the content item is no longer in the system, information about the content item cannot be found, or when the system is unable to check revision properties.

Access Level: Write, Scriptable (34)

Queries Executed: QdocID, Qrevisions, QdocInfo

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dID: The generated content item revision ID.

Optional Service Parameters

- dDocName
- dWfName

- ResultSets:
 - DOC_INFO (all fields from Revisions and DocMeta for the specified revision)
 - DocFormats (dFormat, dConversion, dDescription)
 - DocTypes (dDocType, dDescription, dGif)
- Local Data:
 - CurRevCheckoutUser
 - CurRevID
 - CurRevIsCheckedOut
 - dDocAccount
 - dDocAuthor
 - dDocName
 - defaultAccount
 - dID
 - DocUrl

- dPublishState
- dReleaseState
- dRevClassID
- dRevLabel
- dSecurityGroup
- dStatus
- dUser
- dWorkflowState
- isCurRevEmpty
- IsNotLatestRev
- IsWorkflow
- latestID
- Plus all DocMeta fields
- Response Template: CHECKIN_SEL_FORM (checkin_sel.htm)

Used By

- Resource Includes:
 - classic_info_page_content
 - workflow_action_popup
 - checkin_list_action_popup
 - legacy_checked_out_content_table
 - workflow_doc_action_links
 - docinfo_checkin_similar_option
 - setup_checked_out_content_action_popups
 - wf_reviewer_doc_action_links
- Templates:
 - CHECKOUT_OK (chkook.htm)
 - WORKFLOW_REVIEW_FORM (workflow_review_form.htm)

Example

IdcService=CHECKIN_SEL_FORM dID=55

4.3.15 CHECKIN_SEL_SUB

SubService used if a content item being checked in already exists, is checked out, or if it is not in a workflow.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.3.16 CHECKIN_SIMILAR_FORM

Service that returns the check-in form for a new content item in a browser, with metadata from a similar content item filled in. The most likely error is when the content item was not properly defined.

Access Level: Write, Global, Scriptable (50)

Queries Executed: QdocInfoSimilarCheckin

Location: IdcHomeDir/resources/core/tables/std_services.htm

Results

- ResultSets:
 - DOC_INFO_SIMILAR (dDocTitle, dDocType, dSecurityGroup, dDocAccount for the specified revision)
 - DocFormats (dFormat, dConversion, dDescription)
 - DocTypes (dDocType, dDescription, dGif)
- Local Data:
 - dDocAccount
 - dDocType
 - dSecurityGroup
- Response Template: CHECKIN_NEW_FORM (checkin_new.htm)

Used By

- Resource Includes:
 - search_results_action_popup
 - docinfo_checkin_similar_option
 - doc_file_checkin_similar
 - setup_search_results_action_popups
- Templates: CHECKIN_CONFIRM (checkin_confirm.htm)

4.3.17 CHECKIN UNIVERSAL

Service that performs an Content Server controlled checkin.

Access Level: Write (2)

Location: IdcHomeDir/resources/core/tables/std_services.htm

- This service sends the check-in request to one of the following SubServices, which are the same SubServices called during checkin through the browser or Repository Manager application. (These SubServices are not called during a Batch Loader or Archive import.)
 - CHECKIN_NEW_SUB If the content item does not exist in the server. This SubService validates the check-in data and determines if this content item belongs to a criteria workflow.
 - CHECKIN_SEL_SUB If the content item exists on the system, the content item is checked out, and the content item is not in a workflow.

- WORKFLOW_CHECKIN_SUB If the content item exists and is in a
- This service checks security to determine if the user has sufficient permission to check in the content item.
- Determines if the content item is new or already exists in the system by querying the database using the Content ID (dDocName) as the key.
- If the content item exists in the system, the publish state (dPublishState) must be empty.
- If the item exists and is checked out, a new revision is checked in.
- The most likely errors are mismatched parameters or when the content item was not successfully checked in.

Note: All paths use the slash (/) as the file separator. This is because the backslash (\) is an escape character. For example, primaryFile=d:/temp/myfile.txt.

Additional Required Service Parameters

- dDocName: The Content ID for the content item.
 - If Content ID auto generation is enabled, this parameter is not required.
 - If dDocName is specified and exists in the Content Server system, a revision is checked in. If dDocName is specified and does not exist in the Content Server, a new content item is checked in.
 - The Content ID cannot contain spaces or invalid characters ;/\?:@&=+"#%<>*~|[].
- dDocAuthor: The content item author (contributor).
- dDocTitle: The content item title.
- dDocType: The content item type.
- dSecurityGroup: The security group such as *Public* or *Secure*.
- dDocAccount: The account for the content item. Required only if accounts are enabled.
- primaryFile: The absolute path to the location of the file as seen from the server. Use the slash as the file separator. A primary file must be specified unless checking in metadata only. If an alternate file is specified with the primary file, the content refinery converts the alternate file. Otherwise, the primary file is converted.
 - If a primary file is not specified, you can use a metafile in its place. Only one metafile can exist for each content item (a primary AND alternate meta file cannot coexist).
 - If both a primary and alternate file is specified, their extensions must be different.
 - doFileCopy: 1 (true): The file is not deleted from the hard drive after checkin. 0 (*false*): The file is removed from the hard drive after checkin.
- Required custom fields: Custom metadata fields that are required must also be specified.
- **Optional Service Parameters**

- alternateFile: The alternate file for conversion.
- Only one metafile can exist for each content item (a primary AND alternate meta file cannot coexist.)
 - If an alternate file is specified with the primary file, the content refinery converts the alternate file. Otherwise, the primary file is converted.
- dCreateDate: The date the content item was created. By default, this is the current
- dInDate: The content release date. The date the content item is to be released to the Web. By default, this is the current date. If the content release date (dInDate) is not specified, the creation date (dCreateDate) is used. This value is auto generated if it is not supplied.
- dOutDate: The content expiration date. By default, this is blank and does not specify an expiration date. If the content expiration date (dOutDate) is not entered, the value remains empty. This is a valid state.
- dRevLabel: The revision label for the content item. If set, the label is used to locate the specified revision. If a revision label (dRevLabel) is specified, this service checks if the content revision exists in the system; an exception is thrown if it exists.
- isFinished: Set to true (1) if this is a workflow checkin and you have finished editing it.
- For additional information, see WORKFLOW_CHECKIN.

Note: Do not confuse the Content ID (dDocName) with the internal content item revision identifier (dID). The dID is a generated reference to a specific rendition of a content item.

Results

- Local Data:
 - dConversion: If refinery-processed, contains information about what conversion occurred.
 - dID: Internal reference ID for the new content item.
 - IsWorkflow: Returns 1 (*true*) if item entered workflow upon checkin.

Used By

- Resource Includes: std_doc_page_definitions
- Other:
 - SoapCustom:Esdl:CheckIn:Services
 - SoapCustom:Wsdl:Workflow:Services

Example

IdcCommand command file format:

IdcService=CHECKIN_UNIVERSAL dDocName=adsales dDocType=ADACCT dDocTitle=Advertising Sales dSecurityGroup=Secure

```
dDocAuthor=user1
dRevLabel=1
dDocType=ADACCT
primaryFile=c:/temp/docs/mydoc.txt
doFileCopy=1
# If this is a workflow check-in and you have finished editing it, mark it as
finished.
#isFinished=true
#Required depending on configuration
dDocAccount=mainaccount
#Optional fields:
#dCreateDate=
#dInDate=
#dOutDate=
#alternateFile=
#Custom metadata fields:
xComments=
xLocation=
xProjects=
```

HDA format (check in the content item *myDocName*):

```
@Properties LocalData
IdcService=CHECKIN UNIVERSAL
doFileCopy=1
dDocName=myDocName
dDocTitle=My document title
dDocType=ADACCT
dSecurityGroup=Secure
dDocAuthor=user1
primaryFile=c:/temp/docs/mydoc.txt
dDocAccount=mainaccount
xComments=
xLocation=
xProjects=
@end
```

4.3.18 CHECKOUT

Service that checks out the latest revision of a content item from a browser.

- The service fails if the content item does not exist in the system, if the content item is already checked out, or if the user does not have sufficient permission to check out the content item.
- The most likely error is when the content no longer exists in the system or when the system is unable to retrieve revision information.
- This service executes the SubService CHECKOUT_SUB. This SubService checks out a content item revision.

Access Level: Write, Scriptable (34) Calls Subservice: CHECKOUT_SUB

Queries Executed:

QdocID

- **Qrevisions**
- QdocInfo

Location: IdcHomeDir/resources/core/tables/std services.htm

Note: This service only marks the content item as locked. It does not perform a download.

Additional Required Service Parameters

dID: The generated content item revision ID.

Optional Service Parameters

- dDocTitle: The content item title.
- RedirectUrl: Used to display another page. If omitted, the user is redirected to the Content Server home page.

- Local Data:
 - CurRevCheckoutUser
 - CurRevIsCheckedOut
 - CurRevID
 - dAction
 - dActionDate
 - dActionMillis
 - dCheckoutUser
 - dClbraName
 - dDocName
 - dIsCheckedOut
 - dPublishState
 - dReleaseState
 - dRevClassID
 - dRevLabel
 - dSecurityGroup
 - dStatus
 - dWorkflowState
 - isCurRevEmpty
 - isFinished
 - IsNotLatestRev
 - IsWorkflow
 - latestID
 - prevReleaseState

- RedirectParams
- wfAction
- Response Templates:
 - REDIRECT_TEMPLATE (redirect_template.htm)
 - Default redirect service: CHECKOUT_OK

Used By

- Applets:
 - Repository Manager
 - Workflow Administrator
- Resource Includes:
 - classic_search_result_item_checkout
 - clbra_active_doc_display
 - doc_file_checkout
 - docinfo_checkout_form
 - searchapi_result_table_content_end
 - search_results_action_popup
 - setup_search_results_action_popups
 - wf_reviewer_doc_action_links
 - wips_list_action_popup
 - workflow_action_popup
 - workflow_doc_action_links
 - workflow_docs_table
 - workflow_in_queue_table
 - work_in_progress_table
- Template: WORKFLOW_REVIEW_FORM (workflow_review_form.htm)
- Other: SoapCustom:Wsdl:CheckIn:Services

Example

IdcCommand command file format:

IdcService=CHECKOUT dID=55

HDA format with optional parameter:

@Properties LocalData IdcService=CHECKOUT dID=55 dDocTitle=Sample Title @end

4.3.19 CHECKOUT_BY_NAME

Service that checks out a content item from an applet or application.

Location: IdcHomeDir/resources/core/tables/std_services.htm

- The service fails if the content item does not exist in the system, if the content item is already checked out, or if the user does not have sufficient permission to check out the content item.
- The most likely error is a content item name not in the system.
- This service executes the SubService CHECKOUT_SUB. This SubService checks out a content item revision.

Note: This service only marks the content item as locked. It does not perform a download.

Additional Required Service Parameters

dDocName: The Content ID of the content item.

Optional Service Parameters

dDocTitle: The content item title.

Example

IdcCommand command file format:

IdcService=CHECKOUT_BY_NAME dDocName=myDocument

HDA format with optional parameter:

@Properties LocalData IdcService=CHECKOUT_BY_NAME dDocName=myDocument dDocTitle=Just a title @end

4.3.20 CHECKOUT OK

Called as a redirect service by the service(s) that check out a content item from a browser and display a checkout confirmation page.

Access Level: Write, Scriptable (34)

Queries Executed: QdocInfo

Location: IdcHomeDir/resources/core/tables/std_services.htm

- The most likely error is when the revision no longer exists or when the system is unable to retrieve revision information.
- This service executes the SubService CHECKOUT_SUB. This SubService checks out a content item revision.

Additional Required Service Parameters

- dID: The generated content item revision ID.
- CurRevCheckoutUser: The user who checked out the item.

Optional Service Parameters

CurRevID: The ID of the current revision, usually the same as dID.

Results

- ResultSets: DOC_INFO (All Fields from Revisions and DocMeta for the specified version.)
- Response Template: CHECKOUT_OK (chkook.htm)

Used By

Other: Redirect service for CHECKOUT, CHECKOUT_BY_NAME

Example

IdcService=CHECKOUT_OK dID=48

4.3.21 CHECKOUT_SUB

SubService that checks out a content item revision. Requires that the binder contain a result set named DOC_INFO that contains the results of QdocInfo (or equivalent) for the most recent version of a content item.

Access Level: SubService (N/A)

Queries Executed:

QworkflowDocInfo

- IdocHistory
- UcheckoutRevision

Location: IdcHomeDir/resources/core/tables/std_services.htm

Results

- Local Data:
 - CurRevCheckoutUser
 - dAction
 - dActionDate
 - dActionMillis
 - dCheckoutUser
 - dClbraName
 - dIsCheckedOut
 - hasUserAccessChanged
 - isCurRevEmpty
 - isFinished
 - IsNotLatestRev
 - prevReleaseState
 - wfAction

Used By

- Services:
 - **CHECKOUT**

- CHECKOUT_BY_NAME
- FORM_PROCESS (indirectly through the processForm method)

4.3.22 CONTINUE_CHECKIN

Service that completes a checkin that was started with the CACHE_CHECKIN_NEW or CACHE_CHECKIN_SEL service.

After a preview has been performed and the check-in data is cached the user can decide to finish or continue the checkin using this service.

The cached data must be provided to this service to perform a successful checkin. Filters are provided to customize the cache and check-in behavior.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dDocName: The Content ID for the content item.

4.3.23 CONTINUE_SUBMIT_HTML_FORM

Service that completes a checkin that was started with the CACHE_SUBMIT_HTML_ FORM service.

After a preview has been performed and the check-in data is cached the user can decide to finish or continue the checkin using this service.

The cached data must be provided to this service to perform a successful checkin. Filters are provided to customize the cache and check-in behavior.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

dDocName: The Content ID for the content item.

4.3.24 COPY REVISION

Service that copies one document revision, creating a new rev class from it. Most of the document metadata from the original revision will be carried over. The caller can also overwrite any metadata value by setting it in the request parameters.

The user only needs READ permissions to the original document revision. However, because the new revision inherits the metadata of the original, new security metadata values must be set if the user does not have WRITE permissions to the original revision.

This service assumes that GetCopyAccess is set to TRUE in the Content Server configuration.

Service Class: DocService

Location: IdcHomeDir/resources/core/tables/std_services.htm

Required Service Parameters

- dID: (integer) The ID of the document revision to copy.
- dDocName: The content ID of the document revision to copy. Used for nice error messages.

Optional Service Parameter

newDocName: The dDocName of the new rev class. If this is not specified and auto-numbering is enabled, a dDocName will be generated automatically.

Results

- ResultSets:
 - NewDocInfo: Information about the newly created document.
 - Original DocInfo: Information about the original document that was copied.

4.3.25 CREATE_SUBSCRIPTION_TYPE

Service that creates a new subscription type. The most likely error is when the subscription type name is not unique.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- scpType: The subscription type.
- scpDescription: The subscription description.
- scpEnabled: 1 (true): Subscription notifications are enabled. 0 (false): Subscription notifications are disabled.
- scpFields: The metadata fields that define the subscription criteria. For example, dDocAuthor, dDocType.

Example

IdcService=CREATE_SUBSCRIPTION_TYPE scpType=subscription_test scpFields=dDocType scpDescription=testing the subscription scpEnabled=1

4.3.26 DELETE BYCLASS

SubService used to delete content items based on specific parameters.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.3.27 DELETE BYNAME

SubService used to delete content items based on specific parameters.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.3.28 DELETE BYREV

SubService used to delete content items based on specific parameters.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.3.29 DELETE BYREV REVISION

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.3.30 DELETE_CHECKIN_CACHE

SubService used to delete content items based on specific parameters.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.3.31 DELETE_DOC

Service that deletes the entire content item and all revisions. The user must have permission to delete the content item. The most likely error is when the content item no longer exists in the system.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

- dID: The generated content item ID.
- dDocName: The documentID for the document; the actual content ID.

Example

IdcService=DELETE_DOC dID=48 dDocName=test1000

4.3.32 DELETE_REV

Service that deletes an existing content item revision from a browser. The most likely errors are mismatched parameters, when the content item no longer exists in the system, or when the content item is part of a workflow.

Access Level: Read, Write (3)

Calls SubService: DELETE_BYREV_REVISION

Queries Executed: QdocInfo

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

dID: The generated content item revision ID.

- ResultSets: DOC_INFO (All fields from Revisions and DocMeta for the specified revision.)
- Local Data:
 - Content Server:
 - currentReleaseState
 - dAction (returns 'Delete Revision')
 - dReleaseState
 - isAllRevisionsDeleted (returns true when the last revision of an item is deleted)
 - isCurRevEmpty
 - newReleaseState
 - prevID

- If the item being deleted is currently in a workflow, the operation fails and the following workflow info is returned:
 - dWfCurrentStepID
 - dWfDocState
 - dWfID
 - dWfName
 - dWfStatus
 - dWfStepDescription
 - dWfStepID
 - dWfStepIsAll
 - dWfStepName
 - dWfStepType
 - dWfStepWeight
 - dWfType
 - dWorkflowState
 - IsWorkflow
 - wfStepCheckinType
- Response Templates:
 - REDIRECT_TEMPLATE (redirect_template.htm)
 - Default redirect service: DOC_INFO

Used By

- Resource Includes:
 - delete_rev_form
 - delete_revision_form

Example

IdcService=DELETE_REV dID=51

4.3.33 DELETE_REV_EX

Service that deletes an existing content item revision from an applet or application. The most likely errors are mismatched parameters, when the content item no longer exists n the system, or when the content item is part of a workflow.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dID: The generated content item revision ID.

Example

IdcService=DELETE_REV_EX dID=56

4.3.34 DELETE_SUBSCRIPTION_TYPE

Service that deletes an existing subscription type. The most likely error is a subscription type that is not in the system.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

scpType: The subscription type.

Example

IdcService=DELETE_SUBSCRIPTION_TYPE scpType=subscription_test

4.3.35 DOC_FORMATS_WIZARD

Service that retrieves content item format extensions. Used to load the content item configuration information and set the default content item format extension.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.3.36 DOC INFO

Service that retrieves content item information for a specific revision of a content item. It returns all metadata associated with that revision of the content item. The most likely errors are when the content item no longer exists in the system or when the user does not have the security level to perform this action.

Limited information is provided for other revisions through the REVISION_HISTORY result set.

This service returns subscription information and workflow information if the item is in workflow.

Access Level: Read, Scriptable (33)

Oueries Executed:

- **QdocInfo**
- **QdocFormats**
- QisSubscribed
- **OrevHistory**

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dID: The content item revision ID.
- dDocName: The content item ID.

- ResultSets:
 - DOC_INFO (all fields from Revisions and DocMeta for the specified revision)
 - REVISION HISTORY (dFormat, dInDate, dOutDate, dStatus, dProcessingState, dRevLabel, dID, dDocName, dRevisionID for all non-deleted revisions)

- If item is in workflow: WF_INFO (all fields from Workflows and WorkflowDocuments for the specified revision)
- Local Data:
 - Content Server:
 - AuthorAddress
 - dDocFormats
 - dDocTitle
 - dID
 - DocUrl
 - dStatus
 - dSubscription Alias
 - dSubscriptionID
 - dSubscriptionType
 - dUser
 - If item is in workflow:
 - dWfCurrentStepID
 - dWfDocState
 - dWfID
 - dWfName
 - dWfStatus
 - wfStepCheckinType
 - dWfStepDescription
 - dWfStepID
 - dWfStepIsAll
 - dWfStepName
 - dWfStepType
 - dWfStepWeight
 - dWfType
 - IsWorkflow
- String: DocURL (the full URL to the weblayout file associated with this revision)
- Response Template: DOC_INFO (doc_info.htm)

Used By

- Resource Includes:
 - checkin_list_action_popup
 - checkin_multiuploadapplet_processing_functions
 - classic_doc_rev_info
 - clbra_active_doc_display

- clbra_wf_doc_list

- Redirect service for:
 - DELETE REV
 - RESUBMIT_FOR_CONVERSION
 - **SUBSCRIBE**
 - UNDO CHECKOUT
 - UNSUBSCRIBE
 - UPDATE_DOCINFO_BYFORM

Example

IdcService=DOC_INFO dID=54321

4.3.37 DOC_INFO_BY_NAME

Service that retrieves information about the latest revision of a content item based on the content ID (the dDocName) as a parameter rather than the revision-specific dID parameter, which is required by the DOC_INFO service. The RevisionSelectionMethod parameter can be set to *specific* to return information about a specific revision.

By default, this service returns information for the Latest revision, whether it is released or not. An item is not released until it is out of workflow. Results returned for a given revision are identical to those of the DOC_INFO service.

Access Level: Read, Scriptable (33)

Queries Executed:

- OdocInfo
- **QdocFormats**
- QisSubscribed
- **QrevHistory**
- QlatestIDByName (if RevisionSelectionMethod is empty or 'Latest')
- QlatestReleasedIDByName (if RevisionSelectionMethod is 'LatestReleased')

Location: IdcHomeDir/resources/core/tables/std services.htm

Important: Either the content item name (*dDocName*) must be specified or a Content ID (dDocName) with the RevisionSelectionMethod parameter must be specified.

Additional Required Service Parameters

dDocName: The content item name.

Optional Service Parameters

RevisionSelectionMethod: Can be set to Latest to retrieve the most recent version, or LatestReleased to retrieve the most recently released version, or Specific (if set to Specific, a dID must be provided). If set to Specific, dID can be used instead of dDocName to point to a specific revision.

- ResultSets:
 - DOC_INFO (all fields from Revisions and DocMeta for the specified revision)
 - REVISION_HISTORY (dFormat, dInDate, dOutDate, dStatus, dProcessingState, dRevLabel, dID, dDocName, dRevisionID for all non-deleted revisions)
 - If item is in workflow: WF INFO (all fields from Workflows and WorkflowDocuments for the specified revision)
- Local Data:
 - Content Server:
 - AuthorAddress
 - dDocFormats
 - dDocTitle
 - dID
 - DocUrl
 - dStatus
 - dSubscriptionAlias
 - dSubscriptionID
 - dSubscriptionType
 - dUser
 - If item is in workflow:
 - dWfStatus
 - dWfCurrentStepID
 - dWfDocState
 - dWfID
 - dWfName
 - dWfStepDescription
 - dWfStepID
 - dWfStepIsAll
 - dWfStepName
 - dWfStepType
 - dWfStepWeight
 - dWfType
 - IsWorkflow

- wfStepCheckinType
- Response Template: DOC_INFO (doc_info.htm)

Used By

- Resource Includes:
 - email_docinfo_body_by_id
 - email_docinfo_body_by_name
 - setup_workflow_action_popups
 - workflow_action_popup
- Template: PR_PUBLISHER_MAIL (pr_publisher_mail.htm)
- Other: SoapCustom:Wsdl:DocInfo:Services

4.3.38 DOC INFO LATESTRELEASE

Service that retrieves information only for the latest revision of a released content item. If the content item has no released revision, the service returns a StatusCode of -1, with a corresponding StatusMessage value. It only returns the DOC_INFO result set (no revision, workflow, or subscription information). Because it does not have a template it returns only raw data.

The most likely errors are when the content item no longer exists in the system or when the user does not have the security level to perform this action.

Access Level: Read, Scriptable (33)

Queries Executed: QlatestReleasedIDByName, QdocInfo

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dDocName: The document name for the content item.

Results

- ResultSets: DOC_INFO (All fields from Revisions and DocMeta for the latest released revision.)
- Local Data:
 - AuthorAddress
 - dDocName
 - dID
 - dUser

Example

IdcService=DOC INFO LATESTRELEASE dDocName=PublicDoc1_ia3c488971

4.3.39 DOC_INFO_SIMPLE

Service that returns information about a specific content item without workflow or subscription information. It returns revision information as a simple listing of rows from the Revisions table rather than a specific selection of fields from the Documents and Revisions table. These differences make this service a less expensive operation than the standard DOC_INFO service.

Because it does not have a template it returns only raw data.

Access Level: Read, Scriptable (33)

Queries Executed: QdocInfo, QdocName

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dID: The Content ID for the content item.

Results

- ResultSets:
 - DOC_INFO (all fields from Revisions and DocMeta for specific revision)
 - DocRevisions (all fields from Revisions for all non-deleted revisions)
- Local Data:
 - AuthorAddress
 - dID
 - dUser

4.3.40 DOC_INFO_SIMPLE_BYREV

Service that returns information about a content item based on a revision number. This service differs from others by requiring a combination of Content ID (dDocName) and revision number (dRevLabel) as required parameters. All other revision-specific doc_ info services require dID.

This service returns the DOC_INFO result set. DOC_INFO_SIMPLE also returns revision information.

Access Level: Read, Scriptable (33)

Queries Executed: QdocRev, QdocInfo

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dDocName: The document name for the content item.
- dRevLabel: The revision number for the content item.

- ResultSets:
 - DOC_INFO (all fields from Revisions and DocMeta for specific revision)
- Local Data:
 - dUser
 - dRevLabel
 - dID
 - AuthorAddress

dDocName

4.3.41 DOC_SUBS_LIST

Service that returns a list of content items in a specific subscription.

For criteria-based subscriptions, this returns items matching the criteria. For basic subscriptions, it returns the item with a name that matches the subscription ID.

Access Level: Read, Global, Scriptable (49)

Queries Executed: QuserSubscription

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

dSubscriptionID: The subscription ID. For a Basic subscription, this is the Content ID. For a Criteria subscription, this is a comma-delimited list of the values of the criteria fields.

For example, if the criteria fields are Author and Security Group, the value for a Public content item authored by user1 would be *Public,user1*.

dSubscriptionType: The subscription type, either Basic or a custom name. Must be set to *Basic* for a basic subscription.

Optional Service Parameters

- dSubscriptionAlias: Use to pass an alias or user name. If set to alias, a valid alias name must be used. If set to *user* a valid user name is necessary. If an invalid alias or user name is used, an error occurs. If left blank, the value defaults to user and is set to the current user (dUser).
- dSubscriptionAliasType: Determines what the service expects as a value for dSubscriptionAlias. Valid values are alias or user.
- unsubscribeService: For response pages (such as the default template for this service) that provide a link that allows the user to unsubscribe, a value must be passed as a parameter. If omitted an error does not appear but the unsubscribe link on the response page produces an error if clicked (the standard value should be UNSUBSCRIBE).
- subscribeService: Same as unubscribeService parameter except a link to subscribe is provided if the user is not already subscribed to the subscription (the standard value should be SUBSCRIBE).
- MaxQueryRow: Truncates the number of rows returned for the DOCUMENT LIST result set.

- ResultSets:
 - DOCUMENT_LIST: All fields from Revisions and DocMeta for items matching the subscription criteria. This data is returned regardless of whether the user is subscribed to the specified subscription.
 - USER_SUBSCRIPTION: All fields from Subscriptions for the row that assigns the specified subscription to the user/alias. If the user/alias is not subscribed to the specified subscription, the result set is empty.
- Local Data:

- dataSource
- dSubscriptionAlias
- dSubscriptionAliasType
- dSubscriptionID
- dSubscriptionType
- dUser
- MaxQueryRows
- resultName
- scpDescription
- scpEnabled
- whereClause
- Response Template: DOC_SUB_LIST (doc_sub_list.htm)

Used By

- Applets: Repository Manager
- Resource Includes:
 - criteria_subscription_info_image
 - legacy_criteria_subscriptions_table
 - setup_subscription_action_popups
 - subscription_action_popup
- Templates:
 - SUBSCRIBE_FORM (subscribe_form.htm)
 - UNSUBSCRIBE_FORM (unsubscribe_form.htm)

Example

IdcService=DOC SUBS LIST dSubscriptionType=my_subscription dSubscriptionID=ADENG

4.3.42 EDIT_DOC_FORMATS

Service that modifies existing file formats. The service updates content item formats and file extension information. This service is executed in a browser interface by the Inbound Refinery.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

- dFormat: The formatting process used to create the web-viewable version of the content. For example, application/hcsf or application/doc.
- dDescription: The format description.
- dConversion: The conversion algorithm is determined by this parameter.

If the conversion type is not *Passthru* or *NoConversion* (default value) and the content is not web-viewable or has a publish state, the content gets added to the queue to get

converted. Otherwise, the server looks for the web-viewable (if applicable) and the vault file and updates the processing state to say that the file has already been converted.

If the file mime-type is *application/FDF*, the server sets the conversion to *exchange-fdf*.

extensions: The file extensions such as *doc*, *txt*, or *pdf*.

Example

IdcService=EDIT_DOC_FORMATS dFormat=application/msword extensions=doc dConversion=PASSTHRU dDescription=adding the description

4.3.43 FORM PROCESS

Service that processes a PDF form for submission. This service is called by FORM_ SUBMIT. It uses the auto-generated ClientId parameter.

Location: IdcHomeDir/resources/core/tables/std services.htm

Note: This service cannot be executed by Idc Command.

4.3.44 FORM SUBMIT

Service that submits a PDF form. This service calls the FORM_PROCESS service to process the PDF form before submission.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Note: This service cannot be executed by Idc Command.

4.3.45 GET_CACHED_CHECKIN_INFO

Service used to display the cached data for a cache checkin such as CACHE_ CHECKIN_NEW. It is available from the checked-out content listing.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dDocName: The Content ID for the content item.

4.3.46 GET_DOC_CONFIG_INFO

Service that returns Content Server configuration information. Gets a dump of the server environment form external applications.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Results

Returns the properties information, the security group option list, and these ResultSets:

- DOC_DEFAULT_INFO
- DocMetaDefinition

- DocTypes
- **DocFormats**

Example

IdcCommand command file format:

#Retrieves content item configuration information IdcServer=GET_DOC_CONFIG_INFO

HDA format:

@Properties LocalData IdcService=GET_DOC_CONFIG_INFO @end

4.3.47 GET DOC SUBSCRIBERS

Service that returns a list of subscribers to a specific content item.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dDocName: The Content ID for the content item.

Example

IdcService=GET_DOC_SUBSCRIBERS dDocName=test_000036

4.3.48 GET_DOCUMENT_HISTORY_REPORT

Service that returns changes in the DocumentHistory table to be used by cache services and others objectives.

Service Class: DocService

Location: IdcHomeDir/resources/core/tables/std services.htm

Optional Service Parameter

actionDateGreaterThan: A date in ODBC format used for the query against the DocumentHistory table. Two minutes are automatically subtracted from this date to anticipate clustered servers where the clocks can be slightly misaligned. This parameter defaults to five minutes before the current time

Results

- ResultSets:
 - HistoryReport: Each row contains information about a document history event: rename, update, move, or delete.

Example

```
IdcService=GET_DOCUMENT_HISTORY_REPORT
actionDateGreaterThan={ts '2012-11-19 15:58:00.100'}
```

4.3.49 GET ENVIRONMENT

Service used to retrieve the settings of configuration values for a Content Server environment.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Optional Service Parameters

startTime: The time (in milliseconds) that the instance started.

4.3.50 GET EXPIRED

Service used to retrieve a list of expiring and expired items. The optional isExpiredQuery parameter, when set to true, causes the service to list only items that have already expired.

Without this parameter, the list also contains items that are scheduled to expire within the range of dates specified by endDate and startDate. This may include items that have already expired if the start date is earlier than the current system time.

Access Level: Read, Write, Global (18)

Location: IdcHomeDir/resources/core/tables/std_services.htm

Optional Service Parameters

- endDate: Items expiring before this date are displayed.
- isExpiredQuery: Setting this parameter to 1 (true) causes searching for only expired items. If set to true and the end date is unspecified, the current system time is used as a default end date. This lists content that has already expired unless constrained by a specific start date.
- If set to 0 (false) and the start date is empty, the current system time is used as a default start date. This lists content items that expire in the future, constrained by a specified end date.

In all other situations, empty start or end dates are treated as empty, and no corresponding constraint is imposed upon the query.

startDate: Items expiring after this date are displayed.

- Results Sets: EXPIRED_LIST (All fields from Revisions and DocMeta for expired or expiring items as defined by the dates and is Expired Query parameter.)
- Local Data:
 - dataSource
 - endDate
 - expiredQuery
 - isExpiredQuery
 - isQueryResult
 - MaxQueryRows
 - orderClause
 - resultName
 - startDate
 - user Defined End Date
 - userDefinedStartDate

- whereClause
- Response Template: EXPIRED_PAGE (expired_page.htm)

Used By

- Resource Includes:
 - pne_nav_management_links
 - std_doc_man_pages
- Templates: EXPIRED_PAGE (expired_page.htm)
- Standard Navigation: commonNav.js

4.3.51 GET_PACKAGE_ENVIRONMENT_PAGE

Services used to retrieve the page that initiates the packaging of the environment.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.3.52 GET_UPDATE_FORM

Service used to generate the Info Update Form for an existing content item.

The most likely error is naming a content item that is no longer in the system.

Access Level: Write, Scriptable (34)

Queries Executed: QdocInfo

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dID: The generated content item revision ID.

Results

- ResultSets:
 - DOC_INFO (all fields from Revisions and DocMeta for the specified revision)
 - DocFormats (all rows and fields of the DocFormats database table)
 - DocTypes (all rows and fields of the DocTypes database table)
- Local Data:
 - dDocAccount
 - dDocName
 - dDocType
 - defaultAccount
 - dID
 - dSecurityGroup
 - dUser
- Response Template: UPDATE_DOC_INFO (update_docinfo.htm)

Example

IdcService=GET_UPDATE_FORM

dID=59

4.3.53 NOTIFY INDEXER

Service used to notify the indexer that work is to be done. This service is not used because normally a checkin notifies the indexer or because the indexer has its own timer, which checks for 'work to do' every five minutes.

This service should only be used if a NO_NOTIFY checkin has been performed and the client application does not want to wait for the normal indexing cycle.

Location: IdcHomeDir/resources/core/tables/std services.htm

4.3.54 ODMA_DOC_INFO_SIMPLE

Service used by the ODMA client application to retrieve the content information for the specified content item.

This service is currently not in use.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dID: The unique ID for the item revision.

4.3.55 PACKAGE ENVIRONMENT

Service that creates a packaged zip file containing Content Server environment files.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.3.56 REMOVE METAFILE SUB

SubService called to alter document meta information.

Location: IdcHomeDir/resources/core/tables/std services.htm

4.3.57 REPLACE METAFILE SUB

SubService called to replace document meta information.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.3.58 RESTORE REVISION

Service that restores the document revision corresponding to the supplied dID as a new (latest) revision.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Required Service Parameter

dID: The document ID of the item to restore as the latest revision.

- dID: The document ID of the new revision created.
- dDocName: The document name of the new revision created.
- dDocTitle: The document title of the new revision created.

4.3.59 RESUBMIT_FOR_CONVERSION

Service that resubmits a content item for conversion when it fails the initial conversion attempt. The most likely errors are when the content item no longer exists in the system or when the user does not have the security level to perform this action.

This service can resubmit successful conversions and failed ones.

Access Level: Write (2)

Queries Executed: QdocInfo, QlatestID, Qdocuments

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dID: The generated content item revision ID.

Optional Service Parameters

- RedirectUrl: URL used for the redirected service.
- AlwaysResubmit: When set to 1 (true), allows the service to be used on items that were successfully converted. Otherwise the service only operates on failed conversions.

- Local Data:
 - dConversion
 - dCurRevID
 - dDocID
 - dExtension
 - dFileSize
 - dFormat
 - dID
 - dOriginalName
 - dProcessingState
 - dPublishState
 - dRawDocID
 - dReleaseState
 - dRevClassID
 - dStatus
 - dWorkflowState
 - IsNotLatestRev
 - isStatusChanged
 - prevReleaseState
 - RedirectParams
 - VaultfilePath
 - WebfilePath

- wfAction
- Response Template:
 - REDIRECT_TEMPLATE (redirect_template.htm)
 - Default redirect service: DOC_INFO

Used By

- Applets: Repository Manager
- Resource Includes:
 - classic_info_page_content
 - docinfo_resubmit_option
 - std_docinfo_error_msg

Example

IdcService=RESUBMIT_FOR_CONVERSION

4.3.60 REV_HISTORY

Service that returns the revision history for a content item revision.

Access Level: Read, Scriptable (33)

Queries Executed: QdocInfo, QrevHistoryReleased

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dID: The generated content item revision ID.

Results

- ResultSets:
 - DOC_INFO (All fields from Revisions and DocMeta for the specified revision)
 - REVISIONS (Rows listing all the item's released revisions containing the fields: dDocAccount, dDocName, dDocType, dFormat, dID, dInDate, dProcessingState, dReleaseState, dRevLabel, dRevisionID, dSecurityGroup, dStatus, dWebExtension)
- Local Data: dID
- Response Template: REV_HISTORY (rev_history.htm)

Used By

- Resource Includes:
 - classic_search_result_item_revision
 - searchapi_result_table_content_end

Example

IdcService=REV_HISTORY dID=62

4.3.61 SELECTDOC

Service that returns content item information and evaluates the user security level when selecting a content item using ODMA.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dID: The generated content item revision ID.

Example

IdcService=SELECTDOC dID=62

4.3.62 SUBMIT HTML FORM

Service that submits HCSP or HCSF forms for processing. These are Dynamic Server Pages used to process HTML-based business forms. This service calls the GET_FILE SubService, called with Java code from

intradoc.server.FormHandler.retrieveHtmlFormState() method.

Usually the Auto Content ID feature is enabled to submit HTML forms. If not, each submitted form must be assigned a unique Content ID.

The most likely error is an HTML form that does not exist.

Access Level: Write (2)

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

dID: The generated content item revision ID. The specified revision must be an HTML form.

Optional Service Parameters

- RedirectUrl: Used to display another page. If omitted, the user is redirected to the Content Server home page.
- isFormFinished: Used on HCSP files. If this is set to 1 (true), the HCSP cannot be submitted again.
- Text fields: You can submit any text field in the form as an optional parameter and pass a value to that field. For example, if the form has a text field called *Product*, the string value *publisher* could be assigned to that field (Product=publisher).

- ResultSets:
 - DocTypes
 - **DocFormats**
- Local Data:
 - dDocTitle
 - dID
- Response Template:
 - null

default redirect server (GET_DOC_PAGE: HOME_PAGE)

Used By

Resource Includes: std_html_form_submit_start

Example

IdcCommand command file format:

```
IdcService=SUBMIT HTML FORM
dID=44
```

HDA format with an optional parameter (assigns a value to a text field):

```
@Properties LocalData
IdcService=SUBMIT_HTML_FORM
dTD=44
Product=publisher
@end
```

4.3.63 SUBSCRIBE

Service that subscribes a user to a content item or group of items. The most likely errors are when the content item no longer exists in the system or when the user does not have the security level to perform this action. Note that to create a subscription, authentication is required.

Access Level: Read (1)

Queries Executed:

- OdocInfo
- QuserSubscription
- Quser
- **UuserEmail**
- Isubscription

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dID: The generated content item revision ID.
- dSubscriptionEmail: The e-mail address for the subscription. The service uses the value to overwrite the user's e-mail value in their user profile. If no value is passed for this parameter, the profile not updated. Essentially, every time this service is executed, the user's e-mail address is updated.
- dSubscriptionType: The subscription type. You can optionally provide the name of a custom subscription. If this parameter is used, the service subscribes the user to a criteria-based subscription where the specified custom subscription's criteria fields match the value of the corresponding metadata of the item specified through the dID parameter. If dSubscriptionType is left blank, the Basic subscription is used by default.

Optional Service Parameters

RedirectUrl: Used to display another page. If omitted, the user is redirected to the Content Server home page.

Results

- Local Data:
 - dID
 - dName
 - dSubscriptionAlias
 - dSubscriptionAliasType
 - dSubscriptionCreateDate
 - dSubscriptionID
 - dSubscriptionType
 - dUser
- Response Template:
 - DOC_INFO
 - Default redirect service: DOC_INFO

Used By

- Resource Includes:
 - docinfo_subscription_form
 - doc_subscription_unsubscription
- Other: SoapCustom:Wsdl:Subscription:Services

Example

These parameters are passed in the browser environment to execute this command:

```
<input type=hidden name=IdcService value="SUBSCRIBE">
<input type=hidden name=dID value="63">
<input type=hidden name=dSubscriptionType value=my_subscription>
<input type=hidden name=dSubscriptionEmail value=sysadmin@example.com>
```

4.3.64 SUBSCRIBE DOC USER

Service used in the browser environment when a user subscribes to a content item (builds the subscription page).

This service is executed when a user subscribes to a document (performs a search and clicks Subscribe). If the system has more than one subscription type, the user is redirected to the Subscription page where the user can subscribe to different criteria.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dID: The generated content item revision ID.

Note: Additional parameters are passed when the user subscribes to the content item (see the following example).

Example

These parameters are passed in the browser environment to execute this command:

```
<form name=SubscriptionForm action="/cs/idcplg"method="GET"">
<input type=hidden name=dID value="63">
<input type=hidden name=dDocName value="test_000045">
<input type=hidden name=IdcService value="SUBSCRIBE_DOC_USER">
<input type=hidden name=subscribeService value=SUBSCRIBE>
<input type=hidden name=exitUrl value="/cs/idcplg?IdcService=DOC_</pre>
INFO&dID=63&dDocName=test_000045">
<input type=hidden name=title value="Subscriptions">
<input type=hidden name=unsubscribeService value=UNSUBSCRIBE>
<input type=submit value="Subscriptions">
</form>
```

4.3.65 SUBSCRIBE EX

Service used in Repository Manager to add a user or alias to a subscription. It returns the list of users and aliases subscribed to this type. The most likely error is when the specified subscription alias type or subscription alias does not exist.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dSubscriptionAlias: The alias for the subscription.
- dSubscriptionAliasType: The type of user. This value must be either *user* or *alias*. It refers to the value defined in dSubscriptionAlias.
- dSubscriptionEmail: The email address for the subscription.
- dSubscriptionID: The subscription ID.
 - For a Basic subscription, this is the Content ID.
 - For a Criteria subscription, this is a comma-delimited list of the values of the criteria fields.

For example, if the criteria fields are Author and Security Group, the dSubscriptionID parameter value for a *Public* content item authored by *user1* would be *Public*, *user1*.

dSubscriptionType: Name of the subscription type defined in the applet. A subscription type consists of a list of fields. When subscribing to a subscription type, the user must specify the values for each of the fields that make up the subscription type.

Optional Service Parameters

To return information about who is subscribed, this service requires these parameters:

- dataSource: The data source.
- resultName: The ResultSet name.
- where Clause: The programmatic clause.

Example

```
IdcService=SUBSCRIBE_EX
dSubscriptionID=user20
dSubscriptionAlias=sysadmin
dSubscriptionAliasType=user
dSubscriptionType=test
dSubscriptionEmail=user20@example.com
resultName=USER LIST
dataSource=Subscriptions
```

whereClause=dSubscriptionType='test'

4.3.66 SUBSCRIBE_FORM

Service that retrieves the subscription form used for content item subscriptions.

This service is identical to the UNSUBSCRIBE_FORM service except the template it returns.

Access Level: Read (1)

Queries Executed: QdocInfo, QSubscribed

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

- dID: The generated content item revision ID.
- unsubscribeService: For response pages (such as the default template for this service) that provide a link that allows the user to unsubscribe, a value must be passed as a parameter. If omitted an error does not appear but the unsubscribe link on the response page produces an error if clicked (the standard value should be UNSUBSCRIBE).
- subscribeService: Same as unubscribeService parameter except a link to subscribe is provided if the user is not already subscribed to the subscription (the standard value should be SUBSCRIBE).

Results

- ResultSets:
 - DOC_INFO (All fields from Revisions and DocMeta for the revision specified by dID)
 - SUBSCRIPTION_LIST (All fields from the Subscription table plus the additional fields scpFields, scpDescription, scpEnabled, and notSubscribed for all defined subscriptions)
- Local Data:
 - dID
 - dSubscriptionAlias
 - dSubscriptionID
 - dSubscriptionType
 - dUser
- Response Template: SUBSCRIBE_FORM (subscribe_form.htm)

Used By

- Resource Includes:
 - docinfo_subscription_form
 - doc_subscription_unsubscription

4.3.67 SUBSCRIPTION_LIST

Service that returns a list of all subscribed content items for a specific user.

No alias-based subscriptions are returned by this service, even if the user belongs to an alias that has subscriptions.

Access Level: Read, Global, Scriptable (49)

Queries Executed: QdocNameSubscription, QnotDocNameSubscriptions

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dUser: The user name of the currently logged-in user.

Results

- ResultSets: SUBSCRIPTION_LIST (Each row contains all fields from the Subscription table corresponding to each of the current user's subscriptions. Additionally, for BASIC subscriptions, each row contains all fields from the Revisions table (metadata) for the latest revision of the item subscribed to.)
- Local Data: dUser
- Response Template: SUBSCRIPTION_LIST (subscription_list.htm)

- Resource Includes: pne_nav_userprofile_links
- Templates:
 - DOC_SUB_LIST (doc_sub_list.htm)
 - USER_INFO (user_info.htm)
- Standard Navigation: commonNav.js
- Other:
 - SoapCustom:Wsdl:Subscription:Services
 - SoapCustom:Wsdl:Subscription:Service:SubscriptionList:ResponseParams
 - Redirect service for: UNSUBSCRIBE_FROM_LIST

Example

IdcService=SUBSCRIPTION_LIST dUser=sysadmin

4.3.68 UNDO_CHECKOUT

Service that reverses a content item checkout from a browser. The service fails if the content item does not exist in the system, if the content item is not checked out, or the user does not have sufficient permission to undo the checkout.

Access Level: Write (2)

- **Oueries Executed:**
 - OdocID
 - **Orevisions**
 - **QdocInfo**
 - IdocHistory
 - QdocWebFormat

- Uuncheckout

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dID: The generated content item revision ID.

Optional Service Parameters

RedirectUrl: Used to display another page. If omitted, the user is redirected to the Content Server home page.

Results

- Local Data:
 - CurRevCheckoutUser
 - CurRevID
 - CurRevIsCheckedOut
 - dAction
 - dCheckoutUser
 - dClbraName
 - dDocAccount
 - dDocName
 - dID
 - dIsCheckedOut
 - dReleaseState
 - dRevClassID
 - dRevLabel
 - dSecurityGroup
 - dStatus
 - dUser
 - isFinished
 - IsWorkflow
 - latestID
 - noDocLock
 - prevReleaseState
 - wfAction
- Response Template:
 - REDIRECT_TEMPLATE (redirect_template.htm)
 - Default redirect service: GET_PORTAL_PAGE (Page=WF_INQUEUE_LIST)

Used By

Applets:

- Repository Manager
- Workflow
- Resource Includes:
 - checkin_list_action_popup
 - doc_file_checkout
 - docinfo_undo_checkout_form
 - setup_checked_out_content_action_popups
 - setup_workflow_action_popups
 - wf_reviewer_doc_action_links
 - workflow_action_popup
- Templates: WORKFLOW_REVIEW_FORM (workflow_review_form.htm)
- Other: SoapCustom:Wsdl:CheckIn:Services

Example

IdcCommand command file format:

IdcService=UNDO CHECKOUT dID=44

HDA format:

@Properties LocalData IdcService=UNDO_CHECKOUT dID=44 @end

4.3.69 UNDO_CHECKOUT_BY_NAME

Service that reverses a content item checkout from an applet or application. The service fails if the content item does not exist in the system, if the content item is not checked out, or the user does not have sufficient permission to undo the checkout.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dDocName: The Content ID for the content item.

Optional Service Parameters

dDocTitle: The content item title.

Example

IdcCommand command file format:

IdcService=UNDO_CHECKOUT_BY_NAME dDocName=myDocument

HDA format with optional parameter:

@Properties LocalData IdcService=UNDO_CHECKOUT_BY_NAME dDocName=myDocument dDocTitle=Just a title

@end

4.3.70 UNSUBSCRIBE

Service that cancels a content item subscription when only the Basic subscription is defined. This service is run by clicking the **Unsubscribe** button on a Content Information page.

This service is different from the UNSUBSCRIBE_FROM_LIST service primarily in what data it returns. UNSUBSCRIBE redirects to the Content Info page by default, so it loads content info for the item specified by dID. UNSUBSCRIBE_FROM_LIST redirects to the subscription listing page by default, so it loads the data necessary to display the user's subscriptions.

Access Level: Read (1)

Queries Executed: QdocInfo, Dsubscription

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dID: The generated content item revision ID.
- dSubscriptionID: The subscription ID.
 - For a Basic subscription, this is the Content ID.
 - For a Criteria subscription, this is a comma-delimited list of the values of the criteria fields.

For example, if the criteria fields are Author and Security Group, the dSubscriptionID parameter setting for a *Public* content item authored by *user1* would be *Public*, *user1*.

dSubscriptionType: The subscription type.

Optional Service Parameters

- RedirectUrl: Used to display another page. If omitted, the user is redirected to the Content Server home page.
- dSubscriptionAlias: The user or alias for the criteria subscription (set to a valid user name or alias name, depending upon the value for dSubscriptionAliasType).
- dSubscriptionAliasType: The alias for the subscription type. Valid values are *user* or alias.

If the current user has Admin privileges, the dSubscriptionAlias parameter with dSubscriptionAliasType can be used to unsubscribe a different user or alias from a subscription. If these parameters are omitted, the service defaults to a dSubscriptionAliasType of *user* and uses the current user (dUser) for the value of dSubscriptionAlias. If these parameters are included but the current user doesn't have Admin privileges, they are disregarded.

- Local Data:
 - dCheckoutUser
 - dDocAccount
 - dDocName
 - dID

- dRevClassID
- dSecurityGroup
- dUser
- Response Template:
 - DOC INFO
 - Default redirect service: DOC_INFO

Used By

- Resource Includes:
 - docinfo_subscription_form
 - doc_subscription_unsubscription
- Other: SoapCustom:Wsdl:Subscription:Services

Example

IdcService=UNSUBSCRIBE dID=66 dSubscriptionType=test dSubscriptionID=test_000048

4.3.71 UNSUBSCRIBE FORM

Service that retrieves the form used when unsubscribing from a content item.

This service is identical to the SUBSCRIBE_FORM service except the template it returns.

Access Level: Read (1)

Queries Executed: QdocInfo, QisSubscribed

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dID: The generated content item revision ID.
- subscribeService: For response pages (such as the default template for this service) that provide a link that allows the user to unsubscribe, a value must be passed as a parameter. If omitted an error does not appear but the unsubscribe link on the response page produces an error if clicked (the standard value should be SUBSCRIBE).

Results

- ResultSets:
 - DOC_INFO (All fields from Revisions and DocMeta for the revision specified by dID)
 - SUBSCRIPTION_LIST (All fields from the Subscription table plus the additional fields scpFields, scpDescription, scpEnabled, and notSubscribed for all defined subscriptions)
- Local Data:
 - dID

- dSubscriptionAlias
- dSubscriptionID
- dSubscriptionType
- dUser
- Response Template: UNSUBSCRIBE_FORM (unsubscribe_form.htm)

Used By

- Resource Includes:
 - docinfo_subscription_form
 - doc_subscription_unsubscription

4.3.72 UNSUBSCRIBE FROM LIST

Service that cancels a content item subscription from a browser when multiple subscriptions are defined.

This service is run from the Subscriptions page, either by clicking the **Unsubscribe** link, or by clicking the Subscription Info link for that content item and then clicking **Unsubscribe** on the Subscription Info page.

This service differs from the UNSUBSCRIBE service primarily in what data it returns. UNSUBSCRIBE_FROM_LIST redirects to the subscription listing page by default, so it loads the data necessary to display the user's subscriptions. UNSUBSCRIBE redirects to the Content Info page by default, so it loads content info for the item specified by dID.

Access Level: Read, Global (17)

Queries Executed:

- Dsubscription
- QdocNameSubscription
- QnotDocNameSubscriptions

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dSubscriptionID: The subscription ID. For a Basic subscription, this is the Content ID. For a Criteria subscription, this is a comma-delimited list of the values of the criteria fields.

For example, if the criteria fields are Author and Security Group, the dSubscriptionID parameter setting for a *Public* content item authored by *user1* would be *Public*, *user1*.

- dSubscriptionType: The subscription type.
- **Optional Service Parameters**
- RedirectUrl: Used to display another page. If omitted, the user is redirected to the Content Server home page.
- dSubscriptionAlias: The user alias for the criteria subscription, set to a valid user name or alias name, depending on the value for dSubscriptionAliasType.
- dSubscriptionAliasType: The alias for the subscription type, set to either *user* or alias.

If the current user has Admin privileges, the dSubscriptionAlias parameter with dSubscriptionAliasType can be used to unsubscribe a different user or alias from a subscription. If these parameters are omitted, the service defaults to a dSubscriptionAliasType of user and uses the current user (dUser) for the value of dSubscriptionAlias. If these parameters are included but the current user doesn't have Admin privileges, they are disregarded.

Results

- ResultSets: SUBSCRIPTION_LIST. Each row contains all fields from the Subscription table corresponding to each of the current user's subscriptions. Additionally, for Basic subscriptions, each row contains all fields from the Revisions table (metadata) for the latest revision of the item subscribed to.
- Local Data:
 - dID
 - dSubscriptionAlias
 - dSubscriptionAliasType
 - dUser
- Response Template:
 - SUBSCRIPTION LIST
 - Default redirect service: SUBSCRIPTION_LIST

Used By

- Applets: Repository Manager
- Resource Includes: pne_nav_userprofile_links
- Templates:
 - DOC_SUB_LIST (doc_sub_list.htm)
 - USER_INFO (user_info.htm)
- Standard Navigation: commonNav.js

Example

IdcService=UNSUBSCRIBE_FROM_LIST dSubscriptionType=test dSubscriptionID=test 000046

4.3.73 UNSUBSCRIBE_FROM_LIST_EX

Service used by the Repository Manager applet to remove a user or alias from the subscription type. For information about adding a user or alias, see SUBSCRIBE_EX.

This service is normally run by deleting a user from a subscription in the Repository Manager applet.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dSubscriptionAlias: Name of the subscription type as defined in the applet.
- dSubscriptionAliasType: The type of user. This value must be either user or alias. It refers to the value defined in dSubscriptionAlias.

- dSubscriptionID: The subscription ID.
 - For a Basic subscription, this is the Content ID.
 - For a Criteria subscription, this is a comma-delimited list of the values of the criteria fields.

For example, if the criteria fields are Author and Security Group, the dSubscriptionID parameter setting for a *Public* content item authored by *user1* would be *Public*, *user1*.

dSubscriptionType: The subscription type.

Optional Service Parameters

To return information about who is subscribed, this service requires these parameters:

- dataSource: The data source.
- resultName: The ResultSet name.
- where Clause: The programmatic clause.

Example

Unsubscribes *user20* from any content that is checked in by *sysadmin*:

IdcService=UNSUBSCRIBE_FROM_LIST_EX dSubscriptionID=sysadmin dSubscriptionAlias=user20 dSubscriptionAliasType=user dSubscriptionType=test dSubscriptionEmail=sysadmin@example.com resultName=USER LIST dataSource=Subscriptions whereClause=dSubscriptionType='test'

4.3.74 UPDATE BYREV

SubService used to check in content items based on specific parameters.

Location: IdcHomeDir/resources/core/tables/std services.htm

4.3.75 UPDATE DOCINFO

Service that updates the metadata for a content item from an applet or application. This service is used by the Repository Manager. and executes the UPDATE_ DOCINFO SUB SubService.

This service differs from the UPDATE_DOCINFO_BYFORM service which provides an option to redirect to a display template. UPDATE_DOCINFO provides no display option.

Access Level: Write (2)

Calls SubService:

UPDATE_DOCINFO_SUB. This SubService may also call REMOVE_METAFILE_ SUB, REPLACE_METAFILE_SUB, and UPDATE_DOCINFO_STATUS.

Queries Executed (all queries executed within SubServices):

- **QdocInfo**
- **QlatestID**
- **Qdocuments**

- Ddocument
- Idocument
- Urevision2
- Umeta
- IdocHistory

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dDocName: The Content ID for the content item.
- dID: The generated content item revision ID.
- dRevLabel: The content item revision label.
- dSecurityGroup: The security group such as *Public* or *Secure*.
- dDocAccount: The account for the content item. Required only if accounts are enabled.

Optional Service Parameters

- Metadata fields: You can submit any metadata field as an optional parameter and pass a value to that field.
- SkipIndexingForUpdate: If set to *true*, the content item will not be indexed as part of the update. (The normal behavior is that an item will be re-indexed after an update.) In either case, content items will be indexed in a full index rebuild.

Results

- Local Data:
 - Content Server:
 - dAction
 - dActionDate
 - dClbraName
 - dCreateDate
 - dDocAccount
 - dDocType
 - dDocName

- dWfType
- dWorkflowState
- IsWorkflow
- wfAction
- wfCurrentStepPrefix
- wfEditFinished
- wfMessage
- wf Queue Action State
- wfStepCheckinType

- Plus any custom doc meta fields
- Response Template: null

Used By

- **Applets: Repository Manger**
- Other: SoapCustom:Wsdl:CheckIn:Services

Example

IdcCommand command file format:

```
IdcService=UPDATE_DOCINFO
dID=66
dDocName=test_000048
dSecurityGroup=Secure
dRevLabel=2
```

HDA format with additional and optional parameters (assigns a value to a metadata field):

```
@Properties LocalData
IdcService=UPDATE_DOCINFO
dID=66
dDocName=test_000048
dSecurityGroup=Secure
dRevLabel=2
dDocAccount=mainaccount
xComments=Preliminary
@end
```

4.3.76 UPDATE_DOCINFO_BYFORM

Service that updates content information for a content item from a browser. This service executes the SubService UPDATE_DOCINFO_SUB. This SubService updates content item information.

The difference between this service and UPDATE_DOCINFO is that this service provides an option to redirect to a display template.

Access Level: Write (2)

Calls SubService:

UPDATE_DOCINFO_SUB, which may also call REMOVE_METAFILE_SUB, REPLACE_METAFILE_SUB, and UPDATE_DOCINFO_STATUS

Queries Executed (all queries executed within SubServices):

- **QdocInfo**
- **QlatestID**
- **Qdocuments**
- **Ddocument**
- Idocument
- Urevision2
- Umeta
- IdocHistory

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dDocName: The Content ID for the content item.
- dID: The generated content item revision ID.
- dRevLabel: The content item revision label.
- dSecurityGroup: The security group such as *Public* or *Secure*.
- dDocAccount: The account for the content item. Required only if accounts are enabled.

Optional Service Parameters

- Metadata fields: You can submit any metadata field as an optional parameter and pass a value to that field. For example, if the system has a metadata field called *xComments*, the string value *Preliminary* could be assigned to that field (xComments=Preliminary).
- RedirectUrl: Used to display another page. If omitted, the user is redirected to the Content Server home page.

Results

- Local Data:

 - wfMessage
 - wfQueueActionState
 - wfStepCheckinType
- Plus any custom doc meta fields
- Response Template:
 - REDIRECT_TEMPLATE (redirect_template.htm)
 - Default redirect service: DOC_INFO

Used By

Resource Includes: std_doc_page_definitions

Example

IdcCommand command file format:

IdcService=UPDATE_DOCINFO_BYFORM dID=66 dSecurityGroup=Secure dDocName=test_000048 dRevLabel=2

HDA format with additional and optional parameters (assigns a value to a metadata field):

@Properties LocalData IdcService=UPDATE_DOCINFO_BYFORM dID=66 dSecurityGroup=Secure dDocName=test_000048 dRevLabel=2 dDocAccount=mainaccount xComments=Preliminary @end

4.3.77 UPDATE DOCINFO BYREV

Location: IdcHomeDir/resources/core/tables/std services.htm

4.3.78 UPDATE DOCINFO METAFILE BYREV

Location: IdcHomeDir/resources/core/templates//std_services.htm

4.3.79 UPDATE_DOCINFO_STATUS

Location: IdcHomeDir/resources/core/tables/std services.htm

4.3.80 UPDATE_DOCINFO_SUB

SubService that updates content item information.

Location I: IdcHomeDir/resources/core/tables/std_services.htm

4.3.81 UPDATE SUBSCRIPTION NOTIFY

Currently unused in the core Content Server software.

Service that updates the notification timestamp and redirects the user to the page specified in the RedirectUrl parameter.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.3.82 UPDATE_SUBSCRIPTION_TYPE

Service that updates a Criteria subscription. The most likely error is when the specified subscription type does not exist.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

scpType: The subscription type.

Optional Service Parameters

- scpDescription: The subscription description.
- scpEnabled:
 - 1 (*true*): Subscription notifications are enabled.
 - 0 (*false*): Subscription notifications are disabled.
- scpFields: A comma-delimited list of the metadata fields that define the subscription criteria. For example: dDocAuthor, dDocType.

Example

IdcCommand command file format:

```
IdcService=UPDATE_SUBSCRIPTION_TYPE
scpType=my_subscription
```

HDA file format (changes the subscription for Author and disables the subscription):

```
@Properties LocalData
IdcService=UPDATE_SUBSCRIPTION_TYPE
scpType=my_subscription
scpFields=dDocAuthor
scpDescription=updating subscription
scpEnabled=false
aend
```

4.3.83 UPDATE_SUBSCRIPTION_USED

Service that updates a user's subscription records when they access a content item from a subscription notification. This service updates the date in the dSubscriptionUsedDate column of the Subscription database table.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dDocName: The Content ID for the content item.
- dSubscriptionAlias: The user alias for the criteria subscription.
- dSubscriptionAliasType: The alias subscription type.
- dSubscriptionID: The subscription ID.
 - For a Basic subscription, this is the Content ID.
 - For a Criteria subscription, this is a comma-delimited list of the values of the criteria fields.

For example, if the criteria fields are Author and Security Group, the dSubscriptionID parameter setting for a *Public* content item authored by *user1* would be *Public,user1*.

dSubscriptionType: The subscription type.

Example

IdcService=UPDATE_SUBSCRIPTION_USED dSubscriptionType=test_subscription dSubscriptionID=sysadmin dDocName=test_000056 dSubscriptionAlias=global dSubscriptionAliasType=user

4.3.84 UPDATE_METADATA

SubService that updates metadata.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.3.85 VALIDATE_DOCINFO

Service used for metadata-only checkins for a heavy client (InternalUpload = 1).

Location: IdcHomeDir/resources/core/tables/std services.htm

4.3.86 WORK IN PROGRESS

Service that returns a list of all content items in the GENWWW or DONE status. It does not show items currently in a workflow.

Access Level: Write, Global, Scriptable (50)

Location: IdcHomeDir/resources/core/tables/std_services.htm

Optional Service Parameters

- orderClause: Use to provide a field name on which to sort the list.
- MaxQueryRows: Use to control the number of items returned in the list.

Results

- ResultSets: DOC_LIST (All Fields from Revisions and DocMeta)
- Local Data:
 - copyAborted
 - dataSource
 - MaxQueryRows
- Response Template: WIPS (wips_list.htm)

Used By

- Resource Includes:
 - pne_nav_management_links
 - std_doc_man_pages
- Standard Navigation:
 - commonBundle.js
 - commonNav.js

4.4 Doc Profile Services (Core Content Server)

The following services are used when creating, maintaining, or deleting document profiles:

- ADD_DOCPROFILE
- ADD_DOCRULE
- DELETE DOCPROFILE
- DELETE DOCRULE
- DOCPROFILE_PREVIEW
- EDIT_DOCPROFILE
- EDIT_DOCPROFILE_TRIGGER
- EDIT_DOCRULE
- **GET_DOCPROFILE**
- GET_DOCPROFILES
- GET DOCRULE
- GET_DOCRULES

4.4.1 ADD_DOCPROFILE

Service that is used to add a document profile. The service adds the profile and description to the content profile listing and generates the profile definition file from the data which is passed in.

Note: The data provided for this service becomes the profile definition. When editing the profile (using EDIT_DOCPROFILE), the profile definition must first be read using GET_DOCPROFILE before adding or changing the desired values.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

- dpName: The name for the profile. This must be a unique name.
- dpDescription: A description of the new profile.
- dpTriggerValue: The trigger value associated with the profile.
- dpDisplayLabel: The display label for the profile.

Optional Service Parameters

is Validate Trigger: When set to true, validates that the trigger value exists. If the value does not exist, the service fails. When set to *false*, the profile is added without validating the trigger.

