1.5	INTEGRATING ORACLE FLEXCUBE UBS AND MBEAN	1-78
1.5.1	<i>Startup Script Modification</i>	<i>1-78</i>

1. Setting Up Plug-Ins

1.1 Introduction

You need to carry out certain tasks manually before Oracle FLEXCUBE deployment. This document details out the pre-deployment tasks based on the on the selected plug-ins.

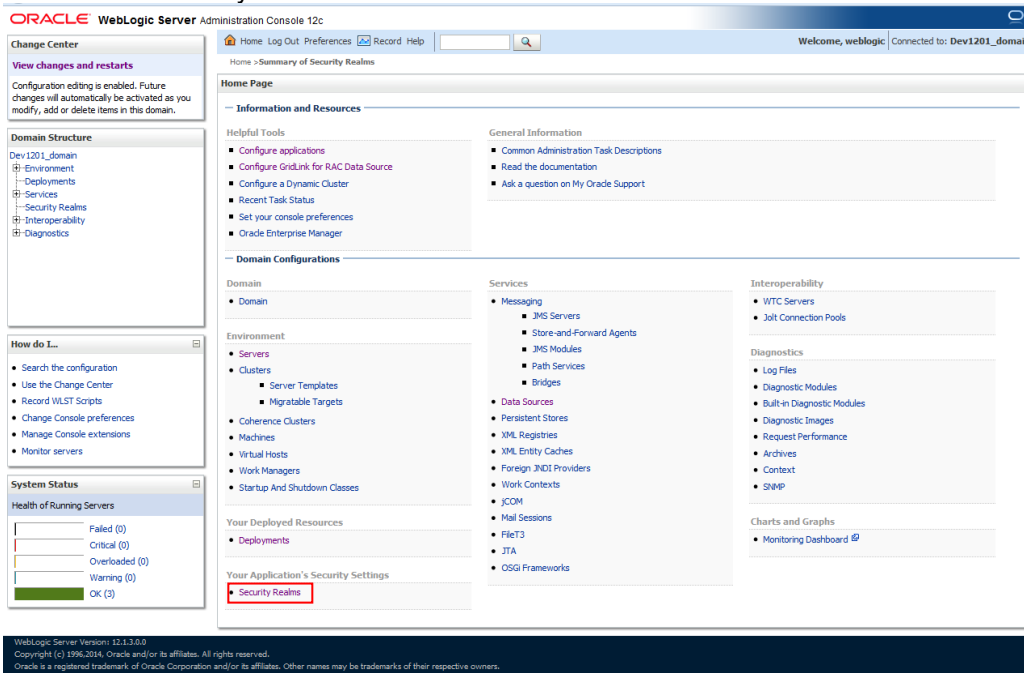

1.2 Integrating Oracle FLEXCUBE UBS and BPEL

If you have created the EAR file with BPEL as a plug-in, then along with the Oracle FLEXCUBE UBS EAR file, the Installer creates 'FCJJPSPProvider.jar' file inside the folder 'BPELbuild' created along. You need to complete the following tasks before deploying Oracle FLEXCUBE UBS EAR file.

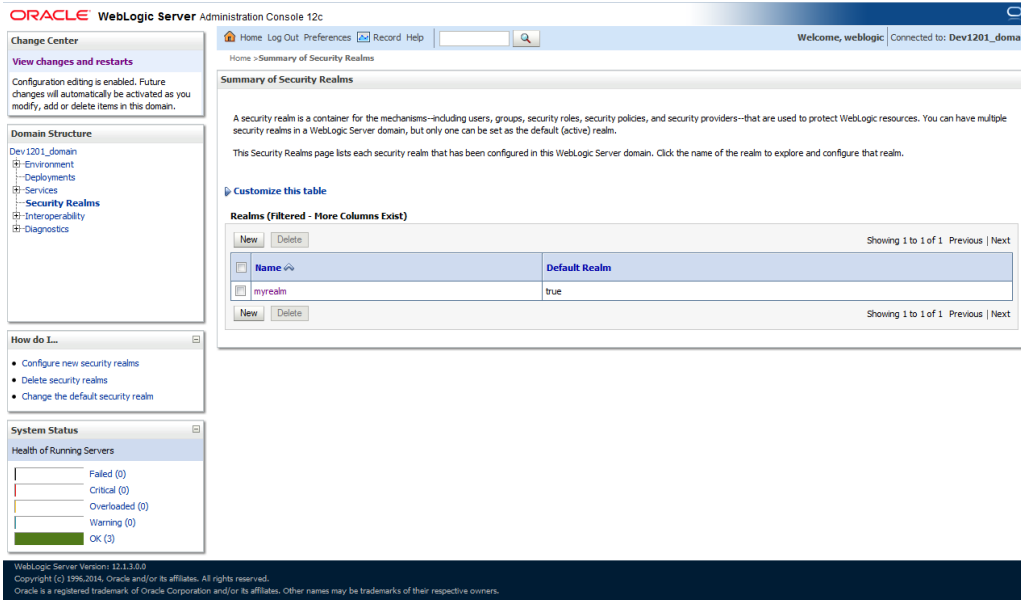

1.2.1 Custom Provider Configuration

FCUBS Custom Authenticator Provider configuration has to be done from the Weblogic console of SOA or manually update the config.xml of the SOA domain. Below steps needs to be followed to setup Custom Authentication Provider:

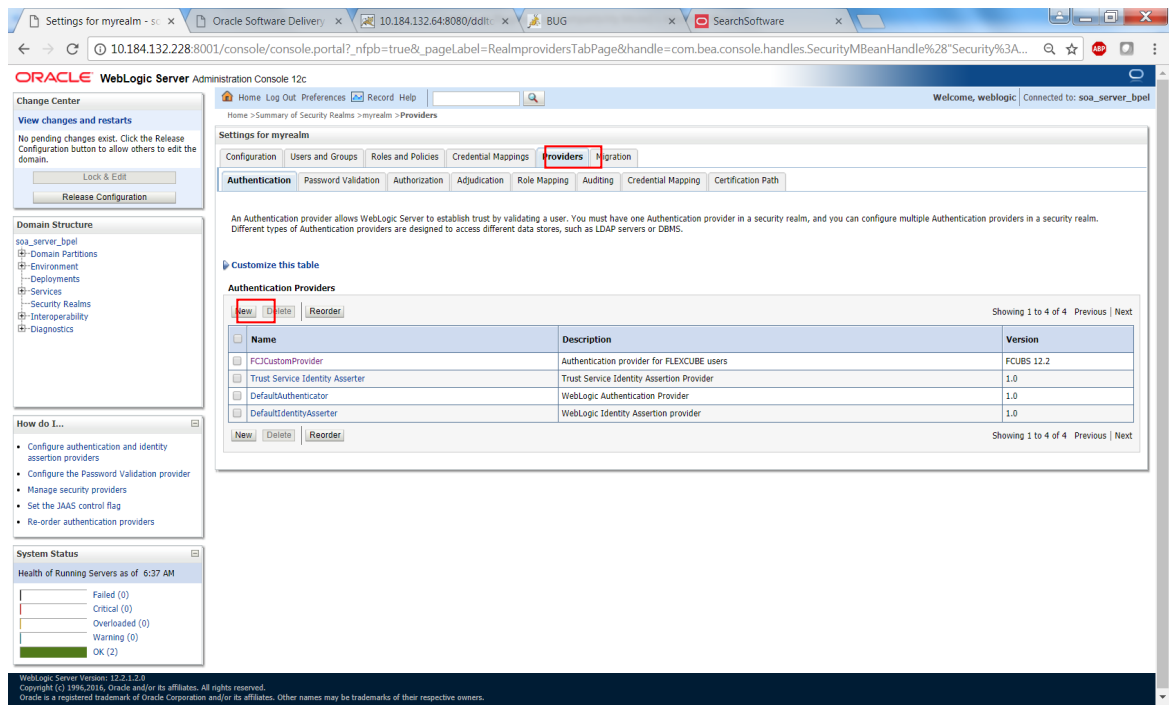

1. Along with FCUBS Ear file, Installer creates FCUBSAuthenticationProvider.jar file inside the BPELbuild folder.
 - a. Copy this file to the following path on the application server host
<ORACLE_HOME>\wlserver\server\lib\mbeantypes .
2. Restart the Admin Server.
3. Login to the Console.
4. Click on Security Realms.

5. Click on myrealm.

6. Click on Providers tab and click on new button to create new authentication provider.

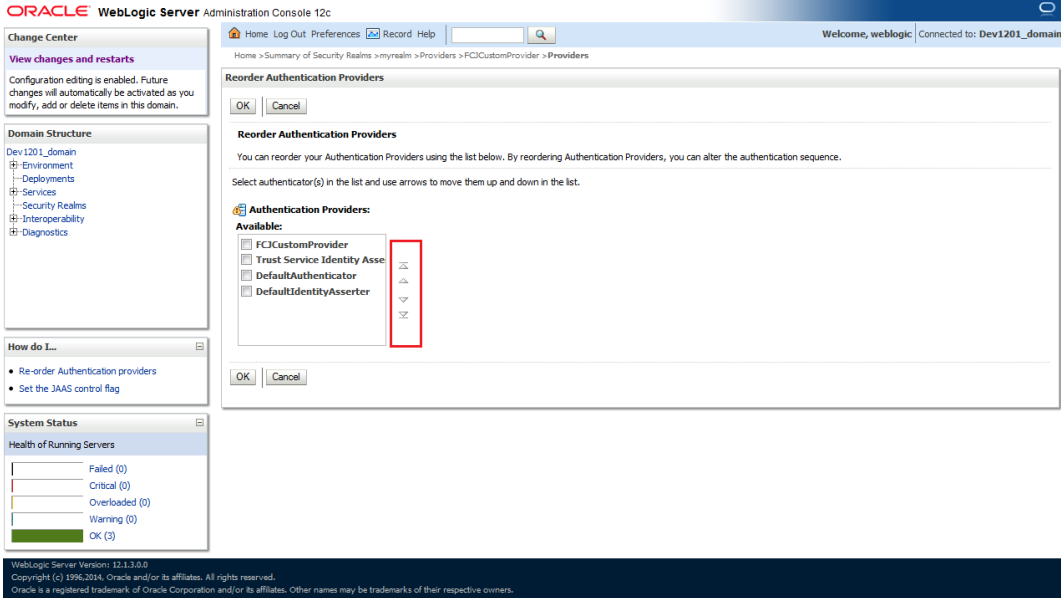

7. Give Provider name as FCJCustomProvider and type as FCUBSUserAuthenticator.

The screenshot shows the Oracle WebLogic Server Administration Console. On the left, there are panels for 'Change Center', 'Domain Structure', 'How do I...', and 'System Status'. The main area displays the 'Create a New Authentication Provider' dialog box. The dialog has a title bar with 'OK' and 'Cancel' buttons. Below the title bar, it says 'Create a new Authentication Provider' and 'The following properties will be used to identify your new Authentication Provider.' There is a note: '* Indicates required fields'. The 'Name' field is labeled '* Name:' and contains the text 'FCJCustomProvider'. Below this, it says 'This is the type of authentication provider you wish to create.' The 'Type' dropdown menu is labeled 'Type:' and is set to 'FCUBSUserAuthenticator'. At the bottom of the dialog, there are 'OK' and 'Cancel' buttons.

8. Click Reorder to bring the newly created provider to first of all providers and click OK.

The screenshot shows the Oracle WebLogic Server Administration Console. On the left, there are panels for 'Change Center', 'Domain Structure', 'How do I...', and 'System Status'. The main area displays the 'Settings for myrealm' page, specifically the 'Providers' tab. Below the navigation tabs, there is a table titled 'Authentication Providers'. The table has columns for 'Name', 'Description', and 'Version'. The first row is 'FCJCustomProvider', which is highlighted. Below the table, there are buttons for 'New', 'Delete', and 'Reorder'. The 'Reorder' button is circled in red. The table also shows 'Showing 1 to 4 of 4' and 'Previous | Next' links.

Name	Description	Version
FCJCustomProvider	Authentication provider for FLEXCLUBE users	FCUBS 12.1
Trust Service Identity Asserter	Trust Service Identity Asserter Provider	1.0
DefaultAuthenticator	WebLogic Authentication Provider	1.0
DefaultIdentityAsserter	WebLogic Identity Asserter provider	1.0

9. Click on FCJCustomProvider.

10. In Common tab change the control flag to "SUFFICIENT".

11. In Provider Specific tab

- Set JNDIName as Flexcube JNDI Name.
- If external authentications are used in FCUBS then Fill the Ldap/MSAD related fields.

12. For manually editing the config.xml go to the below path and open the config.xml file
 <ORACLE_HOME>\Middleware\user_projects\domains\base_domain\config\
 The following codes need to be added at proper locations in the config.xml.
 a) Search for <realm> tag and add the following code between <realm> and </realm> tags. This should be the first child of the realm Node.

```
<sec:authentication-provider xmlns:n1="http://fcubs.ofss.com/security"
xsi:type="n1:fcubs-user-authenticatorType">
  <sec:name>FCJCustomProvider</sec:name>
  <sec:control-flag>SUFFICIENT</sec:control-flag>
  <n1:msad-or-ldap-login-required>true</n1:msad-or-ldap-login-required>
  <n1:external-password-required>true</n1:external-password-required>
  <n1:authentication-type>MSAD</n1:authentication-type>
  <n1:ldap-server-ip-and-port>LDAP://localhost:389</n1:ldap-server-ip-and-port>
  <n1:ldap-ssl-enabled>true</n1:ldap-ssl-enabled>
  <n1:security-authentication-type>simple</n1:security-authentication-type>
  <n1:ldap-domain-name>OFSS.COM</n1:ldap-domain-name>
  <n1:ldap-server-time-out-duration>0</n1:ldap-server-time-out-duration>
</sec:authentication-provider>
```

- b) Make sure tag values matches the value given during Property file creation.

1.2.2 Configuring libovd for single Entity

You need to configure the libovd details. Follow the steps given below:

1. Along with the Oracle FLEXCUBE UBS EAR file, the Installer creates 'FCJJSPProvider.jar' file inside the BPELbuild folder under SOURCE directory.
2. On the application server host, create a folder by name 'classes' at the location '<MIDDLEWARE_HOME>soa\soa\modules\oracle.soa.ext_11.1.x'.
3. Extract the file 'FCJJSPProvider.jar' and from the extracted content, copy the folder 'com' to: '<MIDDLEWARE_HOME>soa\soa\modules\oracle.soa.ext_11.1.x\classes'.

