*—the full range of values from 0–255

un (optional)

16-bit ITU-national unit number. The *un* of the point code represented by *un-sna-mna*.

Range:

0--127, *

*—the full range of values from 0–127

zone (optional)

ITU international zone. The *zone* in the point code represented by *zone-area-id*.

Range:

0 - 7, *

*—the full range of values from 0–7

Example

```
dlt-scr-destfld:sr=iec:ni=240:nc=010:ncm=010
```

```
dlt-scr-destfld:sr=dst1:zone=1:area=2:id=3:pcst=s
```

```
dlt-scr-destfld:sr=dst1:un=125:sna=12:mna=17
```

Dependencies

A complete point code must be specified, using the *ni-nc-ncm*, *zone-area-id*, *msa-ssa-sp*, *un-sna-mna*, or *npc* combination unless a value of *c* is specified.

2556 E2556 Cmd Rej: A complete point code must be entered

ANSI point code value 000-000-000 and ITU-International point code value 0-000-0 are not allowed.

2564 E2564 Cmd Rej: Point code out of range

If the `zone=*` parameter is specified, then the `area=*` and the `id=*` parameters must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `area=*` parameter is specified, then the `id=*` parameter must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `ssa=*` parameter is specified, then the `sp=*` parameter must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `sna=*` parameter is specified, then the `mna=*` parameter must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `msa=*` parameter is specified, then the `ssa=*` and the `sp=*` parameters must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `un=*` parameter is specified, then the `sna=*` and the `mna=*` parameters must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `nc` parameter is specified as a range, the `ncm` parameter must be specified as an asterisk or as the full range.

2512 E2512 Cmd Rej: NCM is invalid

If the `nc` parameter is specified as a single value or a range, a single value must be specified for the `ni` parameter.

2512 E2512 Cmd Rej: NCM is invalid

If the `nc` parameter is specified as an asterisk, the `ncm` parameter must be specified as an asterisk or as the full range.

2512 E2512 Cmd Rej: NCM is invalid

If the `ncm` parameter is specified as a single value, or a range other than the full range of 0–255, the `ni` and `nc` parameters must be specified with a single value.

2512 E2512 Cmd Rej: NCM is invalid

If the `ni` parameter is specified as an asterisk or as a range, the `nc` and `ncm` parameters must be specified as an asterisk or as the full range.

2511 E2511 Cmd Rej: NC is invalid

The DESTFLD specified by `ni-nc-ncm`, `zone-area-id`, `msa-ssa-sp`, `un-sna-mna`, or the `npc` parameter must already exist in the screening reference.

3272 E3272 Cmd Rej: PC does not match existing entry in given SR

If only one entry exists, the `sr` cannot be referenced by another screening table. If the `sr` is not referenced by another screening table, the entire screening table is deleted.

2498 E2498 Cmd Rej: Last entry in given SR is ref'ed by another screen

The Spare Point Code Support feature must be enabled before the `pcst` parameter can be specified.

4193 E4193 Cmd Rej: Spare Point Code Feature must be enabled

The spare point code subtype prefix (s-) is not supported for ANSI point codes (parameters `ni`, `nc`, `ncm`) or for 24-bit ITU national point codes (parameters `msa`, `ssa`, `sp`) or for 16-bit ITU national point codes (parameters `un`, `sna`, `mna`). The `pcst` parameter cannot be specified for ANSI, ITU-N16 and ITU-N24 point codes.

4264 E4264 Cmd Rej: Parameter PCST / NPCST is not allowed with C for blocked SR

If the `nsfi=fail` parameter is specified, then the `nni`, `nc`, `nncm`, `narea`, `nzone`, `nid`, `nmsa`, `nssa`, `nsp`, `nun`, `nsna`, `nmna`, and `npc` parameters cannot have a value of `c`.

2527 E2527 Cmd Rej: C value not allowed

The GWSOA parameter combination should be known and valid.

2483 E2483 Cmd Rej: Unknown / Invalid GWSOA parameter combination

Notes

The asterisk is a parameter value indicating that the gateway screening process is screening all values for that parameter in the MSU. The asterisk parameter value does not mean that multiple entries whose values may be in the range implied by the asterisk will be removed. The only entry that will be removed by this command when the asterisk is specified as a parameter value is the entry that contains an asterisk as that parameter value.

For example, if the `dlt-scr-destfld:sr=ied:ni=240:nc=010:nccm=":ssn=*` command is entered, the only entry that will be removed from the database is the entry in screening reference `iec` that contains the values `ni=240`, `nc=010`, `ncm=*`, and `ssn=*`. For an entry to be specified in this command with asterisks as parameter values, that entry must be shown in the `rtrv-scr-destfld` output with asterisks as the same parameter values specified in the `dlt-scr-destfld` command.

A range of values is specified by separating the values that define the range by two ampersands (&&); for example, `ni=025&&100` specifies all network indicators for ANSI point codes from 25 - 100.

The spare point code subtype prefix (s-) is supported only for ITU international and ITU national point codes. The `pcst` parameter indicates whether the specified point code has no subtype prefix or has the spare point code prefix.

Output

```
dlt-scr-destfld:sr=iec:ni=240:nc=010:ncm=010
```

4.1.253 dlt-scr-dpc

Use this command to remove a specific screening reference from the allowed DPC category.

Parameters**sr (mandatory)**

Screening reference. The point code's unique screening reference name.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters

area (optional)

ITU international area. The *area* in the point code represented by *zone-area-id*.

Range:

*0 - 255, **

*—the full range of values from 0–255

id (optional)

ITU international ID. The *ID* in the point code represented by *zone-area-id*.

Range:

*0 - 7, **

*—the full range of values from 0–7

mna (optional)

16-bit ITU national main number area. The *mna* in the point code represented by *un-sna-mna*.

Range:

*0--31, **

*—the full range of values from 0–31

msa (optional)

24-bit ITU-national main signaling area value. The *msa* of the point code represented by *msa-ssa-sp*.

Range:

*0 - 255, **

*—the full range of values from 0–255

nc (optional)

Network cluster value. This parameter specifies one or more *nc* values for the network indicator and network cluster member values specified in the *ni* and *ncm* parameters. It specifies the *nc* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *

*—the full range of values from 0–255

ncm (optional)

Network cluster member value. This parameter specifies one or more *ncm* values for the network indicator and network cluster values identified in the *ni* and *nc* parameters. It specifies the *ncm* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *

*—the full range of values from 0–255

ni (optional)

Network indicator value. This parameter specifies one or more *ni* values for the network cluster and network cluster member values identified in the *nc* and *ncm* parameters. It specifies the *ni* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *

*—the full range of values from 0–255

npc (optional)

ITU national point code.

**Note:**

Gateway screening allows the ITU national point code to be displayed and entered in the database only as a single number. For multiple-part ITU national point codes, see [Converting ITU National Point Code Formats](#) for information on converting the point code format.

Range:

0 - 16383, *

*—the full range of values from 0–16383

pcst (optional)

Point code subtype. This parameter indicates whether the specified ITU international or ITU national point code has no subtype prefix or has the spare point code prefix (S-).

Range:*none**s***Default:***none***sna (optional)**

16-bit ITU national sub number area. The *sna* in the point code represented by *un-sna-mna*.

Range:

0--15, *

*—the full range of values from 0–15

sp (optional)24-bit ITU national signaling point. The *sp* in the point code represented by *msa-ssa-sp*.**Range:**

0 - 255, *

*—the full range of values from 0–255

ssa (optional)24-bit ITU national sub signaling area. The *ssa* in the point code represented by *msa-ssa-sp*.**Range:**

0 - 255, *

*—the full range of values from 0–255

un (optional)16-bit ITU-national unit number. The *un* of the point code represented by *un-sna-mna*.**Range:**

0--127, *

*—the full range of values from 0–127

zone (optional)ITU international zone. The *zone* in the point code represented by *zone-area-id*.**Range:**

0 - 7, *

*—the full range of values from 0–7

Example

```
dlt-scr-dpc:sr=iec:ni=240:nc=010:ncm=010
```

```
dlt-scr-dpc:sr=dpc1:npc=128:pcst=s
```

```
dlt-scr-dpc:sr=dpc2:un=1:sna=2:mna=1
```

Dependencies

A complete point code must be specified, using the *ni-nc-ncm*, *zone-area-id*, *msa-ssa-sp*, *un-sna-mna*, or *npc* combination unless a value of *c* is specified.

2556 E2556 Cmd Rej: A complete point code must be entered

The DPC specified by *ni-nc-ncm*, *zone-area-id*, *msa-ssa-sp*, *un-sna-mna*, or the *npc* parameter must already exist in the screening reference or within an existing range of DPCs.

3272 E3272 Cmd Rej: PC does not match existing entry in given SR

ANSI point code value 000-000-000 and ITU-International point code value 0-000-0 are not allowed.

2564 E2564 Cmd Rej: Point code out of range

If the `nc` parameter is specified as a range, the `ncm` parameter must be specified as an asterisk or as the full range.

2512 E2512 Cmd Rej: NCM is invalid

If the `nc` parameter is specified as a single value or a range, a single value must be specified for the `ni` parameter.

2511 E2511 Cmd Rej: NC is invalid

If the `nc` parameter is specified as an asterisk, the `ncm` parameter must be specified as an asterisk or as the full range.

2512 E2512 Cmd Rej: NCM is invalid

If the `ncm` parameter is specified as a single value, or a range other than the full range of 0–255, the `ni` and `nc` parameters must be specified with a single value.

2512 E2512 Cmd Rej: NCM is invalid

If the `ni` parameter is specified as an asterisk or as a range, the `nc` and `ncm` parameters must be specified as an asterisk or as the full range.

2511 E2511 Cmd Rej: NC is invalid

If only one entry exists, the `sr` must not be referenced by another screening table. If the `sr` is not referenced by another screening table, the entire screening table is deleted.

2498 E2498 Cmd Rej: Last entry in given SR is ref'ed by another screen

The Spare Point Code Support feature must be enabled before the `pcst` parameter can be specified.

4193 E4193 Cmd Rej: Spare Point Code Feature must be enabled

The spare point code subtype prefix (s-) is not supported for ANSI point codes (parameters `ni`, `nc`, `ncm`) or for 24-bit ITU national point codes (parameters `msa`, `ssa`, `sp`) or for 16-bit ITU national point codes (parameters `un`, `sna`, `mna`). The `pcst` parameter cannot be specified for ANSI, ITU-N24, or ITU-N16 point codes.

4264 E4264 Cmd Rej: Parameter PCST / NPCST is not allowed with C for blocked SR

If the `nsfi=fail` parameter is specified, then the `nni`, `nc`, `nncm`, `narea`, `nzone`, `nid`, `nmsa`, `nssa`, `nsp`, `nun`, `nsna`, `nmna`, and `npc` parameters cannot have a value of `c`.

2527 E2527 Cmd Rej: C value not allowed

The GWSOA parameter combination should be known and valid.

2483 E2483 Cmd Rej: Unknown / Invalid GWSOA parameter combination

Notes

The asterisk is a parameter value indicating that the gateway screening process is screening all values for that parameter in the MSU. The asterisk parameter value does not mean that multiple entries whose values may be in the range implied by the asterisk will be removed. The only entry that will be removed by this command when the asterisk is specified as a parameter value is the entry that contains an asterisk as that parameter value.

For example, if the `dlt-scr-dpc:sr=ied:ni=240:nc=010:nccm=":ssn=*` command is entered, the only entry that will be removed from the database is the entry in screening reference *iec* that contains the values `ni=240`, `nc=010`, `ncm=*`, and `ssn=*`. For an entry to be specified in this command with asterisks as parameter values, that entry must be shown in the `rtrv-scr-dpc` output with asterisks as the same parameter values specified in the `dlt-scr-dpc` command.

A range of values is specified by separating the values that define the range by two ampersands (&&); for example, `ni=025&&100` specifies all network indicators for ANSI point codes from 25 - 100.

The spare point code subtype prefix (s-) is supported only for ITU international and ITU national point codes. The `pcst` parameter indicates whether the specified point code has no subtype prefix or has the spare point code prefix.

Output

```
dlt-scr-dpc:sr=iec:ni=240:nc=010:ncm=010
```

4.1.254 dlt-scr-isup

Use this command to delete an allowed ISUP screening reference from the Allowed ISUP entity set.

Parameters

isupmt/tupmt (mandatory)

ISUP or TUP message type.

Range:

0 - 255, *

*—the full range of values from 0–255

sr (mandatory)

Screening reference. This parameter specifies the point code's unique screening reference name.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters

Example

```
dlt-scr-isup:sr=iec:isupmt=9
dlt-scr-isup:sr=iec:isupmt=1&&2
dlt-scr-isup:tupmt=1:sr=tu01
```

Dependencies

The specified `sr` must exist in the Allowed ISUP entity set.

N/A N/A

The specified `isupmt` or `tupmt` parameter value must already exist in the specified `sr`.

2520 E2520 Cmd Rej: ISUPMT/TUPMT does not exist in given SR

The last entry in the specified `sr` cannot be deleted if the entry is referenced by another screen.

N/A N/A

The GWSOA parameter combination should be known and valid.

2483 E2483 Cmd Rej: Unknown / Invalid GWSOA parameter combination

The ISUPMT (ISUP Message Type) parameter must be specified for a SEAS command.

3506 E3506 Cmd Rej: ISUP Message Type must be valid

Notes

An asterisk can be specified for a parameter value in the `chg/dlt-scr-isup` commands *only* if that parameter value was specified as an asterisk in the `ent-scr-isup` command to define the parameter value.

A range of values can be specified for the `isupmt` or `tupmt` parameter, by separating the values that define the range by two ampersands (`&&`); for example, `isupmt=025&&100` specifies all ISUP message types from 25 - 100. The value to the left of the `&&` must be less than the value to the right of the `&&` in the range.

Output

No screen sets are listed in the following example, because the specified screening reference is not associated with any screen sets.

```
dlt-scr-isup:sr=iec:isupmt=9

tekelecstp 02-09-02 11:59:41 EST EAGLE 30.0.0

4.1.255 dlt-scr-opc

Use this command to remove a specific screening reference from the allowed OPC category.

Parameters

sr (mandatory)

Screening reference. This parameter specifies the point code's unique screening reference name.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters

area (optional)

ITU international area. The *area* in the point code represented by *zone-area-id*.

Range:

*0 - 255, **

*—the full range of values from 0–255

id (optional)

ITU international ID. The *ID* in the point code represented by *zone-area-id*.

Range:

0 - 7, *

*—the full range of values from 0–7

mna (optional)

16-bit ITU national main number area. The *mna* in the point code represented by *un-sna-mna*.

Range:

0--31, *

*—the full range of values from 0–31

msa (optional)

24-bit ITU-national main signaling area value. The *msa* of the point code represented by *msa-ssa-sp*.

Range:

0 - 255, *

*—the full range of values from 0–255

nc (optional)

Network cluster value. This parameter specifies one or more *nc* values for the network indicator and network cluster member values specified in the *ni* and *ncm* parameters. It specifies the *nc* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *

*—the full range of values from 0–255

ncm (optional)

Network cluster member value. This parameter specifies one or more *ncm* values for the network indicator and network cluster values identified in the *ni* and *nc* parameters. It specifies the *ncm* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *

*—the full range of values from 0–255

ni (optional)

Network indicator value. This parameter specifies one or more *ni* values for the network cluster and network cluster member values identified in the *nc* and *ncm* parameters. It specifies the *ni* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *

*—the full range of values from 0–255

npc (optional)

ITU national point code.

Gateway screening allows the ITU national point code to be displayed and entered in the database only as a single number. For multiple-part ITU national point codes, see [Converting ITU National Point Code Formats](#) for information on converting the point code format.

Range:

0 - 16383, *

*—the full range of values from 0-16383

pcst (optional)

Point code subtype. This parameter indicates whether the specified ITU international or ITU national point code has no subtype prefix or has the spare point code prefix (s).

Range:

none

s

Default:

none

sna (optional)

16-bit ITU national sub number area. The *sna* in the point code represented by *un-sna-mna*.

Range:

0--15, *

*—the full range of values from 0–15

sp (optional)

24-bit ITU national signaling point. The *spin* the point code represented by *msa-ssa-sp*.

Range:

0 - 255, *

*—the full range of values from 0–255

ssa (optional)

24-bit ITU national sub signaling area. The *ssa* in the point code represented by *msa-ssa-sp*.

Range:

0 - 255, *

*—the full range of values from 0–255

un (optional)

16-bit ITU-national unit number. The *un* of the point code represented by *un-sna-mna*.

Range:

0--127, *

*—the full range of values from 0–127

zone (optional)

ITU international zone. The *zone* in the point code represented by *zone-area-id*.

Range:

0 - 7, *

*—the full range of values from 0–7

Example

```
dlt-scr-opc:sr=iec:ni=240:nc=010:ncm=010
```

```
dlt-scr-opc:sr=opc1:npc=128:pcst=s
```

```
dlt-scr-opc:sr=opc2:un=1:sna=2:mna=1
```

Dependencies

A complete point code must be specified, using the `ni-nc-ncm`, `zone-area-id`, `msa-ssa-sp`, `un-sna-mna`, or `npc` combination unless a value of `c` for “continue” is specified.

2556 E2556 Cmd Rej: A complete point code must be entered

The OPC specified by `ni-nc-ncm`, `zone-area-id`, `msa-ssa-sp`, `un-sna-mna`, or the `npc` parameter must already exist in the screening reference or within an existing range of OPCs.

3272 E3272 Cmd Rej: PC does not match existing entry in given SR

ANSI point code value 000-000-000 and ITU-International point code value 0-000-0 are not allowed.

2564 E2564 Cmd Rej: Point code out of range

If the `nc` parameter is specified as a range, the `ncm` parameter must be specified as an asterisk or as the full range.

2512 E2512 Cmd Rej: NCM is invalid

If the `nc` parameter is specified as a single value or a range, a single value must be specified for the `ni` parameter.

2511 E2511 Cmd Rej: NC is invalid

If the `nc` parameter is specified as an asterisk, the `ncm` parameter must be specified as an asterisk or as the full range.

2512 E2512 Cmd Rej: NCM is invalid

If the `ncm` parameter is specified as a single value, or a range other than the full range of 0–255, the `ni` and `nc` parameters must be specified with a single value.

2512 E2512 Cmd Rej: NCM is invalid

If the `ni` parameter is specified as an asterisk or as a range, the `nc` and `ncm` parameters must be specified as an asterisk or as the full range.

2511 E2511 Cmd Rej: NC is invalid

If only one entry exists, the `sr` must not be referenced by another screening table. If the `sr` is not referenced by another screening table, the entire screening table is deleted.

2498 E2498 Cmd Rej: Last entry in given SR is ref'ed by another screen

The Spare Point Code Support feature must be enabled before the `pcst` parameter can be specified.

4193 E4193 Cmd Rej: Spare Point Code Feature must be enabled

The spare point code subtype prefix (s-) is not supported for ANSI point codes (parameters `ni`, `nc`, `ncm`) or for 24-bit ITU national point codes (parameters `msa`, `ssa`, `sp`) or for 16-bit ITU national point codes (parameters `un`, `sna`, `mna`). The `pcst` parameter cannot be specified for ANSI, ITU-N24, or ITU-N16 point codes.

4264 E4264 Cmd Rej: Parameter PCST / NPCST is not allowed with C for blocked SR

If the `nsfi=fail` parameter is specified, then the `nni`, `nc`, `nncm`, `narea`, `nzone`, `nid`, `nmsa`, `nssa`, `nsp`, `un`, `sna`, `mna`, and `npc` parameters cannot have a value of `c`.

2527 E2527 Cmd Rej: C value not allowed

The GWSOA parameter combination should be known and valid.

2483 E2483 Cmd Rej: Unknown / Invalid GWSOA parameter combination

Notes

The asterisk is a parameter value indicating that the gateway screening process is screening all values for that parameter in the MSU. The asterisk parameter value does not mean that multiple entries whose values may be in the range implied by the asterisk will be removed. The only entry that will be removed by this command when the asterisk is specified as a parameter value is the entry that contains an asterisk as that parameter value.

For example, if the `dlt-scr-dpc:sr=ied:ni=240:nc=010:nccm=":ssn=*` command is entered, the only entry that will be removed from the database is the entry in screening reference `iec` that contains the values `ni=240`, `nc=010`, `ncm=*`, and `ssn=*`. For an entry to be specified in this command with asterisks as parameter values, that entry must be shown in the `rtrv-scr-dpc` output with asterisks as the same parameter values specified in the `dlt-scr-dpc` command.

A range of values is specified by separating the values that define the range by two ampersands (`&&`); for example, `ni=025&&100` specifies all network indicators for ANSI point codes from 25 - 100.

The spare point code subtype prefix (`s-`) is supported only for ITU international and ITU national point codes. The `pcst` parameter indicates whether the specified point code has no subtype prefix or has the spare point code prefix.

Output

```
dlt-scr-opc:sr=iec:ni=240:nc=010:ncm=010
```

4.1.256 dlt-scr-sio

Use this command to remove a specific screening reference from the allowed service indicator octet (SIO) category.

Parameters

nic (mandatory)

Network indicator code. This parameter specifies whether the message originated from an international (0) or national (2) network.

Range:

0 - 3, *

*—the full range of values from 0–255

pri (mandatory)

New message priority. The new message priority in the SIO.

Range: 0 - 3, *

*—the full range of values from 0–255

Default:

Current value

si (mandatory)

Service indicator. The service indicator identifies the type of message. The values are defined in Telcordia TR-NWT-000246.

Range:

00

01-15

sr (mandatory)

Screening reference. The point code's unique screening reference name.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters

h0 (optional)

This parameter is mandatory if the *si* parameter has a value of *00*, *01*, *02*, or *03*. Otherwise, the *h0* parameter is undefined.

Range:

0 - 15

Default:

Current value or undefined

h1 (optional)

This parameter is mandatory if the *si* parameter has a value of *00*, *01*, *02*, or *03*. Otherwise, the *h1* parameter is undefined.

Range:

0 - 15

Default:

Current value or undefined

Example

```
dlt-scr-sio:sr=iec:nic=1:si=1:h0=4:h1=2:pri=*
```

```
dlt-scr-sio:sr=iec:nic=1:si=3:pri=2
```

Dependencies

The `h0` and `h1` parameters cannot be specified if the `si` parameter is specified and is not equal to `00`, `01`, or `02`.

N/A N/A

The parameter to be removed must be in the screening reference.

2569 E2569 Cmd Rej: SIO does not exist in given SR

Valid combinations for the `h0/h1` parameters:

- `h0` is a single value— `h1` can be a single value, range, or an asterisk
- `h0` is a range— `h1` can be an asterisk
- `h0` is an asterisk— `h1` can be an asterisk

3269 E3269 Cmd Rej: Invalid H0/H1 or NH0/NH1 specified

The `sr`, `nic`, `si`, `pri`, and `h0/h1` parameters cannot be removed if they are the last entry in the screening reference and the screening reference is part of a screen set.

2498 E2498 Cmd Rej: Last entry in given SR is ref'd by another screen

If the `si` parameter has value of `00`, `01`, or `02`, the `h0` and `h1` parameters must be specified. Otherwise, the `h0` parameter cannot be specified.

2488 E2488 Cmd Rej: H0 and H1 must be specified for given SI

If the value of the `si` parameter value is greater than 2, then the `h0` and `h1` parameters cannot be specified.

2490 E2490 Cmd Rej: H0 and H1 cannot be specified for SI greater than 2

If asterisks or ranges are specified for the heading codes, nothing that matches the +combination of `nic`, `si`, and the specified heading codes can already exist in the allowed SIO entity set for the screening reference.

2393 E2393 Cmd Rej: Terminal is not equipped

The specified screening reference (`sr`) must already exist in the database.

2573 E2573 Cmd Rej: SR or NSR does not reference an existing SR

The GWSOA parameter combination should be known and valid.

2483 E2483 Cmd Rej: Unknown / Invalid GWSOA parameter combination

For SEAS commands, the `pri` parameter specified must be in the range 0-3, *.

2562 E2562 Cmd Rej: A specific PRI must be specific in the range (0-3, *)

For SEAS commands, the `h0` parameter specified must be in the range 0-15, *.

2563 E2563 Cmd Rej: A specific H0 must be specified in the range (0-15, *)

For SEAS commands, the `h1` parameter specified must be in the range 0-15, *.

2566 E2566 Cmd Rej: A specific H1 must be specified in the range (0-15, *)

Notes

The network identifier specifies whether the message originated from an international (0) or a national (2) network.

The asterisk is a parameter value indicating that the gateway screening process is screening all values for that parameter in the MSU. The asterisk parameter value does not mean that multiple entries whose values may be in the range implied by the asterisk will be removed. The only entry that will be removed by this command when the asterisk is specified as a parameter value is the entry that contains an asterisk as that parameter value.

For example, if the `dlt-scr-sio:sr=iec:ni=240:nc=010:nccm=":ssn=*` command is entered, the only entry that will be removed from the database is the entry in screening reference `iec` that contains the values `ni=240`, `nc=010`, `nccm=*`, and `ssn=*`. For an entry to be specified in this command with asterisks as parameter values, that entry must be shown in the `rtrv-scr-sio` output with asterisks as the same parameter values specified in the `dlt-scr-sio` command.

A range of values is specified by separating the values that define the range by two ampersands (&&); for example, `ni=025&&100` specifies all network indicators for ANSI point codes from 25 - 100.

Output

```
dlt-scr-sio:sr=iec:nic=1:si=3:pri=2
```

```
rlghncxa03w 04-02-14 16:45:50 EST EAGLE 31.3.0

4.1.257 dlt-scr-tt

Use this command to remove a specific screening reference from the allowed translation type category.

Parameters

sr (mandatory)

Screening reference. This parameter specifies the point code's unique screening reference name.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters

type (mandatory)

Translation type. The GTT type value in the CdPA.

Range:

0 - 255, *

*—the full range of values from 0–255

Example

```
dlt-scr-tt:sr=iec:type=012
```

Dependencies

The screening reference must exist.

2573 E2573 Cmd Rej: SR or NSR does not reference an existing SR

The `sr` and `type` parameters cannot be removed if they are the last entry in the screening reference and the screening reference is part of a screen set.

2498 E2498 Cmd Rej: Last entry in given SR is ref'd by another screen

The allowed `type` to be removed must already exist in the screening reference.

N/A N/A

The single value or range specified for the allowed `type` to be deleted from the TT screen for the allowed TT screening reference must already exist in that TT screen.

2574 E2574 Cmd Rej: TYPE does not exist in given SR

The value specified for the `type` parameter must be within the allowed range.

2524 E2524 Cmd Rej: A specific TT must be specified in the range (1-255,*)

The GWSOA parameter combination should be known and valid.

2483 E2483 Cmd Rej: Unknown / Invalid GWSOA parameter combination

Notes

The asterisk is a parameter value indicating that the gateway screening process is screening all values for that parameter in the MSU. The asterisk parameter value does not mean that multiple entries whose values may be in the range implied by the asterisk will be removed. The only entry that will be removed by this command when the asterisk is specified as a parameter value is the entry that contains an asterisk as that parameter value.

For example, if the `dlt-scr-tt:sr=ied:type=":ssn=*` command is entered, the only entry that will be removed from the database is the entry in screening reference `iec` that contains an asterisk as the value for the `type` parameter. For an entry to be specified in this command with an asterisk as the value for the `type` parameter, that entry must be shown in the `rtrv-scr-tt` output with an asterisk as the value for the `type` parameter.

Output

```
dlt-scr-tt:sr=iec:type=012
```

```

4.1.258 dlt-scrset

Use this command to remove a screen set definition from the database. A screen set is a group of screening references that belong to various categories. This command does not remove any gateway screening tables.

Parameters

scrn (mandatory)

Screen set name. Each screening reference must have a unique name.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters

Example

```
dlt-scrset:scrn=nc27
```

Dependencies

The screen set name must exist.

2361 E2361 Cmd Rej: Screen set name not defined

Before the screen set can be removed, it must be removed from all linksets.

2568 E2568 Cmd Rej: Screen set name is referenced by a link set

The GWSOA parameter combination should be known and valid.

2483 E2483 Cmd Rej: Unknown / Invalid GWSOA parameter combination

Notes

The system validates the command to ensure that the specified screen set name is in use.

Output

```
dlt-scrset:scrn=nc27
```

```
rlghncxa03w 04-01-07 11:43:04 EST EAGLE 31.3.0

4.1.259 dlt-shlf

Use this command to remove a shelf from the system database.

Parameters

loc (mandatory)

Location of the shelf to be deleted.

Range:

1200, 1300, 2100, 2200, 2300, 3100, 3200, 3300, 4100, 4200, 4300, 5100, 5200, 5300, 6100, 6200, 6300

Example

```
dlt-shlf:loc=2300
```

```
dlt-shlf:loc=6200
```

Dependencies

The frame and shelf values of the shelf location parameter (`loc`) must be within the valid range (`xyzz`, where `x`=frame and `y`=shelf; `zz` is always 00 for this command).

2152 E2152 Cmd Rej: Shelf ID out of range

The equipment shelf must have been configured previously.

2202 E2202 Cmd Rej: Shelf location already equipped

The specified shelf cannot have any configured cards.

2203 E2203 Cmd Rej: All cards on shelf must be unequipped

The Shelf table is corrupt or cannot be found by the system.

2104 E2104 Cmd Rej: Failed reading the shelf table

The IMT table is corrupt or cannot be found by the system.

2102 E2102 Cmd Rej: Failed reading the IMT table

A string of 1 to 64 characters. Valid values are (0-9, A-Z), +, *, #, .(period), @ or DFLT (default).

px (optional)

Prefix

Range:

ZZZZZZZZZZZZZZZZ

A string of 1 to 15 characters. Valid values are hex digits (0-9, A-F), +, *, -, #.

Example

```
dlt-sip-npp:phctxt=abc.com:px=111111
```

```
dlt-sip-npp:phctxt=xyz.com
```

```
dlt-sip-npp:phctxt=a+bc.com
```

Dependencies

SIPNP Feature must be enabled before entering any number normalization rules.

2590 E2590 Cmd Rej: SIPNP Feature must be enabled

SIP Phone Context table (SIPPHCXT) should be accessible.

2594 E2594 Cmd Rej: Failed reading SIP Phone Context table

SIP Prefix table (SIPNPPFX) should be accessible.

2637 E2637 Cmd Rej: Failed reading SIP Prefix table

SIP DBMM 2 table should be accessible.

2649 E2649 Cmd Rej: Failed reading DBMM 2 table

Phone Context cannot be deleted if it still has some Prefix assigned to it.

2654 E2654 Cmd Rej: Assigned PFXs must be deleted before PHCXT can be deleted

Requested SIP Prefix entry must exist in the SIPNPPFX table.

2655 E2655 Cmd Rej: SIP Prefix entry does not exist

Requested SIP Phone Context entry must exist in the SIPPHCXT table.

2656 E2656 Cmd Rej: SIP Phone Context entry does not exist

Default Phone Context cannot be deleted from the SIPPHCXT table.

2673 E2673 Cmd Rej: Default Phone Context cannot be deleted

Notes

None.

Output

This example displays the output when all the parameters are specified:

```
dlt-sip-npp:phctxt=x+yz.com:px=12
```

```
tekelecstp 12-07-09 19:08:39 EST EAGLE 45.0.0
dlt-sip-npp:phctxt=x+yz.com:px=12
Command entered at terminal #4.
PHCTXTID table is (3 of 101) 3% full.

4.1.261 dlt-slk

Use this command to remove a signaling link from the system database.

Parameters

link (mandatory)

Signaling link on the card specified in the `loc` parameter. The links can be specified in any sequence or pattern.

Synonym:

port

Range:

a, b, a1 - a63, b1 - b63

Not all card types support all link parameter values.

See [Table A-1](#) for valid link parameter range values for each type of card that can have a location specified in the `loc` parameter.

loc (mandatory)

The card location as stenciled on the shelf of the system.

Range:

*1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318,
2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318,
3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318,
4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318,
5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318,
6101 - 6108, 6111 - 6118*

force (optional)

This parameter must be used to remove the last link in a linkset without having to remove all of the routes that referenced the linkset.

Range:**yes****no****Default:***no***Example**

```
dlt-slk:loc=1211:link=a
```

```
dlt-slk:loc=1201:link=b:force=yes
```

Dependencies

Card locations 1113 - 1118 cannot be specified.

2154 E2154 Cmd Rej: Card slot reserved by system

The frame and shelf portions of the specified card location (*loc*) can be 11 - 13, 21 - 23, 31 - 33, 41 - 43, 51 - 53, and 61 . (The card location is *xyss*, where *x* is the frame, *y* is the shelf, and *ss* is the slot.)

2152 E2152 Cmd Rej: Shelf ID out of range

Links A16 - A31 and B16 - B31 cannot be specified for even-numbered card locations. HC MIM cards are dual-slot cards. The links are assigned only to the cards in odd-numbered locations.

Links A32-A63 and B32-B63 is only applicable for SLIC cards running the IPSPG application.

3494 E3494 Cmd Rej: Link is invalid for card location

The specified link must exist in the database.

2373 E2373 Cmd Rej: Link is unequipped in the database

The signaling link must be in the unavailable (UAV) state before it can be removed. Enter the `rept-stat-slk` command to verify the state of the signaling link.

3726 E3726 Cmd Rej: Active device state does not permit database change

The signaling link cannot have an active LFS test in progress when this command is entered to delete the link.

2106 E2106 Cmd Rej: Link is in test mode

The `force=yes` parameter must be specified to remove the last signaling link in a linkset that is assigned to a route.

2128 E2128 Cmd Rej: Linkset assigned to route must have at least one link

To remove the last signaling link on a card, the state of the card must be OOS-MT-DSBLD.

3726 E3726 Cmd Rej: Active device state does not permit database change

The card must be inhibited before the last link on the card can be deleted.

3726 E3726 Cmd Rej: Active device state does not permit database change

An IPLIMx or IPGWx signaling link assigned to a local host cannot be deleted if it has a socket or association with connection status `open=yes`.

3448 E3448 Cmd Rej: LHOST has open socket or association

The Route table must be accessible.

2648 E2648 Cmd Rej: Failed reading the route table

The Link table must be accessible.

2103 E2103 Cmd Rej: Failed reading the link table

The Linkset table must be accessible.

2122 E2122 Cmd Rej: Failed reading linkset table

The slot portion of the specified card location (`loc`) can be 1 - 8 and 11 - 18 . Slots 09 and 10 cannot be specified. (The card location is `xyss`, where `x` is the frame, `y` is the shelf, and `ss` is the slot.)

2153 E2153 Cmd Rej: Card slot location out of range

If deleting the link causes the provisioned link count to fall below the `numslk` thresholds configured for the corresponding IPSPG-M3UA linkset (see the `chg-lsopts` command), then the command cannot be entered.

If values of 0 or 1 are specified for all of the `numslk` threshold parameters, then the last link can be deleted.

4943 E4943 Cmd Rej: Number of links in the linkset falls below NUMSLK value

SLK can only be deleted if no LG Engine is associated with it.

5238 E5238 Cmd Rej: LG Engine is associated with PORT(SLK)

If the `lsrestrict=on` parameter is specified (see the `chg-ss7opts` command), and if deleting the link would send the number of links assigned to the linkset below the value specified for the `tfatcabmlq` parameter (see the `chg-ls` command), then the link cannot be deleted.

2860 E2860 Cmd Rej: TFATCABMLQ value exceeds number of links in link set

The GTT destination must exist in the DSTN table.

4753 E4753 Cmd Rej: DSTN table entry was not found

Notes

This command disassociates the equipment of a link from a logical signaling link. The link must first be placed in the unavailable (UAV) state by entering the `chg-slk` (or `canc-slk`) command before this command can be used to disconnect it. Entering this command results in the link entity being deleted from the STP's link entity set. The link is then considered to be "disconnected." The link on the STP becomes unassigned (spare) but retains the existing equipment type and options; the link remains in the "equipped" provisioning state unless that state is changed by subsequent local craft activity. The link is also no longer associated with its assigned linkset.

Not every card location represents a signaling link. Be sure to address a signaling link in this command.

Installation Guide provides an illustration of card locations.

Signaling links and scheduled UI measurement reports

If the Integrated Measurements feature is turned on, the measurements subsystem is provisioned (see the `chg-measopts` command), and the latest deletion causes the provisioned link count to fall to 700, then the measurements subsystem automatically enables the scheduled UI measurements report.

MTT 2976 and MTT 3494 are deleted as part of EPM-B.

Output

```
dlt-slk:loc=1211:link=a

rlghncxa03w 05-02-07 11:11:28 EST  EAGLE5 33.0.0
DLT-SLK: MASP A - COMPLTD

4.1.262 dlt-snmp-host

Use this command to delete an existing entry in the SNMP Host table.

Parameters

host (optional)

Host name. This parameter is used as the search key to locate a specific table entry. Either HOST or IPADDR must be specified, but both cannot be used in the same command.

Range:

XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX

A string of characters, beginning with a letter and comprising up to 32 characters in length. Valid values are a..z, A..Z, 0..9, or .

ipaddr (optional)

IP Address. This parameter is used as the search key to locate a specific table entry. Either HOST or IPADDR must be specified, but both cannot be used in the same command.

Range:

4 numbers separated by dots, with each number in the range of 0-255.

Example

```
dlt-snmp-host:host=snmpmgr
dlt-snmp-host:ipaddr=10.25.60.99
```

Dependencies

The specified HOST or IPADDR must exist in the SNMP Host table.

2170 E2170 Cmd Rej: SNMP host table entry not found for specified HOST/IPADDR

The SNMP feature must be enabled before an SNMP Host can be configured.

2268 E2268 Cmd Rej: SNMP feature must be enabled

To locate a table entry, either the HOST or IPADDR parameters must be specified, but both cannot be used in the same command.

2315 E2315 Cmd Rej: Either HOST or IPADDR must be specified, but not both

Notes

None.

Output

```
dlt-snmp-host:ipaddr=10.25.55.25

tekelecstp 12-06-13 11:08:11 EST 45.0.0-64.66.0

4.1.263 dlt-spc

Use this command to delete an SPC (secondary point code) from the database. Also use this command to change an SPC by first removing the SPC from the database and then using the `ent-spc` command to enter the new SPC value.

Parameters

**Note:**

See [Point Code Formats and Conversion](#) in Appendix A for a detailed description of point code formats, rules for specification, and examples.

spc (mandatory)

ANSI destination point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.

Synonym:

spca

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001-005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006-255*.

The point code *000-000-000* is not a valid point code.

spc/spca/spci/spcn/spcn24/spcn16 (mandatory)

Secondary point code.

spci (mandatory)

ITU international point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*)

Range:

s-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s

zone—0-7

area—000-255

id—0-7

The point code *0-000-0* is not a valid point code.

spcn (mandatory)

ITU international point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*).

Range:

s-, 0-16383, aa-zz

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s-

nnnnn—0-16383

gc—aa-zz

m1-m2-m3-m4—0-14 for each member; values must sum to 14

spcn24 (mandatory)

24-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*).

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

msa—000–255

ssa—000–255

sp—000–255

spcn16 (mandatory)

16-bit ITU national point code with subfields *unit number sub number area main number area* (*un-sna-mna*).

Range:

000---127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

un---000---127

sna---000---15

mna---000---31

Example

```
dlt-spc:spc=10-20-30
```

```
dlt-spc:spcn24=98-98-98
```

```
dlt-spc:spcn=s-12345
```

```
dlt-spc:spcn16=121-10-30
```

Dependencies

A secondary point code that is referenced in the Destination table cannot be deleted.

3819 E3819 Cmd Rej: SPC may not be referenced in the STP's route table

SPC table must be accessible.

3807 E3807 Cmd Rej: Failed reading Secondary Point Code (SPC) table

Route Destination table must be accessible.

2648 E2648 Cmd Rej: Failed reading the route table

If the value specified for the `spc` parameter is referenced in the Linkset table, then the parameter cannot be deleted.

4633 E4633 Cmd Rej: SPC may not be referenced in the STP's linkset table

Linkset table must be accessible.

2122 E2122 Cmd Rej: Failed reading linkset table

The MPC feature must be turned on before this command can be entered.

3867 E3867 Cmd Rej: MPC feature must be enabled

The value specified for the `spc` parameter must exist in the Secondary Point Code table.

3814 E3814 Cmd Rej: SPC does not exist

Notes

In this command, only ITU-international and ITU national point codes support the spare point code subtype prefix (s-).

Output

```
dlt-spc:spc=10-20-30
```

```
rlghncxa03w 04-02-18 08:50:12 EST EAGLE 31.3.0

4.1.264 dlt-srvsel

Use this command to delete a service selector.

Parameters

gti/gtia/gtii/gtin/gtin24 (mandatory)

Global title indicator. For all service selector commands, the domain is defined as GTI and GTIA (ANSI), GTII (ITU international), and GTIN (ITU national). For the service selector commands, GTI and GTIA are equivalent.

Range:

2, 4

Supported value for ANSI: `gti=2`, `gtia=2`

Supported values for ITU: `gtii=0`, `gtii=2`, `gtii=4`, `gtin=0`, `gtin=2`, `gtin=4`, `gtin24=2`, `gtin24=0`, `gtin24=4`

ssn (mandatory)

Subsystem number.

Range:

0 - 255

tt (mandatory)

Translation type.

Range:

0 - 255

nai (optional)

Nature of Address indicator.

Range:

sub

rsvd

natl

intl

naiv (optional)

Nature of Address indicator value.

Range:

0 - 127

np (optional)

Numbering Plan.

Range:

e164

generic

x121

f69

e210

e212

e214

private

npv (optional)

Numbering Plan value.

Range:

0 - 15

Example

```
dlt-srvsel:gti=2:ssn=250:tt=10
dlt-srvsel:gtin=4:tt=0:ssn=100:np=e164:nai=sub
dlt-srvsel:gtin24=4:tt=4:ssn=20:np=e164:nai=intl
dlt-srvsel:gtii=4:tt=4:np=e164:nai=intl:ssn=9
dlt-srvsel:gtii=4:tt=5:np=e164:nai=intl:ssn=*
dlt-srvsel:gtii=0:tt=0:ssn=*
```

Dependencies

The `np` and `npv` parameters cannot be specified together in the command.

3551 E3551 Cmd Rej: NP and NPV must not be specified together

The `nai` and `naiv` parameters cannot be specified together in the command.

3552 E3552 Cmd Rej: NAI and NAIV must not be specified together

The value 0, 4 is not valid for the `gti` and `gtia` parameters.

3553 E3553 Cmd Rej: GTI(A)=4, and GTI(x)=1 and 3 are not supported

The values 1 and 3 are not valid for the `gti/gtia/gtii/gtin/gtin24` parameters.

3553 E3553 Cmd Rej: GTI(A)=4, and GTI(x)=1 and 3 are not supported

If the `gtii/gtin/gtin24=4` parameter is specified, then an `np(v)` and `nai(v)` parameter combination must be specified. These parameters can be specified in the following combinations: `np/naiv`, `npv/nai`, `np/nai`, or `npv/naiv`.

3555 E3555 Cmd Rej: NP(V) and NAI(V) must be specified for given GTI value

If the `gti/gtia/gtii/gtin/gtin24=0` or `2` parameter is specified, no `np(v)` and `nai(v)` parameter combinations can be specified.

3554 E3554 Cmd Rej: NP(V) and NAI(V) must not be specified for given GTI value

An entry must already exist that matches the `gti/gtia/gtii/gtin/gtin24`, `tt`, `ssn`, and `np(v)` and `nai(v)` combination of parameters.

4900 E4900 Cmd Rej: Entry does not exist with specified GTIN24-TT-NP(V)-NAI(V)

The requested service selector entry must exist in the database.

3504 E3504 Cmd Rej: GSM Selector does not exist

The GSM DBMM table must be accessible.

3546 E3546 Cmd Rej: Failed reading GSM DBMM Table

Notes

None

Output

```
dlt-srvsel:gti=2:ssn=250:tt=10
```

```

4.1.265 dlt-ss-appl

Use this command to remove the application from the database.

Parameters

app1 (mandatory)

Application type.

Range:

lnp

inp

eir

vflex

atinpq

aiq

sfapp

Example

```
dlt-ss-appl:appl=inp
```

Dependencies

The LNP feature must be turned on before the `appl=lnp` parameter can be specified.

3009 E3009 Cmd Rej: LNP feature must be ON

The INP feature must be turned on before the `dlt-ss-appl:appl=inp` command can be entered.

3524 E3524 Cmd Rej: INP/AINPQ feature must be ON

The Equipment Identity Register (EIR) feature must be turned on before the `dlt-ss-appl:appl=eir` command can be entered.

3699 E3699 Cmd Rej: EIR feature must be ON

The value specified for the `appl` parameter must already exist in the SS-APPL table.

3529 E3529 Cmd Rej: Application type not in SS-APPL table

The LNP database and the SS-APPL table are corrupt or cannot be found.

3638 E3638 Cmd Rej: Failed Reading SS Appl table

The subsystem must be inhibited before `status=offline` can be specified. This condition is not true in the case of SFAPP, as the status is not changed to offline for SFAPP, but the entry is deleted.

3155 E3155 Cmd Rej: Subsystem must be inhibited before it can be deleted

Application type must exist in the LNP database (non DBS 1.0 only)

3152 E3152 Cmd Rej: Application type not in LNP database

Unable to access database. Severe database failure.

2601 E2601 Cmd Rej: Command aborted due to system error

Failed reading SSAPPL table. (non-DBS 1.0 systems only)

3124 E3124 Cmd Rej: Failed Reading LNP SS Appl table

The V-Flex feature must be turned on before the `appl=vflex` parameter can be specified.

4142 E4142 Cmd Rej: VFLEX feature must be ON

The ATINP feature must be enabled before the `appl=atinpq` parameter can be entered.

4816 E4816 Cmd Rej: ATINP feature must be enabled

The ANSI41 AIQ feature must be enabled before the `appl=aiq` parameter can be specified.

5158 E5158 Cmd Rej: ANSI41 AIQ feature must be enabled

Notes

When a subsystem application is deleted, the following message is displayed:

CAUTION: DELETED APPL SSN MAY BE REFERENCED BY GTT ENTRY

Output

```
dlt-ss-appl:appl=aiq
```

```
tekelecstp 09-12-03 17:34:20 EST EAGLE 42.0.0

4.1.266 dlt-subnetid

Use this command to delete a Subnet ID entry from the Subnet ID list, for the ISUP NP with EPAP feature.

Parameters**subnetid (mandatory)**

Subnet ID

Range:

1 - 15 digits

Example

```
dlt-subnetid:subnetid=886933
```

Dependencies

The `subnetid=none` parameter cannot be specified.

N/A N/A

The SUBNETID table is corrupt or cannot be found by the system.

4352 E4352 Cmd Rej: SUBNETID table is full

The specified Vendor ID entry must already exist in the SUBNETID table.

4355 E4355 Cmd Rej: SUBNETID does not exist in SUBNETID table

Notes

None.

Output

```
dlt-subnetid:subnetid=886933
```

```
rlghncxa03w 04-10-07 11:11:28 EST EAGLE 31.11.0

4.1.267 dlt-t1

Use this command to delete an interface for E5-E1T1-B cards used as T1 or ST-HSL-A cards.

Parameters

loc (mandatory)

The card location as stenciled on the shelf of the system.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118

t1port (mandatory)

T1 card port number. The value must be a T1 port for which an interface has already been configured on the specified T1 card.

Range:

1 - 8

Example

```
dlt-t1:loc=1205:t1port=2
```

Dependencies

The specified card location (`loc` parameter) must be equipped.

2739 E2739 Cmd Rej: T1 card location is unequipped

The card in the specified card location (`loc` parameter) must be a LIMT1 card type.

2212 E2212 Cmd Rej: Invalid card type for this command

The port specified by the `t1port` parameter must be already equipped with a T1 interface.

2737 E2737 Cmd Rej: The T1PORT at the specified location is not equipped

The E1/T1 table must be accessible.

4059 E4059 Cmd Rej: Failed reading the E1/T1 table

The Card (IMT) table must be accessible.

2102 E2102 Cmd Rej: Failed reading the IMT table

All signaling links providing timeslots serviced by the specified T1 interface must be deleted before the T1 interface can be deleted. Use the `dlt-slk` command to delete the signaling links providing the timeslots.

4057 E4057 Cmd Rej: All signaling links serviced by this E1/T1 must be deleted

Card locations 1113 - 1118 (E5-MASP and E5-MDAL cards) cannot be specified as values for the `loc` parameter.

2154 E2154 Cmd Rej: Card slot reserved by system

Notes

None.

Output

```
dlt-t1:loc=1205:t1port=1
```

```
rlghncxa03w 04-02-20 09:07:58 EST EAGLE 31.3.0

4.1.268 dlt-tt

Use this command to remove a translation type from the system database.

Note:

When the EGTT feature is turned on, the GTT Selector (`ent/chg/dlt/rtrv-gttset`), GTT Set (`ent/dlt/rtrv-gttset`), and GTA (`ent/chg/dlt/rtrv-gta`) commands replace the Translation Type (`ent/dlt/rtrv-tt`) and Global Title Translation (`ent/chg/dlt/rtrv-gtt`) commands. However, the Translation Type and Global Title Translation commands continue to work according to their original functionality when the EGTT feature is turned on.

Parameters

alias (optional)

The global title translation type

Range:

000 - 255

Default:

No translation type given

ttn (optional)

Translation type name.

Range:

ayyyyyyy

1 alphabetic character followed by up to 8 alphanumeric characters

Default:

No translation name is given

type/typea/typei/typen/typen24/typeis/typens (optional)

Translation type. This parameter identifies the translation type and network type. This parameter is the decimal representation of the 1-byte field used in SS7.

The `type` and `typea` parameters specify an ANSI network.

The `typei` parameter specifies an ITU-international network.

The `typen` parameter specifies an ITU-national network.

The `typen24` parameter specifies a 24-bit ITU-national network.

The `typeis` parameter specifies an ITU-international spare network.

The `typens` parameter specifies an ITU-national spare network.

A translation type numeric value may be entered as ANSI type and as an ITU type. However, they are separate entities.

The point code domain translation types for GTT are handled by the EAGLE protocol processing as either ANSI or ITU; therefore, ITU applies to ITU-I, ITU-I spare, ITU-N, ITU-N spare, and ITU-N24.

Range:

0 - 255

Default:

No translation type is specified

Example

```
dlt-tt:type=230
dlt-tt:ttn=lidb
dlt-tt:type=230:ttn=lidb
dlt-tt:type=230:ttn=lidb:alias=030
dlt-tt:typeis=3
dlt-tt:typens=4
dlt-tt:typeis=1:ttn=setitu001
```

Dependencies

Asterisk (*) parameter values are not allowed in this command.

2478 E2478 Cmd Rej: Wild card entries are not allowed in this command

To delete a translation type, the translation type, the translation name, or both, must be specified.

2474 E2474 Cmd Rej: Translation TYPE must be specified

If the translation type is specified, it must already exist in the database for the network type.

2466 E2466 Cmd Rej: Translation Type specified does not exist

If the translation name is specified, it must already exist in the database.

2468 E2468 Cmd Rej: TTN specified does not exist

If the translation type is specified, it cannot be an `alias` value.

2465 E2465 Cmd Rej: Translation TYPE defined as an alias

If both the translation type and translation name are specified, they must correspond.

2473 E2473 Cmd Rej: TTN and TYPE do not correspond to each other

The translation type cannot be deleted if there are current GTT entries that reference it.

2472 E2472 Cmd Rej: Translation TYPE is referenced by GTT entry

To delete an `alias`, both the alias and the translation type must be specified, and both must already exist in the database for the network type.

2463 E2463 Cmd Rej: Alias not assigned to translation type

If an `alias` is specified, it must be associated with the specified translation type and cannot be the value of an existing translation type.

2460 E2460 Cmd Rej: Alias defined as translation type

The `type` or `ttn` parameter must be specified.

2475 E2475 Cmd Rej: Either TYPE or TTN must be specified

If aliases exist, they must be removed from the database before the translation types can be removed.

2471 E2471 Cmd Rej: Translation TYPE has an alias

The GTT set associated with the translation type specified by the `ttn` parameter must have a set type of CDGTA (see the `ent-gttset` command).

4997 E4997 Cmd Rej: SETTYPE of specified GTTSET must be CdGTA

The network domain of the translation type specified by the `ttn` parameter cannot be CROSS (see the `ent-gttset` command).

5371 E5371 Cmd Rej: Network domain of corresponding ttn must not be CROSS

The `ttn=none` parameter cannot be specified.

3565 E3565 Cmd Rej: Set name must not be specified as NONE

Notes

If the specified translation type entry is not referenced by a current global title translation entry and does not have any aliases, the translation type entry is removed.

This command can delete only selector entries that have been provisioned by GTT Selector commands, have a GTI value of 2, and a set type of CdGTA.

If the EGTT feature is turned on:

- For ANSI, if the GTT selector of a true entry is deleted using the `dlt-gttset` command, then the aliases for the entry or the entry itself cannot be deleted.
- For ITU, if a true GTT selector entry (GTI=2 or GTI=4) is deleted using the `dlt-gttset` command, or if the GTTSN of an entry is changed using the `chg-`

gttset command, then the aliases for that entry or the entry itself cannot be deleted.

Output

```
dlt-tt:typens=4
```

```
tekelecstp 10-03-28 16:51:25 EST Eagle 42.0.0  
DLT-TT: MASP A - COMPLTD  
;
```

4.1.269 dlt-ttmap

Use this command to delete from the database a mapped SS7 message translation type (TT) for a given gateway linkset name. For example, suppose you are mapping the translation type 001 (before TT mapping) to 238 (after TT mapping). You can use this command to delete that mapping from the database.

Parameters

lsn (mandatory)

Linkset name. The unique network identifier for the gateway linkset.

Range:

ayyyyyyyyy

1 alphabetic character followed by 9 alphanumeric characters

ett (optional)

Translation type before mapping. The identification of the type of global title translation in the SS7 message *before* translation type mapping. This attribute is the decimal representation of the 1-octet binary field used by the SS7 protocol to identify the translation type.

Range:

0 - 255

io (optional)

Incoming or outgoing. The system uses this parameter to indicate whether the translation type mapping data provisioned for the gateway linkset is for SS7 messages *received* or *sent* on the linkset.

Range:

i
incoming

o
outgoing

Default:
Both incoming and outgoing

Example

```
dlt-ttmap:lsn=n c001:io=i:ett=128:mtt=55
```

Dependencies

The linkset must be defined and the linkset table must be accessible.

N/A N/A

The translation type mapping table must be accessible.

N/A N/A

None

N/A N/A

Notes

None

Output

```
dlt-ttmap:lsn=nc001:io=i:ett=128:mtt=55
```

```

4.1.270 dlt-uim-acthresh

Use this command to clear the level of activity threshold that is used to report UIM messages.

Parameters

uimn (mandatory)

The UIM number.

Range:
1000 - 1999

Example

Clears UIM number 1333 message threshold:

```
dlt-uim-acthresh:uimn=1333
```

Dependencies

The `uimn` parameter value must be a numeric value in the range of 1000–1999 .

N/A N/A

The specified `uimn` value must exist in the UIM Threshold database table.

N/A N/A

The `uimn` parameter must be within the valid range: 1000-1999 for UIMs.

Notes

None

Output

```
dlt-uim-acthresh:uimn=1333
```

4.1.276 dlt-vlr-prof

Use this command to delete a Visitor Location Register (VLR) Profile for a mobile subscriber for existing entries.

Parameters

vlr (mandatory)

VLR Number: Hexadecimal digit GT Number with variable length (1 to 16).

Range:

Hexadecimal digit string 1 to 16 digits

Example

```
dlt-vlr-prof:vlr=4234
```

Dependencies

VLR_PROF table must be accessible.

3604 E3604 Failure reading VLR Profile Table

VLR DBMM table must be accessible.

3610 E3610 Failure reading VLR DBMM Table

OLDVLR and NEWVLR parameter length must be in the range 1 to 5 digits as per current restriction.

3603 E3603 VLR length is out of range. Range: 1...5

OLDVLR or NEWVLR parameter must be existing in VLR-PROF table

3607 E3607 No entry found for entered VLR in VLR profile tbl

Entry being deleted should not be referenced in roaming table

3609 E3609 A reference of this entry exists in VLR roaming tbl.

Output

```
dlt-vlr-prof:vlr=9234

tekelecstp 17-11-23 14:08:49 MST EAGLE 46.5.1.5.0-73.2.0

4.1.277 dlt-vlr-roaming

Use this command to delete a Visitor Location Register (VLR) Roaming entry for a mobile subscriber for existing entries.

Parameters

oldv1r (mandatory)

VLR Number from which mobile subscriber has moved, hexadecimal digit GT number with variable length (1 to 16).

Range:

Hexadecimal digit string 1 to 16 digits

newv1r (mandatory)

VLR Number to which mobile subscriber has moved, hexadecimal digit GT number with variable length (1 to 16).

Range:

Hexadecimal digit string 1 to 16 digits

Example

```
dlt-vlr-roaming:newv1r=12345:oldv1r=56780
```

Dependencies

VLR_PROF table must be accessible.

3604 E3604 Failure reading VLR Profile Table

VLR_DBMM table must be accessible.

3610 E3610 Failure reading VLR_DBMM Table

VLR_ROAM table must be accessible.

3602 E3602 Failure reading VLR_Roaming Table

OLDVLR and NEWVLR parameter length must be in the range 1 to 5 digits as per current restriction.

3603 E3603 VLR length is out of range. Range: 1....5

OLDVLR or NEWVLR parameter must be existing in VLR-PROF table

3607 E3607 No entry found for entered VLR in VLR profile tbl

The entry should be existing in VLR_ROAM table

3601 E3601 OLD and NEW VLR combination does not exist.

Output

```
dlt-vlr-roaming:newvlr=12345:oldvlr=56780

tekelecstp 17-11-23 16:23:44 MST EAGLE 46.5.1.5.0-73.2.0

4.1.278 enable-ctrl-feat

Use this command to enable a controlled feature that the customer is entitled to use.

Note:

The “LNP (Local Number Portability) feature” is turned on when the LNP ported TNs quantity is greater than 0 in the `rtrv-ctrl-feat` command output (an LNP ported TNs quantity feature access key has been enabled and turned on).

Parameters

partnum (mandatory)

Part number. The part number for the feature.

Range:

893000000 - 893999999

Do not include dashes in the 9-digit number.

faak (optional)

Feature Access Key. The Feature Access Key for the feature.

Range:
aaaaaaaaaaaa
13 alphanumeric characters

**Note:**

The FAK parameter has no significance starting with Release 46.3. The parameter is used only for backward compatibility.

Example

```
enable-ctrl-feat:partnum=893xxxxxxx
```

Dependencies

The phrase "Service Module cards" refers to E5-SM4G or E5-SM8G-B cards when any of these cards can be used. If a specific card is required, then the appropriate requirement is listed.

The Dual ExAP Config feature cannot be enabled before the E5-SM4G Throughput Cap feature is enabled.

2479 E2479 Cmd Rej: E5-SM4G Throughput Cap feature must be enabled.

The system serial number must be locked in the database before this command can be entered for the feature (see the `ent-serial-num` command).

3233 E3233 Cmd Rej: System serial number has not been locked

A feature cannot be enabled with this command when the feature has already been enabled with a permanently ON feature access key or a feature access key for a quantity that is greater than the quantity specified in the command.

3827 E3827 Cmd Rej: No change requested

The GTT feature must be on before the IDP Screening for Prepaid feature can be enabled.

4546 E4546 Cmd Rej: GTT must be ON before IDPS can be enabled

The value specified for the `partnum` parameter must be the correct part number for the feature.

3450 E3450 Cmd Rej: Invalid Part Number

A valid system serial number must be entered in the database before this command can be entered for the feature (see the `ent-serial-num` command).

3453 E3453 Cmd Rej: Database does not contain a serial number

The Feature Control database (FEATCTRL.TBL) is corrupt; database maintenance is required.

4037 E4037 Cmd Rej: Error in FEATCTRL.TBL database, maintenance required

The LNP ELAP Configuration feature and the WNP feature must be turned on before the LNP SMS feature can be enabled.

3598 E3598 Cmd Rej: LNP ELAP Configuration and WNP features must be ON

The GTT feature must be turned on before the XGTT Table Expansion feature can be enabled.

3103 E3103 Cmd Rej: GTT must be ON before XGTT can be enabled

Both cards that run the OAM application in the system must be GPSM-II cards before the XGTT Table Expansion feature can be enabled.

3105 E3105 Cmd Rej: XGTT requires both OAMS running on GPSMII cards

The DSTN5000 feature bit for the 5000 Routesets feature must be turned on before the 6000 Routesets, 7000 Routesets, 8000 Routesets, or 10,000 Routesets feature can be enabled.

3421 E3421 Cmd Rej: DSTN5000 feature must be ON

The 7000 Routesets or 8000 Routesets feature cannot be enabled if more than 8000 alias point codes are already assigned in the system.

The 10,000 Routesets feature cannot be enabled if more than 10000 alias point codes are already assigned in the system.

4280 E4280 Cmd Rej: Alias PCs exceed Max allowed for Feature Quantity

If the LNP (an LNP ported TNs quantity), LNP 150,000 LRNs, or LNP 300,000 NPANXX feature is enabled, then none of the following features can be enabled unless the Dual ExAP Config feature is enabled:

- AINPQ
- A-Port
- ATINP
- Equipment Identity Register (EIR)
- G-Flex
- G-Port
- Info Analyzed Relay Base (IAR Base)
- INP
- IS41 GSM Migration (IGM)
- MO SMS ASD
- MO SMS GRN
- MO-based GSM SMS NP
- MO-based IS41 SMS NP
- MTP Msgs for SCCP Apps
- Portability Check for MO SMS
- Prepaid IDP Query Relay (IDP Relay)
- Prepaid SMS Intercept Phase 1 (PPSMS)
- TIF Number Portability
- TIF Number Substitution
- TIF Subscriber CgPN Blacklist
- V-Flex

3334 E3334 Cmd Rej: LNP and specified feature are mutually exclusive

The LNP feature (an LNP ported TNs quantity) must be enabled before the LNP 150,000 LRNs feature or the LNP 300.000 NPANXXs feature can be enabled.

3009 E3009 Cmd Rej: LNP feature must be ON

A card with unknown hardware is detected in system (possibly in the process of loading, or a loading error has occurred).

3243 E3243 Cmd Rej: Unknown hardware configuration

The LNP ELAP Configuration feature must be enabled and turned on before any LNP quantity features can be enabled.

3456 E3456 Cmd Rej: LNP ELAP Configuration feature must be ON

The LNP feature for 24 million TNs requires all Service Module cards with a minimum of 2GB of memory.

3462 E3462 Cmd Rej: LNP ported TNs 24million Qty Feat Require at least DSM2GB

The LNP feature for 36 million TNs requires all Service Module cards with a minimum of 3GB of memory.

3463 E3463 Cmd Rej: LNP ported TNs 36million Qty Feat Require at least DSM3GB

The LNP feature for LNP ported TNs quantities of 48 million TNs to 192 million TNs requires all Service Module cards with a minimum of 4GB of memory.

The LNP feature for LNP ported TNs quantities of 204 million TNs to 228 million TNs requires all Service Module cards with a minimum of 4GB of memory.

3464 E3464 Cmd Rej: LNP ported TNs 48 to 192 M Qty Feat Req at least DSM4GB

The 150,000 LNP LRNs feature requires all Service Module cards with a minimum of 2GB of memory.

3796 E3796 Cmd Rej: LNP ported LRNs 150K Qty Feat Requires at least DSM2GB

The 300,000 LNP NPANXXs feature requires all Service Module cards with a minimum of 2GB of memory.

3795 E3795 Cmd Rej: LNP ported NPANXXs 300K Qty Feat Requires at least DSM2GB

The GTT feature bit must be turned on (see the `chg-feat` command) before the following features can be enabled:

- Advanced GT Modification (AMGTT)
- ANSI41 AIQ
- ATI Number Portability Query (ATINP)
- Dual ExAP Config
- E5-SM4G Throughput Capacity
- Equipment Identity Register (EIR)
- G-Flex
- GSM Map Screening (GSM)

- Hex Digit Support for GTT
- Info Analyzed Relay Base (IAR Base)
- Intermediate GTT Loadsharing (IGTTLS)
- LNP ELAP Configuration
- LNP ported LRNs
- LNP ported NPANXXs
- LNP ported TNs
- MO SMS ASD
- MO SMS GRN
- MO SMS IS41-to-GSM Migration
- MO-based GSM SMS NP
- MO-based IS41 SMS NP
- MTP Msgs for SCCP Apps
- MTP Routed Gateway Screening Stop Action
- Portability Check for MO SMS (MNPSMS)
- Prepaid SMS Intercept Ph1 (PPSMS)
- SCCP Loop Detection
- TIF Additional Subscriber Data
- TIF Generic Routing Number
- TIF Number Portability
- TIF Number Substitution
- TIF Range CgPN Blacklist
- TIF SCS Forwarding
- TIF Simple Number Substitution
- TIF Subscriber CgPN Blacklist
- Transaction-based GTT Loadsharing (TBGTTLS)
- Voice Mail Router (V-Flex)

2584 E2584 Cmd Rej: GTT feature must be ON

If the SCCP Conversion or TCAP Conversion feature is turned on, then the ANSI/ITU SCCP Conversion feature cannot be enabled.

4201 E4201 Cmd Rej: SCCPCNV,TCAPCNV must be disabled

The ANSI/ITU SCCP Conversion feature requires Service Module cards in the system.

4202 E4202 Cmd Rej: SCCP Conversion feature requires at least TSM Hardware

The GSM Map Screening (GSM) feature must be turned on before the Enhanced GSM Map Screening (EGSM) feature can be enabled.

3883 E3883 Cmd Rej: GSM Map Screening feature must be ON

The Enhanced GSM Map Screening (EGSM) feature must be turned on before the MTP MAP Screening feature can be enabled.

4166 E4166 Cmd Rej: EGMS must be ON before MTP MAP Screening can be enabled

The Measurements Platform feature must be turned on and the Measurements Platform collection function must be enabled (see the `chg-measopts:platformenable=on` parameter) before the MTP MAP Screening feature can be enabled (at least one MCPM card must be active).

3088 E3088 Cmd Rej: Platformenable or Oamhcmeas option must be on

The G-Port feature must be turned on before the following features can be enabled:

- GSM MAP SRI Redirect for Serving HLR
- ISUP NP with EPAP
- MNP Circular Route Prevention
- Prepaid SMS Intercept Phase 1 (PPSMS)

3991 E3991 Cmd Rej: GPORT feature must be ON

The GWS (Gateway Screening) feature must be turned on before the following features can be enabled:

- Integrated GLS
- ISUP NP with EPAP
- TIF Additional Subscriber Data
- TIF Generic Routing Number
- TIF Number Portability
- TIF Number Substitution
- TIF Range CgPN Blacklist
- TIF SCS Forwarding
- TIF Simple Number Substitution
- TIF Subscriber CgPN Blacklist

2585 E2585 Cmd Rej: GWS feature must be ON

The following features cannot be enabled if the ANSIGFLEX system option is enabled (see the `chg-stpopts` command) AND E5-SM4G Throughput Cap quantity key for 6800 or above has not been enabled:

- 1100 TPS/DSM for ITU NP
- ANSI-41 INP Query (AINPQ)
- A-Port
- ATINP
- Equipment Identity Register (EIR)
- G-Flex MAP Layer Routing
- G-Port

- Info Analyzed Relay Base
- INP
- IS41 GSM Migration (IGM)
- MO SMS ASD
- MO SMS GRN
- MO SMS IS41-to-GSM Migration
- MO-based GSM SMS NP
- MO-based IS41 SMS NP
- Portability Check for MO SMS
- TIF Number Portability
- TIF Number Substitution
- TIF Selective Screening
- TIF Subscriber CgPN Blacklist
- V-Flex

2690 E2690 Cmd Rej: E5-SM4G Throughput Cap qty 6800 or above must be enabled

The following features cannot be enabled if the ANSIGFLEX system option is enabled (see the `chg-stpopts` command) AND DSM is equipped in the system

- 1100 TPS/DSM for ITU NP
- ANSI-41 INP Query (AINPQ)
- A-Port
- ATINP
- Equipment Identity Register (EIR)
- G-Flex MAP Layer Routing
- G-Port
- Info Analyzed Relay Base
- INP
- IS41 GSM Migration (IGM)
- MO SMS ASD
- MO SMS GRN
- MO SMS IS41-to-GSM Migration
- MO-based GSM SMS NP
- MO-based IS41 SMS NP
- Portability Check for MO SMS
- TIF Number Portability
- TIF Number Substitution
- TIF Selective Screening
- TIF Subscriber CgPN Blacklist

- V-Flex

5415 E5415 Cmd Rej: Feature can not be enabled with non-SMXG VSCCP in system

Before an LNP ported TNS quantity greater than 96 million numbers can be enabled, an ELAP system that supports a quantity greater than 96 million numbers must be available to the EAGLE.

- The ELAP software must be at version 4.0 to support LNP ported TNS quantities greater than 96 million numbers and up to 120 million numbers.
- The ELAP software must be at version 5.0 or greater to support LNP ported TNS quantities greater than 120 million numbers. A quantity greater than 120 million numbers cannot be enabled until the ELAP is upgraded to the required software level, and the appropriate ELAP commands are issued to convert the 120 Million LNP Numbers database structure to the data compaction structure for more than 120 million numbers.

The `rept-stat-mps` command can be entered at the EAGLE to determine the ELAP software version.

4325 E4325 Cmd Rej: ELAP architecture does not support LNP quantity requested

Service Module cards running the VSCCP application must be present in the system before the following features can be enabled:

- AINPQ
- ANSI41 AIQ
- A-Port
- ATI Number Portability Query (ATINP)
- EIR
- Enhanced GSM MAP Screening (EGMS)
- Flexible GTT Load Sharing
- G-Flex
- G-Port
- INP
- IS41 GSM Migration (IGM)
- LNP ELAP Configuration
- MO SMS ASD
- MO SMS B-Party Routing
- MO SMS GRN
- MO SMS IS41-to-GSM Migration
- MO-based GSM SMS NP
- MO-based IS41 SMS NP
- Origin-based SCCP Routing (OBSR)
- PPSMS
- SCCP Loop Detection

- TIF Additional Subscriber Data
- TIF Generic Routing Number
- TIF Number Portability
- TIF Number Substitution
- TIF Range CgPN Blacklist
- TIF SCS Forwarding
- TIF Simple Number Substitution
- TIF Subscriber CgPN Blacklist
- Transaction-based GTT Loadsharing (TBGTTLS)
- Weighted GTT Loadsharing (WGTTLS)
- V-Flex

3584 E3584 Cmd Rej: Feature configuration requires DSM card with VSCCP appl

Before LNP ported TNs quantities greater than 96 million numbers can be enabled, an ELAP system must be available to validate its software version to the EAGLE.

4326 E4326 Cmd Rej: ELAP must be available to verify LNP quantity support

The Enhanced GTT (EGTT) feature must be turned on before the following features can be enabled

- Flexible Linkset Optional Based Routing (FLOBR)
- GTT Action - DISCARD
- GTT Action - DUPLICATE
- GTT Action - FORWARD
- MO SMS B-Party Routing
- Origin-based SCCP Routing

3557 E3557 Cmd Rej: EGTT must be ON

At least one of the EPAP-based ITU NP features (G-Port, A-Port, INP, IGM, EIR, IDP Relay, ANSI-41 INP Query, V-Flex, or PPSMS) must be turned on before the 1100 TPS/DSM for ITU NP feature can be enabled.

4950 E4950 Cmd Rej: At least one ITU NP feature must be ON

The GTT feature must be turned on before the A-Port feature can be enabled.

2086 E2086 Cmd Rej: GTT must be turned ON for A-Port

The GTT feature must be turned on before the G-Port feature can be enabled.

2087 E2087 Cmd Rej: GTT must be turned ON for G-Port

The GTT feature must be turned on before the IS41 GSM Migration (IGM) feature can be enabled.

2088 E2088 Cmd Rej: GTT must be turned ON for IGM

If a DSM card with less than 4 gigabytes of memory is present in the system, the following features cannot be enabled

- A-Port
- MO SMS ASD
- MO SMS B-Party Routing
- MO SMS GRN
- MO SMS IS41-to-GSM Migration
- MO SMS Prepaid Intercept on B-Party
- Portability Check for MO SMS
- PPSMS

3363 E3363 Cmd Rej: Feature cannot be enabled with DSM less than 4G is present

The PPSMS feature cannot be enabled if the LNP ELAP Configuration feature is turned on.

3396 E3396 Cmd Rej: LNP and PPSMS Intercept Ph1 features are mutually exclusive

Service Module cards must be provisioned in the system before the Prepaid IDP Query Relay feature can be enabled.

4501 E4501 Cmd Rej: Enabling of IDPR requires VSCCP DSM card

The GTT feature must be turned on before the Prepaid IDP Query Relay feature can be enabled.

4502 E4502 Cmd Rej: GTT must be ON before IDPR can be enabled

The IP User Interface feature must be enabled before the SEAS Over IP feature can be enabled.

4351 E4351 Cmd Rej: Telnet Feature must be enabled

If the TIF (Number Portability/ Additional Subscriber Data / Generic Routing Number) is enabled, then the LNP feature cannot be enabled. If the LNP feature is enabled, then the TIF (Number Portability/ Additional Subscriber Data / Generic Routing Number) feature cannot be enabled.

3356 E3356 Cmd Rej: TIF feature is mutually exclusive with LNP

The Multiple Point Code (MPC) feature must be turned on before the Multiple Linksets to Single Adjacent PC (MLS) feature can be enabled.

3867 E3867 Cmd Rej: MPC feature must be enabled

The G-Flex feature must be turned on before the G-Flex MAP Layer Routing feature can be enabled.

3500 E3500 Cmd Rej: GFLEX feature must be ON

The STP Options table is corrupt or cannot be found by the system.

2852 E2852 Cmd Rej: Failed reading STP Options table

The G-Port feature must be enabled before the following features can be enabled:

- G-Port SRI Query for Prepaid
- MT-Based GSM SMS NP

4371 E4371 Cmd Rej: GPORT must be enabled

The A-Port feature must be enabled before the MT-Based IS41 SMS NP feature can be enabled.

4433 E4433 Cmd Rej: APORT must be enabled

The AMGTT CdPA Only feature cannot be enabled using the `enable-ctrl-feat` command. This feature is automatically enabled and turned on if the MGTT feature was on before upgrade to EAGLE Release 38.0 occurred.

4790 E4790 Cmd Rej: AMGTT CdPA Only feature cannot be enabled

The AMGTT CdPA Only feature must be turned on before the AMGTT CgPA Upgrade feature can be enabled.

4791 E4791 Cmd Rej: AMGTT CdPA Only must be ON

If the AMGTT CdPA Only feature or the AMGTT CgPA Upgrade feature is turned on, then the AMGTT feature cannot be enabled.

4792 E4792 Cmd Rej: AMGTT CdPA Only or AMGTT CgPA Upgrade must not be ON

The LNP (an LNP ported TNs quantity), LNP 150,000 LRNs, or LNP 300,000 NPANXX feature cannot be enabled if the INP or AINPQ feature is turned on or if any of the features listed below is enabled. If the LNP (an LNP ported TNs quantity), LNP 150,000 LRNs, or LNP 300,000 NPANXX feature is enabled, then none of the features listed below can be enabled.

- A-Port
- ATINP
- Equipment Identity Register (EIR)
- G-Flex
- G-Port
- Info Analyzed Relay Base (IAR Base)
- IDP Screening for Prepaid
- IS41 GSM Migration (IGM)
- MO SMS ASD
- MO SMS GRN
- MO SMS IS41-to-GSM Migration
- MO-based GSM SMS NP
- MO-based IS41 SMS NP
- MTP Msgs for SCCP Apps
- Portability Check for MO SMS (MNPSMS)
- Prepaid IDP Query Relay (IDP Relay)
- Prepaid SMS Intercept Phase 1 (PPSMS)
- TIF Number Portability
- TIF Number Substitution
- TIF Subscriber CgPN Blacklist
- V-Flex

4070 E4070 Cmd Rej: LNP is mutually exclusive with an existing feature

The MT-Based GSM SMS NP feature must be enabled before the MT-Based GSM MMS NP feature can be enabled.

4701 E4701 Cmd Rej: MT-Based GSM SMS NP must be enabled

The LNP ported TNs 24 Million Quantity feature or greater must be turned on before the LRNQT feature can be enabled.

4830 E4830 Cmd Rej: LNP ported TNs (24Million or more) Qty Feature must be ON

The Intermediate GTT Load Sharing feature must be turned on before the GTT LS ARI feature can be enabled.

2996 E2996 Cmd Rej: Intermed GTT Load Sharing feature must be ON

The Flexible GTT Load Sharing feature must be enabled before the GTT LS ARI feature can be enabled.

5055 E5055 Cmd Rej: Flexible GTT Load Sharing Feature must be enabled

The Flexible Linkset Optional Based Routing (FLOBR) feature must be turned on before the TCAP Opcode Based Routing (TOBR) feature can be enabled.

5060 E5060 Cmd Rej: Flexible Linkset Optional Based Routing must be ON

The Variable Length GTT (VGTT) feature must be turned on before the Support for 16 GTT Lengths in VGTT feature can be enabled.

N/A N/A

The TOBR feature must be turned on before any of the TOBR Quantity features can be enabled.

5099 E5099 Cmd Rej: TCAP Opcode Based Routing feature must be turned ON

A TOBR quantity feature cannot be enabled if a TOBR feature with a higher quantity is enabled.

5100 E5100 Cmd Rej: Larger Opcode Quantity FAK should be provided

If the TOBR quantity feature of maximum quantity level is enabled, then no other TOBR Quantity feature can be enabled.

5101 E5101 Cmd Rej: Maximum Opcode Quantity FAK already enabled

The Prepaid IDP Query Relay feature must be turned on before the following features can be enabled:

- IDP A-Party Blacklist
- IDP A-Party Routing
- IDP Service Key Routing

5024 E5024 Cmd Rej: Prepaid IDP Query Relay feature must be activated

The INP feature must be turned on before the INP CRP feature can be enabled.

5033 E5033 Cmd Rej: INP feature must be ON

The Default Country Code must be provisioned (see the `defcc` parameter in the `chg-stpopts` command) before the ATINP, IAR Base, MT-Based GSM SMS NP, or MT-Based IS41 SMS NP feature can be enabled.

4618 E4618 Cmd Rej: STPOPTS DefCC must not be NONE

If the system contains any cards other than those listed below, then the 2800 links quantity of the Large System # Links feature cannot be enabled:

- E5-ATM-B
- E5-E1T1-B
- E5-ENET-B
- E5-IPSM
- E5-MCPM-B
- E5-OAM
- E5-SM4G
- E5-SM8G-B
- E5-TSM
- HIPR2

4581 E4581 Cmd Rej: Unsupported Hardware is equipped in the system

The Info Analyzed Relay Base (IAR Base) feature must be enabled before the IAR NP, IAR GRN, or IAR ASD feature can be enabled.

5150 E5150 Cmd Rej: Info Analyzed Relay Base feature must be enabled

The S-Port feature and the IDP A-Party Blacklist feature cannot both be enabled in the system.

4927 E4927 Cmd Rej: S-Port feature exclusive of A-Party Blacklist feature

The value specified for the `partnum` parameter must consist of 9 digits, without any dashes. The first three digits are 893. The next six values are numeric (0...9).

2017 E2017 Cmd Rej: `<parm_desc>` is out of range, `<min>..<max>` - `<parm>`

The Service Portability (S-Port) feature must be enabled before the S-Port Subscriber Differentiation feature can be enabled.

4926 E4926 Cmd Rej: Service Portability feature must be enabled

If the system is not in mixed mode and is equipped with GPSM-II/TDM card(s), then the Integrated GLS and Integrated Measurements features cannot be enabled.

4916 E4916 Cmd Rej: Command invalid for hardware configuration

The A-Port or IGM feature must be turned on before the LOCREQ Query Response feature can be enabled.

2084 E2084 Cmd Rej: A-Port or IGM must be turned ON

If a PCT feature of maximum quantity level is enabled, then a PCT feature of a lower quantity cannot be enabled.

5395 E5395 Cmd Rej: Maximum PCT Quantity FAK already enabled

A PCT feature cannot be enabled if the quantity is higher than the quantity of the associated FAK.

5396 E5396 Cmd Rej: Larger PCT Quantity FAK is required

If a DSM card is provisioned in the system, then the FLOBR, GTT Action – DUPLICATE, and VGTT-16 features cannot be enabled.

5059 E5059 Cmd Rej: Configuration requires E5-SM4G card or better

If an EOAM card is in the active or standby MASP location, then the 10,000 Routesets feature cannot be enabled.

4581 E4581 Cmd Rej: Unsupported Hardware is equipped in the system

The VCI value for any ATM link (see the `ent-slk` command) must be less than or equal to 16383 before a 3 Links per Card feature quantity can be enabled.

5439 E5439 Cmd Rej: ATM link with VCI greater than 16383 exists

The `mtplprst` option must be configured (see the `chg-stpopts` command) before the Origin-based MTP Routing feature can be enabled.

4579 E4579 Cmd Rej: MTPLPRST option must be on

The `matchseq=dn` parameter must be specified (see the `chg-tifopts` command) before the TIF Number Substitution feature can be enabled.

5093 E5093 Cmd Rej: TIF NS feature cannot be Enabled unless MATCHSEQ is DN

Each provisioned Service Module card must have at least 4G memory before the AINPQ feature can be enabled.

3517 E3517 Cmd Rej: VSCCP cards have insufficient extended memory

At least one EPAP related feature must be turned on before the EPAP Data Split feature can be enabled.

4815 E4815 Cmd Rej: At least one EPAP related feature must be ON

The EPAP Data Split feature requires E5-SM4G or E5-SM8G-B cards.

5415 E5415 Cmd Rej: Feature can not be enabled with non-SMXG VSCCP in system

ISUP NP with EPAP feature cannot be enabled once Dual ExAP Config feature has been enabled.

2807 E2807 Cmd Rej: Dual ExAP Config feature must NOT be Enabled.

TIF Selective Screening feature is mutually exclusive with TIF Number Substitution feature. TIF Selective Screening feature uses Number Substitution digit field to store Call Types associated with DN.

2482 E2482 Cmd Rej: TIF Sel Scr and TIF NS features are mutually exclusive

The Default Country Code must be provisioned (see the `defcc` parameter in the `chg-stpopts` command) before the SIP NP feature can be enabled.

4618 E4618 Cmd Rej: STPOPTS DefCC must not be NONE.

The J7 support feature cannot be enabled if ANSI or ITUN-24 SID is already provisioned.

2802 E2802 Cmd Rej: J7 Support feature cannot be Enabled.

The EPM A/E5-SM4G cards are not supported when the SMxG 13,600 TPS Throughput Capacity feature is enabled.

3510 E3510 Cmd Rej: EPMA/SM4G card not supported for this feature

Notes

XGTT or XMAP (GTT or MAP Table Increase) Feature

After the XGTT feature is enabled, the feature cannot be disabled or turned off.

After the XMAP feature is enabled, the feature cannot be disabled or turned off.

1500 Links and 2000 Links Support

After the 1500 Links feature or the 2000 Links Support feature is enabled, the feature cannot be disabled or turned off.

SE-HSL SLK Capacity

The SE-HSL feature allows unchannelized E1 links to be provisioned. The maximum number of unchannelized signaling links that can be assigned to E5-E1T1-B cards in the system with each SE-HSL SLK Capacity quantity feature access key are:

- 893-0130-01—4
- 893-0130-02—8
- 893-0130-03—16
- 893-0130-04—24
- 893-0130-05—32
- 893-0130-06—40
- 893-0130-07—48
- 893-0130-08—56
- 893-0130-09—64
- 893-0130-10—72
- 893-0130-11—80
- 893-0130-12—88
- 893-0130-13—96
- 893-0130-14—104
- 893-0130-15—112
- 893-0130-16—120

LNP Ported Numbers Capacity, LNP NPANXXs, LNP LRNs, and LNP ELAP Configuration Features

[Table 4-21](#) lists the minimum Service Module hardware type required by each LNP quantity feature. Quantities of 204-228 million TNs require DSM cards and do not support E5-SM4G or E5-SM8G-B cards. Quantities of 240-504 million TNs require E5-SM4G or E5-SM8G-B cards.

Quantities of 516-756 million TNs require SLIC cards.

Table 4-21 Minimum Hardware Required for LNP Quantity Features

Object / Capacity	Minimum Hardware	Part Number
156 Million TNs	4 GB Service Module card	893-0110-17
168 Million TNs	4 GB Service Module card	893-0110-18
180 Million TNs	4 GB Service Module card	893-0110-19
192 Million TNs	4 GB Service Module card	893-0110-20
204 Million TNs	This capacity was previously supported only on the 4 GB DSM card. Starting with EAGLE Release 46.0, the DSM card is no longer supported; therefore this specific capacity limit is no longer supported.	893-0110-21
216 Million TNs	This capacity was previously supported only on the 4 GB DSM card. Starting with EAGLE Release 46.0, the DSM card is no longer supported; therefore this specific capacity limit is no longer supported.	893-0110-22
228 Million TNs	This capacity was previously supported only on the 4 GB DSM card. Starting with EAGLE Release 46.0, the DSM card is no longer supported; therefore this specific capacity limit is no longer supported.	893-0110-23
240 Million TNs	E5-SM4G/E5-SM8G-B	893-0110-24
252 Million TNs	E5-SM4G/E5-SM8G-B	893-0110-25
264 Million TNs	E5-SM4G/E5-SM8G-B	893-0110-26
276 Million TNs	E5-SM4G/E5-SM8G-B	893-0110-27
288 Million TNs	E5-SM4G/E5-SM8G-B	893-0110-28
300 Million TNs	E5-SM4G/E5-SM8G-B	893-0110-29
312 Million TNs	E5-SM4G/E5-SM8G-B	893-0110-30
324 Million TNs	E5-SM4G/E5-SM8G-B	893-0110-31
336 Million TNs	E5-SM4G/E5-SM8G-B	893-0110-32
348 Million TNs	E5-SM4G/E5-SM8G-B	893-0110-33
360 Million TNs	E5-SM4G/E5-SM8G-B	893-0110-34
372 Million TNs	E5-SM4G/E5-SM8G-B	893-0110-35
384 Million TNs	E5-SM4G/E5-SM8G-B	893-0110-36
396 Million TNs	E5-SM4G/E5-SM8G-B	893-0110-37
408 Million TNs	E5-SM4G/E5-SM8G-B	893-0110-38
420 Million TNs	E5-SM4G/E5-SM8G-B	893-0110-39
432 Million TNs	E5-SM4G/E5-SM8G-B	893-0110-40

Table 4-21 (Cont.) Minimum Hardware Required for LNP Quantity Features

Object / Capacity	Minimum Hardware	Part Number
444 Million TNs	E5-SM4G/E5-SM8G-B	893-0110-41
456 Million TNs	E5-SM4G/E5-SM8G-B	893-0110-42
468 Million TNs	E5-SM4G/E5-SM8G-B	893-0110-43
480 Million TNs	E5-SM4G/E5-SM8G-B	893-0110-44
492 Million TNs	E5-SM4G/E5-SM8G-B	893-0110-45
504 Million TNs	E5-SM4G/E5-SM8G-B	893-0110-46
516 Million TNs	SLIC	893011047
528 Million TNs	SLIC	893011048
540 Million TNs	SLIC	893011049
552 Million TNs	SLIC	893011050
564 Million TNs	SLIC	893011051
576 Million TNs	SLIC	893011052
588 Million TNs	SLIC	893011053
600 Million TNs	SLIC	893011054
612 Million TNs	SLIC	893011055
624 Million TNs	SLIC	893011056
636 Million TNs	SLIC	893011057
648 Million TNs	SLIC	893011058
660 Million TNs	SLIC	893011059
672 Million TNs	SLIC	893011060
684 Million TNs	SLIC	893011061
696 Million TNs	SLIC	893011062
708 Million TNs	SLIC	893011063
720 Million TNs	SLIC	893011064
732 Million TNs	SLIC	893011065
744 Million TNs	SLIC	893011066
756 Million TNs	SLIC	893011067
150,000 NPANXXs	4 GB Service Module card	893-0094-01
300,000 NPANXXs	4 GB Service Module card	893-0094-02
100,000 LRNs	4 GB Service Module card	893-0105-05
150,000 LRNs	4 GB Service Module card	893-0105-01

Flexible GTT Load Sharing

The Flexible GTT Load Sharing feature allows a PC or PC/SSN combination to be provisioned in multiple load-sharing relationships for post-GTT load sharing of intermediate and final GTT traffic.

Load sharing for intermediate GTT traffic requires the Intermediate GTT Load Sharing feature, which can be run in conjunction with the Flexible GTT Load Sharing feature. Intermediate GTT load sharing is performed through the MRN table, and the GTT destination is a PC. If both the Intermediate and Flexible GTT Load Sharing features are on, different load-sharing relationships can be defined between the same set of PCs, and different sets of destinations can contain the same PCs.

Load sharing for final GTT traffic is performed through the MAP table, and the GTT destination is a PC/SSN combination. If the Flexible GTT Load Sharing feature is on, different load-sharing relationships can be defined between the same set of PC/SSNs, and different sets of destinations can contain the same PC/SSN combinations.

Weighted GTT Loadsharing

The Weighted GTT Loadsharing feature allows a PC or PC/SSN combination to be provisioned with weights and threshold values to change the loadsharing method. This weight is relative to the weights of the PCs or PC/SSNs that have the same relative cost (RC group) and determines the relative percentage of traffic sent to the PC or PC/SSN. If the total available weight of the PCs or PC/SSNs in the RC group falls below the threshold, that RC group is not used and the next lowest RC group is used for traffic loadsharing.

SEAS Over IP

All database commands associated with the SEAS Over IP feature can be entered after the SEAS Over IP feature is enabled.

SCCP Loop Detection

The SCCP Loop Detection feature allows sets of point codes that form a routing loop in the network to be specified. These sets are linked with GTT sets and are checked during intermediate and final GTT traffic routing. If a loop exists, either the system can simply be notified or the traffic can be discarded. The SCCP Loop Detection feature requires the GTT feature and is supported on Service Module cards.

Multiple Linksets to a Single Adjacent PC (MLS)

The MLS feature allows multiple linksets to be established to a single adjacent destination point code.

Voice Mail Router (V-Flex)

The V-Flex feature allows calls to be routed to a specific voice mail server based on subscriber and call context data.

Proxy Point Code Capacity

The Proxy Point Code feature allows the EAGLE to assume the point codes of other nodes. The total numbers of proxy point codes that can be provisioned in the system for each quantity are:

- 893-0187-01—10
- 893-0187-02—20
- 893-0187-03—30
- 893-0187-04—40
- 893-0187-05—50
- 893-0187-06—60
- 893-0187-07—70
- 893-0187-08—80
- 893-0187-09—90
- 893-0187-10—100

E5-SM4G and E5-SM8G-B Throughput Capacity

The E5-SM4G and E5-SM8G-B Throughput Capacity feature is a quantity feature that is used to increase the SCCP traffic processing capacity of an E5-SM4G or E5-SM8G-B card.

- 893-0191-01—5000 TPS
- 893-0191-02—6800 TPS
- 893-0191-03—10,000 TPS
- 893-0191-04—13,600 TPS

Table 4-22 displays the TPS capacities for each E5-SM4G Throughput Capacity Quantity

Table 4-22 TPS Capacities

Feature Quantity Part Number	Maximum TPS Capacity per Card	Maximum System TPS Capacity*
893-0191-01	3125 (if one or more EPAP-based features are enabled)	75,000 TPS with one or more EPAP-based features and 24+1 cards 96,875 TPS with one or more EPAP-based features and 31+1 cards
	5000 (if no EPAP-based features are enabled)	155,000 TPS (if one or more GTT-based features is turned on) and 31+1 cards 40,000 TPS (if one or more ELAP-based features is enabled) with 8+1 cards 85,000 TPS (if one or more ELAP-based features is enabled) with 17+1 cards
893-0191-02	6800	210,800 TPS with or without EPAP-based features and 31+1 cards 163,200 TPS with one or more EPAP-based features and 24+1 cards 54,400 TPS with ELAP and 8+1 cards 115,600 TPS with ELAP and 17+1 cards
893-0191-03**	10,000	310,000 TPS with or without EPAP-based features and 31+1 cards 240,000 TPS with one or more EPAP-related features and 24+1 cards 80,000 TPS with ELAP and 8+1 cards 170,000 TPS with ELAP and 17+1 cards

Table 4-22 (Cont.) TPS Capacities

Feature Quantity Part Number	Maximum TPS Capacity per Card	Maximum System TPS Capacity*
893-0191-04** ***	13,600	421,600 TPS with or without EPAP-based features and 31+1 cards 326,400 TPS with one or more EPAP-related features and 24+1 cards 108,800 TPS with ELAP and 8+1 cards 231,200 TPS with ELAP and 17+1 cards

*32 cards implies an N+1 configuration, so 31 cards are used for calculating actual TPS capacity.

** Requires E5-SM8G-B

*** Requires B cards (E5-E1T1-B is recommended) or SLIC cards throughout a node.

HIPR2

The HIPR2 High Rate Mode feature (Part Number 893-0201-01) must be enabled before the EAGLE can use the entire channel for data and provide a throughput rate of 2.5Gbps. If this feature is not enabled, then the EAGLE provides an effective inter-shelf throughput rate of 1Gbps.

Advanced GT Modification (AMGTT)

There are three AMGTT features:

- Part number 893-0218-01: Advanced Global Title Modification (AMGTT). Allows non-MGTT customers to enable CdPA and CgPA functions after upgrade.
- Part number 893-0218-02: Advanced Global Title Modification, Called Party Only (AMGTT CdPA Only). Allows existing MGTT customers to continue using CdPA modification functions after upgrade. Does not allow any CgPA modification capabilities. The AMGTT CdPA Only feature cannot be enabled by this command. It is automatically enabled upon upgrading from the source release to EAGLE release 38.0 if the MGTT feature was turned on prior to the upgrade.
- Part number 893-0218-03: Advanced Global Title Modification, Calling Party Upgrade (AMGTT CgPA Upgrade). Allows existing MGTT customers to upgrade to AMGTT after upgrade to EAGLE release 38.0. Requires the AMGTT CdPA Only feature to be enabled, and allows full AMGTT CdPA and CgPA modification.

Prepaid IDP Query Relay

The IDPRCDPN(X) NPP Service must be turned on before the Prepaid IDP Query Relay feature can be turned on. The IDPRCGPN NPP service must be turned on to process Calling Party Numbers. The IDPRCGPN Service is reached from the IDPRCDPN Service. The following warning message appears while enabling the Prepaid IDP Query Relay feature:

 **Caution:**

Any of the IDPRCDPN(X) NPP services must be ON before turning ON the IDPR feature.

MO SMS IS41-to-GSM Migration

The MO SMS IS41-to-GSM Migration feature addresses modifications to the MO-based IS41 SMS NP feature (893-0194-01) required to meet certain IS41-to-GSM Migration call flows. This feature also allows the IS412GSM Migration Prefix to be used as a prefix instead of the RTDB RN/SP when an SMS is destined for a GSM-migrated subscriber.

SLS Bit Rotation by Incoming Linkset (ISLSBR)

The ISLSBR feature allows SLS Bit rotation to occur on an incoming linkset. This feature provides the ability to configure distribution in an ANSI or ITU network.

Eagle Additional Subscriber Data

Prepaid IDP Query Relay and TIF framework features support ASD data, which can be associated with individual subscribers and ranges. IDPR and TIF ASD/GRN features address the addition of ASD fields into the EAGLE. The ASD feature allows generic data to be associated with DN and DN Block subscriber records.

Prepaid SMS Intercept Ph1

The MOSMSGCDPN and MOSMSGCGPN services must be provisioned before the MO SMS Prepaid Check feature is turned on for "Prepaid SMS Intercept Ph1" to be functional. The following warning message appears while enabling the MO SMS Prepaid Check feature:

 **Caution:**

MOSMSGCDPN or/and MOSMSGCGPN NPP Services must be turned on for the feature to be functional.

MO-based IS41 SMS NP and MO SMS IS41-to-GSM Migration

The MOSMSICDPN NPP service must be provisioned before the MO-based IS41 SMS NP or the MO SMS IS41-to-GSM Migration feature is turned on for the feature to be functional. The following warning message appears while enabling these features:

 **Caution:**

MOSMSICDPN NPP Services must be turned on for the feature to be functional.

Portability Check for MO SMS

The MOSMSGCGPN NPP service must be enabled before the Portability Check for MO SMS feature is turned on for the feature to be functional. The following warning message appears while enabling the feature:

▲ Caution:

MOSMSGCGPN NPP Services must be turned on for the feature to be functional.

MO-based GSM SMS NP

The MOSMSGCDPN NPP service must be provisioned before the MO-based GSM SMS NP feature is turned on for the feature to be functional. The following warning message appears while enabling the feature:

▲ Caution:

MOSMSGCDPN NPP Services must be turned on for the feature to be functional.

GTT Load Sharing With Alternate Routing Indicator

The GTT Load Sharing with Alternate Routing Indicator (GTT LS ARI) feature allows loadsharing relationships to be established between the MAP and MRN table in that the MAP and MRN sets allow provisioning of MRN and MAP sets, respectively, as the Alternate Mate RI if the point codes in the MAP or MRN table are unavailable.

ST-HSL-A SLK Capacity

The ST-HSL-A feature allows unchannelized T1 links to be provisioned. The total number of unchannelized signaling links that can be assigned to E5-E1T1-B cards in the system with each ST-HSL-A SLK Capacity quantity feature access key is enabled are:

- 893-0273-01—4
- 893-0273-02—8
- 893-0273-03—16
- 893-0273-04—24
- 893-0273-05—32
- 893-0273-06—40
- 893-0273-07—48
- 893-0273-08—56
- 893-0273-09—64
- 893-0273-10—72
- 893-0273-11—80
- 893-0273-12—88
- 893-0273-13—96
- 893-0273-14—104
- 893-0273-15—112

- 893-0273-16—120
- 893-0273-07—128
- 893-0273-18—136
- 893-0273-19—144
- 893-0273-20—152
- 893-0273-21—160
- 893-0273-22—168

- 893-0273-24—180

MO SMS ASD, MO SMS GRN

The MOSMSGCGPN, MOSMSGCDPN, MOSMSICGPN, or MOSMSICDPN NPP service must be provisioned before the MO SMS ASD or MO SMS GRN feature is turned on for the feature to be functional. The following warning message appears while enabling the feature:

Caution:

MOSMSGCDPN, MOSMSICDPN, MOSMSGCGPN or/and MOSMSICGPN NPP Services must be turned on for the feature to be functional.

Large MSU Support for IP Signaling

The Large MSU Support for IP Signaling feature supports MSUs having a Service Information Field (SIF) up to 4095 bytes over M2PA and M3UA Protocols with Service Indicator (SI) values ranging from 6 to 15. The values for the Service Indicators are:

- 6, 7—Data
- 9—Broadband ISDN
- 10—Satellite ISDN
- 13—BICC
- 14—H.248
- 8, 11, 12, 15—Spare

EPAP based features

If Global Title Translation (GTT) is on and more than 25 SCCP cards are provisioned, then when the first EPAP based feature is enabled, a warning is issued to state that the EAGLE must be connected to an EPAP T1200 or higher. Subsequent commands for enabling EPAP based features are accepted without any warning.

XUDT UDT Conversion feature

The XUDT UDT Conversion feature allows the following SCCP message conversions:

- UDT(S) messages to XUDT(S) messages
- Non-segmented XUDT(S) messages to UDT(S) messages
- Segmented XUDT(S) messages to UDT(S) messages

MTT 3354 deleted for PR 165345 MB

3 Links per Card feature

The 3 Links per Card feature is a quantity feature that supports a third link (A1) on an E5-ATM-B card. Each quantity FAK supports the 3 Links per card feature in an increment of 5 cards, up to a maximum of 385 cards. Part numbers range from 893-0391-01 (supports the feature on 5 cards) to 893-0391-77 (supports the feature on 385 cards).

Point Code and CIC Translation (PCT)

The PCT feature is a quantity feature that allows the EAGLE to change the destination point code (DPC) and originating point code (OPC) of an MTP-routed MSU to previously configured values. The quantity is used to define the maximum number of allowed translations:

- 893-0372-01—25 translations
- 893-0372-02—50 translations
- 893-0372-03—75 translations
- 893-0372-04—100 translations
- 893-0372-05—150 translations
- 893-0372-06—200 translations
- 893-0372-07—250 translations
- 893-0372-08—1000 translations

Integrated GLS

The E5-OAM Integrated GLS (Integrated GLS) feature allows the E5-MASP cards to support the function of GLS cards for Gateway Screening. If the Integrated GLS feature is turned on, then the E5-MASP accepts the bind requests for the GWS screenset from network cards, binds the requested screenset, and downloads the screenset to the requested network cards.

If the Integrated GLS feature is turned OFF, then the E5-MASP cards do not service the requests for binding screensets and the network cards continue to send binding requests for screen sets to the active GLS cards.

E5-ENET-B IPSP High Throughput

The E5-ENET-B IPSP High Throughput feature allows the E5-ENET-B card running the IPSP application to have a maximum capacity of 9500 TPS. If the feature is not turned on, then the E5-ENET-B card running the IPSP application has a maximum capacity of 6500 TPS.

EPAP Data Split

The EPAP Data Split feature allows EPAP data to be split into DN and IMSI subsets. Each subset is loaded on a specific set of E5-SM4G or E5-SM8G-B cards. The maximum capacity for each data subset (120 million) can be loaded on the associated set of cards. Therefore, splitting the data allows a system-wide EPAP data capacity of 240 million.

Dual ExAP Config

Warning: Enabling the Dual ExAP Config feature will disable functions of ISUP NP with EPAP and TINP.

Prior to enabling the Dual ExAP Config feature, upgrade the ISUP NP with EPAP and TINP features to TIF if one or both of those features are present in the system.

The Dual ExAP Config feature is allowed to be turned on regardless of whether the ISUP NP with EPAP or TINP features are already turned on.

If the Dual ExAP Config is turned on while ISUP NP with EPAP and TINP are not upgraded to TIF, these two features will stop working.

SIP Number Portability

The SIP-based Number Portability feature allows the E5-SM8G-B card running the SIPHC application to support SIP interfaces on EAGLE and also provide SIP based Number Portability using EAGLE's RTDB/RIDB.

1M System TPS

The 1M System TPS feature allows provisioning 1,000,000 TPS on SIGTRAN and ATM cards collectively. If the feature is not turned on, then the system will support 750,000 TPS or 500,000 TPS only based on the state of HIPR2 High Rate Mode feature. If the HIPR2 High Rate Mode feature is ON and the 1M System TPS is OFF, the system will support 750,000 TPS. If the HIPR2 High Rate Mode feature is OFF and the 1M System TPS is OFF, the system will support 500,000 TPS. HIPR2 High Rate Mode feature is a mandatory feature for turning ON the 1M System TPS feature.

S13/S13' Interface for EIR

The Diameter S13/S13' Interface for EIR feature allows the E5-SM8G-B card running the DEIRHC application to support Diameter S13/S13' interface on EAGLE and also provide EIR functionality on 3G and LTE networks.

Output

```
enable-ctrl-feat:partnum=893xxxxxxx
```

```
tekelecstp 08-12-04 13:55:19 EST EAGLE 46.3.0
enable-ctrl-feat:partnum=893xxxxxxx

4.1.279 ent-acg-mic

Use this command to assign Automatic Call Gapping (ACG) controls to certain queries. The control can apply to all queries or to specific query services and called party digits. If the EAGLE LNP query service receives a query to which a control applies, then the EAGLE sends an ACG component, encoded as configured, with the response.

Parameters

drtn (mandatory)

Duration index. The amount of time that the ACG is in effect. This number is mapped to a time value at the LNP node.

Range:

1 - 13

Default:

The current value

aintvl (optional)

AIN interval index

Range:

1 - 15

Default:

The current value

dgts (optional)

Digits

Range:

000 - 999, 000000 - 9999999999

Specify 3 digits or 6-10 digits.

intvl (optional)

IN Interval index. The amount of time between ACGs. This number is mapped to a time value for the LNP node.

Range:

0 - 15

Default:

Current value

nd (optional)

Number of digits

Range:

3, 6 - 10

Default:

The current value

serv (optional)

Query service

Range:*ain**in***type (optional)**

Type of control

Range:*all**sd***Default:***sd***Example**

```
ent-acg-mic:type=all:nd=6:drtn=6:intvl=2:aintvl=7
```

```
ent-acg-mic:serv=ain:dgts=9194602132:drtn=13:aintvl=1
```

```
ent-acg-mic:type=sd:serv=in:dgts=919:drtn=8:intvl=3
```

Dependencies

If the `type=all` parameter is specified, then the `nd`, `intvl`, and `aintvl` parameters must be specified.

3056 E3056 Cmd Rej: Parameters ND, INTVL, and AINTVL are required

If the `type=all` parameter is specified, the optional parameters `serv` and `dgts` cannot be specified.

3057 E3057 Cmd Rej: Parameters SERV and DGTS are not allowed for TYPE = ALL

If the `type=sd` parameter is specified, the optional parameters `serv` and `dgts` must be specified.

3058 E3058 Cmd Rej: Parameters SERV and DGTS are required

If the `type=sd` parameter is specified, then the `nd` parameter cannot be specified.

3059 E3059 Cmd Rej: Parameter ND is not allowed

If the `serv=in` parameter is specified, the `aintvl` parameter cannot be specified.

3063 E3063 Cmd Rej: Parameter AINTVL is not allowed

If the `serv=ain` parameter is specified, the optional parameter `intvl` cannot be specified.

3061 E3061 Cmd Rej: Parameter INTVL is not allowed

If the `serv=in` parameter is specified, the optional parameter `intvl` must be specified.

3062 E3062 Cmd Rej: Parameter INTVL is required

If the `serv=ain` parameter is specified, the optional parameter `aintvl` must be specified.

3060 E3060 Cmd Rej: Parameter AINTVL is required

The `dgts` parameter value must be specified as 3 or 6–10 digits.

3064 E3064 Cmd Rej: DGTS parameter must be 3 or 6-10 digits

A valid value must be specified for the `nd` parameter.

3065 E3065 Cmd Rej: ND parameter must be 3 or 6-10

The LNP feature must be turned on before this command can be entered.

3009 E3009 Cmd Rej: LNP feature must be ON

If the `type=all` parameter is specified, then an MIC with the `type=all` parameter cannot already exist.

3066 E3066 Cmd Rej: A MIC of TYPE=ALL already exists

If the `type=sd` parameter is specified, a MIC with the same service and digits must not already exist.

3067 E3067 Cmd Rej: A MIC with the same service and digits already exists

The ACG MIC table must be accessible.

3055 E3055 Cmd Rej: Failed reading ACG MIC table

A maximum of 256 `type=sd` MICs are allowed.

3068 E3068 Cmd Rej: Table full - a maximum of 256 TYPE=SD MICs are allowed

Notes

None

Output

```
ent-acg-mic:type=all:nd=6:drtn=6:intvl=2:aintvl=7
```

```
rlghncxa03w 04-02-28 08:50:12 EST EAGLE 31.3.0
ACG MIC table is (11 of 256) 4% full of type SD

4.1.280 ent-acg-noc

Use this command to enter the values for the automatic call gapping (ACG) controls that you want to send when you reach the specified node overload level. The definition is comprised of the threshold LNP query rates for node overload levels and the values for the ACG to be sent when at the level. If a level is not defined, it is not used. Level 10 is predefined.

Parameters**drtn (mandatory)**

Duration index. The amount of time that the ACG is in effect. This number is mapped to a time value at the LNP node.

Range:

1 - 13

Default:

The current value

intvl (mandatory)

Interval index. The amount of time between ACGs. This number is mapped to a time value for the LNP node.

Range:

0 - 15

Default:

Current value

lvl (mandatory)

Overload level.

Range:

1 - 9

qr (mandatory)

Query rate. The number of LNP queries, which define a particular overload level, in a 30-second period.

Range:

1 - 2147483647

and (optional)

AIN number of digits. The number of digits in the global title address of an AIN query.

Range:**6****10****Default:****6****ind (optional)**

IN number of digits. The number of digits in the global title address of an IN query.

Range:**6****10****Default:****6****Example**

```
ent-acg-noc:lvl=3:qr=300000:and=10:ind=6:drtn=6:intvl=3
```

Dependencies

The ACG NOC table must be accessible.

3053 E3053 Cmd Rej: Failed reading ACG NOC table

The LNP feature must be turned on before this command can be entered.

3009 E3009 Cmd Rej: LNP feature must be ON

Either 6 or 10 must be specified for the `and` parameter.

3074 E3074 Cmd Rej: AND parameter must be 6 or 10

The specified overload level must not already be defined.

3076 E3076 Cmd Rej: The specified overload level has already been defined

Either 6 or 10 must be specified for the `ind` parameter.

3075 E3075 Cmd Rej: IND parameter must be 6 or 10

Notes

None

Output

```
ent-acg-noc:lvl=3:qr=300000:and=10:ind=6:drtn=6:intvl=3

4.1.281 ent-appl-rtkey

Use this command to configure static entries in the Routing Key table, which associates a routing key with a socket name.

There are three types of routing keys, as follows:

- DPC, SI, SSN routing keys, which are used to route SCCP messages
- DPC, SI routing keys, which are used to route non-SCCP and non-ISUP messages
- DPC, SI, CIC routing keys, which are used to route ISUP messages

Parameters**Note:**

See [Point Code Formats and Conversion](#) in Appendix A for a detailed description of point code formats, rules for specification, and examples.

asname (mandatory)

Application Server (AS) name assigned to this routing key.

Range:

ayyyyyyyyyyyyyyy

Up to 15 alphanumeric characters; the first character must be a letter

cice (optional)

The end range of circuit identification codes assigned to the routing key.

Range:

0 - 4294967295

See [Table A-4](#) for valid CIC values for specified SI and MSU types.

cics (optional)

The start range of circuit identification codes assigned to the routing key.

Range:

0 - 4294967295

See [Table A-4](#) for valid CIC values for specified SI and MSU types.

dpc (optional)

ANSI destination point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.

Synonym:*dPCA***Range:**

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001-005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006-255*.

The point code *000-000-000* is not a valid point code.

dpc/dPCA/dpci/dpcn/dpcn24/dpcn16 (optional)

Destination point code.

dpci (optional)

ITU international destination point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*)

Range:*s-*, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*prefix—s**zone—0-7**area—000-255**id—0-7*

The point code *0-000-0* is not a valid point code.

dpcn (optional)

ITU national destination point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the *chg-stpopts:npcfmti* flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc,m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

Range:*s-*, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*prefix—s-**nnnnn—0-16383**gc—aa-zz**m1-m2-m3-m4—0-14* for each member; values must sum to 14**dpcn24 (optional)**

24-bit ITU national destination point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*).

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

msa—000–255
ssa—000–255
sp—000–255

dpcn16 (optional)

16-bit ITU national point code with subfields *unit number sub number area main number area* (*un-sna-mna*).

Range:

000--127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

un---000---127

sna---000---15

mna---000---31

opc (optional)

ANSI originating point code with subfields *network indicator-network cluster-network cluster member* (*ni-nc-ncm*).

Synonym:

opca

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001–005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006–255*.

The point code *000-000-000* is not a valid point code.

opc/opca/opci/opcn/opcn24/opcn16 (optional)

Originating point code. This parameter is valid and required if a value of 4, 5, or 13 is specified for the *si* parameter and the *type=full* parameter is specified.

opci (optional)

ITU international destination point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*)

Range:

s-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s

zone—0-7

area—000-255

id—0-7

The point code *0-000-0* is not a valid point code.

opcn (optional)

New ITU national originating point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the `chg-stpopts:npcfmti` flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

Range:

s-, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s*-

nnnnn—0-16383

gc—*aa-zz*

m1-m2-m3-m4—0-14 for each member; values must sum to 14

opcn24 (optional)

24-bit ITU national originating point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*).

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

msa—000–255

ssa—000–255

sp—000–255

opcn16 (optional)

16-bit ITU national point code with subfields *unit number sub number area main number area* (*un-sna-mna*).

Range:

000--127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

un---000---127

sna---000---15

mna---000---31

rcontext (optional)

Routing context. The new routing context for a routing key. The routing context uniquely identifies the routing key.

Routing context is mandatory for routing keys associated with SUA Application Servers. Routing context is optional for routing keys associated with M3UA Application Servers.

Range:

0 - 4294967295

si (optional)

Service indicator.

Range:

0-15 or equivalent text values

Number =Text—Description0=*snm*—Signaling network management messages1=*regtest*—Signaling network testing and maintenance regular2=*spltes*—Signaling network testing and maintenance special3=*sccp*—SCCP4=*tup*—Telephone user part5=*isup*—ISDN user part13=*qbicc***ssn (optional)**

Subsystem number.

Range:

0 - 255

type (optional)

The type of routing key.

Range:*full**partial**default***Default:***full***Example**

```

Dependencies

The `srkq` parameter (see the `chg-sg-opts` command) limits the maximum number of static routing keys that can be provisioned using this command. For SS7IPGW and IPGWI applications running on E5-ENET-B cards, there is a limit of 2500 routing keys in the system.

3842 E3842 Cmd Rej: Entries in static route key table cannot exceed SRKQ

The `ssn` parameter is valid only when the `si=3` (or `sccp`) parameter is specified.

3757 E3757 Cmd Rej: SSN is not allowed unless SI is 3

The value specified for the `cics` parameter must be less than or equal to the value specified for the `cice` parameter.

3783 E3783 Cmd Rej: CICS must be less than or equal CICE

The ISUP routing-over-IP feature must be turned on before a DPC/SI/CIC routing key to route ISUP messages can be specified.

3785 E3785 Cmd Rej: IPISUP Feature must be ON

A circuit identification code range (`cics - cice`) cannot be specified that overlaps an existing routing key.

3786 E3786 Cmd Rej: CIC Range overlaps an existing routing key

When a value of 4, 5, or 13 (*tup*, *isup*, or *qbicc*) is specified for the `si` parameter, the `opc`, `cics`, and `cice` parameters are required. The `opc`, `cics`, and `cice` parameters can be specified only if a value of 4, 5, or 13 is specified for the `si` parameter. See [Table A-4](#) for valid `cic` and `si` values for MSU types.

3788 E3788 Cmd Rej: OPC, CICS, CICE are required if SI is 4, 5 or 13

Partial point codes are not allowed; no asterisks can be specified in the routing key in the command.

2166 E2166 Cmd Rej: Partial point codes are not allowed

Mixed point code types are not allowed; the types for the `opc` and `dpc` parameters must match.

N/A N/A

A DPC/SI routing key must be specified when the DPC is ANSI and the `si=4` parameter is specified (TUP is used only in an ITU network).

3874 E3874 Cmd Rej: TUP must use DPC/SI route key if DPC is ANSI

When the `type=full` parameter is specified, the `dpc` and `si` parameters must also be specified.

3999 E3999 Cmd Rej: When `type=full`, DPC and SI must be specified

The group codes for the `dpc` and `opc` parameter values must match when both parameters are entered in the command.

4001 E4001 Cmd Rej: Group Code of DPCN and OPCN must match

The `rcontext` parameter must be specified for routing keys that are associated with SUA Application Servers.

4161 E4161 Cmd Rej: Routing Context is required for SUA

The specified `rcontext` parameter value must not already exist in the database.

N/A N/A

If specified, the service indicator parameter must be `si=3` for routing keys that are associated with SUA Application Servers.

4262 E4262 Cmd Rej: SI value must be 3 for SUA

An AS cannot be simultaneously assigned to a routing key with routing contexts and routing keys without routing context.

4300 E4300 Cmd Rej: Conns cannot exist in rkeys with and without rcontext

To assign an M3UA or SUA association to multiple routing keys with routing context, the M3UA/SUA association must be assigned to more than one AS and each AS must be assigned to a routing key with routing context.

N/A N/A

The AS name and parameters specified for a routing key must use an address format that is valid for the adapter type used by the ASP associations assigned to the AS.

N/A N/A

If the `type=default` parameter is specified, then the `rcontext` and `asname` parameters are the only optional parameters that can be specified.

4067 E4067 Cmd Rej: Invalid combination of parameters for a default routing key

The following four types of partial routing keys are supported:

- DPC/SI/OPC (ignore CIC) can be used as a partial match key for CIC- based traffic.
- DPC/SI (ignore all other fields) can be used as a partial match key for CIC- based traffic or SCCP traffic.
- DPC only (ignore all other fields) can be used as a partial match for any type of traffic.
- SI only (ignore all other fields) can be used as a partial match for any type of traffic.

3955 E3955 Cmd Rej: Invalid combination of parameters for a partial routing key

The DPC entered cannot be an APC or SAPC for an IPGWx linkset. Routing keys cannot be provisioned for the fake adjacent node.

4597 E4597 Cmd Rej: RTKEY DPC cannot be IPGWx APC or SAPC

AS can be associated to only one routing key that contains a routing context value.

4272 E4272 Max number of rcontexts per AS exceeded

The J7 support feature must be enabled before the `dpcn16/opcn16` parameters can be specified.

2691 E2691 Cmd Rej: J7 Support Feature must be enabled.

Mixed point code types are not allowed, the types for the `opc` and `dpc` must match.

2501 E2501 Cmd Rej: Mixed point code types are not allowed.

The routing context value should be unique.

4139 E4139 Cmd Rej: Routing Context already equipped

The `opc`, `cics`, and `cice` parameters can be specified with the `si` parameter only if the `si` parameter has a value of 4, 5, or 13 (or `tup`, `isup`, or `qbicc`).

3789 E3789 Cmd Rej: OPC, CICS, CICE are not allowed unless SI is 4, 5 or 13

Notes

The Routing Key table associates a routing key with a socket name or an Application Server (AS).

The routing key can be associated with up to 16 socket names or with 1 AS.

The OPC and DPC cannot specify a cluster route.

Group codes are required for ITU-N point codes and spare point codes (DPCN/OPCN) when the ITU Duplicate Point Code feature (ITUDUPPC) is turned on, and not allowed when the feature is off.

Routing context is a routing key parameter that uniquely identifies routing keys. Routing context is mandatory for routing keys associated with SUA Application Servers and optional for routing keys associated with M3UA Application Servers. An AS cannot be simultaneously assigned to routing keys with routing contexts and routing keys without routing contexts.

An AS cannot be simultaneously assigned to a routing key with routing contexts and routing keys without routing contexts.

An AS can be associated with multiple routing keys that do not contain routing context. An AS can be associated with only 1 routing key with routing context. To assign an M3UA or SUA association to multiple routing keys with routing context, the M3UA/SUA association must be assigned to more than one AS and each AS must be assigned to a routing key with routing context.

In this command, only ITU-international and ITU national point codes support the spare point code subtype prefix (s-).

The `opc`, `cics`, and `cice` parameters can be specified with the `si` parameter only if the `si` parameter has a value of 4, 5, or 13 (or `tup`, `isup`, or `qbicc`).

3789 E3789 Cmd Rej: OPC, CICS, CICE are not allowed unless SI is 4, 5 or 13.

Output

```

4.1.282 ent-as

Use this command to create an Application Server (AS) as a logical entity to serve a specific routing key. This command enters a new AS into the AS table and assigns an M3UA or SUA SCTP association to it, or assigns an M3UA or SUA SCTP association to an existing AS.

Parameters

aname (mandatory)

Name of the M3UA or SUA SCTP association.

Range:

aaaaaaaaaaaaaaaa

Up to 15 alphanumeric characters; the first character must be a letter

asname (mandatory)

Name of the Application Server (AS).

Range:

aaaaaaaaaaaaaaaa

Up to 15 alphanumeric characters; the first character must be a letter

Example

```
ent-as:asname=asx:aname=asxp1
```

Dependencies

The specified `aname` must exist in the IPAPSOCK table.

N/A N/A

The adapter layer for each association assigned to the AS must be defined.

N/A N/A

SUA Application Servers must have routing keys with assigned routing contexts.

N/A N/A

The service indicator must be `si=3` for routing keys that are associated with SUA Application Servers.

4262 E4262 Cmd Rej: SI value must be 3 for SUA

The adapter layer must be the same for all M3UA/SUA associations assigned to the AS.

4083 E4083 Cmd Rej: Connection adapter type does not match AS adapter type

The value specified for the `aname` parameter cannot refer to an IPLIMx or IPSPG association.

3447 E3447 Cmd Rej: IPLIMx and IPSPG connections cannot be resident in AS

The `asname=default` parameter cannot be specified.

3420 E3420 Cmd Rej: 'Default' is an invalid ASNAME

An association can be assigned to a maximum of 50 application servers.

4374 E4374 Cmd Rej: Association in maximum allowed application servers

Notes

The DCM card has 16 MB of memory. Socket/association limits are based on card memory as is the ratio of associations to sockets. This ratio, known as the trade ratio, defines the number of sockets that are equivalent to one association with respect to memory consumption.

By default the AS recovery timer value is set to 200 ms when an AS is entered. This value can be changed at any time using the `chg-as` command. The new timer value will be used the next time the AS enters the AS-Pending state.

The trade ratio states the quantity of associations to sockets that may be provisioned on a certain card, as follows:

Trade Ratio = a:s

Where:

a=association : s=socket

The maximum sockets/associations per DCM card are:

- Socket to Association Ratio—8:1
- Max Sockets—50
- Max Associations—4

Output

```
ent-as:asame=asx:aname=asxp1
```

- [dlt-as](#)

Range:
1024 - 65535

Default:
0

Example

```
ent-
assoc:aname=assoc1:lhost=gw105.nc.tekelec.com:lport=1030 :rhost=gw10
0.nc.tekelec.com:rport=1030:adapter=m3ua
```

```
ent-
assoc:aname=assoc1:lhost=gw105.nc.tekelec.com:lport=1030 :rhost=gw10
0.nc.tekelec.com:rport=1030:adapter=diam
```

Dependencies

The value specified for the `aname` parameter must already exist in the IP Socket/Association (IPAPSOCK) table.

N/A N/A

The hostnames specified in the `lhost` and `alhost` parameters must refer to different IP addresses.

3618 E3618 Cmd Rej: LHOST and ALHOST must refer to different IP addresses

The IP host names specified in the `lhost` and `alhost` parameters must exist in the IP Host table and must be provisioned as local to this EAGLE.

N/A N/A

The hostnames specified in the `lhost` and `alhost` parameters must refer to IP addresses on the same IP card.

3619 E3619 Cmd Rej: LHOST and ALHOST must refer to IP address on the same card

If the `m2patset` parameter is specified, then the `adapter=m2pa` parameter must be specified.

