## Table of Contents

<b>1. ABOUT THIS MANUAL.....</b>	<b>1-1</b>
1.1 INTRODUCTION.....	1-1
1.2 AUDIENCE.....	1-1
1.3 ORGANIZATION.....	1-1
1.4 GLOSSARY OF ICONS.....	1-2
1.4.1 <i>Related Documents</i> .....	1-3
<b>2. BILLS AND COLLECTIONS - AN OVERVIEW.....</b>	<b>2-1</b>
2.1 INTRODUCTION.....	2-1
2.2 OPERATIONS ON A BILL.....	2-2
2.2.1 <i>SWIFT Messages for an Import Bill</i> .....	2-3
2.2.2 <i>SWIFT Messages for an Export Bill</i> .....	2-4
2.3 INTEREST AND CHARGE LIQUIDATION.....	2-5
<b>3. MAINTENANCE.....</b>	<b>3-1</b>
3.1 INTRODUCTION.....	3-1
3.2 MAINTAINING DOCUMENTS AND CLAUSES.....	3-1
3.2.2 <i>Specifying Values for the User Defined Fields</i> .....	3-4
3.2.3 <i>Operations on the Document Code Maintenance Screen</i> .....	3-4
3.3 MAINTAINING COMMODITIES.....	3-5
3.3.2 <i>Specifying values for the User Defined Fields</i> .....	3-7
3.3.3 <i>Operations on the Goods/Commodity Maintenance Record</i> .....	3-7
3.4 MAINTAINING INSTRUCTION CODES.....	3-8
3.4.2 <i>Specifying values for the User Defined Fields</i> .....	3-10
3.4.3 <i>Operations on the Instructions Code Maintenance Records</i> .....	3-10
3.5 MAINTAINING FREE FORMAT TEXTS (FFT).....	3-11
3.5.2 <i>Specifying Values for the User Defined Fields</i> .....	3-12
3.5.3 <i>Operations on the FFT Maintenance Record</i> .....	3-13
3.6 MAINTAINING DISCREPANCY CODES.....	3-13
3.6.2 <i>Specifying values for the User Defined Fields</i> .....	3-15
3.6.3 <i>Operations on the Discrepancy Code Maintenance Record</i> .....	3-15
3.7 MAINTAINING INSURANCE COMPANY DETAILS.....	3-16
3.7.2 <i>Specifying Values for the User Defined Fields</i> .....	3-18
3.7.3 <i>Operations that you can Perform on a Insurance Company Record</i> .....	3-18
3.7.4 <i>Application of Exchange Rate Type Based on Transaction Amount</i> .....	3-18
3.7.5 <i>Specifying Values for the User Defined Fields</i> .....	3-21
3.8 MAINTAINING INCO TERMS.....	3-22
3.9 OPERATIONS ON AN INCO TERM.....	3-23
3.10 MAINTAINING BRANCH PARAMETERS FOR BILLS AND COLLECTIONS.....	3-24
<b>4. DEFINING ATTRIBUTES OF A BILLS AND COLLECTION PRODUCT.....</b>	<b>4-1</b>
4.1 INTRODUCTION.....	4-1
4.2 DEFINING A PRODUCT.....	4-2
4.2.2 <i>Specifying the Role Details</i> .....	4-7
4.2.3 <i>Specifying Event Details</i> .....	4-7
4.2.4 <i>Specifying Branch and Currency Details</i> .....	4-7
4.2.5 <i>Specifying Customer Details</i> .....	4-7
4.2.6 <i>Specifying Preferences for a product</i> .....	4-8
4.2.7 <i>Specifying the Main Preferences</i> .....	4-8
4.2.8 <i>Specifying the Interest and Charge Details</i> .....	4-18

4.2.9	Specifying MIS details .....	4-24
4.2.10	Specifying ICCF details .....	4-24
4.2.11	Specifying Charge details .....	4-25
4.2.12	Specifying Discount Accrual Details .....	4-26
4.2.13	Specifying Tax Details .....	4-27
4.2.14	Specifying Tracer Details .....	4-28
4.2.15	Specifying Document Details .....	4-29
4.2.16	Specifying FFT details .....	4-30
4.2.17	Specifying instruction details .....	4-31
4.2.18	Specifying documents for a product .....	4-31
4.2.19	Specifying the clauses that should accompany the document .....	4-33
4.2.20	Specifying Status Details .....	4-33
4.2.21	Indicating if status changes have to be carried out automatically .....	4-36
4.2.22	Specifying Status Control Details .....	4-37
4.2.23	Indicating Movement Details .....	4-38
4.3	SETTING UP A PRODUCT FOR BILL FORFEITING .....	4-39
4.3.1	Defining the Product .....	4-39
4.3.2	Setting Up Interest Details .....	4-40
4.3.3	Maintaining Accounting Entries .....	4-41
<b>5.</b>	<b>PROCESSING BILLS.....</b>	<b>5-1</b>
5.1	INTRODUCTION .....	5-1
5.2	CREATING A BILLS CONTRACT .....	5-2
5.2.1	Entering Main Details of a Bill .....	5-7
5.2.2	Specifying Contract Details .....	5-18
5.2.3	Specifying Margin Details .....	5-23
5.2.4	Capturing Party Details .....	5-25

# 1. About this Manual

## 1.1 Introduction

This manual is designed to help you to quickly get familiar with the Bills and Collections module of Oracle FLEXCUBE. It provides an overview to the module and takes you through the various stages in processing a bill or collection.

Besides this User Manual, you can find answers to specific features and procedures in the Online Help, which can be invoked, by choosing 'Help Contents' from the *Help* Menu of the software. You can further obtain information specific to a particular field by placing the cursor on the relevant field and striking <F1> on the keyboard.

## 1.2 Audience

This manual is intended for the following User/User Roles:

Role	Function
Back Office Trade Finance Department Clerks	BC Contract Input functions except Authorization
Back Office Trade Finance Department Officers	BC Contract Authorization, maintenance of static data specific to the BC module
Front end Trade Finance Product Managers	BC Product definition functions excluding authorization. BC Report/Query functions
End of Day Operators	End and beginning of day related processing functions. BC Report/Query functions
Bank's Financial Controller/Trade Finance Department Manager	Branch level processing related setup for BC module and Authorization of the same Authorization of BC product definitions/amendments. BC Report/Query functions
MIS Department Officers	BC Query/Report functions

## 1.3 Organization

This manual is organized into the following chapters:

<b>Chapter 1</b>	<i>About this Manual</i> gives information on the intended audience. It also lists the various chapters covered in this User Manual.
<b>Chapter 2</b>	<i>Bills and Collections - An Overview</i> offers a snapshot of the features of the entire module.
<b>Chapter 3</b>	<i>Maintenance</i> details the procedure to set up static information related to the module. This includes the maintenance of Goods, Documents, Instructions, Free format text (FFT), Clause codes, and their corresponding description.

<b>Chapter 4</b>	<i>Defining Attributes of a Bills and Collection Product</i> describes the procedure to define attributes specific to Bills and Collection products.
<b>Chapter 5</b>	<i>Processing Bills</i> deals with the sequence of events involved, to process a bill.
<b>Chapter 6</b>	<i>Defining Discount Accrual Fee Classes</i> explains discount accrual processing for bills.
<b>Chapter 7</b>	<i>Registration of a Collection Bill</i> details the procedure involved in registering a collection bill.
<b>Chapter 8</b>	<i>Automatic Processes</i> explains the processes that automatically run periodic activities.
<b>Chapter 9</b>	<i>Annexure - A</i> contains details of the FFTs that are shipped along with the module.
<b>Chapter 10</b>	<i>Annexure - B</i> contains a list of suggested accounting entries and advices that can be set up for the BC module.
<b>Chapter 11</b>	<i>Annexure C - Error Codes and Messages</i> lists all the error messages that you can encounter while working with Oracle FLEXCUBE.
<b>Chapter 12</b>	<i>Reports</i> provides a list of reports that can be generated in this module and also explains their contents.

## 1.4 Glossary of Icons

This User Manual may refer to all or some of the following icons.

<b>Icons</b>	<b>Function</b>
	New
	Copy
	Save
	Delete
	Unlock
	Print
	Close
	Re-open
	Reverse

Icons	Function
	Template
	Roll-over
	Hold
	Authorize
	Liquidate
	Exit
	Sign-off
	Help
	Add
	Delete

*Refer the Procedures User Manual for further details about the icons.*

## 2. Bills and Collections - An Overview

### 2.1 Introduction

A bill, as an instrument of international trade, is the most commonly used method for a seller to be paid through banking channels. Besides credit risk considerations, bills are the customary business practice for trade and a particularly important fee-earning service for any bank.

The Bills and Collections (BC) module supports the processing of all types of bills, both domestic and international. It handles the necessary activities during the entire lifecycle of a bill once it is booked.

In an effort to empower your bank in handling a high volume of credit and to enable you to provide superior services to the customers of your bank, Oracle FLEXCUBE provides you with the following features:

- The Bills and Collections module supports the processing of all types of international and domestic bills like:
  - Incoming Bills under LCs
  - Incoming Bills not under LCs
  - Outgoing Bills under LCs
  - Outgoing Bills not under LCs
  - Incoming Collections
  - Outgoing Collections
  - Usance or Sight Bills
  - Documentary or Clean Bills
- You can create products, templates, or even copy the details of an existing bill on to a new one and modify it to suit your requirements. This renders the input of the details of a bill faster and easier.
- You have the flexibility to create and customize a product to suit almost any requirement under a bill. The bills associated with the product will bear characteristics that you define for it.
- The BC module is designed to handle the interest, charges, or fees related to a bill and record amendments to the original terms of the bill.
- The BC module actively interacts with the LC module of Oracle FLEXCUBE. This enables easy retrieval of information for bills drawn under an LC that was issued at your bank. Most of the details maintained for the LC will be defaulted to the bill when you indicate the reference number of the LC involved in the bill. This eliminates the need to re-enter the details of the LC all over again.
- The Central Liability sub-system automatically controls the booking of a bill against the credit lines assigned to the customer before the bookings are made. Oracle FLEXCUBE also supports tracking your bank's exposure for a bill to several parties.
- You have the option to automate periodic processes such as:

- The application of floating interest rates to the components of a bill as and when they change
- The movement of a bill from a given status to another
- Accrual of interest due to a bill
- Liquidation of bills on the liquidation date that you indicate
- Generation of tracers on the due date

These will be processed as part of the batch processes run at BOD or EOD. The system automatically calculates the date on which the events should take place, based on the frequency and the date specified for the bill.

- The module also supports automated follow-up and tracer facility for payments and acceptance. Tracers can be automatically generated at an indicated frequency until a discrepancy is resolved.
- When a repayment against the bill, is not made on the due date, you may want to do an aging analysis for the bill. You can define the number of days that the bill should remain in a given status, the sequence in which a bill should move from one status to another and also indicate the direction of movement (forward or reverse). You can follow-up on the repayment of a bill by generating reports which detail the status of aging bills.
- Depending on the processing requirements of your bank, you can define and store the standard documents, clauses, and instructions and free format texts. These details can be incorporated and printed onto the output document of the bill, by entering the relevant code. This eliminates entering the details of standard components of a bill every time you need to use them.
- Bills can be carried over several stages during the day. After a bill has been entered, it can be verified and authorized on-line before further processing.
- Information services for managerial and statistical reporting such as on-line transactions, status report and the immediate retrieval of information of the bills processed at your bank can be generated.
- Oracle FLEXCUBE's Graphic User Interface (GUI) facilitates ease of input. Option lists are provided wherever possible. This makes the module both efficient and easy to use.
- The media supported include Mail, Telex and SWIFT.
- The BC module supports and handles the following functions:
  - Open/Amend a bill
  - The authorization of bill contracts
  - The reversal and liquidation of interest and charges
  - Customer inquiries
  - The generation of tracers and advices
  - The generation and printing of reports
- On-line help - indicates that you can invoke global help by making use of the Help option in the Menu bar. You can also invoke on-line context sensitive help, which is made available to you, if you strike the hot key <F1> while in the application. A window pops up displaying information associated with the field from which you invoked it.

## 2.2 Operations on a Bill

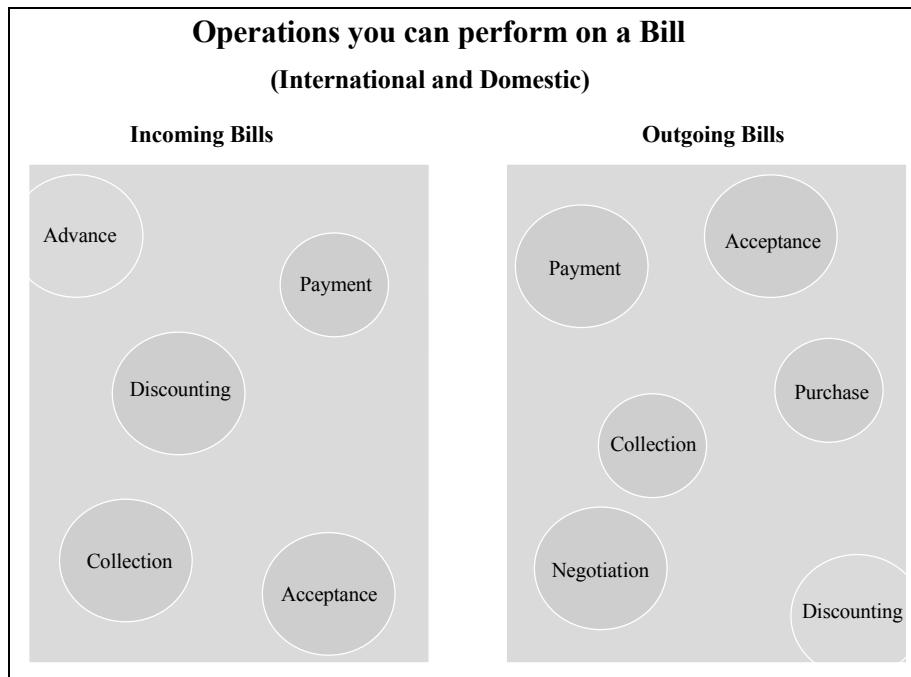

The operations that you can perform on a bill depend on the trade finance product type you are processing. Further, the messages and advices that are generated for the bill are determined by the operation you perform on the bill. The interest, charges or fees can be different for each operation that you perform on the bill.

In Oracle FLEXCUBE, all types of bills are classified in to two categories. They are:

- Import Bills
- Export Bills

All types of incoming bills (international and domestic) financed by your bank are termed Import bills. Similarly, all outgoing bills (international and domestic) financed by your bank are termed Export bills.

The operations that you can perform on a bill have been diagrammatically represented below:

The system allows you to effect a change of operation for the following operation types:

- Acceptance to Advance (automatic facility provided)
- Acceptance to Discount
- Collection to Purchase

For instance, while processing an acceptance bill, which needs to be discounted, you need not enter a new bill to discount the bill. You need to just amend the operation type from acceptance to discount.

## 2.2.1 SWIFT Messages for an Import Bill

The messages that are generated for an Import bill depend on the operation you perform on the bill. The following are the SWIFT messages that are supported for an Import bill.

<b>Description</b>	<b>SWIFT code</b>
Acknowledgement	MT410
Acceptance Advice	MT412
Payment tracer	MT420
Acceptance tracer	MT420
Advice of Payment for a Collection bill	MT400
Advice of fate (principal and acceptance)	MT422
Refusal Advice (payment and accept)	MT734
Discharge Advice	MT732
Tracers that are generated	MT420
Authorization to pay, accept or negotiate	MT752
Advice of Payment for import bills under LC	MT756

### **2.2.2 SWIFT Messages for an Export Bill**

The messages that are generated for an Export bill depend on the operation you perform on the bill. The following are the SWIFT messages that are supported for an Export bill.

<b>Description</b>	<b>SWIFT Code</b>
Acknowledgement	MT410
Acceptance Advice	MT412
Payment tracer	MT420
Acceptance tracer	MT420
Refusal Advice (payment and accept)	MT734
Discharge Advice	MT 732
Amendment of instruction	MT 430
Reimbursement claim	MT 742
Discrepancy Requirement	MT 750
Tracers that are generated	MT 420

## 2.3 **Interest and Charge Liquidation**

The BC module has a flexible mechanism for raising, tracking and controlling the interest that you collect and the charges that you levy. These may be on a cash or account receivable basis. They can be collected either in advance or in arrears and can be accrued or non- accrued.

Interest can be collected either as a rate or as a flat amount. Standard Interest rates can be defined for each bill type.

Changes that you effect to fields like the base date, exchange rate or account numbers require reversal entries The system generates reversal entries for the corrected amount, account, rate etc.

---

## 3. Maintenance

### 3.1 Introduction

The Bills module requires certain basic information to be set up before becoming fully operational. You can maintain details for the following:

- Document details
- Clause details
- Commodity
- Instruction codes
- Free Format Texts
- Parameters for your branch
- Insurance Company Details
- Exchange Rate Type maintenance for different transaction amount slabs
- INCO Terms

The procedure for maintaining these details is discussed in the subsequent sections of this chapter.

### 3.2 Maintaining Documents and Clauses

There are certain standard documents that are required under a documentary bill. As these documents are standard and common to most countries, you need not specify the details of the document each time you need to use it for a bill. Instead, you can maintain its details in the 'Bills and Collections Document Master Maintenance' screen.

The advantage of maintaining document details is that, at the time of creating a product or at the time of entering the details of a bill, you need only specify the code assigned to the document. All the details maintained for the document will be automatically picked up. This reduces effort and taken as there is no need to enter the contents of the document every time you use it.

You can invoke the 'Bills & Collections Document Code Maintenance' screen by typing 'BCDDOCCD' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button. If you are maintaining the details of a new document, select 'New' from the Actions menu in the Application tool bar or click New icon. The screen is displayed without any details.

If you are calling a document maintenance record that has already been defined, double click on a document code from the summary screen.

### 3.2.1.1 Specifying the Document Details

You can maintain the following details related to the documents in the 'Bills and Collections Document Code Maintenance' screen.

#### **Document Code**

In Oracle FLEXCUBE, each document that you maintain is identified by a 12-character code called a document code. One of the characters of the code should be a letter of the English Alphabet. You can follow your own conventions for devising this code.

The code should be unique as it is used to identify the document. While creating a product or at the time of entering the details of a bill, where you need to specify the documents that should accompany a bill, you need to only specify the code assigned to the document. The document details will be automatically picked up and defaulted.

#### **Language Code**

Specify the language code using which all the correspondences with the party should be carried out. The adjoining option list displays all available language codes. You can choose the appropriate one.

#### **Document Type**

Select the document type from the drop-down list. The available options are Transport, Insurance, Invoice, and Others.

## **Validate Shipping Guarantee**

To track the documents captured during booking of import bill against shipping guarantee issued based on the same set of documents select the 'Validate Shipping Guarantee' option in the screen. The tracking will be based on document reference captured in the documents screen of LC and BC contract online.

By default, this field will be unchecked and can be changed before you save the record. This field can be modified at any time using unlock operation.

During Copy operation the value of this field will be copied to the new document code.

## **Document Short Description**

The documents required under a bill are sometimes large and hence difficult to identify. Therefore you can specify a short description or a title, which will enable quick identification of the document.

The short description specified is for information purposes only and will not be printed on the document.

## **Document Long Description**

Specify the complete description of the document. This option allows you to enter a maximum of 255 characters.

### **3.2.1.2 Specifying the Clause Details**

A clause is a statement that can accompany a document sent under a bill. Instead of specifying the details of a clause each time you need to use it, you can maintain a list of the standard clauses, which can accompany the documents sent under a bill, in the Bills and Collections Document Code Maintenance screen.

The advantage of maintaining clause details is that at the time of creating a product or at the time of entering a bill, you need to only specify the code assigned to the clause. All the details maintained for the clause will be automatically picked up. This reduces the effort involved in entering the contents of the clause each time you use it.

You can capture the following details related to the clause:

#### **Clause Code**

Each clause maintained is identified by a four-character code called a Clause code. One of the characters of the clause code should be a letter of the English Alphabet. You can follow your own convention for devising the code.

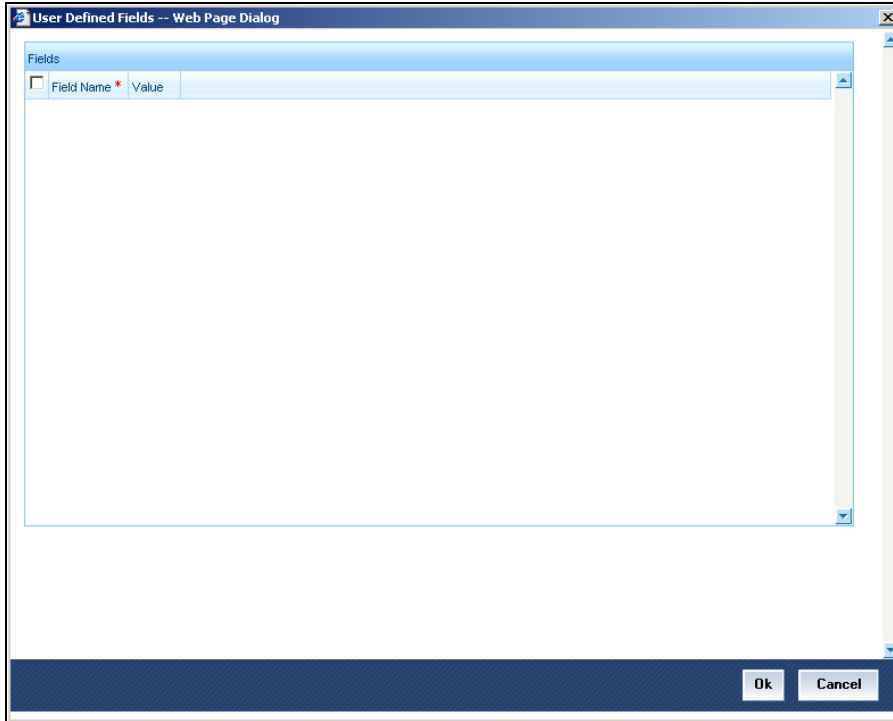

This code should be unique as it is used to identify the clause. While creating a product or at the time of entering the details of a bill, instead of specifying the clauses that should accompany a document, you need to only specify the code assigned to the clause. The clause details will be automatically picked up and defaulted.

## Description

After specifying a code for the clause, you can proceed to maintain a detailed description of the clause. The description carries the contents of the clause and they will be printed on the documents that are required for the bill. The clause description can contain a maximum of two thousand characters.

### 3.2.2 Specifying Values for the User Defined Fields

You can specify values for user defined fields in the 'User Defined Fields' screen. To invoke this screen, click 'Fields' button.

 Value for UDF can be made mandatory or non-mandatory as maintained in the 'User Defined Fields Maintenance' screen.

After you have entered the details of the document and clause you should save the record. Click 'Exit' or 'Cancel' button to exit the screen.

### 3.2.3 Operations on the Document Code Maintenance Screen

On an existing Document Maintenance record, you can perform any of the following operations (if any function under the Actions Menu is disabled, it means that the function is not allowed for the record):

- Amend the details of a document
- Authorize a document
- Copy the details of a document on to a new document
- Close the document

- Reopen the document
- Print the details of a document
- Delete the details of a document

On an existing Clause Maintenance record, you can perform any of the following operations (if any function under the Actions Menu is disabled, it means that the function is not allowed for the record):

- Amend the details of the record
- Authorize the record
- Copy the details of a clause on to a new record
- Close the record
- Reopen the closed record
- Print the details of a record
- Delete the record

Please refer to the User Manual on Common Procedures for details of these operations.

### **3.3 Maintaining Commodities**

A bill is an instrument used for trade payments and trade involves merchandise. There are certain standard goods or commodities that are transacted under bills. Instead of specifying details of the merchandise each time they are traded, you can maintain the details of the standard goods in the 'Bills & Collections Commodity Code Maintenance' screen.

The advantage of maintaining goods details is that at the time of entering the details of a bill, you need to only specify the code assigned to the goods. All the details maintained for the goods code will be automatically picked up. This reduces your effort, as you do not need to enter the description of the goods each time you need to use it.

The details of the standard goods transacted under a bill can be maintained using the 'Bills & Collections Commodity Code Maintenance' screen. You can invoke this screen by typing 'BCDCOMCD' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

If you are maintaining details of a commodity for the first time, select 'New' from the Actions Menu in the Application toolbar or click new icon. The 'Bills & Collections Commodity Code Maintenance' screen is displayed without any details.

If you are calling a goods maintenance record that has already been defined, double click on a commodity code from the summary screen.

### 3.3.1.1 **Specifying Goods Code Details**

You can capture the following details related to the standard goods:

#### **Goods Code**

In Oracle FLEXCUBE, goods are identified by a 12-character code called a 'Goods Code'. One of the characters of the goods code should be an alphabet. You can follow your own conventions for devising the code.

The goods code that you specify should be unique as it is used to identify the goods. While creating a product or at the time of entering a bill, instead of defining details of the goods transacted under the bill, you need to only specify the code assigned to the goods. The details of the goods will automatically be picked up and defaulted.

#### **Language Code**

Specify the language code using which all the correspondences with the party should be carried out. The adjoining option list displays all available language codes. You can choose the appropriate one.

#### **Banned Commodity**

As part of maintaining the details of the goods that can be traded under a Bill, you can also specify whether the commodity being defined is banned from import/export.

If you are maintaining the details of a banned commodity, you can indicate the same by selecting the 'Banned commodity' option in the screen.

At the time of selecting the goods being traded under a Bill, the system will display the commodities in the option list. In addition, the list will also display whether a particular commodity is banned or not by indicating 'YES' (for a banned product) and 'NO' (for a product that is allowed for trade) against the product.

## Goods Description

After assigning a code to the goods, you can proceed to maintain a detailed description of the goods. The goods description can contain a maximum of six thousand five hundred characters.

While specifying details of the goods transacted under a bill, you can edit the description that is defaulted to suit the requirements of the bill you are processing. You can also use it to enter specifications such as the quality and quantity of the merchandise.

### 3.3.2 Specifying values for the User Defined Fields

You can specify values for user defined fields in the 'User Defined Fields' screen. To invoke this screen, click 'Fields' button.

Value for UDF can be made mandatory or non-mandatory as maintained in the 'User Defined Fields Maintenance' screen.

After you have entered the details of the document and clause you should save the record. Click 'Exit' or 'Cancel' button to exit the screen.

### 3.3.3 Operations on the Goods/Commodity Maintenance Record

On an existing Goods maintenance record, you can perform any one of the following operations (if any function under the Actions Menu is disabled, it means that the function is not allowed for the record):

- Amend the details of a record
- Authorize a record
- Copy the details of a commodity on to a new record

- Close a record
- Reopen a closed record
- Print the details of a record
- Delete a record

Refer to the chapter on common procedures for details of these operations.

## 3.4 **Maintaining Instruction Codes**

You can register the standard set of instructions or statements that are applicable to the bills that you issue. These standard instructions can be made to appear in the correspondence and messages sent to the parties involved in a bill. Instead of specifying details of an instruction each time you use it, maintain its details in the 'Bills and Collections Instruction Codes Maintenance' screen. The advantage of maintaining Instruction Codes is that at the time of creating a product or while entering the details of a bill, you need to only specify the code assigned to the Instructions. All the details maintained for the instruction code will be automatically picked up. This considerably reduces time and effort as there is not need to enter the description of an instruction each time you use it.

You can invoke the 'Bills & Collections Instruction Code Maintenance' screen by typing 'BCDINSCD' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button. If you are maintaining the details for an instruction for the first time, select 'New' from the Actions Menu in the Application toolbar or click new icon. If you are calling an instruction maintenance record that has already been defined, click on an instruction from the summary screen to open it.

### 3.4.1.1 **Specifying the Instructions Code Details**

You can capture the following details.

#### **Instructions Code**

In Oracle FLEXCUBE, each instruction that you maintain is identified by a four-character code called an Instruction Code. One of the characters of this code should be a letter of the English Alphabet. You can follow your own conventions for devising the code.

The code that you specify should be unique as it is used to identify the instruction. While creating a product, or at the time of entering the details of a bill instead of specifying the Instructions required under a bill, you need to only specify the code assigned to the instruction. The instruction details will be automatically picked up and defaulted.

In order to process MT734, you need to maintain the following instruction codes and link them to PAYMENT\_REFUSAL advice:

- NOTIFY – This indicates that documents are held until the issuing bank receives a waiver from the applicant and agrees to accept it, or it receives further instructions from the presenter prior to agreeing to accept a waiver.
- PREVINST – This indicates that the issuing bank is acting in accordance with instructions previously received from the presenter.

These codes are captured in field 77B of MT734. You can link these instruction codes to the advice in the 'Advices/Free Format Text' screen that can be invoked from the 'Bills and Collections – Contract Input' screen by clicking 'Advices / FFT' button.

Refer the section 'Specifying instructions for a bill' in the chapter 'Processing Bills' of this User Manual for details about instruction code linkage.

### **Language Code**

Specify the language code using which all the correspondences with the party should be carried out. The adjoining option list displays all available language codes. You can choose the appropriate one.

### **Instructions Text**

After assigning a code to identify an instruction, you can proceed to maintain the description of the instruction. The contents of the instruction that you define can contain text up to 2000 characters.

### 3.4.2 Specifying values for the User Defined Fields

You can specify values for user defined fields in the 'User Defined Fields' screen. To invoke this screen, click 'Fields' button.

Value for UDF can be made mandatory or non-mandatory as maintained in the 'User Defined Fields Maintenance' screen. After you have entered the details of the document and clause you should save the record. Click 'Exit' or 'Cancel' button to exit the screen.

### 3.4.3 Operations on the Instructions Code Maintenance Records

On an existing Instruction Maintenance record, you can perform any one of the following operations (if any function under the Actions Menu is disabled, it means that the function is not allowed for the record):

- Amend the details of the record
- Authorize the record
- Copy the details of an FFT on to a new record
- Close the record
- Reopen the closed record
- Print the details of a record
- Delete the record

Please refer to the chapter on common procedures for details of these operations

## 3.5 Maintaining Free Format Texts (FFT)

Free Format Texts (FFT's) may be a set of instructions or statements that are applicable to the bills that you process. There are several standard free format texts that should appear in the correspondence and messages sent to the parties involved in the bill. Instead of specifying the details of the FFT each time you need to use it, you can maintain them in the FFT Maintenance screen.

The advantage of maintaining FFT details is that at the time of creating a product or while entering the details of a bill, you need to only specify the code assigned to the FFT. All the details maintained for the FFT code will be automatically picked up. This reduces your effort, as you do not need to enter the description of the FFT each time you use it.

You can invoke the 'Bills & Collections Free Format Code Maintenance' screen by typing 'BCDFFTC' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button. If you are maintaining the details for the FFT for the first time, select 'New' from the Actions Menu in the Application toolbar or click new icon. The 'Bills & Collections Free Format Code Maintenance' screen is displayed.

If you are calling an FFT maintenance record that has already been defined, click on FFT from the summary screen to open it.

### 3.5.1.1 Specifying Free Format Text Code Details

You can capture the following details related to the Free Format Text Code here.

#### **Text Code**

In Oracle FLEXCUBE, each FFT that you maintain is identified by a 12-character code called an FFT code. One of the characters of this code should be a letter of the English Alphabet. You can follow your own conventions for devising the code.

The code that you specify should be unique as it is used to identify the FFT. While creating a product, or at the time of entering the details of a bill instead of specifying the FFTs required under a bill, you need to only specify the code assigned to the FFT. The FFT details will be automatically picked up and defaulted.

### Language Code

Specify the language code using which all the correspondences with the party should be carried out. The adjoining option list displays all available language codes. You can choose the appropriate one.

### Free Format Text

After you have assigned a code to identify an FFT, you can proceed to maintain the description of the FFT. The Description that you specify can contain text up to 2500 characters. After you have made the required mandatory entries you can save the record. On saving the record, your User ID will be displayed in the Input By field at the bottom of the screen. The date and time at which you saved the record will be displayed in the Date/Time field.

A record that you have created should be authorized by a user bearing a different login Id, before the EOD is run. Once the record is authorized the Id of the user who authorized the record will be displayed in the Auth By field. The date and time at which the record has been authorized will be displayed in the Date/Time field positioned next to the Auth By field. The status of the record will be displayed in the check box marked Authorized. The field will remain unchecked until the record is authorized.

## 3.5.2 Specifying Values for the User Defined Fields

You can specify values for user defined fields in the 'User Defined Fields' screen. To invoke this screen, click 'Fields' button.

Value for UDF can be made mandatory or non-mandatory as maintained in the 'User Defined Fields Maintenance' screen.

After you have entered the details of the document and clause you should save the record. Click 'Exit' or 'Cancel' button to exit the screen.

### **3.5.3 Operations on the FFT Maintenance Record**

On an existing FFT Maintenance record, you can perform any one of the following operations (if any function under the Actions Menu is disabled, it means that the function is not allowed for the record):

- Amend the details of the record
- Authorize the record
- Copy the details of an FFT on to a new record
- Close the record
- Reopen the closed record
- Print the details of a record
- Delete the record

Please refer to the chapter on common procedures for details of these operations

## **3.6 Maintaining Discrepancy Codes**

You can register the standard discrepancy codes that are applicable to the bills you process. Instead of specifying the details of the discrepancy each time you need to use it, you can maintain them in the BC Discrepancy Codes Maintenance screen.

The advantage of maintaining Discrepancy codes is that at the time of creating a product or while entering the details of a bill, you need to only specify the code assigned to the discrepancy code. All the details maintained for the discrepancy code will be automatically picked up. This reduces your effort, as you do not need to enter the description of the discrepancy each time you use it.

You can invoke the 'Bills & Collections Discrepancy Code Maintenance' screen by typing 'BCDDISCD' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button. If you are maintaining the details for an instruction for the first time, select 'New' from the Actions Menu in the Application toolbar or click new icon.

If you are calling a discrepancy maintenance record that has already been defined, double click on a discrepancy code of your choice from the summary screen.

### 3.6.1.1 **Specifying Discrepancy Code Details**

You can capture the following details related to the Discrepancy Codes here.

#### **Discrepancy Code**

In Oracle FLEXCUBE, each discrepancy that you maintain is identified by a 12-character code called a Discrepancy Code. One of the characters of this code should be a letter of the English Alphabet. You can follow your own conventions for devising the code.

The code that you specify should be unique as it is used to identify the discrepancy. While creating a product, or at the time of entering the details of a bill, instead of specifying the discrepancy codes applicable to a bill, you need to only specify the code assigned to the discrepancy. The details maintained for the discrepancy code, will be automatically picked up and defaulted.

#### **Language Code**

Specify the language code using which all the correspondences with the party should be carried out. The adjoining option list displays all available language codes. You can choose the appropriate one.

#### **Description**

After you have assigned a code to identify a discrepancy, you can proceed to maintain the description of the discrepancy. The contents of the discrepancy that you define can contain text up to six thousand five hundred characters.

After making the mandatory entries you can save the record.

On saving the record, your User ID will be displayed in the Input By field at the bottom of the screen. The date and time at which you saved the record will be displayed in the Date/Time field.

A record that you have created should be authorized by a user bearing a different login Id, before the EOD is run. Once the record is authorized, the Id of the user who authorized the record will be displayed in the Auth By field. The date and time at which the record has been authorized will be displayed in the Date/Time field positioned next to the Auth By field. The status of the record will be displayed in the check box marked Authorized. The field will remain unchecked until the record is authorized.

### 3.6.2 Specifying values for the User Defined Fields

You can specify values for user defined fields in the 'User Defined Fields' screen. To invoke this screen, click 'Fields' button.

Value for UDF can be made mandatory or non-mandatory as maintained in the 'User Defined Fields Maintenance' screen. After you have entered the details of the document and clause you should save the record. Click 'Exit' or 'Cancel' button to exit the screen.

### 3.6.3 Operations on the Discrepancy Code Maintenance Record

On an existing Discrepancy Code maintenance record, you can perform any one of the following operations (if any function under the Actions Menu is disabled, it means that the function is not allowed for the record):

- Amend the details of the record
- Authorize the record
- Copy the details of a discrepancy code on to a new record
- Close the record
- Reopen the closed record

- Print the details of a record
- Delete the record

Refer to the Procedures User Manual for details of these operations.

### 3.7 Maintaining Insurance Company Details

A bill, as an instrument used for trade payments involves the shipment of large merchandise over long distances. To cover the loss or damage of the goods during transition, most merchandise that is traded is covered under an insurance policy.

You can maintain the details of different Insurance Companies in Oracle FLEXCUBE.

At the time of capturing the details of a Bill contract in the system, you can associate the appropriate Insurance Company Code with the contract. Upon selection of the code, all the details maintained for the selected code will be automatically picked up by the system. Subsequently, on receipt of the insurance policy from the company, the insurance policy number can also be captured in the relevant contract.

You can maintain the details of an insurance company through the 'Bills & Collections Insurance Company Maintenance' screen. You can invoke this screen by typing 'BCDINSCO' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

The screenshot displays a web page dialog titled "Bills & Collections Insurance Company Maintenance -- Web Page Dialog". The main content area is titled "Company Details" and contains the following fields:

- Insurance Company Code \*
- Insurance Company Name
- Address 1
- Address 2
- Address 3
- Address 4
- Telephone Number
- Fax Number

Each of these fields has a small help icon to its right. At the bottom of the dialog, there is a "Fields" section containing the following information:

- Input By: ELIZA
- Date Time
- Modification Number
- Open
- Authorized

A "Cancel" button is located in the bottom right corner of the dialog.

### **3.7.1.1 Specifying the Company Details**

In this screen, you can maintain the following details of Insurance Companies:

#### **Insurance Company Code**

Specify a unique code for each insurance company being defined in the system. The insurance company will be identified by this code throughout the system. This is mandatory information and if not provided, you will not be allowed to save the details of the company.

You can use a maximum of 9 alphanumeric characters to create the company code.

#### **Insurance Company Name**

After specifying a unique code for the company, you can also specify the full name of the insurance company.

#### **Address**

Specify the mailing address of the insurance company being defined. You can maintain a maximum of four lines of address. Each line of address can accommodate a maximum of 105 alphanumeric characters.

#### **Telephone Number**

You can also capture the telephone number of the insurance company.

#### **Fax Number**

Specify the Fax number of the insurance company.

The insurance company will be available for association with Bill contracts only after you authorize the company details.

### 3.7.2 Specifying Values for the User Defined Fields

You can specify values for user defined fields in the 'User Defined Fields' screen. To invoke this screen, click 'Fields' button.

Value for UDF can be made mandatory or non-mandatory as maintained in the 'User Defined Fields Maintenance' screen.

After you have entered the details of the document and clause you should save the record. Click 'Exit' or 'Cancel' button to exit the screen.

### 3.7.3 Operations that you can Perform on a Insurance Company Record

In addition to creating the details of an insurance company, you can perform the following operations on an existing record:

- Unlock the record (to amend the details)
- Delete an unauthorized record
- Close the record
- Reopen the closed record

Refer to the Procedures User Manual for details of these operations.

### 3.7.4 Application of Exchange Rate Type Based on Transaction Amount

Oracle FLEXCUBE allows you to apply different exchange rates based on the amount involved in the transaction. The cut-off amount slabs are maintained in the local currency of your bank.

If the transaction currency is not the local currency, the system will first convert the transaction amount into the local currency equivalent using the Standard Mid Rate. This is necessary as the cut-off amount slabs are maintained in the local currency. The system will then validate the converted amount against the different amount slabs to determine the appropriate rate type. This is the rate type that will be used for the actual conversion of the transaction currency into the local currency equivalent.

You can capture the exchange rate types for different amount slabs through the 'Bills and Collections Exchange Rate Type Maintenance' screen. You can invoke this screen by typing 'BCDAMTEX' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

### 3.7.4.1 Specifying the Amount Tag Details

In this screen, you can specify the amount slabs for a branch, module and product combination.

#### **Branch, Module and Product Code**

Each branch of your bank is identified by a unique code. All authorized and active branch codes are available in the option list. You can select the appropriate branch code from the list.

Like wise, all the modules (like Loans & Deposits, Letters of Credit, Bills & Collections, Funds Transfer etc) available in your bank are also displayed in an option list. All active and authorized records are available for selection. You can select the appropriate module code from the list.

The various products/services offered by your bank are also available in an option list. Select the product code from the list.

Alternatively, you can also maintain the cut-off amounts that will be applicable for all the branches, modules, and products of your bank. You can make the following selections to do this:

- Branch Code – ALL (all branches)
- Module Code – AL (all modules)
- Product Code – ALL (all products)

### **Amount Tag**

Amount tags identify the various components (eg Bill Amount, Loan Principal, LC Amount etc.) involved in a contract.

You can maintain the cut-off amount slabs for:

1. All Amount Tags: The maintenance will be applicable to all the amount tags available in the system (Module tags and Non-module tags).
2. Module Tags: The amount tags that are specific to a particular module are known as Module Tags. For eg the amount tag PRINCIPAL is specific to the Loans module, BILL\_AMOUNT is defined for the Bills module and so on.
3. Non-Module Tags: The amount tags that are internally created by the system are referred to as Non-Module tags. The system will automatically create the amount tags for the Interest, Tax, Charge, and Commission components that you define for a product.

### **Basis Amount**

You can maintain the different amount slabs in this field. Specify the lower limit of the amount slab here. For the first slab, the floor basis amount will always be maintained as zero.

### **Amount To**

Specify the upper limit of the slab. The upper limit of the previous amount slab gets defaulted as the Floor Basis Amount. Click add icon to capture each subsequent amount slab.

### **Currency Rate Type**

You can associate a different exchange rate type with each cut-off amount slab that you have maintained. All authorized and active rate types defined in your system are available in the option list. Select the appropriate rate type for each amount slab.

### 3.7.5 Specifying Values for the User Defined Fields

You can specify values for user defined fields in the 'User Defined Fields' screen. To invoke this screen, click 'Fields' button.

**STOP** Value for UDF can be made mandatory or non-mandatory as maintained in the 'User Defined Fields Maintenance' screen. After you have entered the details of the document and clause you should save the record. Click 'Exit' or 'Cancel' button to exit the screen.