4. Navigate to the location
'<MIDDLEWARE_HOME>soa\soa\modules\oracle.soa.ext_11.1.x\classes\com\ofss\fcc\bpel\cac'. Edit the properties file 'CISProperties.properties' and update 'JNDI.name' with the JNDI name same as Entity Name given in Multi Entity Names screen while creating property file 'fcubs.properties', e.g. 'jdbc/fcjdevDS'.
5. Copy 'FCJJSPProvider.jar' to
'<MIDDLEWARE_HOME>/user_projects/domains/<domain_name>/config/fmwconfig/ovd/plugins/lib'. Create the directory structure if it does not exist.
6. Copy the fcubs_adapter.xml from this word doc to
'<MIDDLEWARE_HOME>/oracle_common/modules/oracle.ovd/templates/

fcubs_adapter.xml

7. Search for param name="DataSource" in fcubs_adapter.xml and update its value with FCUBS Datasource name, e.g. updated parameter would look like
<param_name="DataSource" value="jdbc/fcjdevDS"/>.
8. Set environment variables in the command prompt, e.g. for linux shell,

```
export ORACLE_HOME=/scratch/app/bpm12212(setting ORACLE_HOME)
export WL_HOME=/scratch/app/bpm12212/wlserver(setting WL_HOME)
export JAVA_HOME=/scratch/work_area/DBA/jdk1.8.0_144 (setting JAVA_HOME)
```
9. Execute "libovdadapterconfig" script which is present in
'<MIDDLEWARE_HOME>/oracle_common/bin' with below parameters. Provide the below arguments with values for admin server host name or ip ,admin server port ,weblogic user id, domain home and fcubs datasource.

```
./libovdadapterconfig.sh -adapterName fcubsadapter -adapterTemplate fcubs_adapter.xml -host
<ADMIN_SERVER_HOST> -port <ADMIN_PORT> -userName <WEBLOGIC_USERID> -domainPath
<DOMAIN_HOME> -dataStore DB -root ou=fcubs,dc=oracle,dc=com -contextName default -
dataSourceJNDIName <FCUBS_DATASOURCE_JNDI>
```
10. Once the above steps are completed, i.e. "Adapter created successfully: fcubsAdapter" message is displayed, restart the server.

1.2.3 **Configuring libovd for MultiEntity**

1. Continue step 1 to step5 from 1.2.2 section.
2. In the following steps replace the <EntityId> tag with the proper Entity name.
3. Copy the fcubs_adapter_<EntityId>.xml to
'<MIDDLEWARE_HOME>/oracle_common/modules/oracle.ovd/templates/

fcubs_adapter_<EntityId>.xml

4. Search for <FCUBSDATASOURCE> in fcubs_adapter_< EntityId>.xml and update it with fcubs Datasource with the mapped Datasource for the entity in the property file.

EX:<param name="DataSource" value="<FCUBSDATASOURCE>"/>

5. Search for UserIdPattern Parameter and Update the value for OU to the entity name in lower case.

EX: <param name="UserIdPattern" value="cn=%USERID%,ou=< EntityId>,dc=oracle,dc=com"/>

6. Search for MultiEntityEnabled element and update the value to true.

EX: <param name="MultiEntityEnabled" value="true"/>

7. Search for EntityId element and update the value with the entity name in lower case which we have created.

EX:<param name="EntityId" value=" < EntityId >"/>

8. Search for ou=fcubs and update with entity id in lower case.

EX : ou= EntityId

9. Execute "libovdadapterconfig" script which is present in '<MIDDLEWARE_HOME>/oracle_common/bin' with below parameters. Update the admin server host name or ip ,admin server port ,weblogic user id, domain home ,root and fcubs datasource

libovdadapterconfig.sh -adapterName fcubsAdapter -adapterTemplate fcubs_adapter_< EntityId >.xml -host <ADMIN_SERVER_HOST> -port <ADMIN_PORT> -userName <WEBLOGIC_USERID> -domainPath <DOMAIN_HOME> -dataStore DB -root ou=<EntityId>,dc=oracle,dc=com -contextName default -dataSourceJNDIName <FCUBSDATASOURCE name which we mapped in step4>

10. Repeat from step2 to step7 for each entity creation

11. Once the above steps are completed, restart the server.

Note:- for any misconfiguration in libovd

We can delete the existing fcubsAdapter and re run the ./libovdadapterconfig.sh

For deleting fcubsAdapter use the below command:

Log in to the WSLT console by running the WLST script.For example:

MW_HOME/oracle_common/common/bin/wlst.sh

(UNIX)MW_HOME\oracle_common\common\bin\wlst.cmd (Windows)

Connect to your Administration Server using the following syntax:

connect ('<WLS admin user name>','<WLS admin password>','t3://<admin server host>:<admin server port>')

For example:connect('weblogic','weblogic','t3://myserver:7001')

Delete the misconfigured adapter using the following syntax:

deleteAdapter(adapterName='fcubsAdapter')

Note the following:

- In case of Multi Entity, all data sources must be created separately for each entity. The JNDI name will be differentiated by suffixing entity name.

Examples: If Data source is 'jdbc/fcjDevDs' then jdbc/fcjDevDs+entity name will be lookup the application. (jdbc/fcjDevDs+entity name) jndi should be presented in application server.

- For multi tenant deployment BPMN support will be available only for the logged entity.

1.2.4 Configuring for Multiple Providers for Multiple Entities

1. Login to the Adminserver.
2. Click on security Realms.

3. Click on myrealms.

ORACLE WebLogic Server Administration Console 12c

Welcome, weblogic | Connected to: soa_doma

Home > Summary of Servers > Summary of Security Realms > myrealm > Providers > FCUBS > Summary of Security Realms > myrealm > Summary of Security Realms > myrealm > Summary of Security Realms

Summary of Security Realms

A security realm is a container for the mechanisms—including users, groups, security roles, security policies, and security providers—that are used to protect WebLogic resources. You can have multiple active security realms in a WebLogic Server domain, but only one can be set as the default security realm, which is reserved for domain administrative purposes.

This Security Realms page lists each security realm that has been configured in this WebLogic Server domain. Click the name of the realm to explore and configure that realm.

Customize this table

Realms (Filtered - More Columns Exist)

Name	Default Realm
myrealm	true

Showing 1 to 1 of 1 Previous | Next

Save

Use this page to configure the general behavior of this security realm.

Note: If you are implementing security using JACC (Java Authorization Contract for Containers as defined in JSR 115), you must use the DD Only security model. Other WebLogic Server models are not available and the security functions for Web applications and EJBs in the Administration Console are disabled.

Name: myrealm The name of this security realm. [More Info...](#)

Security Model Default: DD Only Specifies the default security model for Web applications or EJBs that are secured by this security realm. You can override this default during deployment. [More Info...](#)

Combined Role Mapping Enabled Determines how the role mappings in the Enterprise Application, Web application, and EJB containers interact. This setting is valid only for Web applications and EJBs that use the Advanced security model and that initialize roles from deployment descriptors. [More Info...](#)

Use Authorization Providers to Protect JMX Access Configures the WebLogic Server MBean servers to use the security realm's Authorization providers to determine whether a JMX client has permission to access an MBean attribute or invoke an MBean operation. [More Info...](#)

Automatically Restart After Non-Dynamic Changes Specifies whether the Realm will be auto-restarted if non-dynamic changes are made to the realm or providers within the realm. [More Info...](#)

Retire Timeout: 60 Specifies the retire timeout for a realm that is restarted. The old realm will be shutdown after the specified timeout period has elapsed. [More Info...](#)

Settings for myrealm

Configuration | Users and Groups | Roles and Policies | Credential Mappings | **Providers** | Migration

Authentication | Password Validation | Authorization | Adjudication | Role Mapping | Auditing | Credential Mapping | Certification Path

An Authentication provider allows WebLogic Server to establish trust by validating a user. You must have one Authentication provider in a security realm, and you can configure multiple Authentication providers in a security realm. Different types of Authentication providers are designed to access different data stores, such as LDAP servers or DBMS.

11. Change the JNDI name to the Datasource JNDI name which have mapped to the entity in the property file level and check the multi entity enabled checkbox.

12. Enter the EntityId with the Entity name which we created in the property file level and click on save

13. Create the new datasource for each entity with the JNDI name which we mapped in the property file.
14. Restart the Admin server
15. Continue the step1 to step15 for each provider creation in multientity scenario.

1.2.5 Configuring DBAdapter

In order to configure DBAdapter, follow the steps given below.

1. Log in to 'Weblogic Console' and click 'Deployment' under 'Domain Structure'.

The screenshot shows the Oracle WebLogic Server Administration Console. The left sidebar contains navigation menus for 'Change Center', 'Domain Structure', 'How do I...', and 'System Status'. The main content area is titled 'Summary of Deployments' and contains a table of installed applications.

Name	State	Health	Type	Targets	Deployment Order
AQAdapter	Active	OK	Resource Adapter	soa_server1	324
b2bui	Active	OK	Enterprise Application	soa_server1	313
BamComposer	New		Enterprise Application	bam_server1	500
BamCQService	New		Enterprise Application	bam_server1	300
BamServer	New		Enterprise Application	bam_server1	400
BPMComposer	Active	OK	Enterprise Application	soa_server1	385
coherence-transaction-rar	Active	OK	Resource Adapter	AdminServer, bam_server1, soa_server1	100
CoherenceAdapter	Installed		Resource Adapter		331
DBAdapter	Active	OK	Resource Adapter	soa_server1	322
DefaultToDoTaskFlow	Active	OK	Enterprise Application	soa_server1	314
DMS Application (12.1.3.0.0)	Active	OK	Web Application	AdminServer, bam_server1, soa_server1	5
em	Active	OK	Enterprise Application	AdminServer	400
FUBSApp (12.1.0.0)	Prepared	OK	Enterprise Application	soa_server1	500

2. In the Deployments table, select 'DbAdapter'. You will be navigated to 'Settings for DbAdapter'.

The screenshot shows the 'Settings for DbAdapter' page in the Oracle WebLogic Server Administration Console. The 'Configuration' tab is selected, and the 'Outbound Connection Pools' sub-tab is active. A table displays the configuration for the 'Outbound Connection Pool'.

Groups and Instances	Connection Factory Interface
javax.resource.cc.ConnectionFactory	javax.resource.cc.ConnectionFactory

3. Click 'Configuration' tab and select 'Outbound Connection Pools' under it.

4. Under 'Groups and Instances', click and expand 'javax.resource.cci.ConnectionFactory'.
5. Click 'New' and select 'javax.resource.cci.ConnectionFactory' in Outbound Connection Group.
6. Define 'JNDI Name' as 'eis/DB/FCCDEV' and click on 'Finish'.

- The 'jndi name' should be the same as the one in 'Dbutility sub-process'.
7. Click 'DbAdapter' again. Click 'Configuration' tab and select 'Outbound Connection Pools'.
 8. Under 'Groups and Instances', click and expand 'javax.resource.cci.ConnectionFactory'.
 9. The new JNDI name is listed.
 10. Click on the hyperlink 'eis/DB/FCCDEV'.

The screenshot shows the Oracle WebLogic Server Administration Console. The main content area displays the 'Settings for javax.resource.cci.ConnectionFactory' page, specifically the 'Outbound Connection Properties' tab. The page includes a 'Save' button and a table of properties. The table has the following data:

Property Name	Property Type	Property Value	Supports Dynamic Updates
DataSourceName	java.lang.String	jdbc/fcdevOS	false
DefaultCharset	java.lang.Boolean	false	false
PlatformClassName	java.lang.String	org.eclips.persistence.platform.database.Oracle10Platform	false
SequencePreallocatorSize	java.lang.Integer	50	false
UsesBatchWriting	java.lang.Boolean	true	false
UsesNativeSequencing	java.lang.Boolean	true	false
UsesSkipLocking	java.lang.Boolean	true	false
XADataSourceName	java.lang.String		false

11. Click the 'Property Value' field for the 'DataSourceName' and update the application JNDI reference (given in 'fcubs.properties' file) and then press 'Enter' key.
12. Save and restart the Admin server.

1.2.6 Configuring JMS Adapter

1. Login in to console → Click on JMS Servers→New

The screenshot shows the Oracle WebLogic Server Administration Console 12c Home Page. The left sidebar contains navigation panels for Change Center, Domain Structure, How do I..., and System Status. The main content area is titled 'Home Page' and includes sections for Information and Resources, Domain Configurations, Environment, Services, Interoperability, Diagnostics, and Charts and Graphs. The 'Services' section is expanded, and the 'JMS Servers' link is circled in red.

The screenshot shows the Oracle WebLogic Server Administration Console 12c Summary of JMS Servers page. The page provides an overview of JMS servers and includes a table of existing servers. A 'New' button is circled in red in the table's header row.

JMS servers act as management containers for the queues and topics in JMS modules that are targeted to them. This page summarizes the JMS servers that have been created in the current WebLogic Server domain.

JMS Servers (Filtered - More Columns Exist)

Name	Persistent Store	Target	Current Target	Health
BamAlertEngineJmsServer	BamAlertEngineJmsFileStore	BAMServer	BAMServer	
BamCQServiceJmsServer_BAMServer	BamCQServiceJmsFileStore_BAMServer	BAMServer	BAMServer	
BamReportCacheJmsServer	BamReportCacheJmsFileStore	BAMServer	BAMServer	
BamServerJmsServer_BAMServer	BamServerJmsFileStore_BAMServer	BAMServer	BAMServer	
BPMJmsServer	BPMJmsFileStore	SOAServer	SOAServer	OK
SOAJmsServer	SOAJmsFileStore	SOAServer	SOAServer	OK
UMSJmsServer_auto_1	UMSJmsFileStore_auto_1	BAMServer	BAMServer	
UMSJmsServer_auto_2	UMSJmsFileStore_auto_2	SOAServer	SOAServer	OK

2. Please provide the below Name for JMS Server and select the file persistent store as below→Next

The screenshot shows the Oracle WebLogic Server Administration Console. The main window displays the 'Create a New JMS Server' wizard. The 'JMS Server Properties' section is active, showing the following configuration:

- Name:** FCUBSJMServer
- Persistent Store:** SOAJMSFileStore

The left sidebar contains the following sections:

- Change Center:** View changes and restarts. Configuration editing is enabled.
- Domain Structure:** A tree view showing the domain hierarchy: AlphaDomain > Environment > Servers > Clusters > Coherence Clusters > Machines > Virtual Hosts > Work Managers > Startup and Shutdown Classes > Deployments > Services > Messaging > JMS Servers > Store and Forward Agents.
- How do I...:** Configure JMS system modules, Configure custom persistent stores.
- System Status:** Health of Running Servers: Failed (0), Critical (0), Overloaded (0), Warning (0), OK (2).

3. Select the target as SOA Server →Finish

The screenshot shows the Oracle WebLogic Server Administration Console. The main window displays the 'Create a New JMS Server' wizard. The 'Select targets' section is active, showing the following configuration:

- Target:** SOAServer

The left sidebar contains the following sections:

- Change Center:** View changes and restarts. Configuration editing is enabled.
- Domain Structure:** A tree view showing the domain hierarchy: AlphaDomain > Environment > Servers > Clusters > Coherence Clusters > Machines > Virtual Hosts > Work Managers > Startup and Shutdown Classes > Deployments > Services > Messaging > JMS Servers > Store and Forward Agents.
- How do I...:** Configure JMS system modules, Configure custom persistent stores.
- System Status:** Health of Running Servers: Failed (0), Critical (0), Overloaded (0), Warning (0), OK (2).