3469 E3469 Cmd Rej: M2PATSET requires M2PA adapter type

If the card is running an IPLIMI application, then an association with `adapter=sua` or `m3ua` cannot be assigned as a value for the `lhost` parameter. If the card is running the DEIRHC GPL, then the adapter type must be DIAM.

4077 E4077 Cmd Rej: Parameters incompatible with adapter type

Association connection parameters (`lhost`, `rhost`, `lport`, `rport`) must be unique.

4091 E4091 Cmd Rej: Association connection parameters must be unique

The card location for the card associated with the `lhost` and `alhost` must exist in the IP Link table.

N/A N/A

The allowed maximum is 1 association per signaling link on IPLIMx cards.

4092 E4092 Cmd Rej: Too many associations per SLK

There is a maximum of 50 connections (association-to-AS assignments + sockets) per Local Host on IPGWx cards.

N/A N/A

A maximum of 4000 connections (association-to-AS assignments + sockets) are allowed per system.

N/A N/A

If the value specified for the `lhost` parameter refers to an IPGW card or a DEIR card running the DEIRHC GPL, then the `link` parameter cannot be specified.

The value specified for the `link` parameter must be valid for the card and application type:

- Link A—card running the SS7IPGW or IPGWI application
- Links A - A7 and B - B7—card running the IPLIMI application

3860 E3860 Cmd Rej: Link not valid for card or application type

A maximum of 32 associations can be provisioned on an IPGW card.

4093 E4093 Cmd Rej: Too many associations per card

The value specified for the `host` parameter must begin with an alphabetic character and can contain a..z, A..Z, 0..9, - (hyphen), or . (period). If the host name contains a hyphen, then the host name must be enclosed within quotation marks.

3731 E3731 Cmd Rej: Invalid Hostname

LHOST with REALM and RHOST with REALM are mandatory parameters for an association with adapter type DIAM.

2805 E2805 Cmd Rej: Host and Realm required for diameter connection

RHOST is a mandatory parameter for a DIAM association.

2731 E2731 Cmd Rej: RHOST required for DIAM association

If the LHOST is defined on Port A its ALHOST must be on PORT B.

If the LHOST is defined on Port B its ALHOST must be on PORT A.

If the LHOST is defined on Port C, its ALHOST must be PORT D.

If the LHOST is defined on Port D, its ALHOST must be PORT C.

3627 E3627 Cmd Rej: Invalid combination of LHOST and ALHOST interfaces

RHOST must be present in the IPHOST table.

3739 E3739 Cmd Rej: No Entry found

Remote IP address (RHOST) must not exist in the IPLINK table.

2685 E2685 Cmd Rej: Remote IP address exists in the IPLINK table

The IP Socket/Association (IPAPSOCK) table cannot contain more than 4000 entries.

3748 E3748 Cmd Rej: Socket Table full

The requested buffer size increase cannot exceed the available buffer space on the card. Use the `rtrv-assoc` command with the `aname`, `lhost`, or `alhost` parameter to display used and total buffer space on the card.

4602 E4602 Cmd Rej: Requested Assoc Buffer Space Exceeds Available Buffer Space

IP address associated with the LHOST and ALHOST should be of the same IP version.

3258 E3258 Cmd Rej: LHOST and ALHOST must be of the same IP version.

IP address associated with the LHOST and RHOST should be of the same IP version.

3264 E3264 Cmd Rej: LHOST and RHOST must be of the same IP version.

Association name must be unique

4096 E4096 Cmd Rej: Association name already exists

The `alhost` or `lhost` should be present in IP link table

3095 E3095 Cmd Rej: LHOST/ALHOST location not found

Notes

The IPAPSOCK table is used to associate the Local Host/Local Port to a Remote Host/Remote Port. This fully specifies the connection.

For a diameter association, the IPAPSOCK table is used to associate the Local Host/Local Realm/Local Port to a Remote Host/Remote Realm/Remote Port. This fully specifies the diameter connection.

SCTP associations can be configured as either uni-homed or multi-homed endpoints. Uni-homed endpoints are SCTP associations configured with the `lhost` parameter specified and the `alhost` parameter not specified. In this case, the `lhost` represents an IP address that corresponds to either the A or B or C or D network of the IP application card (see `chg-ip-lnk`). Multi-homed endpoints are SCTP associations configured with both the `lhost` and `alhost` parameters specified. In this case, the `lhost` represents an IP address corresponding to one of the networks (A, B, C or D) of the IP card while the `alhost` represents an IP address corresponding to the other network of the same IP card.

If a valid `lhost` parameter is specified that equates to a valid IP address, the `lhost` maps directly to a card location in the IP Link table, which can then determine the card's application (IPLIMx or SS7IPGWx). If the application is an IPLIMx, two additional validation checks are made:

- The `adapter` parameter value must equal `m3ua` or `m2pa`.
- The `ipliml2` value for the IPLIMx signaling link must be the same as the association `adapter` parameter value.
- The `ipliml2` value for an IPLIMx signaling link cannot be set to `m3ua`.

If the determination of the application running on the card or the signal link cannot be performed when the `ent-assoc` command is executed, the check will be performed by the `chg-assoc` command.

An association with an `adapter` value of `m2pa` cannot be assigned to an SS7IPGW or IPGWl host.

There are fields in the IPAPSOCK table that receive default values even though there are no parameters on this command for changing those fields. If a different value is desired, the

`chg-assoc` command must be used. The `chg-assoc` command can also be used if the hostnames are too long to fit on the command line with other parameters. The fields in question and their default values are:

- `open=no`
- `alw=no`
- `rmode=lin`
- `rmin=120`
- `rmax=800`
- `rtimes=10`
- `cwmin=3000`
- `ver=rfc`
- `istrms=2`
- `ostrms=2`

For the M2PA RFC feature, when the application is IPLIMx and the `adapter=m2pa` parameter is specified, the supported M2PA version is set to M2PA RFC by default.

For the S13/S13' EIR feature, if the E5-SM8G-B card is running the DEIRHC GPL, an adapter other than `diam` cannot be specified.

Output

```
ent-  
assoc:aname=assoc1:lhost=gw105.nc.tekelec.com:lport=1030 :rhost  
=gw100.nc.tekelec.com:rport=1030:adapter=m3ua

4.1.284 ent-card

Use this command to add a card to the database. The card type and application specifies the function assigned to the card.

Parameters

Note:

The phrase "Service Module card" refers to an E5-SM8G-B or SLIC card when any of these cards can be used to provision the VSCCP, DEIRHC, SIPHC, and ENUMHC application. The cards are provisioned with the `type=dsm` or `type=slic` and `appl=deirhc/enumhc/siphc/vsccp` parameters.

app1 (mandatory)

Application. The application for the card.

Range:

xyyyyyy

1 alphabetic character followed by up to 6 alphanumeric characters. Valid applications are:

atmansi—Used by E5-ATM-B cards to support ANSI high-speed ATM signaling links and T1 functions.

atmitu—Used by E5-ATM-B cards to support ITU E1 high-speed ATM signaling links and E1 functions.

ccs7itu—Used by E5-E1T1-B, and SLIC cards for ITU-TSS MTP functions.

deirhc—Used by E5-SM8G-B and SLIC cards to support the S13/S13' EIR feature.

elap - Used by E5-APP-B card to support ELAP/LNP functionality.

enumhc - Used by E5-SM8G-B and SLIC cards to support the ENUM application.

epap - Used by E5-APP-B card to support EPAP/RTDB functionality.

eroute—Used by STC and E5-STC cards for EAGLE 5 Integrated Monitoring Support functions.

gls—Used by E5-TSM cards for downloading gateway screening to LIM and Service Module cards.

imf --- Used by E5-APP-B card to support IMF functionality.

ipgwi—Used by E5-ENET-B cards for IP point-to-multipoint connectivity for ITU point codes.

iplimi—Used by E5-ENET-B cards for IP point-to-point connectivity for ITU point codes.

ips—Used by E5-IPSM and E5-ENET-B cards for the IP User Interface feature.

ipsg—Used by E5-ENET-B, and SLIC cards to support the combined functionality of IPLIMx M2PA and IPGWx M3UA.

lsms - Used by E5-APP-B card to support LSMS/LNP functionality.

mcp—Used by E5-MCPM-B cards for the Measurements Platform feature.

nas - Used by E5-APP-B card to support NAS (storage of LNPDB from LSMS) functionality.

sfapp— Used by SLIC cards to support the SFAPP application.

siphc— Used by E5-SM8G-B and SLIC Cards to support SIP application.

ss7ansi—Used by E5-E1T1-B, and SLIC cards for ANSI MTP functions.

ss7ipgw— Used by E5-ENET-B cards for TCP/IP point-to-multipoint connectivity.

switch - Used by Telco switch to add power consumed by Telco Switch to Frame Power Budget. This is not an application gpl.

vsccp—Used by Service Module cards to support EPAP-based features and LNP features. If no EPAP-based features or LNP features are turned on, and a Service Module card is present, the VSCCP GPL processes GTT traffic.

loc (mandatory)

The card location as stenciled on the shelf of the system.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318,
2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318,
3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318,
4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318,
5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318,
6101 - 6108, 6111 - 6118, 6201 - 6208, 6211 - 6218, 6301 - 6308, 6311 - 6318

type (mandatory)

The type of hardware being added.

Range:***dcm***

Data Communications Module card (E5-ENET-B card). Applications for this card type are IPLIMI, SS7IPGW, and IPGWI.

dsm

E5-SM8G-B or SLIC card to support EPAP-based features, LNP features, and the GTT feature. The application for this card type is VSCCP. The E5-SM8G-B and SLIC cards also supports the S13/S13' EIR, ENUM, and SIP Number Portability features. The application for the E5-SM8G-B or SLIC card running the S13/S13' EIR, ENUM, or SIP application is DEIRHC, ENUMHC, or SIPHC respectively.

e5appb

E5-APP-B card to support ELAP, EPAP, IMF, LSMS, and NAS applications.

enet

E5-ENET-B card to support the IP Signaling Gateway. The application for this card type is IP SG.

enetb

E5-ENET-B or SLIC card to support the IP Signaling Gateway. The application for this card type is IP SG

ipsm

IP Services Module card (E5-IPSM or E5-ENET-B card) to support the IP User Interface feature. The application for this card type is IPS.

limatm

E5-ATM-B card to support high-speed signaling links. The application for this card type is ATMANSI.

lime1atm

E5-ATM-B card to support high-speed signaling links. The application for this card type is ATMITU.

lime1

E5-E1T1-B, or SLIC card used as an E1 card or an SE-HSL card. Applications for this card type are SS7ANSI and CCS7ITU.

limt1

E5-E1T1-B, or SLIC card used as a T1 card or an SE-HSL card; or E5- E1T1-B card used as an ST-HSL card. Applications for this card type are SS7ANSI or CCS7ITU

mcpm

E5-MCPM-B card used as a Measurement Collection and Polling Module (MCPM) card for the Measurements Platform feature. The application for this card type is MCP.

slic

SLIC card to support Service Module Applications and IP Signaling Gateway. The application for this card type are IPSPG (with or without GTT functionality), VSCCP, DEIRHC, SIPHC, ENUMHC, or SFAPP.

stc

E5-ENET-B or SLIC card used as a Signaling Transport Card (STC or E5-STC) for the EAGLE 5 Integrated Monitoring Support feature. The application for this card type is EROUTE.

telco

TELCO switch to add power consumed by Telco Switch to Frame Power Budget.

tsm

E5-TSM card used for Gateway Screening. The application for this card type is GLS.

data (optional)

The type of OAM/MPS data that can be loaded on an E5-SM8G-B or a SLIC card.

Range:**dn**

only DN related data from EPAP is loaded on the card

elap

ELAP data are loaded on the card

epap

all RTDB data (DN + IMSI) from EPAP are loaded on the card

 **Note:**

The *epap* value cannot be specified when the EPAP Data Split feature is ON.

gtt

only OAM data are loaded on the card. The card will not load any ELAP or EPAP data at all.

imsi

only IMSI related data from EPAP is loaded on the card

nosccp

only OAM data, excluding GTT data is loaded on the card. No GTT or MPS data will be downloaded on the card. This value (=nosccp) of the `data` parameter is valid only for IPSP card(s) with the `type=slic`.

**Note:**

The `nosccp` value signifies the absence of SCCP functionality on the IPSP card, and that it behaves as a regular IPSP card.

Default:

`nosccp`

force (optional)

If the `force=yes` parameter is used to add a LIM card to the database, it is recommended that you add the required number of Service Module cards to the database after the LIM card is added to avoid the loss of global title translation (GTT) traffic.

Range:

`no`

`yes`

Default:

`yes`

sflog (optional)

The `sflog=yes` parameter is used to configure a logging IPS card for logs collection.

Range:

`no`

`yes`

Default:

`no`

srvname (optional)

The name/identifier of the server/host running on E5-APP-B cards and Telco Switches.

Range:

YYYYYYYYYYYYYYY

Example

```
ent-card:loc=1206:type=limatm:appl=atmansi:force=yes
```

```
ent-card:loc=1208:type=limatm:appl=atmansi:force=no
```

```
ent-card:loc=1105:type=enet:appl=ipsg
```

```
ent-card:loc=1201:type=dsm:appl=vscpp:data=dn
```

```

ent-card:loc=1101:type=e5appb:appl=epap:srvname=tklcepap:force=yes
ent-card:loc=1103:type=e5appb:appl=elap:srvname=tklcelap
ent-card:loc=6201:type=telco:appl=switch:srvname=telco1
ent-card:loc=1101:type=dsm:appl=siphc:data=dn
ent-card:loc=1101:type=dsm:appl=vsccp:data=elap
ent-card:loc=1104:type=dsm:appl=deirhc
ent-card:loc=1101:type=dsm:appl=enumhc
ent-card:loc=1111:type=ipsm:appl=ips:sflog=yes
ent-card:loc=1103:type=slic:appl=ipsg
ent-card:loc=1105:type=slic:appl=vsccp //odd slot
ent-card:loc=1106:type=slic:appl=vsccp //even slot
ent-card:loc=1108:type=slic:appl=sfapp

```

Dependencies

Note:

The LNP feature is "turned on" when an LNP ported TNs quantity is shown in the `rtrv-ctrl-feat` command output.

For features that are enabled with the `enable-ctrl-feat` command, use the `rtrv-ctrl-feat` command to verify whether a feature is enabled or turned on. For features that are turned on with the `chg-feat` command, use the `rtrv-feat` command to display the ON or OFF status of the features.

[Table A-9](#) shows the card names, the only valid card type (`type` parameter) and application (`appl` parameter) combinations, the card part numbers, and the maximum number of cards allowed in the database.

3727 E3727 Cmd Rej: Max number of cards of application type already exist

The MAS Configuration table is corrupt or cannot be found.

2145 E2145 Cmd Rej: Failed reading MAS configuration table

2105 E2105 Cmd Rej: Invalid card TYPE and APPL load type combination

The card location must not be 1113-1118, xy09 or xy10 where x is the frame and y is the shelf.

2154 E2154 Cmd Rej: Card slot reserved by system

The specified shelf location must be provisioned and present in the frame.

2108 E2108 Cmd Rej: Shelf location not equipped

The specified card location cannot already be provisioned in the database.

2100 E2100 Cmd Rej: Card location already equipped

The DSM card must be inserted into an odd-numbered location. The $n+1$ slot next to the DSM card must be empty, where n is the odd-numbered location (for example, if the DSM card is in location 1101, then the 1102 slot must be empty and unprovisioned).

2025 E2025 Cmd Rej: Invalid card location

The Measurements Platform feature must be turned on before the command can be entered for an MCPM card (`type=mcpm:appl=mcp`).

2701 E2701 Cmd Rej: Meas Platform feature must be ON

A valid value must be specified for the `appl` parameter.

3710 E3710 Cmd Rej: APPL not valid for command

The Shelf table is corrupt or cannot be found.

2104 E2104 Cmd Rej: Failed reading the shelf table

The IMT (Card) table is corrupt or cannot be found.

2102 E2102 Cmd Rej: Failed reading the IMT table

A card that is in an active maintenance state cannot be provisioned with this command. A card must be in the Out-of Service-Memory Administration (OOS-MA) state before it can be provisioned.

3726 E3726 Cmd Rej: Active device state does not permit database change

The $n+1$ slot next to the DSM card must be empty, where n is the odd-numbered location (for example, if the DSM card is in location 1101, then the 1102 slot must be empty and unprovisioned).

2144 E2144 Cmd Rej: Location invalid for hardware configuration

The GTT feature must be turned on to specify the `appl=vsccp` parameter.

2584 E2584 Cmd Rej: GTT feature must be ON

The GWS feature must be turned on to specify the `appl=gls` parameter.

2585 E2585 Cmd Rej: GWS feature must be ON

2583 E2583 Cmd Rej: LAN feature must be ON

A valid card type must be specified. See the description for the `type` parameter for a list of valid values.

2212 E2212 Cmd Rej: Invalid card type for this command

[Table A-9](#) lists the maximum number of cards of each card type and application that are allowed in the system.

3727 E3727 Cmd Rej: Max number of cards of application type already exist

The MAS Configuration table is corrupt or cannot be found.

2145 E2145 Cmd Rej: Failed reading MAS configuration table

All provisioned shelves must contain HIPR cards before more than 115 LIM-ATM cards can be provisioned.

3512 E3512 Cmd Rej: All provisioned shelves must have HIPR cards

E2441 Cmd Rej: Dual ExAP Config must be ON and EPAP Data Split must be OFF.

If ELAP or EPAP is specified for the data parameter for VSCCP, then the Dual ExAP Config feature must be enabled.

E2441 Cmd Rej: Dual ExAP Config must be ON and EPAP Data Split must be OFF.

When data=gtt is specified for VSCCP, either the Dual ExAP Config feature must be enabled or the EPAP Data Split feature must be turned ON.

2434 E2434 Cmd Rej: Dual ExAP Config or EPAP Data Split must be ON

If DN or IMSI is specified for the data parameter for VSCCP, the EPAP Data Split feature must be turned on.

5413 E5413 Cmd Rej: EPAP Data Split feature must be turned on

If the EPAP Data Split feature is turned on or the Dual ExAP Config feature is enabled, and the value specified for the loc parameter indicates an E5-SM8G-B or SLIC card, then the data parameter must be specified. The data parameter can be specified only for an E5-SM8G-B or SLIC card running the VSCCP or SIPHC application on an IPSCP card.

**Note:**

The data parameter is valid only for SLIC IPSP cards, and not ENET/ENET-B IPSP cards.

5414 E5414 Cmd Rej: DATA parm must be specified with VSCCP/SIPHC/IPSP Appl

The Diameter S13/S13' Interface for EIR feature must be enabled before the type=dsm and appl=deirhc parameters can be specified.

2724 E2724 Cmd Rej: S13 Feature Must Be Enabled

The data parameter is not allowed with the DEIRHC GPL.

The parameter sflog=yes can be specified only when the type=ipsm and appl=ips parameters are specified.

2155 E2155 Cmd Rej: Invalid parameter combination specified

A maximum of 32 EPAP based cards can be provisioned with type=dsm and data=EPAP/DN/IMSI.

A maximum of 2 SFLOG cards can be provisioned.

3727 E3727 Cmd Rej: Max number of cards of application type already exist

The SIPNP feature must be enabled before the type=dsm and appl=siphc parameters can be specified.

2590 E2590 Cmd Rej: SIPNP Feature must be enabled.

The DATA parameter can only be equal to EPAP/ELAP when type=dsm and appl=siphc parameters are specified.

If the IP3G32 GPL is running on the location specified by the `loc` parameter, then `data=gtt` and `data=nosccp` are the only valid values for the DATA parameter. If the GPL is anything but IP3G32 GPL, `data=nosccp` cannot be used for the card on that location.

E2670 Cmd Rej: Invalid value of DATA parameter for given APPL

The `srvname` parameter must be specified for an E5-APP-B card and Telco Switch.

2665 E2665 Cmd Rej: SRVNAME must be specified with E5APPB Card/Telco Switch

The `srvname` must be unique for each E5-APP-B card and Telco Switch to be provisioned in the system.

2666 E2666 Cmd Rej: SRVNAME already exists.

Unless the `force` parameter is specified, two E5-APP-B cards running the same application cannot be provisioned in slots drawing power from the same FAP power source. EAGLE shelf card slots XXX1, XXX2, XXX5, and XXX6 draw power from the A designation FAP power source. Cards XXX3, XXX4, XXX7, and XXX8 draw power from the B designation FAP power source.

2667 E2667 Cmd Rej: Same Power source of E5APPB cards running same application

The `srvname` parameter can only be used with E5-APP-B card or Telco Switch.

2131 E2131 Cmd Rej: Parameters not valid for card type.

Telco switch can only be provisioned in a shelf with type equal to FPB.

2676 E2676 Cmd Rej: Telco switch can be provisioned only in FPB shelf.

E5-APP-B card and Telco switch cannot be provisioned in the same shelf. They are mutually exclusive.

2677 E2677 Cmd Rej: E5APPB card and Telco switch are not allowed on the same shelf.

A maximum of 6 Telco switches can be provisioned in a shelf.

2678 E2678 Cmd Rej: Maximum 6 TELCO Switches can be provisioned in a shelf.

E5-ENET-B, SLIC, and E5-APP-B cards can be provisioned if the shelf FAN bit is turned ON.

3866 E3866 Cmd Rej: Shelf FAN bit must be enabled

When re-entering the command for the provisioning of the 26th Service Module card, the re-entered command must specify `type=dsm` and the same `loc` value as the original command. See "Service Module Cards" under [Notes](#) for more information.

5275 E5275 Cmd Rej: ent-card command for type DSM already in progress

The `data` parameter can only be specified for IP3G application running on SLIC card.

3540 E3540 Cmd Rej: DATA parm can be entered for IP3G appl running on SLIC card only.

Notes

ITU Environment

The `force` parameter can be specified to add the card even if its addition would exceed the SCCP TPS threshold. If the `force=yes` parameter is specified, the command is accepted but the following warning message appears:

```
WARNING: System current rated TPS unable to support additional SS7 card =  
use FORCE=YES.
```

If the `force=yes` parameter is specified, it is recommended that the required number of Service Module cards be added to the database after the LIM card is added. This action avoids the loss of GTT traffic. Another option is to add additional Service Module cards or to increase the SCCP TPS threshold, and then add the LIM card. This action prevents the alarm from being triggered.

For additional information on using the `force` parameter, see Chapter 4, "System Administration Procedures" of *Database Administration - System Management User's Guide*.

STC Cards

STC cards are E5-ENET-B cards that run the EROUTE application. E5-ENET-B cards provisioned with `type=stc` can be referred to as E5-STC cards.

The `type=stc` and `appl=eroute` parameters apply only when the EAGLE 5 Integrated Monitoring Support (E5IS) feature is turned on.

An "n+1" STC configuration is required to provide redundancy: therefore, a minimum of two STC cards must be provisioned in the EAGLE.

The EAGLE can contain a maximum of 32 STC cards.

The STC cards must be provisioned in the same shelf that contains the cards or links being monitored.

E5-SM8G-B/SLIC Cards

If an LNP feature quantity that is greater than 192 million numbers and less than 240 million numbers is present in a node, and there is an attempt to insert an E5-SM8G-B or SLIC card, then the card auto-inhibits (see the `alw-card` command).

IPSM Cards

IPSM cards consist of E5-IPSM and E5-ENET-B cards.

A maximum of three IPSM cards are supported for a single EAGLE node, on any shelf or combination of shelves.

Apart from these, two more cards with application type IPS can be configured on E5-ENET-B cards for the SS7 Firewall Logging feature.

IPSG Cards

IPSG cards consist of E5-ENET-B, or SLIC cards running the IP Signaling Gateway application (`type=enet`, `enetb` or `slic`, and `appl=ipsg`). The IPSG application combines the functionality of IPLIMx M2PA and IPGWx M3UA. They can also have GTT-enabled capabilities support with SLIC running the 64-bit IPSG GPL.

If an E5-ENET-B card is inserted in a slot provisioned for SLIC, then the E5-ENET-B card will be auto-inhibited and issue a degraded mode alarm.

E5-ATM-B Cards

E5-ATM-B cards support ANSI and ITU implementations. The cards can support 3 ATM signaling links, operating at 1 Erlang.

IP Signaling Capacity Guidelines

System limits on the total number of cards allowed in the system are not enforced by the `ent-card` command. If the HIPR2 High Rate Mode feature is turned off, then the total IP Signaling TPS for the system must be less than or equal to 500,000 TPS. If the HIPR2 High Rate Mode feature is turned on, then the total IP Signaling TPS for the system must be less than or equal to 750,000 TPS. If the HIPR2 High Rate Mode and 1M System TPS features are turned on, then the total IP Signaling TPS for the system must be less than or equal to 1,000,000 TPS.

E5-TSM Cards

A maximum of eight E5-TSM cards are supported for a single EAGLE node, on any shelf or combination of shelves, to support the GLS application for Gateway Screening.

Fast Copy Cards

E5-ENET-B, or SLIC cards running the IPSG or IPGHC GPL are considered to be *FC-capable*. A card running the IPGHC GPL must be in the IS-NR State before the card can be considered *FC-capable*. This restriction does not apply to cards running the IPSG GPL. An *FC-capable* card is considered *FC-enabled* when Fast Copy monitoring is enabled for the respective GPL.

Service Module Cards

Service Module cards consist of E5-SM8G-B or SLIC cards.

If the `ent-card` command is issued while an EPAP-based feature is enabled, then a warning is issued only for the provisioning of the 26th Service Module card. The command must be re-entered within 30 seconds to be accepted. If the command is entered a second time with `type=dsm` and a different `loc` specified, the command will be rejected.

For Service Module applications (VSCCP, ENUMHC, SIPHC, DEIRHC), the `ent-card` command can be used to provision E5-SM4G and E5-SM8G-B cards only in even numbered slots and the next odd numbered slot has to be empty since these cards are dual slots. There is no such restriction with SLIC cards since it is a single slot card, as in, these applications can be provisioned either in even numbered slot or odd numbered slot.

E5-E1T1-B Cards

E5-T1T1-B cards support ANSI and ITU implementations and can be used to replace the cards.

Each E5-E1T1-B card provides access to eight E1/T1 ports. Each card supports up to two SE-HSL signaling links on one of the eight ports (links A or B).

EPM and EPM-B Based Cards

Release 44.0 introduces the E5-ATM-B, E5-ENET-B, and E5-MCPM-B cards and Release 45.0 introduces the E5-E1T1-B card, which are all based on a new EPM-B. If the Message Flow Control option is provisioned (see the [chg-stpopts](#) command), and fan trays are installed, then the EPM-B cards can co-exist and be hot-swapped with the EPM cards. The E5-ENET-B and SLIC card running the IPS application and the

E5-MCPM-B card do not require Message Flow Control, except for cards configured as SFLOG.

Service and Link Interface Cards

Release 46.3 introduced the EAGLE's Service and Link Interface Card (SLIC). These cards are the next generation, general purpose EAGLE processors and can be installed in any EAGLE shelf equipped with fan trays. In Release 46.3 the SLIC card supports the IPSPG application and is hot-swappable with E5-ENET-B cards. In Release 46.5, the SLIC card supports VSCCP, SIPHC, ENUMHC, DEIRHC, CCS7ITU and SS7ANSI applications.

MCPM Cards

E5-MCPM-B cards are the MCPM cards. These cards are used to perform Measurements collection and reporting functionality for nodes with a link capacity greater than 2,400 (1,200 if 15 Minute Measurements is enabled). E5-OAM Integrated Measurements is used for nodes with a link capacity of 2400/1200 or less.

E5-APP-B Cards

E5-APP-B cards support the ELAP, EPAP, IMF, LSMS and NAS applications. E5-APP-B card is dual-slot card. These cards host the EPAP, ELAP, IMF, LSMS and NAS application servers that can be placed in any odd numbered slot in any EAGLE shelf. These cards do not connect to the IMT bus. The ENT-CARD command only reserves a slot in an EAGLE shelf for this card. An E5-APP-B card cannot be provisioned if there is another E5-APP-B card already on the same source of power unless the force parameter is specified.

TELCO Switches

Telco Switches are not application cards. The support of Telco Switches is added in the ENT-CARD command to reserve a slot in an Eagle shelf (type=FPB) and add the power consumed by Telco Switch to the Frame Power Budget. These switches will not be connected to the IMT bus. Telco Switch and E5-APP-B cards will be mutually exclusive for a shelf. There can be a maximum of 6 Telco Switches in a shelf.

4.1.285 ent-csl

Use this command to enter new screening data into the Common Screening List (CSL). The Common Screening List commands are used to tailor certain types of general screening information to specific features.

Parameters

ds (optional)

Digit string. A unique string of digits that is used by the specified screening feature.

Range:

1-15 hexadecimal digits.
Valid digits are 0-9, a-f, A-F.

- 1-6 digits—Prepaid IDP Query Relay *ccnc* list
- 1-15 digits—Prepaid IDP Query Relay *gt* list
- 1-10 digits—Prepaid IDP Query Relay *skbcsm* list
- 4 digits—IDP Screening for Prepaid *skts* list
- 1-15 digits—IDP Screening for Prepaid *insl* list
- 1-15 digits—VFLEX *vmprfx* list
- 1-6 digits—Info Analyzed Relay Base *ccnc* list
- 1-15 digits—Info Analyzed Relay Base *gt* list
- 2 digits—Info Analyzed Relay Base *trig* list
- 1-15 digits — EIR *imsipfx* list

Table 4-23 lists valid hexadecimal values for the Info Analyzed Relay Base *trig* list *ds* entries.

feature (optional)

Feature name. The name of the enabled feature for which the command is entered.

Note:

The `pn` or `feature` parameter must be specified to identify the feature.

Range:

`ayyyyyyyyyyyyyyyyyyyyyyyyyyy`

1 alphabetic character followed by up to 24 optional alphanumeric characters, including spaces and special characters, enclosed in double quotation marks (" ").

- EIR
- IDP Screening for Prepaid
- IDP Service Key Routing
- Info Analyzed Relay Base
- Prepaid IDP Query Relay
- VFLEX

list (optional)

The name of the Common Screening List associated with the feature.

Note:

This parameter must be specified when the feature uses more than one type of Common Screening List.

Range:

ccnc

CC+NC List

delpfx

Delete Prefix List

gt

Global Title List

imsipfx

IMSI Screening Prefix List

insl

In Network Subscriber List

npbypass

SIP NPBYPASS List

skbcm

SK+BCSM List

skts

SK+TS List

trig
Trigger List

vmplx
Voice Mail Prefix List

opcdpc
OPC + DPC List

The following screening lists are valid for the indicated features:

- *ccnc*, *gt*—Prepaid IDP Query Relay and Info Analyzed Relay Base
- *imsipfx* ---EIR

 **Note:**

If the list argument is not specified in this command, then `list=imsipfx` by default is taken.

- *skbcm*—Prepaid IDP Query Relay and IDP Service Key Routing
- *skts*, *insl*—IDP Screening for Prepaid
- *trig*—Info Analyzed Relay Base
- *vmplx*—VFLEX
- *opcdpc*—Prepaid IDP Query Relay

The *delpfx* list is not supported at this time. This list should only be used by Oracle personnel.

dpci/dpcn/dpcn24/dpcn16 (optional)

Destination point code.

dpci(optional)

ITU international destination point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*).

Range:

s, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix-s

zone-0-7

area-000-255

id-0-7

The point code *0-000-0* is not a valid point code.

dpcn(optional)

ITU national destination point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the `chg-stpopts:npcfnti` flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc,m1-m2-m3-m4-gc*). The *prefix* subfield

indicates a spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

Range:

s-, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix-s-

nnnnn-0-16383

gc-aa-zz

m1-m2-m3-m4-0-14 for each member; values must sum to 14

dpcn24(optional)

24-bit ITU national destination point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*).

Range:

000 - 255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

msa-000-255

ssa-000-255

sp-000-255

dpcn16(optional)

16-bit ITU national point code with subfields *unit number sub number area main number area* (*un-sna-mna*).

Range:

000 - 127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

un---000---127

sna---000---15

mna---000---31

opci/opcn/opcn24/opcn16 (optional)

Originating point code.

opci(optional)

ITU international destination point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*).

Range:

s-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix-s

zone-0-7

area-000-255

id-0-7

The point code *0-000-0* is not a valid point code.

opcn(optional)

New ITU national originating point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the *chg-stpopts:npcfmti* flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

Range:

s-, *0-16383*, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix-s-

nnnnn-0-16383

gc-aa-zz

m1-m2-m3-m4-0-14 for each member; values must sum to 14.

opcn24(optional)

24-bit ITU national originating point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*).

Range:

000 - 255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

msa-000-255

ssa-000-255

sp-000-255

opcn16(optional)

opcn24(optional)

16-bit ITU national point code with subfields *unit number sub number area main number area* (*un-sna-mna*).

Range:

000 - 127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

un---000---127

sna---000---15

mna---000---31

Range:

000 - 255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

msa-000-255

ssa-000-255

sp-000-255

p1 (optional)

Parameter Value 1. This parameter is specific to the feature and list that use the parameter.

Range:

ZZZZZZZZZZ

Valid values for the IDP Service Key Routing feature are:

- 3 or *prepaid1*—Prepaid Portability Type 3 for the SKBCSM list
- 4 or *prepaid2*—Prepaid Portability Type 4 for the SKBCSM list
- 6-35 or *prepaid3-prepaid32*—Prepaid Portability Types 6 through 35 for the SKBCSM list
- 255 or *prepaidno*—No Prepaid Portability Type for the SKBCSM list

Valid values for the EIR feature are:

- 1 or *range* - Check only Range IMEI Table for the IMSIPFX list
- 2 or *individual* - Check only Individual IMEI Table for the IMSIPFX list
- 3 or *both* - Check Individual IMEI Table then Range IMEI Table for the IMSIPFX list
- 4 or *none* - No check in either Individual or Range IMEI Table for the IMSIPFX list

Valid values for the Prepaid IDP Query Relay feature are:

- 0, 1—National or International for the DELPFX list, which is for Oracle personnel use ONLY.

**Note:**

The *p1* parameter is used by the IDP Service Key Routing feature or the EIR feature.

Default:

prepaidno

p2 (optional)

Parameter Value 2. The IDP Relay Service that is associated with an SKBCSM list DS entry. Multiple IDP Relay Services can be provisioned for use with NPP or Response Type for EIR feature that is associated with an *imsipfx* list DS Entry. This value can be entered as a number or as a mnemonic.

Range:

ZZZZZZZZZZ

Valid values for the Prepaid IDP Query Relay feature are:

- 1 or *idprcdpn* —IDPRCDPN Service for the SKBCSM list
- 2 or *idprcdpn2* —IDPRCDPN2 Service for the SKBCSM list
- 3 or *idprcdpn3* —IDPRCDPN3 Service for the SKBCSM list
- 4 or *idprcdpn4* —IDPRCDPN4 Service for the SKBCSM list

Valid values for the EIR feature are:

- 1 or *whitelist* - Response Type as Whitelist for *imsipfx* list.
- 2 or *graylist* - Response Type as Graylist for *imsipfx* list.
- 3 or *blacklist* - Response Type as Blacklist for *imsipfx* list.
- 4 or *unknown* - Response Type as Unknown for *imsipfx* list.

 **Note:**

The p2 parameter is used by the Prepaid IDP Query Relay feature or the EIR feature.

Default:

idprcdpn

p3 (optional)

Parameter Value 3. The IDP Relay Service that is associated with a GT list DS entry. Multiple IDP Relay Services can be provisioned for use with NPP or Response Type for EIR feature that is associated with an *imsipfx* list DS Entry. This value can be entered as a number or as a mnemonic.

Default:

P3 by default is *idprcdpn*

Range:

ZZZZZZZZZZ

Valid values for Prepaid IDP Query Relay features are:

- *1* or *idprcdpn*—IDPRCDPN Service for the GT list
- *2* or *idprcdpn2*—IDPRCDPN2 Service for the GT list
- *3* or *idprcdpn3*—IDPRCDPN3 Service for the GT list
- *4* or *idprcdpn4*—IDPRCDPN4 Service for the GT list

pc (optional)

ANSI point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.

 **Note:**

See [Point Code Formats and Conversion](#) for a detailed description of point code formats, rules for specification, and examples.

Synonym:

pca

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001-005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006-255*.

The point code *000-000-000* is not a valid point code.

pc/pca/pci/pcn/pcn24 (optional)

Point code.

pci (optional)

ITU international point code with subfields *zone-area-id*.

Range:

0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

zone—0-7

area—000-255

id—0-7

The point code 0-000-0 is not a valid point code.

pcn (optional)

ITU national destination point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the `chg-stpopts:npcfmti` flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc, m1-m2-m3-m4-gc*).

Range:

s-, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s-*

nnnnn—0-16383

gc—*aa-zz*

m1-m2-m3-m4—0-14 for each member; values must sum to 14

pcn24 (optional)

24-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*).

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

msa—000-255

ssa—000-255

sp—000-255

pfxstrip (optional)

This parameter in NPBYPASS list indicates whether matched prefix must be deleted or not.

Range:

yes

no

Default:

no

pn (optional)

Part number. The 9-digit "893xxxxxx" part number of the feature for which the command is entered. The `rtrv-ctrl-feat` command description shows the part number in the command output example.

 **Note:**

The `pn` or `feature` parameter must be specified to identify the feature.

Range:

893000000 - 893999999

The first 3 digits are 893. Do not separate the digits with dashes or spaces. The following part numbers are valid for this command:

- 893012301---EIR
- 893015501—IDP Screening for Prepaid
- 893034201—Info Analyzed Relay Base
- 893016001—Prepaid IDP Query Relay
- 893016701—VFLEX

scpgta (optional)

Signaling Control Point (SCP) Global Title Address (GTA). The value used by the SKGTARTG Service Action in IDP Relay IDPRCDPN(X) Services to replace the SCCP CdPA GTA in the outgoing message.

Range:

1 - 21 hexadecimal digits. Valid digits are 0-9, a-f, A-F.

 **Note:**

The `scpgta` parameter is used by the Prepaid IDP Query Relay feature.

Default:

none

Example

```
ent-csl:feature="Prepaid IDP Query Relay":list=ccnc:ds=123456
ent-csl:pn=893015001:list=ins1:ds=123456789bcdEF
ent-csl:feature="Prepaid IDP Query
Relay":list=skbcsm:ds=0000000056:p2=idprcdpn2:scpgta=896589
ent-
csl:feature="EIR":list=imsipfx:ds=401134134:p1=range:p2=whitelis
t
ent-csl:pn=893016001:list=opcdpc:dpci=4-5-6
ent-csl:pn=893016001:list=opcdpc:dpci=4-5-6:opci=2-3-4
```

Dependencies

An enabled feature must be specified using either a valid part number (`pn` parameter) or feature name (`feature` parameter). The specified feature must use a Common Screening List.

4458 E4458 Cmd Rej: Common screening list feature is required

The feature that is specified in the `feature` parameter must be enabled.

4468 E4468 Cmd Rej: Common screening list requested feature must be enabled

The `list` parameter must be specified for features that use more than one type of screening list.

4459 E4459 Cmd Rej: Common screening list type is required

The value specified for the `list` parameter must be valid for the specified screening feature.

4460 E4460 Cmd Rej: Common screening list type is invalid

The length of the digit string specified for the `ds` parameter must be valid for the screening feature and list type.

4493 E4493 Cmd Rej: Common screening list DS length invalid

A valid `ds` parameter value is required for the specified feature and list type.

4340 E4340 Cmd Rej: Common screening list key invalid

The following parameters are allowed with the indicated common screening list type:

- `list=gt` — `ds` parameter
- `list=ccnc` — `ds` parameter
- `list=imsipfx---` `ds` parameter
- `list=insl---` `ds` parameter
- `list=skbcm` — `ds` and `scpgta` parameters
- `list=skts` — `ds` parameter
- `list=trig` — `ds` parameter
- `list=vmpfx` — `ds` parameter

4464 E4464 Cmd Rej: Common screening list invalid parameter combination

The leading digit pattern of the value specified for the `ds` parameter must be unique in the specified screening list for the indicated feature.

4489 E4489 Cmd Rej: Common screening list key must be unique

The Common Screening List table is corrupt or cannot be found.

4467 E4467 Cmd Rej: Common screening list read fail

Each list table is allowed to contain a maximum number of entries:

- IDP Screening for Prepaid
 - INSL —50 entries
 - SKTS—25 entries
- Prepaid IDP Query Relay
 - CCNC —20 entries
 - GT—500 entries

- SKBCSM—150 entries
- VFLEX
 - VMPFX—100 entries
- Info Analyzed Relay Base
 - CCNC—20 entries
 - GT—500 entries
 - TRIG—150 entries
- EIR
 - IMSIPFX — 100000 entries

4466 E4466 Cmd Rej: Common screening list full

The `pc` or `ds` parameter must be specified in the command. The parameters cannot be specified together in the command.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The value specified for the feature parameter must be a valid feature name for a feature that uses a Common Screening List. The feature name must be specified as it appears in the `rtrv-ctrl-feat` command output. Enough of the name must be specified to make the name unique when two features begin with the same word or acronym.

4339 E4339 Cmd Rej: Common screening list feature invalid

The value specified for the `ds` parameter must be unique in the specified screening list for the indicated feature.

4461 E4461 Cmd Rej: Common screening list entry already exists

The `scpgta` and `pc` parameters cannot be specified together in the command.

2155 E2155 Cmd Rej: Invalid parameter combination specified

If the `scpgta` parameter is specified, then the `ds` parameter must be specified.

4340 E4340 Cmd Rej: Common screening list key invalid

A valid `p1` and `p2` parameter value is required for the specified feature and list type.

4499 E4499 Cmd Rej: Common screening list invalid parameter value

`P3` parameter can only be entered when `mergein` is on in `TTROPTS`.

3677 E3677 Cmd Rej: MERGE_IN should be ON to use P3

If list type `opcdpc` given, then `p1`, `p2`, `p3`, `ds`, `scpgta` and `pc` parameters cannot be specified.

For IDPR service, if list type `opcdpc` given, then `opc/dpc` parameter must be specified and the types for the OPC and DPC must match.

Notes

[Table 4-23](#) lists the decimal values, the hexadecimal values, and the mnemonic for each TRIGTYPE code that can appear in the CSL TRIG list.

Table 4-23 TRIGTYPE Hexadecimal Codes

Hex	Decimal	Mnemonic	Hex	Decimal	Mnemonic
00	0	Unspecified	1A	26	Inter-LATA_ Toll_Call.
01	1	All_Calls.	1B	27	World_Zone_ Call.
02	2	Double_ Introducing _Star.	1C	28	International_ Call.
03	3	Single_ Introducing_ Star.	1D	29	Unrecognized_ Number.
04	4	Reserved	1E	30	Prior_ Agreement.

4.1.286 ent-cspc

Use this command to add signaling points to a current broadcast signaling point code group. These point codes are notified of the receipt by the system of subsystem-prohibited (SSP) and subsystem-allowed (SSA) SS7 SCCP management messages from an application at an adjacent signaling point and subsystem. This command can also be used to add new groups to the table.

Note:

The command must be entered first with the group only (no point code); then the command must be entered again with the group code and the point code.

Parameters

Note:

See [Point Code Formats and Conversion](#) in Appendix A for a detailed description of point code formats, rules for specification, and examples.

grp (mandatory)

Name of the group. This parameter is a character string associated with this broadcast list.

Range:

ayyyyyyy

1 alphabetic character followed by up to 7 alphanumeric characters

pc (optional)

ANSI point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.

Synonym:

pca

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When `chg-sid:pctype=ansi` is specified, `ni = 000` is not valid.

When `chg-sid:pctype=ansi` is specified, `nc = 000` is not valid if `ni = 001–005`.

When `chg-sid:pctype=ansi` is specified, `nc = 000` is valid if `ni = 006–255`.

The point code `000-000-000` is not a valid point code.

pc/pca/pci/pcn/pcn24/pcn16 (optional)

Point code.

This parameter is mandatory when the group and point code are entered, after the group has been entered.

pci (optional)

ITU international point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*)

Range:

s-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s*

zone—0-7

area—000-255

id—0-7

The point code 0-000-0 is not a valid point code.

pcn (optional)

ITU national point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the `chg-stpopts:npcfmti` flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

Range:

s-, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s*-

nnnnn—0-16383

gc—*aa-zz*

m1-m2-m3-m4—0-14 for each member; values must sum to 14

pcn24 (optional)

24-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*).

Range:

p-, 000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*p*

msa—000-255

ssa—000-255

sp—000-255

pcn16 (optional)

16-bit ITU national point code with subfields *unit number sub number area main number area* (*un-sna-mna*). The *prefix* subfield indicates a private point code.

Range:

p-, 000-127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix-p

un-000-127

sna-000-15

mna-000-31

Example

```
ent-cspc:grp=grp01:pc=144-201-001
ent-cspc:grp=group02:pcn24=10-100-10
ent-cspc:grp=grp01
ent-cspc:grp=grp01:pc=240-3-55
ent-cspc:grp=grp01:pci=7-233-5
ent-cspc:grp=grp01:pci=s-7-233-5
ent-cspc:grp=grp01:pcn24=234-56-245
ent-cspc:grp=grp01:pcn16=123-13-27
```

Dependencies

Reserved words (for example, " none ") cannot be used to name a group.

3040 E3040 Cmd Rej: <string> cannot be used in this command

The specified CSPC Broadcast group name must not exist if a point code is not specified. If the specified group name does not exist, and a point code is not specified, a new group is created.

2408 E2408 Cmd Rej: CSPC broadcast group already exists

The Spare Point Code Support feature must be enabled before the spare point code prefix s- can be specified for an ITU-I or ITU-N point code.

4193 E4193 Cmd Rej: Spare Point Code Feature must be enabled

If the CSPC group name and a point code are specified, the group name must exist in the database.

2411 E2411 Cmd Rej: CSPC group does not exist

The specified point code must exist in the Routing Table and cannot already exist in the specified group.

2413 E2413 Cmd Rej: PC already exists in CSPC group

The destination point code must be a full point code (*ni-nc-ncm*).

N/A N/A

The concerned signaling point code must have been specified previously as a full point code destination, or it must be a member of a previously specified cluster.

N/A N/A

A maximum of 2550 Concerned Signaling Point Code Broadcast groups can be defined.

2410 E2410 Cmd Rej: CSPC broadcast group table is full

A maximum of 96 point codes can be defined for each group.

2415 E2415 Cmd Rej: Concerned node table for this group is full

If the ANSI/ITU SCCP Conversion feature is not enabled, then the first point code to be entered defines the network type for the group. All subsequent point codes for the group must be for the same network type.

2449 E2449 Cmd Rej: CSPC group network type does not match PC network type

The ANSI/ITU SCCP Conversion feature must be enabled before the point codes in a group can be of different network types.

2449 E2449 Cmd Rej: CSPC group network type does not match PC network type

The point code must exist in the routing table.

2417 E2417 Cmd Rej: Point code does not exist in the routing table

A routeset and link that provides a path to the new CSPC must be configured before the `ent-cspc` command can be entered.

5072 E5072 Cmd Rej: PC has no allowed route

Notes

To broadcast SSPs and SSAs to one or more mated applications, each mate's point code must be added to the CSPC group. Otherwise the broadcast is not sent to the mate.

In this command, only ITU-international and ITU national point codes support the spare point code subtype prefix (`s-`).

Output

The command must be entered with just the `grp` parameter to define a new group in the database.

```
ent-cspc:grp=grp01
```

```
rlghncxa03w 04-01-07 11:43:04 EST EAGLE 31.3.0
ENT-CSPC: MASP A - COMPLTD
```

```
;
```

The command must specify an existing group and a point code to add the point code to the group.

```
ent-cspc:grp=grp01:pc=144-201-001
```

```

4.1.287 ent-dconn

Use this parameter to enter DEIR connection information. The DCONN table supports the provisioning information related to the Diameter connections.

Parameters**dcname (mandatory)**

Diameter connection name. This parameter specifies the unique logical name assigned to each diameter connection.

Range:

aaaaaaaaaaaaaaaa

A string of alphanumeric characters, beginning with a letter and up to 15 characters in length. Valid values are *a..z*, *A..Z*, *0..9*.

Default:

No change to the current value

System Default:

null

aname (mandatory)

Association name linked with particular diameter connection.

Range:

aaaaaaaaaaaaaaaa

A string of alphanumeric characters, beginning with a letter and up to 15 characters in length. Valid values are *a..z*, *A..Z*, *0..9*.

Default:

No change to the current value

System Default:

null

maxtps (optional)

Maximum TPS. This is the maximum TPS for a diameter connection. The unused card capacity will be allocated among the connections that have exceeded their RSVDTPS up to the limit of the MAXTPS value provisioned for the particular connection.

Range:

100 - 8000

Default:

No change to the current value

System Default:

8000

rsvdtps (optional)

Reserved TPS. This is the guaranteed TPS (Transactions per second) for a diameter connection. Total RSVDTPS on a card cannot exceed 8000.

Range:

100 - 8000

Default:

No change to the current value

System Default:

250

td (optional)

Diameter Peer Disconnect timer. This timer is used to control how long the S13 process will wait for a DPA (Disconnect Peer Answer) response before sending a DPR (Disconnect Peer Request). The value given to a timer is in seconds.

Range:

1 - 10

Default:

No change to the current value

System Default:

3

tw (optional)

Diameter Watchdog timer. This timer is used to control how long the S13 process will wait for a DWA (Diameter Watchdog Answer) response before sending a DWR (Diameter Watchdog Request). The value given to a timer is in seconds.

Range:

6 - 30

Default:

No change to the current value

System Default:

6

Example

```
ent-dconn:dcname=connection1:aname=assoc1:rsvdtps=1000
ent-
dconn:dcname=connection2:aname=assoc2:rsvdtps=500:td=5:tw=10
ent-dconn:dcname=connection3:aname=assoc3:maxtps=5000:td=2
```

Dependencies

S13/S13' EIR feature must be enabled before entering any diameter connection.

2724 E2724 Cmd Rej: S13 Feature Must Be Enabled

DCONN table should be accessible.

2735 E2735 Cmd Rej: Failed reading DCONN table

A unique DCNAME must be specified for a new connection.

2588 E2588 Cmd Rej: Connection Name already exists

The adapter for the association linked to diameter connection on DEIR card must be of type DIAM.

2799 E2799 Cmd Rej: Association adapter is not DIAM

ANAME must be present in IPAPSOCK table.

4099 E4099 Cmd Rej: Association name not found

ANAME cannot be assigned to another diameter connection.

2792 E2792 Cmd Rej: Association already assigned to Connection

Any OPEN association cannot be assigned to a new diameter connection (the open parameter set to *yes/no* with the *chg-assoc* command).

3448 E3448 Cmd Rej: LHOST has open socket or association

RSVDTPS of all the diameter connections on a particular card must not exceed the MAXTPS.

2808 E2808 Cmd Rej: TPS exceeded on DEIR card

RSVDTPS of a diameter connection must be less than or equal to MAXTPS.

2732 E2732 Cmd Rej: RSVDTPS must be less than or equal to MAXTPS

Notes

The `ent-assoc` command should be used to configure an association for the adapter type = DIAM prior to establishing any diameter connection.

Maximum of 32 connections can be provisioned per Diameter card and maximum of 16 diameter cards are allowed. So, maximum of 512 diameter connections can be provisioned.

Output

```
ent-dconn:dcname=connection1:aname=assoc1:rsvdtps=1000
```

```

4.1.288 ent-dlk

Use this command to add a TCP/IP data link to the database. The TCP/IP data link is used to send copies of SS7 MSUs (selected by the gateway screening feature) to a remote host for further processing.

Parameters

ipaddr (mandatory)

The TCP/IP data link's IP address. This is a TCP/IP address expressed in standard dot notation. IP addresses consist of the system's network number and the machine's unique host number. An example IP address is *192.126.100.5*, where *192.126.100* is the network number and *5* is the machine's host number.

Range:

loc (mandatory)

The card location as stenciled on the shelf of the system.

Range:

*1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318,
2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318,
3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318,
4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318,
5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318,
6101 - 6108, 6111 - 6118*

auto (optional)

Automatic. This parameter specifies whether the hardware automatically determines duplex and speed.

Note:

This parameter is valid only for E5-ENET-B cards

Range:

yes

Duplex and speed are automatically determined.

no

Duplex and speed are not automatically determined.

Default:

yes

duplex (optional)

The mode of operation of the interface

**Note:**

This parameter is valid only for E5-ENET-B cards

Range:***half***

The mode of operation of the interface is half duplex.

full

The mode of operation of the interface is full duplex.

Default:

half

speed (optional)

The bandwidth for the interface in megabits per second

Range:

10

100

Default:

10

Example

```
ent-dlk:loc=1201:ipaddr=196.3.202.45
```

```
ent-dlk:loc=1101:ipaddr=192.168.63.11:speed=10:duplex=half
```

```
ent-dlk:loc=1107:ipaddr=192.168.63.12:auto=yes
```

Dependencies

The shelf and card must be equipped.

2101 E2101 Cmd Rej: Card location is unequipped

The IP address (*ipaddr*) cannot be in the TCP/IP link table and cannot be a TCP/IP node.

2607 E2607 Cmd Rej: IPADDR assigned to a TCP/IP node

The specified card cannot contain any data links.

2133 E2133 Cmd Rej: There is a link already assigned to this port

The specified card's status must be out of service maintenance disabled (OOS-MT-DSBLD).

Enter the `rept-stat-card` command to verify the state of the card.

2603 E2603 Cmd Rej: Card must be inhibited before executing this command

The specified TCP/IP data link cannot be in the database.

2638 E2638 Cmd Rej: IPADDR already assigned to another TCP/IP link

2071 E2071 Cmd Rej: Network Portion Invalid

If the `auto=yes` parameter is specified, then the `speed` and `duplex` parameters cannot be specified.

3740 E3740 Cmd Rej: If AUTO=yes, Then Duplex and SPEED are not allowed

The `speed` and `duplex` parameters must be specified together in the command.

3343 E3343 Cmd Rej: Speed and Duplex must be specified together

If the `speed=100` parameter is specified, then an E5-ENET-B card must be used.

4490 E4490 Cmd Rej: Card type must be DCM/SLIC for a 100Mbit link

The IP address (`ipaddr`) cannot be in the TCP/IP link table and cannot be a TCP/IP router.

2636 E2636 Cmd Rej: IPADDR assigned to a TCP/IP Router

Notes

The value of the `ipaddr` parameter cannot match the TCP/IP default router's IP address (the `iprte` parameter of the `ent-ip-node` command).

Output

```
ent-dlk:loc=1201:ipaddr=196.3.202.45
```

```
tekelecstp 07-04-03 11:12:34 EST EAGLE 37.0.0
ENT-DLK: MASP A - COMPLTD

4.1.289 ent-dstn

Use this command to add a destination address (a destination point code, capability point code, or network cluster address) and the associated destination attributes to the destination point code table.

Caution:

When using the Network Routing feature, limited network management is provided for point codes not covered by full point code routing, Cluster Routing, or Nested Cluster Routing.

Parameters

Note:

See [Point Code Formats and Conversion](#) for a detailed description of point code formats, rules for specification, and examples.

dpc/dpca/dpci/dpcn/dpcn24/dpcn16 (mandatory)

Destination point code.

dpc (optional)

ANSI destination point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*. The *prefix* subfield indicates a private point code (*prefix-ni-nc-ncm*).

Synonym:

dpca

Range:

p-, *000-255*, *

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix-p-

The asterisk value (*) is not valid for the *ni* subfield.

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001-005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006-255*.

The point code *000-000-000* is not a valid point code.

dpci (optional)

ITU international destination point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-zone-area-id*).

Range:

s-, *p-*, *ps-*, *0-255*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s-, p-, ps

zone—0-7

area—000-255

id—0-7

The point code *0-000-0* is not a valid point code.

dpcn (optional)

ITU national destination point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the `chg-stpopts:npcfmti` flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

Range:

s-, p-, ps-, 0-16383, aa-zz

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s-, p-, ps

nnnnn—0-16383

gc—aa-zz

m1-m2-m3-m4—0-14 for each member; values must sum to 14

dpcn24 (optional)

24-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*). The *prefix* indicates a private point code (*prefix-msa-ssa-sp*).

Range:

p-, 000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—p

msa—000-255

ssa—000-255

sp—000-255

Default:

No change to current value.

dpcn16 (optional)

16-bit ITU national point code with subfields *unit number sub number area main number area* (*un-sna-mna*). The *prefix* indicates a private point code (*prefix-un-sna-mna*).

Range:

p-, 000-127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix-p

un-000-127

sna-000-15

mna-000-31

Default:

No change to the current value.

aliasa/aliasi/aliasn/aliasn24/aliasn16 (optional)

Alias point code.

aliasa (optional)

ANSI alias point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*. This parameter is not valid if an ANSI (DPC or DPCA) point code is entered.

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001-005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006-255*.

The point code *000-000-000* is not a valid point code.

aliasi (optional)

ITU international alias point code list with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*).

If an ITU international destination (DPCI) point code is entered, then the *dpci* and *aliasi prefix* subfields cannot be the same (both spare or both non-spare). Up to 2 comma-delimited entries can be entered in the point code list.

Range:

s-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s

zone—0-7

area—000-255

id—0-7

The point code *0-000-0* is not a valid point code.

aliasn (optional)

ITU national alias point code list in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the *chg-stpopts:npcfmti* flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

If an ITU national destination (DPCN) point code is entered, then the *dpcn* and *aliasn prefix* subfields cannot be the same (both spare or both non-spare). Up to 2 comma-delimited entries can be entered in the point code list.

Range:*s-*, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*prefix—s-**nnnnn—0-16383**gc—aa-zz**m1-m2-m3-m4—0-14* for each member; values must sum to 14**aliasn24 (optional)**24-bit ITU national alias point code with subfields *main signaling area-sub signaling area-signaling point (msa-ssa-sp)*. This parameter is not valid if a 24-bit ITU national (DPCN24) point code is entered.**Range:**

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*msa—000–255**ssa—000–255**sp—000–255***aliasn16 (optional)**16-bit ITU national *alias* point code with subfields *unit number-sub number area-main number area (un-sna-mna)*. This parameter is not valid if a 16-bit ITU national (DPCN16) point code is entered.**Range:**

000-127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*un-000-127**sna-000-15**mna-000-31***bei (optional)**

Broadcast exception indicator. This parameter specifies whether the STP broadcasts network management messages to adjacent signaling points.

**Note:**

The network management messages contain information about the indicated cluster and any of that cluster's member signaling points that are on its exception list. The messages whose broadcast is determined by this parameter are:

- TFP—transfer prohibited
- TCP—transfer cluster prohibited

- TFA—transfer allowed
- TCA—transfer cluster allowed

Range:**yes**

Network management messages are not broadcast

no

Network management messages are broadcast

Default:

yes —If the DPC is a member whose associated cluster destination has `bei=yes` specified.

no —for DPCs in the cluster or if the DPC is a member whose associated cluster destination has `bei=no` specified or the `bei` parameter is not specified.

c11i (optional)

The Common Language Location Identifier assigned to this destination.

Range:

ayyyyyyyyy

1 alphabetic character followed by 10 alphanumeric characters

Default:

Null string

domain (optional)

The network in which the destination entity or node exists.

Range:

ss7

Default:

ss7

e1ei (optional)

Exception-list exclusion indicator, for cluster destinations only. This parameter specifies whether the system excludes or includes (maintains) a dynamic status exception list (x-list) for each cluster route used to reach the member signaling points that make up the cluster.

Range:**yes**

Do not maintain a dynamic status x-list

no

Maintain a dynamic status x-list

Default:

no

homescp (optional)

This parameter specifies whether the destination point code (DPC) is considered a Home SCP when performing SCCP processing for messages with no Global Title Address Digits (Global Title Indicator (GTI) is set to zero)

This parameter can only be set to "yes" for full DPCs.

Range:**yes**

the DPC is considered a Home SCP

no

the DPC is not considered a Home SCP

System Default:

no

homesmsc (optional)

This parameter specifies whether the DPC is considered a Home SMSC when performing SCCP processing for messages with no Global Title Address Digits (GTI is set to zero).

This parameter can only be set to "yes" for full DPCs.

Range:**yes**

the DPC is considered a Home SMSC

no

the DPC is not considered a Home SMSC

System Default:

no

ncai (optional)

Nested cluster allowed indicator. Specifies whether the route to the cluster point code can be different for provisioned members of the cluster. A point code is a member of a cluster point code if it has the same network identifier (NI) and network cluster (NC) values as the cluster point code. This parameter can be specified only for cluster point codes. Nested cluster routing is allowed if this parameter is set to *yes* and the CRMD and NCR features are turned on.

Range:**yes**

The cluster point code is a nested cluster point code. Point codes that are members of this cluster point code can be assigned to route sets that are different from the route set assigned to the cluster point code.

no

The cluster point code is not a nested cluster point code. Point codes that are members of this cluster point code must be assigned to the same route set assigned to the cluster point code.

Default:

no

nprst (optional)

NM bits reset. This parameter specifies whether the NM bits should be set to 00. This parameter applies only to ITU IAM messages. The `nptype=nm` parameter must be specified (see the `chg-tifopts` command) before this parameter can be specified.

Range:**off**

Do not set NM Bits to 00 in an ITU IAM message if the TIFOPTS `nptype` option value is *nm*

on

Set the NM Bits to 00 in an ITU IAM message if the TIFOPTS `nptype` option value is *nm*

System Default:

off

ppc/ppca/ppci/ppcn/ppcn24/ppcn16 (optional)

Proxy point code.

The proxy point code must be a full point code.

ppc (optional)

ANSI proxy point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.

The proxy point code must be a full point code.

Synonym:

ppca

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When `chg-sid:pctype=ansi` is specified, *ni = 000* is not valid.

When `chg-sid:pctype=ansi` is specified, *nc = 000* is not valid if *ni = 001-005*.

When `chg-sid:pctype=ansi` is specified, *nc = 000* is valid if *ni = 006-255*.

The point code *000-000-000* is not a valid point code.

ppci (optional)

ITU international proxy point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*).

Range:

s-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s

zone—0-7

area—000-255

id—0-7

The point code *0-000-0* is not a valid point code.

ppcn (optional)

ITU national proxy point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the `chg-stpopts:npcfmti` flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

Range:

s-, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s*-

nnnnn—0-16383

gc—*aa-zz*

m1-m2-m3-m4—0-14 for each member; values must sum to 14

ppcn24 (optional)

24-bit ITU national proxy point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*).

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

msa—000-255

ssa—000-255

sp—000-255

ppcn16 (optional)

16-bit ITU national proxy point code with subfields *unit number-sub number area-main number area* (*un-sna-mna*).

Range:

000-127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

un-000-127

sna-000-15

mna-000-31

prx (optional)

Proxy point code indicator. This parameter specifies whether a destination is used as a proxy point code.

Range:

yes

The destination is used as a proxy point code.

no

The destination is not used a proxy point code.

Default:

no

Will not be used as a proxy point code.

rcause (optional)

Release cause. The condition that triggers the sending of a Release message.

 **Note:**

If the `rlcopc` parameter is specified (see the `chg-tifopts` command), and a value of 0 - 127 is specified for the `rcause` parameter, then the `rcause` parameter value overrides the values specified for the TIFOPTS `rcausenp` and `rcausepfx` parameters.

Range:

0 - 127, *none*

none —use the values specified for the TIFOPTS table's `rcausenp` and `rcausepfx` parameters

System Default:

none

sccpmsgcnv (optional)

SCCP UDT(S)/XUDT(S) Message Conversion Indicator. The type of conversion performed on messages for the specified destination.

Range:***none***

conversion is not required on messages for the destination

udt2xudt

convert all UDT(S) messages for the destination to XUDT(S) messages

xudt2udt

convert all non-segmented XUDT(S) messages for the destination to UDT(S) messages

sxudt2udt

convert all segmented and non-segmented XUDT(S) messages for the destination to UDT(S) messages

Default:

none

spc/spca/spci/spcn/spcn24/spcn16 (optional)

Secondary point code.

spc (optional)

ANSI secondary point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*. The *prefix* subfield indicates a private point code (*prefix-ni-nc-ncm*).

Synonym:

spca

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001-005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006-255*.

The point code *000-000-000* is not a valid point code.

spci (optional)

ITU international secondary point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-zone-area-id*).

Range:

s-, p-, ps-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s-, p-, ps

zone—0-7

area—000-255

id—0-7

The point code *0-000-0* is not a valid point code.

spcn (optional)

ITU national secondary point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the *chg-stpopts:npcfmti* flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc, m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-nnnnn, prefix-nnnnn-gc, prefix-m1-m2-m3-m4, prefix-m1-m2-m3-m4-gc*).

Range:

s-, p-, ps-, 0-16383, aa-zz

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s-, p-, ps

nnnnn—0-16383

gc—aa-zz

m1-m2-m3-m4—0-14 for each member; values must sum to 14

spcn24 (optional)

24-bit ITU national secondary point code with subfields *main signaling area-sub signaling area-signaling point (msa-ssa-sp)*. The *prefix* subfield indicates a private point code (*prefix-msa-ssa-sp*).

Range:*p*-, 000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*p**msa*—000—255*ssa*—000—255*sp*—000—255**spcn16 (optional)**16-bit ITU national secondary point code with subfields *unit number-sub number area-main number area* (*un-sna-mna*). The *prefix* indicates a private point code (*prefix-un-sna-mna*).**Range:***p*-, 000-127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix---*p**un*--000---127*sna*---000---15*mna*---000---31**splitiam (optional)**

This parameter specifies when and how to split an ITU IAM message into 1 IAM message + 1 SAM message.

This parameter applies only to ITU IAM messages.

Range:15-31, *none*

15-31 - Maximum number of CdPN digits allowed in the IAM message before splitting occurs. The remaining digits, up to a total of 32, are encoded in the SAM message.

none -the value specified for the TIFOPTS table's *splitiam* parameter is used to determine when to split the IAM message**System Default:***none***Example**

To add destination 8-1-1 with CLLI of systest1:

ent-dstn:dpc=8-1-1:clli=systest1:bei=yes

To add destination 8 with ITU and national aliases:

ent-dstn:dpc=8-8-8:aliasi=1-2-3:aliasn=124

To add cluster 20-2-*:

ent-dstn:dpc=20-2-*:elei=yes:bei=yes

To add a destination with an SPC of 100:

ent-dstn:dpc=20-2-2:spc=100-100-100

To add nested cluster 21-2-*:

```
ent-dstn:dpc=21-2-*:elei=yes:bei=yes:ncai=yes
```

To add network routing destination 21-*-*:

```
ent-dstn:dpc=21-*-*
```

To add ITU national destination 7654 with a group code of FR and secondary point code of 7050:

```
ent-dstn:dpcn=7654-fr:spc=7050-fr
```

To add ITU-N 24-bit destination 15-100-10:

```
ent-dstn:dpcn24=15-100-10:bei=no
```

To add a 24-bit ITU-N destination with a 24-bit ITU-N secondary point code of 99:

```
ent-dstn:dpcn24=12-12-12:spcn24=99-99-99
```

To add destination 1-6-1 with a 24-bit ITU-N alias:

```
ent-dstn:dpci=1-6-1:aliasn24=4-4-4
```

To add private ANSI destination point code p-100-100-101 with spare point code alias s-1-123-1:

```
ent-  
dstn:dpc=p-100-100-101:spca=2-2-3:aliasi=s-1-123-1:aliasn=128
```

To add spare ITU-I destination point code s-2-100-1 with ANSI alias point code 121-120-120 and ITU-N alias spare point code s-129:

```
ent-  
dstn:dpci=s-2-100-1:spci=s-2-129-9:aliasa=121-120-120:aliasn=s-  
129
```

To add spare ITU-N destination point code s-231 with ITU-N secondary point code 129, ANSI alias point code 120, and ITU-I alias spare point code s-2-123-2:

```
ent-  
dstn:dpcn=s-231:spcn=129:aliasa=120-120-122:aliasi=s-2-123-2
```

To define a destination as a proxy point code:

```
ent-dstn:dpc=11-11-11:prx=yes
```

To associate a proxy point code with a destination point code:

```
ent-dstn:dpc=11-11-11:ppc=2-7-2
```

To add ITU-I destination point code 3-30-3 with ITU-I spare alias s-3-30-3:

```
ent-dstn:dpci=3-30-3:aliasi=s-3-30-3
```

To add ITU-N destination point code 8199-aa with ITU-I aliases s-4-0-7 and 4-0-7:

```
ent-dstn:dpcn=8199-aa:aliasi=s-4-0-7,4-0-7
```

To add destination 11 with SCCPMSGCNV type as UDT2XUDT:

```
ent-dstn:dpc=11-11-11:sccpmsgcnv=udt2xudt
```

To add ITU-N 16-bit destination 121-10-5:

```
ent-dstn:dpcn16=121-10-5
```

Dependencies

Note:

A full point code contains numerical values for all three segments of the point code.

The ANSI self-ID destination point code for the STP must be defined before ANSI destinations can be entered.

2725 E2725 Cmd Rej: ANSI site id not defined

The ITU-I self-ID destination point code for the STP must be defined before ITU-I destinations can be entered.

2726 E2726 Cmd Rej: ITU-INTL site id not defined

The ITU-N self-ID or SPCN destination point code for the STP must be defined before ITU-N destinations can be entered.

2727 E2727 Cmd Rej: ITU-NATL site id not defined

The 24-bit ITU-N self-ID or SPCN24 destination point code for the STP must be defined before 24-bit ITU-N destinations can be entered. (See the `chg-sid` command.)

2785 E2785 Cmd Rej: ITU-N 24bit site id not defined

The Destination point code table can contain up to 2000 entries.

2359 E2359 Cmd Rej: Route table is full

The destination address must be a full point code or a cluster point code.

2886 E2886 Cmd Rej: DSTN address must be a full, network or cluster PC

The specified destination address cannot already exist in the Destination entity set.

2333 E2333 Cmd Rej: DPC is already being used

A destination address cannot already be defined as an alias address.

2322 E2322 Cmd Rej: Alias defined as a destination point code

The Spare Point Code Support feature must be enabled before the spare point code prefix (s-) can be specified for an ITU-I or ITU-N destination, secondary, or alias point code.

4193 E4193 Cmd Rej: Spare Point Code Feature must be enabled

The specified `dpc` value cannot match the point code, secondary point code, or capability point code of the system.

2168 E2168 Cmd Rej: Point code matches a STP point code

A destination can have up to two alias point codes. A destination alias point code type (ANSI, ITU-I, ITU-N, ITU-N24) must not match that destination's true point code type. If both alias point codes are defined, the point code types of the aliases must not match.

4238 E4238 Cmd Rej: Point code matches a STP secondary point code.

Alias point codes are supported only for full point code destinations.

2854 E2854 Cmd Rej: Alias PCs are not valid for cluster destinations

Alias point codes for destinations must be full point codes.

2863 E2863 Cmd Rej: Destination's alias PCs must be full PCs

An alias point code cannot already be defined as a destination point code.

2332 E2332 Cmd Rej: Point code defined as an alias

The format of the specified `dpcn` or `aliasn` parameter must match the format that was assigned with the `chg-stpopts:npcfmti` parameter.

2055 E2055 Cmd Rej: Incorrect information unit, expecting point code- <parm>

If the 7000 Routesets or 8000 Routesets feature is enabled, then the total number of provisioned aliases in the system cannot exceed 8000. If the 10,000 Routesets feature is enabled, then the total number of provisioned aliases in the system cannot exceed 10000.

4298 E4298 Cmd Rej: Alias PC table is full

If an ANSI or ITU-I point code is specified, the `aliasn` or the `aliasn24` parameter can be specified, but not both.

3497 E3497 Cmd Rej: Either ALIASN or ALIASN24, not both, for destination

A 24-bit ITU-N point code cannot have:

- A 14-bit ITU-N alias point code
- An ANSI alias point code

2839 E2839 Cmd Rej: Invalid parameter for ITU-N 24bit point code

A 24-bit ITU-National point code can have an ITU-I point code alias. This allows conversion of 14-bit ITU-I routing label to 24-bit routing label and vice versa.

2839 E2839 Cmd Rej: Invalid parameter for ITU-N 24bit point code

An ITU-I point code can have either a 14-bit ITU-N alias or a 24-bit ITU-N alias, but not both.

3497 E3497 Cmd Rej: Either ALIASN or ALIASN24, not both, for destination

A 14-bit ITU-N point code cannot have a 24-bit ITU-N alias point code.

2839 E2839 Cmd Rej: Invalid parameter for ITU-N 24bit point code

An ANSI point code cannot have a 24-bit ITU-N alias point code.

2839 E2839 Cmd Rej: Invalid parameter for ITU-N 24bit point code

The CRMD feature must be turned on before a cluster destination point code (*ni-nc-**) can be specified.

2855 E2855 Cmd Rej: Cluster DPCs are only valid if the CRMD feature is ON

A cluster destination cannot be defined using the same network identifier (*ni*) and network cluster (*nc*) subfields of any previously defined alias ANSI point codes.

2875 E2875 Cmd Rej: Network/Cluster cannot have alias DPC members

The CRMD (Cluster Routing and Management Diversity) and NCR (Nested Cluster Routing) features must be turned on before the `ncai` parameter can be specified.

2856 E2856 Cmd Rej: ELEI is only valid if the CRMD feature is ON

If the `ncai=yes` parameter is specified, then the maximum number of provisioned nested clusters must be no greater than 500.

2836 E2836 Cmd Rej: Too many nested cluster dstn entered

When a cluster point code is specified, the collection of signaling points sharing the same network identifier (*ni*) and network cluster (*nc*) subfields must have the same route set.

2877 E2877 Cmd Rej: NCAI required if cluster members have different route set

Cluster DPCs are not allowed to inherit cluster members that have routes with A or E linkset types.

4260 E4260 Cmd Rej: Cluster DPCs can't inherit A or E linkset types

Network routing is valid only if the Network Routing (NRT) feature is turned on.

2955 E2955 Cmd Rej: Network Routing is only valid if the NRT feature is ON

When using network routing, if the destination point code has a value of * in the *nc* subfield, the *ncm* subfield must also be * (e.g., `dpc=21-**-*`).

2956 E2956 Cmd Rej: NCM must be * when using Network Routing

The `ncai` parameter can be specified only for cluster destinations.

2869 E2869 Cmd Rej: NCAI parm is only valid if both feat CRMD & NCR are ON

Alias ANSI point codes cannot have the same network identifier (*ni*) and network cluster (*nc*) subfields as a cluster point code that is already defined.

2876 E2876 Cmd Rej: Alias DPCs cannot be a member of a Network or Cluster

The CRMD feature must be turned on before the `elei` parameter can be specified.

2856 E2856 Cmd Rej: ELEI is only valid if the CRMD feature is ON

The `elei` parameter can be specified only for cluster destinations (e.g., `dpc=ni-nc-*`).

2853 E2853 Cmd Rej: ELEI is only valid for cluster destinations

The CLLI of the destination point code cannot match the CLLI of the system.

2163 E2163 Cmd Rej: CLLI used by STP

A reserved word cannot be specified for the destination identifier (`clli`).

3040 E3040 Cmd Rej: <string> cannot be used in this command

If the corresponding destination for the specified destination point code is an adjacent signaling point (matched a Far End point code in its linkset entity set), the CLLI of the specified destination point code cannot be assigned to any other destination address.

2163 E2163 Cmd Rej: CLLI used by STP

The value of the `dpc` parameter must be a valid point code.

2340 E2340 Cmd Rej: Invalid point code

If specified, the `spc` parameter value must already be configured as a secondary point code in the Secondary Point Code table.

3814 E3814 Cmd Rej: SPC does not exist

The value specified for the `spc` parameter must be a full point code.

3822 E3822 Cmd Rej: SPC must be a full point code

If the `spc` parameter is specified, the `domain=ss7` parameter must be specified.

3823 E3823 Cmd Rej: Domain must be SS7 if SPC is specified

If the `spc` parameter is specified, then the value specified for the `dpc` parameter must be a full point code.

2859 E2859 Cmd Rej: Destination address must be a full point code

The network type of the value specified for the `spc` parameter must match the network type of the value specified for the `dpc` parameter.

3821 E3821 Cmd Rej: SPC & DPC must be the same network type

If an ITU national destination is provisioned and the ITUDUPPC feature is turned on, and if the destination does not use an SPC, the group code of the destination must be the same as the group code of the ITU national true point code.

For example, if the ITU national true point code has a group code of `ee`, then you can add destinations with group codes of `ee` without using an SPC. Destinations with a group code of `ff`, however, must use an SPC with a group code of `ff`.

3880 E3880 Cmd Rej: Grp Code of dstn & True PC must match if no Secondary PC

The Route table cannot be full.

2359 E2359 Cmd Rej: Route table is full

If an ITU national destination is provisioned and the ITUDUPPC feature is turned on, and if the destination uses an SPC, then the group code of the destination must match the group code of the SPC.

For example, if the ITU national true point code has a group code of `ee`, then you can add destinations with group codes of `ee` without using an SPC. Destinations with a group code of `ff`, must use an SPC with a group code of `ff`.

3881 E3881 Cmd Rej: Group Code and/or Spare Point Code of DPC and SPC must match

The `ncai` parameter can be specified only for cluster destinations (for example (`dpc=ni-nc-*`)).

2868 E2868 Cmd Rej: Invalid NCAI parameter has been entered

The value of the `clli` parameter cannot already exist in the Route table.

2184 E2184 Cmd Rej: CLLI is already being used by a route

The ICNP feature must be turned on before the `icnpxlat`, `cgpafmt`, and `cdpafmt` parameters can be specified.

4497 E4497 Cmd Rej: ICNP feature must be activated

The NCR feature must be enabled before the `ncai` parameter can be enabled.

2837 E2837 Cmd Rej: NCR must be enabled to enter NCAI param

The MAS configuration table is corrupt or cannot be found.

2145 E2145 Cmd Rej: Failed reading MAS configuration table

The route table is corrupt or cannot be found.

2648 E2648 Cmd Rej: Failed reading the route table

If the 6000 Routesets feature is turned on, and the destination point code to be provisioned is above 5000, then the GPSM-II OAM cards must be used.

3284 E3284 Cmd Rej: OAM card(s) must be of type GPSM-II

The `alias` parameter must be specified with a different point code type than the `dpc` parameter.

The `aliasa` and `dpca` parameters cannot be specified together in the command. The `aliasi` and `dpci` parameters and the `aliasn` and `dpcn` parameters cannot be specified together in the command if the `prefix` subfields are the same (both are spare or both are non-spare).

2325 E2325 Cmd Rej: Alias type matches DPC type

The Proxy Point Code feature must be enabled before the `prx=yes` parameter can be specified.

4677 E4677 Cmd Rej: PRX allowed only if PPC feature is enabled

The Proxy Point Code feature must be enabled before the `ppc` parameter can be specified.

4678 E4678 Cmd Rej: PPC allowed only if PPC feature is enabled

If the `ppc` parameter or the `prx=yes` parameter is specified, then the value specified for the `dpc` parameter must be a full point code.

2859 E2859 Cmd Rej: Destination address must be a full point code

The `spc` and `ppc` parameters cannot be specified together in the command.

4681 E4681 Cmd Rej: SPC and PPC are mutually exclusive

The values specified for the `dpc` and `ppc` parameters must have the same network type.

4682 E4682 Cmd Rej: PPC and DPC must be of the same network type

The values specified for the `dpc` and `ppc` parameters must have the same group code.

4683 E4683 Cmd Rej: Group code of PPC and DPC must match

The number of proxy destinations cannot exceed the value given by the enabled Proxy Point Code quantity feature.

4684 E4684 Cmd Rej: Allowed Proxy PC capacity exceeded

If the value of the `dpc` parameter is a private point code, then the `prx=yes` parameter cannot be specified.

4723 E4723 Cmd Rej: PRX=YES not supported for Private PC

If the value of the `dpc` parameter is a private point code, then the `ppc` parameter cannot be specified.

4722 E4722 Cmd Rej: PPC not supported for Private PC

The `dpc` parameter and the `prx=yes` parameter must be specified before the `ppc` parameter can be specified.

4724 E4724 Cmd Rej: Proxy PC not defined in route(dstn) table

The total number of proxy destinations cannot exceed the total capacity (100) of the Proxy Point Code feature.

4730 E4730 Cmd Rej: Maximum Proxy PC capacity exceeded

The `prx` parameter must have a value of `yes` or `no`.

2044 E2044 Cmd Rej: <parm_desc> value is undefined - <parm>

Cluster destination point codes cannot inherit cluster members that have routes using proxy linksets.

4731 E4731 Cmd Rej: Cluster DPCs can't inherit PRX linkset type

The spare ITU-I self-ID destination point code for the STP must be defined before spare ITU-I destinations can be entered.

4787 E4787 Cmd Rej: SPARE ITU-INTL site id not defined

The spare ITU-N self-ID destination point code for the STP must be defined before spare ITU-N destinations can be entered.

4788 E4788 Cmd Rej: SPARE ITU-NATL site id not defined

A maximum of two aliases can be specified per destination point code.

5001 E5001 Cmd Rej: Up to two alias PCs are supported per DPC

If the `dpci` parameter is specified, then a combination of ITUI and ANSI aliases cannot be specified. If the `dpcn` parameter is specified, then a combination of ITUN and ANSI aliases cannot be specified.

5074 E5074 Cmd Rej: ITU destination does not support ANSI/ITU alias combination

Two ITUI or two ITUN aliases can be specified for the same destination point code only if the aliases have different prefixes. One alias must be spare and one non-spare.

4985 E4985 Cmd Rej: Destination does not support same ITU ntwk alias combination

The TIF Number Portability feature must be enabled before the `rcause` or `nprst` parameter can be specified.

3357 E3357 Cmd Rej: TIF feature must be enabled

A TIF feature must be enabled before the `splitiam` parameter can be specified.

4982 E4982 Cmd Rej: At least one TIF feature must be enabled

The XUDT UDT Conversion feature must be turned on before the `sccpmsgcnv` parameter can be specified.

5384 E5384 Cmd Rej: XUDT UDT Conversion feature must be activated

The value specified for the `ppc` parameter must already exist in the DSTN table and the `prx=yes` parameter must be assigned.

4728 E4728 Cmd Rej: PPC destination in route(dstn) table is not proxy

ITU-N16 destination cannot be provisioned if ITU-N16 site id is not provisioned.

2806 E2806 Cmd Rej: ITU-N 16bit site id not defined

The J7 Support feature must be enabled before the `aliasn16` parameter can be specified.

2691 E2691 Cmd Rej: J7 Support Feature must be enabled.

If the J7 Support feature is enabled then the `aliasa` and `aliasn24` parameters cannot be specified.

2801 E2801 Cmd Rej: J7 Support feature must not be enabled.

Spare point codes for `aliasn 1` and `aliasn 2` must be different, and spare point codes for `aliasi 1` and `aliasi 2` must be different.

4992 E4992 Cmd Rej: ITU aliases with matching Spares are not allowed

Notes

Upon initial installation of the system, the self point code must be entered before you enter any destination.

When you define a DPC with the unique destination signaling point of a provisioned cluster, the DPC automatically inherits the route set of its cluster if the `ncai=no` parameter is specified. If the `ncai=yes` parameter is specified, the provisioned members can have a different route set.

When you define a cluster point code for previously defined destination signaling points, the cluster automatically inherits the unique route set of its members.

For ITU national duplicate point codes, you cannot change a destination's group code. To move a destination from one group to another, provision a new destination that uses the new group code and delete the old destination.

The system requires that the destination point code of each routeset be entered in the database. For example, to enter 6000 routesets in the database, 6000 destination point codes must be entered in the database.

If you have turned on the 5000 Routes feature, prior to provisioning the additional routing table entries, you must issue the `chg-stpopts` command to specify the maximum number of allowed DPCs and dynamic x-list entries.

If the 6000, 7000, 8000, or 10,000 Routesets feature is enabled, then in order to enter more than 2000 destination point codes, the maximum number of point codes that can be configured on the system must be changed to 6000, 7000, 8000, or 10000 respectively, using the `mtpdpcq` parameter of the `chg-stpopts` command.

In this command, only ITU-international and ITU national point codes and aliases support the spare point code subtype prefix (s-). Only ITU-international and ITU national point codes support the private and spare point code subtype prefix (ps-). All of the point code types support the private (internal) point code subtype prefix (p-). Aliases do not support the private (internal) point code prefix.

If the Proxy Point Code feature is enabled, then the value specified for the `ppc` or `dpc` parameter (when the destination point code is designated as a proxy point code) must be full point codes. Cluster point codes and private point codes are not supported.

One of `dpc/dpca/dpci/dpcn/dpcn24/dpcn16` is mandatory and they are mutually exclusive.

Only one of `aliasa/aliasi/aliasn/aliasn24/aliasn16` can be specified as they are mutually exclusive.

Only one of `spc/spca/spci/spcn/spcn24/spcn16` can be specified as they are mutually exclusive.

Output

This example shows the output with the NCR, NRT, and CRMD features off and all Routes and Routesets features off:

```
ent-dstn:dpc=8-8-8:aliasi=1-2-3:aliasn=124
```

```
rlghncxa03w 04-08-17 15:35:05 EST EAGLE 31.8.0
Destination table is (10 of 2000) 1% full
Alias table is (8 of 12000) 1% full
ENT-DSTN: MASP A - COMPLTD
;
```

This example shows the output with the NCR, NRT, and CRMD features off and the DSTN5000 (5000 Routes) feature on:

```
ent-dstn:dpc=8-8-8:aliasi=1-2-3:aliasn=124
```

```
rlghncxa03w 04-08-18 08:29:15 EST EAGLE 31.8.0
Destination table is (10 of 5000) 1% full
Alias table is (8 of 12000) 1% full
ENT-DSTN: MASP A - COMPLTD
;
```

This example shows the output with one or more of the NCR, NRT, or CRMD features on and the DSTN5000 (5000 Routes) feature on:

```
ent-dstn:dpc=8-8-8:aliasi=1-2-3:aliasn=124
```

```

4.1.290 ent-e1

Use this command to enter an interface into the system for E5-E1T1-B cards used as an E1 or SE-HSL cards.

Any of the 8 ports can be specified when the card is used as a standard E1 card. No more than 2 ports on the E5-E1T1-B can have defined E1 interfaces.

Parameters

e1port (mandatory)

E1 card port number. The value must be an E1 port for which an interface has not been configured on the specified E1 card.

Range:

1 - 8

Any 2 of the 8 ports on an E5-E1T1-B card can be specified when the card is used as an SE-HSL card.

loc (mandatory)

The card location as stenciled on the shelf of the system.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118

crc4 (optional)

CRC4 enable or disable indicator.

Range:

on

off

Default:

on

encode (optional)

Indicator for use of HDB3 or AMI encoding/decoding.

Range:

hdb3

ami

**Note:**

AMI encoding is supported for cards that are used as E1 cards (not as SE-HSL cards).

Default:

hdb3

linkclass (optional)

Link class for links that are assigned to E1 cards (“channelized” links) or SE-HSL cards (“unchannelized” links).

Range:

chan

unchan

Default:

chan

minsurate (optional)

Minimum signal unit rate. The minimum number of SUs present on a link uniformly distributed. This parameter is valid only when the `linkclass=unchan` parameter is specified for an SE-HSL card.

Range:

500 - 2000

Default:

1000

si (optional)

Value of two Spare International bits of NFAS data.

Range:

0 - 3

Default:

0

sn (optional)

Value of five Spare International bits of NFAS data.

Range:

0 - 31

Default:

0

t1tse1 (optional)

Timing source.

Range:*line - slave timing source**external - master timing source***Default:***line***Example**

```
ent-e1:loc=1205:elport=1:crc4=off:encode=hdb3:si=2:sn=12
ent-e1:loc=1205:elport=2:encode=ami
ent-
e1:loc=1203:crc4=on:elport=2:encode=hdb3:linkclass=unchan:minsu
rate=2000
ent-e1:loc=1205:elport=1:crc4=off:encode=hdb3:eltsel=external:
si=2:sn=12
ent-e1:loc=1205:elport=1:crc4=off:encode=hdb3:eltsel=line:
si=2:sn=12
```

Dependencies

The card location specified by the `loc` parameter must be equipped.

4076 E4076 Cmd Rej: E1 card location is unequipped

The card specified by the `loc` parameter must be an LIME1 card type.

2212 E2212 Cmd Rej: Invalid card type for this command

The E1/T1 table is corrupt or cannot be found.

4059 E4059 Cmd Rej: Failed reading the E1/T1 table

The Card (IMT) table is corrupt or cannot be found.

2102 E2102 Cmd Rej: Failed reading the IMT table

The port specified by the `elport` parameter cannot already be equipped with an E1 interface.

4054 E4054 Cmd Rej: The E1PORT at the specified location is already equipped

The `minsurate` parameter can be specified only when the `linkclass=unchan` parameter is specified.

3047 E3047 Cmd Rej: Parameter combination invalid

Only 2 ports can be used for E1 interfaces on an E5-E1T1-B card that is used as an SE-HSL card. Any 2 of the 8 ports can be used on the SE-HSL card.

4044 E4044 Cmd Rej: Only two E1/T1 ports allowed for Linkclass=Unchan

The shelf FAN bit must be turned ON for the shelf on which an E5-E1T1-B card is being used as an E1 or SE-HSL card.

3866 E3866 Cmd Rej: Shelf FAN bit feature must be enabled

HIPR2 cards must be equipped in card locations `xy09` and `xy10` (`x` is the frame, `y` is the shelf) on each EAGLE shelf that contains one or more E5-E1T1-B cards that are used as E1 or SE-HSL cards.

3490 E3490 Cmd Rej: HIPR/HIPR2 must be equipped on the shelf for this card

An SE-HSL feature quantity must be enabled before the `linkclass=unchan` parameter can be specified for an SE-HSL card.

4282 E4282 Cmd Rej: An HSL feature key must be enabled for Linkclass=Unchan

Channelized and unchannelized E1 ports (mixed mode) are not allowed on a single card (the card cannot be used as an E1 card and an SE-HSL card at the same time).

4274 E4274 Cmd Rej: Cannot mix Unchannelized and Channelized modes on E1/T1 card

4595 E4595 Cmd Rej: Only one E1/T1 port allowed for Linkclass=Unchan

Card locations 1113 - 1118 (E5-MASP and E5-MDAL cards) cannot be specified as values for the `loc` parameter.

2154 E2154 Cmd Rej: Card slot reserved by system

The `encode=ami` parameter is supported only for cards used as E1 cards (not as SE-HSL cards).

4121 E4121 Cmd Rej: ENCODE = AMI not currently supported

Locations `xy09` and `xy10`, where `x` is the frame and `y` is the shelf, cannot be specified as values for the `loc` parameter.

2016 E2016 Cmd Rej: `<parm_desc>` is out of range - `<parm>`

Notes

One or two E1 interfaces must be defined on an E1 card after the E1 card type (LIME1) is defined in the database (see the `ent-card` command), and before the signaling links and associated timeslots are defined for the E1 card (see the `ent-slk` command).

External timing is derived from the EAGLE High-Speed Master Clock (1.544 MHz for T1 or 2.048 MHz for E1); therefore, the Master Timing feature is required. Line timing is derived from its received data stream, if present.

Up to 8 E1 interfaces can be defined on a card used as an E1 card after the E1 card type (LIME1) is defined in the database (with the `ent-card` command), and before the signaling links and associated timeslots are defined for the E1 card.

For an SE-HSL card, the `minsurate` parameter indicates the least number of SUs present on a link uniformly distributed. The number of SUs present is the `minsurate` parameter value (without link traffic) or the `minsurate` parameter value minus the number of MSUs (with link traffic).

Output

```
ent-e1:loc=1205:elport=1:crc4=off:encode=hdb3:si=2:sn=12
```

```

4.1.291 ent-enum-acl

Use this command to make an entry in the ENUM Access Control List (ACL) Table. The ENUM ACL Table supports the provisioning information related to the allowed IP Addresses for the ENUM application.

Parameters

ipaddr (mandatory)

This is a TCP/IP address expressed in standard dot notation. It specifies allowed IP addresses for the ENUM application.

Range:

Four numbers separated by dots, with each number in the range of 0-255, *.

Note:

It also supports wildcard characters as follows:

```
xxx.xxx.xxx.*
```

```
xxx.xxx.*.*
```

```
xxx.*.*.*
```

where xxx can be any number in range of 0-255.

System Default:

```
0.0.0.0
```

Example

```
ent-enum-acl:ipaddr=10.248.13.9
ent-enum-acl:ipaddr=10.248.13.*
ent-enum-acl:ipaddr=10.248.*.*
ent-enum-acl:ipaddr=10.*.*.*
ent-enum-acl:ipaddr6="2003:db8::*"
ent-enum-acl:ipaddr6="2004:1234:abcd::3456:abc6"
ent-enum-acl:ipaddr6="2005:*:*:*:*:*:*:*"
```

Dependencies

The ENUM ACL Table should be accessible.

3182 E3182 Cmd Rej: Failure accessing ENUMACL table

An overlapping IP Address cannot be provisioned in the ENUM ACL Table.

3196 E3196 Cmd Rej: Overlapping entry must be removed

The IP Address specified by the IPADDR parameter must be a valid IP address.

2704 E2704 Cmd Rej: Invalid IPADDR

A maximum of 100 IP addresses can be defined in the ENUM ACL Table.

3193 E3193 Cmd Rej: ENUM ACL table is full

The IP address specified by the IPADDR parameter must be unique.

3760 E3760 Cmd Rej: IP Address must be unique

Notes

Wildcard IP addresses are allowed to support the ranges of IP addresses.

Output

```
ent-enum-acl:ipaddr=10.248.13.*
```

```
tekelecstp 14-05-28 15:04:28 EST EAGLE 46.1.0
ent-enum-acl:ipaddr=10.248.13.*
Command entered at terminal #4.
ENT-ENUM-ACL: MASP A - COMPLTD
;
```

4.1.292 ent-enum-prof

Use this command to configure the data used to generate the ENUM response for three supported resource record formats such as NAPTR, NS and CNAME. The ENUM Profile Table is used to configure the resource record data.

Parameters

prn (mandatory)

Profile name. This parameter specifies the unique logical name assigned to the profile entry used to generate the ENUM response.

Dependencies

The ENUM Profile Table should be accessible.

3184 E3184 Cmd Rej: Failure accessing ENUMPROF table

The domain name for regular expression (RRDOMAIN) can be specified only with RTYPE=NAPTR.

3190 E3190 Cmd Rej: RRDOMAIN must be specified

For RTYPE=NS or CNAME, the replacement domain name (RPDOMAIN) must be specified.

3191 E3191 Cmd Rej: RPDOMAIN must be specified

The SPARM, PREF and RRDOMAIN parameters are valid only for RTYPE=NAPTR.

The RRDOMAIN parameter is valid for SPARM=SIP or SPARM=PSTNSIP.

2155 E2155 Cmd Rej: Invalid parameter combination specified

A unique profile name must be specified for a new profile.

3206 E3206 Cmd Rej: Profile name must be unique

A maximum of 1024 entries can be provisioned in the ENUM Profile Table.

3222 E3222 Cmd Rej: ENUM PROF Table is full

The RRDOMAIN parameter must be specified with either SPARM=SIP or SPARM=PSTNSIP.

3230 E3230 Cmd Rej: RRDOMAIN must be specified with sparm=sip/pstnsip

A profile name of "none" cannot be specified.

3246 E3246 Cmd Rej: 'none' is an invalid profile name

Notes

The requirement of using PREFIX in the regular expression is only for PSTN-SIP (NAPTR query). As such, PREFIX will not be applied for PSTN-TEL and SIP (NAPTR queries).

PREFIX can be configured for PSTN-TEL and SIP profiles, but it will not be used.

4.1.293 ent-enum-profsel

Use this command to make an entry in the ENUM Profile Selection Table and the ENUM DN Block Table. The ENUM Profile Selection Table supports the provisioning information related to mapping of Entity Id to Profile Id. The ENUM DN Block Table supports the provisioning information related to mapping of DN Block to Profile Id.

Parameters

edn (optional)

End Dialed Number

Range:

5-15 digits

entityid (optional)

Network Entity

Range:

1-15 hex-digits (0-9, a-f)

prn1 (optional)

Profile Name

Range:

ZZZZZZZZZZ

A string of alphanumeric characters, beginning with a letter and with a maximum length of 10 characters. Valid values are a..z, A..Z, 0..9.

Note:

Response type of specified profile must be NS

prn2 (optional)

Profile Name

Range:*ZZZZZZZZZZ*

A string of alphanumeric characters, beginning with a letter and with a maximum length of 10 characters. Valid values are a..z, A..Z, 0..9.

**Note:**

Response type of specified profile must be CNAME

prn3 (optional)

Profile Name

Range:*ZZZZZZZZZZ*

A string of alphanumeric characters, beginning with a letter and with a maximum length of 10 characters. Valid values are a..z, A..Z, 0..9.

**Note:**

Response type of specified profile must be NAPTR

prn4 (optional)

Profile Name

Range:*ZZZZZZZZZZ*

A string of alphanumeric characters, beginning with a letter and with a maximum length of 10 characters. Valid values are a..z, A..Z, 0..9.

**Note:**

Response type of specified profile must be NAPTR

sdn (optional)

Start Dialed Number

Range:

5-15 digits

Example

```
ent-enum-  
profsel:entityid=12345:prn1=ns1:prn2=cname1:prn3=naptr1:prn4=naptr2
```

```
ent-enum-  
profsel:sdn=12345:edn=12400:prn1=ns1:prn2=cname1:prn3=naptr1:pr  
n4=naptr2
```

Dependencies

The ENUM Profile Selection Table should be accessible.

3183 E3183 Cmd Rej: Failure accessing ENUMPRID table

The ENUM DN Block Table should be accessible.

3185 E3185 Cmd Rej: Failure accessing ENUM DNBLK table

The ENUM Profile Table should be accessible.

3184 E3184 Cmd Rej: Failure accessing ENUMPROF table

Either ENTITYID or SDN and EDN must be specified.

3194 E3194 Cmd Rej: ENTITYID or SDN and EDN must be specified

ENTITYID cannot be specified with SDN or EDN.

2155 E2155 Cmd Rej: Invalid parameter combination specified

At least one profile must be specified.

3189 E3189 Cmd Rej: At least one profile name must be specified

The profile name specified by the prnX (x=1,2,3,4) parameter must be provisioned in the ENUM Profile Table.

3192 E3192 Cmd Rej: Profile Name not present in ENUM PROF table

SDN and EDN digit length must be the same.

3203 E3203 Cmd Rej: SDN and EDN digit length must be the same

EDN must be greater than or equal to SDN.

3204 E3204 Cmd Rej: EDN must be greater than or equal to SDN

The response type specified by profile name prn1, prn2, prn3 and prn4 should be NS, CNAME, NAPTR and NAPTR respectively.

3208 E3208 Cmd Rej: Order of the profile is incorrect

The entity ID value must be unique in the ENUM Profile Selection Table.

3207 E3207 Cmd Rej: Entity ID must be unique

NAPTR profile names must be unique.

3219 E3219 Cmd Rej: NAPTR profiles must be unique

A maximum of 1024 entries can be provisioned in the ENUM Profile Selection Table.

3221 E3221 Cmd Rej: ENUM PRID Table is full

A maximum of 1024 entries can be provisioned in the ENUM DN Block Table.

3223 E3223 Cmd Rej: ENUM DNBLK Table is full

The SDN and EDN cannot already be provisioned in the ENUM Profile Selection Table.

3236 E3236 Cmd Rej: SDN and EDN must be unique

The default profile cannot be associated with any profile selection entry.

3234 E3234 Cmd Rej: Default Profile cannot be associated with any profsel entry

If SDN is specified then EDN must be specified or vice-versa.

3229 E3229 Cmd Rej: SDN and EDN must be specified

Overlapping SDN and EDN cannot already be provisioned in the ENUM DN Block Table.

3196 E3196 Cmd Rej: Overlapping entry must be removed

Notes

Response type specified by profile name prn1, prn2, prn3 and prn4 should be NS, CNAME, NAPTR and NAPTR respectively.

Entity Id and SDN/EDN are mutually exclusive.

SDN must be specified with EDN and vice-versa.

Output

This example displays output when entity id specified:

```
ent-enum-  
profsel:entityid=1234:prn1=ns1:prn2=cname1:prn3=naptr1:prn4=naptr2
```

```
tekelecstp 14-05-28 15:04:28 EST EAGLE 46.1.0  
ent-enum-

4.1.294 ent-frm-pwr

Use this command to add a new entry to the Frame Power Threshold (FPT) table. The frame-level power threshold value in the table is compared with the current calculated maximum power consumption for a particular frame, and appropriate alarms are raised if that consumption exceeds the threshold limit.

The entries in the Frame Power Threshold table contain a Frame ID and the corresponding power threshold value. You can use the following commands to display the threshold and calculated maximum power consumption for the frames in the system.

- The `rtrv-frm-pwr` command displays the current provisioned frame power threshold for each provisioned frame.
- The `rtrv-stp:display=power` command displays the provisioned frame power threshold for each provisioned frame, and displays the maximum calculated power consumption for each frame, based on card population.
- The `rtrv-stp:display=power:frm=xxxx` command displays the provisioned frame power threshold for the specified frame, the maximum calculated power consumption for the frame based on card population, and the maximum power consumption for each card in the frame and for a fan assembly for each shelf.

Note:

The frame-level power threshold value needs to be determined from the capacity in Amps of the fuse alarm panel (FAP) for the frame. Contact your site engineer to determine the FAP capacity.

Parameters

frm (mandatory)

Frame ID.

Range:

cf00

Control frame

ef00

First extension frame

ef01

Second extension frame

ef02

Third extension frame

ef03

Fourth extension frame

ef04

Fifth extension frame

thrshld (optional)

Threshold. The frame-level power threshold value, in Amps. This value is compared with the current calculated maximum power consumption for a particular frame (use the `rttrv-stp:display=power:frm=` command to obtain the maximum power consumption value), and the appropriate alarms are raised if current consumption exceeds the threshold limit. The value of the `thrshld` parameter needs to be determined from the capacity of the fuse alarm panel (FAP) for the frame. Contact your site engineer to determine the frame FAP capacity.

Range:

30 - 65

Default:

30

Example

Enter the frame power threshold value for the first extension frame.

```
ent-frm-pwr:frm=ef00:thrshld=55
```

Dependencies

A valid value must be specified for the `frm` parameter.

2044 E2044 Cmd Rej: <parm_desc> value is undefined - <parm>

The valid range for the `thrshld` parameter is 30-65 Amps.

2017 E2017 Cmd Rej: <parm_desc> is out of range, <min>..<max> - <parm>

The specified power threshold value (`thrshld` parameter) cannot already be provisioned for the specified frame.

4537 E4537 Cmd Rej: Power Threshold entry already exists in FPT table

The specified frame (`frm` parameter) must be a provisioned frame.

4541 E4541 Cmd Rej: Entered Frame must be a provisioned frame

The Frame Power Threshold table must be accessible.

4539 E4539 Cmd Rej: Failed reading FPT table

Notes

The maximum calculated power for a frame is based on the cards that are populated in the system, and includes a fan tray assembly for every shelf (the system cannot detect the presence or absence of a fan tray, and assumes presence for the calculation). These values are typically much higher than the actual power being drawn; the values cannot be used as a gauge of the actual power consumption of the EAGLE.

Output

```
ent-frm-pwr:frm=ef00:thrshld=55
```

```
tekelecstp 06-04-11 15:18:41 EST EAGLE 35.0.0  
FRAME POWER THRESHOLD table is (4 of 10) 40% full  
ENT-FRM-PWR: MASP A - COMPLTD
```

4.1.295 ent-ftp-serv

Use this command to write an entry into the FTP Server table for an FTP Server.

Note:

The FTP Server table entry for the Oracle Communications EAGLE FTP Table Base Retrieval (FTRA) is entered through input from FTRA. Though the entry can be made with this command at the EAGLE, the information entered at the EAGLE will be overwritten by the information sent by FTRA.

Parameters

app (mandatory)

Application. This parameter specifies the FTP Client application that interfaces with the FTP server.

Range:

db

Database Backup\Restore application

dist

EAGLE Software Release Distribution application

meas

Measurements Platform application

sflog

SS7 Firewall Logging application

user

Oracle Communications EAGLE FTP Table Base Retrieval (FTRA)

ipaddr (mandatory)

IP Address of the FTP Server.

login (mandatory)

FTP Server Username (A prompt for entering a password appears on a separate line.)

Range:

ZZZZZZZZZZZZZZZZ

1 to 15 alphanumeric characters; mixed-case is allowed

path (mandatory)

FTP path used to locate the file that will be sent.

Range:

ZZZZZZZZZZZZZZZZZZZZZZZZZZZZZZ (up to 100)

Up to 100 characters; mixed-case string in double quotes with valid FTP path format

prio (mandatory)

Priority of this FTP server when there is more than one FTP Server for this application.

Range:

1 - 10

security (optional)

The parameter specifies whether the FTP connection is secure or not.

Range:

on

Set the FTP connection to be secure.

off

Set the FTP connection to be unsecure.

System Default:

on

Example

```
ent-ftp-  
serv:app=meas:ipaddr=1.255.0.102:login=ftpmeas1:path="~meas":prio=1  
  
ent-ftp-  
serv:app=user:ipaddr=1.255.0.102:login=tekperson1:path="~/data":prio  
=1  
  
ent-ftp-serv:app=dist:ipaddr=192.168.53.195:  
  
login=pvftp:prio=1:path="/remote/labftp1/pvftp/dallen2ftp"  
  
ent-ftp-serv:app=db:ipaddr=192.168.53.195:  
  
login=pvftp:prio=1:path="/remote/labftp1/pvftp/aholden"  
  
ent-ftp-serv:ipaddr=10.248.13.9:app=meas:login=root:path="/  
root":prio=5:security=on  
  
ent-ftp-serv:ipaddr=10.248.13.9:app=sflog:login=root:path="/  
root":prio=1:security=on
```

Dependencies

A separate prompt appears for you to enter the FTP server password that will be used with the FTP Server Username (`login`). You must enter a password that is at least 1 and not more than 15 characters long. If you enter an invalid password (you press the Return key without entering a password, or you enter more than 15 characters), you must enter the entire command again to cause the password prompt to appear again. The password that you enter is not displayed as you enter it.

3089 E3089 Cmd Rej: FTP Server password must be 1 - 15 characters in length

An entry for the specified application ID at the specified priority cannot already exist.

2772 E2772 Cmd Rej: Entry already exists for this application at this priority

An entry for the specified application ID at the specified IP address cannot already exist.

2769 E2769 Cmd Rej: Entry already exists for this application at this IP Address

The `app` parameter must specify an application that uses the FTP Support feature.

N/A N/A

The `ipaddr` parameter must specify a valid IP address for the FTP server.

N/A N/A

The `path` parameter value must be in a valid FTP path format.

N/A N/A

The `prio` parameter specifies a priority for use of an FTP server by an application when the application has more than one FTP server defined in the table. Each FTP server defined for use by the application must have a priority from 1 to 10 assigned. The available FTP server with the highest priority (smallest number) will be used first by the application.

N/A N/A

The FTP Server table can contain entries for a maximum of 10 FTP servers: however, the number of FTP servers supported by an application may be less than 10. Entries that are made for an application cannot be made for more than the maximum number of FTP servers supported by the application.

- The Measurements Platform application (`app=meas`) supports 3 FTP servers.
- The FTP-based Table Retrieve Application (FTRA) (`app=user`) supports 2 FTP servers.
- The Database (`app=db`) and Software Distribution (`app=dist`) applications each support 1 FTP server.
- The SS7 Firewall Logging application (`app=sflog`) supports 2 FTP servers.

2779 E2779 Cmd Rej: Max number of FTPSERV table entries exist for this APP

The `security` parameter must be set with value ON when the SS7 Firewall Logging application (`app=sflog`) is configured.

3499 E3499 Cmd Rej: Security parameter must be ON

Notes

The same FTP server can be defined more than once, but the specified application must be different for each entry.

The FTP connection will be secure when the `security` parameter is ON. The secure FTP connection (SFTP) uses port 22, which must be opened in the customer's network.

Output

4.1.296 ent-gen-name

Use this command to add a generic name into the database.

Parameters

gname (mandatory)

Generic name. Each Generic name must be unique in the system. Maximum 15 characters can be provisioned. Valid values are (0-9, A-Z), *, SPACE, all special characters.

Range:

ZZZZZZZZZZZZZZZZ

ZZZZZZ

ZZZ*

****ZZZ***

ZZ*ZZ

****ZZ****

settype (mandatory)

Set Type. Set to which generic name belong.

Range:

SetA

SetB

Both

None

Example

Add generic name POLICE with settype BOTH:

```
ent-gen-name:gname="POLICE":settype=BOTH
```

Add generic name HOSP* with settype SETB:

```
ent-gen-name:gname="HOSP*":settype=SETB
```

Add generic name *ICE with settype SETA:

```
ent-gen-name:gname="*ICE":settype=SETA
```

Add generic name EOC CANADA with settype NONE:

```
ent-gen-name:gname="EOC CANADA":settype=NONE
```

Dependencies

Missing mandatory parameter

2011 E2011 Cmd Rej:Missing mandatory parameter-gname

2011 E2011 Cmd Rej:Missing mandatory parameter-settype

Generic name entered is invalid i.e. Generic name in following format is restricted:

- Name with more than two ASTERIK(*) i.e. zz*zz*zz*zz
- Two consecutive ASTERIK(*) i.e. zzz**zz
- Two ASTERICK(*) if they are not at extermes i.e. zz*zz*

3642 E3642 Cmd Rej: Invalid Generic Name

Unable to read generic name table

3645 E3645 Cmd Rej: Unable to read Generic name table

Subset or Superset of the generic name entered already exist in the database

3643 E3643 Cmd Rej: Similar Generic name already exist

Generic name table is full

3644 E3644 Cmd Rej: Generic name table full

Notes

Maximum 5000 unique generic name can be provisioned.

The generic name supports wildcarding using ASTERIK (*)

If gname="*" is provisioned as first entry than no more generic name can be configured. Also gname="*" cannot be configured, if atleast one entry is already provisioned.

Output

```
ent-gen-name:gname="hosp*":settype=both
```

```
tekelecstp 19-10-04 02:44:06 EST EAGLE 46.9.0.0.0-76.4.0

4.1.297 ent-gserv-data

Use this command to enter translation type, originating point code, or global title address data in the GSERV table. These values are used to determine whether a Send Routing Information (SRI) request should receive G-Port SRI Query for Prepaid service or normal G-Port SRI service.

Parameters

Note:

See [Point Code Formats and Conversion](#) for a detailed description of point code formats, rules for specification, and examples.

gta (optional)

Global title address. Use this parameter to specify a calling party (CgPA) global title address.

Range:

1 - 21 digits

opc (optional)

ANSI originating point code in the form of *network indicator-network cluster-network cluster member (ni-nc-ncm)*. The *prefix* subfield indicates a private point code *prefix-ni-nc-ncm*.

Synonym:

opca

Range:

p-, 000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*p*-

When `chg-sid:pctype=ansi` is specified, *ni* = 000 is not valid.

When `chg-sid:pctype=ansi` is specified, *nc* = 000 is not valid if *ni* = 001-005.

When `chg-sid:pctype=ansi` is specified, *nc* = 000 is valid if *ni* = 006-255.

The point code 000-000-000 is not a valid point code.

opc/opca/opci/opcn/opcn24 (optional)

Originating point code. Use these parameters to specify message transfer part (MTP) originating point codes.

opci (optional)

ITU international originating point code with subfields *zone-area-id*.

Range:

s-, *p*-, *ps*-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s*-, *p*-, *ps*

zone—0-7

area—000-255

id—0-7

The point code 0-000-0 is not a valid point code.

opcn (optional)

ITU national originating point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the `chg-stpopts:npcfmti` flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*).

Range:

s-, *p*-, *ps*-, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s*-, *p*-, *ps*

nnnnn—0-16383

gc—*aa-zz*

m1-m2-m3-m4—0-14 for each member; values must sum to 14

opcn24 (optional)

24-bit ITU national originating point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*).

Range:

p-, 000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*p*

msa—000-255

ssa—000-255

sp—000-255

tt (optional)

Translation type. Use this parameter to specify a called party (CdPA) translation type.

Range:
0 - 255

Example

```
ent-gserv-data:tt=26  
ent-gserv-data:opc=1-1-1  
ent-gserv-data:gta=9194605500
```

Dependencies

Duplicate entries cannot exist in the GSERV table.

3167 E3167 Cmd Rej: GSERV Entry already exists

The system is busy, or the GSERV table is corrupted.

3215 E3215 Cmd Rej: Cannot access GSERV table

The G-Port SRI Query for Prepaid feature must be enabled before this command can be entered.

3216 E3216 Cmd Rej: G-Port SRI Query for Prepaid feature is not enabled

A new entry cannot be added to the GSERV table because all available space is in use. A maximum of 256 `tt` values, 50 `gta` values, and 50 `opc` values can be entered in the GSERV table.

3260 E3260 Cmd Rej: GSERV Table is full

The `tt`, `opc`, and `gta` parameters cannot be specified within the same command.

2609 E2609 Cmd Rej: Only one optional parameter may be specified

The G-Port feature must be enabled before this command can be entered.

4371 E4371 Cmd Rej: GPORT must be enabled

Notes

A translation type, originating point code, or global title address value must be entered in the GSERV table and must match the corresponding SRI Query parameter for an SRI message to receive the G-Port SRI Query for Prepaid service.

The G-Port SRI Query for Prepaid feature must be on before entries in the GSERV table can be used to affect a G-Port SRI query

Output

```
ent-gserv-data:tt=26
```

```
mystp 06-07-27 22:58:17 EST EAGLE 35.2.0  
ENT-GSERV-DATA: MASP A - COMPLTD
```

4.1.298 ent-gsmmap-scrn

Use this command to assign the GSM (Global System for Mobile Telecommunication) MAP (Mobile Application Part) screening entries that filter or allow TCAP messages for certain MAP operation codes. The messages are filtered or allowed based on CgPA GTA+NPV+NAIV, CdPA GTA+NPV+NAIV, and forbidden (*forbid*) parameters. Each CgPA entry is associated with one or more CdPA entries and one or more CgPA entries are associated with a MAP Opcode. This command provisions both CgPA and CdPA entries into the database.

Parameters

Note:

See [Point Code Formats and Conversion](#) for a detailed description of point code formats, rules for specification, and examples.

cgscr (mandatory)

CGPA screening reference. This parameter specifies a CGPA entry for an OPNAME.

Range:

ayyy

1 alphabetic character and up to 3 optional alphanumeric characters

opname (mandatory)

Operation code name. This parameter references the operation code (*opcode*) defined with the `ent-gsms-opcode` command. GSM Map Screening is performed on the specified address or addresses for the referenced operation code.

Range:

ayyyyyyy

Up to 8 alphanumeric characters

action (optional)

The screening action to take if a message is forbidden as defined by the *forbid* parameter.

Range:

atierr

Generate an ATI reject message. This option is only valid for ATI MAP operation codes.

discard

Discard the MSU

dupdisc

Route the original message to the duplicate node. The original message will not be sent to the original node. If, however, the duplicate node is not available for routing, the MSU is discarded.

duplicate

Route the message as normal to the original destination and route a copy of the original message to the duplicate node. If the MSU fails to route to the duplicate node, a UIM is generated indicating the duplicate routing failure.

forward

Route the original message to the forward node. The original message will not be sent to the original node. If, however, the forward node is not available for routing, the MSU is routed to the original node.

pass

Route the message as normal to the destination.

route

Route the message as normal to the original destination node; no UIM will be generated. The original destination is the node to which normal GTT would be sent if no GSM MAP actions are taken.

Default:

discard

cdsr (optional)

CDPA screening reference. A CDPA entry for a combination of CGSR and OPNAME.

Range:

ayyy

1 alphabetic character and up to 3 optional alphanumeric characters

eaddr (optional)

Ending CDPA address. This parameter is used with the `npv`, `naiv`, `cgsr`, and `cdsr` parameters.

Range:

1-15 digits

Valid digits are 0–9, a-f, A-F

forbid (optional)

Forbidden parameter value. A forbidden parameter for the entered address. If a forbidden parameter is detected, then the message is rejected by the action defined by the `action` parameter.

Range:***all***

All parameters are forbidden. Take the specified screening action defined by the `action` parameter for messages arriving at the system.

none

None of the parameters are forbidden. Route the message to its destination.

state

Take the specified screening action defined by the `naction` parameter for messages arriving at the system that contain `state` as the forbidden parameter for the entered address/operation code combination.

 **Note:**

The `state` parameter is valid only for GSM ATI messages.

location

Take the specified screening action defined by the `naction` parameter for messages arriving at the system that contain `location` as the forbidden parameter for the entered address/operation code combination.

 **Note:**

The `location` parameter is valid only for GSM ATI messages.

Default:

all

force (optional)

Check Mated Application Override. This parameter must be used to complete command execution if the `pc/pca/pci/pcn/pcn24` and `ssn` parameter combination (if the `ssn` parameter has a value other than *none*) specified in the command is not already defined in the SCCP Application entity set (Remote Point Code/Mated Application Table).

Range:

yes

no

Default:

no

mapset (optional)

MAP set ID.

Range:

1 - 36000, dflt

dflt —Default MAP set

naiv (optional)

Nature of Address value for the address or range of CgPA and CdPA addresses. If a message is screened and does not contain matching `npv` and `naiv` values, the message is rejected. The message is rejected with the default action defined by the `ent-gsms-opcode` command for the operation code (`opcode`) parameter entry referenced by the operation name (`opname`) parameter.

This parameter must be specified with the `npv` parameter.

Range:

*0 - 127, **

Default:

npv (optional)

Numbering Plan value for the address or range of CgPA and CdPA addresses. If a message is screened and does not contain matching `npv` and `naiv` values, the message is rejected. The message is rejected with the default action defined by the `ent-gsms-opcode` command for the operation code (`opcode`) parameter entry referenced by the operation name (`opname`) parameter.

This parameter must be specified with the `naiv` parameter.

Range:

0 - 15, *

Default:

*

pc (optional)

ANSI point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.

Synonym:

pca

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When `chg-sid:pctype=ansi` is specified, `ni = 000` is not valid.

When `chg-sid:pctype=ansi` is specified, `nc = 000` is not valid if `ni = 001-005`.

When `chg-sid:pctype=ansi` is specified, `nc = 000` is valid if `ni = 006-255`.

The point code `000-000-000` is not a valid point code.

pc/pca/pci/pcn/pcn24 (optional)

Point code. The Point Code and SSN parameters are used to enter the node to which the input message will be routed.

pci (optional)

ITU international point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*).

Range:

s-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s

zone—0-7

area—000-255

id—0-7

The point code `0-000-0` is not a valid point code.

pcn (optional)

ITU national point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the `chg-stpopts:npcfmti` flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

Range:

s-, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s*-

nnnnn—0-16383

gc—*aa-zz*

m1-m2-m3-m4—0-14 for each member; values must sum to 14

pcn24 (optional)

24-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point (msa-ssa-sp)*.

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

msa—000–255

ssa—000–255

sp—000–255

ri (optional)

Routing indicator. This parameter specifies whether a subsequent global title translation is required.

This parameter can be specified only when the value specified for the `action` parameter is *forward*, *duplicate*, or *dupdisc*.

Range:

gt

ssn

System Default:

ssn

saddr (optional)

Starting origination address.

With the `npv`, `naiv`, and `cgsr` parameters, this parameter is for a single CGPA entry or the starting CGPA address in the range to be screened.

With the `npv`, `naiv`, and `cdsr` parameters, this parameter is for a single CDPA entry or the starting CDPA address in the range to be screened.

Range:

1-15 digits, *

Valid digits are 0–9, *a-f*, *A-F*

Default:

*

ssn (optional)

Subsystem Number. The Point Code and SSN are used to change the defined node where the input message will be routed.

Range:

002 - 255, *none*

Default:
none

tt (optional)

Translation type. The value that the CdPA TT is set to as the result of Enhanced GSM Map Screening.

This parameter can be specified only if the value specified for the `action` parameter is *forward*, *duplicate*, or *dupdisc*.

Range:
0 - 255, none

Default:
none

Example

The following example adds a MAP OPNAME of ATI with a range of allowed addresses, defines a forbidden parameter for that range of addresses and an action to take if the forbidden parameter is detected, and sets the NPV and NAIV values. This example is wrapped to the next line for readability:

```
ent-gsmmap-
scrn:saddr=919461:eaddr=919462:opname=ati:action=discard:forbid
=state :npv=1:naiv=4:cgsr=fela
```

The following example adds a MAP OPNAME of ATI of with a range of allowed addresses, defines a forbidden parameter for that range of addresses and an action to take if the forbidden parameter is detected, and sets the NPV and NAIV values. The command also defines an ITU International Point Code with Subsystem Number 5, and forbids by `location` messages that have an action of *forward*. This example is wrapped to the next line for readability:

```
ent-gsmmap-
scrn:saddr=919461:eaddr=919462:opname=ati:action=forward:pci=1-
1-1 :ssn=5:force=yes:forbid=location:cgsr=fela
```

The following example adds a MAP OPNAME of XYZ with an allowed hexadecimal address of abcdefabcdefabc, defines the action *discard* to take if a forbidden parameter is detected, and sets the NPV and NAIV values. The command also defines a CGSR of FELA. This example is wrapped to the next line for readability:

```
ent-gsmmap-
scrn:opname=xyz:saddr=abcdefabcdefabc:npv=10:naiv=10:cgsr=fela
:action=discard

ent-gsmmap-
scrn:opname=test2:cgsr=t1:cdsr=cd3:saddr=125:pci=s-1-1-1:ssn=10
:action=duplicate

ent-gsmmap-
scrn:opname=test2:cgsr=cg1:cdsr=cd1:saddr=125:pci=1-1-1:ssn=10
:action=duplicate:mapset=11

ent-gsmmap-
scrn:opname=test3:cgsr=ad:action=forward:pc=1-1-2:ssn=12:ri=gt
```

```
ent-gsmmap-  
scrn:opname=test4:cgsr=ksl:action=forward:mapset=df1t:pc=1-2-3 :ssn=  
12:tt=11
```

Dependencies

The GSM Map Screening feature must be turned on before this command can be entered.

3883 E3883 Cmd Rej: GSM Map Screening feature must be ON

The EGMS feature must be turned on before:

- The `saddr=*` parameter can be specified.
- Values for the `saddr` and `eaddr` parameters can contain hexadecimal digits.
- The `cdsr` parameter can be specified.
- The `pc/pca` parameter can be specified.