#### **Example**

You have maintained the following cut-off amount slabs, and the corresponding exchange rate types & exchange rates to be applied on Bill contracts processed at your bank:

<b>Cut-Off Amount Slabs (in Local Ccy - USD)</b>	<b>Exchange Rate Type</b>	<b>Exchange Rate (for GBP to USD conversion)</b>
0-25,000	STANDARD	1.684
>25,000	COUNTER	1.897

Let us assume that you are processing a Bill for GBP 20,000. The local currency of your bank is USD. In such a case, the system will first convert GBP 20,000 into the local currency equivalent using the Standard mid rate. Assuming that the mid rate is 1.5, the converted amount works out to USD 30,000. The system will then validate the converted amount against the cut-off amount slabs maintained. USD 30,000 (converted amount) falls in the second slab (>25,000). The exchange rate type maintained for this slab is 'COUNTER' and the corresponding exchange rate is 1.897. The actual conversion of the transaction amount takes place using the COUNTER rate of 1.897. Therefore, the USD equivalent of 20,000 GBP works out to 37,940.

## 3.8 Maintaining INCO Terms

You can associate documents and clauses to INCO terms as part of a one-time maintenance for your bank. You can do this through the 'INCO Term Document Maintenance' screen.

You can invoke this screen by typing 'BCDINCOD' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

The screenshot shows a web-based application window titled "INCO Term Document Maintenance -- Web Page Dialog". The window is divided into two main sections: "Document Details" and "Clause Details".

**Document Details:**

- INCO Term \*
- Document Code \*
- Description

**Clause Details:**

Clause Code	Description
-------------	-------------

**Footer:**

- Input By
- Authorized By
- Date Time
- Date Time
- Modification Number
- Open
- Authorized
- Exit

Here, you need to specify the following:

### **INCO Term**

The following are the INCO terms for which you can maintain documents and clauses:

- CIFC
- C&I
- CANDI
- CANDF
- EXM
- EX-work
- FOR
- EX-Delv

This maintenance is factory-shipped for your bank.

### **Document Code**

You need to associate a valid document to an INCO term. All valid document codes maintained (through the 'Bills and Collections Document Master Maintenance' screen) in your current branch are made available here for selection. You can associate any number of valid documents to an INCO term.

### **Description**

A brief description of the chosen document is displayed here.

### **Clause Code**

To each document associated with an 'INCO Term', you need to associate a clause. The adjoining option list displays all clause codes maintained in through the 'Clause Maintenance' screen. You can choose the appropriate one.

To each document associated with an 'INCO Term', you can associate any number of clauses.

### **Description**

A brief description of the chosen clause is displayed here. Click 'Exit' or 'Cancel' button to exit the screen.

## **3.9 Operations on an INCO Term**

On an existing INCO term maintenance record, you can perform any one of the following operations (if any function under the Actions Menu is disabled, it means that the function is not allowed for the record):

- Create a record
- Unlock and amend the details of the record
- Delete the record

During the 'amend' operation, you can amend the clause code only.

*Refer to the chapter on common procedures for details on each of these operations.*

## 3.10 Maintaining Branch Parameters for Bills and Collections

You can maintain bills and collections details specific to a branch using the 'Bills and Collections Branch Parameters' screen. These parameters can be maintained for each branch of your bank. You can invoke this screen by typing 'BCDBRPRM' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

The screenshot shows a web-based dialog box titled "Bills & Collections Branch Parameter Maintenance -- Webpage Dialog". It contains several sections:

- BRANCH DETAILS:** Includes a "Branch \*" dropdown menu and a "Branch Name" text input field.
- BATCH PROCESSING:** Contains three checkboxes: "PROCESS TILL NEXT WORKING DAY" (checked), "USE USER REFERENCE NO IN MESSAGES" (unchecked), and "USER ULTIMATE PARENT USER REFERENCE FOR CHILD CONTRACTS" (unchecked).
- ACCRUAL LEVEL:** Features two radio buttons: "Product" (selected) and "Contract" (unselected).
- Fields:** A section at the bottom left with a header "Fields".
- Bottom Bar:** Includes fields for "Maker", "Checker", "Date Time:", "Mod No", "Authorized", and "Open", along with a "Cancel" button.

The following details can be captured here:

### Branch Details

#### **Branch**

Specify the branch code for which you need to maintain specific parameters. Alternatively, you can select the branch code from the adjoining option list also. All branch codes maintained in the system will be available in the list of values for selection.

#### **Branch Name**

The branch name is defaulted based on the branch code selected.

### Batch Processing

#### **Process till next working day**

Check this box to indicate that Commission Accrual and Liquidation calculation has to be done based on this setting.

#### **Use User Reference NO in Messages**

Check this box to include User Reference number in messages.

### **User Ultimate Parent User Reference For Child Contracts**

Check this box to indicate that the Master/Parent contract Reference number has to be displayed on messages generated for Child contracts. If the box is left unchecked, the user reference number of the child will be displayed for the child contracts.

### **Accrual Level**

Select the option to indicate the level at which accrual has to be done and entries have to be passed. The options available are:

- Product
- Contract

## 4. Defining Attributes of a Bills and Collection Product

### 4.1 Introduction

In this chapter, we shall discuss the manner in which you can define attributes specific to a Bill and Collections product.

You can create a Bills and Collections (BC) product in the 'Bills and Collections Product Definition' screen. You can invoke this screen by typing 'BCDPRMNT' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button. In this screen, you can enter basic information relating to a BC product such as the Product Code, the Description, etc.

The screenshot displays the 'Bills and Collections Product Definition' web page dialog. The dialog is titled 'Bills and Collections Product Definition -- Web Page Dialog'. It contains several input fields and radio buttons for defining a product. The fields include: Product Code (EBLC), Description (export sight bills under LC), Product Type (E), Slogan Details (booking), Product Group (BCOUT), Start Date (12/1/1999), End Date (12/30/2020), Remarks (export collection under LC), and Operation (Collection). The radio buttons are for Tenor Code (Sight, Usance), Document (Clean, Documentary), and Under Letter Of Credit (Yes, No). A section titled '- Change Of Operation Allowed' contains several checkboxes, with 'Collection to Purchase' and 'Purchase to Collection' checked. The bottom of the dialog features a navigation bar with tabs for Accounting Roles, Events, Branch & Currency, Customer, Preferences, Tracers, Document, Status, Discount Accrual, Interest, Charges, Tax, MIS, and Fields. The footer displays user information: Input By RAC2, Date Time 7/3/2000 16:39:33, Modification Number 4, Open, Authorized, and an Exit button.

The primary attribute of a product is whether the bills linked to it are either:

- Import Bills under LCs
- Import Bills not under LCs
- Export Bills under LCs
- Export Bills not under LCs
- Incoming Collections

- Outgoing Collections
- Usance or Sight Bills
- Documentary or Clean Bills

The first attribute you define for a product is its Type. Once you have made this basic classification you can tailor the product to suit your requirements. To explain further, within the broad categories of the type of Bills listed above you can further define attributes that are characteristic to each type. Each of these types that you define, with its distinctive features, constitutes a Product in Oracle FLEXCUBE.

Since you define products for convenience, all the Bills involving the product inherit the attributes defined for the product. Yet, you have room for flexibility. You can change the inherited attributes of a specific bill to suit your requirement at the time of processing it.

For any product you create in Oracle FLEXCUBE, you can define generic attributes, such as branch, currency, and customer restrictions, interest details, tax details, etc., by clicking on the appropriate icon in the horizontal array of icons in this screen. For a BC product, in addition to these generic attributes, you can specifically define other attributes. These attributes are discussed in detail in this chapter.

You can define the attributes specific to a BC product in the BC Product Definition Main screen and the BC Product Preferences screen. In these screens, you can specify the product type and set the product preferences respectively.

*For further information on the generic attributes that you can define for a product, please refer the following Oracle FLEXCUBE User Manuals:*

- Products
- Interest
- User Defined Fields
- Settlements

## **4.2 Defining a Product**

The characteristics that you define for a product helps distinguish it from another. The entries that are passed, the messages that are generated and the processing of bills involving this product is determined by the characteristics that you define for it. You can indicate characteristics like:

### **Product Code**

Select the product code from the option list provided.

### **Description**

Specify a description for the product.

### **Slogan**

Here you can specify a slogan for the product, if required.

### Product Group

Select the group to which the product is associated, from the option list provided.

### Start Date

Specify the start date for the product.

### End Date

Specify the end date for the product.

### Remarks

Enter any remarks related to the product, if required.

### Operation

This indicates the operation that is allowed for the bills linked to a product. The operation that you can select for the product is determined by the type of bill product you define (import, export, and collection). The operation type selected for the bill determines the type of accounting entries passed and the messages that are generated.

You can select an operation from the option list available. The type of operation that you can perform on a bill has been represented below:

<b>Incoming (International and Domestic)</b>	<b>Outgoing (International and Domestic)</b>
Advance	Negotiation
Payment	Payment
Discounting	Discounting
Collection	Collection
Acceptance	Acceptance
	Purchase

### Product Type

An important detail in defining a product is to specify the type of product you are creating. A Bill product that you create in Oracle FLEXCUBE can be of the following types:

- Import
- Export

The type of bill product you are creating determines the operations that can be performed on a bill.

## **Tenor Code**

The tenor that you define indicates when the bills linked to the product will be paid (immediately or after a usance period).

The bills linked to a product can be paid either at:

- Sight - Indicating that the bill is paid immediately
- Usance - indicating that bill is paid after a usance period

## **Document**

A bill that is drawn under an LC issued at your bank or at another bank can be either clean or documentary. If you indicate that bills under an LC can be processed using the product, you can also indicate the type of LC that the bill was drawn under.

The options available are:

- Clean - indicating that no documents are required to process the bills linked to this product
- Documentary - indicating that documents are required for the processing of bills linked to this product

## **Under Letter of Credit**

The bills that you process at your bank can be drawn under an LC that was issued at your bank or at another bank. You can indicate whether bills drawn under an LC can be processed using the product you are creating.

## **Reimbursement Claim**

Check this option to indicate that the product is applicable for processing reimbursement claims. This field is enabled only when the operation is chosen as 'Payment' and the type is specified as 'Import'.

### **4.2.1.1 Indicating whether a change of Operation is allowed**

In addition to indicating the operation that is allowed for the bills linked to a product, you also have an option to indicate whether a change of operation is allowed for the bills linked to the product.

#### **Acceptance to Discount**

If you are creating a product with operation type 'Acceptance' you can indicate that the bills, which are processed using this product, can also be discounted also.

#### **Acceptance to Advance**

If you are creating a product with operation type 'Acceptance' you can also indicate that the bills, which are processed using this product can be advanced as well.

## Collection to Purchase

If you are creating a product with operation type 'Collection' you can indicate that the collection bills processed using this product can be purchased as well.

## Discount to Collection

If you are creating an export bill product with operation type 'Discount' click here to indicate that discounted bills processed using this product can be booked for collection also. If you select this option, you should also maintain accounting entries for the events 'BCOL' and 'LCOL'.

While processing a bill involving the product, you need to book a bill under Discount. If you change the Operation to Collection, the accounting entries defined for BCOL will be passed. When the bill is liquidated, the accounting entries defined for LCOL will be passed.

This operation type is treated as a foreclosure and outstanding discount accruals are completed unconditionally when the operation is carried out before the maturity date of a BC contract linked to the product.

*You can refer to the chapter titled 'Defining Discount Accrual Fee Classes' for more information on discount accruals.*

## Purchase to Collection

If you are creating an export product with operation type 'Purchase' click here to indicate that purchase bills processed using this product be changed to Collection also. If you select this option, you should also maintain accounting entries for the event 'BCOL' and 'LCOL'.

This operation type is treated as a foreclosure and outstanding discount accruals are completed unconditionally when the operation is carried out before the maturity date of a BC contract linked to the product.

*You can refer to the chapter titled 'Defining Discount Accrual Fee Classes' for more information on discount accruals.*

**Acceptance To Forfaiting** – If you are creating an export product of Bills under LC with Tenor as 'Usance', you can indicate that the bills coming under this product can be forfeited, by checking this option.

This option will be available only if the selected operation for the product is 'Acceptance'.

The system will trigger the event FACP if the bill operation changes from 'Acceptance' to 'Forfaiting'.

**Discount To Forfaiting** - If you are creating an export product of Bills under LC with Tenor as 'Usance', you can indicate that a discounted bill coming under this product can be forfeited, by checking this option.

This option will be available only if one of the two cases is true:

- The selected operation for the product is 'Discount'.

- The selected operation for the product is 'Acceptance' with the change preference 'Acceptance to Discount' checked.

The system will trigger the event FDIS if the bill operation changes from 'Discount' to 'Forfeiting'. If the initial operation for an export bill with tenor 'Usance' is set as 'Acceptance' then you can change the operation to 'Acceptance to Discount'. If 'Acceptance to Discount' is chosen, then you will be able to select any one of the following operations:

- Discount to Collection
- Discount to Forfeiting

On save of the product, the system will check whether the bill product was saved initially with the Forfeiting operations or not. If the product had been saved earlier with any of the forfeiting operations, the system will not allow you to save the product.

The process for changing a bill status is given below:

1. First you have to unlock the contract
2. Secondly, you have to change the operation code
3. Specify the limits tracking parameters for the changed contract

After you save the changes, a BCOL (Collection of Bill under Purchase/Advance/Discount) event is passed for the transaction. During BCOL event, the system will:

- Reverse all the purchased/discounted/advanced assets
- Execute a complete interest accrual
- Pass collection contingent entries
- Pass interest liquidation entries – if interest collection is of arrears type
- If there is any penalty, then it will also be liquidated

Partially liquidated contracts can also be reverted to collection operation. Also, this can be done before/on/after maturity date. In case it is done after the maturity date and if there is any penalty due and penalty accounting entries are defined in BCOL event of product, then it will liquidate the penalty as well. Limits utilization will get matured on triggering the BCOL event. Following are the accounting entries passed during the BCOL:

Accounting Role	Amount Tag	Dr./Cr.
BC CUSTOMER	BILL_OS_AMTEQV	DR
BILLSPURCHASED/DISCOUNT	BILL_OS_AMTEQV	CR
CONT GL	BILL_OS_AMTEQV	DR
CONT OFFSET GL	BILL_OS_AMTEQV	CR
BC CUSTOMER	INT_LIQD	DR

Accounting Role	Amount Tag	Dr./Cr.
RECIEVABLE GL	INT_LIQD	CR
BC CUSTOMER	PENINT_LIQD	DR
RECIEVABLE GL	PENINT_LIQD	CR

 Last two entries of interest liquidation should be defined only for arrears type collection products.

Following are the accounting entries passed during LCOL:

Accounting Role	Amount Tag	Dr./Cr. Indicator
CONT GL	BILL_LIQ_AMTEQ	CR
CONT OFFSET GL	BILL_LIQ_AMTEQ	DR
BC CUSTOMER	BILL_LIQ_AMTEQ	DR
NOSTRO ACCOUNT	BILL_LIQ_AMTEQ	CR

For forfeited bills, BCOL entries should be defined with MRG\_AMT\_EQUIV tag instead of BILL\_OS\_AMTEQV. In LCON event, MRG\_LIQ\_AMOUNT should be used in place of BILL\_LIQ\_AMTEQ.

#### **4.2.2 Specifying the Role Details**

Click 'Accounting Roles' button to define accounting roles for the product you are creating. In the screen that corresponds to this icon you can map Accounting Roles to Accounting Heads.

#### **4.2.3 Specifying Event Details**

Click 'Events' button to invoke the events screen. Through this screen, you can specify the details of the Accounting Entries and Advices that have to be generated for the events that take place during the life cycle of a bill.

#### **4.2.4 Specifying Branch and Currency Details**

Click 'Branch & Currency' button to invoke the product branch and currency restrictions screen. In this screen you have the option of allowing all the branches of your bank to use the product or restricting its use to only some branches. By default when a new product is created no branches will be disallowed.

You can also specify the currencies allowed or restricted for the product. This currency corresponds to the Bill currency. By default when a new product is created no currencies will be disallowed.

#### **4.2.5 Specifying Customer Details**

Click 'Customer' button to invoke the product customers and categories screen. In this screen you can specify the categories of customers or the customers themselves with whom you can enter into bills involving the product.

## 4.2.6 Specifying Preferences for a product

Preferences are the options available to you for defining attributes that will help distinguish a product. The preferences that you state will ultimately shape the product.

By default, a bill involving a product inherits all the attributes defined for the product. However the attributes defined as the product's preferences can be changed for a bill.

Click 'Preferences' button to invoke the 'Bills and Collections Product – Preferences' screen. Through this screen you can define preferences for the product you are creating. The Preferences that you define for a product will be made applicable to all Bills involving the product. The preferences that you can define for a product are discussed below.

## 4.2.7 Specifying the Main Preferences

You can specify the following Main preferences related to the Bills and Collections product.

### 4.2.7.1 Capturing Limits Monitoring Details

You can capture the following details regarding Limits Monitoring.

## Track Accrued Amounts

You have to specify whether the accrued interest of bills that have not yet been paid should also be considered as the utilized amount for the purpose of credit administration. You can make more than one interest type of component applicable to a bill product. In such a case, one type is designated as the main interest. The following example illustrates how this concept works.

### **Example**

You have purchased a bill worth 100,000 from Mr. Sam Brown on June 1, 1999. You have specified that the bill should be liquidated automatically on the maturity date may 31, 1999. The central liability limit assigned to Mr. Sam Brown is USD 110,000.

On 31, December 1999, Mr. Brown approaches you to discount a bill for USD 10000.

If you had opted to track the accrued interest, his total liability to the bank on December 31, 1999 is USD 110,167 (USD 100,000 + USD11, 167 as of December 31 - Interest calculation method Actual/365). Since the utilized amount is above the central liability limit of USD 110,000, Mr. Brown will not be eligible to discount his bill with the bank.

However, if you had chosen not to track the accrued interest on the bill, he would have been eligible for the discounting of the second bill of USD10, 000. As only the bill amount will be considered for Central Liability tracking.

## Tracking Bill Amount for Discounted Bills

Under a discounted bill, the interest that is calculated for the bill is deducted at the time of initiating the bill.

For the purpose of limits tracking, you should indicate whether the actual bill amount or the discounted amount should be tracked, against the limit assigned to the customer under a Credit Line.

Check against this field, to indicate that the actual bill amount should be considered for the purpose, of limits tracking. Leave it unchecked to indicate that the discounted amount should be considered.

### **Example**

You are discounting bill of USD 100,000 and the interest component amounts to USD1000. Under the discounted type of interest payment, the total interest calculated until the maturity date of the bill (USD1000), is deducted from the nominal (USD 100,000) and then advanced to Mr. Brown.

If you check against this field, USD 100,000 will be tracked against the credit limit assigned to Mr. Brown. If you leave it unchecked, USD 90,000 will be tracked against his credit limit.

## Limits Tenor Calculation Type

For tenor based bills you can indicate the type or manner in which the bill needs to be tracked.

The tenor calculation type can be either of the following:

- Fixed
- Rolling

If you indicate fixed, a tenor-based bill will through out its tenor be tracked against the relevant credit line.

**Example**

Mr. Brown has requested your bank to discount his bill worth USD 100,000. The tenor of the bill is 60 days.

You have also assigned Mr. Brown credit limits, under the following tenor based sub-lines, for the Main Line Bills:

Credit Line	Tenor
Bill30	30 days
Bill45	45 days
Bill60	60 days
Bill90	90 days

Mr. Sam Brown has been assigned a credit limit under all the sub-lines under the Main Line - Bills.

*For fixed tenor type*

If you specify the tenor calculation type as Fixed, the bill that has been discounted will be tracked under the credit line 'Bill60' throughout its tenor.

*For rolling tenor type*

If you specify the tenor calculation type as revolving, the bill that has been discounted will be tracked under the credit line Bill60 when it is initiated. After 15 days of discounting the bill, the bill amount will be automatically be tracked under the credit line Bill45. Similarly after 30 days, it will be tracked under the sub-line Bills30 and so on until the bill is liquidated.

**4.2.7.2 Capturing Loan Preferences**

You can capture the following loan preferences here:

**Advance By Loan**

Checking on the option 'Advance by Loan' allows you to book a loan. Loan booking is allowed only during final liquidation and is not allowed during partial liquidation of bill. Once you have opted for this option, you need to specify the loan product and the bridge GL in the consecutive fields.

You are allowed to create a loan for import bills that are of Acceptance type and also for Usance and Sight import bills for both under LC and not under LC.

**Loan Product**

After opting to book a loan, you need a loan product to create a loan. Choose the loan product from the option list. The loan will be created using this product at the time of liquidating the bills.

Only Loan products will be displayed in the option list.

## Suspense General Ledger

To create a loan, you need to transfer the principal from Bills to Loans. For this purpose, a Bridge GL has to be specified in this field. Select the GL from the option list.

The system displays only GL's in the option list and will *not* display any customer accounts.

### **4.2.7.3 Indicating the Batch Processing Preferences**

You can specify the following preferences related to Batch Processing:

#### **Auto Liquidate BC Contracts**

Components of a bill can be liquidated automatically or manually. In the Product Preferences screen, you can indicate whether you need to liquidate the BC Contracts automatically.

If the automatic mode of liquidation is specified, a bill will be automatically liquidated on the day it falls due, by the Contract Auto Liquidation function run as part of the BOD processing. If a bill for which you have specified auto liquidation matures on a holiday, the bill will be processed based on your holiday handling specifications in the Branch Parameters table.

- If you have specified that the processing has to be done on the last working day before the holiday, a bill maturing on a holiday will be liquidated during the End of Day processing on the last working day.
- If you have specified that the processing has to be done only up to the system date, the bills maturing on a holiday will be processed on the next working day, during the Beginning of Day process

If you do not specify Auto Liquidation, you have to give specific instructions for liquidation through the Manual Liquidation screen on the day you want to liquidate the bill.

#### **Auto Status Change**

A status change is one in which the status of a bill changes from one to the next.

If you specify that status changes have to be carried out automatically, the status of the bill will be changed after the specified number of days. If not, you have to change the status of a bill, through the bill processing function. In the Bills - User Defined Status Maintenance screen, you can specify whether the status change should be in the forward or reverse direction. Other details related to the status change can also be specified here.

Even if automatic status change has been specified for a product and therefore a bill involving it, you can manually change the status of a bill, before the automatic change is due. It can be done through, the Contract On-line Details screen.

If a product has been specified with manual status change, you cannot specify automatic status change, for a bill involving the product.

You will be allowed to specify whether automatic status change should be in the forward or reverse direction in the status maintenance screen only if you specify that automatic status change is allowed for the product.

### **Auto Change from Acceptance to Advance**

A product to cater to the acceptance type of bills is being created. You can indicate whether the bills linked to this product, should be automatically converted into an Advance type of bill, on its liquidation date.

### **Upload Security**

This needs to be checked if the Bills contract is to be considered as Banker's Acceptance and uploaded as an instrument into the Securities module. The value date of the Bill would be the issue date of the Security and maturity date will be mapped to the redemption date of the security. The Bill amount will be uploaded as the initial and current Face Value of the security

## **4.2.7.4 Specifying the Past Due Reckoning Status**

The Past Due Status preferences that you define for a product default to the bills processed under it.

### **By Goods Arrival Date**

In the BC Product Preferences screen, you can indicate if the past due status (of bill contracts entered under the product) should be determined with respect to the Goods Arrival Date.

### **Days after Goods Arrival**

If you opt to determine the past due status with respect to the Goods Arrival Date, you can enter the *number of days* vis-à-vis the Goods Arrival Date that should determine the past due status. The following example illustrates what this implies.

#### **Example**

When building a Bills product, you opt to determine the Past Due Status of bills entered under it with respect to the Goods Arrival Date. You can specify this in the BC Product Preferences screen.

#### *Setting up:*

Choose the 'By Goods Arrival Date' option by clicking on the check box adjacent to it.

In the Days after Goods Arrival field, specify the number of days *after* the goods arrival date that should determine the past due status, say, '4'.

#### *Implication on bill contracts entered under the product:*

When capturing the details of a bill contract, you specify the Goods Arrival Date as 25 May 1999.

If this bill is not settled by 29 May 1999 (25 May 1999 plus '4' days), the bill will be moved, automatically, to the Past Due Status.

## **INCO Term**

Specify the INCO term related to goods that are a part of the LC instrument. You can select one of the following values from the adjoining option list:

- CIFC
- C&I
- CANDI
- CANDF
- EXM
- EX-work
- FOR
- EX-Delv

### **4.2.7.5 Specifying Authorization Re-key Requirements**

All operations on a bill (input, modification, manual liquidation etc.) have to be authorized by a user other than the one who carried out the operation.

Authorization is a way of checking the inputs made by a user. All operations on a bill, except placing it on hold, should be authorized before you can begin the End of Day operations.

As a cross-checking mechanism to ensure that you are invoking the right bill for authorization, you can specify that the values of certain fields should be entered before the other details are displayed. The complete details of the bill will be displayed only after the values to these fields are entered. This is called the rekey option. The fields for which the values have to be given are called the rekey fields.

#### **Required**

You can indicate whether re-key option is required or not by clicking the 'Yes' or 'No' option respectively.

If you indicate positively for the cross-checking mechanism, you should also specify the fields that will have to be re-keyed at the time the contract is authorized. You can specify any or all of the following as re-key fields:

- Amount
- Value date
- Customer
- Currency
- Total Paid
- Maturity date

If no re-key fields have been defined, the details of the bill will be displayed immediately once the authorizer calls the bill for authorization.

This facility has been incorporated as a safety measure. It is advisable to indicate positively in these fields as the possibility of human error cannot be discounted. For instance, let us assume that the value date has been input incorrectly for an bills contract. You have specified 'Yes at the Re-key Required field and checked on Value date under it. At the time when the contact is being authorized this field will have to be re-keyed and the error that could have otherwise been overlooked can be corrected.

#### **4.2.7.6 Specifying Pay Due Advice Generation Preferences**

Specify the following details.

##### **Required**

While creating a bill product, you can indicate whether a Payment Due advice should be generated for bills involving the product by selecting this check box.

##### **Before/After**

If you indicate that a Payment due Advice should be generated, you need to indicate whether it is to be generated before or after bill maturity.

##### **Notice Days**

Specify the number of days before/after maturity when the advice should be generated.

The advice will be automatically generated as part of BOD for all Incoming Collections associated with the product based on the preferences that you specify.

*Refer to the chapter titled Automatic Processes of this User manual for the procedure to manually generate a Payment due Advice before the automatic generation date.*

#### **4.2.7.7 Specifying the Acceptance Commission Preferences**

For incoming bills in the acceptance stage, you can collect Acceptance commission. This is different from main interest and penalty interest applicable to advance bills. Acceptance interest can be either fixed interest or floating interest or special interest.

##### **Interest Component**

To compute and accrue acceptance commission, you need to associate an interest component. Select the interest component from the option list. All interest components maintained through the product 'ICCF Details' screen are made available here.

During acceptance, you have not funded your customer. If you select an acceptance interest commission component here and select 'Authorize' from the Actions menu in the Application toolbar or click authorize icon, the system will check whether the 'Consider as Discount' option is checked at the corresponding product 'ICCF Details' screen. If checked, system does not allow you to save the same. It gives you an error message. This is because you do not compute IRR during the acceptance stage.

## Advance/Arrears

After choosing the interest component, you need to specify the mode in which the Interest is to be collected.

Indicate this by choosing one of the following options:

- Advance
- Arrears

Note the following:

- Acceptance commission fields are enabled only for '**Incoming Acceptance**' Bills.
- Acceptance Commission is **not** considered as the Main Interest component or the Penalty component.

### 4.2.7.8 Specifying Rollover Preference

For a Bills product, you can specify whether bill contract can be rolled over into a new bill if it is not liquidated on its Maturity Date.

#### Allow Rollover

Checking this box will indicate that the rollover is allowed for the bill, involving the product you are defining. Once you specify this option, the system allows you to change/extend the rollover to a new maturity date.

Rollover is possible on maturity date or after maturity date. However, rollover option is enabled only when:

- The BC product is an import bill with operation as 'Advance'
- The BC product is an import bill with operation as Acceptance and Acceptance to Advance option is enabled. However the bill can be rolled over only when the current operation is advance and not when it is in the acceptance stage.
- Both the above products have interest collection type specified as 'Arrears'

For handling Rollover, you will have to maintain two events and associate the relevant accounting roles and amount tags while defining the Bills Product.

The two events are:

- ROLL – Triggered on Old Bills Contract
- INIT – Triggered on New Bills Contract

The system posts the following accounting entries when rollover is initiated manually on the bills contract:

Event	Dr./Cr.	Accounting Role	Amount Tag
-------	---------	-----------------	------------

Event	Dr./Cr.	Accounting Role	Amount Tag
ROLL	DR	ROLL_BRIDGE_GL	PRINCIPAL_ROLL
ROLL	CR	ADV UNDER LCS	PRINCIPAL_ROLL
INIT	DR	ADV UNDER LCS	PRINCIPAL_ROIN
INIT	CR	ROLL_BRIDGE_GL	PRINCIPAL_ROIN

### Discounting Method

As a product preference, you have to specify the discounting method that would be applicable when discounting a bill. The following options are available:

- Discounted (Straight Discounting basis) - The following formula will be used for calculating the discounted value:

$$DV = FV \times \left\{ 1 - \frac{(R \times DTM)}{(DTY \times 100)} \right\}$$

In the formula above,

- DV = Discounted Value
- FV = Face Value
- R = Discount Rate
- DTM = Days to Maturity/Number of Days
- DTY = Number of Days in a year

### Example

Assume that you have purchased a bill for USD 100,000. The other details of the bill are as follows:

- Discount Rate - 10%
- Number of days till maturity - 31
- Interest basis - Actual /360

Discounted Value = **99138.89** (substituting the above values in the formula)

Discount Amt. = 100,000 – 99138.89 (Bill Amt. – Discounted Value) = **861.11**

The following accounting entries will be passed during the initiation event:

Accounting Role	Amount Tag	Amount	Dr/Cr
Bill Asset	Bill_Amount	100, 000	Dr
Customer	Bill_Amount	100, 000	Cr
Customer	Interest_liqd	861.11	Dr
RIA	Interest_liqd	861.11	Cr

True Discounted (Discount to Yield basis) - In the Discount to Yield method, the following formula will be used:

$$DV = \frac{FV}{\left\{ \frac{1 + (R \times DTM)}{(DTY \times 100)} \right\}}$$

Here,

- DV = Discounted Value
- FV = Face Value
- R = Discount Rate
- DTM = Days to Maturity/Number of Days
- DTY = Number of Days in a year

In the True Discounted method, the interest will be computed on the discounted value and not on the Bill Amount.

**Example**

Consider the example discussed above,

Discounted Value = **99146.24** (substituting the values in the formula above)

Discount Amt. = 100, 000 – 99146.24 (Bill Amt. – Discounted Value) = **853.76**

The following accounting entries will be passed during the initiation event:

Accounting Role	Amount Tag	Amount	Dr/Cr
Bill Asset	Bill_Amount	100, 000	Dr
Customer	Bill_Amount	100, 000	Cr
Customer	Interest_liqd	853.76	Dr
RIA	Interest_liqd	853.76	Cr

 This option will be available for selection only if you choose the 'Interest Collection Type' as 'Advance'.

#### 4.2.7.9 Specifying Linked Loan Preferences for Export Bills

You can specify your preference for linked loans.

##### **Link to Loan**

Check this box if you want to link an export bill to a loan.

 This is enabled only for export type of bills.

#### 4.2.8 Specifying the Interest and Charge Details

You can specify the Interest and Charge Details in the 'Interest and Charge Details' tab.

The screenshot shows a web page dialog titled "Bills and Collections product - Preferences -- Web Page Dialog". The "Interest and Charge Details" tab is active. The form includes the following sections and fields:

- Interest Commission Charges Fees Components**
  - Accrual Start Day: 31
  - Grace Days: 0
  - Accrual Start Month: January (dropdown)
  - Allow Prepayment of Interests:
  - Accrual Frequency: Monthly (dropdown)
  - Interest Components to be Collected in:  Arrears,  Advance
- Forfeiting**
  - Forfeiting Interest Component: \_\_\_\_\_
- Tenor (in Days)**
  - Minimum: 0
  - Maximum: 0
  - Standard: 0
  - Transit Days: \_\_\_\_\_
- Rate Code**
  - Buy / Sell Rate
  - Mid Rate
  - Free Collection
- Exchange Rate**
  - Default Rate Type: \_\_\_\_\_
  - Override Variance Limit: \_\_\_\_\_
  - Maximum Variance: \_\_\_\_\_

Buttons for "Ok" and "Exit" are located at the bottom right of the dialog.

#### 4.2.8.1 Specifying the Interest, Commission, Charges and Fees preferences

##### **Accrual Frequency**

Apart from the bill amount, a bill can have other components, such as interest, charges or fees. They can be accrued over the tenor of the bill. The frequency, at which these components should be accrued, can be specified as a Product Preference.

The attributes of the other components are defined in the ICCF sub-system of Oracle FLEXCUBE. However the frequency with which the components should be accrued is specified in this screen.

The system carries out automatic accruals at the frequency specified by you, as part of the End of Cycle processing. However, if the accrual date falls on a holiday, the accruals are done as per your holiday handling specifications in the Branch Parameters screen:

You could have specified that automatic events for a holiday(s) are to be processed on the working day before the holiday. The accruals falling due on a holiday(s) will be then processed during End of Day processing on the last working day before the holiday.

You could have specified that the automatic events for a holiday(s) are to be processed on the working day following the holiday; the automatic events falling due on a holiday(s) will be processed on the next working day, during the Beginning of Day processing.

The frequency can be one of the following:

- Daily
- Monthly
- Quarterly
- Half yearly
- Yearly

In the case of monthly, quarterly, half yearly or yearly accruals, you should specify the date on which the accruals have to be done during the month. For example, if you specify the date as 30, accruals will be carried out on that day of the month, depending on the frequency.

If you want to fix the accrual date for the last working day of the month, you should specify the date as 31 and indicate the frequency. If you indicate the frequency as monthly, the accruals will be done at the end of every month. That is, on 31st for months with 31 days, on 30th for months with 30 days and on 28th or 29th, as the case may be, for February.

If you specify the frequency as quarterly and fix the accrual date as 31, the accruals will be done on the last day of the month at the end of every quarter. It works in a similar manner for half-yearly and yearly accrual frequency.

If you set the accrual frequency as quarterly, half yearly or yearly, you have to specify the month in which the first accrual has to begin along with the date.

**Example**

You have selected the half-yearly option, specified the start date as 31 and the start month as June. In this case, the system will make the first accrual on June 30, 1999 for the period from January 1 to June 30, 1999. The second accrual will be on December 31, 1999, for the period from July 1, 1999 to December 31, 1999.

**Accrual Start Day**

In the case of monthly, quarterly, half yearly or yearly accruals, you should specify the date on which the accruals have to be done during the month. For example, if you specify the date as 30, accruals will be carried out on that day of the month, depending on the frequency.

## Accrual Start Month

If you set the accrual frequency as quarterly, half yearly or yearly, you have to specify the month in which the first accrual has to begin along with the date.

## Grace Days

The grace period specifies the period after the repayment date, within which the penalty interest (if one has been defined for the product) will not be applied, even if the repayment is made after the due date. This period is defined as a specific number of days and will begin from the date the repayment becomes due.

Penalty interest will be applied, on a repayment made after the grace period. The penalty interest will be calculated for the entire period it has been outstanding (that is, from the date the payment was due).

### Example

The repayment on Mr. Sam Brown's bill is due on June 15, 1999. You have specified a grace period of 5 days, after which a penalty interest of 2% will be imposed.

#### *Bill repayment made within the grace period*

Now, if Mr. Brown makes the payment on June 18, which falls within the grace period, he will not have to pay penal interest.

#### *Bill repayment made after the grace period*

But if he makes the payment after the expiry of the grace period, that is, after June 20, then he will be charged penal interest starting from June 16 (the repayment date) and not from June 20, the day the grace period expires.

## Interest Components to be collected in

You can have the interest collected in one of the following ways:

Advance - When interest is to be collected in advance, it will be collected at the time of initiating the bill.

### Example

You have purchased a bill on Jan 10th and set it up as having interest to be collected in advance.

In this case 10th is the transaction date of the bill. Therefore, the interest amount due on the bill is collected on Jan 10th.

If you opt to collect interest in advance, you can also specify the discounting method applicable on the bill. This is discussed in the section titled 'Specifying the Discounting Method' of this chapter.

Arrears - If the interest component of a bill is to be collected in arrears, the interest is collected on the maturity date of the bill.

### **Example**

You have discounted a bill on 10 January 1999, which matures on 31 April 1999. You have specified that the bill is to be collected in arrears.

In this case, on 31 April 1999, which is the expiry date of the bill, the interest amount due on the bill, will be collected.

### **Allow Prepayment of Interest**

If this option is checked at the product level, payment of interest is allowed even before the due date is reached.

## **4.2.8.2 Capturing Forfeiting Details**

Here you need to capture the interest component.

### **Forfeiting Interest Component**

For bills that can be forfeited, you need to specify the interest component at the product preference level. The adjoining option list displays all the interest components (except the main interest component) attached to the product. You can select the appropriate one.

You can specify the interest collection preference in the 'Interest Component' screen. To invoke this screen, click 'Interest' button in the 'Bills and Collections – Product Preferences' screen.

## **4.2.8.3 Specifying Tenor Details**

You can set the Standard, Minimum and the Maximum limits for tenor based bills. The tenor details that you specify for a bill product, is always expressed in days.

### **Maximum**

You can fix the maximum tenor of a product. The tenor of the bills that involve the product should be less than or equal to the Maximum tenor that you specify.

### **Minimum**

You can fix the minimum tenor of a product. The tenor of the bills that involve the product should be greater than or equal to the Minimum tenor that you specify.

### **Standard**

The standard tenor is the tenor that is normally associated with a bill, involving a product. The standard tenor of a bill is always expressed in days and will apply to all bills involving the product. If you do not specify any specific tenor while processing a bill, the standard tenor will be applicable to it. However, the standard tenor applied on a bill can be changed during bill processing.

You can create a product with the standard tenor as zero. While processing a bill involving such a product, you will need to specify the maturity and the expiry date of the bill.

If you attempt to save the bill without entering the expiry or maturity date you will be prompted for an override.

**Example**

You have defined a bill product to cater to tenor based discounted bills. The minimum tenor specified for this product is 100 days and the maximum tenor is 1000 days. You have also specified a standard tenor that is 500 days.

For this product, you can process bills with a tenor between 100 and 1000 days. As you have specified the standard tenor as 500 days, by default, a bill involving this product will have a 500 day tenor. However, at the time of processing the bill you can change this tenor to any period between the Minimum and Maximum tenor limits specified.

**Transit Days**

The transit days is used to compute the maturity date of the bill. Enter the transit days for the bill. The system does not allow you to save the record in case the transit day exceeds the standard tenor.

**4.2.8.4 Specifying Rate Code Details**

Enter the following details:

**Mid Rate or Buy/ Sell Rate**

If it is a cross currency bill the exchange rate that has to be used for conversion can be mentioned as MID/BUY/SELL rate. Select 'Mid Rate' option if you want to specify the exchange rate as Mid rate. Select 'Buy/Sell Rate' option if you want to specify Buy/Sell rate for exchange.

**Free Collection**

Check this option if you wish to use the product for free collection.

**4.2.8.5 Specifying Exchange Rate related details**

You can capture the details regarding the exchange rate here.

**Default Rate Type**

You can specify the exchange rates that are to be picked up and used for, liquidating the Bill Amount, Interest and Charge components of a bill. You can indicate that the standard rate prevailing, as of the issue date of the bill should be used. You can also specify an exchange rate of your choice.

The possible values for the rate pickup are:

- As per Standard rate
- As input in the Contract

If you specify as input in the contract, then the system computes the components of the bill, based on your input in the Exchange rate field, in the Bills Contract Main screen.

If you choose As per standard rate the system computes the applicable components, by picking up the exchange rates as of the transaction date, from the Currency table maintained in the Core Services module of Oracle FLEXCUBE.

### **Override Variance Limit**

For a Bills product, you can specify the exchange rate type to be used to process the bill amount, the interest, charge or fee components of the bill. At the time of entering a contract involving a product, you have the option of, changing the exchange rate defaulted from the product and specifying an exchange rate, of your choice.

The exchange rate variance is applicable only if you have decided to change the standard rate defaulted from the currency table and if the contracts linked to the product involve a foreign currency. You can specify the minimum and maximum limit by which, the exchange rate entered for contracts involving this product can exceed the standard exchange rate.

In the Override Variance Limit field specify the minimum percentage over which you can exceed the normal exchange rates.

### **Maximum Variance**

In the Maximum Variance field specify the maximum percentage upto which you can exceed the normal exchange rate.

### **Example**

Let us assume that for a product you have specified the override range to be between 7% and 30%. In such a case the entries in these fields would read:

- Rate Override Limit - 7%
- Rate Stop Limit - 30%

You enter a bill involving this product. This is a cross currency contract and involves the American and the Australian dollar. Also assume that the Standard mid-rate for the currency pair is 1.25. If you wish to override the existing rates for the currency pair, the permissible override would range between 7% and 30%. We shall examine the three possible situations that you can encounter.

**Below the override limit** - Let us assume that for the bill, you have specified the exchange rate as 1.2. Here the exchange rate exceeds the standard rate by 4%. The bill will be processed.

**Within the override limit** - In this case, let us now assume that you had specified the exchange rate to be 2.0. Here you have exceeded the standard rate by 20%. You will be prompted to confirm the override. If you confirm the override, the bill will be processed using these rates.

**Above the override limit** - Let us assume a situation in which you have specified the exchange rates to be 2.5. In this case you have exceeded the standard rate by 100%. An error message will be displayed and you will not be allowed to continue with processing the bill, until the exchange rate you specify is within the permissible limit of 7-30%.

### **Their Charges**

Here you can define the charge component for the charges that are due to the counterparty bank.

## 4.2.9 Specifying MIS details

Click 'MIS' button to define Management Information Details (MIS) details for the product you are defining.