WebLogic Server Version: 12.1.3.0.0
Copyright (c) 1996, 2014, Oracle and/or its affiliates. All rights reserved.
Oracle is a registered trademark of Oracle Corporation and/or its affiliates. Other names may be trademarks of their respective owners.

The screenshot shows the Oracle WebLogic Server Administration Console 12c interface. The main content area displays the 'Summary of JMS Modules' page. On the left, there is a 'Domain Structure' tree with 'JMS Modules' selected. Below it, 'How do I...' and 'System Status' sections are visible. The 'Summary of JMS Modules' page includes a 'Customize this table' section with a 'New' button circled in red. Below this is a table of existing JMS modules:

Name	Type
BamAlertEngineJmsSystemModule	System
BamCQServiceJmsSystemResource_BAMServer	System
BamReportCacheJmsSystemModule	System
BamServerJmsSystemResource	System
BPMJmsModule	System
SOAJmsModule	System
UMSAQJmsSystemResource	System
UMSJmsSystemResource	System

5. Create a JMS Module with the Name, FCUBSJMSModule. Click on Next→Select the target as SOA Server→Finish

The screenshot shows the 'Create JMS System Module' wizard in the Oracle WebLogic Server Administration Console 12c. The 'Name' field is filled with 'FCUBSJMSModule'. The 'Descriptor File Name' and 'Location In Domain' fields are empty. The 'Next' button is highlighted.

The following properties will be used to identify your new module.

JMS system resources are configured and stored as modules similar to standard J2EE modules. Such resources include queues, topics, connection factories, templates, destination keys, quota, distributed queues, distributed topics, foreign servers, and JMS store-and-forward (SAF) parameters. You can administratively configure and manage JMS system modules as global system resources.

* Indicates required fields

What would you like to name your System Module?

* Name:

What would you like to name the descriptor file name? If you do not provide a name, a default will be assigned.

Descriptor File Name:

Where would you like to place the descriptor for this System Module, relative to the jms configuration sub-directory of your domain?

Location In Domain:

6. Go back to JMS Modules→FCUBSJMSModule→New

The screenshot shows the Oracle WebLogic Server Administration Console. The main content area is titled "Settings for FCUBSJMSModule" and includes a "Configuration" tab. The page displays general information about the JMS system module and its resources. Key details include:

- Name:** FCUBSJMSModule
- Descriptor File Name:** jms/FCUBSJMSModule-jms.xml

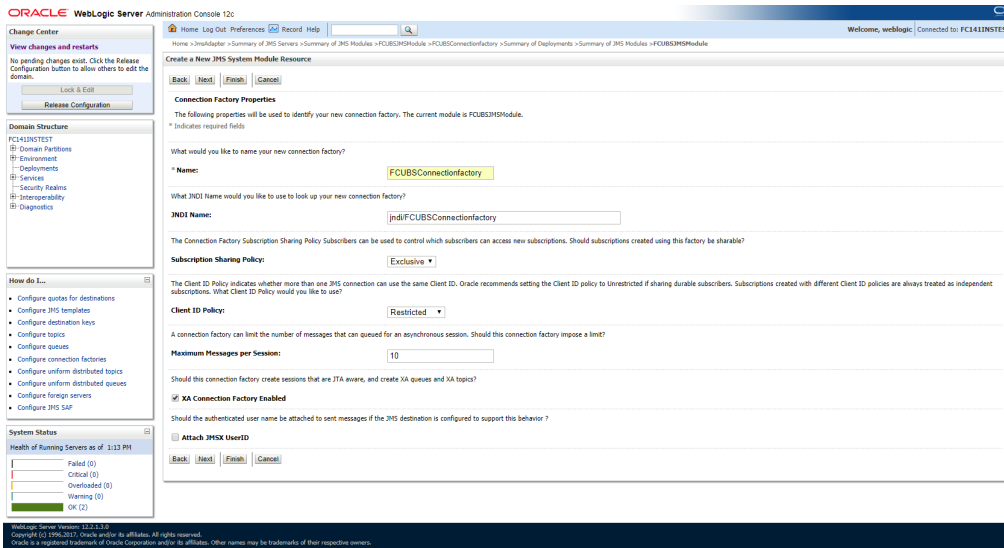

Below this information is a "Summary of Resources" table, which currently shows "There are no items to display".

7. Click on Connection Factory→ next→Create the connection Factory with the below Names→Next

The screenshot shows the "Create a New JMS System Module Resource" dialog in the Oracle WebLogic Server Administration Console. The dialog prompts the user to "Choose the type of resource you want to create." The "Connection Factory" option is selected and circled in red. Other options include Queue, Topic, Distributed Queue, Distributed Topic, Foreign Server, Quota, Destination Sort Key, JMS Template, SAF Imported Destinations, and Remote SAF Context.

Below the options, there is a table with the following columns: Resource Type, Description, and More Info... The "Connection Factory" row is highlighted.

Resource Type	Description	More Info...
Connection Factory	Defines a set of connection configuration parameters that are used to create connectors for JMS clients.	More Info...
Queue	Defines a point-to-point destination type, which are used for asynchronous peer communications. A message delivered to a queue is distributed to only one consumer.	More Info...
Topic	Defines a publish/subscribe destination type, which are used for asynchronous peer communications. A message delivered to a topic is distributed to all topic consumers.	More Info...
Distributed Queue	Defines a set of queues that are distributed on multiple JMS servers, but which are accessible as a single, logical queue to JMS clients.	More Info...
Distributed Topic	Defines a set of topics that are distributed on multiple JMS servers, but which are accessible as a single, logical topic to JMS clients.	More Info...
Foreign Server	Defines foreign messaging providers or remote WebLogic Server instances that are not part of the current domain.	More Info...
Quota	Controls the allotment of system resources available to destinations.	More Info...
Destination Sort Key	Defines a unique sort order that destinations can apply to arriving messages.	More Info...
JMS Template	Defines a set of default configuration settings for multiple destinations.	More Info...
SAF Imported Destinations	Defines a collection of imported store-and-forward (SAF) destinations. A SAF destination is a representation of a queue or topic in a remote server instance or cluster that is imported into the local cluster or server instance, so that the local server instance or cluster can send messages to the remote server instance or cluster.	More Info...
Remote SAF Context	Defines the URL of the remote server instance or cluster where a JMS

10.184.135.218:7001/console/console.portal?JMSCreateSystemModuleEntityPortlet.action=overrides/com/bee/console/actions/jms/destinati

Use these pages to create resources in a JMS system module, such as queues, topics, templates, and connection factories.

Depending on the type of resource you select, you are prompted to enter basic information for creating the resource. For targetable resources, like stand-alone queues and topics, connection factories, distributed queues and topics, foreign servers, and JMS SAF destinations, you can also proceed to targeting pages for selecting appropriate server targets. You can also associate targetable resources with subdeployments, which is an advanced mechanism for grouping JMS module resources and the members to server resources.

- Connection Factory: Defines a set of connection configuration parameters that are used to create connections for JMS clients. [More Info...](#)
- Queue: Defines a point-to-point destination type, which are used for asynchronous peer communications. A message delivered to a queue is distributed to only one consumer. [More Info...](#)
- Topic: Defines a publish/subscribe destination type, which are used for asynchronous peer communications. A message delivered to a topic is distributed to all topic consumers. [More Info...](#)
- Distributed Queue: Defines a set of queues that are distributed on multiple JMS servers, but which are accessible as a single, logical queue to JMS clients. [More Info...](#)
- Distributed Topic: Defines a set of topics that are distributed on multiple JMS servers, but which are accessible as a single, logical topic to JMS clients. [More Info...](#)
- Foreign Server: Defines foreign messaging providers or remote WebLogic Server instances that are not part of the current domain. [More Info...](#)
- Quota: Controls the allotment of system resources available to destinations. [More Info...](#)
- Destination Sort Key: Defines a unique sort order that destinations can apply to arriving messages. [More Info...](#)
- JMS Template: Defines a set of default configuration settings for multiple destinations. [More Info...](#)
- SAF Imported Destinations: Defines a collection of imported store-and-forward (SAF) destinations. A SAF destination is a representation of a queue or topic in a remote server instance or cluster that is imported into the local cluster or server instance, so that the local server instance or cluster can send messages to the remote server instance or cluster. [More Info...](#)
- Remote SAF Context: Defines the URL of the remote server instance or cluster where a JMS destination is exported from. It also contains the security credentials to be authenticated and authorized in the remote cluster or server. [More Info...](#)
- SAF Error Handling: Defines the action to take when the SAF service fails to forward messages to remote destinations. [More Info...](#)

This page displays a table of Outbound Connection Pool groups and instances for this resource adapter. The top level entries in the table represent Outbound Connection Pool groups. Groups are listed by connection factory interface and the instances are listed by their JNDI names. Expand a group to obtain configuration information for a Connection Pool instance within an Outbound Connection Pool group. Click the name of a group or instance to configure it. Automatically generated Connection Pools are not displayed in the table below.

Outbound Connection Pool Configuration Table

New | Delete | Showing 1 to 1 of 1 | Previous | Next

Groups and Instances	Connection Factory Interface

WebLogic Server Version: 12.1.3.0.0
Copyright (c) 1996-2014, Oracle and/or its affiliates. All rights reserved.
Oracle is a registered trademark of Oracle Corporation and/or its affiliates. Other names may be trademarks of their respective owners.

13. Click on the Outbound connection pool with **eis/Queue/Notif** and enter the connection factory location as **jndi/FCUBSConnectionFactory** → press Enter and Save

The screenshot shows the Oracle WebLogic Server Administration Console. The main content area is titled "Settings for oracle.tip.adapter.jms.DmsConnectionFactory". It has tabs for General, Properties, Transaction, Authentication, Connection Pool, and Logging. The "Properties" tab is active, displaying a table of configuration properties for the "Outbound Connection Properties".

Property Name	Property Type	Property Value	Supports Dynamic Updates
AcknowledgeMode	java.lang.String	AUTO_ACKNOWLEDGE	false
ConnectionFactoryLocation	java.lang.String	jndi/FCUBSConnec	false
FactoryProperties	java.lang.String		false
IsTopic	java.lang.Boolean	false	false
IsTransacted	java.lang.Boolean	false	false
Password	java.lang.String		false
Username	java.lang.String		false

At the bottom of the page, there is a footer with the text: "WebLogic Server Version: 12.1.3.0.0 Copyright (c) 1996-2014, Oracle and/or its affiliates. All rights reserved. Oracle is a registered trademark of Oracle Corporation and/or its affiliates. Other names may be trademarks of their respective owners."

This screenshot shows the same Oracle WebLogic Server Administration Console page as above, but after the configuration has been saved and applied. A "Messages" section at the top of the main content area displays the following information:

- All changes have been activated. No restarts are necessary.
- Deployment plan has been successfully updated.
- Remember to update your deployment to reflect the new plan when you are finished with your changes.

The "Outbound Connection Properties" table now shows the updated value for "ConnectionFactoryLocation":

Property Name	Property Type	Property Value	Supports Dynamic Updates
AcknowledgeMode	java.lang.String	AUTO_ACKNOWLEDGE	false
ConnectionFactoryLocation	java.lang.String	jndi/FCUBSConnectionFactory	false
FactoryProperties	java.lang.String		false
IsTopic	java.lang.Boolean	false	false
IsTransacted	java.lang.Boolean	false	false
Password	java.lang.String		false
Username	java.lang.String		false

The footer text remains the same as in the previous screenshot.

14. Go to console → Deployments → JMS adapter → Update → Next → Next → finish

15. Create the out bound connection pool with the **eis/wls/Queue** name in the Deployments using connection factory **jndi/FCUBSConnectionFactory**.

1.2.7 Configuring FTP Adapter

1. Login to console → Deployments → FTP Adapter → Configuration → Outbound Connection Pool → New

The screenshot shows the Oracle WebLogic Server Administration Console. The main content area is titled "Settings for FtpAdapter" and has several tabs: Overview, Deployment Plan, Configuration, Security, Targets, Control, Testing, Monitoring, and Notes. The "Configuration" tab is active, and within it, the "Outbound Connection Pools" sub-tab is selected. Below the tabs, there is a descriptive paragraph and a table titled "Outbound Connection Pool Configuration Table".

Groups and Instances	Connection Factory Interface
javax.resource.cd.ConnectionFactory	javax.resource.cd.ConnectionFactory
eis/ftp/CoherenceHftpAdapter	javax.resource.cd.ConnectionFactory
eis/ftp/FtpAdapter	javax.resource.cd.ConnectionFactory
eis/ftp/FtpAdapterLcl	javax.resource.cd.ConnectionFactory
eis/ftp/FtpAdapter_VMS	javax.resource.cd.ConnectionFactory
eis/ftp/FtpsAdapter	javax.resource.cd.ConnectionFactory
eis/ftp/HftpAdapter	javax.resource.cd.ConnectionFactory
eis/ftp/HftpAdapterDB2	javax.resource.cd.ConnectionFactory
eis/ftp/HftpAdapterMSSQL	javax.resource.cd.ConnectionFactory
eis/ftp/LocalTransactionFtpAdapter	javax.resource.cd.ConnectionFactory

The screenshot shows the "Create a New Outbound Connection" form in the Oracle WebLogic Server Administration Console. The form has a "Back", "Next", "Finish", and "Cancel" navigation bar at the top. Below this, there is a section titled "JNDI name for Outbound Connection Instance" with a text input field containing "eis/ftp/FtpAdapterLcl". There are also "Back", "Next", "Finish", and "Cancel" buttons at the bottom of the form.

2. Add JNDI name as eis/ftp/FtpAdapterLcl
3. Click finish and save.

1.2.7.1 BIP Interactive reports configuration

The Following set of instructions can be followed if the BPEL needs to be configured with BIP interactive reports

1. Login to the BIP domain console, `http/s:<hostname>:<port>/console`.
2. Follow the step 1.2.1 to add the “FCJCustomProvider”.

After adding, Navigate to security realms >myrealm > Users and Groups and check if the users from the schema are displayed in Users tab, and Roles from the schema are displayed under the Groups Tab.

The screenshot shows the Oracle WebLogic Server Administration Console interface. The main content area is titled 'Settings for myrealm' and has tabs for 'Configuration', 'Users and Groups', 'Roles and Policies', 'Credential Mappings', 'Providers', and 'Migration'. The 'Users and Groups' tab is active, and the 'Users' sub-tab is selected. Below the tabs, there is a message: 'This page displays information about each user that has been configured in this security realm. Some results are not displayed because there are too many matches. Please customize this table to specify more specific criteria.' Below this message is a 'Customize this table' section with a 'Users' table. The table has columns for 'Name', 'Description', and 'Provider'. The table contains 10 rows of user data. The left sidebar shows the 'Domain Structure' tree with 'Security Realms' highlighted. The bottom status bar shows 'WebLogic Server Version: 10.3.6.0'.