4.4.2 ADD_DOCRULE

Service used to create a new content profile rule. This service adds the rule to the content rule listing and creates the rule definition file. The data provided to the service becomes the rule definition.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dpRuleName: The name for the new rule. This name must be unique.

dpRuleDescription: A description for the rule.

4.4.3 DELETE DOCPROFILE

Service used to remove a document profile from the profile listing and removes the content profile definition file.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dpName: The name for the profile.

4.4.4 DELETE_DOCRULE

Service used to remove a content rule from the rule listing and deletes the content rule definition file from the system.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dpRuleName: The name for the rule.

4.4.5 DOCPROFILE PREVIEW

Service used in the Configuration Manager applet to simulate the use of a content profile. The preview executes in the desired context and returns the resulting data in a data binder. The context consists of the event (submit, request, or import) and the action (search, checkin, and so on). It also includes a user name and a content item when necessary. The data includes display information for each field and which rule determined the display for each field.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dpName: The name for the rule to be used in the preview.
- dpTriggerValue: the trigger value to use for the preview.

4.4.6 EDIT DOCPROFILE

Service used to edit a document profile.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dpName: The name for the profile to be edited.
- dpDescription: The new description for the profile.
- dpTriggerValue: The new trigger value for the profile.
- dpDisplayLabel: The new display label.

4.4.7 EDIT_DOCPROFILE_TRIGGER

Service that changes the metadata field that will be used as the trigger field for the content profile.

Note: Changing the metadata fields may invalidate all existing profiles.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

- dpName: The name of the profile to be edited.
- dpTriggerField: The new trigger field to be used for the profile. Changing the trigger to empty (dpTriggerfield=) invalidates all profiles.

4.4.8 EDIT_DOCRULE

Service that changes a document rule description.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dpRuleName: The name of the rule to be edited.
- dpRuleDescription: The new description for the rule.

4.4.9 GET_DOCPROFILE

Service that returns the profile definition file for the specified rule. The returned data is in a data binder and contains all information used to define the profile.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dpName: The name of the profile to be used.

4.4.10 GET_DOCPROFILES

Service that returns the listing file for the content profiles. The listing file contains the name, description, trigger value and display label for each profile.

Location: *IdcHomeDir*/resources/core/tables/std_services.htm

4.4.11 GET DOCRULE

Service that returns the rule definition file for the specified rule. The returned data is returned in a data binder and contains all the information used to define the rule.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dpRuleName: The name of the profile to be used.

4.4.12 GET DOCRULES

Service that returns the listing file for the content rules. The listing file contains the name and description for each rule in the system.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.5 File Services (Core Content Server)

File services are those which manipulate files, such as dynamic conversion and resource files. Frequently used services are marked with an asterisk (*) in the following list.

The following file services are described in this section:

- ADD WEB APP
- APPEND_FILE_CACHING_INFO
- GET_DYNAMIC_CONVERSION
- GET_DYNAMIC_CONVERSION_SUB
- *GET_DYNAMIC_URL
- GET_TEMPLATE_CONVERSIONS
- GET_WEB_APP_STATUS
- LOAD RESOURCE FILE
- REMOVE_WEB_APP
- SAVE_TEMPLATE_CONVERSIONS

4.5.1 ADD_WEB_APP

Used with the internal Tomcat engine.

Service used to add a WAR file to the Tomcat engine and to enable the contained JSP pages.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

pathToWAR: Complete path to the WAR file.

4.5.2 APPEND_FILE_CACHING_INFO

SubService used by GET_SYSTEM_AUDIT_INFO to return information on the System Audit Info page.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.5.3 GET_DYNAMIC_CONVERSION

Service that returns a content item as an HTML or XML file converted by Dynamic Converter. This is available if the Dynamic Converter component is installed and enabled.

Given a dID or a dDocName and a RevisionSelectionMethod parameter, the service determines the filename of a particular rendition of the revision and returns that file to the client. The most likely errors are mismatched parameters or a request for a content item that does not exist.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Note: dDocName should be included in all requests for content items where the requester knows the dDocName. Error messages in the Content Server system assume that it is present, as do other features such as forms.

Additional Required Service Parameters

Important: Either the content item revision ID (dID) must be specified or a Content ID (dDocName) with the RevisionSelectionMethod parameter.

- dID: The generated content item revision ID.
 - If dID is not specified, dDocName and RevisionSelectionMethod must specified.
 - A rendition of the revision of the content item with this ID is returned, if it exists, and the RevisionSelectionMethod parameter does not exist or has the value Specific.
- dDocName: The Content ID of the content item.
 - If dDocName is not present, dID must be present and RevisionSelectionMethod must not be present.
 - If RevisionSelectionMethod is present, a rendition of a revision of the content item with this name is returned, if it exists. If RevisionSelectionMethod is not present, *dDocName* is used in error messages.
- RevisionSelectionMethod: The revision selection method.
 - If present, dDocName must be present. The value of this variable is the method used to compute a dID from the specified dDocName. Its value can be *Specific, Latest,* or *LatestReleased*.
 - If the value is *Specific*, the dDocName parameter is ignored, and dID is required and is used to get a revision. If the value is *Latest*, the latest revision of the content item is used to compute the dID. If the value is Latest Released, the latest released revision of the content item is used to compute the dID.

Optional Service Parameters

- conversion Template: The conversion template. This parameter can be passed to the service to override the template conversions criteria page.
- DCViewFormat: The file to be converted and displayed: Native, Alternate, or WebViewable.
- useDocInfoCache: Disables the caching mechanism while requesting an individual content item. It applies only to the single request. You might use this parameter to test or troubleshoot the optimized query feature. To use this parameter, append it to your Content Server URL as follows (parameter is in bold):

```
http://server_name/cs/idcplg?IdcService= GET_DYNAMIC_CONVERSION
&dDocName=aTest&RevisionSelectionMethod= LatestReleased&useDocInfoCache=false
```

conversionRule: Specifies the conversion rule to be used, rather than allowing the conversion rule to be selected by the conversion rule criteria.

Example

IdcCommand command file format:

Retrieve a web-viewable revision IdcService=GET_DYNAMIC_CONVERSION dDocName=corporatereport RevisionSelectionMethod=LatestReleased DCViewFormat=WebViewable

HDA format:

@Properties LocalData IdcService=GET_DYNAMIC_CONVERSION dTD=54321 @end

4.5.4 GET_DYNAMIC_CONVERSION_SUB

SubService used by GET_DYNAMIC_CONVERSION.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.5.5 GET_DYNAMIC_URL

Service that is used internally to extract information from the web-viewable URL to determine if it maps into the /weblayout directory. If it does not map then it throws an exception.

This service is usually used to retrieve a dynamic page. This service is called from the Web server to deliver dynamic content web-viewable files. It is called in the core to dynamically change the response page for a service.

Access Level: Read, Scriptable (33)

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

fileUrl: The relative URL for the item. This can be a checked-in item in the Content Server, a Java Script file for Schema or Layout Manager, or an image file from the /images directory.

Results

- ResultSets:
 - **DocFormats**
 - DocTypes
- Local Data:
 - ref:dDocAccount
 - ref:dDocName
 - ref:dDocType
 - ref:dExtension
 - ref:dSecurityGroup
 - ref:hasDocInfo
 - ref:isLatestRevision

- SourceID
- HCSP/F metadata (including custom XML data between idcbegindata and idcenddata tags)
- Response Template: null (Returns the file requested in the fileUrl parameter.)

4.5.6 GET_TEMPLATE_CONVERSIONS

Service used by the Dynamic Converter to retrieve the list of templates that are used during conversion.

Location: IdcHomeDir/resources/core/tables/std services.htm

4.5.7 GET_WEB_APP_STATUS

Used with the internal Tomcat engine.

Service that returns the status of the internal Tomcat engine. For internal use only.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.5.8 LOAD_RESOURCE_FILE

Service that returns a resource file.

Given a dID or a dDocName and a RevisionSelectionMethod parameter, the service determines the filename of a particular rendition of the revision and returns that file to the client.

The most likely errors are some form of mismatched parameters or a request for a revision or rendition that does not exist.

> **Note:** It is recommended that dDocName be included in all requests for content items where the requester knows the dDocName. Error messages in the Content Server system assume that it is present, as do other features such as forms.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

Important: Either the content item revision ID (dID) must be specified or a content item name (dDocName) and a RevisionSelectionMethod parameter must be specified.

Optional Service Parameters

- dID: The generated content item revision ID.
 - If dID is not specified, dDocName and RevisionSelectionMethod must specified.
 - A rendition of the revision of the content item with this ID is returned, if it exists, and the RevisionSelectionMethod parameter does not exist or has the value Specific.
- dDocName: The Content ID for the content item.

- If dDocName is not present, dID must be present and RevisionSelectionMethod must not be present.
- If RevisionSelectionMethod is present, a rendition of a revision of the content item with this name is returned, if it exists. If RevisionSelectionMethod is not present, dDocName is used in error messages.
- RevisionSelectionMethod: The revision selection method.
- If present, dDocName must be present. The value of this variable is the method used to compute a dID from the specified dDocName. Its value can be Specific, Latest, or LatestReleased.
- If the value is *Specific*, the dDocName is ignored, and dID is required and is used to get a rendition. If the value is *Latest*, the latest revision of the content item is used to compute the dID. If the value is Latest Released, the latest released revision of the content item is used to compute the dID.
- Rendition: The content item rendition. This parameter specifies the rendition of the content item and can be set to Primary, Web, or Alternate. If Rendition is not present, it defaults to Primary.
 - If the value is *Primary*, the primary rendition of the selected revision is returned.
 - If the value is Web, the web-viewable rendition of the selected revision is returned.
 - If the value is *Alternate*, the alternate rendition of the selected revision is returned.

Example

IdcService=LOAD RESOURCE FILE dID=456

4.5.9 REMOVE_WEB_APP

Used with the internal Tomcat engine.

This service is used to remove a WAR file from use with the internal Tomcat engine. For internal use only.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.5.10 SAVE TEMPLATE CONVERSIONS

Service used by the Dynamic Converter to save the conversion template.

Location: IdcHomeDir/resources/core/tables/std services.htm

4.6 Indexer Services (Core Content Server)

Indexer services are used to control the search index. Frequently used services are marked with an asterisk (*) in the following list.

The following services are described in this section:

- CANCEL_SEARCH_INDEX
- CONTROL_SEARCH_INDEX
- *GET_FILE

START_SEARCH_INDEX

4.6.1 CANCEL SEARCH INDEX

Service that cancels the current indexing session.

Location: IdcHomeDir/resources/core/tables/std services.htm

4.6.2 CONTROL SEARCH INDEX

Service that updates or rebuilds the search index. Updates and rebuilds are performed automatically in a background thread.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Important: Rebuilding the search index is necessary only when you change or add metadata fields. Depending on the quantity and size of your files, this process can take several days. Rebuilding is system-intensive, so you should plan to rebuild during non-peak system usage times.

- This service is called when changes are made to the Automatic Update Cycle and Collection Rebuild Cycle options provided on the Repository Manager: Indexer Tab.
- The options defined on the Configure Automatic Update Cycle or Configure Collection Rebuild Cycle screen map to these parameters:
 - Content Items Per Indexer Batch (MaxCollectionSize)
 - Content Items Per Checkpoint (IndexerCheckpointCount)
 - Indexer Debug Level (SearchDebugLevel)
 - Indexer Auto Updates (sEnableAutoUpdate)

Additional Required Service Parameters

- cycleID: The index cycle type:
 - **update:** Incrementally updates the index database.
 - **rebuild:** The search index is entirely rebuilt, and the old index collection is replaced with a new index collection after the rebuild has successfully completed.
- action: The action to perform. This entry can be set to these values:
 - **start**: Begins the update or rebuild cycle.
 - **cancel**: Stops the update or rebuild cycle, and does not permit a future restart.
 - suspend: Stops the update or rebuild cycle, and permits a future restart.
 - **restart**: Restarts the update or rebuild cycle after a suspend was executed.
 - **setConfiguration**: Used when enabling or disabling the update cycle. Setting this value enables you to adjust the checkpoint (IndexerCheckpointCount), batch size (MaxCollectionSize), debug level (SearchDebugLevel), and auto update (sEnableAutoUpdate) options.

Additional Optional Service Parameters

This service might require these parameters, depending on the action to execute (see the following examples).

GetCurrentIndexingStatus: Setting this parameter to 1 (true) returns the status of the indexer cycle:

- **Idle**: An indexer cycle is complete.
- Active: An indexer cycle is currently running.
- **Interrupt**: An unexpected event, that abruptly ends the indexing cycle. For example, a power, database, or file system failure.
- Suspend: The indexing cycle was stopped in a controlled manner. For example, using the Suspend button on the Repository Manager: Indexer Tab.
- **Restart**: An interrupted or suspended cycle was started again. If you are restarting after an interrupted cycle, ensure that you have corrected the problem that caused the interrupt to occur.
- **Cancel**: The indexing cycle was stopped with no intent to restart.
- **getStatus**: Setting this parameter to 1 (*true*) returns the indexer settings and status information.
- **PerformProcessConversion**: Enables the process conversion when starting or restarting the Indexer rebuild process.
 - 1 (*true*): The process conversion is performed.
 - 0 (false): The process conversion is not performed.
- **IndexerCheckpointCount**: The number of files that go through each indexing state at a time.
 - You can have multiple batches of files indexed per checkpoint.
 - To update this entry, the action must be set to setConfiguration.
- MaxCollectionSize: The maximum number of files that the search index processes simultaneously.
 - The default is 25, which means 25 files are indexed together, then the next 25 files are indexed.
 - You can change this setting to 1 if you are experiencing problems with the search engine indexing large and complicated files. However, slow system performance can result.
 - To update this entry, the action must be set to setConfiguration.
- **SearchDebugLevel**: The indexer debug level.
 - The more debug information listed in the server window, the slower the indexing progresses.
 - To update this entry, the action must be set to setConfiguration.
 - These are the debug levels from the least to the most debug information:
 - **none**: No information for each file accessed is displayed.
 - **verbose**: Displays information for each file accessed. Indicates indexed, ignored, or failed.
 - **debug**: Displays the medium level of information.

- **trace**: Displays the lowest level of information.
- all: Displays the highest level of information.
- sEnableAutoUpdate: To update this entry, the action must be set to setConfiguration.
 - 1 (true): Automatic update cycles are enabled.
 - 0 (false): Automatic update cycles are enabled.

Examples

These examples are for controlling the indexer from another process.

HDA format to return the defined settings and status information:

```
@Properties LocalData
IdcService=CONTROL_SEARCH_INDEX
getStatus=1
@end
```

HDA format to enable the update cycle:

```
@Properties LocalData
IdcService=CONTROL_SEARCH_INDEX
MaxCollectionSize=500
sEnableAutoUpdate=1
cycleID=update
action=setConfiguration
SearchDebugLevel=none
IndexerCheckpointCount=5000
GetCurrentIndexingStatus=1
@end
```

HDA format to disable the update cycle:

```
@Properties LocalData
IdcService=CONTROL_SEARCH_INDEX
MaxCollectionSize=500
sEnableAutoUpdate=0
cycleID=update
action=setConfiguration
SearchDebugLevel=none
IndexerCheckpointCount=5000
GetCurrentIndexingStatus=1
```

HDA format to start the Indexer rebuild:

```
@Properties LocalData
IdcService=CONTROL_SEARCH_INDEX
cycleID=rebuild
action=start
getStatus=1
GetCurrentIndexingStatus=1
PerformProcessConversion=1
@end
```

HDA format to cancel the Indexer rebuild:

```
@Properties LocalData
IdcService=CONTROL_SEARCH_INDEX
cycleID=rebuild
```

action=cancel getStatus=1 GetCurrentIndexingStatus=1

HDA format to suspend the Indexer rebuild:

@Properties LocalData IdcService=CONTROL_SEARCH_INDEX cycleID=rebuild action=suspend getStatus=1 GetCurrentIndexingStatus=1

HDA format to restart the Indexer rebuild after being interrupted or suspended:

@Properties LocalData IdcService=CONTROL_SEARCH_INDEX cycleID=rebuild action=restart getStatus=1 GetCurrentIndexingStatus=1 PerformProcessConversion=1 @end

4.6.3 GET FILE

Service that returns a specific rendition of a content item revision to a browser. A copy of the file is retrieved without performing a checkout.

- Given a dID or a dDocName and a RevisionSelectionMethod parameter, the service determines the file name of a particular rendition of the revision and returns that file to the client.
- The most likely errors are some form of mismatched parameters or a request for a revision or rendition that does not exist.

Note: It is recommended that dDocName be included in all requests for content items where the requester knows the dDocName. Error messages in the Content Server instance assume that it is present, as do other features such as forms.

Access Level: Read, Scriptable (33)

Queries Executed:

- QdocInfo
- QlatestIdByName
- Qlatest Released ID By Name

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

Note: Either the content item revision ID (*dID*) must be specified or a Content ID (*dDocName*) along with a *RevisionSelectionMethod* parameter must be defined.

- dID: The generated content item revision ID.
 - If dID is not specified, dDocName and RevisionSelectionMethod must specified.
 - A rendition of the revision of the content item with this ID is returned, if it exists, and the RevisionSelectionMethod parameter does not exist or has the value Specific.
- dDocName: The Content ID for the content item.
 - If dDocName is not present, dID must be present and RevisionSelectionMethod must not be present.
 - If RevisionSelectionMethod is present, a rendition of a revision of the content item with this name is returned, if it exists. If RevisionSelectionMethod is not present, dDocName is used in error messages.
 - **Optional Service Parameters**
- allowInterrupt: If set to 1 (true), this suppresses an error if the user cancels the file download.
- RevisionSelectionMethod: The revision selection method.
 - If present, *dDocName* must be present. The value of this variable is the method used to compute a dID from the specified dDocName. Its value can be Specific, Latest, or LatestReleased.
 - If the value is *Specific*, the *dDocName* is ignored, and *dID* is required and is used to get a rendition. If the value is Latest, the latest revision of the content item is used to compute the dID. If the value is LatestReleased, the latest released revision of the content item is used to compute the dID.
- Rendition: The content item rendition. This parameter specifies the rendition of the content item and can be set to *Primary*, Web, or Alternate. If Rendition is not present, it defaults to Primary.
 - If the value is *Primary*, the primary rendition of the selected revision is returned.
 - If the value is *Web*, the web-viewable rendition of the selected revision is returned.
 - If the value is *Alternate*, the alternate rendition of the selected revision is returned.
- IsXml: When set to true or 1, returns the XML data island which is present in some HCSP, HCST, and HCSF pages. It returns the data island that is wrappered inside the std_html_form_xml_wrapper include, which can be modified to pass additional information if desired.

Results

Response Template: null (Only the requested file is returned.)

Used By

- Applets: Configuration Manager
- Resource Includes:
 - doc_file_get_copy
 - doc_odma_select_get
 - download form fields
 - email_docinfo_body_by_id
 - email_docinfo_body_by_name
 - legacy_workflow_in_queue_table
 - subscription_info_cell
 - subscription_info_cells
 - wf_in_queue_display
 - wf_review_cannot_view_msg
- Templates:
 - CHECKOUT_OK (chkook.htm)
 - DOWNLOAD_OK (dwnldok.htm)
 - QUERY_NOTIFICATION (query_notification_mail.htm)
 - REDIRECTION_FILE_TEMPLATE (redirectionfile_template.htm)
 - REV_HISTORY (rev_history.htm)
 - SELECTDOC_OK (slctdcok.htm)
 - WORKFLOW_REVIEW_FORM (workflow_review_form.htm)
 - WORKFLOW_REVIEW_FRAMES (workflow_review_frames.htm)
- Other: SoapCustom:Wsdl:GetFile:Services

Example

IdcCommand command file format:

Retrieve a web-viewable revision IdcService=GET_FILE dDocName=corporatereport RevisionSelectionMethod=LatestReleased Rendition=Web

HDA format:

@Properties LocalData IdcService=GET_FILE dID=54321 @end

4.6.4 START SEARCH INDEX

Service that updates or rebuilds the search index. This service is asynchronous and the action is performed in a background thread. This service can only be executed in the context of the Content Server instance and only completes successfully if a connection is made to the Content Server instance.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Optional Service Parameters

- IsRebuild: Sets the scope of the indexing process.
 - 1 (*true*): The Indexer performs a complete rebuild of the search index. 0 (*false*): The Indexer performs an incremental update of the search index.
 - Default is 0 (*false*).

Example

IdcCommand command file format:

Rebuild the entire search index IdcService=START_SEARCH_INDEX IsRebuild=true

4.7 Internal Services (Core Content Server)

The following services are called internally by the Content Server system. Do not use or modify these services:

- CANCEL_COMPONENT_INSTALL
- CLEAR_SERVER_OUTPUT
- DOWNLOAD_COMPONENT
- GET_COMPONENT_CONFIG
- GET_COMPONENT_INSTALL_FORM
- GET_COMPONENT_INSTALL_PROMPTS_FORM
- GET_COMPONENT_INSTALL_SETTINGS'
- GET_LOCAL_REGISTRATION_FORM
- GET_MANIFEST_INFO
- GET_SERVER_OUTPUT
- PROXIED_REQUEST
- UNINSTALL_COMPONENT
- UPDATE_COMPONENT_CONFIG
- UPDATE_LICENSE
- UPLOAD_NEW_COMPONENT

4.7.1 CANCEL_COMPONENT_INSTALL

Do not use.

4.7.2 CLEAR_SERVER_OUTPUT

Do not use.

4.7.3 DOWNLOAD COMPONENT

Do not use.

4.7.4 GET_COMPONENT_CONFIG

Do not use.

4.7.5 GET_COMPONENT_INSTALL_FORM

Do not use.

4.7.6 GET_COMPONENT_INSTALL_PROMPTS_FORM

Do not use.

4.7.7 GET_COMPONENT_INSTALL_SETTINGS'

Do not use.

4.7.8 GET_LOCAL_REGISTRATION_FORM

Do not use.

4.7.9 GET_MANIFEST_INFO

Do not use.

4.7.10 GET_SERVER_OUTPUT

Do not use.

4.7.11 PROXIED_REQUEST

Do not use.

4.7.12 UNINSTALL_COMPONENT

Do not use.

4.7.13 UPDATE COMPONENT CONFIG

Do not use.

4.7.14 UPDATE LICENSE

Do not use.

4.7.15 UPLOAD_NEW_COMPONENT

Do not use.

4.8 Meta Services (Core Content Server)

The Meta Services are used to manage and alter metadata in the Content Server system. Frequently used services are marked with an asterisk (*) in the following list.

The following services are described in this section:

ADD_METADEF

- DEL_METADEF
- EDIT_METADEF
- GET ADVANCED SEARCH OPTIONS
- GET DISPLAY FIELDS
- *GET_DOC_METADATA_INFO
- GET_OPTION_LIST
- GET_USER_METADATA_INFO
- MOVE METADEF
- UPDATE ADVANCED SEARCH OPTIONS
- UPDATE_USER_META
- UPDATE USER META TABLE
- UPDATE_META_TABLE
- UPDATE_OPTION_LIST

4.8.1 ADD METADEF

Service that creates a new metadata field.

Location: IdcHomeDir/resources/core/tables/std services.htm

Note: For more details, see UPDATE_META_TABLE and START_ SEARCH INDEX. These services must be run before storing data in a new metadata field. For details about updating the OptionLists database table, see also UPDATE OPTION LIST.

Additional Required Service Parameters

- dName: Internal name of the field.
- dCaption: User-visible caption used to label the field in the Content Server pages.
- dIsRequired: Prevents files from being checked in if the field does not contain a value. Values are 1 (required) or 0 (not required). Default is 0.
- dIsEnabled: Enables the field to be displayed on user interface pages. Values are 1 (enabled) or **0** (disabled). Default is 1.
- dIsSearchable: Enables the field to be indexed and searchable. Values are 1 (searchable) or 0 (not searchable). Default is 1.
- dIsOptionList: Allows the use of a user-selectable option list on Content Server pages. Values are 1 (enabled) or 0 (disabled). Default is 0. If 1 is used then dOptionListKey is also required.
- dOptionListKey: Name of the option list to be used.
- dOptionListType: Specifies the type of option list to be used. Values can be choice (Select List Validated), chunval (Select List Not Validated), combo (Edit and Select List), multi2 (Multiselect List) or multi (Edit and Multiselect List).
- dType: The type of field. Values can be Text (Text), BigText (Long Text), Int (Integer), Date (Date), Memo (Memo). Default: Text.

- dOrder: Sequence in which the field is displayed on Content Server pages. The default value is the highest current value of any existing field, plus one.
- dDefaultValue: Default value for the metadata field being created.

Example

IdcService=ADD_METADEF dIsRequired=0 dOptionListKey=Web_SectionList dOptionListType=choice dIsOptionList=1 d0rder=5 dName=xWeb_Section dIsSearchable=1 dIsEnabled=1 dTvpe=Text FieldName=Web_Section dCaption=Web Section

4.8.2 DEL METADEF

Service that deletes an existing custom metadata field. You cannot delete the standard metadata fields such as *dDocName*, *dSecurityGroup*, and so forth.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dName: The metadata field name, including the 'x' prefix.

Example

IdcService=DEL_METADEF dName=xCustomField

4.8.3 EDIT METADEF

Service that modifies an existing custom metadata field.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dName: The metadata field name, including the 'x' prefix. For example, *xDepartment*.
- dCaption: The metadata field caption.
- dType: The metadata field type, such as *Text*, *BigText*, *Memo*, *Date*, or *Integer*.
- dOrder: The display order.
- dIsRequired: 1 (true: The field is required. 0 (false): The field is optional.
- dIsEnabled: 1 (true): The field is enabled on the user interface. 0 (false): The field is disabled on the user interface.
- dIsSearchable: 1 (true): The field is searchable. 0 (false): The field is not searchable.
- dDefaultValue: The default value for the metadata field.
- dIsOptionList: 1 (true): The field has an option list. 0 (false): The field does not have an option list.

- dOptionListKey: The option list key.
- dOptionListType: The option list type.

Example

IdcService=EDIT_METADEF dName=xDepartment dType=BigText dIsRequired=1 dIsEnabled=1 dIsSearchable=1 dCaption=Caption_Changed dIsOptionList=1 dDefaultValue=two dOptionListKey=xDepartmen_fieldList dOptionListType=chunval dOrder=4

4.8.4 GET_ADVANCED_SEARCH_OPTIONS

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.8.5 GET_DISPLAY_FIELDS

Service that returns information about custom metadata fields for different Content Server pages. This information can be used by front-end clients to render custom metadata fields.

The service requires an action which maps to a specify Content Server page. The service then returns metadata information for that page.

The service also provides support to generate Dynamic Choice List (DCL) options and Dynamic Tree.

Location:

Required Service Parameter

- dpAction: Indicates the Content Server action, which can be
 - CheckinNew
 - CheckinSel
 - CheckinSimilar
 - Info
 - Update
 - Search
 - FLDMetadataUpdate
 - FLDMetadataInfo

Conditionally Required Service Parameters

- dID: Required when dpAction is CheckinSel, CheckinSimilar, Info, or Update.
- fFolderGUID: Required when dpAction is either FLDMetadataUpdate or FLDMetadataInfo.

Optional Service Parameter

dpTriggerValue: Indicates the trigger value that will be used to load a profile.

Results

- ResultSets:
 - DisplayFieldInfo: Contains information about individual custom metadata fields. It holds the following columns:
 - fieldName: The name of the field.
 - fieldType: The type of field. For example: Text, BigText, Memo, Data, Int, Decimal, File.
 - fieldLabel: The display label for the field.
 - isHidden: Indicates whether the field should be a hidden form field.
 - isReadOnly: Indicates whether the field should be a non-input form field.
 - isRequired: Indicates whether the field should be a required form field.
 - defaultValue: The default value for the field.
 - display Value: The display value to be used for the corresponding default Value.
 - isOptionList: Indicates whether this is a drop-down option list.
 - optionList: If isOptionList is set to 1, then this column will contain the name of the additional result set that will contain the options that should be used to create the drop-down list.
 - optionListType: Type of option list. For example: choice, chunval, combo, multi2 and multi.
 - isDependent: Indicates whether the field is part of DCL. The value of this field depends on another field.
 - dependentOnField: Indicates the name of the field that will derive the value for this field.
 - isPadMultiselectStorage: Used by option list of type multi*.
 - multiselectDisplaySeparator: Used by option list of type multi*.
 - multiselectStorageSeparator: Used by option list of type multi*.
 - isStoreSelectionPath: Used by Dynamic Tree (for more information, see Dynamic Tree).
 - treeNodeDisplaySeparator: Used by Dynamic Tree.
 - treeNodeStorageSeparator: Used by Dynamic Tree.
 - order: Order of the field.
 - decimalScale
 - isError: If there was an error when retrieving information about a field.
 - errorMsg: Error message.
 - DisplayGroupInfo: Indicates whether certain custom metadata fields should be grouped together. It holds the following columns:
 - parentField: The name of the field that should appear first in the group.

- groupFieldList: The list of fields that should appear together with the parent field.
- groupHeader: Name of the group.
- defaultHide: Indicates whether the group should be collapsed by default.
- xFieldName.options: Contains the options to be used to create the drop-down list for a specific field.
 - dOption: Internal value of the option.
 - dDescription: The display value of the option.

Supported dpAction List

- CheckinNew: Maps to CHECKIN_NEW_FORM.
- CheckinSet: Maps to CHECKIN_SEL_FORM.
- CheckinSimilar: Maps to CHECKIN_SIMILAR_FORM.
- Info: Maps to DOC_INFO.
- Update: Maps to GET_UPDATE_FORM.
- Search: Maps to GET_SEARCH_FORM.
- FLDMetadataUpdate: Maps to FLD_EDIT_METADATA_RULES_FORM.
- FLDMetadataInfo: Maps to FLD_GET_METADATA_RULES.

Dynamic Choice List

The GET_DISPLAY_FIELDS service also provides support to generate Dynamic Choice Lists (DCLs). It uses the following parameters:

- dFieldName: (Required) The name of the DCL field.
- dParentValue: (Optional) The parent value to be used to narrow down the drop-down options.

If dParentValue is not specified, then the service returns all the options values for any option list field.

The columns "isDependent" and "dependentOnField" in the DisplayFieldInfo ResultSet are used to generate DCLs. These columns specify if a field is dependent on another field, and on which field it is dependent.

For example, if the field City is dependent on State, and the field State is dependent on the field *Country*, the GET_DISPLAY_FIELDS service will return all the options for Country, but it will not return options for State and City. It will only indicate in the DisplayFieldInfo ResultSet that State and City are dependent fields. The ResultSet will have isDependent set to 1 for both State and City, and dependentOnField set to *Country* for *State*, and *State* for *City*.

For example, to get the dependent value for *State*, call GET_DISPLAY_FIELDS with the dFieldName parameter set to *State* and the dParentValue parameter set to the value for Country. The service will then return all the options that were passed for State and for Country.

Dynamic Tree

The GET_DISPLAY_FIELDS service also provides support to generate Dynamic Tree. It uses the following parameters:

dFieldName: (Required) The name of the DCL field.

dParentValue: (Optional) The parent value that is used to narrow down the drop-down options.

The field that is using the tree option list will have tree: // in the optionListType column in the DisplayFieldInfo ResultSet. The response binder also will contain another ResultSet with fieldName.options; for example, xTreeField.options.

The xTreeField.options ResultSet will contain the options that represent the first level of the tree.

To retrieve options for any level of the tree, call GET DISPLAY FIELDS with both the dFieldName and appropriate dParentValue parameters.

The DisplayFieldInfo ResultSet that is returned by GET_DISPLAY_FIELDS also will contain the following four new columns:

- isShowSelectionPath: Indicates whether to show the full path. The full path appears on the Info page.
- isStoreSelectionPath: Indicates whether to store the full path in the database.
- treeNodeDisplaySeparator: Indicates the character that must be used to display the separators.
- treeNodeStorageSeparator: Indicates the character that must be used as a separator when the path is saved in the database.

Search

When GET_DISPLAY_FIELDS is called with Search as the dpAction, the service adds additional information to the response binder.

- DisplayFieldInfo ResultSet contains two additional columns:
 - defaultOperator: Indicates the default operator for the field.
 - searchOperatorsRSName: Indicates the name of the ResultSet that contains all the applicable search operators for this field.

The service also adds additional ResultSets to the response binder. These ResultSets contain the search operators for different field types:

- SearchTextField: Contains the search operator for Text, Big Text and Memo fields.
- SearchDateField: Contains the search operator for Date fields.
- SearchIntegerField: Contains the search operator for Integer fields.
- SearchBooleanField: Contains the search operator for Boolean fields. Usually does not exist.

These ResultSets also contain the following columns:

- dOperator: The name of the operator.
- dOperatorDisplay: The Localized Display string for the operator.
- dOperatorExpression: The syntax that must be used to create the query text.

4.8.6 GET DOC METADATA INFO

Service that returns a list of custom metadata fields from the DocMetaDefinition table, and a listing of information for the available DocTypes as result sets. Also returns two option lists of available values for SecurityGroups and Accounts filtered to show only those the user can access. Used with SOAP retrievals and other remote applications.

Access Level: Read, Global, Scriptable (49)

Location: IdcHomeDir/resources/core/tables/std_services.htm

Results

- ResultSets:
 - DocMetaDefinition (All rows and fields from DocMetaDefinition database table.)
 - Doctypes (All rows and fields from DocTypes database table.)
- Option Lists:
 - SecurityGroups (Option list of security groups filtered based upon user's privileges/)
 - Accounts (Option list of Accounts filtered based upon user's privileges.)
- Local Data:
 - isAutoNumber
 - useAccounts

Used By

Other: SoapCustom:Wsdl:MetaData:Services

4.8.7 GET_OPTION_LIST

Service that returns a table of all option lists. Returns the common key value, option value, and order for each option list.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.8.8 GET_USER_METADATA_INFO

Service that returns metadata information for users. Used with SOAP retrievals.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.8.9 MOVE METADEF

Service used by the Configuration Manager to move a metadata field up or down in the list. Moving the metadata in the list changes the default order in which it is displayed on the Checkin, Update, Info, and Search pages.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dName: Name of the metadata field to move.

Optional Service Parameters

isMoveUp: Default is *false*.Set to *true* to move the field up, not down.

4.8.10 UPDATE ADVANCED SEARCH OPTIONS

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.8.11 UPDATE_USER_META

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.8.12 UPDATE_USER_META_TABLE

Service that updates the user information fields in the database. This service alters the database by adding, altering, and deleting columns.

- By default, fields will only be added or changed, not deleted. To delete a user information field, it must be specifically mentioned in the optional parameter MetaFieldsToDelete.
- This service is run when you add or delete user information fields in the User Admin applet and click the **Update Database Design** button.

Location: IdcHomeDir/resources/core/tables/std services.htm

Caution: Data may be lost if a column is deleted. Use this service carefully.

Optional Service Parameters

MetaFieldsToDelete: Specifies a comma-delimited list of the database columns to delete.

Example

IdcCommand command file format:

IdcService=UPDATE_USER_META_TABLE

HDA format (deletes two fields from the database):

@Properties LocalData IdcService=UPDATE_USER_META_TABLE MetaFieldsToDelete=xUserLocation,xDivision @end

4.8.13 UPDATE_META_TABLE

Service that updates the metadata fields in the database.

This service alters the database by adding, altering, and deleting columns in the DocMeta table to conform to the DocMetaDefinition table. By default, fields will only be added or changed, not deleted. To delete a metadata field, it must be specifically mentioned in the optional parameter *MetaFieldsToDelete*.

This service is run when you add or delete metadata fields in the Configuration Manager applet and click the **Update Database Design** button.

> **Caution:** Data may be lost if a column is deleted. Use this service carefully.

Optional Service Parameters

MetaFieldsToDelete: Specifies a comma-delimited list of the database columns to delete from the DocMeta table.

- IdcCommand command file format:
 - # Synchronize the DocMeta table with the design in the DocMetaDefinition table IdcService=UPDATE_META_TABLE
- HDA format (deletes two fields from the database):

@Properties LocalData IdcService=UPDATE_META_TABLE MetaFieldsToDelete=xInteger,xMemo

4.8.14 UPDATE OPTION LIST

Service that adds or updates an option list for a metadata field. Updates or adds an option list in the *OptionLists* database table.

> **Caution:** The option list values specified in the *OptionListString* parameter replace any existing values. To retain existing values, you must include the existing values along with any new values.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dKey: The option list key.
- OptionListString: The list of options, separated by the \n escape sequence.

Example

- IdcCommand command file format:
 - # Add the new options list 'LocationList' and # Add values Madrid, Tokyo, London, Washington IdcService=UPDATE_OPTION_LIST dKey=LocationList OptionListString=Madrid\nTokyo\nLondon\nWashington
- HDA format (adds the option list *LocationList* with the values *Madrid*, *Tokyo*, London, and Washington):

@Properties LocalData IdcService=UPDATE_OPTION_LIST dKey=LocationList OptionListString=Madrid\nTokyo\nLondon\nWashington

4.9 Miscellaneous Services (Core Content Server)

The services in this section are used for a variety of tasks, including working with batch loads, retrieving pages, and chunking files for uploading. The following services are described in this section:

- CHUNKED_UPLOAD
- DOWNLOAD_LISTBOX_ITEMS
- LOAD_USER_LOCALIZATION

4.9.1 CHUNKED_UPLOAD

This service adds support for calling an Content Server service that is very large. It chunks the request.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.9.2 DOWNLOAD_LISTBOX_ITEMS

Service used by the SelectUser applet to provide type-ahead capabilities to the Users or Alias table. It returns ListBoxServiceItems, a resultset containing the results of the query.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dataSource: The name of the data source to use (for example, select query stub).

Optional Service Parameters

- limit: The number of items to download. The default is 100.
- op: The operator to use when creating the WHERE clause.

4.9.3 LOAD_USER_LOCALIZATION

Service that loads localization information for user.

Location: IdcHomeDir/resources/core/tables/std services.htm

4.10 Page Handler/Page Request Services (Core Content Server)

Page Request Services retrieve HTML pages. Page Handler Services manage library Web pages created by the Web Layout Editor. Frequently used services are marked with an asterisk (*) in the following list.

The following services are described in this section:

- DELETE_RESULT_TEMPLATE
- *GET_ADMIN_PAGE
- *GET_DOC_PAGE
- *GET_DYNAMIC_PAGE
- GET_PERSONALIZED_JAVASCRIPT
- GET_PORTAL_PAGE
- *GET SECURE PAGE
- LOAD_GLOBALINCLUDES
- PAGE_HANDLER
- PNE_SAVE_QUERY
- PNE_UPDATE_PERSONAL_URLS
- PNE_UPDATE_PORTAL_INFO
- SAVE_GLOBALINCLUDES
- UPDATE_RESULT_TEMPLATE

4.10.1 DELETE_RESULT_TEMPLATE

Service that deletes an existing search results template.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

name: The search results template name.

Example

IdcService=DELETE_RESULT_TEMPLATE name=test_template

4.10.2 GET ADMIN PAGE

Service that returns the Administration page in a browser. It does not load the server's configuration. If the user is not assigned the **admin** role, the service returns an error message.

Access Level: N/A (0)

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

PageName: The name of the page template.

Optional Service Parameters

Action: The action to execute. Usually set to GetTemplatePage.

Results

- Local Data:
 - TemplateType
 - **TemplateClass**
 - TemplateFilePath
- Response Template: Returns whatever template was passed as the value of the Page parameter. In standard usage this is ADMIN_LINKS (admin.htm).

Used By

- Resource Includes:
 - pne_nav_admin_links
 - std_admin_pages
- Templates:
 - ADMIN_LINKS (admin.htm)
 - IDC_ADMIN_PAGE (idc_admin_page.htm)
 - std_home_page.htm
- Standard Navigation: commonNav.js

Example

To get the standard Administration page:

IdcService=GET_ADMIN_PAGE Page=ADMIN_LINKS Action=GetTemplatePage

4.10.3 GET_DOC_PAGE

Service that executes an HTML page request. This service is usually called from the browser interface. It executes the LOAD DOC ENVIRONMENT SubService.

Access Level: Read, Global, Scriptable (49)

Calls SubService: LOAD_DOC_ENVIRONMENT

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

PageName: The name of the page template.

Optional Service Parameters

Action: The action to execute. Usually set to GetTemplatePage.

Results

- ResultSets:
 - DocFormats (All rows and fields of the DocFormats database table.)
 - DocTypes (All rows and fields of the DocTypes database table.)
- Local Data:
 - **TemplateClass**
 - **TemplateFilePath**
 - TemplateType
- Response Template: Returns whatever template was passed as the value of the Page parameter.

Used By

- Resource Includes:
 - calculate_doc_profile_urls
 - determine_wf_review_rendition_url
 - home_page_static_content
 - pne_nav_bookmark_links
 - pne_nav_shared_links
 - search_template_user_info_settings
 - std_js_bootstrap_vars
 - std_main_page_begin
 - std_query_page_link_args
 - xui_searchapi_results_action_form
- Templates:
 - PNE_PORTAL_DOC_PROFILES_PAGE (pne_portal_doc_profiles_page.htm)

- PNE_PORTAL_PERSONAL_URLS_PAGE (pne_portal_personal_urls_ page.htm)
- PNE_PORTAL_SAVED_QUERIES_PAGE (pne_portal_saved_queries_ page.htm)
- PNE_PORTAL_SYSTEM_LINKS_PAGE (pne_portal_system_links_page.htm)
- PREVIEW_FRAMES (preview_frames.htm)
- USER_INFO (user_info.htm)
- Standard Navigation:
 - commonNav.js
 - Trays/layout.js
 - Trays/search_tray_tabs.htm
- Other:

Redirect service for: SUBMIT_HTML_FORM, LOGIN, EDIT_USER_PROFILE, CONTINUE_SUBMIT_HTML_FORM, UPLOAD_NEW_COMPONENT, CANCEL_COMPONENT_INSTALL, UPDATE_COMPONENT_CONFIG, UNINSTALL_COMPONENT, SAVE_USER_TOPICS, PUBLISH_SCHEMA, EDIT_ SCHEMA_VIEW_VALUES

Example

To get the home page the parameters are:

```
IdcService=GET_DOC_PAGE
Page=HOME_PAGE
Action=GetTemplatePage
```

To get the standard query page the parameters are:

```
IdcService=GET_DOC_PAGE
Page=STANDARD_QUERY_PAGE
Action=GetTemplatePage
```

4.10.4 GET_DYNAMIC_PAGE

Service that returns a Library page for dynamic assembly. This service can be used in two ways:

- To load a library page for display directly in the Content Server system.
- Used in the background in a hidden frame to dynamically generate or update nodes in the Library tree display.

The default template used by the DIRECTORY_PAGE service (dir_page.htm) is branched based upon the value of lmXML to perform one or the other of the two uses for the service. If lmXML is set to 1 (true), the template generates an XML object instead of an HTML page, then fires the libraryNodeLoadSequence to update the Library navigation tree.

Access Level: Read, Scriptable (33)

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

PageName: The name of the page template.

Results

- ResultSets:
 - PageMap (result set containing local pages contained within this library node; fields: PageName, PageParent)
 - LinkList (result set containing listing of links contained within this library node; fields: LinkType, LinkData, LinkTitle, LinkDescription)
- Local Data:
 - dSecurityGroup
 - HeaderText
 - LinkSelectedIndex
 - LocationInfo
 - OutOfDate
 - PageFunction
 - PageLastChanged
 - PageName
 - PageParent
 - PageTitle
 - PageType
 - PageUrl
 - restrictByGroup
 - **TemplatePage**
- Response Template: null (During execution of the service, the TemplatePage value is set to DIRECTORY_PAGE (dir_page.htm)).

Used By

- Applets: Installer
- Resource Includes:
 - calculate_all_doc_profile_urls
 - home_page_static_content
 - pne_nav_shared_links
 - std_main_page_begin
 - std_page_nav_bar
- Standard Navigation: commonNav.js

Example

To get the index page the required parameters are:

IdcService=GET_DYNAMIC_PAGE PageName=index Action=GetTemplatePage

4.10.5 GET_PERSONALIZED_JAVASCRIPT

Service that delivers the navigation information for a particular user's page. If a browser optimally caches the JavaScript, this enables the browser to not request the URL on every page load. If the navigation data changes, a numeric ID which is added at the end of the URL is changed and the browser will reload the page.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.10.6 GET_PORTAL_PAGE

Service that displays a Portal Design page. The most likely errors are when there is an error loading configuration information, an error retrieving the options list, or when the referenced HTML page is not found.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- Action: The action to execute. Usually GetTemplatePage.
- PageName: The name of the page template. The following standard pages are displayed using this parameter:
 - Portal Design page: PNE_PORTAL_DESIGN_PAGE
 - System Links page: PNE PORTAL SYSTEM LINKS PAGE
 - Saved Queries page: PNE_PORTAL_SAVED_QUERIES_PAGE
 - Personal URLs page: PNE_PORTAL_PERSONAL_URLS_PAGE

Example

To get the Portal Design page, the parameters are:

```
IdcService=GET PORTAL PAGE
Action=GetTemplatePage
Page=PNE_PORTAL_DESIGN_PAGE
```

To get the Saved Queries page, the parameters are:

```
IdcService=GET_PORTAL_PAGE
Action=GetTemplatePage
Page=PNE_PORTAL_SAVED_QUERIES_PAGE
```

4.10.7 GET SECURE PAGE

Service that executes a secure HTML page request. This service is usually called from the browser interface and is restricted to users with Write permission to at least one group. The most likely error is when the referenced HTM page is not found.

This service is identical to GET_DOC_PAGE except this service requires Write privileges to at least one security group, whereas GET_DOC_PAGE only requires Read access.

This service executes the LOAD_DOC_ENVIRONMENT SubService.

Access Level: Write, Global, Scriptable (50)

Calls SubService: LOAD_DOC_ENVIRONMENT

Additional Required Service Parameters

Page: The name of the page template.

Optional Service Parameters

Action: The action to execute. Usually GetTemplate*Page*.

Results

- ResultSets:
 - DocFormats (all rows and fields of the DocFormats database table)
 - DocTypes (all rows and fields of the DocTypes database table)
- Local Data:
 - **TemplateClass**
 - **TemplateFilePath**
 - TemplateType
- Response Template: Returns whatever template was passed as the value of the Page parameter

Used By

- Resource Includes: pne_nav_management_links
- Templates: std_home_page.htm

Example

To get the content management page the parameters are:

IdcService=GET_SECURE_PAGE Page=DOC_MANAGEMENT_LINKS Action=GetTemplatePage

4.10.8 LOAD GLOBALINCLUDES

Service that returns the portal page content. This service is used during the page assembly process for dynamic pages. Using the Web Layout Editor applet, select Options then Update Portal. The content shown on that screen is the content that is returned from the Content Server if you run this service.

Location: IdcHomeDir/resources/core/templates//std_services.htm

4.10.9 PAGE HANDLER

Service that rebuilds the static web layout structure as defined in the Web Layout Editor. Returns the entire page list in HDA format. This service is asynchronous and the action is performed in a background thread. This service can only be executed in the context of the Content Server instance and only completes successfully if a connection is made to the Content Server instance.

Location: IdcHomeDir/resources/core/tables/std_services.htm

- IsRebuild: Enables a rebuild.
 - Must be set to *true* (1) for the server to rebuild the web layout pages.

- Default is *false* (0).
- PageFunction: Must be set to GetPageList.

IdcCommand command file format (rebuild the web layout pages):

```
# Rebuild the entire search index
IdcService=PAGE HANDLER
PageFunction=GetPageList
IsRebuild=1
```

HDA format (rebuild the web layout pages):

@Properties LocalData IdcService=PAGE_HANDLER PageFunction=GetPageList IsRebuild=1 @end

4.10.10 PNE_SAVE_QUERY

Service that saves a search query in the User Profile for the current user.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

The parameters for this are exhibited in the std_page.htm in the dynamic HTML definition query_save_for_personalization_list_form_common_fields. Parameters include the following:

- queryText
- queryTitle
- sortField
- ResultCount

4.10.11 PNE_UPDATE_PERSONAL_URLS

Service that updates the personal URLs in the User Profile for the current user.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- Action: The action to execute. Usually set to GetTemplatePage.
- Page: The name of the page template.
- titleEd: The link name to be displayed in the portal navigation bar.
- websiteEd: The URL to be saved as a link.

Example

IdcService=PNE_UPDATE_PERSONAL_URLS Page=PNE PORTAL PERSONAL URLS PAGE Action=GetTemplatePage titleEd=Company websiteEd=http://www.example.com

4.10.12 PNE_UPDATE_PORTAL_INFO

Service that updates the System Links in the User Profile for the current user.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- Action: The action to execute. Usually set to *GetTemplatePage*.
- PageName: The name of the page template.

Example

IdcService=PNE_UPDATE_PORTAL_INFO Page=PNE_PORTAL_DESIGN_PAGE Action=GetTemplatePage

4.10.13 SAVE GLOBALINCLUDES

Service that saves all global includes used during the page assembly process for dynamic pages. This service runs when you update the portal page from the Web Layout Editor.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- IsRebuild: Enables a rebuild of the portal page.
 - Must be set to 1 (*true*) for the Content Server system to update the portal page.
 - Default is 0 (false).
- PageFunction: Must be set to GetPageList.

Example

IdcService=SAVE_GLOBALINCLUDES PageFunction=GetPageList IsRebuild=1

4.10.14 UPDATE_RESULT_TEMPLATE

Service that updates a search results template.

When you launch the **Web Layout Editor** applet, then select **Options**, then select Query Result Page and click Add, Delete, or Edit, enter template information, and click **OK**, this service is executed.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Note: See the following example of the entries required to add a new query result template in HDA format.

Example

IdcCommand command file format:

IdcService=UPDATE_RESULT_TEMPLATE

HDA file format (adds a new query result template called *my_research_template*).

@Properties LocalData

```
IdcService=UPDATE_RESULT_TEMPLATE
@end
@ResultSet ResultPageUpdates
name
formtype
filename
outfilename
flexdata
description
my_research_template
ResultsPage
Text2<$dDocAuthor$><$dSecurityGroup$>Text1<$dDocTitle$>
testing the update template sevice
```

Important: Notice that there are two blank lines between the ResultsPage entry and the Text2 entry. This is required because there are no values for filename and outfilename (the blank lines define the empty values).

4.11 Provider Manager Services (Core Content Server)

Provider Manager services handle the providers that establish a connection to outside entities. The following services are described in this section:

- ADD_EDIT_PROVIDER
- APPEND_DATABASE_AUDIT_INFO
- DELETE_PROVIDER
- ENABLE_DISABLE_PROVIDER
- GET_ADD_EDIT_PROVIDER_FORM
- GET_ALL_PROVIDERS
- GET_PROVIDER_INFO
- NOTIFY_CHANGE
- REQUEST_SECURITYINFO
- TEST_PROVIDER

4.11.1 ADD_EDIT_PROVIDER

Service that creates a new provider. The most likely error is when the provider name is not unique.

Location: IdcHomeDir/resources/core/tables/std_services.htm

- pName: The provider name.
- ProviderClass: The provider class.
- pDescription: The description for the provider.

- pType: The provider type:
 - database: An information repository server that provides an API for connecting and communicating with it. This retrieves information and enables information to be changed in the database. Examples of this type are system databases and LDAP.
 - **incoming**: A connection initiated from an outside entity like a browser or client application. The server listens and is aware of incoming connections
 - outgoing: A connection initiated to an outside entity. You can use this type to communicate between Content Server instances.
 - preview: The API that establishes connections between Content Server and Preview technology like the DTM server for HTML Preview and Content Categorizer.
 - **LDAP:** The Lightweight Directory Access Protocol.

IdcService=ADD_EDIT_PROVIDER pName=admin_provider pType=Database pDescription=provider description ProviderClass=providerclass

4.11.2 APPEND_DATABASE_AUDIT_INFO

SubService used by GET_SYSTEM_AUDIT_INFO to return information on the System Audit Info page.

Location: IdcHomeDir/resources/core/tables/std services.htm

4.11.3 DELETE_PROVIDER

Service that deletes an existing provider. The most likely error is a provider name not in the system.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

pName: The provider name.

Example

IdcService=DELETE_PROVIDE pName=Proxied_2_on_test13

4.11.4 ENABLE DISABLE PROVIDER

Service that reverses the enable/disable state of an existing provider. If the provider is enabled, the service disables it. If the provider is disabled, the service enables it.

Location: IdcHomeDir/resources/core/tables/std_services.htm

- pName: The provider name.
- pDescription: The provider's description.

- pType: Used to create the provider type. Any component can add its own provider type. Currently, the following types are accepted:
 - database: An information repository server that provides an API for connecting and communicating with it. This retrieves information and enables information to be changed in the database. Examples of this type are system databases and LDAP.
 - **incoming**: A connection initiated from an outside entity like a browser or client application. The server listens and is aware of incoming connections
 - **outgoing**: A connection initiated to an outside entity. You can use this type to communicate between Content Server instances.
 - preview: The API that establishes connections between Content Server and Preview technology like the DTM server for HTML Preview and Content Categorizer.
 - **LDAP:** The Lightweight Directory Access Protocol.

Optional Service Parameters

IsEnabled: The desired state of the provider, *true* or *false*.

Example

IdcService=ENABLE_DISABLE_PROVIDER pName=Proxied_2_on_test13 pType=outgoing

4.11.5 GET ADD EDIT PROVIDER FORM

Service that returns a form for adding or editing a provider in a browser.

Location: IdcHomeDir/resources/core/tables/std services.htm

- isEdit: 1 (true): An existing provider is edited. 0 (false): A new provider is added.
- pName: The provider name. Required only when editing a provider.
- pType: The provider type:
 - **Database:** An information repository server that provides an API for connecting and communicating with it. This retrieves information and enables information to be changed in the database. Examples of this type are system databases and LDAP.
 - **Incoming:** A connection initiated from an outside entity like a browser or client application. The server listens and is aware of incoming connections
 - Outgoing: A connection initiated to an outside entity. You can use this type to communicate between Content Server instances.
 - **Preview:** The API that establishes connections between Content Server and Preview technology like the DTM server for HTML preview and Content Categorizer.
 - **LDAP**: The Lightweight Directory Access Protocol.
- ResourceTemplate: The resource template for the form. Required only when adding a provider.

If you are adding a provider, the parameters you pass are similar to the following:

```
IdcService=GET_ADD_EDIT_PROVIDER_FORM
pType=preview
ResourceTemplate=PROVIDER_ADD_PREVIEW
isEdit=0
```

If you are editing a provider, the parameters you pass are similar the following:

```
IdcService=GET_ADD_EDIT_PROVIDER_FORM
pType=outgoing
pName=Proxied_2_on_server02
isEdit=1
```

4.11.6 GET_ALL_PROVIDERS

Service that returns a list of all providers.

Location: IdcHomeDir/resources/core/tables/std services.htm

4.11.7 GET_PROVIDER_INFO

Service that returns information about a provider.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

- pName: The provider name.
- ResourceTemplate: The resource template for page display. Required only when running the service from a browser interface. For example:

ResourceTemplate=DATABASE_PROVIDER_INFO

Example

IdcService=GET_PROVIDER_INFO pName=SystemDatabase

4.11.8 NOTIFY_CHANGE

Service that notifies an Content Server instance of changes to another Content Server instance through an outgoing provider.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

IDC_Name: The name of the Content Server instance to be notified.

Example

IdcService=NOTIFY_CHANGE IDC_Name=Master_on_server01

4.11.9 REQUEST SECURITYINFO

Service that returns all security and user information from the Content Server instance.

4.11.10 TEST_PROVIDER

Service that tests a provider.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

pName: The provider name.

Example

IdcService=TEST_PROVIDER pName=provider22

4.12 Schema Services (Core Content Server)

These services manage the server-side publishing of JavaScript files of database tables, such as option lists. The following services are described in this section:

- ADD_SCHEMA_FIELD
- ADD_SCHEMA_RELATION
- ADD_SCHEMA_VIEW
- ADDOREDIT_SCHEMA_TABLE
- CONTROL_SCHEMA
- DELETE_SCHEMA_FIELD
- DELETE_SCHEMA_RELATION
- DELETE_SCHEMA_TABLE
- DELETE_SCHEMA_VIEW
- EDIT_SCHEMA_FIELD
- EDIT_SCHEMA_NODE
- EDIT_SCHEMA_RELATION
- EDIT_SCHEMA_VIEW
- EDIT_SCHEMA_VIEW_VALUES
- GET SCHEMA FIELD INFO
- GET_SCHEMA_FIELDS
- GET_SCHEMA_RELATIONS
- **GET_SCHEMA_STATS**
- GET_SCHEMA_TABLE_INFO
- GET_SCHEMA_TABLES
- GET_SCHEMA_VIEW_EDIT_INFO
- GET_SCHEMA_VIEW_FRAGMENT
- GET_SCHEMA_VIEW_INFO
- GET_SCHEMA_VIEW_VALUES
- GET_SCHEMA_VIEWS

PUBLISH_SCHEMA

4.12.1 ADD SCHEMA FIELD

Service that adds a field to a schema table.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

schFieldName: The name of the field to be included.

4.12.2 ADD_SCHEMA_RELATION

Service that adds a relation to an existing schema.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

schRelationName: The name of the relation to be included.

4.12.3 ADD SCHEMA VIEW

Service used to add a new view for a schema.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- schViewName: The name of the view to be added.
- schViewType: The type of the schema view to be added.
- schTableName: The name of the table that the view is related to.

4.12.4 ADDOREDIT SCHEMA TABLE

Service used to add or edit a table used in a schema.

Location: IdcHomeDir/resources/core/tables/std services.htm

4.12.5 CONTROL SCHEMA

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.12.6 DELETE_SCHEMA_FIELD

Service used to delete a field from a schema table.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

• schFieldName: The name of the field to be deleted.

4.12.7 DELETE_SCHEMA_RELATION

Service used to delete a relation from a schema.

Additional Required Service Parameters

schRelationName: The name of the relation to be deleted.

4.12.8 DELETE_SCHEMA_TABLE

Service used to delete a table from a schema.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

schTableName: The name of the relation to be deleted.

4.12.9 DELETE_SCHEMA_VIEW

Service used to delete a view from a schema.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

schViewName: The name of the view to be deleted.

4.12.10 EDIT_SCHEMA_FIELD

Service used to edit a field in a schema.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

schFieldName: The name of the field to be edited.

4.12.11 EDIT_SCHEMA_NODE

Service used to edit a node in a schema.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- editViewValueAction: The action to be used for the node.
- schViewName: The name of the view used for the node.

4.12.12 EDIT SCHEMA RELATION

Service used to edit a schema relation.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- schRelationName: The name of the relation to be edited.
- schTable*n*Table: The number of the table to be used for the relation (for example, Table1 or Table2). If this value is not provided, no table is used for the relation.

4.12.13 EDIT_SCHEMA_VIEW

Service used to edit a schema view.

Additional Required Service Parameters

- schViewType: The type of the view to be edited.
- schViewName: The name of the view to be edited.
- schTableName: The name of the table associated with the schema.

4.12.14 EDIT_SCHEMA_VIEW_VALUES

Service used to edit values in a schema view.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

schViewName: The name of the view to be used.

4.12.15 GET SCHEMA FIELD INFO

Service that returns information about a specific schema field.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

schFieldName: The name of the field to be used.

4.12.16 GET_SCHEMA_FIELDS

Service that returns information about fields used in schemas.

Location: IdcHomeDir/resources/core/tables/std services.htm

4.12.17 GET SCHEMA RELATIONS

Service that returns information about relations used with schemas.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.12.18 GET_SCHEMA_STATS

Service that gathers statistics regarding schema usage for the Edit Active Console Output Tracing Report on the System Audit Info Page.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.12.19 GET_SCHEMA_TABLE_INFO

Service that returns information about all tables used in schemas.

Location: IdcHomeDir/resources/core/tables/std services.htm

4.12.20 GET SCHEMA TABLES

Service that returns information about the tables and information in the tables that are used in schemas.

4.12.21 GET_SCHEMA_VIEW_EDIT_INFO

Service that returns the editable information for a schema view.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

schViewName: The name of the view to be used.

4.12.22 GET_SCHEMA_VIEW_FRAGMENT

Service that returns a fragment of a Schema-based option list.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

schViewName: The name of the view to be used.

Optional Service Parameters

- schRelationName: If this field is a Dependent Choice List (DCL), this is the name of the Schema relation used to filter the list results.
- schParentValue: If this field is a DCL, this is the value of the parent field used with the relation to filter the list.

4.12.23 GET_SCHEMA_VIEW_INFO

Service that returns table and other information for the specified view.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

schViewName: The name of the view to be used.

4.12.24 GET_SCHEMA_VIEW_VALUES

Service that displays values in the specified view.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

schViewName: The name of the view to be used.

4.12.25 GET SCHEMA VIEWS

Service that retrieves all defined schema views.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.12.26 PUBLISH SCHEMA

Service that initiates a publish of all schemas.

4.13 Search Services (Core Content Server)

The Search Services are used to manage searching within the Content Server system. Frequently used services are marked with an asterisk (*) in the following list.

The following services are described in this section:

- APPEND SEARCH AUDIT INFO
- GET_EXTERNAL_DOC_INFO
- GET_EXTERNAL_HIGHLIGHT_INFO
- GET_EXTERNAL_XML_HIGHLIGHT_INFO
- GET HIGHLIGHT INFO
- *GET_SEARCH_RESULTS
- GET_SEARCH_RESULTS_FORCELOGIN
- GET_XML_HIGHLIGHT_INFO
- PNE GET SEARCH RESULTS
- VIEW DOC

4.13.1 APPEND SEARCH AUDIT INFO

SubService used by GET_SYSTEM_AUDIT_INFO to return information on the System Audit Info page.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.13.2 GET EXTERNAL DOC INFO

Service that retrieves content information from an external Verity collection. Used with the LightlyManagedContent component.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dDocName: The Content ID for the content item.
- sCollectionID: The collection ID used by the Content Server system to locate the collection.

Example

IdcService=GET EXTERNAL DOC INFO dDocName=adminform113

4.13.3 GET_EXTERNAL_HIGHLIGHT_INFO

Service that returns PDF or HTML highlight information for a content item in an external collection.

Location: IdcHomeDir/resources/core/tables/std_services.htm

- dDocName: The Content ID for the content item.
- HighlightType: The highlight type:

- For PDF, use PdfHighlight.
- For HTML, use HtmlHighlight.
- QueryText: The full-text search expression.
- SortField: The name of the metadata field to sort on.
 - Examples: *dInDate*, *dOutDate*, *alternateFile*.
 - Defaults to DocId.
 - SortOrder: The sort order. Allowed values are ASC (ascending) and DESC (descending).

IdcService=GET_EXTERNAL_HIGHLIGHT_INFO dDocName=test113 HighlightType=PdfHighlight QueryText=test SortField=dInDate SortOrder=Desc

4.13.4 GET EXTERNAL XML HIGHLIGHT INFO

Service that returns XML highlight information for a content item in an external collection. This service is called if a user is doing a full-text search for a PDF document in a browser environment. It occurs when the user selects the link for the PDF on the result page and views the highlighted word on the PDF.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dDocName: The Content ID for the content item.
- HighlightType: The highlight type:
 - For PDF, use PdfHighlight.
 - For HTML, use HtmlHighlight.
- QueryText: The full-text search expression.
- SortField: The name of the metadata field to sort on.
 - Examples: *dInDate*, *dOutDate*, *alternateFile*.
 - Defaults to DocId.
- SortOrder: The sort order. Allowed values are ASC (ascending) and DESC (descending).

Example

IdcService=GET_EXTERNAL_XML_HIGHLIGHT_INFO dDocName=test113 HighlightType=PdfHighlight QueryText=test SortField=dInDate SortOrder=Desc

4.13.5 GET HIGHLIGHT INFO

Service that returns PDF or HTML highlight information for a content item.

This service is run from the browser interface when you do a full-text search and click the Content ID or thumbnail on the search result page. On the displayed page, the words that you searched for are highlighted. For HTML document the words are bold and for PDF document they are highlighted.