4285 E4285 Cmd Rej: Enhanced GSM Map Screening feature must be ON

If the `eaddr` parameter is specified, the `saddr` parameter must be specified.

3898 E3898 Cmd Rej: EADDR can not be specified without SADDR

If the `eaddr` parameter is specified, then its value must contain the same number of digits as the value of the `saddr` parameter.

3894 E3894 Cmd Rej: SADDR and EADDR must have the same number of digits

If the `eaddr` parameter is specified, its value must be greater than the `saddr` parameter value.

3895 E3895 Cmd Rej: EADDR must be greater than SADDR

If the `saddr=*` parameter is specified, then the `eaddr` parameter cannot be specified.

4286 E4286 Cmd Rej: EADDR shouldn't be specified when SADDR = *

If the `opname` parameter is specified, its value must exist in the GSM MAP Op-Code table.

3892 E3892 Cmd Rej: OPNAME does not exist in the database

A value of *state* or *location* cannot be specified for the `forbid` parameter unless the operation code (`opcode`) referenced by the `opname` parameter is 71.

3902 E3902 Cmd Rej: FORBID can not be STATE or LOCATION for the given OPNAME

The `action=atierr` parameter cannot be specified unless the operation code (`opcode`) referenced by the `opname` parameter is 71.

3903 E3903 Cmd Rej: Screening action can not be ATIERR for the given OPNAME

The GSM MAP Screening table cannot be full.

3906 E3906 Cmd Rej: The GSM Map Screening table is full

The GSM MAP Screening table must have at least two free entries to provision a CgPA entry, because a default wildcard CdPA entry is created for each CgPA entry.

4284 E4284 Cmd Rej: CGPA entry can't be provisioned

If a single entry is specified for the CgPA/CdPA (the `eaddr` parameter is not specified), then the combination of `saddr/npv/naiv` and `opname` parameters cannot already exist in the GSM MAP screening table.

3897 E3897 Cmd Rej: GSM MAP SCRN entry already exists or overlaps another entry

If a range entry is specified for the CgPA/CdPA (the `eaddr` parameter is specified), then the `saddr/eaddr/npv/naiv` and `opname` combination cannot already exist or overlap another range entry in the GSM MAP screening table.

3897 E3897 Cmd Rej: GSM MAP SCRN entry already exists or overlaps another entry

If a CdPA entry is being created, then the CGSR must already exist for the specified OPNAME.

3905 E3905 Cmd Rej: CGSR doesn't exist for specified OPNAME

If a CgPA entry is being created, the CGSR cannot already exist for the specified OPNAME.

4289 E4289 Cmd Rej: (N)CGSR already exists for specified OPNAME

The specified `cdsr` cannot already exist for the specified `cgsr`.

4293 E4293 Cmd Rej: (N)CDSR already exists for specified CGSR

If specified, the `pc/pca/pci/pcn/pcn24` parameter must be a full point code.

3090 E3090 Cmd Rej: Full Point Code must be specified

If the `action` parameter is specified with a value of *forward*, *duplicate*, or *dupdisc*, the `pc/pca/pci/pcn/pcn24` and `ssn` parameters must be specified.

3091 E3091 Cmd Rej: PC/SSN must be given with Action FORWARD, DUPLICATE, DUPDISC

The `pc/pca/pci/pcn/pcn24` and `ssn` parameters can be specified only if the `action` parameter is specified with a value of *forward*, *duplicate*, or *dupdisc*.

3080 E3080 Cmd Rej: ACTION must be specified as FORWARD, DUPLICATE, or DUPDISC

The `force` parameter can be specified only if the `pc/pca/pci/pcn /pcn24` and `ssn` parameters are specified.

3902 E3902 Cmd Rej: FORBID can not be STATE or LOCATION for the given OPNAME

If the `pc/pca/pci/pcn/pcn24` and `ssn` parameters are specified, and the `force` parameter is not specified as *yes*, then the PC/SSN must be populated in the SCCP Application entity set (Remote Point Code/MAP Table).

2450 E2450 Cmd Rej: PC/SSN does not exist as a mated application

The values for the `npv` and `naiv` parameters must both be numbers or asterisks (*).

4087 E4087 Cmd Rej: Both NPV and NAIV must be either * or numbers

The GSM Map screening table must be accessible.

3890 E3890 Cmd Rej: Failure reading the GSM MAP SCRN Table

The GSM Map Op-Code table must be accessible.

3889 E3889 Cmd Rej: Failure reading the GSM OPCODE Table

The Route table must be accessible.

2648 E2648 Cmd Rej: Failed reading the route table

If specified, the `pc/pca/pci/pcn/pcn24` parameter value must exist as a destination in the Ordered Route entity set or reside in a cluster (ANSI only) that exists as a destination in the Ordered Route entity set (for global title routing).

2417 E2417 Cmd Rej: Point code does not exist in the routing table

The `opname` parameter must consist of alphanumeric characters.

2040 E2040 Cmd Rej: String pattern nonconformance, alphanumeric - <parm>

The `opname` parameter must be entered.

2011 E2011 Cmd Rej: Missing mandatory parameter - <parm>

The `cgsr` parameter must be entered.

2011 E2011 Cmd Rej: Missing mandatory parameter - <parm>

The `saddr` and `eaddr` parameters must each be between 1 - 15 digits in length.

2045 E2045 Cmd Rej: <parm_desc> num digits incorrect, min <min> max <max> - <parm>

The `npv` parameter must be in range (0 - 15, *).

2051 E2051 Cmd Rej: Incorrect information unit, expecting number - <parm>

The `naiv` parameter must be in range (0 - 127, *).

2051 E2051 Cmd Rej: Incorrect information unit, expecting number - <parm>

The `saddr` parameter must have valid hexadecimal digits (0 - 9, a-f, A-F, or *).

2062 E2062 Cmd Rej: Incorrect information unit, expecting number or none - %s

The `eaddr` parameter must have valid hexadecimal digits (0 - 9, a - f, A - F).

2062 E2062 Cmd Rej: Incorrect information unit, expecting number or none - %s

The `cgsr` and `cdsr` parameters must each begin with an alphabetic character.

2041 E2041 Cmd Rej: String pattern nonconformance, alphabetic - <parm>

The `cgsr` and `cdsr` parameters must each consist of 1-4 alphanumeric characters.

2039 E2039 Cmd Rej: <parm_desc> too long, min <min>, max <max> - <parm>

If the `action` parameter has a value of *forward*, *duplicate*, or *dupdisc*, then the `mapset` parameter must be specified.

4530 E4530 Cmd Rej: MAPSET must be specified if action is FORWARD/DUP/DUPDISC

If the `mapset`, `ri`, or `tt` parameter is specified, then the value specified for the `action` parameter must be *forward*, *duplicate*, or *dupdisc*.

3080 E3080 Cmd Rej: ACTION must be specified as FORWARD, DUPLICATE, or DUPDISC

The Flexible GTT Load Sharing feature must be enabled before the `mapset` parameter can be specified.

4523 E4523 Cmd Rej: MAPSET must be specified (only) if FGTTLS feature is enabled

The specified MAP set must exist.

4527 E4527 Cmd Rej: Specified MAPSET does not exist

If the value of the `mapset` parameter is not `dfmt`, then the specified PC/SSN must exist in the specified MAP set.

4528 E4528 Cmd Rej: PC/SSN doesn't exist in MAPSET

If the `mapset=dfmt` parameter is specified, and the `force` parameter is not specified as `yes`, then the specified PC/SSN must exist in the specified MAP set.

4528 E4528 Cmd Rej: PC/SSN doesn't exist in MAPSET

The MAP Table must be accessible.

4524 E4524 Cmd Rej: Failed Reading MAP table

If the `action` parameter has a value of `forward`, `duplicate`, or `dupdisc`, then the value specified for the `pc/pca/pci/pcn/pcn24` parameter cannot be associated with a proxy point code.

4713 E4713 Cmd Rej: PRX using DPC not allowed in GSM tables

If the `ri=ssn` parameter is specified, then the `ssn=none` parameter cannot be specified.

4880 E4880 Cmd Rej: SSN must not be NONE if RI is SSN

If the `forbid=none` parameter is specified, then the `action=pass` parameter must be specified.

4993 E4993 Cmd Rej: If specified, (n)action must be PASS when (n)forbid=NONE

If the FGTTLS feature is enabled, the `mapset` parameter is specified, and the `ssn` parameter is not specified or has a value of `none`, then the specified MAPSET/PC combination must already exist in the MAP table.

4543 E4543 Cmd Rej: PC/MAPSET does not exist in MAP table

If the FGTTLS feature is not enabled and the `ssn` parameter is not specified or has a value of `none`, then the specified point code must already exist in the MAP table.

2419 E2419 Cmd Rej: Point code does not exist in the remote point code table

Notes

GSM screening entries are handled differently from other screening entries such as GWS (gateway screening) in the system database. The following differences apply to provisioning GSM screening entries:

- GSM screening entries can be either single entries or range entries.
- Single entries have precedence in screening over range entries. Thus the single entries are searched first and if a match is found, the range entries are never searched.

- Range entries can overlap single entries.

In this command, only ITU-international and ITU national point codes support the spare point code subtype prefix (s-).

Output

```
ent-gsmmap-
scrn:opname=test2:cgsr=cg1:cdsr=cd1:saddr=125:pci=1-1-1:ssn=10:ac

4.1.299 ent-gsms-opcode

Use this command to assign the concerned GSM (Global System for Mobile Telecommunication) MAP (mobile application part) screening operation codes and the default screening action for the operation code. This command allows the craftsman to provision a list of all operation codes that the system uses in performing GSM screening.

Parameters

Note:

See [Point Code Formats and Conversion](#) for a detailed description of point code formats, rules for specification, and examples.

opcode (mandatory)

MAP operation code. This parameter refers to the actual decimal value of the MAP operation codes from the TCAP layer of GSM MAP messages.

Range:

0 - 255, *

If a decimal Map Opcode is not found in the database, then the asterisk (wildcard *), if provisioned, will constitute a match when screening the MSUs.

opname (mandatory)

Operation code name. The `opname` value is defined with the `ent-gsmmap-scrn` command.

Range:

ayyyyyyy

Up to 8 alphanumeric characters

df1tact (optional)

Default screening action for a MAP operation code. The default screening action is used when a matching CGPA address+NPV+NAIV entry is not found in the GSM MAP screening table.

Range:

atierr

Do not route the MSU. An ATI (Any Time Interrogation) reject message is generated. This option is only valid for ATI MAP operation codes.

discard

Do not route the MSU. The MSU is discarded (thrown away) and an appropriate UIM is issued.

dupdisc

Route the original message to the duplicate node. The original message will not be sent to the original node. If, however, the duplicate node is not available for routing, the MSU is discarded.

duplicate

Route the message as normal to the original destination and route a copy of the original message to the duplicate node. If the MSU fails to route to the duplicate node, a UIM is generated indicating the duplicate routing failure.

forward

Route the original message to the forward node. The original message will not be sent to the original node. If, however, the forward node is not available for routing, the MSU is routed to the original node.

pass

Route the message as normal to the destination.

route

Route the message as normal to the original destination node; no UIM will be generated. The original destination is the node to which normal GTT would be sent if no GSM MAP actions are taken.

Default:

discard

force (optional)

Check Mated Application Override. This parameter must be used to complete command execution if the *pc/pca/pci/pcn/pcn24* and *ssn* parameter combination (if the *ssn* parameter has a value other than *none*) specified in the command is not already defined in the SCCP Application entity set (Remote Point Code/Mated Application Table).

Range:

yes

no

Default:

no

mapset (optional)

MAP set ID.

Range:

1 - 36000, dflt

dflt —Default MAP set

pc (optional)

ANSI point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.

Synonym:

pca

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001-005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006-255*.

The point code *000-000-000* is not a valid point code.

pc/pca/pci/pcn/pcn24 (optional)

Point code. The `pc/pca/pci/ncn/pcn24` and `ssn` parameters allow the user to change the defined node to which the input message will be routed.

pci (optional)

ITU international point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*).

Range:

s-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s

zone—0-7

area—000-255

id—0-7

The point code *0-000-0* is not a valid point code.

pcn (optional)

ITU national point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the `chg-stpopts:npcfmti` flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

Range:

s-, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s-

nnnnn—0-16383

gc—aa-zz

m1-m2-m3-m4—0-14 for each member; values must sum to 14

pcn24 (optional)

24-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*).

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

msa—000-255

ssa—000-255

sp—000-255

ri (optional)

Routing indicator. This parameter specifies whether a subsequent global title translation is required.

 **Note:**

This parameter can be specified only when the value specified for the `dfltact` parameter is *forward*, *duplicate*, or *dupdisc*.

Range:*gt**ssn***System Default:***ssn***ssn (optional)**

Subsystem Number. The `pc/pca/pci/pcn/pcn24` and `ssn` parameters are used to change the defined node where the input message will be routed.

Range:*002 - 255***Default:***none***tt (optional)**

Translation type. The value that the CdPA TT is set to as the result of Enhanced GSM Map Screening.

The parameter can be specified only if the value specified for the `dfltact` parameter is *forward*, *duplicate*, or *dupdisc*.

Range:*0 - 255, none***Default:***none***Example**

This example adds a MAP operation code of 71 with a name of ATI with a default action of DISCARD:

```
ent-gsms-opcode:opcode=71:opname=ati:dfltact=discard
```

This example adds a MAP operation code of 71 with a name of ATI, a default action of FORWARD, an international point code of 1, a subsystem number of 5, and forces:

```
ent-gsms-  
opcode:opcode=71:opname=ati:dfltact=forward:pci=1-1-1:ssn=5:force=yes
```

This example adds a MAP operation code of 71 with a name of ATI, a default action of DUPLICATE, an international point code of 1, a subsystem number of 5, and forces:

```
ent-gsms-  
opcode:opcode=71:opname=ati:dfltact=duplicate:pci=1-1-1:ssn=5:force=yes
```

This example adds a MAP operation code of 71 with a name of ATI, a default action of DUPDISC, an international point code of 1, a subsystem number of 5, and forces:

```
ent-gsms-  
opcode:opcode=71:opname=ati:dfltact=dupdisc:pci=1-1-1:ssn=5:force=yes
```

This example adds a MAP operation code of * with a name of XYZ, a default action of DUPLICATE, an ANSI point code of 8, a subsystem number of 20:

```
ent-gsms-  
opcode:opcode=*:opname=xyz:pca=8-8-8:dfltact=duplicate:ssn=20
```

This example adds a MAP operation code of 22 with a name of ATI with a default action of DISCARD:

```
ent-gsms-opcode:opcode=22:opname=ati:dfltact=discard
```

This example shows a spare point code:

```
ent-gsms-  
opcode:opname=test3:opcode=3:pci=s-1-1-1:dfltact=duplicate:ssn=10:force
```

This example shows a MAP set value. The Flexible GTT Load Sharing feature is ON.

```
ent-gsms-  
opcode:opname=test3:opcode=3:pc=1-1-1:dfltact=duplicate:ssn=10:mapset=7
```

This example adds a MAP operation code of 27 with a name of TEST3, a default action of FORWARD, an ANSI point code of 1, a subsystem number of 12 and a routing indicator of GT:

```
ent-gsms-  
opcode:opname=test3:opcode=27:dfltact=forward:pca=1-1-2:ssn=12:ri=gt
```

This example shows a translation type value:

```
ent-gsms-  
opcode:opname=test4:opcode=32:dfltact=forward:mapset=dflt:pc=1-2-3:ssn=12:tt=11
```

Dependencies

The GSM Map Screening feature must be turned on before this command can be entered.

3883 E3883 Cmd Rej: GSM Map Screening feature must be ON

A valid value must be specified for the `dfltact` parameter.

2044 E2044 Cmd Rej: <parm_desc> value is undefined - <parm>

The `opcode` parameter value must be specified as a number in the range 0-255 or as *.

2018 E2018 Cmd Rej: <parm_desc> is out of range, <min>..<max>,'<char>' - <parm>

The reserved word *none* cannot be specified as a value for the `opname` parameter.

2001 E2001 Cmd Rej: Undefined msg#

The `pc/pca/pci/pcn/pcn24` and `ssn` parameters can be specified only if the `dfltact` parameter is specified and its value is *forward*, *duplicate*, or *dupdisc*.

2780 E2780 Cmd Rej: DFLTACT must be specified as FORWARD, DUPLICATE, or DUPDISC

If the `dfltact` parameter is specified with a value of *forward*, *duplicate*, or *dupdisc*, then the `pc/pca/pci/pcn/pcn24` and `ssn` parameter must be specified.

3091 E3091 Cmd Rej: PC/SSN must be given with Action FORWARD, DUPLICATE, DUPDISC

The `force` parameter can be specified only if the `pc/pca/pci/pcn/pcn24` and the `ssn` parameters are specified.

3092 E3092 Cmd Rej: PC/SSN must be specified if FORCE is specified

The `dfltact=atierr` parameter cannot be specified unless the value of the operation code referenced by the `opname` parameter is 71. The `atierr` option is valid only for ATI MAP operation codes, and the `opcode=71` parameter signifies an ATI MAP operation code.

3904 E3904 Cmd Rej: DFLTACT can not be ATIERR unless OP CODE=71

The value specified for the `opcode` parameter cannot already exist in the GSM Map Op-Code table.

3887 E3887 Cmd Rej: OP CODE already exists

The value specified for the `opname` parameter cannot already be used in the GSM Map Op-Code table.

3888 E3888 Cmd Rej: OPNAME already used

If the `pc/pca/pci/pcn/pcn24` and `ssn` parameters are specified, and the `force` parameter is not specified as *yes*, then the PC-SSN must exist in the SCCP Application entity set (Remote Point Code / Mated Application Table).

2450 E2450 Cmd Rej: PC/SSN does not exist as a mated application

The Enhanced GSM Map Screening feature must be enabled and turned on before the `opcode=*` parameter can be specified.

4285 E4285 Cmd Rej: Enhanced GSM Map Screening feature must be ON

If specified, the `pc/pca/pci/pcn /pcn24` parameter value must be a full point code.

3090 E3090 Cmd Rej: Full Point Code must be specified

The GSM MAP Op-Code table must be accessible.

3889 E3889 Cmd Rej: Failure reading the GSM OP CODE Table

The Route table must be accessible.

2648 E2648 Cmd Rej: Failed reading the route table

If specified, the `pc/pca/pci/pcn/pcn24` parameter value must exist as a destination in the Ordered Route entity set or reside in a cluster (ANSI only) that exists as a destination in the Ordered Route entity set (for global title routing).

2417 E2417 Cmd Rej: Point code does not exist in the routing table

The Enhanced GSM Map Screening feature must be enabled and turned on when the PC/PCA is specified.

4285 E4285 Cmd Rej: Enhanced GSM Map Screening feature must be ON

The `opname` parameter must consist of alphanumeric characters.

2040 E2040 Cmd Rej: String pattern nonconformance, alphanumeric - <parm>

The `opname` parameter must be no more than 8 characters in length.

2039 E2039 Cmd Rej: <parm_desc> too long, min <min>, max <max> - <parm>

If the `mapset`, `ri`, or `tt` parameter is specified, then the value specified for the `dfltact` parameter must be *forward*, *duplicate*, or *dupdisc*.

2780 E2780 Cmd Rej: DFLTACT must be specified as FORWARD, DUPLICATE, or DUPDISC

If the `dfltact` parameter is specified as *forward*, *duplicate*, or *dupdisc*, then the `mapset` parameter must be specified.

4530 E4530 Cmd Rej: MAPSET must be specified if action is FORWARD/DUP/DUPDISC

The Flexible GTT Load Sharing feature must be enabled before the `mapset` parameter can be specified.

4523 E4523 Cmd Rej: MAPSET must be specified (only) if FGTTLS feature is enabled

The specified MAP set must exist.

4527 E4527 Cmd Rej: Specified MAPSET does not exist

If the `mapset` parameter is not specified as *dflt*, or if the `mapset=dflt` parameter is specified, and the `force` parameter is not specified as *yes*, then the specified PC/SSN must exist in the specified MAP set.

4528 E4528 Cmd Rej: PC/SSN doesn't exist in MAPSET

The MAP table must be accessible.

4524 E4524 Cmd Rej: Failed Reading MAP table

If the `dfltact` parameter has a value of *forward*, *duplicate*, or *dupdisc*, then the value specified for the `pc/pca/pci/pcn/pcn24` parameter cannot be associated with a proxy point code.

4713 E4713 Cmd Rej: PRX using DPC not allowed in GSM tables

If the `ri=ssn` parameter is specified, then the `ssn=none` parameter cannot be specified.

4880 E4880 Cmd Rej: SSN must not be NONE if RI is SSN

If the FGTTLS feature is enabled, the `mapset` parameter is specified and the `ssn` parameter is not specified or has a value of *none*, then the specified MAPSET/PC combination must already exist in the MAP table.

4543 E4543 Cmd Rej: PC/MAPSET does not exist in MAP table

If the FGTTLS feature is not enabled and the `ssn` parameter is not specified or has a value of `none`, then the specified point code must already exist in the MAP table.

2419 E2419 Cmd Rej: Point code does not exist in the remote point code table

Notes

Origination Addresses are considered to be the SCCP CGPA address as well as the Numbering Plan and Nature of Address values.

In this command, only ITU-international and ITU national point codes support the spare point code subtype prefix (s-).

4.1.300 ent-gsmssn-scrn

Use this command to provision origination and destination SSNs (subsystem numbers) to be screened using the GSM (Global System for Mobile Telecommunication) MAP (mobile application part) screening feature. The value of the `ssn` parameter that is entered with this

command is added to the GSM SSN screening table. All the MAP messages with the originating or destination SSN entered are screened using the GSM Map screening feature.

Parameters

ssn (mandatory)

Subsystem number.

Range:

000 - 255

type (mandatory)

Subsystem type.

Range:

dest

destination SSN

orig

origination SSN

Example

The following example adds an originating subsystem of 10 to the GSM SSN Screening table:

```
ent-gsmssn-scrn:ssn=10:type=orig
```

Dependencies

The GSM Map Screening feature must be turned on before this command can be entered.

3883 E3883 Cmd Rej: GSM Map Screening feature must be ON

The GSM SSN screening table is corrupt or cannot be found.

3885 E3885 Cmd Rej: Failure reading the GSM SSN Screening Table

A value for the `ssn` and `type` parameter combination cannot be specified that already exists in the GSM SSN screening table.

3884 E3884 Cmd Rej: SSN/TYPE combination already exists

The `ssn` value must be a valid numeric between **0** and **255**

2017 E2017 Cmd Rej: <parm_desc> is out of range, <min>..<max> - <parm>

The type parameter value must be *orig* or *dest*.

2044 E2044 Cmd Rej: <parm_desc> value is undefined - <parm>

Notes

None

Output

```
ent-gsmssn-scrn:ssn=10:type=orig

      rlghncxa03w 04-01-10 11:43:04 EST  EAGLE 31.3.0

4.1.301 ent-gta

Use this command to specify the GTA (global title address) information for applicable global title selectors required to specify a global title entry.

This command adds the routing object (a destination address and a subsystem number) for messages requiring a global title translation. The translation is performed on the basis of the global title address (GTA), global title indicator (GTI), numbering plan (NP), nature of address indicator (NAI), and translation type (TT) of each SS7 SCCP message directed to the STP with a routing indicator of 0, indicating a GTT is required.

Note:

If the EGTT feature is turned on, then the GTT Selector (`ent/chg/dlt/rtrvgtttsel`), GTT Set (`ent/dlt/rtrv-gttset`), and GTA (`ent/chg/dlt/rtrvgta`) commands replace the Translation Type (`ent/dlt/rtrv-tt`) and Global Title Translation (`ent/chg/dlt/rtrv-gtt`) commands. It is not recommended to run `ent/dlt/rtrv-tt & ent/chg/dlt/rtrv-gtt` commands as it may cause the advance GTA fields of GTT entry to be reset to the default values.

Parameters

Note:

See [Point Code Formats and Conversion](#) for a detailed description of point code formats, rules for specification, and examples.

gttsn (mandatory)

GTT set name. The entity to which global title addresses and selectors are assigned.

Range:

ayyyyyyy

1 leading alphabetic and up to 8 following alphanumeric characters

xlat (mandatory)

Translate indicator. This parameter specifies translation actions and routing actions.

Range:

dpc

dpcngt

dpcssn

none

acn (optional)

Application context name. This parameter specifies the ITU TCAP *acn* field in the incoming MSU.

Range:

*0 - 255, *, none*

The *acn* supports up to 7 subfields separated by dash (e.g.,
1-202-33-104-54-26-007)

* —any valid value in the ITU TCAP *acn* field in the incoming MSU

none —there is no ITU TCAP *acn* field in the incoming MSU

actsn (optional)

GTT Action Set Name.

Range:

ayyyyyyy

1 leading alphabetic character and up to 8 following alphanumeric characters

ccgt (optional)

Cancel called global title indicator.

Range:

yes

no

Default:

no

cdselid (optional)

CdPA Selector ID.

Range:

0 - 65534

cdssn (optional)

Starting CdPA subsystem number.

Range:

0 - 255

cgcnvsn (optional)

CgPA conversion set name.

Range:*ayyyyyyy*

1 leading alphabetic character and up to 8 following alphanumeric characters

cggtmod (optional)

Calling party GT modification indicator. This parameter specifies whether calling party global title modification is required.

Range:*yes**no***Default:***no***cgpc (optional)**ANSI CgPA point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.**Synonym:***cgpca***Range:***0-255, **

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

The asterisk (*) value is not valid for the *ni* subfield.When *chg-sid:pctype=ansi* is specified, *ni=000* is not valid.When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni=001-005*.When *chg-sid:pctype=ansi* is specified, *nc=000* is valid if *ni=006-255*.When *chg-sid:pctype=ansi* is specified, *ni-*-** is valid if *ni =006-255*.The point code *000-000-000* is not a valid point code.**cgpcaction (optional)**

This parameter is used to provide the required abilities, indicating what any particular translation needs to do with CgPA PC.

Range:*dflt*

protocol will be allowed to perform all the required processing/conversion with CGPC.

ignore

CGPC will be left as it was in incoming MSU.

remove

CGPC will be removed from outgoing MSU.

Default:*dflt*

cgpci (optional)

ITU international CgPA point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*).

Range:

s-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s*

zone—0-7

area—000-255

id—0-7

The point code 0-000-0 is not a valid point code.

cgpcn (optional)

ITU national CgPA point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the `chg-stpopts:npcfmti` flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

Range:

s-, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s-*

nnnnn—0-16383

gc—*aa-zz*

m1-m2-m3-m4—0-14 for each member; values must sum to 14

cgpcn24 (optional)

24-bit ITU national CgPA point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*).

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

msa—000-255

ssa—000-255

sp—000-255

cgpcn16 (optional)

16-bit ITU national CgPA point code with subfields *unit number-sub number area-main number area* (*un-sna-mna*).

Range:

000--127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*un---*000---127

sna---000---15

mna---000---31

cgse1id (optional)

CgPA Selector ID.

Range:

0 - 65534

cgssn (optional)

Starting CgPA subsystem number.

Range:

0 - 255

defmapvr (optional)

Default MAP version for MBR opcodes. This parameter is used to provide the default MAP version for supported MBR opcodes if Application Context Name (ACN) is not present in an incoming MAP message.

Range:

v1

v2

v3

Default:

v3

dpc (optional)

ANSI destination point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.

Synonym:

dpca

Range:

*0-255, **

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

The asterisk (*) value is not valid for the *ni* subfield.

When *chg-sid:pctype=ansi* is specified, *ni=000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni=001-005*.

When *chg-sid:pctype=ansi* is specified, *nc=000* is valid if *ni=006-255*.

When *chg-sid:pctype=ansi* is specified, *ni-*.** is valid if *ni =006-255*.

The point code *000-000-000* is not a valid point code.

dpc/dpca/dpci/dpcn/dpcn24/dpcn16 (optional)

Point Code.

dpci (optional)

ITU international destination point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*).

Range:*s-*, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*prefix—s**zone—0-7**area—000-255**id—0-7*

The point code 0-000-0 is not a valid point code.

dpcn (optional)ITU destination point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the `chg-stpopts:npcfmti` flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).**Range:***s-*, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*prefix—s-**nnnnn—0-16383**gc—aa-zz**m1-m2-m3-m4—0-14* for each member; values must sum to 14**dpcn24 (optional)**24-bit ITU national destination point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*).**Range:**

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*msa—000-255**ssa—000-255**sp—000-255***dpcn16 (optional)**16-bit ITU national destination point code with subfields *unit number-sub number area-main number area* (*un-sna-mna*).**Range:**

000--127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*un---000---127**sna---000---15**mna---000---31*

eaddr (optional)

End Address (similar to EGTA). This parameter specifies the end of a range of MAP digits (IMEI/IMSI/MSISDN/VLRNB/SMRPOA/SMRPDA).

Range:

1 - 21 digits

If the Hex Digit Support for GTT feature is not enabled, the range is 1 - 21 decimal digits; valid digits are 0-9.

If the Hex Digit Support for GTT feature is enabled and on, the range is 1 - 21 hexadecimal digits; valid digits are 0-9, a-f, A-F.

Default:

Same as the specified `SADDR` value

ecdssn (optional)

Ending CdPA subsystem number.

Range:

0 - 255

ecgssn (optional)

Ending CgPA subsystem number.

Range:

0 - 255

egta (optional)

End global title address. This parameter specifies the end of a range of global title digits.

Range:

1 - 21 digits

If the Hex Digit Support for GTT feature is not enabled, the range is 1 - 21 decimal digits; valid digits are 0-9.

If the Hex Digit Support for GTT feature is enabled and on, the range is 1 - 21 hexadecimal digits; valid digits are 0-9, a-f, A-F.

Default:

Same as the specified `gta` value

fallback (optional)

Fallback option. The action taken when the final translation does not match while performing GTT using a FLOBR-specific GTT mode.

Range:**yes**

perform GTT based on the last matched entry

no

GTT fails and the MSU is discarded

sysdfit

use the system-wide default fallback option in the SCCOPTS table

Default:

sysdfit

family (optional)

The ANSI TCAP *family* field in the incoming MSU.

Range:

0 - 255, *, *none*

*—any valid value in the ANSI TCAP *family* field in the incoming MSU

none—there is no value in the ANSI TCAP *family* field in the incoming MSU

force (optional)

Check mated application override. This parameter must be used to complete command execution if the *pci/pcn* and *ssn* parameter combination specified in the command is not already defined in the SCCP Application entity set (Remote Point Code/Mated Application Table).

Range:

yes

no

Default:

no

gta (optional)

Global title address. The beginning of a range of global title digits.

Range:

1 - 21 digits

If the Hex Digit Support for GTT feature is not enabled, the range is 1 - 21 decimal digits; valid digits are 0-9.

If the Hex Digit Support for GTT feature is enabled and on, the range is 1 - 21 hexadecimal digits; valid digits are 0-9, a-f, A-F.

gtmodid (optional)

Global title modification identifier.

Range:

aaaaaaaa

1 alphabetic character followed by up to 8 alphanumeric characters

Default:

none

loopset (optional)

SCCP loopset name. This parameter associates a translation set with a loopset.

Range:

aaaaaaa

1 leading alphabetic character and up to 7 following alphanumeric characters.

none—There is no association between the translation set and any loopset.

Default:

none

mapset (optional)

MAP set ID. This parameter specifies the Mated Application set ID.

Range:

1 - 36000, *dflt*
dflt —Default MAP set

mrnset (optional)

MRN set ID. The Mated Relay Node set ID.

Range:

1 - 3000, *dflt*, *none*
dflt —Default MRN set
none —The GTA translation does not participate in any load sharing

opc (optional)

ANSI originating point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.

Synonym:

opca

Range:

0-255, *

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

The asterisk (*) value is not valid for the *ni* subfield.

When *chg-sid:pctype=ansi* is specified, *ni=000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni=001–005*.

When *chg-sid:pctype=ansi* is specified, *nc=000* is valid if *ni=006–255*.

When *chg-sid:pctype=ansi* is specified, *ni-**-** is valid if *ni =006–255*.

The point code *000-000-000* is not a valid point code.

opc/opca/opci/opcn/opcn24/opcn16 (optional)

Originating Point Code

opci (optional)

ITU international originating point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*).

Range:

s-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s*
zone—0-7
area—000-255
id—0-7

The point code *0-000-0* is not a valid point code.

opcn (optional)

ITU originating point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the *chg-stpopts:npcfmti* flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

Range:*s*-, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s*-*nnnnn*—0-16383*gc*—*aa-zz**m1-m2-m3-m4*—0-14 for each member; values must sum to 14**opc24 (optional)**24-bit ITU national originating point code with subfields *main signaling area-sub signaling area-signaling point (msa-ssa-sp)*.**Range:**

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

msa—000-255*ssa*—000-255*sp*—000-255**opc16 (optional)**16-bit ITU national originating point code with subfields *unit number-sub number area-main number area (un-sna-mna)*.**Range:**

000--127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

un---000---127*sna*---000---15*mna*---000---31**opcodetag (optional)**

The ITU TCAP opcodetag field in the incoming MSU.

Range:*none, local, global, any**none* —there is no value in the ITU TCAP opcodetag field in the incoming MSU*local* —The opcodetag is local in the ITU TCAP opcodetag field in the incoming MSU*global* —The opcodetag is global in the ITU TCAP opcodetag field in the incoming MSU*any* — any valid value in the ITU TCAP opcodetag field in the incoming MSU**Default:**

any

opcsn (optional)

The OPC GTT set name.

Range:

ayyyyyyy

1 leading alphabetic character and up to 8 following alphanumeric characters

optsn (optional)

Optional gtt set name.

Range:

ayyyyyyy

1 leading alphabetic character and up to 8 following alphanumeric characters.

pc (optional)ANSI point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*. The *prefix* subfield indicates a private point code (*prefix-ni-nc-ncm*).**Synonym:**

pca

Range:

p-, 000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*prefix—p-*When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001-005*.When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006-255*.The point code *000-000-000* is not a valid point code.**pc/pca/pci/pcn/pcn24/pcn16 (optional)**

Point code.

pci (optional)ITU international destination point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-zone-area-id*).**Range:**

s-, p-, ps-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*prefix—s-, p-, ps**zone—0-7**area—000-255**id—0-7*The point code *0-000-0* is not a valid point code.**pcn (optional)**ITU national point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the *chg-stpopts:npcfmti* flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

Range:*s-, p-, ps-, 0-16383, aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

ppmeasreqd (optional)

This parameter specifies whether Per Path measurements are required.

Range:

yes
per path measurements are required

no
per path measurements are not required

Default:

No change to the current value

prio (optional)

This parameter assigns priority to an OPCODE GTTSET based translation.

Range:

1 - 1024

1 is the highest priority and 1024 the lowest

Default:

1024

ri (optional)

Routing indicator.

Range:**gt**

Allow a called party address with a routing indicator value of "global title."

ssn

Allow a called party address with a routing indicator value of "DPC/SSN."

saddr (optional)

Start Address (similar to GTA). This parameter specifies the beginning of a range of MAP digits (IMEI/MSI/MSISDN/VLRNB/SMRPOA/SMRPDA).

Range:

1 - 21 digits

If the Hex Digit Support for GTT feature is not enabled, the range is 1 - 21 decimal digits; valid digits are 0-9.

If the Hex Digit Support for GTT feature is enabled and on, the range is 1 - 21 hexadecimal digits; valid digits are 0-9, a-f, A-F.

ssn (optional)

New translated subsystem number.

Range:

002 - 255

Default:

none

testmode (optional)

This parameter is used to invoke a field-safe Test Tool in order to debug the FLOBR/TOBR rules.

 **Caution:**

If the `testmode=on` parameter is specified, then the rule is used only by test messages. The rule is ignored by 'live' traffic. If the `testmode=off` parameter is specified, then both test and live messages use the rule. Changing from `testmode=off` to `testmode=on` is equivalent to deleting the rule for live traffic.

Range:**on**

Process the translation rules defined in the test message

off

Perform standard GTT behavior

Default:*off***transmeasrqd (optional)**

GTT Translation Measurement Required. This parameter specifies whether to perform per GTT Translation Measurements.

Range:**yes**

perform per GTT Translation Measurements

no

do not perform per GTT Translation Measurements

Default:*no***Example**

The lines in some examples are wrapped for readability:

```

Dependencies

The EGTT feature must be turned on before this command can be entered.

3557 E3557 Cmd Rej: EGTT must be ON

The ANSI/ITU SCCP Conversion feature must be enabled before a translated PC that is of a different domain than the GTT set specified by the `gttsn` parameter can be specified.

3570 E3570 Cmd Rej: Point Code type does not match GTT Set network domain

The ANSI/ITU SCCP Conversion feature must be enabled before a translated PC and a translation type in different network types can be specified.

2470 E2470 Cmd Rej: Point Code network type does not match TT network type

The `gttsn` parameter must be specified and must match an existing `gttsn`.

3561 E3561 Cmd Rej: GTT Set specified by GTT Set Name/index does not exist

The `pc/pca/pci/pcn/pcn24/pcn16` parameter cannot be out of range.

2169 E2169 Cmd Rej: Point code out of range

If the `egta/eaddr` parameter is specified, then the values of the `gta/saddr` and `egta/eaddr` parameters must be the same length.

2403 E2403 Cmd Rej: Length of EGTA/EADDR must be equal to length of GTA/SADDR

The length of the specified `gta/saddr` parameter must match the number of digits provisioned for the specified GTT set (`gttsn`) when VGTT is OFF. If the VGTT (variable length GTT) feature is turned on, then up to 10 GTA/SADDR lengths can exist per GTT set. If the Support for 16 GTT Lengths in VGTT feature is turned on, then up to 16 GTA/SADDR lengths can exist per GTT set.

3571 E3571 Cmd Rej: GTA/SADDR Length does not match GTT Set number of digits

The specified `gta/egta` or `saddr/eaddr` range must exist for the specified GTT set in the STP active database. While an exact match is not required, you cannot specify

an overlap with another range. If the range overlaps, an error is generated that displays a list of overlapped global title addresses. An example follows that shows what happens when the user attempts to enter a global title address range (such as 8005550000 to 8005559999) that overlaps an existing range. The overlapping links must match. If they do not, the error message displays the list of overlapped global title addresses:

```
The following GTA ranges overlap the input GTA range START GTA END GTA
8005550000 8005551999 8005552000 8005553999 8005554000 8005555999 ENT-GTA:
MASP A - Command Aborted
```

2401 E2401 Cmd Rej: GTA/SADDR range overlaps a current range

If the translated point code is of type ANSI, the `ngti` parameter of the referred GTMOD cannot be 4. For ANSI PCs, the `ngti` value must be 2.

4903 E4903 Cmd Rej: If NGTI of referred GTMOD is 4, PC cannot be ANSI

If the new or existing `pc/pca/pci/pcn/pcn24/pcn16` parameter is the STP point code or capability point code, then the `ccgt=no` parameter must be specified.

3573 E3573 Cmd Rej: CCGT must be NO when PC is the STP's PC or CPC

If the `xlat=dpcngt` parameter is specified, then the `ri=gt` parameter must be specified.

2480 E2480 Cmd Rej: RI=GT must be specified when XLAT=DPCNGT

If the `ssn` parameter is specified, then the `xlat=dpcssn` parameter must be specified.

2457 E2457 Cmd Rej: SSN can only be specified when XLAT=DPCSSN

If the `xlat=dpcssn` parameter is specified, then the `ssn` parameter must be specified.

2481 E2481 Cmd Rej: SSN must be specified when XLAT=DPCSSN

If the value specified for the `pc/pca/pci/pcn/pcn24/pcn16` parameter is the STP's true point code, the `xlat=dpcssn` and `ri=ssn` parameters must be specified.

3648 E3648 Cmd Rej: XLAT must be DPCSSN and RI must be SSN if PC is the True PC

If the value specified for the `pc/pca/pci/pcn/pcn24/pcn16` parameter is the STP's true point code and the `ssn` parameter is specified, the `ssn` parameter must exist in the SS-APPL table.

3612 E3612 Cmd Rej: SSN must be in SS-APPL table when PC is true point code

Unless the PC is the STP true PC, the value specified for the `pc/pca/pci/pcn/pcn24/pcn16` parameter must exist as a destination in the Route table or reside in a cluster that exists as a destination in the Route table (for global routing).

2417 E2417 Cmd Rej: Point code does not exist in the routing table

If a final GTT (the `ri=ssn` parameter is specified with the `xlat=dpc` parameter and without the `force=yes` parameter), then the PC (`pc/pca/pci/pcn/pcn24/pcn16`) must exist in the Remote Point Code/MAP table. The `force=yes` parameter can be specified to execute the command when the PC is not in the table; the following warning message is displayed in the scroll area of the terminal:

```
CAUTION: DPC DOES NOT EXIST IN MATED APPLICATION TABLE.
```

2419 E2419 Cmd Rej: Point code does not exist in the remote point code table

If the `ccgt=yes` parameter is specified, then the `ri=ssn` parameter must be specified.

3572 E3572 Cmd Rej: RI must be SSN when CCGT is YES

If the `ri=gt` parameter is specified, then the `ccgt=no` parameter must be specified.

3577 E3577 Cmd Rej; CCGT must be NO when the RI is set to GT.

If the `pc/pca/pci/pcn/pcn24/pcn16` parameter is any of the STP's PCs or CPCs, then the `ccgt=no` parameter must be specified.

3573 E3573 Cmd Rej: CCGT must be NO when PC is the STP's PC or CPC

If the XGTT feature is enabled, the GTT table can contain up to either 400,000 or 1,000,000 entries, depending on the controlled feature Part Number that is enabled. If XGTT is not enabled, the GTT table can contain up to 269,999 user entries. An error message is displayed if a command entry would result in more than the allowed maximum number of entries in the table.

2462 E2462 Cmd Rej: GTT table is full

If the `egta/eaddr` parameter is specified, then the value of the `egta/eaddr` parameter must be greater than or equal to the value of the `gta/saddr` parameter.

2420 E2420 Cmd Rej: EGTA/EADDR must be greater than or equal to GTA/SADDR

The GTT Set Name must not be *none*.

3565 E3565 Cmd Rej: Set name must not be specified as NONE

The `pc/pca/pci/pcn/pcn24/pcn16` parameter must be a full PC.

2859 E2859 Cmd Rej: Destination address must be a full point code

If the VGTT feature is turned on, then up to 10 GTA/SADDR lengths can exist per GTT set. If the Support for 16 GTT Lengths in VGTT feature is turned on, then up to 16 GTA/SADDR lengths can exist per GTT set.

4008 E4008 Cmd Rej: Exceeding max GTA/SADDR Lengths supported per GTTSET

The GTT Selector table is corrupt or cannot be found.

3543 E3543 Cmd Rej: Failed reading GTT Selector Table

The GTT Set table is corrupt or cannot be found.

3554 E3554 Cmd Rej: NP(V) and NAI(V) must not be specified for given GTI value

The GTA table is corrupt or cannot be found.

3119 E3119 Cmd Rej: Failed Reading GTT TRANS table

The GTT DBMM table is corrupt or cannot be found.

3120 E3120 Cmd Rej: Failed Reading GTT DBMM table

A severe system fault has occurred, and the command was rejected.

2416 E2416 Cmd Rej: Unable to access database. Severe database failure

The Site ID table is corrupt or cannot be found.

2874 E2874 Cmd Rej: Failed reading site identification table

The SS-APPL table is corrupt or cannot be found.

3638 E3638 Cmd Rej: Failed Reading SS Appl table

The Route table is corrupt or cannot be found.

2648 E2648 Cmd Rej: Failed reading the route table

The MRN table is corrupt or cannot be found.

2999 E2999 Cmd Rej: Failed reading the MRN table

The MAP table is corrupt or cannot be found.

4524 E4524 Cmd Rej: Failed Reading MAP table

If the `ri=ssn` parameter is specified, then the `mrnset` parameter must not be specified.

4475 E4475 Cmd Rej: MRNSET must be specified (only) if RI parameter is GT

If the Flexible GTT Load Sharing feature is enabled, then the specified PC must already exist in the specified MRN set.

4483 E4483 Cmd Rej: PC does not exist in specified MRNSET

The specified MRN set must already exist in the MRN table.

4480 E4480 Cmd Rej: Specified MRNSET does not exist

The `mrnset` parameter can only be specified when the Flexible GTT Load-Sharing feature is enabled.

4479 E4479 Cmd Rej: MRNSET must be specified (only) if FGTTLS feature is enabled

If the `ri=gt` parameter is specified, then the `mrnset` parameter must be specified.

4475 E4475 Cmd Rej: MRNSET must be specified (only) if RI parameter is GT

The `mapset` parameter can only be specified if the Flexible GTT Load Sharing feature is enabled, and the `ri=ssn` parameter is specified. If the `ri=ssn` parameter is specified, the `mapset` parameter must be specified. If the `ri=gt` parameter is specified, the `mapset` parameter cannot be specified.

4532 E4532 Cmd Rej: MAPSET must be specified (only) if RI parameter is SSN

The Flexible GTT Load Sharing feature must be enabled before the `mapset` parameter can be specified.

4523 E4523 Cmd Rej: MAPSET must be specified (only) if FGTTLS feature is enabled

The specified PC and SSN must exist in the specified MAP set.

4528 E4528 Cmd Rej: PC/SSN doesn't exist in MAPSET

The specified MAP set must exist in the database.

4527 E4527 Cmd Rej: Specified MAPSET does not exist

If the `xlat=dpc` parameter is specified, and the `force` parameter is not specified as yes, then the specified PC and MAP set must exist in the MAP table.

4543 E4543 Cmd Rej: PC/MAPSET does not exist in MAP table

The MAP table is corrupt or cannot be found.

4524 E4524 Cmd Rej: Failed Reading MAP table

The `gta`, `cgpc/cgpcac/cgpci/cgpcn/cgpcn24/cgpcn16`, `opc/opca/opci/opcn/opcn24/opcn16`, `cgssn`, `cdssn`, `opcode/acn/pkgtype`, `opcode/family/pkgtype`, `dpc/dpca/dpci/dpcn/dpcn24/dpcn16`, or `saddr` parameter must be specified.

4400 E4400 Cmd Rej: GTA/CGPC/OPC/CGSSN/CDSSN/OPCODE/DPC/SADDR must be specified

The `cdselid`, `cgselid`, and `optsn` parameters cannot be specified together in the command. If the GTT set has a set type of `cdgta`, `cdssn`, or `opcode`, then the `opcsn` parameter can be specified with one of the above parameters.

4398 E4398 Cmd Rej: OPTSN and CGSELID/CDSELID are mutually exclusive

If the `cgssn` parameter is specified, then the `optsn` and `cgselid` parameters cannot be specified.

4403 E4403 Cmd Rej: CGSSN cannot be specified with OPTSN/OPCSN/CGSELID

The `cgpc/cgpcac/cgpci/cgpcn/cgpcn24/cgpcn16`, `opc/opca/opci/opcn/opcn24/opcn16` and `dpc/dpca/dpci/dpcn/dpcn24/dpcn16` parameters must have a valid value within the range for each subfield.

2169 E2169 Cmd Rej: Point code out of range

The value specified for the `ecgssn` or `ecdssn` parameter must be greater than the value specified for the `cgssn` or `cdssn` parameter.

4404 E4404 Cmd Rej: End value must be greater than or equal to a starting value

The OBSR feature must be enabled before the `opcsn`, `optsn`, `cgpc/cgpcac/cgpci/cgpcn/cgpcn24/cgpcn16`, `opc/opca/opci/opcn/opcn24/opcn16`, or (e) `cgssn` parameters can be specified.

4393 E4393 Cmd Rej: Origin Based SCCP Routing feature must be enabled

If the GTT set specified by the `gttsn` parameter (GTTSN set) has a set type of `cdgta` (see the `ent-gttset` command), then the `optsn` parameter cannot specify a GTT set (OPTSN set) with a set type of `cgssn`.

If the GTTSN set has a set type of `cdgta`, then the OPTSN set must have a set type of `cgta` or `cgpc`.

The FLOBR feature must be turned on before a GTTSN set with a set type of `cgpc`, `cgta`, or `opc` can be specified with an OPTSN with a set type other than `cgssn`.

If the FLOBR feature is turned on, and the GTTSN set has a set type of `cdgta` or `cdssn`, then the OPTSN set cannot have a set type of `opc`.

If the TOBR feature is turned on, and the GTTSN set has a set type of `opcode`, then the OPTSN set cannot have a set type of `opc`.

If the GTTSN set has a set type of MBR (`imei/imsi/vlrnb/msisdn/smrpda/smrpoa`), then the OPTSN set type cannot have the same set type as GTTSN.

If the OPTSN set has a set type of MBR (*imei/imsi/vlrnb/msisdn/smrpda/smrpoa*), then the GTTSET must have a set type of MBR (*imei/imsi/vlrnb/msisdn/smrpda/smrpoa*) or *opcode*.

4405 E4405 Cmd Rej: OPTSN GTT set type is not compatible with GTTSN set type

The GTA must be specified if the GTTSN set type has a value of *cdgta* or *cggta*. The GTA cannot be specified for other set types.

4406 E4406 Cmd Rej: GTA parm must be specified if GTTSN is type of CDGTA/CGGTA

If the GTTSN set type has a value of *cgpc*, the *cgpc/cgpca/cgpci/cgpcn/cgpcn24/cgpcn16* parameter must be specified. This parameter cannot be specified for other set types.

4407 E4407 Cmd Rej: CGPCx parm must be specified if GTTSN is type of CGPC

The *opc/opca/opci/opcn/opcn24/opcn16* parameter must be specified if the GTTSN set type has a value of *opc*. These parameters cannot be specified for other set types.

4408 E4408 Cmd Rej: OPCx parm must be specified if GTTSN is type of OPC

If the GTTSN set type has a value of *cgssn*, the *cgssn* parameter must be specified. The *cgssn* parameter cannot be specified for GTTSN of other types.

4409 E4409 Cmd Rej: CGSSN parm must be specified if GTTSN is type of CGSSN

The range specified by the *cdssn/ecdssn* and *cgssn/ecgssn* parameters cannot overlap a currently existing range for the specified GTT set.

4412 E4412 Cmd Rej: CGSSN/CDSSN range cannot overlap an existing range

The GTT set name specified by the *opcsn* parameter must have a set type of *opc* (see the `ent-gttset` command).

4399 E4399 Cmd Rej: Set type of GTT Set Name doesn't match

The OPC subsystem number set domain must be the same as the GTTSN set domain. If the GTT subsystem number set domain is ANSI, then the OPC subsystem number set domain must be ANSI. If the GTT subsystem number set domain is ITU, then the OPC subsystem number set domain must be ITU.

4522 E4522 Cmd Rej: OPCS set domain must be the same as GTTSN set domain

The translation entry specified by the *cgpc*, *opcode*, *opc*, or *dpc* parameters cannot already exist.

4509 E4509 Cmd Rej: Translation entry already exists

The *cgpc*, *cgssn*, *gta*, *opc*, *cdssn*, *opcode*, *dpc*, and *saddr* parameters cannot be specified together in the command.

If the *cgssn* and *cdssn* parameters are both specified in the same command (in any order), then only the value for the last of the two parameters specified is used during processing.

3332 E3332 Cmd Rej: GTA/CGPC/OPC/CG-CDSSN/OPCODE/DPC/ADDR are mutually exclusive

The Hex Digit Support for GTT feature must be turned on before hexadecimal digits can be specified for the *gta/saddr* or *egta/eaddr* parameter.

3006 E3006 Cmd Rej: Hex Digit Support for GTT feature must be ON

The value of the `loopset` parameter must already exist in the database.

4568 E4568 Cmd Rej: Loop Set entry does not exist

The SCCP Loop Detection feature must be enabled before the `loopset` parameter can be specified.

4565 E4565 Cmd Rej: SCCP Loop Detection Feature is not enabled

The Loopset table is corrupt or cannot be found.

4567 E4567 Cmd Rej: Cannot access LoopSet table

The value specified for the `pc` parameter cannot be associated with a proxy point code.

4707 E4707 Cmd Rej: PRX using DPC not allowed in GTT, MAP, MRN tables

The AMGTT feature or the AMGTT CgPA Upgrade feature must be turned on before the `cggmod` parameter can be specified.

4789 E4789 Cmd Rej: Either AMGTT or AMGTT CgPA Upgrade feature must be ON

The FLOBR feature must be turned on before the `fallback`, `cdselid`, `cdssn`, `ecdssn`, or `dpc` parameter can be specified.

5060 E5060 Cmd Rej: Flexible Linkset Optional Based Routing must be ON

The FLOBR feature must be turned on before the `gttsn` parameter can specify a GTT set with a set type other than `cdgta` (see the `ent-gttset` command) in the same command with the `cgselid` parameter.

4457 E4457 Cmd Rej: CGSELID is valid only if specified GTTSN set type is CDGTA

The OBSR feature must be enabled or the FLOBR feature must be turned on before the `cgselid` parameter can be specified.

5063 E5063 Cmd Rej: OBSR must be enabled or FLOBR must be ON

The ANSI/ITU SCCP Conversion feature must be enabled before the GTT set specified by the `optsn` parameter can have a different domain than the GTT set specified by the `gttsn` parameter.

5103 E5103 Cmd Rej: OPTSN set domain must be the same as GTTSN set domain

A TOBR quantity feature must be turned on before the `opcode`, `pkgtype`, `acn`, `family`, `saddr`, `eaddr`, or `defmapvr` parameter can be specified.

5105 E5105 Cmd Rej: One of the TOBR quantity feature must be ON

The `opcode`, `pkgtype`, and `family` parameters must be specified together for ANSI TCAP translations. The `opcode`, `pkgtype`, and `acn` parameters must be specified together for ITU TCAP translations.

5106 E5106 Cmd Rej: OP CODE,PKGTYPE,ACN/FAMILY must be specified together

If the `opcodetag` is specified by `opcodetag` parameter, then the `pkgtype`, `opcode` and `acn` must be specified.

E3701 Cmd Rej: PkgType, Opcode and ACN must be specified.

If the GTT set specified by the `gttsn` parameter has a set type of *opcode* (see the `ent-gttset` command), then the `opcode/acn/pkgtype` or `opcode/family/pkgtype` parameter must be specified. These parameters cannot be specified for GTT sets of any other set types.

5107 E5107 Cmd Rej: OPCODE param must be specified if GTTSN settype is OPCODE

If the GTT set specified by the `gttsn` parameter has a set type of *cdssn* (see the `ent-gttset` command), then the `cdssn` parameter must be specified. This parameter cannot be specified for GTT sets with other set types.

5108 E5108 Cmd Rej: CDSSN param must be specified if GTTSN settype is CDSSN

The maximum number of OPCODE translation entries cannot exceed the value that is set by the associated TOBR quantity feature.

5109 E5109 Cmd Rej: Exceeding TOBR Quantity feature OPCODE translations limit

The GTT set specified by the `gttsn` parameter must have a set type of *cdgta*, *opcode*, or *cdssn* (see the `ent-gttset` command) before the `opcsn` parameter can be specified.

5110 E5110 Cmd Rej: OPCSN is valid with cdgta/cdssn/opcode GTTSN type

The same value cannot be specified for the `gttsn` and `optsn` parameters.

5111 E5111 Cmd Rej: The GTTSN set name must not be same as OPTSN set name

The ANSI/ITU SCCP conversion feature must be enabled and the FLOBR feature must be turned on before the `cgcnvsn` parameter can be specified.

5124 E5124 Cmd Rej: SCCP Conversion and FLOBR features must be ON

The GTT set specified by the `gttsn` parameter must have a set type of *cdgta* or *cggta* (see the `ent-gttset` command) before the `cgcnvsn` parameter can be specified.

5127 E5127 Cmd Rej: CGCNVSN is invalid when GTTSET type is not cggta/cdgta

If the `cgssn` parameter is specified, then the `ecdssn` parameter cannot be specified. If the `cdssn` parameter is specified, then the `ecgssn` parameter cannot be specified.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The GTT set specified by the `gttsn` parameter cannot be the same as the GTT set specified by the `cgcnvsn` parameter.

5139 E5139 Cmd Rej: CGCNVSN Gttset name cannot be same as GTTSN Gttset name

If the `family` parameter is specified, then a value of *ansiuni*, *qwp*, *qwop*, *resp*, *cwp*, *cwop*, *ansiabort*, or *any* must be specified for the `pkgtype` parameter.

5140 E5140 Cmd Rej: FAMILY parameter is allowed with ANSI TCAP PKGTYPE

If the `acn` parameter is specified, then a value of *bgn*, *ituabort*, *ituuni*, *any*, *end*, or *cnt* must be specified for the `pkgtype` parameter.

5141 E5141 Cmd Rej: ACN parameter is allowed with ITU TCAP PKGTYPE

The GTT set specified by the `optsn`, `opcsn`, and `cgcnvsn` parameters must match an existing GTT set.

5143 E5143 Cmd Rej: GTT Set specified by OPTSN/OPCSN/CGCNVSN does not exist

If the `pkgtype=ituabort` parameter is specified, then a value of *none* must be specified for the `acn`, `opcode` and `opcodetag` parameters.

If the `pkgtype=ansiabort` parameter is specified, then a value of *none* must be specified for the `family` and `opcode` parameters.

E5144 Cmd Rej: PKGTYPE abort requires ACN/FAMILY/OPCODE/OPTAG value *none*.

If the `family` and `opcode` parameters are specified in the command, then either both parameters must have a value of *none* or neither parameter can have a value of *none*.

5148 E5148 Cmd Rej: Both FAMILY and OPCODE must be NONE if either is NONE

One or more point codes in the command will exceed the maximum number of entries in the MAP table.

4526 E4526 Cmd Rej: MAP table is full

The OBSR feature must be enabled or the FLOBR feature must be turned on before the `optsn` parameter can be specified.

5063 E5063 Cmd Rej: OBSR must be enabled or FLOBR must be ON

The specified GTT Action Set must already exist in the database.

5196 E5196 Cmd Rej: GTT Action Set does not exist

Failure while reading GTT Action Set Table.

5197 E5197 Cmd Rej: Unable to access GTT Action Set table

The `actsn=none` parameter cannot be specified.

5113 E5113 Cmd Rej: (New) GTT Action Set name must not be *none*.

The `dpc/dpca/dpci/dpcn/dpcn24/dpcn16` parameter must be specified if the GTTSN set type is `dpc` (see the `ent-gttset` command). If the GTT set has a set type other than `dpc`, then the `dpc/dpca/dpci/dpcn/dpcn24/dpcn16` parameter cannot be specified.

5267 E5267 Cmd Rej: DPCx parameter must be specified if GTTSN set type is DPC

If the `xlat=none` parameter is specified, then the `ri`, `pc/pca/pci/pcn/pcn24/pcn16`, `force`, `ssn` and `ccgt` parameters cannot be specified.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The value specified for the `gtmodid` parameter must already exist in the GTMOD table.

5285 E5285 Cmd Rej: GTMODID does not exist

The GTMOD table is corrupt or cannot be found.

5284 E5284 Cmd Rej: Failed reading GTMOD table

The `gtmodid=none` parameter cannot be specified.

5292 E5292 Cmd Rej: GTMODID must not be specified as NONE

If the FGTTLS feature is enabled, and the `xlat=none` parameter is specified, then the `mrnset` or `mapset` parameter must be specified.

5381 E5381 Cmd Rej: If FGTTLS feat enabled, specify MAPSET and/or MRNSET

The specified GTT set must have a set type of `opcode` (see the `ent-gttset` command) before the `opcode/acn/pkgtype` or `opcode/family/pkgtype` parameters can be specified. The specified GTT set must have a set type of `cdssn`, `cgssn`, `cdgta/cgta`, `opc`, or `cgpc` before the `cdssn`, `cgssn`, `gta`, `opc`, or `cgpc` parameter, respectively, can be specified.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The `acn` and `family` parameters cannot be specified together in the command.

2155 E2155 Cmd Rej: Invalid parameter combination specified

If the `opc` or `dpc` parameter is specified, then the `(e)gta`, `(e)cgssn`, `(e)cdssn`, `eaddr`, and `opcode` parameters cannot be specified.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The J7 Support feature must be enabled before the `cgpcn16/opcn16/dpcn16` parameters can be specified.

2691 E2691 Cmd Rej: J7 Support Feature must be enabled.

The J7 Support feature must not be enabled before the `cgpcn24/opcn24/dpcn24/cgpcn24/opcn24/dpcn24` parameters can be specified.

2801 E2801 Cmd Rej: J7 Support feature must not be enabled

The `saddr` parameter must be specified if the GTT set specified by the `gttsn` parameter is of MBR type (IMEI/IMSI/MSISDN/VLRNB/SMRPOA/SMRPDA).

3449 E3449 Cmd Rej: SADDR must be specified for MBR GTT settypes

If the GTT set specified by the `optsn` parameter is of MBR type (IMEI/IMSI/MSISDN/VLRNB/SMRPOA/SMRPDA) in the GTA command for the ITU opcode entry, then the package type specified via the `pkgtype` parameter must be ITU BGN/CNT/END.

3459 E3459 Cmd Rej: GTTSET MBR Settypes Support ITU BGN/CNT/END Pkgtype

The `defmapvr` parameter can be specified in the GTA command for the ITU opcode entry if the GTT set specified by the `optsn` parameter is of MBR type (IMEI/IMSI/MSISDN/VLRNB/SMRPOA/SMRPDA).

3460 E3460 Cmd Rej: DEFMAPVR is supported by MBR GTT settypes

The `PRIO` parameter can be specified with OP CODE GTT set types only.

3552 E3522 Cmd Rej: CHECKMULCOMP/PRIO can be specified with OP CODE SETTYPES only

If the `GTA/EGTA` parameter is specified, then the `EADDR` parameter cannot be specified.

2155 E2155 Cmd Rej: Invalid parameter combination specified

If the `SADDR` parameter is specified, then the `ECGSSN/ECSSN` parameter cannot be specified.

2155 E2155 Cmd Rej: Invalid parameter combination specified

If the `OPCODE` parameter is specified, then the `EADDR/EGTA/ ECGSSN/ECDSSN` parameter cannot be specified.

2155 E2155 Cmd Rej: Invalid parameter combination specified

If the `CGPC` parameter is specified, then the `EADDR/EGTA/ECGSSN/ECDSSN` parameter cannot be specified.

2155 E2155 Cmd Rej: Invalid parameter combination specified

If the `ECGSSN/ECDSSN` parameter is specified, then the `EADDR/EGTA` parameter cannot be specified.

2155 E2155 Cmd Rej: Invalid parameter combination specified

SSN configured for SFAPP cannot be used in any command for any configuration

3558 E3558 Cmd Rej: SFAPP SSN can not be used

Notes

In this command, only ITU-international and ITU national point codes support the spare point code subtype prefix (s-) and the private and spare point code subtype prefix (ps-). All of the point code types support the private (internal) point code subtype prefix (p-).

When the Flexible GTT Load Sharing feature and the Intermediate GTT Load Sharing feature are on, multiple relationships can be defined among set of destination point codes in the MRN table, which already exists in the EAGLE. The relationship used in a particular translation is based on the GTA digits used for translation. The MRN set and the post-translation PC create a key that is used to perform lookups in the MRN table. The lookup results in a set of alternate PCs, one of which is selected, based on PC relative cost, to route the MSU in the most cost effective way.

When the Flexible GTT Load Sharing feature is enabled, multiple relationships can be defined among a set of PC/SSNs in the existing MAP table. The relationship used in a particular translation is based on the GTA digits used for translation.

When the Origin-based SCCP Routing feature is turned on, the CdPA GTA, CgPA GTA, CgPA PC, CgPA SSN, and OPC entries can be provisioned. When provisioning, the following rules apply:

- The Advanced CdPA GTA entry can associate with CgPA GTA set, CgPA PC set, or SELID and OPC set.
- The CgPA GTA, CgPA PC, or OPC entry can associate with the CgPA SSN set.
- The CgPA SSN entry cannot associate with any other GTT set.
- The Advanced CdPA GTA entry may contain SELID, which is (together with the CgPA information) derived from incoming MSU to search the Selector table again for the CgPA GTA or CgPA PC Set.

When the Origin-based SCCP Routing feature is enabled, the GTA and EGTA can be used for the CgPA translation as well as the CdPA GTA translation.

The Flexible GTT Load Sharing feature introduces the `mrnset` parameter. The MRN set and the post-translation PC create a key that is used to perform look ups in the

MRN table. This lookup results in a set of alternate PCs, from which one is selected, based on PCs relative cost, to route the MSU in the most cost effective way.

A loopset consists of a set of point codes that form a routing loop in the network. If the SCCP Loop Detection feature is enabled, then the loopset can be associated with or disassociated from specified translation entries. Loopsets that are associated with translation entries are checked during intermediate and final GTT traffic routing. If a loop exists, then the system can be notified with or without discarding the associated traffic.

The maximum length of the resulting GTA string must not exceed 21 digits when translation is complete.

If the FLOBR GTT hierarchy is provisioned on a linkset, then translations do not have to be searched in a predetermined manner. If a translation points to another GTTSET/SELID, then database searches continue. The number of searches is limited by the following conditions:

- The same GTT set name cannot be referred more than once.
- Up to 7 database searches can be performed.
- For MBR, the same GTT set type (IMEI/IMSI/MSISDN/VLRNB/SMRPOA/SMRPDA) cannot be referred more than once.

If the FLOBR feature is turned on, then any translation can point to any GTTSETs other than that specified by the GTTSN. The CdPA GTA and CdPA SSN translations can also point to an OPCODE. For CdPA GTA and CdPA SSN translations, if an OPTSN GTTSET/SELID is provisioned apart from an OPCODE, then the OPTSN GTTSET/SELID takes precedence over the OPCODE.

The MBR GTT set type translation entries (IMEI/IMSI/MSISDN/VLRNB/SMRPOA/SMRPDA) can be configured only when the TOBR feature is turned on. The GTT sets of the types mentioned above are allowed to be provisioned ONLY in GTA entries from a GTT set of the type OPCODE or one of the other GTT set types supported by this feature (SS7 Firewall).

Translations, supporting ANSI or ITU opcodes, associated with the TOBR feature:

- ANSI Opcode—ANSI opcode specifier, ANSI TCAP Package type, and Family
- ITU Opcode—ITU opcode, ITU TCAP Package Type, Opcodetag and ACN

Translations associated with the FLOBR feature:

- CdPA SSN Translations—Can be configured with routing and flexible routing data. The provisioning rules for CdPA SSN translations are the same as CgPA SSN translations in OBSR.
- DPC Translations—The provisioning rules for DPC translations are the same as OPC translations except that the OPCODE parameter cannot be configured for DPC translations.

4.1.302 ent-gtcnv

Use this command to provision the Default Global Title Conversion table. The table is used during conversion for MTP-routed cross network SCCP UDT(S), XUDT(S) and SCCP Management messages. It is also used during conversion for GT routed messages when a matching entry exists in the Global Title address table but the NGTI value is not provisioned.

Parameters

dir (mandatory)

Direction of conversion.

Range:

atoi

ANSI to ITU conversion

itoa

ITU to ANSI conversion

both

conversion in both directions

gtixlat (mandatory)

Global Title Indicator conversion. This parameter is expressed in the form of the ANSI GTI and the ITU GTI.

Range:**22**

Converts an incoming ANSI GTI 2 to an outgoing ITU GTI 2 or an incoming ITU GTI 2 to an outgoing ANSI GTI 2

24

Converts an incoming ANSI GTI 2 to an outgoing ITU GTI 4 or an incoming ITU GTI 4 to an outgoing ANSI GTI 2

tta (mandatory)

ANSI translation type.

Range:

0 - 255, *

tti (mandatory)

ITU translation type.

Range:

0 - 255, *

nai (optional)

Nature of address indicator. This parameter is mandatory when `gtixlat=24` is specified, and not specified when `gtixlat=22` is specified.

Range:

0 - 63, *

Default:

Not set

np (optional)

Numbering plan. This parameter is mandatory when `gtixlat=24` is specified, and not specified when `gtixlat=22` is specified.

Range:

0 - 15, *

Default:

Not set

npdd (optional)

New prefix digits to be deleted. The number of new prefix digits to be deleted. These digits will be replaced with the new prefix digits string (`npds`).

Range:

0 - 21

Default:

0

npds (optional)

New prefix digits string. The new prefix digits string that will replace the received prefix digits string.

Range:

1 - 21 digits

If the Hex Digit Support for GTT feature is not enabled and on, the range is 1 - 21 decimal digits; valid digits are 0-9

If the Hex Digit Support for GTT feature is enabled and on, the range is 1 - 21 hexadecimal digits; valid digits are 0-9, a-f, A-F

Default:

No digits

nsdd (optional)

New suffix digits to be deleted. This parameter identifies the new suffix digits to be deleted that will replace the received suffix digits to be deleted.

Range:

0 - 21

Default:

0

nsds (optional)

New suffix digits string. The new suffix digits string that will replace the received suffix digits string.

Range:

1 - 21 digits

If the Hex Digit Support for GTT feature is not enabled and on, the range is 1 - 21 decimal digits; valid digits are 0-9

If the Hex Digit Support for GTT feature is enabled and on, the range is 1 - 21 hexadecimal digits; valid digits are 0-9, a-f, A-F

Default:

No digits

Example

The following example assigns an entry used for ANSI to ITU conversion where the conversion is from GTI 2 to GTI 2.

```
ent-gtcnv:dir=atoi:gtixlat=22:tta=10:tti=5
```

The following example assigns an entry used for ANSI to ITU conversion where the conversion is from GTI 2 to GTI 4. The `nsdd` parameter specifies that the last 3 digits are to be removed from the end of the address digits, and the `nsds` parameter specifies that the digits 123 are to be appended to the end of the remaining address digits.

```
ent-
gtcnv:dir=atoi:gtixlat=24:tta=11:tti=7:nai=8:np=6:nsdd=3:nsds=1
23
```

The following example assigns an entry used for ITU to ANSI conversion where the conversion is from GTI 2 to GTI 2. The `npdd` parameter specifies that the first 3 digits are to be deleted from the beginning of the address digits, and the `npds` parameter specifies that the digits 407 should be appended to the beginning of the remaining address digits.

```
ent-gtcnv:dir=ittoa:gtixlat=22:tta=11:tti=7:npdd=3:npds=407
```

The following example assigns an entry used for ITU to ANSI conversion where the conversion is from GTI 2 to GTI 4. The `nsds` parameter specifies that the digits 45667 are to be appended to the end of the address digits.

```
ent-gtcnv:dir=ittoa:gtixlat=24:tta=11:tti=7:nai=8:np=6:nsds=45667
```

The following example assigns an entry used for ANSI/ITU conversion in both directions where the conversion is from GTI 2 to GTI 2.

```
ent-gtcnv:dir=both:gtixlat=22:tta=11:tti=7
```

The following example assigns an entry used for ANSI/ITU conversion where an incoming ANSI GTI 2 is converted to an outgoing ITU GTI 4 or an incoming ITU GTI 4 to an outgoing ANSI GTI 2.

```
ent-gtcnv:dir=both:gtixlat=24:tta=12:tti=9:nai=6:np=4
```

The following example assigns a default entry for ANSI to ITU conversion where the conversion is from GTI 2 to GTI 2.

```
ent-gtcnv:dir=atoi:gtixlat=24:tta=*:tti=4:nai=6:np=5
```

The following example assigns a default entry for ITU to ANSI where the conversion is from GTI 2 to GTI 4. The `npds` parameter specifies that the digits 919 are to be appended to the beginning of the address digits.

```
ent-gtcnv:dir=ittoa:gtixlat=24:tta=17:tti=*:nai=*:np=*:npds=919
```

The following example specifies hexadecimal digits for the `npds` parameter.

```
ent-  
gtcnv:dir=atoi:gtixlat=22:tta=*:tti=4:npdd=3:npds=abcdef0123456789
```

The following example assigns a default entry for ITU to ANSI where the conversion is from GTI 2 to GTI 4. The `npds` parameter specifies that the digits 123 are to be appended to the beginning of the address digits and the `nsds` parameter specifies that the digits 407 are to be appended to the end of the address digits

```
ent-  
gtcnv:dir=ittoa:gtixlat=24:tta=17:tti=*:nai=*:np=*:npds=123:nsds=407
```

Dependencies

The ANSI/ITU SCCP Conversion feature must be enabled before this command can be entered.

4171 E4171 Cmd Rej: SCCP Conversion feature must be enabled

If the `gtixlat=22` parameter is specified, then the `nai` and `np` parameters cannot be specified.

4033 E4033 Cmd Rej: If GTIXLAT is 22, NAI and NP cannot be specified

If the `gtixlat=24` parameter is specified, then the `nai` and `np` parameters must be specified.

4034 E4034 Cmd Rej: If GTIXLAT is 24, NAI and NP must be specified

If the `dir=both` parameter is specified, then a wildcard value (*) cannot be specified for any of the other parameters.

4116 E4116 Cmd Rej: Wildcard/Asterisk invalid for direction of BOTH

If the `dir=atoi` parameter is specified, then a wildcard value (*) can be specified only for the `tta` parameter.

4117 E4117 Cmd Rej: Wildcard/Asterisk combination invalid for direction

If the `dir=itoa` parameter is specified, then a wildcard value (*) must be specified for the `tti`, `np`, and `nai` parameters.

4118 E4118 Cmd Rej: Wildcard/Asterisk required for TTI, NP, NAI if DIR is ITOA

The specified `dir`, `tta`, `tti`, `np`, and `nai` parameter combination cannot already exist in the database.

4119 E4119 Cmd Rej: Key values: DIR, TTA, TTI, NP, NAI already exist

The `nsdd/nsds` and `npdd/npds` parameters cannot be specified together in the command.

4170 E4170 Cmd Rej: Prefix & Suffix digit modification parameters can't be mixed

The Default Global Title Conversion table can contain a maximum of 1000 entries.

4169 E4169 Cmd Rej: GT Conversion table is full

The Hex Digit Support for GTT feature must be enabled and on before hexadecimal digits can be specified for the `npds` and `nsds` parameters.

3006 E3006 Cmd Rej: Hex Digit Support for GTT feature must be ON

Notes

The use of asterisks (wildcards) is allowed only once for each direction of ANSI to ITU and ITU to ANSI. This provides a configurable default.

In the conversion direction of ANSI to ITU, an asterisk can be specified only for the ANSI `tta` parameter.

In the conversion direction of ITU to ANSI, the asterisk value must be specified for the `itu`, `tti`, `np`, and `nai` parameters.

Asterisks are not allowed when conversion is in both directions (`dir=both`).

The suffix digit manipulation parameters `nsdd` and `nsds` cannot be specified in the same command with the prefix digit manipulation parameters `npdd` and `npds` parameters. The `npdd` and `nsdd` parameters specify how many digits to delete, if any, from the beginning or end respectively of the Global Title address digits. The `npds` and `nsds` parameters specify what digits, if any, to append to the beginning or end respectively of the Global Title address digits.

The `gtixlat` parameter is expressed in the form of the ANSI GTI and the ITU GTI. The `gtixlat` parameter is used to indicate the conversion of the Global Title Indicator between the ANSI and ITU standards. For example: A `gtixlat` value of 24 converts an incoming ANSI GTI 2 to an outgoing ITU GTI 4 or an incoming ITU GTI 4 to an outgoing ANSI GTI 2.

Output

```
ent-gtcnv:dir=atoi:gtixlat=22:tta=10:tti=5

      rlghncxa03w 04-01-07 11:43:07 EST  EAGLE 31.3.0

4.1.303 ent-gtmod

Use this command to enter GT Modification (GTMOD) data in the GTMOD table. The GTMOD entry consists of a GTMOD ID and GTMOD specific data. After the GTMOD ID is provisioned, it can be used in GTT and GTT Action commands.

Parameters**Note:**

Definitions for the feature options specified by the `on` and `off` parameters are located in the Notes section.

gtmodid (mandatory)

GTMOD identifier.

Range:

ayyyyyyy

1 leading alphabetic character followed by up to 8 alphanumeric characters

cgpassn (optional)

Calling party subsystem number. This parameter specifies the calling party subsystem address that receives the message.

Range:

002 - 255

ngti (optional)

New global title indicator. This parameter specifies whether a new GTI translation format is type 2 or type 4.

Range:

2

4**nnai (optional)**

New nature of address indicator. The value that replaces the received NNAI.

Range:
0 - 127

nnp (optional)

New numbering plan. The value that is used to replace the received numbering plan.

Range:
0 - 15

npdd (optional)

Number of prefix digits to be deleted. The number of digits to be deleted from the prefix of the received GT address.

Range:
1 - 21

npds (optional)

New prefix digits string. The digits to be prefixed to the received GT address.

Range:
1 - 21 digits
If the Hex Digit Support for GTT feature is not enabled, the range is *1 - 21* decimal digits; valid digits are *0-9*
If the Hex Digit Support for GTT feature is enabled and on, the range is *1 - 21* hexadecimal digits; valid digits are *0-9, a-f, A-F*

nsdd (optional)

Number of suffix digits to be deleted. The number of digits to be deleted from the suffix of the received GT address.

Range: 1 - 21

nsds (optional)

New suffix digits string. The digits to be suffixed to the received GT address.

Range:
1 - 21 digits
If the Hex Digit Support for GTT feature is not enabled, the range is *1 - 21* decimal digits; valid digits are *0-9*
If the Hex Digit Support for GTT feature is enabled and on, the range is *1 - 21* hexadecimal digits; valid digits are *0-9, a-f, A-F*

ntt (optional)

New Translation type. This parameter specifies the value that replaces the received Translation Type.

Range:
0 - 255

off (optional)

Disables or turns off the specified feature options. This parameter specifies a comma-separated list of feature options that are requested to be turned off. Up to 8 feature options can be specified in the list.

Range:

gt0fill

on (optional)

Enables or turns on the specified feature options. This parameter specifies a comma-separated list of feature options that are requested to be turned on. Up to 8 feature options can be specified in the list.

Range:

gt0fill

precd (optional)

Precedence. This parameter specifies whether the prefix or suffix takes precedence while modifying the received GT address.

Range:

px

if the *npdd* and *npds* parameters are specified

sfx

if the *nsdd* and *nsds* parameters are specified

Example

```
ent-gtmod:gtmodid=set1:npdd=5:npds=123:off=gt0fill:ntt=10
```

```
ent-gtmod:gtmodid=gtmodset4:npdd=5:npds=123:nsdd=2:
```

```
nsds=1234:ngti=4:on=gt0fill:nnai=12:nnp=5:precd=sfx
```

```
ent-gtmod:gtmodid=setntt:ntt=12
```

Dependencies

If the *ngti=4* parameter is specified, then the *nnp* and *nnai* parameters must be specified.

4175 E4175 Cmd Rej: If NGTI is 4, NNP and NNAI must be specified

If the *ngti=2* parameter is specified, the *nnp* and *nnai* parameters cannot be specified.

4176 E4176 Cmd Rej: If NGTI is 2, NNP and NNAI cannot be specified

The ANSI/ITU SCCP Conversion feature must be enabled before the *ngti* parameter can be specified.

4171 E4171 Cmd Rej: SCCP Conversion feature must be enabled

The Hex Digit Support for GTT feature must be turned on before hexadecimal digits can be specified for the *npds* or *nsds* parameters.

3006 E3006 Cmd Rej: Hex Digit Support for GTT feature must be ON

The GTMOD table cannot contain more than 100000 entries.

5283 E5283 Cmd Rej: GTMOD table is full

The GTMOD table is corrupt or cannot be found.

5284 E5284 Cmd Rej: Failed reading GTMOD table

At least one optional parameter must be specified.

2136 E2136 Cmd Rej: At least one optional parameter is required

The AMGTT, AMGTT CdPA Only, or AMGTT CgPA Upgrade feature must be turned on before any parameter except the `ntt` parameter can be specified.

2789 E2789 Cmd Rej: AMGTT/AMGTT CdPA Only/AMGTT CgPA Upgrade must be ON

The value specified for the `gtmodid` parameter cannot already exist in the GTMOD table.

5286 E5286 Cmd Rej: GTMODID already exist

The combined digit length of the values specified for the `npds` and `nsds` parameters cannot be greater than 21.

5290 E5290 Cmd Rej: Combined digit length of NPDS & NSDS must not exceed 21

If the `npdd/npds` and `nsdd/nsds` parameters are specified, then the `precd` parameter must be specified.

5289 E5289 Cmd Rej: PRECD must be specified when NPD(x) and NSD(x) are specified

The `gtmodid=none` parameter cannot be specified.

5292 E5292 Cmd Rej: GTMODID must not be specified as NONE

If the `precd` parameter is specified, then the `npdd`, `npds`, `nsdd`, or `nsds` parameter must be specified.

4198 E4198 Cmd Rej: If PRECD specified, NPDS/NSDS/NPDD/NSDD must be specified

If the `on=gt0fill` parameter is specified, then the `ngti` parameter must be specified.

4174 E4174 Cmd Rej: GT0FILL can be specified as ON only if NGTI is specified

The same value cannot be specified for the `on` and `off` parameters.

4732 E4732 Cmd Rej: Same option in ON & OFF params cannot be specified

SSN configured for SFAPP cannot be used in any command for any configuration

3558 E3558 Cmd Rej: SFAPP SSN can not be used

Notes

on/off options

- `gt0fill` —GT zero fill. Specifies whether the last 0 of the GTA is a treated as a valid digit (OFF) or as filler (ON) during GT Modification for the `gti(x)=2` to `gti(x)=4` scenario.

Output

```
ent-gtmod:gtmodid=set5:ngti=4:nnp=4:nnai=2:on=gt0fill
```

```
tekelecstp 10-03-08 14:43:31 EST EAGLE 42.0.0
```

```
GTMOD table is (2 of 50000) 1% full
```

```
ENT-GTMOD: MASP A - COMPLTD
```

4.1.304 ent-gtt

Use this command to add the routing object, DPC, and subsystem number for messages requiring global title translation. The translation is performed on the basis of the global title address (GTA) and translation type (TT) for each SS7 SCCP message directed to the STP's self-identity DPC or CPC with a routing indicator of 0, indicating a GTT is required.

Note:

If the EGTT feature is turned on, then the GTT Selector (`ent/chg/dlt/rtrvgtttsel`), GTT Set (`ent/dlt/rtrv-gttset`), and GTA (`ent/chg/dlt/rtrvgta`) commands replace the Translation Type (`ent/dlt/rtrv-tt`) and Global Title Translation (`ent/chg/dlt/rtrv-gtt`) commands. It is not recommended to run `ent/dlt/rtrv-tt & ent/chg/dlt/rtrv-gtt` commands as it may cause the advance GTA fields of GTT entry to be reset to the default values.

Parameters

Note:

See [Point Code Formats and Conversion](#) for a detailed description of point code formats, rules for specification, and examples.

gta (mandatory)

Global title address. The beginning of a range of global title digits.

Range:

1 - 21 digits

If the Hex Digit Support for GTT feature is not enabled, the range is 1 - 21 decimal digits; valid digits are 0-9.

If the Hex Digit Support for GTT feature is on, the range is 1 - 21 hexadecimal digits; valid digits are 0-9, a-f, A-F.

pc (mandatory)

ANSI point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*. The *prefix* subfield indicates a private point code (*prefix-ni-nc-ncm*).

Synonym:

pca

Range:

p-, 000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—p-

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001-005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006-255*.

The point code *000-000-000* is not a valid point code.

pc/pca/pci/pcn/pcn24 (mandatory)

Point code.

pci (mandatory)

ITU international point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-zone-area-id*).

Range:

s-, *p-*, *ps-*, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s-, *p-*, *ps*

zone—0-7

area—000-255

id—0-7

The point code *0-000-0* is not a valid point code.

pcn (mandatory)

ITU national point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the *chg-stpopts:npcfmti* flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc,m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

Range:

s-, *p-*, *ps-*, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s-, *p-*, *ps*

nnnnn—0-16383

gc—aa-zz

m1-m2-m3-m4—0-14 for each member; values must sum to 14

pcn24 (mandatory)

24-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point (msa-ssa-sp)*. The *prefix* subfield indicates a private point code (*prefix-msa-ssa-sp*).

Range:

p-, 000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*p*

msa—000–255

ssa—000–255

sp—000–255

ri (mandatory)

Route indicator. This parameter specifies whether a subsequent global title translation is required.

Range:

gt

Subsequent translation is required.

ssn

Subsequent translation is not required.

xlat (mandatory)

Translate indicator. The type of global title translation to be performed.

Range:

dpc

dpcssn

dpcngt

cggtmod (optional)

Calling party GT modification indicator. This parameter specifies whether calling party global title modification is required.

Range:

yes

no

Default:

no

egta (optional)

Global title end address. The end of a range of global title digits.

Range:

1 - 21 digits

If the Hex Digit Support for GTT feature is not enabled, the range is 1 - 21 decimal digits; valid digits are 0-9.

If the Hex Digit Support for GTT feature is enabled and on, the range is 1 - 21 hexadecimal digits; valid digits are 0-9, a-f, A-F.

Default:the `gta` value**force (optional)**When a final GTT is specified, the DPC and subsystem number must be configured in the mated application table (`xlat=dpc` and `ri=ssn`). The `force=yes` parameter overrides this restriction.**Range:***yes**no***Default:***no***gtmodid (optional)**

Global title modification identifier.

Range:*ayyyyyyy*

1 leading alphabetic character followed by up to 8 alphanumeric characters

Default:*none***loopset (optional)**

SCCP loopset name. This parameter associates a translation set with a loopset.

Range:*ayyyyyyy*

1 alphabetic character followed by up to 7 alphanumeric characters.

none —There is no association between the translation set and any loopset**Default:***none***mapset (optional)**

MAP set ID.

Range:*1 - 36000, dflt**dflt* —Default MAP set**mrnset (optional)**

MRN set ID.

Range:

1 - 3000, *dflt*, *none*
dflt —Default MRN Set ID
none —Removes the specified MRN Set ID from the MRN table

ssn (optional)

Subsystem number. The subsystem address that will receive the message.
 This parameter is required and can only be specified if the `xlat=dpcssn` parameter is specified.

Range:

002 - 255

ttn (optional)

Translation type name. The name is of local significance only, and is related to the translation type.

Range:

ayyyyyyy
 1 alphabetic character followed by up to 8 alphanumeric characters

Default:

No translation name is given

type/typea/typei/typen/typen24/typeis/typens (optional)

Translation type. This parameter identifies the translation type and network type. This parameter is the decimal representation of the 1-byte field used in SS7.
 The `type` and `typea` parameters specify an ANSI network.
 The `typei` parameter specifies an ITU-international network.
 The `typen` parameter specifies an ITU-national network.
 The `typen24` parameter specifies a 24-bit ITU-national network.
 The `typeis` parameter specifies an ITU-international spare network.
 The `typens` parameter specifies an ITU-national spare network.
 A translation type numeric value may be entered as an ANSI type (`type/typea`) and as an ITU type (`typei/typen/typen24/typeis/typens`). However, they are separate entities.
 The point code domain translation types for GTT are handled by the EAGLE protocol processing as either ANSI or ITU; therefore, ITU applies to ITU-I, ITU-I spare, ITU-N, ITU-N spare, and ITU-N24.

Range:

000 - 255

Default:

No translation type is specified

Example

The lines in the following examples are wrapped for readability:

```

Dependencies

The end address must be greater than or equal to the start address.

2420 E2420 Cmd Rej: EGTA must be greater than or equal to GTA

The `pcn` parameter format must match the format that was assigned with the `chg-stpopts:npcfmti` parameter.

2055 E2055 Cmd Rej: Incorrect information unit, expecting point code- <parm>

Point code entries must be full point codes. Partial point codes are not allowed.

2859 E2859 Cmd Rej: Destination address must be a full point code

The start global title address length must be equal to the number of digits specified by the given translation type. If the VGTT (variable length GTT) feature is turned on, then up to 10 GTA lengths per translation type can be provisioned. When this command is entered to create entries, the software keeps track of the lengths and allows only 10 different lengths. The global title address specified for the translation type must then have the same number of digits as an existing GTA.

2404 E2404 Cmd Rej: GTA does not match translation type's number of digits

If the end global title address is specified, its length must equal the length of the start global title address.

2403 E2403 Cmd Rej: Length of EGTA must be equal to length of GTA

The maximum length of the resulting GTA string must not exceed 21 digits when translation is complete.

2404 E2404 Cmd Rej: GTA does not match translation type's number of digits

If the translation type is specified, then it must already exist and cannot be an alias.

2466 E2466 Cmd Rej: Translation Type specified does not exist

The ANSI/ITU SCCP Conversion feature must be enabled before a translated PC and a translation type in different network types can be specified.

2470 E2470 Cmd Rej: Point Code network type does not match TT network type

When the translated point code is of type ANSI, the `ngti` parameter of the referred GTMOD cannot have a value of 4. For ANSI PCs, the `ngti` parameter must have a value of 2.

4903 E4903 Cmd Rej: If NGTI of referred GTMOD is 4, PC cannot be ANSI

The range, as specified by the start and end global title addresses, cannot exist in the global title translation data for the specified translation type. Each range may be contained completely within a previously defined range, in which case splitting is performed. However, if the ranges overlap, splitting cannot occur, the command is rejected, and a list of overlapped global title addresses is displayed. An example follows that shows what happens when the user attempts to enter a global title address range (such as 8005550000 to 8005559999) that

overlaps an existing range. The overlapping links must match. If they do not, error message E2401 is generated displaying the list of overlapped global title addresses:

```
The following GTA ranges overlap the input GTA range
START GTA END GTA 8005550000 8005551999 8005552000 8005553999
8005554000 8005555999 ENT-GTT: MASP A - Command Aborted
```

2401 E2401 Cmd Rej: GTA range overlaps a current range

If a final GTT is specified with the `ri=ssn` parameter and the `xlat=dpc` parameter, and if the value of the `force` parameter is not `yes`, the point code must be configured in the Remote Point Code/MAP Table.

2419 E2419 Cmd Rej: Point code does not exist in the remote point code table

The `xlat=dpcssn` parameter must be specified before the `ssn` parameter can be specified.

2457 E2457 Cmd Rej: SSN can only be specified when XLAT=DPCSSN

If the `xlat=dpcssn` parameter is specified, then the `ssn` parameter must be specified.

2481 E2481 Cmd Rej: SSN must be specified when XLAT=DPCSSN

Table 4-24 shows the valid combinations for the `xlat`, `ri`, and `ssn` parameters. All other combinations are rejected.

Table 4-24 Valid ent-gtt Routing Parameter Combinations

XLAT Value	RI Value	Routing Action	SSN Value
DPC	GT	Translate DPC only and route on GT	Cannot specify
DPC	SSN	Translate DPC only and route on SSN	Cannot specify
DPCSSN	GT	Translate DPC and SSN and route on GT	Must specify
DPCSSN	SSN	Translate DPC and SSN and route on SSN	Must specify
DPCNGT	GT	Translate DPC only and route on GT	Cannot specify

N/A N/A

If the XGTT feature is enabled, then the GTT table can have up to either 400,000 or 1,000,000 entries, depending on the controlled feature Part Number that is enabled. If XGTT is not enabled, then the GTT table can contain up to 269,999 user entries.

2462 E2462 Cmd Rej: GTT table is full

To enter this command, the Remote Point Code table cannot be full.

2454 E2454 Cmd Rej: Remote point code table is full

To enter this command, the subsystem table for primary remote point codes cannot be full.

2453 E2453 Cmd Rej: Subsystem table for primary remote point code is full

If the `ri=ssn` parameter is specified, the `mrnset` parameter cannot be specified.

4475 E4475 Cmd Rej: MRNSET must be specified (only) if RI parameter is GT

If the Flexible GTT Load Sharing feature is enabled, the specified PC must already exist in the specified MRN set.

4483 E4483 Cmd Rej: PC does not exist in specified MRNSET

The specified MRN set must already exist in the MRN table.

4480 E4480 Cmd Rej: Specified MRNSET does not exist

The Flexible GTT Load Sharing feature must be enabled before the `mrnset` parameter can be specified.

4479 E4479 Cmd Rej: MRNSET must be specified (only) if FGTTLS feature is enabled

If the `ri=gt` parameter is specified, then the `mrnset` parameter must be specified.

4475 E4475 Cmd Rej: MRNSET must be specified (only) if RI parameter is GT

The MRN table is corrupt or cannot be found.

2999 E2999 Cmd Rej: Failed reading the MRN table

If the `ri=gt` parameter is specified, the `mapset` parameter cannot be specified.

4532 E4532 Cmd Rej: MAPSET must be specified (only) if RI parameter is SSN

The Flexible GTT Load Sharing feature must be enabled before the `mapset` parameter can be specified.

4523 E4523 Cmd Rej: MAPSET must be specified (only) if FGTTLS feature is enabled

The `mapset` parameter can only be specified if the Flexible GTT Load Sharing feature is enabled, and the `ri=ssn` parameter is specified. If the `ri=ssn` parameter is specified, the `mapset` parameter must be specified. If the `ri=gt` parameter is specified, the `mapset` parameter cannot be specified.

4532 E4532 Cmd Rej: MAPSET must be specified (only) if RI parameter is SSN

The specified PC and SSN must exist in the specified MAP set.

4528 E4528 Cmd Rej: PC/SSN doesn't exist in MAPSET

At least one entry must be provisioned in the specified MAP set in the MAP table.

4527 E4527 Cmd Rej: Specified MAPSET does not exist

If the `xlat=dpc` parameter is specified, and the `force` parameter is not specified as yes, the specified PC and MAP set must exist in the MAP table.

4543 E4543 Cmd Rej: PC/MAPSET does not exist in MAP table

The MAP table is corrupt or cannot be found.

4524 E4524 Cmd Rej: Failed Reading MAP table

The Hex Digit Support for GTT feature must be turned on before hexadecimal digits can be specified for the `gta` or `egta` parameters.

3006 E3006 Cmd Rej: Hex Digit Support for GTT feature must be ON

The SCCP Loop Detection feature must be enabled before the `loopset` parameter can be specified.

4565 E4565 Cmd Rej: SCCP Loop Detection Feature is not enabled

The value of the `loopset` parameter must already exist in the database.

4568 E4568 Cmd Rej: Loop Set entry does not exist

The `tt` or the `ttn` parameter must be specified.

2475 E2475 Cmd Rej: Either TYPE or TTN must be specified

The value specified for the `pc/pca/pci/pcn/pcn24` parameter must be a valid point code.

2169 E2169 Cmd Rej: Point code out of range

The SCCP Loop Detection feature must be enabled before the `loopset` parameter can be specified.

4565 E4565 Cmd Rej: SCCP Loop Detection Feature is not enabled

The value of the `loopset` parameter must exist in the Loopset table.

4568 E4568 Cmd Rej: Loop Set entry does not exist

If the value of the `pc/pca/pci/pcn/pcn24` parameter is the True Point Code, then the `xlat=dpcssn` parameter and the `ri=ssn` parameter must be specified.

3648 E3648 Cmd Rej: XLAT must be DPCSSN and RI must be SSN if PC is the True PC

If the `ssn` parameter is specified, and if the value of the `pc/pca/pci/pcn/pcn24` parameter is the True Point Code, then the value of the `ssn` parameter must exist in the SS-APPL table.

3612 E3612 Cmd Rej: SSN must be in SS-APPL table when PC is true point code

The value of the `pc/pca/pci/pcn/pcn24` parameter must exist as a destination in the ordered route entity set or must reside in a cluster (ANSI only) that exists as a destination in the ordered route entity set (for global title routing).

2417 E2417 Cmd Rej: Point code does not exist in the routing table

If the VGTT feature is turned on, then up to 10 GTA lengths can exist per translation type. If the Support for 16 GTT Lengths in VGTT feature is turned on, then up to 16 GTA lengths can exist per translation type.

4007 E4007 Cmd Rej: Exceeding max GTA Lengths supported per TT

The value of the `tt` parameter must not be defined as an alias.

2465 E2465 Cmd Rej: Translation TYPE defined as an alias

If both the translation type (`tt`) and translation type name (`ttn`) are specified, the translation type name (`ttn`) must match that of the specified translation type (`tt`).

2473 E2473 Cmd Rej: TTN and TYPE do not correspond to each other

If the `tt` parameter is not specified, then the value of the `ttn` parameter must match the value of a `tt` parameter in the STP database.

2468 E2468 Cmd Rej: TTN specified does not exist

If the `xlat=dpcngt` parameter is specified, then the `ri=gt` parameter must be specified.

2480 E2480 Cmd Rej: RI=GT must be specified when XLAT=DPCNGT

The site identification table is corrupt or cannot be found.

2874 E2874 Cmd Rej: Failed reading site identification table

The Route table is corrupt or cannot be found.

2648 E2648 Cmd Rej: Failed reading the route table

The Loopset table is corrupt or cannot be found.

4567 E4567 Cmd Rej: Cannot access LoopSet table

The database is corrupt or cannot be found.

2416 E2416 Cmd Rej: Unable to access database. Severe database failure

The GTT table cannot be full.

2462 E2462 Cmd Rej: GTT table is full

The value specified for the `pc` parameter cannot be associated with a proxy point code.

4707 E4707 Cmd Rej: PRX using DPC not allowed in GTT, MAP, MRN tables

The AMGTT feature or the AMGTT CgPA Upgrade feature must be turned on before the `cggmod` parameter can be specified.

4789 E4789 Cmd Rej: Either AMGTT or AMGTT CgPA Upgrade feature must be ON

One or more point codes in the command will exceed the maximum number of entries in the MAP table.

4526 E4526 Cmd Rej: MAP table is full

The GTT set associated with the translation type specified by the `ttn` parameter must have a set type of `cdgta` (see the `ent-gttset` command).

4997 E4997 Cmd Rej: SETTYPE of specified GTTSET must be CdGTA

The value specified for the `gtmodid` parameter must already exist in the GTMOD table.

5285 E5285 Cmd Rej: GTMODID does not exist

The GTMOD table is corrupt or cannot be found.

5284 E5284 Cmd Rej: Failed reading GTMOD table

The `gtmodid=none` parameter cannot be specified.

5292 E5292 Cmd Rej: GTMODID must not be specified as NONE

The network domain of the translation type specified by the `ttn` parameter cannot be CROSS (see the `ent-gttset` command).

5371 E5371 Cmd Rej: Network domain of corresponding ttn must not be CROSS

The `ttn=none` parameter cannot be specified.

3565 E3565 Cmd Rej: Set name must not be specified as NONE

The length of the specified `gta` parameter must match the number of digits provisioned for the specified GTT set (`gttsn`) when the VGTT feature is turned off. If the VGTT feature is turned on, then up to 10 GTA lengths can exist per GTT set. If the Support for 16 GTT Lengths in VGTT feature is turned on, then up to 16 GTA lengths can exist per GTT set.

3571 E3571 Cmd Rej: GTA Length does not match GTT Set number of digits

SSN configured for SFAPP cannot be used in any command for any configuration

3558 E3558 Cmd Rej: SFAPP SSN can not be used

Notes

The routing indicator provides routing instructions to the receiving signaling point. If the routing indicator specifies global title, global title translation then needs to be performed at another signaling point.

Up to 200,000 entries are allowed for an individual translation type if all SCCP cards are E5-TSM cards or DSM cards.

The ANSI point code 0 and the ITU-I point code 0-000-0 are not valid point codes.

The EAGLE does not require a MAP table entry to be configured prior to provisioning a GTT entry. The EAGLE assumes that the GTT entry is for a solitary point code/subsystem and automatically creates a MAP entry for the point code/subsystem.

In this command, only ITU-international and ITU national point codes support the spare point code subtype prefix (s-) and the private and spare point code subtype prefix (ps-). All of the point code types support the private (internal) point code subtype prefix (p-).

When the Flexible GTT Load Sharing (FGTTLS) feature and the Intermediate GTT Load Sharing feature are on, multiple relationships can be defined among a set of destination point codes in the MRN table that exists in the EAGLE. The relationship used in a particular translation is based on the GTA digits used for translation. The MRN set and the post-translation PC creates a key that is used to perform lookups in the MRN table. The lookup results in a set of alternate PCs, one of which is selected, based on the PCs relative cost, to route the MSU in the most cost-effective way.

The FGTTLS feature introduces the `mrnset` parameter. The MRNSET and post-translation PC create a key that is used to perform lookup tasks in the MRN table. This lookup results in a set of alternate PCs, from which one is selected, based on the PCs relative cost, to route the MSU in the most cost-effective way.

When the FGTTLS feature is turned on, multiple relationships can be defined among set of PC/SSNs in the existing MAP table. The relationship used in a particular translation is based on the GTA digits used for translation.

When the FGTTLS feature is ON, the `mapset` parameter is used. The MAP set and PC/SSN creates a key that is used to perform lookup tasks in the MAP table. The lookup into the MAP table results in a set of mate PC/SSNs, from which one is selected to route the MSU in the most cost-effective way.

If the AMGTT feature is turned off, then the Default GT Conversion Table is used for conversion.

A loopset consists of a set of point codes that form a routing loop in the network. If the SCCP Loop Detection feature is enabled, then the loopset can be associated with or disassociated from specified translation entries. Loopsets that are associated with translation entries are checked during intermediate and final GTT traffic routing. If a loop exists, then the system can be notified with or without discarding the associated traffic.

If the OBSR or FLOBR feature is turned on, then this command can provision only translation entries with a set type of CdGTA.

If the EGTT feature is turned on, then the following occurs:

- For ANSI, if the GTT selector of a true entry is deleted using the `dlt-gttset` command, then a GTT entry cannot be created for that translation type.
- For ITU, if a true GTT selector entry (GTI=2 or GTI=4) is deleted using the `dlt-gttset` command, or if the GTT set name of an entry is changed using the `chg-gttset` command, then a GTT entry cannot be created for that translation type.

4.1.305 ent-gttact

Use this command to enter a Global Title Translations (GTT) Action entry. A GTT Action entry consists of an Action ID, an action, and action-specific data. The action specified in the entry determines the actions performed the MSU during translation.

Parameters

Note:

Definitions for the feature options specified by the `on` and `off` parameters are located in the Notes section.

act (mandatory)

Action. The action applied to the message.

Range:***disc***

discard message with no return error

dup

route a copy of the message to a specified duplicate node

fwd

route the original message to a specified forward node instead of the destination indicated by the GTT/ DB data

scpval

perform the SCCP MAP validation on MO/MT-FSM messages

sflog

send a copy of original message to SFLOG card

sfthrot

discard message if threshold exceeded

srvc

apply service (GPORT/GFLEX/SMSMR) on the message

tcaperr

discard message that has a specified TCAP error

udts

discard message and send UDTS/XUDTS

sfapp

route message to SFAPP card

actid (mandatory)

This parameter specifies the Action ID associated with the GTT action entry.

Range:

ayyyyyyy

1 leading alphabetic character and up to 8 following alphanumeric characters

atcaperr (optional)

ANSI TCAP Error Cause. The reason for discarding the message containing the ANSI TCAP portion that is associated with the TCAPERR GTT Action.

Range:

0 - 255

atirescmodid (optional)

Calling party global title modification identifier for ATI. The GTMOD ID to be associated with the calling party of a SFAPP GTT Action entry.

Range:

ayyyyyyy

1 leading alphabetic character followed by up to 8 alphanumeric characters

Default:

None

bursts (optional)

This parameter signifies the number of previous 30-second windows from which the unused capacity can be carried over to the current window.

Range:

0 - 2

Default:

0

cdgtmodid (optional)

Called party global title modification identifier. The GTMOD ID to be associated with the called party of a GTT Action entry.

Range:

ayyyyyyy

1 leading alphabetic character followed by up to 8 alphanumeric characters

Default:

None

cggtmodid (optional)

Calling party global title modification identifier. The GTMOD ID to be associated with the calling party of a GTT Action entry.

Range:

ayyyyyyy

1 leading alphabetic character followed by up to 8 alphanumeric characters

Default:

None

cgpc (optional)

ANSI point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*. The *prefix* subfield indicates a private point code (*prefix-ni-nc-ncm*).

Synonym:

cgpca

Range:

p-, 000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—p-

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001-005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006-255*.

The point code *000-000-000* is not a valid point code.

cgpci (optional)

ITU international destination point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-zone-area-id*).

Range:*s-, p-, ps-, 0-255*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*prefix—s-, p-, ps**zone—0-7**area—000-255**id—0-7*The point code *0-000-0* is not a valid point code.**cgpcn (optional)**ITU national point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the `chg-stpopts:npcfmti` flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc, m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-nnnnn, prefix-nnnnn-gc, prefix-m1-m2-m3-m4, prefix-m1-m2-m3-m4-gc*).**Range:***s-, p-, ps-, 0-16383, aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*prefix—s-, p-, ps**nnnnn—0-16383**gc—aa-zz**m1-m2-m3-m4—0-14* for each member; values must sum to 14**cgpcn24 (optional)**24-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*). The *prefix* subfield indicates a private point code (*prefix-msa-ssa-sp*).**Range:***p-, 000-255*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*prefix—p**msa—000-255**ssa—000-255**sp—000-255***cgpcn16 (optional)**16-bit ITU national point code with subfields *unit number-sub number area-main number area* (*un-sna-mna*). The *prefix* subfield indicates a private point code (*prefix-un-sna-mna*).**Range:***p, 000--127*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix---p

un---000---127

sna---000---15

mna---000---31

cgpcogmsg (optional)

The data that is used as the Calling Party Point Code in the outgoing message.

Range:***dflt***

Default. The standard Global Title Translation process supplies the CgPA PC.

cgpcicmsg

CgPA PC data from the incoming MSU

opcicmsg

OPC data from the incoming MSU

provcgpc

provisioned CGPC/CGPCA/CGPCI/CGPCN/CGPCN24/CGPCN16 data in the GTT Action

remove

CGPC will be removed from outgoing MSU

Default:

dflt

defactid (optional)

Default Action ID. The default action that is performed when the *fwd* GTT Action fails to route the MSU or when the *sftthrot* or *scpvall* GTT Action fails.

Range: ayyyyyyyy

1 leading alphabetic character followed by 8 alphanumeric characters

The *defactid* parameter can take one of the following values:

- GTT Action ID with a GTT Action of *disc*, *udts*, or *tcaperr* (see the *act* parameter). This value must already be defined in the GTT Action table.
- *fallback* —The MSU is routed using routing data in the translated MSU when action is *fwd*. When action is set to *scpvall/sftthrot*, the MSU is discarded.

Default:

fallback

failactid (optional)

Fail Action ID. The default action that is performed to route the message when the VLR Validation fails on Stateful App.

Range:

aaaaaaaa

1 leading alphabetic character followed by 8 alphanumeric characters

The *failactid* parameter can take one of the following values:

- GTT Action ID with a GTT Action of disc, udts or tcaperr (see the `act` parameter). This value must already be defined in the GTT Action table.
- fallback -The MSU is discarded.

Default:

fallback

fwdgtt (optional)

Forward GTT. The forward GTT Action ID that is to be used to route the MSU.

Range:

ayyyyyyy

hlraddr (optional)

It is used to address the HLR for the ATI message.

Range:

USECDPA --- Use the CDPA GTA from the query message

TCAPPARM --- GTT translation shall be performed on MAP Parameter. MAP parameter will be used in SCCP CDPA for GTT translation

FWDACT --- Route the message to a specified forward node indicated in FWD GTT Action ID

Default:

USECDPA

itcaperr (optional)

ITU TCAP Error Cause. The reason for discarding the message containing the ITU TCAP portion that is associated with the TCAPERR GTT Action.

Range:

0 - 255

loopset (optional)

SCCP loopset name. The loopset associated with a GTT action.

Range:

ayyyyyyy

1 leading alphabetic character and up to 7 following alphanumeric characters.

none —There is no association between the screening action and any loopset.

Default:

none

mapset (optional)

MAP Set ID. This parameter specifies the Mated Application Set ID.

Range:

1 - 36000, dflt

dflt —Default MAP set

mrnset (optional)

MRN Set ID. The Mated Relay Node Set ID.

Range:

1 - 3000, *dflt*, *none*

dflt —Default MRN Set ID

none —The GTT Action does not participate in any load sharing.

ndgt (optional)

Number of digits to be matched. This parameter is used to specify the number of digits that must be matched between the *SCCP* parameter and *MAP* parameter.

Range:

1 - 21, *all*

all —All the digits present in the *SCCP* parameter and *MAP* parameter are matched.

Default:

all

off (optional)

Disables or turns off the specified feature options. This parameter specifies a comma-separated list of feature options that are requested to be turned off. Up to 8 feature options can be specified in the list.

Range:

uimreqd

useicmsg

handlresp

on (optional)

Enables or turns on the specified feature options. A comma-separated list of feature options that are requested to be turned on. Up to 8 feature options can be specified in the list.

Range:

uimreqd

useicmsg

handlresp

pc (optional)

ANSI point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*. The *prefix* subfield indicates a private point code (*prefix-ni-nc-ncm*).

Synonym:

pca

Range:

p-, 000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*p*-

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When `chg-sid:pctype=ansi` is specified, `nc = 000` is not valid if `ni = 001-005`.
 When `chg-sid:pctype=ansi` is specified, `nc = 000` is valid if `ni = 006-255`.
 The point code `000-000-000` is not a valid point code.

pci (optional)

ITU international destination point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-zone-area-id*).

Range:

s-, *p-*, *ps-*, *0-255*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s-*, *p-*, *ps*

zone—*0-7*

area—*000-255*

id—*0-7*

The point code `0-000-0` is not a valid point code.

pcn (optional)

ITU national point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the `chg-stpopts:npcfmti` flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

Range:

s-, *p-*, *ps-*, *0-16383*, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s-*, *p-*, *ps*

nnnnn—*0-16383*

gc—*aa-zz*

m1-m2-m3-m4—*0-14* for each member; values must sum to 14

pcn24 (optional)

24-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*). The *prefix* subfield indicates a private point code (*prefix-msa-ssa-sp*).

Range:

p-, *000-255*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*p*

msa—*000-255*

ssa—*000-255*

sp—*000-255*

pcn16 (optional)

16-bit ITU national point code with subfields *unit number-sub number area-main number area* (*un-sna-mna*). The *prefix* subfield indicates a private point code (*prefix-un-sna-mna*).

Range:*p--*, *000--127*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*prefix--p**un---000---127**sna---000---15**mna---000---31***psirescgmodid (optional)**

Calling party global title modification identifier for PSI. The GTMOD ID to be associated with the calling party of a SFAPP GTT Action entry.

Range:*ayyyyyyy*

1 leading alphabetic character followed by up to 8 alphanumeric characters

Default:

None

ri (optional)

Routing indicator. The routing indicator in the SCCP called party address of the duplicated copy of MSU.

Range:*gt**ssn*

route by subsystem number

Default:*ssn***scfaddr (optional)**

GSM SCFAddressparameter must be specified when sfapp action needs to be performed.

Range:*2 digits - 18 digits***snai (optional)**

The service nature of address indicator.

Range:*Sub ---* Subscriber Number*Natl ---* National significant number*intl ---* International number*rnidn ---* Routing number prefix and international dialed/directory number

rnndn --- Routing number prefix and national dialed/directory number

rnsdn --- Routing number prefix and subscriber dialed/directory number

ccrndn --- Country code, routing number, and national directory number

snp (optional)

The service numbering plan.

Range:

e164 --- E.164 numbering plan

e212 --- E.212 numbering plan

e214 --- E.214 numbering plan

sprm (optional)

SCCP Parameter. This parameter is used to determine whether the SCCP GTA, NP, and NAI (if GTI=4 and NP/NAI is present) will be picked up from CDPA or CGPA and used for comparison.

Range:

CDPA --- SCCP CDPA GTA, NP, and NAI (if GTI=4 and NP/NAI is present) will be used for comparison

CGPA --- SCCP CGPA GTA, NP, and NAI (if GTI=4 and NP/NAI is present) will be used for comparison

Default:

CDPA

svccerr (optional)

The action to be taken when the Service triggered by GTT Action Service fails. The MSU can be processed by either applying the results of the pre-Service GTT, or continue with the specific Service error.

Range:

SRVC --- Continue with specific service error

GTT --- Apply the result of pre-GTT service

Default:

SRVC

svcname (optional)

Service to be applied on the MSU when *act* is set to *svc*.

Range:

GFLEX, *GPORT*, *SMSMR*

ssn (optional)

Subsystem number. The subsystem number in the SCCP called party address of the MSU.

Range:

2 - 255

Default:
none

threshold (optional)

If the number of MSUs serviced by the SFTHROT action exceeds this value, MSUs are discarded.

Range:
1- 42949676295

Default:
1

tprm (optional)

TCAP Parameter. This parameter is used to determine whether the MAP digits, NP, and NON (if NP and NON are present) will be picked up from SMRPDA or SMRPOA and used for comparison.

Range:
SMRPDA --- MAP digits, NP, and NON (if NP and NON are present) from SMRPDA will be used for comparison

SMRPOA --- MAP digits, NP, and NON (if NP and NON are present) from SMRPOA will be used for comparison

Default:
SMRPDA

tt (optional)

New Translation Type

Range:
0 - 255

udtserr (optional)

UDTS Error Cause. The reason associated with the UDTS GTT Action for discarding the message.

Range:
0 - 255

valtype (optional)

Validation Type. This parameter is used to decide whether SCCP/TCAP parameter should be used for the validation of the MSU or IR21.xml file data should be used for the validation of the MSU. This parameter is mandatory when act=scpval.

Range:
sccptotcap

ir21totcap

Dependencies

A value of *disc*, *udts*, *tcaperr*, *scpval*, or *sfapp* must be specified for the *act* parameter before a value of *uimreqd* can be specified for the *on* or *off* parameter.

5068 E5068 Cmd Rej: Uimreqd only valid for DISC/UDTS/TCAPERR/SCPVAL/SFAPP

The GTT Action table cannot contain more than 2000 entries.

5066 E5066 Cmd Rej: GTT Action table is full

The GTT Action table is corrupt or cannot be found.

5067 E5067 Cmd Rej: Unable to access GTT Action table

If a value of *dup* or *fwd* is specified for the *act* parameter then the *pc/pca/pci/pcn/pcn24/pcn16* parameter must be specified.

If the *ri=ssn* parameter is specified, then the *ssn* parameter must be specified.

If the value of the *cgpcogmsg=provcgpc* parameter is specified, then the *cgpc/cgpca/cgpci/cgpcn/cgpcn24/cgpcn16* parameter must be specified.

The *sprm* and *tprm* parameters must be specified when *act* is set to *scpval*.

If the *hlraddr=tcapparm* parameter is specified, then the *tt* parameter must be specified.

If the *hlraddr=fwdact* parameter is specified, then the *fwdgtt* parameter must be specified.

2379 E2379 Cmd Rej: Missing parameter

The GTT Action - DISCARD feature must be enabled before a value of *disc*, *udts*, or *tcaperr* can be specified for the *act* parameter.

5119 E5119 Cmd Rej: GTT Action- DISCARD Feature must be enabled

The GTT Action - DUPLICATE feature must be enabled before the *act=dup* parameter can be specified.

5120 E5120 Cmd Rej: GTT Action- DUPLICATE Feature must be enabled

The specified PC and SSN must already exist in the specified MAP set.

4528 E4528 Cmd Rej: PC/SSN doesn't exist in MAPSET

If the *ri=ssn* parameter is specified, then the *mrnset* parameter cannot be specified.

4475 E4475 Cmd Rej: MRNSET must be specified (only) if RI parameter is GT

The Flexible GTT Load-Sharing feature must be enabled before the *mrnset* parameter can be specified.

4479 E4479 Cmd Rej: MRNSET must be specified (only) if FGTTLS feature is enabled

If the *ri=gt* parameter is specified, then the *mapset* parameter cannot be specified.

4532 E4532 Cmd Rej: MAPSET must be specified (only) if RI parameter is SSN

The Flexible GTT Load Sharing feature must be enabled before the `mapset` parameter can be specified.

4523 E4523 Cmd Rej: MAPSET must be specified (only) if FGTTLS feature is enabled

The specified MAP set must already exist in the database.

4527 E4527 Cmd Rej: Specified MAPSET does not exist

The specified MRN set must already exist in the MRN table.

4480 E4480 Cmd Rej: Specified MRNSET does not exist

If the Flexible GTT Load Sharing feature is enabled, the specified PC must already exist in the specified MRN set.

4483 E4483 Cmd Rej: PC does not exist in specified MRNSET

The point code specified for the `pc/pca/pci/pcn/pcn24/pcn16` and `cgpc/cgpcacgpci/cgpcn/cgpcn24/cgpcn16` parameters must be within the range specified by the parameter definition.

2169 E2169 Cmd Rej: Point code out of range

The point code specified for the `pc/pci/pcn/pcn24/pcn16` parameter must be a full point code.

3090 E3090 Cmd Rej: Full Point Code must be specified

A value of `dup` or `fwd` must be specified for the `act` parameter before the `pc/pca/pci/pcn/pcn24/pcn16`, `cgpc/cgpcacgpci/cgpcn/cgpcn24/cgpcn16`, `ssn`, `ri`, `mrnset`, `mapset`, `loopset`, `cgpcogmsg`, `cdgtmodid`, or `cggtmodid` parameter can be specified and before a value of `useicmsg` can be specified for the `on` or `off` parameter.

The `act=tcaperr` parameter must be specified before the `atcaperr` and `itcaperr` parameters can be specified.

The `act=udts` parameter must be specified before the `udtserr` parameter can be specified.

The `act=fwd/sfthrot/scpval/sfapp` parameter must be specified before the `defactid` parameter can be specified.

The Service Numbering Plan (`snp`), Service Nature of Address Indicator (`snaI`), Service name (`svcname`) and Service Error Cause (`svcerr`) parameters can only be specified if action type is `svc`.

The `threshold` or `bursts` parameter can only be specified when `act=sfthrot` is specified.

The `tprm`, `sprm`, and `ndgt` parameters can only be specified if action type is `scpval/sfapp`.

The `scfaddr`, `hIaddr`, `tt`, `failactid` and `fwdggt` parameters can only be specified if action type is `sfapp`.

2155 E2155 Cmd Rej: Invalid parameter combination specified

A value of `none` or `fallback` cannot be specified for the `actid` parameter.

5069 E5069 Cmd Rej: (New) GTT Action Id must not be NONE/FALLBACK

The GTT Action entry specified by the `actid` parameter cannot already exist in the database.

5199 E5199 Cmd Rej: (New) GTT Action Id already exist

If the value specified for the `pc/pca/pci/pcn/pcn24/pcn16` parameter is the STP true point code, then the value specified for the `ssn` parameter must already exist in the SS-APPL table.

3612 E3612 Cmd Rej: SSN must be in SS-APPL table when PC is true point code

The value specified for the `pc/pca/pci/pcn/pcn24/pcn16` parameter must already exist as a destination in the Route table.

2417 E2417 Cmd Rej: Point code does not exist in the routing table

The value specified for the `pc` parameter cannot be associated with a proxy point code.

4707 E4707 Cmd Rej: PRX using DPC not allowed in GTT, MAP, MRN tables

The MAP table is corrupt or cannot be found.

4524 E4524 Cmd Rej: Failed Reading MAP table

If the `pc/pca/pci/pcn/pcn24/pcn16`, `ri=ssn` and `ssn` parameters are specified, then the PC/SSN must be populated in the SCCP Application entity set (Remote Point Code/MAP Table).

2450 E2450 Cmd Rej: PC/SSN does not exist as a mated application

The SS-APPL table is corrupt or cannot be found.

3638 E3638 Cmd Rej: Failed Reading SS Appl table

The Route table is corrupt or cannot be found.

2648 E2648 Cmd Rej: Failed reading the route table

The STP Self-identity table is corrupt or cannot be found.

2874 E2874 Cmd Rej: Failed reading site identification table

The MRN table is corrupt or cannot be found.

2999 E2999 Cmd Rej: Failed reading the MRN table

If the value specified for the `pc/pca/pci/pcn/pcn24/pcn16` parameter is the STP's true point code, then the `ri=ssn` parameter must be specified.

5245 E5245 Cmd Rej: RI must be SSN if PC is the True PC

The value specified for the `loopset` parameter must already exist in the database.

4568 E4568 Cmd Rej: Loop Set entry does not exist

The SCCP Loop Detection feature must be enabled before the `loopset` parameter can be specified.

4565 E4565 Cmd Rej: SCCP Loop Detection Feature is not enabled

The Loopset table is corrupt or cannot be found.

4567 E4567 Cmd Rej: Cannot access LoopSet table

The GTT Action - FORWARD feature must be enabled before the `act=fwd` parameter can be specified.

5201 E5201 Cmd Rej: GTT Action- FORWARD Feature must be enabled

The GTMOD table is corrupt or cannot be found.

5284 E5284 Cmd Rej: Failed reading GTMOD table

The value specified for the `pc/pca/pci/pcn/pcn24/pcn16` parameter must be a point code that is already associated with a valid route.

5072 E5072 Cmd Rej: PC has no allowed route

The AMGTT feature must be enabled before the `cggtmodid` parameter can be specified.

4789 E4789 Cmd Rej: Either AMGTT or AMGTT CgPA Upgrade feature must be ON

The value specified for the `cdgtmodid` and `cggtmodid` parameters must already exist in the GTMOD table.

5291 E5291 Cmd Rej: CGGTMODID/CDGTMODID does not exist

A value of *none* cannot be specified for the `cdgtmodid` or `cggtmodid` parameter.

5296 E5296 Cmd Rej: CDGTMODID/CGGTMODID must not be specified as NONE

A value of *disc*, *utds*, or *tcaperr* must be specified for the `defactid/failactid` parameter.

5172 E5172 Cmd Rej: Invalid action type

The GTT Action ID specified by the `defactid` or `failactid` parameter must already exist.

5071 E5071 Cmd Rej: GTT Action Id does not exist

The values specified for the `pc/pca/pci/pcn/pcn24/pcn16` and `cgpc/cgpga/cgpci/cgpcn/cgpcn24/cgpcn16` parameters must have the same domain.

5299 E5299 Cmd Rej: PC and CGPC must be of same domain

The `loopset=none` parameter cannot be specified.

5310 E5310 Cmd Rej: Loop Set must not be specified as NONE

The `defactid=none` or `failactid=none` parameter cannot be specified.

5298 E5298 Cmd Rej: Default/Fail ACTID must not be specified as NONE

The same value cannot be specified for the `on` and `off` parameters.

4732 E4732 Cmd Rej: Same option in ON & OFF params cannot be specified

The `snp`, `snai`, and `srvcname` parameters must be specified when `act` is set to `svrc`.

3125 E3125 Cmd Rej: SNP, SNAI and SRVCNAME is mandatory for svrc action

The GFLEX Feature must be activated if the GFLEX service is entered with the SRVCNAME parameter.

3500 E3500 Cmd Rej: GFLEX feature must be ON

The GPORT Feature must be activated if the GPORT service is entered with the SRVCNAME parameter.

3991 E3991 Cmd Rej: GPORT feature must be ON

When the service specified is GFLEX, SNAI must be specified as subscriber, national or international.

3114 E3114 Cmd Rej: For GFLEX, the SNAI must be SUB, NATL OR INTL

The Portability Check for Mobile Originated SMS feature/PPSMS feature must be turned ON, or the MO SMS ASD/MO SMS B-Party Routing/MO SMS GRN/MO SMS IS41-to-GSM Migration/MO-based GSM SMS NP/MO-based IS41 SMS NP feature must be ENABLED before the SMSMR Service is entered with SRVCNAME parameter.

3107 E3107 Cmd Rej: At least one of SMSMR services must be configured

When service is specified as GPORT or SMSMR, the SNP must be specified as E164.

3990 E3990 Cmd Rej: (N)SNP must be E164 when (N)SERV=GPORT/SMSMR

The GTT Action - FORWARD/DISCARD/DUPLICATE feature must be enabled before the `act=svrc` parameter can be specified.

3451 E3451 Cmd Rej: Controlled Feature is not enabled

The GTT destination must exist in the DSTN table.

4753 E4753 Cmd Rej: DSTN table entry was not found

More than 32 SFTHROT GTT Actions are not permitted.

3277 E3277 Cmd Rej: Maximum number of SFTHROT/SFAPP Action already provisioned

A value of *fwd*, *dup*, or *scpval* must be specified for the `act` parameter before a value of *useicmsg* can be specified for the `on` or `off` parameter.

3465 E3465 Cmd Rej: USEICMSG only valid for FWD/DUP/SCPVAL

The EGTT feature must be on before the SCPVAL GTT Action can be entered.

3557 E3557 Cmd Rej: EGTT must be ON

A value of *none* cannot be specified for the `atirescgmodid` and `psirescgmodid` parameter.

5292 E5292 CmdRej: GTMODID must not be specified as NONE

The value specified for the `atirescgmodid` and `psirescgmodid` parameters must already exist in the GTMOD table.

5285 E5285 CmdRej: GTMODID does not exist.

AMGTT feature must be enabled, if `atirescgmodid` or `psirescgmodid` is specified.

2789 E2789 Cmd Rej: AMGTT/AMGTT CdPA Only/AMGTT CgPA Upgrade must be ON

Notes

on/off options

- *uimreqd* —UIM required. Specifies whether a UIM should be generated.
- *useicmsg* —Use Incoming Message. Specifies whether to apply GTT Action data to the message as the message was received (OFF) or after any EPAP or GTT translation/modification data has been applied (ON).
- *handlresp* —Specifies whether the ATI/PSI response will be sent to SFAPP card or not.

GTI, TT and NPDS must be provisioned in GTMOD table to associate `gtmodid` with `ATIRESCGMODID` or `PSIRESCGMODID`.

4.1.306 ent-gttapath

Use this command to enter a GTT Action path entry. A GTT Action path consists of pairs of "setname + value" for Opcode/CgGTA/CdGTA. Each "setname + value" pair must already be defined in the GTT translation table.

Parameters

gttpn (mandatory)

GTT Path name.

Range:

ayyyy

1 leading alphabetic character and up to 4 following alphanumeric characters

acn (optional)

Application context name. The ITU TCAP *acn* field in the incoming MSU.

Range:

0 - 255, none

none—there is no ITU TCAP *acn* field in the incoming MSU

cdgta (optional)

Called Party Global Title Address.

Range:

1 - 21 digits

If the Hex Digit Support for GTT feature is not enabled, the range is 1 - 21 decimal digits; valid digits are 0-9

If the Hex Digit Support for GTT feature is enabled and on, the range is 1 - 21 hexadecimal digits; valid digits are 0-9, a-f, A-F

cdgttsn (optional)

GTT set name (CDPA type).

Range:

ayyyyyyy

1 leading alphabetic and up to 8 following alphanumeric characters

cggta (optional)

Calling Party Global Title Address.

Range:

1 - 21 digits

If the Hex Digit Support for GTT feature is not enabled, the range is 1 - 21 decimal digits; valid digits are 0-9

If the Hex Digit Support for GTT feature is enabled and on, the range is 1 - 21 hexadecimal digits; valid digits are 0-9, a-f, A-F

cggtsn (optional)

GTT set name (CGPA type).

Range:

ayyyyyyy

1 leading alphabetic and up to 8 following alphanumeric characters.

family (optional)

The ANSI TCAP *family* field in the incoming MSU.

Range:

0 - 255, *none*

none—there is no value in the ANSI TCAP *family* field in the incoming MSU

opcode (optional)

This parameter specifies the TCAP *opcode* field in the incoming MSU.

Range:

0 - 255, *none*

none—there is no value in the TCAP *opcode* field in the incoming MSU

opgtsn (optional)

GTT set name (Opcode type).

Range:

ayyyyyyy

1 leading alphabetic and up to 8 following alphanumeric characters

pkgtype (optional)

The ANSI and ITU TCAP package type.

Range:

ituuni

ITU unidirectional

qwp

Query with Permission

qwop

Query without Permission

resp
Response

cwp
Conversation with Permission

cwop
Conversation without Permission

any
Wildcard value

bgn
Begin

end
End

cnt
Continue

ituabort
ITU abort

ansiabort
ANSI abort

ansiuni
ANSI unidirectional

ANSI TCAP Package Types—*ansiuni, qwp, qwop, resp, cwp, cwop, ansiabort, any*

ITU TCAP Package Types—*bgn, ituabort, ituuni, any, end, cnt*

Example

```
ent-
gttapath:gttpn=path1:opgttsn=opsn1:acn=111-111-111-111-111-111-
111: opcode=123:pkgtype=ituuni:cdgttsn=cdsn1:cdgta=7654
```

```
ent-
gttapath:gttpn=path2:cggtsn=cgsn2:cggta=45673:opgttsn=opsn2:op
code=124: family=2:pkgtype=ansiuni
```

```
ent-
gttapath:gttpn=path3:opgttsn=opsn2:pkgtype=ansiuni:opcode=124:f
amily=2: cggtsn=cgsn3:cggta=987654:cdgttsn=cdsn1:cdgta=123456
```

Dependencies

If the `family` parameter is specified, then a value of *ansiuni, qwp, qwop, resp, cwp, cwop, ansiabort*, or *any* must be specified for the `pkgtype` parameter.

5140 E5140 Cmd Rej: FAMILY parameter is allowed with ANSI TCAP PKGTYPE

If the `acn` parameter is specified, then a value of *bgn, ituabort, ituuni, any, end, or cnt* must be specified for the `pkgtype` parameter.

5141 E5141 Cmd Rej: ACN parameter is allowed with ITU TCAP PKGTYPE

If the `pkgtype=ituabort` parameter is specified, then a value of *none* must be specified for the `acn` and `opcode` parameters.

If the `pkgtype=ansiabort` is specified then a value of *none* must be specified for the `family` and `opcode` parameters.

5144 E5144 Cmd Rej: PKGTYPE abort requires ACN/FAMILY/OPCODE value none

The `opcode`, `pkgtype`, and `family` parameters must be specified together for ANSI TCAP translations. The `opcode`, `pkgtype`, and `acn` parameters must be specified together for ITU TCAP translations.

5106 E5106 Cmd Rej: OPCODE,PKGTYPE,ACN/FAMILY must be specified together

If the `family` and `opcode` parameters are specified in the command, then both parameters must have a value of *none* or neither parameter can have a value of *none*.

5148 E5148 Cmd Rej: Both FAMILY and OPCODE must be NONE if either is NONE

The GTA table is corrupt or cannot be found.

3119 E3119 Cmd Rej: Failed Reading GTT TRANS table

The GTT DBMM table is corrupt or cannot be found.

3120 E3120 Cmd Rej: Failed Reading GTT DBMM table

A value of *none* cannot be specified for the `opgttsn`, `cgttsn`, or `cdgttsn` parameter.

3565 E3565 Cmd Rej: Set name must not be specified as NONE

The GTT Action Path table cannot contain more than 10000 entries.

5185 E5185 Cmd Rej: GTT Action Path table is full

The GTT Action Path table is corrupt or cannot be found.

5186 E5186 Cmd Rej: Unable to access GTT Action Path table

The path specified cannot already exist in the GTT Action Path table.

5187 E5187 Cmd Rej: Specified Path entry already exists

The `acn` and `family` parameters cannot be specified together in the command.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The GTT Action - DISCARD, GTT Action - FORWARD, or GTT Action - DUPLICATE feature must be enabled before this command can be entered.

3451 E3451 Cmd Rej: Controlled Feature is not enabled

A translation entry corresponding to the specified (`opgttsn + opcode + pkgtype + acn/family`)/(`cgttsn + cgtta`)/(`cdgttsn + cdgta`) parameters must already exist.

4510 E4510 Cmd Rej: Translation entry does not exist

At least one GTT set-value combination must be specified.

5319 E5319 Cmd Rej: At least one set-value combination must be specified

The value specified for the `opgttsn`, `cgttsn`, or `cdgttsn` parameter must match an existing GTT setname.

3561 E3561 Cmd Rej: GTT Set specified by GTT Set Name/index does not exist

The GTT set name specified by the `opgttsn`, `cggtsn`, and `cdgttsn` parameters must have set types of `opcode`, `cggta`, and `cdgta`, respectively.

4399 E4399 Cmd Rej: Set type of GTT Set Name doesn't match

The GTT Set table must be accessible.

3544 E3544 Cmd Rej: Failed reading GTT Set Table

The GTA value specified by the `cggta` or `cdgta` parameter must be the start GTA in the translation entry.

5375 E5375 Cmd Rej: Specified CgGTA/CdGTA not a start GTA in a Translation entry

The GTT path name specified by the `gttpn` parameter must not exist in the GTT Action Path table.

5376 E5376 Cmd Rej: Specified path name already exists

The value specified for the `gttpn` parameter cannot be a reserved word.

3040 E3040 Cmd Rej: <string> cannot be used in this command

Output

```
ent-
gttspath:gttpn=path2:cggtsn=cgsn2:cggta=45673:opgttsn=opsn2:op
code=124:family=2: pkgtype=ansiuni

4.1.307 ent-gttaset

Use this command to enter a Global Title Translations (GTT) Action Set. A GTT Action Set consists of an Action Set name and a group of actions. The specified actions determine what actions that applied to the MSU during translation.