The screenshot shows a web-based dialog box titled "MIS Details -- Web Page Dialog". It contains the following elements:

- Product Code \***: A text input field with a red asterisk indicating it is required.
- MIS Group**: A text input field.
- Pool Code**: A text input field.
- Default from MIS Group**: A button located to the right of the MIS Group field.
- MIS Classes**: A table with a header row containing "MIS Class" and "MIS Code". The table body is currently empty.
- Cost Code**: A text input field with a horizontal line above it, and several empty lines below it for additional input.
- Ok** and **Exit**: Buttons located at the bottom right of the dialog box.

*Refer the User Manual on MIS under Modularity for further details.*

## 4.2.10 Specifying ICCF details

Click 'Interest' button to define the Interest that is to be collected for Bills involving this product.

Here you can capture details about interest computation, accrual and liquidation for all contracts under the product.

### Collection Method

Indicate the method for collecting interest for the components by choosing one of the following:

- Advance
- Arrears

*Refer the User Manual on Interest under Modularity for further details.*

### 4.2.11 Specifying Charge details

Click 'Charges' button to define the Charges or Fees that are to be collected for Bills involving this product.

**Charge Details -- Web Page Dialog**

Product Code \_\_\_\_\_ Product Description \_\_\_\_\_

Component Details

Component \* \_\_\_\_\_ Description \_\_\_\_\_

Refer the User Manual on Tax under Modularity for further details.

#### 4.2.14 Specifying Tracer Details

Tracers are reminders, sent to various parties involved in a bill indicating that an exception that has occurred, while processing the bill. In this screen you can capture tracer details for the following exception events:

- Payment Exception
- Acceptance Exception
- Charge Exception
- Reserve Exception

Reserve Exception – sent by negotiating bank (for bills under LC), if discrepancies are noted and negotiation is done under reserve (right of recourse). The tracers are for reminding resolution of the discrepancies and get stopped when the respective discrepancy is marked as resolved

The details specified for the product involved in the bill will be defaulted to the contract. You can change the defaults to suit the requirements of the bill you are processing. Click 'Tracers' button in the 'Bills and Collections Product Definition' screen and invoke the following screen. If you have checked the option 'Reimbursement Claim' in the 'Bills and Collection Product Definition' screen, you will not be able to save details in this screen. The system will display an error message while saving the product if you have entered details in this screen.

The screenshot shows a web page dialog titled "Bills Collections Product Tracer Details -- Web Page Dialog". It contains the following fields and sections:

- Product Code \* (text field)
- Product Description (text field)
- Tracer Details for Reserve Exception**
  - Tracer Generation: Not Required (dropdown)
  - Number of Tracers Required (text field)
  - Start Tracer after Days (text field)
  - Generation Frequency Days (text field)
  - Preferred Tracer Medium (text field)
- Tracer Details for Acceptance Exception**
  - Tracer Generation: Not Required (dropdown)
  - Number of Tracers Required (text field)
  - Start Tracer after Days (text field)
  - Generation Frequency Days (text field)
  - Preferred Tracer Medium (text field)
- Tracer Details for Payment Exception**
  - Tracer Generation: Not Required (dropdown)
  - Number of Tracers Required (text field)
  - Start Tracer after Days (text field)
  - Generation Frequency Days (text field)
  - Preferred Tracer Medium (text field)
- Tracer Details for Charges Exception**
  - Tracer Generation: Not Required (dropdown)
  - Number of Tracers Required (text field)
  - Start Tracer after Days (text field)
  - Generation Frequency Days (text field)
  - Preferred Tracer Medium (text field)

At the bottom right, there are "Ok" and "Exit" buttons.

You can specify the following details here:

### **Tracer Generation**

You can indicate whether the exception tracer (for reserve, acceptance, payment and charges) is applicable to the bill you are processing. You can select one of the following options:

4. Required -If you specify that a tracer is applicable to a bill, you should also specify the number of tracers that should be generated, for the exception.
5. Not Required -You can select this option to indicate that the exception tracer is not applicable, to the bill you are processing.
6. Till resolved -If you indicate that the tracer should be generated until the exception is resolved, you need not specify the number of tracers that should be sent. This is because the tracer will be generated at the frequency that you specify, until the exception is resolved.

### **Number of Tracers Required**

If you have indicated that the tracer is applicable, to the bill you are processing, you should also specify the maximum number of tracers that should be generated, for each of the exception events.

By default, the first tracer for all authorized bills linked to this product, will be sent after the number of days that you prescribe, for the product.

### **Start Tracer after Days**

Exception tracers can be generated, only after the maturity date of the bill. While creating a product, you have also indicated the number of days that should elapse after the Bill matures on which the first tracer should be generated.

### **Generation Frequency Days**

You can specify the frequency (in days), with which the tracer should be sent to the concerned parties, involved in the bills linked to this product.

### **Preferred Tracer Medium**

For each of the exception tracers that you specify, indicate the preferred medium through which the tracer should be generated to the concerned party.

For a bill involving the product, you can change the medium that is defaulted. The medium you specify here is only the preferred medium, for the exception tracer.

## **4.2.15 Specifying Document Details**

Click 'Document' button in the 'Bills and Collection Product Definition' screen and invoke the following screen.

Free Format Texts (FFTs) ,Instructions and Document codes applicable to the product you are creating can be defined here. These FFTs and Instructions can appear along with the advices that are generated, during the lifecycle of the Bills linked to this product.

#### 4.2.16 Specifying FFT details

In this screen specify the FFTs that are applicable, to the bills product you are creating.

##### **Text Code**

A list of the standard FFTs that can accompany a bill is maintained in the 'Free Format Text Maintenance' screen. You can select an FFT code from the pre-defined list of FFTs.

##### **Description**

The description associated with the FFT code you have selected will be displayed.

More than one of the predefined FFTs can be specified for the product you are creating. The FFTs, including the other details that you define for it will be defaulted to all bills involving this product.

While entering a bill contract involving this product, you can however, add to or delete from the defaulted list of FFTs.

### **Advice Code**

You have an option to specify whether the FFT or instruction is for the internal reference of the bank or should it appear on the advices generated, for the bills linked to the product.

If you do not specify an advice code for an FFT or instruction it is assumed that it is for the internal reference of the bank. If the FFT is to appear on the advices, you can specify the advice on which, the FFT or Instruction should be printed. Select an advice code from the list of the advices that you specified for the product, in the Advices screen.

After you have specified details for an FFT, click add icon to add it to the list of FFTs, for the product. Click delete icon to delete an FFT from the screen.

## **4.2.17 Specifying instruction details**

Through this screen, you can specify the instructions that are applicable to the Bills product you are creating.

### **Text Code**

A list of the standard instructions that can accompany the bill is maintained in the 'Instructions Codes Maintenance' screen. Select an Instruction code from the list of instructions maintained earlier.

More than one of the predefined Instructions can be made applicable to the product you are creating. The instructions, including the other details that you define for it, will be defaulted to all bill contracts, involving this product.

However, while entering a bill involving this product, you can add to or delete from the defaulted list of instructions.

### **Description**

The description associated with the instruction code you have selected will be displayed.

### **Advice Code**

You have the option to specify whether the instruction is for the internal reference of your bank or should it appear on the advices generated for the bills linked to the product.

If you do not specify an advice code for an instruction it is treated as an internal instruction. If the Instruction is to appear on the advices, you can specify the advice on which, the Instruction should be printed. You can select an advice code from the list of the advices in the Advices screen.

After you have specified details, of the Instructions applicable to a product, click add icon to add it to the list of instructions, for the product. Click delete icon to delete an instruction from the screen.

## **4.2.18 Specifying documents for a product**

In addition to the Instructions and FFTs that you specify for a product, you can also specify the documents and clauses. From the Bills Product - Instructions and Free Format Text screen, click 'Document Codes' button to specify the documents and clauses applicable to the product you are creating. If you have checked the option 'Reimbursement Claim' in the 'Bills and Collection Product Definition' screen, you will not be able to save details in this screen. The system will display an error message while saving the product if you have entered details in this screen.

The screenshot shows a web page dialog titled "Bills Collection Product Document Codes -- Web Page Dialog". It features two input fields at the top: "Product Code" and "Product Description". Below these are two main sections: "Document Details" and "Clause Details". Each section contains a table with columns for identifying codes, descriptions, and serial numbers. The "Document Details" table has columns for "Document Code \*", "Document Type", "Document Description", and "Serial Number". The "Clause Details" table has columns for "Clause Code \*", "Description", and "Serial Number". At the bottom right, there are "Ok" and "Exit" buttons.

The documents that can be associated with a bill are broadly classified into:

- Transport documents
- Insurance documents
- Invoices
- Other documents (includes packaging list, certificate of origin, etc.).

There are certain standard documents that are required, under a documentary bill. You can specify the documents that are applicable to the bills that are linked to the product.

### **Document Code**

A list of the standard shipping documents that can accompany the bill is maintained in the Documents Maintenance screen. Along with these documents, you will also be provided with a pre-defined list of documents.

Select a document code from the list of documents maintained earlier.

## **Document Type and Description**

The description and the document type associated, with the code you have selected will be displayed.

You can specify more than one of the predefined documents, for the product you are creating. All the documents that you define for the product will be defaulted to all the bills involving this product. However, while entering a bill you can add to or delete, from the defaulted list of documents.

After you have specified details of the document, click add icon to add it to the list of documents, applicable to the product. Click delete icon to delete a document from the product.

### **4.2.19 Specifying the clauses that should accompany the document**

A clause is a statement that can accompany a document, sent under a bill. After indicating the documents applicable to a product, you can specify the related clauses that should accompany the document.

#### **Clause Code**

A list of the standard clauses that can accompany a document required under a bill is maintained in the 'Clauses Maintenance' screen. From the pre-define list of clauses select the clauses applicable. You can attach more than one clause, to a document that you have specified, for a bills product.

#### **Description**

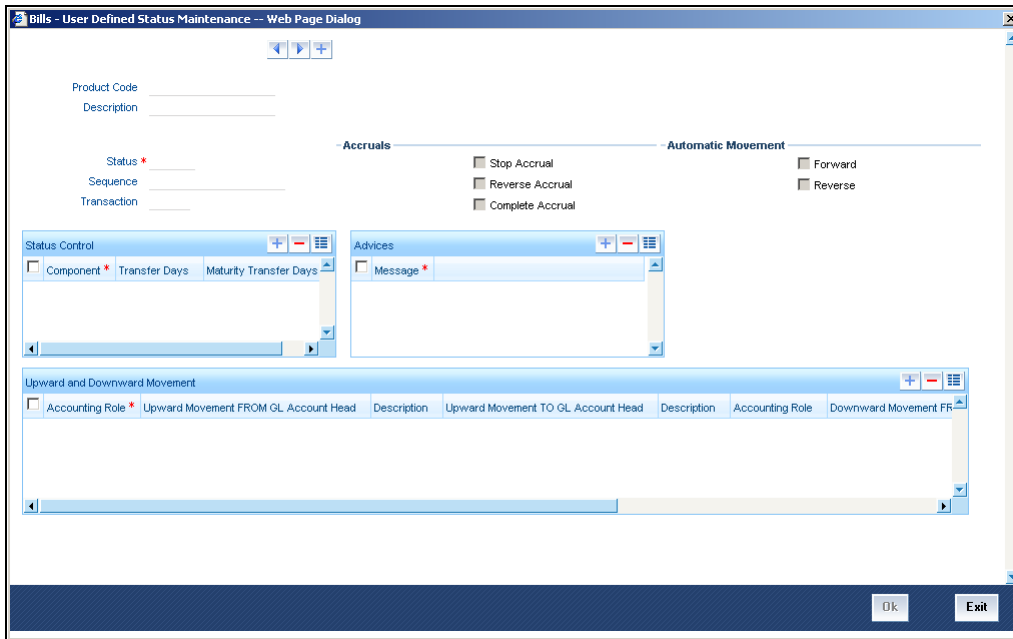

The description associated, with the code you have selected will be displayed.

By default, all the clauses including the number of copies that you specify for the product will be sent for all bills involving this product. However while entering a bill, you can add to or delete, from the defaulted list of clauses.

After you have specified details of the clause, click add icon to add it to the list of clauses, for the document. Click delete icon to delete a clause from the screen.

### **4.2.20 Specifying Status Details**

An Active status is automatically allotted to a bill on its initiation. However, a bill on which payment has not been made, on the due date can pass through more than one status. Click 'Status' button and invoke the following screen.

You can define attributes for each status through the User Defined Status Maintenance screen. These attributes are:

- The number of days for which a bill should stay in a particular status, after its repayment date has been reached
- Whether the GL under which it is reported should be changed when there is a status change
- The new GL under which it should be reported

### Status

This is the sequence in which, a bill should move to the status you are defining. Usually, more than one status is defined for a product. In this context, you should indicate the sequence in which a bill moves from status to status.

You can also specify the number of days after a repayment falls due that a component has to be moved to the status you are defining.

In case of a component for which repayment is due, you can specify the number of days after the Maturity date, on which the component should be moved, to the status being defined.

### Example

You define the following status for the product, Export Bills Discounted - 45 days:

- Past Due Obligation (PDO).
- Non-accrual basis (NAB).
- Write-off (WO).

You want a bill under this product, to move from one status to another in the order in which they are listed above.

For such a condition, the status sequence has to be defined as follows:

- PDO - 1
- NAB - 2
- WO - 3

Based on the default number of days defined for each component, a bill will first move from Active status to PDO, then to NAB and lastly to WO status.

### **Transaction**

When the GL under which a component is reported is changed along with the status of a bill, an accounting entry is passed. This accounting entry will be to transfer the component from one GL to another.

A Transaction Code is associated with every accounting entry in Oracle FLEXCUBE. You should indicate the Transaction Code to be used for the GL transfer entries, involved in the status change.

### **Stop Accrual**

You can indicate that accruals (on all accruable components of the bill), should be stopped, when the bill moves to the status being defined. By doing so, you can ensure that your Receivable accounts, for interest and other components, are not updated for a bill on which repayment has been defaulted.

#### **Example**

In our example of Export Bills Discounted - 45 days, the following status codes are involved:

- Past Due Obligation (PDO).
- Non-accrual basis (NAB).
- Write-off (WO).

For this product, you can specify that when the bill moves to PDO status, accruals can continue. However, accruals have to stop when the bill moves to NAB status.

### **Reverse Accrual**

You can indicate that the outstanding accruals (where a component has been accrued but not paid) on the bill should be reversed when it moves to the status that you are defining. If you specify so, the accrual entries passed on the bill, will be reversed when the status change is carried out.

Future accruals should necessarily be stopped if accruals, done till the date of status change, have to be reversed.

#### **Example**

In our example of the product for Export Bills Discounted - 45 days, the following status are involved:

- Past Due Obligation (PDO)
- Non-accrual basis (NAB)

- Write-off (WO)

Accruals on a bill should be stopped when it moves to NAB. We can specify that, besides stopping accruals, the accruals done so far have to be reversed. In such a case, the accruals done on the bill (for all accruable components), on which a payment has not been made, will be reversed.

Suppose a bill under this product was initiated on 01 June 1999, with the following details:

- Value (Initiation) Date - 01 June 1999
- Maturity Date - 14 July 2000
- Interest Rate - 20%

Repayment - Payment of principal and interest, on the maturity date.

In this case, there is a default on the repayment. The bill moves to PDO status on 1 March 1999 (15 days after the maturity date) and to NAB status on 16 March 1999 (30 days from the maturity date). Since the product has been defined for reversal of accruals along with status movement to NAB, the accruals for the 30 days of default will be reversed.

### **Complete Accrual**

Check this option to complete accruals.

## **4.2.21 Indicating if status changes have to be carried out automatically**

Indicate the movement preference for statuses.

### **Forward**

A forward status change is one in which the status changes from one to the next. In our example, the movement from Active to PDO, PDO to NAB and NAB to Write Off are forward changes.

### **Reverse**

A reverse status change is one in which the status changes from present status to the previous. Such a situation arises when a payment is made on a bill with a status other than Active.

If you specify that forward changes have to be carried out automatically, the status of the bill will be changed, after the specified number of days. If not, you have to change the status of a bill through the bill processing function. Even if automatic status change has been specified for a product and therefore a bill involving it, you can manually change the status of a bill before the automatic change is due. You can do it through the, Contract On-line Details screen.

If a product has been specified with manual status change, then you cannot specify automatic status change for a bill involving the product.

If you specify, that reverse changes have to be carried out automatically, the status will be changed when a payment is made on a bill with a status, other than Active. If you specify that reverse changes should not be automatic, the status remains unchanged, even if a repayment is made on the bill. The status has to be changed by you through the, Contract Processing function.

A reverse change may also become necessary, when the number of days of default is increased for a product.

If you specify that forward changes or reverse changes have to be carried out automatically, the status changes will be carried out by the Automatic Contract Update function during BOD processing. This is done on the day the change falls due. If the day on which the forward or reverse status change is due happens to be a holiday, then, the processing would depend upon your specifications in the Branch Parameters screen.

If you have not specified that the forward or reverse changes should be carried out automatically, the status remains unchanged till you change it for a bill, through the Contract Processing function.

### **Advices to be generated for a status change**

You can specify whether an advice has to be generated to inform the customer about the status change of the bill.

### **Message**

You can also specify the kind of advices, to be generated. You can generate advices, to notify the customer of the forward status change and possibly urge him to take action, to make the payments for liquidating the outstanding components.

You can specify the advice or message that you want sent to the customer, when a bill moves automatically (forward) into the status you are defining. These messages or advices are maintained by the messaging sub-system of Oracle FLEXCUBE.

## **4.2.22 Specifying Status Control Details**

Enter the following details.

### **Component**

Specify the component for which the status is being defined.

### **Transfer Days**

The number of days after which, a component should be moved to a particular status can vary for each of the components of the bill.

The number of days is always counted as calendar days, from the maturity date specified for the bill. The following example illustrates how this concept works:

### **Example**

In the example of Export Bills Discounted - 45 days, the following status are involved:

- Past Due Obligation (PDO).
- Non-accrual basis (NAB).
- Write-off (WO).

For PDO status, the number of days that should result in a status change, for the different components is defined as follows:

Interest	15 days
Principal	30 days
Charges and Fees	45 days

You enter a bill involving the product. The repayment on this bill is defaulted. The status of the bill moves to PDO status after 15 days of default, in interest payment.

A bill involving this product is moved to PDO status after 15 days of default in interest payment. The report on the bills with PDO status will indicate that for this bill only the interest component is in PDO status.

The principal, of the bill will be reported to PDO for both interest and principal 30 days after the maturity date. Similarly, for charge and fees, it will be reported after 45 days.

If the customer pays back the interest and keeps the principal outstanding, the bill will be moved to PDO only after 30 days of default, in principal repayment.

If you are defining varying number of days for the different components to move into a particular status, each component will be in a different status at a given time. You may tend to be more lenient with the repayment of the principal (since the principal earns interest). You may specify a greater number of days for the principal to move from Active to PDO, than you would, for the main interest component. You may specify 15 days for the principal to move from Active status to PDO, while you specify just 5 days for the interest to move from Active to PDO.

#### **4.2.23 Indicating Movement Details**

You may have a GL structure under, which bills in the Active status are reported in on GL, while those with defaulted payments are in different GLs, depending on their status. For example, the GL structure for Discounted bills for 45 days could be as follows:

Status	GL
Active	1001ASSF
PDO	1001ASSF
NAB	1110ASSC
WO	1111ASSE

#### **Upward/Downward Movement From GL**

For each component, you should indicate the GL from which it has to be moved, when there is a status change.

#### **Upward/Downward Movement To GL**

For each component, you should indicate the GL to which it has to be moved, when there is a status change. For principal, the GL will be changed, while for the other components, the receivable accounts will be moved to the new GL.

## Accounting Role

Specify the accounting role (asset, liability, contingent asset, etc), for the GL into which the bill has to be transferred, when its status changes.

## Account Head

Also specify the new GL (accounting head), under which the bill has to be reported. Select an option from the option list, which displays the description of the GL.

## 4.3 Setting up a Product for Bill Forfaiting

In order to perform bill forfaiting, you need to maintain specific products with the following set-up:

### 4.3.1 Defining the Product

Invoke the 'Bills and Collections Product Definition' screen.

The screenshot shows the 'Bills and Collections Product Definition' web page dialog. The form is divided into several sections:

- Product Code:** ACP1
- Description:** FORFAIT
- Product Type:** E
- Slogan Details:** (empty)
- Product Group:** BCOUT
- Start Date:** (empty)
- End Date:** (empty)
- Remarks:** (empty)
- Operation:** Advance
- Tenor Code:** Sight (selected), Usance
- Document:** Clean, Documentary (selected)
- Under Letter Of Credit:** Yes (selected), No
- Change Of Operation Allowed:**
  - Acceptance to Advance
  - Acceptance to Discount (checked)
  - Collection to Purchase
  - Discount to Collection (checked)
  - Purchase to Collection
  - Acceptance To Forfaiting
  - Discount To Forfaiting (checked)
  - Reimbursement Claim

At the bottom, there are tabs for Accounting Roles, Events, Branch & Currency, Customer, Preferences, Tracers, Document, Status, Discount Accrual, Interest, Charges, Tax, MIS, and Fields. The bottom bar includes fields for Input By (ELIZA), Date Time, Modification Number, Open (checked), Authorized By, Date Time, Authorized, and a Cancel button.

## Operation

Select 'Acceptance' or 'Discount' from the option list.

## Change of Operations Allowed

You can check the following options:

- Acceptance to Discount (Only if operation chosen is 'Acceptance')
- Discount to collection
- Discount to Forfaiting

### 4.3.2 Setting Up Interest Details

Invoke the 'Interest Details' screen.

You need to set up the following interest components:

- Main interest
- Forfaiting interest component – This component should be linked to events FACP or FDIS.
- Rebate interest component – This should be linked to event FACP or FDIS.

#### **Collection Method**

You need to specify 'Advance' for the forfaiting and rebate interest components. You need to indicate the collection method as 'Arrears' for the main interest component.

#### **Rate Type**

The forfaiting interest component should not be of type 'Special'.

### 4.3.3 Maintaining Accounting Entries

Invoke the 'Interest Details' screen.

Accounting Role *	Amount Tag *	Dr/Cr *	Txn Code *	Netting	MIS Head	Profit GL
<input type="checkbox"/> BILLCOLLCONT	BILL_AMOUNT	Credit	000	No		
<input type="checkbox"/> BILLCOLLCONTOFF	BILL_AMOUNT	Debit	000	No		

You need to set up the accounting entries for the main and normal interest components for the following events:

- INIT
- FACP
- FDIS
- BDIS

The accounting entries for forfeiting and rebate interest components should be defined for the following events:

- FACP
- FDIS

If interest component is linked to the event 'BDIS', the collection method is set as 'Arrears' and the bill is forfeited, the interest can be collected when the 'FDIS' event is triggered as there won't be any further processing on the bill.

---

## 5. Processing Bills

### 5.1 Introduction

A contract is an instruction, wherein, a customer (drawer) approaches your bank to purchase, negotiate, discount, or send for collection, a financial instrument called a bill. This written instrument is an instruction instructing the drawee of the bill to pay a certain sum of money in favor of your bank or at the order of your bank.

Such an instruction involves a sequence of events, but is treated as one contract in Oracle FLEXCUBE.

#### Example

Ms Keturah Smith (exporter or drawer) in India draws a bill on Mr. Silas Reed (importer or drawee) stationed in Paris in which the exporter Keturah Smith instructs Mr. Silas Reed to pay the amount quoted on the bill to her bank Midas Bank, India, (exporters bank) or to the order of Midas Bank.

Midas Bank after endorsing the bill in favor of Mr. Reed's bank - Berliner Bank (collecting bank) sends the bill for collection.

The collecting bank, on receiving the bill and its supporting documents, requests Mr. Reed to make a payment against the bill. Berliner Bank will then remit the bill amount to Midas Bank (issuing bank), and debit Mr. Reed's account.

The collecting bank releases the documents to Mr. Reed, allowing him to claim the merchandise.

The sequence of events involved, to affect the bill can be considered a bill contract. Thus, the specific bills processed for the customers of your bank can be defined as a contract.

A Bills Contract would, therefore, require information on:

- Who is the Drawer of the bill?
- Who is the Drawee of the bill?
- Is the bill drawn under an LC?
- Is it a Sight or Usance bill?
- The operation that your branch is performing on the bill
- The amount for which the bill is drawn and the currency in which it is expressed
- Details of the parties involved in the bill
- Details of the collecting bank (for export bill) or the remitting bank (for import bills)
- Details of the merchandise that was traded
- The documents that should accompany the bill
- Specifications for the transportation of the consignment
- The Insurance Company and the Policy Number

You have defined products to group together or categorize bills, which share broad similarities. Under each product that you have defined, you can enter specific bills, based on the needs of your customers. Each of these will constitute a contract. While products provide a general framework and serve to classify or categorize bills, contracts are customer specific.

By default, a bill inherits all attributes of the product to which it is associated. This means that you will not have to define these general attributes, each time you input a bill involving a product.

## 5.2 Creating a Bills Contract

You can invoke the 'Bills and Collections - Contract Input - Detailed' screen by typing 'BCDCONON' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

The 'Bills and Collections - Contract Input - Detailed' screen will be displayed. Select 'New' from the Actions Menu in the Application toolbar or click new icon. The screen with no values in the fields is displayed. If you are calling a contract that has already been entered, double click on a contract from the summary screen.

Through the screens that follow in this section you can process all type of bills - Import and Export (both domestic and international).

You can choose to enter the details of a contract either by:

- Copying the details, from an existing contract and changing only the details that are different for the contract, you are entering
- Using your keyboard and the option lists that are available at the various fields, to enter the details of the bill afresh

To facilitate quick input, you only need to enter the product code. Based on the product code you choose, many of the fields will be defaulted. You can over write these defaults to suit your requirement. You can also add further, which are specific to the bill like the bill amount.

### **Contract Reference Number**

The Contract Reference Number identifies a contract uniquely. It is automatically generated by the system for each contract. The Contract Reference Number is a combination of the branch code, the product code, the date on which the contract is booked (in Julian format) and a running serial number for the booking date.

The Reference Number consists of a three-digit branch code, a four-character product code, a five-digit Julian Date and a four-digit serial number.

The Julian Date has the following format:

YYDDD

Here, YY stands for the last two digits of the year and DDD for the number of day(s) that has/have elapsed, in the year.

### **User Reference**

In addition, a contract is also identified by a unique User Reference Number. By default, the Contract Reference Number generated by the system will be taken as the User Reference Number. But you have the option to change the User Ref Number.

Oracle FLEXCUBE also provides you the facility to generate the user reference number in a specific format. However, the number, thus generated will be non-editable.

You can specify a format for the generation of the User Reference Number in the 'Sequence Generation' screen available in the Application Browser. Refer to the Core Services User Manual for details on maintaining a sequence format.

### **Product**

Enter the code of the product to which you want to link the contract. You can select an authorized product code from the adjoining option list. The contract will inherit all the attributes of the product you have selected.

### **Product Description**

This is a description of the product code that you have selected.

## Characteristics

Characteristics of the product are displayed here.

## External Reference

The system displays the reference number of the same contract in an external system.

## Stage

Select the stage at which your branch is processing the bill from the drop-down list. The options available are:

- Initial
- Final
- Registered

Use the 'Initial' stage of processing if the documents received are pending approval from the applicant. When a bill is processed in the Initial stage, no accounting entries will be passed.

You can indicate 'Registered' only if you are processing a collection.

## Operation

The operations that you can perform on a bill are determined by the type of bill you are processing and on the operation you perform on the bill. The operation that you perform on a bill, also determines the accounting entries, that are passed and the messages that will be generated.

You can select an operation from the option list available. The type of operation that you can perform on a bill has been listed below:

<b>Incoming (International and domestic)</b>	<b>Outgoing (International and domestic)</b>
Advance	Negotiation
Payment	Payment
Discounting	Discounting
Collection	Collection
Acceptance	Acceptance
	Purchase

The Bills Contract Details screen contains a header and a footer that has containing fields specific to the contract you are entering. Besides these, there are six tabs and a vertical array of five icons through which, you can enter details of the bill. Contract details are grouped into the various screens according to the similarities they share.

The Bills Contract Screen is designed to contain seven tabs along the lines of which, you can enter details of the contract. The seven tabs are:

<b>Tabs</b>	<b>Description</b>
Contract Main	Click on this tab to enter the essential details of the bill you are processing.
Contract Details	In this screen you can enter the fields that provide detailed information about the contract.
Parties	In the screen that corresponds to this tab, you can enter details of all the parties involved in the bill. This screen along with its fields have been detailed under the head Entering Party Details
Document/Shipments	In the screen corresponding to this tab you can enter details of the documents required under a bill and the clauses that should accompany the documents.  You can also specify details, of the merchandise that was traded and the shipping instructions based on which, the goods were transported.
Exceptions	Click on this tab to enter details of the exception tracers that should be generated for the exceptions that occur while processing the bill.
Discrepancies	In the screen that corresponds to this tab, you can enter details of the discrepancies that occur while processing the bill.  The screen also captures details of the tracers that should be generated for Reserve exceptions.
Rollover	Click on this tab to maintain rollover details for the bill.
Purchase Details	In the screen that corresponds to this tab, you can enter details for a Bill purchase.

In the Contract Detailed screen there is a horizontal toolbar. The buttons on this toolbar enable you to invoke a number of functions that are vital to the processing of a bill. These buttons have been briefly described below:

<b>Buttons</b>	<b>Description</b>
Advices / FFT	In the screen corresponding to this button, you can view, suppress and prioritize the advices that are to be generated for a contract.  You can also specify the FFTs and Instructions that should accompany the advices generated for the bill.
Settlement	Invokes the Settlement screens. Based on the details that you enter in the settlement screens, the bill will be settled. The details of these screens have been discussed in the Settlements manual.

<b>Buttons</b>	<b>Description</b>
MIS	Click this button to define MIS details for the bill.
ICCF	This button invokes the Interest and Charges or Fees (ICCF) service.  The Processing Interest manual deals with the application of interest on a bill.
Events	Click this button to view details of the events, accounting entries and Messages generated for each event in the lifecycle of a bill.
Tax	This button invokes the Tax services. On invoking this function you can define a tax scheme, the rule details and the amount details of the contract.  The Processing Tax manual details the entire procedure of maintaining tax rules and schemes. It also deals with the linking of a tax scheme to a product and the application of the scheme on a bill'.
Linkages	Clicking this button invokes the Contract Linkages screen. Here, you can link the bill to funds available in an account or deposit.
Change Log	Click this button to view the changes made to a particular version of a bills contract.
Fields	Click this button to enter values for custom fields associated with the bill.
FX Linkage	This button invokes a screen in which you can link a bill involving a specific counterparty with FX deals involving the same counterparty.
Charges	Click this button to invoke the Contract Charge Details screen. The Charges and Fees manual details the entire procedure of applying charges to a bill.
Drafts	Click this button to view the components that make up the Bill Amount.
Collateral	In the screen that corresponds with this button, you can reduce the cash offered as collateral for the LC to which the Bill is associated.
Invoice	Click this button to define the invoice margin that should be withheld whenever an invoice is raised against a discounted bill.
Insurance	Click on this button to associate the appropriate Insurance Company with the Bill contract.
Loan	Click on this button to invoke the Automatic Booking of Loans. You can maintain the details of the Loan.
Effective Interest Rate	Click on this button to specify effective interest rate details.
Interest Dates	Click on this button to capture forfeiting interest computation dates.
Split	Click on this button to specify split settlement details of the bill.

<b>Buttons</b>	<b>Description</b>
Settlements	
Loan Accounts	Click on this button to preview the linked loan details.
Packing Credit	Click this button to specify Pre Shipment Loan details and view Linked or Settled loans

Enter valid inputs into all the mandatory fields; or to save the contract. The contract can be saved by either by selecting 'Save' from the Actions menu in the Application tool bar or clicking save icon.

On saving the contract, your User ID will be displayed in the Entry By field at the bottom of the screen. The date and time at which you saved the record will be displayed in the Date/Time field.

A contract that you have entered should be authorized by a user, bearing a different login Id, before the EOD is run. Once the contract is authorized, the ID of the user who authorized the contract will be displayed in the Auth By field. Click 'Exit' or 'Cancel' button to go back to the Application Browser.

### **5.2.1 Entering Main Details of a Bill**

While defining a product, you have already defined a broad outline that will be applicable to all bills involving the product. However, while processing a bill involving a product, you need to enter information specific, to the bill you want to process. This information is captured through the 'Bills and Collections - Contract Input - Detailed' screen. Click on the tab titled 'Contract Main' to capture the essential details of the bill.

You can capture the following details related in this 'Contract Main' tab.

### 5.2.1.1 **Specifying References**

The bills that you process can be raised against an LC drawn at an earlier date by another bank or by your bank itself, or the bill might have come to you for collection.

#### **Collection Reference**

If you are entering the details of a bill that was registered earlier, you should indicate the reference number assigned to the collection, when it was registered. All the details that you specified for the collection, during registration will be defaulted to the Contract screen.

#### **Example**

A customer of your bank has requested you to collect a sum of money due to him under a bill. You have registered the bill and sent it for collection. The reference number assigned to the bill is - 000COB7993630007.

When you receive the sum due on the bill, you need to liquidate the bill. While doing this, you need to specify the reference number allotted to the collection by Oracle FLEXCUBE when it was registered i.e., 000COB7993630007.

### **Their Letter of Credit Reference**

If you are processing an outgoing bill, under an LC, that was issued by another bank, you can enter the Reference number assigned to the LC by the other bank.

### **Our Letter of Credit Customer**

Specify the customer in whose name the LC was drawn.

### **Our Letter of Credit Reference**

If the export or import bill is under an LC that was issued by your bank, you can enter the Reference number assigned to the LC, by your bank. The option list displays all the available LC contract reference numbers along with the respective user reference numbers. If the bill is linked to a product for which the 'Reimbursement Claim' option is checked, the system will display only the LC contracts under the operation 'Reimbursement'.

If the linked LC is backed by an open insurance policy, the system will check if the option 'Update utilization Automatically' is checked for the policy or not. If the option is checked, the system will re-instate the available amount on the policy to the extent of the bill amount and correspondingly decrease the utilization on the policy. Similarly, if the bill contract is reversed or a reversal is deleted, the policy utilization amount will be increased or decreased respectively to the extent of the bill amount.

### **Letter of Credit Issue Date**

Specify the date on which the LC was issued.

### **Their Charge Currency**

You can capture the charge details of other banks (for instance, the charge levied by the remitting bank on an import bill) in the 'Their Charge' fields. In this field you can specify the charge currency.

### **Their Charge Amount**

Specify the charge amount here. In a phased manner, you can settle this charge by debiting your customer and crediting the correspondent bank.

If the LC module of Oracle FLEXCUBE has been installed at your bank, you can enter the contract reference number assigned by the system to the LC. In which case the following should be true of the LC:

- The status of the LC should be open
- It should be authorized
- The amount for which the bill is raised should be available under the LC

All the related details of the LC will be automatically picked up and defaulted to the relevant fields of the Bills -Contract details screens.

If the bill amount that you specify is greater than the amount available under the LC to which it is associated, you will not be allowed to proceed with the processing of the bill.

### **5.2.1.2 Specifying the Amount**

The terms that you define for a bill forms the basis on which the bill will be processed. You can specify the following terms for a bill:

#### **Bill Currency**

Specify the currency in which the bill is drawn.

#### **Bill Amount**

Specify the amount for which the bill is drawn. While uploading an MT430, the system amends the bill amount as per fields 33A or 33K of the incoming message and displays the new bill amount in this field. If the bill is under an LC that is linked to an open insurance policy, the system will re-instate the policy utilization with the bill amount.

#### **Liquidation Bill Amount**

This is a display only field which shows the actual bill amount which is liquidated.

#### **Outstanding Amount**

The outstanding amount which is the amount that is yet to be liquidated under the bill is automatically displayed. In the case of a collection it is computed as follows:

Outstanding Amount = Bill Amount - Liquidation Amount

For bills other than collection type the bill amount will always be equal to the liquidation amount.

#### **Bill Amount in Local Currency**

Specify the amount for which the bill is drawn, in terms of the local currency.

#### **Letter of Credit Amount**

The Letter of Credit Amount gets defaulted from the LC Contract. This is a display only field.

#### **Letter of Credit Liability Amount**

The Letter of Credit Liability Amount also gets defaulted from the LC Contract. This is a display only field.

For a collection bill, most of its details are captured during registration. The details of the collection will be displayed in the respective fields of this screen, when you specify the collection reference.

### 5.2.1.3 Specifying Liquidation Preferences

Enter the following details.

#### **Liquidation Date**

A liquidation date is meaningful, if you have specified that the bill should be automatically liquidated. By default, the liquidation date of a bill is taken to be the maturity date specified for the bill.

The Auto liquidation function will automatically liquidate the bill on the liquidation date that you specify.

Suppose you are processing an acceptance bill, for which you had specified automatic change of operation from acceptance to advance. Then the automatic processes run as part of EOD or BOD will automatically change the operation of the bill from Acceptance to Advance on its liquidation date.

#### **Interest Liquidation Mode**

At the time of final liquidation of principal, you have the option of either recovering interest immediately or later. The interest liquidation mode with 'immediate' and 'deferred' values are enabled only at the time of final liquidation of principal.

If 'immediate' option is selected at the time of final liquidation, of principal, the entire outstanding interest will be liquidated along with the principal and the contract status becomes 'liquidated'.

If 'deferred' option is chosen at the time of final liquidation of principal, only principal gets liquidated and recovery of interest gets deferred. The contract status would remain 'active'. The outstanding interest can be liquidated later either partially in stages or fully through BC interest payment screen. Once the entire outstanding interest gets liquidated, contract status will be shown as 'liquidated'.

In case the rollover of the bill is specified after the maturity date of the bill, the contract will have interest components along with penalty interest on principal as outstanding. You need to specify the mode in which the system liquidates both the interest components i.e. Normal and Penal components by choosing either of the following:

- Immediately: At the time of final liquidation, the system liquidates all outstanding interest components and transfers the outstanding Principal to new Bills Contract.
- Deferred: At the time of final liquidation, the system only transfers the outstanding Principal to new Bills contract without liquidating the interest components. These interest components can be liquidate partially or fully using Bills Payment Online.

Oracle FLEXCUBE does not support backdated or future dated rollover. The value date for the Rollover event will always be the current system date.

In case of auto liquidation, the system will apply 'Immediate' mode to liquidate the bill.

### **5.2.1.4 Specifying Our Customer Details**

Enter the following details.

#### **Customer Identification**

In the Contract screen, you can capture details of the party who is your customer. The details of the other parties involved in the bill are captured in the parties' screen.

#### **Party Type**

Specify the Party Type of the customer. In the case of an Import bill, you should specify details of the Drawee of the bill. If the Drawee is a customer of your bank you should specify the customer reference, assigned to the customer, in the Customer Information File (CIF) of the Core Services module of Oracle FLEXCUBE. The other details of the customer will be automatically picked up.

If you are processing an Export bill, you should specify details of the Drawer of the bill. If the drawer is a customer of your bank, you should specify the customer reference assigned to the customer, in the Customer Information File (CIF) of the Core Services module of Oracle FLEXCUBE. The other details of the customer will be automatically picked up.

If you are processing a reimbursement claim bill, the system will display only 'ISSUING BANK' in the adjoining option list.

### **5.2.1.5 Specifying Tenor Details**

Enter the following details.

#### **Base Date**

The base date is the date from which, the tenor specified for the bill becomes effective. The base date is used to calculate, the maturity date of the bill. In effect the tenor of the bill will begin from this date.

#### **Example**

You indicate the base date of a bill to be 01 January 1999 and the tenor of the bill as 45 days. The 45-day tenor of the bill will begin from 01 January 1999.

If you are processing a sight bill, the base date is the lodgment date and for a usance bill it can be, the Invoice or the Shipping Date.

You have the option to change the Base date specified for the bill. The maturity date of the bill is automatically updated using the new base date.

When you accept an Inward Bill of Usance without specifying the Base Date, an Acceptance Advice in an MT 499 format will be generated. When you enter the Base Date for the bill, the Acceptance Advice will be generated in an MT 412 format.

#### **Base Date Description**

Enter a description for the Base Date.

## Tenor

Usance bills are generally associated with a tenor. The tenor of a bill is always expressed in days. The tenor that you specify for a bill should be within the minimum and maximum tenor specified for the product, to which the bill is linked.

The standard tenor defined for the product associated with the bill is defaulted. You can change the default and specify a tenor, to suit the bill you are processing. If the product to which the bill is associated is defined with the standard tenor as zero, you need to specify the maturity and the expiry date of the bill.

If you attempt to save the bill without entering the expiry or maturity date you will be prompted for an override.

The tenor of a sight bill is always defaulted to zero days. You do not have an option to change it.

## Transaction Date

The transaction date is the date on which, the bill was entered into Oracle FLEXCUBE. The system automatically defaults the transaction date to today's date. You cannot amend or change the date that is defaulted.

## Transit Days

The transit days refer to the notional period for the realization of the proceeds of a sight or matured usance bill. The transit days will be used in the computation of the maturity date, of the bill.

## Value Date

The Value date of a bill, is the date from which a bill becomes effective. The accounting entries triggered off by events like input, amendment and liquidation hitting the Nostro and the customer accounts will be passed as of the value date.

The Value date should be earlier than or the same as today's date. The Value date can be one of the following:

- Today's Date
- A date in the past
- A date in the future (you can enter a date in the future only if future dating has been allowed for the product)

If you do not enter a value date for a bill, the system defaults to today's date.

The Value date of a bill should not be earlier than the Start Date or later than the End Date specified for the product, involved in the bill.

## **Maturity Date**

The maturity date is the date on which the bill falls due, for payment. The maturity date is calculated in the following manner, based on the entries made to the previous fields:

**Maturity Date = Base date + Tenor + Transit days**

You can change the maturity date of a bill that is arrived at using the above method. However, the maturity date that you specify should be later than or equal to the Value date specified for the bill. While uploading an MT430, the system amends the bill maturity date as per fields 33A or 33K of the incoming message and displays the new date in this field.