The most likely errors are when the content item no longer exists in the system or if the user fails the security check.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dDocName: The Content ID for the content item.
- QueryText: The full-text search expression.
- SortField: The name of the metadata field to sort on.
 - Examples: *dInDate*, *dOutDate*, *alternateFile*.
 - Defaults to DocId.
- SortOrder: The sort order. Allowed values are ASC (ascending) and DESC (descending).

Optional Service Parameters

- dWebExtension: The file extension of the web-viewable content. For example, html, pdf, or txt.
- HighlightType: The highlight type:
 - For PDF, use PdfHighlight.
 - For HTML, use HtmlHighlight.

Example

IdcCommand command file format:

```
IdcService=GET_HIGHLIGHT_INFO
dDocName=test 000043
QueryText=service
SortField=dInDate
SortOrder=Desc
```

HDA format with optional parameters:

```
@Properties LocalData
IdcService=GET_HIGHLIGHT_INFO
dDocName=test_000043
QueryText=service
SortField=dInDate
SortOrder=Desc
HighlightType=HtmlHighlight
dWebExtension=html
@end
```

4.13.6 GET_SEARCH_RESULTS

Service that returns a list of content items that match specific search criteria.

Access Level: Read (1) Calls SubService: SUB

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

QueryText: The search expression.

You can append values for Title, Content ID, and so forth, on the QueryText parameter to refine this service.

Optional Service Parameters

- ResultCount: The number of results to return. Defaults to 25.
- SearchEngineName: The name of the search engine to be used. The default is the value specified in the config/config.cfg file.

Values can be databasefulltext or database. If set to database or databasefulltext, you must pass SQL in the QueryText parameter, as in this example:

```
dDocTitle like 'test'
```

This is equivalent to the Verity query:

```
dDocTitle <substring> 'test'
```

- SortField: The name of the metadata field to sort on.
 - Examples: *dInDate*, *dDocTitle*, *Score*.
 - Defaults to dInDate.
- SortOrder: The sort order. Allowed values are ASC (ascending) and DESC (descending).
- SortSpec: Enables sorting on more than one field. Set this parameter to the following sequence:

```
<sort field> <sort order> <sort field> <sort order>...
```

For example, SortSpec=dDocTitle ASC dInDate DESC.

- StartRow: The row to begin the search results display. For example, if *ResultCount*=25, setting *StartRow*=26 displays the second page of results.
- EndRow: The row to end the search results display.
- vcrContentType: The name of a searchable content type. The server modifies the query text of the search to limit the results to documents of that type. For example, if the content type specified is one describing a profile, then the query text is modified to limit the documents returned to those whose profile trigger value matches that of the profile.
- vcrAppendObjectClassInfo: When set to true, the server adds an additional column to the SearchResults ResultSet called vcrObjectClass. This column lists the content type associated with each document in the results. The default is true.

Example

IdcService=GET SEARCH RESULTS QueryText=benefits

4.13.7 GET_SEARCH_RESULTS_FORCELOGIN

Service that forces the user to be logged in before retrieving the search results. This service is equivalent to GET_SEARCH_RESULTS.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.13.8 GET_XML_HIGHLIGHT_INFO

Service that returns XML highlight information for a content item.

This service is called if a user is doing a full-text search for a PDF document in a browser environment. When the user selects the link for the PDF on the result page and views the highlighted word on the PDF.

The most likely error is a content item name that does not exist.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

- dDocName: The Content ID for the content item.
- HighlightType: The highlight type:
 - For PDF, use PdfHighlight.
 - For HTML, use HtmlHighlight.
- QueryText: The full-text search expression.
- SortField: The name of the metadata field to sort on.
 - Examples: *dInDate*, *dOutDate*, *alternateFile*.
 - Defaults to DocId.
- SortOrder: The sort order. Allowed values are ASC (ascending) and DESC (descending).

Example

IdcService=GET_XML_HIGHLIGHT_INFO dDocName=test13 QueryText=service SortField=dInDate SortOrder=Desc dDocName=TEST13 HighlightType=PdfHighlight

4.13.9 PNE GET SEARCH RESULTS

Service used to retrieve the search results where the presentation is controlled by the user's preferences (that is, the PNE settings).

The QueryText for the service targets the defined search engine and as such can use all the parameters available to the GET_SEARCH_RESULTS service.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

QueryText: The search expression.

IdcService=PNE_GET_SEARCH_RESULTS QueryText=benefits

4.13.10 VIEW DOC

Service that returns highlight information.

- Given a content item name, the service evaluates security information and displays the content item highlight information.
- Usually this service is used when you have an external collection rather than a Content Server search collection. But in either case, the search collection must be created by the Verity search engine. For example, if you want to do a search on an external collection, you must provide the VdkVgwKey and sCollectionID parameters so the collection can be located by the Content Server INSTANCE.
- Usually, the VdkVgwKey is the dDocName. Verity gives a unique ID to each content item, and the Content Server system maps that Verity ID (VdkVgwKey) with dDocName (Content ID).
- Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- QueryText: The search expression.
- sCollectionID: The collection ID used by the Content Server system to locate the collection.
- SortField: The name of the metadata field to sort on.
- Examples: *dInDate*, *dOutDate*, *alternateFile*.
 - Defaults to docID.
- SortOrder: The sort order. Allowed values are Asc (ascending) and Desc (descending).

Optional Service Parameters

- ViewType: The display format. If this parameter is not defined, ViewText is used by default.
 - Set to ViewText to display as Text.
 - Set to ViewHtml to display as HTML.

Example

IdcService=VIEW DOC IsCollectionID=external SortField=dInDate SortOrder=Desc QueryText=test ViewType=ViewText

4.14 User Services (Core Content Server)

User Services assist in managing user-related activities, such as adding accounts, aliases, and roles. Frequently used services are marked with an asterisk (*) in the following list.

The following services are described in this section:

- ADD_ALIAS
- ADD GROUP
- ADD ROLE
- ADD_USER
- CHANGE_USER_AUTH_TYPE
- *CHECK_USER_CREDENTIALS
- DELETE_ALIAS
- DELETE_GROUP
- DELETE_ROLE
- DELETE_USER
- **EDIT_ALIAS**
- EDIT_GROUP
- EDIT_ROLE
- EDIT_USER
- *EDIT_USER_PROFILE
- **GET_ALIASES**
- GET_FILTER_ADMIN_PAGE
- GET_SELF_REGISTER_PAGE
- GET_USERDOCPROFILES
- *GET_USER_INFO
- **GET_USERS**
- LOAD_PNE_PORTAL
- *LOAD_USER_TOPIC
- QUERY_GROUP
- QUERY_USER_ATTRIBUTES
- REGISTER_USER
- *SAVE_USER_TOPICS
- UPDATE_FILTER_INFO
- UPDATE_USEROPTION_LIST

4.14.1 ADD_ALIAS

Used to create a new alias. The most likely errors are mismatched parameters or when a user or alias already exists in the system.

If you add an alias using the User Admin applet, you must add at least one user. However, you do not need to add a user using IdcCommand or IdcCommandX. To add users using IdcCommand or IdcCommandX, the optional parameter AliasUsersString must be included.

Additional Required Service Parameters

- dAlias: The alias name.
- dAliasDescription: The alias description.

Optional Service Parameters

- AliasUsersString: The alias or user. To add multiple users:
 - In HDA format: Use the \n escape sequence between each user name when using HDA format, as in this example:
 - AliasUsersString=sysadmin\nuser1
 - When using SOAP format, put the unencoded line feed directly into the XML or encode the line feed as (
).

Example

To create an alias and add a user the required parameters are:

```
IdcService=ADD ALIAS
dAlias=my_alias
dAliasDescription=admin users
AliasUsersString=sysadmin
```

In HDA format, adding a user with the AliasUsersString parameter:

```
@Properties LocalData
IdcService=ADD_ALIAS
dAlias=my_alias
dAliasDescription=admin users
AliasUsersString=sysadmin
@end
```

In HDA format, adding a user with the AliasUserMap and Alias result sets:

```
@Properties LocalData
IdcService=ADD_ALIAS
changedSubjects=aliases,1008291537850
dAliasDescription=Test Alias
refreshSubjects=
blFieldTypes=StatusMessage message
blDateFormat=M/d{/yy} {h:mm[:ss] {aa}[zzz]}!tAmerica/Chicago!mAM,PM
loadedUserAttributes=1
dUser=sysadmin
IsJava=1
changedMonikers=
refreshSubMonikers=
refreshMonikers=
dAlias=NewAlias
@end
@ResultSet AliasUserMap
2
dAlias 6 30
dUserName 6 50
YourAlias
Gillian
@end
@ResultSet Alias
dAlias 6 30
dAliasDescription 6 50
```

```
MvAlias
This is a test of adding an alias
NewAlias
Test Alias
YourAlias
Test Alias
@end
```

4.14.2 ADD_GROUP

Service that creates a new security group. The most likely error is when the security group name is not unique.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dGroupName: The security group name.
- dDescription: The security group description.
- dPrivilege: The permission setting.

If this value is set to 0, only the **admin** role has RWDA permission on the security group; no other roles are able to access the security group. If the value is set to 15, all roles get RWDA permission on the security group. For more information about numbering of permissions, see Oracle Fusion Middleware Administering Oracle WebCenter Content.

Example

IdcService=ADD GROUP dGroupName=NEW_GROUP dPrivilege=15 dDescription=admin privileges

4.14.3 ADD ROLE

Service that creates a new role. A role is a set of permissions (Read, Write, Delete, Admin) for each security group.

The service adds a row in the RoleDefinition table for every existing security group. The most likely error is when the role name is not unique.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dRoleName: The role name.
- dPrivilege: The permission setting.

If this value is set to 0, only the admin role has RWDA permission on the security group. No other roles are able to access the security group. If the value is set to 15, all roles get RWDA permission on the security group. For more information about numbering of permissions, see Oracle Fusion Middleware Administering Oracle WebCenter Content.

Example

IdcService=ADD ROLE dRoleName=specialuser dPrivilege=15

4.14.4 ADD_USER

Service used to create a new user. The most likely error is when the user name is not unique.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dName: The user name.
- dUserAuthType: The user authorization type. This value must be set to either Local or Global.

Optional Service Parameters

- dFullName: The full name of the user.
- dPassword: The password for the user.
- dEmail: The email address for the user.

Optional Attribute Information

Optional attribute information is specified in a result set that contains the user's attribute information and references the roles the user belongs to and the accounts the user has access to. Attribute information consists of a list of three comma-delimited strings. The first string indicates the type of attribute, the second the name of the attribute, and the third is the access number for accounts or default entry for role.

Important: The user attribute information is not predefined. By default, a new user belongs to no roles or accounts, and becomes a guest in the system.

Attribute Type: When defining a role, the first string specifies that this is a role attribute, the second string is the name of the role, and the third is the default entry of 15.

When defining an account, the first string specifies that this is an account attribute, the second string is the name of the account, and the third is the access level.

- For a role attribute, the information is in the form:
- role,contributor,15
- For an account attribute, the information is in the form:
- account, books, 1
- Attribute Name: A user can belong to multiple roles and accounts, so there can be multiple role and account information strings separated by commas in the attribute information column. If the user is to have the admin role, define the user attribute information as follows:

```
@ResultSet UserAttribInfo
dUserName
AttributeInfo
jsmith
role, contributor, 15
@end
```

If the user is to belong to both the *contributor* and *editor* roles and have Read permission on the books account, define the user attribute information as:

```
@ResultSet UserAttribInfo
dUserName
AttributeInfo
jsmith
role, contributor, 15, role, editor, 15, account, books, 1
```

- Access Number: These access numbers can be assigned to the user.
 - 1: Read only
 - 3: Read and write
 - 7: Read, write, delete
 - 15: Administrative permissions

Example

IdcCommand command file format:

```
IdcService=ADD USER
dName=specialuser
dUserAuthType=LOCAL
```

HDA format with optional parameters:

```
@Properties LocalData
IdcService=ADD_USER
dName=jsmith
dUserAuthType=LOCAL
dFullName=Jennifer Smith
dPassword=password
dEmail=jsmith@example.com
@ResultSet UserAttribInfo
dUserName
AttributeInfo
role, admin, 15, role, contributor, 15
```

4.14.5 CHANGE USER AUTH TYPE

Service that changes the authentication type (global, local, or external) for users.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- curUserAuthType: Current user authentication type.
- dUserAuthType: New user authentication type.

4.14.6 CHECK_USER_CREDENTIALS

Service that checks the credentials of a user. You can use this service to get information about a user (for example, roles and accounts), or use it to check a user/password pair to see if they match. This is called during the authentication process. The data is cached so it is not called for every service request.

This service does not return user data for Microsoft Active Directory managed users when the Content Server instance is configured to use ADSI. It does return the user data for local users and external LDAP managed users.

Access Level: N/A (0)

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

userName: The user name

Optional Service Parameters

- getUserInfo: 0 (false): Does not retrieve extended user information. 1 (true): Retrieves extended user information (full name, e-mail address, locale, and user type)
- hasSecurityInfo: 0 (false): Retrieves the user accounts. 1 (true): Does not retrieve the user accounts.
- authenticateUser: 0 (false): Does not authenticate the user (validate that the user/password pair match). 1 (*true*): Authenticates the user (validate that the user/password pair match). In this case, the userPassword parameter must be specified.
- userPassword: The password for the specified user name. If the authenticateUser parameter is included and set to 1 (true), the userPassword parameter must be specified.
- userExtendedInfo: This parameter, combined with the getUserInfo parameter, returns the user's accounts and groups in the data binder. 0 (false): Does not retrieve the information. 1 (*true*): Retrieves the information.

Results

- Local Data:
 - extendedInfo: HDA-encoded string containing user info fields (ndUserLocale, nblFieldTypes, ndEmail, nblDateFormat, ndFullName, ndUserType, ndUserAuthType, ndUserChangeDate, ndUserTimeZone, and ndUserArriveDate). Only returned if optional parameter 'getUserInfo' is 1 (true).
 - accounts: comma-delimited list of user's accounts. Only returned if optional parameter hasSecurityInfo is 0 (false).
 - roles: comma-delimited list if user's roles. Only returned if optional parameter hasSecurityInfo is 0 (*false*).
 - hasSecurtyInfo: Returns 1 (*true*) if security information is present in response.
 - is Authenticated: Returns 1 (true) if optional parameter authenticateUser is set to 1 (true), and the optional parameter userPassword matches the password that corresponds to userName.
 - isPromptLogin: Returns 1 (true) if userPassword does not correspond to userName. No other data is returned in this situation.

The following is an example CHECK_USER_CREDENTIALS service call to get information about a user:

```
@Properties LocalData
IdcService=CHECK USER CREDENTIALS
userName=user1
getUserInfo=1
@end
```

The following is an example of the results that would be returned by this service call to get user information (note that the accounts are returned):

```
Content-type: text/plain
<?hda version="6.3 dev (build-date)" jcharset=Cp1252 encoding=iso-8859-1?>
@Properties LocalData
dUser=user1
blFieldTypes=
dUserOrgPath=
refreshSubMonikers=
accounts=#none,prj(RWD)
blDateFormat='{ts' ''yyyy-MM-dd HH:mm:ss'''}'!tAmerica/Chicago
StatusCode=0
dUserSourceOrgPath=

```

```
\{aa\}! tAmerica/Chicago\ndEmail=\nu19=\nu18=\nu17=\nu16=\nu15=\nu14=\nu13=\nu12=
\nu11=\nu10=\n\end\n
@end
```

The following is an example CHECK_USER_CREDENTIALS service call to see if a user name/password pair match:

```
@Properties LocalData
IdcService=CHECK_USER_CREDENTIALS
userName=user1
authenticateUser=1
userPassword=idc
@end
```

The following is an example of the results that would be returned by this service call to check a user name/password pair match (note that the user name and password match; the key returned value being *isAuthenticated*=1):

```
Content-type: text/plain
<?hda version="6.3 dev (build-date)" jcharset=Cp1252 encoding=iso-8859-1?>
@Properties LocalData
dUser=user1
blFieldTypes=
refreshSubMonikers=
blDateFormat='{ts' ''yyyy-MM-dd HH:mm:ss'''}'!tAmerica/Chicago
StatusCode=0
changedSubjects=
refreshSubjects=
dName=user1
changedMonikers=
refreshMonikers=
isAuthenticated=1
@end
```

The following is another example CHECK_USER_CREDENTIALS service call to see if a user name/password pair match:

```
@Properties LocalData
IdcService=CHECK_USER_CREDENTIALS
userName=user1
authenticateUser=1
userPassword=pppp
@end
```

The following is an example of the results that would be returned by this service call to check a user name/password pair match (note that the user name and password do *not* match; *isPromptLogin=1* is returned instead of *isAuthenticated=1*):

```
Content-type: text/plain
<?hda version="6.3 dev (build-date)" jcharset=Cp1252 encoding=iso-8859-1?>
@Properties LocalData
dUser=user1
blFieldTypes=
refreshSubMonikers=
blDateFormat='{ts' ''yyyy-MM-dd HH:mm:ss'''}'!tAmerica/Chicago
StatusCode=0
isPromptLogin=1
changedSubjects=
refreshSubjects=
dName=user1
changedMonikers=
```

refreshMonikers= @end

4.14.7 DELETE ALIAS

Service that deletes an existing alias. The most likely errors are mismatched parameters, when the alias is being used in the workflow, or when the system is unable to delete the alias or the user.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dAlias: The alias name.

Example

IdcService=DELETE_ALIAS dAlias=admin_alias

4.14.8 DELETE GROUP

Service that deletes an existing security group. The most likely errors are when content items or workflows associated with this group still exist in the system.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dGroupName: The security group name.

Example

IdcService=DELETE_GROUP dGroupName=admingroup

4.14.9 DELETE_ROLE

Service that deletes an existing role. The most likely errors are when the specified role does not exist or when a user still has this role assigned.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dRoleName: The role name.

Example

IdcService=DELETE_ROLE dRoleName=test_role

4.14.10 DELETE USER

Service that deletes an existing user. The most likely error is when the user has been assigned to an alias.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dName: The user name.

IdcCommand command file format:

IdcService=DELETE USER dName=jsmith

HDA format:

@Properties LocalData IdcService=DELETE_USER dName=jsmith @end

4.14.11 EDIT ALIAS

Service that modifies an existing alias. To edit and add users, the AliasUsersString parameter must be included.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Caution: Editing an alias deletes all existing data (Description and Users) from the alias. To retain existing data, you must include the existing data along with any new data.

Additional Required Service Parameters

- dAlias: The alias name.
- dAliasDescription: The alias description.
- AliasUsersString: The alias or user. To add multiple users:
 - In HDA format: Use the \n escape sequence between each user name when using HDA format, as in this example:

AliasUsersString=sysadmin\nuser1

When using SOAP format, put the unencoded line feed directly into the XML or encode the line feed as (
).

Example

Edits an alias:

IdcService=EDIT_ALIAS dAlias=my_alias dAliasDescription=new user AliasUsersString=sysadmin\nuser1

In HDA format, adding users with the AliasUsersString parameter:

@Properties LocalData monitoredTopics=appcommongui,1000382277000 IdcService=EDIT_ALIAS dAliasDescription=Test Alias blFieldTypes= blDateFormat=M/d{/yy} {h:mm[:ss] {aa}[zzz]}!tAmerica/Chicago!mAM,PM watchedMonikers= monitoredSubjects=usermetaoptlists,1008541017549,aliases,1008541017549, userlist, 1008541017549, users, 1008541017549, metadata, 1008541017549, config, 100854 1017549, accounts, 1008541017549 AliasUsersString=Gillian\nMonique\nsysadmin\n

dAlias=YourAlias @end

In HDA format, adding users with the AliasUserMap and Alias result sets:

```
@Properties LocalData
refreshMonikers=
IsJava=1
refreshSubMonikers=
refreshSubjects=aliases,1008541017551
dAlias=YourAlias
refreshTopics=
AliasUsersString=Gillian\nMonique\nsysadmin\n
ClientEncoding=Cp1252
dUser=sysadmin
blDateFormat=M/d\{/yy\} \ \{h:mm[:ss] \ \{aa\}[zzz]\}!tAmerica/Chicago!mAM,PM \} \\
monitoredSubjects=usermetaoptlists,1008541017549,aliases,1008541017549,
userlist,1008541017549,users,1008541017549,metadata,1008541017549,config,
1008541017549, accounts, 1008541017549

This is a test of adding an alias
NewAlias
Test Alias
YourAlias
Test Alias
@end
```

4.14.12 EDIT_GROUP

Service that modifies an existing security group.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dGroupName: The security group name.
- dDescription: The security group description.
- dPrivilege: The permission setting.

If this value is set to 0, only the admin role has RWDA permission on the group. No other roles are able to access the group. If the value is set to 15, all roles get RWDA permission on the group.

Example

IdcService=EDIT_GROUP dGroupName=MY_GROUP dPrivilege=0 dDescription=admin privileges

4.14.13 EDIT ROLE

Service that modifies an existing role. A role is a set of permissions (Read, Write, Delete, Admin) for each security group.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dRoleName: The existing role name.
- dGroupName: The name of the security group.

Optional Service Parameters

dPrivilege: The permission setting.

If this value is set to 0, only the **admin** role has RWDA permission on the group. No other roles are able to access the group. If the value is set to 15, all roles get RWDA permission on the group. For more information about numbering of permissions, see Oracle Fusion Middleware Administering Oracle WebCenter Content.

Example

IdcService=EDIT ROLE dRoleName=test_role dGroupName=MY_GROUP dPrivilege=15

4.14.14 EDIT USER

Service that modifies an existing user. The most likely error is the user not having the security level to perform this action or the user not existing.

Caution: Editing a user deletes all existing user attributes (role and account permissions). To retain existing attributes, you must include the existing attributes along with any new or changed data. If user attributes are not defined, the user belongs to no roles or accounts, and becomes a guest in the system.

Note: If the specified user does not exist, the Content Server adds the user.

Additional Required Service Parameters

- dName: The user name.
- dUserAuthType: The user authorization type. This value must be set to either Local or Global.

Optional Service Parameters

- dFullName: The full name of the user.
- dPassword: The password for the user.
- dEmail: The email address of the user.
- dUserLocale: The locale designation, such as *English-US*, *English-UK*, *Deutsche*, Français, or Español.
- dUserType: The user type.

Optional Attribute Information

Optional attributes are specified as a result set that contains the user's attribute information and specifies the roles the user belongs to and the accounts the user has access to. Attribute information consists of a list of three comma-delimited strings. The first string indicates the type of attribute, the second the name of the attribute, and the third is the access number for accounts or default entry for role.

- Attribute Type: When defining a role, the first string specifies that this is a role attribute, the second string is the name of the role, and the third is the default entry of 15. When defining an account, the first string specifies that this is an account attribute, the second string is the name of the account, and the third is the access level.
 - For a role attribute, the information is in the form:

```
role, contributor, 15
```

For an account attribute, the information is in the form:

```
account, books, 1
```

Attribute Name: A user can belong to multiple roles and accounts, so there can be multiple role and account information strings separated by commas in the attribute information column. If the user is to have the admin role, define the user attribute information as follows:

```
@ResultSet UserAttribInfo
dUserName
AttributeInfo
ismith
```

```
role, contributor, 15
@end
```

If the user is to belong to both the *contributor* and *editor* roles and have Read permission on the books account, define the user attribute information as:

```
@ResultSet UserAttribInfo
dUserName
AttributeInfo
jsmith
role, contributor, 15, role, editor, 15, account, books, 1
```

- Access Number: These access numbers can be assigned to the user.
 - 1: Read only
 - 3: Read and write
 - 7: Read, write, delete
 - 15: Administrative permissions

Example

IdcCommand command file format:

```
IdcService=EDIT_USER
dName=user20
dUserAuthType=Local
```

HDA format with optional parameters and attribute information:

```
@Properties LocalData
IdcService=EDIT_USER
dName=jsmith
dFullName=Jennifer Smith
dUserAuthType=Local
dPassword=password
dEmail=jsmith@example.com
dUserType=MKT
dUserLocale=English-US
@end
@ResultSet UserAttribInfo
dUserName
AttributeInfo
jsmith
role, admin, 15, role, contributor, 15
```

4.14.15 EDIT USER PROFILE

Service that modifies the user profile for an existing user. and saves profile settings. This cannot be used to change a user's security credentials.

```
Access Level: Read, Global (17)
```

Location: IdcHomeDir/resources/core/tables/std_services.htm

Any of the fields in the Users table (except dName) can be updated by this service.

- You can use this service o edit personalization information that is not stored in the database. Some of a user's information is stored in the database and some is stored in personalization data . hda files.
- For information in the database, simply passing the corresponding field name and a value causes the field to be updated.
- For personalization data, encoded topic strings must be used (for example, topicString1=updateKeys:pne_portal:lm_Layout:Trays).
- The Password value cannot be updated for proxied users.
- The most likely reason this service would fail is if it cannot find the user (dName) in the system, or if the user name passed in dName does not match the current

Additional Required Service Parameters

dName: The user name.

Optional Service Parameters

- dFullName: The full name of the user.
- dPassword: The password for the user.
- dEmail: The email address of the user.
- dUserLocale: The locale designation, such as *English-US*, *English-UK*, *Deutsche*, Français, or Español.
- dUserType: The user type.
- emailFormatList: Set to HTML for HTML-based emails or text for text-based email.
- numTopics: The number of additional personalization topics in this request.
- topicString1: An encoded string of a personalization topic to update.
- numTopics: The total number of topic strings being passed.
- Any field from the User's table (except dName): dFullName, dEmail, dPasswordEncoding, dPassword, dUserType, dUserAuthType, dUserOrgPath, dUserSourceOrgPath, dUserSourceFlags, dUserArriveDate, dUserChangeDate, dUserLocale, dUserTimeZone.
- topicString1 topicStringN: Any number of strings encoded to define personalization topic edit operations.
- RedirectUrl: Used to display another page. If omitted, the user is redirected to the Content Server home page.

Optional parameters for Content Server version 7.0 and later:

- Layout: The API to use (for example, *Top Menu* or *Trays*).
- Skin: The skin to use (for example, *Windows*).
- XuiSearchTemplate: The template to use for the user's personalized Search Results page.

Results

ResultSets: UserTopicEdits (Returned only if personalization data was edited. Contains info about what topic edits were performed. Has the following fields: topicName, topicEditAction, topicKey, topicValue. Note that topicValue is an HDA-encoded string.)

- Local Data:
 - changedSubjects
 - dUser
- Response Template:
 - REDIRECT_TEMPLATE (redirect_template.htm)
 - Default redirect service: GET_DOC_PAGE (Page=HOME_PAGE)

Used By

Resource Includes: user_info_submit_form

Example

IdcCommand command file format:

```
IdcService=EDIT_USER_PROFILE
dName=sysadmin
```

HDA format with optional parameters:

```
@Properties LocalData
IdcService=EDIT_USER_PROFILE
dName=jsmith
dFullName=Jennifer Smith
dPassword=password
dEmail=jsmith@example.com
dUserType=MKT
dUserLocale=English-US
```

4.14.16 GET_ALIASES

Service that returns a list of all aliases.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.14.17 GET_FILTER_ADMIN_PAGE

Service that retrieves the Configure Web Server Filter page in a browser.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.14.18 GET_SELF_REGISTER_PAGE

Service that returns the self-registration page and loads the user information for a self-registered user.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.14.19 GET_USERDOCPROFILES

Service that returns the checkin and search profiles available to the current user. This service also includes the Standard Search / Checkin information if available to the user.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Results

ResultSets:

- SearchProfiles: Result set with search profile information. This result set contains five columns:
 - dpName: The profile name
 - dpDescription: The profile description
 - dpTriggerValue: The trigger value of the profile
 - dpDisplayLabel: The profile display label
 - dpdDocClass: The Document Class associated with the profile
- CheckInProfiles: Result set with check-in profile information. This result set contains five columns:
 - dpName: The profile name
 - dpDescription: The profile description
 - dpTriggerValue: The trigger value of the profile
 - dpDisplayLabel: The profile display label
 - dpdDocClass: The Document Class associated with the profile

4.14.20 GET_USER_INFO

Service that returns the User Profile page for the current user. Use CHECK_USER_ CREDENTIALS to verify the roles and accounts for the user.

This service takes no parameters and derives its information based upon the value of the dUser server variable.

Access Level: Read, Global, Scriptable (49)

Queries Executed: Quser

Location: IdcHomeDir/resources/core/tables/std_services.htm

Results:

- ResultSets:
 - USER_INFO (fields from Users database table for current user)
 - dName: Name of the user
 - dFullName: Full name of the user
 - dEmail: E-mail of the user
 - dUserTimeZone: Time zone of the user
 - dUserLocale: User locale of the user
 - dUserLanguageId: User language ID of the user
 - UserLocaleLanguageMap (available locales for the user)
 - lcLocaleID: Locale ID
 - lcLanguageID: Language ID corresponding to the locale ID
 - UserMetaDefinition (result set that defines properties of user meta fields; matches contents of usermeta.hda file in data directory)
 - LmLayouts (listing of names of available layouts; fields: layout)

- LmLayoutSkinPairs (listing of all available layout/skin combinations; fields: layout, skin)
- Option Lists Returned: Users_UserLocaleList
- Local Data:
 - dName
 - dUser
- Response Template: USER_INFO (user_info.htm)

Used By

- Resource Includes: pne_nav_userprofile_links
- Templates:
 - MY_VIEW_FORM (my_view_form.htm)
 - PNE_PORTAL_DESIGN_PAGE (pne_portal_design_page.htm)
 - PNE_PORTAL_DOC_PROFILES_PAGE (pne_portal_doc_profiles_page.htm)
 - PNE_PORTAL_PERSONAL_URLS_PAGE(pne_portal_personal_urls_ page.htm)
 - PNE_PORTAL_SAVED_QUERIES_PAGE (pne_portal_saved_queries_ page.htm)
 - PNE_PORTAL_SYSTEM_LINKS_PAGE (pne_portal_system_links_page.htm)
 - std_home_page.htm
 - SUBSCRIPTION_LIST (subscription_list.htm)
- Standard Navigation: commonNav.js

4.14.21 GET USERS

Service that returns a list of all users and their attributes. Returns a list of all users registered in the system with their primary attributes: user name, full name, password, email address, directory, type, and password encoding.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.14.22 LOAD PNE PORTAL

Loads all data from the user's PNE file (pne_portal.htm), including standard personalization properties and result sets, and custom personalization data, for a user's saved queries. This is used by remote applications to obtain a user's personalization settings.

This is used as a remote application service. It is a raw data service with no associated template display.

Access Level: Read, Scriptable (33)

Location: IdcHomeDir/resources/core/tables/std services.htm

Results

ResultSets: All result sets from the user's pne_portal.htm file. Typically this includes personal URLS and saved queries, but can also include any custom personalization result sets used by the specific implementation.

Local Data: All LocalData properties from the user's pne_portal.hda file. This includes standard personalization properties (XuiSearchTemplate, showDefaultQuery, defaultQueryRows, lm_Skin, lm_Layout, portalDesignLink, quickSearchLink, defaultQuery, searchFormType, emailFormat), but can also include any custom personalization properties used by the specific implementation.

Used By

Other: SoapCustom: Wsdl:PortalInfo:Services

4.14.23 LOAD_USER_TOPIC

Loads personalization data based on the topic chosen. The topics correspond to HDA files in the DomainHome/ucm/cs/data/users/profiles/ directories.

This is used as a remote application service. It is a raw data service with no associated template display.

Access Level: Read, Scriptable (33)

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

userTopic: The name of the user topic, such as pne_portal or wf_in_queue.

Results

- ResultSets: All result sets in the specified topic file.
- Local Data: All LocalData properties in the specified topic file.

4.14.24 QUERY GROUP

Service that returns the description of a security group.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dGroupName: The security group name.

Example

IdcService=QUERY_GROUP dGroupName=Public

4.14.25 QUERY_USER_ATTRIBUTES

Service that returns user attributes for a specific user.

This service does not return user data for Microsoft Active Directory managed users when the Content Server instance is configured to use ADSI. It does return the user data for local users and external LDAP managed users.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dName: The user name.

Example

IdcService=QUERY_USER_ATTRIBUTES dName=jsmith

4.14.26 REGISTER USER

Service that registers a user. If only the user name parameter (*dName*) is provided, the new user is a local user with the *guest* role and a blank password.

The most likely error is a user name that is not unique.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dName: The user name.

Optional Service Parameters

- dFullName: The full name of the user.
- dPassword: The password for the user.
- dEmail: The email address for the user.
- dUserLocale: The locale designation, such as English-US, English-UK, Deutsche, *Français*, or *Español*.
- dUserType: The user authorization type, either *Local* or *Global*.

Example

IdcService=REGISTER USER dName=user20

4.14.27 SAVE_USER_TOPICS

Service used to save personalization information for the user. Seven actions can be performed with this service. The required parameters for the service vary depending upon which action is being performed.

A form is normally used to submit the service request because of the complexity of the data and the number of additional parameters required.

Access Level: Read, Global (17)

Location: IdcHomeDir/resources/core/tables/std services.htm

Actions

The following actions are used with the topicString parameter:

- updateKeys: Updates a single LocalData key variable. The topicString parameter takes 4 values: the first 3 required values plus a fourth that contains the literal string value to be placed in the key variable.
- updateKeyByName: This action is new as of Content Server version 10gR1. Like updateKeys, this action updates a single LocalData key variable. It also takes 4 topicString values. Instead of containing a literal string, the fourth value contains the name of an additional field/parameter that contains the value to be used in the
- deleteKeys: Deletes a single key variable. The topicString parameter takes the 3 required values only.

updateRows: This action is used to add or update one or more result set rows using a single topic string. The topicString parameter takes 5 values: the first 3 required values; a fourth that contains a comma-delimited list of all result set column names in correct order; a fifth containing a number indicating the total number of rows being updated/added.

A set of additional fields/parameters with names corresponding to the column names must be provided for each row of data based upon the number of rows indicated in the fifth value of the topicString. Sequential numeric suffixes must be appended to the column names of the fields in each row's data set beginning with one and ending with total row number provided in the topicString (if any of these are missing, the Content Server throws an error).

If the value for the first column (the unique key) of a row in the update data matches that of an existing row in the result set, the existing row will be updated; otherwise a new row will be appended to the bottom of the result set.

addMruRow: The "Mru" in the name is an acronym for *most-recenly-used*. This action adds a single row to the top of a result set. The number of rows in the result set is not allowed to exceed a specified maximum. If a row is added to a result set that already contains the maximum number of rows, the last row is deleted at the same time that the new one is added (essentially keeping only the N most recently used rows in a result set).

The maximum number of rows can be specified using an optional *mruNumber* parameter. If no *mruNumber* parameter is provided, the maximum defaults to 10.

The topicString parameter takes 4 values: the first 3 required values and a fourth that contains a comma-delimited list of all result set column names in correct order. Similar to updateRows, a set of additional fields/parameters with names corresponding to the column names must be provided; but since only one row is added/updated at a time, no numeric suffixes are required on the names.

If the value of the first column (the unique key) matches that of an existing row, that row is updated and moved to the top of the result set rather than adding a new row. The number of rows doesn't change, and the affected row is now considered the most-recently-used row.

- deleteRows: Deletes one or more rows from a result set. The topicString parameter takes 4 values: the first 3 required values, and a fourth that contains a comma-delimited list of strings that correspond to the DATA VALUES of the first column (unique key) of existing rows in the specified result set.
- deleteSets: Deletes one or more result sets from a topic file. The topicString parameter takes only 3 values, but in this case, the third value can be a comma-delimited list of names rather than a single key name, allowing multiple result sets to be deleted using a single topicString.

Optional Service Parameters

- numTopics: Tells the service the number of topicStrings to expect.
- topicKeys: Identifies the topic string parameter fields by name. Composed of a colon-separated list of one or more names that correspond to fields or parameters that contain the topic strings. A numTopics value must be present when this parameter is used, even if you don't use the enumeration method of identifying topic string values. (Any value can be used for numTopics.)
- topicStringn: Composed of three to five values, separated by colons. The number of topic strings depends on the value in numTopics. For example, if numTopics is 2, topicString1 and topicString2 are required.

The values are as follows:

- The first value is the action to be taken by the service.
- The second value is the name of the topic file that is acted on.
- The third value is the key name of the item being modified (either the name of a LocalData key variable, or the name of a result set in the topic file).
- The fourth value contains data information for an add or update action. It either contains the data string itself, or it points to additional fields or parameters that contain the data values.
- The fifth value is used only with the updateRows action to indicate the number of rows of data being sent.

All of the update actions perform 'add' operations if a key of the given name is not found in the specified topic file. If a topic file matching the name given in the second value is present, but doesn't contain a key (variable or result set) matching the key name given in the third value, then a new variable or result set will be created using the data provided for the update operation. If the topic file itself is not found, it will also be created.

- RedirectUrl: Used to display another page. If omitted, the user is redirected to the Content Server home page.
- mruNumber: Used to specify the maximum number of rows in a result set when using the addMruRow - 'Add Most-Recently-Used Row' action.

Results

- ResultSets: UserTopicEdits (Rows represent each of the topic edits performed by the service call. Rows contain the fields: topicName, topicEditAction, topicKey, topicValue.)
- Response Template:
 - REDIRECT_TEMPLATE (redirect_template.htm)
 - Default redirect service: GET_DOC_PAGE: HOME_PAGE

Used By

- Resource Includes: xui_searchapi_results_action_form
- Templates:
 - MY_VIEW_FORM (my_view_form.htm)
 - PNE_PORTAL_DOC_PROFILES_PAGE (pne_portal_doc_profiles_page.htm)
 - PNE_PORTAL_PERSONAL_URLS_PAGE (pne_portal_personal_urls_ page.htm)
 - PNE_PORTAL_SAVED_QUERIES_PAGE (pne_portal_saved_queries_ page.htm)
 - PNE_PORTAL_SYSTEM_LINKS_PAGE (pne_portal_system_links_page.htm)
 - WF_INQUEUE_LIST (workflow_queue.htm)

Examples

Caution: The following example is not a core configuration of the Content Server instance. This is a custom feature extension and is only supported through the purchase of Consulting Services or through the purchase of our Developer Support Token Program. As with all customization, when you upgrade your software, the custom changes may be overwritten.

To add a personal URL, use the following parameters and values:

```
topicString1=updateRows:pne_portal:PersonalURLS:title,website:1
```

These values add rows in the PersonalURLS ResultSet in the *pne_portal.hda* user topic. The columns in the ResultSet are *title* and *website*, which are taken from the fourth value of the topic string. The last value (1) tells the service that one row of data is being sent.

You must use additional parameters to the service to specify the row data. These parameters are taken from the title and website column names specified in the topicString. Because it is possible to specify more than one row of data, a numeric suffix is added to each of the column names to form the service parameter name. The first row would require the title1 and website1 parameters and a second row would require the *title2* and *website2* parameters.

To add a row of data that is a link to the home page, set the values of the *title1* and website1 parameters to Home Page and http://www.example.com. These values must be URL-encoded if you are adding them directly to the URL in the browser address bar; if you use a form in a web page to submit the data, encoding is handled. Using a form, the complete service specification would be the following:

```
<FORM name='addPersonalUrlForm' method='POST'</pre>
action='<$HttpCgiPath$>'>
<INPUT type='hidden' name='IdcService' value='SAVE_USER_TOPICS'>
<INPUT type='hidden' name='numTopics' value='1'>
<INPUT type='hidden' name='topicString1'</pre>
value='updateRows:pne_portal:PersonalURLS:title,website:1'>
<INPUT type='hidden' name='title1' value='Company Home Page'>
<INPUT type='hidden' name='website1' value='http://www.example.com'>
<INPUT type='submit' value='Submit'>
</FORM>
```

4.14.28 UPDATE FILTER INFO

Service that updates the Web server filter settings.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.14.29 UPDATE_USEROPTION_LIST

Service that adds or updates an option list for a user information field.

Caution: The option list values specified in the OptionListString parameter replace any existing values. To retain existing values, you must include the existing values along with the new values.

Option list values for the User Type field and all custom user information fields are not stored in the database but in the useroptions. hda file, which is normally located in the DomainHome/ucm/cs/data/users/config/directory.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dKey: The option list key.
- OptionListString: The list of options, separated by the \n escape sequence.

Example

IdcCommand command file format:

Add values NY, DC, CA to UserTypeList IdcService=UPDATE USEROPTION LIST dKey=Users_UserTypeList OptionListString=NY\nDC\nCA

HDA format (adds the values NY, DC, and CA to UserTypeList):

@Properties LocalData IdcService=UPDATE_USEROPTION_LIST dKey=Users_UserTypeList OptionListString=NY\nDC\nCA @end

4.15 Collaboration Services (Core Content Server)

The following Collaboration Services ship with the core Content Server software:

- ADD_COLLABORATION
- ADD_COLLABORATION_FORM
- DELETE_COLLABORATION
- EDIT_CLBRA_ACCESS_LIST
- EDIT_CLBRA_ACCESS_LIST_FORM
- EDIT_COLLABORATION
- EDIT_COLLABORATION_FORM
- GET_CLBRA_DOCUMENTS
- GET_CLBRA_INFO
- GET_COLLABORATION_LIST
- GET_USER_CLBRA_LIST

Note: dClbraType is a required parameter for many services. At this time, basic is the only accepted value for this parameter.

4.15.1 ADD_COLLABORATION

Service called from ADD_COLLABORATION_FORM. This service calls ADD_ COLLABORATION_SUB to add a collaboration project.

Additional Required Service Parameters

- dClbraName: The project name.
- dClbraType: The type of collaboration project.

4.15.2 ADD_COLLABORATION_FORM

Service used to present a form to a user to add a Collaboration. After submitting this form, the ADD COLLABORATION service is called.

Location: IdcHomeDir/resources/core/tables/std services.htm

4.15.3 DELETE_COLLABORATION

Service used to delete a collaboration project.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dClbraName: The project name.

4.15.4 EDIT_CLBRA_ACCESS_LIST

Service used to edit the members in a collaboration project.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- dClbraName: The project name.
- dClbraType: The type of collaboration project.

4.15.5 EDIT_CLBRA_ACCESS_LIST_FORM

Service that presents the form used to edit members in a collaboration project.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dClbraName: The project name.

4.15.6 EDIT_COLLABORATION

Service that calls EDIT_COLLABORATION_SUB to update existing project information.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

- dClbraName: The project name.
- dClbraType: The type of collaboration project.

4.15.7 EDIT_COLLABORATION_FORM

Service that presents the form used to edit a collaboration project.

Additional Required Service Parameters

dClbraName: The project name.

4.15.8 GET_CLBRA_DOCUMENTS

Service used to retrieve content in a collaboration project.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dClbraName: The project name.

4.15.9 GET_CLBRA_INFO

Service used to retrieve information about a specific collaboration project.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

dClbraName: The project name.

4.15.10 GET_COLLABORATION_LIST

Service that returns a list of all collaboration projects.

Location: IdcHomeDir/resources/core/tables/std_services.htm

4.15.11 GET_USER_CLBRA_LIST

Service that returns a list of users in all collaboration projects.

Collaboration	Services	(Core Content Server)

Workflow Services

This chapter describes the services available when using and customizing Oracle WebCenter Content Server workflows, and other services which are stored in the workflow.htm file in the *IdcHomeDir*/resources/core/templates/directory.

This chapter covers the following topics:

- Section 5.1, "About Workflow Services"
- Section 5.2, "Doc and General Services (Workflows)"
- Section 5.3, "Workflow Template Services"
- Section 5.4, "Workflow Services"

5.1 About Workflow Services

Information about what is a WebCenter Content service and how services can be used is provided in Section 2, "Using Services." Information about basic services structure, attributes, actions, and a service example is provided in Section 3, "Customizing Services." You should be familiar with this information before customizing current services or creating new services

The locations for specific workflow services are listed within each individual service.

Note: The most commonly used services have more extensive descriptions.

Important: All services have at least one required parameter. The IdcService parameter takes the name of the service as its argument. If other parameters are required, they are noted in the description of the service.

5.2 Doc and General Services (Workflows)

Doc services are those that are used to manage and manipulate documents or provide information about documents. General services are common or default services. Frequently used services are marked with an asterisk (*) in the following list.

The following services are described in this section:

- ADD PROBLEMREPORT
- DELETE PROBLEMREPORT

- GET_CRITERIA_WORKFLOWS_FOR_GROUP
- GET_DOCUMENT_PROBLEMREPORTS
- GET PROBLEMREPORTS SEARCH FORM
- GET_PROBLEMREPORTS_SEARCH_RESULTS
- GET_UPDATE_PROBLEMREPORT_FORM
- GET_WORKFLOWDOCUMENTS
- GET_WORKFLOWS_FOR_ALL
- *LOAD_WORKFLOW_QUEUE
- NOTIFY_CONTRIBUTOR
- PROBLEMREPORT_INFO
- RESEND PROBLEMREPORT
- REVIEW_WORKFLOW_DOC
- UPDATE_PROBLEMREPORT
- WORKFLOW_CHECKIN_SUB
- WORKFLOW_EDIT_REV
- WORKFLOW_NEW_REV
- WORKFLOW_REJECT_FORM

5.2.1 ADD_PROBLEMREPORT

Service that adds a problem report to a content item.

The most likely errors are mismatched parameters, when the system is unable to add a problem report to the content item, or when the content item no longer exists in the system.

Service Class: Doc Service

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

- dDocName: The content item identifier (Content ID).
- dID: The generated content item revision ID.
- dPrCaption: The caption for the problem report.
- dPrSeverity: The problem report severity level such as Critical, Moderate, or Minor. This option has no effect on how a problem report is handled within the workflow process.
- dPrState: The problem report state such as *Open*, *Closed*, or *Fixed*.

Note: Do not confuse the Content ID (*dDocName*) with the internal content item revision identifier (*dID*). The dID is a generated reference to a specific rendition of a content item.

Example

IdcService=ADD_PROBLEMREPORT

dPrCaption=Problem report for this content. dDocName=PublicDoc1_ia3c488971 dID=67 dPrState=OPEN dPrSeverity=MINOR

5.2.2 DELETE PROBLEMREPORT

Service that deletes an existing problem report. The most likely errors are mismatched parameters or when the content item no longer exists in the system.

Service Class: Doc Service

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

dPrID: The problem report ID.

Example

IdcService=DELETE PROBLEMREPORT dPrID=1

5.2.3 GET_CRITERIA_WORKFLOWS_FOR_GROUP

Service that returns a list of Criteria workflows and workflow steps for a specific security group.

Returns the WorkflowsForGroup and WorkflowStepsForGroup result sets:

- WorkflowsForGroup lists all of the workflows for this group (dWfID, dWfName).
- WorkflowStepsForGroup lists all of the steps in all of the workflows for this group (dWfID, dWfName, dWfStepID, dWfStepName).
- The most likely error is a security group that does not exist or a user failing the security check.

Service class: Service (general service).

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

dSecurityGroup: The security group such as *Public* or *Secure*.

Example

IdcCommand command file format:

Retrieves criteria workflow information IdcService=GET_CRITERIA_WORKFLOWS_FOR_GROUP dSecurityGroup=Public

HDA format:

@Properties LocalData IdcService=GET_CRITERIA_WORKFLOWS_FOR_GROUP dSecurityGroup=Public @end

5.2.4 GET_DOCUMENT_PROBLEMREPORTS

Service that returns all problem reports for a specific content item..

Service class: Doc Service

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

dDocName: The Content ID for the content item.

Example

IdcService=GET_DOCUMENT_PROBLEMREPORTS dDocName=security_000015

5.2.5 GET_PROBLEMREPORTS_SEARCH_FORM

Service that returns the problem report search form.

Service Class: Doc Service

Location: IdcHomeDir/resources/core/templates/workflow.htm

5.2.6 GET_PROBLEMREPORTS_SEARCH_RESULTS

Service that returns a list of problem reports that match search criteria as specified on the Problem Reports search page. The search criteria can be any of the columns as specified in the Problem Reports table.

Search criteria that are used can take any of the columns specified in the Problem Reports table. The service is passed in name/value pairs, which are then turned into a database query's WHERE clause.

The Problem Reports data source (as specified in the resource.htm file) is used with the WHERE clause generated by the name/value pair to construct the query. The results of this query are then passed back for presentation.

Service Class: Doc Service

Location: IdcHomeDir/resources/core/templates/workflow.htm

Optional Service Parameters

- dPrSeverity: The problem report severity level such as Critical, Moderate, Minor. This option has no bearing on how a problem report is handled within the workflow process.
- dPrAuthor: The problem report author.
- dPrCaption: The caption for the problem report.
- dPrState: The problem report state such as *Open*, *Closed*, *Fixed*.
- dDocTitle: The content item title.
- dDocName: The Content ID for the content item.

5.2.7 GET_UPDATE_PROBLEMREPORT_FORM

Service that returns the update form for a problem report.

Service Class: Doc Service

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

dPrID: The problem report ID.

Example

IdcService=GET_UPDATE_PROBLEMREPORT_FORM dPrID=1

5.2.8 GET WORKFLOWDOCUMENTS

Service that returns a list of content item revisions that are in a specific workflow.

The service provides a list of all content items in workflows and is updated by the system server to keep track of the status of content items (state and step) that are in workflows.

The most likely error is a workflow name that does not exist.

Service class: Service (general service)

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

- IdcService: Must be set to GET WORKFLOWDOCUMENTS.
- dWfName: The workflow name.

Example

IdcService=GET_WORKFLOWDOCUMENTS dWfName=mktg_review

5.2.9 GET WORKFLOWS FOR ALL

Service used by the Workflow applet to return information about all workflows and their steps.

Service Class: Service (general service)

Location: IdcHomeDir/resources/core/templates/workflow.htm

5.2.10 LOAD_WORKFLOW_QUEUE

Service that returns the personalization data for the user, which contains a list of content items in a workflow that require action. The data comes from the wf_in_ queue.hda file in the DomainHome/ucm/cs/data/users/profiles directories.

This is intended to be a remote application service because it is a raw data service with no associated display template.

Service Class: User Service

Access Level: Read, Scriptable (33)

Location: IdcHomeDir/resources/core/tables/std services.htm

Results

Results Sets: WorkflowInQueue

Used By

Other: SoapCustom:Wsdl:Workflow:Services

5.2.11 NOTIFY_CONTRIBUTOR

Service that notifies a contributor on the problem report for the specified content item. The most likely error is a content item no longer in the system.

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

dID: The generated content item revision ID.

Example

IdcService=NOTIFY_CONTRIBUTOR dID=55

5.2.12 PROBLEMREPORT INFO

Service that returns all information about a problem report. The information for a problem report is in the file system and in the database. This service takes the user (when used in context) to the problem report information page. This allows the user to resend, delete, or update the problem report from the user interface.

Service Class: Doc Service

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

dPrID: The problem report's unique ID.

Example

IdcService=PROBLEMREPORT_INFO dPrID=1

5.2.13 RESEND PROBLEMREPORT

Service that resends email to all interested users that are to be notified about an activity. This service is accessible from the Problem Report page.

Service Class: Doc Service

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

dPrID: The problem report ID.

Example

IdcService=RESEND_PROBLEMREPORT dPrID=1

5.2.14 REVIEW_WORKFLOW_DOC

Service that generates the page allowing a user to review a document in a workflow.

Service Class: Doc Service

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

dID: The generated content item revision ID.

5.2.15 UPDATE PROBLEMREPORT

Service that updates problem report information.

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

- dPrID: The problem report ID.
- dPrState: The problem report state, such as *Open*, *Closed*, *Fixed*.

Optional Service Parameters

- dPrCaption: The caption for the problem report.
- dPrSeverity: The problem report severity level, such as Critical, Moderate, Minor. This option has no effect on how a problem report is handled within the workflow process.
- prMessage: The problem report message.

Example

IdcCommand command file format:

```
IdcService=UPDATE_PROBLEMREPORT
dPrID=1
dPrState=OPEN
```

HDA file format with optional parameters:

```
@Properties LocalData
IdcService=UPDATE_PROBLEMREPORT
dPrID=1
dPrState=OPEN
prMessage=Description is stored in hda file.
dPrCaption=change this caption
dPrSeverity=SERIOUS
@end
```

5.2.16 WORKFLOW_CHECKIN_SUB

SubService that checks in a content item if the item already exists and is in a workflow.

Service Class: Doc Service

Location: IdcHomeDir/resources/core/templates/workflow.htm

5.2.17 WORKFLOW_EDIT_REV

SubService used by the WORKFLOW_CHECKIN_SUB SubService to determine what kind of workflow check is being performed. This service edits the workflow revision in place. When the workflow design is evaluated, a decision is made whether to use WORKFLOW_EDIT_REV or WORKFLOW_NEW_REV.

Service Class: Doc Service

Location: IdcHomeDir/resources/core/templates/workflow.htm

5.2.18 WORKFLOW NEW REV

SubService used by the WORKFLOW_CHECKIN service to determine the type of workflow checkin being performed. This service creates a new revision for the workflow document.

Service Class: Doc Service

Location: IdcHomeDir/resources/core/templates/workflow.htm

5.2.19 WORKFLOW REJECT FORM

Service that returns the reject form for a rejected workflow revision. This service is executed when a reviewer rejects content in a workflow step (when the reviewer clicks Reject).

This service is normally performed in the browser environment, which uses JavaScript to assign values. Parameters that are passed in the browser environment are listed in the following subsection.

Service Class: Doc Service

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

- dID: The generated content item revision ID.
- dWfName: The workflow name.

Example

IdcService=WORKFLOW_REJECT_FORM dWfName=mktg_review dID=44

5.3 Workflow Template Services

Workflow Template Services are used to manage or alter workflow templates. All services listed here have a Service Class of Workflow Template Service. The following services are described in this section:

- ADD_WF_TEMPLATE
- DELETE_WF_TEMPLATE
- EDIT_WF_TEMPLATE
- GET_WF_TEMPLATE
- **GET_WF_TEMPLATES**

5.3.1 ADD_WF_TEMPLATE

Service that creates a new workflow template. The most likely error is when the workflow template name is not unique or when the system is unable to retrieve the workflow template list.

Additional Required Service Parameters

- dWfTemplateName: The workflow template name.
- dWfTemplateDescription: The workflow template description.

Example

IdcService=ADD_WF_TEMPLATE dWfTemplateName=mark_temp dWfTemplateDescription=marketing template

5.3.2 DELETE_WF_TEMPLATE

Service that deletes an existing workflow template. The most likely error is when the system is unable to retrieve workflow templates.

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

dWfTemplateName: The workflow template name.

Example

IdcService=DELETE_WF_TEMPLATE dWfTemplateName=wf_template_10

5.3.3 EDIT WF TEMPLATE

Service that modifies an existing workflow template. This service is similar to EDIT_ WORKFLOWSTEP, as a workflow template has steps in it. However, this service allows the editing of more than one step and other parts of the template.

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

- dAliases: The list of alias users separated by the /n escape sequence.
- For example: dAliases=subadmins/nservices
- dWfStepDescription: The step description.
- dWfStepHasWeight: Enables the limited reviewer option.
- Set to 1 (*true*), and define the number of reviewers with the dWfStepWeight parameter.
- Set to 0 (*false*) if *dWfStepIsAll* is enabled.
- dWfStepIsAll: Enables the all reviewer option.
- Set to 1 (*true*) to require all users assigned to the step to approve the revision before the workflow passes to the next step.
- Set to 0 (false) if dWfStepHasWeight is enabled.
- dWfStepName: The workflow step name. Typically this is the type of review (such as *initial review* or *copy edit*) or the function of the reviewer (such as *manager* or *copy* editor).
- dWfStepType: The workflow step type:
- Reviewer: Approves or rejects the revision.
- Reviewer/Contributor: Can edit the revision and approves or rejects it.

- dWfStepWeight: Defines the number of reviewers for the limited reviewer option.
- Enter a numeric value for the number of reviewers. The workflow passes to the next step as soon as the number of users specified have approved the revision.
- You can enter zero (0) in this field to notify reviewers that the revision has reached the step, but reviewers will not be able to approve, reject, or edit the revision at that step. The workflow will pass to the next step automatically.
- dWfTemplateDescription: The workflow template description.
- dWfTemplateName: The workflow template name.

