This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

**U.S. GOVERNMENT END USERS:** Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, MySQL, and NetSuite are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

# About This Content

This guide serves as a protocol implementation compliance statement (PICS) for Oracle Communications Billing and Revenue Management Elastic Charging Engine (ECE) HTTP/2 Gateway for 5G. 5G CHF supports Nchf interfaces for converged charging and spending limit control for policy. Interactions with Network Repository Functions are also listed in this document.

## Audience

This guide is intended for system administrators, product integrators, and developers. Readers must be familiar with the following:

- Elastic Charging Engine
- 5G Service-based Network Function Architecture
- 5G Charging Function Interfaces

## How to Read the Status in Section Compliance Sections

The below table describes the meaning of the status in section compliance sections.

If the status says	It means
<b>Supported</b>	Application supports functionality. Application supports the attribute and is mapped to ECE charging function. The attribute is received in the request and used in the charging flows. This attribute is sent in the response as indicated by the specifications. You can optionally leverage this attribute for storing in the event, and to make charging decisions.
<b>Supported with Extensions</b>	Application supports functionality with extension. Application supports the attribute and may be leveraged optionally for selecting a price. The attribute is received in the request and is not used in the out-of-the-box charging flow. The attribute may or may not be sent in the response. You may optionally leverage available extensions in the charging flow to achieve the intended functionality. You can optionally leverage this attribute for storing in the event, and for making charging decisions.
<b>Not Supported</b>	Application does not support the functionality. Application does not support the attribute.
<b>Not Applicable</b>	The section is not applicable for the implementation.
<b>Informational</b>	This section is for informational purposes only in the specifications document.

# 1

# Charging Function – Charging Service

Learn about the Oracle Communications Elastic Charging Engine (ECE) compliance with the 5G System Charging Service 3GPP TS 32.291 v17.11.0 (2024-09) specification.

Topics in this document:

- [Section Compliance](#)
- [Response Codes](#)

## ⚠ Caution

Deploying charging for 5G with HTTP Gateway (5G CHF) requires a cloud native deployment of ECE and BRM components. The HTTP Gateway can be used only on an ECE cloud native system.

## Section Compliance

[Table 1-1](#) describes the section compliance of 5G System Charging Service 3GPP TS 32.291 v17.11.0 (2024-09).

**Table 1-1 5G System Charging Service 3GPP TS 32.291 v17.11.0 (2024-09) Section Compliance**

## Response Codes

[Table 1-2](#) describes the Charging Function (CF) response codes.

**Table 1-2 Response Codes**

Response codes	Description
<b>201 Created (Create)</b>	<p>The creation of a Charging Data resource is confirmed, and a representation of that resource is returned.</p> <p>The Charging Data resource is created and returned successfully.</p> <p>The representation of created resource is identified via Location header field in the 201 response.</p>
<b>200 OK (Updates)</b>	<p>The modification of a Charging Data resource is confirmed, and a representation of that resource is returned.</p> <p>The Charging Data resource which is modified and returned successfully.</p>
<b>204 No Content (Release)</b>	<p>The Charging Data resource matching the ChargingDataRef is modified and then released.</p>
<b>400 Bad Request</b>	<p>CHARGING_FAILED: The HTTP request is rejected because the set of session or subscriber information needed by the CHF for charging or CDR creation is incomplete or erroneous or not available (for example, Rating Group, subscriber information).</p> <p>RE_AUTHORIZATION_FAILED: The HTTP request is rejected because the set of information needed by the NF Consumer (CTF) to report the usage is incomplete or erroneous or not available.</p>
<b>403 Forbidden</b>	<p>CHARGING_NOT_APPLICABLE: The HTTP request is rejected by the CHF since it has been determined that the service can be granted to the end user without any charging or CDR creation.</p> <p>END_USER_REQUEST_DENIED: The HTTP request is denied by the CHF due to restrictions or limitations related to the end-user.</p> <p>QUOTA_LIMIT_REACHED: The HTTP request denied by the CHF because the end user's account could not cover the requested service. If the request contained used units they are deducted, if applicable.</p> <p>END_USER_REQUEST_REJECTED: The HTTP request rejected by the CHF due to end-user restrictions or limitations.</p>
<b>404 Not Found</b>	<p>USER_UNKNOWN: The HTTP request is rejected because the end user specified in the request cannot be served by the CHF.</p>
<b>500 Internal Server Error</b>	<p>Common Application Error</p>

# Charging Function – Spending Limit Control Service

Learn about the Oracle Communications Elastic Charging Engine (ECE) compliance with the 5G System Charging Service 3GPP TS 29.594 v17.5.0 (2022-09) specification.