For a BC product under which you may be creating a contract here, you may have chosen the 'Consider as Discount' option (specified through the 'ICCF Details' screen) and you may have specified the interest collection method to be advance (specified through the 'Bills and Collections Product - Preferences' screen). In such a case, you cannot change the 'Maturity Date' here.

If we modify the maturity date for a sight bill, the transit days gets adjusted accordingly, displaying an override. Similarly, for a usance bill, the tenor gets adjusted. An override is displayed for the same.

For discounted export bills, you have the option to amend the maturity date of the bill. This could mean a pre closure or extending the maturity date of the bill.

If you extend the maturity date of the LC, additional interest for the extended period will be charged.

## **Reimbursement Days**

Enter the reimbursement days for the bill you are processing. The Reimbursement Claim for the bill will be automatically generated on reimbursement (working) days prior to the Maturity Date.

Assume that the Maturity Date of a bill is March 23, 2001. You specify the Reimbursement Days as '2'. Two working days prior to the Maturity Date (that is, March 21, 2001), as part of the BOD process, the Reimbursement Claim (MT 742) for the bill will be automatically generated.

## **Debit Value Date**

For accounting entries hitting nostro or customer accounts, you can specify a debit and credit value date that is different from the value date specified for the bill.

The value date of the Bill will be defaulted as the Debit and Credit value date. You have an option to change it to suit the requirement of the bill you are processing. In this case, the value date of the bill will be used only for debiting and crediting GLs involved in the bill.

## **Credit Value Date**

Specify the date on which credit entries should be posted.

### **5.2.1.6 Indicating Processing Details**

There are some events that triggered automatically, when the batch process is run as part of the EOD or BOD. Batch processing preferences for a product is specified in the Bills - Product Preferences screen. The preferences indicated for the product involved in the bill will be defaulted. You can change these defaults to suit the requirements of the bill you are processing.

#### **Auto Liquidate**

The components of a bill can be liquidated automatically or manually. In the Bills - Product Preferences screen you can indicate the mode of liquidation. The preference indicated for the product involved in the bill, will be defaulted. You can change the default.

If you choose the automatic mode of liquidation, the bill will be automatically liquidated, on the day it falls due, by the Contract Auto Liquidation function run as part of the BOD processing. If a bill for which you have specified auto liquidation matures on a holiday, the bill will be processed based on your holiday handling specifications, in the Branch Parameters table.

- If you have specified that the processing has to be done on the last working day before the holiday, a bill maturing on a holiday will be liquidated during the EOD processing, on the last working day before the holiday.
- If you have specified that the processing, has to be done only up to the system date, then the bills maturing on a holiday will be processed on the next working day after the holiday, during the BOD process

If you do not specify auto liquidation, you have to give specific instructions for liquidation through the Manual Liquidation screen, on the day you want to liquidate the bill.

#### **Auto Status Control**

A status change is one in which the status of a bill changes or moves, from one defined status to another. In the Bills - Product Preferences screen, you can indicate whether the bills linked to the product, should move from one status to another, automatically or manually. The preference indicated for the product involved in the bill, will be defaulted. You can change the default for the bill.

If you specify that status changes have to be carried out automatically, the status of the bill will be automatically changed, after the specified number of days. If not, you have to change the status of a bill through the Bills -Contract Details screen.

You can indicate other preferences for the status change like should the change be in the forward or reverse direction, through the Bills - User Defined Status Maintenance screen.

Even if the product, to which a bill is associated, is specified with automatic status change, you can manually change the status of the bill, before the automatic change is due.

However, if a product associated with the bill has been specified with manual status change, you cannot specify automatic status change for the bill.

 You will be allowed to specify whether automatic status change should be in the forward or reverse direction in the Status Maintenance screen, only if you specify that automatic status change is allowed.

### **Available for Rediscount**

A discounted bill, which is in the final stage, can be made available for re-discounting. You can indicate that a bill is eligible for rediscounting, by checking the field. The discounted bill will be reported available for rediscounting, when they are in final stage but not yet matured.

 No processing will be done, based on your specifications to this field. It only helps retrieve information, on discounted bills available for rediscounting. The Bills eligible for Rediscounting report, lists the bills that are eligible for rediscounting. Based on the report you can send a discounted bill for rediscounting.

### **Limits Tracking Required**

Check this option if you wish to track limits utilization.

### **Allow Rollover**

Specify whether the Bill contract can be rolled over into a new bill. This field is enabled only if you have opted for the rollover option at the product level. You can choose to change this option during initiation or amendment of the Bill.

 If the box is unchecked, the Bill contract will not be rolled over even though rollover is specified at the product level.

### **Link to Loan**

Check this box if you want to link an export bill contract to a loan. This is defaulted from the product level. You are allowed to modify this.

### **Advance By Loan**

Oracle FLEXCUBE provides the facility to book a loan through the Bills module. Check this option to book a loan while liquidating the import bills. Once you have selected this option, you need to specify the loan product and the bridge GL in the consecutive fields.

 You are allowed to create a loan only for import bills that are of Acceptance type and for Usance and Sight import bills for both under LC and not under LC. In BC module, creation of the loan is possible only at the time of Final liquidation and not during Auto or Partial Liquidation.

In case you delete the Bill, the loan that is created through the bills contract will also be automatically deleted. However, deletion of the loan alone is not possible. In case of reversal of a bill, the system displays an override.

You cannot authorize the new loan contract outside the bill contract. When the liquidation of the bill is authorized, the loan also gets authorized.

### **Letter of Credit Detail in Payment Message**

If this option is checked then MT756 (Advice of reimbursement or Payment) is generated with tag32B containing the LC Contract Currency and Amount.

### **User Letter of Credit Reference in Message**

Choose this option if you would like to furnish the Related LC Reference Number in the messages generated for the bill. If you do not choose this option, Field 20 of the SWIFT messages and the mail messages generated for the bill will furnish the Bill Reference Number.

### **Auto Change of Operation Acceptance to Advance**

If you are processing an acceptance type of bill, you can indicate whether the bill should be automatically converted, into an advance type of bill on its liquidation date.

## **5.2.1.7 Pre-closure of the Bill**

You also have the option to bring the maturity date of a discounted bill forward. The excess interest collected for the bill can be returned to the customer, if you defined the relevant accounting entries for the product associated with the bill.

### **Example**

You have entered a bill worth USD 20000 at the rate of 10%. The interest calculation period for the bill is 1 January 2001 to 31 December 2001.

Original interest calculation period: 01 Jan to 31 December 2001.

Original interest = USD 2000

Later you amend the bill and bring forward the interest to calculation date to 30 June 2001. The excess interest that was collected in advance and to be refunded to the customer is derived as follows:

- Interest collected in advance on USD 20000 = 2000
- Interest on 20000 between 1 July to 31 December = 1000
- Excess interest to be refunded to the customer = USD 1000 (2000-1000)

### *Accrual adjustment entries*

As on June 30 (interest amendment date), the interest already accrued will also be adjusted.

## 5.2.2 Specifying Contract Details

Click the 'Contract Details' tab and invoke the following screen.

Here you can enter the following details:

### 5.2.2.1 Specifying Interest Computation Dates

Enter the following details.

#### From Date

Enter the date from which all tenor-based components of the bill should be calculated. The 'from' date that you enter should not be later than today's date. It is mandatory for you to enter a start date for all bills, with at least one tenor based interest component.

#### To Date

Enter the date upto which the tenor based components of the bill should be calculated. These components will be calculated for the period between the Interest 'From' date and the 'to' date. This date should be later than or equal to today's date. If the non-penalty interest components of the bill are to be collected in advance, it is mandatory for you indicate a 'To date'.

The tenor based interest components of the bill will be calculated for the period between the 'Interest From date' and the 'To date'.

For a BC product under which you may be creating a contract here, you may have chosen the 'Consider as Discount' option (specified through the 'ICCF Details' screen) and you may have specified the interest collection method to be advance (specified through the 'Bills and Collections Product - Preferences' screen). In such a case, you cannot change the Interest 'To Date' here.

### **Grace Days**

The grace period indicates the period, after the To date specified for a bill within which the penalty interest (if one has been defined for the product to which the bill is linked) will not be applied. This period is defined as a specific number of days and will begin from the date the repayment becomes due. If the repayment is made after the due date, but within the grace period, penalty is not changed.

Penalty interest will be applied on a repayment made after the grace period. The penalty interest will be calculated for the entire period it has been outstanding (that is, from the date the payment was due).

#### **Example**

The repayment on Mr. Silas Reed's bill is due on June 15, 1999 (maturity date). You have specified a grace period of 5 days, after which a penalty interest of 2% will be imposed.

#### *Bill repayment made within the grace period*

Now, if Mr. Reed makes the payment on June 18, which falls within the grace period, he will not have to pay penal interest.

#### *Bill repayment made after the grace period*

If he makes the payment after the expiry of the grace period, that is, after June 20, then he will be charged penal interest right from June 16 onwards (the repayment date) and not from June 20, the day the grace period expires.

The penalty type Interest Components of a bill will become applicable after the To date + No of Grace days, for penalty defined for the bill.

### **5.2.2.2 Specifying Acceptance Commission – Interest Computation**

For Incoming Bills in Acceptance stage you can specify the dates for calculating the commission components. Indicate the From date and To date in the respective fields.

#### **From Date**

The system starts the computation of interest from the date specified here. This date must be later than or equal to the base date.

#### **To Date**

Indicate the end date for calculating the interest. The minimum/maximum tenor specified in the product underlying the contract has to be adhered to.

Based on the preferences for acceptance commission, the system calculates the commission:

- In case the Acceptance commission is collected in Advance, the system liquidates the commission during the INIT event.
- On moving a bill from acceptance to advance, the pending accruals are passed as part of Acceptance to Advance (BADV) event.
- In case the Acceptance commission is calculated in Arrears, the system liquidates the commission during BADV event. However, in case of no change in the operation, the system liquidates the commission during LIQD event.
- Acceptance commission is always calculated based on the original bill amount and 'From' and 'To' dates specified for acceptance commission irrespective of BADV/Liquidation date and Mode of liquidation (Partial or Full liquidation).

### 5.2.2.3 Capturing Forfeiting Details

You can specify the following details:

#### **Request Date**

Specify the date on which your customer requests for bill forfeiting.

#### **Document Submission Date**

The requestor of forfeiting will invariably submit a document. This may or may not happen on the date of request. So you can capture the date of submission of the forfeiting document here.

These two fields are only meant for information purpose. The system performs no processing or validation on them.

### 5.2.2.4 Capturing Document Details

Enter the following details.

#### **Document Duplicate Received**

This field is applicable only to Documentary bills. Here you can indicate whether the duplicate set of documents that are required under the bill have been received.

If you had indicated negatively in the 'Document Original Received' field you should indicate positively in this field. This is because the bill contract should be entered based on the first set of documents that are received.

#### **Document Original Received**

This field is applicable only to Documentary bills. Here you can indicate whether the original set of documents that are required under the bill have been received.

### **Letter Dated**

Specify the date printed on the covering letter of the documents based on which the contract was entered. This date can be used to retrieve information on pending documents. Note that this date cannot be greater than the application date.

### **Acknowledgement Received**

Check this option to indicate that an acknowledgement has been received from the collecting bank to confirm the receipt of collection.

For an existing contract, if you check this option, the system will trigger the ACKB event.

### **Acknowledgement Date**

If you have checked the option 'Acknowledgement Received', specify the date on which acknowledgment is received.

These fields get updated during an upload of MT410. During contract amendment too, these fields can be modified. The system will trigger the ACKB event on saving.

## **5.2.2.5 Specifying Cash Collateral Details**

When your bank accepts discounts or advances a bill on behalf of its customers, the bank in reality undertakes to pay even if the confirming bank does not fulfill its obligation, under the bill. Thus, accepting or advancing a bill is a liability for your bank.

Ideally, you would track your exposure to the credit-seeking customer, under a Credit Line. The credit granted to a customer under a Credit Line can be backed by Collateral that the customer offers. Often you may accept cash, as collateral for the bill.

### **Currency**

This is the currency in which the cash collateral account is opened. Select a valid currency code from the option list of currencies allowed for the product, which the bill involves.

### **Amount**

Here you can express the value of cash collateral in the currency specified in the previous field.

### **Description**

Here you can enter collateral details that are specific to the bill you are processing. Enter a description of the collateral in the dialog box that pops up. These details are intended for the internal reference of your bank and will not be printed on any of the advices generated for the bill.

### **5.2.2.6 Capturing Loan Details**

Enter the following details.

#### **Loan Reference Number**

This is the reference number of the loan that is created automatically at the time of liquidation of the Bill. You will not be allowed to change this reference number.

### **5.2.2.7 Specifying Charge Details**

Enter the following details.

#### **Pass Our Charges to Them**

During initiation of a bill, you can indicate that the drawer's charges can be passed on to the drawee. Check against this option to indicate that the remitting bank can pass on our charges to the drawee.

#### **Our Charges Refused**

During liquidation of an incoming bill, the drawee may refuse to pay the drawers charges. Check against this option to indicate the same.

#### **Pass Interest to Them**

Check this option to indicate that the drawer's interest can be passed on to the drawee.

#### **Their Charges Refused**

During liquidation of an incoming bill, the drawee may refuse to pay the charges due. Check against this option to indicate that the drawee has refused to pay the charges due.

### **5.2.2.8 Specifying Check Details**

Enter the following details.

#### **Check Number**

In case the payment for the bill has been made by cheque, specify the cheque number here.

### **5.2.2.9 Indicating Contract Status**

While defining a product, you have also specified the various stages or status that the bill should pass through, if repayment is not made on the due date against a bill. These details are defaulted to all the bills that involve the product. The current status of a bill will be displayed along with the date on which the bill moved into the status.

## **Status**

The system displays the contract status. If you have specified the status change as a manual event, you can change the status of a bill from one status to another in this screen. The option list available for this field contains all the lists of Status codes, defined for the product, to which this contract is linked.

## **As on**

The system displays the date on which the status was last changed.

### **5.2.3 Specifying Margin Details**

Enter the following details.

#### **Liquidated Amount**

While processing a collection type of bill, partial liquidation is allowed. In this field you can indicate the amount that has been liquidated under a collection.

#### **Outstanding Amount**

The outstanding amount, which is the amount that is yet to be liquidated under the bill, is automatically displayed. In the case of a collection it is computed as follows:

Outstanding Amount = Bill Amount - Liquidation Amount

For bills other than collection type the bill amount will always be equal to the liquidation amount.

#### **5.2.3.1 Capturing Provision Details**

Enter the following details.

#### **Provision Amount**

Specify the amount set aside for provisioning.

#### **5.2.3.2 Indicate ICCF Pickup Details**

For any export purchases, you can indicate whether you want to levy the charges and interest in the ICCF pickup currency or the contract currency for the customer.

#### **ICCF Pickup Currency**

Indicate the currency in which interest and the charge pick-up will happen for the contract.

#### **Exchange Rate**

Specify the exchange rate between ICCF pick-up currency and contract currency. You are not allowed to change the ICCF pickup currency for EIM (Effective Interest Method) contracts. It gets defaulted to the contract currency and will be disabled here.

- You have to manually select the settlement account for BC module tags in the ICCF pickup currency. Settlement pickup of ICCF and charge tags will happen based on the ICCF pickup currency.

In case where the charges and interest are based on ICCF pickup currency, you have to maintain the ICCF rule as follows:

Transaction currency (Rule currency)	ICCF Pickup Currency
Basis Amount Currency	ICCF Pickup Currency
Charge Currency	ICCF Pickup Currency
Booking Currency	Charge Currency

**Example**

Let us assume the following:

Bill Currency = USD

ICCF Pickup Currency = GBP

Exchange Rate = 12

So the ICCF rule will be as follows:

Transaction currency (Rule currency)	GBP
Basis Amount Currency	GBP
Charge Currency	GBP
Booking Currency	GBP or USD

Floating rate pickup and customer margin pickup for interest components will be based on ICCF pickup currency. So, you need to maintain the floating rate code and customer margin for the respective ICCF pickup currency.

Also, if you want to apply charges in ICCF pickup currency, then you have to define the charge component with amount tags suffixed by \_ICCY. If charge components are defined with normal bills amount tags, then charges will be computed in contract currency. Thus, you can apply charges in contract currency or ICCF pickup currency based on basis amount tag of a charge component.

**5.2.3.3 Specifying Rollover Details**

Enter the following details.

**Parent Reference**

You can view the reference number of the parent contract if the current contract is a child contract.

## Internal Remarks

You can enter information describing the contract details here. This will be available when you retrieve information on the contract. These remarks will not be printed on any of the advices generated for the bill.

### 5.2.4 Capturing Party Details

In the Bills Contract Input screen, you have already specified details for the Counterparty of the bill. The Parties screen can be used to record details pertaining to, all the parties involved in a bill. The documents, tracers, advices and messages that are generated for the bill, will be sent to the concerned parties based on the details you specify in this screen.

The screenshot displays the Oracle Bills and Collections - Contract Input - Detailed - Webpage Dialog. The interface is divided into several sections. At the top, there are input fields for Product Description, Characteristics, Product, Operation Stage (set to FINAL), External Reference, Contract Ref No., and User Reference. Below this is a tabbed interface with the 'Parties' tab selected. The 'Parties Details' section contains a table with columns: Party Type, Party ID, Party Name, Country, Language, Reference, Address1, Address2, Address3, and Address4. Below this are two smaller sections: 'Party Media Addresses' with columns for Media and Address, and 'Party Limits' with columns for Operation, Party Type, and Credit Line. At the bottom of the dialog, there is a status bar with fields for Input By, Date Time, Authorized By, Date Time, Contract Status, and an Authorized checkbox. An Exit button is located in the bottom right corner.

You can capture the following details of the parties involved in the bill you are processing:

- The party type of the customer
- The CIF ID assigned to the party
- The country to which the party belongs
- The party's mail address
- The language in which tracers and messages should be sent to the party
- The party reference
- The media through which all tracers and advices should be routed
- The party's address(es) for the given media
- Party Limits

The following table contains a list of party types that can be involved in all types of bills:

<b>Party Type</b>	<b>Party Description</b>
DRAWER	Drawer
DRAWEE	Drawee
ISSUING BANK	Issuing Bank
NEG BANK 1	Negotiating Bank 1
NEG BANK 2	Negotiating Bank 2
BENEFICIARY	Beneficiary
ACCOMTEE	Accountee
CASE NEED	Case Need
GURANTOR	Guarantor
ACCEPTING BANK	Accepting Bank
DISCNTING BANK	Discounting Bank
REMITTING BANK	Remitting Bank
COLLECTING BANK	Collecting Bank
REIMBURSING BANK	Reimbursing Bank
CONFIRMING BANK	Confirming Bank
FORFAITING HOUSE	Forfaiting Bank/Institution
CLB	Claiming Bank

The parties that can be involved in a bill depend on the type of bill you are processing and on the operation that you perform on the bill. The following table indicates the parties that can be involved based on the operation that you perform on the bill:

<b>Bill Type</b>	<b>Operation</b>	<b>Parties Applicable</b>
Incoming	Pay and Advance	Accountee (if different from Drawee) Issuing Bank (your bank) Negotiating Bank Reimbursing Bank

Bill Type	Operation	Parties Applicable
		Drawer Drawee
Incoming	Acceptance	Accountee (if different from Drawee) Issuing Bank (your bank) Negotiating Bank Accepting Bank (your bank) Drawer Drawee
Incoming	Discount	Beneficiary Accountee (if different from Drawee) Discounting Bank Negotiating Bank Reimbursing Bank Remitting Bank Drawer Drawee
Outgoing	Negotiation	Negotiating Bank 1 Negotiating Bank 2 Reimbursing Bank Confirming Bank Issuing Bank Drawer Drawee
Outgoing	Pay	Negotiating Bank 1 Negotiating Bank 2 Reimbursing Bank

Bill Type	Operation	Parties Applicable
		Confirming Bank Drawer Drawee
Outgoing	Acceptance	Accepting Bank Issuing Bank Reimbursing Bank Negotiating Bank 1 Negotiating Bank 2 Confirming Bank Drawer Drawee
Outgoing	Discounting	Discounting Bank Issuing Bank Reimbursing Bank Negotiating Bank Confirming Bank Drawer Drawee
Incoming and Outgoing	Collection	Through Bank Guarantor Collecting Bank Remitting Bank Drawer Drawee
Incoming and Outgoing	Reimbursement	Claiming Bank of the LC

In case of a reimbursement claim, the following parties are mandatory:

- Negotiation Bank
- Issuing Bank

While processing an outgoing collection bill, you have the option to change the party that you specified earlier as the:

- Collecting Bank
- Drawee

To change the collecting bank you need to first change the Party Type of the previous collecting bank to 'Prev Collecting Bank'. Thereafter, select the new collecting Bank from the option list. An amendment advice is sent to the previous collecting bank requesting them to transfer the documents to the new collecting bank and a remittance letter is generated to the new collecting bank.

To change the Drawee of a collection bill, you need to change the party type of the previous Drawee to 'Prev Drawee' and select a new drawee from the option list. Similarly, to change the Drawee of a Incoming Bill, you need to change the party type of the previous Drawee to 'Prev Drawee' and select a new drawee from the option list.

You can use a particular CIF ID only once in a bill that you process.

*The details on central liability tracking that feature on this screen have been covered in the chapter titled Specifying Central Liability tracking details*

## **5.2.5 Capturing Document and Shipment Details**

A bill, as an instrument of trade finance, involves trade transactions. Such transactions involve merchandise, a mode of transportation and documents that accompany the goods in the case of a documentary bill.

You can specify document, goods and shipping details only for documentary bills under an LC or not under an LC. You can specify these details in the 'Bills and Collections - Contract Input - Detailed' screen by clicking on the tab titled 'Document/Shipment'.

If the LC module of Oracle FLEXCUBE has been installed at your bank, and the documentary bill is under an LC, then the document, goods and shipping details will be automatically picked up on specifying the reference number of the related LC. You will not be able to amend the details, defaulted from the related LC.

If the bill is under a reimbursement claim, you will not be able to save details in this screen. The system will display an error message while saving the contract if you have entered details in this screen.

For the documentary bills that are processed at your branch, you can keep track of the documents that are required under the bill. You can indicate:

- If the original set of documents that are required under the bill have been received (and the number of copies of the same)
- If the duplicate set of documents that are required under the bill have been received
- The date printed on the covering letter of the documents based on which the contract was entered. This date can be used to retrieve information on pending documents.

### 5.2.5.1 Specifying Details of the Documents Applicable to a Bill

There are some standard documents that may be required under a documentary bill. For documentary bills not under an LC, the documents specified for the product to which the bill is linked, will be defaulted to this screen. The details specified for these documents like the document type, description, the clauses specified for the document are also defaulted from the product. You can edit the list of documents, as well as the contents of the documents to suit the bill you are processing.

As two sets of documents are sent or received for a bill, there is a provision to capture details regarding the documents sent in both mails. The first set is recorded as I Mail and the second as II Mail. In this field you can also capture the number of documents issued along with the number of documents required. The data is captured in NN/MM format where NN denotes number of documents required and MM signifies number of documents issued.

If the LC module of Oracle FLEXCUBE has been installed at your bank, and the documentary bill is under an LC, the documents picked up, when you specify the reference number of the related LC. You will however, not be able to amend the list of documents defaulted from the related LC.

The BC Contract online function will validate whether the supplied document reference has a shipping guarantee against it. This will be done only for import bills and if the 'Validate shipping guarantee' field is checked for the document code in the document codes maintenance.

The following processing will be carried out after capturing the document reference in documents screen of import bills.

- For the document code, Oracle FLEXCUBE will check if the validate shipping guarantee flag is 'Y' in the document code maintenance
- If the above condition is satisfied, the system will check if the document reference exists in any of the shipping guarantee for the same document code.
- If a document reference exists then the system gives an override ' Document reference exists for the shipping guarantee'
- If a document reference is not found then the system gives an override ' Document reference does not exist for the shipping guarantee'

BC Upload processing will validate the document reference against shipping guarantee documents if the bill is import LC and validate shipping guarantee for the document code is 'Y'.

You can add to or delete from the list of documents that are defaulted from the product. To add to the list of documents defaulted for a bill, click add icon and select the code that identifies the document, from the list of document codes maintained in the Documents Maintenance screen. The other details of the document will be defaulted to this screen. To delete a document, that is not required for the bill you are processing, highlight the document code and click delete icon.

### **5.2.5.2 Specifying Clauses for a Document**

There are some standard clauses, which should appear on the documents that are required under a documentary bill. In this screen you can indicate the clauses that should accompany a document

For documentary bills not under an LC, the clauses that you specified for a document, while defining the product are defaulted to this screen. In addition, the details specified for these clauses, like it's description, are defaulted from the product.

When you highlight a document code, all the clauses defined for the document are displayed. You can add to or delete from the list of clauses that are defaulted. To add to the list of clauses defaulted for a bill, click add icon and select the code that identifies the clause, from the list of clauses maintained, in the Clause Maintenance screen. The description of the clause will be displayed, based on the clause code that you select. To delete a clause that is not required for the bill you are processing, highlight the clause code and click delete icon.

If the LC module of Oracle FLEXCUBE has been installed at your bank, and the documentary bill is under an LC, then the clauses specified for documents will be automatically picked up, when you specify the reference number of the related LC. You will not be able to amend the list of clauses, defaulted from the related LC.

### **5.2.5.3 Specifying Shipping Details for a Bill**

There are certain standard requirements and conditions associated with the shipment of the merchandise, based on which the bill was drawn. You can specify the following shipping details for a bill.

- The location from which the goods transacted under the bill were shipped
- The destination to which the goods transacted under the bill were dispatched or transported
- The latest date by which shipment should be made
- The date on which the shipment was made
- The carrier that carried the goods
- The date on which the goods arrived at its destination.
- Besides these details, you can also specify details like:
  - Was trans-shipment allowed
  - Was partial shipment of the goods allowed
- The INCO term for the bill

### **5.2.5.4 Specifying Goods Details**

A bill is an instrument of payment, for trade transactions. Trade transactions involve goods that are transported from one destination to another. You have maintained the list of standard goods that are traded, in the Goods Maintenance screen.

In this screen, you can specify a description of the goods that were traded for the payment of which the bill was raised. After you select the code that identifies the goods, its description (which contains details of the merchandise traded) will be picked up and displayed automatically.

You can edit the description that is defaulted to suit the requirements of the bill you are processing. You can also enter specifications such as the quality and quantity of the merchandise.

If the LC module of Oracle FLEXCUBE has been installed at your bank, and the bill is under an LC, the goods will be defaulted, when you specify the reference number of the related LC. You will however, not be able to amend the list of clauses defaulted from the related LC.

These details are used only for information purposes. The system will not validate the date you capture here

- If the bill is not under LC, the INCO Term will be defaulted from linked product. The document and clause details will be displayed based on the maintenance for the INCO term in the 'INCO Term Maintenance' screen
- If the bill is under LC, the INCO term, document and clause details will be displayed from the linked LC contract.
- For bills under LC, you cannot modify the INCO term. The system will show an override/error message while saving the contract if you attempt changing the defaulted INCO term.

#### **5.2.5.5 SWIFT Messages for the Documents Received**

When you receive a document for Usance LCs, an Authorization to Reimburse Advice in an MT 740 format will be generated.

While indicating the messages that should be generated at the event (INIT), you should also associate the pre-shipped advice tag LC\_AUTH\_REIMB to the event. When the Bills Contract is authorized, the MT 740 is generated from the Outgoing Message Browser with the bills contract reference number and it displays all the details of the LC contract excluding the credit amount.

The expiry date of LC contract and maturity date from Bills contract are also displayed in the generated MT740 message. For swift MT740 message, the 31D field will display the expiry date specified in the LC contract and 42P field will display the maturity date specified in the BC contract. But for mail MT740, the system will display both LC and BC dates.

The bill amount that is defaulted includes the contract and its currency. However, the BC amount will be converted to LC contract currency equivalent using STANDARD mid rate in case the LC contract currency is different from the bill contract currency.

#### **5.2.6 Specifying Exception Details**

Tracers are reminders, sent to various parties involved in a bill indicating that an exception that has occurred, while processing the bill.

To specify the tracers that should be generated for each exception, click on the tab titled 'Exceptions' in the 'Bills and Collections - Contract Input - Detailed' screen. If the bill is under a reimbursement claim, you will not be able to save details in this screen. The system will display an error message while saving the contract if you have entered details in this screen.

In this screen you can capture tracer details for the following exception events:

- Payment Exception
- Acceptance Exception

The details specified for the product involved in the bill will be defaulted. You can change the defaults to suit the requirements of the bill you are processing.

There are two types of messages that can be sent, each time an exception tracer is generated. One to the party who needs to be reminded, to take action to resolve the exception (exception tracer) and the another to the party, who needs to be informed about the current status of the exception (advice of fate tracer).

In this screen, you can specify details for the generation of both types of messages.

### 5.2.6.1 Specifying Details for the Receiver of the Tracer

#### Tracers Required

You can indicate whether the exception tracer is applicable to the bill you are processing. You can select one of the following options:

- Required -If you specify that a tracer is applicable to a bill, you should also specify the number of tracers that should be generated, for the exception.
- Not Required -You can select this option to indicate that the exception tracer is not applicable, to the bill you are processing.

- Till resolved -If you indicate that the tracer should be generated until the exception is resolved, you need not specify the number of tracers that should be sent. This is because the tracer will be generated at the frequency that you specify, until the exception is resolved.

### **Tracer Frequency**

You can specify the frequency (in days) with which, the tracer should be generated to the concerned parties (after the Start days) involved in the bill.

### **Tracer Receiver**

You can specify details of the party, who needs to be reminded to take action to resolve the exception. Select the party type from the option list that is available. The tracer will be generated to the customer linked to the party type, in the Parties screen.

### **Tracer Medium**

For each of the exception tracers that you specify for a bill, you can also indicate the medium through which the tracer should be generated.

The preferred medium specified for the product to which the bill is linked is defaulted. The media supported include:

- Mail
- Telex
- SWIFT

If the tracer is generated through SWIFT an MT420 will be generated.

### **Tracers to be Sent**

If you have indicated that the tracer is applicable, to the bill you are processing, you should also specify the maximum number of tracers that should be generated, for each of the exception events.

The number of copies specified for the product to which the bill is linked will be displayed. You can change the default and specify a number, to suit the bill you are processing.

If you have indicated that the tracer should be generated until the bill is resolved, the value 9999 is displayed, indicating that the tracer will be generated until the exception is resolved.

### **Manually Generate**

Oracle FLEXCUBE allows you to manually generate tracers for bills. To manually generate a specific tracer for a bill, unlock the bill contract, and check the box adjacent to the Manually Generate option under the tracer concerned.

On manual generation of a tracer, the system calculates the Next Tracer Date according to the defined tracer cycle.

### **Tracer Start Date**

Exception tracers can be generated, only after the maturity date of the bill. While creating a product, you have also indicated the number of days that should elapse after the Bill matures on which the first tracer should be generated.

By default, the system calculates the date on which the first tracer should be generated, based on the maturity date specified in the contract screen and on the number of days specified for the product, involved in the contract.

You can change the default and specify a start date, to suit the requirement of the bill you are processing. The system also displays the number of tracers, already sent to the concerned party.

### **Under Protest**

Check this option to indicate that you want to protest the bill.

### **Protest Date**

When the exception has not been resolved by the concerned party, even after a number of tracers have been sent, you may want to protest the bill. You can specify the date on which the protest advice needs to be generated, to the concerned party.

### **Tracers Sent**

The system displays the number of tracers that have been sent.

### **Previous Tracer Date**

This is the date on which the last tracer was sent to the party indicated in the tracer Receiver field.

### **Next Tracer Date**

This is the date on which the next tracer will be generated to the party indicated earlier.

### **Pay Message Date**

Enter the date on which you send the acceptance message to the remitting bank (in the case of an Import bill). In the case of an export bill this is the date specified on the acceptance message received from the collecting bank.

This field is for information purposes only.

### **Non Pay Message Date**

Enter the date on which you send the non-payment message to the remitting bank in the case of an export bill. In the case of an export bill this is the date specified on the non-payment message received from the collecting bank.

On entering the nonpayment message date the event -- REFP (refusal to pay) is triggered. The accounting entries defined for the event will be passed and the advices will be generated.

### **5.2.6.2 Viewing Tracer Updates**

You can visit this screen to view the current status of the tracers generated for the bill. The system displays the following information:

- The date on which the last tracer was sent.
- The date on which the next tracer will be generated.
- The number of tracers that have been sent to the concerned party, till date.

### **5.2.6.3 Specifying Advice of Fate for Payments**

The advice of fate is sent, to keep a party involved in the bill, informed about the current status of an exception. An advice of fate is generated, along with the exception tracer and at the frequency specified for, the exception tracer. You can specify the following preferences for the generation of an:

- Advice of Fate (payment)
- Advice of Fate (acceptance)

#### **Advice Required**

You can indicate whether the advice of fate should be generated, to a party involved in the bill. You can indicate one of the following options:

1. Required -If you specify that a tracer is applicable to a bill, you can also specify the number of tracers that should be generated. This option is defaulted while processing an Import Bill.
2. Not required - You can select this option to indicate that the exception tracer is not applicable to the bill you are processing. This option is defaulted while processing an Export Bill.
3. Till resolved -If you indicate that the tracer should be generated until the exception is resolved, you need not specify the number of tracers that should be sent. This is so because the tracer will be generated until the exception is resolved.

While processing an export bill the Advice of Fate Required field is automatically defaulted to 'Not Required'.

#### **Receiver of Advice**

You can specify details of the party, who needs to be informed, about the current status of the exception. Select the party type from the option list of valid parties that you specified, in the parties screen.

The advice will be generated to the customer, linked to the party type, in the Parties screen.

#### **Advice Medium**

For each of the advice of fate that should be generated for a bill, you can indicate the medium through which the advice should be generated.

You can select a media type from the option list available. The valid media include -

- Mail
- Telex
- SWIFT

If the advice is generated through SWIFT an MT422 will be generated.

### **Manually Generate**

An advice of fate tracer is generated at the frequency with which, the related exception tracer is generated. If you want to generate the advice of fate immediately, check against manually generate. If you do not check against it, the message will be generated automatically, as part of the end of day processes on the day it falls due.

#### **5.2.6.4 Viewing Advice Updates**

You can visit this screen, to view the current status of the advices of fate generated for the bill. The system displays the following information:

- The number of tracers that have been sent to the concerned party, till date
- The date on which the last tracer was sent
- The date on which the next tracer will be generated

#### **5.2.7 Specifying Discrepancies**

You can register the discrepancies that you encounter while processing a bill, in the Discrepancies screen. To invoke this screen click on the tab titled 'Discrepancies' from the 'Bills and Collections - Contract Input - Detailed' screen. If the bill is under a reimbursement claim, you will not be able to save details in this screen. The system will display an error message while saving the contract if you have entered details in this screen.

Discrepancies are likely to be found, while processing Incoming or Outgoing bills that are under LCs.

### 5.2.7.1 Specifying the Discrepancies that Occurred in the Bill

You have specified the discrepancies and assigned codes to them, in the Discrepancy Code Maintenance screen. In this screen, you can select the discrepancies that are applicable to the bill you are processing. The description associated with the discrepancy code will be automatically picked up from the discrepancy code maintenance screen. This value is captured in field 77J of an outgoing MT734 in the following format: 70\*50.

In this screen, you can also indicate whether the discrepancy, has been resolved. The date on which it was resolved will be automatically displayed.

#### Tracer Required

You can indicate whether the reserve exception tracer is applicable, to the bill you are processing. You can indicate one of the following:

- Required -If you specify that a tracer is applicable to a bill, you can also specify the number of tracers that should be generated for the exception.
- Not Required -You can select this option to indicate that the exception tracer is not applicable to the bill you are processing.
- Till resolved -If you indicate that the tracer should be generated until the exception is resolved, you need not specify the number of tracers that should be sent. This is so, because the tracer will be generated until the exception is resolved.

### **Tracer Frequency**

You can specify the frequency (in days) with which the tracer should be generated to the concerned parties (after the Start days) involved in the bill.

### **Trace Receiver**

You can specify details of the party, who needs to be reminded to take action to resolve the exception. Select the party type of the party, from the option list that is available. The tracer will be generated to the customer linked to the party type, in the Parties screen.

### **Tracer Medium**

For each of the exception tracers that you specify for a bill, you can also indicate the medium through which, the tracer should be generated.

The preferred medium specified for the product, to which the bill is linked, is defaulted.

The media supported include:

- Mail
- Telex
- SWIFT

If the tracer is generated through SWIFT an MT420 will be generated.

An override message is displayed if you enter an export bill in final stage with unresolved discrepancies. Similarly if you attempt to move a bill that has unresolved discrepancies to the final stage an override is sought.

### **Tracers to be sent**

Specify the number of tracers that can be sent.

### **Tracers Sent**

The system displays number of tracers that have been sent.

### **Previous Tracer Date**

This is the date on which the last tracer was sent to the party indicated in the tracer Receiver field.

### **Reserve Release Date**

Enter the date on which the reserve was released that is the date on which you received the reserve advice from the Issuing bank or the Drawee.

## **Under Release**

Check this option to indicate that the discrepancy is under release.

### **5.2.7.2 Specifying the Number of Tracers that should be Generated**

If you have indicated that the tracer is applicable, to the bill you are processing, you should also specify the maximum number of tracers that should be generated for each of the exception events.

The number of copies specified for the product, to which the bill is linked, will be displayed. You can change the default and specify a number to suit the bill you are processing.

If you have indicated that the tracer should be generated until the bill is resolved, the value 9999 is displayed, indicating that the tracer will be generated until the exception is resolved.

#### **Tracer Start Date**

Exception tracers can be generated for a bill, only after the maturity date of the bill. While creating a product, you have indicated the number of days that should elapse after the Bill matures, on which the first tracer should be generated.

By default, the system calculates the date, on which, the first tracer should be generated, based on the maturity date specified in the contract screen and on the number of days specified, for the product involved in the contract.

You can change the default and specify a start date, to suit the requirement of the bill you are processing. The system also displays the number of tracers already sent to the concerned party.

### **5.2.7.3 Viewing Tracer Updates**

You can visit this screen, to view the current status of the reserve exception. The system displays the following information:

- The date on which the last tracer was sent
- The date on which the next tracer will be generated
- The number of tracers that have already been sent, to the concerned party till date

The system will display an override if the discrepancies are added to the bills after the discrepancy notice period. You can capture this period in the 'Letters of Credit-Branch Parameters' screen. This period is calculated from the booking date of the bills contract.

For details on 'Letters of Credit-Branch Parameters' screen, refer the 'Automatic processes' chapter of the Letters of Credit (LC) User Manual.

## 5.2.8 Specifying Rollover Details

A contract that is marked for rollover will be rolled over with all the terms of the original contract. However, you can change certain terms by specifying them in the Rollover Details tab.

In the 'Bills and Collections - Contract Input - Detailed' Screen, click the 'Rollover' tab.

The screenshot displays the 'Bills and Collections - Contract Input - Detailed' web page. The interface includes a navigation bar with tabs for 'Contract Main', 'Contract Details', 'Parties', 'Document / Shipment', 'Exceptions', 'Discrepancies', 'Rollover', and 'Purchase Details'. The 'Rollover' tab is currently selected. Below the navigation bar, there are several sections for data entry: 'Tenor Details' (Maturity Date, Base Date, Bill Tenor, Transit Days, Base Date Description, Base Date Code), 'Interest Liquidation Preference' (Interest Liquidation dropdown), and 'Interest Computation Dates' (From Date, To Date). At the bottom, there is a status bar with fields for 'Input By', 'Date Time', 'Authorized By', 'Date Time', 'Contract Status', and an 'Authorized' checkbox. An 'Exit' button is located in the bottom right corner.

You need to specify the following additional details for the rollover of the bill:

### 5.2.8.1 Specifying the Tenor Details for the Bill

#### Base Date

The base date is used to calculate the maturity date of the bill. In effect the tenor of the bill will begin from this date. The current system date will be displayed in this field and you cannot change the default value.

#### Base Date Description

The description of the instruction will be automatically picked up and displayed. You can edit the description of base date that is defaulted, to suit the requirements of the bill you are processing.

#### Bill Tenor

Specify the number of days for the tenor. The system will use the number of days to arrive at the maturity date for each tenor. The minimum/maximum tenor specified in the product underlying the contract has to be adhered to.

### **Transit Days**

The transit days will be used in the computation of the maturity date, of the bill. Enter the transit days for the bill.

### **Maturity Date**

The maturity date is the date on which the bill falls due, for payment. The maturity date is calculated in the following manner, based on the entries made to the previous fields:

**Maturity Date = Base date + Tenor + Transit days**

You can change the maturity date of a bill that is arrived at using the above method. However, the maturity date that you specify should be later than or equal to the Value date specified for the bill.

### **Base Date Code**

Indicate the date from which the tenor specified for the bill should become effective. The base date is used to calculate the maturity date of the bill. In effect the tenor of the bill will begin from this date.

If you are processing a sight bill the base date is the lodgment date and for a usance bill it can be the Invoice date or the Shipping Date.

## **5.2.8.2 Specifying the Preferences for Interest Liquidation**

### **Interest Liquidation**

Interest components of a bill can be liquidated immediately or deferred to a later date. In the Roll Over Preferences screen, you can indicate whether the mode of liquidation is to be immediate or deferred.

Choose '**Immediate**' to liquidate the interest components at the time of Rollover. If you choose '**Deferred**' from the option list, the system defers the liquidation of interest components to a later date. You can choose to pay the interest components fully or partially subsequently.

## **5.2.8.3 Indicating the Dates for Computation of Interest**

### **From Date**

The system starts the computation of interest from the date specified here.

### **To Date**

Once you have specified the start date for interest computation, you have to indicate the end date for calculating the interest. The minimum/maximum interest rate specified in the product underlying the contract has to be adhered to.

#### **5.2.8.4 Rollover of a Contract**

The roll over of a bills contract is possible only if:

- It is an import advance bill
- The bill is in the final stage
- Rollover is initiated on or after the maturity date of the bill
- The contract status is active and authorized
- 'Allow Rollover' option is maintained for the bill at the product level
- The event roll is maintained for the product

If you have marked a bill for roll over, the system liquidates the original bill and creates a new rolled over bill based on the details you have maintained through the Rollover screen.