Example

The following is an example EDIT_WF_TEMPLATE service call:

```
@Properties LocalData
dUser=fradiche
dWfStepIsAll=0
watchedMonikers=

5.3.4 GET_WF_TEMPLATE

@end

Service that returns the description of a specific workflow template. The most likely error is a workflow template name that does not exist.

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

dWfTemplateName: The workflow template name.

Example

IdcService=GET_WF_TEMPLATE dWfTemplateName=servicestemplate

5.3.5 GET_WF_TEMPLATES

Service that returns a list of all workflow templates and their descriptions. The most likely error is a workflow name that does not exist.

Service Class: Workflow Template Service

Location: IdcHomeDir/resources/core/templates/workflow.htm

5.4 Workflow Services

Workflow services are those used to manage workflows, including adding a workflow, adding tokens, and enabling or disabling a workflow. Frequently used services are marked with an asterisk (*) in the following list.

All of these services have a Service Class of Workflow Service.

The following services are described in this section:

- ADD_WORKFLOW
- ADD_WORKFLOW_SCRIPT
- ADD_WORKFLOW_TOKEN
- ADD_WORKFLOWALIASES
- ADD_WORKFLOWDOCUMENT
- ADD_WORKFLOWDOCUMENT_SUB

- ADD_WORKFLOWDOCUMENTS
- ADD_WORKFLOWSTEP
- CRITERIAWORKFLOW_DISABLE
- CRITERIAWORKFLOW_DISABLE_SUB
- CRITERIAWORKFLOW_ENABLE
- DELETE_WFCONTRIBUTORS
- DELETE_WORKFLOW
- DELETE_WORKFLOW_SCRIPT
- DELETE_WORKFLOW_TOKEN
- DELETE_WORKFLOWCRITERIA
- DELETE_WORKFLOWDOCUMENTS
- DELETE_WORKFLOWSTEP
- EDIT_WORKFLOW
- EDIT_WORKFLOW_SCRIPT
- EDIT_WORKFLOW_TOKEN
- EDIT_WORKFLOWCRITERIA
- EDIT_WORKFLOWSTEP
- *GET_ACTIVE_WORKFLOWS
- GET_ALL_WORKFLOWDOCREVISIONS
- GET_CRITERIA_WORKFLOWS_FOR_GROUP
- GET_WF_COMPANION_INFO
- GET_WORKFLOW
- *GET_WORKFLOW_INFO
- *GET_WORKFLOW_INFO_BYNAME
- GET_WORKFLOW_SCRIPT
- *GET_WORKFLOWDOCREVISIONS
- GET_WORKFLOW_INFO
- GET_WORKFLOWS
- TEST_WORKFLOW_SCRIPT
- WORKFLOW_APPROVE
- WORKFLOW_CANCEL
- *WORKFLOW_CHECKIN
- WORKFLOW_EDIT_APPROVE
- *WORKFLOW_REJECT
- WORKFLOW_START

5.4.1 ADD_WORKFLOW

Service that creates a new workflow. This service is executed by the Workflow Admin applet. Workflows and sub-workflows can be added, edited, enabled, disabled, and deleted from the Workflow Admin administration applet.

The most likely error is when the workflow name is not unique.

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

- dWfName: The workflow name.
- dWfDescription: The workflow description.
- dWfType: The workflow type such as Basic or Criteria.
- dSecurityGroup: The security group such as *Public* or *Secure*.
- dWfCriteriaName: The workflow criteria field.
- dWfCriteriaOperator: The workflow criteria operator *matches*.
- dWfCriteriaValue: The workflow criteria value.

Example

IdcService=ADD WORKFLOW dWfName=test_workflow dSecurityGroup=Public dWfType=Criteria dWfCriteriaName=dDocAuthor dWfCriteriaOperator=matches dWfCriteriaValue=sysadmin dWfDescription=testing workflow

5.4.2 ADD_WORKFLOW_SCRIPT

Service used to add a script template for a workflow.

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

- wfScriptName: Name of the script template to be used.
- wfScriptDescription: Description used for the script.

5.4.3 ADD_WORKFLOW_TOKEN

Service used to add tokens for workflows.

Service Class: Workflow Service

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

- wfToken: Default token to use to create the new token.
- wfTokenName: Name of the new token to be added.
- wfTokenDescription: Description used for the token.

5.4.4 ADD_WORKFLOWALIASES

Service that adds a user or an alias to a workflow step. To add a user, set the dAliasType parameter to user. To add an alias, set dAliasType to alias. The most likely error is when the specified workflow does not exist.

Note: The alias is not defined here. The alias must already exist. It is usually created using the UserAdmin applet.

Service Class: Workflow Service

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

aliases: The alias name.

- dAliasType: The assigned alias type. Values can be alias or user.
- dWfID: The workflow ID.
- dWfName: The workflow name.
- dWfStepID: The workflow contribution stage ID. This auto-generated value can be retrieved from the database table. The Content Server system automatically assigns dWfStepID for that contribution stage.

Example

IdcService=ADD_WORKFLOWALIASES dWfName=mktg_review dWfID=12 dAliasType=user aliases=sammy dWfStepID=26

5.4.5 ADD_WORKFLOWDOCUMENT

Service that adds a new content item to a Basic workflow. The content item specified by dDocName does not have to exist in the system.

This service is called from the Workflow Admin applet by creating a Basic workflow and clicking **New** in the Content section. This service executes the ADD_ WORKFLOWDOCUMENT_SUB SubService.

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

- dWfName: The workflow name.
- dDocName: The Content ID of the content item.

Example

IdcService=ADD_WORKFLOWDOCUMENT dWfName=mktg review dDocName=test1234

5.4.6 ADD_WORKFLOWDOCUMENT_SUB

SubService called by ADD_WORKFLOWDOCUMENTS and ADD_ WORKFLOWDOCUMENT to add a content item to the Basic workflow.

Location: IdcHomeDir/resources/core/templates/workflow.htm

5.4.7 ADD_WORKFLOWDOCUMENTS

Service that adds the selected content items to a Basic workflow. The list of items to add is specified in the dDocName parameter.

This service is called from the Workflow Admin applet by creating a Basic workflow and clicking **Select** in the Content section.

This service executes the SubService ADD_WORKFLOWDOCUMENT_SUB.

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

- dWfName: The workflow name.
- dDocName: The Content ID of the content items to be added. If multiple items are to be added, use a tab-separated list.

Example

IdcService=ADD_WORKFLOWDOCUMENTS dWfName=mktg_review dDocName=test_000035 dataSource=Documents resultName=DOCUMENTS dWfType=Basic whereClause=dSubscriptionType='test' dWfDirectory=public

5.4.8 ADD WORKFLOWSTEP

Service that creates a new workflow step.

- These parameters can be executed in a browser environment using the Workflow Admin applet. For example, the dWfStepName, dWfStepDescription, and dWfStepType entries correspond to the Name entry, the Description field, and the Type drop-down list of the Workflow Admin applet Edit Step Reviewer screen.
- Setting dWfStepWeight to a numeric value is the same as entering a value in the field associated with the At least this many reviewers option for Workflow Steps in the Workflow Admin applet. If defined, the workflow passes to the next step as soon as the number of users specified in dWfStepWeight have approved the revision.
- Setting dWfStepIsAll to 1 (*true*) is the same as enabling the **All Reviewers** option for Workflow Steps in the Workflow Admin applet. If set to true, all users assigned to the step must approve the revision before the workflow passes to the next step.
- The most likely error is when the specified workflow does not exist or when the specified step is not unique.

Additional Required Service Parameters

- dWfName: The workflow name.
- dWfStepName: The workflow step name.
- dWfStepDescription: The step description.
- dWfStepType: The workflow step type:
 - Reviewer: Approves or rejects the revision.
 - Reviewer/Contributor: Can edit the revision and approves or rejects it.
- dWfStepIsAll:
 - 1 (*true*): All users assigned to the step must approve the revision before the workflow passes to the next step.
 - 0 (false): The number of approvals required is specified by the dWfStepWeight parameter.
- dWfStepWeight: The number of reviewers that must approve the revision before the workflow passes to the next step.
 - If dWfStepIsAll is 1 (*true*), this parameter is ignored. If dWfStepIsAll is 0 (false), this parameter is enabled.
 - Setting this parameter to 0 (zero) notifies reviewers that the revision has reached the step, but reviewers will not be able to approve, reject, or edit the revision at that step. The workflow will pass to the next step automatically.

Optional Service Parameters

- wfEntryScript: The step entry script.
- wfExitScript: The step exit script.
- wfUpdateScript: The step update script.

Note: Scripts must be placed within <\$ and \$> delimiters. For example: <\$if ConditionExpression\$>

5.4.9 CRITERIAWORKFLOW_DISABLE

Service that disables a Criteria workflow. The most likely error is when the specified workflow does not exist.

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

dWfName: The workflow name.

Example

IdcService=CRITERIAWORKFLOW_DISABLE dWfName=mktg_review

5.4.10 CRITERIAWORKFLOW_DISABLE_SUB

Service that disables a sub-workflow in a Criteria workflow.

5.4.11 CRITERIAWORKFLOW_ENABLE

Service that enables a Criteria workflow. The most likely error is when the specified workflow does not exist.

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

dWfName: The workflow name.

Example

IdcService=CRITERIAWORKFLOW_ENABLE dWfName=mktg_review

5.4.12 DELETE WFCONTRIBUTORS

Service used to delete the users and aliases from the first step (the contribution step) of a Basic workflow. The most likely errors are mismatched parameters or when the specified workflow or alias does not exist.

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

- aliases: The aliases and users to be deleted from the Basic workflow. If multiple aliases are to be deleted, use a tab-separated list.
- dWfName: The workflow name.
- dWfStepID: The workflow contribution step ID. This auto-generated value can be retrieved from the database table.

Example

IdcService=DELETE_WFCONTRIBUTORS dWfName=mktg_review dWfStepID=26 aliases=user20

5.4.13 DELETE WORKFLOW

Service that deletes an existing Basic workflow. The most likely error is when the specified workflow does not exist.

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

dWfName: The workflow name.

Example

IdcService=DELETE_WORKFLOW dWfName=mktg_review

5.4.14 DELETE_WORKFLOW_SCRIPT

Service that deletes a workflow script.

Additional Required Service Parameters

- wfScriptName: Name of the script template to be used.
- wfScriptDescription: Description used for the script.

5.4.15 DELETE_WORKFLOW_TOKEN

Service that deletes a workflow token.

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

wfTokenName: Name of the token to be deleted.

5.4.16 DELETE WORKFLOWCRITERIA

Service that deletes an existing Criteria workflow. If the workflow is active the user is prompted that this action will cause all content items in this workflow to exit the workflow. The most likely error is when the specified workflow does not exist.

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

dWfName: The workflow name.

Example

IdcService=DELETE_WORKFLOWCRITERIA dWfName=mktg_review

5.4.17 DELETE WORKFLOWDOCUMENTS

Service that deletes content items from a Basic workflow. This service is executed by the Workflow Admin applet.

The most likely error is when the specified workflow does not exist.

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

- dWfName: The Basic workflow name.
- docNames: The content item names of the documents to be deleted. If multiple items are to be deleted, use a tab-separated list.

Note: It is recommended that you include both the docNames parameter and the dDocName parameter, as both parameters are used in the execution of this service.

Example

The following is an example DELETE_WORKFLOWDOCUMENTS service call:

@Properties LocalData IdcService=DELETE_WORKFLOWDOCUMENTS dWfName=w3 docNames=rr dDocName=rr @end

The following is an example of the results that would be returned:

```
Content-type: text/plain
Content-Length: 931
<?hda version="6.3 dev (build-date)" jcharset=Cp1252 encoding=iso-8859-1?>
@Properties LocalData

dDocName=rr
refreshMonikers=
changedMonikers=
dWfDocState=INIT
IdcService=DELETE_WORKFLOWDOCUMENTS
IsJava=1
@end
```

5.4.18 DELETE WORKFLOWSTEP

Service that deletes a specified step from a workflow. This service is used from the Workflow applet. The user selects a step and clicks the **Delete Step** button. If this service is run outside the applet, then the controlling application must specify the workflow step. The step ID and name is stored in the database as part of the workflow design information and can be retrieved from there for use.

The most likely error is when the specified workflow or workflow step does not exist or if the workflow is active.

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

- dWfName: The workflow name.
- dWfStepName: The workflow step name.
- dWfStepID: The workflow contribution stage ID.

Example

IdcService=DELETE_WORKFLOWSTEP dWfName=c2 dWfStepID=12 dWfStepName=edit

5.4.19 EDIT_WORKFLOW

Service that modifies an existing workflow. This service is executed by the Workflow Admin applet. The most likely error is a workflow name that does not exist or a user failing the security check.

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

- dWfName: The workflow name.
- dSecurityGroup: The security group such as *Public* or *Secure*.

Optional Service Parameters

- dWfCriteriaName: The workflow criteria name.
- dWfCriteriaOperator: The workflow criteria operator such as Matches, Starts, Ends.
- dWfCriteriaValue: The workflow criteria value.
- dWfDescription: The workflow description.
- dWfType: The workflow type such as *Basic* or *Criteria*.

Example

IdcCommand command file format:

```
IdcService=EDIT_WORKFLOW
dWfName=c2
dSecurityGroup=Public
```

HDA format with optional parameters:

```
@Properties LocalData
IdcService=EDIT_WORKFLOW
dWfName=test_workflow
dSecurityGroup=Public
dWfType=Criteria
dWfCriteriaName=dDocAuthor
dWfCriteriaOperator=matches
dWfCriteriaValue=sysadmin
dWfDescription=testing workflow
@end
```

5.4.20 EDIT_WORKFLOW_SCRIPT

Service used to edit a workflow script.

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

- wfScriptName: Name of the script template to be used.
- wfScriptDescription: Description used for the script.

5.4.21 EDIT_WORKFLOW_TOKEN

Service used to edit a workflow token.

Location: IdcHomeDir/resources/core/templates/workflow.htm

wfTokenName: Name of the token to be edited.

5.4.22 EDIT_WORKFLOWCRITERIA

Service that modifies the criteria for an existing Criteria workflow. Editing the criteria may include changing the workflow to a project or collaboration workflow, or changing the metadata conditions that a content item must meet to enter the workflow.

Two types of Criteria workflows exist: criteria, which is a workflow that requires a metadata condition and *subworkflow*, which does not have a metadata condition. Because of the two types of workflows, dWfType is a required parameter to designate which type of Criteria workflow is to be used.

This service is executed by the Workflow Admin applet. The most likely error is a workflow name that does not exist or a user failing the security check.

Service Class: Workflow Service

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

- dWfName: The workflow name.
- dSecurityGroup: The security group such as *Public* or *Secure*.
- dWfType: The workflow type.
- dWfCriteriaName: The workflow criteria name.
- dWfCriteriaOperator: The workflow criteria operator such as *Matches, Starts, Ends*.
- dWfCriteriaValue: The workflow criteria value.

Optional Service Parameters

dWfDescription: The workflow description.

Example

IdcService=EDIT_WORKFLOWCRITERIA dWfName=c2 dSecurityGroup=Public dWfType=Criteria dWfCriteriaName=dDocType dWfCriteriaOperator=matches dWfCriteriaValue=ADACCT

5.4.23 EDIT_WORKFLOWSTEP

Service that modifies an existing workflow step.

These parameters can be executed in a browser environment using the Workflow Admin applet. For example, the dWfStepName, dWfStepDescription, and dWfStepType entries correspond to the Name entry, the Description field, and the Type drop-down list of the Workflow Admin applet Edit Step Reviewer screen.

Setting dWfStepWeight to a numeric value is the same as entering a value in the field associated with the At least this many reviewers option for Workflow Steps in the Workflow Admin applet. If defined, the workflow passes to the next step as soon as the number of users specified in dWfStepWeight have approved the revision.

Setting dWfStepIsAll to 1 (*true*) is the same as enabling the **All Reviewers** option for Workflow Steps in the Workflow Admin applet. If set to true, all users assigned to the step must approve the revision before the workflow passes to the next step.

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

- dWfName: The workflow name.
- dWfStepName: The workflow step name.
- dAliases: A tab-delimited list of aliases and users to be used for the step. The format for this parameter is (alias/user) \t (alias/user) $type) \setminus t(alias/user) \setminus t(alias/user\ type)$.
- dWfStepDescription: The step description.
- dWfStepType: The workflow step type:
 - Reviewer: Approves or rejects the revision.
 - Reviewer/Contributor: Can edit the revision and approves or rejects it.
- dWfStepIsAll:
 - 1 (true): All users assigned to the step must approve the revision before the workflow passes to the next step.
 - 0 (false): The number of approvals required is specified by the dWfStepWeight parameter.
- dWfStepWeight: The number of reviewers that must approve the revision before the workflow passes to the next step.
 - If dWfStepIsAll is 1 (*true*), this parameter is ignored. If dWfStepIsAll is 0 (false), this parameter is enabled.
 - Setting this parameter to 0 (zero) notifies reviewers that the revision has reached the step, but reviewers will not be able to approve, reject, or edit the revision at that step. The workflow will pass to the next step automatically.

Optional Service Parameters

- wfEntryScript: The step entry script.
- wfExitScript: The step exit script.
- wfUpdateScript: The step update script.

Note: Scripts must be placed within <\$ and \$> delimiters. For example, <\$if ConditionExpression\$>.

Example

Note in the following example, the convention \t denotes a tab separator.

IdcService=EDIT_WORKFLOWSTEP dWfName=test_workflow dWfStepName=edit dWfStepType=Reviewer/Contributor dWfStepDescription=copy edit step dAliases=AllUsers\taliases\tsysadmin\tuser dWfStepIsAll=0 dWfStepWeight=2

wfEntryScript= wfExitScript= wfUpdateScript=

5.4.24 GET ACTIVE WORKFLOWS

Service that returns the Active Workflows page where a user can select a workflow and view all documents in a workflow.

Access Level: Read, Global, Scriptable (49)

Location: IdcHomeDir/resources/core/templates/workflow.htm

Results

- ResultSets:
 - StdWorkflows (dWfName, dWfID, dWfDescription, dCompletionDate, dSecurityGroup, dWfStatus, dWfType, dIsCollaboration)
 - ClbraWorkflows (same fields as StdWorkflows)
 - ClbraAccessList (dClbraName, userList, aliasList)
- Response Template: WORKFLOW_LIST (workflow_list.htm)

Used By

- Resource Includes:
 - pne_nav_management_links
 - std_doc_man_pages
- Templates:
 - WORKFLOW_REJECT_FORM (reject_doc.htm)
 - ALL_WORKFLOW_DOCS (workflow_all_docs_list.htm)
 - WORKFLOW DOCS (workflow docs list.htm)
 - WORKFLOW_INFO (workflow_info.htm)
 - WF_INQUEUE_LIST (workflow_queue.htm)
 - WORKFLOW_REVIEW_FORM (workflow_review_form.htm)
- Standard Navigation: commonNav.js

5.4.25 GET_ALL_WORKFLOWDOCREVISIONS

Service that returns a result set of documents in a workflow and their revision information.

Location: IdcHomeDir/resources/core/templates/workflow.htm

5.4.26 GET_CRITERIA_WORKFLOWS_FOR_GROUP

Service used by the Workflow applet that returns workflows for a specified security group. It returns the step information for the returned workflows. The most likely error is a security group that does not exist or a user failing the security check.

Returns the WorkflowsForGroup and WorkflowStepsForGroup result sets:

WorkflowsForGroup lists all of the workflows for this group (dWfID, dWfName).

WorkflowStepsForGroup lists all of the steps in all of the workflows for this group (dWfID, dWfName, dWfStepID, dWfStepName).

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

dSecurityGroup: The security group such as *Public* or *Secure*.

IdcCommand command file format:

Retrieves criteria workflow information IdcService=GET_CRITERIA_WORKFLOWS_FOR_GROUP dSecurityGroup=Public

HDA format:

@Properties LocalData IdcService=GET_CRITERIA_WORKFLOWS_FOR_GROUP dSecurityGroup=Public @end

5.4.27 GET_WF_COMPANION_INFO

Returns the companion information file for a document in a workflow.

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

- dDocName: The name of the document in the workflow.
- dWfName: The workflow name.

5.4.28 GET_WORKFLOW

Service that returns information about a specific workflow. The most likely error is a workflow name that does not exist.

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

dWfName: The workflow name.

Example

IdcService=GET_WORKFLOW dWfName=mktg_review

5.4.29 GET_WORKFLOW_INFO

Service that returns workflow step information for a content item. This service is executed in a browser interface by selecting Active Workflows from PNE links, clicking on the workflow name, and then clicking the link for step name.

The most likely error is a content item or workflow name that does not exist.

Access Level: Read, Global, Scriptable (49)

Queries Executed: QdocInfo, QworkflowDocument, QworkflowForID, QwfDocState, QworkflowSteps

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

- dID: The generated content item revision ID.
- dWfStepID: The workflow contribution stage ID. This auto-generated value can be retrieved from the database table.

Results

- ResultSets:
 - WorkflowSteps (All fields from all rows of WorkflowSteps DB table for specified workflow)
 - WorkflowStep (All WorkflowSteps fields for current step plus dUsers and dHasTokens fields)
 - DOC_INFO (All fields from Revisions and DocMeta for the specified revision)
 - WorkflowInfo (All fields from Workflows DB table for specified workflow)
 - WorkflowState (dUserName field only from WorkflowState DB table for specified content item)
 - WorkflowActionHistory (Result set from corresponding HDA file in data\workflow\states directory)
- Local Data:
 - AuthorAddress
 - dID
 - dUser
 - dWfCurrentStepID
 - dWfName
 - dWfStepID
 - RemainingStepUsers
- Response Template: WORKFLOW_INFO (workflow_info.htm)

Used By

Resource Includes: clbra_wf_doc_list

Example

IdcService=GET_WORKFLOW_INFO dID=61 dWfStepID=19

5.4.30 GET WORKFLOW INFO BYNAME

Service used to retrieve information about a workflow based on the name of a document in the workflow. It returns the Workflow Information page for a content item, which lists the history of the document, what steps remain in the workflow, and who is currently reviewing the workflow.

Access Level: Read, Global, Scriptable (49)

Queries Executed:

- QdocNameMeta
- QworkflowDocument
- **QworkflowForID**
- **QwfDocState**
- QworkflowSteps

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

dDocName: The name of a document in an active workflow.

Results

- ResultSets:
 - WorkflowSteps (All fields from all rows of WorkflowSteps DB table for specified workflow)
 - WorkflowStep (All WorkflowSteps fields for current step plus dUsers and dHasTokens fields)
 - DOC_INFO (All fields from Revisions and DocMeta for the specified content
 - WorkflowInfo (All fields from Workflows DB table for specified workflow)
 - WorkflowState (dUserName field only from WorkflowState DB table for specified content item)
 - WorkflowActionHistory (Result set from corresponding HDA file in data\workflow\states directory)
- Local Data:
 - AuthorAddress
 - dUser
 - dWfName
 - dWfStepID
 - RemainingStepUsers
- Response Template: WORKFLOW_INFO (workflow_info.htm)

Used By

- Resource Includes:
 - setup_workflow_action_popups
 - wf_in_queue_display
 - workflow_action_popup
- Templates:
 - WORKFLOW_REVIEW_FORM (workflow_review_form.htm)
 - WORKFLOW_REVIEW_FRAMES (workflow_review_frames.htm)
- Other: SoapCustom:Wsdl:Workflow:Services

5.4.31 GET_WORKFLOW_SCRIPT

Service used to retrieve a workflow script.

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

- wfScriptName: Name of the script template to be used.
- wfScriptDescription: Description used for the script.

5.4.32 GET_WORKFLOWDOCREVISIONS

Service that returns a list of content item revisions that are in a specific workflow. This service is run in the browser environment by selecting **Active Workflows** in PNE links and clicking on the workflow name.

The most likely error is a workflow name that does not exist.

Access Level: Read, Global, Scriptable (49)

Queries Executed:

- **Qworkflow**
- **QwfStates**
- **QworkflowDocuments**
- QworkflowSteps

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

dWfName: The workflow name.

Results

- ResultSets:
 - WorkflowSteps (All fields from all rows of WorkflowSteps DB table for specified workflow plus the additional fields, dUsers and dHasTokens)
 - WfDocuments (Rows correspond to each content item belonging to the specified workflow; each row contains all fields from WorkflowDocuments, Revisions, and DocMeta DB tables)
 - WorkflowStates (All fields from the WorkflowStates DB table for the specified
 - WF_INFO (All fields from the Workflows DB table for the specified workflow)
- Local Data:
 - dUser
 - dWfName
 - isCollaboration
- Response Template:
 - WORKFLOW_DOCS (workflow_docs_list.htm)

Used By

- **Resource Includes:**
 - checkin_multiuploadapplet_processing_functions
 - setup_active_standard_workflows_table_row
 - legacy_active_collaboration_workflows_table
 - legacy_active_standard_workflows_table
 - wf_in_queue_display
 - workflow_action_popup
 - workflow_revisions_href
- Templates:
 - CONTRIBUTOR_MAIL (contributor_mail.htm)
 - PROJECT_INFO (project_info.htm)
 - WF_REJECT_MAIL (reject_mail.htm)
 - WORKFLOW_INFO (workflow_info.htm)
 - WORKFLOW_REJECT_FORM (reject_doc.htm)
 - WORKFLOW_REVIEW_FORM (workflow_review_form.htm)
- Other: SoapCustom:Wsdl:Workflow:Services
 - Redirect service for: WORKFLOW_APPROVE, WORKFLOW_EDIT_ APPROVE, WORKFLOW_REJECT, WORKFLOW_CHECKIN

Example

IdcService=GET_WORKFLOW dWfName=mktg_review

5.4.33 GET WORKFLOWS

Service that retrieves a list of all workflows including their description, security group, status, and type.

Location: IdcHomeDir/resources/core/templates/workflow.htm

5.4.34 TEST_WORKFLOW_SCRIPT

Service used to check the validity of a workflow script.

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

- wfScriptName: Name of the script template to be used.
- wfScriptDescription: Description used for the script.
- dDocName: Content item to be used in the test scenario.

5.4.35 WORKFLOW APPROVE

Service that approves a content item revision in a workflow.

Location: IdcHomeDir/resources/core/templates/workflow.htm

dID: The generated content item revision ID.

Example

IdcService=WORKFLOW_APPROVE dID=81

5.4.36 WORKFLOW CANCEL

Service that cancels a Basic workflow.

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

dWfName: The workflow name.

Example

IdcService=WORKFLOW_CANCEL dWfName=mktg_review

5.4.37 WORKFLOW CHECKIN

Service that checks in a new revision of a content item that is in a workflow. The most likely error is when the specified content item or workflow does not exist.

This service executes the SubService WORKFLOW_CHECKIN_SUB. This SubService checks a content item revision into a workflow.

Access Level: Read (1)

Queries Executed: QdociInfo, Qrevisions

Calls Subservice: WORKFLOW CHECKIN SUB

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

- dDocName: The content item identifier (Content ID).
- dID: The generated content item revision ID.
- dSecurityGroup: The security group such as *Public* or *Secure*.
- dDocAccount: The account for the content item. Required only if accounts are enabled.
- primaryFile: The absolute path to the location of the file as seen from the Content Server instance. Use the slash as the file separator.

A primary file must be specified unless checking in metadata only. If an alternate file is specified with the primary file, the content refinery will convert the alternate file. Otherwise, the primary file will be converted.

- If a primary file is not specified, you can use a metafile in its place. Only one metafile can exist though for each content item (a primary AND alternate meta file cannot coexist).
- If both a primary and alternate file is specified, their extensions must be different.

Optional Service Parameters

- isFinished: Indicates that the editing is finished for a rejected content item.
 - 1 (*true*): The revision will be checked in and approved.
 - 0 (false): The revision will be checked in but will still need to be approved.
- doFileCopy:
 - 1 (*true*): The file will not be deleted from the hard drive after checkin.
 - 0 (*false*): The file will be removed from your hard drive after checkin.
- alternateFile
- RedirectUrl

Results

- Local Data:
 - Content Server:
 - alternateFile
 - changedSubjects
 - CurRevID
 - dAction
 - dActionDate
 - dCheckoutUser
 - dClbraName
 - dConversion
 - dCreateDate
 - dDocAccount
 - dDocAuthor
 - dDocID
 - dDocName
 - dDocTitle
 - dDocType
 - dExtension
 - dFileSize
 - dFormat
 - dID
 - dInDate
 - dIsPrimary
 - dIsWebFormat
 - dlsCheckedOut
 - doFileCopy
 - dLocation

- dOriginalName
- dOutDate
- dpAction
- dpEvent
- dProcessingState
- dPublishState
- dPublishType
- dRawDocID
- dReleaseState
- dRevClassID
- dRevisionID
- dRevLabel
- dRevRank
- dSecurityGroup
- dStatus
- dUser
- dUserName
- isCheckin
- is Cur Rev Empty
- is Doc Profile Used
- is Edit Mode
- is In fo Only
- isNew
- IsNotLatestRev
- is Status Changed
- IsUpdate
- Is Work flow
- latestID
- oldName

- WebfilePath
- Workflow:
 - dWfComputed
 - dWf Current Step ID

- dWfDirectory
- dWfDocState
- dWfEntry
- dWfID
- dWfName
- dWfStatus
- dWfStepID
- dWfStepDescription
- dWfStepIsAll
- dWfStepName
- dWfStepType
- dWfStepWeight
- dWfType
- dWorkflowState
- entryCount
- wfAction
- wfCurrentStepPrefix
- WfEditFinished
- wfMessage
- wfStepCheckinType
- Response Template:
 - REDIRECT_TEMPLATE (redirect_template.htm)
 - Default redirect service (branched): GET_WORKFLOWDOCREVISIONS or GET_PORTAL_PAGE (Page=WF_INQUEUE_LIST)

Example

IdcService=WORKFLOW_CHECKIN dID=92 dDocName=test_00063 dWfID=4 dSecurityGroup=Public dDocAccount=mainaccount dWfType=Criteria dWfName=mktg_review primaryFile=c:/hello_hello.txt dRevLabel=2 doFileCopy=1 isFinished=1

5.4.38 WORKFLOW_EDIT_APPROVE

Service used for client applications (that is, not used by the core Content Server software) which need the ability to approve a document without passing through a checkin/checkout process.

Location: IdcHomeDir/resources/core/templates/workflow.htm

5.4.39 WORKFLOW REJECT

Service that rejects a content item revision in a workflow.

The system administrator cannot approve or reject a content item in a workflow unless they are defined as a reviewer for the current step. Therefore, if you run this service in IdcCommand as the user sysadmin, you cannot reject the content item unless sysadmin is defined as a reviewer.

Access Level: Read (1)

Queries Executed:

- QdocInfo
- **IworkflowDocHistory**
- UrevisionStatus
- UworkflowDocStep
- UrevisionStatus
- DworkflowDocState
- OwfDocInformation

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

- dID: The generated content item revision ID.
- wfRejectMessage: The rejection message.

Optional Service Parameters

RedirectUrl

Results

- Local Data:
 - Content Server:
 - changedSubjects
 - dActionDate
 - dClbraName
 - dDocAuthor
 - dDocName
 - dDocTitle
 - dExtension
 - dID
 - dPublishState
 - dReleaseState
 - dRevClassID
 - dStatus

- dUser

- prevReleaseState
- Workflow:
 - dAction
 - dOriginalName
 - dWfCompute
 - dWf Current Step ID
 - dWfDirectory
 - dWfDocState
 - dWfID
 - dWfName
 - dWfStatus
 - dWfStepDescription
 - dWfStepID
 - dWfStepIsAll
 - dWfStepName
 - dWfStepType
 - dWfStepWeight
 - dWfType
 - dWorkflowState
 - entryCount
 - wfAction
 - wfCurrentStepPrefix
 - WfEditFinished
 - wfMailSubject
 - wfMailTemplate
 - wf Message
 - wfRejectMessage
 - wfStepCheckinType
 - wfUsers
- Response Template:
 - REDIRECT_TEMPLATE (redirect_template.htm)
 - Default redirect service (branched): GET_WORKFLOWDOCREVISIONS or GET_PORTAL_PAGE (Page=WF_INQUEUE_LIST)

References

Applets: Repostory Manager

Templates: WORKFLOW_REJECT_FORM (reject_doc.htm)

Other: SoapCustomer:Wsdl:Workflow:Services

Example

IdcService=WORKFLOW_REJECT dID=95 wfRejectMessage=Please Revise

5.4.40 WORKFLOW_START

Service Class: Workflow Service

Location: IdcHomeDir/resources/core/templates/workflow.htm

Additional Required Service Parameters

dWfName: The workflow name.

dSecurityGroup: The security group, such as *Public* or *Secure*.

Optional Service Parameters

wfMessage: The message that will be included in the Workflow Started notification e-mail.

Example

IdcService=WORKFLOW_START dWfName=mktg_review dSecurityGroup=Public wfMessage=Please check in this content item

Archive Services

This chapter describes the services available when using and customizing Oracle WebCenter Content Server archives.

This chapter covers the following topics:

- Section 6.1, "About Archive Services"
- Section 6.2, "Archive Services"

6.1 About Archive Services

Information about what is a WebCenter Content service and how services can be used is provided in Section 2, "Using Services." Information about basic services structure, attributes, actions, and a service example is provided in Section 3, "Customizing Services." You should be familiar with this information before customizing current services or creating new services

The locations for specific archive services are listed within each individual service.

Note: The most commonly used services have more extensive descriptions.

Important: All services have at least one required parameter. The IdcService parameter takes the name of the service as its argument. If other parameters are required, they are noted in the description of the service.

Important: Most archive services use the underlying method used by EDIT_ARCHIVEDATA and consequently require the EditItems parameter set to the appropriate value. The user interface usually controls what is put into this parameter. If necessary, the user should exercise archive services through the user interface with Filter Debug flags enabled to determine how the values should be set. By using the Filter Debug flags, the request as it is sent to the server can be captured.

6.2 Archive Services

Unless noted otherwise, all services listed here are the ArchiveService Service Class. Frequently used services are marked with an asterisk (*) in the following list.

The following services are described in this section:

- ADD ARCHIVE
- ADD_COLLECTION
- ADD_PROXIEDCOLLECTION
- CANCEL_ARCHIVE
- *CHECKIN ARCHIVE
- COPY_ARCHIVE
- DELETE_ARCHIVE
- DELETE_BATCH_FILE
- DELETE_BATCH_FILE_DOCUMENTS
- DELETE_BATCH_FILE_TABLES
- EDIT_ARCHIVE
- EDIT_ARCHIVEDATA
- EDIT_EXPORTERS
- EDIT_TRANSFEROPTIONS
- EXECUTE_BATCH
- EXPORT ARCHIVE
- **GET_ARCHIVECOLLECTIONS**
- GET_ARCHIVETABLECONTENT
- GET_ARCHIVED_FILE
- GET_ARCHIVES
- GET_ARCHIVERELATIONQUERY
- GET_BATCH_FILE_DOCUMENTS
- GET_BATCH_PROPERTIES
- GET_BATCH_SCHEMA
- GET_BATCH_VALUES
- GET_BATCHFILES
- GET_PROXIED_ARCHIVECOLLECTIONS
- GET_PROXIEDSERVERS
- GET_REPLICATION_DATA
- GET_TABLECOLUMNLIST
- **GET_TARGET_INFO**
- GET_TARGET_TRANSFER_STATUS
- GET_TRANSFER_SOURCE_INFO

- IMPORT_ARCHIVE
- IMPORT_ARCHIVE_START_AUTOMATED
- IMPORT BATCHFILE
- IMPORT DOCUMENT
- IMPORT_TABLE_ENTRY
- **INSERT_NATIVE**
- INSERT_NEW
- REGISTER_IMPORTER
- REMOVE_COLLECTION
- REMOVE_EXPORTER
- REMOVE_IMPORTER
- REMOVE_PROXIEDTRANSFER
- REMOVE_QUEUED_IMPORT
- REMOVE TRANSFER
- REQUEST_TRANSFER
- TRANSFER_ARCHIVE
- UPDATE_TARGET_TOTALS
- UPDATE TRANSFER STATUS
- UPLOAD_ARCHIVE_TRANSFER

6.2.1 ADD_ARCHIVE

Service that adds an archive to an archive collection. The most likely errors are mismatched parameters or when an archive name is not unique.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Content Server instance.
- aArchiveName: The archive name.
- aArchiveDescription: The menu label for the Content Server instance (used on the interface). For example, Master_on_server01.

Example

To add an archive to a master Content Server instance, the required parameters will be:

IdcService=ADD_ARCHIVE IDC_Name=Master_on_server01 aArchiveName=archive_test aArchiveDescription=this is an archive test

6.2.2 ADD_COLLECTION

Service that creates a new archive collection. The most likely error is an instance menu label that is not unique.

Caution: Using duplicate *IDC_Name* collection names will cause data corruption. The Archiver cannot be used to move or copy data between two collections that share the same *IDC_Name*. To do so will corrupt the data on the target system.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- IDC Name: The name of the collection.
- aCollectionLocation: The absolute path to the collection location. Use the slash as the file separator.
- aVaultDir: The absolute path to the *vault* directory. Use the slash as the file separator.
- aWeblayoutDir: The absolute path to the weblayout directory. Use the slash as the file separator.

Example

IdcService=ADD_COLLECTION IDC_Name=new_collection aCollectionLocation=c:/oracle/archives aVaultDir=c:/oracle/vault aWeblayoutDir=c:/oracle/weblayout

6.2.3 ADD PROXIEDCOLLECTION

Service used to add an archive collection from another server.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- psIDC_Name: The name of the provider (proxied connection).
- IDC_Name: The name of the archive collection.

6.2.4 CANCEL ARCHIVE

Service that cancels the current archive request.

Location: IdcHomeDir/resources/core/tables/std_services.htm

6.2.5 CHECKIN ARCHIVE

Service that checks a content item revision into an archive.

Access Level: Admin (8)

- This service executes one of the following SubServices, based on parameters and conditional variables:
 - DELETE_BYREV: If the Action parameter is *Delete* and the content item revision exists in the system.
 - DELETE_BYCLASS: If the Action parameter is *Delete* and the content item revision does not exist in the system.

- CHECKIN_NEW_SUB: If the content item does not exist in the system, the Action parameter is not *Delete*, and the conditional variable IsPublish is set to true.
- INSERT_NEW: If the content item does not exist in the system, the Action parameter is not *Delete*, and the conditional variable IsPublish is set to *false* or not specified.
- UPDATE_DOCINFO_BYREV: If the Action parameter is not *Delete* and the primaryFile parameter is not empty. Additionally, the conditional variable IsPublish must be *true* or the content item revision must exist in the system.
- UPDATE_BYREV: If the Action parameter is not *Delete* and the primaryFile parameter is empty. Additionally, the conditional variable IsPublish must be *true* or the content item revision must exist in the system.

Important: The IsPublish variable is set by the server when a workflow or project is unregistered. This value cannot be set as a parameter or as a configuration entry in this service.

- If the IsNative parameter is *true*, the service executes one of the following SubServices:
 - DELETE_BYREV: If the content item exists in the Revisions table and Action parameter is *Delete*.
 - UPDATE_BYREV: If the content item exists in the Revisions table, the content has not been deleted, and the Action parameter is *Update*.
 - INSERT_NATIVE: If the content item does not exist in the server and the action parameter is not *Delete*.
- If a content item already exists in the system and has not been deleted, the server cannot update or insert the entry; an error will be thrown.
- The most likely error is when the content item name is not unique or when the service is unable to check in the specified file.
- A primary file is required. If you do not want to check in a primary file and want to check in only metadata, an additional parameter must be included and a configuration entry added in the Content Server instance.
- Required additional parameter (metadata checkin):

createPrimaryMetaFile=true

Required Content Server configuration entry (metadata checkin):

AllowPrimaryMetaFile=true Example: IdcService=CHECKIN ARCHIVE Action=insert dDocTitle=my_test dDocAuthor=sysadmin dDocType=ADACCT dSecurityGroup=Public createPrimaryMetaFile=true

Additional Required Service Parameters

Action: Must be set to a value as specified earlier.

- dDocName: The Content ID for the content item.
 - If Content ID auto generation is enabled, this parameter is not required. If *dDocName* is defined, it will override the auto generated Content ID.
 - The Content ID cannot contain spaces or invalid characters ;/\?:@&=+"#%<>*~|[].
- dDocAuthor: The content item author (contributor).
- dDocTitle: The content item title.
- dSecurityGroup: The security group such as *Public* or *Secure*.
- dDocAccount: The account for the content item. Required only if accounts are enabled.
- primaryFile: The absolute path to the location of the file as seen from the server. Use the slash as the file separator.

A primary file must be specified unless checking in metadata only. If an alternate file is specified with the primary file, the content refinery will convert the alternate file. Otherwise, the primary file will be converted.

- If a primary file is not specified, you can use a metafile in its place. Only one metafile can exist though for each content item (a primary AND alternate meta file cannot coexist).
- If both a primary and alternate file is specified, their extensions must be different.
- doFileCopy: 1 (true): The file will not be deleted from the hard drive after checkin. 0 (false): The file will be removed from your hard drive after checkin.
- Required custom fields: Custom metadata fields that are required must also be specified.

Optional Service Parameters

- alternateFile: The alternate file for conversion.
 - Only one metafile can exist though for each content item (a primary AND alternate meta file cannot coexist.)
 - If an alternate file is specified with the primary file, the content refinery will convert the alternate file. Otherwise, the primary file will be converted.
- dCreateDate: The date the content item was created. By default, this is the current date.
- dRevLabel: The revision label for the content item. If set, the label will be used to locate the specified revision.
- doDocSecurityCheck: Enables the document security check. By default this entry is false.
- dPublishState: The publish state. If the content item exists in the system, this parameter must be empty.
- dReleaseState: The release state (used to indicate the web state of the revision).
- IsNative: This is a configuration entry but can be specified as a parameter.
 - If the IsNative parameter is *true* and the content item exists in the system, the specified Content ID (dDocName) must coincide with the content name in the

- database. Otherwise, the command is not native and the service will be determined as if the IsNative parameter is false.
- If the IsNative parameter is *true* and the Action parameter is *Delete*, the content item must exist in the system. Otherwise, the command is not native and the service will be determined as if the IsNative parameter is *false*.
- webViewableFile: If the content is marked as web-viewable the file format is determined by the parameter webViewableFile:format and the extension is determined by the parameter dWebExtension. Otherwise, the extension and file format are determined by the parameters dExtension and dFormat, respectively. The user can override the file format and extension by overriding these parameters.
- Optional custom fields: Custom metadata fields that are not required can also be specified.

Results

- Local Data:
 - Action
 - dRevClassID
 - dRevisionID,
 - dRendition2
 - dRendition1
 - dDocAuthor
 - **DocExists**
 - isCheckin
 - StatusMessage
 - primaryFile
 - dStatus
 - dRevLabel
 - dWorkflowState
 - dDocTitle
 - StatusCode
 - dpEvent
 - isNew
 - dUser
 - isEditMode
 - dDocName

Used By

Applets: Batch Loader

Example

IdcService=CHECKIN_ARCHIVE Action=insert

dDocAuthor=user1 dDocName=test dDocTitle=new content dSecurityGroup=Public primaryFile=c:/test.txt doFileCopy=true

6.2.6 COPY_ARCHIVE

Service that copies an archive into a collection.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- IdcService: Must be set to COPY_ARCHIVE.
- InstanceMenuLabel: The name of the collection. If you are using the default collection, this is the name of the Content Server instance.

Example

IdcService=COPY_ARCHIVE InstanceMenuLabel=Master_on_server01

6.2.7 DELETE ARCHIVE

Service that deletes an existing archive from a collection. The most likely error is when the specified archive does not exist on the system.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- IdcService: Must be set to DELETE ARCHIVE.
- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Content Server instance.
- aArchiveName: The archive name.

Example

IdcService=DELETE_ARCHIVE IDC_Name=Master_on_server01 aArchiveName=archive test

6.2.8 DELETE BATCH FILE

Service that deletes a batch file from an archive.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Content Server instance.
- aArchiveName: The archive name.
- aBatchFile: The batch file subdirectory and HDA file name.

Example

IdcService=DELETE_BATCH_FILE IDC_Name=Master_on_server01 aArchiveName=archive_test aBatchFile=02-jan-16_12.02.06_184/0216120206~1.hda

6.2.9 DELETE_BATCH_FILE_DOCUMENTS

Service used during batch file editing. It is available when using the Archiver/General/View Batch Files/Edit dialog. Using this dialog, a user can delete selected entries in a batch file.

When the user finishes editing and clicks **OK**, the changes are sent to the server. The delete actions performed during the dialog operation are handled by this service.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Content Server instance.
- aArchiveName: The archive name.
- aBatchFile: The batch file subdirectory and HDA file name.
- DeletedRows: A resultset which contains the items to delete.

Example

IdcService=DELETE_BATCH_FILE_DOCUMENTS IDC_Name=Master_on_server01 aArchiveName=archive_test aBatchFile=02-jan-16_16.53.02_289/0216165302~1.hda

6.2.10 DELETE_BATCH_FILE_TABLES

Service similar to DELETE_BATCH_FILE_DOCUMENTS except it is used on exported table data.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Content Server instance.
- aArchiveName: The archive name.

6.2.11 EDIT ARCHIVE

Service used to change the description of an archive after it has been created. To access the description, double click the archive in the archive list.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

IDC Name: The name of the collection. If you are using the default collection, this is the name of the Content Server instance.

Example

IdcService=EDIT_ARCHIVE IDC_Name=Master_on_server01

6.2.12 EDIT ARCHIVEDATA

Service used to edit the data as specified in the EditItems parameter.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Important: Most archive services use the underlying method used by EDIT_ARCHIVEDATA and consequently require the EditItems parameter set to the appropriate value. The user interface usually controls what is put into this parameter. If necessary, the user should exercise these services through the user interface with Filter Debug flags enabled to determine how the values should be set. By using the Filter Debug flags, the request as it is sent to the server can be captured.

Additional Required Service Parameters

- EditItems: A comma-delimited list of keys that are used to define the archive. Any key used must also be specified as a parameter. For example, if EditItems=aValueMaps, then aValueMaps is a required parameter to this service.
- KeyValue: Value for key in the EditItem parameter.
- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Content Server instance.

Example

IdcService=EDIT_ARCHIVEDATA IDC_Name=Master_on_server01

6.2.13 EDIT_EXPORTERS

Service that edits the archive data for the specified archive. If specified, it registers or unregisters the archive.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

EditItems: The only values accepted are alsAutomatedExport and aRegisteredExporters.

By setting EditItems, these parameters are also required:

- aIsAutomatedExport
- aRegisteredExporters

6.2.14 EDIT_TRANSFEROPTIONS

Service used to edit transfer options for an archive process.

IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Content Server instance.

6.2.15 EXECUTE_BATCH

Service that executes a batch operation for an archive.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

aBatchFile: The path and name of the batch file to be executed.

6.2.16 EXPORT ARCHIVE

Service that exports an archive.

- The export will read in the archive's definition file and will follow the export rules specified. This includes specifying the export query, whether users or document configuration information should be exported (or both), and whether previous batch files should be deleted.
- The Content Server executes this service asynchronously. The server must be running for the services to be even executed and that IdcCommand will exit announcing success, when actually all it has done is told the server to perform the action.

Note: The EXPORT_ARCHIVE service only starts the archive export and provides confirmation that the request to start the export has been made. No notification is sent regarding the status or completion of the archive export. A custom component could be created to provide notification of the status and completion of the archive export.

The Content Server can only export archives one at a time. A batch file that has multiple exports will declare success on the first and failure on all subsequent commands until it has finished the first. A batch file should have only one export in it, and some external process will need to determine that the action has completed before issuing another export command.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Content Server instance.
- aArchiveName: The archive name.
- dataSource: Must be set to RevisionIDs. This is the query stub which, along with the export query, will be used to create the list of revisions to export.

Optional Service Parameters

- aDoDelete:
 - 1 (*true*): Revisions are deleted after successful export.
 - 0 (*false*): Revisions are not deleted after export.

Example

IdcCommand command file format (exports the archive archive_test in the collection *Master_on_server01*):

To export an archive IdcService=EXPORT ARCHIVE aArchiveName=archive_test IDC_Name=Master_on_server01 dataSource=RevisionIDs

HDA format with optional parameter:

@Properties LocalData IdcService=EXPORT_ARCHIVE aArchiveName=archive_test IDC_Name=Master_on_server01 dataSource=RevisionIDs aDoDelete=1 @end

6.2.17 GET ARCHIVECOLLECTIONS

Service that returns a list of all archive collections.

Location: IdcHomeDir/resources/core/tables/std_services.htm

6.2.18 GET_ARCHIVETABLECONTENT

Service used to preview the table data to be exported. It is used in the Archiver/Export **Data/Table/Preview** dialog.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Content Server instance.
- aArchiveName: The archive name.
- resultName: The result set name for the table content.

6.2.19 GET ARCHIVED FILE

Service that returns a specific rendition of an archived content item revision from an archive.

Given a dID or a dDocName and RevisionSelectionMethod parameter, the service determines the file name of a particular rendition of the revision and returns that file to the client.

The most likely errors are mismatched parameters or a request for a revision or rendition that does not exist.

> **Note:** It is recommended that dDocName be included in all requests for content items where the requester knows the dDocName. Error messages in the Content Server system assume that it is present, as do other features such as forms.

Important: Either the content item revision ID (dID) must be specified or a Content ID (dDocName) along with a RevisionSelectionMethod parameter must be defined.

Optional Service Parameters

- dID: The generated content item revision ID.
 - If dID is not specified, dDocName and RevisionSelectionMethod must specified.
 - A rendition of the revision of the content item with this ID will be returned, if it exists, and the RevisionSelectionMethod parameter does not exist or has the value Specific.
- dDocName: The content item identifier (Content ID).
 - If dDocName is not present, dID must be present and RevisionSelectionMethod must not be present.
 - If RevisionSelectionMethod is present, a rendition of a revision of the content item with this name will be returned, if it exists. If RevisionSelectionMethod is not present, dDocName will be used in error messages.
- RevisionSelectionMethod: The revision selection method.
 - If present, dDocName must be present. The value of this variable is the method used to compute a dID from the specified dDocName. Its value can be *Specific*, *Latest*, or *LatestReleased*.
 - If the value is Specific, the dDocName is ignored, and dID is required and is used to get a rendition. If the value is *Latest*, the latest revision of the content item is used to compute the dID. If the value is Latest Released, the latest released revision of the content item is used to compute the dID.
- Rendition: The content item rendition. This parameter specifies the rendition of the content item and can be set to *Primary*, *Web*, or *Alternate*. If Rendition is not present, it defaults to Primary.
 - If the value is *Primary*, the primary rendition of the selected revision is returned.
 - If the value is *Web*, the web-viewable rendition of the selected revision is returned.
 - If the value is *Alternate*, the alternate rendition of the selected revision is returned.

Example

IdcService=GET ARCHIVED FILE dDocName=notice RevisionSelectionMethod=LatestReleased Rendition=web

6.2.20 GET ARCHIVES

Service that returns a list of all archives in a collection.

IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Content Server instance.

Example

IdcService=GET_ARCHIVES IDC_Name=Master_on_server01

6.2.21 GET ARCHIVERELATIONQUERY

Service used to query for the established relationships between exported tables. All parameters are provided by the user interface and come from the definition of the archive. Depending on the archive export definition, this service must be called before GET_ARCHIVETABLECONTENT.

Location: IdcHomeDir/resources/core/tables/std_services.htm

6.2.22 GET_BATCH_FILE_DOCUMENTS

Service that returns all batch file content items.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Content Server instance.
- aArchiveName: The archive name.
- aBatchFile: The batch file subdirectory and HDA file name.

Example

IdcService=GET_BATCH_FILE_DOCUMENTS IDC_Name=Master_on_server01 aArchiveName=latest_archive aBatchFile=02-jan-18_09.34.41_430/0218093441~1.hda

6.2.23 GET BATCH PROPERTIES

Service that returns the properties of the specified batch file.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Content Server instance.
- aArchiveName: The archive name.
- aBatchFile: The batch file subdirectory and HDA file name.

6.2.24 GET_BATCH_SCHEMA

Service that returns the batch schema. Schema information describes the classes of objects that are stored in the database.

- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Content Server instance.
- aArchiveName: The archive name.
- aBatchFile: The batch file subdirectory and HDA file name.

Example

IdcService=GET_BATCH_SCHEMA IDC_Name=Master_on_server01 aArchiveName=latest_archive aBatchFile=02-jan-18_09.34.41_430/0218093441~1.hda

6.2.25 GET_BATCH_VALUES

Service that returns the metadata field values for the batch.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Content Server instance.
- aArchiveName: The archive name.
- aBatchFile: The batch file subdirectory and HDA file name.

Example

IdcService=GET_BATCH_VALUES IDC_Name=Master_on_server01 aArchiveName=latest_archive aBatchFile=02-jan-18_09.34.41_430/0218093441~1.hda

6.2.26 GET BATCHFILES

Service that returns batch files for a specified archive.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Required Service Parameters

- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Content Server instance.
- aArchiveName: The archive name.

Example

IdcService=GET_BATCHFILES IDC_Name=Master_on_server01 aArchiveName=latest_archive

6.2.27 GET PROXIED ARCHIVECOLLECTIONS

Service that returns a list of all archive collections on a proxied Content Server instance.

psIDC_Name: The name of the proxied Content Server instance.

Example

IdcService=GET_PROXIED_ARCHIVECOLLECTIONS psIDC_Name=Proxied_2_on_test13

6.2.28 GET PROXIEDSERVERS

Service that returns a list of outgoing providers.

Location: IdcHomeDir/resources/core/tables/std_services.htm

6.2.29 GET_REPLICATION_DATA

Service that returns replication data. The most likely error is an incorrect archive location.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

IDC Name: The name of the collection. If you are using the default collection, this is the name of the Content Server instance.

Example

IdcService=GET_REPLICATION_DATA IDC_Name=Master_on_server01

6.2.30 GET_TABLECOLUMNLIST

Service that retrieves the column information about specified tables. It returns the name, type, and length of the columns. In order to execute this service, the caller must have ADMIN rights.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Content Server instance.
- aArchiveName: The archive name.
- tableName: A list of comma-delimited table names.

6.2.31 GET_TARGET_INFO

Service that performs a status check of a target. It does an initial status check to determine if the target is still targetable and if it exists.

This service is not intended for external use.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Content Server instance.
- aArchiveName: The archive name.

- TargetCollection: The name of the collection to be targeted.
- TargetArchive: The name of the archive within the target collection.
- aTransferOwner: The name of the user who is initiating the transfer.

6.2.32 GET_TARGET_TRANSFER_STATUS

Service used during transfer to determine transfer status. The TransferMonitor uses it to determine if the transfer has completed or is still in progress.

Not intended for external use.

Location: IdcHomeDir/resources/core/tables/std services.htm

6.2.33 GET TRANSFER SOURCE INFO

Service that is used during a pull transfer to establish the work that must be performed. Used when the source Archiver for the transfer resides on a proxied server and the transfer owner must determine what work, if any, must be done.

Not intended for external use.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- IDC Name: The name of the collection. If you are using the default collection, this is the name of the Content Server instance.
- SourceArchive: The archive used as source for the target.
- aTransferOwner: The name of the user who is initiating the transfer.
- aArchiveName: The archive name.

6.2.34 IMPORT ARCHIVE

Service that imports an archive.

- The import will read in the archive's definition file and will follow the import rules specified.
- The Content Server system executes this service asynchronously. The Content Server instance must be running for the service to be executed and that IdcCommand will announce success as soon as the service has been requested, not when it has been executed successfully.

Note: The IMPORT_ARCHIVE service only starts the archive import and provides confirmation that the request to start the import has been made. No notification is sent regarding the status or completion of the archive import. A custom component could be created to provide notification of the status and completion of the archive import.

The server can only import archives one at a time. A batch file that has multiple imports will declare success on the first and failure on all subsequent commands until it has finished the first. A batch file should have only one import in it and some external process will need to determine that the action has completed before issuing another import command.

The most likely error is an archive name that does not exist.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Content Server instance.
- aArchiveName: The archive name.

Note: At least one of the Additional Service Parameters must be set for this service to execute successfully.

Additional Service Parameters

- aImportDocuments: When set to true, the service will import content item revisions.
- aImportDocConfig: When set to true, the service will import document configuration information.
- aImportUsers: When set to *true*, the service will import user information.

Important: If the users have not been exported and aImportUsers is set to *true*, the service fails. If the document configuration has not been exported and this parameter is set to *true*, the service fails.

Example

IdcCommand command file format (import the revisions in the archive_test archive from the *Master on server01* collection):

