1 Preface

This document describes helps developer to familiarize with ORACLE FLEXCUBE Development Workbench for Universal Banking.

1.1 Audience

This document is intended for FLEXCUBE Application developers/users that use Development Workbench to develop various FLEXCUBE components.

To Use this manual, you need conceptual and working knowledge of the below:

Proficiency	Resources	
FLEXCUBE Functional Architecture	Training programs from Oracle Financial Software Services.	
FLEXCUBE Object Naming conventions	Development Overview Guide	
Working knowledge of Web based applications	Self Acquired	
Working knowledge of XML files	Self Acquired	

1.2 Related Documents

<u>01-Development_WorkBench_Installation.docx</u> <u>02-Development_WorkBench_Administration.docx</u>

2 Introduction

This document contains information about the following topics:

- <u>Chapter 2 , "Introduction"</u>
- <u>Chapter 3 , "Explanation of Some Basic Icons"</u>
- <u>Chapter 4 , "Login"</u>
- <u>Chapter 5 , "Browser"</u>
- <u>Chapter 6 , "Windows"</u>
- Chapter 7, "Launch FCUBS"
- <u>Chapter 8 , "User Preferences"</u>
- <u>Chapter 9 , "Change Password"</u>
- <u>Chapter 10 , "Sign Out"</u>
- <u>Chapter 11 , "About"</u>

3 Explanation of Some Basic Icons and Jargons

Icons	Function
	New Button used to add new User, Environment, Release etc
R	Save button used to save the work done by user.
×	Close button clears all the data in the screen and all buttons will be reset to initial position.
I	Enter query button to retrieve existing data from the screen. Primary key field will be get enabled.
τ <mark>γ</mark>	Execute query button. This gets enabled on click of enter query button. On click of this button it will retrieve the required data and displays on the screen.
Ъ	Unlock button used to modify the existing record. On click of this , all fields except primary key fields gets enabled.
×1	List Of Values
	To add New labels or modify existing labels in FLEXCUBE schema
S	Generate Files.
§	Deploy Files.
¢	Release Files.

Radxml: Workbench saves all the activities carried out by the developer in an xml file referred to as radxml

Rad/RadTool/ODT: These terms also refers to FLEXCUBE Development Workbench for Universal Banking

4 Client Browser Settings

Recommended Browsers:

• Microsoft Internet Explorer 8.0

The version of Microsoft Internet Explorer 8.0 should not be a Beta version, Partner Build or a Release Candidate. It should be the Final build of Microsoft Internet Explorer 8 or later. The minimum version of Microsoft Internet Explorer 8 should be **8.0.6001.18702**. This can be verified by visiting the 'About Internet Explorer' dialog in the Help menu as shown below.

🖉 About Internet Explorer 🛛 🔀
Windows* Internet Explorer 8
Version: 8.0.6001 18702 Cipher Strength: 128-bit Product ID: 01398-600-2411832-23325 Update Versions: 0
Warning: This computer program is protected by copyright law and international treaties. Unauthorized reproduction or distribution of this program, or any portion of it, may result in severe civil and criminal penalties, and will be prosecuted to the maximum extent possible under the law.
©2009 Microsoft Corporation System Info

- Mozilla Firefox
- Google Chrome
- Recommended Screen Resolution: 1280*1024 pixels

4.1 IE Specific Settings

ActiveX Scripting has to be enabled to read and write files in Client Machine. Therefore, if you have to generate the files in client machine (instead of downloading as zip from server); certain settings has to be done in the browser. Client Mode is supported only in Internet Explorer. Settings required in IE for enabling writing to Client Machines is explained below

MSXML 6.0 :

Microsoft Core XML Services (MSXML 6.0) needs to be installed in the system. It can be downloaded from, http://www.microsoft.com/en-us/download/details.aspx?id=3988 The following IE settings need to be done to launch the Workbench Login page

- 1) Go to Internet Explorer →Tools→Internet options
- 2) Click on Security tab, select Internet and click on Custom level button as shown below:

Internet Options 🛛 🛛 🛛 🖓 🔀			
General Security Privacy Content Connections Programs Advanced			
Select a zone to view or change security settings.			
🔍 🍕 🗸 🚫			
Internet Local intranet Trusted sites Restricted sites			
Internet			
This zone is for Internet websites, except those listed in trusted and restricted zones.			
Security level for this zone			
Custom Custom settings. - To change the settings, click Custom level. - To use the recommended settings, click Default level.			
Custom level Default level			
<u>R</u> eset all zones to default level			
OK Cancel Apply			

3) As security settings make all settings as enabled except **use Pop-up Blocker** as shown below

Make sure following things are enabled

- o Allow previously unused active controls to run
- Allow script lets
- Automatic prompting for active control
- Binary and script behaviors.
- \circ $\,$ Only allow approved domains to use active control without prompting.
- Run active controls and plug-ins.
- Script active controls marked for saving.