A new event Roll will be triggered when a bill is rolled-over and the system:

- Routes the outstanding principal through the roll over Bridge GL. In case the liquidation mode is 'Immediate' for the contract, the outstanding interest is collected in the ROLL event.
- Passes entries for the principal amount in the INIT event.

If a bill has to be rolled-over:

- The Maturity Date should be past its Base date
- The value of date of the bill should not be null or less than the 'From date' maintained in the 'Rollover details' screen

## 5.2.9 Specifying Purchase Details

Purchase details of a bill can be captured in the 'Purchase Details' tab. To invoke this screen, in the 'Bills and Collections - Contract Input - Detailed' Screen, click the 'Purchase Details' tab.

The screenshot shows a web application window titled "Bills and Collections - Contract Input - Detailed -- Webpage Dialog". The interface includes a header with navigation controls and a main content area with several tabs: "Contract Main", "Contract Details", "Parties", "Document / Shipment", "Exceptions", "Discrepancies", "Rollover", and "Purchase Details" (which is currently selected). The "Purchase Details" tab contains a light blue shaded area with the following fields: "Purchase Amount", "Unlinked FX Rate", "Effective Collection Liquidation Rate", and "Effective Purchase Liquidation Rate". Above this area, there are fields for "Product Description", "Characteristics", "Product \*", "Operation", "Stage" (set to "FINAL"), "External Reference", "Contract Ref No. \*", and "User Reference". A bottom navigation bar contains numerous other tabs such as "Advices / FFT", "Settlement", "ICCF", "MIS", "Events", "Tax", "Linkages", "Change Log", "Fields", "FX Linkage", "Charges", "Drafts", "Collateral", "Invoice", "Insurance", "Loan", "Effective Interest Rate", "Split Settlements", "Interest Dates", "Loan Accounts", and "Packing Credit". At the very bottom, there are fields for "Input By", "Date Time", "Authorized By", "Date Time", "Contract Status", and an "Authorized" checkbox, along with an "Exit" button.

 The packing credit subsystem is available through the BC Contract Online screen.

You can link pre-shipment loans availed by exporters such that they be adjusted against outgoing Bills, Discounting of Bills or Purchase of Bills .The system then liquidates the loan and credits only the remaining proceeds to the exporter's settlement account.

You can also allow CL accounts linkages and purchase details only for export bills i.e. for product of type 'E'. Further you can link CL accounts using the 'Packing Credit' subsystem during the following events:

- Purchase (BPUR),
- Discount (BDIS).
- Liquidation of purchase and discount(LPUR and LDIS) and
- Liquidation (LIQD) event OR
- INIT event of the BC but only where initial operation is 'PURCHASE' or 'DISCOUNT' or 'NEGOTIATION'.

You can also select the 'Packing Credit Product' check box under 'Account Preferences' in the CL Product Preferences Screen to allow linking with bills. CL account creation also involves the packing credit field, the value of defaults from the one maintained at CL Products.

The system throws an error if you enter purchase details for events other than Purchase (BPUR), Discount (BDIS), Liquidation of Purchase and Discount (LPUR and LDIS), Liquidation (LIQD) and 'INIT' in BC when the initial operation are 'PURCHASE', 'DISCOUNT' or 'NEGOTIATION' only.

You can attach a CL to multiple bills such loan to the bill linking is possible only during the final stages. You can modify a linked CL account only in attached corresponding events before saving, Post authorization de-linking or modifications are not possible at any stage of the contract.

Liquidation of an attached CL during a corresponding event is possible either to the extent of the purchase amount (in case of purchase and discount) or the liquidation amount (in case of liquidation of bill) while the amount in excess is credited to the customer.

You can attach the same CL that is linked to BPUR and BDIS events for liquidation to LPUR and LDIS events if the outstanding CL amount is not zero. You can also attach another active and authorized CL account having a non-zero outstanding amount to another bill belonging to the same customer, Such CL accounts are not enabled for auto liquidation or attached to any other bill. You cannot validate a CL Contracts and Bills against their creation dates.

The following amount tags are available in this module.

Module	Amount Tag	Description
BC	LOAN_LIQD_AMT	Loan liquidated amount
BC	AMT_PURCHASED	Amount tag used during customer CASA credit
BC	COLL_LIQ_AMT	Amount tag used for Nostro debit to be credited to the customer
BC	COLL_LIQ_AMTEQ	Amount tag used for credit to the customer.

### Purchase Amount

Specify the value of the Bill purchased. Partial purchases are allowed where the amount tag 'AMT\_PURCHASED' indicates the amount used for the purchase.

## Unlinked FX Rate

Specify the unlinked FX rate. This is the rate at which the system liquidates an LCY Loan utilizing a part purchase amount to which no FX is attached.

## Effective Purchase or Liquidation Rate

This rate is defaulted by the Oracle FLEXCUBE system if FX is linked to BC. You can use this rate to liquidate a CL in the LCY of that branch. The Oracle FLEXCUBE system finally arrives at the Effective Purchase /Liquidation rate by using the method of weighted averages. The FX sequence used for arriving at the Effective FX rate remains in the sequence used while initially attaching the same.

### Example

Let us assume the existence of three FX deals Fx1, Fx2 and Fx3.

Fx contract 1                    USD/INR @ 50 for USD 200

Fx contract 2                    USD/INR@49 for USD 200

Fx contract 3                    USD/INR@48 for USD 200

In case of a purchase of say USD 600, the effective exchange rate would be calculated as:

Effective exchange rate =  $((200*50+200*49+200*48))/600 = 49$

Therefore in case of a LCY loan where INR is the local currency of the branch, the CL loan will get liquidated during purchase at the rate of 49 per USD/INR. The liquidation of this purchase, negotiation or discount (LPUR or LDIS or LIQD event of INIT), is also completed at the same exchange rate, where the 'INIT' event is triggered by the liquidation operation,

## Effective Collection Liquidation Rate

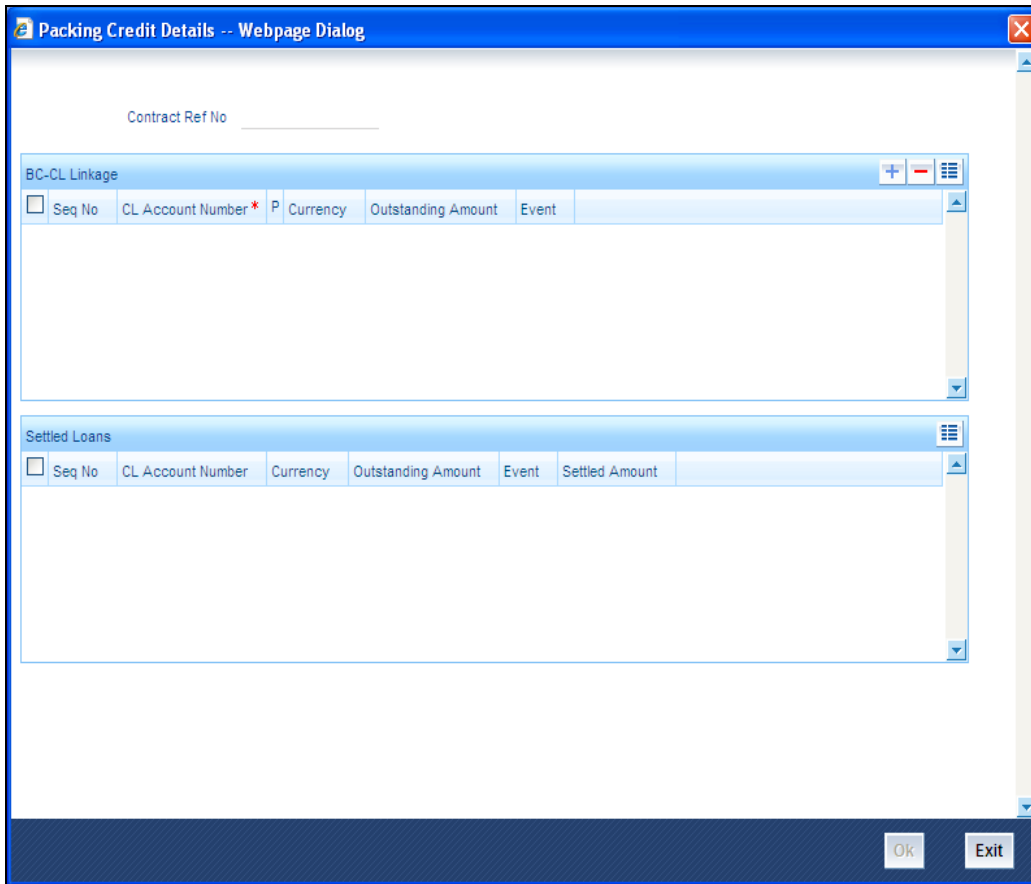

This rate is also defaulted if FX is linked to BC and is applied in case of liquidation of CL when it is in the LCY of the branch. The liquidation event of the bills (LPUR, LDIS and LIQD events) are triggered during subsequent to the initial operations of bill purchase, discount, negotiation or normal liquidation events during the life cycle of the BC if a loan is attached. The effective collection liquidation rate is arrived at by the weighted average method discussed in the example of effective purchase or liquidation rate mentioned above.

### **5.2.9.1 Using the Packing Credit Subsystem**

Packing Credit is a Loan or Cash Credit facility sanctioned to an exporter at the Pre Shipment stage to facilitate purchase of raw materials at competitive rates, produce goods per requirement of the customer and finally organize packing for onward export.

You can enable a 'Packing Credit Product' through the 'CL Product Preferences' screen in Oracle FLEXCUBE. To invoke the 'Packing Credit Details' screen, in the 'Bills and Collections - Contract Input - Detailed' Screen, click the 'Packing Credit' tab.

The Packing Credit Subsystem includes the following as detailed under.

### **Sequence Number**

Specify the order in which the system liquidates attached multiple loans. You need not maintain bridge GLs within CL Products which allow creation of these CL accounts as the system replaces the credit settlement bridge with the bridge GL that the BC product maintains, automatically.

### **CL Account Number**

Select the CL Account Number from the option list provided.

### **Event Code**

The system defaults the appropriate event code while attaching CL for liquidation and attempting to save. These include INIT (in case of initial Discount, Purchase or Negotiation operation) and LIQD, BPUR, BDIS, LPUR and LDIS events.

### **Outstanding Amount**

The system displays the outstanding amount of the CL contract while attaching the same. Click 'P' to populate information to the field.

### **Currency**

The system displays the outstanding currency of the CL contract while attaching the same. Click 'P' to populate information to the field.

### **Settled Amount**

The system displays the loan amount settled against each event in the CL currency, while liquidating the loan from the bill.

## **5.2.10 Processing Packing Credits**

You can attach Packing Credits during purchasing, discounting or liquidation of an Export Bill. The Oracle FLEXCUBE system throws an error if you attempt to attach CL accounts during any other event than the latter ones or INIT events on account of direct purchases, discounts and negotiations.

The system allows linking only active and authorized CL accounts created with the 'Packing Credit' flag enabled at the contract level. You cannot enable auto liquidation for these accounts. Further these accounts need to have an outstanding CL amounts as greater than zero. The counterparty involved remains as the one on the bill. The system also allows linking of multiple bills to the same account.

You must enter Pre-Payment Details for Products with the Packing Credit flag enabled to avoid a CL error on attempting to save.

If the total value of a CL contract attached to a bill exceeds the Purchase or Liquidation amount, the system displays an override on attempting to save. In case of change of operation from Discount to Collection or Purchase to Collection, another override is displayed on saving that event to manually reverse CL Payments in the contract.

If you create a Bill under the product with the flag 'link to loans' enabled, you can attach the Packing Credit during the BPUR or LIQD events only if no BLNK event has been fired in the CL contract failing which an error is thrown on attempting to save. You can link the Bill to the CL after attaching the Packing Credit to the latter. You cannot create a CL where its value is greater than difference of the Outstanding Bill Amount and the Purchase Amount. During the LPUR event an override alerts you of the soft linked outstanding loans. You need to handle this operationally by manually liquidating the loan outstanding and then input such liquidation amount in BC. Alternatively the system credits the customer's CASA account with such difference liquidation amount.

When the system authorizes the event in which the CL is linked, the LIQD event in CL is also authorized. Some limitations in this regard though are noteworthy:

- If at anytime the event linking the CL to the Bill is deleted, the corresponding Loan event in the CL is also deleted .It is not possible though to delete such Liquidation Event from the CL Payments screen.
- If a Bill is reversed the system does not reverse the Loan but rather it displays an override to manually reverse of the Loan on saving, if CL linkages exist in the contract.

On linking and saving a BC contract liquidation of the linked CL Account is triggered. You do not require maintaining a separate Bridge GL in the CL Product, as the system automatically replaces the Credit Settlement Bridge with the Bridge GL in the BC Product. In case of a Purchase or Discount operation the system converts the purchase amount to CL currency and credits the same into the Bridge GL maintained in the BC Product.

### 5.2.10.1 Liquidating a Packing Credit Loan

In BC Products when FX is linked but the CL Account attached is in the LCY of the branch the effective LCY exchange rate is used for Loan liquidation, In case multiple FX contracts are used, the system arrives at an effective Purchase or Liquidation rate by using the method of weighted averages. If the Loan currency is different from the Bill currency, then the Interest Rate from the Rate Type at the Product level is used. The Loan liquidation happens to the extent of the Purchase Amount and the excess amount if any is credited to the customer's account.

Again during Bill Purchase or Discount Liquidation, when funds are received from a Nostro Account if a CL is attached, the system liquidates any Loan attached per the effective LCY Collection Rate or the Rate Type at the product level in that order, if in LCY. The effective Purchase or Liquidation Rate used during Bills Purchased Asset creation is again used during Asset Liquidation. The excess proceeds then if any are credited to the customer in that order. Again when no Purchase, Discount or Negotiation occurs the system directly liquidates any existing Loans and credits excess proceeds to the customer.

The Tag 'LOAN\_LIQD\_AMT' includes both the Outstanding Principal and Interest components put together while the system uses the Tag 'AMT\_PURCHASED' if the customer's CASA account needs to be credited.

#### Example 1

Let us illustrate accounting entries for appropriate events using conditions bulleted below:

- Pre-Shipment finance offered in LCY = 9,000 INR
- Loan Outstanding to date (Principal + Interest) = 10,000 INR
- Bill Amount = 600 USD
- Effective LCY Exchange Rate (effective purchase or liquidation rate) USD/INR = 50
- Purchase Amount = 300 USD

In the BC module the initial operations include Purchase, Discount and Negotiation (BPUR, BDIS and INIT) events are shown below:

Dr/ Cr	Account role code	Amount tag	FCY Amount	Exch . Rate	LCY Amou nt	Date
Dr	BILLS PURCHASED	LOAN_LIQD_AMT	200 USD	50	10000	7-SEP-09
Cr	BRIDGE GL	LOAN_LIQD_AMT	200 USD	50	10000	7-SEP-09
Dr	BILLS PURCHASED	AMT_PURCHASE D	100 USD	50	5000	7-SEP-09
Cr	CUSTOMER	AMT_PURCHASE D	100 USD	50	5000	7-SEP-09

The corresponding events in CL would trigger the LIQD event in the CL module, whose appropriate accounting entries are as seen under:

Dr/ Cr	Account role code	Amount tag	LCY Amou nt	Date
Dr	BRIDGE GL	PRINCIPAL_LCRY	9000	7-SEP-09
Cr	ASSET GL	PRINCIPAL_LCRY	9000	7-SEP-09
Dr	BRIDGE GL	<INTEREST>_LC RY	1000	7-SEP-09
Cr	INTERESTRE C	<INTEREST>_LC RY	1000	7-SEP-09

In addition to the above events, the system maintains normal LIQD accounting tags for any further Manual Liquidations in the CL module.

### **Example 2**

Let us illustrate accounting entries for the additional events using conditions bulleted below:

- Funds received in NOSTRO = USD 600
- Bill Amount = USD 600
- Loan Outstanding in LCY(Principal and Interest) = INR 10,000
- Bills Purchased = USD300
- Effective LCY Exchange Rate USD/INR =50

The table below shows LPUR/LDIS/LIQD events in the BC module:

Dr/ Cr	Account role code	Amount tag	FCY Amount	Exch Rate	LCY Amount	Date
Dr	NOSTRO	LOAN_LIQD_AMT	200 USD	50	10000	10-SEP-02
Cr	BRIDGE GL	LOAN_LIQD_AMT	200 USD	50	10000	10-SEP-02
Dr	NOSTRO	AMT_PURCHASE D	300 USD	50	15000	10-SEP-02
Cr	BILLS PURCHASED	AMT_PURCHASE D	300 USD	50	15000	10-SEP-02
Dr	NOSTRO	COLL_LIQ_AMT	100 USD	50	5000	10-SEP-02
Cr	CUSTOMER	COLL_LIQ_AMTE Q	100USD	50	5000	10-SEP-02

In case of the event LIQD you need not maintain accounting entries pertaining to Purchase. In case of Normal Liquidation without any Purchase or Loan linkages, you need to maintain the existing tags 'BILL\_LIQ\_AMT' and 'BILL\_LIQ\_AMTEQ'. Finally in case of Loan or Purchase Liquidation, the excess funds are linked to the 'COLL\_LIQ\_AMT' tag. The order for Liquidation Proceeds is Loan Asset, Bills Purchased Asset and then Customer. The corresponding event in the CL module triggers a Loan LIQD event shown in the table below:

Dr/ Cr	Acc-role	Amount tag	LCY	Date
Dr	BRIDGE GL	PRINCIPAL_LCRY	9000	10-SEP-02
Cr	ASSET GL	PRINCIPAL_LCRY	9000	10-SEP-02
Dr	BRIDGE GL	<INTEREST>_LCRY	1000	10-SEP-02
Cr	INTERESTREC	<INTEREST>_LCRY	1000	10-SEP-02

Again more than the above the system maintains normal LIQD accounting tags for any further manual liquidations in the CL module.

## 5.2.11 Viewing the Media Addresses of a Customer

When you specify the CIF ID of the counterparty involved in a bills contract, the Media Address details that you have maintained for the customer will be displayed. These details are displayed in the 'Customer Address Maintenance' screen. You can invoke this screen by typing 'MSDCUSAD' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

The screenshot displays the 'Customer Address Maintenance -- Web Page Dialog' window. It is divided into several sections:

- Customer Address:** Fields for Customer Number, Location, Country, Answerback, and a checkbox for 'Add Hold Mail Text'.
- Media:** Fields for Media, Language, Test Keyword, Delivery By, and a checkbox for 'Send by E-Mail'.
- Name:** A field for the customer's name.
- Address:** Four fields labeled Address1, Address2, Address3, and Address4.
- Message Address:** A table with columns: Branch, Module, Message Type, Number Of Copies, Format, Account Number, and Primary Address.
- Fields:** A bottom section with checkboxes for 'Input By', 'Date Time', 'Modification Number', 'Open', 'Authorized By', and 'Date Time', along with an 'Exit' button.

When you specify the CIF ID, the system checks whether you have maintained multiple media addresses for the customer. If you have maintained multiple media addresses, a list of all the media addresses will be displayed in a separate window.

## 5.2.12 Capturing the BIC Details of a Customer

When the media type of the party is SWIFT, and the customer address you have specified happens to be a BIC customer, the system automatically displays the related BIC details in the 'BIC Code Details' screen. You can invoke this screen by typing 'ISDBICDI' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

**BIC Code Details -- Web Page Dialog**

## 5.2.13 Maintaining Preferences for Loan

From the 'Bills and Collections - Contract Input - Detailed' screen, click 'Loan' button. The 'Automatic Booking of Loans' screen is displayed. In this screen you can maintain the details for the loan.

UDE ID	Value	Rate Code	Code Usage
--------	-------	-----------	------------

To recall, you have the option to create a loan from bills module. In case you opt for this option, the preferences you maintain in this screen will be used to create a loan during liquidation of bills.

### Contact Reference Number

The system displays the contract reference number.

### Currency

The system will display the local currency of the Branch in which the loan is initiated. You cannot change this value.

### Tenor

Here you need to indicate the tenor for each loan being maintained. The tenor is expressed in days. The minimum/maximum tenor specified in the loan product underlying the contract has to be adhered to.

### Line

This is the credit line against which the loan is issued to the customer. The adjoining option list displays a list of GL codes maintained in the GL Module. Highlight the line you want to assign to this loan and click 'Ok' button to select the line.

**Rate**

Select the rate to be applied for the conversion. The options available are Buy rate, Mid Rate or the Sell Rate.

**Rate Code**

The rate code will be used to pick up the exchange rate. The rate codes maintained through the 'Standard Rate Code Maintenance' screen will be available for selection in the option list provided. Select the appropriate rate code for the loan.

**Exchange Rate**

The Exchange Rate will be picked from the exchange rate table and displayed, by default.

**Rate Type**

The Rate Type indicates whether the rate to be applied for the conversion is the Buy rate, Mid Rate or the Sell Rate. Select the appropriate rate type from the drop down list.

**Maturity Account**

You should specify the settlement account for the loan. You can choose a valid account number from the list of values that is available.

**Event Sequence Number**

The system displays the event sequence number.

**Customer**

The system displays the contract customer ID.

**Customer Name**

The system displays the contract customer name.

**Currency Description**

The system displays the description of the currency.

**Units**

Specify the units in which the tenor is specified.

## **5.2.14 Indicating Preferences for the Interest Components**

### **Component**

The component gets defaulted from the BC product level.

### **Description**

The description for the component also gets defaulted from the product level.

### **Rate Type**

You can indicate the interest rate type that is to be picked up and applied to the loan contracts involving the product. The options available for the rate type are:

- Fixed
- Floating
- Special

Choose the appropriate option from the drop down list.

### **Rate Code**

Interest of the contract is computed on the basis of the Rate code associated with it. This field is enabled only if you have opted for 'Floating' rate type for the loan.

### **Basis**

The interest basis indicates the method in which the tenor for interest has to be calculated, if their application is tenor based.

It could be one of the following:

- (Euro)/360
- (US)/360
- Actual/360
- (Euro)/365
- (US)/365
- Actual/365
- (Euro)/Actual
- (US)/Actual
- Actual/Actual

The Interest Basis defined for the product involved in the contract will be displayed. You can change it here to suit the bill you are processing.

The minimum/maximum rate specified in the loan product underlying the contract has to be adhered to.

**Rate**

In case you choose the rate type as Fixed, you can specify the rate that is to be used for computing the interest of the contract.

**Usage**

The usage indicates the time at which the rate change has to be applied to the loan contract in case the interest is floating rate type. The options available are:

- Auto - rate change is triggered automatically when the rate associated with a rate code changes.
- Periodic – rate change is triggered at pre-defined dates.

**Spread**

You have to indicate the spread that can be applied on the floating rate.

**Amount**

In the case of ‘Special’ rate type, the interest component is expressed as an amount and not as a rate. This amount should be specified when the loan is liquidated.

When a new loan contract is created the following accounting entries are passed:

Event Code	Dr/Cr Indicator	Accounting Role	Amount Tag
DSBR	DR	LOAN ASSET GL	PRINCIPAL
DSBR	CR	BRIDGE GL	PRINCIPAL

If a bill contract is booked with ‘Advance by Loan’ option is not checked at the contract level, then the following accounting entries are passed:

Event Code	Dr/Cr Indicator	Accounting Role	Amount Tag
LIQD	DR	BC CUSTOMER	BILL_AMOUNT (or) BILL_AMT_EQUIV
LIQD	CR	NOSTRO	BILL_AMOUNT (or) BILL_AMT_EQUIV

If a bill contract is booked with ‘Advance by Loan’ option is checked at the contract level, then the following accounting entries are passed:

Event Code	Dr/Cr Indicator	Accounting Role	Amount Tag
LIQD	DR	BRIDGE GL	BILL_LIQ_AMT (or) BILL_LIQ_AMTEQ
LIQD	CR	NOSTRO	BILL_LIQ_AMT (or) BILL_LIQ_AMTEQ

When a loan is booked against a bill the event 'BLNK- Bill Linkage to Loan' is triggered. There will be no advice or accounting entries passed for this event. If the loan linked with the bill is reversed then the event 'BLRV- Bill Linkage reversal to Loan' is triggered. You cannot reverse a bill if there is a Loan linked to the bill that has not been reversed. Once the loan is reversed you will be allowed to reverse the bill.

### 5.2.15 Specifying Advices, FFTs and Instructions for a Bill

The advices that have to be generated for an event during the lifecycle of a bill, are specified for the Product involved in the bill. While processing a bill, you can:

- Specify the advices that should be generated for the bill
- Suppress the generation of any of the advices not applicable to the bill
- Indicate the priority with which the advice should be generated
- Indicate the Free Format Texts and Instructions that should accompany the advices

From the 'Bills and Collections - Contract Input - Detailed' screen, click 'Advices / FFT' button. The 'Advices / Free Format Text' screen is displayed.

## **5.2.16 Specifying Advice Details**

The advices inherited from the product involved in the bill you are processing will be displayed in the Advice Code field.

### **Suppress**

By default, all the advices that have been defined for a product will be generated for the bills involving it. As certain advices may not be applicable to the bill you are processing, you can suppress its generation by indicating the same in this screen.

### **Priority**

For messages sent through media like SWIFT or TELEX, you can specify the priority with which the advice should be generated. By default, the priority of all advices is marked as Normal. You have the option to prioritize advices to one of the following options:

- Normal
- Medium
- High

However, you can change the priority of an advice to Urgent only for Payment Advices.

### **Medium**

If advices are to be generated, for the bill you are processing, it is mandatory for you to also specify the medium through which an advice is to be transmitted. An advice that is generated can be transmitted Mail, TELEX, or SWIFT You can select the appropriate medium code from the option list.

### **Advice Code**

This is the code that identifies the advice that can be generated for a bill. All the advices specified for the product to which the bill is linked will be displayed in this screen. If the advice is not applicable to the LC you are processing you can suppress its generation in the corresponding fields on this screen.

### **Party Type and Identification**

This is the type of party involved in the bill for example Drawee, Drawer etc. The party type is displayed based on your specifications in the Parties screen.

### **Party Name**

This is the name of the party involved in the bill to whom the advice is to be sent.

## **5.2.17 Specifying FFTs for a Bill**

Free Format Texts (FFT) may be a set of statements that should be printed on the advices generated to the parties, involved in the bill. Additional information that should be a part of the bill instrument can be entered in the form of an FFT.

While defining a product, you also specify the FFTs that should accompany an advice generated for a bill, involving the product. These FFTs will appear when you select an advice code. This indicates that the FFTs that you specify will appear on the advice which is highlighted.

If the Applicable Rule in the 'LC Product Preferences' screen is selected as 'OTHR', you need to specify a rule narrative for the LC Product. If the Rule Narrative exceeds the limit predefined (35 characters), the same can be defined as a Free Format Text. For BC contracts, FFT codes are associated with advices in the LC contract. The 47A and 47B tags are linked to FFT codes. The message types supported by 47A tag are:

- MT700
- MT710
- MT720

Message Types supported by 47B tag are:

- MT701
- MT711
- MT721

You can add to or delete from the list of FFTs that are defaulted from the product involved in the bill. To add an FFT to the list, click add icon and select the code that identifies the FFT, from the option list. The description of the FFT is automatically picked up and displayed. You can edit the FFT description that is defaulted to suit the requirements of the bill you are processing.

To delete an FFT from the list, highlight the code that identifies the FFT and click delete icon.

For the values of Field 72, Field 75 and Field 76 to be populated in MT 422, it is mandatory that you enter a description for the following FFT codes:

- SNDRRCVRINFO (FIELD 72)
- ADVFATEPQRY (FIELD 75)
- ADVFATEPANS (FIELD 76)

### **5.2.18 Specifying Instructions for a Bill**

You have defined instructions and assigned them codes, in the Instruction Code Maintenance screen. These instructions can be sent, along with the advices that are generated, to the parties involved in the bill.

When you select an advice code, the advice code is displayed in the Instruction section, of the screen. This indicates that the Instructions that you choose will appear on the advice, which is displayed.

The Instruction Codes indicated for the product to which the bill is associated will be defaulted to this screen. You can add or delete instruction codes, from the defaulted list of Instructions that accompanies an advice generated for the bill.

You can add to or delete from the list of Instructions, defaulted from the product involved in the bill.

The list of instructions associated with an advice is displayed. You can add to or delete from the list of defaulted instructions.

To add an Instruction to the list, click add icon and select the code that identifies the instruction from the option list. The description of the instruction is automatically picked up and displayed. You can edit the description that is defaulted.

To delete an instruction from the list, highlight the code that identifies the Instruction and click delete icon.

### 5.2.19 Viewing Event Details

Click 'Events' button in the 'Bills and Collections - Contract Input - Detailed' screen and invoke the 'Event Details' screen. The details of events, that have already taken place on the contract, will be displayed along with pending events. The date on which the event took place will also be displayed.

Click 'Accounting Entries' button to view the accounting entries for the event. Click 'Message' button to view the messages applicable to the event. Click 'Exit' or 'Cancel' button to return to the Bills Contract Detailed screen.

## 5.2.20 Viewing the Accounting Entries Passed for the Bill

From the 'Event Details' screen, click 'Accounting Entries' button and view the 'View Details' for the event. The details of the accounting entries that were passed for the event can be viewed here. The accounting entries that are passed depend on the type of bill you are processing.

The screenshot shows a web page dialog titled "View Details -- Web Page Dialog". At the top, it displays "Reference Number \* CHOBCP1001850006" and "Event INIT". Below this is a section for "Accounting Entries" with a table header including columns for Branch, Account, Dr/Cr, Amount Tag, Currency, Foreign Currency Amount, Rate, Local Currency, Date, Value Date, and Currency. Below the table is a checkbox labeled "See Position Entries" which is checked. At the bottom is a section for "Overrides" with a table header including columns for Overrides, Authorization Status, Auth By, and Auth Date Stamp. The table contains several rows of override information, such as "No limit tracking done for the contract" and "SETTLEMENT defaults Changed". An "Exit" button is located in the bottom right corner.

Branch	Account	Dr/Cr	Amount Tag	Currency	Foreign Currency Amount	Rate	Local Currency	Date	Value Date	Currency
--------	---------	-------	------------	----------	-------------------------	------	----------------	------	------------	----------

See Position Entries

Overrides	Authorization Status	Auth By	Auth Date Stamp
<input type="checkbox"/> No limit tracking done for the contract			
<input type="checkbox"/> No limit tracking done for the contract			
<input type="checkbox"/> SETTLEMENT defaults Changed			
<input type="checkbox"/> No limit tracking done for the contract			
<input type="checkbox"/> MIS Defaults picked for CHOBCP1001850006			
<input type="checkbox"/> Settlement Defaults Changed for CHOBCP1001850006			

Exit

The following information is provided for each event:

- Branch
- Account
- Dr/Cr indicator
- All the overrides that were allowed for an event will also be displayed

## 5.2.21 Viewing Advices

Click 'Message' button from the 'View Events' screen and view the list of advices applicable to a particular event in the lifecycle of the bill.

View Messages -- Web Page Dialog

Contract Reference Number CHOBCP1001850006  
Event Sequence Number 1  
Event INIT

Message	Medium	Receiver	Name	Message Status	Test Status	Authorization Status
---------	--------	----------	------	----------------	-------------	----------------------

Message

Exit

The following details of a message are displayed:

- The message type
- The Name and ID of the recipient of the message and
- The status of the message

To view the text of a message, highlight the message and click 'Message' button. Click 'Exit' or 'Cancel' button to exit the screen.

## 5.2.22 Capturing Invoice Details

When an invoice is raised against a discounted bill, you can specify a margin of the invoice amount that should be withheld. Click 'Invoice' button in the Bills contract screen and invoke the 'Invoice Details' screen.

The screenshot shows a web page dialog titled "Invoice Details -- Web Page Dialog". It contains the following elements:

- Invoice Currency:** A text input field.
- Invoice Details Table:** A table with columns for "Invoice Number", "Invoice Date", and "Amount".
- Margin Indicator:** Radio buttons for "Percentage" and "Amount".
- Margin Fields:** Input fields for "Margin", "Eligible Amount", and "Margin Amount".
- Buttons:** "Ok" and "Exit" buttons at the bottom right.

You need to specify the following details of the invoice you are raising for the bill:

- The identification number of the Invoice that you are entering
- The date on which the invoice was raised
- The amount for which the invoice was raised

The invoice amount is taken to be in the currency of the bill against which it was raised. You can enter several invoices against a bill. However the total invoice amount should be greater than or equal to the Bill amount of the bill against which the invoice is raised.

## 5.2.23 Specifying Margin Details

The system will always calculate the margin amount on the bill amount. You can indicate the manner in which the margin to be discounted should be derived. You can express the margin as:

- A percentage of the bill amount

- A flat amount

If you specified percentage, indicate the percentage of the bill amount that should be retained as a margin.

If you specified amount, indicate the margin amount. If a margin is applicable, the system will arrive at the 'Eligible Amount' by subtracting the 'Margin Amount' from the bill amount. The bill amount will not be considered as the eligible amount. The outflow on the value date (the date on which the accounting entry is passed pertaining to the day you actually fund your customer) is the eligible amount. The following example will illustrate the calculation:

**Example**

A bill contract has the following details:

- Bill Amount – 1000
- Total Invoice – Amount
- Margin Percentage – 10%

Calculation will be as follows:

Margin Amount – 10% of Bill Amount = 100

Hence, Eligible Amount = Bill Amount - Margin Amount = (1000 – 100) = 900

The Bill Amount will not be altered and remain at 1000.

On the maturity date of the contract, the inflow is the bill liquidation amount and the outflow is the margin amount.

The sum of the invoice amounts that you specify can be greater than or equal to the total bill amount.

### **5.2.24 Liquidating the Margin**

If you are liquidating the margin that you retained for a bill, specify the amount to be liquidated here. The Outstanding Margin Amount applicable to the bill at any point in time is displayed in the Outstanding Margin Amount field. The margin that you liquidate should be less than or equal to the outstanding margin amount.

### **5.2.25 Reducing LC Cash Collateral**

While processing a bill against an LC, you can reduce the cash offered as collateral for the LC.

In the 'Bills and Collections - Contract Input - Detailed' screen, you need to click 'Collateral' button. The 'LC Cash Collateral' screen is displayed. You can reduce the cash collateral amount by the amount being availed through the bill. If you make an avayment against an LC and do not reduce the cash collateral, an override message is displayed. Oracle FLEXCUBE will not automatically reverse the cash collateral when an avayment is made against an LC.

## 5.2.26 Linking Contracts to Accounts and Deposits

You can 'link' a deposit or an account to a bill contract. Linking a deposit or account to a bill means:

Type of Linkage	It Implies
Linking a deposit	<p>The entire bill amount, or a portion of it, can be linked to a deposit. The outstanding amount in the deposit should always be greater than or equal to the outstanding bill amount.</p> <p>A deposit can be linked to more than one contract provided funds are available in the deposit.</p>
Linking an account	<p>You can link the entire contract amount, or a portion of it, to a savings or current account that is maintained with you. The available balance in the account should always be equal to or greater than the contract amount that is outstanding.</p> <p>An account can be linked to any number of contracts provided a balance greater than or equal to the <i>total</i> amount outstanding in the linked contracts is available.</p>

Please note that the entire contract amount, or a portion of it, can be linked to any number of deposits and accounts, or both. From the 'Bills and Collections - Contract Input - Detailed' screen you can invoke the 'Contract Linkages' screen by choosing the 'Linkages' button. In this screen, you can specify any account maintained with you and indicate the funds that you would like to block.

## **5.2.27 Specifying the Type of Linkage**

In the Contract Details screen, you can specify the type of linkage. The bill can be linked to a:

- Deposit
- Customer account

## **5.2.28 Specifying the Details of the Linkage**

If the bill you are processing is linked to a deposit, you should enter the Reference Number of the deposit. The deposit should be a valid contract in Oracle FLEXCUBE, with a Value Date that is earlier than, or the same as the Value Date of the bill, and a Maturity Date that is the same as, or later than that of the bill.

If you link the bill to an account, you must specify the account number. The account has to be a Current or Savings Bank account.

### **Version Number**

The version number of the bill on which you are working is displayed in this field.

### **Currency**

The currency of the deposit or account to which the bill is linked is displayed once the linkage details are specified.

### **Exchange Rate**

If the currency of the bill is different from the currency of the deposit or account to which it is linked, the mid-rate for the day will be picked from the Exchange Rate table, and displayed in the screen.

### **Linked Amount**

In this screen, you should also indicate the contract amount that has to be linked to the deposit or account. This amount can be the entire bill amount, or a portion of it. The 'amount available for linkage', in the specified deposit or account, is arrived at taking into account the other linkages and uncollected funds, and the unauthorized balance (in case an account).

The system will display the following amounts, once you specify the Linked Amount:

- Amount linked to each contract or account
- The contract amount that has not been linked, in the case of a partial linkage

### **Type**

This is the type or nature of the document that you have specified in the Document code field. This field is defaulted based on the document code you have selected.

The documents required under a bill can be of the following types:

- Transport documents
- Insurance documents
- Invoices
- Other documents (including packaging list, certificates of origin, etc.)

### **Linked to Reference Number Account**

Specify the contract/account to which you wish to link the bill.

### **Converted Linked Amount**

If the linked contract is in a different currency (than that of the bill), the system will convert the account/contract amount into the bill currency and display it here.

### **Available Amount**

The system displays the amount available in the linked contract/amount.

## **5.2.29 Linking a Bill to an FX Deal**

Oracle FLEXCUBE allows you to link a bill involving a specific counterparty with FX deals involving the counterparty. This feature guards you against exchange rate fluctuations. For instance, in case cross currency settlements are made for a bill, you would, typically, enter into a forward deal with the counterparty (or ask the counterparty to enter into a forward deal).

Click 'FX Linkage' button from the Contract screen. The 'FX Linkage' screen is displayed.

Contract Reference Number CHOBCEP1001850006      Event Sequence Number 1

FX Linkage Details

FX Reference Number *	Currency	Amount	Rate

Total Amount \_\_\_\_\_      Calculate

Effective Rate \_\_\_\_\_

Ok      Exit

You can link one or more FX deals to a bill. The value of an FX deal should not exceed the value of the bill it hedges. If you link several FX deals to a bill, the total value of all the deals should not exceed the bill amount.

### 5.2.30 Capturing Amount Break-up Details

You can capture amounts for the different components of a bill. Click 'Drafts' button in the Contract Online screen to capture the different component amounts.

The components for which you can capture this information are:

- Cost of goods
- Insurance amount
- Interest amount
- Freight charges

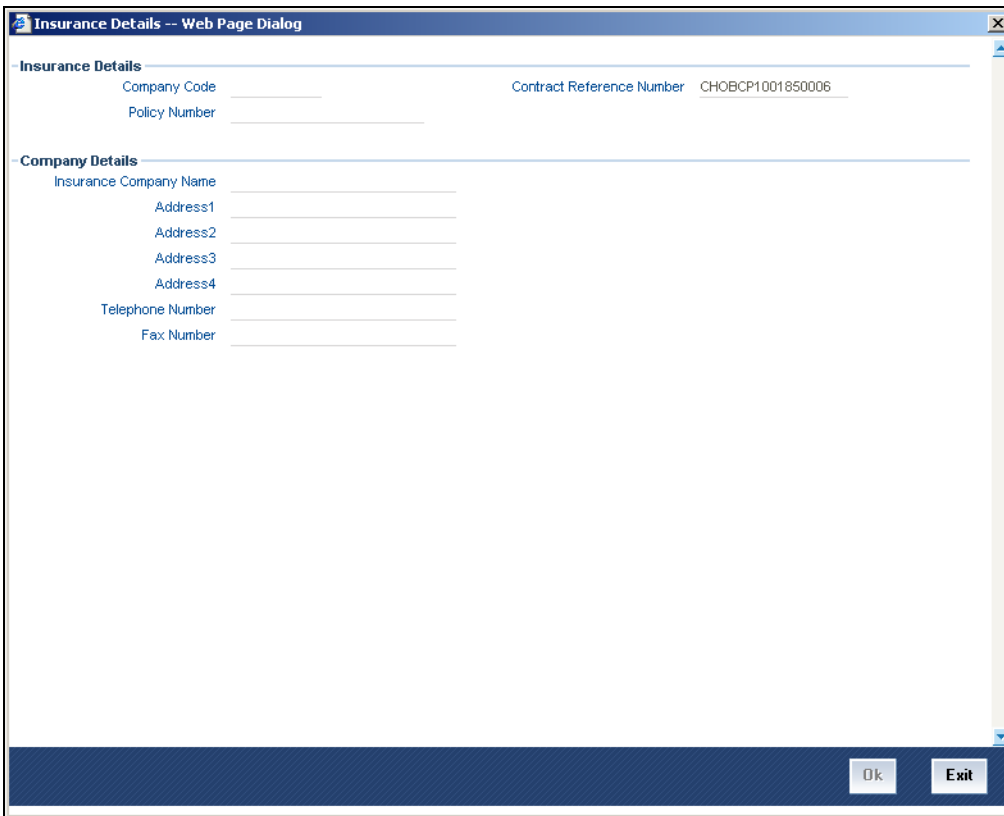

### 5.2.31 Viewing the Amended Details

You can view the values that were modified in a specific version of a bills contract. In the Contract Details screen, click 'Change Log' button to see the changes made at a specific version. The values that changed in the version will be displayed in a screen, as follows:

### 5.2.32 Associating an Insurance Company with the Bill

You can associate the name of an insurance company to the bill contract being processed. Click 'Insurance' button in the contract screen and invoke the 'Insurance Details' screen.

Select the appropriate insurance company code from the option-list. The list will display all authorized and active company codes. Upon selection of the company code, the following details will be automatically displayed by the system:

- Insurance Company Name

- Address of the company
- Telephone Number
- Fax Number

On receiving the policy, you can also specify the Insurance Policy Number in this screen. The Reference Number of the bill contract will also be defaulted to the screen.