```
# To import an archive
IdcService=IMPORT_ARCHIVE
aArchiveName=archive_test
IDC_Name=Master_on_server01
aImportDocuments=true
```

HDA format:

@Properties LocalData IdcService=IMPORT_ARCHIVE aArchiveName=archive_test IDC_Name=Master_on_server01 aImportDocuments=true @end

6.2.35 IMPORT_ARCHIVE_START_AUTOMATED

Service that registers a queued archive for import.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Content Server instance.
- aArchiveName: The archive name.

6.2.36 IMPORT_BATCHFILE

Service that imports the content items in the specified batch files, as selected from the **View Batch File** dialog, into the Content Server instance.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Content Server instance.
- aArchiveName: The archive name.

6.2.37 IMPORT DOCUMENT

Service that imports a specified document, usually selected from the View Batch File dialog, into the Content Server instance.

The most likely error is a content item name that does not exist.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Content Server instance.
- aArchiveName: The archive name.
- dDocName: The Content ID for the content item.

Example

IdcService=IMPORT_DOCUMENT IDC_Name=Master_on_server01 aArchiveName=JAN 22 02 dDocName=billing_00004

6.2.38 IMPORT TABLE ENTRY

Service used to add entries to a table in an archive. This service is equivalent to IMPORT_DOCUMENT. It works on exported table items instead of exported content items. It is accessible from the View Batch File dialog and is used to import the specified table item.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Content Server instance.
- aArchiveName: The archive name.
- aBatchFile: The path and name of the batch file where the table is stored.

6.2.39 INSERT NATIVE

SubService used by the Archiver to recover IDs created during INSERT_NEW. This service does not generate new IDs. It reuses the IDs stored during the export. This SubService is only used when the administrator is archiving back into the original system that created the export. The Archiver uses INSERT_NATIVE when the exporter and importer have the same instance name (IDC_name) and the system is trying to recover the content item completely.

Location: IdcHomeDir/resources/core/tables/std_services.htm

To disallow the check in of empty files, set the following: ValidatePrimaryFileNotEmpty=1

6.2.40 INSERT_NEW

SubService used during a CHECKIN_ARCHIVE when the system has discovered no prior item with the specified dDocName. This SubService is used during a batch load and during an archive import operation. It adds a new content item into the system and creates new IDs (such as dID, dRevClassID) for it.

Location: IdcHomeDir/resources/core/tables/std_services.htm

To disallow the check in of empty files, set the following: ValidatePrimaryFileNotEmpty=1

6.2.41 REGISTER IMPORTER

Service that registers or unregisters the importer for an archive. The most likely errors are mismatched parameters or an incorrect instance menu label or archive name.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Content Server instance.
- aArchiveName: The archive name.
- EditItems: Must be set to aRegisteredImporter, aImportLogonUser.
- IsRegister: Defines the registration setting:
 - 1 (true): Register Self
 - 0 (false): Unregister

Example

Self register the Content Server instance as importer:

IdcService=REGISTER_IMPORTER IDC_Name=Master_on_server01 aArchiveName=JAN_22_02 IsRegister=1 EditItems=aRegisteredImporter,aImportLogonUser

6.2.42 REMOVE COLLECTION

Service that removes an archive collection. You cannot remove the default archive collection.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

IDC_Name: The name of the collection.

Example

IdcService=REMOVE_COLLECTION IDC_Name=new_collection

6.2.43 REMOVE EXPORTER

Service that removes an exporter from an archive. The most likely error is an incorrect archive location.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- aArchiveName: The archive name.
- IDC_Name: The name of the exporter.
- Example

IdcService=REMOVE_EXPORTER IDC_Name=Master_on_server02 aArchiveName=archive_02

6.2.44 REMOVE IMPORTER

Service that removes an importer from an archive. The most likely error is an incorrect archive location.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- IDC Name: The name of the importer. If you are using the default collection, this is the name of the Content Server instance.
- aArchiveName: The archive name.

Example

IdcService=REMOVE_IMPORTER IDC_Name=Master_on_server01 aArchiveName=my_archive_test

6.2.45 REMOVE PROXIEDTRANSFER

Service that is called when removing the transfer settings for an archive but the Content Server instance performing the activity is not the Content Server instance that owns the archive (that is, the transfer is being proxied). To remove or stop the transfer, the request must be submitted to this proxied server.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

- aArchiveLocation: Location of the archive.
- IDC_Name: The name of the owner of the transfer.

6.2.46 REMOVE QUEUED IMPORT

Service that allows a user to delete a queued import. It is used from the Automation dialog, accessible by clicking Archiver Options then View Automation then Queued Automated Imports.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

IDC_Name: The name of the importer. If you are using the default collection, this is the name of the Content Server instance.

6.2.47 REMOVE TRANSFER

Service that allows a user to delete or stop an automated transfer. It is used from the Automation dialog, accessible by clicking Archiver Options then View Automation.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- aArchiveLocation: Location of the archive.
- IDC_Name: The name of the importer. If you are using the default collection, this is the name of the Content Server instance.

6.2.48 REQUEST_TRANSFER

Service that initiates a transfer request.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- aArchiveName: The archive name.
- IDC_Name: The name of the exporter. If you are using the default collection, this is the name of the Content Server instance.

6.2.49 TRANSFER ARCHIVE

Service that initiates a specified manual transfer.

Location: IdcHomeDir/resources/core/tables/std services.htm

Additional Required Service Parameters

- aArchiveName: The archive name.
- IDC_Name: The name of the exporter. If you are using the default collection, this is the name of the Content Server instance.

6.2.50 UPDATE_TARGET_TOTALS

Service that updates the amount of work the archiver has completed in the archive definition file. This service is not intended for external use. It is part of the Transfer engine that is responsible for monitoring the automated transfer and updating the data on completion of any manual or automated transfers.

Location: IdcHomeDir/resources/core/tables/std_services.htm

6.2.51 UPDATE_TRANSFER_STATUS

Service used by the TransferMonitor to send update information about the progress of the transfer. Not intended for use by client applications.

Location: IdcHomeDir/resources/core/tables/std_services.htm

6.2.52 UPLOAD_ARCHIVE_TRANSFER

Service used to upload the export batch file to the target. This service is not extended for external use and is part of the service that make up the Transfer engine of the Archiver.

Location: IdcHomeDir/resources/core/tables/std_services.htm

Additional Required Service Parameters

- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Content Server instance.
- TargetCollection: The name of the collection to be targeted.
- TargetArchive: The name of the archive within the target collection.
- SourceCollection: The name of the collection used for the transfer.
- SourceArchive: The archive used as source for the target.
- aBatchFile: The name of the batch file used in the transfer.
- ZipFile:path: The path name to the zip file of the transfer to be uploaded.

Contribution Folders Services

This chapter describes the Oracle WebCenter Content services available when using and customizing Contribution Folders services.

This chapter covers the following topics:

- Section 7.1, "About Contribution Folders Services"
- Section 7.2, "Contribution Folders Services"

7.1 About Contribution Folders Services

Contribution Folders is the name given to what in earlier releases of WebCenter Content was named the Folders_g feature. Contribution Folders is supported by the Folders_g component in WebCenter Content. Contribution Folders services cannot be used with the current Folders feature (see Chapter 8).

Information about what is a WebCenter Content service and how services can be used is provided in Section 2, "Using Services." Information about basic services structure, attributes, actions, and a service example is provided in Section 3, "Customizing Services." You should be familiar with this information before customizing current services or creating new services

The locations and service types for specific Contribution Folders services are listed within each individual service.

Note: The most commonly used services have more extensive descriptions.

7.2 Contribution Folders Services

The following services are described in this section:

- COLLECTION_ADD
- COLLECTION_ADD_LINK
- COLLECTION_BROWSE
- COLLECTION_CHECKIN_NEW
- COLLECTION_CHECKIN_REVISION
- COLLECTION_CHECKIN_SEL_SUB
- COLLECTION_COPY_ALL
- COLLECTION_COPY_COLLECTION

- COLLECTION_COPY_ITEM
- COLLECTION_COPY_LOT
- COLLECTION DELETE
- COLLECTION DELETE ALL
- COLLECTION_DELETE_COLLECTION
- COLLECTION_DELETE_ITEM
- COLLECTION_DELETE_LOT
- COLLECTION_DISPLAY
- COLLECTION_EDIT
- COLLECTION_GET_ADMIN_CONFIG
- COLLECTION_GET_ADMIN_INHERIT_CONFIG
- COLLECTION_GET_ADMIN_MARKED_CONFIG
- COLLECTION_GET_ADMIN_META_CONFIG
- COLLECTION GET ADMIN METADATA DEFAULTS
- COLLECTION_GET_ADMIN_MOUNTED_CONFIG
- COLLECTION_GET_ARCHIVE
- COLLECTION_GET_BRANCH
- COLLECTION_GET_COLLECTION
- COLLECTION_GET_COLLECTIONS
- COLLECTION_GET_CONTENT_FILE
- COLLECTION_GET_CONTENTS
- COLLECTION_GET_FILE
- COLLECTION_GET_INFO
- COLLECTION_GET_LINKS
- COLLECTION GET META MAPPING
- COLLECTION_GET_PROFILE_METADATA_DEFAULTS
- COLLECTION_GET_PROFILE_METADATA_REVISION_DEFAULTS
- COLLECTION_GET_REFERENCE
- COLLECTION_GET_SEARCH_FORM
- COLLECTION_GET_SYSTEM_FILE
- COLLECTION_GET_USER_CONFIG
- COLLECTION_INFO
- COLLECTION_ISVALID_META
- COLLECTION_LOCK
- COLLECTION_MOVE_ALL
- COLLECTION MOVE COLLECTION
- **COLLECTION MOVE ITEM**

- COLLECTION_MOVE_LOT
- COLLECTION_NEW
- COLLECTION PROFILE UPDATE COLUMNS
- COLLECTION RESTORE COLLECTION
- COLLECTION_RESTORE_ITEM
- COLLECTION_SEARCH_CONTENT
- COLLECTION_SEARCH_RESULTS
- COLLECTION_SET_ARCHIVE
- COLLECTION_SET_USER_CONFIG
- COLLECTION_UNLOCK
- COLLECTION_UPDATE
- COLLECTION_UPDATE_ADMIN_CONFIG
- COLLECTION_UPDATE_ADMIN_INHERIT_CONFIG
- COLLECTION UPDATE ADMIN METADATA DEFAULTS
- COLLECTION_UPDATE_ALL
- COLLECTION_UPDATE_ITEM
- COLLECTION_UPDATE_META
- COLLECTION_UPDATE_META_TABLE
- COLLECTION_UPDATE_PROFILE_METADATA_DEFAULTS
- COLLECTION_UPDATE_PROFILE_METADATA_REVISION_DEFAULTS
- COLLECTION_UPDATE_STRUCTURE
- COLLECTION_VERIFY_FOLDER_NAME
- FOLDERSLOCAL_BUILD_MOUNT
- FOLDERSLOCAL_CREATE_MOUNT
- FOLDERSLOCAL DELETE MOUNT
- FOLDERSLOCAL_UPDATE_MOUNT
- GET_FOLDER_HISTORY_REPORT
- GET_OPTION_LISTS
- GOTO_COLLECTION
- GOTO_ROOT_COLLECTION

7.2.1 COLLECTION_ADD

Service that creates a Contribution Folder. The most likely errors are mismatched parameters or the contribution folder does not exist.

Service Class: Service (general service)

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

Additional Required Service Parameters

dCollectionName: The name of the Contribution Folder to create.

One of the following sets of parameters to identify the parent Contribution Folder:

- hasParentCollectionID: (Boolean) Specifies whether the dParentCollectionID parameter is used to identify the parent Contribution Folder ID.
 - dParentCollectionID: The parent Contribution Folder ID.
- hasParentCollectionPath: (Boolean) Specifies whether the dParentCollectionPath parameter is used to identify the path to the parent Contribution Folder.
 - dParentCollectionPath: The path to the parent Contribution Folder.
- hasParentCollection GUID: (Boolean) Specifies that the dParentCollectionGUID parameter is used to identify the GUID for the parent Contribution Folder.
 - dParentCollectionGUID: The parent Contribution Folder GUID.

Optional Service Parameters

- dCollectionOwner: The Contribution Folder owner. If xForceFolderSecurity=TRUE, then the Contribution Folder owner is the same as the parent Contribution Folder's owner. Otherwise, the default is the current user.
 - This setting overrides the user set as the collection owner. The owner can access and modify the Contribution Folder despite other set security criteria.
- dCollectionCreator: Overrides the user set as the Contribution Folder creator. The default value is the current user.
- dCollectionModifier: Overrides the user set as the last Contribution Folder modifier. The default value is the current user.
- ignoreMaxFolderLimit: Allows more subfolders to be added to the parent Contribution Folder than the currently set maximum limit. The default value is false.
- mark: Sets dCollectionMark for the Contribution Folder. Contribution Folders with dCollectionMark set are not modifiable without CollectionReadOnlyMarkedFolders being set to false (not the default case). These marked Contribution Folders and their enabled/disabled state can be viewed on the System Folder Configuration page. Contribution Folders and Trash are marked folders.
- force: Creates a Contribution Folder under the root Contribution Folder (dParentCollectionID=-1). The default value is false.
- any system or custom metadata field: The given field and value will be set for the Contribution Folder and used as default values for content and Contribution Folders created within the Contribution Folder.

Example

IdcService=COLLECTION ADD hasParentCollectionID=true dCollectionName=Products dParentCollectionID=1 dCollectionOwner=bsmith

7.2.2 COLLECTION_ADD_LINK

Service that adds a shortcut to a Contribution Folder or content within a Contribution Folder. The shortcut references the Contribution Folder using either the Contribution Folder ID, the actual path to the Contribution Folder, or the Contribution Folder

The most likely errors are mismatched parameters or the Contribution Folder does not exist. No returned data.

Service Class: Service (general service)

Location: IdcHomeDir/components/folders_g/resources/folders_ services.htm

Additional Required Service Parameters

- One of the following sets of parameters to identify destination parent Contribution Folder for the created short cut:
 - tohasCollectionID: (Boolean) Specifies whether the todCollectionID parameter is used to identify the destination parent Contribution Folder ID.
 - todCollectionID: The Contribution Folder ID that the shortcut references.
 - tohasCollectionPath: (Boolean) Specifies whether the todCollectionPath parameter is used to identify the path to the Contribution Folder.
 - todCollectionPath: The path to the Contribution Folder that the shortcut references.
 - tohasCollectionGUID: (Boolean) Specifies whether the todCollectionGUID parameter is used to identify the Contribution Folder.
 - todCollectionGUID: The GUID for the Contribution Folder that the shortcut references.
- dLinkName: The name of the shortcut being created.
- dLinkType: The type of shortcut being created. Must be either COLLECTION or CONTENT.
 - If COLLECTION is specified, then hasdCollectionID must be specified.
 - hasdCollectionID: (Boolean) Specifies whether the Contribution Folder is referenced using a Collection ID.
 - dCollectionID: The Contribution Folder ID of the parent Contribution Folder referenced by the shortcut.
 - If CONTENT is specified, then dRevClassID must be specified. dRevClassID: The revision class ID for the content item to which the shortcut points.

Example

IdcService=COLLECTION_ADD_LINK tohasCollectionID=true todCollectionID=999999999999000633 dLinkName=Short.cut. dLinkType=COLLECTION hasdCollectionID=true dCollectionID=999999999999004533

7.2.3 COLLECTION_BROWSE

Service that loads the defined Contribution Folder metadata and the Contribution Folder path. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Search Service

Location: IdcHomeDir/components/folders_g/resources/folders_ interface_service.htm

Additional Required Service Parameters

- dCollectionID: The Contribution Folder ID of the parent Contribution Folder referenced by the shortcut (for example, ="+id+").
- hasCollectionID: (Boolean) Specifies whether the Contribution Folder has an assigned collection ID.
- change To User: Reassigns the Contribution Folder to a different user.

Example

IdcService=COLLECTION_BROWSE dCollectionID="+id+" hasCollectionID=true changeToUser=bsmith

7.2.4 COLLECTION_CHECKIN_NEW

Service that checks new content into a Contribution Folder. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Doc Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.5 COLLECTION CHECKIN REVISION

Service that checks in a revision to an existing Contribution Folder.

This service sends the checkin request to one of the following SubServices, which are the same SubServices called during checkin through the browser or Repository Manager application. (These SubServices are not called during a Batch Loader or Archive import.)

- COLLECTION_CHECKIN_SEL_SUB
- CHECKIN_SEL_FORM
- COLLECTION_SEARCH_CONTENT
- CHECKOUT_BY_NAMENULL
- COLLECTION_LOCKNULL
- DELETE_REVNULL

This service checks security to determine if the user has sufficient permission to check in the Contribution Folder. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Doc Service

Location: IdcHomeDir/components/folder/resources/folders_ service.htm

7.2.6 COLLECTION_CHECKIN_SEL_SUB

Service that checks in a revision to an existing Contribution Folder under certain conditions. Used when the Contribution Folder exists on the system but no valid revision was specified or when the content item is checked out (but not in a workflow).

The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Doc Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.7 COLLECTION COPY ALL

Service that copies all content residing in the specified Contribution Folder to the destination Contribution Folder. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Service (general service)

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.8 COLLECTION_COPY_COLLECTION

Service that copies a specified Contribution Folder and places the copy into a different Contribution Folder. The most likely errors are mismatched parameters or the Contribution Folder does not exist. No returned data.

Service Class: Service (general service)

Location: IdcHomeDir/components/folders g/resources/folders service.htm

Additional Required Service Parameters

One of the following sets of parameters to identify the destination parent Contribution Folder for the copied Contribution Folder:

- tohasCollectionID: (Boolean) Specifies whether the todCollectionID parameter is used to identify the destination parent Contribution Folder ID.
 - todCollectionID: The destination parent Contribution Folder ID.
- tohasCollectionPath: (Boolean) Specifies whether the todCollectionPath parameter is used to identify the path to the destination parent Contribution Folder.
 - todCollectionPath: The path to the destination parent Contribution Folder.
- tohasCollection GUID: (Boolean) Specifies whether the todCollectionGUID parameter is used to identify the destination parent Contribution Folder.
 - todCollectionGUID: The destination parent Contribution Folder GUID.

One of the following sets of parameters to identify the source Contribution Folder to be copied:

- fromhasCollectionID: (Boolean) Specifies whether the fromdCollectionID parameter is used to identify the source Contribution Folder.
 - fromdCollectionID: The source Contribution Folder ID.
- fromhasCollectionPath: (Boolean) Specifies whether the fromdCollectionPath parameter is used to identify the path to the source Contribution Folder.
 - fromdCollectionPath: The path to the source Contribution Folder.
- fromhasCollectionGUID: (Boolean) Specifies whether the fromdCollectionGUID parameter is used to identify the source Contribution Folder.
 - fromdCollectionGUID: The source Contribution Folder GUID.
- fromisLink: (Boolean) Specifies whether the fromdLinkID parameter is used to identify the source Contribution Folder.
 - fromdLinkID: The Contribution Folder shortcut ID for the source Contribution Folder
- fromCollectionislink: (Boolean) Specifies whether the fromdCollectionLinkID parameter is used to identify the source Contribution Folder.
 - fromdCollectionLinkID: The collection shortcut ID for the source Contribution Folder.

Example

IdcService=COLLECTION_COPY_COLLECTION tohasCollectionID=true todCollectionID=999999999999000633 fromhasCollectionID=true fromdCollectionID=999999999999000633

7.2.9 COLLECTION_COPY_ITEM

Service that copies a single content item in a Contribution Folder and places it in a destination Contribution Folder. The most likely errors are mismatched parameters or the Contribution Folder does not exist. No returned data.

Service Class: File Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

Additional Required Service Parameters

dDocName: The content ID of the content item being copied.

One of the following sets of parameters to identify the destination Contribution Folder:

- tohasCollectionID: (Boolean) Specifies whether the todCollectionID parameter is used to identify the destination Contribution Folder.
 - todCollectionID: The ID for the destination Contribution Folder.
- tohasCollectionPath: (Boolean) Specifies whether the todCollectionPath parameter is used to identify the destination Contribution Folder.
 - todCollectionPath: The path to the destination Contribution Folder.
- tohasCollectionGUID: (Boolean) Specifies whether the todCollectionGUID parameter is used to identify the destination Contribution Folder.

todCollectionGUID: The GUID for the destination Contribution Folder.

tolevel0: Specifies the base value in the path for the destination parent Contribution Folder (for example, /Contribution Folders).

tolevel1: Specifies the next level value in the path for the destination parent Contribution Folder (for example, /t4).

tolevel2: Specifies the next level value in the path for the destination parent Contribution Folder (for example, /1).

Example

IdcService=COLLECTION_COPY_ITEM tohasCollectionPath=true todCollectionPath=/Contribution Folders/t4/1 dDocName=000660

7.2.10 COLLECTION_COPY_LOT

Service that copies a set of items including content items, Contribution Folders, shortcuts to content items, and shortcuts to Contribution Folders. The copied items are placed into a single designated Contribution Folder.

The most likely errors are mismatched parameters or the designated Contribution Folder does not exist. No returned data.

Service Class: Service (general service)

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

Additional Required Service Parameters

One of the following sets of parameters to identify the destination parent Contribution Folder for the copied items:

- tohasCollectionID: (Boolean) Specifies whether the todCollectionID parameter is used to identify the destination parent Contribution Folder.
 - todCollectionID: The destination parent Contribution Folder ID.
- tohasCollectionPath: (Boolean) Specifies whether the todCollectionPath parameter is used to identify the destination parent Contribution Folder.
 - todCollectionPath: The path to the destination parent Contribution Folder.
- tohasCollection GUID: (Boolean) Specifies whether the todCollectionGUID parameter is used to identify the destination parent Contribution Folder.
 - todCollectionGUID: The destination parent Contribution Folder GUID.

Parameters to designate content items (where {n} designates an integer used to distinguish parameters particular to one item to copy from other items to copy):

- contentselect{n}: (Boolean) Specifies whether to copy the content item. The value must be *true* to copy the content item.
- fromContentisLink{*n*}: (Boolean) Specifies whether this is a content item or a shortcut. The value must be 0 to specify a content item.
- fromdDocName{*n*}: The content ID of the content item to be copied.

Parameters to designate shortcuts to content items (where $\{n\}$ designates an integer used to distinguish parameters particular to one item to copy from other items to copy):

- contentselect $\{n\}$: (Boolean) Specifies whether to copy the content item. The value must be *true* to copy the content item.
- fromContentisLink{n}: (Boolean) Specifies whether this is a content item or a shortcut. The value must be 1 to specify a shortcut.
- fromdDocName{n}: The content ID of the content item pointed to by the shortcut.

Parameters to designate Contribution Folders (where {n} designates an integer used to distinguish parameters particular to one item to copy from other items to copy):

- collectionselect{*n*}: (Boolean) Specifies whether to copy the Contribution Folder. The value must be *true* to copy the Contribution Folder.
- fromCollectionisLink{n}: (Boolean) Specifies whether this is a Contribution Folder or a shortcut. The value must be 0 to specify a Contribution Folder.
- fromdCollectionID{n}: The dCollectionID of the Contribution Folder being copied.
- from has Collection ID $\{n\}$: The value must be 1 to copy the Contribution Folder.

Parameters to designate shortcuts to Contribution Folders (where {n} designates an integer used to distinguish parameters particular to one item to copy from other items to copy):

- collectionselect{n}: (Boolean) Specifies whether to copy the shortcut to the Contribution Folder. The value must be *true* to copy the shortcut.
- fromCollectionisLink{n}: (Boolean) Specifies whether this is a Contribution Folder or a shortcut. The value must be 1 to specify a shortcut.
- fromCollectiondLinkID{*n*}: The link ID of the shortcut to be copied.
- fromdCollectionID{n}: The dCollectionID of the Contribution Folder pointed to by the shortcut.
- from has Collection ID $\{n\}$: The value must be 1 to copy the shortcut to the Contribution Folder.

Example

IdcService=COLLECTION_COPY_LOT tohasdCollectionID=true todCollectionID=999999999999000633 contentselect=true fromContentisLink=0 fromdDocName=PHL11GX010033

7.2.11 COLLECTION DELETE

Service that deletes Contribution Folders. If Trash is enabled, the Contribution Folder is moved to Trash and not directly deleted.

The most likely errors are mismatched parameters or the Contribution Folder does not exist. No returned data.

Service Class: Doc Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

Additional Required Service Parameters

One of the following parameter sets is required to identify the Contribution Folder.

- hasCollectionID: (Boolean) Specifies that the dCollectionID parameter is used to identify the Contribution Folder.
 - dCollectionID: The Contribution Folder ID of the Contribution Folder to delete.
- hasCollectionPath: (Boolean) Specifies that the dCollectionPath parameter is used to identify the Contribution Folder.
 - dCollectionPath: The path of the Contribution Folder to delete.
- hasCollectionGUID: (Boolean) Specifies that the dCollectionGUID parameter is used to identify the Contribution Folder.
 - dCollectionGUID: The GUID of the Contribution Folder to delete.

Example

IdcService=COLLECTION_DELETE hasCollectionPath=true dCollectionPath=/Contribution Folders/dept/hr

7.2.12 COLLECTION_DELETE_ALL

Service that deletes all content residing in a Contribution Folder. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Service (general service)

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.13 COLLECTION DELETE COLLECTION

Service that deletes a specified Contribution Folder. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Search Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.14 COLLECTION DELETE ITEM

Service that deletes a single content item in a Contribution Folder. If Trash is enabled, the item is moved to the Trash Contribution Folder and not directly deleted. The most likely errors are mismatched parameters or the Contribution Folder does not exist. No returned data.

Service Class: Doc Service

Location: IdcHomeDir/components/folders g/resources/folders service.htm

Additional Required Service Parameters

dDocName: The content ID of the content item to be deleted.

Example

IdcService=COLLECTION_DELETE_ITEM dDocName=000660

7.2.15 COLLECTION_DELETE_LOT

Service that deletes a set of items including content items, Contribution Folders, shortcuts to content items, and shortcuts to Contribution Folders. If Trash is enabled, the items are moved to Trash and not directly deleted.

The most likely errors are mismatched parameters or the Contribution Folder does not exist. No returned data.

Service Class: Service (general service)

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

Additional Required Service Parameters

Parameters to designate content items (where {n} designates an integer used to distinguish parameters particular to one item to delete from other items to delete):

- contentselect{n}: (Boolean) Specifies whether to delete the content item. The value must be *true* to copy the content item.
- fromContentisLink{*n*}: (Boolean) Specifies whether this is a content item or a shortcut. The value must be 0 to specify a content item.
- fromdDocName $\{n\}$: The content ID of the content item to delete.

Parameters to designate shortcuts to content items (where {n} designates an integer used to distinguish parameters particular to one item to delete from other items to delete):

- contentselect{n}: (Boolean) Specifies whether to delete the shortcut. The value must be true to delete the shortcut.
- fromContentisLink{n}: (Boolean) Specifies whether this is a content item or a shortcut. The value must be 1 to specify a shortcut.
- fromContentdLinkID{*n*}: The link ID of the shortcut.
- fromdDocName $\{n\}$: The content ID of the content item pointed to by the shortcut.

Parameters to designate Contribution Folders (where $\{n\}$ designates an integer used to distinguish parameters particular to one item to delete from other items to delete):

- collectionselect{n}: (Boolean) Specifies whether to delete the Contribution Folder. The value must be *true* to delete the Contribution Folder.
- fromCollectionisLink{n}: (Boolean) Specifies whether this is a Contribution Folder or a shortcut. The value must be 0 to specify a Contribution Folder.
- fromdCollectionID{*n*}: The dCollectionID of the Contribution Folder to delete.
- from has Collection ID $\{n\}$: The value must be 1 to delete the Contribution Folder.

Parameters to designate shortcuts to Contribution Folders (where {n} designates an integer used to distinguish parameters particular to one item to delete from other items to delete):

- collectionselect[n]: (Boolean) Specifies whether to delete the shortcut to the Contribution Folder. The value must be true to delete the shortcut.
- fromCollectionisLink{n}: (Boolean) Specifies whether this is a Contribution Folder or a shortcut. The value must be 1 to specify a shortcut.
- fromCollectiondLinkID{*n*}: The link ID of the shortcut to delete.

- fromdCollectionID{n}: The dCollectionID of the Contribution Folder pointed to by the shortcut.
- from has Collection ID $\{n\}$: The value must be 1 to delete the shortcut to the Contribution Folder.

Example

IdcService=COLLECTION_DELETE_LOT collectionselect=true fromCollectionisLink=0 fromdCollectionID=999999999999004955 fromhasCollectionID=1

7.2.16 COLLECTION_DISPLAY

Service that returns a list of the items contained in a Contribution Folder, including content items, Contribution Folders and short cuts. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Search Service

Location: IdcHomeDir/components/folders_g/resources/folders_ interface_service.htm

Additional Required Service Parameters

One of the following parameter sets is required to identify the Contribution Folder.

- hasCollectionID: (Boolean) Specifies that the dCollectionID parameter is used to identify the Contribution Folder.
 - dCollectionID: The collection ID of the Contribution Folder.
- hasCollectionPath: (Boolean) Specifies that the dCollectionPath parameter is used to identify the Contribution Folder.
 - dCollectionPath: The path of the Contribution Folder.
- hasCollectionGUID: (Boolean) Specifies that the dCollectionIGUID parameter is used to identify the Contribution Folder.
 - dCollectionGUID: The collection GUID for the Contribution Folder.

Optional Service Parameters

- CollectionDisplayResultSetSize: Limits the number of items returned in the COLLECTIONS and CONTENTS ResultSets and establishes the page size.
- showCollections: Flag that signals the web UI presentation to display the COLLECTIONS ResultSet. This is effective when using CollectionDisplayResultSetSize and PageNumber.
- showContent: Flag that signals the web UI presentation to display the CONTENTS ResultSet. This is effective when using CollectionDisplayResultSetSize and PageNumber.
- PageNumber: Integer value 1 or greater displays the correct page size subset of data from the CONTENTS or COLLECTIONS ResultSets. Page size is set by CollectionDisplayResultSetSize.

Results

- ResultSets: (contain a row with Contribution Folder metadata for each Contribution Folder item directly contained by the Contribution Folder, including shortcuts to Contribution Folders)
 - **CONTENTS**
 - **COLLECTIONS**
 - **METAMAPPING**
 - **COLUMNS**
 - Fields
 - METADATA_OVERRIDE
 - PATH
 - metadata

Example

IdcService=COLLECTION_DISPLAY hasCollectionPath=true dCollectionPath=%2fContent%20Server%20Folders%2f

7.2.17 COLLECTION EDIT

Service that edits a Contribution Folder. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service type: Doc Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

Additional Required Service Parameters

- hasCollectionID: (Boolean) Specifies whether the Contribution Folder has an assigned collection ID. If set to *true*, dCollectionID must be defined.
- dCollectionID: The Contribution Folder ID of the parent Contribution Folder.

7.2.18 COLLECTION_GET_ADMIN_CONFIG

Service that retrieves the current global values defined for the Contribution Folders hierarchy. No specific collection is passed. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Service (general service)

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.19 COLLECTION_GET_ADMIN_INHERIT_CONFIG

Service that retrieves the current metadata fields that are propagated when it is requested. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Service (general service)

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.20 COLLECTION GET ADMIN MARKED CONFIG

Service that retrieves 'special' Contribution Folders and their disabled/enabled status. A disabled Contribution Folder does not show up in the hierarchy. An enabled Contribution Folder is accessible. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Service (general service)

Location: IdcHomeDir/components/folders g/resources/folders service.htm

7.2.21 COLLECTION GET ADMIN META CONFIG

Service that retrieves the fields from the administration metadata ResultSet for the defined Contribution Folder. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Service (general service)

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.22 COLLECTION_GET_ADMIN_METADATA_DEFAULTS

Service that retrieves the option lists for custom fields, default metadata, and the administration metadata of the Contribution Folder configuration (retrieves field defaults). The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Doc Service

Location: IdcHomeDir/components/folders g/resources/folders service.htm

7.2.23 COLLECTION GET_ADMIN_MOUNTED_CONFIG

Service that retrieves the Contribution Folders system configuration for the local Contribution Folder. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Search Service

Location: IdcHomeDir/components/folders_g/resources/folders_ mounted service.htm

7.2.24 COLLECTION GET ARCHIVE

Service that downloads the archived Contribution Folder structure of the specified Contribution Folder. This service does not download the contents of a Contribution Folder. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: File Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.25 COLLECTION_GET_BRANCH

Service that retrieves the structure of the specified Contribution Folder and its subfolders. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Service (general service)

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.26 COLLECTION_GET_COLLECTION

Service that retrieves all the subfolders of the specified Contribution Folder. Compare COLLECTION_GET_COLLECTIONS. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Search Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.27 COLLECTION GET COLLECTIONS

Service that retrieves the Contribution Folder. Compare COLLECTION GET COLLECTION. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Search Service

Location: IdcHomeDir/components/folders g/resources/folders service.htm

Example

To retrieve a listing of hierarchical collections, the required parameters are:

hasCollectionID=1 dCollectionID=collectionnumber

7.2.28 COLLECTION_GET_CONTENT_FILE

Service that downloads the first content item of the specified Contribution Folders collection that matches the metadata of the item passed in (excluding revisions). The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: File Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.29 COLLECTION_GET_CONTENTS

Service that retrieves information for the content items contained directly in the specified Contribution Folder. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Search Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

Additional Required Service Parameters

One of the following parameter sets is required to identify the Contribution Folder.

- hasCollectionID: (Boolean) Specifies that the dCollectionID parameter is used to identify the Contribution Folder.
 - dCollectionID: The Contribution Folder ID of the Contribution Folder.
- hasCollectionPath: (Boolean) Specifies that the dCollectionPath parameter is used to identify the Contribution Folder.
 - dCollectionPath: The path of the Contribution Folder.
- hasCollectionGUID: (Boolean) Specifies that the dCollectionGUID parameter is used to identify the Contribution Folder.
 - dCollectionGUID: The GUID of the Contribution Folder.

Results

- ResultSets:
 - CONTENTS (contains a row with content metadata for each content item contained in the Contribution Folder)

Example

IdcService=COLLECTION_GET_CONTENTS hasCollectionID=true dCollectionID=999999999999000633

7.2.30 COLLECTION_GET_FILE

Service that determines the type of item specified and then downloads its content. The item may or may not be a content item. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: File Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.31 COLLECTION_GET_INFO

Service that retrieves Contribution folder information for the local Contribution Folder. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Search Service

Location: IdcHomeDir/components/folders g/resources/folders service.htm

Additional Required Service Parameters

One of the following parameter sets is required to identify the Contribution Folder.

- hasCollectionID: (Boolean) Specifies whether the dCollectionID parameter is used to identify the Contribution Folder.
 - dCollectionID: The Contribution Folder ID of the Contribution Folder.
- hasCollectionPath: (Boolean) Specifies whether the dCollectionPath parameter is used to identify the Contribution Folder.

dCollectionPath: The path of the Contribution Folder.

hasCollectionGUID: (Boolean) Specifies that the dCollectionGUID parameter is used to identify the Contribution Folder.

dCollectionGUID: The GUID of the Contribution Folder.

Results

- ResultSets:
 - PATH (contains a row with Contribution Folder metadata for each Contribution Folder in the Contribution Folder's path)

Example

IdcService=COLLECTION_GET_INFO hasCollectionID=true dCollectionID=999999999999000633

7.2.32 COLLECTION_GET_LINKS

Service that retrieves information about the specified shortcut (dLinkID) to a content item or Contribution Folder. The most likely errors are mismatched parameters or the item or Contribution Folder does not exist.

Service Class: Service (general service)

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

Additional Required Service Parameters

dLinkID: The link ID for a shortcut to a content item or Contribution Folder.

Optional Service Parameters

resultSetName: Sets the name of the returned ResultSet. The default value is LINKS.

Results

- ResultSets:
 - \$resultSetName\$ (the ResultSet containing shortcut information for a content item or a Contribution Folder)

7.2.33 COLLECTION_GET_META_MAPPING

Service used to retrieve the WebDAV equivalent properties of the specified Contribution Folder. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Service (general service)

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.34 COLLECTION GET PROFILE METADATA DEFAULTS

Service used to retrieve the Default Information Field Configuration for a specific user. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Service (general service)

Location: IdcHomeDir/components/folders_g/resources/folders_

service.htm

7.2.35 COLLECTION_GET_PROFILE_METADATA_REVISION_DEFAULTS

Service that retrieves the Revision Information Field Configuration values for a specific user. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Service (general service)

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.36 COLLECTION GET REFERENCE

Service used to determine the existence of an item within the Contribution Folder hierarchy, and if the item exists, whether it is a Contribution Folder, content item, or a shortcut. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Service (general service)

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

Additional Required Service Parameters

One of the following parameter sets is required to identify the path.

- hasCollectionPath: (Boolean) Specifies whether the dCollectionPath parameter is used to identify the parent Contribution Folder.
 - dCollectionPath: The path of the parent Contribution Folder.
- level0: The primary level of the parent Contribution Folder.
 - level1: The secondary level of the parent Contribution Folder.
 - level2: The content item within the Contribution Folder.

Optional Service Parameters

RevisionHistory: (Boolean) Specifies whether to include the REVISION_HISTORY result set if a content item is selected. The default value is *false*.

Results

- isCollection: (Boolean) Is true if the referenced path represents a Contribution Folder.
- isContent: (Boolean) Is true if the referenced path represents a content item. If both isCollection and isContent are *false*, then no item exists with the given path.
- isLink: (Boolean) Is true if the referenced path represents a shortcut. If missing, the value is assumed *false*.
- ResultSets:
 - REVISION_HISTORY (only included if the RevisionHistory and isContent parameters are *true*)

Partial item information is returned for the referenced item in the binder's local data (Doc Info or Contribution Folder Info).

7.2.37 COLLECTION_GET_SEARCH_FORM

Service that retrieves the Contribution Folder specific search form. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Search Type: Service (general service)

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.38 COLLECTION_GET_SYSTEM_FILE

Service that retrieves the files that are usually dynamically built at the time of the request and have no counterpart on the system. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: File Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.39 COLLECTION_GET_USER_CONFIG

Service that retrieves user specific configuration for the display and behavior of their Contribution Folder structure. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Service (general service)

Location; IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.40 COLLECTION INFO

Service that retrieves the metadata associated with this particular Contribution Folder. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Doc Service

Location: IdcHomeDir/components/folders_g/resources/folders_service.htm

Additional Required Service Parameters

One of the following sets of parameters to identify the Contribution Folder:

- hasCollectionID: (Boolean) Specifies whether the dCollectionID parameter is used to identify the Contribution Folder.
 - dCollectionID: The Contribution Folder ID of the Contribution Folder referenced by the shortcut.
- hasCollectionPath: (Boolean) Specifies whether the dCollectionPath parameter is used to identify the Contribution Folder.
 - dCollectionPath: The path of the Contribution Folder.
- hasCollectionGUID: (Boolean) Specifies whether the dCollectionGUID parameter is used to identify the Contribution Folder.

dCollectionGUID: The GUID of the Contribution Folder.

Results

- canReadCollection: (Boolean) Is true if the requesting user has read privilege for the Contribution Folder.
- canWriteCollection: (Boolean) Is true if the requesting user has write privilege for the Contribution Folder.
- canAdminCollection: (Boolean) Is true if the requesting user has admin privilege for the Contribution Folder.
- ResultSets:
 - PATH (contains a row with Contribution Folder information for every Contribution Folder in the Contribution Folder's path)
 - **DocFormats**
 - ClbraProjectsAccessLists
 - DocTypes
 - metadata

7.2.41 COLLECTION ISVALID META

Service that verifies that the Contribution Folder can be added by the item of the specified metadata. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Service (general service)

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.42 COLLECTION LOCK

Service that checks out a Contribution Folder by name (dDocName) and locks the Contribution Folder. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Doc Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.43 COLLECTION_MOVE_ALL

Service that moves all of the content in a specified Contribution Folder into a different Contribution Folder. The most likely errors are mismatched parameters or the Contribution Folder does not exist. No returned data.

Service Class: Service (general service)

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

Additional Required Service Parameters

One of the following sets of parameters to identify the current source Contribution Folder of items to move:

- fromhasCollectionID: (Boolean) Specifies whether the fromdCollectionID parameter is used to identify the source Contribution Folder.
 - fromdCollectionID: The source Contribution Folder ID.
- fromhasCollectionPath: (Boolean) Specifies whether the fromdCollectionPath parameter is used to identify the source Contribution Folder.
 - fromdCollectionPath: The path to the source Contribution Folder.
- fromhasCollectionGUID: (Boolean) Specifies whether the fromdCollectionGUID parameter is used to identify the source Contribution Folder.
 - fromdCollectionGUID: The source Contribution Folder GUID.

One of the following sets of parameters to identify the destination Contribution Folder:

- tohasCollectionID: (Boolean) Specifies whether the todCollectionID parameter is used to identify the destination parent Contribution Folder.
 - todCollectionID: The ID for the destination parent Contribution Folder.
- tohasCollectionPath: (Boolean) Specifies whether the todCollectionPath parameter is used to identify the destination parent Contribution Folder.
 - todCollectionPath: The path to the destination parent Contribution Folder.
- tohasCollectionGUID: (Boolean) Specifies whether the todCollectionGUID parameter is used to identify the destination parent Contribution Folder.
 - todCollectionGUID: The GUID for the destination parent Contribution Folder.
- tolevel0: Specifies the base value in the path for the destination parent Contribution Folder (for example, /Contribution Folders).
 - tolevel1: Specifies the next level value in the path for the destination parent Contribution Folder (for example, /t4).
 - tolevel2: Specifies the next level value in the path for the destination parent Contribution Folder (for example, /1).

Example

IdcService=COLLECTION MOVE ALL fromhasCollectionPath=true fromdCollectionPath=/Contribution Folders/B/1 tohasCollectionPath=true todCollectionPath=/Contribution Folders/t4/1

7.2.44 COLLECTION MOVE COLLECTION

Service that moves a folder into a different Contribution Folder. Compare COLLECTION_MOVE_ALL. The most likely errors are mismatched parameters or the Contribution Folder does not exist. No returned data.

Service Class: Search Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

Additional Required Service Parameters

One of the following sets of parameters to identify the Contribution Folder to move:

- fromhasCollectionID: (Boolean) Specifies that the fromdCollectionID parameter is used to identify the source Contribution Folder.
 - fromdCollectionID: The source Contribution Folder ID.
- fromhasCollectionPath: (Boolean) Specifies whether the fromdCollectionPath parameter is used to identify the source Contribution Folder.
 - fromdCollectionPath: The path to the source Contribution Folder.
- fromhasCollectionGUID: (Boolean) Specifies whether the fromdCollectionGUID parameter is used to identify the source Contribution Folder.
 - fromdCollectionGUID: The source Contribution Folder GUID.

One of the following sets of parameters to identify the destination parent Contribution Folder:

- tohasCollectionID: (Boolean) Specifies whether the todCollectionID parameter is used to identify the destination parent Contribution Folder.
 - todCollectionID: The ID for the destination parent Contribution Folder.
- tohasCollectionPath: (Boolean) Specifies whether the todCollectionPath parameter is used to identify the destination parent Contribution Folder.
 - todCollectionPath: The path to the destination parent Contribution Folder.
- tohasCollectionGUID: (Boolean) Specifies whether the todCollectionGUID parameter is used to identify the destination parent Contribution Folder.
 - todCollectionGUID: The GUID for the destination parent Contribution Folder.
- tolevel0: Specifies the base value in the path for the destination parent Contribution Folder (for example, /Contribution Folders).
 - tolevel1: Specifies the next level value in the path for the destination parent Contribution Folder (for example, /t4).
 - tolevel2: Specifies the next level value in the path for the destination parent Contribution Folder (for example, /1).

Example

IdcService=COLLECTION MOVE COLLECTION fromhasCollectionID=true fromdCollectionID=257 tohasCollectionID=true todCollectionID=218

7.2.45 COLLECTION MOVE ITEM

Service that moves a single content item (or link) from the specified Contribution Folder to the destination Contribution Folder. If an item with the same file name exists in the target Contribution Folder, the move fails. The most likely errors are mismatched parameters or the Contribution Folder does not exist. No returned data.

Service Class: Doc Service

Location: IdcHomeDir/components/folders g/resources/folders service.htm

Additional Required Service Parameters

- One of the following sets of parameters to identify the destination Contribution Folder:
 - tohasCollectionID: (Boolean) Specifies whether the todCollectionID parameter is used to identify the destination Contribution Folder.
 - todCollectionID: The ID for the destination Contribution Folder.
 - tohasCollectionPath: (Boolean) Specifies whether the todCollectionPath parameter is used to identify the destination Contribution Folder.
 - todCollectionPath: The path to the destination Contribution Folder.
 - tohasCollectionGUID: (Boolean) Specifies whether the todCollectionGUIID parameter is used to identify the destination Contribution Folder.
 - todCollectionGUID: The GUID for the destination Contribution Folder.
 - tolevel0: Specifies the first value in the path for the destination Contribution Folder (for example, /Contribution Folders).
 - tolevel1: Specifies the next level value in the path for the destination Contribution Folder (for example, /t4).
 - tolevel2: Specifies the next level value in the path for the destination Contribution Folder (for example, /1).
- One of the following sets of parameters to identify the content item to move:
 - dDocName: The Content ID for the content item.
 - fromhasCollectionPath: (Boolean) Specifies whether the fromhasCollectionPath parameter is used to identify the Contribution Folder for the content item.
 - fromdCollectionPath: The path to the Contribution Folder for the content item.
 - isLink: (Boolean) Specifies whether the dLinkID parameter is used to identify the shortcut to the content item.
 - dLinkID: The Link ID for the shortcut to the content item.

Optional Service Parameters

- toContentName: New file name for the moved item.
- destMustExist: Defines (true/false) whether the destination for the item or link to move must exist. If this parameter is false or missing, and no destination Contribution Folder is specified, then the item is removed from its current Contribution Folder (xCollectionID is set to 0).

Example

IdcService=COLLECTION MOVE ITEM tohasCollectionID=true todCollectionID=218 dDocName=TG000570 toContentName=moved_name.txt

7.2.46 COLLECTION_MOVE_LOT

Service that moves a set of items including Contribution Folders, content items, and shortcuts to Contribution Folders and content items to a single destination

Contribution Folder. The most likely errors are mismatched parameters or the Contribution Folder does not exist. No returned data.

Service Class: Service (general service)

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

Additional Required Service Parameters

One of the following sets of parameters to identify the destination parent Contribution Folder for the moved items.

- tohasCollectionID: (Boolean) Specifies whether the todCollectionID parameter is used to identify the destination parent Contribution Folder.
 - todCollectionID: The Contribution Folder collection ID.
- tohasCollectionPath: (Boolean) Specifies whether the todCollectionPath parameter is used to identify the path to the destination Contribution Folder.
 - todCollectionPath: The path to the destination Contribution Folder.
- tohasCollectionGUID: (Boolean) Specifies whether the todCollectionGUID parameter is used to identify the destination Contribution Folder.
 - todCollectionGUID: The GUID for the destination Contribution Folder.

Parameters required to designate content items. {n} designates an integer used to distinguish parameters particular to one item to move from other items to move.

- contentselect{n}: (Boolean) Specifies whether to move the content item. To move the item, the value must be true.
- fromContentisLink{n}: (Boolean) If the item is a content item and not a shortcut, the value must be 0.
- fromdDocName{*n*}: The content ID of the item to move.

Parameters required to designate shortcuts to content items. {n} designates an integer used to distinguish parameters particular to one item to move from other items to move.

- contentselect{n}: (Boolean) Specifies whether to move the shortcut. To move the shortcut, the value must be true.
- fromContentisLink{n}: (Boolean) Specifies whether this is a shortcut and not a content item. If the item is a shortcut, the value must be 1.
- fromContentdLinkID{*n*}: The link ID of the shortcut to move.
- fromdDocName $\{n\}$: The content ID of the content item pointed to by the shortcut.

Parameters required to designate Contribution Folders. {n} designates an integer used to distinguish parameters particular to one item to move from other items to move.

- collectionselect{n}: (Boolean) Specifies whether to move the Contribution Folder. To move the shortcut, the value must be *true*.
- fromCollectionisLink{n}: (Boolean) Specifies whether this is a Contribution Folder and not a shortcut. If this is a Contribution Folder, the value must be 0.
- fromdCollectionID{n}: The dCollectionID of the Contribution Folder to move.
- from has Collection ID $\{n\}$: To move the Contribution Folder, the value must be 1.

Parameters required to designate shortcuts to Contribution Folders. {n} designates an integer used to distinguish parameters particular to one item to move from other items to move.

- collectionselect{n}: (Boolean) Specifies whether to move the shortcut. To move the shortcut, the value must be *true*.
- fromCollectionisLink{n}: (Boolean) Specifies whether this is a shortcut and not a Contribution Folder. If this is a shortcut, the value must be 1.
- fromdCollectiondLinkID $\{n\}$: = The link ID of the shortcut to move.
- fromdCollectionID{*n*}: The dCollectionID of the Contribution Folder pointed to by the shortcut.
- fromhasCollectionID{n}: To move the Contribution Folder shortcut, the value must be 1.

Example

IdcService=COLLECTION MOVE LOT tohasCollectionID=true docCollectionID=999999999999000633 contentselect1=true fromContentisLink1=0 fromdDocName1=PHL11GX010033

7.2.47 COLLECTION NEW

Service used to create a new Contribution Folder. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Doc Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

Additional Required Service Parameters

- hasParentCollectionID: (Boolean) Specifies whether the Contribution Folder being added as a parent Contribution Folder. If set to true, dParentCollectionID must be defined.
- dParentCollectionID: (Boolean) Specifies whether the Contribution Folder ID for the parent Contribution Folder. Used when hasParentCollectionID is set to true.
- dCollectionInherit: (Boolean) Specifies whether to inherit Contribution Folder metadata.

Example

IdcService=COLLECTION NEW hasParentCollectionID=true dParentCollectionID=1 dCollectionInherit=0

7.2.48 COLLECTION_PROFILE_GET_COLUMNS

Service that return user hierarchy column information and metadata field information. There are no parameters.

Service Class: Doc Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

Returned Data

- ResultSets:
 - COLUMNS (User-specific column set.) If the requesting user has not selected columns, the default columns returned are:
 - dFileSize
 - dDocType
 - dDocAuthor
 - dSecurityGroup
 - metadata (information about system and custom metadata fields)

7.2.49 COLLECTION PROFILE UPDATE COLUMNS

Service that updates user hierarchy columns. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Doc Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.50 COLLECTION_RESTORE_COLLECTION

Service that restores a Contribution Folder that is currently in the Trash folder to its original location. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Search Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.51 COLLECTION_RESTORE_ITEM

Service that restores an item that is currently in the Trash folder to its original location. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Search Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.52 COLLECTION SEARCH CONTENT

Service that retrieves all content that matches all of the metadata that is passed in for a content item. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Search Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.53 COLLECTION_SEARCH_RESULTS

Service that displays the search results of a search for Contribution Folders that match search criteria. Fields used for the search operands are those in the COLMETA and COLLECTIONS table. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Search Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

Additional Optional Service Parameters

- ResultCount: Limits the number of items returned in the SearchResuls result set. The default is 25.
- SortField: Field used as a sort key. The default is dCollectionName.
- SortOrder: The sort direction. The default is ASC (ascending).
- *fieldname*: Name of the field to be used as part of a string search condition. Example: dSecurityGroup=true
- opfieldname: Operator, relative to the name field, to be used in a string search condition. Example: opdSecurityGroup=hasAsSubstring
- comparefieldname: Value to be use in a string search condition, relative to named field. Example: comparedSecurityGroup=public
- fieldnameLE or fieldnameGE: Field and value to be used in a date search condition. Example: dCreateDatedateLE=2008-03-01 00:01:00

Results

- ResultSets:
 - SearchResults (list of Contribution Folders, with metadata, matching the search conditions)

Examples

startsWith search:

dCollectionName=true&opdCollectionName=beginsWith&comparedCollectionName=a

endsWith search:

dCollectionName=true&opdCollectionName=endsWith&comparedCollectionName=12

exact string match search:

dCollectionName=true&opdCollectionName=equals&comparedCollectionName=A-EZ-9

field not empty search:

 $\verb|dDocTitle=true&opdDocTitle=hasAsSubstring&comparedDocTitle=\$|$

boolean field search:

xBooleanTestField=true&opxBooleanTestField=equals&comparexBooleanTestField=1

later than search:

dCreateDatedateGE=2009-10-01 00:01:00

earlier than search

dCreateDatedateLE=2008-03-01 00:01:00

7.2.54 COLLECTION_SET_ARCHIVE

Service that takes the uploaded archive and applies it to the system. This service deletes any Contribution Folders that are in conflict with the archive. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Doc Service

Location: IdcHomeDir/components/folders g/resources/olders service.htm

7.2.55 COLLECTION_SET_USER_CONFIG

Service that sets the user configuration for the display and behavior of their folder structure. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Service (general service)

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.56 COLLECTION UNLOCK

Service that undoes a checkout of a content item and makes it available for use. This service frees content after a COLLECTION_LOCK. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Doc Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.57 COLLECTION_UPDATE

Service that modifies field data for a Contribution Folder. The most likely errors are mismatched parameters or the Contribution Folder does not exist. No returned data.

Service Class: Service (general service)

Location: IdcHomeDir/components/folders g/resources/folders service.htm

Additional Required Service Parameters

One of the following sets of parameters to identify the Contribution Folder:

- hasCollectionID: (Boolean) Specifies whether the dCollectionID parameter is used to identify the Contribution Folder.
 - dCollectionID: The Contribution Folder ID.
- hasCollectionPath: (Boolean) Specifies whether the dCollectionPath parameter is used to identify the Contribution Folder.
 - dCollectionPath: The path of the Contribution Folder.
- hasCollectionGUID: (Boolean) Specifies whether the dCollectionGUID parameter is used to identify the Contribution Folder.

dCollectionGUID: The GUID of the Contribution Folder.

Optional Service Parameters

- dCollectionName: Collection ID for the Contribution Folder.
- dCollectionMark:
- dCollectionEnabled:
- dPromptForMetadata:
- dCreateDate: Date the content item was created.
- dInDate: Content release date.
- dOutDate: Content expiration date.
- dReleaseDate: Release state (used to indicate the Web state of the revision).
- dLastModifiedDate: Date of the last modification to the content item.
- dDocName: Content ID for the content item.
- dDocType: Content item type.
- dDocTitle: Content item title.
- dDocAuthor: Content item author.
- dRevLabel: Revision label for the content item. If set, the label is used to locate the specified revision.
- dSecurityGroup: Security group such as *Public* or *Secure*.
- dDocAccount: Account for the content item. Required only if accounts are enabled.
- dCollectionOwner: Contribution Folder owner.
- dCollectionCreator: Overrides the user set as the Contribution Folder creator. The default value is the current user.
- dCollectionModifier: Overrides the user set as the last Contribution Folder modifier. The default value is the current user.
- x?????: Any of the fields as defined in the ColMeta table, which must exactly match the custom metadata fields in DocMeta.

Example

IdcService=COLLECTION_UPDATE dCollectionName=Products dParentCollectionID=1 dCollectionOwner=bsmith

7.2.58 COLLECTION UPDATE ADMIN CONFIG

Service that updates the Contribution Folders system configuration settings. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Service (general service)

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.59 COLLECTION_UPDATE_ADMIN_INHERIT_CONFIG

Service that updates the Contribution Folders system configuration setting by inheriting the metadata from an existing Contribution Folder (from which metadata is propagated). The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Service (general service)

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.60 COLLECTION_UPDATE_ADMIN_METADATA_DEFAULTS

Service that updates the Contribution Folders system metadata field default system settings. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Doc Service

Location: IdcHomeDir/components/folders g/resources/folders service.htm

7.2.61 COLLECTION_UPDATE_ALL

Service that updates all items in a collection and changes the defined metadata. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Service (general service)

Location: IdcHomeDir/components/folders g/resources/folders service.htm

7.2.62 COLLECTION UPDATE ITEM

Service that updates a specific item in a collection and changes the defined metadata. Contribution Folders related service (table Folders_Services). The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Doc Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.63 COLLECTION_UPDATE_META

Service that propagates metadata values from a Contribution Folder to all underlying Contribution Folders and content. The most likely errors are mismatched parameters or the Contribution Folder does not exist. No returned data.

Service Class: Meta Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

Additional Required Service Parameters

One of the following sets of parameters to identify the Contribution Folder:

hasCollectionID: (Boolean) Specifies that the dCollectionID parameter is used to identify the Contribution Folder.

dCollectionID: The Contribution Folder ID of the parent Contribution Folder.

hasCollectionPath: (Boolean) Specifies that the dCollectionPath parameter is used to identify the Contribution Folder.

dCollectionPath: The path of the parent Contribution Folder.

hasCollectionGUID: (Boolean) Specifies that the dCollectionGUID parameter is used to identify the Contribution Folder.

dCollectionGUID: The GUID of the parent Contribution Folder.

Example

IdcService=COLLECTION UPDATE META hasCollectionGUID=true dCollectionGUID=5A2E5617-7F95-7356-D923-F6DA894D489C

7.2.64 COLLECTION UPDATE META TABLE

Service that updates a Contribution Folder metadata table. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Meta Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.65 COLLECTION_UPDATE_PROFILE_METADATA_DEFAULTS

Service that updates the profile metadata field defaults. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Doc Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.66 COLLECTION_UPDATE_PROFILE_METADATA_REVISION_DEFAULTS

Service that updates the profile metadata field defaults of a revision. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Doc Service

Location: IdcHomeDir/components/folders_g/resources//folders_ service.htm

7.2.67 COLLECTION UPDATE STRUCTURE

Service that refreshes the Contribution Folder cache. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Meta Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.68 COLLECTION_VERIFY_FOLDER_NAME

Service that validates that the given Contribution Folder name is a valid name for a Contribution Folder. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Service (general service)

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

Additional Required Service Parameters

One of the following sets of parameters to identify the Contribution Folder:

- dCollectionName: The Collection ID for the Contribution Folder.
- hasCollectionPath: (Boolean) Specifies that the dCollectionPath parameter is used to identify the Contribution Folder.

dCollectionPath: The path of the parent Contribution Folder.

Optional Service Parameters

CollectionSkipIllegalFolderValidation: Allows all validation to be skipped except csCollectionFolderHasNoName. The default is false.

Configuration Parameters

- CollectionIllegalFolderCharacters: String containing any illegal characters to use in a folder name. The default is / : *?" <> |
- dCollectionNameSize: Maximum number of characters for a Contribution Folder name. The default is 100.
- CollectionIllegalFolderPattern_1: A regular expression. If the expression matches the Contribution Folder name, the verification will fail. The default is \\...*
- CollectionIllegalFolderPattern_2: A regular expression. If the expression matches the Contribution Folder name, the verification will fail. The default is . * \ \.
- CollectionIllegalFolderPattern_3: A regular expression. If the expression matches the Contribution Folder name, the verification will fail. The default is com[\\d]
- CollectionIllegalFolderPattern_4: A regular expression. If the expression matches the Contribution Folder name, the verification will fail. The default is lpt [\\d]
- CollectionIllegalFolderPattern_5: A regular expression. If the expression matches the Contribution Folder name, the verification will fail. The default is con
- CollectionIllegalFolderPattern_6: A regular expression. If the expression matches the Contribution Folder name, the verification will fail. The default is nul
- CollectionIllegalFolderPattern_7: A regular expression. If the expression matches the Contribution Folder name, the verification will fail. The default is prn

Additional CollectionIllegalFolderPattern_{n} variables can be added. They are evaluated by the service as long as they are in sequence.

- ResultSets:
 - SUCCESS
 - FAILED (csCollectionFolderHasNoName)

- FAILED (csCollectionInvalidCharacter:pos=position of first bad char)
- FAILED (csCollectionNameTooLong:folder name,number of extra characters)
- FAILED (csCollectionIllegalPatternMatch:folder name,illegal folder pattern)

Example

IdcService=COLLECTION VERIFY FOLDER NAME hasCollectionPath=true dCollectionPath=/Contribution Folders/dept/hr CollectionSkipIllegalFolderValidation=true dCollectionNameSize=90

7.2.69 FOLDERSLOCAL_BUILD_MOUNT

Service that rewrites the files of the specified local Contribution Folder. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Search Service

Location: IdcHomeDir/components/folders_g/resources/folders_ mounted_service.htm

7.2.70 FOLDERSLOCAL CREATE MOUNT

Service that maps a Contribution Folder to a local file system. Whenever the Contribution Folder changes, the mapped directory is updated.

There is no security on this directory.

The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: SearchService

Location: IdcHomeDir/components/Folders/resources/folders_mounted_ service.htm

7.2.71 FOLDERSLOCAL_DELETE_MOUNT

Service that removes the specified local Contribution Folder. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Search Service

Location: IdcHomeDir/components/folders_g/resources/folders_ mounted_service.htm

7.2.72 FOLDERSLOCAL_UPDATE_MOUNT

Service that updates the files of the specified local Contribution Folder. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Search Service

Location: IdcHomeDir/components/folders_g/resources/folders_ mounted service.htm

7.2.73 GET_FOLDER_HISTORY_REPORT

Service that retrieves history data for Contribution Folders. The requesting user must have admin role.

Service Class: DocService

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

Additional Required Service Parameters

actionDateGreaterThan: A date in ODBC format. All history data from two minutes before this time and later is returned. The two minutes is a margin for load-balanced servers. The default value is five minutes before the current time.

Results

- ResultSets
 - HistoryReport: Each row contains information about a Contribution Folder history event: rename, update, move, or delete.

Example

IdcService=GET_FOLDER_HISTORY_REPORT actionDateGreaterThan={ts '2010-09-09 18:04:06.293'}

7.2.74 GET_OPTION_LISTS

Contribution Folders-related service that retrieves the option lists. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Service (general service)

Location: IdcHomeDir/components/folders g/resources/folders service.htm

7.2.75 GOTO_COLLECTION

Service that displays a Contribution Folder. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Doc Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

7.2.76 GOTO_ROOT_COLLECTION

Service that displays the root Contribution Folder. The most likely errors are mismatched parameters or the Contribution Folder does not exist.

Service Class: Doc Service

Location: IdcHomeDir/components/folders_g/resources/folders_ service.htm

Folders Services

This chapter describes the Oracle WebCenter Content services available when using and customizing Folders services.

This chapter covers the following topics:

- Section 8.1, "About Folders Services"
- Section 8.2, "Folders Services"

8.1 About Folders Services

Folders is the name given to the current WebCenter Content feature that provides a hierarchical folder interface, similar to a conventional file system, for organizing and locating some or all of the content in the Content Server repository. This feature is supported by the FrameworkFolders component in WebCenter Content. For information about services used with the earlier version of Folders named Contribution Folders, supported by the Folders_g component in WebCenter Content, see Chapter 7.

Information about what is a WebCenter Content service and how services can be used is provided in Section 2, "Using Services." Information about basic services structure, attributes, actions, and a service example is provided in Section 3, "Customizing Services." You should be familiar with this information before customizing current services or creating new services

The locations for specific Folders services are listed within each individual service.

Note: The most commonly used services have more extensive descriptions.

8.2 Folders Services

Individual Folders service types are noted in each service description. The following services are described in this section:

- FLD_BROWSE
- FLD_BROWSE_POPUP
- FLD_COPY
- FLD_CREATE_FILE
- FLD_CREATE_FILE_FORM
- FLD_CREATE_FOLDER

- FLD_CREATE_FOLDER_FORM
- FLD_DELETE
- FLD EDIT FILE
- FLD_EDIT_FILE_FORM
- FLD_EDIT_FOLDER
- FLD_EDIT_FOLDER_FORM
- FLD_EDIT_METADATA_RULES
- FLD_EDIT_METADATA_RULES_FORM
- FLD_FOLDER_MIGRATION_STATUS
- FLD_FOLDER_SEARCH
- FLD_FOLDER_SEARCH_FORM
- FLD_GET_CHOOSE_DESTINATION_DIALOG
- FLD_GET_CREATE_LINK_DIALOG
- FLD_GET_CREATE_SHORTCUT_DIALOG
- FLD_GET_RENAME_FILE_DIALOG
- FLD_GET_RENAME_FOLDER_DIALOG
- FLD_INFO
- FLD_LOAD_SOFT_LINKS_FOR_DOCUMENT
- FLD_MIGRATION_FOLDER_DATA
- FLD_MOVE
- FLD_PRE_CHECKIN
- FLD_PROPAGATE
- FLD_PROPAGATE_FORM
- FLD_REINDEX_FOLDER_CONTENTS
- FLD_RETRIEVE_CHILD_FILES
- FLD_RETRIEVE_CHILD_FOLDERS
- FLD_SUBSCRIBE
- FLD_TEST_USER_CAPABILITIES
- FLD_UNFILE
- FLD_UNSUBSCRIBE

8.2.1 FLD_BROWSE

Service that is used to browse through the folder structure. It can be used to paginate through the folder structure in these browse modes:

- Paging through folders and files separately (default behavior)
- Paging through folders and files combined (must set doCombinedBrowse=true)

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s_service.htm

Required Service Parameters

- item: (Required if no fFolderGUID, no path, and no items are specified.) The item to browse. Specify in the form path:path to item or fFolderGUID is specified, fFolderGUID:GUID of item. Can be used in both browse modes.
- items: (Required if no fFolderGUID, no path, and no item are specified.) The items to browse. Specify in the form of a comma-delinated list of identifiers in the form path:path to item or fFolderGUID:GUID of item. Can be used in both browse modes.
- path: (Required if no lFolderGUID is specified.) The full path to the current folder. Can be used in both browse modes.
- fFolderGUID: (Required if no path is specified.) Can be used instead of the path to reference the current folder. Can be used in both browse modes.

Optional Service Parameters

- fldapp: Specifies the Folders Application of the location to which the user is browsing. Can be used in both browse modes.
- doCombinedBrowse: (Integer) If set, performs the service in a combined pagination mode. Default is 0 (zero).
- foldersFirst: (Integer) If set, lists folders before files in the combined pagination mode. Default is 1.
- folderCount: (Integer) The number of folders to return. Default is 50. Can be used in separate browse modes.
- folderStartRow: (Integer) The row number at which to start returning data. Used for pagination. Default is 0 (zero). Can be used in separate browse modes.
- fileCount: (Integer) The number of files to return. Default is 50. Can be used in separate browse modes.
- fileStartRow: (Integer) The row number at which to start returning data. Used for pagination. Default is 0 (zero). Can be used in separate browse modes.
- combinedCount: (Integer) The number of items (folders plus files) to return. Default is 100. Can be used in combined browse modes.
- combinedStartRow: (Integer) The row number at which to start returning data. Used for pagination. Default is 0 (zero). Can be used in combined browse modes.
- doRetrieveTargetInfo: (Integer) If set, returns target folder's information for all shortcuts retrieved in the ChildTargetFolders ResultSet. Default is 0 (zero). Can be used in both browse modes.
- doMarkFavorites: (Integer) If set, adds a fIsFavorite field in the ResultSet to indicate if the folder or file is favorite. It is a favorite if it has a shortcut in the Favorites folder. Default is 0 (zero). Can be used in both browse modes.
- doRetrieveDocumentURL: (Integer) If set, adds a URL field in the files ResultSet that is the absolute Web location of the document. Default is 0 (zero). Can be used in both browse modes.
- doRetrieveUniqueLinks: (Integer) If set, post processes the results to return only unique links. For example, if folder's shortcut and folder itself are in the ResultSet,

- only folder itself will be returned. Same for files. Default is 0 (zero). Can be used in both browse modes.
- foldersFilterParams: The comma-delinated list of filter parameters for the browse. For example,
 - foldersFilterParams=fIsContribution&fIsContribution=1 will return folders with fIsContribution=1. Can be used in both browse modes.
- foldersFilterQuery: Standard query for filtering out the folders. This query is in DATABASE engine format in the FolderFolders table. For example, foldersFilterQuery=fFolderName<substring>`test`. Can be used in both browse modes.
- filesFilterQuery: Standard query for filtering out the files. This query is in DATABASE engine format in the FolderFiles table. For example, filesFilterQuery=fFileName<substring>`test`. Can be used in both browse modes.
- foldersSortField: Field name from the FolderFolders table on which to sort the records. Can be used in both browse modes.
- foldersSortOrder: Specify Asc or Desc for an ascending or descending sort. Can be used in both browse modes.
- \$fieldName: The value for the specified field in the foldersFilterParams and filesFilterParams parameters. Can be used in both browse modes.
- filesFilterParams: The comma-delinated list of filter parameters on the browse. For example, filesFilterParams=fOwner&fOwner=sysadmin will return folders with fOwner=sysadmin. Can be used in both browse modes.
- filterFavorites: If set to Folders, this filters results to only include folders that are favorites. If set to Files, this filters only files that are favorites. If set to 1, this filters both folders and files that are favorites. By default, this filters none. Can be used in both browse modes.
- filterFollows: If set to Folders, this filters results to only include folders that are followed. If set to Files, this filters only files that are followed. If set to 1, this filters both folders and files that are followed. By default, it filters none. Can be used in both browse modes.

- ResultSets:
 - FolderInfo: Information about the folder the user is currently browsing.
 - ChildFolders: Information about all of the folders that exist within this particular folder.
 - ChildTargetFolders: Information about all of the target folders of shortcuts in the ChildFolders ResultSet.
 - ChildFiles: Information about all of the files that exist within this particular folder.
- numFolders: (string) The number of folders in the ChildFolders ResultSet.
- hasMoreChildFolders: (Boolean) This is true if the request did not return all of the child folders. This occurs when the folderCount value is reached and additional folders could have been returned.
- numFiles: (Integer) The number of files in the ChildFiles ResultSet.

- TotalChildFoldersCount: (Integer) The total number of items (folders and files) in the parent folder.
- TotalChildFilesCount: (Integer) The total number of files in the parent folder.
- TotalChildItemsCount: (Integer) The total number of items (folders and files) in the parent folder.
- hasMoreChildFiles: (Boolean) This is true if the request did not return all of the child files. This occurs when the fileCount value is reached and additional documents could have been returned.
- hasMoreChildItems: (Boolean) This is true if the request did not return all of the child items (folders and files). This occurs when count is reached and there are additional items that could have been returned.

8.2.2 FLD_BROWSE_POPUP

Services that prepares a small pop-up containing a tree control which can be used to browse through the Folders structure and then select either documents or folders.

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s service.htm

Required Service Parameters

target: The entity type the user is targeting with this pop-up. Can be set to file or *folder* depending on what the user is allowed to select.

Results

- ResultSets:
 - ChildFolders: The child folders of the root item.
 - ChildFiles: The child files of the root item. Will be null if the target is not set to file.

8.2.3 FLD COPY

Service that allows a user to copy items from one location to another in Folders.

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s service.htm

Required Service Parameters

- destination: The destination to which all of the items will be copied. This identifier must be in the form *path:\$PATH'* or *fFolderGUID:\$FOLDER_GUID*.
- item1: The item to be copied. If more than one item is being copied in this operation, you can specify item2, item3, and so forth. Specify these items either as IDs or as full paths. The items must be in the form of path:\$PATH, fFolderGUID:\$FOLDER_GUID, or fFileGUID:\$FILE_GUID.

Optional Service Parameters

- overwrite: Set to 1 to overwrite any destinations that already exist in the case of naming conflicts. Items that are overwritten are moved to the trash.
- copyOwnerFilesToNewFiles: Set to 1 to copy all files of type owner to a new owner file. This action causes a new checkin to occur for each owner file being copied. By default, the copy of an owner file is a "soft" file that points to the source document.
- copySoftFilesToNewFiles: Set to 1 to create new content items for all soft files being copied. By default, a copy of a soft file is another soft file pointing to the same content item.
- constructDialog: Set this to 1 to make the server automatically construct an HTML dialog with the results of the copy action or information about why the copy action may have failed.

Results

- ResultSets:
 - ItemsRequiringOverwrite: If the overwrite flag is not set, and if any conflicting items exist in the destination, this ResultSet lists what conflicts exist. If there are any conflicts, none of the items are moved. This return allows for a quick server response on potential conflicts, enabling the client application to prompt the user for overwrite.
 - TaskList: Information about the tasks performed and which tasks were successful
- didBackgroundTask: (string) Set this parameter to 1 if some or all of the task was backgrounded.
- mainTasksComplete: (string) Set this parameter to 1 if the main tasks were completed, even if the service was backgrounded. It is useful to know that items have been copied, even if the post-copy checks have not yet finished.
- dialogMarkup: (string) HTML for the dialog.
- dialogScript: (string) JavaScript required to display the dialog.

8.2.4 FLD_CREATE_FILE

Service that creates a link to a document in Folders.

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s service.htm

Required Service Parameters

fParentGUID: The GUID of the parent folder in which the new link will be created.

Optional Service Parameters

\$fileMeta: Metadata to be assigned to the link.

File Name Restrictions

- A file name cannot start or end with a space.
- A file name cannot be longer than 250 characters.

Restricted characters:

Table 8–1 Restricted File Name Characters

Character	Description

8.2.5 FLD_CREATE_FILE_FORM

Service that displays a Folders form for creating a new link object which points to a document.

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s_service.htm

Required Service Parameters

- fParentGUID: The GUID of the parent folder in which the new link will be created.
- fFileType: The type of link to create.
- dDocName: The document name of the target of the link.

Optional Service Parameters

- fApplication: The Folders Application creating the folder. The default is framework.
- \$fileMeta: Default metadata values for the link.

Results

- ResultSets:
 - ParentInfo: Information about the parent folder.
- parentPath: (string) The full path to the parent folder.

8.2.6 FLD_CREATE_FOLDER

Service that creates a folder in Folders.

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s service.htm

Required Service Parameters

fParentGUID: The GUID of the parent folder in which the new folder will be created.

Optional Service Parameters

\$folderMeta: Metadata to be assigned to the folder.

Folder Name Restrictions

- A folder name cannot start or end with a space.
- A folder name cannot be longer than 250 characters.
- Restricted characters:

8.2.7 FLD_CREATE_FOLDER_FORM

Service that displays a Folders form for creating new folders.

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s_service.htm

Required Service Parameters

fParentGUID: The GUID of the parent folder in which the new folder will be created.

Optional Service Parameters

- fApplication: The Folders Application creating the folder. The default is framework.
- fFolderType: The type of folder to create. The default is *owner*.
- \$folderMeta: Default metadata values for the folder.
- fTargetGUID: If the fFolderType value is *soft*, this must be the GUID of the target folder.

Results

- ResultSets:
 - ParentInfo: Information about the parent folder.
 - TargetInfo: Information about the target folder, if there is a target folder.
- parentPath: (string) The full path to the parent folder.
- targetPath: (string) The full path to the target, if there is a target.

8.2.8 FLD DELETE

Service that allows a user to delete one or more items from the Framerwork Folders hierarchy. This immediately deletes the items, even if the items are not already in the

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s service.htm

Required Service Parameters

- item1: The item to be deleted. If more than one item is being deleted in this operation, then you can specify item2, item3, and so on. These items can be specified either as IDs or as full paths, and they must be specified in one of these forms:
 - path:\$PATH
 - fFolderGUID:\$FOLDER_GUID
 - fFileGUID:\$FILE GUID

Optional Service Parameters

constructDialog: (Boolean) Set this parameter to 1 if you want the server to automatically construct an HTML dialog with the results of the FLD_DELETE operation or information about why the operation may have failed.

Results

- ResultSets:
 - TaskList: Information about the tasks performed and which were successful.
- didBackgroundTask: (Boolean) Set to 1 if some or all of the task was backgrounded.
- dialogMarkup: (string) HTML for the dialog.
- dialogScript: (string) JavaScript necessary to display the dialog.
- mainTasksComplete: (Boolean) Set to 1 if the main tasks were completed, even if the service was backgrounded. It is useful to know that items have been deleted, even if the post-delete checks have not yet finished.

8.2.9 FLD EDIT FILE

Service that edits a link to a document in Folders.

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s_service.htm

Required Service Parameters

fFileGUID: The ID of the link being edited.

Optional Service Parameters

\$fileMeta: Metadata to be assigned to the link being edited.

8.2.10 FLD EDIT FILE FORM

Service that displays a form for editing links to documents in Folders.

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s_service.htm

Required Service Parameters

fFileGUID: The GUID of the link being edited.

Results

- \$fileMeta: Metadata values currently assigned to the link being edited.
- folderPath: (string) The full path to the link being edited.

8.2.11 FLD_EDIT_FOLDER

Service that edits a folder in Folders.

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s_service.htm

Required Service Parameters

fFolderGUID: The ID of the folder being edited.

Optional Service Parameters

\$folderMeta: Metadata to be assigned to the folder being edited.

8.2.12 FLD_EDIT_FOLDER_FORM

Service that displays a form for editing folders in Folders.

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s_service.htm

Required Service Parameters

fFolderGUID: The GUID of the folder being edited.

Results

- ResultSets:
 - \$folderMeta: Metadata values currently assigned to the folder being edited.
- folderPath: (string) The full path to the folder being edited.
- targetPath: (string) The full path to the target if the folder being edited is a shortcut.
- TargetInfo: Information about the target if the folder being edited is a shortcut.

8.2.13 FLD_EDIT_METADATA_RULES

Service that edits metadata rules assigned to a folder in Folders.

Service Class: intradoc.folders.FoldersService

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s_service.htm

Required Service Parameters

- fFolderGUID: The GUID of the folder being edited.
- \$fieldName: The value for the specified field.

Optional Service Parameters

- \$fieldName:isDefault: (Boolean) Set to 1 if the specified field is forced upon all children of the folder being edited.
- \$fieldName:isForced: (Boolean) Set to 1 if the specified field is forced upon all children of the folder being edited.
- \$fieldName:isRecursiveForced: (Boolean) Set to 1 if the specified field is forced upon all children of the folder being edited and upon its children's children.
- \$fieldName:inhibitPropagation: (Boolean) Set to 1 if the specified field can be propagated to children of the folder being edited.

8.2.14 FLD_EDIT_METADATA_RULES_FORM

Service that displays a form for editing content metadata defaults assigned to a folder. in Folders.

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s_service.htm

Required Service Parameters

fFolderGUID: The GUID of the folder being edited.

- ResultSets:
 - FolderInfo: Information about the folder that was edited.
- \$fieldName: (string) The value for the specified field.

- \$fieldName:isDefault: (Boolean) Set to 1 if the specified field has a default value associated with it.
- \$fieldName:isForced: (Boolean) Set to 1 if the specified field is forced upon all children of the folder.
- \$fieldName:isRecursiveForced: (Boolean) Set to 1 if the specified field is forced upon all children of the folder and upon its children's children.
- \$fieldName:inhibitPropagation: (Boolean) Set to 1 if the specified field can be propagated to children of the folder.
- folderPath: (string) The full path to the folder.
- dpTriggerField: (string) The profile trigger field, if one exists.
- dpTriggerValue: (string) The current profile trigger value, if one exists.
- dpDisplayLabel: (string) The current profile display label, if one exists.

8.2.15 FLD_FOLDER_MIGRATION_STATUS

Service that displays a dialog for migrating Folders_g legacy folder data into FrameworkFolders data structures. A history of migrations and status of any ongoing migration is displayed.

Service Class: intradoc.folders.FoldersService

IdcHomeDir/components/frameworkfolders/resources/frameworkfolders service.htm

8.2.16 FLD FOLDER SEARCH

Service that search for folders in Folders and returns the result.

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s_service.htm

Required Service Parameters

- QueryTest: The text of the search query.
- SortField: The field on which to sort the search results.
- SortOrder: The order in which to sort the search results. Use one of these:
 - asc
 - desc

Results

- ResultSets:
 - SEARCH RESULTS: The results of the search.

8.2.17 FLD FOLDER SEARCH FORM

Service that displays a form for searching folders in Folders.

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s_service.htm

8.2.18 FLD_GET_CHOOSE_DESTINATION_DIALOG

Service that displays a dialog for choosing a destination during a move or copy operation in Folders.

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s_service.htm

Required Service Parameters

- action: Set to move or copy depending on the action being performed.
- item1: The item to be copied. If more than one item is being touched in this operation, then *item5*, *item3*, and so on can be specified. These items can be specified either as IDs or as full paths, and they must be in the form of one of these:
 - path:\$PATH
 - fFolderGUID:\$FOLDER_GUID
 - fFileGUID:\$FILE_GUID

Results

- dialogMarkup: (string) HTML for the dialog.
- dialogScript: (string) JavaScript required to display the dialog.

8.2.19 FLD_GET_CREATE_LINK_DIALOG

Service that displays a dialog for creating a link to an existing content item in Folders.

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s_service.htm

Required Service Parameters

- fParentGUID: The GUID of the folder in which to create the link. Either this or dDocName must be set.
- dDocName: The target document of the new link. Either this or fParentGUID must be set.
- fFileName: The type of link to create.

- dialogMarkup: (string) HTML for the dialog.
- dialogScript: (string) JavaScript required to display the dialog.

8.2.20 FLD_GET_CREATE_SHORTCUT_DIALOG

Service that displays a dialog for creating a shortcut to an existing folder in Folders.

Service Class: intradoc.folders.FoldersService

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s_service.htm

Required Service Parameters

- fTargetGUID: The target document ID of the shortcut.
- fParentGUID: The parent folder ID where the shortcut will be created.

Results

- dialogMarkup: (string) HTML for the dialog.
- dialogScript: (string) JavaScript required to display the dialog.

8.2.21 FLD_GET_RENAME_FILE_DIALOG

Service that retrieves a dialog used to rename a file in Folders.

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s_service.htm

Required Service Parameters

fFileGUID: The GUID of the file to rename.

Results

- dialogMarkup: (string) HTML for the dialog.
- dialogScript: (string) JavaScript required to display the dialog.

8.2.22 FLD_GET_RENAME_FOLDER_DIALOG

Service that retrieves a dialog used to rename a folder in Folders.

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s_service.htm

Required Service Parameters

fFolderGUID: The GUID of the folder to rename.

Results

- dialogMarkup: (string) HTML for the dialog.
- dialogScript: (string) JavaScript required to display the dialog.

8.2.23 FLD INFO

Service that returns information about a particular folder or file in Folders.

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s service.htm

Required Service Parameters

- path: The path to the folder or file whose information is being requested. This parameter must be specified if no fFolderGUID or fFileGUID parameter is specified.
- fFolderGUID: The GUID of the folder whose information is being requested. This parameter must be specified if no path or fFileGUID parameter is specified.
- fFileGUID: The GUID of the file whose information is being requested. This parameter must be specified if no path or fFolderGUID parameter is specified.

Results

- ResultSets:
 - FileInfo: Information about the link to the document (file). Also the metadata associated with the document itself.
 - FolderInfo: Information about the folder.
 - TargetInfo: Information about the target (shortcut).
- filePath: (string) The full path to the item if the item is a document link.
- folderPath: (string) The full path to the item if the item is a folder.
- targetPath: (string) The full path to the target item if the item is a shortcut.

8.2.24 FLD_LOAD_SOFT_LINKS_FOR_DOCUMENT

Service that loads all soft links which reference a particular content item in Folders.

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s_service.htm

Required Service Parameters

- dDocName: The name of the content item.
- dID: The identifier for the content item.

Optional Service Parameters

constructSoftLinkTableRows: (Boolean) Whether or not to construct HTML for the soft link table rows. The default is 1 (true).

- ResultSets:
 - softLinks: The soft links for the content item.
- softLinkTableRows: (string) HTML to display the soft link table rows.

8.2.25 FLD_MIGRATION_FOLDER_DATA

Service that migrates Folders_g legacy folder data into FrameworkFolders data structures.

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s_service.htm

8.2.26 FLD_MOVE

Service that moves one or more content items from one location to another in Folders.

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s_service.htm

Required Service Parameters

- destination: The destination where all of the items should be moved. If the destination is an existing folder, then all of the items being moved will be moved into that folder. If you are moving a single file, the destination may point to the location (including the new filename) where the file should be moved. This identifier should be in the form path:\$PATH or fFolderGUID:\$FOLDER_GUID.
- item1: The item to be moved. If more than one item is being moved in this operation, the item2, item3, and so on can be specified. These items can be specified either as IDs or as full paths. They must be in one of the following forms:
 - path:\$PATH
 - fFolderGUID:\$FOLDER_GUID
 - fFileGUID:\$FILE GUID

Optional Service Parameters

- overwrite: (Boolean) Set to 1 to overwrite any destinations that already exist in the case of naming conflicts. Items that are overwritten are moved to the trash.
- constructDialog: (Boolean) Set to 1 to make the server automatically construct an HTML dialog with the results of the move operation or information about why the move may have failed.

- ResultSets:
 - ItemsRequiringOverwrite: If the overwrite flag is not set, and if any conflicting items exist in the destination, this ResultSet is returned listing which conflicts exist. If there are any conflicts, none of the items are moved. This allows for a quick server response on potential conflicts, and allows the client application to prompt the user for overwrite.
 - TaskList: Information about the tasks performed and which were successful.
- dialogMarkup: (string) HTML for the dialog.
- dialogScript: (string) JavaScript required to display the dialog.

- didBackgroundTask: (string) This is set to 1 if some or all of the task was backgrounded.
- mainTasksComplete: (string) This is set to 1 if the main tasks were completed, even if the service was backgrounded. It is useful to know that items have been moved, even if the post move sanity check has not yet finished.

8.2.27 FLD_PRE_CHECKIN

Service that provides information so a requesting client can determine if a metadata entry dialog should be presented to a user before checking in a content item.

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s service.htm

Required Service Parameters

- fFolderGUID: The base folder ID for items in CONTENTS. This parameter must be used if fFolderPATH is not set.
- fFolderPath: The base folder path for items in CONTENTS. This parameter must be used if fFolderGUID is not set.
- CONTENTS: (ResultSet) Set of paths for folders and content items relative to the base folder. If the specified path ends with a "/" (slash) character, the path is assumed to be a folder, otherwise it is assumed to be a content item.
- EXTRA_INFO_FIELDS: (ResultSet) A list of extra information fields to be returned for each item. Extra information field data is only populated for content items that already exist. Valid fields that can be requested are any of the columns from the REVISIONS, DOCMETA or DOCUMENTS tables as well as these fields (as in WebDAV): getcontentlength, getcontenttype, getlastmodified, creationdate.

Optional Service Parameters

allowPromptForExistingItem: (Boolean) If set to 1, enables client requests to allow prompting for second revisions. Normally prompts occurs only for first revisions.

Results

- ResultSet: REQUIRES METADATA PROMPT: For each row in CONTENTS, this returned ResultSet contains these fields:
 - FLAG field: Two flag characters: {flag1}{flag2}. For flag1, if set to 1 the specified path already exists, otherwise it does not. For *flag2*, if set to 1 the client is directed to present a prompt dialog for entering metadata for this item.
 - DP_TRIGGER_VALUE: The document profile that was used for this item. It shows one column for each field specified in the EXTRA_INFO_FIELDS parameter.

8.2.28 FLD PROPAGATE

Service that propagates metadata down through the folder structure in Folders.

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s_service.htm

Required Service Parameters

- \$fieldName:isSelected: Set to 1 to propagate the specified field.
- \$fieldName: The value of the field to propagate

Optional Service Parameters

propagateThroughSoftLinks: (Boolean) Set to 1 to propagate metadata to documents pointed to by soft links.

8.2.29 FLD_PROPAGATE_FORM

Service that displays a form to allow people to propagate metadata to all children of a folder in Folders.

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s_service.htm

Required Service Parameters

fFolderGUID: The ID of the folder.

Results

- ResultSets:
 - FolderInfo: Information about the folder.
- folderPath: The full path to the folder.
- \$fieldName: The default value of the field to propagate. This value is taken from metadata rules or the metadata of the folder itself.
- dpTriggerField: The profile trigger field, if one exists.

8.2.30 FLD_REINDEX_FOLDER_CONTENTS

Service that reindexes all currently indexed documents within a particular folder in Folders. Only a system administrator can call this service.

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s service.htm

Required Service Parameters

fFolderGUID: The GUID of the folder.

8.2.31 FLD RETRIEVE CHILD FILES

Service that enables easy pagination of child documents returned by the FLD_ BROWSE service in Folders.

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s_service.htm

Required Service Parameters

- path: The full path to the current folder. This parameter must be used if no folderGUID parameter is specified.
- fFolderGUID: The GUID of the folder. This parameter an be specified instead of the path to reference the current folder.

Optional Service Parameters

- fldapp: The Folders Application of the location to be browsed.
- folderCount: The number of folders to return. The default is 50.
- folderStartRow: The row number at which to start returning data. Used for paging responses. The default is 0.
- constructListingMarkup: Specify whether or not the markup for the additional folders should be returned. This parameter is useful when performing this request in an AJAX environment. The default is 1 (true).

Results

- ResultSets:
 - FolderInfo: Information about the folder currently being browsed.
 - ChildFolders: Information about all of the folders that exist within this particular folder.
 - FileListingHTML: HTML that can be used to display the additional documents. Only returned when constructListingMarkup is set to 1 (true).
 - FileListingScript: JavaScript that must be run to display the additional documents. Only returned when constructListingMarkup is set to 1 (true).
- numFolders: The number of folders in the ChildFolders ResultSet.
- hasMoreChildFiles: This is 1 (true) if the request did not return all of the child files. This occurs when fileCount is reached and there are additional documents that could have been returned.

8.2.32 FLD_RETRIEVE_CHILD_FOLDERS

Service that enables easy pagination of child folders returned by the FLD_BROWSE service in Folders.

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s_service.htm

Required Service Parameters

- path: The full path to the current folder. This parameter must be used if no folderGUID parameter is specified.
- fFolderGUID: The GUID of the folder. This parameter an be specified instead of the path to reference the current folder.

Optional Service Parameters

- fldapp: The Folders Application of the location to be browsed.
- folderCount: The number of folders to return. The default is 50.
- folderStartRow: The row number at which to start returning data. Used for paging responses. The default is 0.
- constructListingMarkup: Specify whether or not the markup for the additional folders should be returned. This parameter is useful when performing this request in an AJAX environment. The default is 1 (true).

Results

- ResultSets:
 - FolderInfo: Information about the folder currently being browsed.
 - ChildFolders: Information about all of the folders that exist within this particular folder.
 - FolderListingHTML: HTML that can be used to display the additional folders. Only returned when constructListingMarkup is set to 1 (true).
 - FolderListingScript: JavaScript that must be run to display the additional folders. Only returned when constructListingMarkup is set to 1 (true).
- numFolders: The number of folders in the ChildFolders ResultSet.
- hasMoreChildFolders: This is 1 (true) if the request did not return all of the child folders. This occurs when fileCount is reached and there are additional folders that could have been returned.

8.2.33 FLD_SUBSCRIBE

Service that allows a user to subscribe to a folder. The subscription notification is sent to the user's e-mail as specified in the profile. If neither the profile e-mail address or the dSubscriptionEmail setting is provided, Content Server sets the flag isNoSubscriptionNotificationSent=1 in the response binder.

Service Class: intradoc.folders.FoldersService

Location: IdcHomeDir/resources/frameworkfolders_service.htm

Required Service Parameter

fParentGUID: The ID of the folder to which the user will subscribe.

Optional Service Parameters

- dSubscriptionEmail: The subscriber's e-mail address. If a non-empty value is provided, the service uses the value to update the user's e-mail value in the profile.
- constructDialog: (boolean) Set this to 1 (true) if you want Content Server to automatically construct an HTML dialog with the results of the subscription or information about why the subscription may have failed.

- dialogMarkup: HTML for the dialog.
- dialogScript: JavaScript needed to display the dialog.

8.2.34 FLD_TEST_USER_CAPABILITIES

Service that tests the capability of a user to perform an operation on a document, folder, or library, based on:

- user's authorization
- item's access control policy
- item's state
- enabled WebCenter Content components

Service Class: intradoc.folders.FoldersServices

Location: IdcHomeDir/resources/frameworkfolders_service.htm

Required Service Parameters

testedItems: A list of items to be tested. The type and ID of each item should be specified in the string testedItems with the format Type1:ID1,Type2:ID2,Type3:ID3

Type is:

- fFolderGUID for Folder
- fFileGUID for File
- dDocName for Document
- dID for Document Revision

ID is the value of those fields.

For example:

fFolderGUID: folder001, dDocName: doc001, fFolderGUID: folder002, fFileGUID: file001, dID: docRevision001

- testedCapabilities: A list of capabilities separated by a comma; for example, MOVE, COPY, DELETE. The full list of all capabilities that can be tested is:
 - CREATE_CHILD_FOLDER
 - CREATE_CHILD_DOCUMENT
 - FILE_DOCUMENT
 - UNFILE_DOCUMENT
 - UPDATE METADATA
 - UPDATE_ACCESS_CONTROL
 - LATEST_REVISION
 - **MOVE**
 - **COPY**
 - DELETE
 - PROPAGATE_METADATA
 - CHECK_OUT
 - CANCEL_CHECK_OUT
 - CHECK_IN_NEW_REVISION

- DELETE_REVISION
- RESTORE_REVISION
- SHARE_PERSONAL_FOLDER
- FOLLOW
- UNFOLLOW

Capabilities Supported for Testing

Table 8–5

Capability	Folder owner link (fFolderGUID)	Folder soft link (fFolderGUID)	File owner link (fFileGUID)	File soft link (fFileGUID)	Document (dDocName)	Revision (dID)	Description
CREATE_CHILD_ FOLDER	TEST	<u> </u>			<u> </u>		Can the user create a new subfolder in this folder?
CREATE_CHILD_ DOCUMENT	TEST						Can the user create a new document in this folder.
FILE_DOCUMENT					TEST		Can the user create an owner link to this document?
UNFILE_DOCUMENT			TEST		TEST(2)		Can the user delete this owner link (without deleting the document)?
UPDATE_METADATA	TEST	TEST	TEST	TEST		TEST	Can the user update the metadata of this item?
UPDATE_ACCESS_ CONTROL	TEST					TEST	Can the user change the access control fields of this folder or file?
LATEST_REVISION						TEST	Is this the latest revision of the document?
MOVE	TEST	TEST	TEST	TEST	TEST(2)		Can the user move this folder, document, or shortcut?
COPY	TEST	TEST	TEST	TEST	TEST(2)		Can the user copy this folder, document, or shortcut?
DELETE	TEST	TEST	TEST(1)	TEST	TEST		Can the user delete this folder, document, or shortcut?
PROPAGATE_ METADATA	TEST						Can the user propagate the metadata fields of this folder? It returns false for personal library/folders (LibraryType=4).

Table 8-5 (Cont.)

Capability	Folder owner link (fFolderGUID)	Folder soft link (fFolderGUID)	File owner link (fFileGUID)	File soft link (fFileGUID)	Document (dDocName)	Revision (dID)	Description
CHECK_OUT					TEST		Can the user check out this document? It returns false for documents in personal library/folder.
CANCEL_CHECK_ OUT					TEST		Can the user cancel the check out of this document?
CHECK_IN_NEW_ REVISION					TEST		Can the user check in a new revision of this document? It returns TRUE for a document that is checked out by the current user, or is not checked out and the user has permissions to do an auto-checkout and checkin cycle.
DELETE_REVISION						TEST	Can the user delete this revision of this document?
RESTORE_REVISION						TEST	Can the user create a new revision of this document as a copy of this revision?
SHARE_PERSONAL_ FOLDER	TEST(3)						Can the user share this personal library or personal folder?
FOLLOW	TEST				TEST		Can the user follow this folder, document, or revision? A document or folder is considered "followed" if it is subscribed to directly.
UNFOLLOW	TEST				TEST		Can the user "unfollow" this folder, document, or revision?

Notes

- (1) Equivalent to testing DELETE on the target Revision.
- (2) Need to be able to test capabilities without knowing the fFileGUID.
- (3) A personal library or personal folder can be shared only if each of the following conditions hold: (a) the ancestor personal library is not shared (for a personal folder); (b) no ancestor personal folder is shared (for a personal folder); and (c) no descendant personal folder is shared. If one or more of these conditions is not true, the user does not have the capability, and the FLD_TEST_USER_CAPABILITIES service should return the fFolderGUIDs of the library or folder that prevent the personal library or folder from being shared.

Results

ResultSet:

- TestResults: The test results in which:
 - "1" means "True" and the current user has the capability
 - "0" means "False"
 - "-1" means "N/A" (not applicable)
 - a string of shared ancestor/descendant folders will be returned for the failed test of the SHARE_PERSONAL_FOLDER capability because of existing shared ancestor/descendants
 - if SHARE_PERSONAL_FOLDER fails because the user doesn't have the share permission on the item, the service returns "0"

8.2.35 FLD_UNSUBSCRIBE

Service that allows a user to unsubscribe a folder.

Service Class: intradoc.folders.FoldersService

Location: IdcHomeDir/resources/frameworkfolders service.htm

Required Service Parameter

fParentGUID: The ID of the folder to be unsubscribed.

Optional Service Parameter

constructDialog: (boolean) Set this to 1 (true) to have Content Server automatically construct an HTML dialog with the results of the unsubscription or information about why the unsubscription may have failed.

Results

- dialogMarkup: HTML for the dialog.
- dialogScript: JavaScript needed to display the dialog.

8.2.36 FLD UNFILE

Service that allows a user to unfile one or more items from the Folders hierarchy. This immediately deletes the link object without affecting the target document in any way.

Service Class: intradoc.folders.FoldersService

Location:

IdcHomeDir/components/frameworkfolders/resources/frameworkfolder s_service.htm

Required Service Parameters

item1: The item to be unfiled. If more than one item is being unfiled in this operation, then *item*2, *item*3, and so on can be specified. These items can be specified either as IDs or as full paths. They must be in the form of path:\$PATH or fFileGUID:\$FILE_GUID.

Optional Service Parameters

constructDialog: Set this to 1 if you want the server to automatically construct an HTML dialog with the results of the unfile or information about why the unfile may have failed.

- ResultSets:
 - TaskList: Information about the tasks performed and which were successful.
- didBackgroundTask: This is set to 1 if some or all of the task was backgrounded.
- mainTasksComplete: This is set to 1 if the main tasks were completed, even if parts of the service were backgrounded. It is useful to know that items have been unfiled, even if the post unfile checks have not yet finished.
- dialogMarkup: HTML for the dialog.
- dialogScript: JavaScript required to display the dialog.

Records Services

This chapter describes the services available when using and customizing Oracle WebCenter Content: Records services.

This chapter covers the following topics:

- Section 9.1, "About Records Services"
- Section 9.2, "Records Services"

9.1 About Records Services

Information about what is a WebCenter Content service and how services can be used is provided in Section 2, "Using Services." Information about basic services structure, attributes, actions, and a service example is provided in Section 3, "Customizing Services." You should be familiar with this information before customizing current services or creating new services

The locations for specific Records services are listed within each individual service.

Note: The most commonly used services have more extensive descriptions.

Important: All services have at least one required parameter. The IdcService parameter takes the name of the service as its argument. If other parameters are required, they are noted in the description of the service.

9.2 Records Services

The following services are used in Records functions:

- ACTIVATE_SERVICE
- APPROVE_DELETE_SERVICE
- BROWSE_CATEGORY_FORM
- BROWSE_FOLDER_FORM
- BROWSE_SERIES_FORM
- CHECKIN_NEW_REVISION_SERVICE
- CHECKIN_SIMILAR_FORM

- CLEAR_FOLDER_CANCELLED_DATE
- CLEAR_FOLDER_EXPIRATION_DATE
- CLEAR FOLDER OSBOLETE DATE
- CLEAR_FOLDER_RESCINDED_DATE
- CLEAR_FOLDER_REVIEW_DATE
- CLEAR_RECORD_CANCELLED_DATE
- CLEAR_RECORD_EXPIRATION_DATE
- CLEAR_RECORD_OBSOLETE_DATE
- CLOSE_FOLDER
- CREATE_FOLDER
- CREATE_FOLDER_FORM
- DELETE_ALL_BUT_LAST_N_REVISIONS_SERVICE
- DELETE_FOLDER
- DELETE REVISION SERVICE
- EDIT FOLDER
- EDIT_FOLDER_FORM
- FREEZE_FOLDER
- FREEZE RECORD
- INFO_CATEGORY_FORM
- INFO_FOLDER_FORM
- INFO_FOLDER_LIFECYCLE
- INFO_FOLDER_METADATA_HISTORY
- INFO_FOLDER_REVIEW_HISTORY
- INFO_RECORD_LIFECYCLE
- INFO RECORD METADATA HISTORY
- INFO_RECORD_REVIEW_HISTORY
- INFO_SERIES_FORM
- MARK_FOLDER_ACTIVATION_DATE
- MARK_FOLDER_CANCELLED_DATE
- MARK_FOLDER_EXPIRATION_DATE
- MARK_FOLDER_OBSOLETE_DATE
- MARK_FOLDER_RESCINDED_DATE
- MARK_FOLDER_REVIEW_DATE
- MARK_FOLDER_REVIEW_DATE_ RECURSIVE
- MARK_RECORD_CANCELLED_DATE
- MARK_RECORD_EXPIRATION_DATE
- MARK_RECORD_OBSOLETE_DATE

- MARK_RECORD_RESCINDED_DATE
- MARK_RECORD_REVIEW_DATE
- MOVE FOLDER
- PREVIEW_RECORD_LIFECYCLE
- RMA_CLOSE_SERVICE
- RMA_CUTOFF_SERVICE
- RMA_DESTROY_SERVICE
- RMA_EXPORT_ARCHIVE_SERVICE
- RMA_EXPORT_SERVICE
- RMA_MARK_COMPLETED
- RMA_NO_ACTION_SERVICE
- RMA_OBSOLETE_SERVICE
- RMA_SCRUB_SERVICE
- RMA SUPERSEDE SERVICE
- UNCLOSE FOLDER
- UNFREEZE_FOLDER
- UNFREEZE_RECORD

9.2.1 ACTIVATE_SERVICE

This service is used to set an Activate disposition action date.

Additional Required Service Parameters

dDispositionID: The unique identifier of the disposition action to be processed.

9.2.2 APPROVE_DELETE_SERVICE

This service is used to an Approve Delete disposition action date.

Additional Required Service Parameters

dDispositionID: The unique identifier of the disposition action to be processed.

9.2.3 BROWSE CATEGORY FORM

This service is used to retrieve a page used to browse the contents of a retention category in the retention schedule.

Additional Required Service Parameters

dCategoryID: The unique identifier of the retention category to be retrieved.

9.2.4 BROWSE_FOLDER_FORM

This service is used to retrieve a page used to browse the contents of a record folder in the retention schedule.

dFolderID: The unique identifier of the record folder to be retrieved.

9.2.5 BROWSE_SERIES_FORM

This service is used to retrieve a page used to browse the contents of a series in the retention schedule.

Additional Required Service Parameters

dSeriesID: The unique identifier of the series to be retrieved.

9.2.6 CHECKIN_NEW_REVISION_SERVICE

This service is used to check in the latest revision of a content item as a new revision. This is usually used to trigger a workflow.

9.2.7 CHECKIN_SIMILAR_FORM

This service is used to retrieve the Check In Similar page. This is a check-in page with metadata fields already filled in based on the previous content item checked in.

Additional Required Service Parameters

dID: The unique content ID for the item already checked in.

9.2.8 CLEAR FOLDER CANCELLED DATE

This service is used to clear the date for a canceled record folder.

Additional Required Service Parameters

dFolderID: The unique identifier of the record folder to be processed.

9.2.9 CLEAR_FOLDER_EXPIRATION_DATE

This service is used to clear the expiration date for a canceled record folder.

Additional Required Service Parameters

dFolderID: The unique identifier of the record folder to be processed.

9.2.10 CLEAR_FOLDER_OSBOLETE_DATE

This service is used to clear the date at which a record folder becomes obsolete.

Additional Required Service Parameters

dFolderID: The unique identifier of the record folder to be processed.

9.2.11 CLEAR FOLDER RESCINDED DATE

This service is used to clear the date at which a record folder is rescinded.

Additional Required Service Parameters

dFolderID: The unique identifier of the record folder to be processed.

9.2.12 CLEAR_FOLDER_REVIEW_DATE

This service is used to clear the date at which a record folder was last reviewed.

Additional Required Service Parameters

dFolderID: The unique identifier of the record folder to be processed.

9.2.13 CLEAR_RECORD_CANCELLED_DATE

This service is used to clear the date at which a content item was canceled.

Additional Required Service Parameters

dID: The unique identifier of the content to be processed.

9.2.14 CLEAR_RECORD_EXPIRATION_DATE

This service is used to clear the date at which an item was expired.

Additional Required Service Parameters

dID: The unique identifier of the item to be processed.

9.2.15 CLEAR RECORD OBSOLETE DATE

This service is used to clear the date at which an item becomes obsolete.

Additional Required Service Parameters

dID: The unique identifier of the item to be processed.

9.2.16 CLOSE FOLDER

This service is used to close an existing record folder in the retention schedule. No further content items can be checked into the closed record folder or its subfolders unless the user has the Folder Open/Close right or is the author of the closed folder.

Additional Required Service Parameters

dFolderID: The unique identifier of the record folder to be processed.

9.2.17 CREATE FOLDER

This service is used to create a new record folder in the retention schedule. This service is usually called from the CREATE_FOLDER_FORM page.

- dFolderID: A unique identifier of the new record folder.
- dFolderName: A name for the new record folder.
- dSecurityGroup: The security group to be associated with the new record folder.
- dDocAuthor: The person creating the new record folder.
- dCategoryID: The unique identifier of the retention category to be associated with the record folder.

9.2.18 CREATE_FOLDER_FORM

This service is used to call CREATE_FOLDER to create a new record folder in the retention schedule.

9.2.19 DELETE_ALL_BUT_LAST_N_REVISIONS_SERVICE

This service is used to process a Delete All But Last N Revisions disposition action. The administrator sets n, which is a variable.

Additional Required Service Parameters

dDispositionID: The unique identifier of the disposition action to be processed.

9.2.20 DELETE FOLDER

This service is used to delete an existing record folder from the retention schedule.

Additional Required Service Parameters

dFolderID: The unique identifier of the record folder to be processed.

9.2.21 DELETE_REVISION_SERVICE

This service is used to delete the latest revision of a content item.

Additional Required Service Parameters

dDispositionID: The unique identifier of the disposition action to be processed.

9.2.22 EDIT_FOLDER

This service is called by EDIT_FOLDER_FORM to update the (modified) properties of an existing record folder in the retention schedule.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be edited.
- dFolderName: The name of the record folder to be edited.
- dSecurityGroup: The security group associated with the record folder.
- dDocAuthor: The owner of the record folder.

9.2.23 EDIT FOLDER FORM

This service is used to call EDIT_FOLDER to edit a folder in the retention schedule.

Additional Required Service Parameters

dFolderID: The unique identifier of the record folder to be edited.

9.2.24 FREEZE FOLDER

This service is used to freeze an existing record folder in the retention schedule. Freezing a folder pauses any processing of disposition rules associated with the folder until the UNFREEZE_FOLDER service is called.

- dFolderID: The unique identifier of the record folder to be frozen.
- dCategoryID: The unique identifier of the retention category associated with the record folder.
- auditComments: The freeze name.
- auditComments2: The freeze reason.

9.2.25 FREEZE_RECORD

This service is used to freeze an existing content item. Freezing a content item pauses any processing of disposition rules associated with the content item until the UNFREEZE RECORD service is called.

Additional Required Service Parameters

- dID: The content ID of the content item to be frozen.
- auditComments: The freeze name.
- auditComments2: The freeze reason.

9.2.26 INFO_CATEGORY_FORM

This service is used to retrieve the information page of a retention category.

Additional Required Service Parameters

dCategoryID: The unique identifier of the retention category to be retrieved.

9.2.27 INFO_FOLDER_FORM

This service is used to retrieve the metadata information page and related content for a record folder in the retention schedule.

Additional Required Service Parameters

dFolderID: The unique identifier of the record folder to be retrieved.

9.2.28 INFO_FOLDER_LIFECYCLE

This service is used to retrieve the lifecycle information page for a record folder.

Additional Required Service Parameters

dFolderID: The unique identifier of the record folder.

9.2.29 INFO FOLDER METADATA HISTORY

This service is used to retrieve the metadata history of a record folder.

Additional Required Service Parameters

dFolderID: The unique identifier of the record folder.

9.2.30 INFO FOLDER REVIEW HISTORY

This service is used to retrieve the review history of a record folder.

dFolderID: The unique identifier of the record folder.

9.2.31 INFO_RECORD_LIFECYCLE

This service is used to retrieve the lifecycle information page for a content item.

Additional Required Service Parameters

- dID: The content ID of the item.
- dCategoryID: The unique identifier of the retention category associated with the

9.2.32 INFO RECORD METADATA HISTORY

This service is used to retrieve the metadata history of a content item.

Additional Required Service Parameters

dID: The content ID of the content item.

9.2.33 INFO_RECORD_REVIEW_HISTORY

This service is used to retrieve the review history of a content item.

Additional Required Service Parameters

dID: The content ID of the content item.

9.2.34 INFO_SERIES_FORM

This service is used to retrieve the information page for a series in the retention schedule.

Additional Required Service Parameters

dSeriesID: The unique identifier of the series.

9.2.35 MARK FOLDER ACTIVATION DATE

This service is used to set the current date for when a record folder will be activated.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be processed.
- currentDate: The date to be used for activation.

9.2.36 MARK FOLDER CANCELLED DATE

This service is used to set the current date for when a record folder will be canceled.

- dFolderID: The unique identifier of the record folder to be processed.
- currentDate: The date to be used for cancellation.

9.2.37 MARK_FOLDER_EXPIRATION_DATE

This service is used to set the current date for the expiration date for a record folder.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be processed.
- currentDate: The date to be used for expiration.

9.2.38 MARK_FOLDER_OBSOLETE_DATE

This service is used to set the current date for when a record folder becomes obsolete.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be processed.
- currentDate: The date to be used as the obsolete date.

9.2.39 MARK_FOLDER_RESCINDED_DATE

This service is used to set the current date for when a record folder will be rescinded.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be processed.
- currentDate: The date to be used as the rescinded date.

9.2.40 MARK FOLDER REVIEW DATE

This service is used to set the current date for when a record folder will be reviewed.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be processed.
- currentDate: The date to be used as the review date.

9.2.41 MARK_FOLDER_REVIEW_DATE_ RECURSIVE

This service is used to set the current date for when a record folder, including all of its child folders, will be reviewed.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be processed.
- currentDate: The date to be used as the review date.

9.2.42 MARK_RECORD_CANCELLED_DATE

This service is used to set the current date for when a content item will be canceled.

- dID: The content ID of the content item to be processed.
- currentDate: The date to be used as the cancellation date.

9.2.43 MARK_RECORD_EXPIRATION_DATE

This service is used to set the current date for when an item will expire.

Additional Required Service Parameters

- dID: The content ID of the item to be processed.
- currentDate: The date to be used as the expiration date.

9.2.44 MARK_RECORD_OBSOLETE_DATE

This service is used to set the current date to be used to make an item obsolete.

Additional Required Service Parameters

- dID: The content ID of the item to be processed.
- currentDate: The date to be used as the obsolete date.

9.2.45 MARK_RECORD_RESCINDED_DATE

This service is used to set the current date for when an item will be rescinded.

Additional Required Service Parameters

- dID: The content ID of the item to be processed.
- currentDate: The date to be used as the rescinded date.

9.2.46 MARK RECORD REVIEW DATE

This service is used to set the current date for when a content item will be reviewed.

Additional Required Service Parameters

- dID: The content ID of the content item to be processed.
- currentDate: The date to be used as the review date.

9.2.47 MOVE FOLDER

This service is used to move a record folder from one location in the retention schedule to another.

Additional Required Service Parameters

- dFolderID: The folder ID of the folder to be processed.
- dCategoryID: The folder category.

9.2.48 PREVIEW_RECORD_LIFECYCLE

This service is used to retrieve the lifecycle preview of a content item.

Additional Required Service Parameters

dID: The content ID of the content item to be processed.

9.2.49 RMA_CLOSE_SERVICE

This service is used to process a Close disposition action on a folder. This service calls the CLOSE_FOLDER service.

Additional Required Service Parameters

dDispositionID: The unique identifier of the disposition action.

9.2.50 RMA_CUTOFF_SERVICE

This service is used to process a Cutoff disposition action.

Additional Required Service Parameters

dDispositionID: The unique identifier of the disposition action.

9.2.51 RMA_DESTROY_SERVICE

This service is used to process a Destroy disposition action. All revisions of content or folders are destroyed unless other disposition rules take precedence.

Additional Required Service Parameters

dDispositionID: The unique identifier of the disposition action.

9.2.52 RMA_EXPORT_ARCHIVE_SERVICE

This service is used to add a Records archive to a Content Server archive.

Additional Required Service Parameters

dDispositionID: The unique identifier of the disposition action.

9.2.53 RMA_EXPORT_SERVICE

This service is used to create a zip archive.

Additional Required Service Parameters

dDispositionID: The unique identifier of the disposition action.

9.2.54 RMA_MARK_COMPLETED

This service is used to mark the completion of an action.

Additional Required Service Parameters

dDispositionID: The unique identifier of the disposition action.

9.2.55 RMA NO ACTION SERVICE

This service is used to process a No Action disposition action.

Additional Required Service Parameters

dDispositionID: The unique identifier of the disposition action.

9.2.56 RMA_OBSOLETE_SERVICE

This service is used to process an Obsolete disposition action. This service calls MARK_FOLDER_OBSOLETE_DATE or MARK_RECORD_OBSOLETE_DATE.

Additional Required Service Parameters

dDispositionID: The unique identifier of the disposition action.

9.2.57 RMA_SCRUB_SERVICE

This service is used to securely delete record folders or content item so they cannot be recovered.

Additional Required Service Parameters

dDispositionID: The unique identifier of the disposition action.

9.2.58 RMA SUPERSEDE SERVICE

This service is used to process a Supersede disposition action.

Additional Required Service Parameters

dDispositionID: The unique identifier of the disposition action.

9.2.59 UNCLOSE FOLDER

This service is used to revoke the closed status of an existing record folder in the retention schedule. Unclosing a folder allows content to be checked into the closed record folder or its subfolders.

Additional Required Service Parameters

dFolderID: The unique identifier of the record folder to be processed.

9.2.60 UNFREEZE FOLDER

This service is used to unfreeze an existing record folder in the retention schedule. Unfreezing a folder releases the folder for processing of its associated disposition rules.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be processed.
- auditComments: The unfreeze name.
- auditComments2: The unfreeze reason.

9.2.61 UNFREEZE RECORD

This service is used to unfreeze an existing content item. Unfreezing releases the content item for processing of its associated disposition rules.

- dFolderID: The unique identifier of the content item to be processed.
- auditComments: The unfreeze name.
- auditComments2: The unfreeze reason.

Physical Content Management Services

This chapter describes the services available when using and customizing Physical Content Management (PCM), which is associated with Oracle WebCenter Content: Records.

This chapter covers the following topics:

- Section 10.1, "About Physical Content Management Services"
- Section 10.2, "Physical Content Management Services"

10.1 About Physical Content Management Services

Information about what is a WebCenter Content service and how services can be used is provided in Section 2, "Using Services." Information about basic services structure, attributes, actions, and a service example is provided in Section 3, "Customizing Services." You should be familiar with this information before customizing current services or creating new services

The locations for specific PCM services are listed within each individual service.

For more information about PCM, see Oracle Fusion Middleware Managing Oracle WebCenter Content.

> **Note:** The most commonly used services have more extensive descriptions.

10.2 Physical Content Management Services

The following services are used in PCM functions:

- ADD_FUNCTION_BARCODE
- ADJUST_INVOICE
- ADJUST_INVOICE_FORM
- BARCODE_PROCESS
- BATCH_STORAGE_CREATION_FORM
- BLOCK_STORAGE
- BROWSE_CHARGE_INVOICES_FORM
- BROWSE_CHARGE_TRANSACTIONS_BY_INVOICE_FORM
- BROWSE_CHARGE_TRANSACTIONS_FORM

- BROWSE_CHARGE_TRANSACTIONS_WITH_NO_INVOICE_FORM
- BROWSE_RESERVATION_ITEMS_FORM
- **BROWSE STORAGE FORM**
- CHECKIN EXTERNAL ITEM
- CHECKOUT_EXTERNAL_ITEM
- CLEAN_UP_STORAGE
- CONFIG_CHARGE_BACKS
- CONFIG_CHARGE_BACKS_FORM
- CONFIGURE_CHARGE_BILLERS_FORM
- CONFIGURE_CHARGE_PAYMENT_TYPES_FORM
- CONFIGURE_CHARGE_TYPES_FORM
- CREATE_CHARGE_BILLER
- CREATE_CHARGE_BILLER_FORM
- CREATE CHARGE PAYMENT TYPECREATE CHARGE PAYMENT TYPE **FORM**
- CREATE_CHARGE_TYPE
- CREATE_CHARGE_TYPE_FORM
- CREATE CHARGE TRANSACTION
- CREATE CHARGE TRANSACTION FORM
- CREATE_CHARGE_TRANSACTION_MULTIPLE
- CREATE_EXTERNAL_ITEM
- CREATE_EXTERNAL_ITEM_FORM
- CREATE_EXTERNAL_ITEM_SIMILAR_FORM
- CREATE_MEDIA_TYPE
- CREATE_MEDIA_TYPE_FORM
- CREATE_OBJECT_TYPE
- CREATE_OBJECT_TYPE_FORM
- CREATE_RESERVATION
- CREATE RESERVATION FORM
- CREATE STORAGE
- CREATE_STORAGE_FORM
- CREATE_STORAGE_TYPE
- CREATE STORAGE TYPE FORM
- DELETE_CHARGE_BILLER
- DELETE_CHARGE_INVOICE
- DELETE_CHARGE_PAYMENT_TYPE
- DELETE_CHARGE_TRANSACTION

- DELETE_CHARGE_TYPE
- DELETE_COMPLETED_RESERVATIONS
- DELETE_EXTERNAL_ITEM
- DELETE_MEDIA_TYPE
- DELETE_OBJECT_TYPE
- DELETE_RESERVATION
- DELETE_RESERVATION_ITEM
- DELETE_STORAGE
- DELETE_STORAGE_TYPE
- EDIT_CHARGE_BILLER
- EDIT_CHARGE_BILLER_FORM
- EDIT_CHARGE_PAYMENT_TYPE
- EDIT_CHARGE_TYPE_FORM
- EDIT EXTERNAL ITEM
- EDIT_EXTERNAL_ITEM_FORM
- EDIT_MEDIA_TYPE
- EDIT_MEDIA_TYPE_FORM
- EDIT_OBJECT_TYPE
- EDIT_OBJECT_TYPE_FORM
- EDIT_OBJECT_TYPE_RELATIONSHIPS
- EDIT_OBJECT_TYPE_RELATIONSHIPS_FORM
- EDIT_RESERVATION
- EDIT_RESERVATION_FORM
- EDIT_RESERVATION_ITEM
- EDIT_RESERVATION_ITEM_FORM
- EDIT_RESERVATION_ITEM_STATUS
- EDIT_STORAGE
- EDIT_STORAGE_FORM
- EDIT_STORAGE_TYPE
- EDIT_STORAGE_TYPE_FORM
- GENERATE_CHARGE_INVOICE
- GET_EXPORT_INVOICES
- INFO_CHARGE_BILLER_FORM
- INFO_CHARGE_INVOICE_FORM
- INFO_CHARGE_PAYMENT_TYPE_FORM
- INFO_CHARGE_TRANSACTION_FORM
- INFO_CHARGE_TYPE_FORM

- INFO_EXTERNAL_ITEM_FORM
- INFO_MEDIA_TYPE_FORM
- INFO_OBJECT_TYPE_FORM
- INFO RESERVATION FORM
- INFO_RESERVATION_ITEM_FORM
- INFO_STORAGE_FORM
- INFO_STORAGE_TYPE_FORM
- MARK_INVOICE_PAID
- MARK_INVOICE_PAID_FORM
- MOVE_STORAGE
- NOTIFY_OVERDUE_USERS
- PROCESS_OVERDUE_REQUESTS
- PROCESS_STORAGE_SPACE_COUNTS
- RESERVE STORAGE
- RUN_CHARGEBACK_REPORT
- RUN_CHARGEBACK_REPORT_MULTIPLE
- RUN_FUNCTION_BARCODE_LABEL
- RUN_RESERVATION_REPORT
- RUN_RESERVATION_SEARCH_RESULTS_REPORT
- RUN_STORAGE_BARCODE_LABEL
- RUN_STORAGE_REPORT
- RUN_USER_BARCODE_LABEL
- SCREEN_CHARGE_BACKS_ADVANCED_FORM
- SCREEN_CHARGE_BACKS_FORM
- SEARCH_EXTERNAL_ITEM_FORM
- UNRESERVE STORAGE
- UPDATE_STORAGE_DEPTHS
- UPDATE_USERS_WITH_NO_BARCODES

10.2.1 ADD_FUNCTION_BARCODE

This service is used to create new function barcodes.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

- dFunctionValue: The unique identifier of the function barcode to be created.
- dFunctionName: The name for of the function barcode to be created

10.2.2 ADJUST_INVOICE

This service is used to adjust an invoice.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

Additional Required Service Parameters

- dInvoiceID: The unique identifier of the invoice to be adjusted.
- dAmount: The amount to add/subtract to the invoice.

10.2.3 ADJUST_INVOICE_FORM

This service is used to retrieve a page used to adjust an invoice.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks service.htm

Additional Required Service Parameters

- dInvoiceID: The unique identifier of the invoice to be adjusted.
- dInvoiceAmount: The current of the invoice.

10.2.4 BARCODE_PROCESS

This service is used to process the uploaded barcode file.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

Additional Required Service Parameters

barcodeFile: The path to the file to be processed.

10.2.5 BATCH STORAGE CREATION FORM

This service is used to paint the Storage Creation Utility form.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

10.2.6 BLOCK STORAGE

This service is used to block a storage location

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks service.htm

Additional Required Service Parameters

dObjectID: The unique identifier of the storage location to be blocked

10.2.7 BROWSE_CHARGE_INVOICES_FORM

This service is used to retrieve a page used to browse transactions invoices.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

10.2.8 BROWSE_CHARGE_TRANSACTIONS_BY_INVOICE_FORM

This service is used to retrieve a page used to browse transactions belonging to the specified invoice.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

Additional Required Service Parameters

dInvoiceID: The unique identifier of the invoice for transactions to be retrieved.

10.2.9 BROWSE_CHARGE_TRANSACTIONS_FORM

This service is used to retrieve a page used to browse charge transactions.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

10.2.10 BROWSE_CHARGE_TRANSACTIONS_WITH_NO_INVOICE_FORM

This service is used to retrieve a page used to browse transactions that have not been invoiced.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

10.2.11 BROWSE_RESERVATION_ITEMS_FORM

This service is used to retrieve a page used to browse items belonging to a the specified request.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm service.htm

Additional Required Service Parameters

dRequestID: The unique identifier of the request for items to be retrieved.

10.2.12 BROWSE_STORAGE_FORM

This service is used to retrieve a page used to browse Storage Items.

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

dObjectID: The unique identifier of the storage item to be retrieved. Set to 0 if you want the root.

10.2.13 CHECKIN_EXTERNAL_ITEM

This service is used to check in an external item in a request.

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

- dRequestID: The unique identifier of the request.
- dID: The unique identifier of the physical item to check in.

10.2.14 CHECKOUT EXTERNAL ITEM

This service is used to check out an external item in a request.

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

- dRequestID: The unique identifier of the request.
- dID: The unique identifier of the physical item to check out.

10.2.15 CLEAN_UP_STORAGE

This service is used to clean up the storage table location values.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

10.2.16 CONFIG_CHARGE_BACKS

This service is used save Chargeback settings.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

10.2.17 CONFIG CHARGE BACKS FORM

This service is used to retrieve a page used to configure Chargeback settings.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

10.2.18 CONFIGURE_CHARGE_BILLERS_FORM

This service is used to retrieve a page used to browse customers.

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

10.2.19 CONFIGURE_CHARGE_PAYMENT_TYPES_FORM

This service is used to retrieve a page used to browse payment types.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks service.htm

10.2.20 CONFIGURE_CHARGE_TYPES_FORM

This service is used to retrieve a page used to browse charge types.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

10.2.21 CREATE CHARGE BILLER

This service is used to create a payment type customer.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks service.htm

Additional Required Service Parameters

- dBillerTypeID: The unique identifier of the customer to be created.
- dBillerName: The name of the customer to be created.

10.2.22 CREATE_CHARGE_BILLER_FORM

This service is used to retrieve a page used to create a customer.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

10.2.23 CREATE_CHARGE_PAYMENT_TYPE

This service is used to create a payment type.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks service.htm

Additional Required Service Parameters

- dPaymentTypeID: The unique identifier of the payment type to be created.
- dPaymentTypeDesc: The name of the payment type to be created.

10.2.24 CREATE CHARGE PAYMENT TYPE FORM

This service is used to retrieve a page used to create a payment type.

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

10.2.25 CREATE CHARGE TYPE

This service is used to create a charge type.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks service.htm

Additional Required Service Parameters

- dChargeTypeID: The unique identifier of the charge type to be created.
- dChargeTypeDesc: The name of the charge type to be created.
- dChargeAction: The action assigned to the charge type.
- dChargeAmount: The amount for the action for the charge type.
- dExtObjectTypes: The object types associated with the charge type.

10.2.26 CREATE_CHARGE_TYPE_FORM

This service is used to retrieve a page used to create a charge type.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

10.2.27 CREATE CHARGE TRANSACTION

This service is used to create a transaction.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

Additional Required Service Parameters

- dChargeTypeID: The unique identifier of the charge type to be used for the transaction.
- dChargeAction: The type of charge action for the transaction.
- dID, dDocName: The unique identifier or name of the charge external item if this is not a storage charge action.
- dChargeAmount: The amount of the transaction.

10.2.28 CREATE_CHARGE_TRANSACTION_FORM

This service is used to retrieve a page used to create a transaction.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks service.htm

10.2.29 CREATE_CHARGE_TRANSACTION_MULTIPLE

This service is used to create a transaction.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

Additional Required Service Parameters

- dIDList: The comma-separated list of dIDs for the items to have transactions created for them.
- dChargeTypeID: The unique identifier of the charge type to be used for the transaction.
- dChargeAction: The type of charge action for the transaction.
- dChargeAmount: The amount of the transaction.

10.2.30 CREATE_EXTERNAL_ITEM

This service is used to retrieve to create physical items.

Location: IdcHomeDir/components/ExternalHelper/resources/erm_ service.htm

Additional Required Service Parameters

- dSource: Source for which the external item is created; for example, Physical.
- dDocTitle: The title of the external item to be created.
- Other: Any field that is set to be required by the user.

10.2.31 CREATE_EXTERNAL_ITEM_FORM

This service is used to retrieve a page used to create physical items.

Location: IdcHomeDir/components/ExternalHelper/resources/erm_ service.htm

Additional Required Service Parameters

dSource: Source in which the external item is created; for example, Physical.

10.2.32 CREATE_EXTERNAL_ITEM_SIMILAR_FORM

This service is used to retrieve a page used to create a physical item similar to another external item.

Location: IdcHomeDir/components/ExternalHelper/resources/erm_ service.htm

Additional Required Service Parameters

- dSource: Source in which the external item is created; for example, Physical.
- dID: The unique identifier of the external item from which to create a similar item.

10.2.33 CREATE_MEDIA_TYPE

This service is used to create a media type.

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

- dMediaTypeID: The unique identifier of the Media Type to be created.
- dMediaTypeName: The name of the Media Type item.

10.2.34 CREATE MEDIA TYPE FORM

This service is used to retrieve a page used to create a media type.

10.2.35 CREATE_OBJECT_TYPE

This service is used to create an object type.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm service.htm

Additional Required Service Parameters

- dObjectTypeID: The unique identifier of the Object Type to be created.
- dObjectTypeName: The name of the Object Type item.

10.2.36 CREATE OBJECT TYPE FORM

This service is used to retrieve a page used to create an object type.

10.2.37 CREATE RESERVATION

This service is used to create a reservation.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

- dRequestID: The unique identifier of the Request to be created.
- dRequestName: Name of the Request.
- dRequestDate: Date of the Request.
- dRequestor: User for whom the request is made.
- dSecurityGroup: Security Group of the request.
- dTransferMethod: Transfer Method of the request.
- dRequestPriority: Delivery Priority for the request.
- dIDList: Comma-separated list of dID values for physical items to request.

10.2.38 CREATE RESERVATION FORM

This service is used to retrieve a page used to create a reservation.

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

dIDList: Comma-separated list of dID values for physical items to request.

10.2.39 CREATE STORAGE

This service is used to create a storage location.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

- dParentID: The unique identifier of the parent storage location for the storage location to be created.
- dObjectName: The name of the storage location to be created.
- dStorageType: The unique identifier of the location type assigned to the storage location.

10.2.40 CREATE STORAGE FORM

This service is used to retrieve a page used to create a storage location.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

dParentID: The unique identifier of the parent storage location for the storage location to be created.

10.2.41 CREATE_STORAGE_TYPE

This service is used to create a location type.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

- dStorageTypeID: The unique identifier of the location type to be created.
- dStorageTypeName: The name of the location type to be created.
- dOrder: The order the location type is located within the location types.
- dStorageImage: The name of the image to be associated with the location type

10.2.42 CREATE STORAGE TYPE FORM

This service is used to retrieve a page used to create a location type.

10.2.43 DELETE_CHARGE_BILLER

This service is used to delete a customer.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

Additional Required Service Parameters

dBillerID: The unique identifier of the customer to be deleted.

10.2.44 DELETE_CHARGE_INVOICE

This service is used to delete an invoice.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

Additional Required Service Parameters

dInvoiceID: The unique identifier of the invoice to be deleted.

10.2.45 DELETE_CHARGE_PAYMENT_TYPE

This service is used to delete a payment type.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

Additional Required Service Parameters

dPaymentTypeID: The unique identifier of the payment type to be deleted.

10.2.46 DELETE CHARGE TRANSACTION

This service is used to delete a transaction.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

Additional Required Service Parameters

dTransactionID: The unique identifier of the transaction to be deleted.

10.2.47 DELETE_CHARGE_TYPE

This service is used to delete a charge type.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

Additional Required Service Parameters

dChargeTypeID: The unique identifier of the charge type to be deleted.

10.2.48 DELETE_COMPLETED_RESERVATIONS

This service is used to remove completed reservations from the system.

10.2.49 DELETE_EXTERNAL_ITEM

This service is used to delete physical items.

Location: IdcHomeDir/components/ExternalHelper/resources/erm_ service.htm

Additional Required Service Parameters

- dSource: Source from which the external item is deleted; for example, Physical.
- dID: The unique identifier of the external item.

10.2.50 DELETE MEDIA TYPE

This service is used to delete a media type.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

dMediaTypeID: The unique identifier of the Media Type to be deleted.

10.2.51 DELETE_OBJECT_TYPE

This service is used to delete a object type.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm service.htm

Additional Required Service Parameters

dObjectTypeID: The unique identifier of the Object Type to be deleted.

10.2.52 DELETE RESERVATION

This service is used to delete a Reservation.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

dRequestID: The unique identifier of the Reservation to be deleted.

10.2.53 DELETE_RESERVATION_ITEM

This service is used to delete a request item from a request.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

- dRequestID: The unique request identifier of the requested item to be deleted.
- dID: The unique identifier of the requested item to be deleted.

10.2.54 DELETE_STORAGE

This service is used to delete a storage item.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm service.htm

Additional Required Service Parameters

dObjectID: The unique identifier of the Storage item to be deleted.

10.2.55 DELETE_STORAGE_TYPE

This service is used to delete a location type.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

dStorageTypeID: The unique identifier of the Location Type to be deleted.

10.2.56 EDIT_CHARGE_BILLER

This service is used to edit a customer.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

Additional Required Service Parameters

- dBillerID: The unique identifier of the customer to be created.
- dBillerName: The name of the customer to be created.

10.2.57 EDIT_CHARGE_BILLER_FORM

This service is used to retrieve a page used to edit a customer.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

10.2.58 EDIT_CHARGE_PAYMENT_TYPE

This service is used to edit a payment type.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

- dPaymentTypeID: The unique identifier of the payment type to be created.
- dPaymentTypeDesc: The name of the payment type to be created.

10.2.59 EDIT_CHARGE_TYPE_FORM

This service is used to retrieve a page used to edit a charge type.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

10.2.60 EDIT_EXTERNAL_ITEM

This service is used to edit physical items.

Location: IdcHomeDir/components/ExternalHelper/resources/erm_ service.htm

Additional Required Service Parameters

- dSource: Source for which the external item is edited; for example, Physical.
- dID: The unique identifier of the external item.

10.2.61 EDIT_EXTERNAL_ITEM_FORM

This service is used to retrieve a page used to edit a physical item.

Location: IdcHomeDir/components/ExternalHelper/resources/erm_ service.htm

Additional Required Service Parameters

- dSource: Source in which the external item is edited; for example, Physical.
- dID: The unique identifier of the external item.

10.2.62 EDIT MEDIA TYPE

This service is used to edit a media type.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

- dMediaTypeID: The unique identifier of the Media Type to be edited.
- dMediaTypeName: The name of the Media Type item.

10.2.63 EDIT_MEDIA_TYPE_FORM

This service is used to retrieve a page used to edit a media type.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

dMediaTypeID: The unique identifier of the Media Type to be edited.

10.2.64 EDIT_OBJECT_TYPE

This service is used to edit an object type.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm service.htm

Additional Required Service Parameters

- dObjectTypeID: The unique identifier of the Object Type to be created.
- dObjectTypeName: The name of the Object Type item.

10.2.65 EDIT_OBJECT_TYPE_FORM

This service is used to retrieve a page used to edit an object type.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

dObjectTypeID: The unique identifier of the Object Type to be edited.

10.2.66 EDIT_OBJECT_TYPE_RELATIONSHIPS

This service is used to edit object type relationships.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

- dObjectTypeID: The unique identifier of the Object Type to be created.
- SelectListValues: List of Object Types that the Object Type can contain.

10.2.67 EDIT_OBJECT_TYPE_RELATIONSHIPS_FORM

This service is used to retrieve a page used to edit object type relationships.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

dObjectTypeID: The unique identifier of the Object Type Relationship to be edited.

10.2.68 EDIT RESERVATION

This service is used to edit the request data.

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

- dRequestID: The unique identifier of the Request to be edited.
- dRequestName: Name of the Request.
- dRequestDate: Date of the Request.
- dRequestor: User for whom the request is made.
- dSecurityGroup: Security Group of the request.
- dTransferMethod: Transfer Method of the request.
- dRequestPriority: Delivery Priority for the request.

10.2.69 EDIT_RESERVATION_FORM

This service is used to retrieve a page used to edit a request.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

dRequestID: The unique identifier of the Request to be edited.

10.2.70 EDIT_RESERVATION_ITEM

This service is used to edit the requested item data.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm service.htm

Additional Required Service Parameters

- dRequestID: The unique identifier of the request to be edited.
- dID: The unique identifier of the requested item to be edited.
- dRequestDate: Date of the Request.
- dRequestStatus: Current status or the requested item.

10.2.71 EDIT_RESERVATION_ITEM_FORM

This service is used to retrieve a page used to edit a specific requested item.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

- dRequestID: The unique identifier of the Request to be edited.
- dID: The unique identifier of the Physical Item to be edited.

10.2.72 EDIT_RESERVATION_ITEM_STATUS

This service is used to edit the requested items status.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

- dRequestID: The unique identifier of the request to be edited.
- dID: The unique identifier of the requested item to be edited.
- dRequestStatusNew: Current status or the requested item.

10.2.73 EDIT_STORAGE

This service is used to edit a storage location.

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

- dParentID: The unique identifier of the parent storage location for the storage location to be created.
- dObjectID: The unique identifier of the storage location to be edit.
- dObjectName: The name of the storage location to be created.
- dStorageType: The unique identifier of the location type assigned to the storage location.

10.2.74 EDIT_STORAGE_FORM

This service is used to retrieve a page used to create a storage location.

IdcHomeDir/components/PhysicalContentManager/resources/pcm service.htm

Additional Required Service Parameters

dObjectID: The unique identifier of the storage location to be edit.

10.2.75 EDIT STORAGE TYPE

This service is used to edit a location type.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

- dStorageTypeID: The unique identifier of the location type to be edited.
- dStorageTypeName: The name of the location type to be edited.
- dOrder: The order the location type is located within the location types.

dStorageImage: The name of the image to be associated with the location type.

10.2.76 EDIT STORAGE TYPE FORM

This service is used to retrieve a page used to edit a location type.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

dStorageTypeID: The unique identifier of the location type to be edited.

10.2.77 GENERATE_CHARGE_INVOICE

This service is used to generate invoices.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks service.htm

10.2.78 GET_EXPORT_INVOICES

This service is used to retrieve a export file for invoices

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

10.2.79 INFO CHARGE BILLER FORM

This service is used to retrieve a page used to display information for a specified storage type customer.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

Additional Required Service Parameters

dBillerID: The unique identifier of the storage type to be created.

10.2.80 INFO_CHARGE_INVOICE_FORM

This service is used to retrieve a page used to display information for a specified Invoice.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

Additional Required Service Parameters

dInvoiceID: The unique identifier of the invoice to be retrieved.

10.2.81 INFO_CHARGE_PAYMENT_TYPE_FORM

This service is used to retrieve a page used to display information for a specified payment type.

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

Additional Required Service Parameters

dPaymentTypeID: The unique identifier of the payment type to be retrieved.

10.2.82 INFO_CHARGE_TRANSACTION_FORM

This service is used to retrieve a page used to display information for a specified Transaction.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks service.htm

Additional Required Service Parameters

dTransactionID: The unique identifier of the transaction to be retrieved.

10.2.83 INFO_CHARGE_TYPE_FORM

This service is used to retrieve a page used to display information for a specified charge type.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks service.htm

Additional Required Service Parameters

dChargeTypeID: The unique identifier of the charge type to be retrieved.

10.2.84 INFO_EXTERNAL_ITEM_FORM

This service is used to retrieve an information page for a physical item.

Location: IdcHomeDir/components/ExternalHelper/resources/erm_ service.htm

Additional Required Service Parameters

- dSource: Source of the external item; for example, Physical.
- dID: The unique identifier of the external item.

10.2.85 INFO_MEDIA_TYPE_FORM

This service is used to retrieve a page used to display information for a specified media type.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

dMediaTypeID: The unique identifier of the media type to be retrieved.

10.2.86 INFO_OBJECT_TYPE_FORM

This service is used to retrieve a page used to display information for a specified object type.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

dObjectTypeID: The unique identifier of the object type to be retrieved.

10.2.87 INFO_RESERVATION_FORM

This service is used to retrieve a page used to display information for a specified request.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm service.htm

Additional Required Service Parameters

- dRequestID: The unique identifier of the request to be retrieved.
- dID: The unique identifier of the physical item to be retrieved.

10.2.88 INFO_RESERVATION_ITEM_FORM

This service is used to retrieve a page used to display information for the specified requested physical item.

Additional Required Service Parameters

dRequestID: The unique identifier of the request to be retrieved.

10.2.89 INFO STORAGE FORM

This service is used to retrieve a page used to display information for a specified storage item.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

dObjectID: The unique identifier of the storage item to be retrieved.

10.2.90 INFO_STORAGE_TYPE_FORM

This service is used to retrieve a page used to display information for a specified storage type.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

dStorageTypeID: The unique identifier of the storage type to be retrieved.

10.2.91 MARK_INVOICE_PAID

This service is used to mark an invoice paid.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

Additional Required Service Parameters

- dInvoiceID: The unique identifier of the invoice to be marked paid.
- dPaymentType: The unique identifier of the payment type.
- dPaymentNumber: The number of the credit card or check, or a miscellaneous number.
- dExpirationDate: The expiration date of the credit card if using one or just blank.
- dAmount: The amount paid.

10.2.92 MARK_INVOICE_PAID_FORM

This service is used to retrieve a page used to mark an invoice paid.

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks service.htm

Additional Required Service Parameters

- dInvoiceID: The unique identifier of the invoice so be marked paid.
- dInvoiceAmount: The current amount of the invoice.

10.2.93 MOVE_STORAGE

This service is used to move one storage item into another.

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

- dObjectID: The unique identifier of the Storage Item to be move.
- newParentID: The unique identifier of the Storage Item to move to (Parent Storage Item).

10.2.94 NOTIFY OVERDUE USERS

This service is used to notify users of overdue requests.

10.2.95 PROCESS OVERDUE REQUESTS

This service is used to update requests that have become overdue.

10.2.96 PROCESS_STORAGE_SPACE_COUNTS

This service is used to update the storage counts, that is, it updates the number of spaces used at each levels.

10.2.97 RESERVE_STORAGE

This service is used to reserve a storage location.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

- dObjectID: The unique identifier of the storage location to be reserved.
- dRequestor: The User ID of the person reserving the storage.

10.2.98 RUN_CHARGEBACK_REPORT

This service is used to run a invoice report.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks service.htm

Additional Required Service Parameters

- rpReportTemplate: The Report Template to use for the report.
- rpReportType: The report type of the report to run.

10.2.99 RUN_CHARGEBACK_REPORT_MULTIPLE

This service is used to run an invoice report.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks service.htm

Additional Required Service Parameters

- rpReportTemplate: The Report Template to use for the report.
- rpReportType: The report type of the report to run.
- selectedDocList: The list of comma-separated invoice IDs to report on.

10.2.100 RUN_FUNCTION_BARCODE_LABEL

This service is used to run a function barcode report.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

10.2.101 RUN_RESERVATION_REPORT

This service is used to run a reservation report.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

dRequestID: The unique identifier for the request to run a report for.

10.2.102 RUN_RESERVATION_SEARCH_RESULTS_REPORT

This service is used to run the reservation search results report.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

QueryText: The query to run to get the reservations.

10.2.103 RUN_STORAGE_BARCODE_LABEL

This service is used to run a storage label report.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

dObjectID: The unique identifier for the storage item for which the report is run.

10.2.104 RUN_STORAGE_REPORT

This service is used to run a storage report

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

dObjectID: The unique identifier for the storage item for which the report is run.

10.2.105 RUN USER BARCODE LABEL

This service is used to run a user report.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

- dSelectUser: The unique identifier of the user for which to run a report.
- dPrintAllUsers: Flag to set if you want to run for all users not a specific one.

10.2.106 SCREEN_CHARGE_BACKS_ADVANCED_FORM

This service is used to retrieve a page used to generate invoices using advanced page.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

10.2.107 SCREEN CHARGE BACKS FORM

This service is used to retrieve a page used to generate invoices

IdcHomeDir/components/PhysicalContentManager/resources/chargebac ks_service.htm

10.2.108 SEARCH_EXTERNAL_ITEM_FORM

This service is used to retrieve a page used to search physical items.

Location: IdcHomeDir/components/ExternalHelper/resources/erm_ service.htm

Additional Required Service Parameters

dSource: Source in which the external item is searched; for example, Physical.

10.2.109 UNRESERVE_STORAGE

This service is used to unreserve a storage location.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Additional Required Service Parameters

dObjectID: The unique identifier of the storage location to be unreserved.

10.2.110 UPDATE STORAGE DEPTHS

This service is used to update the dDepth value for storage items.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

10.2.111 UPDATE_USERS_WITH_NO_BARCODES

This service is used to update users that do not have barcode values.

Location:

IdcHomeDir/components/PhysicalContentManager/resources/pcm_ service.htm

Extended User Attributes Services

This chapter describes the Oracle WebCenter Content services available when using and customizing the Extended User Attributes component.

This chapter covers the following topics:

- Section 11.1, "About Extended User Attributes Services"
- Section 11.2, "Extended User Attributes Services"

11.1 About Extended User Attributes Services

Information about what is a WebCenter Content service and how services can be used is provided in Section 2, "Using Services." Information about basic services structure, attributes, actions, and a service example is provided in Section 3, "Customizing Services." You should be familiar with this information before customizing current services or creating new services

The locations for specific Extended User Attributes services are listed within each individual service.

> **Note:** The most commonly used services have more extensive descriptions.

11.2 Extended User Attributes Services

The following Extended User Attributes component services are installed when the Content Server instance is installed:

- ADD_EXTENDED_USER_ATTRIBUTES
- EDIT_EXTENDED_USER_ATTRIBUTES
- DELETE_EXTENDED_USER_ATTRIBUTES
- DELETE_EXTENDED_ATTRIBUTES_BY_APPLICATION
- DELETE_ALL_EXTENDED_ATTRIBUTES_FOR_USER
- DELETE_ALL_EXTENDED_ATTRIBUTES_FOR_APPLICATION
- QUERY_EXTENDED_USER_ATTRIBUTES
- QUERY_EXTENDED_ATTRIBUTE_MAPPINGS
- EC_SET_PROPERTY
- EC_DELETE_PROPERTY

- EC_GET_PROPERTY
- EC_GET_PROPERTY_BY_KEY
- SET DEFAULT ATTRIBUTES
- DELETE DEFAULT ATTRIBUTES
- GET_DEFAULT_ATTRIBUTES
- SET_EXTENDED_ATTRIBUTE_MAPPINGS
- DELETED_EXTENDED_ATTRIBUTE_MAPPINGS

The following services are extended to provide support for the Extended User Attributes component:

- ADD_USER
- EDIT USER
- DELETE USER
- QUERY_USER_ATTRIBUTES

11.2.1 ADD_EXTENDED_USER_ATTRIBUTES

Service that adds extended attributes to a user. The user does not have to exist before using the service. If this service is asked to add extended attributes which already exist for the user, the service modifies the previous entries.

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendedu serattributes services.htm

Additional Required Service Parameters

- dName: The user name.
- ExtUserAttribInfo Resultset: A result set containing extended user attribution information.

Optional Service Parameters

CheckUserMustExist: If set to true, a limited check is performed to verify that the user exists before extended attributes are added. This check only works for local users; it is *not* recommended to set this value for typical service calls.

Example

The following example from add_user_attr.txt illustrates the use of this service:

