Label Names in Custom Attribute Mapper Data Augmentations Can Be Edited in the Classic Interface

In Oracle NetSuite Analytics Warehouse, data augmentation labels created through the custom attribute mapper (CAM) reset each time the CAM is republished.

You can also edit the data augmentations generated in the CAM using the data configuration classic interface, however those labels are reset to the original names when the CAM is republished. Don't edit CAM-created data augmentations, which have descriptions starting with BatchReq or CAM_V2, using the standard Oracle NetSuite Analytics Warehouse interface. See [About Augmenting Your Data](#).

Issues with Content Explorer - NetSuite Analytics Warehouse Workbook

You may encounter these issues with the Content Explorer - NetSuite Analytics Warehouse workbook.

- Custom subject areas and metrics created through Data Augmentation use system-generated names.
- There is no historical custom content present prior to the Platform 24.R4 release.
- Content Explorer - NetSuite Analytics Warehouse is supported for US English only.