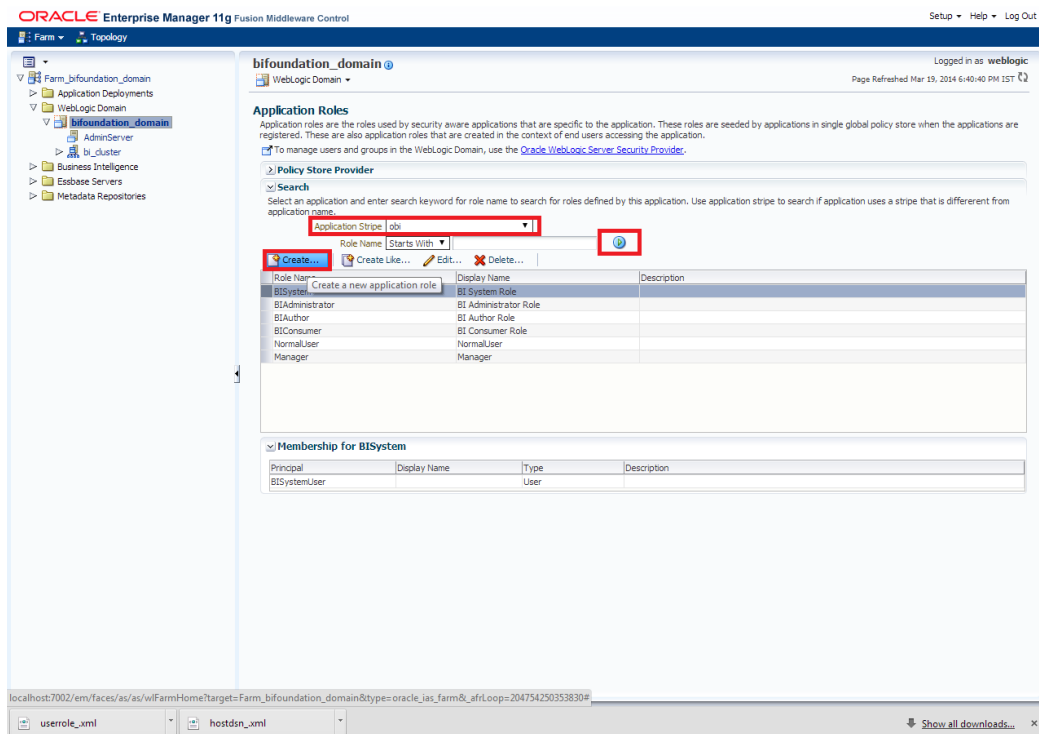

Name	Description	Provider
000ANT_1	Default Admin User 1	FCJCustomProvider
11111RM_3	Siveta	FCJCustomProvider
11111RM_4	RM	FCJCustomProvider
112233	Default Admin User 10	FCJCustomProvider
121212	Default Admin User 10	FCJCustomProvider
123456	SANKER GS	FCJCustomProvider
141414	Default Admin User 10	FCJCustomProvider
15259A03	Kumar	FCJCustomProvider
1M20862	BALA	FCJCustomProvider
20862A1	Bala	FCJCustomProvider

3. Login to the Enterprise Manager (em) `http/s:<hostname>:<port>/em`
 - Right click on the domain(in which BI suite is installed) under the weblogic domain
 - Go to security and then navigate to application roles

4. After navigating to next screen as in below screenshot,

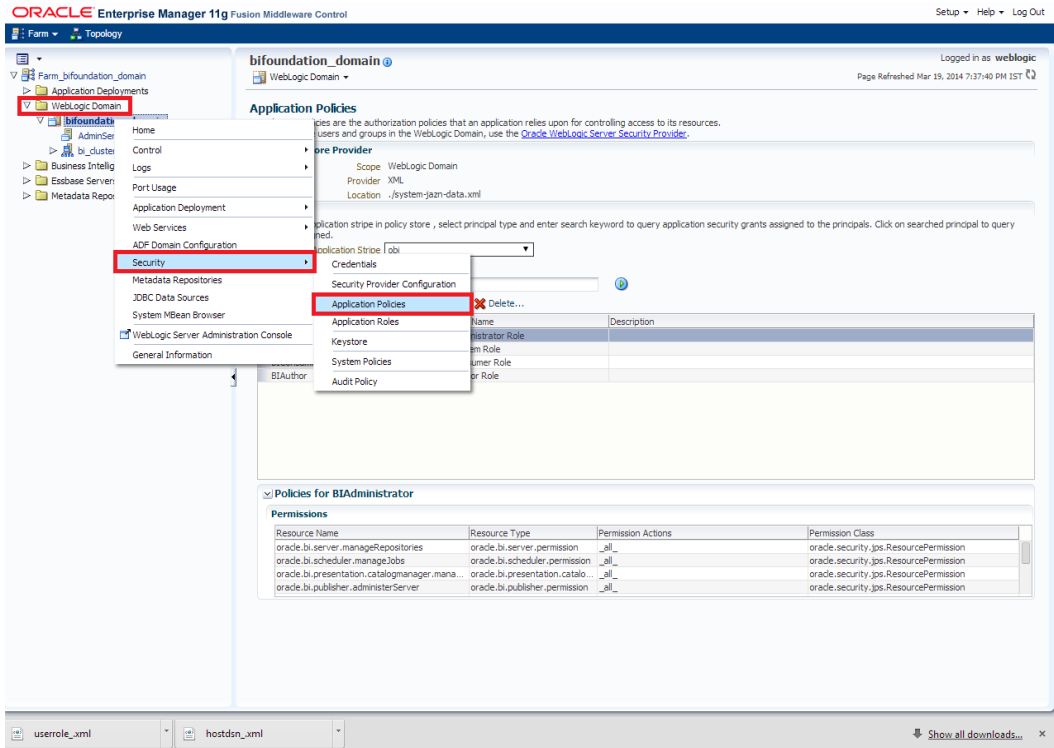

- Select application stripe as obi
- Click on the search button
- Click on create button to add a role

5. After navigating to next screen as in below screenshot,
 - Enter the role name(mandatory), display name(optional), description(optional)
 - Click on the Add button
 - In the Add Principal pop up select type as “Group”
 - In the advanced option check the checkbox and again select the type as “Group” below
 - Click on the Search button, if the roles are listed then select the roles like ALLROLES-000, ADMINROLE-000 from the list.
 - or
 - Enter the Principal Name (mandatory), which is actually the role present in the FCUBS (ex: ALLROLES-000, ADMINROLE-000), Display Name (optional).
 - After completing click on OK button in pop up window and also in the screen.

6. After getting information message like “A new role added successfully”, then again
 - Right click on the domain(in which BI suite is installed) under the weblogic domain
 - Go to security and then navigate to application policies

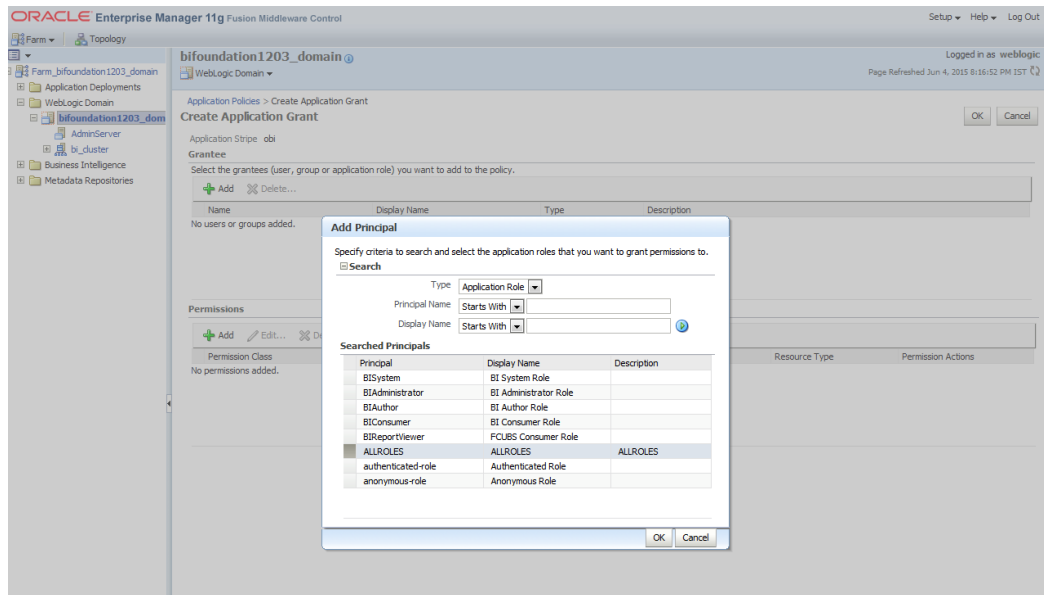

7. After navigating to next screen as per screen shot,

- Select the application stripe as obi, principal type as “Application Role”
- Click on the search button
- Select BIConsumer(it should be highlighted) from the list and click on the create like button.

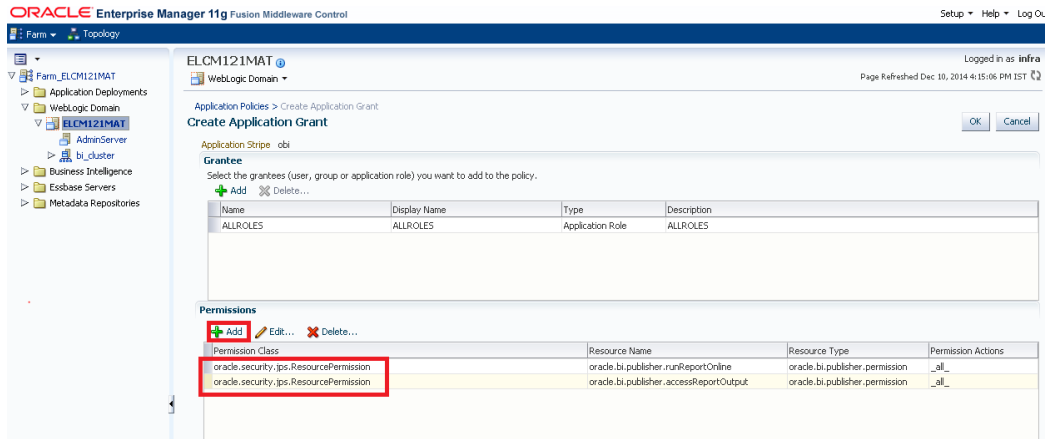

8. After navigating to next screen as per the screen shot,

- Click on Add button , a new window “Add Principal” will be launched.
- Select Type as “Application Role” and click on the search button
- From the list select the role that has been created earlier in application role screen and click on OK button in pop up window and screen.

- Click Add button under Permissions and add the two permissions one by one as mentioned below.

- oracle.bi.publisher.runReportOnline
- oracle.bi.publisher.accessReportOutput

9. After getting information message like “A security added successfully”,

- Login into the BIPublisher , [http/s:<hostname>:<port>/xmlpserver](http://s:<hostname>:<port>/xmlpserver)
- Click on the Administration .
- Click on the Roles and Permission under Security center and check if the added role(in em) is displayed, If not restart the servers.

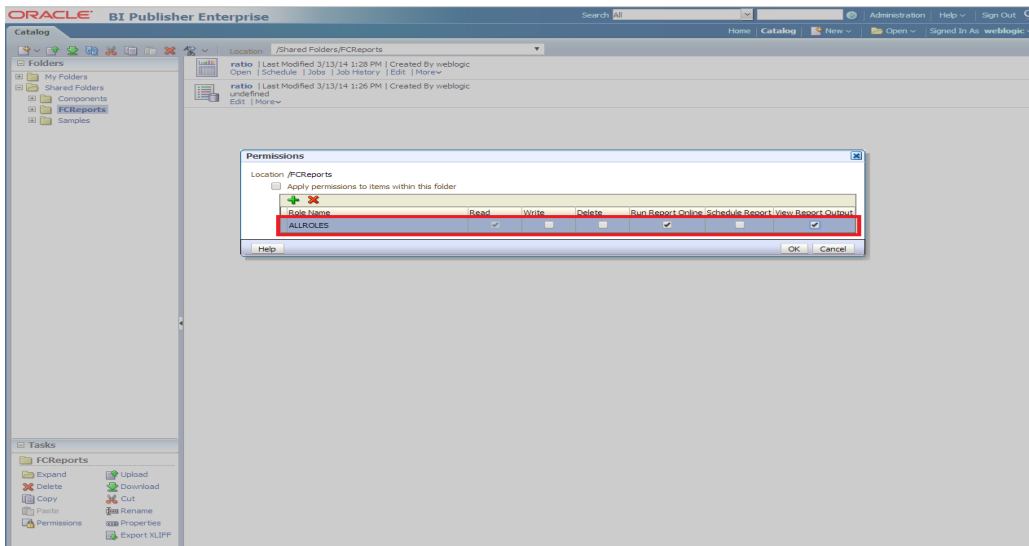

10. Then click on the Catalog , then on the folder that has been created , and then on permissions

11. After clicking on the permissions, a new window will pop up, delete all the roles if any present on click of permissions, then click on Add button, and then click on search button in "Add Roles" window that is launched newly and select the role that has been created and click on move button and click on OK.

12. Finally, the role will be added and select the options that has to be provided for the particular role and check if the permissions is only to items within the folder if necessary.

Now the reports in the folder will be accessed accordingly based on the roles.

Note:

In the similar way we can set the permissions at report level also for particular role.

13. Please login in to Bi Publisher <http://server:port/xmlpserver>.

14. Click on Administration→ JDBC connection→Add Data Source

Add Data Source

Security

Allow Guest Access

Available Roles: BI Administrator Role, BI Author Role, BI Consumer Role, BI System Role, FCUBS Consumer Role

Allowed Roles: ALLROLES

- Click on test connection .once the connection is established succesfully .Click on Apply.