```
# Add a security group and an account to the user's extended attributes
# with different applications
@Properties LocalData
IdcService=ADD EXTENDED USER ATTRIBUTES
dName=jsmith
@end
@ResultSet ExtUserAttribInfo
3
dUserName
dApplication
AttributeInfo
jsmith
appl
```

```
account, abc/def, 15
jsmith
app2
role, contributor, 15
@end
```

11.2.2 EDIT_EXTENDED_USER_ATTRIBUTES

Service that edits extended user attributes for a user. The user does not have to exist before using the service. All previously extended attributes are replaced by the new extended attributes provided.

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendedu serattributes_services.htm

Additional Required Service Parameters

- dName: The user name.
- ExtUserAttribInfo ResultSet: A result set containing extended user attribution information.

Optional Service Parameters

CheckUserMustExist: If set to true, a limited check is performed to verify that the user exists before extended attributes are added. This check only works for local users; it is *not* recommended to set this value for typical service calls.

Example

The following example from edit_user_attr.txt illustrates the use of this service:

```
# Change the user to have all permissions with #all
@Properties LocalData
IdcService=EDIT_EXTENDED_USER_ATTRIBUTES
dName=jsmith
@end
@ResultSet ExtUserAttribInfo
dUserName
dApplication
AttributeInfo
jsmith
appl
account, \#all, 15
@end
```

11.2.3 DELETE_EXTENDED_USER_ATTRIBUTES

Service that deletes specific extended user attributes for a user.

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendedu serattributes services.htm

Additional Required Service Parameters

dName: The user name.

- ExtUserAttribInfo ResultSet: A result set containing extended user attribution information.
- allowMissingAttributes: If set to true, the service suppresses errors when trying to delete attributes that do not exist (the default is *false*).

Optional Service Parameters

CheckUserMustExist: If set to true, a limited check is performed to verify that the user exists before extended attributes are added. This check only works for local users; it is *not* recommended to set this value for typical service calls.

Example

```
# Delete the #all account from extended attributes for jsmith
@Properties LocalData
IdcService=DELETE_EXTENDED_USER_ATTRIBUTES
dName=jsmith
@end
@ResultSet ExtUserAttribInfo
3
dUserName
dApplication
AttributeInfo
ismith
appl
account, \#all, 15
@end
```

11.2.4 DELETE_EXTENDED_ATTRIBUTES_BY_APPLICATION

Service that deletes all extended attributes for a particular role/account for a specified application.

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendedu serattributes services.htm

Additional Required Service Parameters

- dAttributeType: The type of attribute to delete.
- dAttributeName: The name of the attribute to delete.
- dApplication: The application from which to delete the attribute.

The following example from delete_attr_by_app.txt illustrates the use of this service:

```
# Delete the xyz account from extended attributes for appl
@Properties LocalData
IdcService=DELETE_EXTENDED_ATTRIBUTES_BY_APPLICATION
dAttributeName=xyz
dAttributeType=account
dApplication=appl
@end
```

11.2.5 DELETE_ALL_EXTENDED_ATTRIBUTES_FOR_USER

Service that deletes all extended attributes for a user.

Additional Required Service Parameters

dName: The user name.

Optional Service Parameters

CheckUserMustExist: If set to *true*, a limited check is performed to verify that the user exists before extended attributes are added. This check only works for local users; it is *not* recommended to set this value for typical service calls.

Example

The following example from delete_user_attr_all.txt illustrates the use of this service:

```
# Add roles
@Properties LocalData
IdcService=DELETE_ALL_EXTENDED_ATTRIBUTES_FOR_USER
@end
```

11.2.6 DELETE_ALL_EXTENDED_ATTRIBUTES_FOR_APPLICATION

Service that deletes all extended users attributes for an application.

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendedu serattributes_services.htm

Additional Required Service Parameters

dApplication: The application.

Example

The following example from del_all_attr_app.txt illustrates the use of this service:

```
# Delete all extended attribute information for appl
@Properties LocalData
IdcService=DELETE_ALL_EXTENDED_ATTRIBUTES_FOR_APPLICATION
dApplication=appl
@end
```

11.2.7 QUERY_EXTENDED_USER_ATTRIBUTES

Service that places all of a user's extended attributes into a result set in the binder. All of the data is put into the ExtUserAttribInfo ResultSet.

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendedu serattributes services.htm

Additional Required Service Parameters

dName: The user name.

Optional Service Parameters

- dApplication: The application name for the attribute.
- dAttributeType: The type of attribute.
- dAttributeName: The name of the attribute.

Example

Adding one or more of the optional parameters enables greater flexibility in narrowing the query. The following example from query_user_attr_ext.txt illustrates the use of this service:

```
# Query the extended attributes of a user
@Properties LocalData
IdcService=QUERY_EXTENDED_USER_ATTRIBUTES
dName=jsmith
@end
```

11.2.8 QUERY_EXTENDED_ATTRIBUTE_MAPPINGS

Service that places all mapped extended attributes from a particular attribute into a result set in the binder. All of the data is put into the ExtUserAttribInfo ResultSet.

IdcHomeDir/components/ExtendedUserAttributes/resources/extendedu serattributes_services.htm

Additional Required Service Parameters

dMappedAttributeName: The name of the attribute to be mapped.

Optional Service Parameters

- dApplication: The application name for the attribute.
- dAttributeType: The type of attribute.
- dAttributeName: The name of the attribute.

Example

Adding one or more of the optional parameters enables greater flexibility in narrowing the query. The following example from query_attr_map_ext.txt illustrates the use of this service:

```
<?hda version="11gR1-dev" jcharset=Cp1252 encoding=iso-8859-1?>
# Query the attributes mapped from role 'guest'
@Properties LocalData
IdcService=QUERY_EXTENDED_ATTRIBUTE_MAPPINGS
dMappedAttributeName=guest
@end
```

11.2.9 EC SET PROPERTY

Service that sets an extended configuration property. It can be used to either add a new property or modify an existing property.

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendedu serattributes services.htm

Additional Required Service Parameters

- dECPropType: The type of property.
- dECPropKey: A key (generally relating to dECPropType).
- dECPropValue: The property value.

Optional Service Parameters

dECPropSubKey: (Recommended) A second key; for example, the key can be a feature of what is defined by dECPropType and dEDPropKey.

Example

The following example from set_property.txt illustrates the use of this service:

```
# Set an extended configuration property
@Properties LocalData
IdcService=EC_SET_PROPERTY
dECPropType=account
dECPropKey=#abc
dECPropSubKey=URL
dECPropValue=http://www.example.com
@end
```

11.2.10 EC DELETE PROPERTY

Service that deletes an extended configuration property. It is important that the exact key be specified for deletion. This service does not automatically delete all subkeys under a key.

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendedu serattributes services.htm

Additional Required Service Parameters

- dECPropType: The type of property.
- dECPropKey: A key (generally relating to dECPropType).

Optional Service Parameters

dECPropSubKey: (Recommended) A second key; for example, the key can be a feature of what is defined by dECPropType and dEDPropKey.

Example

The following example from del_property.txt illustrates the use of this service:

```
# Delete an extended configuration property
@Properties LocalData
IdcService=EC_DELETE_PROPERTY
dECPropType=account
dECPropKey=#abc
dECPropSubKey=URL
@end
```

11.2.11 EC GET PROPERTY

Service that returns a specified extended configuration property in the ResultSet PROPERTY_LIST. It is important that the exact key be specified; if you want to search based on just the key (not subkey) use EC_GET_PROPERTY_BY_KEY.

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendedu serattributes_services.htm

Additional Required Service Parameters

- dECPropType: The type of property.
- dECPropKey: A key (generally relating to dECPropType).

Optional Service Parameters

dECPropSubKey: (Recommended) A second key; for example, the key can be a feature of what is defined by dECPropType and dEDPropKey.

Example

The following example from get_property.txt illustrates the use of this service:

```
# Retrieve an extended configuration property
@Properties LocalData
IdcService=EC_GET_PROPERTY
dECPropType=account
dECPropKey=#abc
dECPropSubKey=URL
@end
```

11.2.12 EC_GET_PROPERTY_BY_KEY

Service that returns a specified extended configuration property in the ResultSet PROPERTY_LIST.

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendedu serattributes_services.htm

Additional Required Service Parameters

- dECPropType: The type of property.
- dECPropKey: A key (generally relating to dECPropType).

The following example from get_property_by_key.txt illustrates the use of this service:

```
# Retrieve an extended configuration property by key - gets all
# accounts of key #abc (regardless of subkey)
@Properties LocalData
IdcService=EC_GET_PROPERTY_BY_KEY
dECPropType=account
dECPropKey=#abc
@end
```

11.2.13 SET_DEFAULT_ATTRIBUTES

Service that sets some default attributes that will always be applied to a user. The type is defaults and the key is userattributes, so these do not need to be provided.

IdcHomeDir/components/ExtendedUserAttributes/resources/extendedu serattributes services.htm

Additional Required Service Parameters

dDefAttribs: The default attributes in the form of a comma-separated entry consisting of three items.

Optional Service Parameters

- dECPropSubKey: A second key; the default attributes will load for all users whether or not this key is specified.
- IsSecureDefaultAttribute: When set to 1 and used with the databinder when using the default web services () then it registers defaults that only apply to logged in users. (By default, default attributes apply to all users, including anonymous.)

Example

The following example from set_defs.txt illustrates the use of this service:

```
# Sets some default attributes for all users
@Properties LocalData
IdcService=SET_DEFAULT_ATTRIBUTES
dECPropSubKey=extprops
dDefAttribs=account, #abc, 15
```

11.2.14 DELETE_DEFAULT_ATTRIBUTES

Service that deletes some default attributes that will always be applied to a user.

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendedu serattributes_services.htm

Optional Service Parameters

- dECPropSubKey: A second key. If this parameter is not specified, the service will only remove the default attributes specified without a subkey; it will not remove other attributes.
- IsSecureDefaultAttribute: If set to 1 and used with the databinder when using the default web services () then it deletes defaults that only apply to logged in users. (By default, default attributes apply to all users, including *anonymous*.)

Example

The following example from del defs.txt illustrates the use of this service:

```
# Deletes some default attributes for all users
@Properties LocalData
IdcService=DELETE_DEFAULT_ATTRIBUTES
dECPropSubKey=extprops
@end
```

11.2.15 GET DEFAULT ATTRIBUTES

This service returns the default attributes that are applied to all users in the ResultSet DEFAULT_ATTRIBUTES.

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendedu serattributes_services.htm

Optional Service Parameters

dECPropSubKey: If specified, it narrows the search for the default attributes to only the one matching that subkey.

IsSecureDefaultAttribute: If set to 1 and used with the databinder when using the default web services () then it retrieves defaults that only apply to logged in users. (By default, default attributes apply to all users, including anonymous.)

Example

The following example from get_defs.txt illustrates the use of this service:

```
# Returns all default attributes for all users
@Properties LocalData
IdcService=GET_DEFAULT_ATTRIBUTES
```

11.2.16 SET_EXTENDED_ATTRIBUTE_MAPPINGS

Service that sets mappings from one user attribute to another user attribute. Only mappings from roles to other attributes is supported (mapping does not work when the source is an account).

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendedu serattributes_services.htm

Additional Required Service Parameters

ExtUserAttribInfo: A result set containing extended user attribute information.

Example

The following example from set_attr_mapping.txt illustrates the use of this service:

```
<?hda version="11gR1-dev" jcharset=Cp1252 encoding=iso-8859-1?>
# Add the 'contributor' role to all users with the
# 'guest' role, and then consequently give all users
# with the 'contributor' role read/write access to
# account 'abc'. (This does mean that users with
# the 'guest' role ultimately end up with access to 'abc').
@Properties LocalData
IdcService=SET_EXTENDED_ATTRIBUTE_MAPPINGS
@ResultSet ExtUserAttribInfo
dAttributeName
dApplication
quest
role, contributor, 15
contributor
app2
account, abc, 3
@end
```

11.2.17 DELETED_EXTENDED_ATTRIBUTE_MAPPINGS

Service that deletes mappings from one user attribute to another user attribute.

IdcHomeDir/components/ExtendedUserAttributes/resources/extendedu serattributes services.htm

Additional Required Service Parameters

ExtUserAttribInfo: A result set containing extended user attribute information.

Optional Service Parameters

allowMissingAttributes: If set to true, the service suppresses errors when trying to delete attributes that do not exist. The default is false.

Example

The following example from del_attr_mapping.txt illustrates the use of this service:

```
<?hda version="11gR1-dev" jcharset=Cp1252 encoding=iso-8859-1?>
# Delete two attribute mappings
@Properties LocalData
IdcService=DELETE_EXTENDED_ATTRIBUTE_MAPPINGS
@ResultSet ExtUserAttribInfo
dAttributeName
dApplication
AttributeInfo
guest
appl
role, contributor, 15
contributor
app2
account, abc, 3
@end
```

11.2.18 ADD USER

The service has been altered to add extended user attributes at the same time the user is added. For additional information see Section 4.14.4, "ADD_USER."

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendedu serattributes_services.htm

Optional Service Parameter

ExtUserAttribInfo ResultSet: A result set containing extended user attribution information. If it is not included, no extended attributes are added.

Example

The following example from add_user.txt illustrates the use of this service:

```
# Add user with extended security data
@Properties LocalData
IdcService=ADD_USER
dName=jsmith
dUserAuthType=Local
dFullName=Jennifer Smith
dPassword=password
dEmail=email@example.com
@ResultSet UserAttribInfo
dUserName
```

```
AttributeInfo
jsmith
role, guest, 15
@end
@ResultSet ExtUserAttribInfo
dUserName
dApplication
AttributeInfo
jsmith
appl
account, abc, 15
@end
```

11.2.19 EDIT_USER

This service has been altered to allow editing of extended user attributes at the same time. The old values are completely replaced by the new ones. For additional information, see Section 4.14.4, "ADD_USER."

IdcHomeDir/components/ExtendedUserAttributes/resources/extendedu serattributes_services.htm

Optional Service Parameters

ExtUserAttribInfo ResultSet: A result set containing extended user attribution information. If it is not included, the extended attributes are not replaced.

Example

The following example from edit_user.txt illustrates the use of this service:

```
# Edit user with extended security data
@Properties LocalData
IdcService=EDIT_USER
dName=jsmith
dUserAuthType=Local
dFullName=Justin Smith
dPassword=12345
dEmail=real@real.com
@end
@ResultSet UserAttribInfo
2
dUserName
{\tt AttributeInfo}
jsmith
role, guest, 15
@ResultSet ExtUserAttribInfo
3
dUserName
dApplication
AttributeInfo
jsmith
appl
account, abc, 7, account, xyz, 15
@end
```

11.2.20 DELETE_USER

This service has been altered to delete a user's extended attributes if they exist. For additional information, see Section 4.14.10, "DELETE_USER."

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendedu serattributes_services.htm

Example

The following example from delete_user.txt illustrates the use of this service:

```
# Delete user with extended security data
@Properties LocalData
IdcService=DELETE USER
dName=jsmith
@end
```

11.2.21 QUERY_USER_ATTRIBUTES

This service acts as usual however the attributes it returns are contingent on the value of the getAllAttributes parameter. If the parameter is passed as true, this service returns a merger of both regular and extended user attributes. For additional information, see Section 4.14.25, "QUERY_USER_ATTRIBUTES."

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendedu serattributes_services.htm

Example

The following example from query_user_attr.txt illustrates the use of this service:

```
# The normal QUERY_USER_ATTRIBUTES, except it gathers all
# attributes now
@Properties LocalData
IdcService=QUERY_USER_ATTRIBUTES
dName=jsmith
getAllAttributes=true
@end
```

Folios Services

This chapter describes the Oracle WebCenter Content services available when using and customizing the Folios component.

This chapter covers the following topics:

- Section 12.1, "About Folios Services"
- Section 12.2, "Folio Services"

12.1 About Folios Services

Information about what is a WebCenter Content service and how services can be used is provided in Section 2, "Using Services." Information about basic services structure, attributes, actions, and a service example is provided in Section 3, "Customizing Services." You should be familiar with this information before customizing current services or creating new services

The locations for specific Folios services are listed within each individual service.

For more information about Folios, see Oracle Fusion Middleware Managing Oracle WebCenter Content.

> **Note:** The most commonly used services have more extensive descriptions.

12.2 Folio Services

The following services are described in this section:

- LOAD_FOLIO_NODE
- UPDATE_FOLIO
- CHECKIN_NEW_FOLIO
- CREATE_FOLIO_SNAPSHOT
- LOCK_FOLIO
- UNLOCK_FOLIO
- CREATE_FOLIO_RENDITION
- GENERATE_GUIDS

12.2.1 LOAD_FOLIO_NODE

Service that displays the contents of a folio node by returning the nodes, slots and links that are the immediate children of the requested node. By default this service is not recursive; if called recursively, this service returns a complete folio.

Location:

IdcHomeDir/components/ContentContentFolios/resources/cpd_ service.htm

Additional Required Service Parameters

- dID: The content ID of the folio.
- RevisionSelectionMethod: Tells the Content Server instance whether to use retrieved information based on the latest revision, which could be in an unreleased state, or the latest released version. The value can be: Specific, Latest (which could be unreleased), or *Latest Released*.

Optional Service Parameter

parentNodeId: Retrieves details, but not the properties, of the contents of the specified node within a folio. If this parameter is omitted, by default the service retrieves the root node and its properties.

Example 1

http://myserver/idc/idcplg?IdcService=LOAD_FOLIO_NODE&dID=68095 &RevisionSelectionMethod=Specific

Example 2

http://myserver/idc/idcplg?IdcService=LOAD_FOLIO_NODE&dID=68095 &RevisionSelectionMethod=Specific&parentNodeId=E176-3B00-1D2A-A592-E0CF

12.2.2 UPDATE FOLIO

Service that adds one or more content items to a folio and modifies a folio. Multiple changes can be requested as part of a single service call.

Prerequisite: Before an item can be added to a folio, the item must be checked in to the Content Server instance using the standard CHECKIN_NEW or CHECKIN_ UNIVERSAL services.

Location:

IdcHomeDir/components/ContentContentFolios/resources/cpd service.htm

Additional Required Service Parameters

- NumChanges: Specifies the number of changes or updates passed as part of the service call. For example, to pass two changes, NumChanges=2.
- change(n-1): Specifies the actual change to be made to the folio. The default is one change, which is indicated by change() or change0. If there are multiple changes to the folio, as indicated by NumChanges, then a parameter must be passed for each change. For example, if NumChanges=3, then change(), change1, and change2.

Note: For each change(*n*-1) parameter, you must use a change_ data(*n*-1) parameter. For example, if you specify a change1 parameter you must also specify a change_data1 parameter.

The value for the change(*n*-1) parameter must be in the following format: dID:Operation:TargetGUID:ParentGUID

- dID: The dID of the folio to be updated.
- Operation: One of the following choices:
 - removeNode: remove a node
 - addNode: add a node
 - addItem: add a slot
 - addContent: add an actual file
 - removeContent: remove a content item
 - modifyAttribute: modify a property
 - modifyTemplateAttribute: modify a template property
- TargetGUID: The GUID of the node, slot, or content item in the folio to be modified.
- ParentGUID: The parent GUID of the mode, slot, or content item to be modified. This is relevant for only some of the operations, such as addNode.
- change data(n-1): Specifies the values for the operation specified in the change(n-1) parameter. The format for this parameter is name:value pairs separated by commas. A carat (^) can be used as a separator if a colon (:) is required in any of the names or values (name:name^value).

When adding content these properties must be specified:

- dDocAuthor
- dDocName
- dDocName_encoded
- dDocTitle
- dDocType
- dFormat
- dID
- docURL
- docURL_encoded
- dOriginalName
- dRevLabel

Property information can be retrieved using a DOC_INFO service call against the item you want to add to a folio. You must provide the information for the dDocName_encoded, docURL, and docURL_encoded properties. You can specify custom properties that you add to the folio definition as XCST or XCSD data.

Example 1

To add a new content item to an existing content folio, you must define two changes. The first change operation is to specify addItem, which will add a slot. The second change operation is to specify addContent, which will insert the document into the slot. For both changes, the change_data parameter must specify the content properties. The xcsd^name and xcst^name designation for the properties also must be specified.

```
IdcService=UPDATE_FOLIO
NumChanges=2
dDocName=OCS_223948
RevisionSelectionMethod=Latest
change0=8611:addItem:4952-6EBE-1275-0A59-0D19:F5C4-A3D0-E671-D4CF-9C28
change data0=xcsd^dFormat:application/vnd.ms-excel,id:4952-6EBE-1275-0A59-0D19,
xcsd^dID:18251,xcsd^dDocTitle:Next Year Goals,xcsd^dDocType:Document,xcsd^dRendition1:T,

```

Example 2

To add a new content item to an existing folio as part of RIDC code:

```
// Start a new client connection to UCM
IdcClientManager manager = new IdcClientManager();
// build a client that will communicate using the intradoc protocol
IdcClient idcClient = manager.createClient("idc://localhost:4444");
// create a trusted user connection to UCM
IdcContext userContext = new IdcContext("weblogic");
// create the binder for the set of GUIDs needed later on
DataBinder guidBinder = idcClient.createBinder();
// populate the binder with the parameters
guidBinder.putLocal("IdcService", "GENERATE_GUIDS");
// send the request and get the response back from local data and result set
ServiceResponse guidResponse = idcClient.sendRequest(userContext, guidBinder);
DataBinder folderData = guidResponse.getResponseAsBinder ();
DataResultSet guidResults = folderData.getResultSet ("GUID_SET");
// put the set of GUIDs in an array
String guids[] = new String[25];
int. n = 0:
for (DataObject dataObject : guidResults.getRows ()) {
      guids[n] = dataObject.get("id");
}
// create the binder to get the content information of the document to add
DataBinder docInfoBinder = idcClient.createBinder();
// populate the binder with the parameters
docInfoBinder.putLocal("IdcService", "DOC_INFO_BY_NAME");
docInfoBinder.putLocal("dDocName", "OCS_158654");
// send the request and get the response back from local data and result set
ServiceResponse infoResponse = idcClient.sendRequest(userContext, docInfoBinder);
DataBinder infoData = infoResponse.getResponseAsBinder ();
DataResultSet docInfoResults = infoData.getResultSet ("DOC_INFO");
// create the binder to get the content information of the folio to update
```

```
DataBinder folioInfoBinder = idcClient.createBinder();
// populate the binder with the parameters
folioInfoBinder.putLocal("IdcService", "DOC_INFO_BY_NAME");
folioInfoBinder.putLocal("dDocName", "OCS_223948);
// send the request and get the response back from local data and result set
ServiceResponse folioInfoResponse = idcClient.sendRequest(userContext, folioInfoBinder);
DataBinder folioInfoData = folioInfoResponse.getResponseAsBinder ();
ataResultSet folioInfoResults = folioInfoData.getResultSet ("DOC_INFO");
String foliodID = folioInfoData.getLocal("dID");
\ensuremath{//} build the change data string for the content
String newItemStr = "";
for (DataObject dataObject : docInfoResults.getRows ()) {
// build the path to the document
String urlStr = "/cs/groups/" + dataObject.get ("dSecurityGroup") + "/documents/" + dataObject.get
("dDocType") + "/" + dataObject.get ("dDocName") + "." + dataObject.get ("dWebExtension");
// assemble the string with the parameters needed for the content folio service change string
newItemStr = "xcsd^dFormat:" + dataObject.get ("dFormat") + ",";
newItemStr += "id:" + guids[0] + ",";
newItemStr += "xcsd^dDocName:" + dataObject.get ("dDocName") + ",";
newItemStr += "xcsd^dID:" + dataObject.get ("dID") + ",";
newItemStr += "xcsd^dDocTitle:" + dataObject.get ("dDocTitle") + ",";
newItemStr += "xcsd^dDocType:" + dataObject.get ("dDocType") + ",";
newItemStr += "xcsd^dRendition1:" + dataObject.get ("dRendition1") + ",";
newItemStr += "xcsd^dRevLabel:" + dataObject.get ("dRevLabel") + ",";
newItemStr += "xcsd^dOriginalName:" + dataObject.get ("dOriginalName") + ",";
newItemStr += "xcsd^dDocAuthor:" + dataObject.get ("dDocAuthor") + ",";
newItemStr += "xcsd^docURL:" + urlStr + ",";
newItemStr += "xcsd^dDocName_encoded:" + java.net.URLEncoder.encode(dataObject.get ("dDocName"),
"UTF-8") + ",";
newItemStr += "xcsd^docURL_encoded:" + java.net.URLEncoder.encode(urlStr, "UTF-8") + ",";
newItemStr += "xcst^name:" + dataObject.get ("dDocTitle") + ",";
newItemStr += "xcst^description:";
// create the binder to get the folio root GUID
DataBinder rootBinder = idcClient.createBinder();
// populate the binder with the parameters
rootBinder.putLocal("IdcService", "LOAD_FOLIO_NODE");
rootBinder.putLocal("dDocName", folioName);
rootBinder.putLocal("RevisionSelectionMethod", "Latest");
// send the request and get the response back from local data
ServiceResponse rootGUIDResponse = idcClient.sendRequest(userContext, rootBinder);
DataBinder rootGUIDData = rootGUIDResponse.getResponseAsBinder ();
String rootGUID = rootGUIDData.getLocal("RootNode");
// assemble the first change parameter for the service. This will tell the content folio service
// to add a slot
String change0 = foliodID + ":addItem:" + guids[0] + ":" + rootGUID;
// assemble the second change parameter for the service. This will tell the content folio service
// to add a content item to the new slot
String change1 = foliodID + ":addContent:" + guids[0];
// create the binder to run the UPDATE_FOLIO service
DataBinder folioBinder = idcClient.createBinder();
// populate the binder with the parameters
folioBinder.putLocal("IdcService", "UPDATE_FOLIO");
```

```
folioBinder.putLocal("dDocName", folioName)
folioBinder.putLocal("RevisionSelectionMethod", "Latest");
folioBinder.putLocal("NumChanges", "2");
folioBinder.putLocal("change0", change0);
folioBinder.putLocal("change_data0", newItemStr);
folioBinder.putLocal("change1", change1);
folioBinder.putLocal("change_data1", newItemStr);
// send the request and get the response back from local data
ServiceResponse folioResponse = idcClient.sendRequest(userContext, folioBinder);
DataBinder folioData = folioResponse.getResponseAsBinder ();
```

12.2.3 CHECKIN NEW FOLIO

Service that creates and checks in a new folio with a root node.

Location:

IdcHomeDir/components/ContentContentFolios/resources/cpd_ service.htm

Optional Service Parameters

- This service can use standard metadata parameters, such as dDocName, dDocTitle, and so forth. Any other metadata required by parameters used in this service must also be specified.
- If auto-generation of content ID is set on the server and you do not specify the dDocName parameter, then a new content ID is automatically generated.
- The dID of the new folio is listed in the LocalData section of the service response.

Example

http://myserver/xpedio/icdplq?IdcServer=CHECKIN NEW FOLIO &dDocName=myFolioTest&dDocTitle=MyFolioAPITest2&dDocType=TestData &dDocAuthor=authorname&dSecurityGropu=Public&IsJava=1

12.2.4 CREATE FOLIO SNAPSHOT

Service that takes a version of a folio and creates a locked version and a new version.

Location:

IdcHomeDir/components/ContentContentFolios/resources/cpd_ service.htm

Additional Required Service Parameters

- dID: The content ID of the folio.
- RevisionSelectionMethod: Tells the Content Server instance whether to use retrieved information based on the latest revision, which could be in an unreleased state, or the latest released version. The value can be: Specific, Latest (which could be unreleased), or Latest Released.

Example

http://myserver/idc/idcplg?IdcService=CREATE_FOLIO_SNAPSHOT&dID=68095 &RevisionSelectionMethod=Specific

12.2.5 LOCK FOLIO

Service that locks a folio so that it can not be edited, only viewed. No further modifications are allowed on this content item.

Location:

IdcHomeDir/components/ContentContentFolios/resources/cpd_ service.htm

Additional Required Service Parameters

- dID: The content ID of the folio.
- RevisionSelectionMethod: Tells the Content Server instance whether to use retrieve information based on the latest revision, which could be in an unreleased state, or the latest released version. The value can be: Specific, Latest (which could be unreleased), or Latest Released.

Example

http://myserver/idc/idcplg?IdcService=LOCK_FOLIO&dID=68095&RevisionSelectionMethod=Specific

12.2.6 UNLOCK FOLIO

Service that creates a new version of a locked folio, where the new version of the folio can be edited.

Location:

IdcHomeDir/components/ContentContentFolios/resources/cpd service.htm

Additional Required Service Parameters

- dID: The content ID of the folio.
- RevisionSelectionMethod: Tells the Content Server instance whether to use retrieve information based on the latest revision, which could be in an unreleased state, or the latest released version. The value can be: Specific, Latest (which could be unreleased), or Latest Released.

Example

http://myserver/idc/idcplq?IdcService=UNLOCK_FOLIO&dID=68095&RevisionSelectionMethod=Specific

12.2.7 CREATE FOLIO RENDITION

Service that returns a specific rendition of a folio revision to a browser. A copy of the folio is retrieved without performing a checkout.

Location:

IdcHomeDir/components/ContentContentFolios/resources/cpd_ service.htm

Additional Required Service Parameters

- dID: The content ID of the folio.
- RenderID: The type of rendition: PDF, ZIP, XML. A custom rendition can be used.

Example

http://myserver/idc/idcplg?IdcService=CREATE_FOLIO_RENDITION&dID=68095&RenditionID=PDF

12.2.8 GENERATE_GUIDS

Service that generates and returns 25 group user IDs for use.

Location:

 ${\it IdcHomeDir/components/ContentContentFolios/resources/cpd_}$ service.htm

Example

 $\verb|http://myserver/expedio/idcplg?IdcService=GENERATE_GUIDS\&IsJava=1|$

Link Manager Services

This chapter describes the Oracle WebCenter Content services available when using and customizing the Link Manager component.

This chapter covers the following topics:

- Section 13.1, "About Link Manager Services"
- Section 13.2, "Link Manager Services"

13.1 About Link Manager Services

The Link Manager component evaluates, filters, and parses the URL links of indexed content items before extracting them for storage in a database table (ManagedLinks). After the ManagedLinks table is populated with the extracted URL links, the component references this table to generate link search results, lists of link references for the Content Information page, and the resource information for the Link Info page.

Information about what is a WebCenter Content service and how services can be used is provided in Section 2, "Using Services." Information about basic services structure, attributes, actions, and a service example is provided in Section 3, "Customizing Services." You should be familiar with this information before customizing current services or creating new services

The locations for specific Link Manager services are listed within each individual service.

For more information about Link Manager, see Oracle Fusion Middleware Managing Oracle WebCenter Content.

13.2 Link Manager Services

The following services are used in Link Manager functions:

- ABORT_LINKS_ACTIVITY
- ADD_MANAGED_DOCLINKS
- DELETE_MANAGED_DOCLINKS
- **GET_LINK_INFO**
- GET LINKS ADMIN PAGE
- LK_GET_SEARCH_RESULTS
- RECOMPUTE_MANAGED_LINKS
- REFRESH_MANAGED_DOCLINKS

- REFRESH_MANAGED_LINKS
- REFRESH_REFS_MANAGED_LINKS

13.2.1 ABORT_LINKS_ACTIVITY

This service is used to stop the current activity that Link Manager is performing.

You must be logged on to the Content Server instance with administrator credentials to execute this service. This service is also available from the Link Manager Admin page.

Location: IdcHomeDir/components/LinkManager/resources/linkmanager service.htm

Example

IdcService=ABORT_LINKS_ACTIVITY

13.2.2 ADD_MANAGED_DOCLINKS

This service is used to extract HTML links out of the given input file. It is executed automatically when content items are indexed

Location: IdcHomeDir/components/LinkManager/resources/linkmanager_ service.htm

Example

IdcService=ADD MANAGED DOCLINKS

13.2.3 DELETE_MANAGED_DOCLINKS

This service is used to remove the managed links in the database for a given content item. It is executed automatically when content items are deleted.

Location: IdcHomeDir/components/LinkManager/resources/linkmanager_ service.htm

Example

IdcService=DELETE_MANAGED_DOCLINKS

13.2.4 GET_LINK_INFO

This service is used to display link information for a given content item.

Location: IdcHomeDir/components/LinkManager/resources/linkmanager_ service.htm

Additional Required Service Parameters

dLkClassid: The unique class ID assigned to a link in the ManagedLinks table.

- ResultSets:
 - DOC INFO (standard metadata fields)
 - LinkInfo:
 - dLkGUID: Unique ID assigned to a row in the ManagedLinks table.

- dLkClassId: Unique ID assigned to the link in the ManagedLinks table.
- dDocName: Doc name where the link was discovered.
- dLkType: Type of link, which is one of the following: external, unknown, ss_link_rel, ss_link_page, ss_link_node, ss_link_page, ss_link_node, ss_ $link_internal, ss_link_page, ss_link_page, ss_link_node, ss_link_abs.$
- dLkOriginalUrl: Original URL of the link.
- dLkContainerID: Site Studio siteId where the link was found.
- dLkResource: Value of one of the following: dID, dDocName, ssDocName, nodeId (depending on dLkResourceType value, this is null for external links).
- dLkResourceAlias: The docName or nodeLabel.
- dLdResourceType: One of the following: id, doc, node.
- dLkHasAlias: (Boolean) Indicates whether an alias exists.
- dLkState: Y or N. Y means a link references a checked in content item and is valid. N means a link references a deleted content item and is invalid.
- dLkCreateTs: Timestamp when the link was created.
- dLkUpdateTs: Timestamp when the link was last updated.
- dLkCycle: Flag used to tell LinkManager who is working on this link (A -Refresher, D - Decoder, null - none)

Example

```
IdcService=GET_LINK_INFO
dLkClassId=652
```

Sample return information. The beginning of the ResultSet shows how many fields exist (14 in this example) along with the names of the columns, the data types (string, date, integer, and so on), and the size of the fields in bytes. After these entries the values for these fields are listed in the next 14 rows. If there are multiple entries in a result set, another set of 14 rows is listed, and so on.