 You can also choose to associate an Insurance Company that is not maintained in the system. When you are specifying a company code that does not exist, the system will display an override (The override can be configured to be an ignore or an error message depending on your requirement). On confirmation of the override, the company code will be automatically changed to 'XXXXXXXXX'. The system will not perform any validations. Subsequently, you can specify any company name to be associated with the contract. However, no details will be populated in this case.

### 5.2.33 Viewing Different Versions of a Bill

When you enter a bills contract, it is allotted the version number 1. From then on, each amendment that you make to the contract results in the next version of the contract being created. In Detailed View screen of a contract the latest version will be displayed. To navigate between the various versions, use the arrow buttons to view the previous and next versions.

### 5.2.34 Reassigning a Contract to another User

A contract can be deleted only by the user who entered it. If a contract has to be deleted and the user who input the same is not available to do it, you can reassign the contract to another user so that the other user can delete it. Typically, this situation may arise during EOD operations, when a contract that is not authorized has to be deleted and the user who input it has left office for the day.

You can invoke the 'Bills & Collections Contract Reassign' screen by typing 'BCDREAS' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

The screenshot shows a web page dialog titled "Bills & Collections Contract Reassign -- Web Page Dialog". It contains the following fields:

- Product Code \*
- Contract Reference Number \*
- Current User Identity
- New User Identity \*

At the bottom of the dialog, there is a table with the following structure:

Input By	Date Time	Authorized By	Date Time
ELIZA			

A "Cancel" button is located in the bottom right corner of the dialog.

To reassign a contract to another user, the following steps are required:

*Step 1* - Indicate the product associated with the bill. You can select a product code from the option list, which contains a list of the authorized products that you have created.

*Step 2* - Indicate the contract reference number of the bill you wish to reassign, to another user. You can select a reference number from the option list, which contains a list of all the active bills.

*Step 3* - Select the User ID of the user to whom you, are assigning the contract.

This user to whom you reassign a contract should have access rights to enter bill contracts.

Your User ID will be defaulted from the login screen. Select 'Save' from the Actions menu in the Application toolbar or click save icon to save the specifications you have made. Click 'Exit' or 'Cancel' button if you do not want to save the details that you entered.

### 5.2.35 Amending Bill Amount for Collection

You have the option to amend (increase and decrease) the bill amount for incoming and outgoing Collection bills. You can invoke the 'Bills & Collections Amount Amendment Input - Detailed' screen by typing 'BCDAMND' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

The screenshot shows a web browser window titled "Bills & Collections Amount Amendment Input - Detailed -- Web Page Dialog". At the top, there is a "Contract Reference Number" field with a search icon and a dropdown arrow. Below this is a "Customer Identification" field. The main area is divided into two tabs: "CONTRACT" (selected) and "ADVICES/FFT". Under the "CONTRACT" tab, there are several input fields: "Bill Currency", "Bill Amount", "Value Date", "Debit Value Date", "Credit Value Date", "Bill Due Amount", and "Maturity Date". At the bottom of the dialog, there are tabs for "Settlement", "Interest", "Events", "Charges", and "Tax". Below these tabs, there are fields for "Input By" (with the value "ELIZA"), "Date Time", "Authorized By", "Date Time", "Contract Status", and a checkbox for "Authorized". A "Cancel" button is located in the bottom right corner.

## **Contract Reference Number**

In this screen, you need to first indicate the reference number of the bill on which you want to make the amendment. You can select the reference number of the bill from the option list. The option list will contain a list of all authorized collection bills maintained in Oracle FLEXCUBE.

## **Customer Identification**

The system displays the CIF of the contract customer.

## **Bill Amount**

The original bill amount of the bill that you selected is displayed, you can amend the amount (increase/decrease) suitably. There is no limit on the number of amendments that can be made to the bill amount for a collection. However, for the amendment to be effective it should be authorized.

## **Value Date**

The Value date, is the date from which the amendment becomes effective. The accounting entries triggered off by the amendment event hitting Nostro and other accounts will be passed as of the value date. The Value date should be earlier than or the same as today's date. The Value date can be one of the following:

- Today's Date
- A date in the past
- A date in the future (you can enter a date in the future only if future dating has been allowed for the product)

If you do not enter an amendment value date, the system defaults the Bill Value Date.

The amendment value date should not be earlier than the Start Date or later than the End Date specified for the product, involved in the bill.

## **Bill Currency**

The system displays the currency in which the bill has been booked.

## **Bill Due Amount**

The actual or the outstanding amount is displayed here.

## **Maturity Date**

You can extend/reduce the maturity date either before or after the maturity date. You also have the option of amending the interest rates. You will be allowed to amend interest rates for main interest component and penalty interest component provided that the component is of a fixed type.

Both these amendments can be done for advance and arrears type of collection, through the Bills Contract On-line screen after unlocking a contract. If the collection type is of advance, then you have to define accounting entries for interest adjustment (with \_ADJ tags) and liquidation (with \_LIQD tags) in amendment event.

You have the option of amending maturity date and interest rate together as well. Maturity date or interest rate amendment is allowed for any value date (past/present/future). However, the value date you specify should be within the interest start date and interest end date of a bills contract.

To amend the interest rate you have to access the Interest Rate screen by clicking the 'Interest' button.

*For details on specifying interest details for a contract, refer to the ICCF Details explained in the Interest section of this User Manual.*

### **Example**

Let us assume:

Bill Amount = USD 10,000

From Date = 01-Jan-02

To Date = 31-Mar-02

Interest = 5%

Penal Interest = 8%

Interest on USD 10,000 for the above period USD 123.61 will be taken upfront and USD 9876.39 will be credited to the Customer's Account.

### **Case 1:**

If the settlement occurs on 25-Apr-02, then Penal Interest would be calculated on USD 10,000 for 25 days.

### **Case 2:**

Customer requests for a Maturity Date extension on 25-Mar-02 till 30-Apr-02 and the prevailing rate at that point is 5.25%. In this case, the Interest is collected on 25th March at the rate of 5.25% for the period 31-Mar-02 to 30-Apr-02. Penal Interest will be taken into account only after 30-Apr-02.

### **Case 3:**

Customer requests for a Maturity Date extension on 10-Apr-02 and wants it to be extended till 30-Apr-02. Here the Interest is collected on 10-Apr-02 at the rate of 5.25% for the period 31-Mar-02 to 30-Apr-02. Penal is taken into account after 30-Apr-02.

The value date you specify for the amendment can be current/back/future date. After you save your amendment, the accounting entries will be passed for the additional interest or excess interest with the specified value date.

You are allowed to delete an amendment only if it is still unauthorized. Subsequently the contract will be reinstated to previous state.

## Debit and Credit Value Dates

For amendment related accounting entries hitting nostro or customer accounts, you can specify a debit and credit value date that is different from the amendment value date.

The amendment value date is defaulted as the Debit and Credit value date. You have an option to change it to suit the requirement of the bill you are processing. In this case, the amendment value date is used only for debiting and crediting GLs involved in the bill.

### 5.2.36 Specifying Advices for Amendment

The advices defined for the amendment event (RAMT) will be defaulted together with the FFTs and Instructions linked to them.

While processing a bill, you can:

- Suppress the generation of an advice
- Indicate the priority with which the advice should be generated
- Indicate the Free Format Texts and Instructions that should accompany the advices

Click on the tab titled 'Advices/FFT' and invoke the following screen to specify the advices that should be generated for the amendment.

The screenshot displays the 'Bills & Collections Amount Amendment Input - Detailed' web page dialog. The window title is 'Bills & Collections Amount Amendment Input - Detailed -- Web Page Dialog'. The interface includes a 'Contract Reference Number' field with a dropdown menu showing 'D'. Below this is a 'Customer Identification' field. The main area is divided into several sections: 'CONTRACT' and 'ADVICES/FFT' tabs, with 'ADVICES/FFT' selected. Under 'Advices', there is a table with columns: Advice Code, Medium, Party Type, Party ID, Party Name, Priority, and Suppress. Below the table are 'Free Format' and 'Instructions' sections, each with a table. The 'Free Format' table has columns: Code and Free Format Text. The 'Instructions' table has columns: Code and Instructions Text. At the bottom, there are tabs for 'Settlement', 'Interest', 'Events', 'Charges', and 'Tax'. The footer contains fields for 'Input By' (ELIZA), 'Date Time', 'Authorized By', 'Date Time', 'Contract Status', and an 'Authorized' checkbox. A 'Cancel' button is located in the bottom right corner.

In the case of an outgoing bill, an MT 430 is sent. For an incoming bill, an MT 900 is sent to the remitting bank seeking permission for the amendment. When the confirmation is received from the remitting bank, you can make the necessary amendment.

### **Medium**

If advices are to be generated, for the event, it is mandatory for you to also specify the medium through which an advice is to be transmitted. An advice that is generated can be transmitted Mail, TELEX or SWIFT. You can select the appropriate medium code from the option list.

### **Priority**

For messages sent through media like SWIFT or TELEX, you can specify the priority with which the advice should be generated. By default, the priority of all advices is marked as Normal.

You have the option to prioritize advices to one of the following options:

- Normal
- Medium
- High

However, you can change the priority of an advice to High only for Payment Advices.

### **Suppress**

By default, all the advices that have been defined for the event will be defaulted to this screen. As certain advices may not be applicable to the bill you are processing, you can suppress its generation.

### **Advice Code**

This is the code that identifies the advice that can be generated for a bill. All the advices specified for the product to which the bill is linked will be displayed in this screen. If the advice is not applicable to the LC you are processing you can suppress its generation in the corresponding fields on this screen.

### **Party Type**

This is the type of party involved in the bill for example, Drawee, Drawer etc. The party type is displayed based on your specifications in the Parties screen.

### **Party ID**

If the party to whom the advice is to be sent is a customer of your bank the CIF Id assigned to the customer is displayed in this field.

### **Party Name**

This is the name of the party involved in the bill to whom the advice is to be sent.

## **5.2.37 Specifying FFTs for an Advice**

The list of FFTs associated with an advice is defaulted. You can add to or delete from the list of defaulted FFTs.

To add an FFT to the list, click add icon and select the code that identifies the FFT, from the option list. The description of the FFT is automatically picked up and displayed. You can edit the FFT description that is defaulted.

To delete an FFT from the list, highlight the code that identifies the FFT and click delete icon.

### **5.2.38 Specifying Instructions for an Advice**

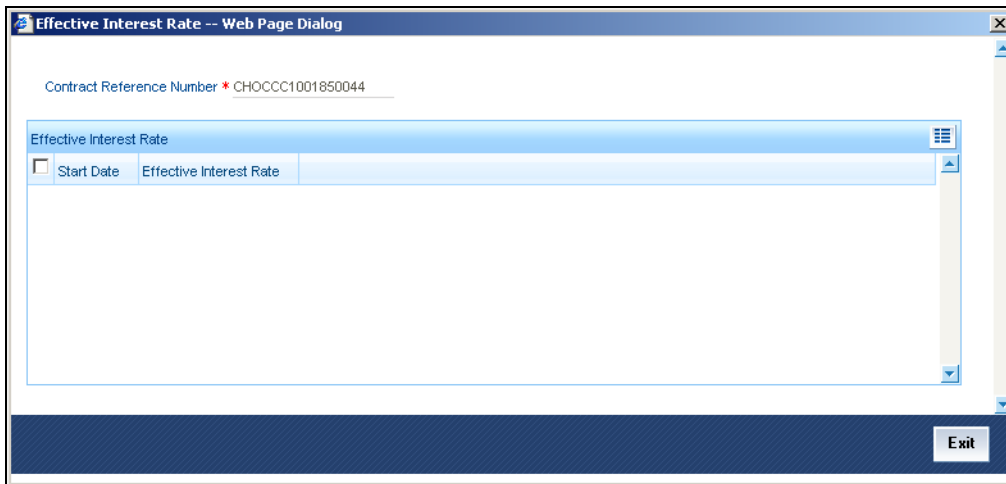

The list of instructions associated with an advice is displayed. You can add to or delete from the list of defaulted instructions.

To add an Instruction to the list, click add icon and select the code that identifies the instruction, from the option list. The description of the instruction is automatically picked up and displayed. You can edit the description that is defaulted.

To delete an instruction from the list, highlight the code that identifies the Instruction and click delete icon.

### **5.2.39 Viewing the Effective Interest Details for a Bill**

You can view the effective interest rates applied for the contract through the 'Effective Interest Rate' screen. Click 'Effective Interest Rate' button to invoke the screen.

In this screen you will be able to view the Effective Interest Rate and the date from which interest rate is effective.

## 5.2.40 Capturing Split Settlement Details for a Bill

You can capture split settlement details for the bill using the 'Split Details' screen by clicking 'Split Settlements' button in the 'Bills and Collection - Contract Input - Detailed' screen.

Settlement Split Master			
<input type="checkbox"/>	Amount Tag	Currency	Amount

Settlement Split Details										
<input type="checkbox"/>	Serial	Amount Tag	Customer	Percentage of Proceed	Branch	Account Currency	Account	Amount	Loan Account	Exit

## 5.2.41 Basis Details

### **Amount Tag**

The bill amount tag defined for the current event in the bills contract is displayed here. It is picked up from those defined for the INIT event. You cannot change them.

### **CCY**

The currencies associated with the amount tags (as picked up from the INIT event) are displayed here. You cannot change them.

### **Amount**

The amount for each amount tag (picked up from the INIT event) is displayed here. You cannot change them.

## **5.2.42 Split Details**

### **S. No**

The system generates a running sequence number for each split record. You cannot modify it. The system automatically generates the sequence number on introducing a new split.

### **Amount Tag**

The selected amount tag in the basis details section is displayed here in the split details section. If there are no settlement tags for the event being processed, the system will display an error.

### **Amount**

Specify the split amount for the split amount tag. The sum of amount should not be greater than the basis amount. The system calculates the amount on the basis of the split percentage. You cannot leave this field blank.

### **Percentage of Proceeds**

Specify the split percentage of the Bill Amount for each account. The sum of split amounts should be equal to the total amount specified for the corresponding basis amount tag. You cannot leave this field blank.

### **Customer**

Specify the customer to whom the split amount should be assigned. The adjoining option list displays all the customers maintained in the system. You can select the appropriate one.

### **Branch**

The system displays the branch where the settlement account for the split amount tag resides. The adjoining option list displays all the valid branches in the system. You can choose the appropriate one.

### **Account Currency**

The settlement account currency for the split amount tag is defaulted based on the settlement account chosen. You cannot change it.

### **Account**

Select a valid account for the specified settlement account branch, from the option list.

### **Loan Account**

Check this box if you want the split amount to be booked as a loan. The split settlement amount entered as the Loan Amount is used to create the loan contract. You can select more than one Account as Loan account. This is enabled only for settlement tags BILL\_LIQ\_AMT or BILL\_LIQ\_AMTEQ.

## Exchange Rate

If the basis amount currency is different from the settlement account currency, you need to specify the exchange rate that should be used for conversion.

### 5.2.43 Capturing Forfaiting Interest Computation Details

Forfaiting refers to purchasing of an exporter's receivables (the amount importer owes the exporter) at a discount by paying cash.

The purchaser of the receivables (forfeiter) becomes the entity to whom the importer is obliged to pay his/her debt. Your bank can process such transactions for export bills under an LC and Usance export bills. As mentioned in the earlier chapters, you can specify the change of operations for such bills at the product level.

While entering a bills contract, you can capture forfaiting interest details in the 'Interest Computation Dates' screen. Click 'Interest Dates' button in the 'Bills and Collections – Contract Input - Detailed' screen and invoke this screen.

#### Interest Component

Specify the interest components. You can choose the appropriate one from the adjoining option list. The forfaiting and rebate interest components will be displayed in this list only if the bill operation has changed to 'Forfaiting'.

#### Calculate From Date

You can specify the start date for interest computation. The start date for the main interest component and acceptance interest components are defaulted from the 'Bills and Collections - Contract Input - Detailed' main screen. However, for the main component, you can specify the base date. The start date for forfaiting and rebate interest components is defaulted as the current date. However, you can change this. For components that have already been liquidated, you cannot change this date.

The start date for all interest components can be less than or equal to the current date. You cannot input a date in the future.

### Calculate To Date

Specify the end date for interest computation. This date for the main interest component and acceptance interest components are defaulted from 'Bills and Collections - Contract Input' main screen. However, for the main component, you can specify the date corresponding to the base date + bill tenor. The system defaults the end date for the forfaiting and rebate interest components as the contract maturity date. However, you can change this. For components that have already been liquidated, you cannot change this date.

The end date for all interest components should be greater than the start date. Oracle FLEXCUBE supports the upload of component-level interest start and end dates.

## 5.2.44 Viewing Linked Loan Details

You can preview the details of the loan linked to the bills contract by clicking 'Loan Accounts' button in the Contract Online screen. The details of the loan are displayed in the 'Account Details' screen.

The following details are displayed here:

- All the Loan Account Numbers which are linked to bill
- The Amount Financed for the loan account
- The currency of the loan account

## 5.2.45 Indicating Advice Processing Charge Collection Preference

Oracle FLEXCUBE provides you with the facility to automatically debit customers of the charges you incur in sending them advices over different media types. When creating a product, you can set up these charges. However, when processing a contract, you can opt to waive these charges.

At the time of saving a contract, the system displays the 'Product Event Advices Maintenance' screen wherein you will be allowed to:

- Suppress an advice from being sent
- Change the Priority of the advice
- Indicate that charges have to be collected from the receiving party

Advice Name *	Description	Trigger	Supress	Priority	Charges
---------------	-------------	---------	---------	----------	---------

If you indicate that the customer is the receiver of charges, the system automatically locates the relevant Receiver, Media and Country combination from the available Charge Maintenance Details records, and deducts the charge amount associated with the particular combination. The Charge amount is deducted from the customer account in the specified currency. If you have not maintained a Charge Maintenance Details record for the particular customer, the system uses the wildcard entry type record to deduct the charge amount.

### **5.2.46 Liquidating Receivable Components of a Bill**

The components of a bill can be liquidated either automatically or manually. The receivable components of a bill, however, will have to be liquidated manually. This is because when a component is due from a customer, and the customer is unable to pay, you debit your interest receivable account and credited the income account.

When the customer pays you can liquidate the receivable outstanding components of the bill from the Bills and Collections Contract screen either by selecting 'Liquidate' from the Actions menu in the Application toolbar or clicking liquidate icon. Enter the liquidation amount and save the liquidation. The contract will be liquidated.

### **5.2.47 Reversing Liquidation Entries**

You can reverse the authorized accounting entries that were passed when you liquidated an outstanding receivable component of a bill. You can reverse the accounting entries passed for the liquidation of an outstanding component of a bill through the Receivable Liquidation screen. Specify the Contract Reference Number of the bill. All the outstanding components of the bill that were paid from a receivable account will be displayed.

Query the component whose liquidation entries you want to reverse. Choose Reverse from the Processing sub-menu of the Actions Menu. The system will prompt you to indicate whether you want to *reverse* the liquidation entries passed for the outstanding component or make the component outstanding again.

If you indicate that the entries should be reversed, the accounting entries that were passed earlier will be reversed. However, you will not be able to pass further entries for the payment of that component at a future date. If you indicate that the component should be made outstanding, the accounting entries that were passed earlier will be reversed and the component will become outstanding again.

The reversal of the liquidation of a component may sometimes entail a change in the status of the bill. If the contract is set for automatic status change, this change will be made by the system automatically.

### **5.2.48 Partial Payment of Discounted Bills**

For discounted export bills you can partially liquidate the principal before the maturity date of the bill. In this case, correction entries will be passed for the:

- Interest that has been collected in advance and
- Interest receivable in the future along with the respective accruals/amortization as the case may be

#### **Example**

You have entered a bill worth USD 20000 in Oracle FLEXCUBE on 1 February 2001. The bill expires on 31 March 2001. Original Interest calculation period: 01 Feb to 31 March 2001 On 08 Feb you partially liquidate USD 8000 of the Original Bill Amount. The excess interest that should be refunded to the customer is derived as follows:

- Interest collected in advance on USD 20000 = X
- Interest on 20000 between 1 Feb to 7 Feb 01 = Y
- Interest on 12000 between 1 Feb to 7 Feb 01 = Z
- Excess interest refunded to the customer = X - (Y+Z)

*Accrual adjustment entries as on 11 Feb 2001 (the liquidation date)*

- Accruals already done on interest between 1 Feb to 10 Feb 2001 = A
- Interest calculated on 20000 between 1 Feb 01 to 7 Feb 01 = B
- Interest calculated on 12000 between 8 Feb 01 to 11 Feb 01 = C
- Accrued interest after partial liquidation = (B + C) - A

## 5.3 **List of Outstanding Items Report**

This report lists all the outstanding items (including commissions and charges), which have been debited to a GL account, which is normally the accounts receivable ledger. The items are marked as outstanding. This report is available in the Application Browser under LQ (indicating liquidation).

### 5.3.1 **Selection Options**

The report is sorted on the basis of currency. It is listed in the serial order of the Accounts receivable account under the currency type. As the sequence of this report is by the Accounts Receivable account, a bill may be reported in more than one place i.e., different charges and interest items were booked to different GLs. This report highlights the necessary details for collection or payment of the outstanding amount, so that the required action may be taken.

### 5.3.2 **Contents of the Report**

The report contains the following information:

Field	Description
Party CIF ID	This is the ID assigned to the customer in the Customer Information File (CIF) of the Core Services module of Oracle FLEXCUBE.
Party Name	The short name of the Customer maintained in bill will be printed.  For all credits which have been opened at your branch, the name of the applicant is printed here.  For those credits which have been advised or confirmed (i.e., the original operation was advise, advise & confirm or confirm) the name of the beneficiary bank is printed in this field.
Party Type	This is the party type assigned to the customer in the Parties screen.
Ac CCY	This is the currency of the outstanding amount.
Module	This is the module to which the outstanding receivable component belongs.
Contract Ref No	This is the reference number of the contract whose outstanding receivable components are overdue.
Event Code	This is the event under which the Outstanding component should have been paid.

Field	Description
Booking Date	This is the date on which the original entry was passed.
Receivable Ac Code	This is the account that is to be credited when the customer pays the outstanding component.
Ac Branch	This is the branch to which the account belongs.
Amount	This is the amount of the outstanding component that is to be received from the customer.
Amount Tag	This is the amount tag of the component.
Description	This is a description of the amount tag.

### 5.3.3 Liquidation of Overdue Components

You can liquidate the overdue components i.e. Normal and Penal components partially or fully through the 'Payment Input' screen.

You can invoke the 'Bills & Collections Payment Input' screen by typing 'BCDPMNT' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

The screenshot displays the 'Bills & Collections Payment Input' web page dialog. The window title is 'Bills & Collections Payment Input -- Web Page Dialog'. The form contains the following fields and values:

- Contract Reference Number: CHOBIN001850003
- Contract Currency: USD
- Customer Name: AAA111
- Outstanding Balance: 1,000.00
- Value Date: 7/3/2000
- Total Paid: (empty)

Buttons include 'Populate', 'Allocate', and 'Sum'. A 'Payment Breakup' table is shown with columns: Component, Amount Due, Currency, Amount Prepaid. The bottom of the screen features a navigation bar with tabs for 'Settlement', 'Events', and 'MIS Details', and an 'Exit' button.

This screen displays all the overdue interest and penalty interest on Principal. All the active contracts with bill amount 'zero' will be displayed. You can choose to liquidate the overdue components only if the interest component is specified as Arrears.

This provision is applicable for incoming advance bills where interest is collected in arrears and outgoing discounted/purchased bills (penalty interest is always collected in arrears). In case the components are liquidated, the screen amends the status of the contract as liquidated. You can also reverse the interest component that is liquidated.

---

## 6. Defining Discount Accrual Fee Classes

### 6.1 Introduction

In Oracle FLEXCUBE, you can define the different *types* of charges or fees that apply on a product as 'classes'. A charge class is a specific type of charge component (E.g. 'Charges for amending the terms of a loan').

When defining a product, you merely have to attach the required classes. In this manner, a contract processed under a particular product acquires the classes (components) associated with the product.

A discount accrual fee class can be made applicable for loans and bills processed in Oracle FLEXCUBE. To apply a discount accrual fee, you should first define attributes for each of the components.

#### 6.1.1.1 Steps Involved in Processing Discount Accrual Fees

The following steps are involved in processing discount accrual fees:

1. Defining discount accrual fee classes
2. Associating discount accrual fee classes with a product

#### 6.1.2 Defining a Discount Accrual Fee Class

A discount accrual fee class specifies the accrual parameters for interest, charges and fees. You can define the attributes of a discount accrual fee class in the 'Discount Accrual Class Maintenance' screen. You can invoke this screen by typing 'DADACRCL' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

Before defining the attributes of a discount accrual fee class, you should specify the following:

**Class Code**

Specify a unique identifier for the class.

**Description**

Enter a brief description for the class. A description would help you easily identify the class.

**Module**

Specify the module to which the class is associated.

**Module Description**

A brief description of the module is displayed here.

**6.1.2.1 Specifying Accrual Preferences**

When building a discount accrual fee class, you define the following attributes:

**Discount Accrual Required**

Specify whether Discount accrual should be performed for the class.

**Accrual Frequency**

Specify the frequency at which discount accrual should be performed. This can be either Daily or Monthly. For monthly accruals, the discount accrual will be done on the last day of the month.

## Acquisition Type

The Acquisition Type determines whether the initial cash flows for a C contract can be more (Premium) or less (Discount) or equal (Par) to the bill amount.

The 'Acquisition Type' is determined by the cash flows of interest, charges and fees for which 'Consider as Discount' option is checked.

The drop down list comprises of the following values:

- Par
- Par/Discount
- Par/Premium
- Par/Discount/Premium

If the incoming cash flows of all the above components are greater than outgoing cash flows considering Incoming flow as Positive (In case of bills), the acquisition type is considered as Discount.

If the incoming cash flows of all the above components are less than outgoing cash flows considering Incoming flow as Positive (In case of bills), the acquisition type is considered as Premium.

If the incoming cash flows of all the above components are equal to outgoing cash flows considering Incoming flow as Positive (In case of bills), the acquisition type is considered as Par.

The acquisition type of a contract can change from premium to par/discount or otherwise depending on the charges getting liquidated during the life cycle of the contract.

## Handling of Foreclosure

Specify how foreclosures with respect to the contracts using the class must be handled. You can opt for the completion of pending accruals, or refund. In case the 'Acquisition Type' is 'Par', there are no refunds. Only the pending accruals are completed.

### **6.1.2.2 Specifying Day Count Method Details**

You can specify the day count methods for each currency using the class. You can define the day count methods for both the Numerator and the Denominator.

### **6.1.3 Associating Discount Accrual Components to Products**

After building discount accrual fee classes you can associate the class with loans or bills products. Click 'Discount Accrual' button in the Product Definition screen. The 'Discount Accrual Preference Association' screen is invoked.

Discount Accrual Preference Association -- Web Page Dialog

Product Code \_\_\_\_\_  
 Description \_\_\_\_\_

Class Code \_\_\_\_\_ Default From Class

---

**Accrual Preference**

Discount Accrual Required

Accrual Frequency

Handling of fore closure

Acquisition Type

**Day Count Method**

<input type="checkbox"/> Currency Code *	Currency Name	Numerator Method	Denominator Method

Ok Exit

To associate discount accrual fee class with a product, click 'Default From Class' button in the Discount Accrual Preference Association screen. Select the appropriate discount accrual fee class from the list of classes.

The attributes defined for the discount accrual fee class defaults to the product. You have the option to modify the attributes defined for the class, to suit the requirement of the product you are creating. Alternatively, you can choose to define the discount accrual details for the product.

The system derives the acquisition type based on the following criteria:

Product Type	Inflow/Outflow	Acquisition Type
Asset	Inflow>Outflow	Discount
Asset	Inflow<Outflow	Premium
Asset	Inflow=Outflow	Par

An asset here is a BC contract and Inflow/Outflow could pertain to the charges and discounted interest associated with a contract. Now, if the acquisition type derived by the system for a contract and the acquisition type of the discount accrual class linked at the product are different, system does not allow saving of a contract.

#### 6.1.4 Events and Accounting Entries for Discount Accrual

While defining the accounting entries for the Loans and Bills modules you must identify the events and accounting entries that are required for discount accrual fee accounting. One of these is the YTM based Discount Accrual (YACR) event.

It is meant to indicate the periodic discount accruals for the contract. The Accounting Roles that should be associated with the event YACR are:

Accounting Role	Acquisition Type	Product Type	Description
EIMDISCRIA	Discount	Asset	Effective Interest Based Discount To Be Accrued
EIMDISCINC	Discount	Asset	Effective Interest Based Discount Accrued Till Date
EIMPREMPIA	Premium	Asset	EIM Premium paid in advance
EIMPREMEXP	Premium	Asset	EIM Premium Expense
EIMINTADJREC	Par	Asset	EIM Interest Adjustment Receivable
EIMINTADJINC	Par	Asset	EIM Interest Adjustment Income

The Amount Tags for the YACR event:

Amount Tag	Description
EIMDISC_ACCR	Net Discount Accrual amount for the processing day
EIMDISC_ADJ	Discount accrual refund amount
EIMPREM_ACCR	Net premium accrual amount for processing day
EIMINTADJ_ACCR	Interest adjustment amount

Amount Tag	Description
EIMPREM_ADJ	Premium accrual refund amount

The following entries should be maintained for the YACR event for assets (BC contracts):

Accounting Role	Amount Tag	Dr/Cr Indicator
EIMDISCRJA	EIMDISC_ACCR	Debit
EIMDISCINC	EIMDISC_ACCR	Credit
EIMDISCRJA	EIMDISC_ADJ	Debit
CUSTOMER	EIMDISC_ADJ	Credit
CUSTOMER	EIMPREM_ADJ	Debit
EIMPREMPIA	EIMPREM_ADJ	Credit
EIMINTADJREC	EIMINTADJ_ACCR	Debit
EIMINTADJINC	EIMINTADJ_ACCR	Credit
EIMPREMEXP	EIMPREM_ACCR	Debit
EIMPREMPIA	EIMPREM_ACCR	Credit

The account head mapped to the accounting role EIMDISCRJA and account heads mapped to the subsystem specific RIA (Received in Advance) accounting roles should be maintained as the same account.

For discount accrual, you must also maintain the following accounting set-up for the Charge Liquidation event. The charge liquidation event is the event in the life of a bill contract at which the charge is going to be levied; you would have specified this while building a charge class or while attaching a charge class to the product. This is in addition to the normal accounting set-up that you would define for the LIQD event:

Accounting Role	Description
component_RIA*	Charge amount Received in Advance

\* The component will be replaced by the appropriate Charge Rule.

Amount Tag	Description
component_DISC*	Charge Amount to be discounted
component_PIA	Charge amount paid in advance

\* The component will be replaced by the appropriate Charge Rule. The following entries should be maintained for the charge liquidation event.

Accounting Role	Amount Tag	Dr/Cr
<Charge rule>_RIA	<Charge rule>_DISC	Credit
CUSTOMER	<Charge rule>_DISC	Debit
<Charge rule>_INC	<Charge rule>_LIQD	Credit
CUSTOMER	<Charge rule>_LIQD	Debit
<Charge rule>_PIA	<Charge rule>_PREM	Debit
CUSTOMER	<Charge rule>_PREM	Credit

Along with the normal accounting entry setup for the LIQD event, you must also maintain the following accounting entries:

Accounting Role	Amount Tag	Dr/Cr Indicator
EIMDISCRJA	EIMDISC_ADJ	Debit
CUSTOMER	EIMDISC_ADJ	Credit

### 6.1.5 **Specifying Status Change Details for Discount Accrual**

You need to define the manner in which discount accrual is processed in the event of status changes. You must maintain the following details as part of status maintenance for bills:

- Whether discount accruals should be stopped or reversed
- The transfer GLs for discount accrual

You can specify the following roles as part of the transfer GLs:

Accounting Role	Description
EIMDISCRJA	Effective Interest Based Discount To Be Accrued
EIMDISCINC	Effective Interest Based Discount Accrued Till Date
EIMPREMPIA	EIM Premium Paid In Advance
EIMPREMEXP	EIM Premium Expense
EIMINTADJREC	EIM Interest Adjustment Receivable
EIMINTADJINC	EIM Interest Adjustment Income

To recall, at the BC product level, you maintain preferences pertaining to status change processing through the 'Bills – User Defined Status Maintenance' screen (which you invoke by clicking 'Status' button in the 'Bills and Collections – Product Definition' screen). During the contract status change processing, the following are supported by the system based on the preferences maintained:

- All discount accrual accounting roles are made available for transfer.

- The balances transferred are:
  - Premium TBA to Premium Accrued
  - Discount TBA to Discount Accrued
- Setting of the 'Stop Accrual' flag stops the discount accrual also. This indicates that the YACR event will not be pass any accounting entries.
- Setting of 'Reverse Accrual' flag reverses the following balances:
  - Premium Accrued
  - Discount Accrued

*For more information, refer to the section 'Aging Analysis for a Product' in the chapter titled 'Product Definition' in the Products User Manual.*

### **6.1.6 Processing for Discount Accrual Fees**

The System provides a batch process for discount accrual. You can trigger the batch process through the 'Setting up Mandatory Programs' screen. The YACR event is initiated, and the net discount accrual amount for the day is computed.

### **6.1.7 Computation of Net Discount Accrual Amount for a Processing Day**

The following details are stored in the system during discount accrual:

- Outstanding bill amount
- Outstanding arrears interest accrued
- Discounted interest to be accrued
- Premium to be accrued
- Discount to be accrued
- Interest adjustment accrued already
- Premium accrued till date
- Discount accrued till date

Catch-Up of discount accrual is done during a BC contract rollover also. The net discount accrual amount for a processing day is computed as follows:

- All future cash flows are discounted to the processing day using the IRR effective as of the processing day, and the net present value (NPV) of the contract as of the processing day is obtained. The NPV is calculated based on the acquisition type as follows:

- If the acquisition type is 'Discount', NPV is given by: NPV = outstanding bill amount + outstanding arrears interest accrued + outstanding acquired interest – (discounted interest to be accrued – discounted interest accrued) – (discount to be accrued - discount accrued).
  - If the acquisition type is 'Premium', the NPV is given by: NPV = outstanding bill amount + outstanding arrears interest accrued + outstanding acquired interest - (discounted interest to be accrued – discounted interest accrued) + (discount to be accrued - discount accrued).
  - If the acquisition type is 'Par', the NPV is given by: NPV = outstanding bill amount + outstanding arrears interest accrued + outstanding acquired interest – (discounted interest to be accrued – discounted interest accrued) + (interest adjustment accrued already + interest adjustment accrued).
  - Outstanding arrears accrued interest is only for arrears (bearing) type contracts. The discounted interest is only for discounted type contracts.
- The till date discount accrual amount is computed using the following expression:

$$TDA_n = NPV_n - (P_n - DTA_s) - AI_n + DA_s$$

- Where,
  - **TDA<sub>n</sub>** represents the Till Date Discount Accrual for nth Accrual Date
  - **NPV<sub>n</sub>**, the Net Present Value of the contract as of nth Accrual Date
  - **P<sub>n</sub>**, the Outstanding Principal of the contract as of nth Accrual Date
  - **DTA<sub>s</sub>**, the Discount to be accrued as of current IRR Effective Date
  - **AI<sub>n</sub>**, the Current Period Accrued Interest as of *n*<sup>th</sup> Accrual Date, and
  - **DA<sub>s</sub>**, the Discount Accrued as of current IRR Effective Date
- The difference between the 'Till date discount accrual' amount as of the previous processing day and the 'Till date discount accrual' amount as of the current processing day is the 'Net Discount accrual' amount that is realized as income as of the processing day. The expression used would be

$$NDA_n = TDA_n - TDA_{(n-1)}$$

- Where,
  - **NDA<sub>n</sub>** represents the Accrual for nth Accrual Date,
  - **TDA<sub>n</sub>**, the Till Date Discount Accrual for nth Accrual Date and
  - **TDA<sub>n-1</sub>**, the Till Date Discount Accrual for n-1th Accrual Date.

### 6.1.8 IRR calculation and IRR Re-calculation

IRR calculation does not happen in the below mentioned cases:

- Collection
- Payment
- Acceptance
- Initial stage of a contract
- Advance by loan is marked for the contract
- Contract closure

IRR recalculation happens during the following events with new effective date:

- Value dated amendment of a contract maturity date
- Floating interest rate revision

- Partial prepayment to a principal amount for a contract
- New charge on a contract, payable by customer
- Amendment of the Interest to Date
- Amendment of the interest rate
- Partial prepayment to an interest amount

 The above events pertain to bearing/arrears type of BC contracts.

For discounted/true discounted type of BC contracts where the interest is collected in advance, IRR recalculation is done with a new effective date during the following events:

- A partial prepayment to a principal amount
- New charge on a contract, payable by your Customer

Additionally, IRR recalculation happens during the below mentioned events if charges are applicable on them:

- REFA – Refusal of Bill/draft acceptance
- REFP – Refusal of bill/ draft payment
- TAFT – Acceptance of payment fate transfer
- TACP – Bill/draft acceptance tracer
- TPAY – Principal payment follow-up tracer
- TPFT – Principal payment fate tracer
- AFAT – Advice of acceptance fate
- PFAT – Advice of payment fate
- PRNA – Protest of non-acceptance of draft
- PRNP – Protest of non payment of principal
- BACP – Acceptance of bill

 IRR recalculation is undone during reversal of a partial prepayment.

IRR recalculation is not done during the following events:

- When a payment is overdue
- For a regular payment
- For a full prepayment
- Amendment of a bill amount

 Amendment of a bill amount is supported for collection bills and this does not form part of funding operations of the bank. It is also assumed that there will be no interest components on the collection bills.

**Discount Accrual Processing**

Let us consider a Loan contract with following parameters

<b>Loan Amount</b>	<b>USD 1,000,000</b>
Value Date	01-Jan-2003

<b>Loan Amount</b>	<b>USD 1,000,000</b>
Maturity Date	01-Jan-2004
Interest Rate	12%
Commission Rate	6%
Commission Value Date	01-Jan-2003
Interest Repayment Frequency	Monthly (Month Ends)
Principal Repayment Frequency	Bullet
Interest Basis	Actual/365
Discount Accrual Day count Numerator Method	Actual
Discount Accrual Day count Denominator method	365
Interest Payment Method	Bearing
IRR	20.30%

The projected cash flow for the contract would be:

<b>Due Date</b>	<b>Component</b>	<b>Amount (USD)</b>
01-Jan-2003	Principal	-1,000,000
01-Jan-2003	Commission	60,000
01-Feb-2003	Interest	10,191.78
01-Mar-2003	Interest	9,205.48
01-Apr-2003	Interest	10,191.78
01-May-2003	Interest	9,863.01
01-Jun-2003	Interest	10,191.78
01-Jul-2003	Interest	9,863.01
01-Aug-2003	Interest	10,191.78
01-Sep-2003	Interest	10,191.78
01-Oct-2003	Interest	9,863.01
01-Nov-2003	Interest	10,191.78
01-Dec-2003	Interest	9,863.01

Due Date	Component	Amount (USD)
01-Jan-2004	Interest	10,191.78
01-Jan-2004	Principal	1,000,000

If the Discount Accrual Processing Date is 15-Feb-2003, the processing for discount accrual is as follows:

**Step 1**

NPV of the contract is computed as of 15-Feb-2003 by discounting the future cash flows as shown below:

Due Date	Amount	(d <sub>t</sub> -d <sub>1</sub> )/D	1+IRR	(1+IRR) <sup>(d<sub>t</sub>-d<sub>1</sub>)/D</sup>	Discount CF
01-Mar-2003	9205.48	0.038	1.203	1.0071	9140.46
01-Apr-2003	10191.78	0.123	1.203	1.023	9962.22
01-May-2003	9863.01	0.205	1.203	1.0387	9495.54
01-Jun-2003	10191.78	0.29	1.203	1.0551	9659.27
01-Jul-2003	9863.01	0.373	1.203	1.0713	9206.78
01-Aug-2003	10191.78	0.458	1.203	1.0882	9365.53
01-Sep-2003	10191.78	0.542	1.203	1.1054	9219.70
01-Oct-2003	9863.01	0.625	1.203	1.1224	8787.80
01-Nov-2003	10191.78	0.71	1.203	1.1401	8939.02
01-Dec-2003	9863.01	0.792	1.203	1.5755	8520.56
01-Jan-2004	1010191.78	0.877	1.203	1.1759	859105.75
					951402.94

The NPV of the Contract as of 15-Feb-2003 = USD 951,402.94

**Step 2**

IRR Start date = 01-Jan-2003

Outstanding Principal as of 12-Feb-2003 = USD 1,000,000

Discount to be accrued as of 01-Jan-2003 = USD 60,000

Accrued Interest as of 15-Feb-2003 = USD 4602.74

Discount Accrued as of 01-Jan-2003 = USD 0.00

Previous process till date = 14-Feb-2003

Till Date Accrual as of 14-Feb-2003 (TDA<sub>n-1</sub>) = USD 6647.43

$$TDA_n = NPV_n - (P_n - DTA_s) - AI_n + DA_s$$

TDA<sub>n</sub> = 951402.94 - (1000000-60000)-4602.74+0

TDA<sub>n</sub> = 6800.2

Net Discount Accrual =  $TDA_n - TDA_{n-1}$

Net Discount Accrual = 6800.20 – 6647.43

Net Discount Accrual = 152.77

Net Discount Accrual amount for 15-Feb-2003 processing = USD 152.77

## 7. Registration of a Collection Bill

### 7.1 Introduction

The details of a collection bill are captured through the Bills - Contract Registration screen. No accounting entries are passed nor will any charges be levied during the registration of a collection bill. A collection bill is registered based on the first set of documents (original or duplicate) received. On registration, a Contract reference number is allocated to the bill. At the time of processing a collection bill that has already been registered, you only need to specify the collection reference of the bill. All the details entered at the time of registration will automatically be picked up and defaulted to the contract main screen.

#### 7.1.1 Entering Details of the Registration of a Bill

You can invoke the 'Bills & Collections Registration Input' screen by typing 'BCDREGON' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button. The 'Bills & Collections Registration Input' screen is displayed. Select 'New' from the Actions Menu in the Application toolbar or click new icon.

If you are calling a bill that has already been registered, double click on the reference number of the bill from the summary screen.