Parameters

Note:

Definitions for the feature options specified by the `on` and `off` parameters are located in the Notes section.

actsn (mandatory)

GTT Action Set Name.

Range:

ayyyyyyy

1 leading alphabetic character and up to 8 following alphanumeric characters

actid1 (optional)

GTT Action ID 1. The first action ID associated with the GTT action set.

Range:

ayyyyyyy

1 leading alphabetic character and up to 8 following alphanumeric characters

actid2 (optional)

GTT Action ID 2. The second action ID associated with the GTT action set.

Range:

ayyyyyyy

1 leading alphabetic character and up to 8 following alphanumeric characters

actid3 (optional)

GTT Action ID 3. The third action ID associated with the GTT action set.

Range:

ayyyyyyy

1 leading alphabetic character and up to 8 following alphanumeric characters

actid4 (optional)

GTT Action ID 4. The fourth action ID associated with the GTT action set.

Range:

ayyyyyyy

1 leading alphabetic character and up to 8 following alphanumeric characters

actid5 (optional)

GTT Action ID 5. The fifth action ID associated with the GTT action set.

Range:

ayyyyyyy

1 leading alphabetic character and up to 8 following alphanumeric characters

actid6 (optional)

GTT Action ID 6. The sixth action ID associated with the GTT action set.

Range:

ayyyyyyy

1 leading alphabetic character and up to 8 following alphanumeric characters

off (optional)

Disables or turns off the specified feature options. This parameter specifies a comma-separated list of feature options that are requested to be turned off. Up to 8 feature options can be specified in the list.

Range:*testmode***on (optional)**

Enables or turns on the specified feature options. This parameter specifies a comma-separated list of feature options that are requested to be turned on. Up to 8 feature options can be specified in the list.

Range:*testmode***Example**

```
ent-gttaset:actsn=asetdisc1:actid1=disc1
ent-gttaset:actsn=aset2:actid1=dup1:actid2=disc1
ent-
gttaset:actsn=aset3:actid1=actfwd:actid2=actdup1:on=testmode
ent-gttaset:actsn=aset4:actid1=dup1:actid2=actsrv
ent-gttaset:actsn=aset5:actid1=dup1:actid2=scpval1:actid3=fwd1
```

Dependencies

The GTT Action table must be accessible.

5067 E5067 Cmd Rej: Unable to access GTT Action table

The Action ID specified by the *actid1/actid2/actid3/actid4/actid5/actid6* parameter(s) must already exist in the GTT Action table.

5071 E5071 Cmd Rej: GTT Action Id does not exist

At least one Action ID in the Action Set must be associated with an action other than *none* or *fallback*.

5069 E5069 Cmd Rej: (New) GTT Action Id must not be NONE/FALLBACK

The value specified by the *actid* parameter cannot already exist in a GTT Action Set.

5234 E5234 Cmd Rej: GTT Action Id already provisioned in GTT Action Set

The GTT Action Set table cannot contain more than 20000 entries

5200 E5200 Cmd Rej: GTT Action Set table is full

Failure while reading the GTT Action Set table.

5197 E5197 Cmd Rej: Unable to access GTT Action Set table

The `actsn=none` parameter cannot be specified.

5113 E5113 Cmd Rej: (New) GTT Action Set name must not be none.

Only one Action ID in an Action Set can be associated with an action of *disc*, *udts*, *svvc*, *sflog*, *sfthrot*, or *tcaperr*.

If an Action ID associated with an action of *fwd* is specified, then no other Action ID in the Action Set can be associated with an action of *disc*, *udts*, *tcaperr*, *svvc*, or *fwd*.

If an Action ID associated with an action of *svvc* is specified, then no other Action ID in the same Action Set can be associated with an action of *fwd*, *disc*, *udts*, *tcaperr*, or *svvc*.

If the Action Set contains 5 Action IDs associated with an action of *dup*, then the remaining action ID cannot be associated with an action of *dup*.

Action IDs associated with an action of *disc*, *udts*, *tcaperr*, or *fwd* must be the last actions in an Action Set.

Action IDs associated with an action of *sfthrot* must be the first action in an Action Set.

If the Action Set contains 2 Action IDs associated with an action of *scpval*, then the remaining Action ID cannot be associated with an action of *scpval*.

5172 E5172 Cmd Rej: Invalid action type

One of the optional parameters must be specified.

2136 E2136 Cmd Rej: At least one optional parameter is required

The `actid1/actid2/actid3/actid4/actid5/actid6` parameters must each specify a unique GTT Action ID in the command.

5236 E5236 Cmd Rej: GTT Action Ids should be unique in a GTT Action Set

The EGTT feature must be on before this command can be entered.

3557 E3557 Cmd Rej: EGTT must be ON

The same values cannot be specified for the `on` and `off` parameters.

4732 E4732 Cmd Rej: Same option in ON & OFF params cannot be specified

A maximum of 2 SCPVAL GTT Actions are allowed in an Action Set. Both Action Sets should have a different combination of SPRM and TPRM.

3498 E3498 Cmd Rej: SPRM & TPRM combination must be unique in a GTTAct Set

Notes

- [chg-gttaset](#)
- [dlt-gttaset](#)
- [rtrv-gttaset](#)

4.1.308 ent-gttset

Use this command to assign applicable global title selectors to a GTT set for enhanced global title translations. If the EGTT feature is turned on, then the GTT Selector ([ent/chg/dlt/rtrv-gttset](#)), GTT Set ([ent/dlt/rtrv-gttset](#)), and GTA ([ent/chg/dlt/rtrv-gta](#)) commands replace the Translation Type ([ent/dlt/rtrv-tt](#)) and Global Title Translation ([ent/chg/dlt/rtrv-gtt](#)) commands. However, the Translation Type and Global Title Translation commands continue to work according to their original functionality when the EGTT feature is on.

Parameters

Note:

The nature of address indicator parameters ([naiv](#) or [nai](#)) and the numbering plan parameters ([npv](#) or [np](#)) can be specified using a mnemonic or an explicit value. Either the mnemonic or the explicit value can be specified: however, both values cannot be specified at the same time for the same parameter. [NAIV/NAI Mapping](#) shows the mapping between the [naiv](#) and [nai](#) values. [NPV/NP Mapping](#) shows the mapping between the [npv](#) and [np](#) values.

gti/gtia/gtii/gtin/gtin24/gtiis/gtins/gtin16 (mandatory)

Global title indicator.

For all EGTT selector commands, the domain is defined as GTI and GTIA (ANSI), GTII (ITU international), GTIN (ITU national), GTIN24 (24-bit ITU national), GTIIS (ITU international spare), GTINS (ITU national spare) and GTIN16 (16-bit ITU National). For the selector commands, [gti](#) and [gtia](#) are equivalent. GTT selectors can be provisioned for the same translation type (TT) with different ITU domains. GTT selectors are provisioned independently for each domain. For example, if an entry with [gtii=2](#) and [tt=4](#) already exists, an entry with [gtin=2](#) and [tt=4](#) can be specified.

Range:

0, 2, 4

Supported values for ANSI: gti=0, 2 and gtia=0, 2

Supported values for ITU: gtii/gtin/gtin24/gtiis/gtins/gtin16=0, 2, 4

cdgtasn (optional)

CdPA GTA GTT set name.

Range:

ayyyyyyy

1 leading alphabetic and up to 8 following alphanumeric characters

cdgttsn (optional)

CdPA GTT set name.

Range:

ayyyyyyy

1 leading alphabetic and up to 8 following alphanumeric characters

cggtasn (optional)

CgPA GTA GTT set name.

Range:

ayyyyyyy

1 leading alphabetic and up to 8 following alphanumeric characters

cggttsn (optional)

CgPA GTT set name.

Range:

ayyyyyyy

1 leading alphabetic and up to 8 following alphanumeric characters

cgpcsn (optional)

CgPA PC GTT set name.

Range:

ayyyyyyy

1 leading alphabetic and up to 8 following alphanumeric characters

cgssn (optional)

CgPA subsystem number.

Range: 0 - 255**eaglegen (optional)**

This parameter specifies whether the selector is used by EAGLE generated messages.

Range:**yes**

Indicates selector used only by Eagle generated MSU.

gttsn (optional)

GTT set name. A GTT set is an entity to which global title addresses and selectors are assigned.

Range:

ayyyyyyy

1 leading alphabetic and up to 8 following alphanumeric characters

lsn (optional)

Linkset name.

Range:

ayyyyyyy

1 alphabetic character followed by up to 9 alphanumeric characters

msgtype (optional)

SCCP message type.

Allow one or more SCCP message types (UDT/UDTS/XUDT/XUDTS) for every GTT Selector entry. This will help in screening different message types differently.

Range:

sub

u

us

x

xs

all

Default

all

nai (optional)

Nature of address indicator.

Range:

sub

rsvd

natl

intl

naiv (optional)

Nature of address indicator value.

Range:

0 - 127

np (optional)

Numbering plan.

Range:**e164****generic****x121****f69****e210****e212****e214****private****npv (optional)**

Numbering plan value.

Range:

0 - 15

selid (optional)

Selector ID.

Range:

0 - 65534

tt (optional)

Translation type.

Range:

0 - 255

Dependencies

The EGTT feature must be turned on before this command can be entered.

3557 E3557 Cmd Rej: EGTT must be ON

The `np` and `npv` parameters cannot be specified in the same command.

3551 E3551 Cmd Rej: NP and NPV must not be specified together

The `nai` and `naiv` parameters cannot be specified in the same command.

3552 E3552 Cmd Rej: NAI and NAIV must not be specified together

The `gti`, `gtia=4`, `gti(x)=1`, and `gti(x)=3` parameters cannot be specified.

3553 E3553 Cmd Rej: GTI(A)=4, and GTI(x)=1 and 3 are not supported

If the `gti/gtia/gtii/gtin/gtin24/gtiis/gtins/gtin16=2` parameter is specified, then the `np/npv` and `nai/naiv` parameters cannot be specified.

3554 E3554 Cmd Rej: NP(V) and NAI(V) must not be specified for given GTI value

If the `gtii/gtin/gtin24/gtiis/gtins/gtin16=4` parameter is specified, the `np(v)` and `nai(v)` parameters must be specified. These parameters can be specified in any combination: `np/naiv`, `npv/nai`, `np/nai`, or `npv/naiv`.

3555 E3555 Cmd Rej: NP(V) and NAI(V) must be specified for given GTI value

A value of *none* cannot be specified for the `gttsn`, `cdgtasn`, `cggtasn`, `cgpcsn`, `cdgttsn`, and `cggttsn` parameters.

3565 E3565 Cmd Rej: Set name must not be specified as NONE

The GTT Selector table must be accessible.

3543 E3543 Cmd Rej: Failed reading GTT Selector Table

The GTT Set table must be accessible.

3544 E3544 Cmd Rej: Failed reading GTT Set Table

At least one GTT set name parameter must be specified. These parameters include:

- `cdgtasn`, `cggtasn`, or `cgpcsn` if the OBSR feature is enabled
- `cdgttsn` or `cggttsn` if the FLOBR feature is turned on
- `gttsn` if the OBSR feature is not enabled and the FLOBR feature is not turned on

4397 E4397 Cmd Rej: At least one GTT Set Name must be specified

The OBSR feature must be enabled before the `cggtasn`, `cgpcsn`, `cgssn`, or `cdgtasn` parameters can be specified.

4393 E4393 Cmd Rej: Origin Based SCCP Routing feature must be enabled

The SSNSELID Table cannot contain more than 100,000 entries.

4414 E4414 Cmd Rej: SSNSELID Table is full

The SSNSELID table must be accessible.

4469 E4469 Cmd Rej: Failed reading SSNSELID table

The linkset specified by the `lsn` parameter must already exist.

2346 E2346 Cmd Rej: Linkset not defined

The Linkset table is corrupt or cannot be found.

2122 E2122 Cmd Rej: Failed reading linkset table

The FLOBR feature must be turned on before the `lsn`, `eagleleg`, `cdgttsn`, and `cggttsn` parameters can be specified.

5060 E5060 Cmd Rej: Flexible Linkset Optional Based Routing must be ON

If the FLOBR feature is turned on, then the `cdgtasn`, `cggtasn`, and `cgpcsn` parameters cannot be specified.

5064 E5064 Cmd Rej: CDGTASN/CGGTASN/CGPCSN are not valid when FLOBR ON

The value specified for the `cdgtasn` or `gttsn` parameter must match the name of an existing GTT set.

4511 E4511 Cmd Rej: CdPA GTT Set does not exist

The GTT set specified by the `cdgtasn` or `gttsn` parameter must have a set type of `cdgta` (see the `ent-gttset` command).

4519 E4519 Cmd Rej: CdPA GTT Set type must be `cdgta`

An entry cannot already exist that matches the `eagleleg`, `gti`, `tt`, and `np(v)`, and `nai(v)` parameter combination for the specified CdPA and/or CgPA selector. If a GTT Selector entry is already provisioned for the given `gti`, `tt`, `np(v)` and `nai(v)` combination with `msgtype=all`, another entry for the same combination but different `msgtype` (`u/us/x/xs`) is not allowed.

5121 E5121 Cmd Rej: CdPA/CgPA GTT Selector already exists

The GTT set specified by the `gttsn`, `cdgtasn`, or `cdgttsn` parameter must already exist in the GTT Set table.

4511 E4511 Cmd Rej: CdPA GTT Set does not exist

The network domain of the specified GTT selector must match the domain of the GTT set that is specified by the `gttsn`, `cdgtasn`, or `cdgttsn` parameter, unless the domain of the GTT set has a value of `cross`.

3562 E3562 Cmd Rej: Network domains of GTI and CdPA GTT Set must match

The GTT set specified by the `cggttsn`, `cggtasn` or `cgpcsn` parameter must already exist in the GTT Set table.

4486 E4486 Cmd Rej: CgPA GTT Set does not exist

The network domain of the GTT set that is specified by the `cggttsn`, `cggtasn`, or `cgpcsn` parameter must match the domain specified by the `gti(x)` parameter.

4487 E4487 Cmd Rej: Network domains of GTI and CgPA GTT Set must match

The set type of the GTT set specified by the `cggtasn` or `cgpcsn` parameter must match the set type of the corresponding entry in the GTT Set table.

4488 E4488 Cmd Rej: CGGTASN/CGPCSN set type doesn't match

The GTT Set specified by the `cdgtasn` or `gttsn` parameter must have a set type of `cdgta` (see the `ent-gttset` command).

4519 E4519 Cmd Rej: CdPA GTT Set type must be `cdgta`

The `gttsn` parameter cannot be specified if the OBSR feature is enabled or the FLOBR feature is turned on.

2083 E2083 Cmd Rej: GTTSN parameter mustn't be specified

The GTTDBMM Table cannot contain more than 42,502 entries.

3686 E3686 Cmd Rej: GTT DBMM table is full

The GTTDBMM table is corrupt or cannot be found.

3120 E3120 Cmd Rej: Failed Reading GTT DBMM table

A database error occurred while trying to access the SSNSELID table.

2601 E2601 Cmd Rej: Command aborted due to system error

If the `gti(x)=4` parameter is specified, then the GTT selector table cannot have more than 5 `nai` entries per `tt/np` combination.

3563 E3563 Cmd Rej: NAI entries per TT-NP combination has reached allowed max

The `cggtasn`, `cgpcsn`, and `cggttsn` parameters cannot be specified together in the command.

5128 E5128 Cmd Rej: CGGTASN, CGPCSN and CGGTTSN are mutually exclusive

The `gttsn`, `cdgtasn`, and `cdgttsn` parameters cannot be specified together in the command.

5129 E5129 Cmd Rej: GTTSN, CDGTASN and CDGTTSN are mutually exclusive

If the `gttsn`, `cdgttsn`, or `cdgtasn` parameter is specified, then the `cgssn` parameter cannot be specified. If the `cggtasn`, `cgpcsn` or `cggttsn` parameter is specified, then the `cgssn` parameter must be specified.

5130 E5130 Cmd Rej: CGSSN must not be specified with GTTSN, CDGTTSN or CDGTASN

If the `cdgttsn` or `cggtsn` parameter is specified, then the `lsn` parameter must be specified.

5062 E5062 Cmd Rej: CDGTTSN and/or CGGTTSN must be specified with LSN

If the `eaglegen=yes` parameter is specified, then the `msgtype`, `lsn`, `selid`, `gttsn`, `cdgtasn`, `cgssn`, `cggtsn`, `cggtasn`, and `cgpcsn` parameters cannot be specified.

5061 E5061 Cmd Rej: Cannot use `msgtype/lsn/selid/gttsn/cg*` field if `eaglegen=yes`

If the `gti(x)=0` parameter is specified, then the `eaglegen`, `tt`, `np/npv`, and `nai/naiv` parameters cannot be specified.

3507 E3507 Cmd Rej: EAGLEGEN,TT,NP(V),NAI(V) parameters mustn't be specified

If a value of 2 or 4 is specified for the `gti(x)` parameter, then the `tt` parameter must be specified.

4367 E4367 Cmd Rej: TT parameter must be specified

For existing TTs with `gtii/gtin/gtin24/gtiis/gtins/gtin16=4`, the domain of the new entry must match the existing domain.

3121 E3121 Cmd Rej: Domain indicated by GTIx must match that of existing TT

The MBR supported GTT set types (IMEI/IMSI/MSISDN/VLRNB/SMRPDA/SMRPOA) cannot be referenced by GTT selectors.

3508 E3508 Cmd Rej: MBR settypes cannot be referenced by GTT selectors

SSN configured for SFAPP cannot be used in any command for any configuration

3558 E3558 Cmd Rej: SFAPP SSN can not be used

Notes

For `gtii/gtin=4`, DFLT may appear in the `rtrv-gttset` output, but `dflt` cannot be specified as value for the `np` or `nai` parameters when the `ent-gttset` command is entered. If a new GTT selector is specified that matches an existing GTT selector's GTI and TT and the existing selector has `dflt` as the value for the `np` and/or `nai` parameters, a new entry is created with the new `np` and `nai` parameter values. The existing GTT selector entry with the `dflt` value is also retained. The `np/nai` parameter value `dflt` can be specified for the `chg/dlt/rtrv-gttset` commands.

The Origin-based SCCP Routing feature allows two GTT sets to be assigned to a GTT selector: CDGTASN and CGGTASN or CDGTASN and CGPCSN. The CGGTASN and CGPCSN GTT sets are mutually exclusive and cannot be assigned to the same GTT selector.

There is no J7 FAK dependency on the GTIA/GTIN16/GTIN24 parameters. The command can be entered successfully whether the J7 FAK is enabled or not enabled.

GTT Selector entries configured using the GTIN24/GTIN16 parameters shall be treated as ITU-N24 entries if the J7 FAK is disabled and shall be treated as ITU-N16 entries if the J7 FAK is enabled.

In the `msgtype` parameter, the parameter values correspond to SCCP message types as given in the following list:

- 'u' implies SCCP UDT message
- 'us' implies SCCP UDTS message
- 'x' implies SCCP XUDT message
- 'xs' implies to SCCP XUUDTS messages, and
- 'all' implies all SCCP messages

Using this parameter, a GTT Selector entry can be made to select one or more types of messages. For similar `gti(x)`, `tt`, `np` and `nai` values but different `msgtype` values, different selector entries will be made.

The user cannot enter a selector with an existing message type again. For example, if the user is trying to add a selector with message type as "`xs, u`" and an existing message type is "`xs, x`", it cannot be added because the selector with message type "`xs`" already exists and the message type is a part of a key to the GTT Selector table and cannot be changed.

To enter a selector with message type `xs, u` either delete the existing `xs, x` entry and enter a selector again with "`xs, x, u`" as the message type, or add an another entry with the message type as "`u`". Please refer the output for example.

4.1.309 ent-gttset

Use this command to specify the attributes of a new GTT set (a set of global title translations). A GTT set consists of a GTT set name, the number of digits allocated for

the GTA (global title address), the domain of the point codes used in the translation, and a pointer to a GTA tree. After the GTT set is provisioned, you can enter subsequent GTT Selector commands and GTA commands.

Parameters

gttsn (mandatory)

GTT set name. A GTT set is an entity to which global title addresses and selectors are assigned.

Range:

ayyyyyyy

1 leading alphabetic character and up to 8 following alphanumeric characters

netdom (mandatory)

Network domain. This command does not distinguish between ITU national or ITU international because the Enhanced Global Title Translation (EGTT) feature does not discriminate between the ITU-I and ITU-N translations.

This parameter refers to the incoming message network domain.

Range:

ansi

itu

cross

checkmulcomp (optional)

This option indicates whether or not to find translation for multiple components (up to 3 components, if present) of a TCAP message.

Range:

on

Perform lookup for translation for multiple components.

off

Perform lookup for translation for first component only.

Default:

No change to the current value

gttsetmeasrqd (optional)

GTTSET Measurement required. This parameter specifies whether to perform per GTTSET measurements.

Range:

yes

perform per GTTSET Measurements

no

do not perform per GTTSET Measurements

pertrans

perform per GTT Translation Measurements

Default:

No change to the current value

***ndgt* (optional)**

Number of digits. This parameter specifies the number of digits required for GTAs associated with the GTT set.

Range:

1 - 21

Default:

6

***npsn* (optional)**

GTT set name (Not Present Set Name). This parameter can have IMEI/IMSI/MSISDN/VLRNB/SMRPOA/SMRPDA GTT set types.

Range:

ayyyyyyy

1 leading alphabetic character and up to 8 following alphanumeric characters

***settype* (optional)**

GTT set type.

Range:

cdgta

cdssn

cggtta

cgpc

cgssn

dpc

imei

imsi

msisdn

opc

opcode

smrpda

smrpoa

vlrnb

sxudt (optional)

Segmented XUDT. This parameter specifies whether TOBR will support the processing of segmented XUDT message.

Range:**yes**

perform decoding of segmented XUDT message

no

do not perform decoding of segmented XUDT message

Default:

no

Example

```
ent-gttset:gttsn=lidb:ndgt=10:netdom=ansient-
gttset:gttsn=t800:netdom=ansi

ent-gttset:gttsn=setint000:netdom=itu:ndgt=15

ent-gttset:gttsn=setcdgt:netdom=cross:ndgt=10:settype=cdgta
ent-gttset:gttsn=setcggg:netdom=ansi:ndgt=11:settype=cggta
ent-gttset:gttsn=setxyz:netdom=ansi:ndgt=11:settype=cggta
ent-gttset:gttsn=setopc:netdom=itu:settype=opc
ent-gttset:gttsn=setcggc:netdom=ansi:settype=cggc
ent-gttset:gttsn=setssn:netdom=ansi:settype=cgssn
ent-gttset:gttsn=setopcode:settype=opcode
ent-gttset:gttsn=setcdssn:netdom=ansi:settype=cdssn
ent-gttset:gttsn=setdpc:netdom=ansi:settype=dpc
ent-gttset:gttsn=imsil:settype=imsi:netdom=itu
ent-gttset:gttsn=msisdnl:settype=msisdn:npsn=imsil:netdom=itu
ent-gttset:gttsn=setopcode:settype=opcode:netdom=itu:checkmulcomp=on
ent-gttset:gttsn=imei1:settype=imei:netdom=itu

ent-
gttset:gttsn=imsil:settype=imsi:netdom=itu:gttsetmeasrqd=pertrans
ent-gttset:gttsn=op1:settype=opcode:netdom=itu:sxudt=yes
```

Dependencies

The EGTT feature must be turned on before this command can be entered.

3557 E3557 Cmd Rej: EGTT must be ON

The GTT Set table cannot contain more than 2000 entries.

3564 E3564 Cmd Rej: GTT Set table is full

The `gttsn=none` parameter cannot be specified.

3565 E3565 Cmd Rej: Set name must not be specified as NONE

If the VGTT (Variable Length GTT) feature is turned on, the `ndgt` parameter cannot be specified.

4011 E4011 Cmd Rej: NDGT Parameter is invalid for VGTT

The `gttsn` parameter must be specified and must not match an existing `gttsn`.

3560 E3560 Cmd Rej: (n)GTT Set specified by GTTSN already exists

The GTT Set table must be accessible.

3544 E3544 Cmd Rej: Failed reading GTT Set Table

The GTT DBMM table must be accessible.

3120 E3120 Cmd Rej: Failed Reading GTT DBMM table

If the `settype` parameter has a value of `cgssn`, `opc`, `cgpc`, `cdssn`, `opcode`, or `dpc`, then the `ndgt` parameter cannot be specified.

4535 E4535 Cmd Rej: NDGT parameter mustn't be specified

The `netdom=cross` parameter can be specified if the `settype=cdgta/imei/imsi/msisdn/vlrnb/smrpoa/smrpda` parameter is specified.

4402 E4402 Cmd Rej: SETTYPE must be CDGTA/MBR Type when NETDOM=CROSS

The Origin-based SCCP Routing feature must be turned on if the value of the `settype` parameter is `cggta`, `cgssn`, `opc`, or `cgpc`.

4393 E4393 Cmd Rej: Origin Based SCCP Routing feature must be enabled

If the OBSR feature is enabled or the FLOBR feature is turned on, then the `settype` parameter must be specified.

4536 E4536 Cmd Rej: settype parameter must be specified

The ANSI/ITU SCCP Conversion feature must be enabled before the `netdom=cross` parameter can be specified.

4171 E4171 Cmd Rej: SCCP Conversion feature must be enabled

The TOBR feature must be turned on before the `settype=opcode/imei/imsi/msisdn/vlrnb/smrpoa/smrpda` parameter can be specified.

5099 E5099 Cmd Rej: TCAP Opcode Based Routing feature must be turned ON

The OBSR feature must be enabled or the FLOBR feature must be turned on before the `settype` parameter can be specified and before more than 950 GTT set entries can be provisioned.

5063 E5063 Cmd Rej: OBSR must be enabled or FLOBR must be ON

The FLOBR feature must be turned on before a value of `cdssn` or `dpc` can be specified for the `settype` parameter.

5060 E5060 Cmd Rej: Flexible Linkset Optional Based Routing must be ON

The `NPSN` parameter must be specified with the `IMEI/IMSI/MSISDN/VLRNB/SMRPOA/SMRPDA` GTT set types.

`NPSN` must be of MBR set type only.

3284 E3284 Cmd Rej: `NPSN` Param only supports MBR SETTYPES

The GTT set type of the GTT set entry referred to by the `NPSN` parameter should be different from the GTT set type referred to by the `GTTSN` parameter.

3401 E3401 Cmd Rej: `NPSN` SETTYPE should be different from GTT SETTYPE.

The value specified for the `NPSN` parameter must match the name of an existing GTT set of `IMEI/IMSI/MSISDN/VLRNB/SMRPOA/SMRPDA` set types.

3400 E3400 Cmd Rej: `NPSN` not configured under GTTSET

The GTTSET domain and associated `NPSN` set domain must match when the SCCP conversion feature is not ON.

3274 E3274 Cmd Rej: GTTSET and `NPSN` set domain mismatch

`CHECKMULCOMP` parameter can be specified with `OPCODE` GTT set types only.

E3522 Cmd Rej: `CHECKMULCOMP/PRIO` can be specified with `OPCODE` SETTYPES only

The `SXUDT` parameter must be specified with the `OPCODE` GTT set type only.

3458 E3458 Cmd Rej: `DEFMAPVR/SXUDT` can be specified with `OPCODE` SETTYPES only.

Notes

When the Origin-based SCCP Routing feature is turned on, VGTT is supported only for CdPA GTA and CgPA GTA. The cross network domain is supported for CdPA GTA and `IMEI/IMSI/MSISDN/VLRNB/SMRPOA/SMRPDA` GTT set type entries.

4.1.310 ent-gws-redirect

Use this command to provision the gateway screening redirect function. The Redirect table must be provisioned before configuring gateway screening to redirect received MSUs. The values that are specified with this command are stored in the Redirect table, and they are used to set the variable fields of the MSUs being redirected. For example, if the `ri=gt` parameter is specified, the value `gt` is set for the routing indicator in the called party address (CDPA) of the MSU being redirected.

Parameters

Note:

See [Point Code Formats and Conversion](#) for a detailed description of point code formats, rules for specification, and examples.

dpc (mandatory)

Specifies the value used to set the ANSI destination point code field in the routing label of the MSU that is being redirected. The ANSI point code has subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.

Synonym:

dpca

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001-005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006-255*.

The point code *000-000-000* is not a valid point code.

dpc/dpca/dpci/dpcn/dpcn24/dpcn16 (mandatory)

Destination point code.

dpci (mandatory)

Specifies the value used to set the ITU international destination point code field in the routing label of the MSU that is being redirected. The point code has subfields *zone-area-id*.

Range:

0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

zone—0-7

area—000-255

id—0-7

The point code *0-000-0* is not a valid point code.

dpcn (mandatory)

Specifies the value used to set the ITU national destination point code field in the routing label of the MSU that is being redirected. The point code is in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) when the *chg-stpopts:npcfmti* flexible point code option is on. A group code (*gc*) must be specified when the ITUDUPPC feature is on (*nnnnn-gc, m1-m2-m3-m4-gc*).

Range:

0-16383, aa-zz

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

nnnnn—0-16383

gc—aa-zz

m1-m2-m3-m4—0-14 for each member; values must sum to 14

dpcn24 (mandatory)

Specifies the value used to set the 24-bit ITU national destination point code field in the routing label of the MSU that is being redirected. The point code has subfields *main signaling area-sub signaling area-signaling point (msa-ssa-sp)*.

Range:*000-255*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*msa—000—255**ssa—000—255**sp—000—255***dpcn16 (mandatory)**

Specifies the value used to set the 16-bit ITU national destination point code field in the routing label of the MSU that is being redirected. The point code has subfields *unit number-sub number area-main number area (un-sna-mna)*.

Range:*000---127*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*un---000---127**sna---000---15**mna---000---31***gta (mandatory)**

Specifies the value used to set the global title address (dialed digits) in the SCCP called party address of the MSU being redirected.

Range:*1 - 21 digits***ri (mandatory)**

Specifies the value used to set the routing indicator in the SCCP called party address of the MSU being redirected. Use the *gt* value to route by global title digits or use the *ssn* value to route by subsystem number.

Range:*gt**ssn***ssn (mandatory)**

Specifies the value used to set the subsystem number (SSN) in the SCCP called party address of the MSU being redirected. This number is the SSN of the SCP to which all MSUs meeting the redirect criteria are to be redirected.

Range:*000 - 255***tt (mandatory)**

Identifies the type of the global title translation (GTT). This value is the decimal representation of the 1-byte field used in SS7 and is used to set the type of the GTT in the SCCP called party address of the MSU being redirected.

Range: *000 - 255*

enabled (optional)

Specifies whether MSUs that have passed gateway screening are to be redirected (*enabled=on*) or routed as normal (*enabled=off*).

Range:

on

off

Default:

on

Example

```
ent-gws-redirect:dpc=1-40-1:ri=gt:ssn=10:tt=1:gta=180833:enabled=on
```

```
ent-gws-  
redirect:dpc=1-40-1:ri=ssn:ssn=10:tt=1:gta=1800833:enabled=off
```

```
ent-gws-redirect:dpcn16=1-14-0:ri=gt:ssn=10:tt=10:gta=1:enabled=on
```

Dependencies

The `dpc/dpca/dpci/dpcn/dpcn24/dpcn16` parameter must be defined in the Destination table or defined as the STP site point code.

2657 E2657 Cmd Rej: Point code not defined

If the `dpc/dpca/dpci/dpcn/dpcn24/dpcn16` parameter is defined as a destination, it must have at least one route defined.

2642 E2642 Cmd Rej: DPC must have at least one route defined

The redirect function data can be entered only once.

2640 E2640 Cmd Rej: Redirect function data has already been entered

Notes

The SCCP screening functions (CGPA, TT, CDPA, and AFTPC) cannot select an MSU to be redirected.

Do not apply a Redirect Stop Action on the Adjacent Node point code for the BLKOPC and OPC screening functions.

Do not apply a Redirect Stop Action for an allowed DPC screen rule if the rule contains the self-identity point code of the EAGLE where the screening rule is applied. This is because the redirection of SLTAs and SLTMs (Signal Link Test Messages and Acknowledgements) will not return to the originating EAGLE and will cause the link to fail.

If `gwsa=off` and `gws=off` are specified for all linksets, gateway screening and the GWS redirect function for the DTA feature are disabled.

Output

```
ent-gws-redirect:dpc=1-40-1:ri=gt:ssn=10:tt=1:gta=180833:enabled=on
```

```

4.1.311 ent-home-smsc

Use this command to enter HOME SMSC specific addresses, currently used to identify Short Message Service Centers in the database. This command updates the HOME SMSCADDR table.

Parameters

smsc (mandatory)

Identifies the type of the Short Message Service Center address.

Range:

1-21 hexadecimal digits. Valid digits are 0-9, a-f, A-F .

Example

```
ent-home-smsc:smsc=256489
```

```
ent-home-smsc:smsc=256489a98bccee56ad237
```

Dependencies

The Portability Check for Mobile Originated SMS (MNPSMS) feature must be turned on or one of the following features must be enabled before this command can be entered.

- MO SMS IS41-to-GSM Migration
- MO-based GSM SMS NP
- MO-based IS41 SMS NP
- MT-Based GSM SMS NP
- MT-Based IS41 SMS NP

4702 E4702 Cmd Rej: MNP SMS must be ON or MO/MT SMS feature must be enabled

The specified HOME SMSC address cannot already exist in the HOME SMSCADDR table.

3477 E3477 Cmd Rej: HOME SMSC Address already exists

The HOME SMSCADDR table can contain a maximum of 500 entries.

3478 E3478 Cmd Rej: HOME SMSC Table is Full

The HOME SMSCADDR table must be accessible.

3475 E3475 Cmd Rej: Failure reading HOME SMSC Address entries

The GSM DBMM table must be accessible.

3546 E3546 Cmd Rej: Failed reading GSM DBMM Table

Notes

None

Output

```
ent-home-smsc:smsc=256489
```

```

4.1.312 ent-homern

Use this command to enter up to 100 routing number prefixes for the operating network into the HOMERN table.

Parameters

rn (mandatory)

The home routing number prefix.

Range:

1-15 hexadecimal digits. Valid digits are *0-9, a-f, A-F* .

Example

```
ent-homern:rn=C441234
```

Dependencies

The HOMERN table cannot be full.

3925 E3925 Cmd Rej: HOMERN table is full

The routing number must not already exist in the HOMERN table.

3930 E3930 Cmd Rej: RN already exists in HOMERN table

The `rn=none` parameter cannot be specified.

3502 E3502 Cmd Rej: The NONE value is not allowed in this case

The A-Port, AINPQ, G-Port, INP, or V-Flex feature must be turned on before this command can be entered.

Range:
1024 - 65535

**Note:**

For EEDB connection using IPS card, port 17529 should be used

Example

```
ent-ip-conn:prot=tcp:lhost=lss1:lport=2019:cname=connection1
```

```
ent-ip-conn:prot=udp:lhost=enumhost:lport=2014:cname=enumudp
```

Dependencies

SIPNP Feature must be enabled before entering any SIP connection information.

At least one ENUM card must be provisioned before entering any ENUM connection information.

At least one IPS card with SFLOG=yes must be provisioned before entering any TCP connection information on IPS.

At least one SCCP/SFAPP card must be provisioned before entering any Visualization connection information.

3179 E3179 Cmd Rej: SIPNP Feat not enabled or required card not provisioned

IPCONN table should be accessible.

2668 E2668 Cmd Rej: Failure accessing IPCONN table

A unique CNAME must be specified for a new connection.

2588 E2588 Cmd Rej: Connection Name already exists

The value specified for the HOST parameter must begin with an alphabetic character and can contain a..z, A..Z, 0..9, - (hyphen), or . (period).

3731 E3731 Cmd Rej: Invalid Hostname

New connections cannot be made if the Number of CNAMES or TCP/UDP connections have reached the maximum limit.

2589 E2589 Cmd Rej: Maximum number of Connections provisioned

Duplicate LHOST, RHOST, LPORT and RPORT entry combination is not allowed.

2674 E2674 Cmd Rej: Connection parameters must be unique

Connections can only be made with a LHOST that is configured on a SIP card.

2684 E2684 Cmd Rej: Specified LHOST is not valid for Card and Appl Type

Remote IP address (RHOST) must not exist in the IPLINK table.

2685 E2685 Cmd Rej: Remote IP address exists in the IPLINK table

The TCP protocol is not supported for ENUMHC; only the UDP protocol is supported.

3180 E3180 Cmd Rej: TCP protocol is not supported for ENUM card

Only one UDP can be provision per interface (lhost).

E3528 Cmd Rej: Only one UDP can provision per lhost

The UDP protocol is not supported for SCCP/SFAPP/IPS card with SFLOG; only the TCP protocol is supported.

E4741 Cmd Rej: UDP connection not supported on card

Visualization connection supports on Port c on SCCP and SFAPP card.

3180 E3180 Cmd Rej: IPCONN supports on Port c on SCCP and SFAPP card

Valid LPORT values are from range 1024 to 65535. ENUM application support one extra LPORT value that is 53.

3702 Cmd Rej: LPORT must be in range 1024-65535 or 53 (only for ENUM)

Notes

The `ent-ip-host` command should be used to define local host names and remote host names for IP addresses. This is an existing command and will be used to configure the local host and remote host for an IP address prior to adding any SIP connection.

Maximum of 16 connections can be provisioned against a local host.

If the host name contains a hyphen, then the host name must be enclosed within quotation marks.

LPORT=53 must be allowed only for ENUM application. LPORT 54 to 1023 must not be supported for any of the application and the command should be rejected with MTT number 3702.

For LPORT value below 53 and above 65535, command should be rejected with MTT number 2017.

Output

```
ent-ip-conn:prot=tcp:lhost=lss1:lport=2020:rhost=rss1:rport=2020:cname=connection5
```

```
tekelecstp 12-06-25 15:04:28 EST EAGLE 45.0.0

4.1.315 ent-ip-node

Use this command to define the IP address of a node.

Parameters

cap (mandatory)

The maximum percentage of Ethernet capacity for the node connection. This capacity is added to other connections to this node for the total capacity of the node.

Note:

The value specified for this parameter can be used to calculate throughput for E5-ENET-B cards. Refer to the *Notes* section for more information.

Range:

1 - 100

ipaddr (mandatory)

The node's IP address. This is a TCP/IP address expressed in standard dot notation. IP addresses consist of the system's network number and the machine's unique host number. An example IP address is *192.126.100.5*, where *192.126.100* is the network number and *5* is the machine's host number.

Range:

4 numbers separated by dots
1-233-first number
0-255-the other three numbers

ipapp1 (mandatory)

The IP application supported by the node.

Range:

ipport (mandatory)

The logical IP port that addresses the application on the node.

Range:

1024 - 5000

loc (mandatory)

The card location as stenciled on the shelf of the system that contains the TCP/IP link that will be directly connected to the node.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118

iprte (optional)

The default router IP address. This is a TCP/IP address expressed in standard dot notation. IP addresses consist of the system's network number and the machine's unique host number. An example IP address is 192.126.100.5, where 192.126.100 is the network number and 5 is the machine's host number.

Range:

4 numbers separated by dots
1-233-first number
0-255-the other three numbers

Example**Dependencies**

The shelf and card must be equipped.

2101 E2101 Cmd Rej: Card location is unequipped

The node IP address cannot be 127.x.x.x, where x is a number from 1 to 254.

N/A N/A

The specified card location must be equipped with a TCP/IP data link.

2604 E2604 Cmd Rej: Card location not assigned a TCP/IP link

The IP address must be unique to the TCP/IP link table and to the TCP/IP nodes.

2610 E2610 Cmd Rej: IPADDR assigned to a TCP/IP link

Only one node can be connected for each data link and each application. The IP address, IP application, and card location combination must be unique in the database.

N/A N/A

The IP port on each node cannot already be assigned to another application.

2612 E2612 Cmd Rej: IPPORT already assigned

The class of the IP address (`ipaddr`) must match the class of the assigned TCP/IP data link's IP address. The system supports three classes of IP addresses, Class A, Class B, and

Class C. Class A IP addresses can contain only the values 1 - 126 in the first field of the IP address. Class B IP addresses can contain only the values 128 - 191 in the first field of the IP address. Class C IP addresses can contain only the values 192 - 223 in the first field of the IP address.

2614 E2614 Cmd Rej: IPADDR w/o IPRTE must match first octet of TCP/IP link

The network portion of the IP address (`ipaddr`) must match the network portion of the IP address assigned to the TCP/IP data link. The network portion of the IP address is based on the class of the IP address. If the IP address is a Class A IP address, the first field is the network portion of the IP address. If the IP address is a Class B IP address, the first two fields are the network portion of the IP address. If the IP address is a Class C IP address, the first three fields are the network portion of the IP address.

2616 E2616 Cmd Rej: IPADDR w/o IPRTE must match first 3 octets of TCP/IP link

If the network portion and class of the IP address of the TCP/IP node matches the class of the assigned TCP/IP data link's IP address, the `iprte` parameter cannot be specified. The `iprte` parameter can be specified only with the `ent-ip-node` command when the network portion and class of the TCP/IP node does not match the class of the assigned TCP/IP data link's IP address. The values of the `ipaddr` parameter, the IP address of the TCP/IP node, and the `iprte` parameter cannot be the same.

2615 E2615 Cmd Rej: IPADDR w/o IPRTE must match first 2 octets of TCP/IP link

The capacity of all connections to the given node cannot be greater than 100%.

2611 E2611 Cmd Rej: Total Ethernet Capacity is greater than 100%% for IP Node

The router's IP address must not be assigned to a local TCP/IP data link.

2632 E2632 Cmd Rej: IPRTE address assigned to TCP/IP link

The router's IP address must be in the same network as the node's IP address.

2633 E2633 Cmd Rej: IPRTE must use 1st octet of Class A TCP/IP Link

2634 E2634 Cmd Rej: IPRTE must use 1st 2 octets of Class B TCP/IP Link

2635 E2635 Cmd Rej: IPRTE must use 1st 3 octets of Class C TCP/IP Link

Notes

If the IP address is a Class A IP address, do not use the IP addresses `127.x.x.x`, where `x` is a number from 1 - 254. These addresses are reserved for loopback.

Using the CAP Value to Calculate Throughput for E5-ENET-B Cards

The value specified for the `cap` parameter can be used to calculate the throughput in transactions per second (TPS) for E5-ENET-B cards. The TPS value is the smaller of the following values:

- `GPL_CARD_CAPACITY`
 - E5-ENET-B card—15000
- $175 \text{ [or } 17.5] * \text{ cap parameter value}$

▲ Caution:

The 175 multiplier is used only when the link negotiates to 100 Mbits/second full duplex. If the link is a different value than 100 Mbits/second full duplex, then a multiplier of 17.5 is used.

Output**Related Topics**

4.1.316 ent-ip-rte

Use this command to configure the destination IP address, subnet mask, and the gateway IP address for the specified card in the Static IP Route table.

Parameters**loc (mandatory)**

Card location. The unique identifier of a specific IP card in the system.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118

dest (mandatory)

Destination IP Address. The IP Address of a remote destination host or network to be reached.

Range:

4 numbers separated by dots, with each number in the range of 0–255.
The IP address 0.0.0.0 is not valid.

gtwy (optional)

Gateway IP Address. The IP address assigned to the gateway router that will properly forward IP datagrams with the destination IP address (*dest*) to the next-hop gateway router or final destination host.

Range:

4 numbers separated by dots, with each number in the range of 0–255.
The IP address 0.0.0.0 is not valid.

submask (mandatory)

The subnet mask of the destination IP address, in the form of an IP address with a restricted range of values. This parameter is required if the *ipaddr* parameter is entered.

Range:

The value must be valid for the class of the entered IP address.

Valid for Class A Networks

- 255.0.0
- 255.192.0
- 255.224.0
- 255.240.0
- 255.248.0
- 255.252.0
- 255.254.0
- 255.255.128.0

Valid for Class A or B Networks

- 255.255.0.0
- 255.255.192.0
- 255.255.224.0
- 255.255.240.0
- 255.255.248.0
- 255.255.252.0
- 255.255.254.0
- 255.255.255.128

Valid for Class A, B, or C Networks

- 255.255.255.0
- 255.255.255.192
- 255.255.255.224
- 255.255.255.240
- 255.255.255.248
- 255.255.255.252

 **Note:**

The value `255.255.255.255` must be specified if the destination IP address represents a host address. If the destination IP address represents a network address, a value must be specified that identifies the network ID and host ID portions of the address.

Example

```
ent-ip-rte:loc=1301:dest=128.252.10.5:submask=255.255.255.255:  
gtwy=140.188.13.33
```

Dependencies

The specified destination IP address (`dest` parameter):

- Must not be the default route (0.0.0.0)
- Must not correspond to any loopback address (i.e. 127.X.X.X)
- Must be unique per card
- Must not reside on any local network on the card

3587 E3587 Cmd Rej: Dest IPAddr can't be local to any of the n/w on the card

The specified gateway IP address (`gtwy` parameter):

- Must not be the default route (0.0.0.0)
- Must not correspond to any loopback address (i.e. 127.X.X.X)
- Must correspond to a host IP address that resides on any local network on the card

3791 E3791 Cmd Rej: Gtwy IP Address is invalid

The IP address must be defined for any or all networks for the card before this command can be entered. (See the [chg-ip-lnk](#) command.)

3589 E3589 Cmd Rej: Specified cards interface IP Address must be assigned

Each destination IP address entered into the Static IP Route table must be unique for the card.

3586 E3586 Cmd Rej: Dest IP Address already exists for this card

A maximum of 64 static IP routes can be defined for a card.

3793 E3793 Cmd Rej: Max IP Route entries already exist for this card.

A maximum of 2048 static IP routes can be defined in the IP Route table.

3794 E3794 Cmd Rej: IP Route table full

The `loc` parameter value must correspond to an E5-ENET-B card running the IPGWI, IPLIMI, IPSG, or SS7IPGW application.

2144 E2144 Cmd Rej: Location invalid for hardware configuration

The network address specified by the `dest` and `submask` parameters must be different from the network address specified by the `pvn` and `pvnmask`, `fcna` and `fcnamask`, and `fcnb` and `fcnbmask` parameters of the NETOPTS table.

4333 E4333 Cmd Rej: The specified IP route is assigned to PVN/FCNA/FCNB

Notes

The Static IP Route table is used to store static IP route entries. Static routes are maintained across card initialization, failures, and reloads. These types of routes are used when the IP Layer cannot determine routes dynamically. Static IP route entries can be added or deleted dynamically.

Output

```
ent-ip-rte:loc=1301:dest=128.252.10.5:submask=255.255.255.255:  
gtwy=140.188.13.33
```

```
rlghncxa03w 12-07-24 15:35:05 EST EAGLE 45.0.0  
IP Route table is (1 of 2048) 1% full  
ENT-IP-RTE: MASP A - COMPLTD  
;
```

4.1.317 ent-j1

Use this command to enter a J1 interface on a T1 card.

Parameters

loc (mandatory)

The card location as stenciled on the shelf of the system.

Range:

*1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318,
2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318,
3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318,
4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318,
5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318,
6101 - 6108, 6111 - 6118*

j1port (mandatory)

J1 port number.

The value must be a J1 port for which an interface has not been configured on the specified J1 card.

Range:

1-8

encode (optional)

Indicator for use of B8ZS or AMI encoding/decoding.

Range:

b8zs

ami

Default:

b8zs

j1tsel (optional)

Timing source

Range:*line*

slave timing source

external

master timing source

Default:*line***l1 (optional)**

T1 cable length in feet between the EAGLE and the connecting node.

Range:

0-655

Default:

133

Example

```
ent-j1:loc=1101:j1port=1:encode=ami:j1tsel=external
```

```
ent-j1:loc=1102:j1port=1:j1tsel=line
```

```
ent-j1:loc=1103:j1port=2
```

Dependencies

The specified card location (loc parameter) must be equipped.

3136 E3136 Cmd Rej: J1 card location is unequipped

The J1 table must be accessible.

3164 E3164 Cmd Rej: Failed reading the J1 table

The Card (IMT) table must be accessible.

2102 E2102 Cmd Rej: Failed reading the IMT table

The port specified by the j1port parameter must not be already equipped with a J1 interface.

3130 E3130 Cmd Rej: The J1PORT at the specified location is already equipped

Card locations 1113 - 1118 (OAM, TDM, MDAL cards) cannot be specified as values for the loc parameter.

2154 E2154 Cmd Rej: Card slot reserved by system

The specified card location must be provisioned with type as limt1 and appl as ccs7itu.

2212 E2212 Cmd Rej: Invalid card type for this command

The card must not be provisioned with any E1/T1 ports.

2212 E2212 Cmd Rej: Invalid card type for this command.

The j1port parameter must be in the range from 1 to 8.

2017 E2017 Cmd Rej: Integer is out of range, 1..8 - j1port

IMT card location cannot be specified.

2016 E2016 Cmd Rej: Card Location is out of range - loc

The J7 support feature must be enabled before the J1 port can be provisioned.

2691 E2691 Cmd Rej: J7 Support Feature must be enabled.

Notes

There is not a new card type for J1. The J1 interface will be provisioned on a T1.

Once the J1 interface is provisioned on it, no T1 interface will be allowed on the T1 card.

This card will be treated as a J1 card.

Output

```
ent-j1:loc=1101:j1port=1:encode=ami:j1tsel=external
```

```
tekelecstp 13-12-20 12:12:36 EST 46.0.0-65.3.0
ent-j1:loc=1101:j1port=1:encode=ami:j1tsel=external

4.1.318 ent-lbp

Use this command to assign a far-end loopback point for testing data signaling link elements in a SS7 transmission path.

Parameters

lbp (mandatory)

Loopback point ID. A far-end loopback point that lies along an SS7 signaling link path between the STP and the target device (up to and including the target device).

Range:

1 - 32

lfst (mandatory)

Link fault sectionalization test. The type of link fault sectionalization loopback test to be performed.

Range:

llt
latching loopback test

nlt
nonlatching loopback test

link (mandatory)

SS7 signaling link. The SS7 signaling link that is to be tested.

Synonym:

port

Range:

a, b, a1 - a31, b1 - b31

Not all card types support all `link` parameter values.

See [Table A-1](#) for valid `link` parameter range values for each type of card that can have assigned signaling link ports.

loc (mandatory)

Card location. The unique identifier of a specific application subsystem located in the STP.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118

rle (mandatory)

Remote link element. The link element to be looped back for testing.

Range:

ds0

ocu

csu

dsu

nei

c11i (optional)

The Common Language Location Identifier (CLLI) code, or other mnemonic identifier, used to refer to the given loopback point.

Range:

ayyyyyyyyy

1 alphabetic character followed by up to 10 alphanumeric characters

rep (optional)

Repetition count. The number of link elements of the same type (not including the target device) that lie between the STP and the link element to be tested.

Range:

0 - 31

Default:

0—If the link element to be looped back for testing is NEI (*rle=nei* is specified)

0—If the LFS test is NLT (non-latched); *lfst=nl* is specified

0—If no other LBP for this link has the same *rle* value

1–30—Next sequential number for subsequent loopback points of the link to be tested (*rle* is specified as anything but *nei*)

Example

```
ent-
lbp:loc=1101:link=a:lbp=1:rle=ds0:lfst=llt:rep=0:clli=rlghncxa0
5w

ent-lbp:loc=1101:port=a:lbp=2:rle=nei:lfst=llt

ent-
lbp:loc=1205:port=a1:lbp=1:rle=ds0:lfst=llt:clli=rlghncxa05w:rep=1
```

Dependencies

The Link Fault Sectionalization (LFS) feature must be on before this command can be entered.

2870 E2870 Cmd Rej: LFS feature must be ON

The card location (*loc* parameter) must be equipped.

2101 E2101 Cmd Rej: Card location is unequipped

The *rle=ds0* parameter and the *rle=nei* parameter cannot be specified when the *lfst=nl* parameter is specified. The DS0 and Network Element Interface (NEI) link elements do not support non-latching loopbacks.

2896 E2896 Cmd Rej: DS0 and NEI link elements do not support non-latching tests

If the *rle=nei* parameter is specified, the *rep=0* parameter must be specified.

2895 E2895 Cmd Rej: REP must be zero if link element to be tested is NEI

The *rep* parameter can be specified only if the *lfst=llt* parameter is specified.

2897 E2897 Cmd Rej: REP is only valid if LFST is defined as LLT

Each specified *rep* parameter value must be greater than any previously specified *rep* value and less than any subsequent specified *rep* value.

2893 E2893 Cmd Rej: REP must be greater than prev. and less than subsequent REP

The specified *clli* cannot be a reserved word.

3040 E3040 Cmd Rej: <string> cannot be used in this command

The loopback point (LBP) cannot have been previously defined.

2894 E2894 Cmd Rej: LBP has already been provisioned

The value specified for the `lbp` parameter cannot exceed the `lbp` parameter value previously defined for a loopback point with `rle=nei` specified.

2898 E2898 Cmd Rej: LBP cannot exceed previously defined NEI LBP value

For each SS7 signaling link, only one loopback point with `rle=nei` specified can be defined.

2899 E2899 Cmd Rej: NEI LBP has already been defined for the CCS7 link

The `rep` parameter must be specified if taking the default value results in duplicate `rep` values for loopback points.

2914 E2914 Cmd Rej: REP parameter must be specified

The loopback point with `rle=nei` specified must be the terminating SS7 signaling link element.

2900 E2900 Cmd Rej: NEI LBP must be defined as the last link element

The card location must contain a provisioned E5-E1T1-B card, provisioned with the LIMT1 card type, that is running either the SS7ANSI or CCS7ITU application.

2892 E2892 Cmd Rej: LOC is not LFS capable

The card location (`loc` parameter) must not be reserved by the system.

2376 E2376 Cmd Rej: Specified LOC is invalid

The Link Fault Sectionalization database Loopback Point (LBP) table is not accessible.

2891 E2891 Cmd Rej: Failed reading Link Fault Sectionalization table

The values specified for the `loc` and `link` parameters must already exist in the database.

2373 E2373 Cmd Rej: Link is unequipped in the database

Notes

None

Output

```
ent-lbp:loc=1101:link=a:lbp=2:rle=nei:lfst=11t
```

```
rlghncxa03w 05-02-17 15:35:05 EST EAGLE5 33.0.0  
ENT-LBP: MASP A - COMPLTD

4.1.319 ent-lg-card

Use this command to create a new LG card. An LG Card is associated with a single LG Group. The command class is TKLC_INTERNAL inheriting properties of DEBUG class. The Load Generator is supported on IPSP, IPLHC, IPGHC and SS7HC GPLs.

Parameters

grp (mandatory)

LG group name

Range:

ayyyyyyyy Up to 10 alphanumeric characters; the first character must be a letter.

loc (mandatory)

The card location as stenciled on the shelf of the system.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318,
2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318,
3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318,
4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318,
5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318,
6101 - 6108, 6111 - 6118

Example

```
ent-lg-card:loc=1301:grp=lggroup1
```

Dependencies

The card location must not be 1113-1118, or xy09 and xy10 where x is the frame and y is the shelf.

2154 E2154 Cmd Rej: Card slot reserved by system

The valid card types are DCM, ENET, LIME1, and LIMT1.

2212 E2212 Cmd Rej: Invalid card type for this command

The specified group name value must exist in the database.

5207 E5207 Cmd Rej: LG Group not defined

The card location specified in the `loc` parameter must not be associated with another LG group.

2100 E2100 Cmd Rej: Card location already equipped

The LG Card table is corrupt or cannot be found.

5222 E5222 Cmd Rej: Unable to read LG Card table

The card in the specified card location must be a LIM and must exist.

2292 E2292 Cmd Rej: Card does not exist or is not a LIM (LOC)

The card location specified in the `loc` parameter must be equipped.

2101 E2101 Cmd Rej: Card location is unequipped

The LG Group table is corrupt or cannot be found.

5221 E5221 Cmd Rej: Unable to read LG Group table

The `loc` and `grp` parameters are mandatory

2379 E2379 Cmd Rej: Missing parameter

The IMT table is corrupt or cannot be found.

2102 E2102 Cmd Rej: Failed reading the IMT table

Only E-5 Class cards are supported card types for a card to be an LG card

2105 E2105 Cmd Rej: Invalid card TYPE and APPL load type combination

4.1.320 ent-lg-engine

Use this command to create an LG engine. An LG Engine is associated with a single LG Card. The command class is `TKLC_INTERNAL` inheriting properties of `DEBUG` class. The Load Generator is supported on `IPSG`, `IPLHC`, `IPGHC` and `SS7HC` GPLs.

Parameters

engine (mandatory)

Range: `aaaaaaaa`

Up to 10 alphanumeric characters; the first character must be a letter.

event (mandatory)

Range: `aaaaaaaa`

Up to 10 alphanumeric characters; the first character must be a letter

loc (mandatory)

The card location as stenciled on the shelf of the system.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 -

4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118

action (optional)

Transmitting and receiving actions of a LG Engine.

Range:***snk***

Rx Action: Sink Mode

ret

Rx Action: Return Mode

retl2

Rx Action: Return by L2 Mode

cong

Rx Action: Congestion

cap

Rx Action: capture mode

pbk

Tx Action: Playback mode

port (optional)

The signaling link on the card specified in the `loc` parameter. The links can be specified in any sequence or pattern.

Synonym:

link

Range:

a, b, a1 - a31, b1 - b31

Not all card types support all `link` parameter values.

See [Summary of Range Values for :link Parameter](#) for valid `link` parameter range values for each type of card that can have a location specified in the `loc` parameter.

rxengine (optional)

Receiving LG Engine name.

Range:

ayyyyyyyy

Up to 10 alphanumeric characters; the first character must be a letter.

txrate (optional)

Transmission rate of a LG Engine.

Range:

0 - 10000

Example

```
ent-lg-  
engine:engine=txengine1:loc=1302:event=txisup1:port=a:txrate=100  
  
ent-lg-engine:engine=rxengine1:loc=1302:event=rxisup1:action=cap  
  
ent-lg-  
engine:engine=txengine2:loc=1302:event=txisup2:action=pbk:rxengine=r  
xengine1
```

Dependencies

The value specified for the `engine` parameter cannot already exist in the LG Engine table.

5214 E5214 Cmd Rej: LG Engine already defined

The LG Engine table is corrupt or cannot be found.

5212 E5212 Cmd Rej: Unable to read LG Engine table

The number of engines associated with a card should not exceed the max limit.

5216 E5216 Cmd Rej: Too many LG Engines associated with LG card

The number of events associated with a engine should not exceed the max limit.

5217 E5217 Cmd Rej: LG Event associated with too many LG Engines

The `txrate` parameter cannot be specified with the parameter `event` of Rx type.

5218 E5218 Cmd Rej: TxRate cannot be assigned to Rx Event direction

The `action` parameter of type PBK can only be assigned to Tx event direction.

5219 E5219 Cmd Rej: Action can not be assigned to Tx Event direction

The engine name specified shouldn't be an Eagle reserved name

3040 E3040 Cmd Rej: <string> cannot be used in this command

The `action` parameter of type SNK/RET/RETL2/CONG/CAP can only be assigned to RX event direction.

5229 E5229 Cmd Rej: Action can not be assigned to Rx Event Direction

The card location specified in the `loc` parameter must be of a provisioned LG card.

5239 E5239 Cmd Rej: LG card not defined

The port specified in the command must be provisioned.

2373 E2373 Cmd Rej: Link is unequipped in the database

The `rxengine` parameter cannot be specified with the `action` parameter of type other than PBK.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The specified **Rx** `engine` parameter value must be associated with the card.

5210 E5210 Cmd Rej: RxEngine not defined on this card

The Rxengine specified must pre-exist in the LG Engine table.

5249 E5249 Cmd Rej: LG RxEngine not defined

Engine specified in RxEngine parameter must of Rx Type.

5241 E5241 Cmd Rej: Invalid RxEngine defined

The LG Event name specified in the command must exist in the table

5227 E5227 Cmd Rej: LG Event not defined

The LG Engine table cannot already be full.

5213 E5213 Cmd Rej: LG Engine table is full

SIF Size > 272 not supported on ss7hc

4763 E4763 Cmd Rej: Invalid SIF size of event specified for SS7HC card

The Rx Event can not be associated to more than one Engine on the same LG card

5280 E5280 Cmd Rej: Duplicate DPC cannot be assigned to same LG card

The LG Card and Event specified in the command must belong to same network

5259 E5259 Cmd Rej: LG Card and event network variant does not match

The `port` parameter cannot be specified with the parameter `event` of Rx type.

5230 E5230 Cmd Rej: Port can not be assigned to Rx Event Direction

Use this command to create a new LG event. The command class is TKLC_INTERNAL inheriting properties of DEBUG class. The Load Generator is supported on IPSTG, IPLHC, IPGHC and SS7HC GPLs.

Parameters

dir (mandatory)

Type of Event (Tx or Rx)

Range:

Tx

Transmit Event

Rx
Receive Event**dpc (mandatory)**

ANSI destination point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*. The *prefix* subfield indicates a private point code (*prefix-ni-nc-ncm*).

Synonym:*dPCA***Range:***p-, 000-255, **

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—p-

The asterisk value (*) is not valid for the *ni* subfield.

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001–005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006–255*.

The point code *000-000-000* is not a valid point code.

dpc/dPCA/dpci/dpcn/dpcn24 (mandatory)

Destination point code

dpci (mandatory)

ITU international destination point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-zone-area-id*).

Range:*s-, p-, ps-, 0-255*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*prefix—s-, p-, ps**zone—0-7**area—000-255**id—0-7*

The point code *0-000-0* is not a valid point code.

dpcn (mandatory)

ITU national destination point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the *chg-stpopts:npcfmti* flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc, m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-nnnnn, prefix-nnnnn-gc, prefix-m1-m2-m3-m4, prefix-m1-m2-m3-m4-gc*).

Range:*s-, p-, ps-, 0-16383, aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*prefix—s-, p-, ps**nnnnn—0-16383**gc—aa-zz*

m1-m2-m3-m4—0-14 for each member; values must sum to 14

dpcn24 (mandatory)

24-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point (msa-ssa-sp)*. The *prefix* indicates a private point code (*prefix-msa-ssa-sp*).

Range:

p-, 000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

0 - 15

SI value:

0 = SNM

1,2, 6-12, 14 = TEST

3 = SCCP

4 = TUP

5 = ISUP
13 = BICC
15 = H248

cause (optional)

Cause Code for UPUs

Range:

0 - 15

Default:

0

class (optional)

Internal or External

Range:

int

Internal

cnglv1 (optional)

Congestion Level for TFCs

Range:

0 - 3

Default:

0

cpc (optional)

ANSI capability point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.

Synonym:

cpc

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001-005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006-255*.

The point code *000-000-000* is not a valid point code.

cpc/cpca/cpci/cpcn/cpcn24 (optional)

Capability point code. The code used by the SS7 protocol to identify a group of functionally related STPs in the signaling network to which the STP belongs.

cpci (optional)**Range:**

s-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s*
zone—*0-7*
area—*000-255*
id—*0-7*

The point code *0-000-0* is not a valid point code.

Default:

No change to existing point code value.

cpcn (optional)

ITU national point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the `chg-stpopts:npcfmti` flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*). 24-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*).

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

msa—*000-255*
ssa—*000-255*
sp—*000-255*

Default:

No change to existing point code value.

egta (optional)

End global title address. The end of a range of global title digits.

Range:

1 - 21

maxcic (optional)

Maximum CIC Selector

Range:
0 - 4294967295

Default:
4294967295

maxsize (optional)
Maximum Service Message SIF Size

Range:
0 - 4095

maxsls (optional)
Maximum SLS selector

Range:
0-255 -ANSI
0-15 -ITU

Default:
255 -ANSI
15 -ITU

mincic (optional)
Minimum CIC Selector

Range:
0 - 4294967295

Default:
0

minsize (optional)
Minimum Service Message SIF Size

Range:
0 - 4095

Default:
60 -SCCP MSUs
40 -other MSUs

System Default:
0

minsls (optional)
Minimum SLS Selector

Range:
0-255 -ANSI
0-15 -ITU

0

priority (optional)
Service Message Priority

Range:

0 - 3

Default:

0

ri (optional)

GTT or SSN

Range:

gtt

ssn

sclass (optional)

Range:

0 - 1

sgta (optional)

Start of global title address. The beginning of a range of global title digits.

Range:

1 - 21

ssn (optional)

Subsystem number. The application's subsystem number. This attribute is composed of the decimal representation of the 1-byte field used in the SS7 protocol.

Range:

2 - 255

Default:

5

System Default:

0

tt (optional)

Translation type.

Range:

0 - 255

Default:

100

type (optional)

Event Type

Range:

MSU

Default:

MSU

usrId (optional)

User ID for UPUs

Range:

0 - 15

Default:

5

System Default:

0

Example

```
ent-lg-
event:event=txisup1:dir=tx:type=msu:si=5:dpc=2-2-2:opc=1-1-1

ent-lg-event:event=txisup1:dir=tx:si=5:dpc=4-4-4:opc=3-3-3

ent-lg-event:event=rxisup1:dir=rx:dpc=3-3-3
```

Dependencies

If the `mincic/maxcic` parameter is specified, the `si` parameter must be 4 (*tup*), 5 (*isup*) or 13 (*bicc*).

If the `tt/ssn/sgta/egta` parameter is specified, the `si=3 (sccp)` parameter must be specified.

If the `h0h1/cnglv1/cause/usrId/cpc` parameter is specified, the `si=0 (snm)` parameter must be specified.

5251 E5251 Cmd Rej: Invalid parameter for SI type

When failed to read LG Event table.

5223 E5223 Cmd Rej: Unable to read LG Event table

The event name specified shouldn't be an Eagle reserved name

3040 E3040 Cmd Rej: <string> cannot be used in this command

The `event` and `dir` parameters must be specified.

The `dpc` parameter is mandatory with Rx event type

The `opc`, `dpc`, and `si` parameters are mandatory with Tx event.

The `h0h1` parameter is mandatory for `si=0 (snm)` Tx event.

2379 E2379 Cmd Rej: Missing parameter

The `mincic` specified must be less than `maxcic`.

5242 E5242 Cmd Rej: MINCIC cannot be greater than MAXCIC

The `minsize` specified must be less than `maxsize`.

5243 E5243 Cmd Rej: MINSIZE cannot be greater than MAXSIZE

The `minsls` specified must be less than `maxsls`.

5244 E5244 Cmd Rej: MINSLS cannot be greater than MAXSLS

The value specified for the event parameter cannot already exist in the LG Event table.

5247 E5247 Cmd Rej: LG Event already defined

ITU SLS must be less than 15.

5250 E5250 Cmd Rej: ITU SLS cannot be greater than 15

The LG Event Table cannot be full.

5226 E5226 Cmd Rej: LG event table is full

A valid SIF size must be specified with SI value.

5233 E5233 Cmd Rej: Invalid SIF size for SI Type

The same `dpc` parameter cannot be assigned to more than one Event of Rx type.

5258 E5258 Cmd Rej: Duplicate DPC cannot be assigned to RX event

When other optional parameters are specified with Rx event

When `sgta/egta/tt` parameters are specified with `RI=SSN` for Tx event

2155 E2155 Cmd Rej: Invalid parameter combination specified

The network type for the `opc` and `dpc` parameters must match.

4387 E4387 Cmd Rej: OPC must not be identical to DPC

If the `ri=gt` parameter is specified, then the `sgta/egta` parameters must be specified.

5225 E5225 Cmd Rej: SGTA/EGTA must be specified with `RI=GT`

The lengths of the `sgta` and `egta` parameters must match.

2403 E2403 Cmd Rej: Length of EGTA must be equal to length of GTA

The `egta` and `sgta` parameters must be specified together in the command.

2409 E2409 Cmd Rej: EGTA cannot be specified without GTA

The value specified for the `egta` parameter must be greater than or equal to the value specified for the `sgta` parameter.

2420 E2420 Cmd Rej: EGTA must be greater than or equal to GTA

Notes

Mandatory and optional event parameters can be organized into two groups: generic and event type specific parameters. The generic parameters are applicable to any event type whereas event type specific are applicable only to a specific event type.

Generic event parameters are shown below:

Table 4-25 ENT-LG-EVENT Generic Parameters

Parameter	Description	Mand/Opt	Applicable Event Direction	Valid Values
event	event name	M	Any	

Table 4-25 (Cont.) ENT-LG-EVENT Generic Parameters

dir	transmit or receive	M	Any	Tx, Rx
class	internal or external	O	Tx	INT Default : INT
type	event type (msu)	O	Any	MSU Default: MSU

Configurable parameters specific to each type of event are shown below:

Common MSU related configuration parameters when DIR (direction) parameter is Rx, are as follows:

Table 4-26 ENT-LG-EVENT Rx MSU Event Type common Parameters

Parameter	Description	Mand/Opt	Valid Values
dpca	Destination PC (ANSI)	M	
dpci	Destination PC (ITU)	M	
dpcn	Destination PC (ITU National)	M	
dpcn24	Destination PC (24 bit ITU national)	M	

Common MSU related configuration parameters when DIR (direction) parameter is Tx, are as follows:

Table 4-27 ENT-LG-EVENT Tx MSU Event Type common Parameters

Parameter	Description	Mand/Opt	Valid Values
dpca	Destination PC (ANSI)	M	
dpci	Destination PC (ITU)	M	
dpcn	Destination PC (ITU National)	M	
dpcn24	Destination PC (24 bit ITU national)	M	
opca	Origination PC (ANSI)	M	
opci	Origination PC (ITU)	M	
opcn	Origination PC (ITU National)	M	
opcn24	Origination PC (24 bit ITU national)	M	
priority	Service message priority	O	
minsls	Minimum SLS selector	O	
maxsls	Maximum SLS selector	O	
minsize	Minimum service message SIF size	O	0 – 4095

Table 4-27 (Cont.) ENT-LG-EVENT Tx MSU Event Type common Parameters

maxsize	Maximum service message SIF size	O	0 – 4095
si	MSU service indicator	M	0-SNM, 1,2, 6-12, 14 - TEST 3-SCCP, 4-TUP, 5-ISUP, 13-BICC 15-H248

For MSU event type, Service indicators (SI) can have different formats, and consequently unique parameters. Following tables list these parameters related to MSU event type and SI.

Table 4-28 ENT-LG-EVENT Tx MSU Event Type Specific Parameters (SI = 0)

Parameter	Description	Mand/Opt	Valid Values
h0h1	SNM type	M	TFA, TFP, TFC, TFR, RCT or UPU
cpca	concerned destination (ANSI)	O	
cpci	concerned destination (ITU)	O	
cpcn	concerned destination (ITU National)	O	
cpcn24	concerned destination (24 bit ITU National)	O	
cnglvl	congestion level for TFCs	O	0-3
cause	cause code for UPU	O	0-15
usrid	user ID for UPU	O	0-15

Table 4-29 ENT-LG-EVENT Tx MSU Event Type Specific Parameters (SI = 1, 2, 6-12, 14, 15)

Parameter	Description	Mand/Opt	Valid Values
None			

Table 4-30 ENT-LG-EVENT Tx MSU Event Type Specific Parameters (SI = 3)

Parameter	Description	Mand/Opt	Valid Values
tt	Translation Type	O	0 – 255
ssn	Sub System Number	O	0 – 255
sgta	Start of global title address	O	1-21 digits

Table 4-30 (Cont.) ENT-LG-EVENT Tx MSU Event Type Specific Parameters (SI = 3)

egta	End of global title address	O	1-21 digits
sclass	Class of service	O	0 – 1
ri	Routing Indicator (GT or SSN)	O	GT, SSN

Table 4-31 ENT-LG-EVENT Tx MSU Event Type Specific Parameters (SI = 4, 5, 13)

4.1.323 ent-lnp-serv

Use this command to reserve an LNP translation type for a unique LNP service. The available services include up to six query services (*ain*, *in*, *pcs*, *lnpqs*, *wnp*, and *lrnqt*) and any combination of six message relay or user-defined services. Translation type names can also be defined and are defaulted to the corresponding reserved service type names.

Note:

LNP Translation Type name referenced in the ENT-LNP-SERV command is different from the Translation Type name referenced in ENT-TT command.

A maximum of 10 LNP services can be assigned in systems with up to 12 million numbers, and a maximum of 15 LNP services can be assigned in systems with more than 12 million numbers (using ELAP). Two of these assigned services will always be reserved for administration of AIN and IN Translation Types. Administration of Message Relay user defined services will also be allowed.

Parameters

serv (mandatory)

Reserved service type name.

Range:

ain

in

pcs

wnp

class

lidx

cnam

isvm

lnpqs

wmsvc

udf1

udf2

udf3

udf4

lnqst

alias (optional)

Alias translation type.

Range:

000 - 255

df1tact (optional)

This parameter specifies the default action associated with the LNP TT Service entry.

Range:

ayyyyyyy

1 leading alphabetic followed by up to 8 alphanumeric characters. This parameter can have one of the following values:

- a valid GTT Action ID of type *disc/udts/tcaperr* that already exists in the GTT Action table
- *fallback* —Fallback to the relay data for MSUs relayed by LNP using relay data from the LNP database provided by the LNP Message Relay service. For an LNP Query message, the MSU is sent to the LNP local subsystem.
- *falltogtt* —Fallback to GTT. The GTT selector search is performed again, using *gttselid=none*.

Default:

fallback

dv (optional)

Digits valid.

Range:

sccp

tcap

Default:

sccp —If *serv* has a value of *class*, *lidx*, *cnam*, *isvm*, *wsmsc*, *udf1*, *udf2*, *udf3*, *udf4*
tcap —If *serv* has a value of *ain*, *in*, *pcs*, *wnp*, *lnpqs*, *lnqt*

gttselid (optional)

GTT Selector ID. This parameter specifies the ID used to perform GTT on the MSU processed by the LNP Message Relay or LNP Query Service.

Range:

0 - 65534

Default:

none

off (optional)

Disables or turns off the specified feature options. This parameter specifies a comma-separated list of feature options that are requested to be turned off. Up to 10 feature options can be specified in the list.

Range:

gttrqd

on (optional)

Enables or turns on the specified feature options. This parameter specifies a comma-separated list of feature options that are requested to be turned on. Up to 10 feature options can be specified in the list.

Range:

gttrqd

rqdtblnop (optional)

The action performed with a message that arrives at an SCCP card that does not have the necessary LNP table, and the current message routing is subsystem.

Range:

udts

generate UDTs for the processed MSU

disc

discard the processed MSU

Default:

No change to the current value

tt (optional)

Translation type.

Range:

000 - 255

ttn (optional)

User defined LNP Translation Type name.

Range:

ayyyyyyy

1 alphabetic character followed by up to 7 alphanumeric characters, the value *none* is not allowed.

Default:Reserved service type name (*serv* parameter)**Example**

```
ent-lnp-
serv:serv=class:tt=10:ttn=class1:dfltact=discl:on=gttrqd:gttsel
id=100
```

```
ent-lnp-serv:serv=lidb:tt=16:dv=tcap:ttn=mrlidb
```

```
ent-lnp-serv:serv=lrnqt:tt=239:dv=tcap
```

Dependencies

The same value cannot be specified for the *on* and *off* parameters.

4732 E4732 Cmd Rej: Same option in ON & OFF params cannot be specified

The *dfltact=none* parameter cannot be specified.

5298 E5298 Cmd Rej: Default ACTID must not be specified as NONE

The EGTT feature must be turned on before the *gttselid*, *dfltact*, or *on/off=gttrqd* parameter can be specified.

3557 E3557 Cmd Rej: EGTT must be ON

If a GTT Action ID is specified as the value for the *dfltact* parameter, then the Action ID must already exist in the GTT Action table.

5071 E5071 Cmd Rej: GTT Action Id does not exist

If a GTT Action ID is specified as a value for the *dfltact* parameter, then the GTT Action ID must be associated with an action of *disc/udts/tcaperr*.

5172 E5172 Cmd Rej: Invalid action type

The LNP feature must be turned on before this command can be entered.

3009 E3009 Cmd Rej: LNP feature must be ON

The PLNP feature must be turned on before the *serv=pcs* parameter can be specified.

3245 E3245 Cmd Rej: PLNP feature must be ON

The WNP feature must be turned on before the *serv=wnp* parameter can be specified.

3647 E3647 Cmd Rej: WNP feature must be ON

The LNP SMS feature must be turned on before the *serv=wsmc* parameter can be specified.

3599 E3599 Cmd Rej: WSMSC feature must be Activated

If a value of *udf1*, *udf2*, *udf3*, or *udf4* is specified for the *serv* parameter, then the *dfltact*, *gttselid* and *on/off=gttrqd* parameters cannot be specified.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The *tt* parameter must be specified if the *alias* parameter is not specified.

2474 E2474 Cmd Rej: Translation TYPE must be specified

The *ttn=none* parameter cannot be specified.

3225 E3225 Cmd Rej: NONE is a reserved name and cannot be used for a TTN

If a value of *udf1*, *udf2*, *udf3*, *udf4*, or *wsmisc* is specified for the *serv* parameter, then the *dv=sccp* parameter must be specified.

3250 E3250 Cmd Rej: DV must be SCCP when SERV is a user defined type or WSMISC

If the *lnpqs*, *ain*, *in*, *pcs*, *wnp*, or *lnqt* value is specified for the *serv* parameter, then the *dv=tcap* parameter must be specified.

3251 E3251 Cmd Rej: If specified, (N)DV must be TCAP for specified service

A reserved service type name can be specified for the *ttn* parameter only if it matches the *serv* parameter value.

3252 E3252 Cmd Rej: A TTN-reserved service type name only if it matches SERV

The value of the *tt* parameter cannot already exist in the LNP database.

3139 E3139 Cmd Rej: Translation Type is already in LNP database

If the *tt* parameter is specified, then the value of the *serv* parameter cannot exist in the LNP database.

3140 E3140 Cmd Rej: Service Type is already in LNP database

A maximum of 6 Message Relay services are allowed.

3266 E3266 Cmd Rej: Only 6 message relay services can be assigned

If the *alias* parameter is specified, then the *serv* parameter must already have an assigned translation type.

3122 E3122 Cmd Rej: SERV has not been assigned a true TT

When the *alias* parameter is specified, its value cannot already exist in the LNP database as a true translation type for this service.

2460 E2460 Cmd Rej: Alias defined as translation type

If the *alias* parameter is specified, then the specified alias cannot be in use.

2459 E2459 Cmd Rej: Alias already in use

The LNP database is corrupt or cannot be found.

2601 E2601 Cmd Rej: Command aborted due to system error

If the *tt* parameter is specified, then its value cannot already exist in the LNP database as an alias for this service.

2465 E2465 Cmd Rej: Translation TYPE defined as an alias

The LNP TT SERV table is corrupt or cannot be found.

3123 E3123 Cmd Rej: Failed Reading LNP TT SERV table

The value of the `ttn` parameter cannot exist in the LNP database.

2467 E2467 Cmd Rej: TTN already in use

The LRNQT feature must be turned on before the `serv= lrnqt` parameter can be specified.

4817 E4817 Cmd Rej: ITU TCAP LRN Query (LRNQT) feature must be ON

If the `alias` parameter is specified, then the `tt`, `ttn`, and `dv` parameters cannot be specified.

3186 E3186 Cmd Rej: TT, TTN, & DV parameters are not allowed with ALIAS

The GTT Action table is corrupt or cannot be found.

5067 E5067 Cmd Rej: Unable to access GTT Action table

The `nrqdtblnop` parameter requires that the Dual ExAP Config feature is enabled.

2400 E2400 Cmd Rej: Dual ExAP Config feature must be enabled

The `defactid=none` parameter cannot be specified.

5298 E5298 Cmd Rej: Default/Fail ACTID must not be specified as NONE

Notes

on/off options

gttrqd —GTT required. Specifies whether GTT is performed after the successful completion of an LNP Message Relay service and before initiation of an LNP Query service. This option has a default of OFF.

Translation type names must be unique for LNP services.

A translation type name can be a reserved service type name only if it matches the specified service.

TTN

LNP Translation type name referenced in the ENT-LNP-SERV command is different from the Translation type name referenced in ENT-TT command.

Output

```
ent-lnp-serv:tt=1:serv=lidb:on=gttrqd:dfltact=falltogtt

4.1.324 ent-loopset

Use this command to enter the loopset information into the database. This command updates the Loopset table.

Parameters

name (mandatory)

Loopset name. This parameter specifies an entry in the Loopset table. The *name=none* parameter cannot be specified.

Range:

ayyyyyyy

1 alphabetic and up to 7 alphanumeric characters

pc1 (mandatory)

ANSI point code list with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*. The *prefix* subfield indicates a private point code (*prefix-ni-nc-ncm*). This parameter allows up to 6 comma-delimited entries in the point code list.

Synonym:

pcla

Range:

p-, 000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—p-

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001-005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006-255*.

The point code *000-000-000* is not a valid point code.

pc1i (mandatory)

ITU international point code list with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-zone-area-id*). This parameter allows up to 6 comma-delimited entries in the point code list.

Range:

s-, p-, ps-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s-, p-, ps

zone—0-7

area—000-255

id—0-7

The point code *0-000-0* is not a valid point code.

pc1n (mandatory)

ITU national point code list in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the *chg-stpopts:npcfmti* flexible point code option. A group code must be specified when the

ITUDUPPC feature is turned on (*nnnnn-gc, m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code (*prefix-nnnnn, prefix-nnnnn-gc, prefix-m1-m2-m3-m4, prefix-m1-m2-m3-m4-gc*). This parameter allows up to 6 comma-delimited entries in the point code list.

Range:

s-, p-, ps-, 0-16383, aa-zz

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s-, p-, ps

nnnnn—0-16383

gc—aa-zz

m1-m2-m3-m4—0-14 for each member; values must sum to 14

pc1n24 (mandatory)

24-bit ITU national point code list with subfields *main signaling area-sub signaling area-signaling point (msa-ssa-sp)*. This parameter allows up to 6 comma-delimited entries in the point code list.

Range:

p-, 000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—p

msa—000–255

ssa—000–255

sp—000–255

pc1n16 (mandatory)

16-bit ITU national point code with subfields *unit number sub number area main number area (un-sna-mna)*. This parameter allows up to 6 comma-delimited entries in the point code list.

Range:

p---, 000---127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (--).

prefix---p

un---000---127

sna---000---15

mna---000---31

mode (optional)

Mode of operation. This parameter specifies whether the message is discarded when an SCCP loop is detected.

Range:

notify

Generates a UIM without discarding the message.

discard

Generates a UIM and discards the message.

Default:

notify

Example

This example creates a new loopset using the default mode of *notify*.

```
ent-loopset:name=rtp1:pc1=3-3-3,5-5-5,7-7-7,3-4-3
```

This example creates a new loopset and sets the mode to *discard*.

```
ent-loopset:name=rtp2:mode=discard:pc1=3-3-3,5-5-5,7-7-7,3-4-3
```

This example creates a new loopset with four 16-bit ITU-N point codes.

```
ent-loopset:name=rtp1:pc1n16=3-3-3,5-5-5,7-7-7,3-4-3
```

Dependencies

The value of the `name` parameter cannot already exist in the database.

4577 E4577 Cmd Rej: Loop Set entry already exists

The SCCP Loop Detection feature must be enabled before this command can be entered.

4565 E4565 Cmd Rej: SCCP Loop Detection Feature is not enabled

The GTT feature must be turned on before this command can be entered.

2584 E2584 Cmd Rej: GTT feature must be ON

The Loopset table can hold a maximum of 1,000 loopset entries, with each entry containing up to 12 point codes. Additional loopset entries and point codes cannot be added when the table is full.

4566 E4566 Cmd Rej: LoopSet Table is full

The Loopset table must be accessible.

4567 E4567 Cmd Rej: Cannot access LoopSet table

The values for the `pc1` parameter must be unique.

4624 E4624 Cmd Rej: PCs in point code list must be unique

The `name=none` parameter cannot be specified.

4628 E4628 Cmd Rej: NONE is an invalid name for a loopset entry

At least one valid point code must be specified as a value for the `pc1` parameter.

4626 E4626 Cmd Rej: Must have at least 1 valid PC in a point code list

The values for the `pc1` parameter cannot consist of any invalid point codes. The valid point codes must be consecutively specified and separated by commas.

4627 E4627 Cmd Rej: Valid point codes must be continuous in point code list

Notes

There is no J7 FAK dependency on the `apcln16/rpcln16/pc1n16/npc1n16/pc2n16/npc2n16` parameters. The command can be entered successfully when the J7 FAK is not enabled.

There is no J7 FAK dependency on the `apcln24/rpcln24/pc1n24/npc1n24/pc2n24/npc2n24` parameters. The command can be entered successfully when the J7 FAK is enabled.

There is no J7 FAK dependency on the `apcl/ apcla/rpcla/pc1a/npc1a/pc2a/npc2a` parameters. The command can be entered successfully when the J7 FAK is enabled.

Output

The following example creates a new loopset and sets the mode to *discard*. `ent-loopset:name=rtp2:mode=discard:pc1=3-3-3,5-5-5,7-7-7,3-4-3`

```

r1ghncxa03w 07-02-10 08:31:28 EST  EAGLE Rel 35.6.0

4.1.325 ent-ls

Use this command to add a linkset, with its assigned far-end point code and other linkset attributes, to the database.

Parameters

Note:

See [Point Code Formats and Conversion](#) for a detailed description of point code formats, rules for specification, and examples.

apc (mandatory)

ANSI adjacent destination point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*. The *prefix* subfield indicates a private point code (*prefix-ni-nc-ncm*).

Synonym:

apca

Range:*p-*, 000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*prefix-p-*When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001-005*.When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006-255*.The point code *000-000-000* is not a valid point code.**apc/apca/apci/apcn/apcn24/apcn16 (mandatory)**

Adjacent point code. The DPC of the adjacent signaling node at the far end of the linkset.

apci (mandatory)ITU international adjacent destination point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-zone-area-id*).**Range:***s--*, *p--*, *ps--*, 0--255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix--s--, *p--*, *ps**zone--0-7**area--000--255**id--0--7*The point code *0--000--0* is not a valid point code.**apcn (mandatory)**ITU national adjacent destination point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the *chg-stpopts:npcfmti* flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).**Range:***s--*, *p--*, *ps--*, 0--16383, *aa--zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

lsn (mandatory)

Linkset name. Each linkset name must be unique in the system.

Range:

ayyyyyyyy

1 alphabetic character followed by up to 9 alphanumeric characters

lst (mandatory)

Linkset type. The linkset type of the specified linkset as defined in Telcordia GR-246-CORE, T1.111.5.

Range:

a

Access links

b

Bridge links

c

Cross links

d

Diagonal links

e
Extended links

prx
Proxy links

adapter (optional)

The adapter layer for links provisioned in an IPSG linkset.

Range:

m3ua

m2pa

Default:

m2pa

apcntype (optional)

ITU-N Adjacent Point Code Type. The format used for changeover and changeover acknowledgement messages.

Range:

itun

ITU National Adjacent Point Code Type

itunchina

ITU National China Adjacent Point Code Type

Default:

itun

as18 (optional)

Adjacent SLS 8-bit indicator. This parameter specifies whether the adjacent node is sending MSUs with 8-bit SLSs.

Range:

yes

no

Default:

no

asnotif (optional)

AS notification. This parameter specifies whether AS notifications should be sent for IPSG-M3UA linkset.

Range:

yes

no

Default:

yes

bei (optional)

Broadcast exception indicator. This parameter specifies whether TFP (transfer prohibited) messages are allowed to be broadcast on the linkset.

Range:

yes

TFPs are not broadcast

no

TFPs are broadcast

Default:

no

cggtmod (optional)

Calling party GT modification indicator. This parameter specifies whether calling party global title modification is required for the specified linkset.

Range:

yes

no

Default:

no

cgpnblset (optional)

Calling party blacklist set

Range:

1-255, none

System Default:

none

chgntp3opc (optional)

Change MTP3 OPC. This parameter specifies whether to change MTP3 OPC with SPC. With this parameter off, OPC-to-SPC conversion will not take place and the outgoing MSU will have the original OPC.

Range:

on

off

Default:

on

c11i (optional)

Far-end Common Language Location Identifier (CLLI). The CLLI assigned to the linkset.

Range:

ayyyyyyyyyy

1 alphabetic character followed by up to 10 alphanumeric characters

Default:

CLLI of the adjacent point code

gnameset (optional)

Generic Name Set type. The new settype for an IPSG-M3UA linkset.

Range:

seta

setb

both

none

System Default:

none

gsmscrn (optional)

GSM MAP screening. This parameter specifies whether GSM MAP screening is allowed.

Range:

on

off

Default:

off

gttmode (optional)

Global title translation mode. The GTT Mode hierarchy for each link set.

Range:

cd

CdPA GTT only

cg

CgPA GTT only

acdcd

Advanced CdPA GTT, CdPA GTT

acdgcg

Advanced CdPA GTT, CgPA GTT, CdPA GTT

acdcdcg

CgPA GTT, Advanced CdPA GTT, CdPA GTT

cgcd
CgPA GTT, CdPA GTT

sysdfflt
System wide default value

fcd
FLOBR CdPA only

fcg
FLOBR CgPA only

fcgfgd
FLOBR CgPA, FLOBR CdPA

fcdfcg
FLOBR CdPA, FLOBR CgPA

cdcg
CdPA GTT, CgPA GTT

Default:
sysdfflt

gwsa (optional)

Gateway screening action. This parameter specifies whether gateway screening is on or off for the specified linkset.

Range:

on

off

Default:
on —if *scrn* is specified
off —if *scrn* is not specified

gwsd (optional)

Gateway screening MSU discard. This parameter specifies whether the discarding of MSUs that bypass the gateway screening function due to load-shedding is on or off. This parameter is also used with the redirect function; MSUs that cannot be screened are discarded if *gwsd=on* is specified.

Range:

on

off

Default:
off

gwsmsg (optional)

Gateway screening messaging. This parameter specifies whether messages are generated for each message screened by gateway screening.

Range:*on, off***Default:***off***ipsg (optional)**

IP signaling gateway adjacent point code. This parameter specifies whether a linkset is entered for an IP SG card. The specified adjacent point code is an IP gateway adjacent point code.

Range:*yes**no***Default:***no***islrsb (optional)**

Incoming rotated signaling link selection (SLS) bit. The bit (1–4 for ITU and 1 – 8 for ANSI linksets) to rotate as the new SLS LSB (Least Significant Bit) of the incoming linkset. The SLS is not modified in the outgoing message.

[Table 4-32](#) shows how the rotation affects the four bits of the ITU SLS during linkset selection:

If This Bit is Selected...	Then Bit Locations 4 3 2 1 Are Rotated To...	Description
Bit 4	3 2 1 4	SLS = 0110 becomes Rotated SLS = 1100 SLS = 1011 becomes Rotated SLS = 0111
Bit 3	2 1 4 3	SLS = 0110 becomes Rotated SLS = 1001 SLS = 1011 becomes Rotated SLS = 1110
Bit 2	1 4 3 2	SLS = 0110 becomes Rotated SLS = 0011 SLS = 1011 becomes Rotated SLS = 1101
Bit 1	No rotation is performed because bit 1 is the existing LSB	-

[Table 4-33](#) shows how the rotation affects the eight bits of the ANSI SLS during linkset selection:

If This Bit is Selected...	Then Bit Locations 8 7 6 5 4 3 2 1 Are Rotated To...	Description
Bit 8	7 6 5 4 3 2 1 8	SLS = 10010110 becomes Rotated SLS = 00101101 SLS = 11001011 becomes Rotated SLS = 10010111

If This Bit is Selected...	Then Bit Locations 8 7 6 5 4 3 2 1 Are Rotated To...	
Bit 7	6 5 4 3 2 1 8 7	SLS = 10010110 becomes Rotated SLS = 01011010 SLS = 11001011 becomes Rotated SLS = 00101111
Bit 6	5 4 3 2 1 8 7 6	SLS = 10010110 becomes Rotated SLS = 10110100 SLS = 11001011 becomes Rotated SLS = 01011110
Bit 5	4 3 2 1 8 7 6 5	SLS = 10010110 becomes Rotated SLS = 01101001 SLS = 11001011 becomes Rotated SLS = 10111100
Bit 4	3 2 1 8 7 6 5 4	SLS = 10010110 becomes Rotated SLS = 11010010 SLS = 11001011 becomes Rotated SLS = 01111001
Bit 3	2 1 8 7 6 5 4 3	SLS = 10010110 becomes Rotated SLS = 10100101 SLS = 11001011 becomes Rotated SLS = 11110010
Bit 2	1 8 7 6 5 4 3 2	SLS = 10010110 becomes Rotated SLS = 01001011 SLS = 11001011 becomes Rotated SLS = 11100101
Bit 1	No rotation is performed because bit 1 is the existing LSB.	

This parameter is used for ITU or ANSI messages on a per-linkset basis.

Range:

1 - 8

ITU linksets— 1 - 4

ANSI linksets— 1 - 8

The `rsls8=yes` parameter must be specified (see the `chg-lsopts` command) before a value greater than 5 can be specified for the `islsrsb` parameter.

Default:

1

itutfr (optional)

ITU TFR (Transfer Restricted) procedure indicator. This parameter specifies whether the TFR procedure is on or off on a per-linkset basis. This parameter is valid for ITU national linksets only.

Range:

on

off

Default:*off***l3tset (optional)**

Link timer set. This parameter value is the value that is defined with the `chg-l3t` command.

Range:*1***Default:***1***lsusealm (optional)**

IPTPS linkset alarm threshold percent. The percent of the linkset TPS (IPTPS) at which an alarm is generated to indicate that the actual linkset TPS is approaching the configured IPTPS value for the linkset.

Range:*10 - 100***Default:***100***maxslktps (optional)**

Maximum per signaling link TPS. The maximum capacity a link is permitted when sufficient unused capacity is present on the host card.

**Note:**

This parameter can only be specified for links in IPSP linksets.

**Note:**

If the HIPR2 High Rate Mode feature is turned off, then the sum of the TPS values assigned to all linksets in the system must be less than or equal to 500,000. If the HIPR2 High Rate Mode feature is turned on, then the sum of the TPS values assigned to all linksets in the system must be less than or equal to 750,000. If the HIPR2 High Rate Mode and 1M System TPS features are turned on, then the sum of the TPS values assigned to all linksets in the system must be less than or equal to 1,000,000.

Range:*25 - 12,000*

 **Note:**

The maximum value that can be specified for this parameter depends on the type of IPSP card that is used:

- E5-ENET-B card when the E5-ENET-B IPSP High Throughput feature is turned off-6500 TPS
- E5-ENET-B card when the E5-ENET-B IPSP High Throughput feature is turned on-9500 TPS
- SLIC card - 12,000 TPS

System Default:

value of `slktps/rsvdslktps` parameter

mtprse (optional)

ANSI or ITU MTP Restart equipped. This parameter specifies whether the node adjacent to the linkset is equipped with MTP Restart.

Range:

yes
equipped

no
not equipped

Default:

no

multgc (optional)

Multiple group codes. This parameter specifies whether multiple group codes can be specified.

Range:

yes

no

Default:

no

nis (optional)

Network Indicator Spare. This parameter specifies whether the Network Indicator Spare option is on or off for the specified linkset. When this option is enabled, the Network Spare value for network indicator for both ANSI and ITU-National (ITU-N) links is supported by the system.

Range:

on

off

Default:*off***ppc (optional)**

ANSI proxy point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.

The proxy point code must be a full point code.

Synonym:*ppca***Range:***000-255*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001-005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006-255*.

The point code *000-000-000* is not a valid point code.

ppc/ppca/ppci/ppcn/ppcn24/ppcn16 (optional)

Proxy Point Code

The proxy point code must be a full point code.

ppci (optional)

ITU international proxy point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code.

Range:*s-, 0-255, none*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*prefix—s**zone—0-7**area—000-255**id—0-7*

Enter *none* to delete the point code.

The point code *0-000-0* is not a valid point code.

ppcn (optional)

ITU national proxy point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (*members*) separated by dashes (*m1-m2-m3-m4*) as defined by the *chg-stpopts:npcfmti* flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc,m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code (*prefix-nnnnn, prefix-nnnnn-gc, prefix-m1-m2-m3-m4, prefix-m1-m2-m3-m4-gc*).

Range:*s-, 0-16383, aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*prefix—s-**nnnnn—0-16383**gc—aa-zz*

m1-m2-m3-m4—0-14 for each member; values must sum to 14

ppcn24 (optional)

24-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point (msa-ssa-sp)*.

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

msa—000–255

ssa—000–255

sp—000–255

ppcn16 (optional)

16-bit ITU national point code with subfields *unit number sub number area main number area (un-sna-mna)*.

Range:

000---127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

un---000---127

sna---000---15

mna---000---31

randsls (optional)

Random SLS (signaling link selection). This parameter is used to apply random SLS generation for the specified linkset.

The `randsls=perls` parameter must be specified in the `chg-stpopts` command before specifying the `randsls` parameter in the `ent-ls` command to enable random SLS generation on a per linkset basis.

Range:***off***

Disables random SLS generation on a specified linkset.

class0

Enables random SLS generation for Class0 SCCP traffic on a specified linkset.

all

Enables random SLS generation for Class0 and Class1 SCCP traffic on a specified ITU linkset and for Class0 and ISUP traffic on a specified ANSI linkset.

Default:

off

rcontext (optional)

Routing context. The new routing context for an IPSP-M3UA linkset.

Range:

0 - 4294967295

System Default:

none

scrn (optional)

Gateway screening screen set. The gateway screening screen set assigned to this linkset.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters

none —Deletes screen set association with the linkset

s1ktps (optional)

Reserved per signaling link TPS for IPSP Linkset. The capacity guaranteed to each link in the linkset.

 **Note:**

This parameter is required for each link in an IPSP linkset. The parameter cannot be specified for links in non-IPSP linksets. The guaranteed capacity for the links hosted by an IPSP card cannot exceed the IPSP card capacity.

 **Note:**

If the HIPR2 High Rate Mode feature is turned off, then the sum of the TPS values assigned to all linksets in the system must be less than or equal to 500,000. If the HIPR2 High Rate Mode feature is turned on, then the sum of the TPS values assigned to all linksets in the system must be less than or equal to 750,000. If the HIPR2 High Rate Mode and 1M System TPS features are turned on, then the sum of the TPS values assigned to all linksets in the system must be less than or equal to 1,000,000.

Synonym:

rsvdsktps

Range:

0 - 12,000

 **Note:**

The maximum value that can be specified for this parameter depends on the type of IPSPG card that is used:

- E5-ENET-B card when the E5-ENET-B IPSPG High Throughput feature is turned off-6500 TPS
- E5-ENET-B card when the E5-ENET-B IPSPG High Throughput feature is turned on-9500 TPS
- SLIC card - 12,000 TPS

s1kusealm (optional)

IPTPS signaling link alarm threshold percent. The percent of the link TPS at which an alarm is generated to indicate that the actual link TPS is approaching the alarmed IPTPS (*s1ktps/rsvds1ktps* or *maxs1ktps*) configured for the link.

System Default:

80

s1sci (optional)

5-bit to 8-bit SLS conversion indicator. This parameter specifies whether the 5-bit to 8-bit SLS conversion feature is used to select links for outgoing messages direct to the given linkset. When enabled, the system replaces any 5-bit SLS values contained in received messages, with a random 8-bit value before the 5-bit SLS values are used by the STP to select the outgoing link in that linkset.

Range:

yes
enabled

no
disabled

Default:

no

s1socbit (optional)

Other CIC (Circuit Identification Code) Bit. If the SLSOCB feature is turned on, this parameter specifies whether the Other CIC Bit option is to be used during link selection. If the option is to be used, specify which bit (5– 16) of the CIC is to be used as the other CIC bit. During link selection, the specified bit acts as the most significant bit of the new SLS and bits 2 through 4 of the received CIC become the least significant bits of the new SLS. This parameter is used for ITU-ISUP messages. The SLS is not modified in the outgoing message. The following example shows a received CIC where bit 9 is the other CIC bit (*s1socbit=9*). The new SLS is 0100.

16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1
0	0	0	0	1	0	0	0	1	0	0	1	1	0	0	1
New SLS							0					1	0	0	

Range:

5 - 16, none

Default:*none***s1srsb (optional)**

Rotated signaling link selection (SLS) bit. The bit (1–4) to rotate as the new SLS Least Significant Bit (LSB). The SLS is not modified in the outgoing message. [Table 4-35](#) shows how the rotation affects the four bits of the SLS during linkset selection:

If This Bit is Selected...	Then Bit Locations 4 3 2 1 Are Rotated To...	Description
Bit 4	3 2 1 4	SLS = 0110 becomes Rotated SLS = 1100 SLS = 1011 becomes Rotated SLS = 0111
Bit 3	2 1 4 3	SLS = 0110 becomes Rotated SLS = 1001 SLS = 1011 becomes Rotated SLS = 1110
Bit 2	1 4 3 2	SLS = 0110 becomes Rotated SLS = 0011 SLS = 1011 becomes Rotated SLS = 1101
Bit 1	No rotation is performed because bit 1 is the existing LSB	-

This parameter is used for ITU messages on a per-linkset basis.

Range:*1 - 4***Default:***1***s1tset (optional)**

SLTM record. The SLTM record to be associated with the linkset.

Range:*0 - 20**0* –sets the linkset to SLT reflect mode**Default:***1 - ANSI**2 - ITU***spc (optional)**

ANSI secondary point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*. The *prefix* subfield indicates a private point code (*prefix-ni-nc-ncm*).

Range:*000-255*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When `chg-sid:pctype=ansi` is specified, `ni = 000` is not valid.

When `chg-sid:pctype=ansi` is specified, `nc = 000` is not valid if `ni = 001–005`.

When `chg-sid:pctype=ansi` is specified, `nc = 000` is valid if `ni = 006–255`.

The point code `000-000-000` is not a valid point code.

spc/spca/spci/spcn/spcn24/spcn16 (optional)

Secondary point code.

spci (optional)

ITU international secondary point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*).

Range:

s-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s*

zone—0-7

area—000-255

id—0-7

The point code `0-000-0` is not a valid point code.

spcn (optional)

ITU national secondary point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the `chg-stpopts:npcfmti` flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc,m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

Range:

s-, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s-*

nnnnn—0-16383

gc—*aa-zz*

m1-m2-m3-m4—0-14 for each member; values must sum to 14

spcn24 (optional)

24-bit ITU national secondary point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*).

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

msa—000–255

ssa—000–255

sp—000–255

spcn16 (optional)

16-bit ITU national point code with subfields *unit number sub number area main number area* (*un-sna-mna*).

Range:*000--127*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*un---000---127**sna---000---15**mna---000---31***tpsalmtype (optional)**

IPSG IPTPS threshold alarm type. The IPTPS threshold that can be alarmed.

Range:*slktps*

the SLKTPS/RSVDSLKTPS threshold is alarmed

maxslktps

the MAXSLKTPS threshold is alarmed

System Default:*slktps***visualizedata (optional)**

Linkset based Visualization option.

Range:*off*

Visualization is off on this linkset

risky

Only risky opcodes (based on FS11) will be visualize on this linkset

all

All opcodes will be visualize on this linkset

System Default:*off***Example**

Adds linkset WY64438 with APC 144-201-1 AND LIST C:

```
ent-ls:lsn=wy644368:apc=144-201-001:lst=c
```

Adds linkset LSITUA1 with APCN 5 and LST C. The APCN uses a four-part format where the maximum number of bits in each position is defined by the `chg-stpopts:npcfmti` parameter:

```
ent-ls:lsn=lsitua1:apcn=5-5-5-1:lst=c
```

Adds linkset EXP123 with APCN 2-3-4-5-aa, which has a duplicate point code group of *aa* and linkset type *a*. The ITU national duplicate point code (ITUDUPPC) feature is turned on, so the ITU national point code contains a group code:

```
ent-ls:lsn=exp123:apcn=2-3-4-5-aa:lst=a
```

Add a linkset in which all applicable MSUs arriving on the linkset are screened using the GSM MAP screening feature:

```
ent-ls:lsn=lsitu1:apcn=5000:lst=a:gsmscrn=on
```

Adds linkset LSN24 with 24-bit ITU-N APCN24 10-100-10 and linkset type a:

```
ent-ls:lsn=lsn24:apcn24=10-100-10:lst=a
```

Adds linkset LSA2 with private APC p-1-2-4:

```
ent-ls:lst=a:lsn=lsa2:apc=p-1-2-4
```

Adds linkset LSN410234 with private and spare APCN ps-1-1-1-2047-aa:

```
ent-ls:lst=b:lsn=lsn410234:apcn=ps-1-1-1-2047-aa
```

Adds linkset LSI00001 with spare APCI s-1-1-209-7:

```
ent-ls:lst=b:lsn=lsi00001:apci=s-1-1-209-7
```

Adds linkset LSN24 with APCN24 10-100-10 with an APCNTYPE of *itunchina* and linkset type a:

```
ent-ls:lsn=lsn24:apcn24=10-100-10:lst=a:apcntype=itunchina
```

Adds linkset LSA using the global title translation mode CGACDCD:

```
ent-ls:lsn=lsa:lst=a:apca=1-1-1:gttmode=cgacdcd
```

Enables random SLS generation for Class0 and Class1 SCCP traffic on ITU linkset LSA:

```
ent-ls:lsn=lsa:lst=a:apci=1-1-2:randsls=all
```

Adds a linkset in which calling party global title modification is required for all GT routed MSUs arriving on the linkset:

```
ent-ls:lsn=ls2:apc=2-2-2:lst=a:cggmod=yes
```

Adds an IPSG-M3UA linkset:

```
ent-  
ls:lsn=ls1201:apc=10-10-10:lst=a:adapter=m3ua:ipsg=yes:slktps=1  
00
```

Adds an IPSG-M2PA linkset:

```
ent-ls:lsn=lsm2pa:apc=5-6-7:lst=c:ipsg=yes:slktps=300
```

Adds a linkset and sets the Incoming SLS Bit Rotation on the 2nd Bit:

```
ent-ls:lsn=lsa:lst=a:apci=1-1-2:islsrsb=2
```

Adds linkset LSA using GTT mode FCDFCG when the Flexible Option Based Routing (FLOBR) feature is turned on:

```
ent-ls:lsn=lsa:lst=a:apca=1-1-1:gttmode=fcdfcg
```

Adds ANSI linkset LSA and sets the Incoming SLS Bit Rotation to the 6th bit (the 6th bit in the SLS is used as the LSB):

```
ent-ls:lsn=lsa:lst=a:apca=1-1-1:islsrsb=6
```

Converts the linkset to SLT reflect mode:

```
ent-ls:lsn=ls1:lst=a:apca=1-1-1:sltset=0
```

Add linkset LS1 with 16-bit ITU-N APCN16 120-11-12 and sets linkset to SLT reflect mode:

```
ent-ls:lsn=ls1:lst=a:apcn16=120-11-12:sltset=0
```

Add linkset ls113 with gnameset=seta

```
ent-ls:lsn=ls113:gnameset=seta
```

Add linkset ls113 with cgpnblset=5

```
ent-ls:lsn=ls113:cgpnblset=5
```

Dependencies

The value specified for the `apc` parameter must be a full point code.

2859 E2859 Cmd Rej: Destination address must be a full point code

The specified adjacent point code cannot exist as an alias point code.

2332 E2332 Cmd Rej: Point code defined as an alias

If the `gwsa=on`, `gwsn=on`, and `gwsd=on` parameters are specified, the `scrn` parameter must be specified.

2336 E2336 Cmd Rej: GWSA, GWSM, GWSD are invalid without SCRSET specified

The specified adjacent point code cannot be the same as the self-ID destination point code of the STP.

2168 E2168 Cmd Rej: Point code matches a STP point code

The specified adjacent point code cannot be the same as any self-ID capability point codes of the STP.

2167 E2167 Cmd Rej: Point code matches a STP capability point code

If the system is configured for ANSI point codes, and the `nc=0` parameter is specified, then the value of the `ni` parameter must be 6 or greater.

2169 E2169 Cmd Rej: Point code out of range

The specified linkset name cannot already exist in the database.

2345 E2345 Cmd Rej: Linkset already defined

The specified adjacent point code cannot be assigned to any other linkset.

2343 E2343 Cmd Rej: Linkset APC/SAPC is already being used

The maximum number of linksets that can be defined in the system is 1024.

2347 E2347 Cmd Rej: Linkset table full

The specified screen set (`scrn` parameter) must exist in the database.

2361 E2361 Cmd Rej: Screen set name not defined

If the `gwsd=on` parameter is specified, the `gwsa=on` parameter must be specified.

2337 E2337 Cmd Rej: If GWSA=OFF then GWSD must also be OFF

If a destination point code matching the specified far-end point code exists, the far-end CLLI for the given linkset must match the destination identifier (DI) of that matching destination.

2335 E2335 Cmd Rej: CLLI is not identical to that of matching Destination

The `mtprse` parameter can be specified only if the MTP Restart feature MTPRS (for ANSI) is turned on. The `rtrv-feat` command can be used to verify whether the feature is turned on (`mtprs=yes` in the output).

2834 E2834 Cmd Rej: MTPRSE parameter is only valid if MTPRS feature is ON

If the `ipgwapc=yes` parameter is specified or the `ipsg=yes` and the `adapter=m3ua` parameters are specified, then the `mtprse=yes` parameter cannot be specified.

3781 E3781 Cmd Rej: MTP restart option invalid for IPGWx and IPGS-M3UA linksets

The `asl8=yes` parameter can be assigned only to an ANSI linkset (a linkset containing an adjacent point code in the SS7 domain).

2848 E2848 Cmd Rej: ASL8 is only valid for ANSI link sets

The `apcntype` parameter can be specified only for ITU-N and ITU-N24 linksets.

4278 E4278 Cmd Rej: APCNTYPE parameter is only valid for ITUN/ITUN24 link sets

The Other CIC (Circuit Identification Code) Bit Used feature (SLSOCB) feature must be turned on before the `slocbit` parameter can be specified.

3863 E3863 Cmd Rej: SLSOCBIT parameter not permitted if SLSOCB Feature is OFF

The `slocbit` parameter is valid only for ITU linksets.

3862 E3862 Cmd Rej: SLSOCBIT parameter is only valid for ITU Link Sets

The `slrsrb` parameter is valid only for ITU linksets.

3864 E3864 Cmd Rej: SLRSRB parameter is only valid for ITU Link Sets

The GSM Map Screening feature must be turned on (see the `enable/chg-ctrl-feat` commands) before the `gmscrn` parameter can be specified.

3883 E3883 Cmd Rej: GSM Map Screening feature must be ON

The `itutfr` parameter is valid only for ITU linksets.

3871 E3871 Cmd Rej: ITUTFR parameter is only valid for ITU link sets

The ITU National Duplicate Point Code (ITUDUPPC) feature must be turned on before the `multgc=yes` parameter can be specified.

4039 E4039 Cmd Rej: MULTGC=YES not allowed if ITUDUPPC feature is OFF

The `multgc=yes` parameter is valid only for ITU-N or ITU-I point codes.

4060 E4060 Cmd Rej: MULTGC=YES requires ITU-N or ITU-I point code

If the HIPR2 High Rate Mode feature is turned off, then the sum of the TPS values assigned to all linksets in the system must be less than or equal to 500,000. If the HIPR2 High Rate Mode feature is turned on, then the sum of the TPS values assigned

to all linksets in the system must be less than or equal to 750,000. If the HIPR2 High Rate Mode and 1M System TPS features are turned on, then the sum of the TPS values assigned to all linksets in the system must be less than or equal to 1,000,000.

4255 E4255 Cmd Rej: Total provisioned system TPS limit exceeded

The `ipgwapc=yes` or the `ipsg=yes` parameter must be specified before the `lsusealm` parameter can be specified.

4253 E4253 Cmd Rej: LSUSEALM allowed only for IPGWx and IP SG linksets

The `ipgwapc=yes` or the `ipsg=yes` parameter must be specified before the `slkusealm` parameter can be specified.

4254 E4254 Cmd Rej: SLKUSEALM allowed only for IPGWx and IP SG linksets

The Enhanced GSM Map Screening feature must be turned on before the `gmsmcrn=on` parameter can be specified for an ANSI linkset.

4285 E4285 Cmd Rej: Enhanced GSM Map Screening feature must be ON

The `mtpmse` parameter can be specified only if the MTP Restart feature ITUMTPRS (for ITU), is turned on. The `rtrv-feat` command can be used to verify whether the feature is turned on (`itumtps=yes` in the output).

3851 E3851 Cmd Rej: MTPRSE parameter is only valid if ITUMTPRS feature is ON

The STP Site ID table is corrupt or cannot be found.

2874 E2874 Cmd Rej: Failed reading site identification table

The Linkset table is corrupt or cannot be found.

2122 E2122 Cmd Rej: Failed reading linkset table

The Route table is corrupt or cannot be found.

2648 E2648 Cmd Rej: Failed reading the route table

The MAS Configuration table is corrupt or cannot be found.

2145 E2145 Cmd Rej: Failed reading MAS configuration table

A point code cannot be assigned to a linkset as an APC if the point code has been provisioned with exception routes.

4369 E4369 Cmd Rej: Cannot assign APC with exception routes to linkset

The Route Exception table is corrupt or cannot be found.

4379 E4379 Cmd Rej: Failed to access Route Exception Table

The Origin-based SCCP Routing feature must be turned on before the `gtmode` parameter can have a value of `acdc`, `cgacdc`, `acdcgc`, `acdcgcg`, `cgcd`, `cdcg`, or `cg`.

5096 E5096 Cmd Rej: Origin Based SCCP Routing feature must be ON.

If APCN is specified for the Adjacent Point Code then the format of APCN must match the format dictated by the NPCFMTI parameter via the CHG-STPOPTS command.

2055 E2055 Cmd Rej: Incorrect information unit, expecting point code- <parm>

The value of the `dpc/dpca/dpci/dpcn/dpcn24/dpcn16` parameter must exist in the Destination Point Code table.

2657 E2657 Cmd Rej: Point code not defined

The `gsmscrn` parameter can be specified only for ITU linksets.

3900 E3900 Cmd Rej: GSM Map Screening feature must be enabled

The value specified for the `spc` parameter must be a full point code.

3822 E3822 Cmd Rej: SPC must be a full point code

If the Multiple Linksets to a Single Adjacent Point Code (MLS) feature is enabled and turned on, then a maximum of 6 non-IPGW linksets can be created using the same adjacent point code.

4632 E4632 Cmd Rej: Max linksets to same APC exceeded

The values specified by the `spc` and `apc` parameters must have the same network type.

3821 E3821 Cmd Rej: SPC & DPC must be the same network type

The Multiple Linksets to a Single Adjacent Point Code (MLS) feature must be turned on before the `spc` parameter can be specified.

4631 E4631 Cmd Rej: Multiple Linksets to Single Adjacent PC feature must be ON

The value specified by the `spc` parameter must already exist in the SPC table.

3814 E3814 Cmd Rej: SPC does not exist

The SPC table must be accessible.

3807 E3807 Cmd Rej: Failed reading Secondary Point Code (SPC) table

The specified combination of the `apc` and `spc` parameters must be unique for each linkset.

4760 E4760 Cmd Rej: Linkset APC/SPC pair is already being used

The value specified for the `spc` parameter cannot already be specified as a secondary point code for an adjacent destination point code.

4636 E4636 Cmd Rej: SPC may not exist as an SPC in the route table for the APC

The Proxy Point Code feature must be enabled before the `lst=prx` parameter can be specified.

4695 E4695 Cmd Rej: LST=PRX is valid only if PPC feature is enabled

The Proxy Point Code feature must be enabled before the `ppc` parameter can be specified.

4678 E4678 Cmd Rej: PPC allowed only if PPC feature is enabled

The value specified for the `ppc` parameter must be a full point code.

4696 E4696 Cmd Rej: PPC must be a full point code

The `lst=prx` parameter must be specified before the `ppc` parameter can be specified. If the `lst=prx` parameter is specified, then the `ppc` parameter must be specified.

4689 E4689 Cmd Rej: PPC must be specified if and only if linktype is PRX

The values specified for the `apc` and `ppc` parameters must have the same network type.

4697 E4697 Cmd Rej: PPC and APC must be of the same network type

The values specified for the `apc` and `ppc` parameters must have the same group code.

4698 E4698 Cmd Rej: Group code of PPC and APC must match

The `spc` and `ppc` parameters cannot be specified together in the command.

4694 E4694 Cmd Rej: APC must not use SPC and PPC together

The `ppc` parameter cannot be specified for more than 10 linksets.

4690 E4690 Cmd Rej: Cannot use one PPC for more than 10 linksets

Two adjacent point codes cannot reference each other as proxy point codes.

4691 E4691 Cmd Rej: Two point codes must not refer each other as PPC

The `apc` parameter and the `prx=yes` parameter must be specified before the `ppc` parameter can be specified.

4724 E4724 Cmd Rej: Proxy PC not defined in route(dstn) table

A valid value must be specified for the `lst` parameter.

2044 E2044 Cmd Rej: <parm_desc> value is undefined - <parm>

The `spc` and `ppc` parameters cannot be specified together in the command.

4681 E4681 Cmd Rej: SPC and PPC are mutually exclusive

All of the linksets for an adjacent destination point code must be of the same type.

4758 E4758 Cmd Rej: Linkset types must match for all linksets to the same APC

The specified combination of the `apc` and `ppc` parameters must be unique for each linkset.

4729 E4729 Cmd Rej: Linkset APC/PPC pair is already being used

The value specified for the proxy point code must be defined in the Destination table before the `lst=prx` parameter can be specified.

4688 E4688 Cmd Rej: LST=PRX if & only if APC uses PPC in route(dstn) table

If multiple linksets are defined for the `apc` parameter, and if a proxy point code is defined for the `apc` parameter, then the first linkset defined in the `ent-ls` command must use the proxy point code.

4692 E4692 Cmd Rej: One LS must use PPC assigned to APC in route(dstn) table

The AMGTT feature or the AMGTT CgPA Upgrade feature must be turned on before the `cggmod` parameter can be specified.

4789 E4789 Cmd Rej: Either AMGTT or AMGTT CgPA Upgrade feature must be ON

The `ipsg=yes` parameter must be specified before the `adapter` parameter can be specified.

4658 E4658 Cmd Rej: ADAPTER can only be specified when IPSP=YES

The `ipsg=yes` and `adapter=m3ua` parameters must be specified before the `asnotif` parameter can be specified.

4666 E4666 Cmd Rej: ASNOTIF prohibited unless IPSP=YES and ADAPTER=M3UA

The `ipsg=yes` and the `adapter=m3ua` parameters must be specified before the `rcontext` parameter can be specified.

4659 E4659 Cmd Rej: RCONTEXT prohibited unless IPSP=YES and ADAPTER=M3UA

If the `ipsg=yes` parameter is specified, then the `slktps/rsvdslktps` or `maxslktps` parameter must be specified.

4812 E4812 Cmd Rej: SLKTPS is required for IPSP linksets

The `ipsg=yes` parameter must be specified before the `slktps/rsvdslktps` or `maxslktps` parameter can be specified.

4811 E4811 Cmd Rej: SLKTPS is prohibited for non-IPSP linksets

The `ipsg=yes` and `adapter=m3ua` parameters must be specified before the `lst=a` parameter can be specified.

4667 E4667 Cmd Rej: IPSP=YES and ADAPTER=M3UA requires LST=A

A maximum of one IPGW linkset or a maximum of 6 of any other linksets are allowed between any APC and the EAGLE.

4632 E4632 Cmd Rej: Max linksets to same APC exceeded

If the `ipsg=yes` and `adapter=m3ua` parameters are specified, then the `multgc=yes` parameter cannot be specified.

4826 E4826 Cmd Rej: MULTGC is prohibited on IPSP-M3UA linksets

The ISLSBR feature must be enabled before the `islsrsb` parameter can be specified.

5025 E5025 Cmd Rej: islsrsb is valid only if ISLSBR Feature is enabled

The FLOBR feature must be turned on before a value of `fcd`, `fcg`, `fcgfc`, or `fcdfcg` can be specified for the `gttmode` parameter.

5060 E5060 Cmd Rej: Flexible Linkset Optional Based Routing must be ON

The SAPC table is corrupt or cannot be found.

3282 E3282 Cmd Rej: Failed reading the SAPC table

The `rsls8=yes` parameter (see the `chg-lsopts` command) must be specified for an ANSI linkset before a value greater than 5 can be specified for the `islsrsb` parameter.

5089 E5089 Cmd Rej: ISLSRSB value must be < 6 when RLS8 is no

If an ITU linkset is used, then a value of 1 – 4 must be specified for the `islsrsb` parameter.

5044 E5044 Cmd Rej: For ITU link sets, ISLSRSB must be in the range (1-4)

The value specified for the `slktps/rsvdslktps` parameter must be less than or equal to the value specified for the `maxslktps` parameter.

5075 E5075 Cmd Rej: SLKTPS/RSVDSLKTPS must be less than or equal to MAXSLKTPS

The value specified for the `ppc` parameter must already exist in the DSTN table and the `prx=yes` parameter must be assigned (see the `ent-dstn` command).

4728 E4728 Cmd Rej: PPC destination in route(dstn) table is not proxy

The `sltset=0` parameter can be specified only for a type A linkset (`lst=a`).

5412 E5412 Cmd Rej: Linkset type must be A for SLTSET=0

The value specified for the `slktps/rsvdslktps` and `maxslktps` parameters must be within the allowed range.

4806 E4806 Cmd Rej: TPS exceeded allowed range

The ITUTFR **cannot** be specified for a linkset to be configured for APCN16.

3047 E3047 Cmd Rej: Parameter combination invalid.

The NIS **cannot** be specified for a linkset to be configured for APCN16.

3047 E3047 Cmd Rej: Parameter combination invalid.

The PPC specified must not be a private point code.

4722 E2722 Cmd Rej: PPC not supported for Private PC

The MTP Restart Equipped (MTPRSE) parameter is only valid for adjacent ANSI nodes in the SS7 domain.

2835 E2835 Cmd Rej: MTPRSE is only valid in the SS7 domain

The adapter type specified must be either `m3ua` or `m2pa`.

4074 E4074 Cmd Rej: Could not locate adapter type

Notes

Of the 1024 maximum linksets supported, up to 255 of the linksets can be gateway linksets.

The system supports a maximum of 2800 links and all of them can be used at one time.

The links that directly connect the system with an adjacent node are grouped into one or more linksets. A linkset can contain up to 8 (international standards) or 16 (national standards) signaling links, depending on how the system was configured when the network was created.

Each linkset must be assigned the same physical links at both ends of the link (local and adjacent signaling points) and each link must be assigned the same link number.

Signaling link acknowledgments (SLTA) are the same type of maintenance message as the SLTMs received on the link.

If the `gwsa=off` and `gws=off` parameters are specified, all MSUs are passed.

If the `gwsa=off` and `gwsm=off` parameters are specified for all linksets, gateway screening and the GWS redirect function for the DTA feature are disabled.

If the `gwsa=off` and `gwsm=on` parameters are specified, all MSUs pass, but MRNs are generated if an MSU matches a screening condition.

If the `gwsa=on` and `gwsm=off` parameters are specified, MSUs are screened but messages are not generated.

If the `gwsa=on` and `gwsm=on` parameters are specified, MSUs are screened and MRNs are generated at the rate of one MRN every 20 seconds per link.

If the `asl8=yes` parameter is specified with the `lst=a` parameter (a linkset containing access signaling links), this indicates that the originator of the MSUs is generating 8-bit SLSs. For other linkset types, the `asl8=yes` parameter indicates that the adjacent STP is converting 5-bit SLSs to 8-bit SLSs. The SLS in MSUs received by the system on a linkset that has the `asl8=yes` parameter assigned to it will not be converted. These MSUs are assumed to contain 8-bit SLSs.

The Network Indicator Spare (`nis`) parameter can be specified only for ANSI and ITU-N links.

The `mtprse` parameter value can be specified independently of the value specified on the `mtprsi` parameter of the `chg-stpopts` command.

The MTP restart option (`mtprse`) is not a valid option on point-to-multipoint IP links (DCM cards equipped as SS7IPGW links).

When two linksets are used as a combined linkset, each linkset must have the same `slsci` and `asl8` values and the same `slsocbit` and `slsrsb/slsrsb` values.

Caution:

This is not enforced in the system and there is no warning mechanism if the values of these parameters are not the same for each linkset.

MTP restart provides an orderly process for bringing signaling links back into service after the system has been isolated and restarted. A greater preference is given to restoring the STP to network service in an orderly fashion than to the speed of recovery. The time required is system dependent as shown:

- up to 64 LIMs—62 seconds (Link Alignment Delay)
- 64 - 127 LIMs—97 seconds
- 128 - 191 LIMs—132 seconds
- more than 191 LIMs—167 seconds

The `slsrsb` parameter alone does not provide an even distribution of ITU-ISUP messages across all links within a linkset. The system uses all four bits of the SLS to determine the actual link to route messages. Because the static bit is simply rotated within the SLS, all possible values of the SLS field are still not realized. The `slsocbit` parameter must also be specified to provide an even distribution across all links within the linkset. If both parameters are specified for a given linkset, the SLS field is processed in the following order.

- The SLS is modified using the Other CIC Bit option.

- The modified SLS is modified again using the Rotated SLS Bit option.
- The modified SLS is used by the existing linkset and link selection algorithms to select a link
- The ISUP message is sent out the link containing the original, unmodified SLS field.

If the ITU National Duplicate Point Code (ITUDUPPC) feature is turned on, for each group that is defined, a separate ITU national C linkset must be provisioned. The C linkset is used as the alternate route for point codes in the group.

In this command, only ITU-international and ITU national point codes support the spare point code subtype prefix (s-) and the private and spare point code subtype prefix (ps-). All point code types support the private (internal) point code subtype prefix (p-).

The ITU National and ITU National China Adjacent Point Code types indicate the format that is used for changeover and changeover acknowledgement messages. China specifies a 16-bit field for data in changeover messages. The FSN occupies the first 12 bits. The trailing 4 bits are spare and are coded as 0. ITU uses a 24-bit field for data in the extended changeover/changeover acknowledgement messages. The FSN is encoded in the first 12 bits. The last 12 bits of the field are spare and are coded as zero.

The `randsls` parameter value applies to SCCP ITU-T messages and Class0 and ISUP ANSI messages when random SLS generation is set to occur on a per linkset basis (the `randsls=perls` parameter is specified in the `chg-stpopts` command).

If the `randsls=perls` parameter is specified in the `chg-stpopts` command, it is recommended that the linksets in a combined linkset be provisioned with the same `randsls` value to avoid undesired SLS distribution.

The value specified for the `ppc` parameter must be a full point code. Cluster point codes and private point codes are not supported.

Invalid point codes (ANSI network = 0) can be used for the adjacent point code of an IPGWx linkset. Private point codes (p-) can be used for IPGWx linksets, as adjacent point codes (`ent-ls:apc=xxx`) or internal point codes (`ent-rmt-appl:ipc=xxx`). Ordinary point codes can be used in all cases as APCs or IPCs.

If the ISLSBR feature is turned on, and Incoming SLS Bit Rotation is applied to an MSU, then the outgoing SLS bit rotation is not applied for that MSU. If the ISLSBR feature is turned off, or Incoming SLS Bit Rotation is not applied to an MSU, then the outgoing SLS bit rotation is applied for that MSU.

The valid ISLSRSB values for ITU link sets are 1 – 4 and for ANSI link sets are 1 – 8.

The `randsls` parameter is applied on an incoming linkset for ANSI messages and on an outgoing linkset for ITU messages.

The `chgntp3opc` parameter is applied on the outgoing linkset.

The `chgntp3opc` parameter will be nullified if the `sccpopts:mtprggt` option is set to `fullggt`.

Output

```
ent-ls:lsn=lsa:lst=a:apca=1-1-1:gttmode=fcdfcg
```

```
tekelecstp 09-03-22 12:14:11 EST EAGLE 41.0.0

4.1.326 ent-map

Use this command to create new entries in the MAP table, which allow the assignment of mated applications and Alternate RI Mate searches for use with SCCP network management. A mated application is used if the local application becomes unavailable. An Alternate RI Mate is used if all mated applications within a MAP Set become unavailable or congested.