18. Please follow the steps 15 to 17 to create data source for FCUBS Schema and give the name as FCBIPBPEL

1.2.8 **BAM Report Configuration settings**

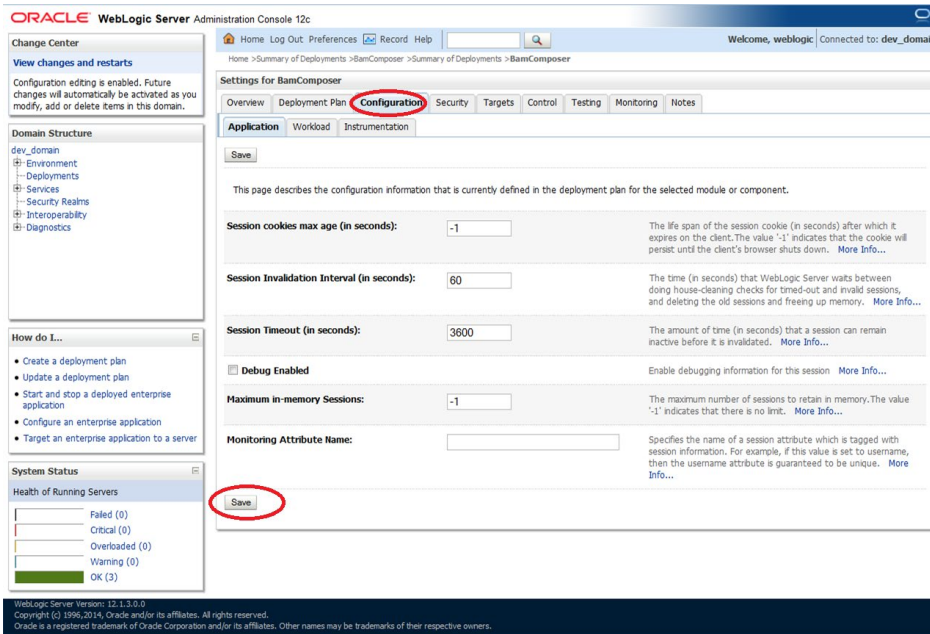

1. The Following set of instructions can be followed if the BPEL need to be configured with BAM reportsGenerate a deployment plan for BAM Composer Application.
2. Login in to console <http://hostname:port/console>
3. Click on Deployments→click on BAM Composer

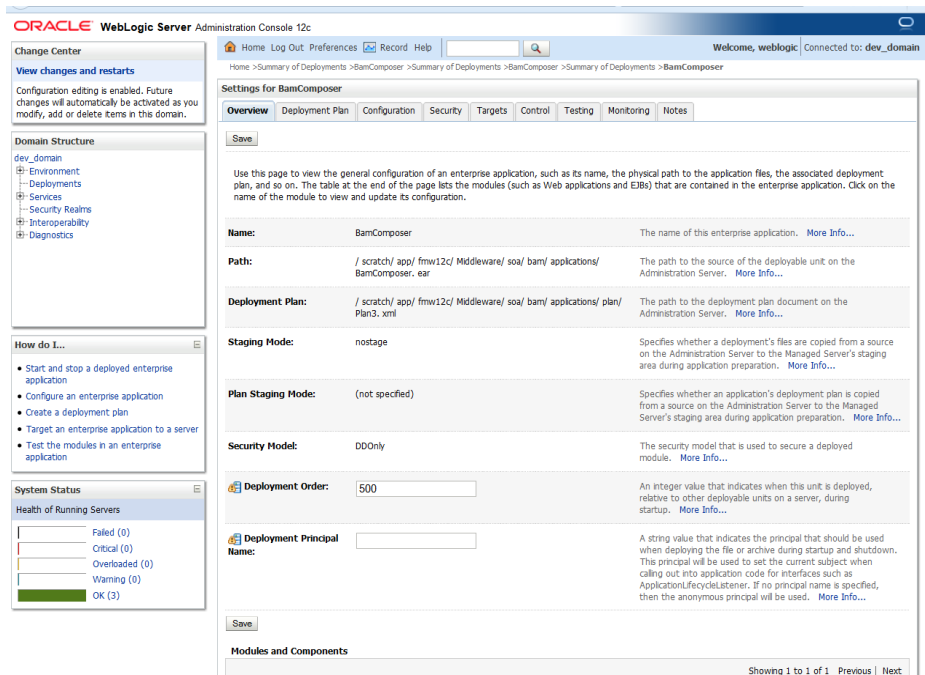

The screenshot shows the Oracle WebLogic Server Administration Console. The main content area displays the 'Summary of Deployments' page. On the left sidebar, the 'Domain Structure' tree is visible, with 'Deployments' highlighted. The main table lists various deployed applications. The 'BAMComposer' application is circled in red. Below the table, there are buttons for 'Install', 'Update', 'Delete', 'Start', and 'Stop'.

Name	State	Health	Type	Targets	Deployment Order
AGAdapter	Active	OK	Resource Adapter	soa_server1	324
b2bui	Active	OK	Enterprise Application	soa_server1	313
BAMComposer	Active	OK	Enterprise Application	bam_server1	500
BAMCQService	Active	OK	Enterprise Application	bam_server1	300
BAMServer	Active	OK	Enterprise Application	bam_server1	400
BPMComposer	Active	OK	Enterprise Application	soa_server1	385
coherence-transaction-var	Active	OK	Resource Adapter	AdminServer, bam_server1, soa_server1	100
CoherenceAdapter	Installed		Resource Adapter		331
DBAdapter	Active	OK	Resource Adapter	soa_server1	322
DefaultToDoTaskFlow	Active	OK	Enterprise Application	soa_server1	314
DMS Application (12.1.3.0.0)	Active	OK	Web Application	AdminServer, bam_server1, soa_server1	5

4. click on Configuration Configuration →Save

5. Click on Overview→check the deployment plan location

6. Add variable and variable assignment as below to the Plan.xml in <module-name>BamComposerWeb.war</module-name> and for reference please find plan.xml file.

```
<variable>
  <name>oracle.adf.view.rich.security.FRAME_BUSTING</name>
  <value>never</value>
</variable>
```

```

<module-descriptor external="true">
  <root-element>web-app</root-element>
  <uri>WEB-INF/web.xml</uri>
  <variable-assignment>
    <name>oracle.adf.view.rich.security.FRAME_BUSTING</name>
    <xpath>/web-app/context-param/[param-
name="oracle.adf.view.rich.security.FRAME_BUSTING"]/param-value</xpath>
    <origin>planbased</origin>
  </variable-assignment> </module-descriptor>

```

Plan3.xml

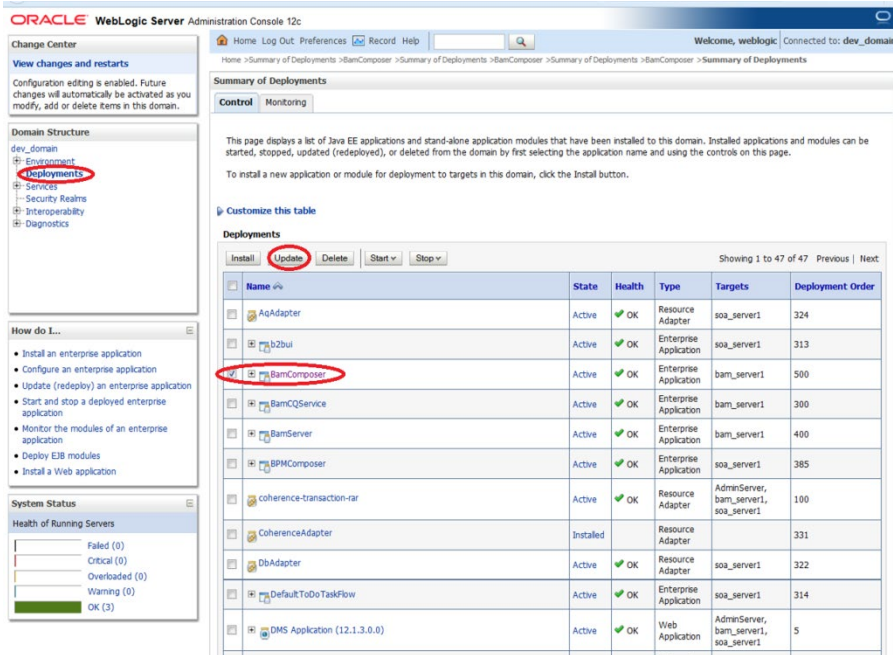

7. Stop the BAM composer application in console.

The screenshot shows the Oracle Enterprise Manager console interface. On the left, there are navigation tabs for Services, Security Realms, Interoperability, and Diagnostics. Below these are sections for 'How do I...' (listing tasks like installing and configuring applications) and 'System Status' (showing health of running servers). The main area displays a 'Deployments' table with columns for Name, Health, Type, Targets, and Deployment Order. The 'BAMComposer' application is highlighted with a red circle. A context menu is open over it, with 'Force Stop Now' selected. Other applications listed include AaAdapter, b2bul, BamCQService, BamServer, BPMComposer, coherence-transaction-car, CoherenceAdapter, DBAdapter, DefaultToDoTaskFlow, DMS Application (12.1.3.0.0), em, FOUBSAppJUT (12.1.0.0.0), FOUBSAppSoaEmb (12.1.0.0.0), FileAdapter, fevo, and EtnAdapter.

Name	Health	Type	Targets	Deployment Order
AaAdapter	OK	Resource Adapter	soa_server1	324
b2bul	OK	Enterprise Application	soa_server1	313
BAMComposer	OK	Enterprise Application	bam_server1	500
BamCQService	OK	Enterprise Application	bam_server1	300