Party Type	Party ID	Party Name	Country	Language	Reference	Address1	Address2	Address3	Address4
------------	----------	------------	---------	----------	-----------	----------	----------	----------	----------

You can enter the details of the registration of a collection bill by:

- Selecting a template that has been created earlier. If you do so, the details that have been stored in the template will be displayed. You can change the values in any of the fields except the Product Code.
- Copying the details from an existing contract and only changing only details that are different for the contract you are entering

- Entering the details of the Registration afresh by using your keyboard and the option lists that are available at various fields

To facilitate quick input, you need to just enter the product code. Based on the product code you choose, many of the fields will be defaulted. You can overwrite these defaults to suit your requirement. You can further add details specific to the collection bill, like the bill amount, the tenor and the party details of the bill.

#### **7.1.1.1 Specifying References of the Bill**

The bills that come to your bank for collection can be raised against an LC drawn at an earlier date by another bank.

##### **Collection Reference**

Enter a unique reference that will help you identify the collection bill. In case of an outgoing collection bill you can specify an identification of your own. In case of an incoming bill, you can indicate the reference assigned to the bill by your confirming bank.

##### **Letter of Credit Reference**

If you are processing an outgoing bill under an LC that was issued by another bank, you can enter the Reference number assigned to the LC by the other bank.

#### **7.1.1.2 Specifying Counterparty Details**

##### **Customer**

Enter the name or CIF Id (as the case may be) of the counterparty to the bill.

In the case of an Import bill, you should specify details of the 'Drawee' of the bill. If the Drawee is a customer of your bank you should specify the CIF Id assigned to the customer, the other details of the bill will be automatically picked up.

If you are processing an Export bill you should specify details of the 'Drawer' of the bill. If the drawer is a customer of your bank you should specify the CIF Id assigned to the customer, the other details of the bill will be automatically picked up.

##### **Party Type**

Specify the party type of the customer indicated in the 'customer' field. If you are processing an import bill this field is defaulted with DRAWEE. If you are processing an export bill it is defaulted to DRAWER.

#### **7.1.1.3 Specifying Document Details**

##### **Document Duplicate Received**

This field is applicable only for Documentary bills. Here you can indicate whether the duplicate set of documents that are required under the bill have been received.

If you had indicated negatively in the 'Document Original Received' field you should indicate positively in this field. This is because the bill contract should be entered based on the first set of documents that are received.

### **Document Original Received**

This field is applicable only for Documentary bills. Here you can indicate whether the original set of documents that are required under the bill have been received.

### **Letter Dated**

This field is applicable only for Documentary bills. Here you can indicate the date printed on the covering letter based on which the contract was entered.

This date can be used to retrieve information on pending documents.

#### **7.1.1.4 Specifying Terms of a Bill**

The terms that you define for a collection bill, while registering it, will form the basis on which the bill will be processed. You can specify the following terms for a bill:

##### **Bill Currency**

Specify the currency in which the bill is drawn.

##### **Bill Amount**

Specify the amount for which the bill is drawn.

While processing a bill that was registered, all the terms that you specify during registration will be displayed in the respective fields of the Contract Main screen.

#### **7.1.1.5 Specifying Tenor Details for a Bill**

You can specify the following tenor related details here.

##### **Base Date**

The base date is the date from which the tenor specified for the bill becomes effective. The base date is used to calculate the maturity date of the bill. In effect the tenor of the bill will begin from the base date.

##### **Example**

You indicate the base date of a bill to be 01-Jan-99 and the tenor of a bill as 45 days. The 45 day tenor of the bill will begin from 01-Jan-99.

If you are processing a sight bill, the base date is the lodgment date and for a usance bill it can be the Invoice date or the Shipping Date.

## Tenor

Usance bills are generally associated with a tenor. The tenor of a bill is always expressed in days. The standard tenor defined for the product involved in the bill is defaulted. You can change the default to suit the tenor of the bill you are processing. However the tenor that you specify for a bill should be within the minimum and maximum tenor specified for the product involved in the bill.

The tenor of a sight bill is always defaulted to zero days. You will not have an option to change it.

## Transit Days

The transit days refer to the expected number of transit days for a sight or matured usance bill. The transit days will be used in the computation of the maturity date of the bill.

## Maturity Date

The maturity date is the date on which the bill falls due for payment. The maturity date that you specify should be a date later than or equal to the Value date specified for the bill. The maturity date is calculated in the following manner based on the entries you have made to the previous fields:

$$\text{Maturity Date} = \text{Base date} + \text{Tenor} + \text{Transit days}$$

You can change the maturity date of a bill that is arrived at using the above method.

## Base Date Description

Here you can specify a description of the base date specified in the earlier field. For example, you can indicate that the base date is the lodgment date or the shipment date etc.

## Transaction Date

The transaction date is the date on which the bill was entered into Oracle FLEXCUBE. The system defaults the transaction, date to the current system date (today's date). You cannot amend or change the defaulted date.

## Value Date

This is the date from which the bill becomes effective. The accounting entries triggered off by events like input, amendment and liquidation hitting the Nostro and customer accounts will be passed as of the value date.

The value date should be earlier than or same as today's date. If you do not enter a value date for a bill, the system defaults to today's date. You can enter a value date of your choice; however it can be one of the following:

- Today's Date
- A date in the past
- A date in the future (you can enter a date in the future only if future dating has been allowed for the product)

The Value date of a bill should not be earlier than the Start Date or later than the End Date specified for the product involved in the bill.

### Internal Remarks

Enter information for the internal reference of your bank. This information will be made available at the time you retrieve the information on the bill.

These remarks will not be printed on any of the advices generated for the bill.

### **7.1.1.6 Specifying the Details of the Parties Involved in a Collection Bill**

In the Bills and Collections Registration Input screen, you can capture details pertaining to all the parties involved in a bill. You can capture the following details in the bill you are registering:

- Party type of the customer
- CIF Id assigned to the party
- Name of the party
- Country to which the party belongs
- Language in which tracers and messages should be sent to the party
- Reference to the party involved in the bill
- Party's mail address

The parties that can be involved in a collection bill not only depend on the type of bill you are processing but also on the operation that you are performing on the bill.

While registering a bill, both incoming and outgoing, the only operation that is possible is Collection. The following table indicates the parties that can be involved in a collection bill.

Party Type	Party Description
DRAWER	Drawer
DRAWEE	Drawee
REMITTING BANK	Remitting Bank
COLLECTING BANK	Collecting Bank
CASE NEED	Case Need
GURANTOR	Guarantor
THROUGH BANK	Through Bank
ISSUING BANK	Issuing Bank

At the time of processing a bill, which was registered, the documents, tracers, advices and messages applicable to the bill will be sent to the concerned parties, based on the details you specify in this screen.

You can use a particular Party Type only once in a bill that you register.

---

## 8. Automatic Processes

### 8.1 Introduction

Thus far we have seen the procedures involved in creating products and process bills. While processing a bill, you were provided with automatic options. The events that are to take place automatically are triggered off during the Batch Process. The Batch process is an automatic program, which is run as a mandatory Beginning of Day (BOD) and End of Day (EOD) process.

The Batch processes that are initiated either at the Beginning of Day (BOD) or End of Day (EOD) execute certain events on the days they fall due. To recall, while entering the details of a bill you were provided with the following automatic options:

- Automatic liquidation of bills
- Automatic tracer generation
- Automatic accrual of interest
- Automatic contract status change
- Automatic change from acceptance to advance
- Automatic floating rate change

The Batch program when run as part of the BOD, processes the automatic events that fall due today. It also processes the automatic events for a holiday previous to today (this however depends on the preferences stated in the Branch Parameters screen).

The Batch program when run as part of the EOD processes the automatic events that fall due today and the automatic events that should be processed for a holiday which falls on the next day (this, however depends on the preferences stated in the Branch Parameters screen).

You should maintain EOD to be a mandatory batch process both as a BOD and a Pre-EOC program in the EOC mandatory program of the Core Services module of Oracle FLEXCUBE.

#### 8.1.1 Maintaining Bills Batch Process

Batches are run automatically. In the mandatory programs, all batches whichever are required will be maintained in sequence and that is triggered automatically as based on the maintenance in the 'Mandatory Batch Program Maintenance' screen.

You can invoke the 'Mandatory Batch Program Maintenance' screen by typing 'EIDMANPR' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

**Mandatory Batch Program Maintenance -- Web Page Dialog**

Branch \* CHO  
Module \* BC

Authorized By      Date Time       Authorized

**Cancel**

**Module**

Choose the module code from the adjoining option list.

**Function Identification**

Choose the function ID of batch that you wish to run. The adjoining option list displays all batch processes available for the module.

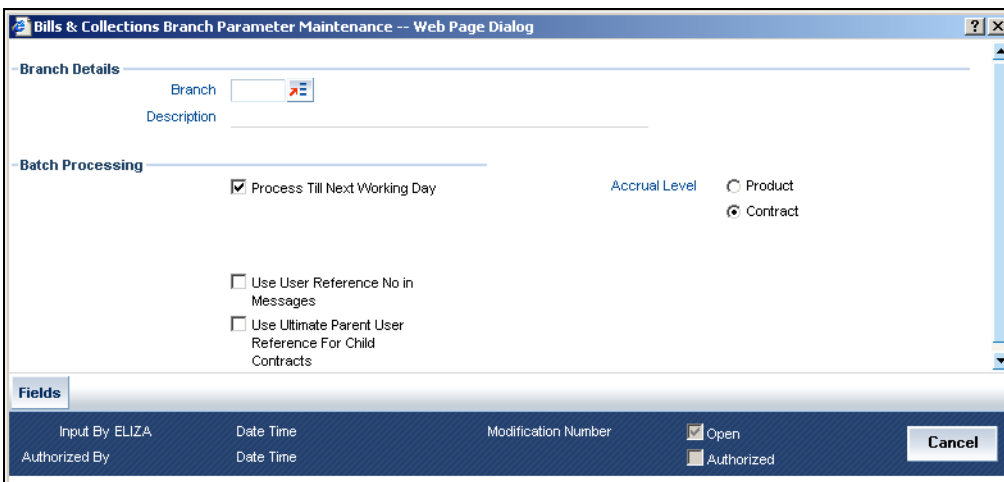

You can configure the batch to be run at various stages of day like EOD, EOTI etc.

*For further details about this screen, refer the chapter 'Setting-up Mandatory Programs for EOD' in the AEOD User Manual.*

### 8.1.2 Maintaining Branch Parameters

A set of rules that governs the processing of bills in a particular branch of your bank is defined in the 'Bills & Collections Branch Parameter Maintenance' screen.

You can invoke the 'Bills & Collections Branch Parameter Maintenance' screen by typing 'BCDBRPRM' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

### **8.1.2.1 Specifying the Branch Details**

#### **Branch**

Select the branch code from the option list provided. You can maintain branch parameters only from the respective branches. At the head office level you can alter branch parameters of other branches also.

#### **Description**

When you select branch code from the option list, the description of the same is defaulted here.

### **8.1.2.2 Specifying Batch Processing Preferences**

The events, for which you had indicated automatic processing, are triggered off during the Batch Process. You can specify preferences for the automatic events that fall on a holiday in the Branch Parameters screen.

You can capture the following preferences here.

#### **Process Till Next Working Day**

If you indicate that the processing has to be done upto the next working day - 1, all the automatic events falling due on the holiday will be processed by the batch process as part of the EOD.

The batch process should process automatic events falling due on a holiday, on either of the following dates:

- Next working day
- Upto system date

If you indicate that processing has to be done only upto the System Date by unchecking 'Process Till Next Working Day', then only the events scheduled for today (the last working day before the holiday) will be processed. The events of the holiday are processed by the batch process as part of the BOD process on the next working day.

#### **An Example**

The current branch date is 20, October 1999. On 21, October 1999, which is a holiday, the following automatic events fall due:

- Automatic tracer generation
- Automatic accrual of interest
- Automatic contract status change

#### **Next working day - 1**

If you specify that the processing should be done on the last working day - 1, the above events will be processed on 20 October as part of the batch process run at EOD.

### **System date**

If you specify that the processing should be done only upto the system date by unchecking 'Process Till Next Working Day', then the events scheduled for 21 October 1999, will be processed as part of the Batch Process run as part of Beginning of Day on 22 October 1999.

### **Use User Reference No in Messages**

If you wish to display the user reference number in the advices that are generated for a contract, select this option. All the advices generated at your branch will display the appropriate user reference number.

You can specify a format for the generation of the User Reference Number in the 'Sequence Generation' screen available in the Application Browser. Refer to the Core Services User Manual for details on maintaining a sequence format.

### **Use Ultimate Parent User Reference for Child Contracts**

If you wish to display the user reference number of the ultimate parent in the advices generated for child contracts, select this option. If this box is unchecked, the user reference number of the child is displayed for the child contracts.

### **Accrual Level**

At the time of creating a product, you specified the following:

- Whether accrual of interest is allowed for the product
- The accounting entries that should be passed for the accrual event
- The frequency with which the accrual entries should be passed

A bill will inherit the accrual frequency defined for the product associated with the contract. For bills, which are to be automatically liquidated, you can indicate the level up to which they should be accrued. The options available are:

- Product
- Contract

If you indicate that automatic accrual should be done at the product level, a single entry for all contracts will be passed. However, if these contracts have moved into different user defined status, the accrual entries will be passed at the product level and for each user-defined status. This helps reduce the time taken to pass each entry. If you indicate that the automatic interest accrual process should pass accrual entries at the contract level, accrual entries will be passed for each of the contracts for which interest was accrued automatically.

### **Example**

You have created a product - INB1 to cater to incoming bills.

The product has the following characteristics:

- Interest is collected in advance

- Interest has to be accrued every month

The accounting entries during interest accrual (defined for the event ACCR) are as follows:

Accounting Role	Accounting Head	Amount Item	Dr/Cr
INTEREST_RIA	INTLI01	Interest	Dr
INTEREST_INC	INTINC01	Interest	Cr

You have entered the following contracts using the product INB1:

The interest calculation method is 360/365

Contract	Tenor	Interest
Contract 1	3 months	US \$300
Contract 2	6 months	US \$500
Contract 3	12 months	US \$1000

The accounts, into which the accrual entries should be passed, for each of these contracts, are the same as they are linked to the same product.

#### *Accrual entries level - Product*

If you indicate that the automatic interest accrual process should pass accrual entries at the product level, a single accrual entry for all the contracts will be passed.

#### *Accrual entries level - Contract*

If you indicate that the automatic interest accrual process should pass accrual entries at the contract level, three accounting entries for the contracts will be passed. You can view details of the individual accrual entries that were automatically passed by invoking the Accrual control journal report.

### **8.1.3 Specifying the User Defined Fields**

You can link the User Defined Fields with Branch Parameters Maintenance screen using Function field mapping screen which can be invoked from the Application Browser by selecting User defined fields, and then Function field mapping.

The value for these fields can be specified in the Branch Parameters Maintenance screen. Value for UDF can be made mandatory or non mandatory as maintained in the Field description screen.

## **8.2 Processes Run during Beginning of Day (BOD)**

The Batch program when run as part of BOD processes the following events:

### **8.2.1 Automatic Liquidation of Bills**

The auto-liquidation function liquidates all the outstanding components of a Bill contract on the liquidation date specified for the bill. To recall, the liquidation date is calculated in the following manner:

### **Maturity Date = Base Date + tenor + transit days**

This function will liquidate only active bills for which you have specified the liquidation method as automatic. The pertinent details of the bill with respect to tax, limits, interest and charges will be updated to indicate that the bill has been liquidated and authorized.

When run as part of the BOD process, the function automatically liquidates all the bills that have a liquidation date between the last working date and the current processing date.

When run as part of EOD the function liquidates those bills that was processed during the day and need to be liquidated as on the current day. If the next working day is a holiday, and you specified that in the branch parameters screen that holiday processing should be done upto the last working day - 1 such bills will be liquidated as part of the BOD run on the previous day.

The bills falling due for liquidation on a holiday will be processed during End of Day on the last working day before the holiday.

#### **8.2.1.1 Accounting Entries that are Passed**

When a bill is automatically liquidated by the function the necessary accounting entries specified for the liquidation event (LIQD) will be booked and automatically authorized.

#### **8.2.1.2 Accounting Entries Passed for a Status Change**

If the liquidation of the bill involves a status change, the accounting entries defined for the status change event (STCH) of the bill will be automatically passed when the bill moves from one status to another. Further, if you have indicated the following:

- The accrual entries passed till date should be reversed when the bill moves into a specific status, the function will reverse all the accrual entries booked for the bill till date.
- The bill amount should be transferred to a new GL head when the bill moves to a particular status, the accounting entries for transferring the bill amount to a new GL head will be automatically passed.
- The accrued amounts should be moved to a new GL head when the bill moves to a particular status, the accounting entries for transferring the accrued amounts of the bill to the new GL head will be automatically passed.

#### **8.2.1.3 Advices**

The advices specified for the liquidation event (LIQD) for the product associated in the bill will be automatically generated.

#### **8.2.1.4 Holiday Processing**

If the liquidation of a bill falls due on a holiday, the liquidation will be done as per your holiday handling specifications for automatic processes, in the Branch Parameters screen.

- If you specified that processing has to be done today (the last working day before the holiday) for automatic events, right up to the day before the next working day, the bills falling due for liquidation on the holiday will be processed during End of Day on the last working day before the holiday.

- If you specified that processing has to be done only up to the System Date (today), then only the bills scheduled to liquidate today (the last working day before the holiday) will be processed. The events of the holiday will be processed on the next working day after the holiday, during Beginning of Day processing.

## **8.2.2 Tracer Generation**

You specified the tracers that should be generated for a bill in the Bills - Contract Exceptions screen. This function triggers the generation of tracers specified for active authorized bills on the day they fall due. Tracers can be triggered for generation as part of BOD, EOD or can be invoked at any time during the day. This function is available in the Application Browser through Bills & Collections and Batch under it. The date on which a tracer should be generated for a bill is determined by the entries you made to the fields of the Contract Exceptions screen.

The following tracers will be generated by the function:

- Tracer for release of reserve
- Tracer for Non-Payment
- Tracer for Non-Acceptance
- Tracer for Payment of Charges
- Tracer for Discrepancies Approval

### **8.2.2.1 Advices**

An advice of fate of the bill is generated whenever the corresponding tracer for the exception is generated.

## **8.2.3 Automatic Accrual of Interest**

While defining interest components for a bill product in the Product, ICCF details screen, you specified whether accruals need to be done for the accruable interest components. For a product, accruals should be done, then the frequency of accrual should also be specified for a product (through the Product Preferences screen, at the time of product definition).

This function when run as part of the batch process run at EOD, calculates the accrual amount and passes accrual accounting entries for the accruable tenor based interest components of a bill.

The Automatic Accrual function will pick up bills for processing on the following criterion:

- Active and authorized bills which are not yet liquidated
- Bills whose accrual date falls on the current processing date or bills whose accrual date falls between the current processing date and the next working date

The date on which accrual is due for a bill is calculated based on the accrual date and accrual frequency defined for the product associated with the bill.

When the function automatically accrues the interest components of a bill, is done the accounting entries defined for the accrual event (ACCR) will be passed and the internal accounts will be updated with the accrual related details.

If the accrual date of a bill falls on a holiday, the accruals are done as per your holiday handling specifications for automatic processes, in the Branch Parameters screen.

The list of bills whose commission components were accrued will be printed in the Accrual Control report.

This function will not accrue interest for bills that have moved into a user defined status for which accruals have been stopped.

## **8.2.4 Automatic Status Changes**

A bill that is yet to reach its repayment date is considered as having an Active status. When repayment against the bill is not made on the due date, you may want to do an aging analysis of the bill.

A forward status change is one in which a bill moves from a given user defined status to another in the forward direction.

A reverse status change is one in which the status of a bill changes from a given status to the previous status defined for the bill. Such a situation arises when a payment is made on a bill whose status is not active.

This function will automatically pickup and move bills from one user defined status to another (either forward or reverse) only if the bill matches the following criterion:

- The bill is Active and Authorized
- You have indicated automatic status change for the bill
- The criteria for a status change have been met - That is, any of the components of the bill remain unpaid for the number of transfer days defined for the status.

If you specify that forward or reverse status changes have to be carried out automatically, the status changes will be carried out automatically when the Contract Status Change Processing function is run either as part of BOD or EOD on the day the status change falls due.

### **8.2.4.1 Accounting Entries that are Passed**

The accounting entries defined for the status change event (STCH) of the bill will be automatically passed when the bill moves from one status to another. Further, if you have indicated:

- That the accrual entries passed till date should be reversed when the bill moves into a specific status, the function will reverse all the accrual entries booked for the bill till date.
- That the bill amount should be transferred to a new GL head when the bill moves to a particular status, the accounting entries for transferring the bill amount to a new GL head will be automatically passed.

- That the accrued amounts should be moved to a new GL head when the bill moves to a particular status, the accounting entries for transferring the accrued amounts of the bill to the new GL head will be automatically passed.

#### **8.2.4.2 Advices that are Generated**

The advices will be automatically triggered for generation to notify the customer about the status change. They would possibly urge the party to pay the amount due and liquidate the aging components of the bill.

#### **8.2.4.3 Holiday Processing**

If the day on which the forward or reverse status change is due happens to be a holiday, then, the processing of such bills will depend on your specifications in the Branch Parameters screen.

If you specify that the forward or reverse changes should *not* be carried out automatically, the status remains unchanged (even if repayment is made on the bill) till you specifically change it for a bill. You can manually change the status of a bill through the Bills - Contract Details screen.

#### **8.2.5 Floating Rate Change**

While defining Floating Rates, you have the option of indicating whether the floating rates should automatically be applied to the bill every time they change, in the Product ICCF screen.

The Automatic Floating Rate Change function can be run as part of EOD. It can also be invoked from the Application Browser at any time during the day. This function is available in the Application Browser under Bills & Collections and Batch under it.

This function will pick up:

- Active and authorized bills
- Bills for which you have specified automatic Floating Rate change

Every time the Floating rates change, the new rates will be applied for the number of days for which they remained unchanged in the rate table.

This is indicated in the example below.

#### **Example**

The rates in the floating rate table change in the following manner:

<b>Effective Date</b>	<b>Rate</b>
1 October 1999	12%
12 October 1999	11.5%
25 October 1999	11%

Effective Date	Rate
15 October 1999	12%
30 October 1999	12.5%

The rates will be applied for the number of days for which they remain unchanged in the rate table, as follows:

From	To	Rate
1 October 1999	11 October 1999	12%
12 October 1999	24 October 1999	11.5%
25 October 1999	31 October 1999	11%

You have entered a bill, which has a Base Date as 1 October 1999 and matures on 30 November 1999. The interest accrual frequency is to be monthly. The bill has been linked to a floating interest rate.

If the first interest accrual is to be done on 31 October, all the rate changes between 1 October and 31 October will be considered automatically.

### 8.2.6 **Automatic Change from Acceptance to Advance**

To recall, while defining preferences for a product, you have the option to indicate whether the movement of a bill from acceptance to advance should be done automatically or manually. This preference that you state for a product will be inherited by all the bills linked to the product.

The Automatic Change from Acceptance to Advance function can be run as part of EOD or can be invoked from the Application Browser at any time in the day. This function is available in the Application Browser under Bills & Collections and Batch under it.

This function, will pick up for processing, only bills which are:

- Active and authorized
- Bills for which you have specified automatic change from acceptance to Advance

On moving a bill from acceptance to advance, the accounting entries passed for the event Change from Acceptance to Advance (BADV) will be automatically passed.

### 8.2.7 **Automatic Generation Advices**

In this screen, you can:

- Indicate whether reimbursement claims should be generated for the bills,
- Manually generate a Payment due Advice

### **8.2.7.1 Automatic Generation of Reimbursement Claims**

You can automatically generate a Reimbursement Claim (MT 742) for export bills under LCs (with deferred payment). To achieve this, you must specify the 'Reimbursement Days' for a bill in the Contract Online screen. The Reimbursement Claim for the bill will be automatically generated depending on the 'Reimbursement Days' prior to the Maturity Date.

For example, the Maturity Date of a bill is 23 March 2001. You specify the Reimbursement Days as '2'. Two *working* days prior to the Maturity Date (that is, 21 March 2001), as part of the BOD process, the Reimbursement Claim (MT 742) for the bill will be automatically generated.

## **8.3 Straight through Processing of SWIFT Messages**

The SWIFT messages that you receive are either uploaded into Oracle FLEXCUBE as new BC contracts or they trigger changes (events) to the existing BC contracts. The message upload process takes one message at a time and applies a sequence of logical steps to derive information required to derive the BC contract upload tables.

*Refer the 'STP' chapter of the 'Funds Transfer' User Manual for more information on maintenances required for straight through processing of SWIFT messages.*

The various SWIFT messages supported in Oracle FLEXCUBE are listed below:

- MT754 - Advice of Payment/Acceptance/Negotiation
- MT412 - Advice of Acceptance
- MT416 - Advice of Non Payment/Non Acceptance
- MT430 - Amendment of Instructions
- MT400 - Advice of Payment
- MT742 - Reimbursement Claim
- MT410 - Acknowledgement Received

The Straight Through Processing (STP) of each of the above messages is discussed in the following sections.

### **8.3.1 STP of MT754 - Advice of Payment/Acceptance/Negotiation**

Using the bills upload utility, the system automatically books an import bill under payment. The relevant product is derived based on the mapping maintained for the message type and product combination in the 'Product Mapping Detailed' screen in order to process the import bill created as a result of the incoming MT754 (Advice of Payment/Acceptance/Negotiation). The bills contract that is generated inherits the following details from the underlying LC:

- The party details
- The document/shipment details
- All details in the 'Main' tab of the Bills Contract

### Tenor Details for the Bill

The system picks the following tenor details for the bills contract, from the product maintenance:

- Base Date – This is the system date.
- Bill Tenor – This is the standard tenor.
- Transit Days – This is the transit days.
- Maturity Date – This is the Base date + Transit days + Base Tenor

### Document Related Details for the Bill

The following details will be blank for the bills contract:

- Original Documents Received
- Duplicate Documents Received
- Letter Dated
- Document Details

### Nostro Account for the Bill

The system uses the SWIFT tags 53, 57 and 58 to derive the Nostro account in the following manner:

- If tag 53 is present, the system will pick the Nostro account maintained for reimbursing bank in the Settlement Instructions maintenance screen.
- If tag 53 is not present, the system will pick the Nostro account you have maintained for the counterparty (either 57 or 58) in the 'Settlement Instructions Maintenance' screen.
- If none of the tags (53, 57 or 58) are available, the system will pick the Nostro account by deriving the sender from the BIC in the header details.

The system checks for the following during STP:

- Field 32A or B value cannot be more than outstanding liability amount of LC.
- If Field 34 amount is less than Field 32 amount, then the system will reject the record.

The system creates an authorized or unauthorized contract based on the 'Post Upload Status' maintained through the 'Upload Source Preferences' screen.

You need to maintain the following entries for INIT (initiation) event in order to pass accounting entries for 'Their Charges':

Dr/Cr	Accounting Role	Amount Tag	Netting
Dr	BC CUSTOMER	THEIR_CHG	Yes
Cr	NOSTRO ACCOUNT	THEIR_CHG_EQUIV	
Dr	NOSTRO ACCOUNT	BILL_AMOUNT	

Dr/Cr	Accounting Role	Amount Tag	Netting
Cr	BC CUSTOMER	BILL_ AMT_EQUIV	Yes

The system maps the SWIFT tags in MT754 and the fields in BC contract as depicted below:

Status	Tag	Description	Oracle FLEXCUBE Fields	Remarks
M	20	Senders reference	Their LC reference	
M	21	Related reference	Our LC reference	
M	32A or B	Principal Paid/Accepted/Negotiated	Bill Amount	This amount is deducted from outstanding balance of LC.
O	33B	Additional amounts	FFT	
O	71B	Charges deducted	FFT	
O	73	Charges added	FFT	
O	34A or B	Total amount claimed	Their charges	Difference of 34 and 32
O	53A, B or D	Reimbursing bank		
O	57A, B or D	Account with bank		
O	58A or D	Beneficiary bank		
O	72	Sender to receiver information	FFT	
O	77A	Narrative	FFT	

### 8.3.2 **STP of MT400 – Advice of Payment**

STP of MT400 results in liquidation of the sight/usance bill (only for collections). The system derives the contract reference number in the following manner:

- First the contract reference number of the bill contract is checked using field 21. If the contract reference number is not found, the system will check for the User Reference Number from field 21.

- If both Bill Contract Reference Number and User Reference Number are not found, the system will check for 'Our LC Reference' number in Field 21.

The system rejects the incoming record in the following cases:

- In case the reference number can not be found
- In case multiple bills are present with the same Our LC reference number

The following mappings are maintained between SWIFT tags in MT400 and the fields in BC contracts:

Status	Tag	Description	Fields of Export Bill	Remarks
M	20	Sender's reference	-	
M	21	Related reference	Contract reference	
M	32A,B or K	Amount collected	Liquidation Bill Amt	
M	33A	Proceeds remitted	Their charges	Difference of 32 and 33
O	52A or D	Ordering bank		
O	53A,B or D	Sender's correspondent		
O	54A,B or D	Receiver's correspondent		
O	57A or D	Account with bank		
O	58A,B or D	Beneficiary bank		
O	71B	Details of charges (Deductions)	FFT	
O	72	Sender to receiver information	FFT	
O	73	Details of amount added	FFT	

As a result of the STP of the incoming MT400, the system creates a new version of the bills contract and also triggers the liquidation event (LIQD) for the contract. All the information in the following fields is stored as Free Format Text as under:

Field	FFT Code	Advice
72	SNDRRCVRINFO	PAYMENT_ADVICE
71B	71CHGTOBEDED	PAYMENT_ADVICE
73	73CHGTOBEADD	PAYMENT_ADVICE

The system updates the following fields in the BC contract based on Field 72:

72 Field Value	BC Contract
ALCHAREF	Our charges refused and Their charges refused should be checked
OUCHAREF	Our charges refused should be checked
UCHAREF	Their charges refused should be checked

### 8.3.2.1 Deriving the Debit Account

System utilizes the following SWIFT tags to derive the debit account from the settlement instructions sequentially:

- 57 (Account with Institution)
- 54 (Receiver correspondent)
- 53 (Sender correspondent)

In case the system does not find any of the three tags, it derives the debit account from the BIC of the sender of the message. The system then updates the tags 52, 53, 54, 57 and 58 in the settlement subsystem maintained for the Nostro account.

STP of MT400 results in authorized or unauthorized liquidation record based on the post upload status you have maintained in the 'Upload Source Preferences' screen.

When an MT400 message is being uploaded, the system checks for the following:

- The contract status should be 'Active' or the system will reject the record.
- The amount specified in field 33 should not be more than the amount specified in the field 32A; else the system will reject the record.
- **If field 32A is present:** The system will reject the record if one of the following is true:
  - The currency code in field 32A does not match the currency of the bill.
  - The amount acknowledged in field 32A is greater than the bill amount.
  - The maturity date in the field 32A does not match the maturity date in the bill.
- **If field 32B is present:** The system will reject the record if one of the following is true:
  - If the currency code in field 32B does not match the currency of the bill
  - The amount acknowledged in field 32B is greater than the bill amount
- **If field 32K is present:** The system will reject the record if one of the following is true:
  - The currency code in field 32K does not match the currency of the bill.
  - The amount acknowledged in field 32K does not match the bill amount.

### 8.3.3 STP of MT410 (Acknowledgement Received)

SWIFT upload of MT410 records acknowledgement details in the contract screen. Note that acknowledgement is supported only for collections. The system fetches the contract reference number of the bill contract from field 21 of the message. If the contract reference number is not found, the system will look for the user reference number in field 21. If field 21 has the value 'NONREF' then the system will fetch the bill reference using their reference (field 20) from the 'Bills and Collections Contract Input - Parties' details. The BIC of the sender will be used for identifying the party for which their reference needs to be fetched. If the customer number for the BIC is null then the system will check whether the party type is collecting bank. If both contract reference number and user reference number are not found, the system will fetch the value in 'Our LC Reference' in field 21.

The system will reject the record if any one of the following is true:

- The system finds multiple records.
- The system does not find a reference number.

If the message has got a repetitive sequence and the same reference number is mentioned in both tag 21 then the message will be sent to repair.

The system creates a new version of a bills contract from an incoming MT410. During STP of MT410, the system checks the 'Acknowledgement Received' box in the 'Bills and Collections Contract Input' screen. It updates the application date in the field 'Acknowledgement Date' and then triggers the event 'ACKB'.

The system stores the information in field 72 as Free Format Text with the FFT code 'SNDRRCVRINFO' for the message type 'ACKNOWLEDGEMENT'.

STP of MT410 creates an authorized or unauthorized amendment record based on the post upload status maintained in the 'Upload Source Preferences' screen.

When an MT410 message is being uploaded, the system triggers the 'ACKB' event and checks the following:

- **If field 32A is present:** The system will reject the record if one of the following is true:
  - The currency code in field 32A does not match the currency of the bill
  - The amount acknowledged in field 32A does not match the bill amount
- The maturity date in the field 32A does not match the maturity date in the bill.
- **If field 32B is present:** The system will reject the record if one of the following is true:
  - The currency code in field 32B does not match the currency of the bill
  - The amount acknowledged in field 32B does not match the bill amount.
- **If Field 32K is present:** The system will reject the record if one of the following is true:
  - The currency code in field 32K is not matching with the currency of the bill.
  - The amount acknowledged in field 32K is not matching with the bill amount.

#### **8.3.4 STP of MT430 – Amendment of Instructions**

MT430 is sent by the remitting bank to the collecting bank or by the collection bank to any other collection bank. Upload of MT430 triggers amendment of the bill contract. Note that upload is supported only for collections. In order to derive the contract reference number on which action needs to be triggered, the system first fetches the contract reference number of the bill contract using field 21 of the message. If the reference is not found, then the system will fetch the bill reference using the user reference number in field 21. If the reference too is not found, then the system will fetch the bill reference using our LC reference in field 21. If field 21 has the value 'NONREF', the system will fetch the bill reference using the 'Their reference' (field 20) from the 'Bills and Collections Contract Input – Parties' screen. The BIC of the sender will be used for identifying the party for which their reference needs to be fetched. If the reference is not found, then the system will fetch the bill reference using their LC reference (field 21). The new maturity date and bill amount are fetched from fields 33A or 33K. The value date of the amendment is always the application date.

The system will reject the record if any one of the following is true:

- Multiple bills are found for the same reference.
- The reference is not found.
- Contract reference is not found using field 21
- The maturity date in field 32A is not matching with the current version of maturity date.
- The amount in field 32A, B or K is not matching with the current version of bill amount.
- The currency code in field 33A, B or K is not matching with the currency of the bill.
- The new maturity date in 33A or K is before the base date.

If the message has got a repetitive sequence and the same reference number is mentioned in both tag 21 then the message will be sent to repair.

All the information in the following fields is stored as Free Format Text as under:

Field	FFT Code	Advice
72	SNDRRCVRINFO	AMNDMNT_OF_INS
74	INSTRUCTIONS	AMNDMNT_OF_INS

The system creates a new version of bill after amendment upload.

STP of MT430 results in authorized or unauthorized liquidation record based on the post upload status you have maintained in the 'Upload Source Preferences' screen.

### **8.3.5 STP of MT742 – Reimbursement Claim**

STP of MT742 generates bills contract in the 'FINAL' stage with the following attributes:

- Operation of the related bills product is 'PAYMENT'.
- The bill amount is the sum of values in fields 32B and 33B.
- The LC amount during booking of import bill is the value in field 32B

- The LC liability amount is the sum of values in fields 32B and 33B.

While booking the import bill from an incoming MT742, the following details are inherited from the underlying LC as per (field 21):

- Party details
- Our customer details
- Our LC customer
- Our LC reference
- LC amount
- LC liability amount in the 'Bills and Collections - Contract Input – Contract Details' screen.
- The claiming bank of the contract matches the claiming bank of the existing LC.

The tenor details of the bills contract are picked up as shown below:

- Base date is fetched from the standard tenor maintained in BC product preferences.
- Transit days are fetched from the transit days maintained for the BC product.
- Maturity date is computed as base date + transit days.
- The Nostro account is derived using SWIFT fields 57 and 58 in the following manner:
  - If field 57 exists, the Nostro account maintained for the counterparty (as in field 57) will be used for crediting the amount claimed.
  - If field 57 is not present and field 58 exists, the Nostro account maintained for the counterparty (as in field 58) will be used for crediting the amount claimed.
  - If both fields 57 and 58 are not present, the Nostro account maintained for the counterparty (as in field 1) will be used for crediting amount claimed.

Values from the above mentioned fields are updated in the settlement message details of the Nostro account leg having the amount tag 'BILL\_AMOUNT' or 'BILL\_AMT\_EQIV'. Value of field 33B is stored as an FFT with FFT code '33ADDAMTCLMD' under the message type 'REIM\_PAY\_ADV'.

The system checks for the following during STP of MT742:

- The mapped product should be of type 'IMPORT'.
- The operation of the bills product should be 'PAYMENT'.
- During upload of bills contract, if the underlying LC is not present then the system will reject the record. The underlying LC is fetched using field 21.
- Amount in field 32 cannot be more than the current available amount of the LC.
- Amount in field 33 cannot be more than outstanding liability amount of the LC.
- The counterparty derived using field 52A or D should match with the counterparty of the party 'ISSUING BANK' defaulted from the underlying LC.

- The counterparty derived using field 1(BIC of sender) should match with the counterparty of the party 'NEGOTIATING BANK' defaulted from the underlying LC. If the party 'NEGOTIATING BANK' does not exist in the bill, then the party details of the same will be derived using field 1 and will be displayed in the party details of the import bill.
- If the amount in field 34 is less than the sum of amounts in field 32 and field 33, the system will reject the record.

The STP process creates an authorized or unauthorized import bill based on the post upload status maintained in the 'Upload Source Preferences' screen.

## 9. Annexure A

### 9.1 Free Format Texts (FFTs)

This annexure contains details of the FFTs that are pre-shipped. The following details of the pre shipped FFTs have been detailed:

- The code assigned to the FFT
- The advice or message that it can accompany
- Whether the FFT is mandatory for the processing of the bill

FFT Code Used	Optional/Mandatory	Advice Code/Message Type

## 10. Annexure B

### 10.1 Suggested Accounting Entries and Advices for Bills

This Annexure lists the suggested accounting entries and advices that can be set up, for the Bills and Collections module of Oracle FLEXCUBE. The annexure lists details of the suggested accounting entries and advices, event-wise.

#### 10.1.1 BOOK: Booking

##### 10.1.1.1 Incoming Payment

Operation	Stage	Clean/Doc	Sight/Usance	Bill Under LC
PAY	INI	DOC	Sight Only	Yes (mandatory)

#### Accounting Entries

If any charges/fees are applicable, then the following accounting entries will be passed for each of the charges/fees:

GL Type	A/C Type	Dr/Cr	Acct Description	CCY	Amount
Real	Income	Cr	Charges/Fees earned.	LCY	Equivalent charge amount in LCY.
Real	Customer /Account Receivable	Dr	Customer/Charges or Fees Receivable.	CCY	Equivalent amount of charges/fees in the charge/fee currency if it is an Account Receivable else equivalent amount of charges/ fees in the Cust Account Ccy.

#### Advices

Advice Type	Advice Description
DISCREPANCY_REQ	Discrepancies Request Letter
DOC_ARVL_NOTICE	Document Arrival Notice
ACKNOWLEDGEMENT	Acknowledgment Advice
PAYMENT_ADVICE	Payment Advice

### 10.1.1.2 Incoming Advance

Stage	Clean/Doc	Sight/Usance	Bill Under LC
INI	DOC	Sight Only	Yes (mandatory)

#### Accounting Entries

If any charges/fees are applicable, then the following accounting entries will be passed for each of the charges/fees:

GL Type	A/C Type	Dr/Cr	Account Description	CCY	Amount
Real	Customer/ Account Receivable	Dr	Customer/Charges or Fees Receivable	CCY	Equivalent amount of charges/fees in the charge/fee currency if it is a Acct Receivable else equivalent amount of charges/fees in Cust Acct Ccy
Real	Income	Cr	Charges/Fees earned	LCY	Equivalent charge amount in LCY

#### Advices

Advice type	Advice Description
DISCREPANCY_REQ	Discrepancies Request Letter
DOC_ARVL_NOTICE	Document Arrival Notice
ACKNOWLEDGEMENT	Acknowledgment Advice
PAYMENT_ADVICE	Payment Advice

### 10.1.1.3 Incoming Acceptance

Stage	Clean/Doc	Sight/Usance	Bill Under LC
INI	DOC	Usance only	Optional

#### Accounting Entries

If any charges/fees are applicable, then the following accounting entries will be passed for each of the charges/fees:

GL Type	A/C Type	Dr/Cr	Account Description	CCY	Amount
---------	----------	-------	---------------------	-----	--------

GL Type	A/C Type	Dr/Cr	Account Description	CCY	Amount
Real	Income	Cr	Charges/Fees earned	LCY	Equivalent charge amount in LCY
Real	Customer / Account Receivable	Dr	Customer/Charges or Fees Receivable	CCY	Equivalent amount of charges/fees in the charge/fee currency if it is a Account Receivable else equivalent amount of charges/fees in Customer Account Currency

#### Advices

Advice type	Advice Description
DISCREPANCY_REQ	Discrepancies Request Letter
DOC_ARVL_NOTICE	Document Arrival Notice
ACKNOWLEDGEMENT	Acknowledgment Advice
PAYMENT_ADVICE	Payment Advice

#### 10.1.1.4 Incoming Discount

Stage	Clean/Doc	Sight/Usance	Bill Under LC
INI	DOC	Usance only	Optional

#### Accounting Entries

If any charges/fees are applicable, then the following accounting entries will be passed for each of the charges/fees:

GL Type	A/C Type	Dr/Cr	Account Description	CCY	Amount
Real	Income	Cr	Charges/Fees earned	LCY	Equivalent charge amount in LCY
Real	Customer / Account Receivable	Dr	Customer/Charges or Fees Receivable	CCY	Equivalent amount of charges/fees in the charge/fee currency if it is a Account Receivable else equivalent amount of charges/fees in Customer Account Currency

**Advices**

Advice Type	Description
DISCREPANCY_REQ	Discrepancies Request Letter
DOC_ARVL_NOTICE	Document Arrival Notice
ACKNOWLEDGEMENT	Acknowledgment Advice
PAYMENT_ADVICE	Payment Advice

**10.1.1.5 Outgoing Payment**

Stage	Clean/Doc	Sight/Usance	Bill Under LC
INI	DOC	Sight only	Yes (Mandatory)

**Accounting Entries**

If any charges/fees are applicable, then the following accounting entries will be passed for each of the charges/fees:

GL Type	A/C Type	Dr/Cr	Account Description	CC Y	Amount
Real	Income	Cr	Charges/Fees earned	LC Y	Equivalent charge amount in LCY
Real	Customer/Account Receivable	Dr	Customer/Charges or Fees Receivable	CC Y	Equivalent amount of charges/fees in the charge/fee currency if it is an Account Receivable else equivalent amount in Account Currency

**Advices**

Advice Type	Description
DISCREPANCY_REQ	Discrepancies Request Letter
PAYMENT_ADVICE	Payment Advice

**10.1.1.6 Outgoing Purchase**

Stage	Clean/Doc	Sight/Usance	Bill Under LC
INI	DOC	Sight Only	Not Under LC

**Accounting Entries**

If any charges/fees are applicable, then the following accounting entries will be passed for each of the charges/fees:

GL Type	A/C Type	Dr/Cr	Account Description	CCY	Amount
Real	Income	Cr	Charges/Fees earned	LCY	Equivalent charge amount in LCY
Real	Customer /Account Receivable	Dr	Customer/Charges or Fees Receivable.	CCY	Equivalent amount of charges/fees in the charge/fee currency if it is a Account Receivable else equivalent amount of charges/fees in Customer Account Currency.