Note:

A MAP set is a logical grouping of a set of PC/SSNs that already exist in the EAGLE MAP table. The Flexible GTT Load Sharing (FGTTLs) feature allows a PC/SSN combination to be part of more than one load-sharing group, with each PC/SSN combination defined by a different MAP set.

Note:

If the FGTTLs feature is enabled, then all existing entries in the MAP table and all existing GTA translations in the GTT table with ri=ssn are stored in default MAP sets. Additional MAP sets can be provisioned, and GTT entries can be associated to the MAP sets.

Note:

The GTT Load Sharing with Alternate Routing Indicator (GTT LS ARI) feature must be enabled to provision Alternate RI Mates.

Parameters

Note:

See [Point Code Formats and Conversion](#) for a detailed description of point code formats, rules for specification, and examples.

pc (mandatory)

ANSI point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.

Synonym:

pca

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001–005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006–255*.

The point code *000-000-000* is not a valid point code.

pc/pca/pci/pcn/pcn24/pcn16 (mandatory)

Primary remote point code.

pci (mandatory)

ITU international point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*).

Range:

s-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s

zone—0-7

area—000-255

id—0-7

The point code *0-000-0* is not a valid point code.

pcn (mandatory)

ITU national point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the *chg-stpopts:npcfmti* flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc,m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

Range:

s-, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s-

nnnnn—0-16383

gc—aa-zz

m1-m2-m3-m4—0-14 for each member; values must sum to 14

pcn24 (mandatory)

24-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point (msa-ssa-sp)*.

Range:*000-255*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*msa—000–255**ssa—000–255**sp—000–255***pcn16 (mandatory)**

16-bit ITU national point code with subfields *unit number-sub number area-main number area* (*un-sna-mna*).

Range:*000---127*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (--).

*un---000---127**sna---000---15**mna---000---31***ssn (mandatory)**

Subsystem number. The application's subsystem number. This attribute is composed of the decimal representation of the 1-byte field used in the SS7 protocol.

Range:*2 - 255***grp (optional)**

Concerned point code broadcast list (CSPC) group name. The name of a group of point codes that should be notified of the subsystem status. A different CSPC group can be assigned to each mated PC/SSN. For ANSI, the EAGLE broadcasts SSP or SSA to the mate subsystem only if the mate's point code is provisioned as part of the CSPC group to receive an SSP or SSA. This parameter must be provisioned for a node if the node is to receive SSP or SSA broadcasts, even if the node is a mated application.

Range:*ayyyyyyy*

1 alphabetic character followed by up to 7 alphanumeric characters

Default:

Current value.

 **Note:**

If the `grp` parameter value is specified, and the specified point code and SSN is assigned to multiple mated applications, the `grp` value for all mated applications containing the specified point code and SSN will be changed to the values specified in this procedure.

mapset (optional)

MAP Set ID.

Range:

dflt

new

Default:

dflt if the FGTTLS feature is not enabled

materc (optional)

Mate relative cost. The RC assigned to the mate PC/SSN that is being added to the entity set. The EAGLE determines the multiplicity mode based on the relative costs (the `rc` and `materc` parameters) of the subsystem.

Range:

0 - 99

Default:

50

mpc (optional)

ANSI point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.

Synonym:

mpca

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When `chg-sid:pctype=ansi` is specified, *ni = 000* is not valid.

When `chg-sid:pctype=ansi` is specified, *nc = 000* is not valid if *ni = 001–005*.

When `chg-sid:pctype=ansi` is specified, *nc = 000* is valid if *ni = 006–255*.

The point code *000-000-000* is not a valid point code.

Default:

000

mpc/mpca/mpci/mpcn/mpcn24/mpcn16 (optional)

Mate remote point code.

mpci (optional)

ITU international destination point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*).

Range:

s-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s*

zone—0-7

area—000-255

id—0-7

The point code 0-000-0 is not a valid point code.

Default:

0-000-0

mpcn (optional)

ITU national point code with subfield ITU number (*nnnnn*). The *prefix* subfield indicates a spare point code.

Range:

s-, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s*-

nnnnn—0-16383

gc—*aa-zz*

m1-m2-m3-m4—0-14 for each member; values must sum to 14

Default:

00000

mpcn24 (optional)

24-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*).

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

msa—000-255

ssa—000-255

sp—000-255

Default:

000

mpcn16 (optional)

16-bit ITU national point code with subfields *unit number-sub number area-main number area* (*un-sna-mna*).

Range:

000---127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (--).

un---000---127

sna---000---15

mna---000---31

Default:

000

mrnc (optional)

Message routing under congestion. This parameter indicates whether Class 0 messages to the specified PC/SSN can be routed to the next preferred node/subsystem when that PC/SSN is congested.

Range:

yes

no

Default:

yes —if ANSI

no —if ITU

mrnpc (optional)

ANSI point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.

Synonym:

mrnpca

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001–005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006–255*.

The point code *000-000-000* is not a valid point code.

Default:

000

mrnpc/mrnpca/mrnpai/mrnpai/mrnpai24/mrnpai16 (optional)

Alternate RI Mate point code.

mrnpai (optional)

ITU international point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*).

Range:

s-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s
zone—0-7
area—000-255
id—0-7

The point code 0-000-0 is not a valid point code.

Default:

0-000-0

mrnpcn (optional)

ITU national point code with subfield ITU number (*nnnnn*). The *prefix* subfield indicates a spare point code.

Range:

s-, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s-
nnnnn—0-16383
gc—aa-zz

m1-m2-m3-m4—0-14 for each member; values must sum to 14

Default:

00000

mrnpcn24 (optional)

24-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*).

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

msa—000-255
ssa—000-255
sp—000-255

Default:

000

mrnpcn16 (optional)

16-bit ITU national point code with subfields *unit number-sub number area-main number area* (*un-sna-mna*).

Range:

000--127

Specify a valid value for each subfield of the point, and separate the subfields with a dash (-).

un---000---127

sna---000---15

mna--000--31

Default:

000

mrnset (optional)

Alternate RI Mate MRN Set ID. The MRN Set where the Alternate RI Mate search is performed.

Range:

1 - 3000, dflt

dflt —default MRN Set

If the `mrnpc` parameter is specified, and the `mrnset` parameter is not specified, then the value for the `mrnset` parameter is automatically set to *dflt*.

mssn (optional)

Mate subsystem number. The mate application's subsystem number. This attribute is the decimal representation of the one-byte field used in the SS7 protocol.

Range:

2 - 255

Default:

Parameter is not used

mwt (optional)

Mate point code weight. The weight assigned to the mate PC/SSN that is being added to a weighted entity set.

Range:

1 - 99

rc (optional)

Relative cost. The EAGLE determines the multiplicity mode based on the relative costs (the `rc` and `materc` parameters) of the subsystem. (See *Notes* for additional information on multiplicity modes).

Range:

0 - 99

Default:

10

srm (optional)

Subsystem routing messages. This parameter specifies whether subsystem routing messages (SBR, SNR) are transmitted between the mated applications.

Note:

This value can be provisioned in any of the multiplicity modes, but its value only affects traffic if the multiplicity mode is *DOM* or *COM*. See the *Notes* section for more information on multiplicity modes.

Range:*yes**no***Default:***yes* —if ANSI*no* —if ITU**sso (optional)**

Subsystem status option. This parameter specifies whether or not the PC/SSN is to initiate a subsystem test when a RESUME is received for the PC.

Range:*on**off***Default:***off***thr (optional)**

Threshold. The in-service threshold assigned to each PC/SSN in a weighted entity set or RC group. The Weighted GTT Loadsharing feature must be turned on before this parameter can be specified.

**Note:**

If this parameter is not specified, a value of 1% is assigned to each weighted PC/SSN.

Range:*1 - 100***wt (optional)**

Weight. The weight assigned to the primary PC/SSN that is being added to the weighted entity set.

Range:*1 - 99***Example**

In this example, the `rc` parameter is not required for a solitary PC/SSN pair. If the `rc` parameter is not specified, the relative cost defaults to 10.

```
ent-map:pc=1-1-1:ssn=10:grp=xyz
```

This example enters 1 and 1 into the MAP table. The `rc` and `materc` parameters are required for this command, which defines a map group.

```
ent-
```

```
map:pc=1-1-0:ssn=10:rc=10:mpc=1-1-1:mssn=10:materc=20:grp=xyz:s  
rm=on
```

These examples enter a solitary point code in the MAP table with the Subsystem Status Option set to ON:

```
ent-map:pc=1-1-3:ssn=20:grp=abc:sso=on
```

```
ent-map:pc=2-2-3:ssn=20:grp=abc
```

This example sets the Subsystem Status Option to ON for the primary and mate:

```
ent-map:pc=1-1-4:ssn=10:rc=10:mpc=1-1-1:mssn=10:materc=20:sso=on
```

This example enters a solitary point code in the MAP table with the Subsystem Status Option set to OFF (the default):

```
ent-map:pc=1-1-6:ssn=10:rc=10:mpc=1-1-7:mssn=10:materc=20
```

This example creates a new MAP Set with Alternate RI Mate 1-1-3/1:

```
ent-
```

```
map:pc=1-1-1:ssn=15:rc=10:mpc=1-1-2:mssn=25:materc=20:mapset=new:mrnset=1:mrnpc=1-1-3
```

The following example creates a new MAP set, and enters 1 and 1 into the newly created MAP set:

```
ent-map:pc=1-1-1:ssn=10:rc=10:mpc=1-1-2:mssn=20:materc=20:mapset=new
```

The following example enters 1 and 1 into the default MAP set:

```
ent-
```

```
map:pc=1-1-1:ssn=15:rc=10:mpc=1-1-2:mssn=25:materc=20:mapset=df1t
```

The following example creates a new MAP set and enters a solitary PC/SSN value of 1:

```
ent-map:pc=1-1-1:ssn=10:mapset=new
```

This example enters a solitary PC/SSN of 1 into the default MAP set:

```
ent-map:pc=1-1-2:ssn=15:mapset=df1t
```

This example creates a new MAP set and enters a solitary PC/SSN 1 with the subsystem option ON. It specifies the `sso=on` parameter for all instances of PC/SSN 1:

```
ent-map:pc=1-1-1:ssn=10:sso=on:mapset=new
```

This example enters a solitary PC/SSN of 1 into the default MAP set with the subsystem option ON. The `sso=on` parameter is specified for all instances of PC/SSN 1:

```
ent-map:pc=1-1-3:ssn=15:sso=on:mapset=df1t
```

These examples create a weighted shared PC/SSN pair:

```
ent-
```

```
map:pc=1-1-1:ssn=10:rc=20:wt=30:mpc=1-2-1:mssn=10:materc=20:mwt=20
```

```
ent-
```

```
map:pc=1-1-1:ssn=10:rc=20:wt=30:mpc=1-2-1:mssn=10:materc=20:mwt=20:thr=40
```

This example creates a new MAP Set with a different ITU network type point code for the Alternate RI Mate PC:

```
ent-
```

```
map:pci=1-001-1:ssn=15:rc=10:mpci=1-001-2:mssn=25:materc=20:mapset=new:mrnpcn=00126:mrnset=2
```

Example for 16 bit PC:

```
ent-  
map:pcn16=1-2-3:ssn=10:rc=20:wt=30:mpcn16=1-1-1:mssn=10:materc=  
20:mwt=20:thr=40
```

Dependencies

The PC/SSN pair cannot already exist in the MAP table.

2440 E2440 Cmd Rej: Primary PC/SSN pair already exists

The specified MPC/MSSN pair cannot already exist in the MAP table.

2431 E2431 Cmd Rej: MPC/MSSN pair already exists

The `apca` and `pcn24/pcn16` parameters cannot be specified for the same MAP set. The `pci` and `pcn` parameters cannot be specified for the same MAP set if the MAP set contains a true point code.

2429 E2429 Cmd Rej: MPC network type does not match PC network type

If a subsystem is configured for a subsystem number (SSN) value in the SS-APPL table, then the specified MAP table entry for that subsystem must be a valid point code type for that subsystem. The following point code types are not valid for the indicated subsystems:

- For the INP subsystem, the True Point code cannot be an ITU-I point code.
- For the AIQ, ATINPQ, VFLEX, and EIR subsystems, the True Point code cannot be an ITU-N24 point code.

4189 E4189 Cmd Rej: Invalid PC type for the subsystem associated with SSN value.

The ANSI/ITU SCCP Conversion feature must be enabled before the network type of the CPC broadcast group can be different from the network type of the point code.

2449 E2449 Cmd Rej: CSPC group network type does not match PC network type

If the `pci`, `pcn`, or `pcn24/pcn16` parameter is specified, then the `srn=yes` parameter cannot be specified.

2424 E2424 Cmd Rej: SRM=YES cannot be entered with ITU point code types

The primary remote point code must already exist in the Route table, as a destination in the ordered route entity set, or in a cluster destination for which ordered routes are specified.

2451 E2451 Cmd Rej: Primary remote PC does not exist in routing table

If a CSPC broadcast list group name is specified, it must already exist.

2411 E2411 Cmd Rej: CSPC group does not exist

A maximum of 1024 unique remote point codes are allowed.

2454 E2454 Cmd Rej: Remote point code table is full

A maximum of 12 SSNs per remote point code can be entered.

2453 E2453 Cmd Rej: Subsystem table for primary remote point code is full

The primary subsystem DPCs must be full point codes.

2864 E2864 Cmd Rej: Address (PCx) of primary subsystem must be a full PC

The mate subsystem DPCs must be full point codes.

2865 E2865 Cmd Rej: Address (MPCx) of mate subsystem must be a full PC

The LNP, V-Flex, EIR, or INP feature must be turned on or the ANSI41 AIQ or ATINP feature must be enabled before a value that is a true point code can be specified for the `pca/mpca` parameter.

4716 E4716 Cmd Rej: LNP/VFLEX/EIR/INP must be ON or ATINP/AIQ must be enabled

The AINPQ, EIR, INP, or V-Flex feature must be turned on or the ANSI41 AIQ or ATINP feature must be enabled before a value that is a true point code can be specified for the `pcn/mpcn` parameter.

4183 E4183 Cmd Rej: INP/AINPQ/EIR/VFLEX must be ON or ATINP/AIQ must be enabled

The EIR or V-Flex feature must be turned on or the ANSI41 AIQ or ATINP feature must be enabled before a value that is a true point code can be specified for the `pai/mpai` parameter.

4717 E4717 Cmd Rej: EIR/VFLEX must be ON or ATINP/AIQ must be enabled

If the `mpc/mpca/mpci/mpcn/mpcn24/mpcn16` parameter is specified, then the value must exist in the Routing table.

2427 E2427 Cmd Rej: MPC does not exist in routing Table

If the `mssn` or `materc` parameter is specified, then the `mpc` parameter must be specified.

2432 E2432 Cmd Rej: MSSN or MATERC entered, MPC must also be given

If the `pc` parameter value is an EAGLE true point code, the subsystem must have a lower relative cost than all other mated subsystems in the group.

2990 E2990 Cmd Rej: Relative Cost (RC) of true PC must be less than RC of mate

The `ssn` parameter cannot be specified with a point code value that is the system true point code.

3466 E3466 Cmd Rej: SSO parameter is not compatible with True PC

A true point code cannot be routed to itself.

2994 E2994 Cmd Rej: True Point Code may not be routed to self

The `mpc` and `mssn` parameters cannot have the same values as the `pc` and `ssn` parameters.

2425 E2425 Cmd Rej: Mate PC/SSN cannot be same as PC/SSN

The point code must already exist in the Concerned Point Code (CSPC) group.

2414 E2414 Cmd Rej: PC does not exist in CSPC group

The number of MPC Subsystem entries must not exceed the table capacity.

2430 E2430 Cmd Rej: Subsystem table for MPC is full

The Route table is corrupt or cannot be found.

2648 E2648 Cmd Rej: Failed reading the route table

The Site Identification table is corrupt or cannot be found.

2874 E2874 Cmd Rej: Failed reading site identification table

If the Flexible GTT Load Sharing feature is not enabled, then the `mapset` parameter cannot be specified. If the Flexible GTT Load Sharing feature is enabled, then the `mapset` parameter must be specified.

4523 E4523 Cmd Rej: MAPSET must be specified (only) if FGTTLS feature is enabled

The EAGLE True PC can be provisioned only in the default MAP set.

4608 E4608 Cmd Rej: True Point Code can exist only in Default MAPSET

The Weighted GTT Loadsharing feature must be turned on before the `wt`, `mwt`, or `thr` parameters can be specified.

3370 E3370 Cmd Rej: Weighted GTT Load-Sharing feature must be ON.

If the `thr` parameter is specified, the `wt` and `mwt` parameters must be specified.

3386 E3386 Cmd Rej: WT and MWT must be specified with THR

If the `mpc` parameter is specified, the `rc` parameter must be specified.

2989 E2989 Cmd Rej: RC must be specified for PC since MPC is specified

The `wt` and `mwt` parameters must be specified together in the same command.

3387 E3387 Cmd Rej: WT and MWT must be specified together

If the `materc` parameter value equals the `rc` parameter value, a Loadshared Group is indicated, and the `rc`, `mpc`, `materc`, and `mwt` parameters must be specified.

3385 E3385 Cmd Rej: Weight can't be specified to create SOL or DOM groups.

If the `chg-sid:pctype=ansi` command is entered, a value of `ni=000` cannot be specified.

If the `chg-sid:pctype=ansi` command is entered, and a value of `ni=001 – 005` is specified, a value of `nc=000` cannot be specified.

2169 E2169 Cmd Rej: Point code out of range

If the `mpc` parameter value is a true point code, the subsystem must have a lower RC than all other mated subsystems in the entity set.

2991 E2991 Cmd Rej: Relative Cost (RC) of true MPC must be less than RC of mate

The maximum number of entries in the MAP table cannot be exceeded.

4526 E4526 Cmd Rej: MAP table is full

The maximum number of possible entries in the MAP table for the specified True Point Code cannot be exceeded. Maximum entries for the ANSI, ITU-I, and ITU-N point codes are:

- ANSI—2 (ANS41 AIQ and LNP), 4 (ANSI41 AIQ, ATINPQ, INP, and V-FLEX)
- ITU-I—4 (ANSI41 AIQ, ATINPQ, EIR, V-FLEX)
- ITU-N—5 (ANSI41 AIQ, ATINPQ, EIR, INP, and V-FLEX)

**Note:**

LNP is mutually exclusive with ATINPQ and V-FLEX, unless the Dual ExAP Config feature is enabled.

3290 E3290 Cmd Rej: True PC already exists in MAP table

If the `mwt` parameter is specified, the `mpc` parameter must be specified.

3393 E3393 Cmd Rej: MPC must be specified since MWT is specified

If the `mpc` parameter is specified, the `mssn` and `materc` parameters must be specified.

2992 E2992 Cmd Rej: MSSN and MateRC must be specified since MPC is specified

The entity set being created must be either solitary or dominant to use the true point code as a point code.

2987 E2987 Cmd Rej: The TPC can be used only when creating a SOL or DOM group

The MAP table is corrupt or cannot be found.

4524 E4524 Cmd Rej: Failed Reading MAP table

If the `thr` parameter is specified, the `rc1`, `rc2`, `rc3`, and `rc4` parameters must be of equal value.

3372 E3372 Cmd Rej: All specified RC values must be equal

If the `mpc` parameter is specified, then the `mssn` parameter must be specified.

2428 E2428 Cmd Rej: MPC entered, MSSN must also be given

SRM=YES cannot be entered with ITU point codes.

2424 E2424 Cmd Rej: SRM=YES cannot be entered with ITU point code types

If the `mpc` or `mssn` parameter is specified, then the `materc` parameter must be specified.

2985 E2985 Cmd Rej: Mate Relative Cost (MateRC) required if MPC/MSSN is entered

If the `pc/ssn` parameters and the `mpc/mssn` parameters are specified, then the `rc` parameter must be specified.

2986 E2986 Cmd Rej: Relative Cost (RC) is required for PC/SSN and MPC/MSSN

If the `pcn` or `mpcn` parameter is specified, then the format of the parameter must match the format dictated by the `chg-stpopts:npcfmti` command.

2055 E2055 Cmd Rej: Incorrect information unit, expecting point code- <parm>

A True PC cannot be routed to itself.

2993 E2993 Cmd Rej: True Point Code must remain primary entity

The Spare Point Code Support feature must be enabled to allow provisioning of an ITU-I or ITU-N spare point code.

4193 E4193 Cmd Rej: Spare Point Code Feature must be enabled

The True Point Code can be provisioned only in the default MAPSET.

4555 E4555 Cmd Rej: Version parameter not supported for SUA or M3UA

Unable to access database. Severe database failure.

2416 E2416 Cmd Rej: Unable to access database. Severe database failure

Failed reading SS APPL table.

3124 E3124 Cmd Rej: Failed Reading LNP SS Appl table

The values specified for the `pc` and `npc` parameters cannot be associated with proxy point codes.

4707 E4707 Cmd Rej: PRX using DPC not allowed in GTT, MAP, MRN tables

If the `mrnset` parameter is specified, then the `mrnpc` parameter must be specified.

5043 E5043 Cmd Rej: MRNPC must be specified when MRNSET is specified

The GTT LS ARI feature must be enabled before the `mrnset` or `mrnpc` parameters can be specified.

5041 E5041 Cmd Rej: GTT LS ARI Feature must be enabled

The value specified for the `mrnpc/mrnpca/mrnpai/mrnpai/mrnpai24/mrnpai16` parameter must be a full point code.

5040 E5040 Cmd Rej: Alternate RI Mate PC must be a full PC

The point codes and alternate RI Mate point codes must have the same network type as shown:

- ITUI, ITU-N, ITU-I spare, ITU-N-spare—ITUI, ITU-N, ITU-I spare, ITU-N-spare
- ANSI—ANSI
- ITUN-24—ITUN-24
- ITUN-16 ---ITUN-16

5042 E5042 Cmd Rej: PC and Alternate RI Mate PC network types don't match

The value specified for the `mrnset` parameter must already exist in the MRN table.

4480 E4480 Cmd Rej: Specified MRNSET does not exist

The MRN table is corrupt or cannot be found.

2999 E2999 Cmd Rej: Failed reading the MRN table

The value specified for the `mrnpc` parameter must already exist in the specified MRN Set.

4483 E4483 Cmd Rej: PC does not exist in specified MRNSET

The `mrnset` parameter cannot be specified if the MAP Set specified by the `mapset` parameter contains a True Point Code.

5088 E5088 Cmd Rej: ARI Mate can't be provisioned for a MAPSET having TPC

The `ent-map` command will reject provisioning of local subsystem for ITUN16 SID, so that ITUN16 MSUs won't be forwarded to Local Subsystems.

2809 E2809 Cmd Rej: ITUN16 SID is not allowed for MAP commands in J7 Support.

SSN configured for SFAPP cannot be used in any command for any configuration

3558 E3558 Cmd Rej: SFAPP SSN can not be used

Notes

Up to 128 PC/SSN pairs can be entered into a mated PC/SSN group.

Multiplicity Modes

For the `-map` commands, an entity set consists of a group of PC/SSNs that are used for traffic distribution, and an RC group consists of PC/SSNs within an entity set that have the same RC. In *loadsharing* mode, an entity set contains 1 RC group. In *combined loadsharing/dominant* mode, an entity set can contain multiple loadsharing groups.

Note:

For *dominant* and *combined loadsharing/dominant* modes, the PC/SSN in the MAP table where traffic distribution initializes is determined by the result of GTT translation and is referred to as the preferred PC/SSN. The preferred PC/SSN may not be the lowest cost entry.

The EAGLE supports the following multiplicity modes for nodes/subsystems:

- When a PC/SSN pair is not replicated, the pair is in *solitary* (SOL) mode. The subsystem acts as the only application, with no backup. If this subsystem fails, messages routed to it are discarded and SCCP management returns “Subsystem Unavailable” messages to the originator.
- A group of replicated PC/SSN pairs are in *dominant* (DOM) mode if each PC/SSN pair in the group has a unique RC. The specified subsystem with the lowest RC acts as the primary subsystem, while the mate subsystem acts as a backup.
- A group of replicated PC/SSN pairs are in *load sharing* (SHR) mode if each PC/SSN pair in the group has the same RC. All messages are evenly distributed at the SCCP level to all nodes/subsystems in the group. If failure occurs, the non-affected subsystem assumes the load of its failed mate.
- The *combined load sharing/dominant* (COM) mode supports a combination of load sharing and dominant mode. A group of PC/SSN pairs are in COM mode when at least two of the PC/SSN pairs have the same RC and another node subsystem in the group has a different RC.

If the XMAP feature is enabled, the MAP table can have up to either 2000 or 3000 entries, depending on the controlled feature Part Number that is enabled. If XMAP is not enabled, the MAP table can contain up to 1024 user entries.

The `SSO` parameter changes the initialization of the subsystem status (“prohibited” or “allowed”) for PC/SSN MAP entries. The EAGLE previously marked the subsystem status “allowed” for each PC/SSN entry. The `SSO` parameter marks the subsystem status “prohibited” for each new entry that has `SSO=on`. This causes the EAGLE to generate an SST to the remote point-code when an MTP-RESUME is received. Upon reception of an SSA, the subsystem status is marked “allowed”.

In this command, only ITU-international and ITU national point codes support the spare point code subtype prefix (s-).

When the Flexible GTT Load Sharing feature is on, MAP load sharing sets are supported. Each set is identified by the `mapset` parameter.

When the Weighted GTT Loadsharing feature is turned on, weighted entity sets and RC groups are supported, and threshold values can be assigned to each PC/SSN.

When the GTT Load Sharing with Alternate Routing Indicator feature is enabled, an Alternate RI Mate can be provisioned.

4.1.327 ent-mate-stp

Use this command to enter mate or self PC (point code) into the database.

Note:

This command is used to populate the mate STP table, and is used to route responses to queries generated by the EAGLE for SFAPP UC #3/4 back to the originating EAGLE if a member of a set of EAGLES is forming a gateway. For messages to be routed properly, the table in each of the members of the set must have the same entries.

Parameters

pc (mandatory)

ANSI point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.

Synonym:

pca

Range:

000-255The point code 000-000-000 is not a valid point code.

pc/pca/pci/pcn/pcn24/pcn16 (mandatory)

Point code.

Note:

See [Point Code Formats and Conversion](#) for a detailed description of point code formats, rules for specification, and examples.

pci (mandatory)

ITU international point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*)

Range:

s-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix-s

zone-0-7

area-000-255

id-0-7

The point code 000-000-000 is not a valid point code.

pcn (mandatory)

ITU international point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*)

Range:

s-, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix-s

nnnnn-0-16383

gc-aa-zz

m1-m2-m3-m4-0-14 for each member; values must sum to 14

pcn24 (mandatory)

24-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*).

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

msa-000-255

ssa-000-255

sp-000-255

pcn16 (mandatory)

16-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*).

Range:

000---127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

un---000---127

sna---000---15

mna---000---31

Example

This example adds a point code:

```
ent-mate-stp:pc=10-20-30
```

This example adds a 24-bit ITU-N secondary point code:

```
ent-mate-stp:pcn24=99-99-99
```

This example adds a spare ITU-N secondary point code:

```
ent-mate-stp:pcn=s-12345
```

This example adds a 16-bit ITU-N secondary point code:

```
ent-mate-stp:pcn16=121-5-10
```

Dependencies

Mate STP point code must be present in either destination table or SID table.

3613 E3613 Cmd Rej: DPC must exist for the STP entry

Point code already exist in mate STP table.

3614 E3614 Cmd Rej: STP point code already in use

Point code entered must be in same network as other existing point codes.

2787 E2787 Cmd Rej: PC network type does not match existing PC network type

Mate stp table is full.

Notes

- The command is rejected when the point code is in invalid format.
- The command is rejected when point code is of a different network than the existing point codes/code's network.
- The command is rejected when the stp_table is full, as in, there are 16 point codes in the table already.
- The command is rejected when the point code specified already exists in the table.
- The command is rejected when no DPC (destination point code) exists for the specified point code. To add a new point code in the STP table, either it should be in the SID table or it should exist in the destination point code table.

Output

```
ent-mate-stp:pci=3-3-1

4.1.328 ent-mrn

Use this command to assign point codes and Alternate RI Mates in the Mated Relay Node (MRN) table. The Intermediate GTT Loadsharing feature must be on before this command can be entered. The GTT Load Sharing with Alternate Routing Indicator (GTT LS ARI) feature must be enabled to provision Alternate RI Mates.

If the Flexible GTT Loadsharing feature is enabled, use this command to create a new MRN set, or to add entries to an existing MRN set in the MRN table. If the Flexible GTT Loadsharing feature is turned on, then MRN sets are used.

Note:

If only the Intermediate GTT Loadsharing feature is turned on, the MRN table can contain a maximum of 3000 entries. If the Intermediate GTT Loadsharing feature is on and the Flexible GTT Loadsharing feature is enabled, the MRN table can contain a maximum of 6000 entries.

Caution:

If any entries are provisioned in the SCCP-SERV table, the maximum number of entries that the MRN table can contain is reduced by that amount. Check the `rtv-sccp-serv` command output to see if entries exist in the SCCP-SERV table.

Note:

An MRN set is a logical grouping of PCs that already exist in the EAGLE MRN table. The Intermediate GTT Loadsharing feature allows PCs to be part of more than one load-sharing group, with each PC defined by a different MRN set. If the Intermediate GTT Loadsharing feature is enabled, then all existing entries in the MRN table and all existing GTA translations in the GTT table with `ri=gta` are stored in default MRN sets. Additional MRN sets can be provisioned, and GTT entries can be associated to the MRN sets.

Parameters

Note:

See [Point Code Formats and Conversion](#) for a detailed description of point code formats, rules for specification, and examples.

If a point code is being added to an existing weighted entity set, and the `df1wt` parameter is not specified, the `wt1/wt2/wt3/wt4` parameter must be specified. The `wt1/wt2/wt3/wt4` parameter can only be specified if at least two of the `rc/rc1/rc2/rc3/rc4` parameters are equal, creating a weighted entity set.

pc (mandatory)

ANSI point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.

Synonym:

pca

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001-005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006-255*.

The point code *000-000-000* is not a valid point code.

pc/pca/pci/pcn/pcn24/pcn16 (mandatory)

Post-GTT-translated point code.

pci (mandatory)

ITU international point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*).

Range:

s-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s

zone—0-7

area—000-255

id—0-7

The point code *0-000-0* is not a valid point code.

pcn (mandatory)

ITU national point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the *chg-stpopts:npcfmti* flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

Range:

s-, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s-

nnnnn—0-16383

gc—aa-zz

m1-m2-m3-m4—0-14 for each member; values must sum to 14

pcn24 (mandatory)

24-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point (msa-ssa-sp)*.

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*msa—000—255**ssa—000—255**sp—000—255***pcn16 (mandatory)**16-bit ITU national point code with subfields *unit number-sub number area-main number area (un-sna-mna)*.**Range:**

000---127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*un---000---127**sna---000---15**mna---000---31***df1wt (optional)**Default weight. The weight to be assigned to a specified PC that is not assigned a weight with the *wt/wt1/wt2/wt3/wt4* parameter. **Note:**If a PC weight is specified with the *wt/wt1/wt2/wt3/wt4* parameter and the *df1wt* parameter is specified, the default weight is ignored, and the PC is assigned the weight specified by its respective weight parameter.**Range:**

1 - 99

mappc (optional)ANSI point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.**Synonym:***mapca***Range:**

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001–005*.When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006–255*.The point code *000-000-000* is not a valid point code.

Default:

000

mappc/mappca/mappci/mappcn/mappcn24/mappcn16 (optional)

Alternate RI Mate point code.

mappci (optional)ITU international point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*).**Range:***s-*, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*prefix—s**zone—0-7**area—000-255**id—0-7*

The point code 0-000-0 is not a valid point code.

Default:

0-000-0

mappcn (optional)ITU national point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the `chg-stpopts:npcfmti` flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).**Range:***s-*, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*prefix—s-**nnnnn—0-16383**gc—aa-zz**m1-m2-m3-m4—0-14* for each member; values must sum to 14**Default:**

00000

mappcn24 (optional)24-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*).**Range:**

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*msa—000-255**ssa—000-255**sp—000-255*

Default:
000

mappcn16 (optional)

16-bit ITU national point code with subfields *unit number-sub number area-main number area* (*un-sna-mna*).

Range:
000---127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

un---000---127

sna---000---15

mna---000---31

Default:
000

mapset (optional)

Alternate RI Mate MAP Set ID. The MAP Set where the Alternate RI Mate search is performed.

Range:
1 - 36000, *dflt*
dflt—default MAP Set

Note:

If the `mappc` and `mapssn` parameters are specified, and the `mapset` parameter is not specified, then the `mapset` parameter is automatically set to a value of `dflt`.

mapssn (optional)

Alternate RI Mate subsystem number.

Range:
2 - 255, *, *none*

Default:
none

mrnset (optional)

MRN set ID.

Range:
1 - 3000, *dflt*, *new*
dflt—default MRN set
new—create a new MRN set

pc1 (optional)

ANSI point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.

Synonym:

pca1

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When `chg-sid:pctype=ansi` is specified, *ni = 000* is not valid.

When `chg-sid:pctype=ansi` is specified, *nc = 000* is not valid if *ni = 001–005*.

When `chg-sid:pctype=ansi` is specified, *nc = 000* is valid if *ni = 006–255*.

The point code *000-000-000* is not a valid point code.

pc1/pca1/pci1/pcn1/pcn241/pcn161 (optional)

Alternate post-GTT-translated point code.

pc2 (optional)

ANSI point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.

Synonym:

pca2

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When `chg-sid:pctype=ansi` is specified, *ni = 000* is not valid.

When `chg-sid:pctype=ansi` is specified, *nc = 000* is not valid if *ni = 001–005*.

When `chg-sid:pctype=ansi` is specified, *nc = 000* is valid if *ni = 006–255*.

The point code *000-000-000* is not a valid point code.

pc2/pca2/pci2/pcn2/pcn242/pcn162 (optional)

Alternate post-GTT-translated point code.

pc3 (optional)

ANSI point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.

Synonym:

pca3

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When `chg-sid:pctype=ansi` is specified, *ni = 000* is not valid.

When `chg-sid:pctype=ansi` is specified, *nc = 000* is not valid if *ni = 001–005*.

When `chg-sid:pctype=ansi` is specified, *nc = 000* is valid if *ni = 006–255*.

The point code *000-000-000* is not a valid point code.

pc3/pca3/pci3/pcn3/pcn243/pcn163 (optional)

Alternate post-GTT-translated point code.

pc4 (optional)

ANSI point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.

Synonym:

pca4

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001-005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006-255*.

The point code *000-000-000* is not a valid point code.

pc4/pca4/pci4/pcn4/pcn244/pcn164 (optional)

Alternate post-GTT-translated point code.

pci1 (optional)

ITU international point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code, (*prefix-zone-area-id*).

Range:

s-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s

zone—0-7

area—000-255

id—0-7

The point code *0-000-0* is not a valid point code.

pci2 (optional)

ITU international point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*).

Range:

s-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s

zone—0-7

area—000-255

id—0-7

The point code *0-000-0* is not a valid point code.

pci3 (optional)

ITU international point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*).

Range:*s*-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s**zone*—0-7*area*—000-255*id*—0-7

The point code 0-000-0 is not a valid point code.

pci4 (optional)ITU international point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*).**Range:**

0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

zone—0-7*area*—000-255*id*—0-7

The point code 0-000-0 is not a valid point code.

pcn1 (optional)ITU national point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the `chg-stpopts:npcfmti` flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).**Range:***s*-, 0-16383, *aa-zz*

pcn164 (optional)

16-bit ITU national point code with subfields *unit number-sub number area-main number area (un-sna-mna)*.

Range:

000---127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

un---000---127

sna---000---15

mna---000---31

rc (optional)

Relative cost. The relative cost of the route for the primary PC.

Range:

0 - 99

rc1 (optional)

Relative cost 1. The relative cost of the route for mate PC 1.

Range:

0 - 99

rc2 (optional)

Relative cost 2. The relative cost of the route for mate PC 2.

Range:
0 - 99

rc3 (optional)

Relative cost 3. The relative cost of the route for mate PC 3.

Range:
0 - 99

rc4 (optional)

Relative cost 4. The relative cost of the route for mate PC 4.

Range:
0 - 99

thr (optional)

Threshold. The in-service threshold of all PCs in a weighted entity set or RC group. The Weighted GTT Loadsharing feature must be turned on before this parameter can be specified.

 **Note:**

If a threshold value is not specified when creating a new RC group in an existing entity set, the new RC group is assigned a threshold value of 1%.

Range:
1 - 100

wt (optional)

Weight. The weight assigned to the primary PC.

 **Note:**

If PCs are being added to an existing entity set, the `wt` parameter cannot be specified. If a new entity set is being created, the `wt` parameter can only be specified if at least two of the specified RC values are equal, which creates a weighted entity set.

Range:
1 - 99

wt1 (optional)

Weight 1. The weight assigned to the mate PC 1 that is being added to the weighted entity set.

Range:
1 - 99

wt2 (optional)

Weight 2. The weight assigned to the mate PC 2 that is being added to the weighted entity set.

Range:

1 - 99

wt3 (optional)

Weight 3. The weight assigned to the mate PC 3 that is being added to the weighted entity set. The Weighted GTT Loadsharing feature must be turned on before this parameter can be specified.

Range:

1 - 99

wt4 (optional)

Weight 4. The weight assigned to the mate PC 4 that is being added to the weighted entity set.

Range:

1 - 99

Example

This example enters point code 1 into the MRN table with a relative cost of 10 and associates point code 1 with it as a point code with a relative cost of 20.

```
ent-mrn:pc=1-1-0:rc=10:pc1=1-1-1:rc1=20
```

This example updates the group containing point code 1 in the MRN table, to add point code 1 with relative cost of 20 and point code 1 with relative cost of 30 to the group.

```
ent-mrn:pc=1-1-0:rc=10:pc1=1-1-1:rc1=20:pc2=1-1-10:rc2=30
```

These examples include spare point codes:

```
ent-  
mrn:pci=s-2-2-1:rc=10:pci1=s-2-2-2:rc1=11:pci2=2-100-1:rc2=12
```

```
ent-mrn:pcn=s-1-1-1-123-aa:rc=1:pcn1=1-1-1-235-  
aa:rc1=2:pcn2=s-1-1-1-235-aa:rc2=3
```

```
ent-mrn:pc=1-1-1:rc=10:pc1=1-1-2:rc1=10:mrnset=df1t
```

```
ent-  
mrn:pc=1-1-1:rc=10:pc1=1-1-2:rc1=20:pc2=1-1-3:rc2=30:apc3=1-1-4  
:rc3=40:apc4=1-1-5:rc4=50:mrnset=new
```

```
ent-mrn:pc=1-1-3:pc1=1-1-6:rc1=60:pc2=1-1-7:rc2=70:mrnset=111
```

These examples create a new weighted entity set:

```
ent-mrn:pc=1-1-0:rc=10:wt=30:pc1=1-1-1:rc1=10:wt1=10
```

```
ent-mrn:pc=1-1-0:rc=10:wt=30:pc1=1-1-1:rc1=10:wt1=10:thr=50
```

```
ent-  
mrn:pc=1-1-0:rc=10:pc1=1-1-1:rc1=10:pc2=1-3-2:rc2=20:wt2=30:pc3  
=1-10-2:rc3=20:df1twt=20
```

```
ent-  
mrn:pc=1-1-0:rc=10:pc1=1-1-1:rc1=10:wt1=30:pc2=1-3-2:rc2=10:df1  
twt=20:thr=60
```

```

ent-
mrn:pc=1-1-0:pc1=2-2-2:rc1=20:pc2=1-1-10:rc2=30:pc3=1-3-2:rc3=10:wt3

Dependencies

The Intermediate Global Title Translation Loadsharing feature must be turned on before this command can be entered.

2996 E2996 Cmd Rej: Intermed GTT Load Sharing feature must be ON

The `apca` and `pcn24/pcn16` parameters cannot be specified for the same MRN set.

2787 E2787 Cmd Rej: PC network type does not match existing PC network type

When a point code parameter is specified, its relative cost parameter must be specified.

2815 E2815 Cmd Rej: PC and RC must be entered as a pair

Point codes cannot have the same value as the EAGLE SID.

2998 E2998 Cmd Rej: PC cannot match the SID

The same point code value cannot be entered more than once in the MRN table.

2979 E2979 Cmd Rej: Cannot enter the same PC more than once

ITU-N point codes must be in the format set by the `npcfmti` parameter of the `chg-stpopts` command. (Use the `rtrv-stpopts` command to display the STP option settings.)

2997 E2997 Cmd Rej: PC must match NPCFMTI set in CHG-STPOPTS

Remote point codes must already exist as destinations in the Ordered Route entity set or reside in a cluster destination for which ordered routes are specified.

2427 E2427 Cmd Rej: MPC does not exist in routing Table

One or more point codes in the command will exceed the maximum number of point codes that can be entered into the MRN table (3000 if the IGTTLS feature is turned on and 6000 if the IGTTLS and FGTTLS features are turned on)..

2817 E2817 Cmd Rej: MRN table is full

The Flexible GTT Load-Sharing feature must be enabled before the `mrnset` parameter can be specified.

4479 E4479 Cmd Rej: MRNSET must be specified (only) if FGTTLS feature is enabled

If the Flexible GTT Loadsharing feature is enabled, then the specified PC must already exist in the specified MRN set.

4483 E4483 Cmd Rej: PC does not exist in specified MRNSET

The specified MRN set must already exist in the MRN table.

4480 E4480 Cmd Rej: Specified MRNSET does not exist

When creating a new weighted entity set, the `mrnset=new` or `mrnset=dflt` parameter must be specified.

4482 E4482 Cmd Rej: NEW or DFLT MRNSET must be specified

Each point code group can contain a maximum of 128 point codes.

2818 E2818 Cmd Rej: A maximum of 128 PCs are allowed in a group

The Weighted GTT Loadsharing feature must be turned on before the `wt/wt1/wt2/wt3/wt4`, `thr`, and `dfltwt` parameters can be specified.

3370 E3370 Cmd Rej: Weighted GTT Load-Sharing feature must be ON.

If the `wt/wt1/wt2/wt3/wt4` parameter is specified, the corresponding `pc/pc1/pc2/pc3/pc4` parameter must be specified.

3371 E3371 Cmd Rej: WT_x must have a matching PC_x specified.

When creating or modifying a weighted entity set, the `dfltwt` parameter must be specified, or an individual weight must be specified for each PC.

3380 E3380 Cmd Rej: WT_x required for all specified PC_x values.

Entity sets in a solitary or dominant loadsharing mode cannot have weights assigned to the PCs. When creating an entity set, if all of the RC values are unique, the `wt/wt1/wt2/wt3/wt4` and `thr` parameters cannot be specified.

3385 E3385 Cmd Rej: Weight can't be specified to create SOL or DOM groups.

If the `thr` parameter is specified, the `rc1`, `rc2`, `rc3`, and `rc4` parameters must be of equal value.

3372 E3372 Cmd Rej: All specified RC values must be equal

If the `thr` parameter is specified, the associated `wt/wt1/wt2/wt3/wt4` parameter or the `dfltwt` parameter must be specified.

3373 E3373 Cmd Rej: WT_x or DFLTWT must be specified with THR

At least one additional point code must be specified.

3087 E3087 Cmd Rej: Must enter at least one PC/RC pair

Any specified point code must be a full point code.

2865 E2865 Cmd Rej: Address (MPCx) of mate subsystem must be a full PC

If the `chg-sid:pctype=ansi` command is entered, a value of `ni=000` cannot be specified.

If the `chg-sid:pctype=ansi` command is entered, and a value of `ni=001 – 005` is specified, a value of `nc=000` cannot be specified

2169 E2169 Cmd Rej: Point code out of range

The SID table is corrupt or could not be found by the system.

2874 E2874 Cmd Rej: Failed reading site identification table

If a new point code is being added to the MRN table, the `pc` and `rc` parameters must be specified together in the command.

If the Flexible GTT Loadsharing feature is enabled, and the `mrnset=new` parameter is specified, the `pc` and `rc` parameters must be specified together in the command.

3086 E3086 Cmd Rej: New PC and RC must be entered as a pair

The Route table is corrupt or could not be found by the system.

2648 E2648 Cmd Rej: Failed reading the route table

If the `pc1/pc2/pc3/pc4` parameter is specified, the `pc` parameter value must already exist in the MRN table.

2849 E2849 Cmd Rej: PC must already exist in the MRN table

A new point code that is specified in the command must not already exist in the MRN table.

2816 E2816 Cmd Rej: PC already exists in the MRN entity set

If the `rc` parameter is not specified, the `wt` parameter cannot be specified.

3374 E3374 Cmd Rej: WT parameter can't be specified

If PCs are being added to a weighted entity set, the `wt/wt1/wt2/wt3/wt4` parameter or the `dfltwt` parameter must be specified.

3381 E3381 Cmd Rej: Must specify wight for new point codes for weighted groups

If PCs are being added to a non-weighted entity set, the `wt/wt1/wt2/wt3/wt4` and the `dfltwt` parameters cannot be specified.

3382 E3382 Cmd Rej: Can't specify weight for non-weighted groups.

At least one optional parameter must be specified.

2136 E2136 Cmd Rej: At least one optional parameter is required

If the `wt/wt1/wt2/wt3/wt4` parameters are specified, the `dfltwt` parameter cannot be specified.

3391 E3391 Cmd Rej: DFLTWT can't be specified when WT_x for each PC_x is specified

The value specified for the `pc/pc1/pc2/pc3/pc4` parameter cannot be associated with a proxy point code.

4707 E4707 Cmd Rej: PRX using DPC not allowed in GTT, MAP, MRN tables

The GTT LS ARI feature must be enabled before the `mapset`, `mappc`, or `mapssn` parameter can be specified.

5041 E5041 Cmd Rej: GTT LS ARI Feature must be enabled

The value specified for the `mappc/mappca/mappci/mappcn/mappcn24/mappcn16` parameter must be a full point code.

5040 E5040 Cmd Rej: Alternate RI Mate PC must be a full PC

The point codes and alternate RI Mate point codes must have the same network type as shown:

- ITUI, ITU-N, ITU-I spare, ITU-N-spare—ITUI, ITU-N, ITU-I spare, ITU-N-spare
- ANSI—ANSI
- ITUN-24—ITUN-24
- ITUN-16---ITUN-16

5042 E5042 Cmd Rej: PC and Alternate RI Mate PC network types don't match

The specified MAPSET must already exist in the MAP table.

4527 E4527 Cmd Rej: Specified MAPSET does not exist

If the `mapset` parameter is specified, then the `mappc` and `mapssn` parameters must be specified.

5048 E5048 Cmd Rej: MAPPC/MAPSSN must be specified when MAPSET is specified

The `mappc` and `mapssn` parameters must be specified together in the command.

5049 E5049 Cmd Rej: MAPPC and MAPSSN must be specified together

The MAP table is corrupt or cannot be found.

4524 E4524 Cmd Rej: Failed Reading MAP table

The values specified for the `mappc` and `mapssn` parameters must already exist in the specified MAP Set.

5051 E5051 Cmd Rej: MAPPC/MAPSSN does not exist in MAPSET

The values specified for the `mapset` and `mappc` parameters must already exist in the MAP table.

5052 E5052 Cmd Rej: MAPPC/MAPSET does not exist in MAP table

The value specified for the `mappc` parameter cannot match an STP point code.

5083 E5083 Cmd Rej: MAPPC can't be TPC or Mate of TPC

The `ent-mrn` command cannot be used to change an Alternate RI Mate that has already been specified for an MRN Set. Use the `chg-mrn` command to modify the Alternate RI Mate.

5086 E5086 Cmd Rej: Alternate RI Mate already provisioned

SSN configured for SFAPP cannot be used in any command for any configuration

3558 E3558 Cmd Rej: SFAPP SSN can not be used

Notes

For the `-mrn` commands, an entity set consists of a group of PCs that are used for traffic distribution, and an RC group consists of PCs within an entity set that have the same RC. In loadsharing mode, an entity set contains 1 RC group. In combined/dominant loadsharing mode, an entity set can contain multiple loadsharing groups.

The EAGLE supports the following modes for nodes and subsystems:

- A group of replicated PCs are in *dominant* mode if each PC in the group has a unique RC. The specified subsystem with the lowest RC acts as the primary subsystem, while the mate subsystem acts as a backup. In the event of congestion, messages route to the mate subsystem. When the congestion subsides, messages are again routed to the primary (dominant) subsystem.
- A group of replicated PCs are in *load sharing* mode if each PC in the group has the same RC. All messages are evenly distributed at the SCCP level to all nodes/subsystems in the group. In the event of congestion or failure, the non-affected subsystem assumes the load of its failed or congested mate.
- The *combined load sharing/dominant* mode supports a combination of load sharing and dominant mode. A group of PCs are in combined load sharing/dominant mode when at least two of the PCs have the same RC and another node subsystem in the group has a different RC. A combination of node accessibility and RC determines the preferred PC.

The `ent-mrn` command cannot be used to change the relative cost value for a point code; the `chg-mrn` command must be used.

In this command, only ITU-international and ITU national point codes support the spare point code subtype prefix (S-).

If the `ent-mrn` command is used to add PCs to an existing weighted entity set, and the threshold is specified, all RC group values specified with `rc/rc1/rc2/rc3/rc4` parameters for the alternate post-GTT-translated point codes must be equal.

The following rules apply when the `ent-mrn` command is used to add PCs to RC groups:

- If a threshold value is specified and the PCs are being added to an existing RC group in the existing entity set, the RC group threshold is changed to the specified threshold value and both pre-existing and new PCs in the RC group assume the new threshold value.
- If a threshold value is specified and the PCs are creating a new RC group in the existing entity set, the new RC group assumes the specified threshold value.
- If a threshold value is not specified and the PCs are being added to an existing RC group in the existing entity set, the RC group threshold does not change and the PC assumes the threshold value of the existing RC group.

When the Weighted GTT Loadsharing feature is turned on, weighted entity sets and RC groups are supported, and threshold values can be assigned to each PC.

Entries cannot be provisioned in the MRN table unless routes are also provisioned for corresponding point codes. However, an entry without a configured route may result from upgrading to a new EAGLE release. If such an entry occurs, then traffic will not be routed to the corresponding point code. The entry can be deleted, or a route for the entry can be configured.

When a node is marked congested in the MRN or MAP table, traffic continues to be routed to that node. When the congested node becomes prohibited, traffic is diverted to another node.

4.1.329 ent-na

Use this command to enter a new network appearance in the Network Appearance table.

Parameters

na (mandatory)

Network appearance.

Range:

0 - 4294967295

type (mandatory)

Type of the network appearance.

Range:

ansi

itui

ituis

itun

ituns

itun24

itun16

gc (optional)

Group Code of the network appearance.

Range:

yy

Example

```
ent-na:type=ansi:na=10
```

```
ent-na:type=itun:na=11:gc=fr
```

Dependencies

The value specified for the *na* parameter cannot already exist in the Network Appearance table.

4136 E4136 Cmd Rej: NA already equipped

The Network Appearance table can contain a maximum of 45 entries.

4265 E4265 Cmd Rej: Network Appearance table full

The value specified for the *gc* or *na* parameter cannot already be equipped.

4137 E4137 Cmd Rej: Group code or network type already equipped

A value of *itun* or *ituns* must be specified for the *type* parameter before the *gc* parameter can be specified.

4132 E4132 Cmd Rej: Group code not allowed with specified network type

If the ITUDUPPC feature is turned on, and a value of *itun* or *ituns* is specified for the *type* parameter, then the *gc* parameter must be specified.

4133 E4133 Cmd Rej: Group code required for ITUN when ITUDUPPC feat is ON

If the ITUDUPPC feature is turned off, then the *gc* parameter cannot be specified.

4134 E4134 Cmd Rej: Group code not allowed when ITUDUPPC feat is OFF

The value specified for the *gc* parameter must already exist in the SID or SPC table.

4135 E4135 Cmd Rej: Group code must be in SID or SPC table

The Spare Point Code Support feature must be enabled before the `ituis` or `ituns` network type can be specified.

4193 E4193 Cmd Rej: Spare Point Code Feature must be enabled

The J7 Support feature must be enabled before the `type=itun16` parameter is specified.

2691 E2691 Cmd Rej: J7 Support Feature must be enabled.

If the J7 support feature is enabled then the `type=(ansi or itun24)` parameter can not be specified.

2801 E2801 Cmd Rej: J7 Support feature must not be Enabled.

Notes

Network Appearance identifies the SS7 network context of the message, for the purposes of logically separating signaling traffic between the SGP and ASP over a common SCTP association. A unique network appearance value can be associated with ANSI, ITUI, 14-bit ITU-N or 24-bit ITU-N networks. When the ITUDUPPC (ITU National Duplicate Point Code) feature is turned on, network appearance can be associated with a specific 14-bit ITU-N group code.

Output

```
ent-na:type=ansi:na=10
```

```
rlghncxa03w 04-02-20 09:07:58 EST EAGLE 31.3.0
ENT-NA: MASP A - COMPLTD
;

4.1.330 ent-npp-as

Use this command to enter a Numbering Plan Processor (NPP) Action Set (AS). An AS is a collection of Conditioning Actions (CAs), Service Actions (SAs), and Formatting Actions (FAs).

Parameters

Note:

CAs and FAs are processed in the order that they are specified in the comma-separated list.

 **Note:**

CAs and FAs are processed in consecutive order.

 **Note:**

SAs are processed in order of high-to-low precedence and must be specified in high-to-low precedence order in the comma-separated list. The SAs cannot be duplicated in the list. If multiple SAs in the list have the same precedence, then those SAs are processed in the order in which they appear in the list.

 **Note:**

SAs are processed in order of high-to-low precedence. The SAs must be specified in high-to-low precedence order in the list, and cannot be duplicated in the comma separated list. If multiple SAs in the list have the same precedence, then those SAs are processed in the order in which they appear in the list.

 **Note:**

The `ac*`, `dn*`, `sn*`, and `cc*` values refer to all CAs that begin with `ac`, `dn`, `sn`, or `cc`, respectively.

 **Note:**

Refer to the *Numbering Plan Processor (NPP) Overview* and to the Feature Manual for the feature of interest for more information on provisioning Action Sets and for definitions for the CA, FA, and SA values.

 **Note:**

The `sa(X) dgt s` parameters are currently not supported by any feature.

 **Note:**

The `sa(X) val` parameters are used by the TIF Range CgPN Blacklist, TIF Subscriber CgPN Blacklist, and TIF Selective Screening features. Up to 2 numerical values can be specified in each list.

 **Note:**

Support of a numerical values list (`sa (X) val` parameter) is specific to the Service and Service Action.

asn (mandatory)

Action set name. The name of the AS.

Range:

ayyyyyyyyy

1 alphabetic character followed by up to 9 alphanumeric characters

ca (optional)

Conditioning Action list. A comma-separated CA list that can be applied to an incoming digit string. Up to 12 CAs can be specified in the list. The CAs are processed in the order in which they are specified in the list.

Range:

ac1, ac2, ac3, ac4, ac5, ac6, ac7, ac8, accgpn, accgpn1, accgpn2, accgpn3, accgpn4, accgpn5, accgpn6, accgpn7, accgpn8, acdef, aclac, cc1, cc2, cc3, ccdef, cccgpn, dn1, dn2, dn3, dn4, dn5, dn6, dn7, dn8, dn9, dn11, dn12, dn13, dn14, dn15, dnx, fpx, ign1, ign2, ign3, ign4, ign5, ign6, ign7, ign8, ign9, ign10, pfxa1, pfxa2, pfxa3, pfxa4, pfxa5, pfxa6, pfxa7, pfxa8, pfb1, pfb2, pfb3, pfb4, pfb5, pfb6, pfb7, pfb8, pfc1, pfc2, pfc3, pfc4, pfc5, pfc6, pfc7, pfc8, pfd1, pfd2, pfd3, pfd4, pfd5, pfd6, pfd7, pfd8, pfe1, pfe2, pfe3, pfe4, pfe5, pfe6, pfe7, pfe8, pxf1, pxf2, pxf3, pxf4, pxf5, pxf6, pxf7, pxf8, sn1, sn2, sn3, sn4, sn5, sn6, sn7, sn8, sn9, sn10, sn11, sn12, sn13, sn14, sn15, snx, znx

fa (optional)

Formatting Action list. A comma-separated FA list that can be applied to the outgoing digit string. Up to 12 FAs can be specified in the list. The FAs are processed in the order they are specified in the list and cannot be duplicated.

Range:

ac, asd, asdothor, cc, dlma, dlmb, dlmc, dlmd, dlme, dlmf, dlmg, dlmh, dlmi, dlmj, dlmk, dlml, dlmm, dlmn, dlmo, dlmp, dn, fpx, grn, grnothor, orig, pfxa, pfb, pfc, pfd, pfe, pxf, rn, rnospodn, rnosposn, rnospozn, sn, sp, sfrimsi, vmid, zn

Default:

orig

ofnai (optional)

Outgoing filter nature of address indicator. This parameter specifies the filter nature of address indicator (FNAI) class of the outgoing digit string.

Range:

intl

intl value provisioned in the `chg-npp-serv` command

natl

natl value provisioned in the `chg-npp-serv` command

nai1

nai1 value provisioned in the `chg-npp-serv` command

nai2

nai2 value provisioned in the `chg-npp-serv` command

nai3

nai3 value provisioned in the `chg-npp-serv` command

unkn

unkn value provisioned in the `chg-npp-serv` command

inc

NAI of the incoming digit string

Default:

inc

sa (optional)

Service Action list. A comma-separated SA list that can be applied to an incoming digit string. Up to 8 SAs can be specified in the list. The SAs must be specified in high-to-low precedence order in the list, and cannot be duplicated in the list.

**Note:**

SAs are service-specific.

Range:

asdlkup, blk1stqry, blk1strly, blnfnrls, blrls, cdial, ccncchk, cdpnnp, cgpnasdrqd, cgpngrnrqd, cgpnp, cgpnrng, cgpnsvcrqd, crp, fpxrls, fraudchk, fwdscs, grnlkup, inprtg, lacck, migrate, nocgpnrls, npnrls, nprelay, nprls, nscgpn, nscdpn, pprelay, rtdbtrn, rtdbtsp, rtdbtrnsp, skgstartg, snsccgpn, selscr, tifgnbl, tiflsbl, tifrdbl

sa1dgt1 (optional)

Service Action 1 digit string. This parameter specifies a digit string that can be used with the first SA.

Range:

1 - 8 hexadecimal digits. Valid digits are 0-9, a-f, A-F.

sa1val (optional)

Service Action 1 numerical values list. A comma-separated numerical values list that can be used with the first SA.

Range:

0 - 65534

sa2dgt1 (optional)

Service Action 2 digit string. A digit string that can be used with the second SA.

Range:

1 - 8 hexadecimal digits Valid digits are 0-9, a-f, A-F.

sa2va1 (optional)

Service Action 2 numerical values list. A comma-separated numerical values list that can be used with the second SA.

Range:

0 - 65534

sa3dgtts (optional)

Service Action 3 digit string. A digit string that can be used with the third SA.

Range:

1-8 hexadecimal digits. Valid digits are 0-9, a-f, A-F.

sa3va1 (optional)

Service Action 3 numerical values list. A comma-separated numerical values list that can be used with the third SA.

Range:

0 - 65534

sa4dgtts (optional)

Service Action 4 digit string. A digit string that can be used with the fourth SA.

Range:

1-8 hexadecimal digits. Valid digits are 0-9, a-f, A-F.

sa4va1 (optional)

Service Action 4 numerical values list. A comma-separated numerical values list that can be used with the fourth SA.

Range:

0 - 65534

sa5dgtts (optional)

Service Action 5 digit string. A digit string that can be used with the fifth SA.

Range:

1-8 hexadecimal digits. Valid digits are 0-9, a-f, A-F.

sa5va1 (optional)

Service Action 5 numerical values list. A comma-separated numerical values list that can be used with the fifth SA.

Range:

0 - 65534

sa6dgtts (optional)

Service Action 6 digit string. A digit string that can be used with the sixth SA.

Range:

1-8 hexadecimal digits. Valid digits are 0-9, a-f, A-F.

sa6va1 (optional)

Service Action 6 numerical values list. A comma-separated numerical values list that can be used with the sixth SA.

Range:
0 - 65534

sa7dgts (optional)

Service Action 7 digit string. a digit string that can be used with the seventh SA.

Range:
1-8 hexadecimal digits. Valid digits are 0-9, a-f, A-F.

sa7val (optional)

Service Action 7 numerical values list. A comma-separated numerical values list that can be used with the seventh SA.

Range:
0 - 65534

sa8dgts (optional)

Service Action 8 digit string. A digit string that can be used with the eighth SA.

Range:
1-8 hexadecimal digits. Valid digits are 0-9, a-f, A-F.

sa8val (optional)

Service action 8 numerical values list. A comma-separated numerical values list that can be used with the eighth SA.

Range:
0 - 65534

Example

```

```

Dependencies

The value specified for the `asn` parameter cannot already exist in the NPP AS table.

4892 E4892 Cmd Rej: Action Set already exists

One of the following combinations of Conditioning Actions must be specified for the AS:

- znx
- cc*, dn*
- cc*, ac*, sn*

The Formatting Actions specified for the AS must contain the corresponding Formatting Action that a Conditioning Action will populate or load.

4898 E4898 Cmd Rej: Minimum Number Conditioning Not Met

The AS must contain a CA that can load or populate the specified FA.

4934 E4934 Cmd Rej: Formating Action Not Loaded

The CAs within an AS cannot condition more than 32 digits.

4960 E4960 Cmd Rej: Conditioning Actions condition too many digits

The AS cannot contain CAs that load or populate the same FA.

4964 E4964 Cmd Rej: Duplicate CAs loading same FA invalid

Conditioning Actions must be specified for inclusion in an individual Action Set using valid number conditioning rules:

- If the ZNX Conditioning Action is specified, then the CC*, AC*, SN*, DN*, and DNX Conditioning Actions cannot be specified.
- If the CC* AND DN* or DNX Conditioning Actions are specified, then the AC*, SN*, SNX, and ZNX Conditioning Actions cannot be specified.
- If the CC*, AC*, AND SN* or SNX Conditioning Actions are specified, then the DN*, DNX, and ZNX Conditioning Actions cannot be specified.

4965 E4965 Cmd Rej: CAs violate number conditioning

The AS cannot contain the following combinations of FAs:

- If the DN FA is specified, then the AC, SN, and ZN FAs cannot be specified.
- If the ZN FA is specified, then the AC, CC, SN, and DN FAs cannot be specified.
- If the SN FA is specified, then the ZN and DN FAs cannot be specified.
- If the RNOSPODN, RNOSPOSN, or RNOSPOZN FA is specified, then the RN, SP, SN, DN, and ZN FAs cannot be specified.
- The RNOSPODN, RNOSPOSN, and RNOSPOZN FAs cannot be specified together in the command.

4968 E4968 Cmd Rej: FAs violate number formatting

If specified, the FPFX CA must be the first value (*fpfx*) in the `ca` list.

4970 E4970 Cmd Rej: FPFX must be first in CA set

If specified, the ZNX, SNX, or DNX CA must be the final value (*znx*, *snx*, or *dnx*) in the `ca` list.

4971 E4971 Cmd Rej: ZNX/DNX/SNX must be last in CA set

A maximum of 1024 (1K) AS entries can be specified in the NPP system.

4956 E4956 Cmd Rej: System Action Set maximum (1024) reached

If no Service Actions are provisioned, then the `sa1val` parameter cannot be specified.

5353 E5353 Cmd Rej: SA1VAL requires SA1 to be provisioned

If less than 2 Service Actions are provisioned, then the `sa2val` parameter cannot be specified.

5354 E5354 Cmd Rej: SA2VAL requires SA2 to be provisioned

If less than 3 Service Actions are provisioned, then the `sa3val` parameter cannot be specified.

5355 E5355 Cmd Rej: SA3VAL requires SA3 to be provisioned

If less than 4 Service Actions are provisioned, then the `sa4val` parameter cannot be specified.

5356 E5356 Cmd Rej: SA4VAL requires SA4 to be provisioned

If less than 5 Service Actions are provisioned, then the `sa5val` parameter cannot be specified.

5357 E5357 Cmd Rej: SA5VAL requires SA5 to be provisioned

If less than 6 Service Actions are provisioned, then the `sa6val` parameter cannot be specified.

5358 E5358 Cmd Rej: SA6VAL requires SA6 to be provisioned

If less than 7 Service Actions are provisioned, then the `sa7val` parameter cannot be specified.

5359 E5359 Cmd Rej: SA7VAL requires SA7 to be provisioned

If less than 8 Service Actions are provisioned, then the `sa8val` parameter cannot be specified.

5360 E5360 Cmd Rej: SA8VAL requires SA8 to be provisioned

If no Service Actions are provisioned, then the `sa1dgts` parameter cannot be specified.

5361 E5361 Cmd Rej: SA1DGTS requires SA1 to be provisioned

If less than 2 Service Actions are provisioned, then the `sa2dgts` parameter cannot be specified.

5362 E5362 Cmd Rej: SA2DGTS requires SA2 to be provisioned

If less than 3 Service Actions are provisioned, then the `sa3dgts` parameter cannot be specified.

5363 E5363 Cmd Rej: SA3DGTS requires SA3 to be provisioned

If less than 4 Service Actions are provisioned, then the `sa4dgts` parameter cannot be specified.

5364 E5364 Cmd Rej: SA4DGTS requires SA4 to be provisioned

If less than 5 Service Actions are provisioned, then the `sa5dgt`s parameter cannot be specified.

5365 E5365 Cmd Rej: SA5DGTS requires SA5 to be provisioned

If less than 6 Service Actions are provisioned, then the `sa6dgt`s parameter cannot be specified.

5366 E5366 Cmd Rej: SA6DGTS requires SA6 to be provisioned

If less than 7 Service Actions are provisioned, then the `sa7dgt`s parameter cannot be specified.

5367 E5367 Cmd Rej: SA7DGTS requires SA7 to be provisioned

If less than 8 Service Actions are provisioned, then the `sa8dgt`s parameter cannot be specified.

5368 E5368 Cmd Rej: SA8DGTS requires SA8 to be provisioned

Notes

Note:

When a new Action Set is entered using the `ent-npp-as` command, the FANF, FASP, FARN, FANE, FASCRCRCD, and FASCRCRGC FA lists are unpopulated. These lists are populated using the `chg-npp-as` command.

Output

```
ent-npp-as:asn=asn6:ca=znx:sa=nscdpn,nscgpn:fa=zn:ofnai=intl
```

```
tekelecstp 09-08-18 11:25:31 EAGLE 41.1.0  
NPP-AS table is (5 of 1024) 1% full.
```

```
ENT-NPP-AS: MASP A - COMPLTD
```

```
;
```

4.1.331 ent-npp-srs

Use this command to enter a Numbering Plan Processor (NPP) Service Rule Set entry. A Service Rule Set (SRS) is a collection of NPP Rules that are associated with a NPP Service. A NPP Rule is an association between a single NPP filter and a single NPP Action Set.

Parameters

asn (mandatory)

Action set name. The name of the AS.

Range:

ayyyyyyyy

1 alphabetic character followed by up to 9 alphanumeric characters

fd1 (mandatory)

Filter digit length. This parameter specifies the number of digits on the incoming digit string that is filtered by the NPP.

Range:

*1 - 32, **

*—multiple lengths of digit strings can be filtered

fnai (mandatory)

Filter nature of address indicator. The filter Nature of Address Indicator (NAI) class.

Range:

intl

filter messages with NAI=INTL

natl

filter messages with NAI=NATL

nai1

filter messages with NAI=NAI1

nai2

filter messages with NAI=NAI2

nai3

filter messages with NAI=NAI3

unkn

filter messages when NAI=UNKN

The `chg-npp-serv` command is used to assign values to the various FNAI classes.

fpfx (mandatory)

Filter prefix. The prefix used to filter incoming digit strings.

Range:

1-16 digits *, ?

1 - 16 hexadecimal digits inclusive of single digit wildcard (?); or wildcard (*) matching the entire digit string; valid digits are ?, 0-9, a-f, A-F.

srvn (mandatory)

Service name. The name of the NPP service.

Range:

nppt

Dependencies

The value specified for the `asn` parameter must exist in the NPP AS table.

4881 E4881 Cmd Rej: Action Set does not exist

The AS specified by the `asn` parameter cannot contain Conditioning Actions that are not supported by the service specified by the `svrn` parameter.

4882 E4882 Cmd Rej: Rule contains unsupported Conditioning Actions

The AS specified by the `asn` parameter cannot contain Service Actions that are not supported by the service specified by the `svrn` parameter.

4883 E4883 Cmd Rej: Rule contains unsupported Service Actions

The AS specified by the `asn` parameter cannot contain Formatting Actions that are not supported by the service specified by the `svrn` parameter.

4884 E4884 Cmd Rej: Rule contains unsupported Formatting Actions

The AS specified by the `asn` parameter cannot contain Service Actions that do not conform to the precedence order supported by the service specified by the `svrn` parameter.

4885 E4885 Cmd Rej: Rule violates Service Action precedence

The Conditioning Actions in the AS specified by the `asn` parameter cannot condition more digits than allowed by the `fdl` parameter.

4886 E4886 Cmd Rej: Rule conditions too many digits

If the `fdl=*` parameter is specified, then the AS specified by the `asn` parameter must contain Conditioning Actions that support variable digit string conditioning.

4887 E4887 Cmd Rej: Rule does not condition a variable length digit string

A maximum of 8192 (8K) rules can be specified in the NPP system.

4888 E4888 Cmd Rej: System Rule maximum (8192) reached

A maximum of 4096 (4K) service rules can be specified in the NPP system.

4889 E4889 Cmd Rej: Service Rule maximum (4096) reached

The NPP Rule cannot already exist within the NPP Rule table.

4890 E4890 Cmd Rej: Rule already exists

If a values other than * is specified for the `fpx` and `fdl` parameters, then the value specified for the `fpx` parameter cannot be greater than the value specified for the `fdl` parameter.

4940 E4940 Cmd Rej: Rule with Longer FPFX than FDL Invalid

All of the features that are associated with the Service Actions in the AS specified by the `asn` parameter must be turned on before the AS can be used.

4808 E4808 Cmd Rej: Service Action(s) require an MPS dependent feature to be ON

The Service Actions in the AS specified by the `asn` parameter cannot violate mutual exclusivity rules defined by the service specified by the `srvn` parameter.

4823 E4823 SAs specified are mutually exclusive

The AS specified by the `asn` parameter cannot contain an OFNAI class with a value of *none*.

4868 E4868 Cmd Rej: action set contains OFNAI value not defined by service

At least one TIF feature must be turned on before an AS containing the CDIAL Service Action can be specified as a value for the `asn` parameter.

4977 E4977 Cmd Rej: At least one TIF feature must be ON

The TIF SCS Forwarding feature must be turned on before an AS containing the FWDSCS Service Action can be specified.

4988 E4988 Cmd Rej: TIF SCS Forwarding feature must be ON

The TIF Simple Number Substitution feature must be turned on before an AS containing the SNSCGPN Service Action can be specified as a value for the `asn` parameter.

4989 E4989 Cmd Rej: TIF Simple Number Substitution feature must be ON

The TIF Number Portability feature must be turned on before an AS containing the CRP, NPNRLS, CGPNNPRQD, NPRELA, or NPRLS Service Action can be specified as a value for the `asn` parameter.

4994 E4994 Cmd Rej: TIF Number Portability feature must be ON

The IDPR ASD feature must be enabled before an AS containing the ASDLKUP or CGPNASDRQD Service Action can be specified as a value for the `asn` parameter with the IDPRCDPN(X) or IDPRCGPN service.

5022 E5022 Cmd Rej: IDPR ASD feature must be enabled

The IDPR GRN feature must be enabled before an AS containing the GRNLKUP or GPNGRNRQD Service Action can be specified as a value for the `asn` parameter with the IDPRCDPN(X) or IDPRCGPN service.

5023 E5023 Cmd Rej: IDPR GRN feature must be enabled

An AS containing the ASDLKUP and CGPNASDRQD and SAs cannot be specified as a value for the `asn` parameter.

5026 E5026 Cmd Rej: ASDLKUP and CGPNASDRQD SAs are mutually exclusive

An AS containing the GRNLKUP and CGPNGRNRQD Service Actions cannot be specified as a value for the `asn` parameter.

5027 E5027 Cmd Rej: GRNLKUP and CGPNGRNRQD SAs are mutually exclusive

The TIF GRN feature must be enabled before an AS containing the GRNLKUP or CGPNGRNRQD SAs can be specified as a value for the `asn` parameter with the TIF services.

5021 E5021 Cmd Rej: TIF GRN feature must be enabled

The TIF ASD feature must be enabled before an AS containing the ASDLKUP or CGPNASDRQD SA can be specified as a value for the `asn` parameter with the TIF services.

5020 E5020 Cmd Rej: TIF ASD feature must be enabled

If a value of `mosmsgcdpn`, `mosmsgcgpn`, `mosmsicdpn`, or `mosmsicgpn` is specified for the `srvn` parameter, then the MO SMS ASD feature must be enabled before an AS containing the ASDLKUP or CGPNASDRQD Service Action can be specified as a value for the `asn` parameter.

5030 E5030 Cmd Rej: MO SMS ASD Feature must be enabled

If a value of `mosmsgcdpn`, `mosmsgcgpn`, `mosmsicdpn`, or `mosmsicgpn` is specified for the `srvn` parameter, then the MO SMS GRN feature must be enabled before an AS containing the CGPNGRNRQD or GRNLKUP Service Action can be specified as a value for the `asn` parameter.

5031 E5031 Cmd Rej: MO SMS GRN Feature must be enabled

If the `fpfx=*` parameter is specified, then an AS containing the FPFX Conditioning Action cannot be specified as value for the `asn` parameter.

4941 E4941 Cmd Rej: Rule with FPFX=* value cannot have AS with CA(x)=FPFX

The value specified for the `fpfx` parameter cannot have a ? as the final character.

4945 E4945 Cmd Rej: FPFX value cannot end with a '?'

The TIF Number Substitution feature must be enabled before an AS containing the NSCGPN or NSCDPN Service Action can be specified.

5091 E5091 Cmd Rej: TIF Number Substitution feature must be Enabled

The AS specified by the `asn` parameter cannot contain both the NSCGPN and SNSCGPN Service Actions.

5092 E5092 Cmd Rej: NSCGPN and SNSCGPN SAs are mutually exclusive

If a value of *mosmsgcdpn* or *mosmsgcgpn* is specified for the *srvn* parameter, then the Prepaid SMS Intercept Ph1 feature must be enabled before an AS containing the PPRELAY Service Action can be specified as a value for the *asn* parameter.

3474 E3474 Cmd Rej: Prepaid SMS Intercept Ph1 feature must be enabled

If the *srvn=mosmsgcgpn* parameter is specified, then the Portability Check for MO SMS feature must be enabled before an AS containing the FRAUDCHK Service Action can be specified as a value for the *asn* parameter.

3479 E3479 Cmd Rej: Port Check for MO SMS feature must be enabled

If the *srvn=mosmsicdpn* parameter is specified, then the MO SMS IS41-to-GSM Migration feature must be enabled before an AS containing the MIGRATE Service Action can be specified as a value for the *asn* parameter.

4957 E4957 Cmd Rej: MO SMS IS41-to-GSM Migration feature must be enabled

If the *srvn=mosmsicdpn* parameter is specified, then the MO-based IS41 SMS NP feature must be enabled before an AS containing the CDPNNP Service Action can be specified as a value for the *asn* parameter.

5115 E5115 Cmd Rej: MO-based IS41 SMS NP must be enabled

If the *srvn=mosmsgcdpn* parameter is specified, then the MO-based GSM SMS NP feature must be enabled before an AS containing the CDPNNP Service Action can be specified as a value for the *asn* parameter.

5116 E5116 Cmd Rej: MO-based GSM SMS NP must be enabled

The IDP A-Party Routing feature must be enabled before the AS specified by the *asn* parameter can contain the CGPNRTG Service Action.

4734 E4734 Cmd Rej: IDP A-Party Routing feature must be enabled

The IDP A-Party Blacklist feature must be enabled before the AS specified for the *asn* parameter can contain the BLKLSTQRY or BLKLSTRLY Service Action.

4737 E4737 Cmd Rej: IDP A-Party Blacklist feature must be enabled

If the AS specified by the *asn* parameter contains the BLKLSTQRY Service Action, then the AS cannot contain any other Service Actions.

4738 E4738 Cmd Rej: BLKLSTQRY and BLKLSTRLY SAs are mutually exclusive

The NPP Unlimited SDWC Characters feature must be turned on before a single digit wildcard (?) can be specified as a value for the *fpx* parameter more than 25 times across all of the rules for an NPP service.

4786 E4786 Cmd Rej: Max 25 FFX single digit wildcard chars '?' per NPP service

If the *srvn=idprcdpn(X)* parameter is specified, then the Action Set specified by the *asn* parameter cannot contain both the ACCGPN* and the CCCGPN Conditioning Actions.

4736 E4736 Cmd Rej: ACCgPN(X) and CCCgPN CAs are mutually exclusive

If a value of *iarcdpn* or *iargcpn* is specified for the *srvn* parameter, then the IAR ASD feature must be enabled before an AS containing the ASDLKUP or CGPNASDRQD Service Action can be specified as a value for the *asn* parameter.

5153 E5153 Cmd Rej: Info Analyzed Relay ASD feature must be enabled

If a value of *iarcdpn* or *iargcpn* is specified for the *srvn* parameter, then the IAR GRN feature must be enabled before an AS containing the GRNLKUP or CGPNGRNRQD Service Action can be specified as a value for the *asn* parameter.

5154 E5154 Cmd Rej: Info Analyzed Relay GRN feature must be enabled

If a value of *iarcdpn* or *iargcpn* is specified for the *srvn* parameter, then the IAR Base feature must be enabled before an AS containing the CCNCCHK, CDIAL, or CGPNSRVRQD Service Action can be specified as a value for the *asn* parameter.

5150 E5150 Cmd Rej: Info Analyzed Relay Base feature must be enabled

If a value of *iarcdpn* or *iargcpn* is specified for the *srvn* parameter, then the IAR NP feature must be enabled before an AS containing the CDNNP or CGNNP Service Action can be specified as a value for the *asn* parameter.

5152 E5152 Cmd Rej: Info Analyzed Relay NP feature must be enabled

If the NPP Service specified by the *srvn* parameter does not support invoking another NPP Service, then only a value of *none* can be specified for the *invkserv* parameter.

5320 E5320 Cmd Rej: INVKSERV value must be NONE for specified SRVN value

If the NPP Service specified by the *srvn* parameter can invoke the TIFCGPN NPP Service, then only a value of *tifcgn* or *none* can be specified for the *invkserv* parameter.

5321 E5321 Cmd Rej: INVKSERV value must be NONE or TIFCGPN

If the NPP Service specified by the *srvn* parameter can invoke the TIFCGPN2 NPP Service, then only a value of *tifcgn2* or *none* can be specified for the *invkserv* parameter.

5322 E5322 Cmd Rej: INVKSERV value must be NONE or TIFCGPN2

If the NPP Service specified by the *srvn* parameter can invoke the TIFCGPN3 NPP Service, then only a value of *tifcgn3* or *none* can be specified for the *invkserv* parameter.

5323 E5323 Cmd Rej: INVKSERV value must be NONE or TIFCGPN3

If the AS specified by the *asn* parameter contains the ASDOTHER or GRNOTHER Formatting Action, then the *invkserv=none* parameter cannot be specified.

5324 E5324 Cmd Rej: FAs ASDOTHER and GRNOTHER require INVKSERV not equal to NONE

If the AS specified by the *asn* parameter contains the CGPNASDRQD, CGPNGRNRQD, CGPNSVCRQD, NSCGPN, or SNSCGPN Service Action, then only a value of *none* can be specified for the *invkserv* parameter.

5325 E5325 Cmd Rej: Action Set with CgPN SAs require Rule INVKSERV equal to NONE

The TIF Range CgPN Blacklist feature must be enabled before:

- an AS containing the NOCGPNRLS Service Action can be specified as a value for the *asn* parameter and a value of *tif*, *tif2*, or *tif3* can be specified for the *srvn* parameter

- an AS containing the FPFXRLS Service Action can be specified as a value for the `asn` parameter and a value of `tifcgnp`, `tifcgnp2`, or `tifcgnp3` can be specified for the `srvn` parameter.

5326 E5326 Cmd Rej: TIF Range CgPN Blacklist feature must be enabled

If the AS specified by the `asn` parameter contains the FPFXRLS Service Action, then no other Service Action can be specified in the AS.

5327 E5327 Cmd Rej: SA FPFXRLS is mutually exclusive with all other SAs

If the AS specified by the `asn` parameter contains the FPFXRLS Service Action, then the AS must also contain a numerical values list with 2 numerical values.

5328 E5328 Cmd Rej: SA FPFXRLS requires 2 SA(X)VAL values

If the AS specified by the `asn` parameter contains the TIFLSBL Service Action, then the AS must also contain a numerical values list with 2 numerical values.

3684 E3684 Cmd Rej: SA TIFLSBL requires 2 SA(X)VAL values

If the AS specified by the `asn` parameter contains the TIFGNBL Service Action, then the AS must also contain a numerical values list with 2 numerical values.

3692 E3692 Cmd Rej: SA TIFGNBL requires 2 SA(X)VAL values

If the AS specified by the `asn` parameter contains the FPFXRLS Service Action, then the 2 numerical values specified by the numerical values list must each be between 0-127.

5329 E5329 Cmd Rej: SA FPFXRLS SA(X)VAL values must be between 0-127

If the AS specified by the `asn` parameter contains the TIFLSBL Service Action, then the 2 numerical values specified by the numerical values list must each be between 0-127.

3696 E3696 Cmd Rej: SA TIFLSBL SA(X)VAL values must be between 0-127

If the AS specified by the `asn` parameter contains the TIFGNBL Service Action, then the 2 numerical values specified by the numerical values list must each be between 0-127.

3700 E3700 Cmd Rej: SA TIFGNBL SA(X)VAL values must be between 0-127

If the AS specified by the `asn` parameter contains the NOCGPNRLS Service Action, then the AS must also contain a numerical values list with 2 numerical values.

5330 E5330 Cmd Rej: SA NOCGPNRLS requires 2 SA(X)VAL values

If the AS specified by the `asn` parameter contains the NOCGPNRLS Service Action, then the 2 numerical values specified by the numerical values list must each be between 0-127.

5331 E5331 Cmd Rej: SA NOCGPNRLS SA(X)VAL values must be between 0-127

The TIF Subscr CgPN Blacklist feature must be enabled before an AS containing the BLRLS or BLNFNDRLS Service Action can be specified as a value for the `asn` parameter, and a value of `tifcgnp`, `tifcgnp2`, or `tifcgnp3` can be specified as a value for the `srvn` parameter.

5332 E5332 Cmd Rej: TIF Subscr CgPN Blacklist feature must be enabled

If the AS specified by the `asn` parameter contains the BLRLS Service Action, then the AS must also contain a numerical values list with 2 numerical values.

5333 E5333 Cmd Rej: SA BLRLS requires 2 SA(X)VAL values

If the AS specified by the `asn` parameter contains the BLRLS Service Action, then the 2 numerical values specified by the numerical values list must each be between 0-127.

5334 E5334 Cmd Rej: SA BLRLS SA(X)VAL values must be between 0-127

If the AS specified by the `asn` parameter contains the BLNFNDRLS Service Action, then the AS must also contain a numerical values list with 2 numerical values.

5335 E5335 Cmd Rej: SA BLNFNDRLS requires 2 SA(X)VAL values

If the AS specified by the `asn` parameter contains the BLNFNDRLS Service Action, then the 2 numerical values specified by the numerical values list must each be between 0-127.

5336 E5336 Cmd Rej: SA BLNFNDRLS SA(X)VAL values must be between 0-127

If the Service specified by the `srvn` parameter does not support a numerical value list for the first Service Action in the AS specified by the `asn` parameter, then the `sa1val` parameter in the AS can only have a value of *none*.

5337 E5337 Cmd Rej: SA1 does not support SA1VAL for specified SRVN value

If the Service specified by the `srvn` parameter does not support a numerical value list for the second Service Action in the AS specified by the `asn` parameter, then the `sa2val` parameter in the AS can only have a value of *none*.

5338 E5338 Cmd Rej: SA2 does not support SA2VAL for specified SRVN value

If the Service specified by the `srvn` parameter does not support a numerical value list for the third Service Action in the AS specified by the `asn` parameter, then the `sa3val` parameter in the AS can only have a value of *none*.

5339 E5339 Cmd Rej: SA3 does not support SA3VAL for specified SRVN value

If the Service specified by the `srvn` parameter does not support a numerical value list for the fourth Service Action in the AS specified by the `asn` parameter, then the `sa4val` parameter in the AS can only have a value of *none*.

5340 E5340 Cmd Rej: SA4 does not support SA4VAL for specified SRVN value

If the Service specified by the `srvn` parameter does not support a numerical value list for the fifth Service Action in the AS specified by the `asn` parameter, then the `sa5val` parameter in the AS can only have a value of *none*.

5341 E5341 Cmd Rej: SA5 does not support SA5VAL for specified SRVN value

If the Service specified by the `srvn` parameter does not support a numerical value list for the sixth Service Action in the AS specified by the `asn` parameter, then the `sa6val` parameter in the AS can only have a value of *none*.

5342 E5342 Cmd Rej: SA6 does not support SA6VAL for specified SRVN value

If the Service specified by the `srvn` parameter does not support a numerical value list for the seventh Service Action in the AS specified by the `asn` parameter, then the `sa7val` parameter in the AS can only have a value of *none*.

5343 E5343 Cmd Rej: SA7 does not support SA7VAL for specified SRVN value

If the Service specified by the `srvn` parameter does not support a numerical value list for the eighth Service Action in the AS specified by the `asn` parameter, then the `sa8val` parameter in the AS can only have a value of *none*.

5344 E5344 Cmd Rej: SA8 does not support SA8VAL for specified SRVN value

If the Service specified by the `srvn` parameter does not support a digit string for the first Service Action in the AS specified by the `asn` parameter, then the `sa1dgts` parameter in the AS can only have a value of *none*.

5345 E5345 Cmd Rej: SA1 does not support SA1DGTS for specified SRVN value

If the Service specified by the `srvn` parameter does not support a digit string for the second Service Action in the AS specified by the `asn` parameter, then the `sa2dgts` parameter in the AS can only have a value of *none*.

5346 E5346 Cmd Rej: SA2 does not support SA2DGTS for specified SRVN value

If the Service specified by the `srvn` parameter does not support a digit string for the third Service Action in the AS specified by the `asn` parameter, then the `sa3dgts` parameter in the AS can only have a value of *none*.

5347 E5347 Cmd Rej: SA3 does not support SA3DGTS for specified SRVN value

If the Service specified by the `srvn` parameter does not support a digit string for the fourth Service Action in the AS specified by the `asn` parameter, then the `sa4dgts` parameter in the AS can only have a value of *none*.

5348 E5348 Cmd Rej: SA4 does not support SA4DGTS for specified SRVN value

If the Service specified by the `srvn` parameter does not support a digit string for the fifth Service Action in the AS specified by the `asn` parameter, then the `sa5dgts` parameter in the AS can only have a value of *none*.

5349 E5349 Cmd Rej: SA5 does not support SA5DGTS for specified SRVN value

If the Service specified by the `srvn` parameter does not support a digit string for the sixth Service Action in the AS specified by the `asn` parameter, then the `sa6dgts` parameter in the AS can only have a value of *none*.

5350 E5350 Cmd Rej: SA6 does not support SA6DGTS for specified SRVN value

If the Service specified by the `srvn` parameter does not support a digit string for the seventh Service Action in the AS specified by the `asn` parameter, then the `sa7dgts` parameter in the AS can only have a value of *none*.

5351 E5351 Cmd Rej: SA7 does not support SA7DGTS for specified SRVN value

If the Service specified by the `srvn` parameter does not support a digit string for the eighth Service Action in the AS specified by the `asn` parameter, then the `sa8dgts` parameter in the AS can only have a value of *none*.

5352 E5352 Cmd Rej: SA8 does not support SA8DGTS for specified SRVN value

If the NPP Unlimited SDWC Characters feature is turned on, then the value specified for the `fpfx` parameter cannot contain more than three single digit wildcards (?).

4856 E4856 Cmd Rej: PFX contains more than three ?

If the NPP Unlimited SDWC Characters feature is turned on, then the value specified for the `fpx` parameter can contain single digit wildcards (?) within only the first six digits.

4958 E4958 Cmd Rej: ? must be in the first six FPFX digits

The TIF Selective Screening feature must be enabled before an AS containing the SELSCR, FPFXRLS, BLRLS, or BLNFNDRLS Service Action can be specified as a value for the `asn` parameter, and a value of `tif`, `tif2`, or `tif3` can be specified as a value for the `srvn` parameter.

2330 E2330 Cmd Rej: TIF Selective Screening feature must be enabled

If the AS specified by the `asn` parameter contains the SELSCR Service Action, then no TIF Number Substitution (NSCGPN or NSCDPN) Service Action can be specified in the AS.

2352 E2352 Cmd Rej: SA SELSCR is mutually exclusive with TIF NS SAs.

If the AS specified by the `asn` parameter contains the SELSCR Service Action, then the 2 numerical values specified by the numerical values list must be none or between 0-127.

2363 E2363 Cmd Rej: SA SELSCR SA(X)VAL values must be none or between 0-127.

Only one call type can be specified for the SELSCR SA. If the AS specified by the `asn` parameter contains the SELSCR SA, the corresponding SA Digit String specified must be none or between 1-FF.

2591 E2591 Cmd Rej: SA SELSCR SA(X)DGTS value must be none or between 1-FF.

The CGPNSVCRQD and NPNRLS Service Actions cannot exist within the same Action Set.

4987 E4987 Cmd Rej: Service actions CgpnSvcRqd and NPRLS are mutually exclusive

SUBCDPN must be configured in TIFOPTS in order to apply TIFRDNBL SA.

3639 E3639 Cmd Rej: SUBCDPN should be configured in TIFOPTS for TIFRDNBL SA.

ASD related SAs cannot be configured in same srs.

E5026 Cmd Rej: ASDLKUP, CGPNASDRQD and TIFRDNBL are mutually exclusive.

Notes

None.

The following error messages were deleted in release 41.1 for PR 135911: E4856 and E4958. These two error messages were re-added and slightly modified for PR 194229 that is in releases 42.1 and 44.0 (and later). These two error messages are NOT in release 43.0.

4.1.332 ent-pct

Use this command to enter Point Code and CIC Translations.

Parameters

epc (mandatory)

ANSI point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.

Synonym:

epca

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001-005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006-255*.

The point code *000-000-000* is not a valid point code.

epci (mandatory)

ITU international destination point code with subfields *zone-area-id*.

Range:

0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

zone—0-7

area—000-255

id—0-7

The point code *0-000-0* is not a valid point code.

epcn (mandatory)

ITU national point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the *chg-*

`stpopts:npcfmti` flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc, m1-m2-m3-m4-gc*).

Range:

0-16383, aa-zz

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

nnnnn—0-16383

gc—aa-zz

m1-m2-m3-m4—0-14 for each member; values must sum to 14

realpc (mandatory)

ANSI point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.

Synonym:

realpca

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When `chg-sid:pctype=ansi` is specified, *ni = 000* is not valid.

When `chg-sid:pctype=ansi` is specified, *nc = 000* is not valid if *ni = 001–005*.

When `chg-sid:pctype=ansi` is specified, *nc = 000* is valid if *ni = 006–255*.

The point code *000-000-000* is not a valid point code.

realpci (mandatory)

ITU international destination point code with subfields *zone-area-id*.

Range:

0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

zone—0-7

area—000-255

id—0-7

The point code *0-000-0* is not a valid point code.

realpcn (mandatory)

ITU national point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the `chg-stpopts:npcfmti` flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc, m1-m2-m3-m4-gc*).

Range:

0-16383, aa-zz

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

nnnnn—0-16383

gc—aa-zz

m1-m2-m3-m4—0-14 for each member; values must sum to 14

ecice (optional)

The end of the Emulated Circuit Identification Code range.

Range:

0-4095
ITU TUP/ISUP

0-16383
ANSI ISUP

0-4294967295
ANSI Q.BICC

*

Default:

*

ecics (optional)

The start of the Emulated Circuit Identification Code range.

Range:

0-4095
ITU TUP/ISUP

0-16383

0-4294967295
ANSI Q.BICC

*

Default:

*

filtpc (optional)

ANSI point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.

Synonym:

filtpca

Range:

0-255, *

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

The asterisk (*) value is not valid for the *ni* subfield.

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001-005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006-255*.

When *chg-sid:pctype=ansi* is specified, *ni-*.** is valid if *ni = 006-255*.

The point code *000-000-000* is not a valid point code.

filtpci (optional)

ITU international destination point code with subfields *zone-area-id*.

Range:

0-255, *

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

zone—0-7

area—000-255

id—0-7

The point code 0-000-0 is not a valid point code.

filtpcn (optional)ITU national point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the `chg-stpopts:npcfmti` flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc, m1-m2-m3-m4-gc*).**Range:**

0-16383, aa-zz

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

nnnnn—0-16383

If the `ecice` or `rcice` parameter is specified, then the `ecics` or `rcics` parameter must be specified, respectively.

4580 E4580 Cmd Rej: CIC must be specified if ECIC is specified

The value specified for the `ecice/rcice` parameter must be equal to or greater than the value specified for the `ecics/rcics` parameter, respectively.

4404 E4404 Cmd Rej: End value must be greater than or equal to a starting value

Full point codes must be specified as the values for the `realpc/realpca/realpci/realpcn` and `epc/epca/epci/epcn` parameters.

3090 E3090 Cmd Rej: Full Point Code must be specified

The PCT table is corrupt or cannot be found.

5392 E5392 Cmd Rej: The PCT table is corrupt or cannot be found

The PCT table cannot contain more entries than the amount specified by the FAK for the PCT quantity feature.

5390 E5390 Cmd Rej: PCT table is full

The `si=3` parameter must be specified before the `ssn` parameter can be specified.

5424 E5424 Cmd Rej: Invalid SI value specified

The values specified for the `realpc/realpca/realpci/realpcn` and `filtpc/filtpca/filtpci/filtpcn` parameters must already exist in the Route table.

2417 E2417 Cmd Rej: Point code does not exist in the routing table

The Route table is corrupt or cannot be found.

2648 E2648 Cmd Rej: Failed reading the route table

The values specified for the `epc/epca/epci/epcn`, `filtpc/filtpca/filtpci/filtpcn`, and `realpc/realpca/realpci/realpcn` parameters must have the same domain.

4606 E4606 Cmd Rej: Point code type mismatch

A PCT quantity feature must be enabled before this command can be specified.

5391 E5391 Cmd Rej: PCT feature must be enabled

If the `ssn` or `ecics` parameter is specified, then the `si` parameter must be specified.

2379 E2379 Cmd Rej: Missing parameter

Duplicate values for the following Key combinations are not allowed:

- `epc/epca/epci/epcn + filtpc/filtpca/filtpci/filtpcn + si + ssn/(ecics/ecice)`
- `realpc/realpca/realpci/realpcn + filtpc/filtpca/filtpci/filtpcn + si + ssn/(rcics/rcice)`

5393 E5393 Cmd Rej: Duplicate keys are not allowed

The values specified for the `realpc/realpca/realpci/realpcn` and `filtpc/filtpca/filtpci/filtpcn` parameters must have at least one route for each value defined in the Route table.

2642 E2642 Cmd Rej: DPC must have at least one route defined

If the ITUDUPPC feature is turned on, and ITU-N Point codes are specified, then the values specified for the `epcn`, `realpcn`, and `filtpcn` parameters must have the same group code.

5394 E5394 Cmd Rej: Group Code of EPC, RealPC and FiltPC must match

A total of 250 unique `epc` and `rpc` values are supported in the PCT table.

5398 E5398 Cmd Rej: Max no of unique EPCs/RealPCs cannot exceed 250

A total of 100 PCT Translations with a single `epc` and `realpc` value are supported in the PCT table.

5399 E5399 Cmd Rej: Max no of PCT Translations per EPC/RealPC cannot exceed 100

A spare point code cannot be specified as a value for the `epci/epcn`, `filtpci/filtpcn`, and `realpci/realpcn` parameters.

5400 E5400 Cmd Rej: Spare point code is not allowed

The `ecics` parameter must be specified before the `relcause` parameter can be specified.

2379 E2379 Cmd Rej: Missing parameter

A value of 4, 5, or 13 must be specified for the `si` parameter before the `ecice/ecics` and `rcice/rcics` parameters can be specified.

5424 E5424 Cmd Rej: Invalid SI value specified

If the `rcics` parameter is specified, then the `ecics` parameter must be specified.

2379 E2379 Cmd Rej: Missing parameter

If the `ecics`, `ecice`, and `rcics` parameters are specified, then the `rcice` parameter must be specified.

2379 E2379 Cmd Rej: Missing parameter

The values specified for the `epc/epca/epci/epcn`, `filtpc/filtpca/filtpci/filtpcn`, and `realpc/realpca/realpci/realpcn` parameters cannot be the same as the STP point code.

2168 E2168 Cmd Rej: Point code matches a STP point code

The values specified for the `epc/epca/epci/epcn`, `filtpc/filtpca/filtpci/filtpcn`, and `realpc/realpca/realpci/realpcn` parameters cannot be the same as the STP capability point code.

2167 E2167 Cmd Rej: Point code matches a STP capability point code

The value specified for the `ecics/ecice` and `rcics/rcice` parameters must be within the range specified by the parameter definition.

3878 E3878 Cmd Rej: CIC outside of valid range for SI

The difference between the values specified for the `ecice` and `ecics` parameters must be equal to the difference between the values specified for the `rcice` and `rcics` parameters.

5426 E5426 Cmd Rej: ECICS/ECICE and RCICS/RCICE should be in same range

A value of 5 or 13 must be specified for the `si` parameter before the `relcause` parameters can be specified.

5424 E5424 Cmd Rej: Invalid SI value specified

The `ssn` and `cic` parameters cannot be specified together in the command.

2155 E2155 Cmd Rej: Invalid parameter combination specified

If the `ecics`, `rcics`, and `rcice` parameters are specified, then the `ecice` parameter must be specified.

2379 E2379 Cmd Rej: Missing parameter

If the same value is specified for the `epc` and `realpc` parameters, then the values specified for the `ecics/ecice` and `rcics/rcice` parameters cannot indicate the same range.

5433 E5433 Cmd Rej: ECIC/Real CIC range can't be same if EPC is same as Real PC

Only one of the `filtpc/filtpca/filtpci/filtpcn` parameters can be specified in the command.

5440 E5440 Cmd Rej: Only one of FILTPC/A, FILTPCI, or FILTPCN may be specified

The value specified for the `epc/epci/epcn` parameter cannot be the same as a secondary point code.

4238 E4238 Cmd Rej: Point code matches a STP secondary point code.**Output**

Use this command to assign user parts to an internal point code that, in turn, assigns user parts to an End Office node.

Parameters**Note:**

See [Point Code Formats and Conversion](#) for a detailed description of point code formats, rules for specification, and examples.

ipc (mandatory)

ANSI point code with subfields network indicator-network cluster-network cluster member (*ni-nc-ncm*). The *prefix* subfield indicates a private point code (*prefix-ni-nc-ncm*).

Synonym:

ipca

Range:

p-, 000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—p-

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001-005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006-255*.

The point code *000-000-000* is not a valid point code.

ipc/ipca/ipci/ipcn/ipcn24/ipcn16 (mandatory)

End Node's internal point code.

ipci (mandatory)

ITU international destination point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-zone-area-id*).

Range:

s-, *p-*, *ps-*, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s-, *p-*, *ps*

zone—0-7

area—000-255

id—0-7

The point code *0-000-0* is not a valid point code.

ipcn (mandatory)

ITU national point code with subfield ITU number (*nnnnn*). The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

Range:

s-, *p-*, *ps-*, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s-, *p-*, *ps*

nnnnn—0-16383

gc—aa-zz

m1-m2-m3-m4—0-14 for each member; values must sum to 14

ipcn24 (mandatory)

24-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*). The *prefix* indicates a private point code (*prefix-msa-ssa-sp*).

Range:*p-*, 000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*prefix—p**msa—000—255**ssa—000—255**sp—000—255***ipcn16 (mandatory)**16-bit ITU national point code with subfields *unit number-sub number area-main number area (un-sna-mna)*. The *prefix* indicates a private point code (*prefix- un-sna-mna*).**Range:***p--*, 000---127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*prefix---p**un---000---127**sna---000---15**mna---000---31***si (mandatory)**

Service indicator value that designates which user part is assigned to the IPC.

Range:

3 - 15

ssn (optional)SCCP subsystem number. Valid only if *si*=3. Use *ssn* as the starting value of the range if *ssne* is specified.**Range:**

0 - 255

ssne (optional)

The end of the range of subsystem numbers.

Range:

1 - 255

Example`ent-rmt-appl:ipc=0-0-1:si=3:ssn=5``ent-rmt-appl:ipc=0-0-1:si=3:ssn=5:ssne=100``ent-rmt-appl:ipc=0-0-1:si=5``ent-rmt-appl:ipcn24=1-100-1:si=5``ent-rmt-appl:ipc=p-1-1-1:si=3:ssn=5:ssne=102`

```
ent-rmt-appl:ipci=ps-2-2-2:si=5
```

```
ent-rmt-appl:ipcn16=1-2-1:si=5
```

Dependencies

Partial point codes are not allowed.

2166 E2166 Cmd Rej: Partial point codes are not allowed

The `ssn` parameter is required if `si=3`.

3743 E3743 Cmd Rej: SSN required if SI is 3

The `ssn` and `ssne` parameters are not allowed unless `si=3`.

3757 E3757 Cmd Rej: SSN is not allowed unless SI is 3

The `ssne` parameter value must be greater than the `ssn` parameter value.

3018 E3018 Cmd Rej: SSNE should be greater than SSN

The specified IPC must be previously defined in the destination table.

2657 E2657 Cmd Rej: Point code not defined

The new entry cannot conflict with an existing entry.

3019 E3019 Cmd Rej: Conflicts with existing entry

Notes

To specify a range of subsystem numbers, specify the `ssn` parameter value as the start of the range and the `ssne` parameter value as the end of the range.

In this command, only ITU-international and ITU national point codes support the spare point code subtype prefix (s-) and the private and spare point code subtype prefix (ps-). All of the point code types support the private (internal) point code subtype prefix (p-).

Output

```
ent-rmt-appl:ipc=0-0-1:si=3:ssn=5
```

```

4.1.334 ent-rte

Use this command to add a route to the system.

 **Caution:**

When using the Network Routing feature, limited network management is provided for point codes not covered by full point code routing, Cluster Routing, or Nested Cluster Routing.

Parameters **Note:**

See [Point Code Formats and Conversion](#) for a detailed description of point code formats, rules for specification, and examples.

lsn (mandatory)

The linkset name associated with this route.

Range:

ayyyyyyyy

1 alphabetic character followed by 9 alphanumeric characters

rc (mandatory)

The relative cost of the route

Range:

0 - 99

dpc (optional)

ANSI destination point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*. The *prefix* subfield indicates a private point code (*prefix-ni-nc-ncm*).

Synonym:

dPCA

Range:

p-, 000-255, *

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—p-

The asterisk value (*) is not valid for the *ni* subfield.

When `chg-sid:pctype=ansi` is specified, *ni* = 000 is not valid.

When `chg-sid:pctype=ansi` is specified, *nc* = 000 is not valid if *ni* = 001–005.

When `chg-sid:pctype=ansi` is specified, *nc* = 000 is valid if *ni* = 006–255.

The point code 000-000-000 is not a valid point code.

dpc/dPCA/dPCi/dPCn/dPCn24/dPCn16 (optional)

prefix—s-, p-, ps

zone—0-7

area—000-255

id—0-7

The point code *0-000-0* is not a valid point code.

dpcn (optional)

ITU national point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the `chg-stpopts:npcfmti` flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc, m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-nnnnn, prefix-nnnnn-gc, prefix-m1-m2-m3-m4, prefix-m1-m2-m3-m4-gc*).

Range:

s-, p-, ps-, 0-16383, aa-zz

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s-, p-, ps

nnnnn—0-16383

gc—aa-zz

m1-m2-m3-m4—0-14 for each member; values must sum to 14

dpcn24 (optional)

24-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*). The *prefix* indicates a private point code (*prefix-msa-ssa-sp*).

Range:

p-, 000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—p

msa—000-255

ssa—000-255

sp—000-255

dpcn16 (optional)

16-bit ITU national point code with subfields *unit number sub number area main number area* (*un-sna-mna*). The *prefix* indicates a private point code (*prefix-un-sna-mna*).

Range:

p--, 000---127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix---p

un---000---127

sna---000---15

mna---000---31

force (optional)

This parameter allows a route to be added to the database even if the linkset to be assigned to the route does not have any signaling links in it.

Range:

yes

Example

Adds route for DPC 1 to linkset WE123642:

```
ent-rte:dpc=1-1-1:lsn=we123642:rc=25
```

Adds route for DPC 21-*-* to linkset WE123642:

```
ent-rte:dpc=21-*-*:lsn=we123642:rc=25
```

Adds route for DPCN24 10-100-14 to linkset WE123624:

```
ent-rte:dpcn24=10-100-14:lsn=we123624:rc=10
```

Adds route for private DPC p-1-1-1 to linkset WE123642:

```
ent-rte:dpc=p-1-1-1:lsn=we123642:rc=25
```

Adds route for private and spare DPCN ps-4082-ge to linkset E1NITUN:

```
ent-rte:dpc=ps-4082-ge:lsn=e1ntitun:rc=10
```

Adds route for private DPCN24 p-10-100-14 to linkset WE123642:

```
ent-rte:dpcn24=p-10-100-1:lsn=we123642:rc=10
```

Adds route for private and spare DPCI s-1-100-1 to linkset UE123642:

```
ent-rte:dpci=s-1-100-1:lsn=ue123642:rc=10
```

Adds route for DPCN16 121-10-15 to linkset WE123642:

```
ent-rte:dpcn16=121-10-15:lsn=we123642:rc=10
```

Dependencies

The value of the `lsn` parameter must exist in the STP database.

2346 E2346 Cmd Rej: Linkset not defined

The DPC must be in the Destination Point Code table.

2657 E2657 Cmd Rej: Point code not defined

The destination point code of a route must be a full point code (*ni-nc-ncm*), a cluster point code (*ni-nc-**), or a network point code (*ni-*-**).

2886 E2886 Cmd Rej: DSTN address must be a full, network or cluster PC

If the specified destination address is a full point code address (*ni-nc-ncm*) and is a member of a provisioned cluster (*ni-nc-**), whether ordered routes can be assigned is determined by the destination address's NCAI (nested cluster allowed indicator). The `ncai=yes/no` parameter is set with the `ncai` parameter of the `ent/chg-dstn` commands.

- If the `ncai=no` parameter is specified, destinations comprising a cluster inherit their ordered routes from the cluster.
- If the `ncai=yes` parameter is specified, then the destination address is a member of a provisioned nested cluster where ordered routes can be assigned to a provisioned member.