8. Update the deployment plan.

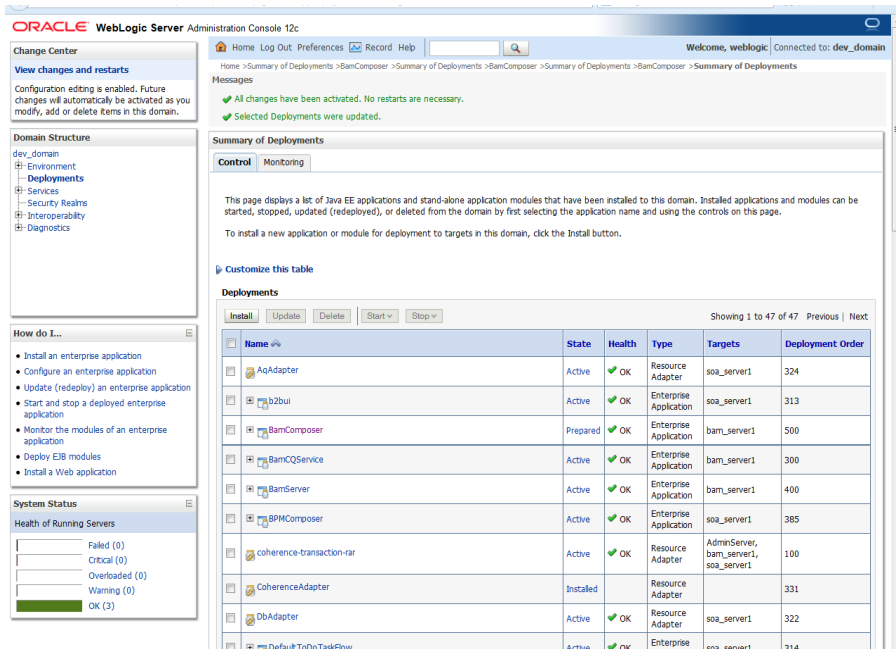

9. Click on deployments → click on BAM Composer checkbox → Click on update

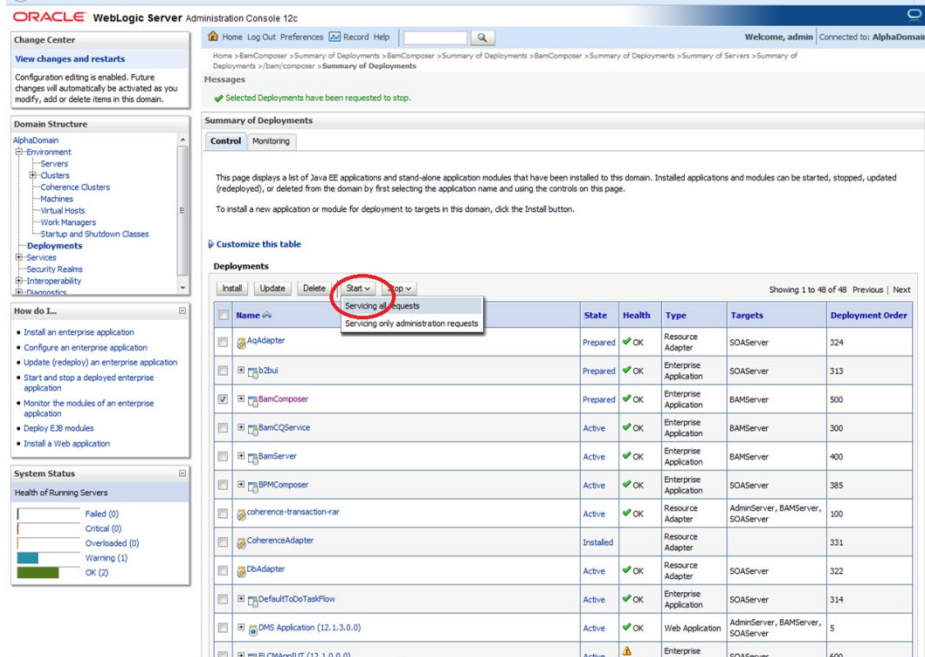

10. Select the Update this application in place with new deployment plan changes and click on change path button.

11. Select the latest plan.xml in the in the path→next→next→Finish

12. Restart the BAM Composer application in the console

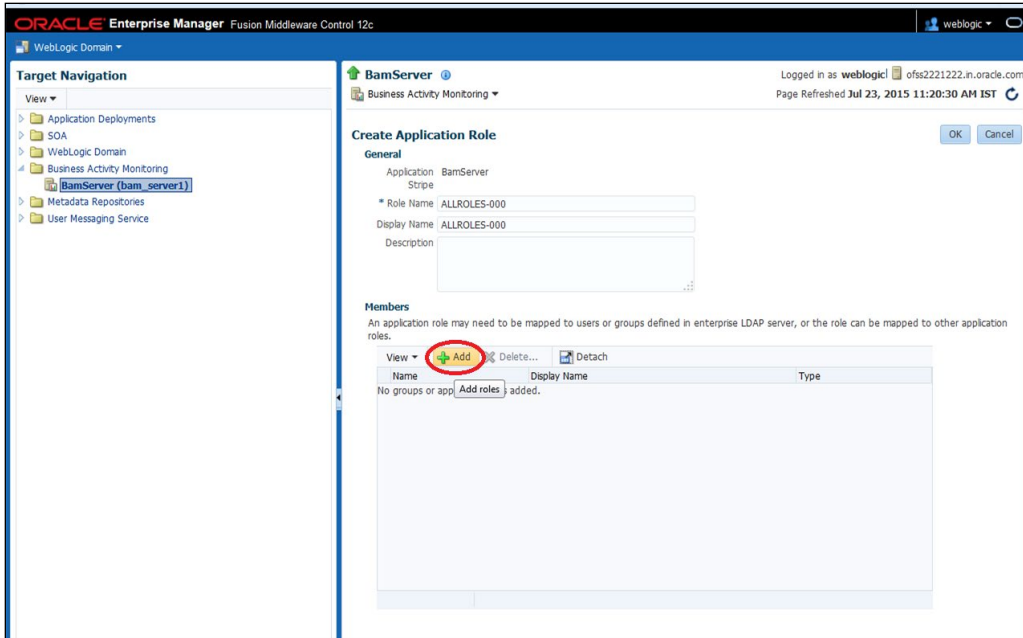

13. Login in to em console <http://hostname:port/em>

14. Right Click on BAM Server → Security → Application Roles

15. Click on Create → create application role with ALL ROLES-000 → Click on ADD button in the Members

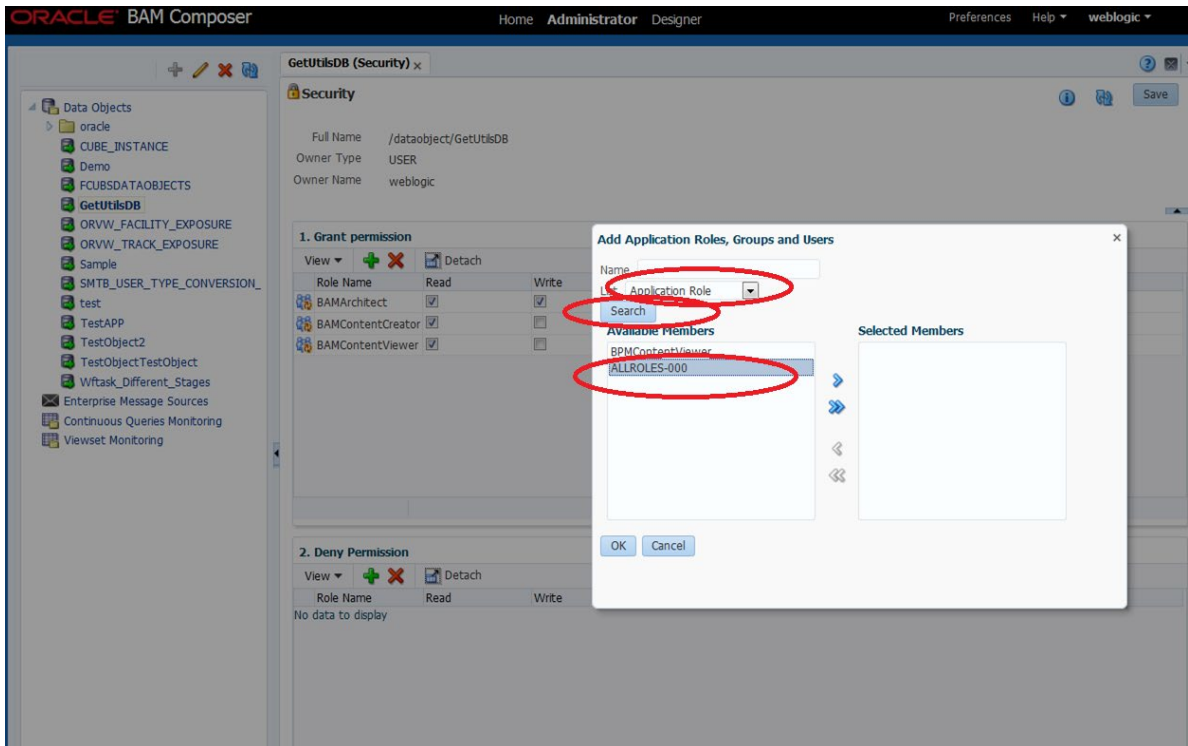

16. Select the Type as Group and add principle details be referring the below screen shot.
17. Login to BAM Composer → <http://hostname:port/bam/composer-->> Click on Administrator.

18. Go to Data Object→Right Click on CUBE_INSTANCE→Security

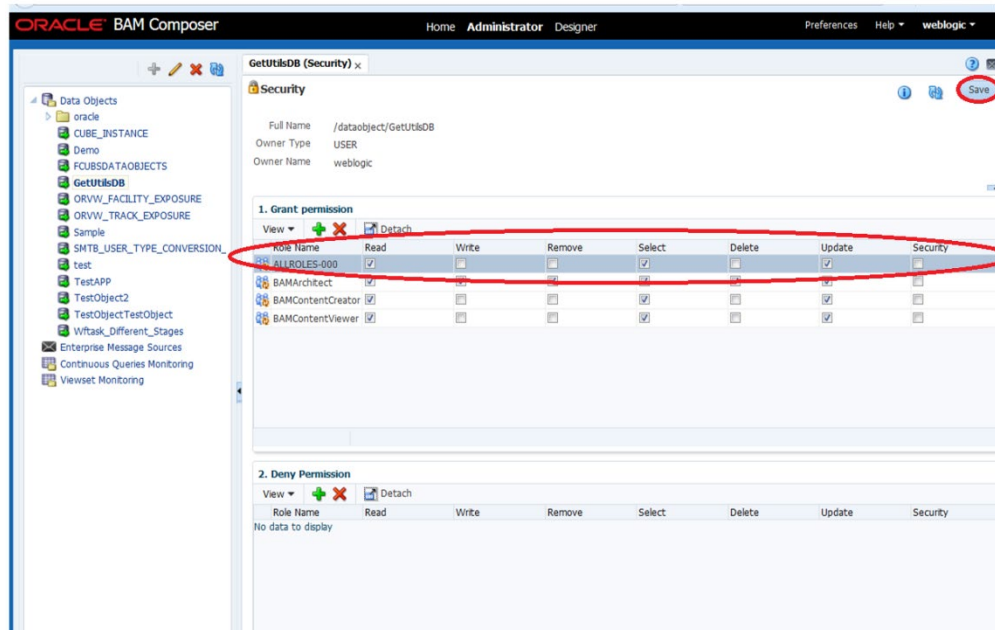

19. Click on Add button under Grant permission and search the list based on the Application Role

20. Move the ALLROLES-000 to Selected members.

21. Click on read, select and Update check boxes → Click on Save.

22. Follow the step 17 to 21 for other Data objects also.(cube_instance,wftask_different_stages, ORVW_TRACK_EXPOSURE, ORVW_FACILITY_EXPOSURE, GetUtilsDB, SMTB_USER_TYPE_CONVERSION_VIEW, FCUBSDATAOBJECTS).

23. Click on Designer →open Project

24. Click on FCUBS_BAM_report

25. click on FCUBS_BAM_Report →Security

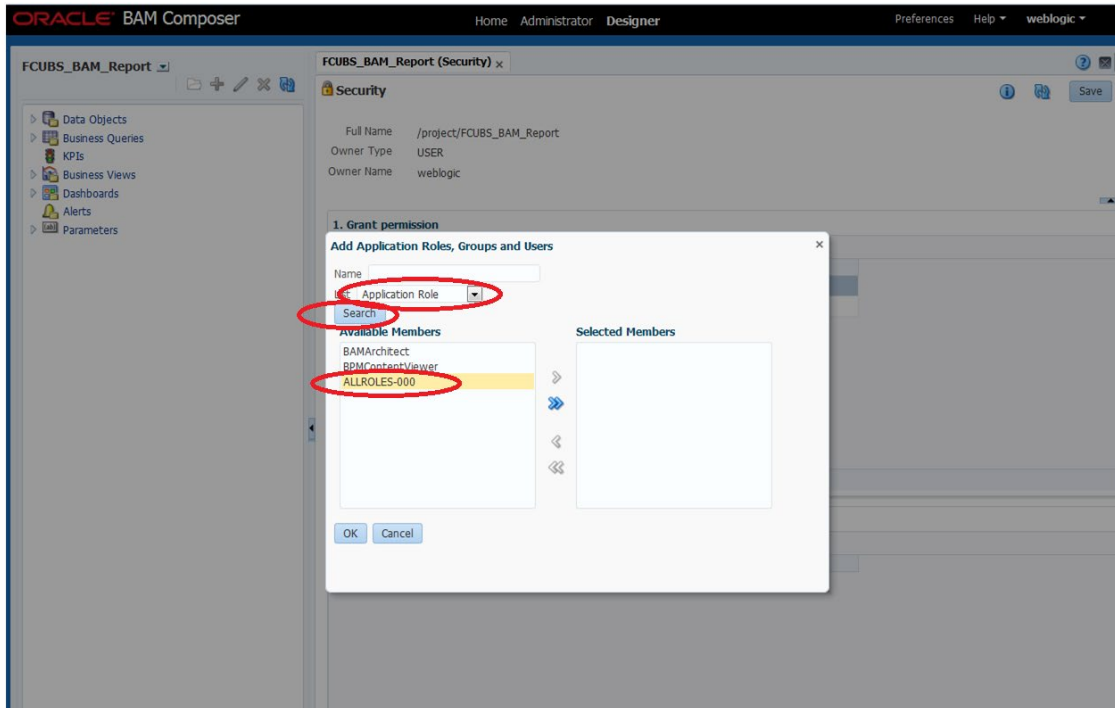

26. Click on ADD button Under Grant Permission.

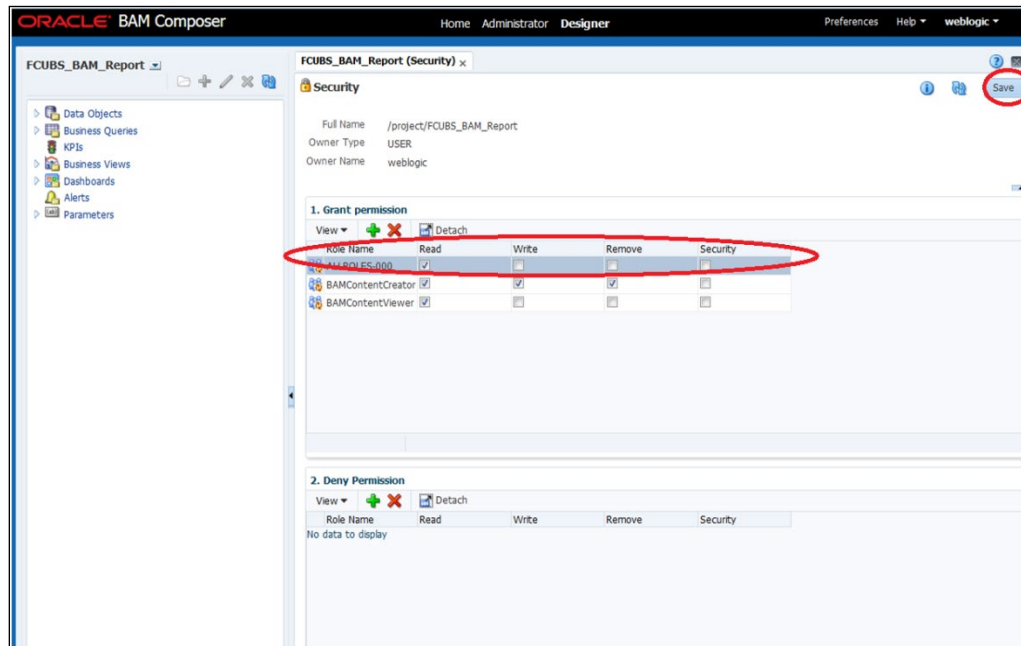

27. Search the List based on the Application Roles and Select the ALLROLES-000

28. Move the ALLROLES-000 to Selected Members and click on ok.

29. Select the Read check box for ALLROLES-000 → Click on Save

1.2.9 IPM configuration to edit the document

The Following set of instructions can be followed if the BPEL need to be configured with IPM configuration

1. Login to the console, `http/s:<hostname>:<port>/console` with admin user
2. Follow the step 1.2.1 to add the “FCJCustomProvider”.

After adding, Navigate to security realms > myrealm > Users and Groups and check if the users from the schema are displayed in Users tab, and Roles from the schema are displayed under the Groups Tab.

3. After adding the custom authenticator,
 - Navigate to security realms >my realm > Users and Groups > Groups.
 - Click on the New button.

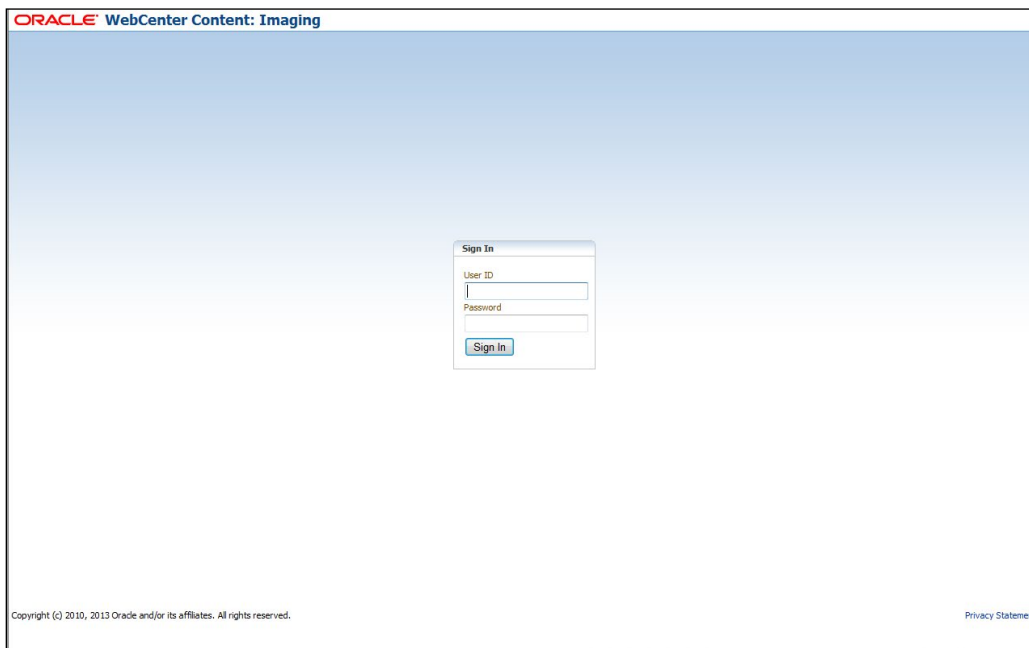

The screenshot shows the Oracle WebLogic Server Administration Console. The left sidebar contains navigation options like 'Domain Structure' and 'System Status'. The main area is titled 'Settings for myrealm' and has tabs for 'Users' and 'Groups'. The 'Groups' tab is active, showing a table of configured groups. A red box highlights the 'New' button above the table. The table has columns for Name, Description, and Provider.