Security Settings - Internet Zone					
Settings					
() () () () () () () () () () () () () (ftware channel permissions High safety Low safety (not secure) Medium safety (recommended) bmit non-encrypted form data Disable Enable Prompt e Phishing Filter Disable Enable Enable Enable				
🖉 1 lei	erdata nersistence				
*Takes offer	ct after you restart Internet Explorer				
Reset custom	settings				
<u>R</u> eset to:	Medium-high (default)				
	OK Cancel				

4) Repeat the same steps for Local Intranet by selecting the same as shown below :

5) After all these settings are done, go to Advanced tab and check whether the checkbox 'Use JRE (Version) for <applet>(requires restart)' is checked or not. If its nnot checked, then it has to be checked as shown below.

Internet Options					
General Security Privacy Content Connections Programs Advanced					
Settings					
Show Information Bar for encoded addresses Use UTF-8 for mailto links Sava (Sun)					
Use JRE 1.6.0_16 for <applet> (requires restart) Microsoft VM Java console enabled (requires restart)</applet>					
Java logging enabled JIT compiler for virtual machine enabled (requires restart) Multimedia					
 Always use ClearType for HTML* Enable automatic image resizing Discretionation in market area at a second seco					
Play animations in webpages*					
*Takes effect after you restart Internet Explorer					
Restore advanced settings					
Reset Internet Explorer settings					
Deletes all temporary files, disables browser add-ons, and resets all the changed settings.					
You should only use this if your browser is in an unusable state.					
OK Cancel Apply					

5 Login

Developers will be provided with Login credentials for Workbench which has to be used for accessing the Tool

Initial login credentials, after installation, will be RADTOOL/RADTOOL. Using this credential; developer has to create release, environment and users. Refer <u>02-</u> <u>Development_WorkBench_Administration.docx</u> for further details.

Fig 4.1: ODT login Screen

On successful login Workbench landing page will be displayed as shown below. Browser will display the available options to user in tree view based on role.

Below options are available in landing page.

6 Browser

It is drop down tree menu. Based on role of the user, Workbench displays the options in tree.

- Administration: This is used to add releases, environments and users.
- Function Generation: This is used to design FLEXCUBE screens.
- Screen Customizer: This is used to design FLEXCUBE screens. Main Difference between function generation and screen customizer is in screen customizer user can just modify the screen lay out. No additions and deletions allowed.
- **Tracking Changes:** This module helps in tracking the changes done in a particular release. A Change Report can be generated OR the changes can be viewed
- Notification Triggers: This will be used to create notification triggers.
- Notification: This will be used to create notification xml.
- **Bulk Generation:** This option used to generate all output files for a set of radxmls at one time.
- **Excel Template Generation:** This option will be used to generate excel template out of radxml which can be used to upload data into FLEXCUBE.
- **Refresh:** This option will be used to upgrade Radxml from lower version to higher version and to update child RADxml with parent changes.
- Web Services: Artifacts required for creation of a Web service can be generated using this feature.
- **Block Detail Upload:** This option will be used to upload block detailed information into schema from a set of radxml at one time.
- **Test Case Definition:** This option will be used to define new test case and modify existing test cases.
- **Run Chart Definition:** This option will be used to define run charts for test cases.
- **Test Case Data Upload:** This option will be used to upload test case data for the defined test cases. Data has to be uploaded in the standard excel formats.
- **Create Request:** This option will be used to create request xml (compatible with FLEXCUBE) for a test case data set.
- **Test Case Execution:** This option is used to execute test case on FLEXCUBE environment
- **Run Chart Execution:** This option will be used to execute run chart on FLEXCUBE environment

- **Test Case Data Bulk Upload:** This option will be used to upload multiple test case data at one time.
- Execution Report: This option generates report for the executed test cases and run charts

7 Windows

It will display all opened windows in drop down menu. User can select the required window to show on top of the tool.

Fig 6.1: The Windows opened

8 Launch FCUBS

This will be used to launch FLEXCUBE link directly from Workbench. User has to maintain correct FLEXCUBE url while adding environment. Refer <u>02-Development WorkBench</u> <u>Administration.docx</u> details on environment creation.