2878 E2878 Cmd Rej: Ordered routes cannot be assigned to cluster members

If the specified destination address is a network cluster address (*ni-nc-**), the assignment of the specified ordered route attributes is determined by the setting of the destination address's NCAI (nested cluster allowed indicator). The `ncai=yes/no` parameter is set with the `ncai` parameter of the `ent/chg-dstn` commands.

- If the `ncai=no` parameter is specified, the collection of signaling point codes having the same network identifier (the `ni` parameter) and network cluster (the `nc` parameter) code are assigned the specified ordered route.
- If the `ncai=yes` parameter is specified, then the specified destination is a network cluster address where provisioned members's signaling point codes can be assigned the same or different ordered routes from the cluster.

2878 E2878 Cmd Rej: Ordered routes cannot be assigned to cluster members

If the `dpcn` parameter is specified, the format of the point code(s) must match the format that was assigned with `chg-stpopts:npcfmti`.

2997 E2997 Cmd Rej: PC must match NPCFMTI set in CHG-STPOPTS

The `dpc/dpca/dpci/dpcn/dpcn24/dpcn16` parameter cannot be specified with a private point code (-p) unless the route is an IPGW route.

4279 E4279 Cmd Rej: Only IPGWx routes are allowed for private PCs

The route destination's type must match the route's linkset adjacent point code or the route's linkset secondary adjacent point code type.

3616 E3616 Cmd Rej: APC/SAPC type and group code must match DPC

If the `ipgwapc=yes` parameter is specified for the linkset, then the associated `dpc/dpca/dpci/dpcn/dpcn24/dpcn16` parameter cannot have a cluster route assigned.

3830 E3830 Cmd Rej: DPC can't specify cluster rte for IPGWx or IPSG-M3UA linkset

The linkset must be defined with at least one link. To override this requirement, specify `force=yes`.

2128 E2128 Cmd Rej: Linkset assigned to route must have at least one link

The 6-Way Loadsharing on Routesets feature must be turned on before more than 2 routes can be provisioned with the same relative cost.

2350 E2350 Cmd Rej: At most two linksets can be assigned same cost

A linkset can be entered only once as a route for each destination or for a routeset.

2355 E2355 Cmd Rej: Linkset already assigned to route

If the specified destination address is a network address (*ni-*-**), or network cluster address (*ni-nc-**), the linkset type (see the `chg-ls` command) used in the route must be *b*, *c*, or *d*.

2349 E2349 Cmd Rej: Linkset Type used for network/cluster route can't be A or E

All routes with ANSI DPCs must use ANSI linkset APCs. A route with an ITU-I DPC can go over an ITU-N APC and an ITU-N DPC can go over an ITU-I APC.

3837 E3837 Cmd Rej: Command not valid for IPGHC

If the link set name (the `lsn` parameter) references a link set that has the `ipgwapc=yes` parameter specified, the DPC must not be a cluster route.

2878 E2878 Cmd Rej: Ordered routes cannot be assigned to cluster members

The NRT feature must be turned on before the `dpc/dpca` parameter can be specified using the asterisk (*) in the `nc` or `ncm` subfields.

2955 E2955 Cmd Rej: Network Routing is only valid if the NRT feature is ON

When using network routing, if the DPC has a value of * in the `nc` field, the `ncm` field must also be * (for example, `dpc=21-*-*`).

2956 E2956 Cmd Rej: NCM must be * when using Network Routing

The Route table is corrupt or cannot be found.

2648 E2648 Cmd Rej: Failed reading the route table

The STP Site ID table is corrupt or cannot be found.

2874 E2874 Cmd Rej: Failed reading site identification table

The Linkset table is corrupt or cannot be found.

2122 E2122 Cmd Rej: Failed reading linkset table

The value of the `dpc/dpca/dpci/dpcn/dpcn24/dpcn16` parameter cannot be the same as the EAGLE point code.

2168 E2168 Cmd Rej: Point code matches a STP point code

The value of the `dpc/dpca/dpci/dpcn/dpcn24/dpcn16` parameter cannot be the same as the EAGLE capability point code.

2167 E2167 Cmd Rej: Point code matches a STP capability point code

The value of the `dpc/dpca/dpci/dpcn/dpcn24/dpcn16` parameter cannot have already been assigned to an APC or SAPC for an IPGWx linkset. The entered route must include the APC or SAPC's linkset with the destination equal to the APC or SAPC.

4582 E4582 Cmd Rej: Single rte to APC or SAPC for IPGW LS allowed

If `dpcn` is specified then the format of `dpcn` must match the format dictated by the `chg-stpopts:npcfmti` command

2055 E2055 Cmd Rej: Incorrect information unit, expecting point code- <parm>

The ITU-N ordered route destination's group code must match the route's Link Set Adjacent PC's group code for all linksets other than IPGWI and IPLHC.

3882 E3882 Cmd Rej: Group Code of destination & Link set Adjacent PC must match

The group code must match for all linksets because the ITU Duplicate Point Code feature is on.

3616 E3616 Cmd Rej: APC/SAPC type and group code must match DPC

All linksets in a routeset must have the same network type. The network type of the routeset must be the same as the network type of the destination point code.

3877 E3877 Cmd Rej: ANSI/ITU point code type mismatch

If multiple routes are defined for the destination point code, and if a proxy point code is assigned to the destination point code, then the first route defined in the `ent-rte` command must use the proxy linkset.

4708 E4708 Cmd Rej: One route must use PPC assigned in route(dstn) table

If the `dpc` parameter has a network cluster address (`ni-nc-*`) or network address (`ni-*-*`), then the `lst=prx` parameter cannot be specified.

4726 E4726 Cmd Rej: Linkset Type for Network/Cluster Route can't be PRX

The SAPC table is corrupt or cannot be found.

3282 E3282 Cmd Rej: Failed reading the SAPC table

Notes

In this command, only ITU-international and ITU national point codes support the spare point code subtype prefix (s-) and the private and spare point code subtype prefix (ps-). All of the point code types support the private (internal) point code subtype prefix (p-).

Output

```
ent-rte:dpc=1-1-1:lsn=we123642:rc=25
```

```

4.1.335 ent-rtx

Use this command to enter an exception route entry. An exception route is associated with an entry in the Routing table. When the Origin-Based MTP Routing feature is enabled and turned on, the least cost route available for an MSU to be routed to a Destination Point Code over a specified linkset is used.

Up to 6 routes can be defined to a single entry in the Routing table. Up to 8000 routesets can be defined for an STP. This total must include at least one normal route (not an exception route). The remaining 7999 routesets can include any combination of normal and exception routes.

Note:

A routeset is a collection of routes to a destination. Each routeset can have up to 6 routes, with 16 links on each route. An exception routeset is a collection of up to 6 exception routes that have the same DPC, exception class, and criteria.

Parameters

dpc (mandatory)

ANSI destination point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*. The *prefix* subfield indicates a private point code (*prefix-ni-nc-ncm*).

Synonym:

dpca

Range:

p-, 000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—p-

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001-005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006-255*.

The point code *000-000-000* is not a valid point code.

dpc/dpca/dpci/dpcn/dpcn24/dpcn16 (mandatory)

Destination point code.

dpci (mandatory)

ITU international point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-zone-area-id*).

Range:

s-, *p-*, *ps-*, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s*-, *p*-, *ps*

zone—*0-7*

area—*000-255*

id—*0-7*

The point code *0-000-0* is not a valid point code.

dpcn (mandatory)

ITU national point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the `chg-stpopts:npcfmiti` flexible point code option. A group code must be specified when the ITUDUPPDC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

Range:

s-, *p*-, *ps*-, *0-16383*, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s*-, *p*-, *ps*

nnnnn—*0-16383*

gc—*aa-zz*

m1-m2-m3-m4—*0-14* for each member; values must sum to 14

dpcn24 (mandatory)

24-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*). The *prefix* subfield indicates a private point code (*prefix-msa-ssa-sp*).

Range:

p-, *000-255*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*p*

msa—*000-255*

ssa—*000-255*

sp—*000-255*

dpcn16 (mandatory)

16-bit ITU national point code with subfields *unit number sub number area main number area* (*un-sna-mna*). The *prefix* subfield indicates a private point code (*prefix-un-sna-mna*).

Range:

p--, *000--127*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix---*p*

un---*000*---*127*

sna---*000*---*15*

mna---*000*---*31*

lsn (mandatory)

Linkset Name. The name of the linkset that is associated with the specified exception route.

Range:

ayyyyyyyyy

1 alphabetic character followed by up to 9 alphanumeric characters

rc (mandatory)

Relative Cost. The relative cost associated with the specified exception route.

Range:

0 - 99

cic (optional)

Starting Circuit Identification Code. This parameter is used alone or together with the `ecic` parameter as exception routing criteria for the specified exception route.

Range:

0 - 16383

ecic (optional)

Ending Circuit Identification Code. This parameter, together with the `cic` parameter, defines the CIC range that is used as exception routing criteria for the specified exception route.

Range:

0 - 16383

force (optional)

The `force=yes` parameter must be specified when the `ilsn` parameter value is the same as the `lsn` parameter value.

Range:

yes

ilsn (optional)

Incoming Link Set Name. The name of the originating linkset. This value is used as part of the exception routing criteria for the specified exception route.

Range:

ayyyyyyyyy

1 alphabetic character followed by up to 9 alphanumeric characters

opc (optional)

ANSI origination point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*. The *prefix* subfield indicates a private point code (*prefix-ni-nc-ncm*).

Synonym:

opca

Range:

p-, 000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—p-

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001-005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006-255*.

The point code *000-000-000* is not a valid point code.

opc/opca/opci/opcn/opcn24/opcn16 (optional)

Originating Point Code

opci (optional)

ITU international point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-zone-area-id*).

Range:

opcn (optional)

ITU national point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the *chg-stpopts:npcfmit* flexible point code option. A group code must be specified when the ITUDUPPDC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

Range:

s-, *p-*, *ps-*, *0-16383*, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s-, *p-*, *ps*

nnnnn—0-16383

gc—aa-zz

m1-m2-m3-m4—0-14 for each member; values must sum to 14

opcn24 (optional)

24-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*). The *prefix* subfield indicates a private point code (*prefix-msa-ssa-sp*).

Range:

p-, *000-255*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—p

msa—000-255

ssa—000-255

sp—000-255

opcn16 (optional)

16-bit ITU national point code with subfields *unit number sub number area main number area* (*un-sna-mna*). The *prefix* subfield indicates a private point code (*prefix-un-sna-mna*).

Range:

p--, *000--127*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (--).

prefix---p

un--000---127

sna--000--15

mna--000--31

si (optional)

Service Indicator. This parameter is used as part of the exception routing criteria for the specified exception route.

Range:

3 - 15

Example

```
ent-rtx:dpc=1-1-1:opca=2-3-3:lsn=1set1:rc=30
```

```
ent-rtx:dpc=1-3-1:ilsn=1set2:lsn=1set3:rc=20
```

```
ent-rtx:dpc=2-100-1:si=5:lsn=1set5:rc=50
```

The variables in the Scroll Area messages that are used by this command can have the following values:

<Cmd Keyword> = ENT-RTX

<Table> = Link Set

<Table> = Route

<Table> = rtx

Searching rtx table on disk - please wait...

Dependencies

Only one of the *opc*, *ilsn*, *cic*, or *si* parameters can be specified for a exception route entry.

4435 E4435 Cmd Rej: OPC/ILSN/CIC/SI is mandatory and mutually exclusive

For an ANSI origination point code that is defined using asterisks (*nnn-*-**), the value of the *network identifier* subfield (*nnn*) must be greater than 5.

2169 E2169 Cmd Rej: Point code out of range

If the *ecic* parameter is specified, the *cic* parameter must also be specified.

4580 E4580 Cmd Rej: CIC must be specified if ECIC is specified

The *ecic* parameter value cannot be less than the *cic* parameter value.

4404 E4404 Cmd Rej: End value must be greater than or equal to a starting value

The *opc/opca/opci/opcn/opcn24/opcn16* parameter value cannot be the same as the *dpc* parameter value.

4387 E4387 Cmd Rej: OPC must not be identical to DPC

The Origin-Based MTP Routing feature must be enabled and turned on before this command can be entered.

4584 E4584 Cmd Rej: MTP Origin Based Routing Feature must be ON

The point code specified by the `dpc/dpca/dpci/dpcn/dpcn24/dpcn16` parameter must already exist in the Route table.

2417 E2417 Cmd Rej: Point code does not exist in the routing table

The value specified for the `dpc` parameter cannot already be used as an adjacent point code (APC).

4388 E4388 Cmd Rej: Exception route cannot be assigned to adjacent point code

The linkset name, as defined by the `ilsn` or `lsn` parameter, must exist.

2346 E2346 Cmd Rej: Linkset not defined

An exception route entry cannot already exist with the same input parameter values, other than the relative cost.

4375 E4375 Cmd Rej: Route Exception already exists for input parameters

The 6-Way Loadsharing on Routesets feature must be turned on before more than 2 routes can be provisioned with the same relative cost for a given exception route criteria.

4376 E4376 Cmd Rej: Maximum matching Route Exceptions already exist for DPC

A maximum of 6 exception routes can be associated with the specified DPC and criteria.

4377 E4377 Cmd Rej: Maximum Route Exceptions already exist per DPC and Criteria

A maximum total of 8000 exception routes and normal routes can be defined for the EAGLE. At least one route must be a normal (not exception) route. The remaining routes (up to 7999) can be all normal routes, all exception routes, or any combination of normal and exception routes.

4378 E4378 Cmd Rej: Maximum Route Exceptions already exist for this STP

The network domain of the adjacent point code in the linkset or of the routes in the specified routeset must be the same as the network domain of the specified destination point code or its alias.

3877 E3877 Cmd Rej: ANSI/ITU point code type mismatch

The adjacent or secondary point code type and group code of the linkset or linksets in the specified routeset must match the point code type and group code of the destination point code.

3616 E3616 Cmd Rej: APC/SAPC type and group code must match DPC

The specified CIC/ECIC range must not overlap an existing range.

4381 E4381 Cmd Rej: CIC Range overlaps an existing range

The Linkset table is corrupt or cannot be found.

2122 E2122 Cmd Rej: Failed reading linkset table

The Route table is corrupt or cannot be found.

2648 E2648 Cmd Rej: Failed reading the route table

The Route Exception table is corrupt or cannot be found.

4379 E4379 Cmd Rej: Failed to access Route Exception Table

If the `ilsn` and `lsn` parameters have the same value, or if the value specified for the `opc/opca/opci/opcn/opcn24/opcn16` parameter is the same as the APC of the linkset specified by the `lsn` parameter, then the `force=yes` parameter must be specified.

3799 E3799 Cmd Rej: FORCE=YES must be specified

The `opcn` parameter must be in the same ITU-N group as the `dpcn` parameter.

4001 E4001 Cmd Rej: Group Code of DPCN and OPCN must match

The Group Code of the APCN in the `ilsn` parameter must be the same as the Group Code of the `dpcn` parameter.

4905 E4905 Cmd Rej: Group Code of APCN of ILSN must be equal to that of DPCN

ANSI network routing and cluster point codes as OPC exception route criteria are not allowed for ITU destinations.

4111 E4111 Cmd Rej: Network/Cluster OPC cannot be criteria for DPCI/DPCN

ITU point codes as OPC exception route criteria are not allowed for ANSI Network and Cluster destination.

4112 E4112 Cmd Rej: ITU OPC cannot be the criteria for Network/Cluster ANSI DPC

If the `lsn` parameter is specified, then the `rc` parameter must be specified.

4750 E4750 Cmd Rej: A cost must be specified with a linkset

If a proxy destination is used, then this command cannot be entered.

4733 E4733 Cmd Rej: Exception route does not support proxy destinations

The value specified for the destination point code must be a full point code and not a cluster or network point code.

2859 E2859 Cmd Rej: Destination address must be a full point code

The destination point code specified by the `dpc` parameter must have routes provisioned.

4799 E4799 Cmd Rej: DPC does not have any routes provisioned

The Nested Cluster Routing feature must be turned on before an exception route can be assigned to cluster members.

4391 E4391 Cmd Rej: Exception route cannot be assigned to cluster members

The STPOPTS table is corrupt or cannot be found.

2852 E2852 Cmd Rej: Failed reading STP Options table

The value specified for the `opc/opca/opci/opcn/opcn24/opcn16` parameter cannot be the same as the adjacent point code of the linkset specified by the `lsn` parameter.

4925 E4925 Cmd Rej: OPC must not be identical to APC of linkset

The J7 Support feature must be enabled before the `dpcn16/opcn16` parameter can be specified.

2691 E2691 Cmd Rej: J7 Support Feature must be enabled

Output

```
ent-rtx:dpci=2-100-1:si=5:lsn=1set5:rc=50
```

```
stdcfg2b 06-05-19 18:20:11 EST EAGLE 35.0.0  
ENT-RTX: MASP A - COMPLTD

4.1.336 ent-scr-aftpc

Use this command to add a specific allowed affected point code (AFTPC) screening reference in the AFTPC entity set.

Parameters

Note:

See [Point Code Formats and Conversion](#) for a detailed description of point code formats, rules for specification, and examples.

nsfi (mandatory)

The next screening category that is used in the gateway screening process.

Range:

stop

The gateway screening process ends and the message proceeds through normal routing.

sr (mandatory)

Screening reference. The point code's unique screening reference name.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters

ssn (mandatory)

Subsystem number.

Range:

0 - 255, *

*—the full range of values from 0–255

actname (optional)

Name of the gateway screening stop action set. Stop actions must be administered using this parameter in conjunction with the gateway screening stop action table (see `chg-gws-actset` and `rtrv-gws-actset`).

Range:

ayyyyy

1 alphabetic character followed by up to 5 alphanumeric characters.

area (optional)

ITU international area. The *area* in the point code represented by *zone-area-id*.

Range:

0 - 255, *

id (optional)

ITU international ID. The *ID* in the point code represented by *zone-area-id*.

Range:

0 - 7, *

*—the full range of values from 0–255

mna (optional)

16-bit ITU national main number area. The *mna* in the point code represented by *un-sna-mna*.

Range:

0---31, *

*---the full range of values from 0--31

msa (optional)

24-bit ITU-national main signaling area value. The *msa* of the point code represented by *msa-ssa-sp*.

Range:

0 - 255, *

*—the full range of values from 0–255

nc (optional)

Network cluster value. This parameter specifies one or more *nc* values for the network indicator and network cluster member values specified in the *ni* and *ncm* parameters. It specifies the *nc* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *

*—the full range of values from 0–255

ncm (optional)

Network cluster member value. This parameter specifies one or more *ncm* values for the network indicator and network cluster values identified in the *ni* and *nc* parameters. It specifies the *ncm* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *

*—the full range of values from 0–255

ni (optional)

Network indicator value. This parameter specifies one or more *ni* values for the network cluster and network cluster member values identified in the *nc* and *ncm* parameters. It specifies the *ni* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *

*—the full range of values from 0–255

npc (optional)

ITU national point code.

 **Note:**

Gateway screening allows the ITU national point code to be displayed and entered in the database only as a single number. For multiple-part ITU national point codes, see [Converting ITU National Point Code Formats](#) for information on converting the point code format.

Range:

0 - 16383, *

*—the full range of values from 0–16383

nsr (optional)

Next screening reference. This parameter specifies which screening reference in the specified screening category (*nsfi*) is to be used in the screening process.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters

Default:

No change to the current value

pcst (optional)

Point code subtype. This parameter indicates whether the specified ITU international or ITU national point code has no subtype prefix or has the spare point code prefix (s-).

Range:

none

s

Default:*none***sna (optional)**

16-bit ITU national sub number area. The *sna* in the point code represented by *un-sna-mna*.

Range:*0--15, ****---the full range of values from 0--15***sp (optional)**

24-bit ITU national signaling point. The *sp* in the point code represented by *msa-ssa-sp*.

Range:*0 - 255, ****—the full range of values from 0–255***ssa (optional)**

24-bit ITU national sub signaling area. The *ssa* in the point code represented by *msa-ssa-sp*.

Range:*0 - 255, ****—the full range of values from 0–255***un (optional)**

16-bit ITU-national unit number. The *un* of the point code represented by *un-sna-mna*.

Range:*0--127, ****---the full range of values from 0--127***zone (optional)**

ITU international zone. The *zone* in the point code represented by *zone-area-id*.

Range:*0 - 7, ****—the full range of values from 0–255***Example**

```

```
ent-scr-aftpc:nsfi=stop:sr=af02:ssn=1:un=10:sna=2:mna=5
```

Dependencies

▲ Caution:

Even though gateway screening is in the screen test mode, as defined by the `gwsa=off` and `gws=on` parameters, the gateway screening action in the stop action set specified by the `actname` parameter of the screen set *will* be performed at the end of the screening process.

A complete point code must be specified, and must be one, and only one of the five point code parameter combinations: `ni-nc-ncm`, `zone-area-id`, `msa-ssa-sp`, `un-sna-mna`, or `npc`.

2556 E2556 Cmd Rej: A complete point code must be entered

ANSI point code value 000-000-000 and ITU-International point code value 0-000-0 are not allowed.

2564 E2564 Cmd Rej: Point code out of range

The value of the `actname` parameter must already be defined in the Gateway Screening Stop Action table with the `chg-gws-actset` command.

3656 E3656 Cmd Rej: ACTNAME specified must exist in GWS Stop Action Set table

The character `c` is not a valid value for the `ni`, `nc`, `ncm`, `zone`, `area`, `id`, `msa`, `ssa`, `sp`, `un`, `sna`, `mna`, and `npc` parameters.

2527 E2527 Cmd Rej: C value not allowed

If `zone=*` is specified, `area=*` and `id=*` must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If `area=*` is specified, `id=*` must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If `msa=*` is specified, `ssa=*` and `sp=*` must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If `ssa=*` is specified, `sp=*` must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If `un=*` is specified, `sna=*` and `mna=*` must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If `sna=*` is specified, `mna=*` must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If specified, the `nsfi` parameter value must be `stop`.

3271 E3271 Cmd Rej: NSFI is invalid

If the `nsfi=stop` parameter is specified, the `nsr` parameter cannot be specified.

2554 E2554 Cmd Rej: NSR cannot be specified when NSFI is STOP or FAIL

If the screening reference exists, the new affected point code and subsystem number to be added cannot already exist in the AFTPC entity set.

2561 E2561 Cmd Rej: PC/SSN already exists in given SR

The Spare Point Code Support feature must be enabled before the `pcst` parameter can be specified.

4193 E4193 Cmd Rej: Spare Point Code Feature must be enabled

The spare point code subtype prefix (s-) is not supported for ANSI point codes (parameters `ni`, `nc`, `ncm`) or for 24-bit ITU national point codes (parameters `msa`, `ssa`, `sp`) or for 16-bit ITU national point codes (parameters `un`, `sna`, `mna`). The `pcst` and `npcst` parameters cannot be specified for ANSI, ITU-N24 and ITU-N16 point codes.

4264 E4264 Cmd Rej: Parameter PCST / NPCST is not allowed with C for blocked SR

The Gateway Screening Rules table can contain a maximum of 360,600 rules.

2565 E2565 Cmd Rej: Gateway screening rules table is full

If the `nc` parameter is specified as a range, the `ncm` parameter must be specified as an asterisk or as the full range.

2511 E2511 Cmd Rej: NC is invalid

If the `nc` parameter is specified as a single value or a range, a single value must be specified for the `ni` parameter.

2511 E2511 Cmd Rej: NC is invalid

If the `nc` parameter is specified as an asterisk, the `ncm` parameter must be specified as an asterisk or as the full range.

2512 E2512 Cmd Rej: NCM is invalid

If the `ncm` parameter is specified as a single value, or a range other than the full range of 0–255, the `ni` and `nc` parameters must be specified with a single value.

2512 E2512 Cmd Rej: NCM is invalid

If the `ni` parameter is specified as an asterisk or as a range, the `nc` and `ncm` parameters must be specified as an asterisk or as the full range.

2511 E2511 Cmd Rej: NC is invalid

The Gateway Screening Stop Action table must be accessible.

3655 E3655 Cmd Rej: Failed Reading the GWS Stop Action Set table

The J7 support feature must be enabled before the `un`, `sna`, or `mna` parameters can be specified.

2691 E2691 Cmd Rej: J7 Support Feature must be enabled.

The J7 support feature must not be enabled before the `msa`, `ssa`, or `sp` parameters can be specified.

2801 E2801 Cmd Rej: J7 Support feature must not be enabled

The GWSOA parameter combination should be known and valid.

2483 E2483 Cmd Rej: Unknown / Invalid GWSOA parameter combination

Notes

A range of values is specified by separating the values that define the range by two ampersands (&&); for example, `ni=025&&100` specifies all network indicators for ANSI point codes from 25 - 100.

If the screening reference is valid, but does not exist, a new AFTPC screen is created.

If the screening reference exists, a new rule is added to the AFTPC screening table.

If asterisks or ranges are specified for the allowed AFTPCs, nothing that matches the specified range of AFTPCs can already exist in the AFTPC screen for the screening reference.

If the screen set reaches 100% capacity (indicated by the 100% Full message), the system allows subsequent entries. An error occurs, however, when downloading the screen set to an LIM. Ensure that screen sets do not exceed 100% capacity. Remove screen set entries until the capacity is below 100%.

An asterisk cannot not be specified for a parameter value in this command unless an asterisk was specified for the parameter value in the original `ent-scr-aftpc` command.

The spare point code subtype prefix (s-) is supported only for ITU international and ITU national point codes. The `pcst` parameter indicates whether the specified point code has no subtype prefix to has the spare point code prefix.

There is no feature dependency on ANSI point code parameters, i.e., `ni`, `nc`, `ncm`. The command can be entered successfully whether the J7 feature is enabled or not enabled.

Output

```

4.1.337 ent-scr-blkdpc

Use this command to add a specific blocked destination point code (BLKDPC) screening reference, and associated attributes, to the BLKDPC's table. The associated attributes are: destination point code, next screening function identifier, and next screening reference. The

destination point codes listed on this screen are prohibited from sending SS7 messages to the network.

Parameters

nsfi (mandatory)

The next screening category that is used in the gateway screening process, or it indicates that the gateway screening process should stop.

Range:

cgpa

Allowed CGPA is the next screening category.

destfld

Allowed destination field (DESTFLD) is the next screening category.

fail

Discard the received message.

isup

ISUP message type (ISUP) is the next screening category.

stop

The gateway screening process ends and the message proceeds through normal routing.

sr (mandatory)

Screening reference. The point code's unique screening reference name.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters

actname (optional)

Name of the gateway screening stop action set. Stop actions must be administered using this parameter in conjunction with the gateway screening stop action table (see `chg-gws-actset` and `rtrv-gws-actset`).

Range:

ayyyy

1 alphabetic character followed by up to 5 alphanumeric characters

area (optional)

ITU international area. The *area* in the point code represented by *zone-area-id*.

Range:

*0 - 255, *, C*

*—the full range of values from 0–255

C—continue

id (optional)

ITU international ID. The *ID* in the point code represented by *zone-area-id*.

Range:

0 - 7, *, C

*—the full range of values from 0–7

C—continue

mna (optional)

16-bit ITU national main number area. The *mna* in the point code represented by *un-sna-mna*.

Range:

0--31, *, C

*--the full range of values from 0--31

C -- continue

msa (optional)

24-bit ITU-national main signaling area value. The *msa* of the point code represented by *msa-ssa-sp*.

Range:

0 - 255, *, C

*—the full range of values from 0–255

C—continue

nc (optional)

Network cluster value. This parameter specifies one or more *nc* values for the network indicator and network cluster member values specified in the *ni* and *ncm* parameters. It specifies the *nc* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *, C

*—the full range of values from 0–255

C—continue

ncm (optional)

Network cluster member value. This parameter specifies one or more *ncm* values for the network indicator and network cluster values identified in the *ni* and *nc* parameters. It specifies the *ncm* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *, C

*—the full range of values from 0–255

C—continue

ni (optional)

Network indicator value. This parameter specifies one or more *ni* values for the network cluster and network cluster member values identified in the *nc* and *ncm* parameters. It specifies the *ni* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *, C

*—the full range of values from 0–255

C—continue

npc (optional)

ITU national point code.

**Note:**

Gateway screening allows the ITU national point code to be displayed and entered in the database only as a single number. If you are using multiple-part ITU national point codes, see [Converting ITU National Point Code Formats](#) in Appendix A for information on converting the point code format.

Range:

0 - 16383, *, C

*—the full range of values from 0–16383

C—continue

nsr (optional)

Next screening reference. This parameter specifies which screening reference in the screening category (*nsfi*) is to be used in the screening process.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters

Default:

No value given

pcst (optional)

Point code subtype. This parameter indicates whether the specified ITU international or ITU national point code has no subtype prefix or has the spare point code prefix (s-).

Range:

none

s

Default:

none

sna (optional)

16-bit ITU national sub number area. The *sna* in the point code represented by *un-sna-mna*.

Range:

0--15, *, C

*--the full range of values from 0--15

C -- continue

sp (optional)

24-bit ITU national signaling point. The *sp* in the point code represented by *msa-ssa-sp*.

Range:

0 - 255, *, C

*—the full range of values from 0–255

C—continue

ssa (optional)24-bit ITU national sub signaling area. The *ssa* in the point code represented by *msa-ssa-sp*.**Range:**

0 - 255, *, C

*—the full range of values from 0–255

C—continue

un (optional)16-bit ITU-national unit number. The *un* of the point code represented by *un-sna-mna*.**Range:**

0--127, *, C

*--the full range of values from 0--127

C --continue

zone (optional)ITU international zone. The *zone* in the point code represented by *zone-area-id*.**Range:**

0 - 7, *, C

*—the full range of values from 0–7

C—continue

Example

```
ent-scr-blkdpc:sr=iec:ni=c:nc=c:ncm=c:nsfi=cgpa:nsr=wrds
ent-scr-blkdpc:sr=iec:ni=c:nc=c:ncm=c:nsfi=stop
ent-scr-blkdpc:sr=iec:ni=c:nc=c:ncm=c:nsfi=stop:actname=copy
ent-scr-blkdpc:sr=iec:ni=240:nc=*:ncm=*:nsfi=fail
ent-scr-blkdpc:sr=bdp1:zone=1:area=2:id=3:nsfi=fail:pcst=none
ent-scr-blkdpc:sr=bdp1:zone=2:area=2:id=3:nsfi=fail:pcst=s
ent-scr-blkdpc:sr=bdp1:npc=128:nsfi=fail:pcst=s
ent-scr-blkdpc:sr=bl01:un=1:sna=2:mna=3:nsfi=fail
```

Dependencies**▲ Caution:**

Even though gateway screening is in the screen test mode, as defined by the `gwsa=off` and `gws=on` parameters, the gateway screening action in the stop action set specified by the `actname` parameter of the screen set will be performed at the end of the screening process.

The Gateway Screening Rules table can contain a maximum of 360,600 rules.

2565 E2565 Cmd Rej: Gateway screening rules table is full

A complete point code must be specified, using the `ni-nc-ncm`, `zone-area-id`, `un-sna-mna`, `msa-ssa-sp`, or `npc` combination unless a value of `c` is specified.

2556 E2556 Cmd Rej: A complete point code must be entered

ANSI point code value 000-000-000 and ITU-International point code value 0-000-0 are not allowed.

2564 E2564 Cmd Rej: Point code out of range

At least one optional parameter must be specified.

2136 E2136 Cmd Rej: At least one optional parameter is required

When a blocked screening reference is created, the first entry for the `ni-nc-ncm`, `zone-area-id`, `msa-ssa-sp`, or `un-sna-mna` must be `c-c-c` or `npc=c` must be specified. Subsequent entries can be specific point codes.

2525 E2525 Cmd Rej: NI,ZONE,MSA,UN or NPC must be C when creating new blocked SR.

If the `actname` parameter is specified, then the `nsfi=stop` parameter must be specified.

3658 E3658 Cmd Rej: NSFI must be STOP if ACTNAME is specified

The value of the `actname` parameter must already be defined in the Gateway Screening Stop Action table with the `chg-gws-actset` command.

3656 E3656 Cmd Rej: ACTNAME specified must exist in GWS Stop Action Set table

If the `area=*` parameter is specified, then the `id=*` parameter must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `msa=*` parameter is specified, then the `ssa=*` and the `sp=*` parameters must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `un=*` parameter is specified, then the `sna=*` and the `mna=*` parameters must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `msa=c` parameter is specified, then the `ssa` and the `sp` parameters must have a value of `c` or cannot be specified. If the `msa=c` parameter is specified, and the `ssa` and the `sp` parameters are not specified, then the `ssa` and `sp` parameters default to a value of `c`.

2485 E2485 Cmd Rej: All entered point code elements must be C if any are C

If the `un=c` parameter is specified, then the `sna` and the `mna` parameters must have a value of `c` or cannot be specified. If the `un=c` parameter is specified, and the `sna` and the `mna` parameters are not specified, then the `sna` and `mna` parameters default to a value of `c`.

2485 E2485 Cmd Rej: All entered point code elements must be C if any are C

If the `nc` parameter is specified as a range, the `ncm` parameter must be specified as an asterisk or as the full range.

2512 E2512 Cmd Rej: NCM is invalid

If the `nc` parameter is specified as a single value or a range, a single value must be specified for the `ni` parameter.

2511 E2511 Cmd Rej: NC is invalid

If the `nc` parameter is specified as an asterisk, the `ncm` parameter must be specified as an asterisk or as the full range.

2512 E2512 Cmd Rej: NCM is invalid

If the `ncm` parameter is specified as a single value, or a range other than the full range of 0–255, the `ni` and `nc` parameters must be specified with a single value.

2512 E2512 Cmd Rej: NCM is invalid

If the `ni` parameter is specified as an asterisk or as a range, the `nc` and `ncm` parameters must be specified as an asterisk or as the full range.

2511 E2511 Cmd Rej: NC is invalid

If the `ni=c` parameter is specified, then the `nc` and `ncm` parameters must have a value of `c` or cannot be specified. If the `ni=c` parameter is specified, and the `nc` and the `ncm` parameters are not specified, then the `nc` and `ncm` parameters default to a value of `c`.

2485 E2485 Cmd Rej: All entered point code elements must be C if any are C

If the specified `ni-nc-ncm`, `zone-area-id`, `un-sna-mna` or `msa-ssa-sp` is not equal to `c-c-c`, or if the `npc=c` parameter is not specified, then the `nsfi=fail` parameter must be specified, and the `nsr` parameter cannot be specified.

2549 E2549 Cmd Rej: NSFI must be FAIL

If the `nsfi` parameter has a value other than `stop` or `fail`, the `nsr` parameter must be specified and must exist.

2553 E2553 Cmd Rej: NSR must be specified for given NSFI

The `nsfi` and `nsr` parameters must point to an existing screen, or the `nsfi=stop` parameter must be specified, and the `nsr` parameter cannot be specified.

2552 E2552 Cmd Rej: NSFI and NSR do not reference an existing screen

If the `sr` does not exist, then the `ni-nc-ncm`, `zone-area-id`, `un-sna-mna` or `msa-ssa-sp` parameters must equal `c-c-c`, or the `npc=c` parameter must be specified, and the `nsfi=fail` parameter cannot be specified.

2547 E2547 Cmd Rej: NSFI must not be FAIL

If the specified screening reference exists:

- The `ni-nc-ncm`, `zone-area-id`, `un-sna-mna` or `msa-ssa-sp` must equal `c-c-c` or `npc` cannot equal `c`.
- The `nsfi` parameter must have a value of `fail`.
- The `nsr` parameter cannot be specified.

- The blocked DPC, given by `ni-nc-ncm`, `zone-area-id`, or `npc`, to be added to the BLKDPC screening table for the blocked DPC screening reference cannot exist as defined or within an existing range of DPCs.

2558 E2558 Cmd Rej: Point code already exists in given SR

The Spare Point Code Support feature must be enabled before the `pcst` parameter can be specified.

4193 E4193 Cmd Rej: Spare Point Code Feature must be enabled

The `pcst` parameter cannot be specified with `c` for a blocked screen reference (`sr`).

4264 E4264 Cmd Rej: Parameter PCST / NPCST is not allowed with C for blocked SR

The spare point code subtype prefix (s-) is not supported for ANSI point codes (parameters `ni`, `nc`, `ncm`) or for 24-bit ITU national point codes (parameters `msa`, `ssa`, `sp`) or 16-bit ITU national point codes (parameters `un`, `sna`, `mna`). The `pcst` parameter cannot be specified for ANSI, ITU-N16 and ITU-N24 point codes.

4264 E4264 Cmd Rej: Parameter PCST / NPCST is not allowed with C for blocked SR

If the `ssa=*` parameter is specified, then the `sp=*` parameter must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `sna=*` parameter is specified, then the `mna=*` parameter must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `zone=*` parameter is specified, then the `area=*` and the `id=*` parameters must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `zone=c` parameter is specified, then the `area` and `id` parameters must have a value of `c` or cannot be specified. If the `zone=c` parameter is specified, and the `area` and `id` parameters are not specified, then the `area` and `id` parameters default to a value of `c`.

2485 E2485 Cmd Rej: All entered point code elements must be C if any are C

The value of the `nsfi` parameter must be valid for the BLKDPC entity type.

3271 E3271 Cmd Rej: NSFI is invalid

If a blocked screening reference exists, then the `ni`, `zone`, `msa`, `un`, and `npc` parameters cannot have a value of `c`.

2497 E2497 Cmd Rej: NI, ZONE, MSA, UN or NPC cannot be C for existing blocked SR

The Gateway Screening Stop Action table is corrupt or cannot be found.

3655 E3655 Cmd Rej: Failed Reading the GWS Stop Action Set table

The J7 support feature must be enabled before the `un/sna/mna` parameters are specified.

2691 E2691 Cmd Rej: J7 Support Feature must be enabled

The J7 support feature must not be enabled before the `msa,ssa,sp` parameters are specified.

2801 E2801 Cmd Rej: J7 Support feature must not be enabled

The GWSOA parameter combination should be known and valid.

2483 E2483 Cmd Rej: Unknown / Invalid GWSOA parameter combination

Notes

When a blocked DPC screening reference is created, the first entry for a point code must be `c-c-c`, or `c` for the `npc` parameter. Subsequent entries must be specific point codes.

The character `c` is used in the blocked DPC screens to allow the screening process to continue for messages with point codes that do not match any point codes in the blocked DPC screens. When screening for a blocked DPC and the point code being screened does not match any of the point codes in the blocked DPC screens, the message is not rejected and the screening process continues.

There must be an entry in the blocked DPC screens to allow the screening process to continue. This entry consists of a screening reference, point code, `nsfi`, and `nsr`. The point code is in the form of `npc=c`, or of subfields equal to `c-c-c`. When the character `c` is specified, the `nsfi` and `nsr` parameters must be specified.

If the character `c` is specified for the parameters `ni-nc-ncm`, `zone-area-id`, `un-sna-mna` or `msa-ssa-sp`, the character `c` is the only value that can be specified for all three parameters. No other values can be used. For example, a point code `c-c-255` is not allowed. The point code must be `c-c-c`. The asterisk value cannot be used with the character `c` (for example, a point code `c-c-*` is not allowed).

When the point code does not match any entries in the blocked DPC screens, the screening process is directed to the screening reference with the point code `c-c-c` or `npc=c`. The `nsfi` and `nsr` in this entry are examined to determine the next step in the screening process.

If the current `ni-nc-ncm`, `zone-area-id`, `un-sna-mna` or `msa-ssa-sp` is equal to `c-c-c` or `npc=c`, only the `nsfi` and `nsr` parameters can be changed. Otherwise, only the blocked DPC can be changed.

A range of values is specified by separating the values that define the range by two ampersands (`&&`); for example, `ni=025&&100` specifies all network indicators for ANSI point codes from 25 - 100.

An asterisk cannot not be specified for a parameter value in this command unless an asterisk was specified for the parameter value in the original `ent-scr-blkdpc` command.

If the screen set reaches 100% capacity (indicated by the 100% Full message), the system allows subsequent entries. An error occurs, however, when downloading the screen set to an LIM. Ensure that screen sets do not exceed 100% capacity. Remove screen set entries until the capacity is below 100%.

The spare point code subtype prefix (s-) is supported only for ITU international and ITU national point codes. The `pcst` parameter indicates whether the specified point code has no subtype prefix or has the spare point code prefix.

There is no feature dependency on ANSI point code parameters, i.e., `ni`, `nc`, `ncm`. The command can be entered successfully whether the J7 feature is enabled or not enabled.

4.1.338 ent-scr-blkopc

Use this command to add a specific blocked originating point code (BLKOPC) screening reference and associated attributes `OPC`, `nsfi`, and `nsr` to the BLKOPC entity set. Any messages received on the link assigned to this screening reference that match the attributes in this table are blocked from entering the network.

Parameters

nsfi (mandatory)

This parameter specifies the next screening category that is used in the gateway screening process, or it indicates that the gateway screening process should stop.

Range:

blkdpc

Blocked DPC is the next screening category.

cgpa

Allowed CGPA is the next screening category.

dpc

Allowed DPC is the next screening category.

fail

Discard the received message.

sio

Allowed SIO is the next screening category.

stop

The gateway screening process ends and the message proceeds through normal routing.

sr (mandatory)

Screening reference. The point code's unique screening reference name.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters

actname (optional)

Name of the gateway screening stop action set. Stop actions must be administered using this parameter in conjunction with the gateway screening stop action table (see `chg-gws-actset` and `rtrv-gws-actset`).

Range:

ayyyyy

1 alphabetic character followed by up to 5 alphanumeric characters

area (optional)

ITU international area. The *area* of the point code represented by *zone-area-id*.

Range:

0 - 255, *, C

*—the full range of values from 0–255

C—continue

id (optional)

ITU international ID. This parameter specifies the *ID* of the point code represented by *zone-area-id*.

Range:

0 - 7, *, C

*—the full range of values from 0–255

C—continue

mna (optional)

16-bit ITU national main number area. The *mna* in the point code represented by *un-sna-mna*.

Range:

0--31, *, C

*--the full range of values from 0--31

C ---continue

msa (optional)

24-bit ITU-national main signaling area value. The *msa* of the point code represented by *msa-ssa-sp*.

Range:

0 - 255, *, C

*—the full range of values from 0–255

C—continue

nc (optional)

Network cluster value. This parameter specifies one or more *nc* values for the network indicator and network cluster member values specified in the *ni* and *ncm* parameters. It specifies the *nc* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *, C

*—the full range of values from 0–255
C—continue

ncm (optional)

Network cluster member value. This parameter specifies one or more *ncm* values for the network indicator and network cluster values identified in the *ni* and *nc* parameters. It specifies the *ncm* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *, C

*—the full range of values from 0–255

C—continue

ni (optional)

Network indicator value. This parameter specifies one or more *ni* values for the network cluster and network cluster member values identified in the *nc* and *ncm* parameters. It specifies the *ni* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *, C

*—the full range of values from 0–255

C—continue

npc (optional)

ITU national point code.

**Note:**

Gateway screening allows the ITU national point code to be displayed and entered in the database only as a single number. For multiple-part ITU national point codes, see [Converting ITU National Point Code Formats](#) for information on converting the point code format.

Range:

0 - 16383, *, C

*—the full range of values from 0–255

C—continue

nsr (optional)

Next screening reference. This parameter indicates which screening reference in the specified screening category (*nsfi*) is to be used in the screening process.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters

pcst (optional)

Point code subtype. This parameter indicates whether the specified ITU international or ITU national point code has no subtype prefix or has the spare point code prefix (S-).

Range:*none**s***Default:***none***sna (optional)**16-bit ITU national sub number area. The *sna* in the point code represented by *un-sna-mna*.**Range:***0--15, *, C***--the full range of values from 0--15**C ---continue***sp (optional)**24-bit ITU national signaling point. The *sp* in the point code represented by *msa-ssa-sp*.**Range:***0 - 255, *, C***—the full range of values from 0–255**C—continue***ssa (optional)**24-bit ITU national sub signaling area. The *ssa* in the point code represented by *msa-ssa-sp*.**Range:***0 - 255, *, C***—the full range of values from 0–255**C—continue***un (optional)**16-bit ITU-national unit number. The *un* of the point code represented by *un-sna-mna*.**Range:***0--127, *, C***--the full range of values from 0--127**C ---continue***zone (optional)**ITU internationalzone. The *zone* in the point code represented by *zone-area-id*.**Range:***0 - 7, *, C***—the full range of values from 0–255**C—continue***Example**

Dependencies

▲ Caution:

Even though gateway screening is in the screen test mode, as defined by the `gwsa=off` and `gwsn=on` parameters, the gateway screening action in the stop action set specified by the `actname` parameter of the screen set will be performed at the end of the screening process.

The Gateway Screening Rules table can contain a maximum of 360,600 rules.

2565 E2565 Cmd Rej: Gateway screening rules table is full

A complete point code must be specified, using the `ni-nc-ncm`, `zone-area-id`, `un-sna-mna`, `msa-ssa-sp`, or `npc` combination unless a value of `c` is specified.

2556 E2556 Cmd Rej: A complete point code must be entered

The ANSI point code value 000-000-000 and the ITU-International point code value 0-000-0 cannot be specified.

2564 E2564 Cmd Rej: Point code out of range

At least one optional parameter must be specified.

2136 E2136 Cmd Rej: At least one optional parameter is required

When a blocked screening reference is created, the first entry for the `ni-nc-ncm`, `zone-area-id`, `msa-ssa-sp` or `un-sna-mna` must be `c-c-c` or `npc=c` must be specified. Subsequent entries can be specific point codes.

2525 E2525 Cmd Rej: NI,ZONE,MSA,UN or NPC must be C when creating new blocked SR

If asterisks or ranges are specified for the blocked OPCs, nothing that matches the specified range of blocked OPCs can already exist in the BLKOPC screening table for the screening reference.

2558 E2558 Cmd Rej: Point code already exists in given SR

If the `actname` parameter is specified, then the `nsfi=stop` parameter must be specified.

3658 E3658 Cmd Rej: NSFI must be STOP if ACTNAME is specified

The value of the `actname` parameter must exist in the Gateway Screening Stop Action table.

3656 E3656 Cmd Rej: ACTNAME specified must exist in GWS Stop Action Set table

If `area=*` is specified, `id=*` must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If `msa=*` is specified, `ssa=*` and `sp=*` must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If `un=*` is specified, `sna=*` and `mna=*` must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `msa=c` parameter is specified, then the `ssa` and `sp` parameters must have a value of `c` or cannot be specified. If the `msa=c` parameter is specified, and the `ssa` and the `sp` parameters are not specified, then the `ssa` and `sp` parameters default to a value of `c`.

2485 E2485 Cmd Rej: All entered point code elements must be C if any are C

If the `un=c` parameter is specified, then the `sna` and `mna` parameters must have a value of `c` or cannot be specified. If the `un=c` parameter is specified, and the `sna` and the `mna` parameters are not specified, then the `sna` and `mna` parameters default to a value of `c`.

2485 E2485 Cmd Rej: All entered point code elements must be C if any are C

If the `nc` parameter is specified as a range, the `ncm` parameter must be specified as an asterisk or as the full range.

2511 E2511 Cmd Rej: NC is invalid

If the `nc` parameter is specified as a single value or a range, a single value must be specified for the `ni` parameter.

2511 E2511 Cmd Rej: NC is invalid

If the `nc` parameter is specified as an asterisk, the `ncm` parameter must be specified as an asterisk or as the full range.

2512 E2512 Cmd Rej: NCM is invalid

If the `ncm` parameter is specified as a single value, or a range other than the full range of 0–255, the `ni` and `nc` parameters must be specified with a single value.

2512 E2512 Cmd Rej: NCM is invalid

If the `ni` parameter is specified as an asterisk or as a range, the `nc` and `ncm` parameters must be specified as an asterisk or as the full range.

2511 E2511 Cmd Rej: NC is invalid

If the `ni=c` parameter is specified, then the `nc` and the `ncm` parameters must have a value of `c` or cannot be specified. If the `ni=c` parameter is specified, and the `nc` and the `ncm` parameters are not specified, then the `nc` and `ncm` parameters default to a value of `c`.

2485 E2485 Cmd Rej: All entered point code elements must be C if any are C

If the specified `ni-nc-ncm`, `zone-area-id`, `un-sna-mna` or `msa-ssa-sp` is not equal to `c-c-c`, or if the `npc=c` parameter is not specified, then the `nsfi=fail` parameter must be specified, and the `nsr` parameter cannot be specified.

2549 E2549 Cmd Rej: NSFI must be FAIL

If the value of the `nsfi` parameter is not `stop` or `fail`, then the `nsr` parameter must be specified.

2553 E2553 Cmd Rej: NSR must be specified for given NSFI

The `nsfi` and `nsr` parameters must point to an existing screen, or the `nsfi=stop` parameter must be specified, and the `nsr` parameter cannot be specified.

2552 E2552 Cmd Rej: NSFI and NSR do not reference an existing screen

If the `sr` does not exist, then the `ni-nc-ncm`, `zone-area-id`, `un-sna-mna` or `msa-ssa-sp` parameters must equal `c-c-c`, or the `npc=c` parameter must be specified, and the `nsfi=fail` parameter cannot be specified.

2547 E2547 Cmd Rej: NSFI must not be FAIL

If the specified screening reference exists:

- The `ni-nc-ncm`, `zone-area-id`, `un-sna-mna` or `msa-ssa-sp` must equal `c-c-c` or `npc=c` cannot be specified.
- The `nsfi` parameter must be `fail`.
- The `nsr` parameter cannot be specified.
- The blocked OPC, specified by `ni-nc-ncm`, `zone-area-id`, `un-sna-mna`, `msa-ssa-sp`, or `npc`, to be added to the BLKOPC screening table for the blocked OPC screening reference cannot exist as defined or within an existing range of OPCs.

2558 E2558 Cmd Rej: Point code already exists in given SR

The Spare Point Code Support feature must be enabled before the `pcst` parameter can be specified.

4193 E4193 Cmd Rej: Spare Point Code Feature must be enabled

The `pcst` parameter cannot be specified with `c` for a blocked screen reference (`sr`).

4264 E4264 Cmd Rej: Parameter PCST / NPCST is not allowed with C for blocked SR

The spare point code subtype prefix (s-) is not supported for ANSI point codes (parameters `ni`, `nc`, `ncm`) or for 24-bit ITU national point codes (parameters `msa`, `ssa`, `sp`) or for 16-bit ITU national point codes (parameters `un`, `sna`, `sna`). The `pcst` parameter cannot be specified for ANSI, ITU-N16 and ITU-N24 point codes.

4264 E4264 Cmd Rej: Parameter PCST / NPCST is not allowed with C for blocked SR

If `ssa=*` is specified, `sp=*` must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If `sna=*` is specified, `mna =*` must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If `zone=*` is specified, `area=*` and `id=*` must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `zone=c` parameter is specified, then the `area` and `id` parameters must have a value of `c` or cannot be specified. If the `zone=c` parameter is specified, and the `area`

and the `id` parameters are not specified, then the `area` and `id` parameters default to a value of `c`.

2485 E2485 Cmd Rej: All entered point code elements must be C if any are C

The specified `nsfi` parameter value must be valid for the BLKOPC entity type.

3271 E3271 Cmd Rej: NSFI is invalid

The Gateway Screening Stop Action table is corrupt or cannot be found.

3655 E3655 Cmd Rej: Failed Reading the GWS Stop Action Set table

If a blocked screening reference exists, then the `ni`, `zone`, `msa`, `un` and `npc` parameters cannot have a value of `c`.

2497 E2497 Cmd Rej: NI, ZONE, MSA, UN or NPC cannot be C for existing blocked SR

The J7 support feature must be enabled before the `un/ sna/ mna` parameters are specified.

2691 E2691 Cmd Rej: J7 Support Feature must be enabled.

The J7 support feature must not be enabled before the `msa`, `ssa`, `sp` parameters are specified.

2801 E2801 Cmd Rej: J7 Support feature must not be enabled

The GWSOA parameter combination should be known and valid.

2483 E2483 Cmd Rej: Unknown / Invalid GWSOA parameter combination

Notes

When a blocked DPC screening reference is created, the first entry for a point code must be `c-c-c`, or the `npc=c` parameter must be specified. Subsequent entries must be specific point codes.

The character `c` is used in the blocked DPC screens to allow the screening process to continue for messages with point codes that do not match any point codes in the blocked DPC screens. When screening for a blocked DPC and the point code being screened does not match any of the point codes in the blocked DPC screens, the message is not rejected and the screening process continues.

There must be an entry in the blocked DPC screens to allow the screening process to continue. This entry consists of a screening reference, point code, `nsfi`, and `nsr`. The point code is in the form of `npc=c` or subfields equal to `c-c-c`. When the character `c` is specified, the `nsfi` and `nsr` parameters must be specified.

If the character `c` is specified for the parameters `ni-nc-ncm`, `zone-area-id`, `un-sna-mna` or `msa-ssa-sp`, the character `c` is the only value that can be specified for all three parameters. For example, a point code `c-c-255` is not allowed. The point code must be `c-c-c`. The asterisk value cannot be used with the character `c` (for example, a point code `c-c-*` is not allowed).

When the point code does not match any entries in the blocked DPC screens, the screening process is directed to the screening reference with the point code `c-c-c` or `npc=c`. The `nsfi` and `nsr` in this entry are examined to determine the next step in the screening process.

If the current `ni-nc-ncm`, `zone-area-id`, `un-sna-mna` or `msa-ssa-sp` is equal to `c-c-c` or `npc=c`, only the `nsfi` and `nsr` can be changed. Otherwise, only the blocked DPC can be changed.

A range of values is specified by separating the values that define the range by two ampersands (&&); for example, `ni=025&&100` specifies all network indicators for ANSI point codes from 25 - 100.

An asterisk cannot not be specified for a parameter value in this command unless an asterisk was specified for the parameter value in the original `ent-scr-blkopc` command.

If the screen set reaches 100% capacity (indicated by the 100% Full message), the system allows subsequent entries. An error occurs, however, when downloading the screen set to an LIM. Ensure that screen sets do not exceed 100% capacity. Remove screen set entries until the capacity is below 100%.

The spare point code subtype prefix (s-) is supported only for ITU international and ITU national point codes. The `pcst` parameter indicates whether the specified point code has no subtype prefix or has the spare point code prefix.

There is no feature dependency on ANSI point code parameters, i.e., `ni`, `nc`, `ncm`. The command can be entered successfully whether the J7 feature is enabled or not enabled.

4.1.339 ent-scr-cdpa

Use this command to add a specific allowed called party address (CDPA) screening reference in the CDPA entity set.

Parameters

nsfi (mandatory)

This parameter specifies the next screening category that is used in the gateway screening process, or it indicates that the gateway screening process should stop.

Range:***aftp***

Allowed affected point code is the next screening category.

stop

The gateway screening process ends and the message proceeds through normal routing.

sr (mandatory)

Screening reference. This parameter specifies the screening reference name for the CdPA.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters

ssn (mandatory)

Subsystem number

Range:

*0 - 255, **

actname (optional)

Name of the gateway screening stop action set. Stop actions must be administered using this parameter in conjunction with the gateway screening stop action table (see `chg-gws-actset` and `rtrv-gws-actset`).

Range:

ayyyyy

1 alphabetic character followed by up to 5 alphanumeric characters

area (optional)

ITU international area. The *area* in the point code represented by *zone-area-id*.

Range:

*0 - 255, **

*—the full range of values from 0–255

id (optional)

ITU international ID. The *ID* in the point code represented by *zone-area-id*.

Range:

*0 - 7, **

*—the full range of values from 0–7

mna (optional)

16-bit ITU national main number area. The *mna* in the point code represented by *un-sna-mna*.

Range:

*0--31, **

*---the full range of values from 0--31

msa (optional)

24-bit ITU-national main signaling area value. The *msa* of the point code represented by *msa-ssa-sp*.

Range:

0 - 255, *

*—the full range of values from 0–255

nc (optional)

Network cluster value. This parameter specifies one or more *nc* values for the network indicator and network cluster member values specified in the *ni* and *ncm* parameters. It specifies the *nc* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *

*—the full range of values from 0–255

ncm (optional)

Network cluster member value. This parameter specifies one or more *ncm* values for the network indicator and network cluster values identified in the *ni* and *nc* parameters. It specifies the *ncm* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *

*—the full range of values from 0–255

ni (optional)

Network indicator value. This parameter specifies one or more *ni* values for the network cluster and network cluster member values identified in the *nc* and *ncm* parameters. It specifies the *ni* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *

*—the full range of values from 0–255

npc (optional)

ITU national point code.

 **Note:**

Gateway screening allows the ITU national point code to be displayed and entered in the database only as a single number. For multiple-part ITU national point codes, see [Converting ITU National Point Code Formats](#) for information on converting the point code format.

Range:

0 - 16383, *

*—the full range of values from 0–16383

nsr (optional)

Next screening reference. This parameter specifies which screening reference in the specified screening category (*nsfi*) is to be used in the screening process.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters

Default:
No value given

pcst (optional)

Point code subtype. This parameter indicates whether the specified ITU international or ITU national point code has no subtype prefix or has the spare point code prefix (s-).

Range:
none
s

Default:
none

scmgfid (optional)

SCMG Format ID. The following SCCP message types are screened against the Allowed CDPA table and all others are passed: UDT, UDTS, XU DT, XU DTS.

Range:
*1 - 255, **
*—the full range of values from 1–255

sna (optional)

16-bit ITU national sub number area. The *sna* in the point code represented by *un-sna-mna*.

Range:
*0--15, **
*---the full range of values from 0--15

sp (optional)

24-bit ITU national signaling point. The *sp* in the point code represented by *msa-ssa-sp*.

Range:
*0 - 255, **
*—the full range of values from 0–255

ssa (optional)

24-bit ITU national sub signaling area. The *ssa* in the point code represented by *msa-ssa-sp*.

Range:
*0 - 255, **
*—the full range of values from 0–255

un (optional)

16-bit ITU-national unit number. The *un* of the point code represented by *un-sna-mna*.

Range:
*0--127, **
*---the full range of values from 0--127

zone (optional)

ITU international zone. The *zone* in the point code represented by *zone-area-id*.

Range:

0 - 7, *

*—the full range of values from 0–7

Example

```
ent-scr-
cdpa:sr=iec:ni=240:nc=010:ncm=*:ssn=224:nsfi=aftpc:nsr=wrds

ent-scr-
cdpa:sr=iec:ni=240:nc=010:ncm=*:ssn=224:nsfi=stop:actname=copy

ent-scr-
cdpa:sr=cdp1:zone=1:area=2:id=3:ssn=1:nsfi=stop:scmgfid=1:pcst=
s

ent-scr-cdpa:sr=cdp2:un=1:sna=2:mna=1:ssn=1:nsfi=stop
```

Dependencies**⚠ Caution:**

Even though gateway screening is in the screen test mode, as defined by the `gwsa=off` and `gws=on` parameters, the gateway screening action in the stop action set specified by the `actname` parameter of the screen set *will* be performed at the end of the screening process.

The Gateway Screening Rules table can contain a maximum of 360,600 rules.

2565 E2565 Cmd Rej: Gateway screening rules table is full

A complete point code must be specified, and must be one and only one of the five point code parameter combinations: `ni-nc-ncm`, `zone-area-id`, `un-sna-mna`, `msa-ssa-sp`, or `npc`.

2556 E2556 Cmd Rej: A complete point code must be entered

ANSI point code value 000-000-000 and ITU-International point code value 0-000-0 are not allowed.

2564 E2564 Cmd Rej: Point code out of range

At least one optional parameter must be specified.

2136 E2136 Cmd Rej: At least one optional parameter is required

The new CDPA entry to be added cannot match any specific, range, or asterisk entry already existing in the specified screening table.

2516 E2516 Cmd Rej: PC/SSN/SCMGFID already exists in given SR

The character `c` is not a valid value for the `ni`, `nc`, `ncm`, `zone`, `area`, `id`, `msa`, `ssa`, `sp`, `una`, `sna`, `mna`, and `npc` parameters.

2527 E2527 Cmd Rej: C value not allowed

The value of the `actname` parameter must already be defined in the Gateway Screening Stop Action table with the `chg-gws-actset` command.

3656 E3656 Cmd Rej: ACTNAME specified must exist in GWS Stop Action Set table

When the `actname` parameter is specified, the `nsfi=stop` parameter must be specified.

3658 E3658 Cmd Rej: NSFI must be STOP if ACTNAME is specified

If the `nc` parameter is specified as a range, the `ncm` parameter must be specified as an asterisk or as the full range.

2512 E2512 Cmd Rej: NCM is invalid

If the `nc` parameter is specified as a single value or a range, a single value must be specified for the `ni` parameter.

2511 E2511 Cmd Rej: NC is invalid

If the `nc` parameter is specified as an asterisk, the `ncm` parameter must be specified as an asterisk or as the full range.

2512 E2512 Cmd Rej: NCM is invalid

If the `ncm` parameter is specified as a single value, or a range other than the full range of 0–255, the `ni` and the `nc` parameters must be specified with a single value.

2512 E2512 Cmd Rej: NCM is invalid

If the `ni` parameter is specified as an asterisk or as a range, the `nc` and `ncm` parameters must be specified as an asterisk or as the full range.

2511 E2511 Cmd Rej: NC is invalid

If the `nnc` parameter is specified as a range, the `nncm` parameter must be specified as an asterisk or as the full range.

2511 E2511 Cmd Rej: NC is invalid

When `nsfi=aftpc` is specified, the `ssn=1` parameter must be specified.

2484 E2484 Cmd Rej: SSN must be 1 if NSFI=AFTPC

When `nsfi` is a value other than `stop`, the `nsr` parameter must be specified.

2553 E2553 Cmd Rej: NSR must be specified for given NSFI

When `nsfi=stop` is specified, the `nsr` parameter cannot be specified.

2554 E2554 Cmd Rej: NSR cannot be specified when NSFI is STOP or FAIL

When `ssn=1` is specified, the `scmgfid` parameter must be specified.

2508 E2508 Cmd Rej: SCMGFID is invalid

When `ssn` is not 1, the `scmgfid` parameter cannot be specified.

2508 E2508 Cmd Rej: SCMGFID is invalid

The Spare Point Code Support feature must be enabled before the `pcst` parameter can be specified.

4193 E4193 Cmd Rej: Spare Point Code Feature must be enabled

The spare point code subtype prefix (s-) is not supported for ANSI point codes (parameters `ni`, `nc`, `ncm`) or for 24-bit ITU national point codes (parameters `msa`, `ssa`, `sp`) or for 16-

bit ITU national point codes (parameters `un`, `sna`, `mna`). The `pcst` parameter cannot be specified for ANSI, ITU-N16 or ITU-N24 point codes.

4264 E4264 Cmd Rej: Parameter PCST / NPCST is not allowed with C for blocked SR

The specified value for the `nsfi` parameter is not valid for `cdpa` screen.

3271 E3271 Cmd Rej: NSFI is invalid

The Gateway Screening Stop Action table must be accessible.

3655 E3655 Cmd Rej: Failed Reading the GWS Stop Action Set table

The next screening function identifier (`nsfi`) and the next screening reference (`nsr`) must point to an existing screen, or the `nsfi=stop` parameter must be specified and the `nsr` parameter cannot be specified.

2552 E2552 Cmd Rej: NSFI and NSR do not reference an existing screen

The J7 support feature must be enabled before the `un/sna/mna` parameters are specified.

2691 E2691 Cmd Rej: J7 Support Feature must be enabled.

The J7 support feature must not be enabled before the `msa/ssa/sp` parameters are specified.

2801 E2801 Cmd Rej: J7 Support feature must not be enabled

The GWSOA parameter combination should be known and valid.

2483 E2483 Cmd Rej: Unknown / Invalid GWSOA parameter combination

Notes

If the screening reference is valid, but does not exist, a new CDPA screen is created.

If the screening reference exists, a new rule is added to the CDPA screening table.

A range of values is specified by separating the values that define the range by two ampersands (&&); for example, `ni=025&&100` specifies all network indicators for ANSI point codes from 25 - 100.

If the screen set reaches 100% capacity (indicated by the 100% Full message), the system will allow subsequent entries. An error will occur, however, when downloading the screen set to a LIM. Screen sets should not exceed 100% capacity. Remove screen set entries until the capacity is below 100%.

An asterisk cannot not be specified for a parameter value in this command unless an asterisk was specified for the parameter value in the original `ent-scr-cdpa` command.

The spare point code subtype prefix (s-) is supported only for ITU international and ITU national point codes. The `pcst` parameter indicates whether the specified point code has no subtype prefix or has the spare point code prefix.

There is no feature dependency on ANSI point code parameters, i.e., `ni`, `nc`, `ncm`. The command can be entered successfully whether the J7 feature is enabled or not enabled.

Output

```
ent-scr-cdpa:sr=iec:ni=240:nc=010:ncm=*:ssn=224:nsfi=aftpc:nsr=wrds
```

4.1.340 ent-scr-cgpa

Use this command to add a specific allowed calling party address (CGPA) screening reference in the CGPA entity set.

Parameters

nsfi (mandatory)

This parameter specifies the next screening category that is used in the gateway screening process, or it indicates that the gateway screening process should stop.

Range:

cdpa

Allowed called party address is the next screening category.

stop

The gateway screening process ends and the message proceeds through normal routing.

tt

Allowed translation type is the next screening category.

ri (mandatory)

Routing indicator. This parameter provides routing instructions to the receiving signaling point. In gateway screening, messages may be screened based on the value of the routing indicator.

Range:

dpc

Allow a called party address with a routing indicator value of "DPC/SSN."

gt

Screening stops and gateway screening is bypassed as a forced pass.

*

A full range of values.

sr (mandatory)

Screening reference. The screening reference name for the CgPA.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters

ssn (mandatory)

Subsystem number

Range:

*1 - 255, **

actname (optional)

Name of the gateway screening stop action set. Stop actions must be administered using this parameter in conjunction with the gateway screening stop action table (see `chg-gws-actset` and `rtrv-gws-actset`).

Range:

ayyyyy

1 alphabetic character followed by up to 5 alphanumeric characters

area (optional)

ITU international area. The *area* in the point code represented by *zone-area-id*.

Range:

*0 - 255, **

*—the full range of values from 0–255

id (optional)

ITU international ID. The *ID* in the point code represented by *zone-area-id*.

Range:

*0 - 7, **

*—the full range of values from 0–7

mna (optional)

16-bit ITU national main number area. The *mna* in the point code represented by *un-sna-mna*.

Range:

*0--31, **

*---the full range of values from 0--31

msa (optional)

24-bit ITU-national main signaling area value. The *msa* of the point code represented by *msa-ssa-sp*.

Range:

*0 - 255, **

*—the full range of values from 0–255

nc (optional)

Network cluster value. This parameter specifies one or more *nc* values for the network indicator and network cluster member values specified in the *ni* and *ncm* parameters. It specifies the *nc* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *

*—the full range of values from 0–255

ncm (optional)

Network cluster member value. This parameter specifies one or more *ncm* values for the network indicator and network cluster values identified in the *ni* and *nc* parameters. It specifies the *ncm* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *

*—the full range of values from 0–255

ni (optional)

Network indicator value. This parameter specifies one or more *ni* values for the network cluster and network cluster member values identified in the *nc* and *ncm* parameters. It specifies the *ni* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *

*—the full range of values from 0–255

npc (optional)

ITU national point code.

 **Note:**

Gateway screening allows the ITU national point code to be displayed and entered in the database only as a single number. For multiple-part ITU national point codes, see [Converting ITU National Point Code Formats](#) for information on converting the point code format.

Range:

0 - 16383

nsr (optional)

Next screening reference. This parameter indicates which screening reference in the specified screening category (*nsfi*) is to be used in the screening process.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters

pcst (optional)

Point code subtype. This parameter indicates whether the specified ITU international or ITU national point code has no subtype prefix or has the spare point code prefix (s-).

Range:*none**s***Default:***none***sccpmt (optional)**

SCCP message type

Range:**9**

UDT

10

UDTS

17

XUDT

18

XUDTS

*

Default:

*

sna (optional)16-bit ITU national sub number area. The *sna* in the point code represented by *un-sna-mna*.**Range:***0--15, ****--the full range of values from 0--15***sp (optional)**24-bit ITU national signaling point. The *sp* in the point code represented by *msa-ssa-sp*.**Range:***0 - 255, ****--the full range of values from 0--255***ssa (optional)**24-bit ITU national sub signaling area. The *ssa* in the point code represented by *msa-ssa-sp*.**Range:***0 - 255, ****--the full range of values from 0--255***un (optional)**16-bit ITU-national unit number. The *un* of the point code represented by *un-sna-mna*.

Range:

0--127, *

*--the full range of values from 0--127

zone (optional)ITU international zone. The *zone* in the point code represented by *zone-area-id*.**Range:**

0 - 7, *

*—the full range of values from 0–255

Example

```

Dependencies**▲ Caution:**

Even though gateway screening is in the screen test mode, as defined by the `gwsa=off` and `gwsn=on` parameters, the gateway screening action in the stop action set specified by the `actname` parameter of the screen set will be performed at the end of the screening process.

The Gateway Screening Rules table can contain a maximum of 360,600 rules.

2565 E2565 Cmd Rej: Gateway screening rules table is full

A complete point code must be specified, and must be one, and only one of the five point code parameter combinations: `ni-nc-ncm`, `zone-area-id`, `un-sna-mna`, `msa-ssa-sp`, or `npc`.

2556 E2556 Cmd Rej: A complete point code must be entered

ANSI point code value 000-000-000 and ITU-International point code value 0-000-0 are not allowed.

2564 E2564 Cmd Rej: Point code out of range

The new CGPA point code, `ri`, `sccpmt`, and `ssn` to be added can not already exist in the CGPA entity set.

2514 E2514 Cmd Rej: PC/SSN/RI/SCCPMT already exists in given SR

The character *c* is not a valid value for the *ni*, *nc*, *ncm*, *zone*, *area*, *id*, *msa*, *ssa*, *sp*, *un*, *sna*, *mna*, and *npc* parameters.

2527 E2527 Cmd Rej: C value not allowed

The value of the *actname* parameter must already be defined in the Gateway Screening Stop Action table with the *chg-gws-actset* command.

3656 E3656 Cmd Rej: ACTNAME specified must exist in GWS Stop Action Set table

When the *actname* parameter is specified, the *nsfi=stop* parameter must be specified.

3658 E3658 Cmd Rej: NSFI must be STOP if ACTNAME is specified

If *area=** is specified, *id=** must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If *msa=** is specified, *ssa=** and *sp=** must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If *un=** is specified, *sna=** and *mna=** must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the *nc* parameter is specified as a range, the *ncm* parameter must be specified as an asterisk or as the full range.

2511 E2511 Cmd Rej: NC is invalid

If the *nc* parameter is specified as a single value or a range, a single value must be specified for the *ni* parameter.

2511 E2511 Cmd Rej: NC is invalid

If the *nc* parameter is specified as an asterisk, the *ncm* parameter must be specified as an asterisk or as the full range.

2512 E2512 Cmd Rej: NCM is invalid

If the *ncm* parameter is specified as a single value, or a range other than the full range of 0–255, the *ni* and *nc* parameters must be specified with a single value.

2512 E2512 Cmd Rej: NCM is invalid

If the *ni* parameter is specified as an asterisk or as a range, the *nc* and *ncm* parameters must be specified as an asterisk or as the full range.

2511 E2511 Cmd Rej: NC is invalid

The Spare Point Code Support feature must be enabled before the *pcst* parameter can be specified.

4193 E4193 Cmd Rej: Spare Point Code Feature must be enabled

The spare point code subtype prefix (s-) is not supported for ANSI point codes (parameters *ni*, *nc*, *ncm*) or for 24-bit ITU national point codes (parameters *msa*, *ssa*, *sp*) or for 16-bit ITU national point codes (parameters *un*, *sna*, *mna*). The *pcst* parameter cannot be specified for ANSI, ITU-N16 or ITU-N24 point codes.

4264 E4264 Cmd Rej: Parameter PCST / NPCST is not allowed with C for blocked SR

The screen referenced by `nsfi` and `nsr` must already exist.

2552 E2552 Cmd Rej: NSFI and NSR do not reference an existing screen

The `nsr` parameter must be specified, if `nsfi` is not equal to `stop`.

2553 E2553 Cmd Rej: NSR must be specified for given NSFI

When `nsfi=stop` is specified, the `nsr` parameter cannot be specified.

2554 E2554 Cmd Rej: NSR cannot be specified when NSFI is STOP or FAIL

The `nsfi=tt` parameter can be specified only if the `ri=gt` parameter or the `ri=*` parameter is specified.

2492 E2492 Cmd Rej: The NSFI / RI combination is invalid

The `nsfi=cdpa` parameter can be specified only if the `ri=dpc` parameter or the `ri=*` parameter is specified.

2492 E2492 Cmd Rej: The NSFI / RI combination is invalid

If `ssa=*` is specified, `sp=*` must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If `sna=*` is specified, `mna=*` must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If `zone=*` is specified, `area=*` and `id=*` must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

The specified value for the `nsfi` parameter is not valid for `cgpa` screen.

3271 E3271 Cmd Rej: NSFI is invalid

The Gateway Screening Stop Action table must be accessible.

3655 E3655 Cmd Rej: Failed Reading the GWS Stop Action Set table

Valid values must be specified for the `nscpmt` and `scpmt` parameters.

2446 E2446 Cmd Rej: SCCPMT must be specified as 9, 10, 17, 18, or *

The J7 Support feature must be enabled before the `un/ sna/ mna` parameters are specified.

2691 E2691 Cmd Rej: J7 Support Feature must be enabled.

The J7 Support feature must not be enabled before the `msa/ ssa/ sp` parameters are specified.

2801 E2801 Cmd Rej: J7 Support feature must not be enabled

The GWSOA parameter combination should be known and valid.

2483 E2483 Cmd Rej: Unknown / Invalid GWSOA parameter combination

Notes

A range of values is specified by separating the values that define the range by two ampersands (&&); for example, `ni=025&&100` specifies all network indicators for ANSI point codes from 25 - 100 .

If the screening reference is valid, but does not exist, a new CGPA screening table is created.

If the screening reference exists, a new rule is added to the CGPA screening table. Only one rule may exist for a given `ni-nc-ncm/ssn/ri/sccpmt` (or `zone-area-id` or `npc`) combination. This implies that for a given combination, only one value of `ri` may be specified. The `ri` for a given combination can be `dpc`, `gt`, or `*`, but not `dpc` and `gt` independently.

If the screen set reaches 100% capacity (indicated by the 100% Full message), the system will allow subsequent entries. An error will occur, however, when downloading the screen set to a LIM. Screen sets should not exceed 100% capacity. Remove screen set entries until the capacity is below 100%.

An asterisk cannot not be specified for a parameter value in this command unless an asterisk was specified for the parameter value in the original `ent-scr-cgpa` command.

The spare point code subtype prefix (s-) is supported only for ITU international and ITU national point codes. The `pcst` parameter indicates whether the specified point code has no subtype prefix or has the spare point code prefix.

There is no feature dependency on ANSI point code parameters, i.e., `ni`, `nc`, `ncm`. The command can be entered successfully whether the J7 Support feature is enabled or not enabled.

4.1.341 ent-scr-destfld

Use this command to add an allowed affected destination field (DESTFLD) screening reference and associated attributes (destination point code, next screening function

identifier, and next screening reference) to the allowed DESTFLD entity set. One or more point codes can be associated with the allowed DESTFLD screening reference. MTP Network Management messages regarding the DESTFLDs listed in this entity set are accepted from another network.

Parameters

nsfi (mandatory)

This parameter indicates that the gateway screening process should stop.

Range:

stop

The gateway screening process ends and the message proceeds through normal routing.

sr (mandatory)

Screening reference. The point code's unique screening reference name.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters.

actname (optional)

Name of the gateway screening stop action set. Stop actions must be administered using this parameter in conjunction with the gateway screening stop action table (see `chg-gws-actset` and `rtrv-gws-actset`).

Range:

ayyyy

1 alphabetic character followed by up to 5 alphanumeric characters.

area (optional)

ITU international area. The *area* in the point code represented by *zone-area-id*.

Range:

*0 - 255, **

*—the full range of values from 0–255

id (optional)

ITU international ID. The *ID* in the point code represented by *zone-area-id*.

Range:

*0 - 7, **

*—the full range of values from 0–7

mna (optional)

16-bit ITU national main number area. The *mna* in the point code represented by *un-sna-mna*.

Range:

*0---31, **

*---the full range of values from 0--31

msa (optional)

24-bit ITU-national main signaling area value. The *msa* of the point code represented by *msa-ssa-sp*.

Range:

0 - 255, *

*—the full range of values from 0–255

nc (optional)

Network cluster value. This parameter specifies one or more *nc* values for the network indicator and network cluster member values specified in the *ni* and *ncm* parameters. It specifies the *nc* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *

*—the full range of values from 0–255

ncm (optional)

Network cluster member value. This parameter specifies one or more *ncm* values for the network indicator and network cluster values identified in the *ni* and *nc* parameters. It specifies the *ncm* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *

*—the full range of values from 0–255

ni (optional)

Network indicator value. This parameter specifies one or more *ni* values for the network cluster and network cluster member values identified in the *nc* and *ncm* parameters. It specifies the *ni* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *

*—the full range of values from 0–255

npc (optional)

ITU national point code.

**Note:**

Gateway screening allows the ITU national point code to be displayed and entered in the database only as a single number. For multiple-part ITU national point codes, see [Converting ITU National Point Code Formats](#) for information on converting the point code format.

Range:

0 - 16383, *

*—the full range of values from 0–16383

nsr (optional)

Next screening reference. This parameter indicates which screening reference in the specified screening category (*nsfi*) is to be used in the screening process.

Range:*ayyy*

1 alphabetic character followed by up to 3 alphanumeric characters

pcst (optional)

Point code subtype. This parameter indicates whether the specified ITU international or ITU national point code has no subtype prefix or has the spare point code prefix (s-).

Dependencies

Caution:

Even though gateway screening is in the screen test mode, as defined by the `gwsa=off` and `gws=on` parameters, the gateway screening action in the stop action set specified by the `actname` parameter of the screen set will be performed at the end of the screening process.

The Gateway Screening Rules table can contain a maximum of 360,600 rules.

2565 E2565 Cmd Rej: Gateway screening rules table is full

The destination point code specified by `ni-nc-ncm`, `zone-area-id`, `un-sna-mna`, `msa-ssa-sp`, or the `npc` parameter must not already exist in the screening reference or within an existing range of DPCs.

2558 E2558 Cmd Rej: Point code already exists in given SR

ANSI point code value 000-000-000 and ITU-International point code value 0-000-0 are not allowed.

2564 E2564 Cmd Rej: Point code out of range

If the `actname` parameter is specified, then the `nsfi=stop` parameter must be specified.

3658 E3658 Cmd Rej: NSFI must be STOP if ACTNAME is specified

The value of the `actname` parameter must already be defined in the Gateway Screening Stop Action table with the `chg-gws-actset` command.

3656 E3656 Cmd Rej: ACTNAME specified must exist in GWS Stop Action Set table

If the `area=*` parameter is specified, then the `id=*` parameter must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `msa=*` parameter is specified, then the `ssa=*` and the `sp=*` parameters must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `un=*` parameter is specified, then the `sna=*` and the `mna=*` parameters must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `nc` parameter is specified as a range, the `ncm` parameter must be specified as an asterisk or as the full range.

2511 E2511 Cmd Rej: NC is invalid

If the `nc` parameter is specified as a single value or a range, a single value must be specified for the `ni` parameter.

2512 E2512 Cmd Rej: NCM is invalid

If the `nc` parameter is specified as an asterisk, the `ncm` parameter must be specified as an asterisk or as the full range.

2512 E2512 Cmd Rej: NCM is invalid

If the `ncm` parameter is specified as a single value, or a range other than the full range of 0–255, the `ni` and `nc` parameters must be specified with a single value.

2512 E2512 Cmd Rej: NCM is invalid

If the `ni` parameter is specified as an asterisk or as a range, the `nc` and `ncm` parameters must be specified as an asterisk or as the full range.

2511 E2511 Cmd Rej: NC is invalid

The `nsfi=stop` parameter must be specified in the command.

3271 E3271 Cmd Rej: NSFI is invalid

If the `nsfi=stop` parameter is specified, then the `nsr` parameter cannot be specified.

2554 E2554 Cmd Rej: NSR cannot be specified when NSFI is STOP or FAIL

If the `ssa=*` parameter is specified, then the `sp=*` parameter must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `sna=*` parameter is specified, then the `mna=*` parameter must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `zone=*` parameter is specified, then the `area=*` and the `id=*` parameters must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

The Spare Point Code Support feature must be enabled before the `pcst` parameter can be specified.

4193 E4193 Cmd Rej: Spare Point Code Feature must be enabled

The spare point code subtype prefix (s-) is not supported for ANSI point codes (parameters `ni`, `nc`, `ncm`) or for 24-bit ITU national point codes (parameters `msa`, `ssa`, `sp`) or for 16-bit ITU national point codes (parameters `un`, `sna`, `mna`). The `pcst` and `npcst` parameters cannot be specified for ANSI, ITU-N16 or ITU-N24 point codes.

4264 E4264 Cmd Rej: Parameter PCST / NPCST is not allowed with C for blocked SR

If the `nsfi=fail` parameter is specified, then the `nni`, `nc`, `ncm`, `narea`, `nzone`, `nid`, `nmsa`, `nssa`, `nsp`, `nun`, `nsna`, `nmna`, and `npc` parameters cannot have a value of `c`.

2527 E2527 Cmd Rej: C value not allowed

The Gateway Screening Stop Action table must be accessible.

3655 E3655 Cmd Rej: Failed Reading the GWS Stop Action Set table

The J7 support feature must be enabled before the `un/ sna/ mna` parameters are specified.

2691 E2691 Cmd Rej: J7 Support Feature must be enabled.

The J7 support feature must not be enabled before the `msa/ssa/sp` parameters are specified.

2801 E2801 Cmd Rej: J7 Support feature must not be enabled

The GWSOA parameter combination should be known and valid.

2483 E2483 Cmd Rej: Unknown / Invalid GWSOA parameter combination

Notes

A range of values is specified by separating the values that define the range by two ampersands (&&); for example, `ni=025&&100` specifies all network indicators for ANSI point codes from 25-100.

An asterisk cannot not be specified for a parameter value in this command unless an asterisk was specified for the parameter value in the original `ent-scr-destfld` command.

The spare point code subtype prefix (s-) is supported only for ITU international and ITU national point codes. The `pcst` parameter indicates whether the specified point code has no subtype prefix or has the spare point code prefix.

There is no feature dependency on ANSI point code parameters, i.e., `ni`, `nc`, `ncm`. The command can be entered successfully whether the J7 feature is enabled or not enabled.

Output

```
ent-scr-destfld:sr=iec:ni=240:nc=010:ncm=010-012:nsfi=stop
```

```
rlghncxa03w 04-02-13 11:49:47 EST EAGLE 31.3.0

4.1.342 ent-scr-dpc

Use this command to add an allowed DPC screening reference and associated attributes (destination point code, next screening function identifier, next screening function reference) to the allowed DPC entity set. One or more DPCs may be associated with the allowed DPC screening reference. The DPCs listed in this entity set are allowed to receive SS7 messages from another network.

Parameters

nsfi (mandatory)

This parameter specifies the next screening category that is used in the gateway screening process, or it indicates that the gateway screening process should stop.

Range:

blkdpc

Blocked DPC is the next screening category.

cgpa

Allowed CGPA is the next screening category.

destfld

Allowed destination field (DESTFLD) is the next screening category.

isup

ISUP message type (ISUP) is the next screening category.

stop

The gateway screening process ends and the message proceeds through normal routing.

sx (mandatory)

Allowed DPC screening reference name. A set of one or more allowed destination point codes.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters

actname (optional)

Name of the gateway screening stop action set. Stop actions must be administered using this parameter in conjunction with the gateway screening stop action table (see `chg-gws-actset` and `rtrv-gws-actset`).

Range:

ayyyyy

1 alphabetic character followed by up to 5 alphanumeric characters

area (optional)

ITU international area. The *area* in the point code represented by *zone-area-id*.

Range:

*0 - 255, *, C*

*—the full range of values from 0–255

C—continue

id (optional)

ITU international ID. The *ID* in the point code represented by *zone-area-id*.

Range:

*0 - 7, *, C*

*—the full range of values from 0–7
C—continue

mna (optional)

16-bit ITU national main number area. The *mna* in the point code represented by *un-sna-mna*.

Range:

0---31, *, C
*---the full range of values from 0--31
C ---continue

msa (optional)

24-bit ITU-national main signaling area value. The *msa* of the point code represented by *msa-ssa-sp*.

Range:

0 - 255, *, C
*—the full range of values from 0–255
C—continue

nc (optional)

Network cluster value. This parameter specifies one or more *nc* values for the network indicator and network cluster member values specified in the *ni* and *ncm* parameters. It specifies the *nc* of the point code represented by *ni-nc-ncm*.

Range:

000 - 255, *, C
*—the full range of values from 0–255
C—continue

ncm (optional)

Network cluster member value. This parameter specifies one or more *ncm* values for the network indicator and network cluster values identified in the *ni* and *nc* parameters. It specifies the *ncm* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *, C
*—the full range of values from 0–255
C—continue

ni (optional)

Network indicator value. This parameter specifies one or more *ni* values for the network cluster and network cluster member values identified in the *nc* and *ncm* parameters. It specifies the *ni* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *, C
*—the full range of values from 0–255
C—continue

npc (optional)

ITU national point code.

 **Note:**

Gateway screening allows the ITU national point code to be displayed and entered in the database only as a single number. For multiple-part ITU national point codes, see [Converting ITU National Point Code Formats](#) for information on converting the point code format.

Range:

0 - 16383, *, C

*—the full range of values from 0–16383

C—continue

nsr (optional)

Next screening reference. This parameter indicates which screening reference in the specified screening category (*nsfi*) is to be used in the screening process.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters

Default:

No value given

pcst (optional)

Point code subtype. This parameter indicates whether the specified ITU international or ITU national point code has no subtype prefix or has the spare point code prefix (s-).

Range:

none

s

Default:

none

sna (optional)

16-bit ITU national sub number area. The *sna* in the point code represented by *un-sna-mna*.

Range:

0---15, *, C

*---the full range of values from 0--15

C ---continue

sp (optional)

24-bit ITU national signaling point. This parameter specifies the *sp* in the point code represented by *msa-ssa-sp*.

Range:

0 - 255, *, C

*—the full range of values from 0–255

C—continue

ssa (optional)

24-bit ITU national sub signaling area. The *ssa* in the point code represented by *msa-ssa-sp*.

Range:

0 - 255, *, C

*—the full range of values from 0–255

C—continue

un (optional)

16-bit ITU-national unit number. The *un* of the point code represented by *un-sna-mna*.

Range:

0--127, *, C

*--the full range of values from 0--127

C ---continue

zone (optional)

ITU international zone. This parameter specifies the *zone* in the point code represented by *zone-area-id*.

Range:

0 - 7, *, C

*—the full range of values from 0–7

C—continue

Example

```
ent-scr-dpc:sr=iec:ni=240:nc=010:ncm=010:nsfi=stop:actname=cncf
```

```
ent-scr-dpc:sr=iec:ni=240:nc=010:ncm=010:nsfi=blkdpc:nsr=bdp1
```

```
ent-scr-dpc:sr=dpc1:zone=1:area=2:id=3:nsfi=fail:pcst=none
```

```
ent-scr-dpc:sr=dpc1:zone=2:area=2:id=3:nsfi=fail:pcst=s
```

```
ent-scr-dpc:sr=dpc1:npc=128:nsfi=fail:pcst=s
```

```
ent-scr-dpc:sr=dpc2:un=1:sna=2:mna=1:nsfi=stop
```

Dependencies**▲ Caution:**

Even though gateway screening is in the screen test mode, as defined by the `gwsa=off` and `gws=on` parameters, the gateway screening action in the stop action set specified by the `actname` parameter of the screen set will be performed at the end of the screening process.

The Gateway Screening Rules table can contain a maximum of 360,600 rules.

2565 E2565 Cmd Rej: Gateway screening rules table is full

The destination point code specified by `ni-nc-ncm`, `zone-area-id`, `msa-ssa-sp`, `un-sna-mna`, or the `npc` parameter must not already exist in the screening reference or within an existing range of DPCs.

2558 E2558 Cmd Rej: Point code already exists in given SR

If the `actname` parameter is specified, then the `nsfi=stop` parameter must be specified.

3658 E3658 Cmd Rej: NSFI must be STOP if ACTNAME is specified

ANSI point code value 000-000-000 and ITU-International point code value 0-000-0 are not allowed.

2564 E2564 Cmd Rej: Point code out of range

The value of the `actname` parameter must already be defined in the Gateway Screening Stop Action table with the `chg-gws-actset` command.

3656 E3656 Cmd Rej: ACTNAME specified must exist in GWS Stop Action Set table

If the `area=*` parameter is specified, then the `id=*` parameter must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `msa=*` parameter is specified, then the `ssa=*` and the `sp=*` parameters must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `un=*` parameter is specified, then the `sna=*` and the `mna=*` parameters must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `nc` parameter is specified as a range, the `ncm` parameter must be specified as an asterisk or as the full range.

2512 E2512 Cmd Rej: NCM is invalid

If the `nc` parameter is specified as a single value or a range, a single value must be specified for the `ni` parameter.

2511 E2511 Cmd Rej: NC is invalid

If the `nc` parameter is specified as an asterisk, the `ncm` parameter must be specified as an asterisk or as the full range.

2512 E2512 Cmd Rej: NCM is invalid

If the `ncm` parameter is specified as a single value, or a range other than the full range of 0–255, the `ni` and `nc` parameters must be specified with a single value.

2512 E2512 Cmd Rej: NCM is invalid

If the `ni` parameter is specified as an asterisk or as a range, the `nc` and `ncm` parameters must be specified as an asterisk or as the full range.

2511 E2511 Cmd Rej: NC is invalid

The `nsfi` and `nsr` parameters must point to an existing screen, or the `nsfi=stop` parameter must be specified, and the `nsr` parameter cannot be specified.

2552 E2552 Cmd Rej: NSFI and NSR do not reference an existing screen

If the `nsfi=stop` parameter is not specified, then the `nsr` parameter must be specified.

2553 E2553 Cmd Rej: NSR must be specified for given NSFI

If the `ssa=*` parameter is specified, then the `sp=*` parameter must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `sna=*` parameter is specified, then the `mna=*` parameter must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `zone=*` parameter is specified, then the `area=*` and `id=*` parameters must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

The Spare Point Code Support feature must be enabled before the `pcst` parameter can be specified.

4193 E4193 Cmd Rej: Spare Point Code Feature must be enabled

The spare point code subtype prefix (s-) is not supported for ANSI point codes (parameters `ni`, `nc`, `ncm`) or for 24-bit ITU national point codes (parameters `msa`, `ssa`, `sp`) or for 16-bit ITU national point codes (parameters `un`, `sna`, `mna`). The `pcst` parameter cannot be specified for ANSI, ITU-N16 or ITU-N24 point codes.

4264 E4264 Cmd Rej: Parameter PCST / NPCST is not allowed with C for blocked SR

If the `nsfi=fail` parameter is specified, then the `ni`, `nc`, `ncm`, `area`, `zone`, `id`, `msa`, `ssa`, `sp`, `un`, `sna`, `mna`, and `npc` parameters cannot have a value of `c`.

2527 E2527 Cmd Rej: C value not allowed

The value of the `nsfi` parameter must be valid for the BLKDPC entity type.

3271 E3271 Cmd Rej: NSFI is invalid

The Gateway Screening Stop Action table is corrupt or cannot be found.

3655 E3655 Cmd Rej: Failed Reading the GWS Stop Action Set table

The J7 support feature must be enabled before the `un/ sna/ mna` parameters are specified.

2691 E2691 Cmd Rej: J7 Support Feature must be enabled.

The J7 support feature must not be enabled before the `msa/ ssa/ sp` parameters are specified.

2801 E2801 Cmd Rej: J7 Support feature must not be enabled

The GWSOA parameter combination should be known and valid.

2483 E2483 Cmd Rej: Unknown / Invalid GWSOA parameter combination

Notes

When a DPC screening reference is created, the first entry for a point code must be `c-c-c`, or `c` for the `npc` parameter. Subsequent entries must be specific point codes.

The character `c` is used in the DPC screens to allow the screening process to continue for messages with point codes that do not match any point codes in the DPC screens. When screening for a DPC and the point code being screened does not match any of

the point codes in the DPC screens, the message is not rejected and the screening process continues.

There must be an entry in the DPC screens to allow the screening process to continue. This entry consists of a screening reference, point code, `nsfi`, and `nsr`. The point code is in the form of `npc=c` or subfields equal to `c-c-c`. When the character `c` is specified, the `nsfi` and `nsr` parameters must be specified.

If the character `c` is specified for the parameters `ni-nc-ncm`, `zone-area-id`, `un-sna-mna` or `msa-ssa-sp`, the character `c` is the only value that can be specified for all three parameters. For example, a point code `c-c-255` is not allowed. The asterisk (*) value cannot be used with the character `c` (for example, a point code `c-c-*` is not allowed).

When the point code does not match any entries in the blocked DPC screens, the screening process is directed to the screening reference with the point code `c-c-c` or `npc=c`. The `nsfi` and `nsr` in this entry are examined to determine the next step in the screening process.

If the current `ni-nc-ncm`, `zone-area-id`, `un-sna-mna` or `msa-ssa-sp` is equal to `c-c-c` or `npc=c`, only the `nsfi` and `nsr` can be changed. Otherwise, only the blocked DPC can be changed.

A range of values is specified by separating the values that define the range by two ampersands (&&); for example, `ni=025&&100` specifies all network indicators for ANSI point codes from 25 - 100.

An asterisk cannot be specified for a parameter value in this command unless an asterisk was specified for the parameter value in the original `ent-scr-dpc` command.

If the screen set reaches 100% capacity (indicated by the 100% Full message), the system allows subsequent entries. An error occurs, however, when downloading the screen set to an LIM. Ensure that screen sets do not exceed 100% capacity. Remove screen set entries until the capacity is below 100%.

The spare point code subtype prefix (s-) is supported only for ITU international and ITU national point codes. The `pcst` parameter indicates whether the specified point code has no subtype prefix or has the spare point code prefix.

There is no feature dependency on ANSI point code parameters, i.e., `ni`, `nc`, `ncm`. The command can be entered successfully whether the J7 feature is enabled or not enabled.

Output

```
ent-scr-dpc:sr=iec:ni=240:nc=010:ncm=010:nsfi=stop:actname=cncf
```

4.1.343 ent-scr-isup

Use this command to add an allowed ISUP or TUP screening reference to the Allowed ISUP entity set. One or more message types can be associated with the allowed ISUP screening reference. The ISUP message types listed in this entity set are accepted from another network.

Parameters

isupmt/tupmt (mandatory)

ISUP or TUP message type.

Range:

0 - 255, *

*—the full range of values from 0–255

sr (mandatory)

Individual ISUP screening reference to which this rule will be added. If the specified `sr` does not exist, it will be created.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters

actname (optional)

Name of the gateway screening stop action set. Stop actions must be administered using this parameter in conjunction with the gateway screening stop action table (see `chg-gws-actset` and `rtrv-gws-actset`).

Range:

ayyyyy

1 alphabetic character followed by up to 5 alphanumeric characters

nsfi (optional)

This parameter specifies the next screening category that is used in the gateway screening process.

Range:

stop

The gateway screening process ends and the message proceeds through normal routing.

nsr (optional)

Next screening reference. This parameter indicates which screening reference in the specified screening category (`nsfi`) is to be used in the screening process.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters

Example

```
ent-scr-isup:sr=iec:isupmt=1:nsfi=stop
```

```
ent-scr-isup:sr=ibig:isupmt=1&&128:nsfi=stop
```

```
ent-scr-isup:sr=iall:isupmt=*:nsfi=stop
```

```
ent-scr-isup:tupmt=20:sr=tu01:nsfi=stop
```

Dependencies

If the `actname` parameter is specified, the `nsfi=stop` parameter must be specified.

N/A N/A

The value of the `actname` parameter must already be defined in the Gateway Screening Stop Action table with the `chg-gws-actset` command.

N/A N/A

The specified `isupmt` parameter or `tupmt` parameter value must not already exist in the specified `sr`.

N/A N/A

If the `nsfi` parameter is specified, the value must be `stop`.

N/A N/A

The `nsr` parameter cannot be specified if the `nsfi=stop` parameter is specified.

N/A N/A

The GWSOA parameter combination should be known and valid.

2483 E2483 Cmd Rej: Unknown / Invalid GWSOA parameter combination

The Gateway Screening Rules table can contain a maximum of 360,600 rules.

2565 E2565 Cmd Rej: Gateway screening rules table is full

Notes

A range of values can be specified for the `isupmt` or `tupmt` parameter by separating the values that define the range by two ampersands (&&); for example, `isupmt=025&&100` specifies all ISUP message types from 25-100. The value to the left of the && must be less than the value to the right of the && in the range.

An asterisk cannot be specified for a parameter value in this command unless an asterisk was specified for the parameter value in the original `ent-scr-isup` command.

TUP does not apply to SEAS. ISUP Message Type is the default.

To use TUP message type screening, an SIO screening reference with `si=04` (TUP) must exist in the SIO table. The TUP screening reference specifies the SIO screening reference as the next screening reference parameter (`nsr`) value.

To use ISUP message type screening, an SIO screening reference with `si=05` (ISUP) must exist in the SIO table. The ISUP screening reference specifies the ISUP SIO screening reference as the next screening reference parameter (`nsr`) value.

To screen for TUP and ISUP message types using a combined ISUP/TUP screen set, the SIO screening reference with `si=4` and the SIO screening reference with `si=5` must be two different screening references. The TUP screening reference specifies the SIO screening

reference as the next screening reference parameter (*nsr*) value, and the ISUP screening reference specifies the SIO ISUP screening reference as the next screening reference parameter (*nsr*) value.

Output

When a screen reference is specified that is not yet associated with a screen set, the following output appears:

```
ent-scr-isup:sr=iec:isupmt=1:nsfi=stop

tekelecstp 04-09-02 09:39:13 EST EAGLE 31.3.0
ENT-SCR-ISUP: MASP A - COMPLTD
;
```

When a screen reference is specified that is already associated with one or more screen sets, the following output appears:

```
ent-scr-isup:tupmt=20:sr=tu01:nsfi=stop

tekelecstp 04-11-17 16:22:27 EST EAGLE 31.4.0
Extended Processing Time Required -- Please Wait
Notice: The number of screensets affected is 2.

4.1.344 ent-scr-opc

Use this command to add an allowed OPC screening reference and associated attributes (originating point code, next screening function identifier, next screening function reference) to the allowed OPC entity set. One or more OPCs may be associated with the allowed OPC screening reference. Each OPC listed in this entity set is allowed to send SS7 messages to the customer's network.

Parameters

nsfi (mandatory)

This parameter specifies the next screening category that is used in the gateway screening process, or it indicates that the gateway screening process should stop.

Range:***blkdpc***

Blocked DPC is the next screening category.

blkopc

Blocked OPC is the next screening category.

cgpa

Allowed CGPA is the next screening category.

dpc

Allowed DPC is the next screening category.

sio

Allowed SIO is the next screening category.

stop

The gateway screening process ends and the message proceeds through normal routing.

sr (mandatory)

Screening reference. A set of one or more allowed OPCs.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters

actname (optional)

Name of the gateway screening stop action set. Stop actions must be administered using this parameter in conjunction with the gateway screening stop action table (see `chg-gws-actset` and `rtrv-gws-actset`).

Range:

ayyyyy

1 alphabetic character followed by up to 5 alphanumeric characters

area (optional)

ITU international area. The *area* in the point code represented by *zone-area-id*.

Range:

*0 - 255, *, C*

*—the full range of values from 0–255

C—continue

id (optional)

ITU international ID. The *ID* in the point code represented by *zone-area-id*. A

Range:

*0 - 7, *, C*

*—the full range of values from 0–7

C—continue

mna (optional)

16-bit ITU national main number area. The *mna* in the point code represented by *un-sna-mna*.

Range:

0--31, *, C

*--the full range of values from 0--31

C—continue

msa (optional)

24-bit ITU-national main signaling area value. The *msa* of the point code represented by *msa-ssa-sp*.

Range:

0 - 255, *, C

*—the full range of values from 0–255

C—continue

nc (optional)

Network cluster value. This parameter specifies one or more *nc* values for the network indicator and network cluster member values specified in the *ni* and *ncm* parameters. It specifies the *nc* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *, C

*—the full range of values from 0–255

C—continue

ncm (optional)

Network cluster member value. This parameter specifies one or more *ncm* values for the network indicator and network cluster values identified in the *ni* and *nc* parameters. It specifies the *ncm* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *, C

*—the full range of values from 0–255

C—continue

ni (optional)

Network indicator value. This parameter specifies one or more *ni* values for the network cluster and network cluster member values identified in the *nc* and *ncm* parameters. It specifies the *ni* of the point code represented by *ni-nc-ncm*.

Range:

0 - 255, *, C

*—full range of values from 0-255

C—continue

npc (optional)

ITU national point code.

 **Note:**

Gateway screening allows the ITU national point code to be displayed and entered in the database only as a single number. For multiple-part ITU national point codes, see [Converting ITU National Point Code Formats](#) for information on converting the point code format.

Range:

0 - 16383, *, C

*—full range of values from 0-255

C—continue

nsr (optional)

Next screening reference. This parameter indicates which screening reference in the specified screening category (*nsfi*) is to be used in the screening process.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters

Default:

No value given

pcst (optional)

Point code subtype. This parameter indicates whether the specified ITU international or ITU national point code has no subtype prefix or has the spare point code prefix (s-).

Range:

none

s

Default:

none

sna (optional)

16-bit ITU national sub number area. The *sna* in the point code represented by *un-sna-mna*.

Range:

0---15, *, C

*---the full range of values from 0--15

C—continue

sp (optional)

24-bit ITU national signaling point. The *sp* in the point code represented by *msa-ssa-sp*.

Range:

0 - 255, *, C

*—full range of values from 0-255

C—continue

ssa (optional)

24-bit ITU national sub signaling area. The *ssa* in the point code represented by *msa-ssa-sp*.

Range:

0 - 255, *, C

*—full range of values from 0-255

C—continue

un (optional)16-bit ITU-national unit number. The *un* of the point code represented by *un-sna-mna*.**Range:**

0---127, *, C

*---the full range of values from 0--127

C—continue

zone (optional)ITU international zone. The *zone* in the point code represented by *zone-area-id*.**Range:**

0 - 7, *, C

*—full range of values from 7

C—continue

Example

```
ent-scr-opc:sr=iec:nsfi=stop
ent-scr-opc:sr=iec:ni=240:nsfi=sio:nsr=iec
ent-scr-opc:sr=iec:ni=240:nc=010:ncm=010:nsfi=stop:actname=copy
ent-scr-opc:sr=iec:ni=240:nc=010:ncm=010:nsfi=dpc:nsr=iec
ent-scr-opc:sr=opc1:zone=1:area=2:id=3:nsfi=fail:pcst=none
ent-scr-opc:sr=opc1:zone=2:area=2:id=3:nsfi=fail:pcst=s
ent-scr-opc:sr=opc1:npc=128:nsfi=fail:pcst=s
ent-scr-opc:sr=opc2:un=1:sna=2:mna=1:nsfi=stop
```

Dependencies**▲ Caution:**

Even though gateway screening is in the screen test mode, as defined by the `gwsa=off` and `gws=on` parameters, the gateway screening action in the stop action set specified by the `actname` parameter of the screen set will be performed at the end of the screening process.

The Gateway Screening Rules table can contain a maximum of 360,600 rules.

2565 E2565 Cmd Rej: Gateway screening rules table is full

A complete point code must be specified, using the `ni-nc-ncm`, `zone-area-id`, `msa-ssa-sp`, `un-sna-mna` or `npc` combination unless a value of `c` is specified.

2556 E2556 Cmd Rej: A complete point code must be entered

The OPC specified by `ni-nc-ncm`, `zone-area-id`, `msa-ssa-sp`, `un-sna-mna` or the `npc` parameter must already exist in the screening reference or within an existing range of OPCs.

2558 E2558 Cmd Rej: Point code already exists in given SR

ANSI point code value 000-000-000 and ITU-International point code value 0-000-0 are not allowed.

2564 E2564 Cmd Rej: Point code out of range

If the `actname` parameter is specified, then the `nsfi=stop` parameter must be specified.

3658 E3658 Cmd Rej: NSFI must be STOP if ACTNAME is specified

The value of the `actname` parameter must already be defined in the Gateway Screening Stop Action table with the `chg-gws-actset` command.

3656 E3656 Cmd Rej: ACTNAME specified must exist in GWS Stop Action Set table

If the `area=*` parameter is specified, then the `id=*` parameter must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `msa=*` parameter is specified, then the `ssa=*` and the `sp=*` parameters must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `un=*` parameter is specified, then the `sna=*` and the `mna=*` parameters must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `nc` parameter is specified as a range, the `ncm` parameter must be specified as an asterisk or as the full range.

2511 E2511 Cmd Rej: NC is invalid

If the `nc` parameter is specified as a single value or a range, a single value must be specified for the `ni` parameter.

2511 E2511 Cmd Rej: NC is invalid

If the `nc` parameter is specified as an asterisk, the `ncm` parameter must be specified as an asterisk or as the full range.

2512 E2512 Cmd Rej: NCM is invalid

If the `ncm` parameter is specified as a single value, or a range other than the full range of 0–255, the `ni` and `nc` parameters must be specified with a single value.

2512 E2512 Cmd Rej: NCM is invalid

If the `ni` parameter is specified as an asterisk or as a range, the `nc` and `ncm` parameters must be specified as an asterisk or as the full range.

2511 E2511 Cmd Rej: NC is invalid

The `nsfi` and `nsr` parameters must point to an existing screen, or the `nsfi=stop` parameter must be specified, and the `nsr` parameter cannot be specified.

2552 E2552 Cmd Rej: NSFI and NSR do not reference an existing screen

If the `nsfi=stop` parameter is not specified, then the `nsr` parameter must be specified.

2553 E2553 Cmd Rej: NSR must be specified for given NSFI

The `nsr` parameter must be specified if `nsfi` is not equal to `stop`.

N/A N/A

If the `ssa=*` parameter is specified, then the `sp=*` parameter must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `sna=*` parameter is specified, then the `mna=*` parameter must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

If the `zone=*` parameter is specified, then the `area=*` and `id=*` parameters must be specified.

2495 E2495 Cmd Rej: Point codes contain invalid wild card combinations

The Spare Point Code Support feature must be enabled before the `pcst` parameter can be specified.

4193 E4193 Cmd Rej: Spare Point Code Feature must be enabled

The spare point code subtype prefix (s-) is not supported for ANSI point codes (parameters `ni`, `nc`, `ncm`) or for 24-bit ITU national point codes (parameters `msa`, `ssa`, `sp`) or for 16-bit ITU national point codes (parameters `un`, `sna`, `mna`). The `pcst` parameter cannot be specified for ANSI, ITU-N16 or ITU-N24 point codes.

4264 E4264 Cmd Rej: Parameter PCST / NPCST is not allowed with C for blocked SR

If the `nsfi=fail` parameter is specified, then the `nni`, `nc`, `nncm`, `narea`, `nzone`, `nid`, `nmsa`, `nssa`, `nsp`, `nun`, `nsna`, `nmna`, and `npc` parameters cannot have a value of `c`.

2527 E2527 Cmd Rej: C value not allowed

The value of the `nsfi` parameter must be valid for the OPC entity type.

3271 E3271 Cmd Rej: NSFI is invalid

The Gateway Screening Stop Action table is corrupt or cannot be found.

3655 E3655 Cmd Rej: Failed Reading the GWS Stop Action Set table

The J7 support feature must be enabled before the `un/ sna/ mna` parameters are specified.

2691 E2691 Cmd Rej: J7 Support Feature must be enabled.

The J7 support feature must not be enabled before the `msa/ ssa/ sp` parameters are specified.

2801 E2801 Cmd Rej: J7 Support feature must not be enabled

The GWSOA parameter combination should be known and valid.

2483 E2483 Cmd Rej: Unknown / Invalid GWSOA parameter combination

Notes

When an OPC screening reference is created, the first entry for a point code must be *c-c-c* or *c* for the *npc* parameter. Subsequent entries must be specific point codes.

The character *c* is used in the OPC screens to allow the screening process to continue for messages with point codes that do not match any point codes in the OPC screens. When screening for a DPC and the point code being screened does not match any of the point codes in the DPC screens, the message is not rejected and the screening process continues.

There must be an entry in the OPC screens to allow the screening process to continue. This entry consists of a screening reference, point code, *nsfi*, and *nsr*. The point code is in the form of *npc=c* or subfields equal to *c-c-c*. When the character *c* is specified, the *nsfi* and *nsr* parameters must be specified.

If the character *c* is specified for the parameters *ni-nc-ncm*, *zone-area-id*, *un-sna-mna* or *msa-ssa-sp*, the character *c* is the only value that can be specified for all three parameters. For example, a point code *c-c-255* is not allowed. The point code must be *c-c-c*. The asterisk value cannot be used with the character *c* (for example, a point code *c-c-** is not allowed).

When the point code does not match any entries in the blocked OPC screens, the screening process is directed to the screening reference with the point code *c* or *npc=c*. The *nsfi* and *nsr* in this entry are examined to determine the next step in the screening process.

If the current *ni-nc-ncm*, *zone-area-id*, *un-sna-mna* or *msa-ssa-sp* is equal to *c-c-c* or *npc=c*, only the *nsfi* and *nsr* can be changed. Otherwise, only the OPC can be changed.

A range of values is specified by separating the values that define the range by two ampersands (&&); for example, *ni=025&&100* specifies all network indicators for ANSI point codes from 25 - 100.

An asterisk cannot not be specified for a parameter value in this command unless an asterisk was specified for the parameter value in the original *ent-scr-opc* command.

If the screen set reaches 100% capacity (indicated by the 100% Full message), the system allows subsequent entries. An error occurs, however, when downloading the screen set to an LIM. Ensure that screen sets do not exceed 100% capacity. Remove screen set entries until the capacity is below 100%.

The spare point code subtype prefix (s-) is supported only for ITU international and ITU national point codes. The *pcst* parameter indicates whether the specified point code has no subtype prefix or has the spare point code prefix.

There is no feature dependency on ANSI point code parameters, i.e., *ni*, *nc*, *ncm*. The command can be entered successfully whether the J7 feature is enabled or not enabled.

Output

```
ent-scr-opc:sr=iec:nsfi=stop

4.1.345 ent-scr-sio

Use this command to add an allowed SIO screening reference and associated attributes (network indicator, service indicator, message priority, H0 heading code, H1 heading code, next screening function identifier, next screening function reference) to the allowed SIO entity set.

 **Note:**

To use TUP message type screening, an SIO screening reference with `si=04` (TUP) must be defined in the SIO table. This SIO screening reference is specified in the `ent-scr-isup` command as the next screening reference (`nsr`) value in a screening reference for TUP message types

Parameters**nic (mandatory)**

Network indicator code. NIC for the SIO screening reference specified in the `sr` parameter. The NIC is the last 2 bits of the subservice field of an SIO.

Range:

0 - 3, *

*—full range of values from 0-3

nsfi (mandatory)

This parameter specifies the next screening category that is used in the gateway screening process, or it indicates that the gateway screening process should stop.

Range:***blkdpc***

Blocked DPC is the next screening category.

cdpa***cgpa***

Allowed CGPA is the next screening category.

destfld

Allowed destination field (DESTFLD) is the next screening category.

dpc

Allowed DPC is the next screening category.

isup

ISUP message type (ISUP) is the next screening category.

stop

The gateway screening process ends and the message proceeds through normal routing.

pri (mandatory)

Message priority. A single priority, or the beginning of a range of priorities for the SIO screening reference specified by the `sr` parameter .

Range:

0 - 3, *

*—full range of values from 0-3

si (mandatory)

Service indicator. SI for the SIO screening reference specified in the `sr` parameter. The SI is the first 4 bits of an SIO. The SS7 code directs the message to the MTP-user at the destination code.

Range:

00 - 15

sr (mandatory)

The allowed SIO screening reference name. This parameter specifies a set of one or more `si/nic/pri` combinations.

Range:

ayyy

1 alphabetic character followed by up to 5 alphanumeric characters

actname (optional)

Name of the gateway screening stop action set. Stop actions must be administered using this parameter in conjunction with the gateway screening stop action table (see `chg-gws-actset` and `rtrv-gws-actset`).

Range:

ayyyy

1 alphabetic character followed by up to 5 alphanumeric characters

h0 (optional)

H0 heading code. New H0 heading code for the screening reference specified in the `sr` parameter.

Range:

0 - 15, *

*—full range of values from 0-15

Default:

Value given if `si` value is 00, 01, 02

h1 (optional)

H1 Heading Code. H1 heading code for the screening reference specified in the `sr` parameter.

Range:

0 - 15, *

*—full range of values from 0-15

Default:Value given if `si` value is 00, 01, 02**nsr (optional)**

Next screening reference. This parameter specifies which screening reference in the specified screening category (`nsfi`) is to be used in the screening process.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters

Example

```
ent-scr-
sio:sr=iec:nic=1:si=1:h0=01&&03:h1=*:pri=*:nsfi=dpc:nsr=abc

ent-scr-sio:sr=iec:nic=1:si=3:pri=2:nsfi=stop

ent-scr-sio:sr=iec:nic=1:si=4:pri=3:nsfi=stop:actname=cncf
```

Dependencies**▲ Caution:**

Even though gateway screening is in the screen test mode, as defined by the `gwsa=off` and `gws=on` parameters, the gateway screening action in the stop action set specified by the `actname` parameter of the screen set will be performed at the end of the screening process.

If the `actname` parameter is specified, then the `nsfi=stop` parameter must be specified.

3658 E3658 Cmd Rej: NSFI must be STOP if ACTNAME is specified

The value of the `actname` parameter must already be defined in the Gateway Screening Stop Action table with the `chg-gws-actset` command.

3656 E3656 Cmd Rej: ACTNAME specified must exist in GWS Stop Action Set table

If the `si` parameter is equal to 00, 01, or 02, the `h0` and `h1` parameters must be specified. Otherwise, the `h0` parameter cannot be specified.

2488 E2488 Cmd Rej: H0 and H1 must be specified for given SI

Valid combinations for the `h0/h1` and `nh0/nh1` parameters are:

- `h0` is a single value—`h1` can be a single value, range, or an asterisk
- `h0` is a range—`h1` can be an asterisk
- `h0` is an asterisk—`h1` can be an asterisk

3269 E3269 Cmd Rej: Invalid H0/H1 or NH0/NH1 specified

If the screening reference exists, the `nic`, `si`, `h0/h1`, and priorities to be added to the allowed SIO entity set for the SIO screening reference cannot exist in that allowed SIO entity set.

3273 E3273 Cmd Rej: NIC, SI, H0/H1, and PRI entry already exists in given SR

If asterisks or ranges are specified for the heading codes, nothing that matches the combination of `nic`, `si`, and the specified heading codes can already exist in the allowed SIO entity set for the screening reference.

2393 E2393 Cmd Rej: Terminal is not equipped

If the screening reference does not exist, a new screening reference for the allowed SIO entity set is created.

N/A N/A

The `nsfi` and `nsr` parameters must point to an existing screen, or the `nsfi=stop` parameter must be specified, and the `nsr` parameter cannot be specified.

2552 E2552 Cmd Rej: NSFI and NSR do not reference an existing screen

The values specified for the `nsfi` and `si` parameters must meet the mapping requirements as shown:

- `nsfi=destfld` — `si=00`
- `nsfi=cdpa` — `si=03`
- `nsfi=cgpa` — `si=03`
- `nsfi=isup` — `si=05`

3271 E3271 Cmd Rej: NSFI is invalid

Use [Table 4-36](#) to determine the acceptable combination of the specified parameter values:

Table 4-36 Additional Valid ent-scr-sio Parameter Combinations

si value:	nic value	pri value	h0 value:	h1 value:
00	s, *	s, *, r	s	s, *, r
00	s, *	s, *, r	*, r	*
01, 02	s, *	s, *, r	s	s, *, r
01, 02	s, *	s, *, r	*, r	*
03-15	s, *	s, *, r	u	u
Legend				
• s = single value				
• r = range				
• * = asterisk				
• u = unspecified				

N/A N/A

The Gateway Screening Stop Action table must be accessible.

3655 E3655 Cmd Rej: Failed Reading the GWS Stop Action Set table

If the `nsfi` parameter has a value other than `stop` or `fail`, the `nsr` parameter must be specified and must exist.

2553 E2553 Cmd Rej: NSR must be specified for given NSFI

If the `nsfi=stop` parameter is specified, then the `nsr` parameter must be specified.

2554 E2554 Cmd Rej: NSR cannot be specified when NSFI is STOP or FAIL

If the `si` parameter is greater than 2, the `h0` and `h1` parameters must not be specified.

2490 E2490 Cmd Rej: H0 and H1 cannot be specified for SI greater than 2

The Gateway Screening Rules table can contain a maximum of 360,600 rules.

2565 E2565 Cmd Rej: Gateway screening rules table is full

The GWSOA parameter combination should be known and valid.

2483 E2483 Cmd Rej: Unknown / Invalid GWSOA parameter combination

For SEAS commands, the `pri` parameter specified must be in the range 0-3, *.

2562 E2562 Cmd Rej: A specific PRI must be specified in the range (0-3, *)

For SEAS commands, the `h0` parameter specified must be in the range 0-15, *.

2563 E2563 Cmd Rej: A specific H0 must be specified in the range (0-15, *)

For SEAS commands, the `h1` parameter specified must be in the range 0-15, *.

2566 E2566 Cmd Rej: A specific H1 must be specified in the range (0-15, *)

Notes

A range of values is specified by separating the values that define the range by two ampersands (&&); for example, `pri=0&&2` specifies all message priorities for the range 0 - 2.

If the screen set reaches 100% capacity (indicated by the **100% Full** message), the system will allow subsequent entries. An error will occur, however, when downloading the screen set to a LIM. Screen sets should not exceed 100% capacity. Remove screen set entries until the capacity is below 100%.

To use TUP message type screening, an SIO screening reference with `si=04` (TUP) must be defined in the SIO table. To use ISUP message type screening, a rule with `si=05` (ISUP) must be defined in the SIO table. To use a combined ISUP/TUP screen set for TUP and ISUP message screening, the SIO screening reference with `si=4` and the SIO screening reference with `si=5` must be two different screening references.

The `h0` and `h1` parameters cannot be specified if `si` is not equal to 00, 01, or 02.

An asterisk cannot not be specified for a parameter value in this command unless an asterisk was specified for the parameter value in the original `ent-scr-sio` command.