Name	Description	Provider
AC-BATCH	Accounting Batch Operations	Fcuhs
AC-REPORTS	Accounting Reports	Fcuhs
AC-RPT	Accounting Reports	Fcuhs
ADMIN	Admin	Fcuhs
AdminChannelUsers	AdminChannelUsers can access the admin channel.	DefaultAuthenticator
Administrators	Administrators can view and modify all resource attributes and start and stop servers.	DefaultAuthenticator
ADMINROLE	Admin Role	Fcuhs
AE-MAINT-IN	AEOD Maintenance	Fcuhs
AEOD-RPT	AEOD Reports	Fcuhs
AEOD-STB	Accounting Reports	Fcuhs

4. After Clicking on the new button,
 - Enter the name as “IPMUserGroup”
 - Description for it (optional)
 - And select the authenticator as “DefaultAuthenticator”
 - And then click “Ok”

5. Login to the Imaging URL <http://s:<hostname>:<port>/imaging> with admin user

- a. Navigate to Manage Applications
- b. Click on the FLEXCUBE
- c. Then click on the modify on the right pane

6. After clicking on the modify button,

- a. Navigate to Document Security
- b. Click on Add button
- c. Click on Search button in the pop up window
- d. Select the "IPMUserGroup"
- e. Click on Add
- f. IPMUserGroup will be listed in the panel, select view ,write,annotate Standard,Annotate Restricted and Annotate Hidden checkboxes.
- g. Finally click on the submit button on the right corner

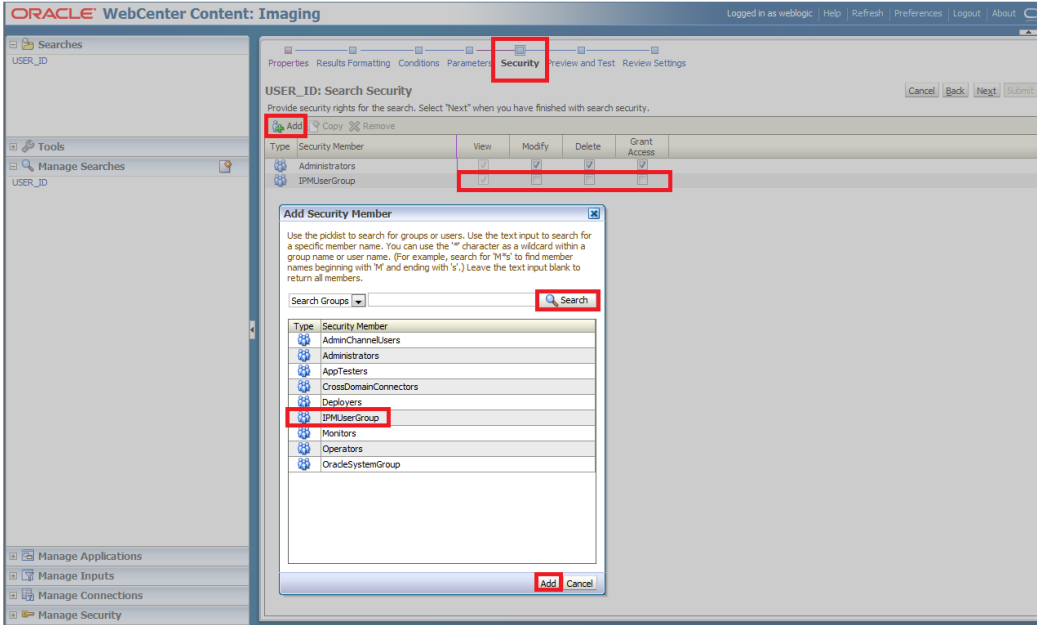

7. After clicking on the submit button,
 - a. Navigate to Manage Searches
 - b. Click on the available search (ex: USER_ID in this doc)
 - c. Click on the modify

The screenshot shows the Oracle WebCenter Content: Imaging interface. The left sidebar contains a 'Tools' menu with 'Manage Searches' highlighted. The main content area displays the 'USER_ID: Search Summary' page, which includes several sections:

- Properties:** Search Name: USER_ID, Description, Instructions, Maximum Search Results: 0.
- Results Formatting:** A table with columns: Source Application, DOCID, Document Creation Date, Document Created By, Document Batch Id, Document Id. Two rows are shown: one for 'FLEXCUBE' and one for 'DOCID'.
- Conditions:** Application: FLEXCUBE. A table with columns: Field, Operator, Value, Conjunction. One row is shown: Document Created, Contains, Parameter - Document Created By.
- Parameters:** A table with columns: Parameter Name, Prompt Text, Operator Text, Default Value, Picklist, Required, Read Only. One row is shown: Document Created, Document Created, Contains.
- Security:** A table with columns: Type, Security Member, View, Modify, Delete, Grant Access. Two rows are shown: Administrators and IPMUserGroup, both with checkmarks in the View, Modify, and Delete columns.
- Audit History:** A table with columns: Date, Type, User Name. Five rows are shown, all with a date of 7/4/2014 and a user name of weblogic.

8. After clicking on the modify button,
 - a. Navigate to Document Security
 - b. Click on Add button
 - c. Click on Search button in the pop up window
 - d. Select the "IPMUserGroup"
 - e. Click on Add
 - f. IPMUserGroup will be listed in the panel; don't select any checkbox except the default view checkbox.
 - g. Finally click on the submit button on the right corner

9. Copy the FCJJSPProvider.jar to location

<ORACLE_HOME >\user_projects\domains\<domian name>\lib

10. Go to the location – ‘<ORACLE_HOME>\

user_projects\domains\<Domain_created>\config\fmwconfig’

- a. Open ‘jps-config.xml’ file. Search for ‘<serviceProviders>’ tag and add the following code between ‘<serviceProviders>’ and ‘</serviceProviders>’ tags.

```
<serviceProvider class="oracle.security.jps.internal.idstore.generic.GenericIdentityStoreProvider"
name="custom.generic.provider" type="IDENTITY_STORE">
  <description>DB IdentityStore Provider</description>
</serviceProvider>
```

- b. Similarly, Search for ‘<serviceInstances>’ tag and add the following code between ‘<serviceInstances>’ and ‘</serviceInstances>’ tags.

```
<serviceInstance location="dumb" name="idstore.custom" provider="custom.generic.provider">
  <description>Custom Identity Store Service Instance</description>
  <property name="idstore.type" value="CUSTOM"/>
  <property name="ADF_IM_FACTORY_CLASS"
value="com.ofss.fcc.bpel.security.idm.providers.stddb.FCIdentityStoreFactory"/>
  <property name="DATASOURCE_NAME" value="jdbc/fcjdevDS"/>
  <property name="INTERNAL_CONTEXT_REQUIRED" value="true"/>
  <property name="INTERNAL_CONTEXT_NAME" value="internalstore"/>
</serviceInstance>
```

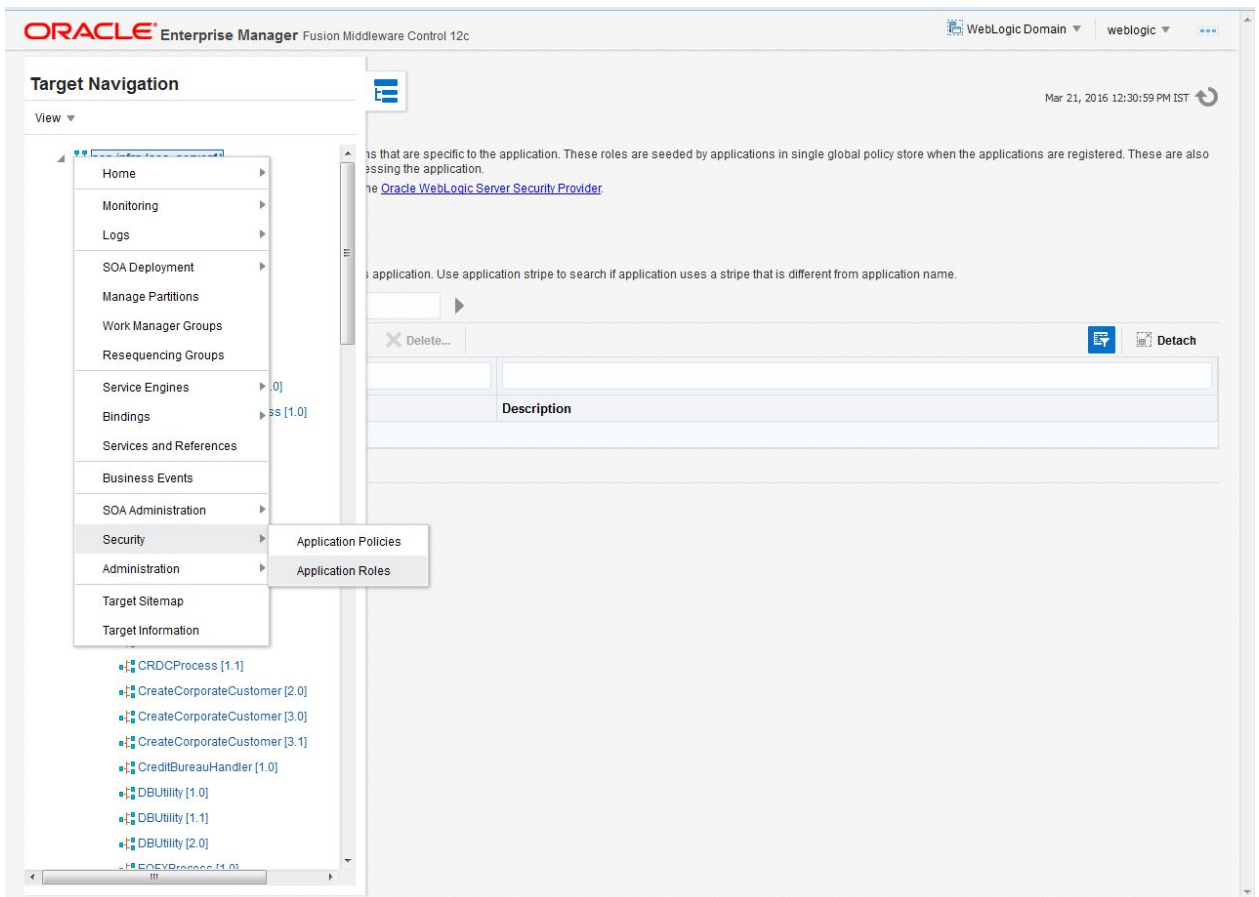

Make sure that the JNDI (jdbc/fcjddevDS) matches the value given during property file creation.

- c. Search for '<jpsContexts default="default">' tag and add the following code between '<jpsContexts default="default">' and '</jpsContexts>', preferably after the default 'jpsContext'.

```
<jpsContext name="internalstore">
  <serviceInstanceRef ref="credstore"/>
  <serviceInstanceRef ref="keystore"/>
  <serviceInstanceRef ref="policystore.xml"/>
  <serviceInstanceRef ref="audit"/>
</jpsContext>
```

1.2.10 Configuring Supervisor Roles in EM

1. Right click on soa-infra. Select security→Application Roles

2. Search the Application Roles with “Starts with” option.

ORACLE Enterprise Manager Fusion Middleware Control 12c

WebLogic Domain | weblogic

soa-infra | SOA Infrastructure

Mar 21, 2016 12:30:59 PM IST

Application Roles

Application roles are the roles used by security aware applications that are specific to the application. These roles are seeded by applications in single global policy store when the applications are registered. These are also application roles that are created in the context of end users accessing the application.

To manage users and groups in the WebLogic Domain, use the [Oracle WebLogic Server Security Provider](#).

Policy Store Provider

Search

Enter search keyword for role name to query roles defined by this application. Use application stripe to search if application uses a stripe that is different from application name.

- Click on the ADD button and provide the Type as Group from drop down.

- Provide the principal name as (EX:ALLROLES-000) Param_val which is mapped to the OR_ADMINROLE in the cstb_param table and search the role. Click on ok.

0.184.133.168:7401/em/faces/as/security/editAppRole?type=oracle_soainfra&target=/Domain_soa_domain/soa_domain/soa_server1/soa-infra#

6. Click Ok .

1.2.11 Email Driver Configuration

The Following set of instructions can be followed if the BPEL need to be configured with Email Driver configurations

1. Login to EM console
2. Navigate to User Messaging Service
3. Right click usermessagingdriver-email (soa_server1)
4. Click on Email Driver Properties

5. .Enter the sender Address and default sender address (This id will be used as sender address).
6. .Enter the supported protocols (SMTP)

7. Select the mail access protocol (IMAP) as per the mail server specification

Name	Description	Mandatory	Encoded Credential	Value
E-mail Receiving Protocol	E-mail receiving protocol. The possible values are IMAP and POP3.			IMAP
Connection Retry Limit	This value specifies the number of times to retry connecting to the incoming mail server, if the connection is lost due to some reason. The default value is -1 which means no limit to the number of tries.			-1
Message Cleanup Frequency	The frequency to permanently remove deleted messages. The unit is in seconds and the default value is 600 seconds. A negative value indicates the messages should not be expunged. For the POP3 protocol, the message is expunged after it is processed.			600
	Whether the driver should mark the messages deleted after they have been			

8. Enter the Receive folder in the mailbox (INBOX)

9. Enter the Outgoing mail server hostname or IP

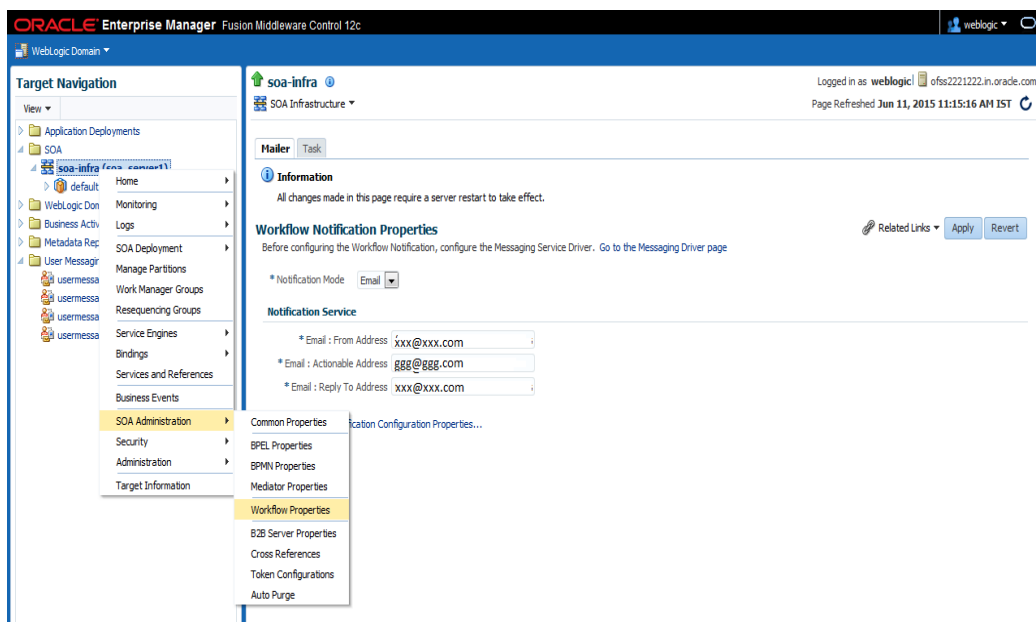

10. Enter the outgoing mail server port

11. Enter the outgoing default from address

12. Enter the Outgoing user name and password if required

Name	Description	Mandatory	Encoded Credential	Value
Outgoing Mail Server	The name of the SMTP server. Mandatory only if e-mail sending is required.			XXXXXX
Outgoing Mail Server Port	Outgoing Mail Server Port			25
Outgoing Mail Server Security	The security used by SMTP server. Possible values are None, TLS and SSL. Default value is None.			None
Default From Address	Deprecated. Use Default Sender Address instead. The default FROM address (if one is not provided in the outgoing message).			xxx@xxx.com
Outgoing Username	The username used for SMTP authentication. Required only if SMTP authentication is supported by the SMTP server.			