**Advices**

Advice type	Advice Description
DISCREPANCY_REQ	Discrepancies Request Letter
PAYMENT_ADVICE	Payment Advice

**10.1.1.7 Outgoing Negotiation**

Stage	Clean/Doc	Sight/Usance	Bill Under LC
INI	DOC	Sight Only	Optional

**Accounting Entries**

If any charges/fees are applicable, then the following accounting entries will be passed for each of the charges/fees:

GL Type	A/C Type	Dr/Cr	Account Description	CCY	Amount
Real	Income	Cr	Charges/Fees earned	LCY	Equivalent charge amount in LCY

GL Type	A/C Type	Dr/Cr	Account Description	CCY	Amount
Real	Customer / Account Receivable	Dr	Customer/Charges or Fees Receivable	CCY	Equivalent amount of charges/fees in the charge/fee currency if it is a Account Receivable else equivalent amount of charges/fees in Customer Account Currency

**Advices**

Advice type	Advice Description
DISCREPANCY_REQ	Discrepancies Request Letter
PAYMENT_ADVICE	Payment Advice

**10.1.1.8 Outgoing Acceptance**

Stage	Clean/Doc	Sight/Usance	Bill Under LC
INI	DOC	Usance only	Optional

**Accounting Entries**

If any charges/fees are applicable, then the following accounting entries will be passed for each of the charges/fees:

GL Type	A/C Type	Dr/Cr	Account Description	CCY	Amount
Real	Income	Cr	Charges/Fees earned	LCY	Equivalent charge amount in LCY
Real	Customer / Account Receivable	Dr	Customer/Charges or Fees Receivable	CCY	Equivalent amount of charges/fees in the charge/fee currency if it is a Account Receivable else equivalent amount of charges/fees in Customer Account Currency

**Advices**

Advice type	Advice Description
DISCREPANCY_REQ	Discrepancies Request Letter
PAYMENT_ADVICE	Payment Advice

**10.1.1.9 Outgoing Discount (Initial)**

Stage	Clean/Doc	Sight/Usance	Bill Under LC
-------	-----------	--------------	---------------

Stage	Clean/Doc	Sight/Usance	Bill Under LC
INI	DOC	Usance only	Optional

### Accounting Entries

If any charges/fees are applicable, then the following accounting entries will be passed for each of the charges/fees:

GL Type	A/C Type	Dr/Cr	Account Description	CCY	Amount
Real	Income	Cr	Charges/Fees earned	LCY	Equivalent charge amount in LCY
Real	Customer/Account Receivable	Dr	Customer/Charges or Fees Receivable	CCY	Equivalent amount of charges/fees in the charge/fee currency if it is a Account Receivable else equivalent amount of charges/fees in Customer Account Currency

### Advices:

Advice type	Description
DISCREPANCY_REQ	Discrepancies Request Letter
PAYMENT_ADVICE	Payment Advice

#### 10.1.1.10 Outgoing Discount (Final)

Stage	Clean/Doc	Sight/Usance	Bill under LC
FIN	DOC	Usance only	Optional

<Rebate Interest>INC	<Rebate interest>_LIQD	Cr

Note the following:

- This event is triggered when the bill operation is changed from 'Acceptance' to 'Forfeiting'. You can associate charges to the event. You will receive the rebate interest and charges during this operation.
- Contingent accounting entries if posted get reversed as a part of this event.

## Advices

Bill Type	Advice type	Advice Description
OUT	FORFAITING_ADV	Forfaiting Advice

MT799 messaging is used for generating reminders. This advice has the following details:

- `_CONTRACTREFNO_`: This will indicate the bill contract reference number.
- `_THEIRLCREFNO_`: This will specify the 'Their LC reference' as stored in bills contract.
- `_OURLCREFNO_`: This will be the 'Our LC reference' as stored in the bills contract.
- `_CCY_`: This will be the bill amount currency.
- `_CONTRACTAMT_`: This will be the amount for which the bills contract has been created.
- `_AMOUNTINWORDS_`: This will state the contract amount in words.
- `_CONTRACTCCYNAME_`: This will specify the contract currency in words.
- `_TENORDESC_`: This will be the tenor description.
- `_TENORDAYS_`: This will be the tenor in days.
- `_MATURITYDATE_`: This will specify the maturity date of the bill
- `_BRANCHNAME_`: This will indicate the branch name.
- `_FORFAITING-REQST-DATE_`: This will be the forfaiting request date as captured in the bills contract.
- `_FORFAITING-DOC-DATE_`: This will be the forfaiting document submission date as captured in the bills contract.
- `_FORFAITINGDATE_`: This will be the actual date of the forfaiting operation. This will be taken as the date of the change of operation from 'Acceptance' or 'Discounted' to 'Forfaiting'.
- `_FORFAITINGBANK_`: This will be the forfaiting bank's CIF as captured in the 'Parties' tab of the 'Bills - Contract Details' screen.
- `_FORFAITINGBANKNAME_`: This will be the forfaiting bank's name (party name of the Forfaiting House) as captured in the 'Parties' tab of the 'Bills - Contract Details' screen.
- `_FORFAITING-INTAMT_`: This will be the interest liquidated for the 'Forfaiting' interest component.
- `_FORFAITING-INTCCY_`: This will be the currency of the forfaiting interest component.

### 10.1.23 **FDIS: Discount to Forfaiting**

When a discounted bill is forfeited this event is triggered as a part of change of operation from 'Discounted' to 'Forfaiting'. You can associate charges to the event. The accounting entry set-up can be maintained differently for two scenarios. You can also maintain different products for this purpose.

**Accounting entries when the bank knows in advance that the exporter will apply for bill forfaiting**

Accounting Role	Amount Tag	Dr/Cr Indicator
BILLS DISCNTED	BILL_OS_AMT	Cr
FORFAITING_NOSTRO	BILL_OS_AMTEQV	Dr
FORFAITING_NOSTRO	<Forfaiting Interest>_LEQV	Cr
BC Customer	<Forfaiting Interest>_LIQD	Dr
BC Customer	<Main Interest>_LIQD	Dr
<Main Interest>INC	<Main Interest>_LIQD	Cr
FORFAITING_NOSTRO	<Rebate interest>_LIQD	Dr
<Rebate Interest>INC	<Rebate interest>_LIQD	Cr

Note the following:

- Forfaiting interest is collected in advance with this.
- The main interest component is collected in arrears.
- Rebate interest entries are posted as a part of the 'Forfaiting' operation.

**Accounting entries when the bank doesn't know in advance that the exporter will apply for bill forfaiting**

Accounting Role	Amount Tag	Dr/Cr Indicator
BILLS DISCNTED	BILL_OS_AMT	Cr
FORFAITING_NOSTRO	BILL_OS_AMTEQV	Dr
FORFAITING_NOSTRO	<Forfaiting Interest>_LEQV	Cr
BC Customer	<Forfaiting Interest>_LIQD	Dr
FORFAITING_NOSTRO	<Rebate interest>_LIQD	Dr
<Rebate Interest>INC	<Rebate interest>_LIQD	Cr
<Main Interest>_INTRIA/ <Main Interest>_INTINC	<Main Interest>_LIQD_RF	Dr
BC CUSTOMER	<Main Interest>_LIQD_RF	Cr

Note the following:

- Forfeiting interest and main interest are collected in advance along with this event.
- Discount interest (additional interest received during the discounting operation) on the main interest component is refunded during this event.
- No further accrual of interest component is performed.
- Rebate interest entries are posted as a part of the forfeiting operation.
- Other interest components with collection method as 'Arrears' are also collected as a part of this event as there is no further processing of bills.

## 12. Reports

### 12.1 Introduction

All activities that are performed in the Bills and Collections (BC) module are recorded. The inputs you have made at different stages of a bill are pieced together and can be extracted in the form of meaningful reports as and when you may require them. The various report programs and reporting features available under the Bills and Collections module are explained in this chapter.

You can generate the following reports for the Bills and Collections module:

- List of Bills in a User Defined Status
- Bills and Collections Daily Activity Report
- List of Overdue Items- Payment
- List of Overdue Items- Acceptances
- List of Overdue Items- Finalization
- BC Automatic Processing Exceptions Report
- BC Contracts Overrides Report
- List of Outstanding Discrepancies
- List of Bills with Pending Documents
- List of Bills Under Protest
- List of Bills To Be Protested
- List of Maturing Bills
- Bills Static Maintenance Reports

### 12.2 List of Bills in User Defined Statuses

This report gives the details of contracts that have been moved into a given user defined status. A contract can be moved to a user-defined status through the Bills - Contract screen. This can be done manually or automatically.

#### 12.2.1 Selection Options

You can configure this report to be triggered automatically as part of the batch processes run as part of EOD. You can also generate the report from the Reports Browser.

If the report is generated as part of EOD, this report will list all the Bills, which have moved into a user-defined status.

If you generate the report manually (from the reports Browser) you can specify preferences for the generation of the report. The contents of the report are determined by the preferences that you specify.

You can invoke this screen by typing 'BCROBUDS' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

The screenshot shows a web page dialog titled "Report - Bills in User Defined Statuses -- Web Page Dialog". It contains three sections for selection:

- Status Selection:** Radio buttons for "All Statuses" (selected) and "Specific Status". A text field labeled "User defined Status" contains "NORM".
- Product Selection:** Radio buttons for "All Products" and "Specific Product" (selected). A text field labeled "Product Code" contains "ALB1".
- Currency Selection:** Radio buttons for "All Currencies" and "Specific Currency" (selected). A text field labeled "Currency Code" contains "AUD".

At the bottom right, there are "Ok" and "Exit" buttons.

Specify the following details.

### Status Selection

Indicate whether the reports should be generated for all statuses or specific status.

If you choose 'Specific Status', you need to specify the user defined status for which the report needs to be generated. The option list provided displays all valid user defined status maintained in the system. You can select the appropriate one.

### Product Selection

Indicate whether the reports should be generated for a specific product or for all products.

If you choose 'Specific Product', you need to specify the product for which the report needs to be generated. The option list provided displays all valid product codes maintained in the system. You can select the appropriate one.

### **Currency Selection**

Indicate whether the reports should be generated for a specific currency or all currencies.

If you choose 'Specific Currency', you need to specify the currency for which the report needs to be generated. The option list provided displays all valid currency codes maintained in the system. You can select the appropriate one.

Click 'OK' to generate the report.

## **12.2.2 Contents of Report**

The options that you specified while generating the report are printed at the beginning of the report. The details of the report are sorted in the ascending order of the following fields:

- User defined Status code
- Bill Currency
- Product Code
- Contract Reference number
- Customer ID

The contents of the List of Bills in User Defined Status report have been discussed under the following heads:

### **Header**

The Header carries the title of the Report, information on the branch code, the branch date, the user id, the module name, the date and time at which the report was generated and the page number of the report.

### **Body of the Report**

The following details are given for contracts in a user defined status:

Our Reference	The Reference Number of the contract.
Customer ID - Type	This is the party type of the customer. The name of the party who has to make the payment will also be printed.
Customer Name	The name of the customer involved in the contract.
Bill Type	The type of bill involved in the contract.
CCY	The code of the currency in which the bill amount is expressed.

Bill Amount	This is the Bill Amount.
Tenor	The Tenor indicates when the contract will be paid - at sight or after a usance period.
Transfer Date	This is the date on which the bill was transferred to it's current status.
Maturity Date	This is the Maturity date of the bill as indicated in the Bills Contract Details screen.
Status Code	This is the current user defined status into which the bill has moved.
BC Product Code	The product to which the bill is associated.
Status Aging days	This is the number of days for which the contract has been outstanding.
Total	This is the total bill amount.

### Summation

The total figure for the bill amount will be provided at the following levels:

- User defined Status + currency level.
- User defined Status + BC product + currency level.

## 12.3 **Bills and Collections Daily Activity Report**

The Daily Activity Journal lists details of all the activities or events that were performed on bills during the course of the bank's operations. The journal's for a particular day or for a period in time.

This report can be used as an audit trail since it also gives the names of the users who performed and authorized an event on the contract.

### 12.3.1 **Selection Options**

You can configure this report to be triggered automatically as part of the batch processes run as part of EOD. You can also generate the report when required from the Reports Browser.

If the report is generated as part of EOD, the report will by default list details of all the activities and events that occurred as of the date the report was generated.

If you generate the report manually (from the reports Browser) you can specify preferences for the generation of the report. You can choose to generate the report to list the activities and events that were performed on bill contracts as of a specific date or over a specified period in time. If the report should contain the list of activities and events that were performed over a period in time, specify the From and To date of the period.

You can invoke this screen by typing 'BCRONACT' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

The screenshot shows a web page dialog titled "Bills And Collections Contract Activity Report -- Web Page Dialog". It features two main sections. The first section, "Product Selection", includes two radio buttons: "All Product Codes" and "Specific Product Code", with the latter selected. Below these is a text input field containing "ACFS" and a small icon. The second section, "Bills And Collections Contract Activity Report", contains two date pickers: "From Date" set to "7/4/2000" and "To Date" set to "7/12/2000". At the bottom right of the dialog are "OK" and "Exit" buttons.

Specify the following details.

### **Product Selection**

Indicate whether the reports should be generated for a specific product code or for all product codes.

If you choose 'Specific Product Code', you need to specify the product for which the report needs to be generated. The option list provided displays all valid product codes maintained in the system. You can select the appropriate one.

### **From Date**

Specify the date from which the transactions need to be considered for report generation.

### **To Date**

Specify the date until which transactions need to be considered for report generation.

Click 'OK' to generate the report.

## **12.3.2 Contents of Report**

The options that you specified while generating the report are printed at the beginning of the report. The details of the report are sorted in the ascending order based on the following fields:

- Event Code
- Product Code
- Contract Currency

- Contract Reference Number

The contents of the Bills and Collections Daily Activity Report have been discussed under the following heads:

### Header

The Header carries the title of the Report, information on the branch code, the branch date, the user id, the module name, the date and time at which the report was generated and the page number of the report.

### Body of the Report

Product Code	This is the code of the product.
Event Code	This is the code of the event.
Our Reference	The Reference Number of the contract on which an activity was performed during the day.
Bill Type	The type of bill involved in the contract.
CCY	This is the currency in which the bill amount is expressed.
Bill Amount	This is the Bill Amount.
Tenor	The Tenor indicates when the contract will be paid - at sight or after a usance period.
Maturity Date	This is the Maturity date of the bill, as indicated in the Bills Contract Details screen.
Party Id	This is the ID of the Party..
Party Name	This is the name of the party.
Party Type	This is the type of the party.
Maker ID	The Login ID of the user who has performed the activity or event on the bill.
Checker ID	The Login ID of the user who has authorized the activity or event on the bill.

## 12.4 List of Overdue Items - Payment

The List of Overdue Items report lists the bills that have Payment items overdue. A bill is considered overdue with regard to payment under the following conditions:

- An import Sight bill unpaid after the seventh day of its booking.
- An Export Sight Bill unpaid after fourteen days of booking.
- A Usance bill unpaid after its maturity date.

You can invoke this screen by typing 'BCRODPAY' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

The screenshot shows a web-based dialog box titled "List of Overdue Items - Payments -- Web Page Dialog". It features a "Product Code" section with two radio button options: "All Products" and "Specific Product". The "Specific Product" option is selected, and a text box below it contains the value "ACFS". Below this is a section titled "List of Overdue Items-Payments" with two input fields: "Overdue Days for Incoming Bill" and "Overdue Days for Outgoing Bill", both of which have the value "30" entered. At the bottom right of the dialog are "OK" and "Exit" buttons.

Specify the following details.

### **Product Code**

Indicate whether the reports should be generated for a specific product or for all products.

If you choose 'Specific Product', you need to specify the product for which the report needs to be generated. The option list provided displays all valid product codes maintained in the system. You can select the appropriate one.

### **Overdue Days for Incoming Bill**

Specify the number of days due for incoming bill.

### **Overdue Days for Outgoing Bill**

Specify the number of days due for outgoing bill.

Click 'OK' to generate the report.

## **12.4.1 Selection Options**

You can configure this report to be triggered automatically as part of the batch processes run at EOD or you can generate the report whenever you need, from the Reports Browser.

If the report is generated as part of EOD, it will, by default list:

- Incoming Sight bills unpaid after the seventh day of its booking.
- Outgoing Sight bills unpaid after fourteen days of booking.
- Usance bills unpaid after its maturity date.

If you generate the report manually (from the reports Browser), you can indicate preferences like:

- The product for which you want details
- Overdue days for Incoming bills
- Overdue days for Outgoing bills

### Indicating the product

You can generate the report to list the bills with overdue payment items associated with all products or a specific product. If you want to generate the report to contain overdue items for a specific product, select the product code from the option list.

## 12.4.2 Contents of Reports

The selection options that you specified while generating the report are printed at the beginning of the report. The contents of the report have been discussed under the following heads:

### Header

The Header carries the title of the Report, information on the branch code, the branch date, the user id, the module name, the date and time at which the report was generated and the page number of the report.

### Body of Report

<b>Payment Date</b>	<b>This is the bill payment date.</b>
Aging Days	The number of days for which the bill is overdue. It will be the number days from the Maturity Date till today.
Our Reference	This is the reference number of the contract.
Bill Type	This is the type of the bill.
CCY	This is the currency referring in the bill.
Bill Amount	This is the amount of the bill.
Tenor	This is the code of the tenor.
Protest Party Type – Party ID	This is the party id of the protest party type.
Protest Party Name	This is the name of the protest party.
BC Product Code	This is the code of the BC Product.
Total	This is the total bill amount.

## 12.5 List of Overdue Items - Acceptances

The List of Overdue Items report displays details of bills which have Acceptance items overdue. A bill is considered overdue with regard to acceptance under the following conditions:

- Import bills in the FINAL stage, unaccepted after the seventh day of booking.
- Export bills in the FINAL stage, unaccepted after fourteen days of booking.

You can invoke this screen by typing 'BCRODACC' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

The screenshot shows a web page dialog box titled "List of Overdue Items - Acceptances -- Web Page Dialog". It features a "Product Code" section with two radio button options: "All Products" and "Specific Product". The "Specific Product" option is selected, and a text field below it contains the value "AFFP". Below this is a section titled "List of Overdue items-Acceptances" which contains two rows of input fields. The first row is "Overdue Days for Incoming Usance Bill" with a value of "30". The second row is "Overdue Days for Outgoing Usance Bill" also with a value of "30". At the bottom right of the dialog are "Ok" and "Exit" buttons.

Specify the following details.

### **Product Code**

Indicate whether the reports should be generated for a specific product or for all products.

If you choose 'Specific Product', you need to specify the product for which the report needs to be generated. The option list provided displays all valid product codes maintained in the system. You can select the appropriate one.

### **Overdue Days for Incoming Usance Bill**

Specify the number of days due for incoming usance bill.

### **Overdue Days for Outgoing Usance Bill**

Specify the number of days due for outgoing usance bill.

Click 'OK' to generate the report.

## 12.5.1 Selection Options

You can configure this report to be triggered automatically as part of the batch processes run at EOD, or you can generate the report when required from the Reports Browser.

If the report is generated as part of EOD, this report will by default list the following:

- Import bills in the FINAL stage, unaccepted after the seventh day of booking.
- Export bills in the FINAL stage unaccepted after fourteen days of booking.

If you generate the report manually (from the reports Browser) you can indicate preferences such as:

- The product for which you want details
- The Overdue days for Incoming Usance bills
- The Overdue days for Outgoing Usance bills

### **Indicating the product**

You can generate the report to list the bills with overdue acceptance items associated with all products or a specific product. If you want to generate the report to contain overdue items for a specific product, select the product code from the option list.

## 12.5.2 Contents of Reports

The selection options that you specified while generating the report are printed at the beginning of the report. The contents of the report have been discussed under the following heads:

### **Header**

The Header carries the title of the Report, information on the branch code, the branch date, the user id, the module name, the date and time at which the report was generated and the page number of the report.

### **Body of Report**

<b>Transaction Date</b>	<b>This is the transaction date.</b>
Aging Days	The number of days for which the bill is overdue. It will be the number days from the Maturity Date till today.
Our Reference	This is the reference number of the contract.
Bill Type	This is the type of the bill.
CCY	This is the currency of the bill.
Bill Amount	This is the amount of the bill.

<b>Transaction Date</b>	<b>This is the transaction date.</b>
Tenor	This is the duration of the contract.
Protest Party Type – Party ID	This is the party Id of the protest party type.
Protest Party Name	This is the name of the protest party.
BC Product Code	This is the code for the BC product.
Total	This is the total bill amount of each BC product.

## 12.6 List of Overdue Items - Finalization

The List of Overdue Items report, displays details of bills, which have Finalization items overdue. A bill is considered overdue with regard to finalization under the following conditions:

- Export bills in the INITIAL stage for more than 5 days
- Import bills in the INITIAL stage for more than 7 days

To invoke the 'Finalization Overdue Days Report' screen, type 'BCRODFIN' in the field at the top right corner of the Application tool bar and click the adjoining arrow button.

Specify the following details.

### **Product Code**

Indicate whether the reports should be generated for a specific product or for all products.

If you choose 'Specific Product', you need to specify the product for which the report needs to be generated. The option list provided displays all valid product codes maintained in the system. You can select the appropriate one.

### **Finalization Overdue Days for Incoming Bills**

Specify the number of days due for finalization of incoming bill.

### **Finalization Overdue Days for Outgoing Bills**

Specify the number of days due for finalization of outgoing bill.

Click 'OK' to generate the report.

## **12.6.1 Selection Options**

You can configure this report to be triggered automatically as part of the batch processes run at EOD or you can generate the report when required from the Reports Browser.

If the report is generated as part of EOD, this report will by default list the following:

- The product for which you want details
- Export bills in the INITIAL stage for more than 5 days
- Import bills in the INITIAL stage for more than 7 days

If you generate the report manually (from the reports Browser) you can indicate preferences such as:

- The finalization overdue days for incoming bills.
- The finalization overdue days for outgoing bills.

### **Indicating the product**

You can generate the report to list the bills with overdue finalization items associated with all products or a specific product. If you want to generate the report to contain overdue items for a specific product, select the product code from the option list.

## **12.6.2 Contents of Report**

The selection options that you specified while generating the report are printed at the beginning of the report. The contents of the report have been discussed under the following heads:

### **Header**

The Header carries the title of the Report, information on the branch code, the branch date, the user id, the module name, the date and time at which the report was generated and the page number of the report.

### **Contents of the Reports**

The following details are printed for the overdue contracts:

<b>Transaction Date</b>	<b>The date on which the bill was entered in the system.</b>
Aging Days	The number of days for which the bill is overdue. It will be the number days from the Maturity Date till today.
Our Reference	The Reference Number of the contract.
Bill Type	The type of bill involved in the contract.
CCY	The currency of the bill.
Bill Amount	The Bill Amount.
Tenor	For Payment:  Indicates whether the bill matures after a usance period or at sight.  For Acceptance:  This is the Maturity Date of the contract involving the bill.
Total	The amount that is outstanding.
Protest Party Type – Party Id	This is the party from whom the payment is due. It indicates the nature of the party's involvement in the contract.
Protest Party Name	The name of the party from whom the payment is due.

### Summation

The report gives total figures of the bill amount at the following levels:

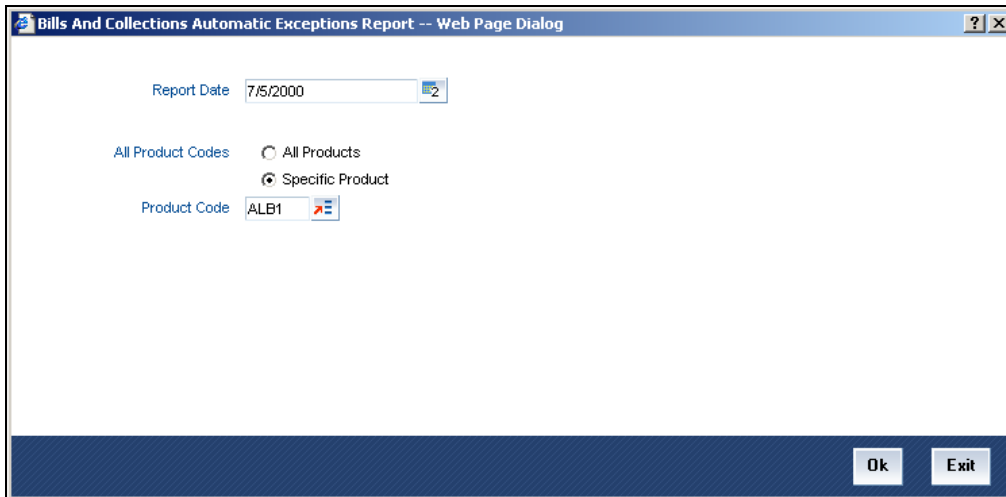

- For each Maturity date, Anticipated Payment date or Transaction date + currency level.
- For each Maturity Date, Anticipated Payment date or Transaction date + Product Code + currency level.

## 12.7 BC Automatic Processing Exceptions Report

The report prints details of the bills for which some exception has occurred while the automatic processes were run as part of EOD or BOD as of the current date.

You can invoke this screen by typing 'BCRUEXCP' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

Specify the following details.

### Report Date

Select the date on which the report is to be generated.

### All Product Codes

Indicate whether the reports should be generated for a specific product or for all products.

If you choose 'Specific Product', you need to specify the product for which the report needs to be generated. The option list provided displays all valid product codes maintained in the system. You can select the appropriate one.

Click 'OK' to generate the report.

## 12.7.1 Contents of Report

The information displayed in this report is sorted in the ascending order on the basis of reference numbers and Event codes. The contents of the List of Overdue Items report are discussed under the following heads:

### Header

The Header carries the title of the Report, information on the branch code, the branch date, the user id, the module name, the date and time at which the report was generated and the page number of the report.

### Contents of the report

Product Code	This is the product code.
Product Description	This is description of the product.

<b>Product Code</b>	<b>This is the product code.</b>
Event Code	This is the event code.
Event Description	This is the description of the event.
Bill Reference	The Reference Number of the contract.
Currency	The currency of the bill.
Bill Due Amount	This is the due amount of the bill ..
Error Code	This is the code that identifies the error that occurred while processing the bill.
Description	This is the description of the error that occurred while processing the bill.

## **12.8 BC Contracts Overrides Report**

The BC contracts Overrides report, reports all BC contracts that have had overrides during an applicable event executed as of today.

If you invoke this report as part of EOD, it will display all the overrides that were encountered during the various events executed on bills during the course of the day.

If you invoke this report at other times, you can specify the contracts for which the overrides need to be reported.

### **12.8.1 Selection Options**

You can configure this report to be triggered automatically as part of the batch processes run as part of EOD or you can also generate the report as and when required from the Reports Browser.

If the report is generated as part of EOD, it will by default, list all the overrides that occurred today while processing bills.

If you generate the report manually (from the reports Browser) you can specify preferences for the generation of the report.

You can invoke this screen by typing 'BCRONOVDS' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

Specify the following details.

### Product Selection

Indicate whether the reports should be generated for a specific product code or for all product codes.

If you choose 'Specific Product Code', you need to specify the product for which the report needs to be generated. The option list provided displays all valid product codes maintained in the system. You can select the appropriate one.

### Bills & Collections Contract Overrides Report

Indicate whether the reports should be overridden, while processing for all Over-rides for single contract or for all contract over-rides for the day.

If you choose 'All Over-rides for Single Contract', you need to specify the contract for which the report needs to be generated. The option list provided displays all valid contract codes maintained in the system. You can select the appropriate one.

Click 'OK' to generate the report.

## 12.8.2 Contents of the Report

The selection options that you specified while generating the report are printed at the beginning of the report. The details of this report are sorted in the ascending order of:

- BC Event code
- BC Contract Reference

The contents of the BC Contracts Overrides Report have been discussed under the following heads:

## Header

The Header carries the title of the Report, information on the branch code, the branch date, the user id, the module name, the date and time at which the report was generated and the page number of the report

## Body of the Report

Product Code	This is the product code.
Product Description	This is the description of the product.
Bill Reference No	The Reference Number of the bill..
Event Code	This is the event code.
Event Description	This is the description of the event.
Currency	The currency of the bill.
Bill Amount	This is the Bill Amount.
Maturity Date	This is the date on which the bill matures.

## 12.9 List of Bills with Pending Documents

The List of Bills with Pending Documents report prints details of the bills with pending documents. You can use the report to find out whether a bill has already been entered on the basis of the first set of documents received. This helps ensure that the same bill is not entered again when the second set of documents are received.

### 12.9.1 Selection Options

You can generate the report using 'List of Bills with Pending Documents Report' screen. You can invoke this screen by typing 'BCRENDOC' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

**List of Bills with Pending Documents Report -- Web Page Dialog**

Specify the following details.

### Product Selection

Indicate whether the reports should be generated for a specific product code or for all product codes.

If you choose 'Specific Product Code', you need to specify the product for which the report needs to be generated. The option list provided displays all valid product codes maintained in the system. You can select the appropriate one.

### Original/Duplicate Document

Select original or duplicate or both documents from the adjoining drop-down list.

### Date Selection

Indicate whether the reports should be generated on all covering dates or a specific covering date.

If you choose 'Specific Covering Date', you need to specify the date for which the report needs to be generated. The adjoining calendar icon provides all the valid dates maintained in the system. You can select the appropriate one.

## Customer Selection

Indicate whether the reports should be generated for specific customer identification or all customer identification.

If you choose 'Specific Customer Identification', you need to specify the customer Id for which the report needs to be generated. The option list provided displays all valid customer Ids are maintained in the system. You can select the appropriate one.

Click 'OK' to generate the report.

## 12.9.2 Contents of Report

The details of this report are sorted in the ascending order of the ID of the customer.

The contents of the List of Bills with Pending Documents report have been discussed under the following heads:

### Header

The Header carries the title of the Report, information on the branch code, the branch date, the user id, the module name, the date and time at which the report was generated and the page number of the report.

### Body of the Report

<b>Our Reference</b>	<b>The Reference Number of the contract.</b>
Currency	The currency of the bill.
Bill Amount	This is the Bill Amount.
Covering Letter Date	The date printed on the covering letter.
Org Doc Recv	Indicates whether the Original documents were received.
Dup Doc Recv	Indicates whether the Duplicate documents were received.
Remitter's Reference	This is the reference code for the remitter.
Remitters Name and Country	The name and country to which the remitter belongs.

## 12.10 List of Bills under Protest

The List of bills under protest report displays all the bills for which a protest advice has been generated during the day. This report is generated automatically as part of the batch processes run as part of EOD. However, if you choose to generate the report during the day you can specify a date. The system will display only those bills for which protest advices were generated as of the date you specify.

You can invoke this screen by typing 'BCROBUNP' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

Specify the following details.

### **Product Code**

Indicate whether the reports should be generated for a specific product or for all products.

If you choose 'Specific Product', you need to specify the product for which the report needs to be generated. The option list provided displays all valid product codes maintained in the system. You can select the appropriate one.

### **Report Date**

Select the date on which the report is to be generated.

Click 'OK' to generate the report.

### **Selection Options**

You have the option to indicate the following selection options for the generation of the report:

- The date and
- The product(s) for which you want details

### **Indicating the product**

You can generate the report to contain a list the bills under protest associated with all products or a specific product. If you want to generate the report for a specific product, select the product code from the option list.

## **Contents of Report**

The details of this report are sorted in the ascending order of:

- Contract Currency.
- Product Code.
- Contract Reference Number.

The contents of the List of Bills under protest report have been discussed under the following heads:

### **Header**

The Header carries the title of the Report, information on the branch code, the branch date, the user id, the module name, the date and time at which the report was generated and the page number of the report.

### **Body of the Report**

<b>Our Reference</b>	<b>The Reference Number of the contract that was protested.</b>
Drawee ID	The CIF ID assigned to the drawee of the bill. This field will remain blank if you have not specified details of the Drawee, in the Parties screen.
Drawee Name	The name of the Drawee. This field will remain blank if you have not specified details of the Drawee in the Parties screen.
Bill Type	The type of bill involved in the contract.
Bill CCY	The currency in which the bill amount is expressed.
Bill Amount	This is the outstanding Bill Amount.
Tenor	The Tenor indicates when the contract will be paid - at sight or after a usance period.
Maturity Date	This is the date on which the bill matures.
Protest Date	The date on which the contract was protested.
Reason for Protest	This is the reason for protest.
Product Code	This is the code of the product.
Total for Product	This is the total bill amount for thr product.
Total for Currency	This is the total bill amount for currency.

## Summation

The total figure for the bill amount will be provided at the following levels:

- For each currency at the report level.
- For a Bills Product Code + Currency level.

## 12.11 List of Bills to be Protested

The List of Bills to be Protested report displays all the bills which need to be protested for Non-payment, Non-acceptance or Non approval of discrepancies. A bill whose protest dates for either Non-payment or Non-acceptance is later than today will also be displayed in the report.

You can configure this report to be generated automatically as part of the batch processes run as part of EOD. Besides, you can also generate the report when required.

If the report is generated as part of EOD, this report will list the bills to be protested in the next three days (from today's date).

You can invoke this screen by typing 'BCROBTBP' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

Specify the following details.

### Product Code

Indicate whether the reports should be generated for a specific product or for all products.

If you choose 'Specific Product', you need to specify the product for which the report needs to be generated. The option list provided displays all valid product codes maintained in the system. You can select the appropriate one.

Click 'OK' to generate the report.

### Selection Options

You can generate the report to contain a list the bills:

- associated with all products or
- a specific product

To generate the report for a specific product, select the appropriate product code from the option list.

## 12.12 Contents of Report

The details of this report are sorted in the ascending order of:

- Contract Currency
- Product Code
- Contract Reference Number

The contents of the List of bills to be protested report have been discussed under the following heads:

### Header

The Header carries the title of the Report, information on the branch code, the branch date, the user id, the module name, the date and time at which the report was generated and the page number of the report.

### Body of the Report

<b>Our Reference</b>	<b>The Reference Number of the contract is to be protested.</b>
Drawee ID	The CIF ID assigned to the drawee of the bill. This field will remain blank if you have not specified details of the Drawee in the Parties screen.
Drawee Name	The name of the Drawee. This field will remain blank if you have not specified details of the Drawee in the Parties screen.
Bill Type	The type of bill involved in the contract to be protested.
Bill Currency	The currency in which the bill amount is expressed.
Bill Amount	This is the outstanding Bill Amount.
Tenor	The Tenor indicates when the contract will be paid - at sight or after a usance period.
Maturity Date	This is the date on which the bill matures.

<b>Our Reference</b>	<b>The Reference Number of the contract is to be protested.</b>
Protest Date	The date on which the contract will be protested.
Reason for Protest	This is the reason for protest.
Product Code	This is the product code.
Total for Product	This is the total amount of the product in the bill.
Total for Currency	This is the total amount in currency.

## **12.13 List of Maturing Bills**

This report lists all the bills that are yet to be liquidated and due to mature.

You can configure this report to be generated automatically as part of the batch processes run as part of BOD or EOD. Besides, you can also generate the report when required.

If the report is generated as part of BOD, then by default all bills maturing as of today's date will be reported.

If generated as part of EOD, this report lists the bills that are due to mature in the next seven calendar days.

If the report is generated manually, it will list the bills to be protested for the period that you indicate.

### **Selection Options**

You can indicate preferences for the generation of the report. The contents of the report will be determined by these preferences that you indicate.

You can invoke this screen by typing 'BCRODMAT' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

Specify the following details.

### **Stage**

Indicate whether the maturing bills report is to be generated in initial or final stage of contract.

### **Product Selection**

Indicate whether the reports should be generated for a specific product code or for all product codes.

If you choose 'Specific Product Code', you need to specify the product for which the report needs to be generated. The option list provided displays all valid product codes maintained in the system. You can select the appropriate one.

### **Maturity Date From**

Select the date from which the contract is matured. You can select a date from the adjoining calendar icon. Click the calendar icon to select a date.

### **Maturity Date To**

Select the date to which the maturity of the contract is valid. Click the calendar icon to select a date.

Click 'OK' to generate the report.

### **Contents of the Report**

The selection options that you specified while generating the report are printed at the beginning of the report.

The details of this report are sorted in the ascending order of:

- Contract stage - INITIAL or FINAL
- Product Code
- Maturity Date
- Contract Currency Code
- Contract Reference Number

The contents of the BC Contract Maturing Bills have been discussed under the following heads:

**Header**

The Header carries the title of the Report, information on the branch code, the branch date, the user id, the module name, the date and time at which the report was generated and the page number of the report..

**Body of the Report**

<b>Our Reference</b>	<b>The Reference Number of the contract is to be protested.</b>
Bill Type	The type of bill involved in the contract to be protested.
Tenor	The Tenor indicates when the contract will be paid - at sight or after a usance period.
Maturity Date	This is the date on which the bill matures.
CCY	The currency in which the bill amount is expressed.
Bill Amount	This is the outstanding Bill Amount.
Customer Party Type – Party ID	This is the party id for customer party type.
Customer Party Name	This is the name of the customer party.
Total	This is the total amount.

**Summation**

The total figure for the bill amount will be provided for each Bills Product Code + Maturity Date + Currency level.

**12.14 List of Bills Eligible for Rediscounting**

This report provides the list of bills eligible for rediscounting. You can set preferences as to generation of the report using ‘List of Bills Eligible for Rediscounting’ screen.

To invoke the screen, type ‘BCROBEFR’ in the field at the top right corner of the Application tool bar and click the adjoining arrow button. The system displays ‘Print Options’ screen. Set your preferences as to printing the report and click ‘OK’ button.

For field wise explanation of the 'Print Options' screen, please refer to the chapter 'Retrieving Information in Oracle FLEXCUBE' on Reports user manual.

## **Contents of Report**

The contents of the list of bills eligible for rediscounting report have been discussed under the following heads:

### **Header**

The Header carries the title of the Report, information on the branch code, the branch date, the user id, the module name, the date and time at which the report was generated and the page number of the report.

### **Body of Report**

<b>Our Reference</b>	<b>The Reference Number of the contract.</b>
Customer Party Type – ID	This is the ID of customer party type.
Customer Name	This is the customer name.
Bill Type	This is the type of the bill.
Under LC	This indicates the LC under which the bill type is organized.
LC Reference	This is the LC Reference code.
Base Date	This is the base date of the bill.
Maturity Date	This is the date at which the bill becomes matured.
Ccy	This is the currency in which bill is created.
Lcy	This is the local currency.
Bill Outstanding Amount	This is the outstanding amount in the bill.
Bill Outstanding LCY Amount	This is the outstanding amount in local currency.
Total for Currency	This is the sum of all bills.
Total for Currency in LCY	This is the sum of all bills in local currency.
Total for Report in LCY	This is the sum of all bills in the report in local currency.

## **12.15 List of Bills Under Reserve**

This report provides the list of bills under reserve. You can set preferences as to generation of the report using 'Under Reserve Report' screen.

To invoke the screen, type 'BCRODAPP' in the field at the top right corner of the Application tool bar and click the adjoining arrow button. The system displays 'Print Options' screen. Set your preferences as to printing the report and click 'OK' button.

For field wise explanation of the 'Print Options' screen, please refer to the chapter 'Retrieving Information in Oracle FLEXCUBE' on Reports user manual.

### **Contents of Report**

The contents of the list of bills under reserve report have been discussed under the following heads:

#### **Header**

The Header carries the title of the Report, information on the branch code, the branch date, the user id, the module name, the date and time at which the report was generated and the page number of the report.

<b>Final Stage Date</b>	<b>This is the date of the final stage.</b>
Our Reference	This is the reference number of the bill.
Bill Type	This is the type of the bill.
CCY	This is the type of the currency used in the bill.
Bill Outstanding Amount	This is the bill amount.
Tenor	This is the duration of the contract.
Maturity Date	This is the date at which the product is matured.
Party Type – Party ID	This is the id of the customer party.
Party Name	This is the name of the customer party.
BC Product Code	This is the code for the BC product.
Product Desc	This is the description of the product.
Total for Product	This is the bill amount for product.
Total for Currency	This is the bill amount in currency.

## **12.16 Bills Static Maintenance Reports**

In this section we shall discuss details of the reports that you can generate to retrieve information on specific maintenance files that have been created.

You can retrieve information about the following:

- Discrepancy Codes
- Document Codes
- Free Format Codes
- Instruction Codes
- Goods Codes

These reports can also be used as an audit trail as they contain the names of the users who created and authorized the record.