Topics in this document:

- [Section Compliance](#)
- [Response Codes](#)

 **Caution**

Deploying the 5G Spending Limit Control Service with HTTP Gateway (5G CHF) requires a cloud native deployment of ECE and BRM components. The HTTP Gateway can be used only on an ECE cloud native system.

## Section Compliance

[Table 2-1](#) describes the section compliance of 5G System Charging Service 3GPP TS 29.594 v17.5.0 (2022-09).

# Charging Function – Interactions with Network Repository Function (NRF)

Learn about the Oracle Communications Elastic Charging Engine (ECE) compliance with the 5G System Network Function Repository Services 3GPP TS 29.510 v17.14.0 (2024-06) specification.

Topics in this document:

- [Section Compliance](#)

## ⚠ Caution

Deploying charging for 5G with HTTP Gateway (5G CHF) requires a cloud native deployment of ECE and BRM components. The HTTP Gateway can be used only on an ECE cloud native system.

## Section Compliance

[Table 3-1](#) describes the services supported by CHF as a consumer Network Function for interacting with NRF, based on 5G System Network Function Repository Services 3GPP TS 29.510 v17.14.0 (2024-06).

**Table 3-1 Services Supported by CHF as a Consumer Network Function**

Section Number	Section	Status	Notes
5	Services Offered by the NRF	Supported	-
5.1	Introduction	Supported	Only NFManagement Service with operations NFRegister, NFUpdate, NFDeregister, and NFListRetrieval are supported.
5.2	Nnrf_NFManagement Service	Supported	-
5.2.1	Service Description	Supported	-
5.2.2	Service Operations	Supported	-
5.2.2.1	Introduction	Supported	-
5.2.2.2	NFRegister	Supported	-
5.2.2.2.1	General	Supported	-
5.2.2.2.2	NF (other than NRF) registration to NRF	Supported	-
5.2.2.3	NFUpdate	Supported	-
5.2.2.3.1	General	Supported	-
5.2.2.3.2	NF Heart-Beat	Supported	-

**Table 3-1 (Cont.) Services Supported by CHF as a Consumer Network Function**

Section Number	Section	Status	Notes
5.2.2.4	NFDeregister	Supported	-
5.2.2.4.1	General	Supported	-
5.2.2.5	NFStatusSubscribe	Not Supported	-

# Oracle nCHF CDR Specification

Learn about the Oracle nCHF CDR OpenAPI specification.

Topics in this document:

- [Specification Details](#)

## Specification Details

Following is the Oracle nCHF CDR OpenAPI specification:

```
openapi: 3.0.0
servers:
  # Added by API Auto Mocking Plugin
  - description: Sample CDR for 5G nCHF OpenAPI
    url: Oracle/CAGBU/nCHF_ConvergentCharging_CDR/
info:
  description: |
    Oracle nCHF Converged Charging CDR Specification.
    1. All fields described in the document are supported, non-supported
       fields are not included in the document.
    2. Fields are passed through the network unless description states
       enriched/populated by CHF.
    3. Fields marked by asterisks (*) are mandatory for all scenarios.
       Unmarked fields are optional and can be conditional based on vendor and
       charging scenarios.
    4. Attributes are as described in this document, conforming to 3GPP
       TS32.298 v16.5.0 Section 5.1.5
    5. CHF CDRs are produced formatted as JSON only and not ASN.1, and does
       not conform to file based CDR transfer procedures as stated in 3GPP TS32.297
    6. For CHF CDR please refer to Schema definition for ChargingDataCDR
       below. The rest of the schema elements are referenced from within the schema
       of ChargingDataCDR.
  version: "1.0"