Output

```
ent-scr-sio:sr=iec:nic=1:si=1:h0=01&&03:h1=*:pri=*:nsfi=dpc:nsr=abc

4.1.346 ent-scr-tt

Use this command to add a specific allowed translation type (TT) screening reference in the TT entity set.

Parameters**nsfi (mandatory)**

This parameter specifies the next screening category that is used in the gateway screening process, or it indicates that the gateway screening process should stop.

Range:***cdpa***

Allowed CDPA is the next screening category.

stop

The gateway screening process ends and the message proceeds through normal routing.

sr (mandatory)

Screening reference. The point code's unique screening reference name.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters

type (mandatory)

Translation type. The GTT type value in the CdPA. This value is the decimal representation of the 1-byte field used in SS7.

Range:

*000 - 255, **

*—full range of values from 0-255

actname (optional)

The name of the gateway screening stop action set. Stop actions must be administered using this parameter in conjunction with the gateway screening stop action table (see `chg-gws-actset` and `rtrv-gws-actset`).

Range:

ayyyy

1 alphabetic character followed by up to 5 alphanumeric characters.

nsr (optional)

Next screening reference. This parameter indicates which screening reference in the specified screening category (`nsfi`) is to be used in the screening process.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters

Default:

No value given

Example

```
ent-scr-tt:sr=iec:type=012:nsfi=cdpa:nsr=wr5
```

```
ent-scr-tt:sr=iec:type=012:nsfi=stop:actname=copy
```

Dependencies**▲ Caution:**

Even though gateway screening is in the screen test mode, as defined by the `gwsa=off` and `gws=on` parameters, the gateway screening action in the stop action set specified by the `actname` parameter of the screen set will be performed at the end of the screening process.

If the screening reference is valid, but does not exist, a new TT screen is created.

N/A N/A

If the screening reference exists, a new rule is added to the TT screening table.

N/A N/A

An asterisk cannot not be specified for a parameter value in this command unless an asterisk was specified for the parameter value in the original `ent-scr-tt` command.

N/A N/A

If the `actname` parameter is specified, the `nsfi=stop` parameter must be specified.

3658 E3658 Cmd Rej: NSFI must be STOP if ACTNAME is specified

The value of the `actname` parameter must already be defined in the Gateway Screening Stop Action table with the `chg-gws-actset` command.

3656 E3656 Cmd Rej: ACTNAME specified must exist in GWS Stop Action Set table

If the `nsfi=stop` parameter is specified, the `nsr` parameter cannot be specified.

2554 E2554 Cmd Rej: NSR cannot be specified when NSFI is STOP or FAIL

If the `nsfi` parameter has a value other than `stop`, the `nsr` parameter must be specified.

2553 E2553 Cmd Rej: NSR must be specified for given NSFI

If the `nsr` parameter is specified, the specified screening reference must exist.

N/A N/A

If the screening reference (`sr`) exists, the single value or range specified for the allowed `type` to be added to the TT screen for the allowed TT screening reference must not already exist in that TT screen.

2575 E2575 Cmd Rej: TYPE matches existing TYPE in given SR

If an asterisk is specified for the allowed `type`, nothing can already exist in the TT screen for the screening reference.

N/A N/A

The Gateway Screening Stop Action table is corrupt or cannot be found.

3655 E3655 Cmd Rej: Failed Reading the GWS Stop Action Set table

The specified value for the `nsfi` parameter is not valid for TT screen.

3271 E3271 Cmd Rej: NSFI is invalid

The screen referenced by `sfi` and `nsr` must already exist.

2552 E2552 Cmd Rej: NSFI and NSR do not reference an existing screen

The Gateway Screening Rules table can contain a maximum of 360,600 rules.

2565 E2565 Cmd Rej: Gateway screening rules table is full

The value specified for the `type` parameter must be within the allowed range.

2524 E2524 Cmd Rej: A specific TT must be specified in the range (1-255,*)

The GWSOA parameter combination should be known and valid.

2483 E2483 Cmd Rej: Unknown / Invalid GWSOA parameter combination

Notes

If the screen set reaches 100% capacity (indicated by the 100% Full message), the system will allow subsequent entries. An error will occur, however, when downloading the screen set to a LIM. Screen sets should not exceed 100% capacity. Remove screen set entries until the capacity is below 100%.

4.1.347 ent-scrset

Use this command to create a new screen set and point it to its first screen. A screen set is a set of screens (filters) that can be assigned to a linkset. SS7 messages transmitted on a linkset assigned to a screen set require screening by the system, if screening is enabled.

Parameters

nsfi (mandatory)

This parameter specifies the next screening category that is used in the gateway screening process, or it indicates that the gateway screening process should stop.

Range:

blkdpc

Blocked DPC is the next screening category.

blkopc

Blocked OPC is the next screening category.

dpc

Allowed DPC is the next screening category.

opc

Allowed OPC is the next screening category.

sio

Allowed SIO is the next screening category.

stop

The gateway screening process ends and the message proceeds through normal routing.

scrn (mandatory)

Screenset name.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters

actname (optional)

The name of the gateway screening stop action set. Stop actions must be administered using the *actname* parameter in conjunction with the gateway screening stop action table (see [chg-gws-actset](#) and [rtrv-gws-actset](#)).

Range:

ayyyyy 1 alphabetic character followed by up to 5 alphanumeric characters.

destfld (optional)

This parameter turns on and off the automatic allowed affected destination screening for network management messages against the routing table, self point codes, and capability point codes. When this parameter is ON, the automatic screening is applied at the end of the provisioned screen set.

Range:

yes

no

Default:

yes

nsr (optional)

Next screening reference. This parameter indicates which screening reference in the specified screening category (*nsfi*) is to be used in the screening process.

Range:

ayyy

1 alphabetic character followed by up to 3 alphanumeric characters

Default:

No value given

Example

```
ent-scrset:scrn=ss01:nsfi=opc:nsr=iec
ent-scrset:scrn=ss02:nsfi=stop
ent-scrset:scrn=empt:nsfi=stop:destfld=yes
ent-scrset:scrn=scr1:nsfi=stop:actname=copy
```

Dependencies

Even though gateway screening is in the screen test mode, as defined by the parameters *gwsa=off* and *gws=on*, the gateway screening action in the stop action set specified by the *actname* parameter of the screen set will be performed at the end of the screening process.

The *nsfi=stop* parameter must be specified before the *actname* parameter can be specified.

3658 E3658 Cmd Rej: NSFI must be STOP if ACTNAME is specified

The value of the *actname* parameter must already be defined in the Gateway Screening Stop Action table with the *chg-gws-actset* command. These values are shown in the *ACTNAME* field of the *rtrv-gws-actset* command output.

3656 E3656 Cmd Rej: ACTNAME specified must exist in GWS Stop Action Set table

If the *nsfi=stop* parameter is specified, then the *nsr* parameter cannot be specified.

2554 E2554 Cmd Rej: NSR cannot be specified when NSFI is STOP or FAIL

The specified screen set name cannot be in use by another screen set.

2567 E2567 Cmd Rej: Screen set name already exists

A maximum of 63 user-defined screen sets can be defined in the database.

2500 E2500 Cmd Rej: Maximum number of screen sets exceeded

The `nsfi` and `nsr` parameters must point to one or more existing entities in another entity set, or the `nsfi=stop` parameter must be specified, and the `nsr` parameter cannot be specified.

2552 E2552 Cmd Rej: NSFI and NSR do not reference an existing screen

If the `nsfi=stop` parameter is not specified, then the `nsr` parameter must be specified.

2553 E2553 Cmd Rej: NSR must be specified for given NSFI

The Gateway Screening (GWS) Stop Action Set table must be accessible.

3655 E3655 Cmd Rej: Failed Reading the GWS Stop Action Set table

The `nsfi` parameter must be valid for the SCRSET entity.

3271 E3271 Cmd Rej: NSFI is invalid

The Gateway Screening (GWS)/Global Title Translation (GTT) shared database resource (DBMM.TBL) cannot be full.

2557 E2557 Cmd Rej: GWS table is full

The GWSOA parameter combination should be known and valid.

2483 E2483 Cmd Rej: Unknown / Invalid GWSOA parameter combination

Notes

Entering a new screen set may take a few minutes of processor time. The following message appears in the scroll area:

```
Extended processing time required-please wait
```

If the screen set reaches 100% capacity (indicated by the 100% Full message), the system will allow subsequent entries. An error will occur, however, when downloading the screen set to a LIM. Screen sets should not exceed 100% capacity. Remove screen set entries until the capacity is below 100%.

Output

```
ent-scrset:scrn=ss01:nsfi=opc:nsr=iec
```

```
rlghncxa03w 04-01-07 11:43:04 EST EAGLE 31.3.0

4.1.348 ent-serial-num

Use this command to enter and lock the NT serial number into the database for an EAGLE STP.

You must enter the serial number at least once without specifying the *lock* parameter. As long as you enter the command without the *lock* parameter, you can enter the system serial number as many times as needed. After the correct serial number is entered, you must use the *lock=yes* parameter to lock the serial number table. You cannot change the serial number with administration commands after the table is locked.

Parameters**serial (mandatory)**

The system NT Serial Number.

Range:

aaayyyyyyy

Up to 10 alphanumeric characters; mixed case is allowed.

The first two characters (the prefix) must be letters. The remaining characters must be numbers. The serial number cannot contain spaces or special characters.

lock (optional)

This parameter is used to lock the Serial Number table when the serial number is entered for the system.

 **Caution:**

After the serial number is locked, you cannot enter it again or change it in the database. You can use the command without the `lock` parameter to enter the serial number as many times as needed; then enter the command with the `lock` parameter and the correct serial number to lock the serial number table.

Range:

yes

Default:

Not locked

Example

```
ent-serial-num:serial=nt00000123
```

```
ent-serial-num:serial=nt00000123:lock=yes
```

Dependencies

The serial number must be entered at least once without specifying the `lock` parameter.

4233 E4233 Cmd Rej: Lock cannot be specified on first NT Serial Number entry

The system serial number that is entered when the `lock` parameter is specified must match the serial number that was previously entered in the Serial Number table by using the command without the `lock` parameter.

3591 E3591 Cmd Rej: Invalid System serial number

The system serial number cannot be entered again after the Serial Number table is locked.

3592 E3592 Cmd Rej: System serial number is already locked in database

The system serial number must start with two alphabetical characters.

4230 E4230 Cmd Rej: First 2 characters of Serial Number must be alphabetical

The format of the serial number should be AANNNNNNNN where NNNNNNNN must be numeric digits (0 - 9).

4231 E4231 Cmd Rej: Last 8 characters of Serial Number must be numerical

The format of the serial number needs to be 2 alphabetical letters followed by 8 numbers (e.g., NT01234567.)

4232 E4232 Cmd Rej: NT Serial Number must be 10 characters long

Notes

None

Output

```
ent-serial-num:serial=nt00000123
```

```
rlghncxa03w 04-01-05 16:40:40 EST EAGLE 31.3.0

4.1.349 ent-shlf

Use this command to add an equipment shelf to the database.

Parameters

loc (mandatory)

The location of the shelf.

Range:

1200, 1300, 2100, 2200, 2300, 3100, 3200, 3300, 4100, 4200, 4300, 5100, 5200, 5300,
6100, 6200, 6300

type (mandatory)

The type of equipment shelf to be configured.

Range

ext, fpb

fan (optional)

This parameter turns ON/OFF the FAN option. If it is turned ON, the FAN power for this shelf will be added to the Frame Power Budget.

Range

off,

on

Example

```
ent-shlf:type=ext:loc=1200
ent-shlf:type=imtswch:loc=6100
ent-shlf:type=fpb:loc=6200:fan=on
```

Dependencies

The frame and shelf values of the shelf location parameter (`loc`) must be within the valid range (`xyzz`, where `x`=frame and `y`=shelf; `zz` is always 00 for this command).

N/A N/A

The specified shelf location must not have been configured previously.

2202 E2202 Cmd Rej: Shelf location already equipped

The Shelf table is corrupt or cannot be found by the system.

2104 E2104 Cmd Rej: Failed reading the shelf table

A shelf cannot be provisioned at location 1100. This location is reserved for the control shelf.

2201 E2201 Cmd Rej: Shelf location 1100 is reserved for the control shelf

The shelf locations 6200 and 6300 are reserved for shelf type FPB only. However, shelf with `type=fpb` can be provisioned in any shelf location from 1200 to 6300.

2675 E2675 Cmd Rej: Shelf locations 6200 and 6300 are reserved for FPB shelf.

Notes

None

Output

```

4.1.350 ent-sid

Use this command to define additional true point codes for an STP. This command allows newly defined true point codes to be distributed to the cards without requiring system initialization.

Parameters

pc (optional)

ANSI point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.

Synonym:

pca

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001-005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006-255*.

The point code *000-000-000* is not a valid point code.

pc/pca/pci/pcn/pcn24/pcn16 (optional)

STP true point code.

pci (optional)

ITU international point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*).

Range:

s-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s

zone—0-7

area—000-255
id—0-7

The point code *0-000-0* is not a valid point code.

pcn (optional)

ITU national point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the `chg-stpopts:npcfmti` flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

Range:

s-, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s-

nnnnn—0-16383

gc—aa-zz

m1-m2-m3-m4—0-14 for each member; values must sum to 14

pcn24 (optional)

24-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*).

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

msa—000-255

ssa—000-255

sp—000-255

pcn16 (optional)

16-bit ITU national point code with subfields *unit number sub number area main number area* (*un-sna-mna*).

Range:

000---127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

un---000---127

sna---000---15

mna---000---31

Example

To create a site identification STP PC for ITU-N and ITU-I:

```
ent-sid:pcn=123:pci=1-1-1
```

To create a site identification STP PC for ITU-N Spare and ITU-I Spare:

```
ent-sid:pcn=s-123:pci=s-1-1-1
```

To create a site identification STP PC for ITU-N16:

```
ent-sid:pcn16=125-1-6
```

Dependencies

At least one optional parameter must be specified.

2136 E2136 Cmd Rej: At least one optional parameter is required

The Spare Point Code Support feature must be enabled before an ITU-I or ITU-N spare point code can be specified.

4193 E4193 Cmd Rej: Spare Point Code Feature must be enabled

If the system is configured for ANSI format point codes, the specified network indicator value (*ni*) of the `pc` parameter must be 6 or greater when the specified cluster value is 0 (*nc*).

2169 E2169 Cmd Rej: Point code out of range

The `pcn` and `pcn24` parameters cannot be specified together in the command.

2647 E2647 Cmd Rej: Only one of PCN or PCN24 may be specified

The specified STP point code must not have been previously defined as a capability point code.

2189 E2189 Cmd Rej: Site point code is already being used

An STP point code cannot exist that is the same type (ANSI, ITU-I, ITU-N, ITU-N24, ITU-N16, ITU-ISpare, or ITU-NSpare) as the specified STP point code or must not have been previously defined as a capability point code.

2189 E2189 Cmd Rej: Site point code is already being used

The value of the `pc/pca/pci/pcn/pcn24/pcn16` parameter must be a full point code.

2861 E2861 Cmd Rej: Site PC, CPCs and NCPCs must be full point codes

The SID table is corrupt or cannot be found.

2874 E2874 Cmd Rej: Failed reading site identification table

ITU-N STP destination point codes can be specified only as full point codes.

3921 E3921 Cmd Rej: ITU National Point Code must be full point code

Invalid parameter was specified.

2014 E2014 Cmd Rej: Unrecognized parameter identifier

ANSI or ITUN-24 SID cannot be provisioned if the J7 feature is enabled.

2802 E2801 Cmd Rej: J7 Support feature must not be Enabled

3238 E3238 Cmd Rej: ANSI or ITUN-24 SID cannot be provisioned

A string of 1 to 64 characters. Valid values are (0-9, A-Z), +, *, #, .(period), @ or DFLT (default).

npdd (optional)

Number of prefix digits to be deleted from the incoming digit string. If NPDD is zero then no digits are deleted.

Range:

ZZZZZZZZZZZZZZZZ

An integer in the range of 0 to 15.

Default:

No change to the current value.

System Default:

0

npds (optional)

New prefix digits to be substituted to digit string after deleting the NPDD. If NPDS is NONE then no digits are prepended.

Range:

ZZZZZZZZZZZZZZZZ

A string of 1 to 15 characters. Valid values are hex digits (0-9, A-F) and NONE.

Default:

No change to the current value

System Default:

none

pfx (mandatory)

Prefix

Range:

ZZZZZZZZZZZZZZZZ

A string of 1 to 15 characters. Valid values are hex digits (0-9, A-F), +, *, -, #.

Example

```
ent-sip-npp:phctxt=abc.com:pfx=101
```

```
ent-sip-npp:phctxt=abc.com:pfx=121:npdd=5:npds=2f
```

```
ent-sip-npp:phctxt=a*bc.com:pfx=91*:npdd=5:npds=af1
```

```
ent-sip-npp:phctxt=df1t:pfx=*121#
```

Dependencies

SIPNP Feature must be enabled before entering any number normalization rules.

2590 E2590 Cmd Rej: SIPNP Feature must be enabled

SIP Phone Context table (SIPPHCXT) should be accessible.

2594 E2594 Cmd Rej: Failed reading SIP Phone Context table

SIP Prefix table (SIPNNPFX) should be accessible.

2637 E2637 Cmd Rej: Failed reading SIP Prefix table

SIP DBMM 2 table should be accessible.

2649 E2649 Cmd Rej: Failed reading DBMM 2 table

A maximum of 101 entries can be added in the SIP Phone Context table (SIPPHCXT).

2644 E2644 Cmd Rej: SIP Phone Context table is full

A maximum of 50 prefixes for each phone context can be added in the SIP Prefix table (SIPNNPFX).

2646 E2646 Cmd Rej: SIP Prefix table is full

Prefixes must be unique. Duplicate Prefix entries are not allowed.

2651 E2651 Cmd Rej: SIP Prefix entry already exists

Phone Contexts must be unique. Duplicate Phone Context entries are not allowed.

2672 E2672 Cmd Rej: SIP Phone Context already exists

At least one NPDD or NPDS must be specified with non-default (other than 0, NONE) value.

2686 E2686 Cmd Rej: Both NPDS and NPDD can not be set to default values

SIPPHCXT table can have a maximum of 101 Phone Contexts which includes 100 Unique and 1 DFLT.

2068 E2068 Cmd Rej: Only 100 Unique and 1 DFLT PHCTXT allowed

A valid Phone Context/Prefix value should be given.

2053 E2053 Cmd Rej: Incorrect information unit, expect string - <parm>

The PHCTXT parameter value must contain no more than 64 characters and the PFX parameter value must contain no more than 15 characters.

2039 E2039 Cmd Rej: <parm_desc> too long, min <min>, max <max> - <parm>

Notes

None.

Output

This example displays the output when all the parameters are specified:

```
ent-sip-npp:phctxt=a*bc.com:pfx=91:npdd=5:npds=af1
```

```
tekelecstp 12-07-16 10:05:45 EST EAGLE 45.0.0
ent-sip-npp:phctxt=a*bc.com:pfx=91:npdd=5:npds=af1
Command entered at terminal #4.
PHCTXTID table is (2 of 101) 2% full.
ENT-SIP-NPP: MASP A - COMPLTD
;
```

This example displays the output when just the `phctxt` and `px` parameters are specified:

```
ent-sip-npp:phctxt=linea.com:px=*121#

tekelecstp 12-07-09 18:59:31 EST 45.0.0-64.35.0
ent-sip-npp:phctxt=linea.com:px=*121#
Command entered at terminal #4.
PHCTXTID table is (1 of 101) 1% full.
ENT-SIP-NPP: MASP A - COMPLTD
;
```

4.1.352 ent-slk

Use this command to add a low-speed or high-speed (ATM or IP) signaling link to a linkset in the database.

Signaling links are the only elements in the database directly supported by a hardware device. When a link is added to a linkset, the link remains in the state OOS-MT-DSBLD (out of service maintenance disabled) until it is activated.

For E5-E1T1-B cards, use this command to associate a signaling link and a timeslot with the E1, T1 or J1 interface that will service the timeslot.

For E5-E1T1-B cards used for SE-HSL links, use this command to assign links A and B on any 2 of the 8 E5-E1T1-B card ports.

Up to 64 signaling links can be assigned to one E5-E1T1-B card, allowing links A, A1 - A31, B, and B1 - B31 to be provisioned.

Up to 128 signaling links can be assigned to SLIC cards running IPSP application, allowing links A, A1 - A63, B, and B1 - B63 to be provisioned.

Up to 3 signaling links can be assigned to an E5-ATM-B card, allowing links A, A1, and B to be provisioned.

Note:

The `link` parameter has been added as a synonym for the `port` parameter. Either `port` or `link` can be used for a few more EAGLE releases; then the `port` parameter will be removed.

Parameters

link (mandatory)

The signaling link on the card specified in the `loc` parameter. The links can be specified in any sequence or pattern.

Synonym:

port

Range:

a, b, a1 - a63, b1 - b63

Not all card types support all `link` parameter values.

See [Table A-1](#) for valid `link` parameter range values for each type of card that can have a location specified in the `loc` parameter.

loc (mandatory)

The card location as stenciled on the shelf of the system.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118

lsn (mandatory)

Linkset name. The linkset name must be unique.

Range:

aaaaaaaa

1 alphabetic character followed by up to 9 alphanumeric characters

slc (mandatory)

Signaling link code. The SLC must be unique within the linkset. It must be the same at both the system location and the distant node.

Range:

0 - 15

aname (optional)

Association name. The association assigned to the signaling link added in an IPSP linkset.

Range:

aaaaaaaaaaaaaaaa

Up to 15 alphanumeric characters; the first character must be a letter

atmtsel (optional)

ATM timing selector. The timing source for the ATM signaling link—internal, line, or external. Internal timing is derived from an internal clock source operating at 1.544 MHz \pm 200 Hz for ANSI links and 2.048 MHz \pm 103 Hz for ITU links. External timing is derived from the High-Speed Master Clock (T1 or E1). Line timing is derived from its received data stream, if present.

 **Caution:**

The internal timing source is used for debug purposes only, and is not to be used for production operation.

If you are using the 2.048 MHz reference clock as the timing source for E1 signaling links, the `atmtsel=external` parameter must be specified for high-speed ATM signaling links. The `atmtsel` parameter is not valid in the command when the `elport` parameter is specified for an E1 signaling link. For information on the E1 interface, see the *Database Administration - SS7 User's Guide*.

Range:*external**internal**line***Default:***line***bps (optional)**

Transmission rate for the link in bits per second.

 **Note:**

Links with different speeds can be mixed within a linkset. Mixing of high speed links and low speed links in a linkset is supported for migration purposes and is not recommended for standard provisioning.

Range:*1536000, 1544000, 1984000, 2048000, 56000, 64000*

The value specified for the `bps` parameter must be supported for the associated card application:

- SS7ANSI—56000 or 64000
- CCS7ITU—56000 or 64000
- ATMANSI—1544000
- SS7ANSI, CCS7ITU (E1 SE-HSL cards)—1984000
- SS7ANSI, CCS7ITU, (T1 SE-HSL-A cards)—1536000
- ATMITU—2048000
- CCS7ITU, (J1 cards) --- 64000

Default:*56000***Default: (For J1 links)***64000*

e1atmcr4 (optional)

CRC4 multi-frame structure enable/disable indicator.

Range:

on

off

Default:

on

e1atmsi (optional)

Value of two Spare International bits of NFAS data.

Range:

0 - 3

Default:

3

e1atmsn (optional)

Value of five Spare National bits of NFAS data.

Range:

0 - 31

Default:

0

e1port (optional)

Port for the E1 interface on the E1 card where a signaling link and timeslot or an SE-HSL link is being assigned.

Range:

1 - 8

Any 2, but no more than 2, of the 8 ports on an E5-E1T1-B card can be specified when the card is used as an SE-HSL card.

Default:

1

ecm (optional)

Error correction method.

Range:

basic

pcr

Default:

basic

j1port (optional)

Port for the J1 interface on the J1 card where a signaling link and timeslot is being assigned.

Range:

1-8

Ports 1 through 8 can be specified for E5-E1T1B cards.

Default:

1

12tset (optional)

Level 2 timer set

A signaling link can be assigned to any of the thirty-five timer sets.

Range:

1 - 40

1-10 —ANSI low speed links

11-20 —ITU low speed links

21-25 —ITUN China high speed links

26-30 —ITUN Q703.A high speed links

31-35 —Unchannelized T1 high speed links

36 --40---- ITUN16 Japan low speed links

Default:

1 — ANSI low speed links

11 — ITU low speed links

21 — ITUN China high speed links (SE-HSL link in a linkset defined with the `apctype=ituchina` parameter)26 — ITUN Q703.A high speed links (SE-HSL link in a linkset defined with the `apctype=itun` parameter)

31 — Unchannelized T1 high speed links

36----ITUN16 Japan low speed links

11 (optional)

ATM line length in feet.

Range:

0 - 7

0 —0-110 feet

1 —110-220 feet

2 —220-330 feet

3 —330-440 feet

4 —440-550 feet

5 —550-660 feet

6 —More than 660 feet

7 —Allows use of external line buildout networks

Default:

0

1pset (optional)

Link parameter set identifier

Range:

1 - 30

Default:

1 — ANSI
21 — ITU

pcrn1 (optional)

Threshold of the number of MSUs available for retransmission. If the error correction method being used is PCR and this threshold is reached, no new MSUs or FISUs are sent. The retransmission cycle is continued up to the last MSU entered into the retransmission buffer in the order in which they were originally transmitted.

Range:

1 - 1023
low speed E1/T1 links: 1 - 127
unchannelized T1 links: 1 - 1023

Default:

76 — low speed E1/T1 links.
608 — unchannelized T1 links.

pcrn2 (optional)

Threshold of the number of MSU octets available for retransmission. If the error correction method being used is PCR, and this threshold is reached, no new MSUs or FISUs are sent. The retransmission cycle is continued up to the last MSU entered into the retransmission buffer in the order in which they were originally transmitted.

Range:

300 - 287744
low speed E1/T1 links: 300 - 35500
unchannelized T1 links: 7200 - 287744

Default:

3800 — low speed E1/T1 links.
32224 — unchannelized T1 links.

t1port (optional)

Port for the T1 interface on the T1 card where a signaling link and timeslot or an ST-HSL-A link is being assigned.

Range:

1 - 8
Any 2, but no more than 2, of the 8 ports on an E5-E1T1-B card can be specified when the card is used as an ST-HSL-A card.

Default:

1

ts (optional)

E1 or T1 timeslot for the assigned signaling link.

Range:

1 - 31

E1 range:

1-31

T1 range:
1 - 24

J1 range:
1-24

vci (optional)

Virtual channel identifier.

Range:
5, 32 - 65535
0-4 and 6-31 are reserved values; they cannot be specified in the command.

Default:
5

vpi (optional)

Virtual path identifier.

Range:
0 - 4095

Default:
0

Example

```
ent-
slk:loc=1201:link=a:slc=3:lsn=c1201001:l2tset=3:bps=64000:ecm=b
asic
```

```
ent-
slk:loc=1201:link=a:slc=3:lsn=c1201001:l2tset=3:ecm=pcr:pcrn1=5
0:pcrn2=4000
```

This example adds signaling link A to linkset LSHCAP:

```
ent-slk:loc=1304:link=a:slc=0:lsn=lshcap:lpset=3:vci=5:vpi=15
```

```
ent-
slk:loc=1302:link=a:slc=5:lsn=atm1302a:lpset=3:vci=10:vpi=15:l1
=0:atmtsel=external
```

This example adds a link to linkset LS1 at 56 KB:

```
ent-slk:loc=1205:link=a1:slc=0:lsn=ls1
```

This example assigns a timeslot for the signaling link on an E1 card that uses E1 port 1:

```
ent-slk:loc=1206:link=a:slc=0:lsn=e1jwk:ts=1
```

This example assigns a timeslot for a signaling link on an E1 card that uses E1 port 2:

```
ent-slk:loc=1205:link=b:slc=0:lsn=e1typ:ts=1:e1port=2
```

This example adds a timeslot for a signaling link using E1 port 2 and signaling link B2:

```
ent-slk:loc=1205:link=b2:slc=0:lsn=e1typ:ts=1:e1port=2
```

This example adds a timeslot for a signaling link using signaling link A2. The T1 interface defaults to the interface defined for T1 port 1 (`t1port` parameter not specified):

```
ent-slk:loc=1207:link=a2:slc=0:lsn=t1jwk:bps=64000:ts=1
```

This example adds a timeslot for a signaling link using T1 port 2 and signaling link B2:

```
ent-slk:loc=1207:link=b2:slc=0:lsn=t1typ:ts=1:t1port=2
```

This example adds a signaling link to linkset LS1 at 2048000 bps for an ATM card that will use the CRC4 multi-frame structure:

```
ent-  
slk:loc=1205:link=a:slc=0:lsn=ls1:bps=2048000:atmsel=line:elatmcr4=  
on
```

This example adds a link to linkset LS1 at 56 Kbps for a card that is provisioned as an E1 card:

```
ent-slk:loc=1205:link=a31:slc=0:lsn=ls1:elport=4:ts=4
```

This example adds a link to linkset LS2 at 64 Kbps for a card provisioned as a T1 card:

```
ent-slk:loc=1207:link=b27:slc=3:lsn=ls2:t1port=8:ts=6:bps=64000
```

This example adds signaling link B to linkset LSE5ATM on an E5-ATM-B card:

```
ent-slk:loc=1305:link=b:slc=1:lsn=lse5atm:lpset=3:vci=5:vpi=15
```

This example adds signaling link A1 to linkset L2E5ATM on an E5-ATM-B card:

```
ent-slk:loc=1303:link=a1:slc=1:lsn=l2e5atm:lpset=3:vci=5:vpi=15
```

This example assigns a timeslot for the signaling link on a J1 card that uses the J1 port:

```
ent-  
slk:lsn=ls2:j1port=2:slc=9:port=a3:loc=1102:ts=5:bps=64000:ecm=basic
```

Dependencies

Card locations 1113 - 1118 cannot be specified.

2154 E2154 Cmd Rej: Card slot reserved by system

The `ecm=pcr` parameter must be specified before the `pcrn1` and `pcrn2` parameters can be specified for the SS7ANSI and CCS7ITU applications.

2121 E2121 Cmd Rej: PCRN1 and PCRN2 parameters are invalid if ECM=BASIC

The value specified for the `bps` parameter must be supported for the associated card application.

2146 E2146 Cmd Rej: BPS value not supported

If the card application is SS7ANSI or CCS7ITU, then a value of 56000 or 64000, respectively, must be specified for the `bps` parameter. If SE-HSL or ST-HSL-A cards are used, then a value of 1984000 or 1536000, respectively, must be specified for the `bps` parameter.

2119 E2119 Cmd Rej: BPS must be 56000 or 64000

A value of 1544000 must be specified for the `bps` parameter if the card application is ATMANSI.

3406 E3406 Cmd Rej: BPS must be 1544000 for LIMATM cards

A value 2048000 must be specified for the `bps` parameter if the card type is LIME1ATM.

3298 E3298 Cmd Rej: If specified, BPS must be 2048000 for LIME1ATM Card

The card application must be ATMANSI before the `bps=1544000` parameter can be specified. The card application must be ATMITU before the `bps=2048000` parameter can be specified.

3418 E3418 Cmd Rej: Specified BPS is invalid

A value of 1984000 or 1536000 must be specified for the `bps` parameter if the card is an E5-E1T1-B card used for SE-HSL or ST-HSL-A links (the `linkclass=unchan` parameter is specified in the `ent-e1` or `ent-t1` command) respectively.

4276 E4276 Cmd Rej: BPS value not valid for Linkclass=Unchan

The values 0 - 4 and 6 - 31 cannot be specified for the `vci` parameter; these values are reserved system values.

3404 E3404 Cmd Rej: VCI values 0..4 and 6..31 are reserved

The linkset type must be valid for the card:

- The linkset adjacent point code (APC) type must be the same as the card application type (ANSI or ITU).
- IPSP-M2PA linksets cannot contain IPGWx and IPSP-M3UA link types. During migration to an IPSP-M2PA linkset, link types other than IPGWx or IPSP-M3UA can be added to the linkset. After the linkset is transitioned to IPSP-M2PA, only IPSP-M2PA and IPLIMx links can be added.
- IPSP-M3UA linksets cannot contain SS7IPGW, IPGWI, and IPGHC link types. After the linkset is transitioned to IPSP-M3UA, only IPSP-M3UA links can be added to the linkset.

2126 E2126 Cmd Rej: Invalid linkset type for card

The specified linkset name must exist in the database.

2346 E2346 Cmd Rej: Linkset not defined

The value of the `slc` parameter cannot be used by more than one link in the linkset.

2132 E2132 Cmd Rej: The specified SLC is in use

A card must be equipped in the specified card location.

2101 E2101 Cmd Rej: Card location is unequipped

The card in the specified card location must be a LIM or MIM and must exist.

2292 E2292 Cmd Rej: Card does not exist or is not a LIM (LOC)

A link cannot be already assigned to the specified port.

2133 E2133 Cmd Rej: There is a link already assigned to this port

The parameters that are specified for the command must be valid for the type of card in the specified card location.

2131 E2131 Cmd Rej: Parameters not valid for card type

If a low-speed link is assigned to a card (card application is not ATMANSI or ATMITU), then the ATM high-speed link and E1 ATM parameters (`atmtsel`, `elatmcrc4`, `etatmsi`, `elatmsn`, `ll`, `lpset`, `vci`, and `vpi`) cannot be specified.

3408 E3408 Cmd Rej: ATM parameters not valid for card type

If an ATM high-speed link is assigned to a card (card application is ATMANSI), then the low-speed link parameters (`ecm`, `l2tset`, `pcrn1`, and `pcrn2`) cannot be specified.

3407 E3407 Cmd Rej: LSL parameters not valid for card type

If an IP link is assigned to a card (card application is SS7IPGW, IPGWI, or IPLIMI), then the following low-speed link parameters, ATM high-speed link parameters, and E1 ATM high-speed link parameters cannot be specified: `lpset`, `vci`, `vpi`, `ll`, `atmtsel`, `elatmcrc4`, `elatmsi`, `elatmsn`, `ecm`, `l2tset`, `pcrn1`, and `pcrn2`.

3770 E3770 Cmd Rej: SS7 parameters cannot be specified for IP7 link

The value specified for the `link` parameter must be valid for the specified card type and application:

- A4 - A-15 and B4 - B15—card type is LIME1 or LIMT1 for an E5-E1T1-B card, and the card application is SS7ANSI or CCS7ITU
- A16 - A31 and B16 - B31 --- card type is LIME1 or LIMT1 for an E5-E1T1-B card used as an E1 or T1 card, and the card application is SS7ANSI or CCS7ITU.
- A4 - A31 and B4 - B31—cannot be specified for an SE-HSL or an ST-HSL-A card
- A - A7 and B - B7—E5-ENET-B cards running the IPLIMI application
- A - A15 and B - B15—E5-ENET-B, or SLIC cards running the IPSP application
- A, A1 - A63 and B, B1 - B63-SLIC card running the IPSP application

3494 E3494 Cmd Rej: Link is invalid for card location

HIPR2 cards must be in card locations `xy09` and `xy10` on any shelf that contains one or more E5-E1T1-B, E5-ENET-B, or SLIC cards. When links A4 - A31 or B4 - B31 are specified, the system verifies that HIPR2 cards are in card locations `xy09` and `xy10` on the same shelf with the specified E5-E1T1-B, E5-ENET-B, or SLIC card.

3490 E3490 Cmd Rej: HIPR/HIPR2 must be equipped on the shelf for this card

If the card application is SS7IPGW or IPGWI, then the `link=a` parameter must be specified.

3768 E3768 Cmd Rej: PORT B not supported for device

If an E5-E1T1-B card is used for SE-HSL or ST-HSL-A links, then only the `link=a` parameter or `link=b` parameter can be specified.

4281 E4281 Cmd Rej: Specified link not supported for Linkclass=Unchan

If the specified linkset has a mate linkset, only 1 SS7IPGW or IPGWI signaling link can be assigned to the specified linkset. The assigned link must be an SS7IPGW or IPGWI link.

3772 E3772 Cmd Rej: Only one SS7IPGW or IPGWI link allowed in mated linkset

Up to 8 IPGWx signaling links can be assigned to one linkset if the linkset is not mated.

4224 E4224 Cmd Rej: Up to 8 SS7IPGW or IPGWI links allowed in un-mated linkset

If an IP link is assigned to a card running the SS7IPGW application, then the `lsn` parameter must reference a linkset that specifies an IP gateway adjacent point code.

3829 E3829 Cmd Rej: Link set with IPGWAPC=YES requires SS7IPGW/IPGWI GPL

If an IP link is assigned to a card running the IPGWI application, then the `lsn` parameter must reference a linkset that specifies an IP gateway adjacent point code.

3828 E3828 Cmd Rej: Card GPL type IPGWx requires a link set with IPGWAPC=YES

If the `multgc=yes` parameter is specified, then all links assigned to the linkset must be of the same type.

4003 E4003 Cmd Rej: MULTGC=YES requires IPSEG-M2PA, IPGWI, or IPLIMI links

If `multgc=yes` parameter is specified, then the card in the specified location must be running the IPGWI, IPLIMI, or IPSEG application.

4045 E4045 Cmd Rej: Linkset with MULTGC=YES requires IPGWI/IPLIMI/IPSEG GPL

Linksets with 14-bit ITU-N and 24-bit ITU-N APCs or SAPCs can contain only IPGWI or IPLIMI M3UA links. These links support 14-bit ITU-N and 24-bit ITU-N traffic simultaneously.

Linksets containing 24-bit ITU-N APCs or SAPCs cannot contain E1 ATM links. These links do not support 24-bit ITU-N traffic.

3538 E3538 Cmd Rej: Linkset SLK requires ITUN APC/SAPC to be 14bit or 24bit only

A maximum of 1200, 1500, 2000, or 2800 links is allowed in the system. The maximum depends on the enabled Large System # Links quantity (see the `rtrv-ctrl-feat` command output). A FAK is required to enable support for more than 1200 links. A mixture of T1 ATM high-speed, E1 ATM high-speed, SE-HSL, IP, and low-speed signaling links is supported.

3409 E3409 Cmd Rej: Max number combined LSLs and HSLs already entered

If a card location is specified for an E1, T1, or Channel card (card type LIME1, LIMT1, or LIMCH), then the `ts` parameter must be specified.

2379 E2379 Cmd Rej: Missing parameter

A specific timeslot can be assigned in the `ts` parameter to only one E1 signaling link for the E1 interface that services that timeslot.

2131 E2131 Cmd Rej: Parameters not valid for card type

A specific timeslot can be assigned in the `ts` parameter to only one T1 signaling link for the T1 interface that services that timeslot.

2746 E2746 Cmd Rej: TS value on the T1 already in use by a signaling link

The `ts` parameter value for a T1 link must be in the range 1-24.

2748 E2748 Cmd Rej: T1 TS value must be specified in the range (1-24)

The `ts` parameter cannot be specified for E5-E1T1-B cards that are used for SE-HSL or ST-HSL-A links (the `linkclass=unchan` parameter is specified in the `ent-e1` or `ent-t1` command).

4275 E4275 Cmd Rej: Cannot specify TS when Linkclass=Unchan

The Card (IMT) table is corrupt or cannot be found.

2102 E2102 Cmd Rej: Failed reading the IMT table

The Link table is corrupt or cannot be found.

2103 E2103 Cmd Rej: Failed reading the link table

The Linkset table is corrupt or cannot be found.

2122 E2122 Cmd Rej: Failed reading linkset table

The E1/T1 table is corrupt or cannot be found.

4059 E4059 Cmd Rej: Failed reading the E1/T1 table

The Extended Link table is corrupt or cannot be found.

2599 E2599 Cmd Rej: Failed reading the extended link table

If the card is an IPSP card, then the `ipsg=yes` parameter must be specified (see the `ent-ls` command).

4809 E4809 Cmd Rej: GPL type IPSP requires linkset with IPSP=YES

If an IPSP linkset and card are used, then the `aname` parameter must be specified.

4805 E4805 Cmd Rej: ANAME is required for an IPSP link

If the `aname=m3ua` parameter is specified, then a maximum of 16 signaling links can be assigned.

4836 E4836 Cmd Rej: Limit 16 SLKs per IPSP-M3UA association

If the `aname=m2pa` parameter is specified, then only one signaling link can be assigned.

4835 E4835 Cmd Rej: Limit 1 SLK per IPSP-M2PA association

The total TPS of all signaling links configured for an IPSP card cannot exceed 6500 TPS for an E5-ENET-B or SLIC card when the `type=enetb` parameter is specified (see the `ent-card` command).

The total TPS of all signaling links configured for an IPSP card cannot exceed 10,000 TPS for a SLIC card when the `type=slic` parameter is specified (see the `ent-card` command).

4807 E4807 Cmd Rej: TPS exceeded for card

If the HIPR2 High Rate Mode feature is turned off, then the sum of the TPS values assigned to all linksets in the system must be less than or equal to 500,000. If the HIPR2 High Rate Mode feature is turned on, then the sum of the TPS values must be less than or equal to 750,000. If the HIPR2 High Rate Mode and 1M System TPS features are turned on, then the sum of the TPS values assigned to all linksets in the system must be less than or equal to 1,000,000. The total provisioned system TPS is equal to SIGTRAN TPS + ATM TPS.

4255 E4255 Cmd Rej: Total provisioned system TPS limit exceeded

The value specified for the `aname` parameter must already exist in the database.

4099 E4099 Cmd Rej: Association name not found

The adapter assigned to the association must be the same as the adapter assigned to the linkset.

4802 E4802 Cmd Rej: Association ADAPTER type doesn't match linkset ADAPTER type

The value specified for the `aname` parameter must be associated with the value specified for the `loc` parameter.

4803 E4803 Cmd Rej: Association and LOC must reference same card

Linksets must have same routing context to share an association.

4828 E4828 Cmd Rej: Unique RCONTEXT required if associations in multiple lsets

The `aname` parameter can be specified only for IPSG links.

4804 E4804 Cmd Rej: ANAME is prohibited for a non-IPSG link

The specified parameter must be valid for the card type and use:

- `elport` —E5-E1T1-B cards used as E1 cards
- `t1port` —E5-E1T1-B cards used as T1 cards
- `j1port`—E5-E1T1-B cards used as J1 cards
- `ts` —E5-E1T1-B cards used as E1/T1 cards
- `lsn`, `slc`, `loc`, `port`, `bps`, `lpset`, `atmsel`, `vci`, `vpi`, `elatmcrc4`, `elatmsi`, and `elatmsn`—E5-ATM-B cards. Low-speed link parameters (`ecm`, `l2tset`, `pcrn1`, and `pcrn2`) cannot be specified.
- `elport` and `l2tset` —E5-E1T1-B cards used as SE-HSL cards
- `t1port` and `l2tset`—E5-E1T1-B cards used as ST-HSL-A cards

2131 E2131 Cmd Rej: Parameters not valid for card type

The E1 interface for the card at the location specified by the `loc` parameter must be defined (see the `ent-e1` command) before a signaling link can be assigned to the port.

4055 E4055 Cmd Rej: The E1PORT at the specified location is not equipped

The card location specified by the `e1loc` parameter must contain an E5-E1T1-B card that is used as an E1 card.

4076 E4076 Cmd Rej: E1 card location is unequipped

The specified card slot must be equipped with the valid card type.

2212 E2212 Cmd Rej: Invalid card type for this command

The value specified for the `ts` parameter cannot already be in use by the E1 card.

4051 E4051 Cmd Rej: TS value on the E1 already in use by a signaling link

The T1 interface of the T1 card specified by the `loc` parameter must already be defined (see the `ent-t1` command) before a signaling link can be assigned to the card.

3455 E3455 Cmd Rej: SCTP Association or SLK provisioned: Card supports 16 links

If a multi-port LIM card is used, then the `bps=56000` parameter must be specified.

2974 E2974 Cmd Rej: BPS must be 56000 for all ports on Multi Port LIM

If the `loc` parameter indicates an ST-HSL-A card, then the `t1port` parameter must be specified.

4215 E4215 Cmd Rej: LOC and T1PORT parameter combination must be specified

3866 E3866 Cmd Rej: Shelf FAN bit feature must be enabled

If the `loc` parameter indicates an SE-HSL card, then the `e1port` parameter must be specified.

4214 E4214 Cmd Rej: LOC and E1PORT parameter combination must be specified

If the link is In-Service, then this command cannot be entered.

3726 E3726 Cmd Rej: Active device state does not permit database change

Links must be available in the linkset that is specified by the `lsn` parameter.

2130 E2130 Cmd Rej: Maximum number of links are assigned to this linkset

The domain of the linkset specified by the `lsn` parameter must match the domain of the link specified by the `link` parameter.

2587 E2587 Cmd Rej: Card GPL of link does not match domain of linkset APC

The link capacity cannot exceed the maximum allowed by the SE-HSL or ST-HSL-A FAK.

3482 E3482 Cmd Rej: Link capacity exceeds limit allowed by HSL feature key

The L2 timer range must be valid for the type of signaling link being provisioned as shown:

- ANSI LSL—1 - 10
- ITU LSL—11 - 20
- E1-HSL (China)—21 - 25
- E1-HSL (ITUN)—26 - 30
- T1-HSL-A—31 - 35
- J1 LSL ---- 36-40

2127 E2127 Cmd Rej: L2 timer not valid for the signaling link type

The same value cannot be specified for the `aname` parameter for multiple links in the same linkset.

4829 E4829 Cmd Rej: Multiple links w/in same linkset cannot share an association

The same value must be specified for the `ecm` parameter for all links in a linkset.

2124 E2124 Cmd Rej: All links of LSN must use same error correction method

The T1 interface on the card at the location specified by the `loc` parameter must be defined (see the `ent-t1` command) before a signaling link can be assigned to the port.

2737 E2737 Cmd Rej: The T1PORT at the specified location is not equipped

The N1/N2 thresholds for PCR Error Correction Mode (ECM) specified by the `pcrn1` and `pcrn2` parameters must be within the range specified for the link type. Only low speed E1/T1 (LSL) and Unchannelized T1 links support PCR ECM.

4922 E4922 Cmd Rej: PCR N1/N2 threshold is out of range for the link type

E5-ATM-B cards must be inhibited before the card can support an A1 link.

2603 E2603 Cmd Rej: Card must be inhibited before executing this command

If a 3 Links per Card feature quantity is enabled, and an E5-ATM-B card is used, then the value specified for the `vci` parameter must be less than or equal to 16383.

5437 E5437 Cmd Rej: VCI value greater than 16383 not allowed

A 3 Links per Card feature quantity must be enabled before the `link=a1` parameter can be specified for an E5-ATM-B card.

The maximum number of E5-ATM-B cards with 3 links cannot exceed the value that is set by the 3 Links per Card quantity feature.

5462 E5462 Cmd Rej: Number of ATM cards with 3 links exceeds allowable quantity

The value specified for the `link` parameter when an ATM card is used must be valid:

- `a-a1`, `b`—E5-ATM-B card running the ATMANSI or ATMITU application

2972 E2972 Cmd Rej: Specified Link is not valid for Card and Appl Type

The BPS parameter value must be 64000 for J1 links. By default, BPS is 64000 for J1 links.

3160 E3160 Cmd Rej: BPS must be 64000 for J1 links in ent-slk.

The Time Slot parameter value must not be greater than 24 for J1 links. The range for the Time Slot is 1 - 24.

3161 E3161 Cmd Rej: Time Slot must not be greater than 24 for J1 links.

The ECM parameter value must be BASIC for J1 links. By default, ECM is BASIC for J1 links.

3163 E3163 Cmd Rej: ECM must be basic for J1 links.

The J1 table must be accessible.

3164 E3164 Cmd Rej: Failed reading the J1 table

A specific timeslot can be assigned in the `ts` parameter to only one J1 signaling link for the J1 interface that services that timeslot.

3171 E3171 Cmd Rej: TS value on the J1 already in use by a signaling link

The value specified for the SLC parameter must be in the range of 0 to 15.

2017 E2017 Cmd Rej: Integer is out of range, 0..15 - slc.

The value specified for TS parameter must be in the range of 0 to 15.

2017 E2017 Cmd Rej: Integer is out of range, 1..31 - ts

Notes

The `ll` parameter is not available in the SEAS database.

If a signaling link is assigned to a card that is running the ATMANSI or ATMITU application, and the `bps`, `vci`, `vpi`, `elatmcrc4`, `elatmsi`, `elatmsn`, `ll`, `atmsel`, and `lpset` parameters are not specified, then the ATM default values are assigned for these parameters.

The MTP Level 2 timers (`l2tset` parameter) are not valid for IP links or for ATM links.

A link is equipped when it is physically operational, that is, when the hardware is in place that is needed to support the link.

Signaling Links for E5-E1T1-B Cards

An E5-E1T1-B card can be used for E1, T1, or J1 card functions, but not both at the same time. E1 cards and T1 cards can coexist in the same EAGLE.

Each signaling link for an E1, T1, or J1 card must be associated with a timeslot assigned in this command. Each signaling link and timeslot assigned for an E1, T1, or J1 card must be associated with an E1, T1, or J1 interface that has been defined for one of the ports on the card (see the `ent-e1` or `ent-t1` command, respectively).

Timeslots and signaling links are defined in the `ent-slk` command by a combination of card location (`loc` parameter), the signaling link that uses the timeslot (A, A1-A31, B, B1-B31), the timeslot number (`ts`), and the port for the servicing E1, T1, or J1 interface on the E1, T1, or J1 card (`e1port` or `t1port` parameter). Timeslot numbers must be unique to the E1, T1, or J1 interface that services the timeslot; that is, the same timeslot cannot be assigned to the same E1, T1, or J1 interface for more than one signaling link.

Each E5-E1T1-B card used as an E1 card can have up to 64 signaling links assigned to the card. Each E1 interface on the card can service 1-31 timeslots.

Each E5-E1T1-B card used as a T1 card can have up to 64 signaling links assigned to the card. Each T1 interface on the card can service 1-24 timeslots.

Each E5-E1T1-B card used as a J1 card can have up to 64 signaling links assigned to the card. Each J1 interface on the card can service 1-24 timeslots.

Signaling Links for E5-ATM-B Cards

An E5-ATM-B card can support E1 or T1 card functions: however, the card cannot support both functions at the same time. Cards running E1 and T1 functions can coexist in the same EAGLE.

Each E5-ATM-B card can have up to 3 signaling links assigned to the card. Only the A, A1, or B link can be used. The card must be inhibited, a 3 Links per Card feature quantity must be enabled, and the value specified for the `vci` parameter must be less than or equal to 16383 before the A1 link can be provisioned.

The A, A1, and B links can be provisioned for a location if a card is not seated in that location. However, if a card other than an E5-ATM-B card is inserted in this location, then the card is auto-inhibited.

Signaling Links for IPSG Cards

An IPSG card supports both M2PA and M3UA signaling links.

The E5-ENET-B card supports up to 32 signaling links per card, 16 M3UA links per association, and 32 associations per card.

The SLIC card supports up to 128 signaling links per card, 16 M3UA links per association, and 128 associations per card.

Multiple M3UA signaling links with routing context (different linksets/AS, up to 16) can use a single association.

Each M3UA AS-ASP instance maps to a signaling link. Signaling link state depends upon AS-ASP state, as well as administrative action.

The IPSP card can share M2PA linksets with IPLIMI, and IPLHC cards, but the card cannot share M3UA linksets with SS7IPGW, IPGWI, and IPGHC cards.

The IPSP card supports ANSI and ITU and ITUN/ITUN24 signaling links simultaneously on one card and on one association. Each signaling link resides in a set of networks determined by the APC and SAPCs of the assigned linkset.

The `slktps` parameter specified for the IPSP linkset (see the `ent/chg-ls` command) specifies the TPS for each link provisioned for that linkset.

HSL and LSL in same linkset

Mixing of high speed links and low speed links in a linkset is supported for migration purposes and is not recommended for standard provisioning.

Signaling links and scheduled UI measurement reports

If the Integrated Measurements feature is turned on, then the measurements subsystem automatically disables the scheduled UI measurements reports, including the daily scheduled reports, if the entered link causes the provisioned link count to exceed 700.

Output

```

4.1.353 ent-snmp-host

Use this command to write an entry into the SNMP Host table to configure an SNMP northbound interface.

Parameters

host (mandatory)

Host name. This parameter specifies the logical name of the device associated with the specified IP address.

Special characters, such as hyphens, can be used in the host name if the host name is enclosed in double quotes (" ").

Range:

ZZZZZZZZZZZZZZZZZZZZZZZZZZZZZZZZZZZZ

A string of characters, beginning with a letter and comprising up to 32 characters in length. Valid values are a..z, A..Z, 0..9, or .

ipaddr (mandatory)

The IP address associated with the host name. This is a TCP/IP address expressed in standard dot notation.

Range

4 numbers separated by dots, with each number in the range of 0-255.

cmdport (optional)

SNMP interface command port ID.

Range:

161, 1024..65535

This is the port that the SNMP agent will monitor for commands such as GET and SET.

Default:

161

hb (optional)

Heartbeat notification interval

Range:

0, 60, 120, 300, 600, 900, 1800, 3600, 5400, 7200

Default:

60

Output

```
ent-snmphost:host=snmphost1:ipaddr=192.168.54.100
```

```
tekelecstp 12-06-13 10:31:11 EST 45.0.0-64.66.0

4.1.354 ent-spc

Use this command to enter an SPC (secondary point code) into the database.

Parameters**spc (mandatory)**

ANSI point code with subfields network indicator-network cluster-network cluster member (*ni-nc-ncm*).

Synonym:

spca

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001-005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006-255*.

The point code *000-000-000* is not a valid point code.

spc/spca/spci/spcn/spcn24/spcn16 (mandatory)

Secondary point code.

 **Note:**

See [Point Code Formats and Conversion](#) for a detailed description of point code formats, rules for specification, and examples.

spci (mandatory)

ITU international secondary point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*).

Range:

s-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s*

zone—0-7

area—000-255

id—0-7

The point code 0-000-0 is not a valid point code.

spcn (mandatory)

ITU national point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the `chg-stpopts:npcfmr` flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

Range:

s-, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s*-

nnnnn—0-16383

gc—*aa-zz*

m1-m2-m3-m4—0-14 for each member; values must sum to 14

spcn24 (mandatory)

24-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*).

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

msa—000-255

ssa—000-255

sp—000-255

spcn16 (mandatory)

16-bit ITU national point code with subfields *unit number sub number area main number area* (*un-sna-mna*).

Range:

000---127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

un---000---127

sna---000---15

mna---000---31

Example

This example adds a secondary point code:

```
ent-spc:spc=10-20-30
```

This example adds a 24-bit ITU-N secondary point code:

```
ent-spc:spcn24=99-99-99
```

This example adds a spare ITU-N secondary point code:

```
ent-spc:spcn=s-12345
```

This example adds a 16-bit ITU-N secondary point code:

```
ent-spc:spcn16=121-5-10
```

Dependencies

The Spare Point Code Support feature must be enabled before a spare point code (prefix s-) can be specified in the command.

4193 E4193 Cmd Rej: Spare Point Code Feature must be enabled

The value specified for the `spc` parameter must be a full point code.

3820 E3820 Cmd Rej: Site SPC must be a full point code

The ANSI point code range requirements have been violated for an ANSI SID. For the ANSI secondary point code with subfields *ni-nc-ncm*, the *ni* component cannot equal 000, the *nc* component cannot equal 000 if the *ni* component is 001 - 005

2169 E2169 Cmd Rej: Point code out of range

The specified secondary point code to be added must not already exist as a secondary point code.

3812 E3812 Cmd Rej: The SPC already exists

A maximum of 40 secondary point codes may be defined.

3815 E3815 Cmd Rej: The maximum number of SPCs has already been defined

The MPC feature must be turned on before a secondary point code can be added using this command.

3867 E3867 Cmd Rej: MPC feature must be enabled

The value specified for the `spc` parameter cannot already exist in the Destination table as a destination point code, true point code, or concerned point code.

3809 E3809 Cmd Rej: SPC may not exist in the STP's route table

The specified secondary point code cannot match an existing true point code or capability point code in the Site Identification table.

3810 E3810 Cmd Rej: SPC may not exist as a TPC or CPC in the SID table

STP Site ID table must be accessible.

2874 E2874 Cmd Rej: Failed reading site identification table

SPC table must be accessible.

3807 E3807 Cmd Rej: Failed reading Secondary Point Code (SPC) table

Route Destination table must be accessible.

2648 E2648 Cmd Rej: Failed reading the route table

The value specified for the `spc/spca/spci/spcn/spcn24/spcn16` parameter cannot be the same as any Emulated Point Code value in the PCT table.

5466 E5466 Cmd Rej: Point Code matches an Emulated Point Code in PCT table

The J7 support feature must be enabled before the `spcn16` parameter can be specified.

2691 E2691 Cmd Rej: J7 Support Feature must be enabled.

The SPC/SPCA/SPCN24 parameters are not allowed if the J7 support feature is enabled.

2801 E2801 Cmd Rej: J7 Support feature must not be Enabled.

Notes

If the `spcn` parameter is specified, its format must match the format that was assigned with the `chg-stpopts:npcfmti` parameter.

In this command, only ITU-international and ITU national point codes support the spare point code subtype prefix (s-).

Output

```
ent-spc:spc=10-20-30
```

```
rlghncxa03w 04-02-18 08:50:12 EST EAGLE 31.3.0

4.1.355 ent-srvsel

Use this command to assign the applicable service selectors required to specify a service entry for DSM services.

Parameters**Note:**

Definitions for the feature options specified by the on and off parameters are located in the Notes section.

**Note:**

The nature of address indicator parameters (*naiv* or *nai*) and the numbering plan parameters (*npv* or *np*) can be specified using a mnemonic or an explicit value. Either the mnemonic or the explicit value can be specified; however, both values cannot be specified at the same time for the same parameter. [NAIV/NAI Mapping](#) shows the mapping between the *naiv* and *nai* values. [Table A-8](#) shows the mapping between the *npv* and *np* values.

gti/gtia/gtii/gtin/gtin24 (mandatory)

Global title indicator. For all service selector commands, the domain is defined as GTI and GTIA (ANSI), GTI (ITU international), and GTIN (ITU national). For the service selector commands, GTI and GTIA are equivalent.

Range:

Supported value for ANSI: *gti=2* and *gtia=2*

Supported values for ITU: *gtii= 0, 2, 4*; *gtin=0, 2, 4*; *gtin24= 0, 2, 4*

serv (mandatory)

DSM service.

**Note:**

The *gport* service cannot be used for the Prepaid SMS Intercept Phase 1 (PPSMS) or the Portability Check for Mobile Originated SMS feature; use the *smsmr* service. The *mnp* service includes the G-Port, A-Port, and IS41 GSM Migration services.

Range:

eir
Equipment Identity Register

gflex
GSM flexible numbering

gport
GSM number portability

inpq
INP query

inpmr
INP message relay

smsmr
MO SMS ASD, MO SMS B-Party Routing, MO SMS GRN, MO-based GSM SMS NP, MO-based IS41 SMS NP, MO SMS IS41-to-GSM Migration, Portability Check for MO SMS, Prepaid SMS Intercept Phase 1

idps
IDP Screening for Prepaid

idpr
Prepaid IDP Query Relay

mnp
Mobile Number Portability

vflex
Voice Mail Router

atinp
ATI Number Portability Query (ATINP)

ttr
Triggerless TCAP Relay

aiq
ANSI41 Analyzed Information Query

ssn (mandatory)
Subsystem number.

Range:
0 - 255

tt (mandatory)
Translation type.

Range:
0 - 255

df1tact (optional)

This parameter specifies the default Action ID associated with the service selector entry.

Range:

ayyyyyyy

1 leading alphabetic followed by up to 8 alphanumeric characters

The `df1tact` parameter can have one of the following values:

- a GTT Action ID that exists in the GTT Action table and has an associated GTT Action of *disc/udts/tcaperr*
- *fallback* —Fallback to the Relay data. The relayed MSU is routed as per routing data provided by the service.
- *falltogtt* —Fallback to GTT. If the `gttselid` parameter has a value other than *none*, and the GTT selector search fails, then the GTT selector search is performed again using `gttselid=none`.

Default:

fallback

gttselid (optional)

The GTT Selector ID used for performing GTT on messages relayed by the service.

Range:

0 - 65534

nai (optional)

Nature of Address indicator.

Range:

sub

rsvd

natl

intl

naiv (optional)

Nature of Address indicator value.

Range:

0 - 127

np (optional)

Numbering Plan.

Range:

e164

generic

x121

f69

e210

e212

e214

private

npv (optional)

Numbering Plan value.

Range:

0 - 15

off (optional)

Disables or turns off the specified feature options. A comma-separated list of feature options that are requested to be turned off. Up to 10 feature options can be specified in the list.

Range:

gttrqd

on (optional)

Enables or turns on the specified feature options. A comma-separated list of feature options that are requested to be turned on. Up to 10 feature options can be specified in the list.

Range:

gttrqd

rqdtb1nop (optional)

The action performed if a message arrives at an SCCP card that does not have the necessary RTDB table, and the current message routing is GT.

Range:

udts

generate UDTS for the processed MSU

gtt

fall through to GTT for the processed MSU

disc

discard the processed MSU

snai (optional)

Service nature of address indicator.

Range:

natl

National significant number

intl
International number

rnidn
Routing number prefix and international dialed/directory number

rnndn
Routing number prefix and national dialed/directory number

rnsdn
Routing number prefix and subscriber dialed/directory number

ccrndn
Country code, routing number, and national directory number

sub
Subscriber number

snp (optional)
Service numbering plan.

Range:

e164

e212

e214

Example

srvsel:gtii=4:tt=20:np=e164:nai=intl:serv=eir:ssn=*:rqdtblnop=disc
```

```
ent-srvsel:gtii=0:tt=0:serv=idpr:ssn=*
```

Dependencies

The Service Selector table cannot contain more than 1024 entries.

3533 E3533 Cmd Rej: Serv Selector table is full

The G-Flex feature must be turned on before the `serv=gflex` parameter can be specified.

3500 E3500 Cmd Rej: GFLEX feature must be ON

The INP feature must be turned on before the `serv=inpnr` or `serv=inpq` parameter can be specified.

3524 E3524 Cmd Rej: INP/AINPQ feature must be ON

The G-Port feature must be turned on before the `serv=gport` parameter can be specified.

3989 E3989 Cmd Rej: GPORT feature must be ON when (N)SERV=GPORT

The Equipment Identity Register (EIR) feature must be turned on before the `serv=eir` parameter can be specified.

3699 E3699 Cmd Rej: EIR feature must be ON

The `np` and `npv` parameters cannot be specified together in the command.

3551 E3551 Cmd Rej: NP and NPV must not be specified together

The `nai` and `nai v` parameters cannot be specified together in the command.

3552 E3552 Cmd Rej: NAI and NAI V must not be specified together

The `gtia=4` parameter cannot be specified.

3553 E3553 Cmd Rej: GTI(A)=4, and GTI(x)=1 and 3 are not supported

The values 1 and 3 are not valid for the `gti/gtia/gtii/gtin/gtin24` parameters.

3553 E3553 Cmd Rej: GTI(A)=4, and GTI(x)=1 and 3 are not supported

If the `gti/gtia/gtii/gtin/gtin24=0` , 2 parameter is specified, then the `np(v)` and `nai(v)` parameter combinations cannot be specified.

3554 E3554 Cmd Rej: NP(V) and NAI(V) must not be specified for given GTI value

If the `gtii/gtin/gtin24=4` parameter is specified, then an `np(v)` and `nai(v)` parameter combination must be specified. The parameters can be specified in the following combinations: `np/nai v`, `npv/nai`, `np/nai`, or `npv/nai v`.

3555 E3555 Cmd Rej: NP(V) and NAI(V) must be specified for given GTI value

If the `serv` parameter has a value of `inpnr`, `gport` or `eir`, then the `gtia` and `gti` parameters cannot be specified.

3942 E3942 Cmd Rej: GTI/GTIA is invalid for specified (N)SERV

If the `serv=inpnr` parameter is specified, then the `snp=e164` parameter must be specified.

3939 E3939 Cmd Rej: (N)SNP must be E164 when (N)SERV=INPNR

If the `serv=inpq` parameter is specified, then the `gtii` parameter cannot be specified.

3941 E3941 Cmd Rej: GTII must not be specified when (N)SERV = INPQ

If the value specified for the `snai` parameter is `rnidn`, `rnndn`, or `rnsdn`, then the value specified for the `serv` parameter must be `inpmr`, `gport`, or `smsmr`.

3940 E3940 Cmd Rej: (N)SERV value is invalid for the specified (N)SNAI

If the value specified for the `serv` parameter is `gflex`, `gport`, `inpmr`, or `smsmr`, then the `snai` and `snp` parameters must be specified.

3944 E3944 Cmd Rej: SNAI and SNP must be specified for requested service

If the value specified for the `serv` parameter is `aiq`, `atinp`, `eir`, `idpr`, `inpq`, `ttr`, or `vflex` then the `snai` and `snp` parameters cannot be specified.

3943 E3943 Cmd Rej: SNP/SNAI mustn't be specified for requested service

If the `snai=ccrndn` parameter is specified, then the value specified for the `serv` parameter must be `gport` or `smsmr`.

3994 E3994 Cmd Rej: (N)SERV must be GPORT/SMSMR when (N)SNAI=CCRNDN

If the value specified for the `serv` parameter is `gport` or `smsmr`, then the `snp=e164` parameter must be specified.

3990 E3990 Cmd Rej: (N)SNP must be E164 when (N)SERV=GPORT/SMSMR

An entry cannot already exist that matches the new `gti/gtii/gtin/gtin24`, `tt`, `ssn`, `np(v)`, and `nai(v)` combination of parameters.

3937 E3937 Cmd Rej: Entry already exists with specified GTI-TT-NP(V)-NAI(V)-SSN

For the specified `gti/gtia/gtii/gtin`, `tt`, `np(v)`, `nai(v)`, and `ssn=*` parameters, an entry matching a specific `ssn` cannot already exist.

4180 E4180 Cmd Rej: Wildcard SSN already exists

For the specified `gti/gtia/gtii/gtin`, `tt`, `np(v)`, `nai(v)`, and `ssn` parameters, an entry matching the `ssn=*` parameter cannot already exist.

4181 E4181 Cmd Rej: Specific SSN already exists

If the `ansigflex` STP option is enabled (see the `chg-stpotps` command), then an ITU service selector cannot be entered.

4297 E4297 Cmd Rej: ITU entries not allowed when ANSIGFLEX is on

The IDP Screening for Prepaid feature must be on before the `serv=idps` parameter can be specified.

4545 E4545 Cmd Rej: IDP Screening for Prepaid feature must be ON when SERV=IDPS

If the `serv=idps` parameter is specified, then the supported mandatory parameters are `tt`, `serv`, `ssn`, `gtin`, and `gtii`. Supported optional parameters are `np` and `nai`.

4548 E4548 Cmd Rej: Requested service parameters not supported when SERV=IDPS

The Prepaid IDP Query Relay feature must be turned on or the IAR Base feature must be enabled before the `serv=ttr` parameter can be specified.

4500 E4500 Cmd Rej: IDPR must be ON or IAR Base must be enabled when SERV=TTR

If a value of *idpr* or *ttr* is specified for the *serv* parameter, then the only valid mandatory service parameters are *tt*, *serv*, *ssn*, *gtii*, and *gtin*, and the only valid optional parameters are *np* and *nai*.

4505 E4505 Cmd Rej: Service parameters not supported when SERV=IDPR or TTR

If the A-Port or IGM feature is enabled, then the *serv=gport* parameter cannot be specified.

2814 E2814 Cmd Rej: GPORT invalid if APORT or IGM is enabled

An entry cannot already exist that matches the new *gti/gtii/gtin/gtin24*, *tt*, *ssn*, *np(v)*, and *nai(v)* combination of parameters.

3946 E3946 Cmd Rej: Entry already exists with specified GTII-TT-NP(V)-NAI(V)-SSN

An entry cannot already exist that matches the new *gti/gtii/gtin/gtin24*, *tt*, *ssn*, *np(v)*, and *nai(v)* combination of parameters.

3947 E3947 Cmd Rej: Entry already exists with specified GTIN-TT-NP(V)-NAI(V)-SSN

An entry cannot already exist that matches the new *gti/gtii/gtin/gtin24*, *tt*, *ssn*, *np(v)*, and *nai(v)* combination of parameters.

4069 E4069 Cmd Rej: Entry exists with specified GTIN24-TT-NP(V)-NAI(V)-SSN

The V-Flex feature must be turned on before the *serv=vflex* parameter can be specified.

4142 E4142 Cmd Rej: VFLEX feature must be ON

The ATINP feature must be enabled before the *serv=atinp* parameter can be specified.

4816 E4816 Cmd Rej: ATINP feature must be enabled

The PPSMS or Portability Check for Mobile Originated SMS feature must be turned on, or the MO SMS ASD, MO SMS GRN, MO SMS B-Party Routing, MO SMS IS41-to-GSM Migration, MO-based GSM SMS NP, or MO-based IS41 SMS NP feature must be enabled before the *serv=smsmr* parameter can be specified.

3631 E3631 Cmd Rej: Incompatible Feature/Option status

If a value of *aiq*, *atinp*, or *eir* is specified for the *serv* parameter, then the *gtin24* parameter cannot be specified.

4838 E4838 Cmd Rej: GTIN24 must not be specified when (N)SERV = ATINP/AIQ/EIR

The Prepaid IDP Query Relay feature must be turned on before the *serv=idpr* parameter can be specified.

5024 E5024 Cmd Rej: Prepaid IDP Query Relay feature must be activated

The ANSI41 AIQ feature must be enabled before the *serv=aiq* parameter can be specified.

5158 E5158 Cmd Rej: ANSI41 AIQ feature must be enabled

The A-Port or IGM feature must be turned on, or the A-Port or IGM feature must be enabled and the G-Port feature must be turned on before the *serv=mdp* parameter can be specified.

2085 E2085 Cmd Rej: A-Port, G-Port or IGM must be turned ON

If a DSM4G card is active in the system, then the `on=gttrqd` parameter cannot be specified.

5059 E5059 Cmd Rej: Configuration requires E5-SM4G card or better

The `dfltact`, `gttselid`, and `on/off=gttrqd` parameters are supported for only the IDPR, TTR, MNP, GPORT, SMSMR, GFLEX, and INPMR services.

2155 E2155 Cmd Rej: Invalid parameter combination specified

If a GTT Action ID is specified as the value for the `dfltact` parameter, then the Action ID must already exist in the GTT Action table.

5071 E5071 Cmd Rej: GTT Action Id does not exist

The GTT Action table is corrupt or cannot be found.

5067 E5067 Cmd Rej: Unable to access GTT Action table

A valid value must be specified for the `dfltact` parameter.

5172 E5172 Cmd Rej: Invalid action type

The EGTT feature must be turned on before the `gttselid` or `dfltact` parameter can be specified.

3557 E3557 Cmd Rej: EGTT must be ON

The same value cannot be specified for the `on` and `off` parameters.

4732 E4732 Cmd Rej: Same option in ON & OFF params cannot be specified

The `dfltact=none` parameter cannot be specified.

5298 E5298 Cmd Rej: Default ACTID must not be specified as NONE

The EPAP Data Split feature or the Dual ExAP Config feature must be on before the `rqdtblnop` parameter can be specified.

2434 E2434 Dual ExAP Config or EPAP Data Split must be ON

If a value of `inpq`, `vflex`, `atinp`, or `eir` is specified for the `serv` parameter, then the `rqdtblnop=gtt` parameter cannot be specified.

5476 E5476 Cmd Rej: Invalid RQDTBLNOP value for service

If a value of `aiq` or `idps` is specified for the `serv` parameter, then the `rqdtblnop` parameter cannot be specified.

5477 E5477 Cmd Rej: RQDTBLNOP must NOT be specified

The requested service selector entry must exist in the database.

3504 E3504 Cmd Rej: GSM Selector does not exist

The GSM DBMM table must be accessible.

3546 E3546 Cmd Rej: Failed reading GSM DBMM Table

Only for IDP Relay feature, `gtii/gtin/gtin24=0` can be specified.

If the `serv=idpr` parameter is specified and the `gti/gtia/gtii/gtin/gtin24=0`, `tt=0` parameter is entered, then the `gti/gtia/gtii/gtin/gtin24=2`, `tt=0` parameter combinations cannot be entered. The parameters can be specified in the following combinations: `gtii=0 tt=0`, or `gtii=2 tt=0`.

Notes

on/off options

- `gtrqd` —GTT required. Specifies whether GTT is required after service execution is complete and the message is relayed by the service. This option is supported for the IDPR, MNP, TTR, GPORT, SMSMR, GFLEX, and INPMR services.

Output

```
ent-srvsel:gtia=4:tt=10:ssn=25:snai=natl:serv=aiq

4.1.356 ent-ss-appl

Use this command to reserve a subsystem number for an application and set the application status to be online or offline. One subsystem can be defined per application. The application must be unique.

Parameters

app1 (mandatory)

Application type.

Range:

Inp

inp

eir

vflex

atinq

aiq

sfapp

ssn (mandatory)

Primary subsystem number.

Range:

2 - 255

rqdtblnop (optional)

The action performed if a message arrives at an SCCP card that does not have the necessary RTDB table, and the current message routing is subsystem.

Range:

udts

generate UDTs for the processed MSU

disc

discard the processed MSU

stat (optional)

Status. In the case of SFAPP, stat can only have the value of online and it defaults to this value.

Range:

offline

online

Default:

offline (online in case of SFAPP)

Example

```
ent-ss-appl:appl=inp:ssn=16:stat=online
```

```
ent-ss-appl:appl=inp:ssn=15:stat=offline:rqdtblnop=disc
```

Dependencies

The LNP feature must be turned on before the `appl=inp` parameter can be specified.

3009 E3009 Cmd Rej: LNP feature must be ON

The INP feature must be turned on before the `appl=inp` parameter can be specified.

3524 E3524 Cmd Rej: INP/AINPQ feature must be ON

The EIR feature must be turned on before the `appl=eir` parameter can be specified.

3699 E3699 Cmd Rej: EIR feature must be ON

The value specified for the `appl` parameter cannot already be assigned.

N/A N/A

The maximum number of applications must not already be assigned.

3150 E3150 Cmd Rej: Application already assigned

The LNP database is corrupt or cannot be found.

2601 E2601 Cmd Rej: Command aborted due to system error

For LNP, the STP true point code and LNP subsystem must exist in the MAP table.

3288 E3288 Cmd Rej: STP True PC and LNP SSN does not exist in MAP table

For INP, the STP true point code and INP subsystem must exist in the MAP table.

3928 E3928 Cmd Rej: STP True PC and INP Subsystem does not exist in MAP Table

For EIR, the STP true point code and EIR subsystem must exist in the MAP table.

4182 E4182 Cmd Rej: STP True PC and EIR Subsystem does not exist in MAP Table

STP True Point Code must exist in MAP table

3286 E3286 Cmd Rej: STP True PC does not exist in MAP table

The SSAPPL table is corrupt or cannot be found (non-DBS 1.0 systems only).

3124 E3124 Cmd Rej: Failed Reading LNP SS Appl table

The SSAPPL table is corrupt or cannot be found (DBS 1.0 systems only)

3638 E3638 Cmd Rej: Failed Reading SS Appl table

If the V-Flex feature is turned on, then the STP true point code and V-Flex subsystem must exist in the MAP table.

4674 E4674 Cmd Rej: STP True PC and VFLEX Subsystem does not exist in MAP Table

The V-Flex feature must be turned on before the `appl=vflex` parameter can be specified.

4142 E4142 Cmd Rej: VFLEX feature must be ON

The RPC3 table is corrupt or cannot be found.

4525 E4525 Cmd Rej: Failed Reading RPC3 table

The ATINP feature must be enabled before the `appl=atinpq` parameter can be specified.

4816 E4816 Cmd Rej: ATINP feature must be enabled

For ATINP, the STP true point code and ATINPQ subsystem must exist in the MAP table.

4876 E4876 Cmd Rej: STP True PC and ATINPQ Subsystem does not exist in MAP Table

The value specified for the `ssn` parameter cannot already exist in the SS-APPL table.

4181 E4181 Cmd Rej: Specific SSN already exists

The specified MAP table entry for a subsystem number (SSN) value in the SS-APPL table, must be a valid point code type for that subsystem. The following point code types are not valid for the indicated subsystems:

- For the INP subsystem, the True Point code cannot be an ITU-I point code.
- For the EIR subsystem, the True Point code cannot be an ANSI point code.
- For the AIQ, ATINPQ, or VFLEX subsystem, the True Point code can not be an ITU-N24 point code.

4177 E4177 Cmd Rej: Invalid TPCs are present in the MAP table for specified SSN

The ANSI41 AIQ feature must be enabled before the `appl=aiq` parameter can be specified.

5158 E5158 Cmd Rej: ANSI41 AIQ feature must be enabled

The STP true point code and a MAP entry for the AIQ subsystem must be provisioned in the MAP table before the `appl=aiq` parameter can be specified.

5161 E5161 Cmd Rej: STP True PC and AIQ Subsystem does not exist in MAP Table

The EPAP Data Split feature OR Dual ExAP Config feature must be on before the `rqdtblnop` parameter can be specified.

5413 E5413 Cmd Rej: EPAP Data Split feature must be turned on

2434 E2434 Dual ExAP Config or EPAP Data Split must be ON

If the `appl=aiq` parameter is specified, then the `rqdtblnop` parameter cannot be specified.

5477 E5477 Cmd Rej: RQDTBLNOP must NOT be specified

If the `appl=sfapp` parameter is specified, then the `stat` parameter cannot take the value `offline`.

3549 E3549 Offline state is not allowed for `sfapp`

For SFAPP, the value specified in the `ssn` parameter should not have an existing entry in MAP table that is associated with STP's own True PC; however, it is valid if the `ssn` is associated with point codes other than the STP's own True PC in any table.

4181 E4181 Cmd Rej: Specific SSN already exists

Notes

If not specified, the application subsystem status defaults to OFFLINE. When the application is OFFLINE, the application subsystem is down. For SFAPP, this defaults to ONLINE and cannot be changed to OFFLINE in any case.

The LNP application status applies to both message relay and LNP query.

Output

```
ent-ss-appl:appl=aiq:ssn=18:stat=online
```

```
tekelecstp 09-12-03 16:40:40 EST EAGLE 42.0.0
```

```
ENT-SS-APPL: MASP A - COMPLTD  
;
```

4.1.357 ent-subnetid

Use this command to enter elements into the Subnet ID list, for the ISUP NP with EPAP feature. Each entry is identified by the Subnet ID and the Subnet number.

The Subnet ID length (`subnetidlen` parameter) must be entered first, before the command is entered the second time to enter the Subnet ID and Subnet Number.

Parameters

subnetid (optional)

Vendor Subnet ID

Range:

1 - 15 digits

Valid digits are 0-9, a-f, A-F.

**Note:**

The number must contain the number of digits defined by the `subnetidlen` parameter.

subnetidlen (optional)

Subnet ID Length.

Range:

1 - 15

All Subnet IDs defined for the ISUP NP with EPAP feature must contain this number of digits.

subnetnum (optional)

Subnet Number. A reference to the prefix number for the ISUP NP with EPAP feature (see the `chg-prefix` command).

Range:

1

Corresponds to the prefix defined with prefix number 1

2

Corresponds to the prefix defined with prefix number 2

3
Corresponds to the prefix defined with prefix number 3

4
Corresponds to the prefix defined with prefix number 4

5
Corresponds to the prefix defined with prefix number 5

Example

```
ent-subnetid:subnetidlen=6  
ent-subnetid:subnetid=886933:subnetnum=1
```

Dependencies

The value *none* cannot be specified for the `subnetid` parameter.

N/A N/A

The ISUP NP with EPAP feature must be enabled before this command can be entered.

4356 E4356 Cmd Rej: ISUP NP with EPAP feature must be enabled

The SUBNETID table can contain a maximum of 50 entries.

4352 E4352 Cmd Rej: SUBNETID table is full

The specified ID entry cannot already exist in the SUBNETID table.

4354 E4354 Cmd Rej: SUBNETID already exists in SUBNETID table

The SUBNETID table is corrupt or cannot be found by the system.

4353 E4353 Cmd Rej: Failed reading SUBNETID table

All SUBNETID table entries must have the number of digits defined by the `subnetidlen` parameter value.

4357 E4357 Cmd Rej: All SUBNETID table entries must be of length SUBNETIDLEN

The prefix with the same prefix number as the specified Subnet Number must already be provisioned for the ISUP NP with EPA feature.

4359 E4359 Cmd Rej: For SUBNETNUM specified the prefix is not provisioned

The Subnet ID length cannot be changed unless the SUBNETID table is empty. All Subnet IDs must be deleted from the table before a different Subnet ID length can be entered.

4358 E4358 Cmd Rej: SUBNETIDLEN may only be changed if SUBNETID table is empty

The Subnet ID length must be entered before any Subnet IDs can be defined.

4362 E4362 Cmd Rej: SUBNETIDLEN must be set before Subnet ID may be entered

The `subnetidlen` parameter cannot be specified in the same command with the `subnetid` and `subnetnum` parameters.

4363 E4363 Cmd Rej: Enter param SUBNETIDLEN, or params SUBNETID and SUBNETNUM

Notes

None.

Output

The Subnet ID length must be entered first.

```
ent-subnetid:subnetidlen=6
```

```
rlghncxa03w 04-10-07 11:11:28 EST EAGLE 31.11.0

4.1.358 ent-t1

Use this command to enter an interface for an E5-E1T1-B card used as a T1 or ST-HSL-A card.

Parameters**loc (mandatory)**

The card location as stenciled on the shelf of the system.

Range:

*1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318,
2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318,
3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318,
4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318,
5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318,
6101 - 6108, 6111 - 6118*

t1port (mandatory)

T1 card port number. The value must be a T1 port for which an interface has not been configured on the specified T1 card.

Range:

1 - 8

Any 2 of the 8 ports on an E5-E1T1-B card can be specified when the card is used as an ST-HSL-A card.

encode (optional)

Indicator for use of B8ZS or AMI encoding/decoding.

Range:

b8zs

ami

Default:

b8zs

framing (optional)

Indicator for framing format. *esfperf* is the framing format with performance monitoring.

Range:

sf, esf, esfperf

Default:

sf

linkclass (optional)

Link class for links assigned to T1 cards (channelized links) or ST-HSL-A cards (unchannelized links).

Range:

chan

unchan

Default:

chan

l1 (optional)

T1 cable length in feet between the EAGLE and the connecting node.

Range:

0 - 655

Default:

133

minsurate (optional)

Minimum signal unit rate. The minimum number of SUs present on a link uniformly distributed.

 **Note:**

The `linkclass=unchan` parameter must be specified for an ST-HSL-A card before this parameter can be specified.

Range:

400 - 1600

Default:

1000

t1tsel (optional)

Timing source.

Range:

line - slave timing source

external - master timing source

Default:

line

Example

```
ent-t1:loc=1205:t1port=1:encode=ami:framing=sf:ll=100
ent-t1:loc=1203:t1port=1
ent-t1:loc=1203:t1port=2:linkclass=unchan:minsrate=1200
ent-
t1:loc=1205:t1port=1:encode=ami:t1tsel=external:framing=sf:ll=1
00
ent-t1:loc=1205:t1port=2:encode=b8zs:t1tsel=line:framing=sf
```

Dependencies

The specified card location (`loc` parameter) must be equipped.

2739 E2739 Cmd Rej: T1 card location is unequipped

The card specified by the `loc` parameter must be a LIMT1 card type.

2212 E2212 Cmd Rej: Invalid card type for this command

The E1/T1 table must be accessible.

4059 E4059 Cmd Rej: Failed reading the E1/T1 table

The Card (IMT) table must be accessible.

2102 E2102 Cmd Rej: Failed reading the IMT table

The port specified by the `t1port` parameter must not be already equipped with a T1 interface.

2733 E2733 Cmd Rej: The T1PORT at the specified location is already equipped

3866 E3866 Cmd Rej: Shelf FAN bit feature must be enabled

HIPR2 cards must be equipped in card locations *xy09* and *xy10* (*x* is the frame, *y* is the shelf) on each EAGLE shelf that contains one or more /E5-E1T1-B cards that are used as T1 cards or ST-HSL-A cards.

3490 E3490 Cmd Rej: HIPR/HIPR2 must be equipped on the shelf for this card

Card locations 1113 - 1118 (E5-MASP and E5-MDAL cards) cannot be specified as values for the `loc` parameter.

2154 E2154 Cmd Rej: Card slot reserved by system

The `linkclass=unchan` parameter must be specified before the `minsurate` parameter can be specified.

3047 E3047 Cmd Rej: Parameter combination invalid

An ST-HSL-A feature quantity must be enabled before the `linkclass=unchan` parameter can be specified for an ST-HSL-A card.

4282 E4282 Cmd Rej: An HSL feature key must be enabled for Linkclass=Unchan

Channelized and unchannelized T1 ports (mixed mode) cannot be specified on a single card (the card cannot be used as a T1 card and an ST-HSL-A card at the same time).

4274 E4274 Cmd Rej: Cannot mix Unchannelized and Channelized modes on E1/T1 card

Only 2 of the 8 ports can be used for T1 interfaces on an E5-E1T1-B card that is used as an ST-HSL-A card.

4044 E4044 Cmd Rej: Only two E1/T1 ports allowed for Linkclass=Unchan

4595 E4595 Cmd Rej: Only one E1/T1 port allowed for Linkclass=Unchan

The ST-HSL-A feature must be turned on before the `framing=esfperf` parameter can be specified.

3872 E3872 Cmd Rej: FRAMING=ESFPERF not supported

Notes

One or two T1 interfaces must be defined on a T1 card after the T1 card type (LIMT1) is defined in the database, and before the signaling links and associated timeslots are defined for the T1 card.

External timing is derived from the EAGLE High-Speed Master Clock (1.544 MHz for T1 or 2.048 MHz for E1); therefore, the Master Timing feature is required. Line timing is derived from its received data stream, if present.

Up to 8 T1 interfaces can be defined on an /E5-E1T1-B card used as a T1 card after the T1 card type (LIMT1) is defined in the database, and before the signaling links and associated timeslots are defined for the T1 card.

For an ST-HSL-A card, the `minsurate` parameter indicates the least number of SUs present on a link uniformly distributed. The number of SUs present is the `minsurate` parameter value (without link traffic) and the `minsurate` parameter value minus the number of MSUs (with link traffic).

Output

```
ent-tt1:loc=1205:t1port=1:encode=ami:framing=sf:ll=100
```

```
rlghncxa03w 04-02-20 09:07:58 EST EAGLE 31.3.0
```

```
ENT-T1: MASP A - COMPLTD
```

```
;
```

- [dlt-t1](#)
- [rtrv-t1](#)
- [tst-t1](#)

4.1.359 ent-tt

Use this command to add a translation type to the system database.

**Note:**

If the EGTT feature is turned on, then the GTT Selector (`ent/chg/dlt/rtrvgtttsel`), GTT Set (`ent/dlt/rtrv-gttset`), and GTA (`ent/chg/dlt/rtrvgta`) commands replace the Translation Type (`ent/dlt/rtrv-tt`) and Global Title Translation (`ent/chg/dlt/rtrv-gtt`) commands. It is not recommended to run `ent/dlt/rtrv-tt & ent/chg/dlt/rtrv-gtt` commands as it may cause the advance GTA fields of GTT entry to be reset to the default values.

Parameters**type/typea/typei/typen/typen24/typeis/typens (mandatory)**

The translation type and network type. This value is the decimal representation of the 1-byte field used in SS7.

The `type` and `typea` parameters specify an ANSI network.

The `typei` parameter specifies an ITU-international network.

The `typen` parameter specifies an ITU-national network.

The `typen24` parameter specifies a 24-bit ITU-national network.

The `typeis` parameter specifies an ITU-international spare network.

The `typens` parameter specifies an ITU-national spare network.

A translation type numeric value may be entered as ANSI type (`type/typea`) and as an ITU type (`typei/typen/typen24/typeis/typens`). However, they are separate entities.

The point code domain translation types for GTT are handled by the EAGLE protocol processing as either ANSI or ITU; therefore, ITU applies to ITU-I, ITU-I spare, ITU-N, ITU-N spare, and ITU-N24.

Range:
000 - 255

Default:
No translation type is specified

alias (optional)
The alias of the global title translation type

Range:
000 - 255

Default:
No alias assignment is made.

ndgt (optional)
The number of digits contained in the global title translation. This parameter is not valid if the VGTT (variable length GTT) feature is turned on.

Range:
1 - 21

Default:
6 (not applicable if the VGTT feature is on)

ttn (optional)
Translation type name.

Range:
ayyyyyyy
1 alphabetic character followed by up to 8 alphanumeric characters

Default:
"set" + "ans"|"int"|"nat"|"24n"|"ins"|"nas" + 3-digit TT value

Example

```
ent-tt:type=230:ttn=lidb:ndgt=5
ent-tt:type=230:ttn=lidb:alias=007
ent-tt:type=2:ndgt=5
ent-tt:type=3
ent-tt:typens=2
ent-tt:typeeis=1:ttn=setitu001
```

Dependencies

The translation type specified by `type/typea/typei/typen/typen24/typeeis/typens` cannot already exist in the database containing the ANSI and ITU types.

2464 E2464 Cmd Rej: Translation Type already exists

The `alias` and `ndgt` parameters cannot be specified together in the command.

2469 E2469 Cmd Rej: NDGT parameter not permitted with ALIAS

The translation type name must be unique.

2467 E2467 Cmd Rej: TTN already in use

The `ndgt` parameter is not valid if the VGTT (variable length GTT) feature is turned on.

4011 E4011 Cmd Rej: NDGT Parameter is invalid for VGTT

The value specified for the `type/typea/typei/typen/typen24/typeis/typens` parameter cannot be an alias value.

2465 E2465 Cmd Rej: Translation TYPE defined as an alias

The value specified for the `type/typea/typei/typen/typen24/typeis/typens` parameter must already exist in the database for the network type.

2466 E2466 Cmd Rej: Translation Type specified does not exist

The value specified for the `ttn` parameter must already exist in the database.

2468 E2468 Cmd Rej: TTN specified does not exist

The values specified for the `type/typea/typei/typen/typen24/typeis/typens` and `ttn` parameters must refer to the same entity.

2473 E2473 Cmd Rej: TTN and TYPE do not correspond to each other

The value specified for the `alias` parameter must be associated with the specified translation type and cannot be the value of an existing translation type.

2460 E2460 Cmd Rej: Alias defined as translation type

The value specified for the `alias` parameter cannot be an existing alias value for the specified network type.

2459 E2459 Cmd Rej: Alias already in use

The network domain of the translation type specified by the `ttn` parameter cannot be CROSS (see the `ent-gttset` command) when entering an alias entry for that `ttn`.

5371 E5371 Cmd Rej: Network domain of corresponding `ttn` must not be CROSS

The `ttn=none` parameter cannot be specified.

3565 E3565 Cmd Rej: Set name must not be specified as NONE

Notes

The new translation type is entered into the translation type table along with the translation name and the number of digits used by the translation type.

The `ttn` parameter always refers to a translation type. Aliases do not have translation type names.

If the OBR or FLOBR feature is turned on, then the `ent-tt` command can be used to provision only CdGTA GTT sets and GTT selectors. NP and NAI values cannot be specified for GTT selectors using the `ent-tt` command as `gtii=4` entries cannot be provisioned with this command.

If the EGTT feature is on, then the following occurs for this command:

- For ANSI, if the GTT selector of a true entry is deleted using the `dlt-gttset` command, a new entry using the same TTN cannot be created. If the true selector is deleted for an entry using the `dlt-gttset` command, then its aliases cannot be entered.
- For ITU, if a true GTT selector entry (GTI=2 or GTI=4) is deleted using the `dlt-gttset` command, or if the GTT set name of an entry is changed using the `chg-gttset` command, then a new entry for the same TTN cannot be created. If a true GTT selector entry is deleted using the `dlt-gttset` command, or if the GTT set name of an entry is changed using the `chg-gttset` command, then its aliases cannot be created.

Output

```
ent-tt:typeeis=1:ttn=setitu001
```

```
tekelecstp 10-04-28 16:45:34 EST Eagle 42.0.0
ENT-TT: MASP A - COMPLTD

4.1.360 ent-ttmap

Use this command to add a mapped SS7 message translation type (TT) for a given gateway linkset name. With this command you can add to the database the identification of the type of allowed global title translation in the SS7 message before and after translation type mapping. For example, you can use this command to add to the database that you want the SS7 message translation type 001 (before TT mapping) mapped to 254 (after TT mapping).

Parameters

ett (mandatory)

Translation type before mapping. The identification of the type of global title translation in the SS7 message *before* translation type mapping. This attribute is the decimal representation of the 1-octet binary field used by the SS7 protocol to identify the translation type.

Range:

000 - 255

io (mandatory)

Incoming or outgoing. The system uses this parameter to indicate whether the translation type mapping data provisioned for the gateway linkset is for SS7 messages *received* or *sent* on the linkset.

Range:

i
incoming

o
outgoing

lsn (mandatory)

Linkset name. The unique network identifier for the gateway linkset.

Range:

ayyyyyyyy

1 alphabetic character followed by 9 alphanumeric characters

mtt (mandatory)

Mapped translation type. The identification of the type of global title translation in the SS7 message after translation type mapping. This attribute is the decimal representation of the 1-octet binary field used by the SS7 protocol to identify the translation type.

Range:

000 - 255

Example

```
ent-ttmap:lsn=nc001:io=i:ett=128:mtt=16
```

Dependencies

The linkset must be defined.

2346 E2346 Cmd Rej: Linkset not defined

The linkset table must be accessible.

2122 E2122 Cmd Rej: Failed reading linkset table

The translation type mapping table must be accessible.

2840 E2840 Cmd Rej: Failed reading tt map table

The Translation Type Mapping table must not be full for the linkset specified in the `lsn` parameter. Translation type mapping entries are supported for up to 255 linksets.

2841 E2841 Cmd Rej: tt map table full for LSN specified

Notes

None

Output

```
ent-ttmap:lsn=nc001:io=i:ett=128:mtt=16
```

```
rlghncxa03w 04-02-21 13:09:27 EST EAGLE 31.3.0  
ENT-TTMAP: MASP A - COMPLTD
```

```
TTMAP table for nc001 is (2 of 64) 3% full
```

4.1.361 ent-user

Use this command to add a user to the database. When you first enter the command, the system prompts you for the user's password, which must follow the administered password guidelines. For security reasons, the password is not displayed. After successfully entering a user password, you are prompted to verify it by entering it again.

Parameters **Note:**

All `cc (X)` parameters consist of a configurable command class name (`ayy`), and indicator (`-yes` or `-no`) to specify whether the command class is allowed. A value of `ayy-yes` indicates that the value is allowed. A value of `ayy-no` indicates that the value is not allowed.

uid (mandatory)

User ID

Range:

azzzzzzzzzzzzzzz

1 alphabetic character followed by up to 15 alphanumeric characters (including asterisks, single quotes, and commas)

a11 (optional)

This parameter specifies whether the user ID is assigned all non-configurable command classes (LINK, SA, SYS, PU, DB, DBG, LNP).

Range:

yes

no

Default:

no

cc1 (optional)

Configurable command class name and an indicator to specify whether the User ID can enter commands assigned to the specified command class.

Range:

ayy-yes, ayy-no

ayy—Command class name of 1 alphabetic character followed by 2 alphanumeric characters

no —the command class is not allowed
yes —the command class is not allowed

cc2 (optional)

Configurable command class name and an indicator to specify whether the User ID can enter commands assigned to the specified command class.

Range:

ayy-yes, *ayy-no*
ayy—Command class name of 1 alphabetic character followed by 2 alphanumeric characters
no —the command class is not allowed
yes —the command class is not allowed

cc3 (optional)

Configurable command class name and an indicator to specify whether the User ID can enter commands assigned to the specified command class.

Range:

ayy-yes, *ayy-no*
ayy —Command class name of 1 alphabetic character followed by 2 alphanumeric characters
no —the command class is not allowed
yes —the command class is allowed

cc4 (optional)

Configurable command class name and an indicator to specify whether the User ID can enter commands assigned to the specified command class.

Range:

ayy-yes, *ayy-no*
ayy—Command class name of 1 alphabetic character followed by 2 alphanumeric characters
no —the command class is not allowed
yes —the command class is allowed

cc5 (optional)

Configurable command class name and an indicator to specify whether the User ID can enter commands assigned to the specified command class.

Range:

ayy-yes, *ayy-no*
ayy—Configurable command class name of 1 alphabetic character followed by 2 alphanumeric characters
no —the command class is not allowed
yes —the command class is allowed

cc6 (optional)

Configurable command class name and an indicator to specify whether the User ID can enter commands assigned to the specified command class.

Range:

ayy-yes, *ayy-no*
ayy—Configurable command class name of 1 alphabetic character followed by 2 alphanumeric characters

no —the command class is not allowed
yes —the command class is allowed

cc7 (optional)

Configurable command class name and an indicator to specify whether the User ID can enter commands assigned to the specified command class.

Range:

ayy-yes, ayy-no

ayy—Configurable command class name of 1 alphabetic character followed by 2 alphanumeric characters

no —the command class is not allowed

yes —the command class is allowed

cc8 (optional)

Configurable command class name and an indicator to specify whether the User ID can enter commands assigned to the specified command class.

Range:

ayy-yes, ayy-no

ayy—Configurable command class name of 1 alphabetic character followed by 2 alphanumeric characters

no —the command class is not allowed.

yes —the command class is allowed

db (optional)

Access to all commands in command class Database Administration.

Range:

yes

no

Default:

no

dbg (optional)

Access to all commands in command class Debug.

Range:

yes

no

Default:

no

link (optional)

Access to all commands in command class Link Maintenance.

Range:

yes

no

Default:

no

page (optional)

The maximum age of the password, in days. The STP automatically prompts the user for a new password at login if the user's password is older than the value specified for this parameter.

Range:

0-999

Default:

The value specified for the `page` parameter in the `chg-secu-dflt` command

pu (optional)

Access to all commands in command class Program Update.

Range:

yes

no

Default:

no

revoke (optional)

Revoke the user ID. The system rejects login attempts for a revoked user ID.

Range:

yes

no

Default:

no

sa (optional)

Access to all commands in command class Security Administration.

Range:

yes

no

Default:

no

sys (optional)

Access to all commands in command class System Maintenance.

Range:*yes**no***Default:***no***uout (optional)**

User ID aging interval. The number of successive days a user ID can go unused (no successful login) before the system denies login of that user ID.

Range:*0 - 999***Default:**

The value specified for the `uout` parameter in the `chg-secu-dflt` command

Example

```
ent-user:uid=john:db=yes
```

```
ent-user:uid=john*mayer:db=yes
```

```
ent-user:uid=user123:cc5=u21-yes:cc8=u32-yes
```

Dependencies

Passwords cannot be created or modified from a telnet terminal (terminal IDs 17-40) without the OA&M IP Security Enhancements feature turned on.

2723 E2723 Cmd Rej: Password operations not allowed on a non-secure terminal

The specified user ID cannot already exist.

2197 E2197 Cmd Rej: The specified user identification is already defined

The user IDs *seas* or *none* cannot be entered because they are reserved for system use. Up to 100 users can be entered.

3040 E3040 Cmd Rej: <string> cannot be used in this command

The `revoke=yes` parameter cannot be specified for a user ID with system administration authorization.

2759 E2759 Cmd Rej: Revocation of security admin userID not allowed

The Command Class Management feature must be enabled before a configurable command class name can be specified in the `cc1-cc8` parameters.

2246 E2246 Cmd Rej: Command Class Management feature must be enabled

The CCCNAMES table must be accessible.

2598 E2598 Cmd Rej: Cccnames table must be accessible

The UserID table must be accessible.

2196 E2196 Cmd Rej: Failed reading the user identification table

The Security Defaults table must be accessible.

2760 E2760 Cmd Rej: Failed reading the security defaults table

The `cc1-cc8` parameter values must have valid default or provisioned configurable command class names. Default names are `u01-u32`.

2266 E2266 Cmd Rej: Class name is not an existing configurable command class

Notes

To disable user ID aging, specify the `uout=0` parameter.

The *Database Administration Manual - System Management* provides a list of all commands allowed within each command class.

Up to 8 configurable command class name parameters can be specified in one command. Additional commands can be entered to assign user access for more than 8 names. To assign user access for all 32 available configurable command class names, four commands could be entered with 8 names specified in each command.

A password must be entered for the newly-created userID. The system issues a separate prompt for this password and disables character echo at the terminal so that the entered password is not displayed on the screen.

After the password has been entered, the system issues a second prompt, and the password must be entered again. This ensures that no typing mistakes were made on the first entry.

Use the following rules for creating passwords:

- A new password cannot contain more than 20 characters.
- A new password must contain at least the number of characters that is specified in the `minlen` parameter of the `chg-secu-dflt` command.
- A new password must contain at least the number of alphabetic (`alpha` parameter), numeric (`num` parameter), and punctuation (`punc` parameter) characters that is specified in the `chg-secu-dflt` command.
- A new password cannot contain the associated user ID.

As a default, the command class Basic is assigned to all users. If no other command class is assigned, the user still has access to commands in the Basic class.

Output

```
ent-user:uid=john*mayer:db=yes
```

```
rlghncxa03w 04-01-07 11:11:28 EST EAGLE 31.3.0

4.1.362 ent-vendid

Use this command to enter elements into the Vendor ID list, for the GSM MAP SRI Redirect to Serving HLR (also called GSM MAP SRI Redirect) feature. Each entry is identified by the Vendor ID and the Vendor number.

The Vendor ID length (`vendidlen` parameter) must be entered first, before the command is entered the second time to enter the Vendor ID and Vendor Number.

Parameters

vendid (optional)

Vendor ID

Range:

1 - 15 digits

vendidlen (optional)

Vendor ID Length. All Vendor IDs defined for the GSM MAP SRI Redirect for Serving HLR feature must contain this number of digits.

Range:

1 - 15

vendnum (optional)

Vendor Number. The Vendor Number is used as a reference to the prefix for the GSM MAP SRI Redirect for Serving HLR feature.

 **Note:**

The prefix values in the range are defined in the `chg-prefix` command.

Range:**1 - 128****1**

Corresponds to the prefix defined with prefix number 1

2

Corresponds to the prefix defined with prefix number 2

..

..

128

Corresponds to the prefix defined with prefix number 128

vendtype (optional)

Vendor Type. The Vendor Type is used with the GSM MAP SRI Redirect for Serving HLR feature to allow multiple networks for the same equipment vendor.

Range:**1 - 32****Example**

```
ent-vendidvend:len=6
ent-vendid:vendid=886933:vendnum=1:vendtype=1
ent-vendid:vendid=886939:vendnum=5:vendtype=9
```

Dependencies

The `vendid=none` parameter cannot be specified.

N/A N/A

The GSM MAP SRI Redirect feature must be enabled before this command can be entered.

4320 E4320 Cmd Rej: SRI Redirect Feature must be enabled

The VENDID table can contain a maximum of 500 entries.

4316 E4316 Cmd Rej: VENDID table is full

The specified ID entry cannot already exist in the VENDID table.

4318 E4318 Cmd Rej: VENDID already exists in VENDID table

The VENDID table is corrupt or cannot be found by the system.

4317 E4317 Cmd Rej: Failed reading VENDID table

All VENDID table entries must have the number of digits defined by the `vendidlen` parameter value.

4321 E4321 Cmd Rej: All VENDID table entries must be of length VENDIDLEN

The prefix with the same prefix number as the specified Vendor Number must already be provisioned for the GSM MAP SRI Redirect feature.

4327 E4327 Cmd Rej: For VENDNUM specified the prefix is not provisioned

The Vendor ID length cannot be changed unless the VENDID table is empty. All Vendor IDs must be deleted from the table before a different Vendor ID length can be entered.

4322 E4322 Cmd Rej: VENDIDLEN may only be changed if VENDID table is empty

The Vendor ID length must be entered before any Vendor IDs can be defined.

4360 E4360 Cmd Rej: VENDIDLEN must be set before Vendor ID may be entered

The `vendidlen` parameter cannot be specified in the same command with the `vendid`, `vendidlen`, and `vendtype` parameters. Either the `vendidlen` parameter, or the `vendid`, `vendidlen`, and `vendtype` parameters can be specified in the command.

4361 E4361 Cmd Rej: Enter VENDIDLEN, or VENDID, VENDNUM and VENDTYPE

Notes

None.

Output

4.1.363 ent-vflx-cd

Use this command to provision the call decision criteria that is used to create a voice mail routing number. This command creates a new entry in the V-Flex Call Decision Table. The V-Flex feature must be enabled before this command can be entered.

Parameters

bcap (mandatory)

The INAP/CAP bearer capabilities for the call.

The INAP/CAP bearer capabilities are used to determine the type of mail that is used by the call, such as voice, video, multimedia, etc.

Range:

0 - 31, none

none —BCAP is not present in the incoming MSU.

cdn (mandatory)

Call decision name. This parameter specifies an entry in the call decision table.

Range:

ayyy

1 alphabetic character followed by 3 alphanumeric characters

dnstat (mandatory)

Dialed number status. This parameter specifies whether the MSISDN is found in the EPAP RTDB.

Range:

fnd

DN found in RTDB

nfn

DN not found in RTDB

It does not matter whether the DN is found in RTDB

rnidx (mandatory)

Routing number index. The index associated with the generated voice mail routing number.

Range:

0 - 9

vmdig (mandatory)

Voice mail number or voice mail prefix digits. A voice mail number or voice mail digits for the call decision entry.

 **Note:**

If the call is redirected (the `rdi=redir` parameter is specified), then the value specified for the `vmdig` parameter represents a voice mail number. If the call is not redirected (the `rdi=dir` parameter is specified), then the value specified for the `vmdig` parameter represents a set of voice mail digits.

Range:

1 - 15

Valid digits are 0-9, A-F, a-f

rdi (optional)

Redirection indicator. This parameter specifies whether the call is redirected.

Range:**dir**

call is not redirected

redir

call is redirected

Default:*dir***Example**

```
ent-vflx-
cd:dnstat=fnd:rdi=redir:bcap=31:vmdig=abcdef123456abc:rnidx=0:cdn=cd
n1
```

Dependencies

The V-Flex feature must be enabled before this command can be entered.

4641 E4641 Cmd Rej: VFLEX feature must be enabled

The value specified for the `cdn` parameter cannot be a reserved word, such as *none*.

3040 E3040 Cmd Rej: <string> cannot be used in this command

The value specified for the `cdn` parameter cannot already exist in the Call Decision table.

4341 E4341 Cmd Rej: (N)CDN already exists in the database

An entry with the specified `dnstat`, `rdi`, `bcap`, and `vmdig` parameters cannot already exist in the Call Decision table.

4649 E4649 Cmd Rej: Entry with RDI, DNSTAT, BCAP, (N)VMDIG already exists

The Call Decision table is corrupt or cannot be found.

4095 E4095 Cmd Rej: Failed reading Call Decision table

The value specified for the `vmdig` parameter cannot differ from a value that already exists in the Call Decision table by only the value of the `dnstat` parameter. The values specified for the `rdi` and `bcap` parameters must differ as well.

4656 E4656 Cmd Rej: Similar entry exists with different DNSTAT value

The maximum number of 25 entries cannot already be provisioned for a given `rdi`, `dnstat`, and `bcap`.

4706 E4706 Cmd Rej: Maximum number of entries already exist for RDI,DNSTAT,BCAP

Output

```
ent-vflx-
cd:dnstat=fnd:rdi=redir:bcap=31:vmdig=abcdef123456abc:rnidx=0:cdn=cdn1

4.1.364 ent-vflx-rn

Use this command to associate a routing number name to a set of voice mail routing numbers. This command creates an entry in the Routing Number table. The V-Flex feature must be enabled before this command can be entered.

Parameters

rn (mandatory)

Routing number. The voice mail routing number.

Range:

1 - 15 digits. Valid digits are 0-9, A-F, a-f.

rnname (mandatory)

Routing number name. The name associated with the voice mail routing number.

Range:

ayyyyyyy

1 alphabetic character followed by 7 alphanumeric characters

Example

```
ent-vflx-rn:rnname=rn01:rn=123ABCDF012
```

Dependencies

The V-Flex feature must be enabled before this command can be specified.

4641 E4641 Cmd Rej: VFLEX feature must be enabled

The Routing Number table is corrupt or cannot be found.

4642 E4642 Cmd Rej: Unable to read Routing Number table

The Routing Number table cannot contain more than 10,000 entries.

4643 E4643 Cmd Rej: Routing Number table is full

The value specified for the `rnname` parameter cannot already exist in the database.

4644 E4644 Cmd Rej: (N)RNNAME already exists in the database

The value specified for the `rn` parameter cannot already exist in the database.

4645 E4645 Cmd Rej: (N)RN already exists in the database

The value specified for the `rnname` parameter cannot be a reserved word, such as *none*.

3040 E3040 Cmd Rej: <string> cannot be used in this command

Output

```
ent-vflx-rn:rnname=rn01:rn=1234ABCDF56

4.1.365 ent-vflx-vmsid

Use this command to provision a voice mail server ID and associate up to 10 routing number names with the ID. This command creates an entry in the VMSID table. The V-Flex feature must be enabled before this command can be entered.

Parameters**id (mandatory)**

The ID of the voice mail server.

Range:

1 - 15 digits, *dflt*

Valid digits are *0-9, A-F, a-f*

dflt—a set of routing numbers used when a query is received with an invalid MSISDN or an MSISDN that is not found in the RTDB

idx0 (optional)

Index 0. The routing number name for index 0.

Range:

ayyyyyyy

1 alphabetic character followed by up to 7 alphanumeric characters

idx1 (optional)

Index 1. The routing number name for index 1.

Range:

ayyyyyyy

1 alphabetic character followed by up to 7 alphanumeric characters

idx2 (optional)

Index 2. The routing number name for index 2.

Range:

ayyyyyyy

1 alphabetic character followed by upto 7 alphanumeric characters

idx3 (optional)

Index 3. The routing number name for index 3.

Range:

ayyyyyyy

1 alphabetic character followed by up to 7 alphanumeric characters

idx4 (optional)

Index 4. The routing number name for index 4.

Range:

ayyyyyyy

1 alphabetic character followed by up to 7 alphanumeric characters

idx5 (optional)

Index 5. The routing number name for index 5.

Range:

ayyyyyyy

1 alphabetic character followed by up to 7 alphanumeric characters

idx6 (optional)

Index 6. The routing number name for index 6.

Range:

ayyyyyyy

1 alphabetic character followed by up to 7 alphanumeric characters

idx7 (optional)

Index 7. The routing number name for index 7.

Range:

ayyyyyyy

1 alphabetic character followed by up to 7 alphanumeric characters

idx8 (optional)

Index 8. The routing number name for index 8.

Range:

ayyyyyyy

1 alphabetic character followed by up to 7 alphanumeric characters

idx9 (optional)

Index 9. The routing number name for index 9.

Range:

ayyyyyyy

1 alphabetic character followed by up to 7 alphanumeric characters

Example

This example provisions a VMS ID and associates a routing number name with index 0:

```
ent-vflx-vmsid:id=123456abcdef123:idx0=RN45
```

This example provisions a VMS ID and associates routing number names with index 0 and index 5:

```
ent-vflx-vmsid:id=DADBEEFEED:idx0=rn15:idx5=rn30
```

Dependencies

The V-Flex feature must be enabled before this command can be entered.

4641 E4641 Cmd Rej: VFLEX feature must be enabled

The values specified for the `idx*` parameters must already exist in the Routing Number table.

4665 E4665 Cmd Rej: <Specified RN Name> does not exist in the Routing Number table

The Routing Number table is corrupt or cannot be found.

4642 E4642 Cmd Rej: Unable to read Routing Number table

The VMSID table is corrupt or cannot be found.

4663 E4663 Cmd Rej: Failed reading VMSID table

The value specified for the `id` parameter cannot already exist in the VMSID table.

4664 E4664 Cmd Rej: VMS ID already exists in the database

The GTT DBMM table is corrupt or cannot be found.

3120 E3120 Cmd Rej: Failed Reading GTT DBMM table

The `idx*=none` parameter cannot be specified.

3502 E3502 Cmd Rej: The NONE value is not allowed in this case

The VMSID table contains a maximum of 1000 entries.

4671 E4671 Cmd Rej: VMSID table is full

The value specified for the `rname` parameter must already exist in the Routing Number table.

4646 E4646 Cmd Rej: RNNAME doesn't exist in the database

Output

```
ent-vflx-vmsid:id=123456abcdef123:idx0=rn45
```

4.1.366 ent-vlr-prof

Use this command to enter a Visitor Location Register (VLR) Profile for a mobile subscriber. A VLR-Profile entry helps in getting information required to locate the user while roaming and is subsequently used in VLR-ROAM table.

Parameters

vlr (mandatory)

VLR Number: Hexadecimal digit GT Number with variable length (1 to 16).

Range:

Hexadecimal digit string 1 to 16 digits

filter (optional)

Determines the category in which the number falls into.

Range:

whitelist

blacklist

graylist

Default:
graylist

ageofloc (optional)

Determines whether the duration at which the location was last updated must be taken into consideration.

Range:
yes

no

Default:
no

lastact (optional)

Determines whether last user activity must be taken into consideration.

Range:
yes

no

Default:
no

imeirtrv (optional)

Determines whether the VLR challenge by the IMEI is enabled for the given profile entry's last user activity has to be taken into consideration.

Range:
yes

no

Default:
no

Example

```
ent-vlr-prof:vlr=12345
```

```
ent-vlr-prof:vlr=4234:filter=blacklist
```

```
ent-vlr-prof:vlr=4234:filter=blacklist
```

```
ent-vlr-prof:vlr=12345:imeirtrv=no
```

Dependencies

VLR_PROF table must be accessible.

3604 E3604 Failure reading VLR Profile Table

VLR parameter must be unique.

3605 E3605 An entry with entered VLR already exists in VLR profile tbl.

VLR parameter specified must neither be a subset of more than 2 existing vlrs present nor be a superset of more than 2 existing vlr entries in VLR-PROF table.

3608 E3608 Max no of VLR entries provisioned with same leading digits

Output

```
ent-vlr-prof:vlr=9234:ageofloc=no:lastact=yes

tekelecstp 17-11-23 14:08:49 MST  EAGLE 46.5.1.5.0-73.2.0
ent-vlr-prof:vlr=9234:ageofloc=no:lastact=yes
Command entered at terminal #17.
;

tekelecstp 17-11-23 14:08:49 MST  EAGLE 46.5.1.5.0-73.2.0
ENT-VLR-PROF: MASP A - Cannot access standby fixed disk.
ENT-VLR-PROF: MASP A - Simplex database update.
Command Accepted - Processing

VLR-PROF table is (4 of 500) 1% full.

;

4.1.367 ent-vlr-roaming

Use this command to enter a Visitor Location Register (VLR) roaming entry for a mobile subscriber. A VLR-Roaming entry uses existing entries for both new as well as old entries from vlr-prof table.

Parameters

oldvlr (mandatory)

VLR Number from which mobile subscriber has moved, hexadecimal digit GT number with variable length (1 to 16).

Range:

Hexadecimal digit string 1 to 16 digits

newvlr (mandatory)

VLR Number to which mobile subscriber has moved, hexadecimal digit GT number with variable length (1 to 16).

Range:

Hexadecimal digit string 1 to 16 digits

time (mandatory)

Duration for which the roaming must occur. Time is in minutes.

Range:

1-1440

Example

```
ent-vlr-roaming:newvlr=12345:oldvlr=56780:time=10
```

Dependencies

VLR_PROF table must be accessible.

3604 E3604 Failure reading VLR Profile Table

VLR_DBMM table must be accessible.

3610 E3610 Failure reading VLR_DBMM Table

VLR_ROAM table must be accessible.

3602 E3602 Failure reading VLR Roaming Table

OLDVLR as well as NEWVLR parameter length must be in the range 1 to 5 digits as per current restriction.

3603 E3603 VLR length is out of range. Range: 1...5

OLDVLR or NEWVLR parameter must be existing in VLR-PROF table

3607 E3607 No entry found for entered VLR in VLR profile tbl

The entry should not be existing in VLR_ROAM table

3569 E3569 OLDVLR and NEW VLR combination already exists.

OLDVLR as well as NEWVLR parameter must not be mentioned as blacklisted in vlr table.

3574 E3574 BLACKLIST VLR number is not allowed

Entries over 1000 are not allowed

3580 E3580 VLR ROAMING Table is FULL

Value for OLDVLR and NEWVLR parameter must not be same.

3600 E3600 OLD and NEW VLR should be different

Output

```
ent-vlr-roaming:oldvlr=1234:newvlr=56545:time=20
```

```
tekelecstp 17-11-23 16:23:44 MST EAGLE 46.5.1.5.0-73.2.0

4.1.368 flash-card

Use this command to load all flash images (GPL) supported by a specified card. This command performs the same functions as the `init-flash` and the `act-flash` commands.

Parameters

code (mandatory)

The GPL type to be loaded.

Range:

appr
Approved GPL

trial
Trial GPL

loc (mandatory)

Card address. The location of the card as stenciled on the shelf of the system.

Range:

1101 - 1108, 1111 - 1113, 1115, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118

force (optional)

This parameter is used to force the command to work on an IS-NR card. Links provisioned on the card are inhibited during command execution. The card and inhibited links are restored to their previous state when the command is completed.

Range:

yes

no

Default:

no

mode (optional)

This parameter converts the flash GPL of cards present in the Upgrade SET lists (RTRV-UPGRADE-CONFIG:DISPLAY=SETS)

Range:

migrate2

Flashes all the cards present in the Upgrade SETs that are running on BLMCAP and/or BLSLC32. Converts BLMCAP to BLDC32 and BLSLC32 to BLSLC932 respectively.

Cards running BLDC32 or BLSLC64 are not affected.

Uses the data in the SETs to decide which cards to migrate simultaneously.

The migration sequence follows the same sequence as used by the Upgrade operations. The OAM cancels the links and boots the cards as the flash GPL changes occur. The use of SETs by the OAM ensures that sufficient signaling link capacity remains available at all times, and prevents disabling all links in the same linkset.

Example

```
flash-card:loc=1105:code=trial
```

```
flash-card:loc=1105:code=appr:force=yes
```

```
flash-card:mode=migrate2
```

Dependencies

Cards do not have to be provisioned to use the `flash-card` command. However, if the specified card is provisioned and not inhibited, use of the `force` parameter is required.

2603 E2603 Cmd Rej: Card must be inhibited before executing this command

The specified card locations must be running a flashable software image.

N/A N/A

This command cannot be used to load flash images for MUX cards. Use the `init-flash` command.

2016 E2016 Cmd Rej: <parm_desc> is out of range - <parm>

If the even-numbered E5-TDM (1114,1116) is specified, the flash occurs on the odd-numbered E5-MCAP running OAM (1113,1115).

N/A N/A

The specified card location cannot be the active E5-MASP (either the active E5-MCAP or the active E5-TDM).

3949 E3949 Cmd Rej: Specified card cannot be the Active MASP

No other action command can be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

The card specified in the location parameter must be present and able to communicate over the IMT. The card does not have to be provisioned in the database.

2269 E2269 Cmd Rej: Unable to communicate with card at location

If the card is already running the specified code load, it cannot be loaded by this command.

4440 E4440 Cmd Rej: Card running the specified code load.

This command cannot be entered if an IMT Rate Change sequence is in progress.

5184 E5184 Cmd Rej: IMT Rate Change sequence is in progress

This command cannot be entered during an Extended Bit Error Rate Test (BERT).

3043 E3043 Cmd Rej: IMT test in progress

Notes

The specified card must be present and able to communicate over the IMT.

A card that is already running the specified code load cannot be reflashed using the `force` parameter. The `act-flash` and `init-flash` commands must then be used to reload the same code level.

Output

```
flash-card:code=appr:force=yes:loc=1112
```

```
Command Accepted - Processing
```

```

4.1.369 format-disk

Use this command to format and initialize a removable drive or standby Terminal Disk Module (TDM).

Note:

The `format-disk` command leaves the disk unusable until the `chg-db` and `copy-gpl` commands are entered.

Parameters

type (mandatory)

The type of drive to format.

Range:

fixed

The standby fixed disk on the standby TDM

meas

The removable measurement drive

system

The removable system drive (latched recessed USB port on the MASP card).

usb

The flush-mounted (not-latched) USB port on the MASP card.

force (optional)

This parameter provides some protection against data loss due to reformatting a used system removable drive.

Range:

yes

no

Default:

no

loc (optional)

The location of the disk that is being formatted.

Range:

1114

The TDM

1116

The TDM

1113

The latched USB port

1115

The latched USB port

low (optional)

This parameter provides control over whether a low-level format will be performed on the target disk. Specifying `low=no` can be used to decrease formatting time.

Range:*yes**no***Default:***yes***prtnggrp (optional)**

Partition group. The disk partition group to be formatted. Specifying the inactive group is relevant only when `type=fixed` is specified.

 **Caution:**

Do not enter the `format-disk:prtnggrp=inactive` command unless directed to by the Customer Care Center to avoid possible loss of a previously archived software release.

Range:*active**inactive***Default:***active***Example**

```
format-disk:type=system
```

```
format-disk:type=meas:force=yes
```

Dependencies

The `type=fixed` parameter must be specified before the `prtnggrp` parameter can be specified.

If the `prtnggrp` parameter is specified, then the `low=no` parameter must be specified.

2155 E2155 Cmd Rej: Invalid parameter combination specified.

Measurements collection must be inhibited during execution of this command. If measurements are not inhibited, this command cannot be executed.

- Do not enter the `chg-measopts:collect=on` command while the `format-disk` command is in progress. This results in read and write errors, because the standby disk is not accessible.
- Do not enter the `format-disk` command until the 30 minute measurements processing or the midnight measurements processing has completed, because inhibiting measurements during these periods results in the loss of measurement data for the period being processed.

2160 E2160 Cmd Rej: Measurements collect must be off

If a removable flash drive that is inserted into the latched USB port contains EAGLE data, then the `force=yes` parameter is required.

2161 E2161 Cmd Rej: Removable drive contains Eagle data (use FORCE=YES)

If a plug-in flash drive that is inserted into the flush-mounted USB port contains EAGLE data, then the `force=yes` parameter is required.

2162 E2162 Cmd Rej: USB drive contains Eagle data (use FORCE=YES)

If the medium that is being formatted contains system data, then the `force=yes` parameter is required.

2164 E2164 Cmd Rej: Fixed disk contains Eagle data (use FORCE=YES)

The `force=yes` parameter must be specified if the drive to be formatted is recognized as a system removable drive. This parameter is optional if the drive is not recognized as a system removable drive. Only drives that have a **dms.cfg** file are recognized as system removable drives.

A removable drive must be inserted and made ready before the `type=meas` or `type=system` parameter can be specified in the command.

2165 E2165 Cmd Rej: Removable drive not inserted

If the `force=yes` parameter is specified, the disk should not require low-level formatting, and the `format=no` parameter should be specified.

N/A N/A

The card with the standby OAM must be available when this command is entered.

2398 E2398 Cmd Rej: Standby MASP is unavailable

The standby fixed disk could not be accessed. There could be a hardware problem.

2824 E2824 Cmd Rej: Could not access standby fixed disk

The active fixed disk could not be accessed. There could be a hardware problem.

2826 E2826 Cmd Rej: Could not access active fixed disk

The source and destination disks are not compatible. There could be a hardware problem.

2828 E2828 Cmd Rej: Source and destination disks not compatible

The system cannot determine the capacity of the disk that is being formatted.

2829 E2829 Cmd Rej: Destination disk capacity equals 0

Refer to *Database Administration - System Management User's Guide* for detailed instructions to resolve this issue.

2831 E2831 Cmd Rej: Current database not coherent

The standby fixed disk contains security log entries that have not yet been uploaded. Upload the log entries before formatting the disk to avoid loss of log data.

3004 E3004 Cmd Rej: Un-uploaded security log entries exist on standby fixed disk

The OAMHC GPL version that is running in the active OAM card location must be the same GPL version that is running in the standby OAM card location.

3778 E3778 Cmd Rej: Active/Stby GPL versions are not compatible.

OAM Measurements collection cannot be in progress when this command is entered.

4113 E4113 Cmd Rej: Measurement collection in progress, Retry later.

A value of 1114 or 1116 must be specified for the `loc` parameter before the `type=fixed` parameter can be specified.

4912 E4912 Cmd Rej: Disk invalid for specified Location

An E5-MCAP card must be installed before the `type=usb` parameter can be specified.

4921 E4921 Cmd Rej: Type invalid for hardware configuration

The OAM card must be able to read the media being formatted.

2311 E2311 Cmd Rej: Disk read/config error

The `format-disk` command cannot be issued when SFAPP(P)->OAM sync is ON.

3637 E3637 Cmd Rej: Turn OFF SFAPP(P)->OAM sync before this command

Notes

The `low=no` parameter should be specified when upgrading a spare TDM. The `low=yes` parameter should be specified when there is a suspected hardware problem.

When the `type=meas` parameter is specified, a measurements removable drive is built.

When the `type=system` parameter is specified, a system removable drive is built.

A system removable drive can contain only GPLs and the database, not measurement data. After formatting, the drive does not contain any data, but can be used as the destination disk of the `copy-gpl` and `chg-db:action=backup:dest=remove` commands. The `copy-gpl` command copies all approved GPLs from the fixed disk on the active TDM to the system removable drive, providing a backup copy of the approved GPLs. The `chg-db:action=backup:dest=remove` command copies the database from the current partition of the fixed disk on the active TDM to a system removable drive, providing a backup copy of the database.

A measurements removable drive can contain only measurement data, not database information and GPLs. After formatting, the drive does not contain any data, but can be used as the destination disk of the `copy-meas` command. The `copy-meas` command copies all measurement data from the fixed disk on the active TDM to a measurements removable drive for offline processing of the measurement data.

The database audit and GPL audit facilities are automatically disabled during execution of this command. When this command has completed (successful or not), the database and GPL audit facilities are automatically re-enabled.

All commands that affect the database are disallowed for the duration of the command. Attempts to use such commands are rejected, and an error message is displayed explaining that the command has been rejected.

During the upgrade process, files made obsolete by the upgrade process are deleted, freeing up disk space.

If the `format-disk` command is initiated and the standby OAM initialization is not complete, command processing is delayed. If standby initialization fails, the command proceeds to allow the standby TDM to recover from a previous `format-disk` or `copy-disk` failure. In such cases, the following messages appear:

```
Standby MASP has not finished initializing - please wait...
```

```
Standby MASP initialization timed out - continuing...
```

The `dms.cfg` file on either the active TDM or a system formatted removable drive is used by the `format-disk` command when formatting the target disk. The location of the `dms.cfg` file cannot be specified by the `format-disk` command. The value of the `type` parameter is used to determine the target disk to format and the location of the `dms.cfg` file on which to base the format. [Table 4-37](#) shows the location of the `dms.cfg` file based on the value of the `type` parameter for the `format-disk` command.

Table 4-37 DMS.CFG File Location for format-disk Command

Value of the type Parameter	Target Disk (Card Location)	Location of the DMS.CFG File
<i>fixed</i>	Standby TDM (1114 or 1116)	Latched USB Port (1113 or 1115)
<i>system</i>	Latched USB Port (1113 or 1115)	Active TDM (1114 or 1116)
<i>meas</i>	Latched USB Port (1113 or 1115)	Active TDM (1114 or 1116)

The `format-disk` command can create a maximum disk partition size of 2047 Mbytes, based on a 16-bit cluster size. A cluster is composed of 64 512-Kilobyte sectors. The physical capacity of the disk being formatted determines the formatted size of the disk and the number of partitions created on the disk.

[Table 4-38](#) shows the format capacities of each type of disk used on the system and the number of partitions created on each disk.

Table 4-38 Disk Format Capacity

Target Disk Type	Disk Location	Target Capacity	Number of Partitions	Formatted Size of Partition
Latched USB Port	1113 or 1115	2 Gigabytes	1	1.9 GB
TDM	1114 or 1116	540 Mbytes	1	507 Mbytes
TDM	1114 or 1116	2 Gigabytes	1	2014 Mbytes
TDM	1114 or 1116	4 Gigabytes	2	2047 Mbytes

Output

```
format-disk:type=system
```

```

4.1.370 inh-alm

Use this command to inhibit the reporting of alarms for the given device. Inhibited alarms will not generate unsolicited output or cause alarm indicators to be turned on. All `rept-stat-xxx` commands continue to display the alarm with an indication that the device has its alarms inhibited.