```
@ResultSet LinkInfo
dLkGUID 6 30
dLkClassId 3 38
dDocName 6 30
dLkType 6 20
dLkOriginalUrl 6 1024
dLkContainerId 6 50
dLkResource 6 50
dLkResourceAlias 6 50
dLkResourceType 6 50
dLkHasAlias 6 1
dLkState 6 1
dLkCreateTs 5 20
dLkUpdateTs 5 20
dLkCycle 6 1
```

13.2.5 GET_LINKS_ADMIN_PAGE

This service is used to obtain the status of the current Link Manager activity. Used by the Link Manager admin page to display status.

Location: IdcHomeDir/components/LinkManager/resources/linkmanager_ service.htm

Example

IdcService=GET_LINKS_ADMIN_PAGE

13.2.6 LK_GET_SEARCH_RESULTS

This service is used to search for links to and from content items.

Location: IdcHomeDir/components/LinkManager/resources/linkmanager_ service.htm

Example

This example opens a form that when submitted will execute the LK_GET_SEARCH_ RESULTS service.

IdcService=LK_SEARCH_FORM

13.2.7 RECOMPUTE MANAGED LINKS

This service is used to extract URL links of indexed documents; evaluate, filter, and parse the URLs according to a pattern engine; and then store the results in a database table.

You must be logged on to the Content Server instance with administrator credentials to execute this service. This service is also available from the Link Manager Admin page.

Location: IdcHomeDir/components/LinkManager/resources/linkmanager_ service.htm

Example

IdcService=RECOMPUTE_MANAGED_LINKS

13.2.8 REFRESH MANAGED DOCLINKS

This service is used to refresh the links for a specific document. A refresh does not involve extracting the links again. It iterates through the links as they are listed in the database and determines their current status.

Location: IdcHomeDir/components/LinkManager/resources/linkmanager_ service.htm

Example

IdcService=REFRESH_MANAGED_DOCLINKS

13.2.9 REFRESH_MANAGED_LINKS

This service is used to refresh the managed links as they exist in the MANAGEDLINKS database table. The managed links are not re-extracted from the content items like in RECOMPUTE_MANAGED_LINKS.

You must be logged on to the Content Server instance with administrator credentials to execute this service. This service is also available from the Link Manager Admin page.

Location: IdcHomeDir/components/LinkManager/resources/linkmanager_ service.htm

Example

IdcService=REFRESH_MANAGED_LINKS

13.2.10 REFRESH_REFS_MANAGED_LINKS

This service is used to perform a recount on the content references as they exist in the MANAGEDLINKS table. Each content item is referenced in the table and will be tallied and stored in the reference table.

You must be logged on to the Content Server instance with administrator credentials to execute this service. This service is also available from the Link Manager Admin page.

Location: IdcHomeDir/components/LinkManager/resources/linkmanager_ service.htm

Example

IdcService=REFRESH_REFS_MANAGED_LINKS

Virtual Content Repository Services

This chapter describes the Oracle WebCenter Content services available when using and customizing Virtual Content Repository (VCR).

This chapter covers the following topics:

- Section 14.1, "About Virtual Content Repository Services"
- Section 14.2, "Virtual Content Repository Services"

14.1 About Virtual Content Repository Services

Services are used by applications that work with the VCR service provider interface, which is used by the Oracle WebLogic Portal as a way to expose content from different repositories. The Content Server application supports VCR functionality.

Note: VCR services are supported only when used with Contribution Folders (provided by the Folders_g component). VCR services are **not** supported with Folders (provided by the FrameworkFolders component). For information about Contribution Folders services, see Chapter 7.

Information about what is a WebCenter Content service and how services can be used is provided in Section 2, "Using Services." Information about basic services structure, attributes, actions, and a service example is provided in Section 3, "Customizing Services." You should be familiar with this information before customizing current services or creating new services

14.2 Virtual Content Repository Services

The following VCR services are described in this section:

- VCR_FOLDER_INFO
- VCR_GET_CONTENT_TYPE
- VCR_GET_CONTENT_TYPES
- VCR_GET_DOCUMENT
- VCR_GET_DOCUMENT_BY_NAME

14.2.1 VCR_FOLDER_INFO

Service that is used to retrieve information about a Folders_g folder having the content and in the format required by the VCR service provider interface.

Service Class: DocService

Additional Required Service Parameters

One of the following parameters to identify the Folders_g folder:

- dCollectionID: The folder ID of the folder containing the target content.
- dCollectionPath: The path to the folder containing the target content.

- ResultSets:
 - VcrNode
 - createdBy
 - createdDate
 - hasChildren
 - modifiedBy
 - name
 - objectClass
 - parentID
 - path
 - **VcrPropertyValues**
 - dChildManipulation
 - dCollectionCreator
 - dCollectionEnabled
 - dCollectionGUID
 - dCollectionID
 - dCollectionInherit
 - dCollectionMark
 - dCollectionModifier
 - dCollectionName
 - dCollectionOwner
 - dCollectionPath
 - dCollectionQueries
 - dCollectionType
 - dCreateDate
 - dDependent
 - dDocAccount
 - dDocAuthor

- dDocName
- dDocTitle
- dDocType
- dInDate
- dLast Modified Date
- dOutDate
- dParentCollectionID
- d Prompt For Metadata
- dReleaseDate
- dRevLabel
- dSecurityGroup
- xClbraAliasList
- xClbraRoleList
- xClbraUserList
- xCollectionID
- **x**Comments
- x Dont Show In Lists For Websites
- xEmailCC
- xEmailFrom
- xEmailSubject
- xEmailTo
- xForceFolderSecurity
- xHidden
- xIdcProfile
- xInhibitUpdate
- xProfileTrigger
- x Publication Date
- xReadOnly
- xReceivedDate
- xRegionDefinition
- xTrashDeleteDate
- xTrashDeleteLoc
- xTrashDeleteName
- xTrashDeleter
- xtestdec2
- xtestdec3

- xtTestField1
- xtTestField2
- xtestINTEGER
- xWebsiteObjectType
- xWebsites
- xWebsiteSection

14.2.2 VCR_GET_CONTENT_TYPE

Service that requests detailed information about a particular VCR content type.

Service Class: Service

Additional Required Service Parameters

vcrContentType: The ID of the content type; also referred to as the content type's name.

Results

- ResultSets:
 - VcrContentType
 - VcrProperties
 - VcrPropertyChoices (FIELDNAME)

14.2.3 VCR_GET_CONTENT_TYPES

Service that requests a list of all VCR content types defined by the system.

Service Class: Service

Results

ResultSets: VcrContentTypes

14.2.4 VCR_GET_DOCUMENT

Service that retrieves content item information for a specific revision of a content item.

This service is almost identical to the DOC_INFO service, however, the data returned is modified to be easier to work with in a VCR context.

Service Class: Service

Additional Required Service Parameters

dID: The generated content item revision ID.

- ResultSets:
 - **VcrPropertyValues**
 - all standard DOC_INFO ResultSet columns returned by the DOC_INFO service
 - idcPrimaryFile

- idcRenditions
- REVISION_HISTORY
 - dDocName
 - dFormat
 - dID
 - dInDate
 - dOutDate
 - dProcessingState
 - dRevLabel
 - dRevisionID for all non-deleted revisions
 - dStatus

14.2.5 VCR_GET_DOCUMENT_BY_NAME

Service that retrieves information about the latest revision of a content item based on the content ID (the dDocName) as a parameter.

This service is almost identical to DOC INFO BY NAME service, however, the data returned is modified to be easier to work with in a VCR context.

Service Class: Service

Additional Required Service Parameters

dDocName: The content item name.

Optional Service Parameters

RevisionSelectionMethod: Can be set to Latest to retrieve the most recent version, or LatestReleased to retrieve the most recently released version, or Specific (if set to Specific, a dID must be provided). If set to Specific, a dID can be used instead of a dDocName to point to a specific revision.

- ResultSets:
 - VcrPropertyValues
 - all standard DOC_INFO ResultSet columns returned by the DOC_INFO service
 - idcPrimaryFile
 - idcRenditions
 - **REVISION HISTORY**
 - dDocName
 - dFormat
 - dID
 - dInDate
 - dOutDate
 - dProcessingState

- dRevisionID for all non-deleted revisions
- dRevLabel
- dStatus

A

Actions

This appendix lists alphabetically and describes the actions used by Oracle WebCenter Content services.

An *action* is an operation to be performed as part of a service script. Actions can execute SQL statements, perform a query, run code, cache the results of a query, or load an option list.

- Section A.1, "About Service Actions"
- Section A.2, "A"
- Section A.3, "B"
- Section A.4, "C"
- Section A.5, "D"
- Section A.6, "E"
- Section A.7, "F"

- Section A.12, "M"
- Section A.13, "N"
- Section A.14, "P"
- Section A.15, "Q"
- Section A.16, "R"
- Section A.17, "S"
- Section A.18, "T"
- Section A.19, "U"
- Section A.20, "V"

A.1 About Service Actions

An action is defined as a list of colon-separated segments, using the following format:

type:name:parameters:control mask:error message

The action type can be designated by a number or a descriptive name:

- 1: Select query. This executes a database query to retrieve information (read-only action) then discards the results.
- 2: Execute query. This executes a database query to delete, add, or update information in the database.
- 3: Java method. This specifies a code module that is a part of the Java class implementing the service.
- 4: Load option list. This loads an option list stored in the system.
- 5: Select cache query. This executes a database query to retrieve information (read-only action) and stores the results for later use.
- For details about actions, their parameters, and control masks, see Section 3.1.3, "Actions."

A.2 A

addAliases

Adds the aliases and passes IworkflowAlias as a parameter. Called as a Java method by ADD WORKFLOWALIASES.

addCollaboration

Called as a Java method by ADD_COLLABORATION.

addContext

Called as a Java method by ADD_WEB_APP.

addFiles:

Checks in the content item by name. Called as a Java method by these services:

- CHECKIN BYNAME
- CHECKIN_NEW_SUB
- CHECKIN_SEL_SUB
- INSERT_NATIVE
- INSERT_NEW
- REPLACE_METAFILE_SUB
- UPDATE_BYREV
- WORKFLOW CHECKIN SUB

addOrEditDocMetaData

Called as a Java method by ADD_METADEF and EDIT_METADEF.

addOrEditProvider

Adds the new provider. Called as a Java method by ADD_EDIT_PROVIDER

addOrEditSchemaTable

Called as a Java method by ADDOREDIT_SCHEMA_TABLE.

addProblemReport

Adds the problem report to the database. Called as a Java method by ADD_PROBLEMREPORT.

addRegisteredUserAttribute

Retrieves the user database profile information. Called as a Java method by REGISTER USER.

addSchemaRelation

Called as a Java method by ADD_SCHEMA_RELATION.

addSchemaView

Called as a Java method by ADD_SCHEMA_VIEW.

addSubscription

Adds the subscription and passes *Isubscription* as a parameter. Called as a Java method by SUBSCRIBE.

addTemplate

Called as a Java method by ADD_WF_TEMPLATE.

addUserAttributes

Adds/updates the user security attributes and passes *IuserSecurityAttribute* as a parameter. Called as a Java method by ADD_USER and EDIT_USER.

addWfDocuments

Adds the workflow content items and passes *ADD_WORKFLOWDOCUMENT_SUB* as a parameter. The action throws a data exception if the service is unable to add content item revisions. Called as a Java method by ADD_WORKFLOWDOCUMENTS.

addWorkflow

Adds the workflow. Called as a Java method by ADD_WORKFLOW.

addWorkflowScript

Called as a Java method by ADD_WORKFLOW_SCRIPT.

addWorkflowStep

Adds the workflow steps and passes *IworkflowStep* as a parameter The action throws a data exception if the service is unable to add the step to the workflow. Called as a Java method by ADD_WORKFLOWSTEP.

addWorkflowStepScript

Called as a Java method by ADD_WORKFLOWSTEP.

addWorkflowToken

Called as a Java method by ADD_WORKFLOW_TOKEN.

Alias

Retrieves alias information. The result of this query is assigned to the parameter *Alias* and stored for later use. Called as a Select Cache Query action by GET_ALIASES.

AliasUserMap

Retrieves the user alias map. The result of this query is assigned to the parameter AliasUserMap and stored for later use. Called as a Select Cache Query action by GET_ ALIASES.

allowProblemReportAction

Allows the problem report action to execute and passes *update* as a parameter. Called as a Java method by DELETE_PROBLEMREPORT and UPDATE_PROBLEMREPORT.

appendCommonSystemInfo

Called as a Java method by GET_SYSTEM_AUDIT_INFO.

appendDatabaseAuditMessage

Called as a Java method by APPEND_DATABASE_AUDIT_INFO.

appendFileCachingMessage

Called as a Java method by APPEND_FILE_CACHING_INFO.

approveDo

Approves the content item for the workflow. Called as a Java method by WORKFLOW APPROVE.

A.3 B

buildAllWebStringFiles

Called as a Java method by LM_BUILD_WEB_STRING_FILES.

buildExpiredContentQuery

Called as a Java method by GET_EXPIRED.

buildPreviewList

Called as a Java method by these services:

- CACHE_CHECKIN_NEW
- CACHE_CHECKIN_SEL
- CACHE_SUBMIT_HTML_FORM
- CACHE_WORKFLOW_CHECKIN

buildSearchIndex

Called as a Java method by START_SEARCH_INDEX.

buildSourceInfo

Builds the source information. Called as a Java method by PROBLEMREPORT_INFO.

A.4 C

cacheCheckin

Called as a Java method by these services:

- CACHE_CHECKIN_NEW
- CACHE_CHECKIN_SEL
- CACHE_SUBMIT_HTML_FORM
- CACHE_WORKFLOW_CHECKIN

cacheTemplates

Caches templates. Called as a Java method by these services:

- ADD_WF_TEMPLATE
- DELETE_WF_TEMPLATE
- EDIT_WF_TEMPLATE

cancelComponentInstall

Cancels the installation of a component. Called as a Java method by CANCEL_COMPONENT_INSTALL.

cancelCriteriaWorkflow

Cancels the criteria workflow and passes *WfDocuments* and *Qdocuments* as parameters. Called as a Java method by these services:

- CRITERIAWORKFLOW_DISABLE
- CRITERIAWORKFLOW_DISABLE_SUB
- DELETE_WORKFLOWCRITERIA

cancelSearchIndex

Cancels the search indexing session. Called as a Java method by CANCEL_SEARCH_INDEX.

cancelWorkflow

Cancels the workflow and passes *WfDocuments* and *Qdocuments* as parameters. Called as a Java method by DELETE_WORKFLOW and WORKFLOW_CANCEL.

canDeleteStep

Evaluates whether a workflow step can be deleted. Called as a Java method by DELETE_WORKFLOWSTEP.

checkCanCreateDocSecurity

Evaluates the assigned security level to verify that the user is authorized to perform this action. Called as a Java method by these services:

- CHECKIN_SEL_FORM
- CHECKOUT_SUB
- UNDO_CHECKOUT
- UNDO_CHECKOUT_BY_NAME

checkCollaborationAccess

Called as a Java method by these services:

ADD_COLLABORATION

- ADD_COLLABORATION_FORM
- DELETE_COLLABORATION
- EDIT_CLBRA_ACCESS_LIST
- EDIT_CLBRA_ACCESS_LIST_FORM
- EDIT_COLLABORATION
- EDIT_COLLABORATION_FORM
- GET_CLBRA_DOCUMENTS
- GET_CLBRA_INFO

checkConversionCache

Called as a Java method by GET_DYNAMIC_CONVERSION_SUB.

checkCounters

Called as a Java method by INSERT_NATIVE.

checkCriteriaWorkflow

Evaluates the criteria workflow. Called as a Java method by these services:

- CHECKIN_BYNAME
- CHECKIN_NEW_SUB
- CHECKIN_SEL_SUB

checkDocRules

Evaluates the defined content item rules and passes checkout and isNotPublished as parameters. Called as a Java method by these services:

- CACHE_CHECKIN_NEW
- CHECKIN_NEW_SUB
- CHECKIN_SEL_FORM
- CHECKOUT_BY_NAME
- CHECKOUT_SUB
- GET_UPDATE_FORM
- UNDO_CHECKOUT
- UNDO_CHECKOUT_BY_NAME
- UPDATE_DOCINFO_SUB

checkDocState

Called as a Java method by ADD_WORKFLOWDOCUMENT_SUB.

checkForceLogin

Forces a log in. Called as a Java method by these services:

- GET_CLBRA_DOCUMENTS
- LOGIN
- PING_SERVER

- UPDATE_SUBSCRIPTION_NOTIFY
- UPDATE_SUBSCRIPTION_USED

checkForPublish

Called as a Java method by UPDATE_BYREV.

checkForRefreshingCachedResources

Called as a Java method by LOAD_RESOURCE_FILE.

checkInByID

Called as a Java method by CACHE_CHECKIN_SEL and CHECKIN_SEL_SUB.

checkInByName

Checks in the content item by name. Called as a Java method by CHECKIN_BYNAME.

checklsLatestRev

Evaluates for the latest revision. Called as a Java method by CHECKOUT_BY_NAME and RESUBMIT_FOR_CONVERSION.

checklsSelf

Checks whether the user is editing self. Called as a Java method by EDIT_USER_PROFILE.

checkParametersAgainstResultSet

Called as a Java method by DELETE_DOC.

checkProblemReportSecurity

Retrieves the data assigned to the parameter *DOC_INFO* and evaluates the problem report security information. Called as a Java method by these services:

- DELETE_PROBLEMREPORT
- GET_UPDATE_PROBLEMREPORT_FORM
- PROBLEMREPORT_INFO
- RESEND_PROBLEMREPORT
- UPDATE_PROBLEMREPORT

checkRefreshUsers

Updates the user information. Called as a Java method by these services:

- ADD_USER
- CHANGE_USER_AUTH_TYPE
- DELETE_USER
- EDIT_USER
- EDIT_USER_PROFILE
- REGISTER_USER

checkRevisionProperties

Retrieves the latest revision information and passes *Qrevisions* as a parameter. Called as a Java method by these services:

- CHECKIN_SEL_FORM
- CHECKOUT_OK
- CHECKOUT_SUB
- GET_UPDATE_FORM

checkSecurity

Retrieves the data assigned to the parameter DOC_INFO and evaluates the assigned security level to verify that the user is authorized to perform this action. The parameter varies by service. Called as a Java method by these services:

- ADD PROBLEMREPORT
- ADD_WORKFLOW
- ADD_WORKFLOWALIASES
- ADD_WORKFLOWDOCUMENT
- ADD_WORKFLOWDOCUMENTS
- APPLET_DOCINFO
- CACHE_CHECKIN_NEW
- CACHE_CHECKIN_SEL
- CACHE_SUBMIT_HTML_FORM
- CACHE_WORKFLOW_CHECKIN
- CHECKIN_BYNAME
- CHECKIN_NEW
- CHECKIN_SEL
- CONTINUE_SUBMIT_HTML_FORM
- CONTINUE CHECKIN
- CRITERIAWORKFLOW_DISABLE
- CRITERIAWORKFLOW_ENABLE
- DELETE_CHECKIN_CACHE
- DELETE_DOC
- DELETE_REV
- DELETE_REV_EX
- DELETE_WFCONTRIBUTORS
- DELETE_WORKFLOW
- DELETE_WORKFLOWCRITERIA
- DELETE_WORKFLOWDOCUMENTS
- DOC INFO
- **EDIT WORKFLOW**

- EDIT_WORKFLOWCRITERIA
- FORM_PROCESS
- GET_ARCHIVED_FILE
- GET_DOCUMENT_PROBLEMREPORTS
- GET_DYNAMIC_CONVERSION
- GET_EXTERNAL_DOC_INFO
- GET_EXTERNAL_HIGHLIGHT_INFO
- GET_EXTERNAL_XML_HIGHLIGHT_INFO
- GET_FILE
- GET_HIGHLIGHT_INFO
- GET_UPDATE_FORM
- GET_WF_COMPANION_INFO
- GET_WORKFLOW_INFO
- GET_WORKFLOW_INFO_BYNAME
- GET_WORKFLOWDOCREVISIONS
- GET_WORKFLOWDOCUMENTS
- GET_XML_HIGHLIGHT_INFO
- LOAD_RESOURCE_FILE
- RESUBMIT_FOR_CONVERSION
- REV_HISTORY
- REVIEW_WORKFLOW_DOC
- SELECTDOC
- SUBMIT_HTML_FORM
- SUBSCRIBE
- UNSUBSCRIBE
- UPDATE_DOCINFO_SUB
- VALIDATE_DOCINFO
- VIEW_DOC
- WORKFLOW_APPROVE
- WORKFLOW_CANCEL
- WORKFLOW_CHECKIN
- WORKFLOW_REJECT
- WORKFLOW_REJECT_FORM
- WORKFLOW_START

checkSubAdmin

Checks if the user has the sub administrator role and passes a parameter, which varies depending which service is used. Called as a Java method by the following services:

- ADD_USER
- ADD_WORKFLOW
- ADD_WORKFLOW_SCRIPT
- ADD_WORKFLOW_TOKEN
- ADD_WORKFLOWALIASES
- ADD_WORKFLOWDOCUMENT
- ADD_WORKFLOWDOCUMENTS
- ADD_WORKFLOWSTEP
- CHANGE_USER_AUTH_TYPE
- CRITERIAWORKFLOW_DISABLE
- CRITERIAWORKFLOW_ENABLE
- DELETE_USER
- DELETE_WFCONTRIBUTORS
- DELETE WORKFLOW
- DELETE_WORKFLOW_SCRIPT
- DELETE_WORKFLOW_TOKEN
- DELETE_WORKFLOWCRITERIA
- DELETE_WORKFLOWDOCUMENTS
- DELETE_WORKFLOWSTEP
- EDIT_USER
- EDIT_WORKFLOW
- EDIT_WORKFLOW_SCRIPT
- EDIT_WORKFLOW_TOKEN
- EDIT_WORKFLOWCRITERIA
- EDIT WORKFLOWSTEP
- GET_ADMIN_PAGE
- GET_CRITERIA_WORKFLOWS_FOR_GROUP
- GET_USERS
- GET_WF_COMPANION_INFO
- GET_WORKFLOW_SCRIPT
- GET_WORKFLOWS_FOR_ALL
- PAGE_HANDLER
- QUERY_USER_ATTRIBUTES
- UPDATE_USEROPTION_LIST
- WORKFLOW_CANCEL
- WORKFLOW START

checkUserAuthType

Called as a Java method by CHANGE_USER_AUTH_TYPE.

checkWorkflow

Checks workflow information by referencing WF_INFO and passes isNotActiveBasic as a parameter. Called as a Java method by these services:

- CACHE_CHECKIN_SEL
- CACHE_WORKFLOW_CHECKIN
- CHECKIN_BYNAME
- CHECKIN_SEL_SUB
- CHECKOUT_SUB
- DELETE_DOC
- DELETE_REV
- DELETE_REV_EX
- WORKFLOW_CHECKIN_SUB
- WORKFLOW_START

checkWorkflowAdminAccess

Called as a Java method by GET_WORKFLOWS.

computeCompanionDirectory

Called as a Java method by ADD_WORKFLOWDOCUMENT_SUB.

computeDeleteSecurity

Called as a Java method by DELETE_REV.

computeDocID

Computes the generated content item revision ID. Called as a Java method by these services:

- GET_ARCHIVED_FILE
- GET_DYNAMIC_CONVERSION
- GET_FILE
- LOAD_RESOURCE_FILE

computeDocInfoInHtmlPage

Evaluates the content information for the HTML page. Parameters vary by service. Called as a Java method by these services:

- CHECKIN_LIST
- CONTINUE_CHECKIN
- DELETE_CHECKIN_CACHE
- DOC_SUBS_LIST
- GET_EXPIRED
- SUBSCRIPTION_LIST

- UNSUBSCRIBE_FROM_LIST
- WORK_IN_PROGRESS

computeDocSubscribers

Evaluates the content item for subscribers. Called as a Java method by GET_DOC_ SUBSCRIBERS.

computeRejectTargetStep

Computes the reject target step. Called as a Java method by WORKFLOW_REJECT.

computeRemainingUsers

Called as a Java method by these services:

- GET WORKFLOW INFO
- GET_WORKFLOW_INFO_BYNAME
- WORKFLOW_REJECT

computeURLs

Evaluates URLS and passes REVISIONS as a parameter. Called as a Java method by REV_HISTORY.

computeWfDocumentsInfo

Evaluates the workflow content item information and passes *WfDocuments* as a parameter. Called as a Java method by GET_WORKFLOWDOCUMENTS.

conditionalDetermineCheckin

Prepares the form for check in. Called as a Java method by FORM_PROCESS.

continueCheckin

Called as a Java method by CONTINUE_CHECKIN.

controllndexing

Executes the search indexing control. Called as a Java method by CONTROL_ SEARCH_INDEX.

createAddEditProviderForm

Creates an Add/Edit provider form. Called as a Java method by GET_ADD_EDIT_ PROVIDER_FORM.

createArchiveFileName

Creates the archive file name. Called as a Java method by GET_ARCHIVED_FILE.

createFileName

Creates a new file name. Called as a Java method by GET_FILE and LOAD_ RESOURCE_FILE.

createNewRev

Called as a Java method by ADD_WORKFLOWDOCUMENT_SUB.

createResultSetSQL

Executes a query with parameters taken from the Data Binder (*dataSource* and *whereClause* local data) rather than from given parameters. It places the results in the local data using the ResultSet name found in the Data Binder (*resultName*). Called as a Java method by these services:

- CHECKIN_LIST
- CONTINUE_CHECKIN
- DELETE_CHECKIN_CACHE
- GET_ACTIVE_WORKFLOWS
- DOC_SUBS_LIST
- GET_CLBRA_DOCUMENTS
- GET_DATARESULTSET
- GET_EXPIRED
- GET_WORKFLOWS
- SUBSCRIBE_EX
- UNSUBSCRIBE_FROM_LIST_EX
- WORK_IN_PROGRESS

createSubscriptionType

Creates the subscription type. Called as a Java method by CREATE_SUBSCRIPTION_TYPE.

createWebFileNameFromRelativeUrl

Creates a Web file name from the provided relative URL and passes *TEMPLATE_URL_INFO* as a parameter. Called as a Java method by GET_DYNAMIC_URL.

createWorkflowID

Creates the workflow label. Called as a Java method by ADD_WORKFLOW.

A.5 D

Dalias

Deletes the alias. Called as an Execute Query action by DELETE_ALIAS.

DaliasUsers

Deletes the alias user. Called as an Execute Query action by DELETE_ALIAS and EDIT_ALIAS.

Dcollaboration

Called as an Execute Query action by DELETE_COLLABORATION.

DdocAccount

Deletes the content item account. Called as an Execute Query action by DELETE_DOC ACCOUNT.

DdocFormat

Deletes the content item format. Called as an Execute Query action by DELETE_ DOCFORMAT.

DdocType

Deletes the content item type. Called as an Execute Query action by DELETE_ DOCTYPE.

Ddocument

Called as an Execute Query action by these services:

- REMOVE METAFILE SUB
- UPDATE_BYREV
- WORKFLOW_CHECKIN_SUB

decodeTopicValues

Decodes the topic values. Called as a Java method by PNE_SAVE_QUERY.

deleteAliases

Called as a Java method by DELETE_WFCONTRIBUTORS.

deleteCollaboration

Called as a Java method by DELETE_COLLABORATION.

deleteDoc

Retrieves the data assigned to the parameter REVISIONS and deletes the content item. Called as a Java method by DELETE_BYCLASS and DELETE_BYNAME.

deleteDocumentSubscription

Deletes the content item subscription and passes *deleteRev* as a parameter. Called as a Java method by these services:

- DELETE_BYCLASS
- **DELETE BYNAME**
- DELETE BYREV
- DELETE_DOC
- DELETE_REV_EX

deleteProblemReport

Deletes the problem report information. Called as a Java method by DELETE_ PROBLEMREPORT.

deleteProvider

Deletes the provider. Called as a Java method by DELETE_PROVIDER.

deleteResultTemplate

Deletes the result template. Called as a Java method by DELETE_RESULT_ TEMPLATE.

deleteRev

Deletes a previous revision of a content item and passes *DOC_INFO* as a parameter. Called as a Java method by DELETE_REV and DELETE_REV_EX.

deleteRevFiles

Called as a Java method by these services:

- REMOVE_METAFILE_SUB
- UPDATE BYREV
- WORKFLOW_CHECKIN_SUB

deleteSchemaRelation

Called as a Java method by DELETE_SCHEMA_RELATION.

deleteSchemaTable

Called as a Java method by DELETE_SCHEMA_TABLE.

deleteSchemaView

Called as a Java method by DELETE_SCHEMA_VIEW.

deleteSubscriptionType

Action that deletes the subscription type. Called as a Java method by DELETE_SUBSCRIPTION_TYPE.

deleteTemplate

Deletes the workflow template. Called as a Java method by ADD_WF_TEMPLATE.

deleteWfDesign

Called as a Java method by DELETE_WORKFLOW and DELETE_WORKFLOWCRITERIA.

deleteWfDocuments

Deletes workflow content items. Called as a Java method by DELETE_WORKFLOWDOCUMENTS.

deleteWorkflowScript

Deletes a workflow script. Called as a Java method by DELETE_WORKFLOW_SCRIPT.

deleteWorkflowStepScript

Deletes the script associated with the workflow step. Called as a Java method by DELETE_WORKFLOWSTEP.

deleteWorkflowToken

Deletes the workflow token. Called as a Java method by DELETE_WORKFLOW_TOKEN.

determineCheckin

Prepares the form for check in. Called as a Java method by these services:

CHECKIN_UNIVERSAL

- CONTINUE_SUBMIT_HTML_FORM
- SUBMIT_HTML_FORM

DextensionMap

Deletes the extension map. Called as an Execute Query action by DELETE_ DOCEXTENSION.

DgroupRole

Deletes the role. Called as an Execute Query action by DELETE_GROUP.

disableSendFile

Called as a Java method by GET_DYNAMIC_CONVERSION.

Dmetadef

Deletes the meta definition information. Called as an Execute Query action by DEL_ METADEF.

doCachedCheckinCleanup

Called as a Java method by CONTINUE_CHECKIN and DELETE_CHECKIN_ CACHE.

doCachedCleanup

Called as a Java method by CONTINUE_SUBMIT_HTML_FORM.

DocFormats

Retrieves content item formats. The result of this query is assigned to the *DocFormats* parameter and stored for later use. Called as a Select Cache Query action by GET_ DOCFORMATS.

docHistoryInfo

Evaluates content item history information and passes Checkout and IdocHistory as parameters. Called as a Java method by these services:

- CHECKIN_BYNAME
- CHECKIN_NEW_SUB
- CHECKIN_SEL_SUB
- CHECKOUT_SUB
- CRITERIAWORKFLOW_DISABLE
- CRITERIAWORKFLOW_DISABLE_SUB
- CRITERIAWORKFLOW_ENABLE
- DELETE_BYCLASS
- DELETE_BYNAME
- DELETE_BYREV
- DELETE_DOC
- DELETE_REV
- DELETE_REV_EX

- INSERT_NATIVE
- INSERT_NEW
- UNDO_CHECKOUT
- UNDO_CHECKOUT_BY_NAME
- UPDATE_BYREV
- UPDATE_DOCINFO_BYREV
- UPDATE_DOCINFO_SUB
- WORKFLOW_APPROVE
- WORKFLOW_CANCEL
- WORKFLOW_CHECKIN_SUB
- WORKFLOW_REJECT
- WORKFLOW_START

docRefinery

Initiates the refinery check-in process. Called as a Java method by these services:

- CHECKIN_BYNAME
- CHECKIN_NEW
- CHECKIN_NEW_SUB
- CHECKIN_SEL_SUB
- INSERT_NATIVE
- INSERT_NEW
- REPLACE_METAFILE_SUB
- UPDATE_BYREV
- UPDATE_DOCINFO_SUB
- WORKFLOW_CHECKIN_SUB

doSubService

Executes the specified SubService. Called as a Java method by these services:

- ADD_WORKFLOWDOCUMENT
- CHECKIN_NEW
- CHECKIN_SEL
- CHECKOUT
- CHECKOUT_BY_NAME
- GET_DOC_PAGE
- GET_DYNAMIC_CONVERSION
- GET_SECURE_PAGE
- GET_SYSTEM_AUDIT_INFO
- LM_LOAD_LAYOUTS
- UPDATE_DOCINFO

- UPDATE_DOCINFO_BYFORM
- WORKFLOW_CHECKIN

doSubservicelfMetafile

Called as a Java method by UPDATE_DOCINFO_SUB.

doUpload

Called as a Java method by CHUNKED_UPLOAD.

downloadComponent

Called as a Java method by DOWNLOAD_COMPONENT.

downloadItems

Called as a Java method by DOWNLOAD_LISTBOX_ITEMS.

doWorkflowAction

Performs the workflow action. Called as a Java method by these services:

- DELETE_BYCLASS
- DELETE_BYNAME
- DELETE_BYREV
- DELETE_DOC
- DELETE_REV
- DELETE_REV_EX

DproblemReport

Deletes the problem report information. Called as an Execute Query action by DELETE PROBLEMREPORT.

Drole

Deletes the role. Called as an Execute Query action by DELETE_ROLE.

DsecurityGroup

Deletes the security group. Called as an Execute Query action by DELETE_GROUP.

DsubscriptionType

Deletes the subscription type. Called as an Execute Query action by DELETE_ SUBSCRIPTION_TYPE.

Duser

Called as an Execute Query action by DELETE_USER.

DuserSecurityAttributes

Deletes the user security attributes. Called as an Execute Query action by these services:

- ADD_USER
- DELETE_ROLE
- EDIT_USER

DuserSubscription

Called as an Execute Query action by DELETE_USER.

Dworkflow

Deletes the workflow. Called as an Execute Query method by DELETE_WORKFLOW and DELETE_WORKFLOWCRITERIA.

DworkflowAliasAll

Deletes the workflow aliases. Called as an Execute Query action by DELETE_WORKFLOW and DELETE_WORKFLOWCRITERIA.

DworkflowCriteria

Deletes the workflow criteria. Called as an Execute Query action by DELETE_WORKFLOWCRITERIA.

DworkflowDocState

Deletes the workflow content item state. Called as an Execute Query action by WORKFLOW_REJECT.

DworkflowDocumentAll

Deletes the workflow content items. Called as an Execute Query by these services:

- CRITERIAWORKFLOW_DISABLE
- CRITERIAWORKFLOW_DISABLE_SUB
- DELETE_WORKFLOW
- DELETE WORKFLOWCRITERIA

DworkflowStateAll

Deletes the workflow states. Called as an Execute Query action by these services:

- CRITERIAWORKFLOW_DISABLE
- CRITERIAWORKFLOW_DISABLE_SUB
- DELETE_WORKFLOW
- DELETE_WORKFLOWCRITERIA
- WORKFLOW_CANCEL

DworkflowStep

Deletes the workflow steps. Called as an Execute Query action by DELETE_WORKFLOWSTEP.

DworkflowStepAliases

Deletes the workflow step aliases. Called as an Execute Query action by DELETE_WORKFLOWSTEP.

DworkflowStepsAll

Deletes the workflow steps. Called as an Execute Query action by DELETE_WORKFLOW and DELETE_WORKFLOWCRITERIA.

DworkflowUserAttributeAll

Deletes the workflow user attributes. Called as an Execute Query action by these services:

- CRITERIAWORKFLOW_DISABLE
- CRITERIAWORKFLOW_DISABLE_SUB
- DELETE_WORKFLOWCRITERIA

A.6 E

editCollaboration

Called as a Java method by EDIT_CLBRA_ACCESS_LIST and EDIT_ COLLABORATION.

editCriteria

Prepares the criteria for edit. Called as a Java method by EDIT_ WORKFLOWCRITERIA.

editRole

Edits role information. Called as a Java method by EDIT_ROLE.

editSchemaRelation

Called as a Java method by EDIT_SCHEMA_RELATION.

editSchemaView

Called as a Java method by EDIT_SCHEMA_VIEW.

editSchemaViewValues

Called as a Java method by EDIT_SCHEMA_VIEW_VALUES.

editTemplate

Edits the workflow template. Called as a Java method by EDIT_WF_TEMPLATE.

editWorkflowScript

Called as a Java method by EDIT_WORKFLOW_SCRIPT.

editWorkflowStep

Edits the workflow step and passes *IworkflowStep* as a parameter. Called as a Java method by EDIT_WORKFLOWSTEP.

editWorkflowStepScript

Edits the script associated with the workflow step. Called as a Java method by EDIT_ WORKFLOWSTEP.

editWorkflowToken

Called as a Java method by EDIT_WORKFLOW_TOKEN.

enableDisableProvider

Changes the provider enable state. Called as a Java method by ENABLE_DISABLE_ PROVIDER.

executeArchiveMethod

Performs a specified action on an archive collection: add, delete, and so on. Called as a Java method by these services:

- ADD_ARCHIVE
- ADD_COLLECTION
- ADD_PROXIEDCOLLECTION
- CANCEL_ARCHIVE
- COPY_ARCHIVE
- DELETE_ARCHIVE
- DELETE_BATCH_FILE
- DELETE_BATCH_FILE_DOCUMENTS
- EDIT_ARCHIVE
- EDIT_ARCHIVEDATA
- EDIT_EXPORTERS
- EDIT_TRANSFEROPTIONS
- EXPORT_ARCHIVE
- GET_ARCHIVES
- GET_BATCH_SCHEMA
- GET_BATCH_VALUES
- GET_BATCHFILES
- GET_BATCH_FILE_DOCUMENTS
- GET_REPLICATION_DATA
- GET_TARGET_INFO
- GET_TARGET_TRANSFER_STATUS
- GET_TRANSFER_SOURCE_INFO
- IMPORT_ARCHIVE
- IMPORT_DOCUMENT
- INSERT_NATIVE
- REMOVE_COLLECTION
- REMOVE_EXPORTER
- REMOVE_IMPORTER
- REMOVE_PROXIEDTRANSFER
- REMOVE_PROXIEDTRANSFER
- REQUEST_TRANSFER
- TRANSFER_ARCHIVE
- UPDATE_TARGET_TOTALS
- UPDATE_TRANSFER_STATUS
- UPLOAD_ARCHIVE_TRANSFER

executeCommands

Called as a Java method by EXECUTE_BATCH.

executeManifest

Executes the manifest. Called as a Java method by UPLOAD_NEW_COMPONENT.

executePageService

Executes the page service. Called as a Java method by PAGE_HANDLER and SAVE_ GLOBALINCLUDES.

ExtensionFormatMap

Retrieves the extension format map. The result of this query is assigned to the ExtensionFormatMap parameter and stored for later use. Called as a Select Cache Query method by GET_DOCEXTENSIONS.

A.7 F

filterUpdateData

Filters the update information. Called as a Java method by EDIT_USER_PROFILE.

A.8 G

getCollaborationData

Called as a Java method by these services:

- EDIT_CLBRA_ACCESS_LIST_FORM
- EDIT_COLLABORATION_FORM
- GET_CLBRA_INFO

getCollaborationDocs

Called as a Java method by GET_CLBRA_DOCUMENTS.

getCollaborations

Called as a Java method by GET_COLLABORATION_LIST.

getCompanionHistory

Called as a Java method by GET_WORKFLOW_INFO and GET_WORKFLOW_INFO_ BYNAME.

getComponentConfig

Called as a Java method by GET_COMPONENT_CONFIG.

getDefaultDocFormats

Sets the default content item format. Called as a Java method by DOC_FORMATS_ WIZARD.

getDocFormats

Retrieves the file formats for the content item. Called as a Java method by these services:

- DOC_INFO
- REVIEW_WORKFLOW_DOC
- WORKFLOW_REJECT_FORM

getDocSubscriptionInfo

Evaluates if the current user has subscribed to the content item and modifies the *DOC_INFO* page. Called as a Java method by these services:

- DOC_INFO
- REVIEW_WORKFLOW_DOC
- SUBSCRIBE_DOC_USER
- SUBSCRIBE_FORM
- UNSUBSCRIBE_FORM

getDocumentList

Retrieves the content item list. Called as a Java method by DOC_SUBS_LIST.

getDynamicPage

Retrieves the dynamic page. Called as a Java method by GET_DYNAMIC_PAGE.

getExternalDocInfo

Retrieves the external content item information. Called as a Java method by GET_EXTERNAL_DOC_INFO.

getExternalSecurityInfo

Evaluates the assigned security level to verify that the user is authorized to perform this action. The action passes *SearchCollectionDocInfo* as a parameter. Called as a Java method by these services:

- GET_EXTERNAL_DOC_INFO
- GET_EXTERNAL_HIGHLIGHT_INFO
- GET_EXTERNAL_XML_HIGHLIGHT_INFO
- VIEW_DOC

getFilesInAppDir

Retrieves the files listed in the application directory. Called as a Java method by GET_FILELIST.

getHighlightInfo

Presents the content item highlight information. Called as a Java method by these services:

- GET_EXTERNAL_HIGHLIGHT_INFO
- GET_EXTERNAL_XML_HIGHLIGHT_INFO
- GET_HIGHLIGHT_INFO
- GET_XML_HIGHLIGHT_INFO

getLatestID

Passes *QlatestID* as a parameter. Called as a Java method by DELETE_REV.

getLatestIDRevInfo

Retrieves the latest revision information and passes *Qrevisions* as a parameter. Called as a Java method by these services:

- CHECKIN_SEL_FORM
- **CHECKOUT**
- CHECKOUT_BY_NAME
- UNDO_CHECKOUT
- UNDO_CHECKOUT_BY_NAME

getOptionList

Retrieves the latest revision information and passes *Qrevisions* as a parameter. Called as a Java method by GET_OPTION_LIST and UPDATE_OPTION_LIST.

getOutgoingProviders

Called as a Java method by GET_PROXIEDSERVERS.

getProxiedArchiveCollections

Called as a Java method by GET_PROXIED_ARCHIVECOLLECTIONS.

getSchemaRelations

Called as a Java method by GET_SCHEMA_RELATIONS.

getSchemaTableInfo

Called as a Java method by GET_SCHEMA_TABLE_INFO and GET_SCHEMA_ VIEW_INFO.

getSchemaTables

Called as a Java method by GET_SCHEMA_TABLES.

getSchemaViewInfo

Called as a Java method by GET_SCHEMA_VIEW_INFO.

getSchemaViews

Called as a Java method by GET_SCHEMA_VIEWS.

getSearchResults

Retrieves the search results. Called as a Java method by GET_SEARCH_RESULTS and PNE_GET_SEARCH_RESULTS.

getSubscriptionList

Retrieves the subscription list and passes *QdocNameSubscription QnotDocNameSubscriptions* as parameters. Called as a Java method by SUBSCRIPTION_LIST and UNSUBSCRIBE_FROM_LIST.

getTable

Called as a Java method by GET_TABLE.

getTemplate

Retrieves template data. Called as a Java method by GET_WF_TEMPLATE.

getTemplateConversions

Called as a Java method by GET_TEMPLATE_CONVERSIONS.

getTemplates

Retrieves the workflow template data. Called as a Java method by GET_WF_TEMPLATES.

getURLAbsolute

Resolves the URL of the content item. The URL is passed to the **Web Location:** entry of the DOC_INFO template. Called as a Java method by DOC_INFO and REVIEW_WORKFLOW_DOC.

getUserAttributes

Retrieves user attributes. Called as a Java method by QUERY_USER_ATTRIBUTES.

getUserCollaborationList

Called as a Java method by GET_USER_CLBRA_LIST.

getUserMailAddress

Resolves the email address of the content item author and the user who has checked out the content item. The action passes *dDocAuthor* and *AuthorAddress* as parameters. Called as a Java method by these services:

- DOC_INFO
- DOC_INFO_LATESTRELEASE
- DOC_INFO_SIMPLE
- DOC_INFO_SIMPLE_BYREV
- GET_WORKFLOW_INFO
- GET_WORKFLOW_INFO_BYNAME
- PROBLEMREPORT_INFO
- REVIEW_WORKFLOW_DOC

getUserProfile

Retrieves user profile information. Called as a Java method by GET_USER_INFO.

getUsers

Retrieves user list. Called as a Java method by GET_USERS.

getUserUnique

Retrieves the unique user name. Called as a Java method by REGISTER_USER.

getViewEditInfo

Called as a Java method by GET_SCHEMA_VIEW_EDIT_INFO.

getViewValues

Called as a Java method by GET_SCHEMA_VIEW_VALUES.

getWebAppStatus

Called as a Java method by GET_WEB_APP_STATUS.

getWfDocuments

Retrieves workflow content items and passes WfDocuments as a parameter. Called as a Java method by these services:

- DELETE_WORKFLOW
- DELETE_WORKFLOWCRITERIA
- WORKFLOW_CANCEL
- WORKFLOW_START

getWorkflowDesignInfo

Called as a Java method by GET_WORKFLOW.

getWorkflowDocumentInfo

Called as a Java method by GET_WORKFLOW.

getWorkflowInfo

Evaluates whether the content item is part of a workflow. The action passes WF_INFO as a parameter. The DOC_INFO template is referenced and if WF_INFO exists the workflow information is included in the DOC_INFO template. Called as a Java method by DOC_INFO and REVIEW_WORKFLOW_DOC.

getWorkflowScript

Called as a Java method by GET_WORKFLOW_SCRIPT.

getWorkflowStepAliasesInfo

Retrieves the workflow step alias information. Called as a Java method by GET_ WORKFLOW.

A.9 H

hidePassword

Hides the password and passes USER_INFO as a parameter. Called as a Java method by GET_USER_INFO.

A.10 I

lalias

Inserts the alias user information. Called as an Execute Query action by ADD_ALIAS.

Icollaboration

Called as an Execute Query action by ADD_COLLABORATION.

IdocAccount

Inserts a new account. Called as an Execute Query action by ADD_DOC_ACCOUNT.

IdocFormat

Inserts the content item format. Called as an Execute Query action by ADD_DOCFORMAT.

IdocType

Inserts the content item type. Called as an Execute Query action by ADD_DOCTYPE.

lextensionMap

Inserts the extension map. Called as an Execute Query action by ADD_DOCEXTENSION.

Imeta

Inserts the meta data information. Called as an Execute Query action by these services:

- CHECKIN_BYNAME
- CHECKIN NEW SUB
- CHECKIN_SEL_SUB
- INSERT_NATIVE
- INSERT_NEW

Imetadef

Inserts the meta data definition information. Called as an Execute Query action by ADD METADEF.

insertAliasUsers

Adds the alias information to the database. Called as a Java method by ADD_ALIAS and EDIT_ALIAS.

insertGroupRow

Called as a Java method by ADD_GROUP.

IproblemReport

Updates the problem report. Called as an Execute Query action by ADD_PROBLEMREPORT.

Irevision

Updates the revision ID. Called as an Execute Query action by these services:

- CHECKIN_BYNAME
- CHECKIN_NEW_SUB
- CHECKIN_SEL_SUB
- INSERT_NATIVE
- INSERT_NEW

Irole

Inserts the role. Called as an Execute Query by ADD_ROLE.

isDocCheckedOut

Called as a Java method by these services:

- CACHE_WORKFLOW_CHECKIN
- WORKFLOW_APPROVE
- WORKFLOW_CHECKIN_SUB

IsecurityGroup

Inserts the security group. Called as an Execute Query action by ADD_GROUP.

Isubscription

Inserts the subscription. Called as an Execute Query by SUBSCRIBE_EX.

Iworkflow

Inserts the workflow information in the database. Called as an Execute Query action by ADD_WORKFLOW.

IworkflowDocument

Called as an Execute Query action by ADD_WORKFLOWDOCUMENT_SUB.

IworkflowState

Provides an internal status table that stores information about content items in active workflows. Called as an Execute Query action by WORKFLOW_APPROVE.

A.11 L

loadActiveComponentData

Loads configuration information and passes ACTIVE_COMPONENTS as a parameter. Called as a Java method by CONFIG_INFO.

loadAndValidateValues

Evaluates the specified values. Called as a Java method by these services:

- CRITERIAWORKFLOW_DISABLE
- CRITERIAWORKFLOW_DISABLE_SUB
- CRITERIAWORKFLOW_ENABLE
- WORKFLOW_CANCEL
- **WORKFLOW START**

loadCollaborationList

Called as a Java method by GET_ACTIVE_WORKFLOWS.

loadComponentInstallInfo

Called as a Java method by GET_COMPONENT_INSTALL_FORM.

loadComponentInstallSettings

Called as a Java method by GET_COMPONENT_INSTALL_SETTINGS'.

loadConfigurationInfo

Loads the content item specific configuration information. Called as a Java method by GET_DOC_CONFIG_INFO.

loadDefaultInfo

Loads the default configuration information. Called as a Java method by these services:

- ASSIGN_DOCINFO_FORM
- CHECKIN_NEW_FORM
- CHECKIN_SEL_FORM
- CHECKIN_SIMILAR_FORM
- GET_DOC_CONFIG_INFO
- GET_PORTAL_PAGE
- GET_UPDATE_FORM
- LOAD_DOC_ENVIRONMENT

loadDocConfig

Loads the content item configuration information. Called as a Java method by DOC_FORMATS_WIZARD and EDIT_DOC_FORMATS.

loadDocDefaults

Called as a Java method by these services:

- ASSIGN_DOCINFO_FORM
- CHECKIN_NEW_FORM
- CHECKIN_SIMILAR_FORM

loadFilterConfig

Called as a Java method by these services:

- ASSIGN_DOCINFO_FORM
- CHECKIN_NEW_FORM
- CHECKIN_SIMILAR_FORM

loadGlobalIncludes

Loads the global includes. Called as a Java method by LOAD_GLOBALINCLUDES.

loadMetaDefaults

Loads the default configuration information. Called as a Java method these services:

- ASSIGN_DOCINFO_FORM
- CHECKIN_NEW_FORM
- CHECKIN_SIMILAR_FORM
- GET_UPDATE_FORM

IoadMetaOptionsLists

Loads the meta data options list. Called as a Java method by these services:

- ASSIGN_DOCINFO_FORM
- CHECKIN_NEW_FORM
- CHECKIN SEL FORM
- CHECKIN SIMILAR FORM
- GET_DOC_CONFIG_INFO
- GET_PORTAL_PAGE
- GET_UPDATE_FORM
- LOAD_DOC_ENVIRONMENT

loadPRStateLists

Loads the problem report state lists. Called as a Java method by GET_ PROBLEMREPORTS_SEARCH_FORM and GET_UPDATE_PROBLEMREPORT_ FORM.

loadRegisteredProjects

Retrieves problem report search information. Called as a Java method by GET_ PROBLEMREPORTS_SEARCH_FORM.

loadServerOutput

Loads the server output. Called as a Java method by CLEAR_SERVER_OUTPUT and GET_SERVER_OUTPUT.

loadSharedTable

Loads the shared table information and passes *ArchiveCollections* as a parameter. Parameters vary by service. Called as a Java method by these services:

- CREATE_SUBSCRIPTION_TYPE
- DELETE_SUBSCRIPTION_TYPE
- GET ARCHIVECOLLECTIONS
- GET_DOC_CONFIG_INFO
- GET_PACKAGE_ENVIRONMENT_PAGE
- GET_PORTAL_PAGE
- GET_RESULT_OPTIONS
- GET_SYSTEM_AUDIT_INFO
- **GET_USER_INFO**
- LOAD_DOC_ENVIRONMENT
- UPDATE_SUBSCRIPTION_TYPE

loadTopic

Called as a Java method by these services:

- LOAD_PNE_PORTAL
- LOAD_USER_TOPIC
- LOAD_WORKFLOW_QUEUE

IoadTraceFlags

Called as a Java method by GET_SYSTEM_AUDIT_INFO.

loadUserAndCheckEditAllowed

Loads the user information and evaluates the allowed edit privilege for the user. Called as a Java method by these services:

- ADD_USER
- CHANGE_USER_AUTH_TYPE
- DELETE USER
- EDIT_USER
- QUERY_USER_ATTRIBUTES

IoadUserMetaData

Loads the user meta data information. Called as a Java method by these services:

- GET_FILTER_ADMIN_PAGE
- GET_SELF_REGISTER_PAGE
- GET_USER_INFO

loadWfCompanionInfo

Retrieves information for companion workflows. Called as a Java method by GET_WF_COMPANION_INFO.

A.12 M

makeNewRevClass

Called as a Java method by CACHE_CHECKIN_NEW and CHECKIN_NEW_SUB.

mapDocNamedResultSetValuesCheckMetaChange

Called as a Java method by CACHE_WORKFLOW_CHECKIN.

mapDocResultSetCheckMetaChange

Called as a Java method by CACHE_CHECKIN_SEL and CHECKIN_SEL_SUB.

mapNamedResultSetValues

Retrieves the data assigned to the parameter *DOC_INFO* and maps the result set values for *dStatus*, *dReleaseState*, and *dProcessingState*. The parameter is the same among services while the result set map values vary by service. Called as a Java method by these services:

- DELETE_REV
- DOC_INFO
- RESUBMIT_FOR_CONVERSION
- REVIEW_WORKFLOW_DOC

mapResultSet

Maps the result set and passes *QdocInfo*, *dRevClassID*, *dDocName*, *dSecurityGroup*, dCheckoutUser, dDocAccount, and dPublishState as parameters. Parameters vary based on service. Called as a Java method by these services:

- ADD_PROBLEMREPORT
- APPLET_DOCINFO
- CACHE_CHECKIN_NEW
- CACHE_CHECKIN_SEL
- CACHE_WORKFLOW_CHECKIN
- CHECKIN_BYNAME
- CHECKIN_NEW_SUB
- CHECKIN_SEL_FORM
- CHECKIN_SEL_SUB
- DOC_INFO_LATESTRELEASE
- DOC_INFO_SIMPLE_BYREV
- INSERT_NEW
- RESUBMIT_FOR_CONVERSION
- UNDO_CHECKOUT
- UNDO_CHECKOUT_BY_NAME
- **SUBSCRIBE**
- WORKFLOW_APPROVE
- WORKFLOW_CHECKIN_SUB
- WORKFLOW_REJECT

markDocDeleted

Sets the status message and passes *delete_doc* as a parameter. Called as a Java method by these services:

- DELETE_BYCLASS
- DELETE_BYNAME
- DELETE_DOC

markRevDeleted

Updates the revision status as deleted. Called as a Java method by these services:

- DELETE_BYREV
- DELETE_REV
- DELETE_REV_EX

mergeTable

Merges the named table. Called as a Java method by MERGE_TABLE.

A.13 N

notifyChange

Notifies the provider of changes to the content item. Called as a Java method by NOTIFY_CHANGE.

notifyCollaborationUsers

Called as a Java method by ADD_COLLABORATION and EDIT_CLBRA_ACCESS_LIST.

notifyContributor

Called as a Java method by ADD_PROBLEMREPORT and RESEND_PROBLEMREPORT.

A.14 P

packageEnvironment

Called as a Java method by PACKAGE_ENVIRONMENT.

packageLocalization

Called as a Java method by LOAD_USER_LOCALIZATION.

pageRequest

Executes an HTML page request. Called as a Java method by these services:

- GET_ADMIN_PAGE
- GET_DOC_PAGE
- GET_PORTAL_PAGE
- GET_SECURE_PAGE
- LOGIN
- PNE_SAVE_QUERY
- PNE_UPDATE_PERSONAL_URLS
- PNE_UPDATE_PORTAL_INFO

postCheckinFilter

Processes the post checkin filter. Called as a Java method by FORM_PROCESS.

postHtmlFormCheckin

Submits the HTML form. Called as a Java method by CONTINUE_SUBMIT_HTML_FORM and SUBMIT_HTML_FORM.

prepareCheckinSecurity

Evaluates the assigned security level to verify that the user is authorized to perform this action. Called as a Java method by these services:

- CHECKIN_NEW
- CHECKIN_SEL

UPDATE_DOCINFO_SUB

prepareDocInfoValidate

Called as a Java method by VALIDATE_DOCINFO.

prepareFormContinue

Called as a Java method by CONTINUE_SUBMIT_HTML_FORM.

prepareForPreview

Called as a Java method by CACHE_SUBMIT_HTML_FORM.

prepareInsertNew

Called as a Java method by INSERT_NEW.

prepareMailForStepUsers

Sends email to the workflow step users. Called as a Java method by WORKFLOW_ REJECT and WORKFLOW_START.

prepareRedirect

Prepares the redirect template for the specified service. Called as a Java method by these services:

- ADD_COLLABORATION
- ADD_EDIT_PROVIDER
- ADD_PROBLEMREPORT
- CHECKIN_NEW
- CHECKIN_SEL
- **CHECKOUT**
- CLEAR_SERVER_OUTPUT
- CONTINUE_SUBMIT_HTML_FORM
- DELETE_COLLABORATION
- DELETE_PROBLEMREPORT
- DELETE_PROVIDER
- DELETE_REV
- EDIT_CLBRA_ACCESS_LIST
- EDIT_COLLABORATION
- EDIT_DOC_FORMATS
- EDIT_TRACE_OPTIONS
- EDIT_USER_PROFILE
- ENABLE_DISABLE_PROVIDER
- RESUBMIT_FOR_CONVERSION
- SAVE_TEMPLATE_CONVERSIONS
- SAVE_USER_TOPICS

- SUBMIT_HTML_FORM
- SUBSCRIBE
- TEST_PROVIDER
- UNDO_CHECKOUT
- UNSUBSCRIBE
- UPDATE_DOCINFO_BYFORM
- UPDATE_FILTER_INFO
- UPDATE_PROBLEMREPORT
- UPLOAD_NEW_COMPONENT
- WORKFLOW_APPROVE
- WORKFLOW_CHECKIN
- WORKFLOW_REJECT

prepareTopicEdits

Prepares the topic edits. Called as a Java method by these services:

- EDIT_USER_PROFILE
- GET_CLBRA_DOCUMENTS
- PNE_GET_SEARCH_RESULTS
- PNE_SAVE_QUERY
- PNE_UPDATE_PERSONAL_URLS
- PNE_UPDATE_PORTAL_INFO
- SAVE_USER_TOPICS

prepareWebViewableDelivery

Called as a Java method by GET_DYNAMIC_CONVERSION.

prepSubscription

Prepares the subscription. Called as a Java method by DOC_SUBS_LIST.

prepSubscriptionDateUpdate

Prepares the subscription date for update and passes the specified parameter. Called as a Java method by UPDATE_SUBSCRIPTION_NOTIFY and UPDATE_SUBSCRIPTION_USED.

processCheckinArchive

Checks the content item into the archive. Called as a Java method by these services:

- CHECKIN_ARCHIVE
- CHECKIN_ARCHIVE_NO_NOTIFY

processForm

Processes the form submission and passes *checkSecurity* as a parameter. Called as a Java method by FORM_PROCESS.

A.15 Q

Qalias

Queries the user alias information. The result of this query is assigned to the parameter AliasInfo. Called as a Select Query action by ADD_ALIAS and EDIT_ALIAS.

QaliasesForUser

Queries if the user has been assigned an alias. The result of this query is assigned to the parameter *Alias*. Called as a Select Query action by DELETE_USER.

QarchivedDoc

Retrieves archived content item information from the database. The result of this query is assigned to the parameter FILE_DOC_INFO and stored for later use. This action should not throw any exceptions. The control mask setting specifies that the query must return a record or the action fails with the given error message. Called as a Select Cache Query action by GET_ARCHIVED_FILE.

Qcache

Called as a Select Cache Query action by CONTINUE_SUBMIT_HTML_FORM.

QcheckinCache

Called as a Select Cache Query by these services:

- CACHE_CHECKIN_NEW
- CACHE CHECKIN SEL
- CACHE_SUBMIT_HTML_FORM
- CACHE_WORKFLOW_CHECKIN
- CONTINUE_CHECKIN
- DELETE_CHECKIN_CACHE
- GET CACHED CHECKIN INFO

QcheckinCachesForUser

Called as a Select Cache Query action by these services:

- CHECKIN_LIST
- CONTINUE_CHECKIN
- "DELETE_BYREV" on page 43

Qcollaboration

Called as a Select Query action by ADD_COLLABORATION.

Called as a Select Cache Query action by these services:

- DELETE_COLLABORATION
- EDIT_CLBRA_ACCESS_LIST
- EDIT_CLBRA_ACCESS_LIST_FORM
- EDIT_COLLABORATION
- EDIT_COLLABORATION_FORM

- GET_CLBRA_DOCUMENTS
- GET_CLBRA_INFO

QdocAccount

Queries the content item account information. The result of this query is assigned to the parameter *DOCACCOUNT_INFO*. Called as a Select Query action by ADD_DOC_ACCOUNT.

QdocAccounts

Retrieves content item account information. The result of this query is assigned to the parameter *DOCACCOUNT_INFO* and stored for later use. Called as a Select Cache Query action by QUERY_DOC_ACCOUNTS.

QdocInfo

Retrieves content item information. The result of this query is assigned to the parameter *DOC_INFO*. Called as a Select Cache Query action by these services:

- ADD_PROBLEMREPORT
- APPLET DOCINFO
- CACHE_WORKFLOW_CHECKIN
- CHECKIN_SEL_FORM
- CHECKOUT
- CHECKOUT_BY_NAME
- CHECKOUT_OK
- DELETE_DOC
- DELETE_REV
- DELETE_REV_EX
- DOC_INFO
- DOC_INFO_LATESTRELEASE
- DOC INFO SIMPLE
- DOC_INFO_SIMPLE_BYREV
- GET_DOC_CONFIG_INFO
- GET_DYNAMIC_CONVERSION
- GET_FILE
- GET_UPDATE_FORM
- GET_WORKFLOW_INFO
- NOTIFY_CONTRIBUTOR
- RESUBMIT_FOR_CONVERSION
- REV_HISTORY
- REVIEW_WORKFLOW_DOC
- SELECTDOC
- SUBSCRIBE

- SUBSCRIBE_DOC_USER
- SUBSCRIBE_FORM
- UNSUBSCRIBE FORM
- UPDATE DOCINFO BYREV
- UPDATE_DOCINFO_SUB
- WORKFLOW_CHECKIN

QdocInfoSimilarCheckin

Called as a Select Cache Query by CHECKIN_SEL_SUB.

QdocName

Called as a Select Cache Query by these services:

- DELETE_PROBLEMREPORT
- DOC_INFO_SIMPLE
- GET_UPDATE_PROBLEMREPORT_FORM
- GET_WF_COMPANION_INFO
- PROBLEMREPORT_INFO
- RESEND_PROBLEMREPORT
- UPDATE_PROBLEMREPORT

QdocNameMeta

Retrieves the content item name. The result of this query is assigned to the parameter DOC_INFO and stored for later use. Called as a Select Cache Query by these services:

- DOC INFO SIMPLE
- GET DOCUMENT PROBLEMREPORTS
- GET_WORKFLOW_INFO_BYNAME

QdocType

Queries the content item's file type information. The result of this query is assigned to the parameter DOCTYPE_INFO. Called as a Select Query action by ADD_DOCTYPE.

QdocTypeDocuments

Queries a specific content item's file type information. The result of this query is assigned to the parameter DOCUMENTS. Called as a Select Query action by DELETE_ DOCTYPE.

QdocTypes

Retrieves content item types. The result of this query is assigned to the parameter DocTypes and stored for later use. Called as a Select Cache Query action by GET_ DOCTYPES.

QdocumentProblemReports

Called as a Select Cache Query action by GET_DOCUMENT_PROBLEMREPORTS.

Qdocuments

Called as a Select Cache Query action by UPDATE_DOCINFO_BYREV and UPDATE_DOCINFO_SUB.

QextensionFormatMap

Queries the content item's format map extension. The result of this query is assigned to the parameter *FormatMap*. Called as a Select Query action by DELETE_DOCFORMAT.

QextensionMap

Queries the mapping of the file extension. The result of this query is assigned to the parameter *ExtensionMap*. Called as a Select Query action by ADD_DOCEXTENSION.

QformatMap

Queries the format map information. The result of this query is assigned to the parameter *FormatMap*. Called as a Select Query action by ADD_DOCFORMAT.

Qgroup

Queries group information. The result of this query is assigned to the parameter *GROUP_INFO*. Called as a Select Query action by ADD_GROUP.

QgroupRevisions

Queries group revision information. The result of this query is assigned to the parameter *GROUP_REVS*. Called as a Select Query action by DELETE_GROUP.

QgroupRole

Queries group role information. The result of this query is assigned to the parameter *GroupRole*. Called as a Select Cache Query action by EDIT_GROUP.

QgroupWF

Queries group workflow information. The result of this query is assigned to the parameter *GROUP_WF*. Called as a Select Query action by DELETE_GROUP.

QisAliasSubscribed

Queries if the alias is subscribed. The result of this query is assigned to the parameter *SUBSCRIPTION_INFO*. Called as a Select Query action by SUBSCRIBE_EX.

QisDocWFLocked

Called as a Select Query action by ADD_WORKFLOWDOCUMENT_SUB.

QisWfTokenUsed

Called as a Select Query action by DELETE_WORKFLOW_TOKEN.

QlatestIDByName

Retrieves the latest content item name information. The result of this query is assigned to the parameter *DOC_LATEST_ID* and stored for later use. The control mask setting specifies that the query must return a record or the action fails with the given error message. Called as a Select Cache Query action by CHECKOUT_BY_NAME and UNDO_CHECKOUT_BY_NAME.

Qmetadef

Called as a Select Query action by these services:

- ADD_METADEF
- **EDIT_METADEF**
- **DEL METADEF**

QmetaFieldInfo

Retrieves meta data field information and passes MetaFieldInfo as a parameter. Called as a Select Cache Query action by GET_METADEFS and UPDATE_META_TABLE.

QODMAdocInfo

Called as a Select Cache Query action by ODMA_DOC_INFO_SIMPLE.

QproblemReport

Retrieves problem report information from the database using a query. The result of this query is assigned to the parameter *ProblemReport* and stored for later use. Called as a Select Cache Query by these services:

- ADD PROBLEMREPORT
- DELETE_PROBLEMREPORT
- GET_UPDATE_PROBLEMREPORT_FORM
- PROBLEMREPORT_INFO
- RESEND_PROBLEMREPORT
- UPDATE PROBLEMREPORT

QprojectDocument

Called as a Select Cache Query by these services:

- ADD PROBLEMREPORT
- GET_DOCUMENT_PROBLEMREPORTS
- PROBLEMREPORT INFO
- RESEND_PROBLEMREPORT

QregisteredProject

Retrieves registered project information. The result of this query is assigned to the specified parameter. Called as a Select Cache Query by these services:

- ADD_PROBLEMREPORT
- GET_DOCUMENT_PROBLEMREPORTS
- PROBLEMREPORT_INFO
- RESEND_PROBLEMREPORT

QreleasedDocInfo

Retrieves content item security information. The result of this query is assigned to the parameter SEC_DOC_INFO and stored for later use. The control mask setting specifies that the query must return a record or the action fails with the given error message. Called as a Select Cache Query action by GET_HIGHLIGHT_INFO and GET_XML_ HIGHLIGHT_INFO.

QrevHistory

Retrieves revision history information. The result of this query is assigned to the parameter *REVISION_HISTORY*. The DOC_INFO template uses REVISION_HISTORY in a loop to present information about each revision in the DOC_INF page. Called as a Select Cache Query action by DOC_INFO and REVIEW_WORKFLOW_DOC.

QrevHistoryReleased

Retrieves revision history information. The result of this query is assigned to the parameter *REVISION_HISTORY*. The DOC_INFO template uses REVISION_HISTORY in a loop to present information about each revision in the DOC_INFO page. Called as a Select Cache Query action by REV_HISTORY.

QrevisionsByClass

Retrieves revision information by class. The result of this query is assigned to the parameter *REVISIONS* and stored for later use. Called as a Select Cache Query by DELETE_BYCLASS and DELETE_DOC.

QrevisionsByName

Called as a Select Cache Query action by DELETE_BYNAME.

Qrole

Queries role information. The result of this query is assigned to the parameter *ROLE_INFO*. Called as a Select Query action by ADD_ROLE.

Oroles

Queries role information. The result of this query is assigned to the parameter *ROLES* and stored for later use. The action throws a data exception if it is unable to query for list of roles. Called as a Select Cache Query action by ADD_GROUP.

QsecurityGroup

Retrieves security group information from the database. The result of this query is assigned to the parameter *SECURITY_GROUPS*. The control mask setting specifies that the query must return a record or the action fails with the given error message. The action throws a data exception if the security group is not in the database.

Called as a Select Query action by EDIT_GROUP.

Called as a Select Cache Query action by QUERY_GROUP.

Quser

Retrieves user information. The result of this query is assigned to the parameter *USER_INFO* and stored for later use. The control mask setting specifies that the query must return a record or the action fails with the given error message. The action throws a data exception if the system is unable to retrieve information for the specified user. Called as a Select Cache Query action by GET_USER_INFO.

QuserMetaFieldInfo

Called as a Select Cache Query action by GET_USER_METADEFS and UPDATE_USER_META_TABLE.

QuserSecurityAttributeByType

Retrieves the security attributes by type. The result of this query is assigned to the parameter *RoleUsers*. Called as a Select Query action by DELETE_ROLE.

QuserSubscription

Retrieves the user subscription information. The result of this query is assigned to the parameter USER_SUBSCRIPTION and stored for later use. Called as a Select Cache Query action by DOC_SUBS_LIST.

QwfCriteriaDocRevs

Retrieves the workflow revision criteria. The result of this query is assigned to the parameter WfDocuments and stored for later use. This action should not throw any exceptions. Called as a Select Cache Query by CRITERIAWORKFLOW DISABLE and CRITERIAWORKFLOW_DISABLE_SUB.

QwfDocInformation

References the active workflow content item revision ID. The result of this query is assigned to the parameter DOC_INFO and stored for later use. Called as a Select Cache Query action by WORKFLOW_REJECT.

QwfDocName

Called as a Select Cache Query action by ADD_WORKFLOWDOCUMENT_SUB.

QwfDocState

Called as a Select Cache Query action by GET_WORKFLOW_INFO and GET_ WORKFLOW_INFO_BYNAME.

QwfStates

Retrieves the workflow state information and provides an internal status table that stores information about content items in active workflows. The result of this query is assigned to the parameter WorkflowState and stored for later use. This action should not throw any exceptions. Called as a Select Cache Query action by GET_ WORKFLOWDOCREVISIONS.

Qworkflow

Retrieves workflow information. The result of this query is assigned to the specified parameter. Called as a Select Query by action by ADD_WORKFLOW.

Called as a Select Cache Query action by these services:

- ADD_WORKFLOWALIASES
- ADD_WORKFLOWDOCUMENT
- ADD_WORKFLOWDOCUMENTS
- ADD_WORKFLOWSTEP
- CRITERIAWORKFLOW_ENABLE
- CRITERIAWORKFLOW_DISABLE
- CRITERIAWORKFLOW_DISABLE_SUB
- DELETE_WFCONTRIBUTORS
- DELETE_WORKFLOW
- DELETE_WORKFLOWCRITERIA
- DELETE_WORKFLOWSTEP
- DELETE_WORKFLOWDOCUMENTS

- DELETE_WORKFLOWSTEP
- EDIT_WORKFLOW
- EDIT WORKFLOWCRITERIA
- EDIT WORKFLOWSTEP
- GET_WORKFLOW
- GET_WORKFLOWDOCUMENTS
- GET_WORKFLOWDOCREVISIONS
- WORKFLOW_START
- WORKFLOW_CANCEL

QworkflowAlias

Retrieves workflow alias information. The result of this query is assigned to the parameter *WFAlias*. Called as a Select Query action by DELETE_ALIAS.

QworkflowAliases

Retrieves workflow alias information. Called as a Select Cache Query action by DELETE_WFCONTRIBUTORS

QworkflowCriteriaForGroup

Called as a Select Cache Query action by GET_CRITERIA_WORKFLOWS_FOR_GROUP.

QworkflowCriteriaStepsForGroup

Called as a Select Cache Query action by GET_CRITERIA_WORKFLOWS_FOR_GROUP.

QworkflowDocument

Retrieves workflow content item information. The result of this query is assigned to the parameter *WfDocuments* and stored for later use. Called as a Select Cache Query action by these services:

- GET_WF_COMPANION_INFO
- GET_WORKFLOW_INFO
- GET_WORKFLOW_INFO_BYNAME

QworkflowDocuments

Retrieves workflow content item information. The result of this query is assigned to the parameter *WfDocuments* and stored for later use. Called as a Select Cache Query action by GET_WORKFLOW and GET_WORKFLOWDOCUMENTS.

QworkflowForID

Called as a Select Cache Query action by GET_WORKFLOW_INFO and GET_WORKFLOW_INFO_BYNAME.

Qworkflows

Called as a Select Cache Query by GET_WORKFLOWS_FOR_ALL.

QworkflowStep

Retrieves workflow step information. The result of this query is assigned to the parameter STEP_INFO. The action throws a data exception if the step name is not unique. Called as a Select Query action by ADD_WORKFLOWSTEP. Called as a Select Cache Query action by EDIT_WORKFLOWSTEP.

QworkflowSteps

Retrieves workflow step information including step description, type, and number of reviewers required to pass each step. The result of this query is assigned to the specified parameter. Called as a Select Cache Query action by these services:

- CRITERIAWORKFLOW_ENABLE
- GET_WORKFLOW_INFO
- GET WORKFLOW INFO BYNAME
- **WORKFLOW START**

QworkflowStepsAll

Called as a Select Cache Query action by GET_WORKFLOWS_FOR_ALL.

A.16 R

refreshCache

Refreshes the cached specified information. The specified information varies by service. Called as a Java method by these services:

- ADD_ALIAS
- ADD_DOC_ACCOUNT
- ADD_DOCEXTENSION
- ADD_DOCFORMAT
- ADD_DOCTYPE
- ADD_METADEF
- ADD_WORKFLOW
- ADD_WORKFLOWALIASES
- ADD_WORKFLOWDOCUMENT
- ADD_WORKFLOWDOCUMENTS
- CRITERIAWORKFLOW_DISABLE
- CRITERIAWORKFLOW_ENABLE
- DEL_METADEF
- DELETE_ALIAS
- DELETE_DOC_ACCOUNT
- DELETE_DOCEXTENSION
- DELETE_DOCFORMAT
- DELETE_DOCTYPE
- DELETE_WFCONTRIBUTORS

- DELETE_WORKFLOW
- DELETE_WORKFLOWCRITERIA
- DELETE_WORKFLOWDOCUMENTS
- EDIT_ALIAS
- EDIT_DOCEXTENSION
- EDIT_DOCFORMAT
- EDIT_DOC_FORMATS
- EDIT_DOCTYPE
- EDIT_METADEF
- EDIT_WORKFLOW
- EDIT_WORKFLOWCRITERIA
- UPDATE_META_TABLE
- UPDATE_USER_META
- UPDATE_USER_META_TABLE
- WORKFLOW_CANCEL
- WORKFLOW_START

refreshLayoutLists

Called as a Java method by LM_LOAD_LAYOUTS_SUB.

refreshRoles

Refreshes the user roles. Called as a Java method by these services:

- ADD_GROUP
- ADD_ROLE
- DELETE_GROUP
- DELETE_ROLE
- EDIT_ROLE

rejectDoc

Rejects the content item and passes *UrevisionStatus* as a parameter. Called as a Java method by WORKFLOW_REJECT.

remoteCredentialsCheck

Called as a Java method by CHECK_USER_CREDENTIALS.

removeCachedUser

Called as a Java method by these services:

- ADD_USER
- DELETE_USER
- EDIT_USER
- REGISTER_USER

removeContext

Called as a Java method by REMOVE_WEB_APP.

removeSubscription

Deletes the subscription and passes *Dsubscription* as a parameter. Called as a Java method by these services:

- **UNSUBSCRIBE**
- UNSUBSCRIBE_FROM_LIST
- UNSUBSCRIBE_FROM_LIST_EX

renameValues

Renames the associated values and passes specified parameters. Called as a Java method by these services:

- ADD_PROBLEMREPORT
- CACHE_CHECKIN_SEL
- CACHE_WORKFLOW_CHECKIN
- CHECKIN_SEL_SUB
- CHECKIN_SIMILAR_FORM
- DELETE_PROBLEMREPORT
- DELETE_REV
- DELETE_ROLE
- DELETE USER
- GET_UPDATE_FORM
- GET_WORKFLOW_INFO
- GET_WORKFLOW_INFO_BYNAME
- NOTIFY_CONTRIBUTOR
- **SUBSCRIBE**
- WORKFLOW_APPROVE
- WORKFLOW_CHECKIN_SUB
- WORKFLOW_REJECT
- WORKFLOW_START

requestSecurityInfo

Requests the security information. Called as a Java method by REQUEST_ SECURITYINFO.

resubmitDocToConversion

Resubmits the content item for conversion. Called as a Java method by RESUBMIT_ FOR_CONVERSION.

retrieveAllProviderInfo

Retrieves the provider list. Called as a Java method by GET_ALL_PROVIDERS

retrieveCachedInfo

Called as a Java method by these services:

- CONTINUE_CHECKIN
- CONTINUE_SUBMIT_HTML_FORM
- GET_CACHED_CHECKIN_INFO

retrieveProblemReportInfo

Retrieves the problem report information. Called as a Java method by these services:

- GET_UPDATE_PROBLEMREPORT_FORM
- PROBLEMREPORT_INFO
- RESEND_PROBLEMREPORT

retrieveProviderInfo

Retrieves registered provider information. Called as a Java method by GET_PROVIDER INFO.

retrieveUserDatabaseProfileData

Retrieves the user database profile information. Called as a Java method by REGISTER_USER.

runHtmlConversion

Called as a Java method by GET_DYNAMIC_CONVERSION_SUB.

A.17 S

saveGlobalIncludes

Saves the global includes. Called as a Java method by SAVE_GLOBALINCLUDES.

saveTemplateConversions

Called as a Java method by SAVE_TEMPLATE_CONVERSIONS

saveUserOptionList

Saves the user option list. Called as a Java method by UPDATE_USEROPTION_LIST.

searchCacheReport

Called as a Java method by APPEND_SEARCH_AUDIT_INFO.

searchProblemReports

Retrieves problem report search information. Called as a Java method by GET_PROBLEMREPORTS_SEARCH_RESULTS.

sendMailTo

Sends an email to the problem report contributor. Called as a Java method by NOTIFY_CONTRIBUTOR.

setConditionVars

Called as a Java method by these services:

- ADD_COLLABORATION
- ADD_COLLABORATION_FORM
- ADD_WORKFLOW
- ADD_WORKFLOWALIASES
- ADD_WORKFLOWDOCUMENT
- ADD_WORKFLOWDOCUMENTS
- ASSIGN_DOCINFO_FORM
- CACHE_CHECKIN_NEW
- CACHE_CHECKIN_SEL
- CACHE_SUBMIT_HTML_FORM
- CACHE_WORKFLOW_CHECKIN
- CRITERIAWORKFLOW_DISABLE
- CRITERIAWORKFLOW_DISABLE_SUB
- CRITERIAWORKFLOW_ENABLE
- DELETE_COLLABORATION
- DELETE_WFCONTRIBUTORS
- DELETE_WORKFLOW
- DELETE_WORKFLOWCRITERIA
- DELETE_WORKFLOWDOCUMENTS
- EDIT_COLLABORATION
- EDIT_COLLABORATION_FORM
- EDIT_WORKFLOW
- EDIT_WORKFLOWCRITERIA
- GET_CLBRA_INFO
- GET_WORKFLOWDOCREVISIONS
- GET_WORKFLOWDOCUMENTS
- WORKFLOW_APPROVE
- WORKFLOW_CANCEL
- WORKFLOW_REJECT
- WORKFLOW_REJECT_FORM
- WORKFLOW_START

setDateToPresent

Sets the current date and passes the specified parameter. Called as a Java method by these services:

- SUBSCRIBE_EX
- UPDATE_SUBSCRIPTION_NOTIFY
- UPDATE_SUBSCRIPTION_USED

setDeleteRevReleaseState

Updates the revision status as deleted. Called as a Java method by these services:

- DELETE_BYREV
- DELETE_REV
- DELETE_REV_EX

setExternalDocInfoFields

Sets the external content item information fields. Called as a Java method by GET_EXTERNAL_DOC_INFO.

setFileConversionInfo

Called as a Java method by GET_DYNAMIC_CONVERSION.

setInputConversionInfo

Called as a Java method by GET_DYNAMIC_CONVERSION_SUB.

setLocalValues

Sets the associated local values and passes the specified parameters. Called as a Java method by these services:

- ADD_GROUP
- ADD_PROBLEMREPORT
- ADD_PROXIEDCOLLECTION
- ADD_ROLE
- ADD_USER
- ASSIGN_DOCINFO_FORM
- CACHE_WORKFLOW_CHECKIN
- CHECKIN_ARCHIVE_NO_NOTIFY
- CHECKIN_LIST
- CHECKIN_NEW_FORM
- CHECKIN_SIMILAR_FORM
- CLEAR_SERVER_OUTPUT
- CONTINUE_CHECKIN
- CONTINUE_SUBMIT_HTML_FORM
- DELETE_CHECKIN_CACHE
- DELETE_ROLE
- EDIT_CLBRA_ACCESS_LIST_FORM
- EDIT_USER
- EDIT_USER_PROFILE
- GET_ACTIVE_WORKFLOWS
- GET_CLBRA_DOCUMENTS
- GET_DOC_CONFIG_INFO

- **GET_EXPIRED**
- GET_SYSTEM_AUDIT_INFO
- GET_WORKFLOWS
- LOAD_PNE_PORTAL
- LOAD_WORKFLOW_QUEUE
- REGISTER_USER
- REMOVE_PROXIEDTRANSFER
- RESUBMIT_FOR_CONVERSION
- REVIEW_WORKFLOW_DOC
- UPDATE_BYREV
- UPDATE_DOCINFO_BYREV
- UPDATE_DOCINFO_SUB
- VALIDATE_DOCINFO
- WORK_IN_PROGRESS
- WORKFLOW_APPROVE
- WORKFLOW_CHECKIN_SUB
- WORKFLOW_REJECT

setOutputConversionInfo

Called as a Java method by GET_DYNAMIC_CONVERSION_SUB.

setStatusMessage

Sets the status message and passes the specified parameter. Called as a Java method by these services:

- CACHE_CHECKIN_NEW
- CACHE_CHECKIN_SEL
- CACHE_SUBMIT_HTML_FORM
- CACHE_WORKFLOW_CHECKIN
- CHECKIN_NEW_SUB
- CHECKIN_SEL_SUB
- DELETE_BYCLASS
- DELETE_BYNAME
- DELETE_BYREV
- DELETE_DOC
- DELETE_REV
- DELETE_REV_EX
- INSERT_NATIVE
- INSERT_NEW
- REPLACE_METAFILE_SUB

- UPDATE_BYREV
- WORKFLOW_CHECKIN_SUB

setTemplateConversionInfo

Called as a Java method by GET_DYNAMIC_CONVERSION_SUB.

setTraceFlags

Called as a Java method by EDIT_TRACE_OPTIONS.

startCriteriaWorkflow

Enables the criteria workflow. Called as a Java method by CRITERIAWORKFLOW_ENABLE.

startWorkflow

Starts the workflow process and passes *WfDocuments* as a parameter. Called as a Java method by WORKFLOW_START.

storeUserDatabaseProfileData

Stores the user profile information in the database. Called as a Java method by these services:

- ADD_USER
- EDIT_USER
- EDIT_USER_PROFILE
- REGISTER_USER

submitForm

Submits the form. Called as a Java method by FORM_SUBMIT.

submitHtmlForm

Submits the form. Called as a Java method by these services:

- CACHE_SUBMIT_HTML_FORM
- CONTINUE_SUBMIT_HTML_FORM
- SUBMIT_HTML_FORM

A.18 T

testProvider

Tests the provider. Called as a Java method by TEST_PROVIDER.

testWorkflowScript

Called as a Java method by TEST_WORKFLOW_SCRIPT.

A.19 U

Ualias

Updates an alias. Called as an Execute Query action by EDIT_ALIAS.

UcheckoutRevision

Updates the revision as checked out. Called as an Execute Query action by CHECKOUT SUB.

Ucollaboration

Called as an Execute Query action by EDIT_CLBRA_ACCESS_LIST and EDIT_ COLLABORATION.

UdeleteRevision

Updates the revision status as deleted. Called as an Execute Query action by these services:

- DELETE_BYREV
- DELETE_REV
- DELETE_REV_EX

UdocFormat

Updates the content item format information. Called as an Execute Query action by EDIT_DOCFORMAT.

UdocType

Updates the content item type. Called as an Execute Query action by EDIT_DOCTYPE.

UextensionMap

Updates the extension map. Called as an Execute Query action by EDIT_ DOCEXTENSION.

Umeta

Updates the metadata information. Called as an Execute Query action by these services:

- UPDATE_BYREV
- UPDATE_DOCINFO_BYREV
- UPDATE_DOCINFO_SUB
- UPDATE_METADATA
- WORKFLOW_CHECKIN_SUB

Umetadef

Updates the meta data definition information. Called as an Execute Query action by EDIT METADEF.

UnextCounter

Updates the counter. Called as an Execute Query action by ADD_PROBLEMREPORT.

UnextRevID

Updates the revision ID. Called as an Execute Query action by these services:

- CHECKIN_BYNAME
- CHECKIN_NEW_SUB
- CHECKIN_SEL_SUB

INSERT_NEW

uninstallComponent

Called as a Java method by UNINSTALL_COMPONENT.

updateAffectedWorkflows

Called as a Java method by EDIT_COLLABORATION.

updateCache

Called as a Java method by UPDATE_FILTER_INFO.

updateCollaborationCache

Called as a Java method by these services:

- ADD_COLLABORATION
- DELETE_COLLABORATION
- EDIT_CLBRA_ACCESS_LIST
- EDIT_COLLABORATION

updateComponentConfig

Called as a Java method by UPDATE_COMPONENT_CONFIG.

updateConversionCache

Called as a Java method by GET_DYNAMIC_CONVERSION_SUB.

updateDocFormatsConfig

Updates content item format configuration. Called as a Java method by EDIT_DOC_FORMATS.

updateDocInfo

Called as a Java method by UPDATE_DOCINFO_BYREV and UPDATE_DOCINFO_SUB.

updateFilterConfig

Called as a Java method by UPDATE_FILTER_INFO.

updateLicense

Called as a Java method by UPDATE_LICENSE.

updateMetaTable

Updates the meta data information table. Called as a Java method by UPDATE_META_TABLE.

updateOptionList

Updates the option list table. Called as a Java method by UPDATE_OPTION_LIST.

updateProblemReport

Updates the problem report information in the database. Called as a Java method by UPDATE_PROBLEMREPORT.

updateResultTemplate

Updates the result template. Called as a Java method by UPDATE_RESULT_ TEMPLATE.

updateRevisionIDAndLabel

Updates the revision ID and revision label. Called as a Java method by CHECKIN_ SEL_FORM.

updateSubscriptionType

Updates the subscription type. Called as a Java method by UPDATE_SUBSCRIPTION_ TYPE.

updateUserLocale

Called as a Java method by EDIT_USER_PROFILE.

updateUserMeta

Called as a Java method by UPDATE_USER_META.

updateUserMetaTable

Called as a Java method by UPDATE_USER_META_TABLE.

updateWorkflowAndDocState

Updates the workflow and content item state information. Called as a Java method by WORKFLOW_APPROVE and WORKFLOW_REJECT.

updateWorkflowState

Updates the workflow state. Called as a Java method by DELETE_ WORKFLOWDOCUMENTS.

updateWorkflowStateAfterCheckin

Called as a Java method by WORKFLOW_CHECKIN_SUB.

UproblemReport

Updates the problem report information in the database. Called as an Execute Query action by UPDATE_PROBLEMREPORT.

Urevision

Called as an Execute Query action by WORKFLOW_CHECKIN_SUB.

Urevision2

Called as an Execute Query action by these services:

- UPDATE_BYREV
- UPDATE_DOCINFO_BYREV
- UPDATE_DOCINFO_SUB

UrevisionStatus

Updates the revision status. Called as an Execute Query action by WORKFLOW_ REJECT.

UroleDefinition

Updates the role definition. Called as an Execute Query action by ADD_GROUP and ADD_ROLE.

UsecurityGroup

Updates the security group. Called as an Execute Query action by EDIT_GROUP.

UsubscriptionNotification

Updates the subscription notification data. Called as an Execute Query action by UPDATE_SUBSCRIPTION_NOTIFY.

UsubscriptionUse

Updates the user subscription. Called as an Execute Query action by UPDATE_SUBSCRIPTION_USED.

Uuncheckout

Updates the checkout information. Called as an Execute Query action by these services:

- UNDO_CHECKOUT
- UNDO_CHECKOUT_BY_NAME
- UPDATE_BYREV
- WORKFLOW_CHECKIN_SUB

UuncheckoutPrevID

Updates the revision ID. Called as an Execute Query action by CHECKIN_BYNAME and CHECKIN_SEL_SUB.

UuserAuthType

Updates the user authorization type. Called as an Execute Query action by CHANGE_USER_AUTH_TYPE.

Uworkflow

Updates the workflow. Called as an Execute Query action by EDIT_WORKFLOW.

UworkflowCriteria

Updates the workflow criteria. Called as an Execute Query action by EDIT_WORKFLOWCRITERIA.

UworkflowDocStep

Updates the content item workflow step. Called as an Execute Query action by WORKFLOW_REJECT.

UworkflowWithProject

Updates workflow project information. Called as an Execute Query action by EDIT_WORKFLOWCRITERIA.

A.20 V

validateCheckinData

Validates the check in data and passes the specified parameter. Called as a Java method by these services:

- CACHE CHECKIN NEW
- CACHE_CHECKIN_SEL
- CACHE_SUBMIT_HTML_FORM
- CACHE_WORKFLOW_CHECKIN
- CHECKIN_BYNAME
- CHECKIN_NEW_SUB
- CHECKIN_SEL_SUB
- INSERT_NATIVE
- INSERT_NEW
- UPDATE_BYREV
- UPDATE_DOCINFO_BYREV
- UPDATE_DOCINFO_SUB
- VALIDATE_DOCINFO
- WORKFLOW_CHECKIN_SUB

validateCollaboration

Called as a Java method by these services:

- ADD_COLLABORATION
- EDIT_CLBRA_ACCESS_LIST
- EDIT_COLLABORATION

validateDelete

Validates the delete request. Called as a Java method by DELETE_USER

validateMetaData

Called as a Java method by UPDATE_METADATA.

validateProblemReport

Validates the problem report. Called as a Java method by ADD_PROBLEMREPORT and UPDATE PROBLEMREPORT.

validateStandard

Validates the standard data. Called as a Java method by these services:

- CACHE_CHECKIN_NEW
- CACHE_CHECKIN_SEL
- CACHE_SUBMIT_HTML_FORM
- CACHE_WORKFLOW_CHECKIN

- CHECKIN_BYNAME
- CHECKIN_NEW_SUB
- CHECKIN_SEL_SUB
- INSERT_NATIVE
- INSERT_NEW
- UPDATE_BYREV
- UPDATE_DOCINFO_BYREV
- UPDATE_DOCINFO_SUB
- VALIDATE_DOCINFO
- WORKFLOW_CHECKIN_SUB

validateSteps

Validates the steps for *WfSteps* and *QworkflowStepAliases*. Called as a Java method by CRITERIAWORKFLOW_DISABLE and WORKFLOW_START.

validateUserNameAndType

Called as a Java method by ADD_USER and CHANGE_USER_AUTH_TYPE.

viewDoc

Displays the content item and passes *SearchCollectionDocInfo* as a parameter. Called as a Java method by VIEW_DOC.