13. Navigate to SOA Administration ->Workflow Properties

14. Select the notification mode as Email/ALL and enter the from address Actionable address and reply to Address.

1.2.12 TimeOut Settings for BPEL

1. The Following set of instructions has to be configured for BPEL Login in to Console (<http://hostname:port/console>)
2. Click on Deployments

The screenshot displays the Oracle WebLogic Server Administration Console interface. The browser address bar shows the URL `10.184.135.218:7001/console/console.portal?_nfpb=true&_pageLabel=HomePage1`. The page title is "ORACLE WebLogic Server Administration Console 12c". The breadcrumb navigation path is "Home > AlphaDomain > Summary of Servers > AlphaDomain > Summary of Servers > Summary of Deployments > soa-infra > BPELEngineBean".

The interface is divided into several sections:

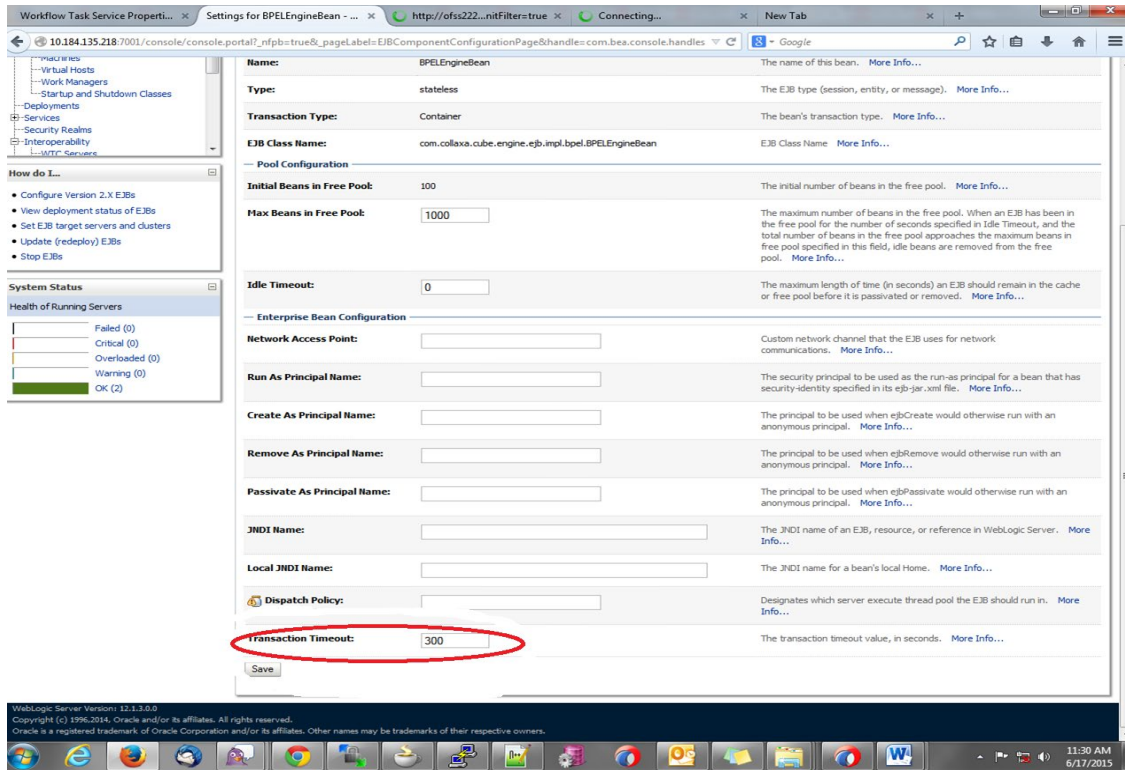

- Change Center:** View changes and restarts. Configuration editing is enabled.
- Domain Structure:** A tree view showing the hierarchy: AlphaDomain > Environment > Servers > Clusters > Coherence Clusters > Machines > Virtual Hosts > Work Managers > Startup and Shutdown Classes > Deployments > Services > Security Realms > Interoperability > WTC Servers.
- How do I...:** Search the configuration, Use the Change Center, Record WLST Scripts, Change Console preferences, Manage Console extensions, Monitor servers.
- System Status:** Health of Running Servers: Failed (0), Critical (0), Overloaded (0), Warning (0).
- Home Page:** Information and Resources, Helpful Tools, General Information, Domain Configurations, Environment, Services, Interoperability, Diagnostics, Charts and Graphs.
- Your Deployed Resources:** A list of deployed resources, with "Deployments" highlighted by a red circle.

3. Click on "soa-infra" application under deployments.

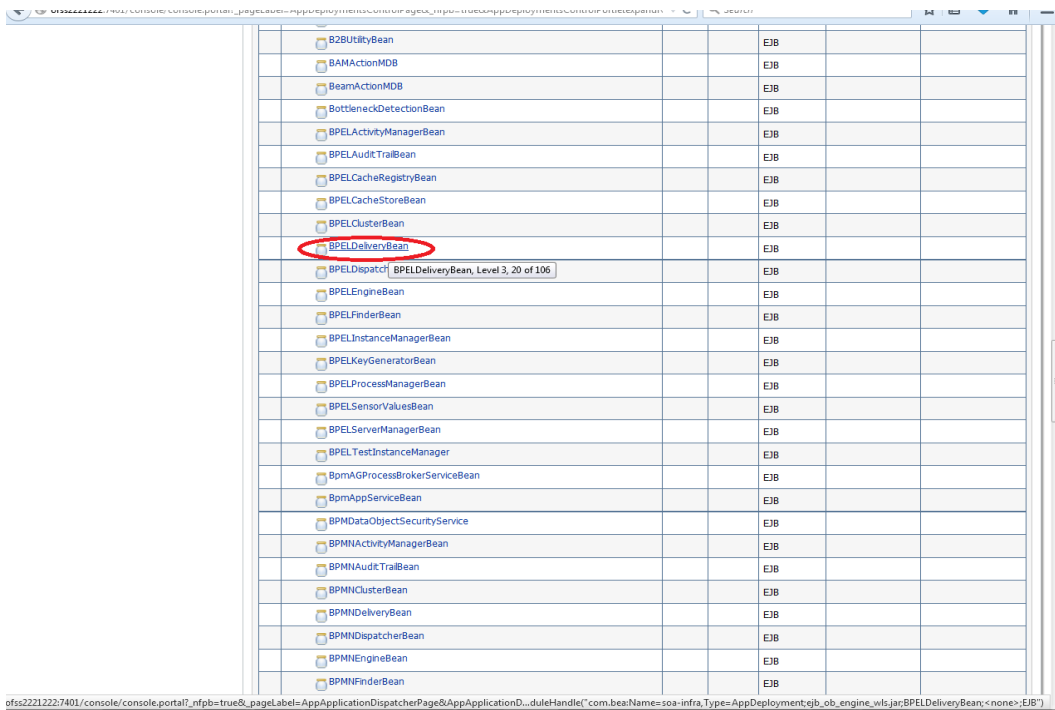

Name	State	Health	Type	Targets	Deployment Order
oracle.wsm.console.core.view(1.0,12.1.3.0)	Active		Library	AdminServer	311

5. Go to EJBs→BPEL DeliveryBean→ Configuration→set Transaction TimeOut to 300

The screenshot displays the configuration page for the BPELDeliveryBean in the Oracle WebLogic Server console. On the left, there are navigation panels for 'How do I...' and 'System Status'. The main area shows configuration details for the bean, including its type (stateless), transaction type (Container), and class name (com.colfaxa.cube.engine.ejb.mpl.bpel.BPELDeliveryBean). Under the 'Pool Configuration' section, the 'Initial Beans in Free Pool' is set to 200 and 'Max Beans in Free Pool' is set to 1000. The 'Idle Timeout' is set to 0. The 'Enterprise Bean Configuration' section includes fields for 'Network Access Point', 'Run As Principal Name', 'Create As Principal Name', 'Remove As Principal Name', 'Passivate As Principal Name', 'JNDI Name', and 'Local JNDI Name'. The 'Dispatch Policy' is also configured. The 'Transaction Timeout' field is highlighted with a red circle and set to 1800. A 'Save' button is located at the bottom of the configuration area.

6. Login in to Console →JTA
7. Set the JTA timeout according to the below condition. Make sure BPELEngineBean + BPELDeliveryBean is \leq JTA timeout(e.g. $300+300\leq 600$)

The screenshot displays the Oracle WebLogic Server Administration Console 12c interface. The main content area is titled "Settings for dev_domain" and shows the "JTA" configuration tab. A red circle highlights the "Timeout Seconds" field, which is set to 3600. Other visible fields include "Abandon Timeout Seconds" (86400), "Before Completion Iteration Limit" (10), "Max Transactions" (10000), "Max Unique Name Statistics" (1000), and "Checkpoint Interval Seconds" (300). The "Write recovery logs when determiners configured" checkbox is unchecked, and the "Forget Heuristics" checkbox is checked.

8. Login in to EM console (<http://host:port/em>)→SOA administration→BPEL Properties→MoreConfigproperties→ SyncMaxWaitTime.Change the SyncMaxWaitTime to 200 secs

The screenshot displays the Oracle Enterprise Manager Fusion Middleware Control interface for SOA Infrastructure. The browser address bar shows the URL: `10.184.135.218:7001/em/faces/ai/soa/infra?_af-Page-Id=11&target=%2FDomain_AlphaDomain%2FAlphaDomain%2Fsoa-server%2Fsoa-infra`. The user is logged in as `admin` and the page was refreshed on `Jun 17, 2015 11:36:01 AM IST`.

Target Navigation: The left sidebar shows a tree view of SOA components. The `soa-infra` component is selected, and a context menu is open, highlighting `SOA Administration` and `BPEL Properties`.

Dashboard: The main content area shows the `soa-infra` dashboard. It includes the following sections:

- Key Configuration:** Profile: `BPM BASIC`, Instance Tracking: `Production`, Default Query Duration: `Last 24 Hours`, Auto Purge: `Enabled`.
- Business Transaction Faults:** Search bar and refresh region.
- Composites and Adapters Availability:** Filtered to `SOAServer`. Status: `Initialized Successfully`.
 - ✓ No Composite Start-Up Errors
 - ✓ No EIS Connectivity Errors
 - ✓ All Composites are UP
 - ✓ All adapter service endpoints are UP
- System Backlogs:** Filtered to `SOAServer`. Refresh region.
- Messages in Queues:**
 - BPEL Invoke --
 - BPEL Callback --
 - Mediator Parallel Routing --

The Windows taskbar at the bottom shows the system clock as `11:36 AM 6/17/2015`.

1.3 **Integrating Oracle FLEXCUBE UBS and Scheduler**

Before deploying the Oracle FLEXCUBE UBS EAR file, you need to carry out the following tasks.

1.3.1 **Running Backend Scripts**

You need to compile certain tables pertaining to Scheduler in the schema to which the Application points. The version of Quartz to be used is Latest Qualified Version.

Follow the steps given below:

1. Download Quartz Latest Qualified Version.gz file from the following URL:
<http://www.quartz-scheduler.org/download/download-catalog.html>
1. Extract the gz file.
2. Open the folder 'Quartz-Latest Qualified Version \docs\dbTables' folder and run 'tables_oracle.sql' (this is specific to Oracle Database) in the schema.

For details on latest version of the software qualified with Oracle FLEXCUBE, refer to the release certificate.

1.4 **Integrating Oracle FLEXCUBE UBS and BIP Reports**

You can integrate Oracle FLEXCUBE UBS and BIP reports. The details are available in the chapter 'BIP Web Service Reports'.

1.4.1 **Deploying Application Through Application Server's Admin Console**

Deployment from Weblogic Administration Console

You can find the details pertaining to the deployment of Application using Weblogic Administration Console in the chapter 'Deploying Oracle FLEXCUBE Application on Weblogic'.

1.5 **Integrating Oracle FLEXCUBE UBS and MBean**

In order to integrate Oracle FLEXCUBE UBS and MBean, you need to follow the below steps before deploying the Oracle FLEXCUBE UBS EAR file created with MBean as a Plugin.

1.5.1 **Startup Script Modification**

By default, the TopLink used in MBean uses Oracle xml parser internally. However, Weblogic Server has to use JAXPlatform.

To change the system property, follow the steps given below:

1. Go to the Weblogic domain home folder.
 - c) Based on the operating system used, open 'startWeblogic.cmd' or 'startWeblogic.sh' from the folder 'bin'.

- d) Search for 'WLS_REDIRECT_LOG'. After '%JAVA_OPTIONS%' add the following code under 'if' and 'else' conditions.

```
"-Dtoplink.xml.platform=oracle.toplink.platform.xml.jaxp.JAXPPlatform"
```

Now, the details will look like this:

```
if "%WLS_REDIRECT_LOG%"==" " (

    echo Starting WLS with line:

    echo %JAVA_HOME%\bin\java %JAVA_VM% %MEM_ARGS% -
Dweblogic.Name=%SERVER_NAME% -
Djava.security.policy=%WL_HOME%\server\lib\weblogic.policy
%JAVA_OPTIONS% %PROXY_SETTINGS% %SERVER_CLASS%

    %JAVA_HOME%\bin\java %JAVA_VM% %MEM_ARGS% -
Dweblogic.Name=%SERVER_NAME% -
Djava.security.policy=%WL_HOME%\server\lib\weblogic.policy
%JAVA_OPTIONS% -
Dtoplink.xml.platform=oracle.toplink.platform.xml.jaxp.JAXPPlatform
%PROXY_SETTINGS% %SERVER_CLASS%

) else (

    echo Redirecting output from WLS window to %WLS_REDIRECT_LOG%

    %JAVA_HOME%\bin\java %JAVA_VM% %MEM_ARGS% -
Dweblogic.Name=%SERVER_NAME% -
Djava.security.policy=%WL_HOME%\server\lib\weblogic.policy
%JAVA_OPTIONS% -
Dtoplink.xml.platform=oracle.toplink.platform.xml.jaxp.JAXPPlatform
%PROXY_SETTINGS% %SERVER_CLASS% >"%WLS_REDIRECT_LOG%" 2>&1

)
```

- e) Restart the Weblogic server.

Setting up Plug - Ins