The frame alarm LEDs are off for the inhibited alarm. This command does not affect the alarm counts on the VT320 banner. The fourth box on the right of the VT320 Control Area indicates the number of devices in the system with inhibited alarms.

Parameters**Note:**

See [Point Code Formats and Conversion](#) for a detailed description of point code formats, rules for specification, and examples.

dev (mandatory)

Device. The device where the reporting of alarms is to be inhibited.

Range:***applsock***

IP gateway application socket

as

IP gateway Application Server

card

Cards in the database

cdt

Customer defined troubles

clock

System clock

dlk

IP ports on the VSCCP, EROUTE, MCP, and FC-capable cards

e1port

E1 port on E5-E1T1-B cards

enet

Ethernet

ls

Linksets

lsmsconn

Communication link between the LSMS and the EMS

route

Route

rtx

Exception Route

slk

Signaling links

t1port

T1 port on E5-E1T1, or E5-E1T1-B cards

tps

TPS subsystem

trm

Terminals

asname (optional)

Gateway Application Server name. Used with the `dev=as` parameter to inhibit alarms for the named Application Server.

Range:

aaaaaaaaaaaaaaaa

up to 15 alphanumeric characters; the first character must be a letter

cic (optional)

Starting Circuit Identification Code. Used with the `ecic` parameter to define the CIC range that is used as an exception routing criterion for the specified exception route.

Range:

0 - 16383

dpcc (optional)

ANSI destination point code with subfields network indicator-network cluster-network cluster member (*ni-nc-ncm*). The *prefix* subfield indicates a private point code (*prefix-ni-nc-ncm*).

Synonym:

dpca

Range:*p*-, 000-255, *

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*p*-The asterisk value (*) is not valid for the *ni* subfield.When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001–005*.When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006–255*.The point code *000-000-000* is not a valid point code.**dpc/dpca/dpci/dpcn/dpcn24 /dpcn16 (optional)**

Destination Point Code

dpci (optional)ITU international destination point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-zone-area-id*).**Range:***s*-, *p*-, *ps*-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s*-, *p*-, *ps**zone*—0-7*area*—000-255*id*—0-7The point code *0-000-0* is not a valid point code.**dpcn (optional)**ITU national destination point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the *chg-stpopts:npcfmti* flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).**Range:***s*-, *p*-, *ps*-, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s*-, *p*-, *ps**nnnnn*—0-16383*gc*—*aa-zz**m1-m2-m3-m4*—0-14 for each member; values must sum to 14**dpcn24 (optional)**24-bit ITU national destination point code with subfields *main signaling area-sub signaling area-signaling point*. The *prefix* subfield indicates a private point code.**Range:***p*-, 000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—p
msa—000–255
ssa—000–255
sp—000–255

dpcn16 (optional)

16-bit ITU national point code with subfields *unit number sub number area main number area* (*un-sna-mna*). The *prefix* subfield indicates a private point code.

Range:

p--, *000---127*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix---p

un---000---127

sna---000---15

mna---000---31

dur (optional)

Duration. The period for which the alarms are inhibited.

Range:***perm***

permanent inhibition of an alarm

temp

temporary inhibition of an alarm

timed

inhibition of an alarm for a specified duration

 **Note:**

If the `dur=temp` parameter is specified, then an alarm inhibit lasts as long as the alarm is present. If the system boots or switches over, then the alarm inhibit is removed. If the `dur=perm` parameter is specified, then the alarm inhibit remains after the alarm is cleared or is no longer present, and after a boot/ switchover. The `dur=timed` parameter behaves the same as the `dur=perm` parameter, but for a set time period.

Default:

perm

e1port (optional)

Port ID. The E1 port on the specified E1 card.

This parameter is mandatory if the `dev=e1port` parameter is specified.

Range:

1 - 8

ecic (optional)

Ending Circuit Identification Code. Used with the `cic` parameter to define the CIC range that is used as exception routing criteria for the specified exception route.

Range:

0 - 16383

edate (optional)

Expiry date. The date on which a timed alarm inhibit expires, at the time specified in the `etime` parameter value.

**Note:**

This parameter is valid and required when the `dur=timed` parameter is specified.

Range:

101 - 991231

Specify the date in the format of *year*, followed by *month*, followed by *day* (*yymmdd*).

etime (optional)

Expiry time. The time at which a timed alarm inhibit expires, on the date specified in the `edate` parameter value.

This parameter is valid and required when the `dur=timed` parameter is specified.

Range:

0 - 2359

Specify the time in the format of *hour* followed by *minute* (*hhmm*).

force (optional)

Allows critical alarms to be inhibited on a device.

This parameter is mandatory if the `lvl=crit` parameter is specified.

The `criticalminh` STP option must be turned on before this parameter can be specified.

Range:**yes****no****Default:**

no

id (optional)

Identification number of the customer-defined trouble. Customer-defined troubles 1 - 4 are generated critical alarms and cannot be specified as values for this parameter.

Range:

5 - 16

ilsn (optional)

Incoming Link Set Name. The name of the originating linkset. The parameter value is used as part of the exception routing criteria for the specified exception route.

Range:

aaaaaaaa

1 alphabetic character followed by up to 9 alphanumeric characters

link (optional)

Signaling link on the card specified in the `loc` parameter.

Synonym:

port

Range:

a, b, a1 - a31, b1 - b31

a1, a2, b1, b2 — `dev=lsmsconn`

a, b, a1-a31, b1-b31 — `dev=slk` for an E5-E1T1, or E5-E1T1-B

a1, b1 — `dev=dlk` for an FC-capable card

a, b — `dev=enet`

loc (optional)

The card location as stenciled on the shelf of the system.

Range:

1101 - 1113, 1115, 1201 - 1218, 1301 - 1318, 2101 - 2118, 2201 - 2218, 2301 - 2318, 3101 - 3118, 3201 - 3218, 3301 - 3318, 4101 - 4118, 4201 - 4218, 4301 - 4318, 5101 - 5118, 5201 - 5218, 5301 - 5318, 6101 - 6118

lsn (optional)

Linkset name. The name of the linkset for which the report information is to be displayed.

Range:

aaaaaaaa

1 alphabetic character followed by up to 9 alphanumeric characters

lv1 (optional)

The alarm severity level (critical, major, or minor).

Range:

crit

majr

minr

Default:

majr

opc (optional)

ANSI point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*. The *prefix* subfield indicates a private point code (*prefix-ni-nc-ncm*).

Synonym:

opca

Range:

0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

zone—0-7

area—000-255

id—0-7

The point code *0-000-0* is not a valid point code.

opc/opca/opci/opcn/opcn24/opcn16 (optional)

Origination point code.

opci (optional)

ITU international destination point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-zone-area-id*).

Range:

s-, p-, ps-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s-, p-, ps

zone—0-7

area—000-255

id—0-7

The point code *0-000-0* is not a valid point code.

opcn (optional)

ITU national destination point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the `chg-stpopts:npcfmti` flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc, m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-nnnnn, prefix-nnnnn-gc, prefix-m1-m2-m3-m4, prefix-m1-m2-m3-m4-gc*).

Range:

s-, p-, ps-, 0-16383, aa-zz

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s-, p-, ps

nnnnn—0-16383

gc—aa-zz

m1-m2-m3-m4—0-14 for each member; values must sum to 14

opc24 (optional)

24-bit ITU national destination point code with subfields *main signaling area-sub signaling area-signaling point (msa-ssa-sp)*. The *prefix* subfield indicates a private point code (*prefix-msa-ssa-sp*).

Range:

p-, 000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—p

msa—000—255

ssa—000—255

sp—000—255

opc16 (optional)

16-bit ITU national point code with subfields *unit number sub number area main number area (un-sna-mna)*. The *prefix* subfield indicates a private point code (*prefix-un-sna-mna*).

Range:

p--, 000---127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix---p

un---000---127

sna---000---15

mna---000---31

si (optional)

Service Indicator. This parameter is used as the exception routing criterion for the specified exception route.

Range:

0 - 15

sname (optional)

Gateway application socket. Used with the `dev=applsock` parameter to inhibit alarms for the named application socket.

Range:

aaaaaaaaaaaaaaaa

1 to 15 alphanumeric characters

t1port (optional)

Port ID. This parameter is mandatory if the `dev=t1port` parameter is specified.

Range:

1 - 8

trm (optional)

Terminal ID. The ID number of the terminal whose characteristics are to be retrieved and displayed.

Range:
1 - 40

Example

```

Dependencies

This command is not allowed in upgrade mode.

3276 E3276 Cmd Rej: Command not allowed while in upgrade mode

The parameters that can be specified with the `dev` parameter vary, depending on the value specified for the `dev` parameter as shown:

- `dev=(any value) — dur or lvl`
- `dev=asname — as`
- `dev=dpc/dpca/dpci/dpcn/dpcn24/dpcn16 — route`
- `dev=id — cdt`
- `dev=loc — card, dlk, elport, slk, tlport, enet`
- `dev=lsn — ls`
- `dev=elport — elport`
- `dev=link (link=a, b)— dlk, slk, enet`
- `dev=link (link=a1, b1)— dlk (For FC-capable cards)`
- `dev=link (link=a, b, a1, a2, b1, b2, a3, b3)— slk`
- `dev=link (link=a1, a2, b1, b2)— lsmsconn`
- `dev=sname — applsock`
- `dev=tlport — tlport`
- `dev=trm — trm`

2965 E2965 Cmd Rej: Too many parameters entered

No other action command can be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

The linkset specified by the `lsn` parameter must be equipped in the database.

2384 E2384 Cmd Rej: Link set is not equipped

This command will not execute while the signaling link is running either a Link Fault Sectionalization test or a Loopback test. An AST of LFS or LPBK must be cleared before signaling link alarms can be inhibited.

2954 E2954 Cmd Rej: DEV state does not allow alarms to be inhibited

This command cannot be used to permanently inhibit XLIST point codes.

3909 E3909 Cmd Rej: XLIST Point codes may not be permanently inhibited

Before critical alarms can be inhibited, the STP option `criticalminh` must be enabled. The `chg-stpopts:criticalminh=yes` command enables this option.

3436 E3436 Cmd Rej: CRITICALMINH not set when trying to inhibit critical alarms

Alarms cannot already be inhibited for the specified device.

3434 E3434 Cmd Rej: The alarms are already inhibited for this device

The Device Alarm Inhibit table is corrupt or cannot be found.

3437 E3437 Cmd Rej: Device alarm inhibit table not accessible

The STP Options table is corrupt or cannot be found.

2852 E2852 Cmd Rej: Failed reading STP Options table

If the `lvl=crit` parameter is specified, the `force=yes` parameter must be specified.

2371 E2371 Cmd Rej: Force parameter required

When the `dev=card` parameter is specified, the `loc` parameter must be specified.

2366 E2366 Cmd Rej: LOC must be specified

When the `dev=dlk` parameter is specified, the `loc` parameter must be specified.

2366 E2366 Cmd Rej: LOC must be specified

When the `dev=slk` parameter is specified, the `loc` parameter and the `link` parameter must be specified.

2903 E2903 Cmd Rej: LOC and PORT parameter combination must be specified

When the `dev=e1port` parameter is specified, the `loc` and `e1port` parameters must be specified.

4214 E4214 Cmd Rej: LOC and E1PORT parameter combination must be specified

When the `dev=t1port` parameter is specified, the `loc` and `t1port` parameter must be specified.

4215 E4215 Cmd Rej: LOC and T1PORT parameter combination must be specified

When the `dev=ls` parameter is specified, the `lsn` parameter must be specified.

2951 E2951 Cmd Rej: LSN must be specified

When the `dev=trm` parameter is specified, the `trm` parameter must be specified.

2966 E2966 Cmd Rej: TRM must be specified

When the `dev=cdt` parameter is specified, the `id` parameter must be specified.

2953 E2953 Cmd Rej: ID must be specified

When the `dev=lsmsconn` parameter is specified, the `link` parameter must be specified.

2952 E2952 Cmd Rej: PORT must be specified

When the `dev=route` parameter is specified, the `dpc/dpca/dpci/dpcn/dpcn24/dpcn16` parameter must be specified.

3433 E3433 Cmd Rej: DPC parameter must be specified

When the `dev=applsock` parameter is specified, the `sname` parameter must be specified.

2949 E2949 Cmd Rej: SNAME must be specified

If the `dev=as` parameter is specified, the `asname` parameter must be specified.

4068 E4068 Cmd Rej: Must specify ASNAME

If the `sname` parameter is specified, the socket name must exist in the IPAPSOCK table.

3767 E3767 Cmd Rej: Socket Name not defined

If a point code parameter is specified, the point code must exist in the Routing table.

2417 E2417 Cmd Rej: Point code does not exist in the routing table

If the `dev=slk` or `dev=dlk` parameter is specified, the specified `link` must exist in the database.

2373 E2373 Cmd Rej: Link is unequipped in the database

The card location that is specified in the `loc` parameter must be equipped.

2101 E2101 Cmd Rej: Card location is unequipped

The specified device type must be supported by the card in the specified card location.

4366 E4366 Cmd Rej: Dev parameter is not supported by the specified location

The Origin-Based MTP Routing feature must be on before the `dev=rtx` parameter can be specified.

4584 E4584 Cmd Rej: MTP Origin Based Routing Feature must be ON

Permanent alarm inhibit is not allowed on the cluster PC if either the cluster or a member PC of the cluster is already alarm inhibited.

2080 E2080 Cmd Rej: Alarms already inhibited for cluster PC or its member PCs

When the `dur=timed` parameter is specified, the `edate` and `etime` parameters must be specified.

4550 E4550 Cmd Rej: Both EDATE and ETIME parameters are required

If the `dur` parameter has a value other than *timed*, the `edate` and `etime` parameters cannot be specified.

2965 E2965 Cmd Rej: Too many parameters entered

The `edate` parameter value must be a date equal to or later than the current system date. If the current system date is specified, then the `etime` parameter value must be a time later than the current system time. If a date later than the current system date is specified, then the `etime` parameter value can be any valid time in the format `hhmm`.

4549 E4549 Cmd Rej: EDATE/ETIME must be greater than system date/time

This command cannot be used to change the level of inhibition on a device.

3333 E3333 Cmd Rej: Alarm Inhibition Level cannot be changed

If the `dev=enet` parameter is specified, then the `loc` and `port` parameters must be specified.

2903 E2903 Cmd Rej: LOC and PORT parameter combination must be specified

The card specified by the `loc` parameter must be provisioned with an IPS, MCP, EROUTE, VSCCP, IPSG, IPLIM, IPLIMI, SS7IPGW, or IPGWI application.

2131 E2131 Cmd Rej: Parameters not valid for card type

The value specified for the `elport/tlport` parameter must be in the range 1-8.

2950 E2950 Cmd Rej: PORT parameter invalid for DEV selected

The `link` parameter must be valid for the selected device type.

2950 E2950 Cmd Rej: PORT parameter invalid for DEV selected

The J7 Support feature must be enabled before the `opcn16/dpcn16` parameters can be specified.

2691 E2691 Cmd Rej: J7 Support Feature must be enabled.

Notes

If critical alarms are inhibited, all alarms (critical, major, and minor) are disabled. Likewise, if major alarms are inhibited, both major and minor alarms are disabled.

The `dur` parameter allows alarms to be inhibited on a temporary basis. If a device has its alarms temporarily disabled, the device's alarms are automatically enabled after the alarm clears.

In this command, only ITU-international and ITU national point codes support the spare point code subtype prefix (s-) and the private and spare point code subtype prefix (ps-). All of the point code types support the private (internal) point code subtype prefix (p-).

4.1.371 inh-card

Use this command to change the state of the card from in-service normal (IS-NR) to Out-of-Service Maintenance-Disabled (OOS-MT-DSBLD). A user can then test the card or physically remove it from the shelf.

Parameters

eLoc (optional)

End location. The location of the last card of a range of cards to be inhibited.

Range:

1101 - 1108, 1111 - 1113, 1115, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118

force (optional)

Force indicator. This parameter is required if:

- The specified card is the last card supporting a linkset, SCCP subsystem, MPS-to-Service Module connection, E1, T1, Measurements Platform subsystem, or GLS
- The TDM contains a security log with un-uploaded entries or any other TDM process in progress
- The specified E5-E1T1-B card is in channel bridging mode
- The specified card has the last in-service SEAS terminal configured.

Range:

yes

no

Default:

no

Note:

If the *force* parameter is specified in the command along with the *sloc* and *eLoc* parameters, then the *force* parameter's value is applied to all the cards within the *sloc-eLoc* range, including *sloc* and *eLoc*.

loc (optional)

Card address. The card location as stenciled on the shelf of the system.

Range:

1101 - 1108, 1111 - 1113, 1115, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118

sloc (optional)

Start location. The location of the first card of a range of cards to be inhibited.

Range:

1101 - 1108, 1111 - 1113, 1115, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118

Example

```
inh-card:loc=1101
inh-card:loc=1201:force=yes
inh-card:sloc=1101:eloc=1111
inh-card:sloc=1101:eloc=1111:force=yes
```

Dependencies

No other action commands can be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

TDM and MDAL cards cannot be inhibited. E5-APP-B cards and Telco Switches cannot be inhibited. Card locations 1114, 1116, 1117, xx09, and xx10 cannot be specified as values for the `loc` parameter.

2378 E2378 Cmd Rej: The specified card cannot be inhibited

If the card contains signaling or data links, all links must be out of service (OOS-MT-DSBLD) before the card can be inhibited.

2631 E2631 Cmd Rej: Link must be cancelled before executing this command

If the card is type LIME1, all signaling links providing timeslots serviced by the E1 interfaces assigned to the card must be deactivated, unless `force=yes` is specified.

4048 E4048 Cmd Rej: All signaling links serviced by the E1 must be deactivated

If the card is type LIMT1, all signaling links providing timeslots serviced by the T1 interfaces assigned to the card must be deactivated, unless `force=yes` is specified.

2736 E2736 Cmd Rej: All signaling links serviced by the T1 must be deactivated

The shelf and card must be equipped.

2144 E2144 Cmd Rej: Location invalid for hardware configuration

If the specified card is the only in-service MPS-Service Module, the `force=yes` parameter must be specified.

3779 E3779 Cmd Rej: FORCE=YES must be specified

If inhibiting the Service Module card would cause less than 80% of the in-service normal (IS-NR) LIM cards to have VSCCP service (i.e., cause the system to enter an unstable loading mode), the `force=yes` parameter must be specified.

2371 E2371 Cmd Rej: Force parameter required

If the Integrated GLS feature is turned OFF and the specified card is only GLS card remaining, then the `force=yes` parameter is required.

2371 E2371 Cmd Rej: Force parameter required

The card that is specified by the `loc/sloc/eloc` parameter cannot be running the active OAM.

3949 E3949 Cmd Rej: Specified card cannot be the Active MASP

If the specified card has the last in-service SEAS Terminal configured, then the `force=yes` parameter must be specified to inhibit the card.

4478 E4478 Cmd Rej: Force must be specified to inhibit the last SEAS terminal

The card location (`loc`) must be within the allowed range.

2016 E2016 Cmd Rej: `<parm_desc>` is out of range - `<parm>`

The standby fixed disk cannot be initialized while un-uploaded security log entries exist.

3004 E3004 Cmd Rej: Un-uploaded security log entries exist on standby fixed disk

The `loc` parameter cannot be specified with the `eloc` and `sloc` parameters.

Either the `loc` parameter or the `eloc` and `sloc` parameters must be specified.

The `eloc` and `sloc` parameters must be specified together in the command.

The `sloc` parameter value cannot be greater than the `eloc` parameter value.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The `inh-card` command cannot be issued when SFAPP(P)->OAM sync is ON.

3637 E3637 Cmd Rej: Turn OFF SFAPP(P)->OAM sync before this command

This command cannot be entered when CAT2 IPSM to OAM syncing is in progress.

3652 E3652 Cmd Rej: IPSM to OAM SYNC in progress

Notes

The function of this command is the same as the `rmv-card` command.

When this command is entered, the card is initialized and enters the OOS-MT-DSBLD state. It has no affect if the card is already OOS-MT-DSBLD.

▲ Caution:

This command can be used to disable Measurements Platform measurements collection after the collection function has been enabled with the `chg-measopts:platformenable=on` command. To disable collection, ALL MCPM cards in the system must be inhibited. THIS CAN RESULT IN LOSING ALL PAST MEASUREMENT DATA ON THE CARDS. Use the `alw-card` command to enable measurements collection after the MCPM cards have been inhibited.

When an IPSM card is inhibited, the active SEAS terminals are set to the state OOS-MT/FLT.

Output

```
inh-card:loc=1101

      rlghncxa03w 04-01-07 11:11:28 EST  EAGLE 31.3.0
      Card has been inhibited.

4.1.372 inh-imt

The interprocessor message transport bus (IMT bus) is the main communications artery between all subsystems in the system. This command removes the IMT bus from service.

Caution:

Use this command only when directed by the Customer Care Center.

Parameters

bus (mandatory)

IMT bus to be inhibited

Range:

a, b

force (optional)

This parameter forces inhibition of a specified bus where an IMT Rate change sequence is in progress.

Range:

yes

no

Default:

no

Example

```
inh-imt:bus=a
```

```
inh-imt:bus=a:force=yes
```

Dependencies

Valid IMT bus entries are "A" or "B".

2247 E2247 Cmd Rej: Bus parameter invalid

The alternate IMT bus must be in-service normal (IS-NR) in order for the specified bus to be inhibited.

2738 E2738 Cmd Rej: Can not inhibit IMT bus - alternate bus is in abnormal state

This command cannot be entered during an IMT Fault Isolation Test or an Extended Bit Error Rate Test (BERT).

3043 E3043 Cmd Rej: IMT test in progress

The `force=yes` parameter must be specified to inhibit a bus where an IMT Rate Change sequence is in progress.

5379 E5379 Cmd Rej: IMT Rate Change sequence is in progress on the specified bus

If an IMT Rate Change sequence is in progress on the alternate bus, then this command cannot be entered.

5380 E5380 Cmd Rej: IMT Rate Change sequence is in progress on the alternate bus

Notes

Cards not connected to the other IMT bus will reinitialize.

All traffic is rerouted to the alternate IMT bus.

The function of this command is the same as the `rmv-imt` command.

Output

```
inh-imt:bus=a
```

```
rlghncxa03w 04-01-07 11:11:28 EST EAGLE 31.3.0  
Inhibit IMT Bus A command issued
```

```
rlghncxa03w 04-01-07 13:12:41 EST EAGLE 31.3.0  
3116.0098 IMT BUS A IMT inhibited
```

```

4.1.373 inh-map-ss

Use this command to shut down (inhibit) a mated application subsystem. Currently, the AIQ, ATINPQ, EIR, INP, INPQS, LNP, and V-Flex and subsystems can be inhibited. The specified subsystem attempts a coordinated shutdown. If the coordinated shutdown fails, a UIM is issued indicating the shutdown failed. If the `force` parameter

is specified, the subsystem is forced to shut down, and a coordinated shutdown is not performed.

Parameters

ssn (mandatory)

The AIQ, ATINPQ, EIR, INP, LNP or V-Flex subsystem number.

Range:

2 - 255

force (optional)

This parameter forces the shutdown of the AIQ, ATINPQ, EIR, INP, LNP or V-Flex subsystem.

Range:

yes

no

Default:

no

Example

```
inh-map-ss:ssn=10
```

```
inh-map-ss:ssn=10:force=yes
```

Dependencies

The EIR, INP, LNP, or V-Flex feature must be turned on or the ANSI41 AIQ or ATINP feature must be enabled before this command can be entered.

3929 E3929 Cmd Rej: LNP/INP/EIR/VFLEX must be ON or ATINP/AIQ must be enabled

No other action command can be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

The specified `ssn` parameter value must represent the AIQ, ATINPQ, EIR, INP, LNP or V-Flex subsystem.

3581 E3581 Cmd Rej: SSN value must be LNP, INP, EIR, VFLEX, ATINPQ or AIQ SSN

The EAGLE must be configured with at least one card running the SCCP application.

2374 E2374 Cmd Rej: SCCP not Configured

Notes

If the LNPQS subsystem is disabled, any GTT requiring Message Relay is also disabled because they both use the same database. This causes the EAGLE to generate a TFP for the EAGLE CPCs. Traffic is then routed to the mate. If both Message Relay GTT and non Message Relay GTT use the same CPC, this could affect the GTT.

Table 4-39 Route Set Test When LNP is Offline

Network Management	Concerned PC	Network Management
RSP	CPC	TFA concerning CPC
RSP	LNP CPC	None
RSP	TPC	TFA concerning TPC
RSR	CPC	TFA concerning CPC
RSR	LNP CPC	TFP concerning LNP CPC
RSR	TPC	TFA concerning TPC

Table 4-40 shows what actions the system takes when LNP is offline and a message arrives requiring LNP. This table assumes that SCCP cards are available.

Table 4-40 Receiving Messages when LNP is Offline

Routing Indicator in Incoming Message	DPC	Result of GTT	Message Handling	Network Management
rt-on-gt	Capability PC	rt-on-ssn, LNP subsystem	Reroute to mate	TFP concerning CPC
rt-on-gt	True PC	rt-on-ssn, LNP subsystem	Reroute to mate	None
rt-on-gt	Capability PC	Message Relay required	Generate UDTS	TFP concerning CPC
rt-on-gt	True PC	Message Relay required	Generate UDTS	None
rt-on-ssn	Capability PC	Not applicable	Generate UDTS	None
rt-on-ssn	True PC	Not applicable	Generate UDTS	SSP concerning True PC

Output

```
inh-map-ss:ssn=30
```

```
rlghncxa03w 04-02-24 10:37:22 EST EAGLE5 31.0.0
Inhibit map subsystem command sent to all SCCP cards.
Command Completed.
```

```
;
```

```
inh-map-ss:ssn=30:force=yes
```

```
rlghncxa03w 04-02-24 10:37:22 EST EAGLE5 31.0.0
Inhibit map subsystem command sent to all SCCP cards.
Command Completed.

4.1.374 inh-slk

Use this command to prevent message signal units (MSU) from being transmitted on a specified, previously uninhibited signaling link.

**Note:**

The signaling link's inhibited status is not preserved across a LIM reboot.

Parameters**link (mandatory)**

The signaling link on the card that is specified in the `loc` parameter. The links can be specified in any sequence or pattern.

Synonym:

port

Range:

a, b, a1 - a63, b1 - b63

Not all card types support all `link` parameter values.

See [Table A-1](#) for valid `link` parameter range values for each type of card that can have a location specified in the `loc` parameter.

loc (mandatory)

The card location as stenciled on the shelf of the system.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118

Example

```
inh-slk:loc=1307:link=b
```

Dependencies

A card location must be specified that is valid and defined in the database.

2376 E2376 Cmd Rej: Specified LOC is invalid

No other action command can be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

The card must be equipped and must be one of the following cards:

- E5-E1T1-B, card running the SS7ANSI or CCS7ITU application
- E5-ATM-B card running the ATMANSI or ATMITU application
- E5-ENET-B card running the IPLIMI, or IPSP application
- SLIC card running the IPSP application

2101 E2101 Cmd Rej: Card location is unequipped

The card must contain signaling links.

2292 E2292 Cmd Rej: Card does not exist or is not a LIM (LOC)

The signaling link must be equipped in the database.

2373 E2373 Cmd Rej: Link is unequipped in the database

If an IPSP-M3UA signaling link is used, then this command cannot be entered.

4077 E4077 Cmd Rej: Parameters incompatible with adapter type

This command is not valid for E5-ENET-B cards with IPGWI links.

2144 E2144 Cmd Rej: Location invalid for hardware configuration

If an ATM card is used, then a valid value must be specified for the `link` parameter:

- `a-a1`, `b`—E5-ATM-B card running the ATMANSI or ATMITU application

2972 E2972 Cmd Rej: Specified Link is not valid for Card and Appl Type

This command is not supported for links associated with J7 APCs.

2810 E2810 Cmd Rej: Command is not valid for ITU-N16 links.

This command is not valid for IPSP-M3UA signaling links.

4813 E4813 Cmd Rej: Command not valid for IPSP-M3UA

Notes

If the link is already inhibited, the system does not execute the command.

If the link is aligned, it attempts to perform a changeover to alternate links. If it is not aligned, it cannot carry traffic.

If the link is the last link in the linkset, or if the node assigned to the link is inaccessible by another route, then the SS7 changeover procedure cannot occur, the inhibit request is denied, and UIM 1150 is issued. The UIM can be retrieved from the logs or from a terminal with the appropriate TRM settings.

If the `inh-slk` command is followed by the `init-card` command, the inhibition of the signaling link is not preserved after the `init-card` command completes.

The `inh-slk` command might time out if a far-end remote does not respond to the inhibit message.

Output

```
inh-slk:loc=1301:link=a
```

```
rlghncxa03w 05-01-07 11:11:28 EST EAGLE5 33.0.0  
Inhibit Link message sent to card  
;
```

4.1.375 inh-trm

Use this command to set the primary state of a serial port to OOS-MT-DSBLD . It sets the secondary state to MANUAL . The serial port is not available to perform service functions. There is no outgoing traffic from the serial port, and all incoming traffic is ignored.

Parameters

trm (mandatory)

The ID of serial port to be inhibited

Range:

1 - 40

force (optional)

This parameter forces the removal of a specified terminal, even if it is last in-service SEAS terminal available.

Range:

yes

no

Default:

no

Example

```
inh-trm:trm=5  
inh-trm:trm=1:force=yes
```

Dependencies

No other action command can be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

The IP User Interface feature must be enabled before terminal ports 17 through 40 can be specified for the `trm` parameter.

2365 E2365 Cmd Rej: TELNET Feature must be activated first

The terminal specified by the `trm` parameter must be equipped.

2372 E2372 Cmd Rej: Terminal is not equipped

This command cannot be used to inhibit the terminal from which the command is entered.

3473 E3473 Cmd Rej: The last active serial port cannot be inhibited

The `force=yes` parameter must be specified to inhibit the last in-service SEAS terminal.

4478 E4478 Cmd Rej: Force must be specified to inhibit the last SEAS terminal

Notes

When inhibiting an already inhibited terminal, a warning message is echoed to the scroll area, but no action is taken.

Output

```
inh-trm:trm=5  
  
rlghncxa03w 04-01-07 11:11:28 EST  EAGLE 31.3.0  
Inhibit message sent to terminal  
;  
  
inh-trm:trm=17:force=yes  
  
tekelecstp 07-01-23 18:46:01 EST  EAGLE 37.5.0  
Inhibit message sent to terminal  
;
```

4.1.376 init-card

Use this command to cause a soft reset of a card. It has the same result as a hard reset (card boots, application, and data load), except that connect status is not affected; that is, if a card is not connected, it stays that way.

When the command is issued, there is a 10-second wait before the card is reset. This wait period is intended to ensure that all database updates are complete before the card is reset.

▲ Caution:

Resetting more than 8 Service Module cards at once may result in an extended reload time for the Service Module cards.

Parameters

app1 (optional)

Application. The type of application residing on the card.

▲ Caution:

Because the `app1` parameter causes all LIMs running the assigned application to reload, it should be used only during periods of low traffic.

Range:

xyyyyyy

1 alphabetic character followed by up to 6 alphanumeric characters. Valid applications are:

all—Used to reset EAGLE cards. Cannot be specified unless `serial=yes` is also specified.

atmansi—Used by E5-ATM-B cards to support high-speed ATM signaling links and T1 functions.

atmitu—Used by E5-ATM-B cards to support E1 high-speed signaling links and E1 functions.

ccs7itu—Used by E5-E1T1-B cards for ITU-TSS MTP functions.

deirhc—Used by E5-SM8G-B and SLIC cards to support the S13/S13' EIR feature.

enumhc—Used by E5-SM8G-B and SLIC cards to support the ENUM application.

eroute—Used by E5-ENET-B cards for EAGLE 5 Integrated Monitoring Support functions.

gls—Used by E5-TSM cards for downloading gateway screening to LIM cards and Service Module cards.

ipgwi—Used by E5-ENET-B cards for point-to-multipoint IP connectivity for ITU point codes. The system allows a maximum of 125 cards to be assigned the IPGWI application.

iplimi—Used by E5-ENET-B cards for point-to-point IP connectivity for ITU point codes.

ips—Used by E5-IPSM and E5-ENET-B cards for the IP User Interface feature.

ipsg—Used by E5-ENET-B cards to support the combined functionality of IPLIMx M2PA and IPGWx M3UA.

mcp—Used by E5-MCPM-B cards for the Measurements Platform feature

oam—Used by both MASP Cards running GPLs that support the OAM application

siphc—Used by E5-SM8G-B and SLIC Cards to support SIP application

ss7ansi—Used by E5-E1T1-B cards for the MTP functions

ss7ipgw—Application software for point-to-multipoint IP connectivity. The system allows a maximum of 125 cards to be assigned the SS7IPGW application.

vsccp—Used by Service Module cards to support EPAP-based features and LNP features. If no EPAP-based features or LNP features are turned on, and a Service Module card is present, the *vsccp* application processes normal GTT traffic.

Default:

The application assigned to the card

data (optional)

High memory refresh. This parameter causes data to be reloaded to the specified card.

Note:

The LNP feature or an EPAP-based feature must be turned on or the ATINP feature must be enabled before this parameter can be specified. This parameter applies only to Service Module cards that (1) run the VSCCP application and contain an RTDB or (2) run the DEIRHC application.

Range:

refresh

Causes data to be reloaded to the specified card.

persist

Indicates that the database is not to be reloaded to the card. Used to request that the EAGLE perform a warm restart of the requested cards. The EAGLE performs various checks to ensure that all conditions necessary to initiate the warm restart are in place. The *force* parameter is required if all of the specified cards do not meet the warm restart requirements. During the card initialization and loading sequence, a warm restart is performed for all cards that meet the warm restart conditions.

Default:

refresh

force (optional)

Force indicator. Enables the command to be processed under the following conditions:

- If `serial=yes` and all cards of the specified GPL type are not IS-NR or OOS-MT-DSBLD.
- If `initclk=yes` and the TDM card specified in the `loc` parameter is the only good HS clock source that is currently active. A temporary clock outage will occur.
- If `initclk=yes` and `appl=oam` is specified (bitfiles on both TDMs will be initialized). A temporary clock outage will occur.

Range:**yes****no****Default:***no***initclk (optional)**

Initialize TDM Bitfile indicator. If TDM reload would cause a system clock outage, the `initclk` parameter cannot be specified unless `force=yes` is also specified.

▲ Caution:

The resulting clock outage will probably cause loss of traffic on all links.

The following scenarios will cause such clock outages:

- Simplex MASP configuration (a system with a single TDM).
- Bad clock status on the remaining TDM.

Range:*yes, no*

If `initclk=yes` is specified with a single TDM card location, the bitfile for the specified TDM reloads.

If `initclk=yes` is specified with `appl=oam` and `force=yes`, the bitfile reloads on both TDMs.

loc (optional)

Card address. The card location as stenciled on the shelf of the system.

Range:

1101 - 1108, 1111 - 1116, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2301 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118

When the `initclk` parameter is not specified, the listed card locations are valid.

When the `initclk` parameter is specified, card locations 1113, 1114, 1115, and 1116 are valid.

Entering locations 1114 and 1116 results in the same action as entering 1113 and 1115.

Default:

All valid card locations are initialized.

perdata (optional)

Persist a particular DB type on all cards (irrespective of the card's type).

Range:

all

Persist all data (GTT/MPS) that can be persisted on the card

mps

Persist only MPS data on the card that supports persistence of MPS DB

gtt

Persist only GTT data on the card that supports persistence of GTT DB

Default:

all

**Note:**

The `perdata` parameter can only be specified where `data=persist` is given.

prtnggrp (optional)

Partition group. The disk partition group that is used as the source for downloading the appropriate GPL.

A value of 1113 or 1115 must be specified for the `loc` parameter before this parameter can be specified.

Range:

active

the active partition group

inactive

the inactive partition group

Default:

active

serial (optional)

Controls the manner in which cards are initialized.

Range:

yes

cards of the specified APPL type are initialized one at a time

no

cards of the specified APPL type are initialized simultaneously

Default:

no

type (optional)

SM Type. The type of RTDB data that can be loaded on an E5-SM8G-B or SLIC card.

Range:***dn***

initialize SM cards running the SIP64, ENUM64 or SCCP64 gpl, with SM type DN.

elap

initialize SM cards running the SIP64 or SCCP64 gpl, with SM type ELAP.

epap

initialize SM cards running the SIP64, ENUM64, DEIR64, or SCCP64 gpl, with SM type EPAP.

gtt

initialize SM or SLIC cards running the SCCP64, GTT enabled IPSPG gpl, with SM type GTT.

imsi

initialize SM cards running the DEIR64 or SCCP64 gpl, with SM type IMSI.

nosccp

initialize the SLIC card running the IPSPG application having no GTT functionality.

Default:

none

Example

```
init-card:loc=1113:prtnggrp=inactive
init-card:loc=1101:data=persist
init-card:loc=1113:initclk=yes
init-card:appl=oam:initclk=yes:force=yes
init-card:appl=ipsg
init-card:type=epap
init-card:appl=deirhc
init-card:appl=deirhc:data=persist
init-card:appl=enumhc
init-card:appl=ipsg:type=gtt
init-card:appl=ipsg:type=nosccp
init-card:appl=ipsg:data=persist:perdata=gtt
```

Dependencies

The shelf and card must be equipped.

2101 E2101 Cmd Rej: Card location is unequipped

The `loc` or `appl` or `type` parameter must be specified in the command. The parameters cannot be specified together in the command, except for when `appl=ipsg`.

This command cannot be entered when CAT2 IPSM to OAM syncing is in progress.

3652 E3652 Cmd Rej: IPSM to OAM SYNC in progress

 **Note:**

An exception to this MTT is when `appl=ipsg`. In this case, it is possible to specify the 'type' parameter. The legal values of the 'type' parameter with `appl=ipsg` are `type=gtt` (Initialize all GTT-enabled IP SG cards) and `type=nosccp` (Initialize all GTT-disabled IP SG cards).

3104 E3104 Cmd Rej: Either LOC or APPL or TYPE must be specified

The following card locations (`loc` parameter) are not allowed for this command: 1117, 1118, and all `xy09` and `xy10` card locations (where `x` is the frame and `y` is the shelf).

N/A N/A

If the `loc` and `initclk` parameters are specified, the `loc` parameter value must be card location 1113 or 1115. If the `appl` and `initclk` parameters are specified, the `appl` parameter value must be `oam`.

2235 E2235 Cmd Rej: Card location must be 1113 or 1115, or APPL=(E)OAM

The `force` parameter must be specified for the cards that are not in the In-service Normal state.

3728 E3728 Cmd Rej: Card(s) not in-service normal - FORCE parameter required

The `serial` parameter is valid only when used with the `appl` parameter.

3775 E3775 Cmd Rej: SERIAL param valid only with APPL param

The `appl=all` parameter can be specified only when the `serial=yes` parameter is also specified.

3777 E3777 Cmd Rej: APPL=ALL can only be selected when SERIAL=YES is specified

A valid value must be specified for the `appl` parameter.

3710 E3710 Cmd Rej: APPL not valid for command

The `initclk`, `appl`, and `data` parameters must be specified before the `force` parameter can be specified.

3847 E3847 Cmd Rej: FORCE valid only with APPL, DATA or INITCLK parameters

The `data` parameter is valid only for SCCP card locations or GPLs/MPS database (VSCCP) card locations or GPLs/SIP/ENUM/DEIR card locations, GPLs, or GTT-enabled IP SG card locations.

3852 E3852 Cmd Rej: Specified APPL/LOC/TYPE not supported with DATA parameter

The card location (`loc`) must be within the allowed range.

2016 E2016 Cmd Rej: `<parm_desc>` is out of range - `<parm>`

The specified card must exist in the card database and must be a logical processing element.

2270 E2270 Cmd Rej: Card does not exist or is not an LPE

An EPAP-based feature or an LNP feature that is warm-restart-capable must be enabled, or SIP or DEIR must be enabled, or at least one ENUM card or one GTT-enabled IPSP card must be present before this command can be entered with the `data=persist` parameter.

2592 E2592 Cmd Rej: Warm Restart capable Feature must be enabled

If the `serial=yes` parameter is specified, the `appl` parameter must specify a network type application value or must be equal to *all*.

3776 E3776 Cmd Rej: Invalid APPL selection for SERIAL init card command

A primary Service Module card must be provisioned.

3112 E3112 Cmd Rej: Loading Mode unstable due to SCCP service is deficient

The link interface module service cannot be loaded due to non availability of the system resources.

3111 E3111 Cmd Rej: Loading Mode unstable. System's LIM service is unavailable

The command cannot be executed if system maintenance is in progress.

3110 E3110 Cmd Rej: Loading Mode unstable due to maint. baseline not established

The A-Port, EIR, G-Flex, G-Port, INP, IS41 GSM Migration (IGM), LNP ELAP Configuration, PPSMS, Prepaid IDP Relay Query (IDP Relay), or V-Flex feature must be turned on, or the ATINP feature must be enabled before the `data` parameter can be specified.

2592 E2592 Cmd Rej: Warm Restart capable Feature must be enabled

If a removable drive is inserted in the system, then the `prtnggrp=inactive` parameter cannot be specified.

4851 E4851 Cmd Rej: Removable media can not be inserted

The `loc` parameter must be specified with a value of 1113 or 1115 before the `prtnggrp` parameter can be specified.

2155 E2155 Cmd Rej: Invalid parameter combination specified

If an Extended BERT is running, the `appl` parameter cannot be specified in this command to initialize multiple cards.

3043 E3043 Cmd Rej: IMT test in progress

If type specified is *epap*, *elap* or *gtt* for VSCCP, then the Dual ExAP Config, SIPNP or DEIR feature must be enabled. For `appl=ipsg` and `type=gtt`, no such features must be enabled.

3115 E3115 Cmd Rej: Dual ExAP Config/SIPNP/DEIR Feature must be enabled

If type specified is *imsi* or *dn* for VSCCP, then the EPAP Data Split feature must be ON.

5413 E5413 Cmd Rej: EPAP Data Split feature must be turned on

The `data` parameter can only be specified for VSCCP/SIPHC/IPSG Application cards.

 **Note:**

The `data` parameter is valid only for SLIC IPSG cards and not for ENET/ENET-B IPSG cards.

5414 E5414 Cmd Rej: DATA parm must be specified with VSCCP/ SIPHC/IPSG Appl

If the IPSG application is running with SLIC H/W on the location specified by the `loc` parameter, then `type=gtt` and `type=nosccp` are the only valid values of the `type` parameter. For any other APPL, `type=nosccp` is an invalid value of the `type` parameter.

5474 E5474 Cmd Rej: Card does not support specified data type

The `perdata` parameter is only valid when `data=persist` and the `loc/appl` parameter is specified. The `type` parameter with `perdata` is redundant and not allowed.

 **Note:**

- The card at the specified `loc` must either run the IPSG32 GPL or VSCCP application
- The card `appl` specified must either be IPSG or VSCCP

3513 E3513 Cmd Rej: Invalid parameter combination with PERDATA param

With IPSG/VSCCP application, the `type` parameter is allowed. For `appl=ipsg`, `type` can be `nosccp/gtt` only. And, for `appl=vsccp`, `type` can be `dn/imsi/epap/elap/gtt` only.

3520 E3520 Cmd Rej: Invalid TYPE and APPL combination

The `init-card` command cannot be issued when SFAPP(P)->OAM sync is ON.

3637 E3637 Cmd Rej: Turn OFF SFAPP(P)->OAM sync before this command

Notes

The TDM card has a processor but no application.

If the `type` specified is `gtt` in the `init-card` command and only a GTT-enabled IPSG card is present in system, then the MTT 3115 will not be observed, as there is no dependency of the Dual ExAP feature on GTT-enabled IPSG card.

Table 4-41 Using init-card Parameters

SCENARIO	INIT COMMAND
Cold boot all VSCCP cards	<code>init-card:appl=vsccp</code>

Table 4-41 (Cont.) Using init-card Parameters

SCENARIO	INIT COMMAND
Cold boot all GTT-enabled IPSPG cards	<code>init-card:appl=ipsg:type=gtt</code>
Cold boot all GTT-disabled IPSPG cards	<code>init-card:appl=ipsg:type=nosccp</code>
Warm boot all GTT-enabled IPSPG cards	<code>init-card:appl=ipsg:type=gtt:data=persist:perdata=gtt</code>
Warm boot a GTT-enabled IPSPG card location (e.g., 1106)	<code>init-card:loc=1106:data=persist:perdata=gtt</code>
Warm boot all cards of the specified application that have ExAP/DN/IMSI data (e.g., vsccp)	<code>init-card:appl=vsccp:type=dn:data=persist:perdata=mps</code>
Warm boot a card that has MPS and/or GTT data (e.g., 1106)	<code>init-card:loc=1106:data=persist:perdata=all</code>
Boot all IPSPG cards and persist GTT data on all GTT-enabled IPSPG cards	<code>init-card:appl=ipsg:data=persist:perdata=gtt</code>
Boot all SCCP cards and persist whatever data is on those cards	<code>init-card:appl=vsccp:data=persist:perdata=all</code>

4.1.377 init-ext-stats

Use this command to cause the HIPR2 cards to collect Extended Statistics for later retrieval.

Parameters

bus (optional)

The IMT bus that contains the HIPR2 card where extended statistics are collected.

Range:

a

collect statistics for HIPR2 cards on the A bus

b

collect statistics for HIPR2 cards on the B bus

both

collect statistics for HIPR2 cards on both buses

Default:

both

delay (optional)

The number of milliseconds to wait before collecting HIPR2 Extended Statistics.

Range:

0 - 10000

Note:

The specified value is automatically rounded to a 10 ms boundary.

Default:

0

e1oc (optional)

The ending card location for a range of HIPR2 cards where extended statistics are collected.

Note:

Statistics are collected from only valid In-Service Normal HIPR2 cards within the range.

Range:

1109, 1110, 1209, 1210, 1309, 1310, 2109, 2110, 2209, 2210, 2309, 2310, 3109, 3110, 3209, 3210, 3309, 3310, 4109, 4110, 4209, 4210, 4309, 4310, 5109, 5110, 5209, 5210, 5309, 5310, 6109, 6110

Default:

6110

loc (optional)

The location of a single HIPR2 card where statistics are collected.

Range:

1109, 1110, 1209, 1210, 1309, 1310, 2109, 2110, 2209, 2210, 2309, 2310, 3109, 3110, 3209, 3210, 3309, 3310, 4109, 4110, 4209, 4210, 4309, 4310, 5109, 5110, 5209, 5210, 5309, 5310, 6109, 6110

Default:

all HIPR2 cards within the range specified by the `sloc` and `eloc` parameters

sloc (optional)

The starting card location for a range of HIPR2 cards where extended statistics are collected.

**Note:**

Statistics are collected from only valid In-Service Normal HIPR2 cards within the location range.

Range:

1109, 1110, 1209, 1210, 1309, 1310, 2109, 2110, 2209, 2210, 2309, 2310, 3109, 3110, 3209, 3210, 3309, 3310, 4109, 4110, 4209, 4210, 4309, 4310, 5109, 5110, 5209, 5210, 5309, 5310, 6109, 6110

Default:

1109

Example

```
init-ext-stats
init-ext-stats:bus=a
init-ext-stats:sloc=1109:eloc=1110
init-ext-stats:loc=1109
```

Dependencies

The value specified for the `loc` or `sloc` and `eloc` parameters must indicate a valid card location. See the description of the desired parameter for a list of valid values.

2017 E2017 Cmd Rej: <parm_desc> is out of range, <min>..<max> - <parm>

The range specified by the `sloc` and `eloc` parameters must include an MUX card location.

2212 E2212 Cmd Rej: Invalid card type for this command

The value specified for the `loc` parameter must be a valid MUX card location or the range specified by the `sloc` and `eloc` parameters must include an MUX card location.

2212 E2212 Cmd Rej: Invalid card type for this command

The value specified for the `delay` parameter must be between 0 - 10000.

2017 E2017 Cmd Rej: <parm_desc> is out of range, <min>..<max> - <parm>

A value of `a`, `b`, or `both` must be specified for the `bus` parameter.

2044 E2044 Cmd Rej: <parm_desc> value is undefined - <parm>

The `loc` parameter cannot be specified in the same command with the `sloc` and `eloc` or `bus` parameters.

2155 E2155 Cmd Rej: Invalid parameter combination specified

An `init-ext-stats` or `copy-ext-stats` command cannot already be in progress when this command is entered.

2412 E2412 Cmd Rej: Command already in progress

Output

```
init-ext-stats
```

```
e5oam 10-02-06 00:56:54 EST EAGLE 42.0.0
init-ext-stats
Command entered at terminal #6.

4.1.378 init-flash

Use this command to load the Board PROM to the inactive FLASH memory of a specified card or range of cards. When a card is reinitialized, it runs this version of the GPL in the card's inactive FLASH memory.

Parameters

bits (optional)

This parameter must be specified for one E5-class card in conjunction with `mode=rplceb1` or `mode=cnvrtbit`. It indicates whether the bootloader or the flash image will be converted to a 32-bit or a 64-bit image. The E5-class card must be inhibited before the bootloader or the flash image can be changed through this mode.

Range:

32 - convert to a 32-bit bootloader or flash image

64 - convert to a 64-bit bootloader or flash image

boot (optional)

This parameter specifies whether the EPME5-class card should boot after the command successfully completes.

Multiple images can be flashed without having to boot after each flash. If multiple images are being flashed to the E5-class card, this parameter can be used to prevent the card from booting after each image is flashed. If multiple images are being flashed and the card is allowed to boot after each flash, an image that is not activated after the card boots will be lost on a subsequent reset of the card. This option does not apply to MUX cards or IMT Switch cards.

Range:

yes

Reboot the card after the command completes successfully

no

Do not reboot the card after the command completes successfully.

Default:

yes

For E5-class cards, if the mode parameter is not specified or if `mode=foregrnd`, `mode=imgselct` or `mode=pvjoy`, then default value of `boot` parameter is `yes`. If the mode parameter is specified for E5-class card(s) as `mode=backgrnd`, then default value of `boot` parameter is `no`.

code (optional)

The version of the GPL being loaded onto the card.

Range:

appr

The approved GPL version

trial

The trial GPL version

The code parameter must be specified if the mode parameter is not specified as `mode=imgselct`; the code parameter must not be specified if the mode parameter is specified as `mode=imgselct`.

e1oc (optional)

End location. The location of the last card of a range of cards to be initialized.

Range:

1101 - 1113, 1115, 1201 - 1218, 1301 - 1318, 2101 - 2118, 2201 - 2218, 2301 - 2318, 3101 - 3118, 3201 - 3218, 3301 - 3318, 4101 - 4118, 4201 - 4218, 4301 - 4318, 5101 - 5118, 5201 - 5218, 5301 - 5318, 6101 - 6118

force (optional)

This parameter is required to force the flash download on the in-service card(s).

Range:

yes

no

Default:

no

gp1 (optional)

Generic program load. The flash GPL type that is running on the cards in the specified range of cards.

Range:

xyyyyyyy

1 alphabetic character followed by up to 7 alphanumeric characters.

Valid GPLs: *bldc32*, *bldc64*, *blmcap*, *blslc32*, *blslc64*, *hipr2*, and *multiple*.

Use " *gp1=multiple* " to simultaneously flash multiple E5-class cards running different GPLs, such as BLDC32, BLDC64, BLMCAP, BLSLC32, and BLSLC64. The command will then flash all E5-class cards in the specified range.

initclk (optional)

Initialize clock. If this parameter is specified, then the card location should be 1113 or 1115.

Range:

yes

no

Default:

no

loc (optional)

The location of a single card to be initialized.

Range:

1101 - 1113, 1115, 1201 - 1218, 1301 - 1318, 2101 - 2118, 2201 - 2218, 2301 - 2318, 3101 - 3118, 3201 - 3218, 3301 - 3318, 4101 - 4118, 4201 - 4218, 4301 - 4318, 5101 - 5118, 5201 - 5218, 5301 - 5318, 6101 - 6118

mode (optional)

If this parameter is specified for the E5-class cards, it indicates that the flashing of the E5-class card or range of cards will be performed in the specified mode. This parameter can be specified only for E5-class cards.

Range:

backgrnd

In this mode, the flash image will be copied into an inactive FLASH memory area of an E5-class card or range of cards. If the E5-class card in the specified location is provisioned, the E5-class card can be flashed without inhibiting it. The image uploaded with *mode=backgrnd* will run after the card boots upon receiving the command *init-flash:mode=imgselct*.

cnvrtbit

When used with this `mode` parameter value, `init-flash` will convert the E5-class card specified with the `loc` parameter to run on either a 32-bit or 64-bit flash image. The card will start running the target 32-bit or 64-bit flash image after it boots. The E5-class card must be inhibited before it can be flashed in this mode, and the `sloc/eloc` parameters may not be used.

foregrnd

In this mode, the flash image will be copied into an inactive FLASH memory area of an E5-class card or range of cards. After the E5-class card initializes, it runs this version of the GPL in the card's inactive FLASH memory. If the E5-class card in the specified location is provisioned, the E5-class card must be inhibited before it can be flashed in this mode.

imgselct

This mode will initialize the card(s), and load & run the image previously copied to the local FLASH memory with `mode=backgrnd`. Do not use this mode unless directed by Oracle's Customer Service.

pvjoy

In this mode, the flash image will be copied into inactive FLASH memory of an E5-class card or range of cards and the card(s) will initialize. After the E5-class card initializes, it will run the version of the GPL in the card's inactive FLASH memory. If the E5-class card in the specified location is provisioned, then the E5-class card can be flashed without inhibiting the E5-class card in the specified location. Debug must be enabled on the active OAM before this mode parameter value can be specified. Do not use this mode unless directed by Oracle's Customer Service.

rplcebl

In this mode, `init-flash` will replace the bootloader in the E5-class card specified with the `loc` parameter with either a 32-bit or 64-bit bootloader image and begin using it the next time the card boots. The E5-class card must be inhibited before the bootloader can be changed through this mode, and the `sloc/eloc` parameters may not be used.

Default:
foregrnd

sloc (optional)

Start location. Location of the first card of a range of cards to be initialized.

Range:

1101 - 1113, 1115, 1201 - 1218, 1301 - 1318, 2101 - 2118, 2201 - 2218, 2301 - 2318,
3101 - 3118, 3201 - 3218, 3301 - 3318, 4101 - 4118, 4201 - 4218, 4301 - 4318, 5101 -
5118, 5201 - 5218, 5301 - 5318, 6101 - 6118

Example

```
init-flash:loc=1105:code=trial
init-flash:loc=1113:code=appr:initclk=yes
init-flash:loc=1115:code=appr:initclk=yes:force=yes
```

```

init-flash:loc=1115:code=trial:initclk=no
init-flash:sloc=1302:eloc=1306:gpl=blisim:code=appr
init-flash:sloc=6305:eloc=6305:code=appr:gpl=blispm
init-flash:sloc=1105:eloc=1306:appr:gpl=blmcap:mode=foregrnd
init-flash:loc=1205:code=appr:mode=backgrnd

init-
flash:sloc=1201:eloc=1311:code=trial:gpl=blmcap:mode=backgrnd
init-flash:sloc=1201:eloc=1311:code=trial:mode=imgselct
init-flash:loc=1301:mode=rplcebl:bits=64
init-flash:loc=1301:code=trial:mode=cnvrtbit:bits=64
init-flash:sloc=1103:eloc=1306:code=appr:gpl=blmcap

```

Dependencies

The specified card must be an E5-class card or Service Module card. A MUX card can be specified for locations xy09 and xy10 (*x* is the frame and *y* is the shelf).

2212 E2212 Cmd Rej: Invalid card type for this command

Each specified card does not have to be defined in the database, but it does have to be aligned on the IMT bus.

2269 E2269 Cmd Rej: Unable to communicate with card at location

If the card in the specified card location is provisioned, then the card must be inhibited before this command is entered (unless the card is a MUX card or E5-class card with mode set to backgrnd, imgselct or pvjoy).

2603 E2603 Cmd Rej: Card must be inhibited before executing this command

If the target card is a MUX card, then both card locations specified in the `sloc` and `eloc` parameters must contain MUX cards on the same IMT bus. For these cards, the bus is implicit based on the specified location. Location xy09 specifies the MUX A Bus, and location xy10 specifies the MUX B Bus (*x* is the frame and *y* is the shelf). For example, `sloc=1109:eloc=6109` specifies all MUX cards on the A Bus only; `sloc=1110:eloc=6110` specifies all MUX cards on the B Bus only. MUX cards from both the A bus and B bus cannot be flash downloaded simultaneously.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The `boot` parameter can be specified only if the target is an E5-class card.

4029 E4029 Cmd Rej: BOOT parameter is not valid with the specified card

A card location that contains the active MASP cannot be specified for the `loc`, `sloc`, or `eloc` parameter.

3949 E3949 Cmd Rej: Specified card cannot be the Active MASP

The provisioning subsystem mode (simple, duplex) must be established prior to executing the command.

2204 E2204 Cmd Rej: Waiting for duplex mode in provisioning subsystem

The `loc` parameter cannot be specified with the `eloc` and `sloc` parameters.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The `loc` parameter or the `eloc` and `sloc` parameters must be specified.

2155 E2155 Cmd Rej: Invalid parameter combination specified

If the `eloc` and `sloc` parameters are specified, the `gpl` parameter must be specified. MUX cards in the locations specified in the `sloc` and `eloc` parameters must be running the specified general program load (`gpl`). If the `GPL` specified is not multiple, then other cards in the range of card locations can be running other `GPLs`, but will not be initialized and only the cards within the range that are running the specified `GPL` will be initialized.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The `sloc` parameter value must be less than the `eloc` parameter value, when the two parameters are specified.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The specified card cannot be running an inactive flash `GPL` when the command is executed. If the `sloc` and `eloc` parameters are specified, cards within the range running an inactive flash `GPL` will be skipped. If there are no cards in the list because all the cards are running an inactive flash `GPL`, then `UIM 1119` (example in `Notes` section) will be raised and the command will be rejected.

2212 E2212 Cmd Rej: Invalid card type for this command

If the `initclk` parameter is specified, the card location parameter value must be `1113` or `1115`.

3291 E3291 Cmd Rej: Card location specified must be an OAM card

If `TDM` reload would cause a system clock outage, the `initclk` parameter cannot be specified unless `force=yes` is also specified.

 **Caution:**

The resulting clock outage will probably cause loss of traffic on all links.

3525 E3525 Cmd Rej: Command will cause system clock outage - Use `FORCE=YES`

No other related command can be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

A card location that is valid and defined in the database must be specified.

2376 E2376 Cmd Rej: Specified `LOC` is invalid

The `eloc` and `sloc` parameters must be specified together in the command.

2155 E2155 Cmd Rej: Invalid parameter combination specified

MUX cards specified in the `sloc` and `eloc` location parameters must be running the specified `GPL`. For other `GPLs` including multiple, all cards within the range running the specified `GPL` will be flashed.

2272 E2272 Cmd Rej: Invalid GPL type for this command

This command cannot be entered if an IMT Rate Change sequence is in progress.

5184 E5184 Cmd Rej: IMT Rate Change sequence is in progress

This command cannot be entered during an Extended Bit Error Rate Test (BERT).

3043 E3043 Cmd Rej: IMT test in progress

The boot parameter cannot be specified with the mode=backgrnd, mode=imgselct or mode=pvjoy for the E5-class card.

2155 E2155 Cmd Rej: Invalid parameter combination specified

A card location that contains the MASP cannot be specified for the sloc or eloc parameter.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The mode parameter cannot be specified with the non E5-class card.

2212 E2212 Cmd Rej: Invalid card type for this command.

The gpl=multiple parameter can be specified only if the sloc and eloc parameters are specified.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The gpl=multiple parameter can be specified only if the card locations in the sloc and eloc parameters are E5-class cards.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The code parameter cannot be specified with mode=imgselct parameter for the E5-class card(s). If the mode=imgselct parameter is not specified, then the code parameter must be specified.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The GPL parameter cannot be specified when the mode=rplcebl or mode=cnvrtbit parameter is used with the E5-class card.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The mode=cnvrtbit parameter must be specified with the loc, code, and bits parameters. Any other parameters like force, boot, initclk, and sloc/eloc cannot be specified when the mode=cnvrtbit parameter is specified.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The mode=rplcebl parameter must be specified with the loc and bits parameters. Any other parameters like force, boot, initclk, code, and sloc/eloc cannot be specified when the mode=rplcebl parameter is specified.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The mode=cnvrtbit parameter can be specified only when the E5-class card is an SM8GB card type.

2212 E2212 Cmd Rej: Invalid card type for this command

The `mode=rplcebl` parameter can be specified only when the E5-class card is either an SM8GB or a SLIC card type.

2212 E2212 Cmd Rej: Invalid card type for this command

The `mode=cnvrtbit` parameter can be specified with the `bits=64` parameter only when the E5-class card is running a 32-bit flash image (i.e., either BLMCAP or BLSLC32).

2212 E2212 Cmd Rej: Invalid card type for this command

The `mode=cnvrtbit` parameter can be specified with the `bits=32` parameter only when the E5-class card is running a 64-bit flash image (as in, BLDC64).

2212 E2212 Cmd Rej: Invalid card type for this command

Notes

Card locations 1114, 1116, and 1117 are not valid and cannot be specified.

For the E5-class cards, multiple images can be flashed without having to boot the card after each flash. If multiple images are being flashed to the card the `boot=no` parameter can be used to prevent the card from booting after each image is flashed. After flashing any number of images, the card can be reset either by entering the `init-flash` command with the `boot=yes` parameter or by entering the `init-card` command. If multiple images are being flashed and the card is allowed to boot after each flash, any images that are not activated after the card boots will be lost on a subsequent reset of the card.

If E5-OAMs are being used, then the `init-flash` command can be accepted even when the cards specified in the `sloc` and `eloc` parameter range contains 1113 and/or 1115 locations in it. But the cards in 1113 and 1115 are never included in the list to flash the cards.

For example, if "`sloc=1111:eloc=1215:gpl=blmcap`", neither 1113 nor 1115 would be included in the list to flash the cards and the command will be accepted. The only way to flash an E5-OAM card is to specify `loc=1113/1115` but the card location specified cannot be the active E5-MASP.

For `mode=backgrnd` or `mode=imgselct` to be accepted, the E5-class target card must already be running a 45.0.0=64.XX.YY release version or higher.

When the `sloc` and `eloc` parameters are specified for E5-class cards and one or more cards in the range are running an inactive Flash GPL, then UIM 1119 will be raised along with the flash results. UIM 1119 will capture the first 5 card locations along with the total number of cards that have been skipped because of running an inactive Flash GPL. Example:

```
XXXX.1119    CARD <Active OAM location>    INFO    Cards out of phase with
flash procedure
           Card List: 1101, 1102, 1103, 1105, 1111, ... ( 1 others)
```

To use a 64-bit flash image, the EAGLE must be running Release 46.3 or higher. Steps for converting an E5-SM8G-B card running BLMCAP to BLDC64 GPL and vice-versa:

- Flash BLMCAP --> BLDC64:
 1. Make sure the E5-SM8G-B card is running BLMCAP Release 46.3 or higher.
 2. Replace the bootloader with the new 64-bit version:

```
init-flash:loc=xxxx:mode=rplcebl:bits=64
```

- This command will not cause the card to boot.
- If the card is already running the new bootloader, this command does nothing.

3. Flash card to BLDC64:

```
init-flash:loc=xxxx:code=yyyyy:mode=cnvrtbit:bits=64
```

4. Activate flash.

5. The card is now running the 64-bit flash image.

• **Flash BLDC64 --> BLMCAP:**

1. The card is running BLDC64.

2. Flash card to BLMCAP (Release 46.3 or higher):

```
init-flash:loc=xxxx:code=yyyyy:mode=cnvrtbit:bits=32
```

3. Activate flash.

4. The card is now running the 32-bit flash image.

SLIC cards run either the 32-bit BLSLC32 flash GPL or the 64-bit BLSLC64 flash GPL.

To convert a SLIC card from the 32-bit to the 64-bit flash image:

1. Inhibit the card:

```
inh-card:loc=xxxx:force=yes
```

The card will boot and return to state OOS-MT-DSBLD.

2. Flash the card:

```
init-flash:loc=xxxx:code=appr:64gpl=blslc64
```

The card will boot and return to state OOS-MT-DSBLD.

3. Activate the 64-bit BLSLC64 flash GPL:

```
act-flash:loc=xxxx
```

The card will now accept 64-bit application GPLs from the OAM.

To convert a SLIC card from the 64-bit to the 32-bit flash image:

1. Inhibit the card:

```
inh-card:loc=xxxx:force=yes
```

The card will boot and return to state OOS-MT-DSBLD.

2. Flash the card:

```
init-flash:loc=xxxx:code=appr:gpl=blslc32
```

The card will boot and return to state OOS-MT-DSBLD.

3. Activate the 32-bit BLSLC32 flash GPL:

```
act-flash:loc=xxxx
```

The card will now accept 32-bit application GPLs from the OAM.

Output

```
init-flash:loc=1105:code=trial
```

4.1.379 init-imt-gpl

Use this command to load the specified IMT GPL software to the specified card and to reset that card. The application software is reloaded following IMT reset.

Parameters

code (mandatory)

The IMT GPL to load to the card.

Range:

appr

The approved GPL version

refresh

Reload approved GPL version without card reset

trial

The trial GPL version

loc (optional)

The location of the card to be initialized.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318,
2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318,
3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318,
4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318,
5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318,
6101 - 6108, 6111 - 6118

Default:

All locations

Example

```
init-imt-gpl:loc=1201:code=trial
```

```
init-imt-gpl:code=refresh
```

```
init-imt-gpl:code=appr
```

Dependencies

The card location shelf must be within the allowed ranges as specified on the `loc` parameter. The shelf is the first two digits of the `loc` parameter.

N/A N/A

The card location slot must be within the allowed ranges as specified on the `loc` parameter. The slot is the second two digits of the `loc` parameter.

N/A N/A

The card location cannot contain a card with flash memory (MUX).

2212 E2212 Cmd Rej: Invalid card type for this command

When this command is entered, no other action command can be in progress.

N/A N/A

If the `code=appr` or `code=trial` parameter is specified, the `loc` parameter must be specified.

2366 E2366 Cmd Rej: LOC must be specified

If the `code=trial` parameter is specified, the `loc` parameter must be specified, and the specified card location must be equipped and in service.

2387 E2387 Cmd Rej: Card is not in service

If the `code=appr` or `code=refresh` parameter is specified, the card must be connected to at least one IMT bus and communicating with the active MASP when the command is entered.

2269 E2269 Cmd Rej: Unable to communicate with card at location

This command cannot be entered if the `clr-imt-stats`, `rept-imt-info`, `rept-imt-lvl1`, `rept-imt-lvl2`, or `tst-imt` command is running.

2368 E2368 Cmd Rej: System busy - try again later

This command must not be entered during IMT statistics collection following an hourly boundary.

N/A N/A

A card location that is valid and defined in the database must be specified.

2376 E2376 Cmd Rej: Specified LOC is invalid

This command cannot be entered during an Extended Bit Error Rate Test (BERT).

3043 E3043 Cmd Rej: IMT test in progress

Notes

None

4.1.380 init-mux

This command is used to reset an individual MUX card, or a given IMT Bus A or B (which includes all MUX cards for that bus).

The command boots the MUX card processor and brings down the respective IMT bus temporarily (approximately 10 seconds) until the MUX card(s) come back into service.

Note:

When a card is disconnected from the IMT Bus, it may take several seconds for the card IMT Status to be updated. If an `init-mux` or `disc-imt` command is entered for the alternate IMT Bus before the card IMT Status is updated, then the card may reboot. After disconnecting the card from the IMT bus, use the `rept-stat-imt` or `rept-stat-card` command to determine whether the card IMT status is updated. Do not issue the `disc-imt` or `init-mux` command for the alternate IMT bus until the card status is updated.

Parameters

bus (optional)

The MUX bus to be reset. All MUX cards on the specified bus are reset.

Range:

a

b

Default:

a

force (optional)

This parameter is specified to override normal safeguards. The `force=yes` parameter can be used to reset an entire MUX bus when the alternate bus is non-

functional or to reset one MUX card during a fault isolation test (see the `tst-imt` command).

▲ Caution:

If the `force=yes` parameter is specified, and the alternate IMT bus is OOS, then all of the cards on the IMT that are running a GPL will initialize. If one or more cards are not aligned on the alternate bus, placing the alternate IMT in IS-ANR, only the non-aligned cards will initialize. Either occurrence could result in nodal isolation.

Range:

yes

no

Default:

no

hs (optional)

This parameter is specified to set the speed of the MUX bus. If the `hs=yes` parameter is specified, the MUX bus speed is set to 2.5 Gbps. If the `hs=no` parameter is specified, the MUX bus speed is set to 1 Gbps.

Range:

yes

no

Default:

yes

loc (optional)

The location of a single MUX card to be reset.

Range:

1109, 1110, 1209, 1210, 1309, 1310, 2109, 2110, 2209, 2210, 2309, 2310, 3109, 3110, 3209, 3210, 3309, 3310, 4109, 4110, 4209, 4210, 4309, 4310, 5109, 5110, 5209, 5210, 5309, 5310, 6109, 6110

Example

```
init-mux:bus=a
```

```
init-mux:bus=a:hs=no
```

```
init-mux:loc=1109
```

```
init-mux:loc=6202
```

Dependencies

An `act/init-flash` command cannot be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

The `bus` or `loc` parameter must be specified in the command. Both parameters cannot be specified in the command.

4032 E4032 Cmd Rej: Either BUS or Location (not both) must be specified

The `hs` parameter can be specified only when the `bus` parameter is specified.

3521 E3521 Cmd Rej: HS can only be specified with BUS

The `force=yes` parameter must be specified before this command can be entered during an IMT Fault Isolation test.

This command cannot be entered during an Extended Bit Error Rate Test (BERT) even if the `force=yes` parameter is specified.

3043 E3043 Cmd Rej: IMT test in progress

This command is not allowed during the IMT statistics collection period following an hourly boundary (IMT performance monitoring).

N/A N/A

This command cannot be entered if an IMT Rate Change sequence is in progress.

5184 E5184 Cmd Rej: IMT Rate Change sequence is in progress

If one or more cards are not aligned on the alternate bus, the alternate IMT state will become IS-ANR. If the alternate bus is IS-ANR, then the `force=yes` parameter must be specified.

2371 E2371 Cmd Rej: Force parameter required

Notes

The `hs` parameter should be specified only as a tool to facilitate updating spare cards for releases that support MUX bus speeds of 2.5 Gbps only. The `hs` parameter is persistent as long as the card remains powered. If the card loses power, it will default back to 2.5 Gbps.

Output

```
init-mux:loc=1109
```

```
rlghncxa03w 05-07-13 08:15:10 EST EAGLE 31.3.0  
Command Completed.
```

```
;
```

- [init-flash](#)

4.1.381 init-network

Use this command to reset all the network cards. The network cards are E5- TSMs and LIMs; that is, anything not part of the Maintenance and Administration Subsystem

(MAS). This command resets all the network cards by reloading GPLs and data to the cards. Use of this command requires maintenance personnel to be located at the site.

▲ Caution:

Using this command causes network nodal isolation; however, if the network nodal isolation is less than two seconds, it may not be detected and may not be reported. Also, in some cases when network nodal isolation has been detected and a large number of maintenance troubles are being reported, the network nodal isolation message may not be reported. An alarm is generated, however.

Parameters

force (optional)

Force the resetting of all the network cards.

Range:

yes

no

Default:

no

Example

```
init-network
```

Dependencies

The MASP must be in either *Upgrade Phase 3* mode or *Full Function* mode. (See the “Notes” section for this command for more information.)

2980 E2980 Cmd Rej: Must be in upgrade phase 3 or full function mode

The system database must be coherent when this command is entered.

2982 E2982 Cmd Rej: Database is incoherent

At least one card with the SS7ANSI or CCS7ITU application installed must exist with an in-service active signaling link.

2981 E2981 Cmd Rej: Already in nodal isolation

The `force=yes` parameter must be specified to override the required four-card SS7ANSI or CCS7ITU configuration. The system then selects the best available of the remaining SS7ANSI or CCS7ITU cards.

N/A N/A

This command cannot be entered during an Extended Bit Error Rate Test (BERT).

3043 E3043 Cmd Rej: IMT test in progress

Notes

Upgrade Phase 3

Upgrade Phase 3mode means that the MASPs are running GPLs that match the major revision defined for the approved GPLs, but the other network processors are only prepared to be upgraded.

Full Function

Full Function mode means that all MASPs are running GPLs that match the major revision defined for the approved GPLs. *Full Function* mode is the normal operating mode for the MASP.

Output

The command output scrolls into the scroll area of your display contiguously. However, for purposes of this example, each part has an explanation preceding it.

4.1.382 init-sys

Use this command to reset all cards in the system (except HIPR2 cards). When this command is entered, a caution message is displayed in the scroll area requesting to re-enter the command to confirm the operation. The command must be re-entered within 30 seconds. The only valid commands that can be entered after entering this command the second time are the `login` and `act-user` commands.

▲ Caution:

This command causes a complete system reload, and should be used only during periods of low traffic. Use this command only when directed by the Customer Care Center.

▲ Caution:

When this command executes, the system does not retain the manually initiated state (for example, OOS-MT-DSBLD) for the signaling link, card, or the terminal. After the command executes, the system attempts to bring all provisioned links, cards, and terminals on line, including those that were previously out of service. Each device must be put back into its previous state after the system is back on line. It is advisable to print or electronically capture the output of the `rept-stat-slk`, `rept-stat-card`, and `rept-stat-trm` commands for reference prior to issuing the `init-sys` command. To restore a device to its previous state, issue the appropriate inhibit/deactivate command listed in this manual in the section for each of the above `rept-stat` commands.

Parameters

data (optional)

High memory refresh. This parameter causes data to be reloaded to the specified card. This parameter is used to reload data if the G-Flex, G-Port, INP, or LNP feature is on, or the ATINP feature is enabled. This parameter is applicable only to network cards containing the MPS database (VSCCP/ENUM or S13 card running DEIRHC gpl).

Range:***refresh***

Causes data to be reloaded to the specified card.

persist

Indicates that the database is not to be reloaded to the card. Used to request that the EAGLE perform a warm restart of the requested cards. The EAGLE performs various checks to ensure that all conditions necessary to initiate the warm restart are in place.

Default:

refresh

force (optional)

Allows the command to be processed if the `data=persist` parameter is specified and all the network cards containing the LNP database cannot maintain a persistent LNP database over the reset.

Range:

yes

no

Default:

no

perdata (optional)

Persist a particular DB type on all cards (irrespective of the card's type).

Range:

all

Persist all data (GTT/MPS) that can be persisted on the card

mps

Persist only MPS data on the card that supports persistence of MPS DB

gtt

Persist only GTT data on the card that supports persistence of GTT DB

Default:

all

**Note:**

The `perdata` parameter can only be specified where `data=persist` is given.

Example

```
init-sys
init-sys:data=persist
init-sys:data=persist:perdata=mps
```

Dependencies

When this command is entered, another `init-sys` command cannot be in progress on another port.

2267 E2267 Cmd Rej: Init-sys already in progress at another terminal

An EPAP-based feature or an LNP feature that is warm-restart-capable must be enabled, or SIP or DEIR must be enabled, or at least one ENUM card or one GTT-enabled IPSP card must be present before this command can be entered with the `data=persist` parameter.

2592 E2592 Cmd Rej: Warm Restart capable Feature must be enabled

The value specified for the `data` parameter for the confirmation command must be the same value that was specified the first time.

3850 E3850 Cmd Rej: Parameters inconsistent on re-entering of command

The `force` parameter is valid only with the `data` parameter.

3848 E3848 Cmd Rej: FORCE parameter valid only with DATA parameter

The `perdata` parameter is valid only with the `data` parameter.

3513 E3513 Cmd Rej: Invalid parameter combination with PERDATA param

The `init-sys` command cannot be issued when SFAPP(P)->OAM sync is ON.

3637 E3637 Cmd Rej: Turn OFF SFAPP(P)->OAM sync before this command

This command cannot be entered when CAT2 IPSM to OAM syncing is in progress.

3652 E3652 Cmd Rej: IPSM to OAM SYNC in progress

Notes

When this command is entered the first time, 30 seconds are allowed to enter the command again. After the command is accepted, a delay of 10 seconds gives the system time to broadcast the information message regarding the system initialization.

From the time that the `init-sys` command is accepted, you must wait approximately two minutes before you can log into the system. If the system terminal is in the VT-100/VT-320 mode, the terminal display will be refreshed with nonzero alarm counts. During this 2-minute interval, an intermediate screen refresh caused by the MASPs' role change from active to standby, and from standby to active. This screen refresh is typically a partial refresh and the alarm indicators are set to zero.

If you are logged into the system in the KSR mode, you receive UAM 0009 (MASP became active) to indicate that you are now able to log into the system. UAM 0009 could be issued twice due to possible transient MASP role change (switching from active to standby). Following the execution of the `init-sys` command, the MASP that was active before the `init-sys` command was entered will be the active MASP when the system has finished reinitializing. E5-TSM cards are reloaded only in the event of power failure or hardware reboot. The execution of this command does not require E5-TSM cards to be reloaded.

When the `init-sys` command is given with `data=persist` and `perdata=all`, it means that all cards in the system will boot, but those that contain either MPS or GTT data as persistent will be warm booted, while others will be cold booted.

When the OA&M IP Security feature and the parameter SSH in SECUDFLT table are turned ON, and an IPSM card is inserted and initialized for the first time or is removed, inserted, and initialized again, the "SSH Host Keys Regenerated" UIM is displayed. The UIM shows the generated SSH Host Key fingerprint that must be provided at the secure client in order for secure information transfer to occur. The SSH Host Key fingerprint is changed whenever power is lost and restored to an IPSM card.

```
rlghncxa03 03-07-11 07:05:00 EST EAGLE 30.2.0
0021.1493 CARD 1111 INFO SSH Host Keys Regenerated
DSA Server Host Key FTRA-formatted Fingerprint=
84 7c 92 8b c 7c ds 19 1c 6 4b de 5c 8f c5 4d
Report Date:03-07-11 Time:22:27:36
```

When the OA&M IP Security feature and the parameter SSH in SECUDFLT table are turned ON, and an IPSM card is restarted with this command, the "SSH Host Keys Loaded" UIM is displayed. The UIM shows the current SSH Host Key fingerprint. The SSH Host Key fingerprint is not changed if the IPSM card does not lose power.

```
rlghncxa03 01-07-11 07:05:00 EST EAGLE 30.2.0
0021.1493 CARD 1111 INFO SSH Host Keys Loaded
DSA Server Host Key FTRA-formatted Fingerprint=
84 7c 92 8b c 7c ds 19 1c 6 4b de 5c 8f c5 4d
Report Date:03-07-11 Time:22:27:36
```

Output

This example shows the output when the `init-sys` command is entered once, then entered again within 30 seconds, causing the system to start resetting all of its cards:

```
init-sys
```

```
rlghncxa03w 04-01-07 07:05:00 EST EAGLE 31.3.0
Command entered at terminal #3
```

```
rlghncxa03w 04-01-07 07:05:01 EST EAGLE 31.3.0
CAUTION: This command causes a complete system reload, and
will result in traffic loss.
Re-enter command within 30 seconds to confirm.
```

```
init-sys
```

```
rlghncxa03w 04-01-07 07:05:16 EST EAGLE 31.3.0
Command entered at terminal #3
```

```
rlghncxa03w 04-01-07 07:05:17 EST EAGLE 31.3.0
Init System command issued at terminal #3
```

This example shows the output when the `init-sys` command is entered once, and more than 30 seconds pass with no other keyboard entry:

```
init-sys
```

```
rlghncxa03w 04-01-05 07:05:00 EST  EAGLE 31.3.0
Command entered at terminal #3.

rlghncxa03w 04-01-05 07:05:01 EST  EAGLE 31.3.0
CAUTION: This command causes a complete system reload, and
will result in traffic loss.
Re-enter command within 30 seconds to confirm.

rlghncxa03w 04-01-05 07:05:31 EST  EAGLE 31.3.0
Init System command aborted due to confirmation timeout
```

This example shows the output when the `init-sys` command is entered once and then the `rls-alm:lvl=minr` command is entered, letting the 30-second timer expire for the second entry of the `init-sys` command:

```
init-sys
```

```
rlghncxa03w 04-01-05 07:05:00 EST  EAGLE 31.3.0
Command entered at terminal #3

rlghncxa03w 04-01-05 07:05:01 EST  EAGLE 31.3.0
CAUTION: This command causes a complete system reload, and
will result in traffic loss.
Re-enter command within 30 seconds to confirm.

rls-alm:lvl=minr
rlghncxa03w 04-01-05 07:05:10 EST  EAGLE 31.3.0
Command entered at terminal #3

rlghncxa03w 04-01-05 07:05:11 EST  EAGLE 31.3.0
All the minor alarms are released

rlghncxa03w 04-01-05 07:05:12 EST  EAGLE 31.3.0
Command Completed

rlghncxa03w 04-01-05 07:05:31 EST  EAGLE 31.3.0
Init System command aborted due to confirmation timeout
```

This example shows the output when the `init-sys` command is entered twice within 30 seconds, and the `data=persist` parameter is specified to perform a warm restart of the requested cards without reloading the database to the cards:

```
init-sys:data=persist
```

```
rlghncxa03w 04-01-05 07:05:31 EST  EAGLE 31.3.0
Command entered at terminal #3

rlghncxa03w 04-01-05 07:05:31 EST  EAGLE 31.3.0
CAUTION: This command causes a complete system reload, and will result
```

```
in
traffic loss.
Re-enter command within 30 seconds to confirm.

init-sys:data=persist
rlghncxa03w 04-01-05 07:05:31 EST  EAGLE 31.3.0
Command entered at terminal #3
rlghncxa03w 04-01-05 07:05:31 EST  EAGLE 31.3.0
Init System command issued at terminal #3
```

This example shows the output when the `init-sys` command is entered twice within 30 seconds, and the `force=yes` and `data=persist` parameter is specified to perform a warm restart of the requested cards without reloading the database to the cards:

```
init-sys:data=persist:force=yes

tekelecstp 02-01-01 21:49:15 MST  EAGLE5 46.2.0-65.42.0
init-sys:data=persist:force=yes
Command entered at terminal #17.
;

tekelecstp 02-01-01 21:49:15 MST  EAGLE5 46.2.0-65.42.0
Verifying card(s) persistent database - please wait

Command Accepted - Processing
tekelecstp 02-01-01 21:49:15 MST  EAGLE5 46.2.0-65.42.0
CAUTION: This command causes a complete system reload, and
will result in traffic loss.
Re-enter command within 30 seconds to confirm.
;
Command Executed

init-sys:data=persist:force=yes

tekelecstp 02-01-01 21:49:20 MST  EAGLE5 46.2.0-65.42.0
init-sys:data=persist:force=yes
Command entered at terminal #17.

4.1.383 lock

Use this command to lock a terminal's keyboard. When the keyboard is locked, the system accepts no keyboard commands other than the `unlock` command. The keyboard remains locked until the logged on user's login password is entered at the UNLOCK prompt. When the keyboard is locked, any idle terminal monitor in effect for the terminal is suspended temporarily.

Parameters

This command has no parameters.

Example

```
lock
```

Dependencies

The terminal cannot be an MGMT terminal used for Network Surveillance.

3079 E3079 Cmd Rej: Command cannot be executed on an MGMT terminal

The terminal cannot be a TELNET terminal (terminal IDs 17-40).

4283 E4283 Cmd Rej: Command cannot be executed on a Telnet terminal

Notes

A locked terminal can also be unlocked by entering the `inh-trm` command, followed by the `alw-trm` command.

Output

```
lock
```

```
rlghncxa03w 04-02-17 16:02:05 EST  EAGLE 31.3.0
Terminal keyboard is locked. Enter UNLOCK command to unlock.
;
```

Related Topics

- [unlock](#)

4.1.384 login

Use this command to log into the system. After you enter this command, the system requests a password. For security reasons, the password is not displayed at the terminal.

Parameters

uid (mandatory)

User ID. The system prompts the user for a valid password after entering in this ID.

Range:

azzzzzzzzzzzzzzzzz

1 alphabetic character followed by up to 15 alphanumeric characters

Example

```
login:uid=john
```

Dependencies

The user cannot be logged onto any terminal while changing the password.

2750 E2750 Cmd Rej: UserID already logged on (or is logging on) another terminal

The user ID must not be logged in to another port already, and it must not be revoked.

2752 E2752 Cmd Rej: UserID has become obsolete and cannot be used

The user ID must have been logged in successfully within the number of days specified on the `uout` parameter of the `ent-user` command.

2751 E2751 Cmd Rej: UserID has been revoked

The OA&M IP Security Enhancements feature must be turned on before the password can be changed from a Telnet terminal (IDs 17-40) if the user is logging in with the assigned ID and password for the first time, or the password has expired.

2723 E2723 Cmd Rej: Password operations not allowed on a non-secure terminal

The password can contain up to 20 characters.

2262 E2262 Cmd Rej: Password too long, 20 maximum

The password must contain at least the number of characters specified by the `minlen` parameter in the `chg-secu-dflt` command.

2263 E2263 Cmd Rej: Password does not contain enough characters

The password must contain at least the number of alphabetic characters specified by the `alpha` parameter in the `chg-secu-dflt` command.

2753 E2753 Cmd Rej: Password does not contain enough alphabetic characters

The password must contain at least the number of numeric characters specified by the `num` parameter in the `chg-secu-dflt` command.

2754 E2754 Cmd Rej: Password does not contain enough numeric characters

The password must contain at least the number of punctuation characters specified by the `punc` parameter in the `chg-secu-dflt` command.

2755 E2755 Cmd Rej: Password does not contain enough punctuation characters

The password cannot contain the associated User ID.

2761 E2761 Cmd Rej: Password cannot contain userID

The number of days specified by the `minintrvl` parameter in the `chg-secu-dflt` command must pass between password changes.

5190 E5190 Cmd Rej: Password change denied, too soon since last change

The password must contain fewer duplicate characters from the existing password than the number specified by the `pchreuse` parameter in the `chg-secu-dflt` command.

5191 E5191 Cmd Rej: Password has too many character matches with old password

The password cannot be the same as a previous password if the limit in the password history, specified by the `preuse` parameter of the `chg-secu-dflt` command, has been reached.

5192 E5192 Cmd Rej: Password matches a previous password

The current password cannot be entered as the new password.

5246 E5246 Cmd Rej: New password matches old password

The values specified for the `uid` parameter and for the password must already exist.

2757 E2757 Cmd Rej: Invalid userID/password combination

Notes

The `act-user` command can be used in place of `login`. The `act-user` command has been provided in compliance with TL1 standards.

When a new system is shipped, the user ID and password are set to the system. These should be changed immediately to ensure system security.

At the time of login, when a password is entered for a user, only the first 20 bytes are chosen for validation.

Output

When the `login` command is entered, a password prompt occurs. If the password and User ID are valid, then the login is processed. When a password change is required, password rules are displayed, and a new password is requested. The login is granted if the change is successful, then or if no password change is necessary.

After login is granted, a banner is displayed. This banner consists of the warning text provided on the `chg-secu-dflt` command, indications about the last login, and any unsuccessful login attempts.

This example shows the output for a normal login path with no request for new password:

```
login:uid=eagle
```

```
eagle5 10-02-19 19:37:16 EST EAGLE5 42.0.0
User logged in on terminal 3.
```

```
;
```

```
eagle5 10-02-19 19:37:16 EST EAGLE5 42.0.0
NOTICE: This is a private computer system.

4.1.385 logout

Use this command to end a user session. The `logout` command has the same affect as the `canc/dact-user` commands.

Parameters

This command has no parameters.

Example

```
logout
```

Dependencies

None

N/A N/A

Notes

The `canc/dact-user` commands can be used in place of `logout`.

Output

```
logout
```

```
rlghncxa03w 06-06-05 07:05:31 EST EAGLE 35.0.0  
Command Completed.
```

```
;
```

**Note:**

Pass-through commands shown in online help that are not documented in Chapter 6 are not supported at this time.

proc (optional)

Processor type.

Range:***appl***

Application processor

com

Communication processor

Default:

appl

Example

```
pass:loc=1201:cmd="ping 198.89.1.2"
```

```
pass:loc=1111:cmd="soipdata -f"
```

```
pass:loc=6312:cmd="help"
```

Dependencies

The value specified for the `loc` parameter must be valid for the card type and application:

- E5-ENET-B card running the IPGWI, IPLIMI, IPSG, or SS7IPGW application
- STC or E5-STC card running the EROUTE application
- IPSM card running the IPS application
- Service Module card running the VSCCP application
- E5-TSM card running the GLS application

2376 E2376 Cmd Rej: Specified LOC is invalid

The specified card location is out of range.

2016 E2016 Cmd Rej: <parm_desc> is out of range - <parm>

Syntax error found in the `pass` command.

3780 E3780 Cmd Rej: Syntax Error Found

Card is not in service

2387 E2387 Cmd Rej: Card is not in service

3782 E3782 Cmd Rej: Command Not Found

The `pass` command must include either the `cmd` or `shellcmd` parameter.

4439 E4439 Cmd Rej: Cmd or Shell parameter must be specified

Notes

None

Output

Output is shown in the individual Pass commands.

4.1.387 rept-ftp-meas

Use this command to manually initiate generation and FTP transfer of a measurements report from the Measurements Platform MCPM or Integrated Measurements enabled E5-OAM to an FTP server.

Parameters**enttype (mandatory)**

Entity type to report on in the measurements report.

Range:***aiq***

Measurements for ANSI41 AIQ

atinpq

Measurements for ATINP

deir

Measurements for S13/S13' EIR

eir

Measurements for Equipment Identity Register

enum

Measurements for ENUM Mobile Number Portability and Tier One Address Resolution

gtt"path

Measurements for GTT Actions Per-Path

gttset

Measurements per GTTSET

idpr

Measurements for IDPR

link

Measurements for signaling links

linkset

Measurements for linksets

lnp

Measurements for local number portability

Isdestni

Measurements for linkset destination network identifiers

Isonismt

Measurements for ISUP message type screening

Isorigni

Measurements for linkset originating network identifiers

mapscrn

Measurements for GSM MAP message screening

np

Measurements for INP, INP CRP, G-Port, A-Port, MO-based GSM SMS NP, MO-based IS41 SMS NP, IGM, MT-Based GSM SMS NP, and MT-Based IS41 SMS NP

origni

Measurements for originating network identifiers greater than 5

origninc

Measurements for originating network identifiers (less than 5, small networks) for network clusters

sctpasoc

Measurements per association for the SCTP protocol (used to carry M3UA, M2PA, and SUA traffic)

sctpcard

Measurements per card for the SCTP protocol (used to carry M3UA, M2PA, and SUA traffic)

sfthrot

Measurements for SFTHROT GTT Action

sip

Measurements for SIP

stp

Measurements pertaining to the Signaling Transfer Point in general or summarized totals recorded on the STP

tt

Measurements for translation types

ua

Measurements per application server/association for the M3UA and SUA protocols

vflex

Measurements for V-Flex

type (mandatory)

Type of measurement report.

Range:

avl
Availability measurements

avld
Daily availability measurements

avldth
Day to hour availability measurements.

comp
Component measurements

gtwy
Internetwork gateway-related data from the STP for ANSI and ITU measurements. ANSI gateway measurements are pegged on a per-linkset, per-Network Indicator basis, whereas ITU measurements are pegged on a per-linkset basis.

mtcd
Daily maintenance measurements

mtcdth
Day-to-hour maintenance measurements

mtch
Hourly maintenance measurements

mtcs
Link/linkset maintenance status

nm
Network management, on-demand

rbase
Schedule-report type record base measurements

systot
STP system totals

day (optional)

Day of the week for the specified daily measurement report.

Range:

mon

tue

wed

thu

fri

sat

sun**Default:**

If not specified, the previous single day is reported.

hh (optional)

Half-hour for the specified report. The end time for the collection interval. For example, `hh=0300` generates a report for the interval 2:30-3:00.

Range:

0000 - 2400

hhmm where *hh*=00 -24 (hour) and *mm*=00 or 30 (minute)

period (optional)

The relative period for the report.

Range:

active

last

specific

qh (optional)

Quarter-hour for the specified report. The end time for the collection interval. For example, `qh=0315` generates a report for the interval 3:00-3:15.

Range:

0000 - 2400

hhmm where *hh* = 00-24 (hour) and *mm* = 00, 15, 30 or 45

Example

```
rept-ftp-meas:type=systot:enttype=stp
```

```
rept-ftp-meas:type=systot:enttype=sip
```

```
rept-ftp-meas:type=mtch:enttype=deir
```

```
rept-ftp-meas:type=mtch:enttype=enum
```

```
rept-ftp-meas:type=mtcd:enttype=sfthrot
```

```
rept-ftp-meas:type=mtch:enttype=gttset
```

Dependencies

This command cannot be used to specify a report type if that report type is currently printing.

2305 E2305 Cmd Rej: On demand report currently being printed

A primary MCPM card must be available when this command is entered.

3117 E3117 Cmd Rej: No available primary MCP

The 15 Minute Measurements feature must be turned on and the 15 Minute Measurements collection option (`chg-measopts:collect15min=on` command) must be on before the `qh` parameter can be specified.

3690 E3690 Cmd Rej: QH cannot be specified unless 15 min meas is turned ON

The LNP feature must be turned on before the `mtchlnp=on`, `mtcdlnp=on`, or `enttype=lnp` parameter can be specified.

3009 E3009 Cmd Rej: LNP feature must be ON

The GSM Map Screening feature must be turned on before the `mtcdmap=on` and `enttype=mapscrn` parameters can be specified

3883 E3883 Cmd Rej: GSM Map Screening feature must be ON

The EIR feature must be turned on before the `enttype=eir` parameter can be specified,.

3699 E3699 Cmd Rej: EIR feature must be ON

If a value of `avl`, `avld`, `comp`, `gtwy`, `mtcd`, or `systot` is specified for the `type` parameter, then the value specified for the `hh` parameter must indicate a half-hour boundary (the end of the requested half-hour for the report). If the `type=mtch` parameter is specified, then the value specified for the `hh` parameter must indicate an hourly boundary (half hours ending in 00, such as 0100, etc).

2302 E2302 Cmd Rej: PERIOD must be 1/2 hour boundary

The `qh` parameter must specify a quarter-hourly boundary (the end of the requested quarter-hour for the report) for valid report types (`avld(th)`, `mtcd(th)`, `mtch`, `nm`, `rbase`, and `mtcs`) cannot be specified.

3689 E3689 Cmd Rej: Period must be 1/4 hour boundary

Hourly collection and report processing cannot be in progress when report type `mtch` is specified.

2290 E2290 Cmd Rej: Hourly measurement collection in progress

Day-to-hour collection and report processing cannot be in progress

- When report type `mtcd` is specified
- When report type `mtcdth` is specified

2276 E2276 Cmd Rej: Day-to-hour measurement collection in progress

Daily collection and report processing cannot be in progress when report type `mtcd` is specified.

2277 E2277 Cmd Rej: Daily measurement collection in progress

Half-hourly collection and report processing cannot be in progress when report type `comp`, `systot`, `avl`, or `gtwy` is specified.

2278 E2278 Cmd Rej: 30-minute measurement collection in progress

Quarter-hourly collection and report processing cannot be in progress when report type `comp`, `systot`, `avl`, or `gtwy` is specified.

3688 E3688 Cmd Rej: 15-minute measurement collection in progress

5-minute collection and report processing cannot be in progress when report type `nm` is specified.

2279 E2279 Cmd Rej: 5-minute measurement collection in progress

The *mtcdth* report type is unavailable between midnight and 1:00 AM (0100).

2275 E2275 Cmd Rej: Day-to-hour measurement data not yet collected

The *day* parameter can be specified only for report type *mtcd* and entity types *aiq*, *eir*, *Inp*, *np*, *vflex*, *mapscrn*, *atinq*, and *gttpath*.

3419 E3419 Cmd Rej: DAY is invalid for type-enttype combination

The *hh* and *qh* parameters cannot be specified together in the command.

3694 E3694 Cmd Rej: QH and HH cannot be specified together

When the *period=last* parameter is specified, the *hh*, *qh*, and *day* parameter cannot be specified.

2283 E2283 Cmd Rej: QH, HH, or DAY cannot be specified when PERIOD=LAST

When the *period=active* parameter is specified, the *hh*, *qh*, and *day* parameters cannot be specified.

2284 E2284 Cmd Rej: QH, HH, or DAY cannot be specified when PERIOD=ACTIVE

When the *period=specific* parameter is specified, the *hh*, *qh*, or *day* parameters must be specified.

2286 E2286 Cmd Rej: QH or HH must be specified when PERIOD=SPECIFIC

[Table 4-42](#) indicates valid parameter combinations for measurements reports; invalid combinations will generate an error message.

2281 E2281 Cmd Rej: Invalid ENTTYPE for this TYPE

An hourly boundary must be specified for report type `mtch`.

2291 E2291 Cmd Rej: PERIOD must be 1 hour boundary for report type

The `oamhcmeas=on` or `platformenable=on` parameter must be specified (see the `chg-measopts` command) before this command can be entered.

3088 E3088 Cmd Rej: Platformenable or Oamhcmeas option must be on

The V-Flex feature must be turned on before the `enttype=vflex` parameter can be specified.

4142 E4142 Cmd Rej: VFLEX feature must be ON

The A-Port, G-Port, IS41 GSM Migration, Prepaid SMS Intercept Ph1, TIF ASD, TIF GRN, TIF Number Portability, or TIF Simple Number Substitution feature must be enabled, or the INP, MO SMS IS41-to-GSM Migration, MO-based GSM SMS NP, or MO-based IS41 SMS NP feature must be turned on before the `mtchnp=on` or `mtcdnp=on` parameter can be specified.

3631 E3631 Cmd Rej: Incompatible Feature/Option status

The ANSI41 AIQ feature must be enabled before the `enttype=aiq` parameter can be specified.

5158 E5158 Cmd Rej: ANSI41 AIQ feature must be enabled

The Integrated Measurements or Measurements Platform feature must be turned on before this command can be entered.

5279 E5279 Cmd Rej: MEASPLAT or Integrated Measurements feature must be ON

The GTT Action - DUPLICATE, GTT Action - DISCARD, or GTT Action - FORWARD feature must be enabled before the `enttype=gttapath` parameter can be specified.

3451 E3451 Cmd Rej: Controlled Feature is not enabled

At least one SFTHROT GTT Action must be provisioned before the `enttype=sfthrot` parameter is specified.

3430 E3430 Cmd Rej: At least one SFTHROT GTT action must be configured

SIPNP Feature must be enabled before the `enttype=sip` and `type=mtcd/systot` parameters can be specified.

2590 E2590 Cmd Rej: SIPNP Feature must be enabled

Period/type parameter combinations:

- If the `period=specific` parameter is specified, then a value of *avl*, *mtcd*, *comp*, *systot*, *gtwy*, or *mtch* must be specified for the `type` parameter.
- If the `type=mtcd` and `period=specific` parameters are specified, then a value of *lnp*, *mapscrn*, *np*, *eir*, *vflex*, *atinpq*, *aiq*, or *gttapath* must be specified for the `enttype` parameter.
- If the `period=active` parameter is specified, then a value of *mtcs* or *rbase* must be specified for the `type` parameter.
- If the `period=last` parameter is specified, then a value of *mtcs* or *rbase* cannot be specified for the `type` parameter.

2280 E2280 Cmd Rej: Invalid PERIOD for this TYPE

At least one ENUM card must be present before the `enttype=enum` parameter can be specified.

3195 E3195 Cmd Rej: At least one ENUM card must be provisioned.

The EGTT feature must be turned ON before `enttype=gttset` parameter can be specified.

3557 E3557 Cmd Rej: EGTT must be ON

- [rept-meas](#)

4.1.388 rept-imt-info

Use this command to display the following statistics:

- IMT bus error statistics currently stored in the IMT fault isolation hourly statistics
- Current IMT bus use statistics. Bus use is the percentage of the capacity of the IMT bus that is used for data during a particular time.
- MUX card error statistics

Parameters

report (mandatory)

The type of report that is generated.

Range:

err
IMT bus error statistics

hmuxerr
HMUX card error statistics

hiprerr
HIPR card error statistics

hipr2err
HIPR2 card error statistics

ebucket (optional)

End bucket. The last one-hour time period (*bucket*) for which error statistics are reported.

Range:

0 - 15

Default:

If *sbucket* is specified—current *sbucket* value; information for only that time period is displayed.

If *sbucket* is not specified—*15*, the report includes statistics for all 16 time periods

e1oc (optional)

End location. Specifies the card location of the last card in the range for the report.

Range:

1101 - 1113, 1115, 1201 - 1218, 1301 - 1318, 2101 - 2118, 2201 - 2218, 2301 - 2318, 3101 - 3118, 3201 - 3218, 3301 - 3318, 4101 - 4118, 4201 - 4218, 4301 - 4318, 5101 - 5118, 5201 - 5218, 5301 - 5318, 6101 - 6118

Default:

If *sloc* is specified—current *sloc* value; displays information for one card

If *sloc* is not specified—*1115*, which corresponds to IMT address 251 (*e=251*); displays information for entire range of locations.

erronly (optional)

This parameter filters the output to display only non-zero counts in the error report.

Range:

yes

no

Default:

yes

eshelf (optional)

The end shelf location for MUX statistics. This shelf location is the last shelf in the range.

Range:

1100, 1200, 1300, 2100, 2200, 2300, 3100, 3200, 3300, 4100, 4200, 4300, 5100, 5200, 5300, 6100

Default:

`sshelf` is specified—the report starts with the `sshelf` value
`sshelf` and `eshelf` are not specified—the report is generated for all shelves equipped with the specified MUX type

eslot (optional)

The end slot location for MUX statistics for the cards in the MUX shelf.

Range:

1 - 18

Default:

`sslot` is specified—current `sslot` value
`sslot` is not specified—no default

mode (optional)

The display mode used in the error report.

Range:***full***

Displays information for each card along with a summary report

stats

Displays only individual card statistics

summary

Displays the summary portion of the report

Default:

summary

sbucket (optional)

Start bucket. The first one-hour time period (bucket) for which error statistics are reported.

Range:

0 - 15

Default:

0

sloc (optional)

Start location. The card location of the first card in the range for the report.

Range:

1101 - 1113, 1115, 1201 - 1218, 1301 - 1318, 2101 - 2118, 2201 - 2218, 2301 - 2318, 3101 - 3118, 3201 - 3218, 3301 - 3318, 4101 - 4118, 4201 - 4218, 4301 - 4318, 5101 - 5118, 5201 - 5218, 5301 - 5318, 6101 - 6118

Default:

`eloc` is specified—current `eloc` value
`eloc` and `sloc` are not specified—displays information for entire range of card locations

sshelf (optional)

The starting shelf location for MUX statistics. This location is the first shelf in the range.

Range:

1100, 1200, 1300, 2100, 2200, 2300, 3100, 3200, 3300, 4100, 4200, 4300, 5100, 5200, 5300, 6100

Default:

eshelf is specified—current *eshelf* value
eshelf and *sshelf* are not specified—report is generated for all shelves equipped with the specified MUX type

sslot (optional)

The starting slot location for MUX statistics for the cards in the MUX shelf.

Range:

1 - 18

Default:

eslot is specified—current *eslot* value
eslot is not specified—no default

trm (optional)

The serial port (printer location) where the report is sent.

Range:

1 - 16

Default:

Report displays on the terminal where the command is issued

Example

```
rept-imt-info:report=err  
rept-imt-info:report=err:sloc=1101:eloc=1102:mode=stats  
rept-imt-  
info:report=err:sloc=1101:eloc=1102:mode=full:erronly=no  
rept-imt-info:report=hiprerr:sbucket=0  
rept-imt-  
info:report=hiprerr:sshelf=1100:sslot=1:eslot=2:sbucket=0
```

Dependencies

No related IMT command can be in progress when this command is entered. Only one report can be active at a time.

2368 E2368 Cmd Rej: System busy - try again later

This command cannot be entered at a telnet terminal (terminal ID 17-40).

4283 E4283 Cmd Rej: Command cannot be executed on a Telnet terminal

This command cannot be entered during an IMT statistics collection period following an hourly boundary (IMT performance monitoring).

N/A N/A

3044 E3044 Cmd Rej: Invalid parameter specified for report type

The ending hourly time period cannot be less than the starting hourly time period.

3049 E3049 Cmd Rej: Ending bucket cannot be less than starting bucket

If the `sslot` and `eslot` parameters are specified, then the `sshelf` parameter must be specified and the `eshelf` parameter cannot be specified (slot information is reported for a single shelf).

2155 E2155 Cmd Rej: Invalid parameter combination specified

A value of `hmutexerr`, `hiprerr`, or `hipr2err` must be specified for the `report` parameter before the `sshelf` and `eshelf` parameters can be specified.

4027 E4027 Cmd Rej: S/ESHELF parameters are invalid with specified report type

The MUX card slots (09 and 10) cannot be specified for the `sslot` and `eslot` parameter values.

3481 E3481 Cmd Rej: S/ESLOT cannot be set to 9 or 10

A card location that is valid and defined in the database must be specified.

2376 E2376 Cmd Rej: Specified LOC is invalid

This command cannot be entered during an Extended Bit Error Rate Test (BERT).

3043 E3043 Cmd Rej: IMT test in progress

The shelf locations specified by the `sshelf` and `eshelf` parameters must be provisioned in the frame.

2108 E2108 Cmd Rej: Shelf location not equipped

The `report=err` parameter must be specified before the `erronly` and `mode` parameters can be specified.

3044 E3044 Cmd Rej: Invalid parameter specified for report type

The `sshelf` parameter must be specified, and a value of `hiprerr` or `hipr2err` must be specified for the `report` parameter before the `sslot` and `eslot` parameters can be specified.

3044 E3044 Cmd Rej: Invalid parameter specified for report type

A value of `hiprerr`, `hipr2err`, or `hmutexerr` must be specified for the `report` parameter before the `sshelf` or `eshelf` parameter can be specified.

3044 E3044 Cmd Rej: Invalid parameter specified for report type

Notes

This command can be canceled using the **F9** function key or the `canc-cmd` command. See `canc-cmd` for more information.

Hourly Bucket Statistics

Hourly Bucket Statistics apply to cards on the IMT bus and to MUX cards. Each hourly time period (*bucket*) contains the statistics for a single hour. A total of 16 hourly time periods,

numbered 0 - 15, exist. Hourly time period 0 is the most-recent (current), and hourly time period 15 is the least-recent (oldest).

Each hour the statistics for the current hourly time period expire, and the hourly time periods advance. That is, after the advance, the statistics previously reported in hourly time period 0 are now reported in the hourly time period 1, and so on. The statistics reported in the hourly time period 15 are no longer available after the change.

When a card is reinitialized, it begins collecting statistics in hourly time period 0 and changes to hourly time period 1 at the start of the next hour. Thus, the first statistics that a card collects after being reinitialized may be for a partial hour.

MUX Statistics

A MUX card stores the statistics separately for each card on its shelf. If the `sloc` and `eloc` parameters are specified, then the card sends the statistics for each card to the OAM application for display. If the `sloc` and `eloc` parameters are not specified, then the card sends an aggregate number to the OAM application to represent statistics for all cards on its shelf.

Low Speed Summary

Table 4-43 rept-imt-info Statistics, Low Speed Summary (rept-imt-info:report=(hmutexerr, hiprerr, or hipr2err))

Stat Label – Low Speed Error & Event Counts	Explanation of Stat	Probable Cause	Recommended Action
IMT Rx Packet CRC Error	Receive CRC error: Bad Checksum in received IMT packet. Caused by corrupted data within the received packet. Detected by hardware.	Maintenance activity: Card insertion, removal, or boot. Does not occur in a normal system and indicates a hardware failure: defective LIM card, MUX card, FC cable or backplane.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a hardware issue is present. Contact the Customer Care Center.
IMT Rx Packet Format Error	Receive Format error: Occurs when the End of Message byte of an IMT packet is found missing. Detected by hardware/software.	Maintenance activity: Card insertion, removal, or boot. Does not occur in a normal system and indicates a hardware failure: defective LIM card, MUX card, FC cable or backplane.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a hardware issue is present. Contact the Customer Care Center.
IMT Rx Violation Error	Violation Error: Received an illegal character from the physical IMT transport (TAXI Interface). Detected by hardware	Card insertion, removal, or boot or defective hardware	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a problem may exist. Contact the Customer Care Center.

Table 4-43 (Cont.) rept-imt-info Statistics, Low Speed Summary (rept-imt-info:report=(hmutexerr, hiprerr, or hipr2err))

Stat Label – Low Speed Error & Event Counts	Explanation of Stat	Probable Cause	Recommended Action
IMT Rx Command Error	Reserved.	Reserved.	Reserved.
IMT Rx FIFO Full	Receive FIFO Full: Watermark indication that this interface receiving data off the TAXI line is receiving traffic in excess of what it can handle. Some traffic will have been discarded. May cause retransmissions, CRC errors and Format errors.	Relatively heavy traffic on this interface can cause these counts to increment. If these counts occur in the field, a software problem may exist.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a problem may exist. Contact the Customer Care Center.
IMT Rx FIFO Half Full	Receive FIFO Half Full: Watermark indication that the interface receiving data off the TAXI line has received substantial traffic.	Relatively heavy traffic on this interface can cause these counts to increment.	None. FIFO Half Full is an indication; no action is required.
IMT Tx FIFO Full	Transmit FIFO Full: The FIFO has overflowed and data has been lost. This stat is only meaningful for MUX card columns.	Relatively heavy traffic on this interface can cause these counts to increment. This condition should never occur. These events may indicate a software problem	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a problem may exist. Contact the Customer Care Center.
IMT Tx FIFO Half Full	Transmit FIFO Half Full: Watermark indication that this interface is backed up through ½ of its available storage. This stat is only meaningful for MUX card columns.	Indicates that data was transmitted at a relatively high rate for a short period.	None. FIFO Half Full is just an indication; no action is required.
CPU Rx FIFO Empty Before SOM	Occurs when valid packet data is read from the CPU Rx FIFO and the beginning (SOM) of the packet is found missing before all data was read.	The SOM was corrupted while being written into the CPU Rx FIFO from the low speed link.	None. This error will automatically empty the FIFO so it is ready to continue receiving data. If the error continues, contact the Customer Care Center.

Table 4-43 (Cont.) rept-imt-info Statistics, Low Speed Summary (rept-imt-info:report=(hmutexerr, hiprerr, or hipr2err))

Stat Label – Low Speed Error & Event Counts	Explanation of Stat	Probable Cause	Recommended Action
CPU Rx FIFO Empty Before EOM	Occurs when valid packet data is read from the CPU Rx FIFO and the end (EOM) of the packet is found missing before all data was read.	The SOM was corrupted while being written into the CPU Rx FIFO or a partial packet was written into the FIFO from the low speed link.	None. This error will automatically empty the FIFO so that it is ready to continue receiving data. If the error continues, contact the Customer Care Center.
CPU Rx Packet SOM Before EOM	A Start of Message was received when an End of Message was expected from the IMT bus.	Packet was corrupted in the system (EOM lost) and has another packet appended to it.	None. If the problem persists, contact the Customer Care Center.
CPU Rx Packet CRC Error	Occurs when valid packet data is read from the CPU Rx FIFO and transferred to the processor memory and calculated CRC does NOT match the CRC word at the end of the packet.	The data was corrupted while being written into the CPU Rx FIFO or data coming from the low speed link is corrupted.	None. If the problem persists, contact the Customer Care Center.
DMA Terminal Count	Received IMT packet length is longer than the max allowed. Detected by hardware.	Card insertion/removal or boot.	None if card has booted or was just inserted. Clear the stats and if the problem persists, contact the Customer Care Center.
CPU Tx Buffer EOB	A packet that was being transmitted from the CPU Tx Buffer did not have an EOM.	The data was corrupted while being written into or being read from the FIFO.	None. If the problem persists, contact the Customer Care Center.
CPU Tx Buffer Full	Transmit Buffer Full: The Tx Buffer unexpectedly filled up.	Either the COM software attempted to transmit too much data at once or the Tx logic was unable to transmit the data.	None. If the problem persists, contact the Customer Care Center.
CPU Tx Buffer Half Full	Transmit Buffer Half Full: Watermark indication that this interface is backed up through ½ of its available storage.	Relatively heavy outbound traffic on this interface can cause these counts to increment.	None. Buffer Half Full is just an indication, no action is required.

Table 4-43 (Cont.) rept-imt-info Statistics, Low Speed Summary (rept-imt-info:report=(hmutexerr, hiprerr, or hipr2err))

Stat Label – Low Speed Error & Event Counts	Explanation of Stat	Probable Cause	Recommended Action
CPU Rx FIFO Full	Receive FIFO Full: The Rx FIFO unexpectedly filled up.	Indicates that data was received at a higher rate than could be processed by the Communications processor.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If the errors continue, a problem may exist. Contact the Customer Care Center.
CPU Rx FIFO Half Full	Receive FIFO Half Full: Watermark indication that this interface is backed up through ½ of its available storage.	Relatively heavy inbound traffic on this interface can cause these counts to increment.	None. FIFO half full is just an indication, no action is required.
IMT Bypass FIFO Full	IMT Bypass FIFO Full: The bypass FIFO unexpectedly filled up.	Relatively heavy traffic on this interface can cause these counts to increment. If these counts occur in the field, a software problem may exist.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If the errors continue, a problem may exist. Contact the Customer Care Center.
IMT Bypass FIFO Half Full	IMT Bypass FIFO Half Full: Watermark indication that this interface is backed up through ½ of its available storage.	Relatively heavy inbound traffic on this interface can cause these counts to increment.	None. FIFO half full is just an indication, no action is required.

High Speed Summary**Table 4-44 rept-imt-info Statistics, High Speed Summary**

Stat Label – High Speed Error & Event Counts	Explanation of Stat	Probable Cause	Recommended Action
IMT Rx Disparity Error	Fibre Channel Receive Packet with Disparity Errors: Parity error in received packet. Usually caused by corrupted data.	Should not occur in a properly functioning system and may indicate a hardware failure.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a problem may exist. Contact the Customer Care Center.

Table 4-44 (Cont.) rept-imt-info Statistics, High Speed Summary

Stat Label – High Speed Error & Event Counts	Explanation of Stat	Probable Cause	Recommended Action
IMT Rx Sync Lost Error (This error count is not used in MUX card.)	Fibre Channel Receive Lost Synchronization Errors: The receiver on this interface lost synchronization.	Should not occur in a properly functioning system and may indicate a hardware failure.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a problem may exist. Contact the Customer Care Center.
IMT Rx Code Word Error	Fibre Channel Receive code Word Errors: Error in received packet. Caused by corrupted data.	Should not occur in a properly functioning system and may indicate a hardware failure.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If the errors continue, a problem may exist. Contact the Customer Care Center.
IMT Rx Packet SOM Before EOM	Fibre Channel Receive Packet with Start of Message without a previous End of Message Errors: The software detected the start of a new packet before the end of the previous packet was detected.	Should not occur in a properly functioning system and may indicate a hardware failure.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a problem may exist. Contact Customer Care Center.
IMT Bypass FIFO Full	Fibre Channel Bypass FIFO Full: The FIFO has over run and data has been lost. May result in significant downstream errors.	Should not occur in a properly functioning system, and may indicate a software or hardware failure.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a problem may exist. Contact the Customer Care Center.
IMT Bypass FIFO Half Full	Fibre Channel Bypass FIFO Half Full: Watermark indication that this interface has backed up to the half way point of its capabilities.	Relatively heavy traffic on this interface can cause these counts to increment.	None. FIFO Half Full is just an indication: no action is required.
IMT Rx FIFO Full	Fibre Channel Receive FIFO Full: The FIFO has over run and data has been lost. May result in significant downstream errors.	Should not occur in a properly functioning system. Indicates a software or hardware failure	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a problem may exist. Contact the Customer Care Center.

Table 4-44 (Cont.) rept-imt-info Statistics, High Speed Summary

Stat Label – High Speed Error & Event Counts	Explanation of Stat	Probable Cause	Recommended Action
IMT Rx FIFO Half Full	Fibre Channel Receive FIFO Half Full: Watermark indication that this interface has backed up to the half way point of its capabilities.	Relatively heavy traffic on this interface can cause these counts to increment.	None. FIFO Full in this case is just an indication; no action is required.
IMT Tx FIFO Full	Fibre Channel Transmit FIFO Full: Watermark indication that this interface has transmitted substantial traffic.	Relatively heavy traffic on this interface can cause these counts to increment.	None. FIFO Full in this case is just an indication; no action is required.
IMT Tx FIFO Half Full	Fibre Channel Transmit FIFO Half Full: Watermark indication that this interface has backed up to the half way point of its capabilities.	Relatively heavy traffic on this interface can cause these counts to increment.	None. FIFO Half Full is just an indication; no action is required.
CPU Rx Fifo Full	Receive FIFO Full: The Rx FIFO unexpectedly filled up.	Indicates that data was received at a higher rate than could be processed by the Communications processor.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If the errors continue, a problem may exist. Contact the Customer Care Center.
CPU Rx FIFO Half Full	Receive FIFO Half Full: Watermark indication that this interface is backed up through ½ of its available storage.	Relatively heavy inbound traffic on this interface can cause these counts to increment.	None. FIFO half full is just an indication, no action is required.
CPU Rx FIFO Empty Before SOM	Occurs when valid packet data is read from the CPU Rx FIFO and the beginning (SOM) of the packet is found missing before all data was read.	The SOM was corrupted while being written into the CPU Rx FIFO from the high speed link.	None. This error will automatically empty the FIFO so that it is ready to continue receiving data. If the problem persists, contact the Customer Care Center.
CPU Rx FIFO Empty Before EOM	Occurs when valid packet data is read from the CPU Rx FIFO and the beginning (SOM) of the packet is found missing before all data was read.	The SOM was corrupted while being written into the CPU Rx FIFO or a partial packet was written into the FIFO from the high speed link.	None. This error will automatically empty the FIFO so that it is ready to continue receiving data. If the problem persists, contact the Customer Care Center.

Table 4-44 (Cont.) rept-imt-info Statistics, High Speed Summary

Stat Label – High Speed Error & Event Counts	Explanation of Stat	Probable Cause	Recommended Action
CPU Rx Packet SOM Before EOM	A Start of Message was received when an End of Message was expected from the Fibre Channel bus.	Packet was corrupted in the system (EOM lost) and has another packet appended to it.	None. If the problem persists, contact the Customer Care Center.
CPU Rx Packet CRC Error	Occurs when valid packet data is read from the CPU Rx FIFO and transferred to the processor memory and calculated CRC does NOT match the CRC word at the end of the packet.	The data was corrupted while being written into the CPU Rx FIFO or data coming from the high speed link is corrupted.	None. If the problem persists, contact the Customer Care Center.
DMA Terminal Count	Received IMT packet length (on Fibre Channel) is longer than the max allowed. Detected by hardware.	Card insertion/removal or boot.	None if card has booted or was just inserted. Clear the stats and if the problem persists, contact the Customer Care Center.
CPU Tx Buffer EOB	A packet that was being transmitted from the CPU Tx Buffer did not have an EOM.	The data was corrupted while being written into or being read from the FIFO.	None. If the problem persists, contact Customer Care Center.
CPU Tx Buffer Full	Transmit Buffer Full: The Tx Buffer unexpectedly filled up.	Either the COM software attempted to transmit too much data at once or the Tx logic was unable to transmit the data.	None. If the problem persists, contact the Customer Care Center.
CPU Tx Buffer Half Full	Transmit Buffer Half Full: Watermark indication that this interface is backed up through ½ of its available storage.	Relatively heavy outbound traffic on this interface can cause these counts to increment.	None. Buffer Half Full is an indication, no action is required.
IXP Rx FIFO Full	Fibre Channel IXP Receive FIFO Full: The IXP Rx FIFO momentarily became full. This event can occur under normal conditions and it does not indicate an issue.	Relatively heavy traffic on this interface can cause these counts to increase.	None. FIFO Full in this case is just an indication; no action is required.
IXP Rx FIFO Half Full	Fibre Channel IXP Receive FIFO Half Full: Watermark indication that this interface has backed up to the half way point of its capabilities.	Relatively heavy traffic on this interface can cause these counts to increment.	None. FIFO Full in this case is just an indication; no action is required.
IMT Rx Byte Per Minute AVG	Average per minute	Normal behavior	None. Information only.

Table 4-44 (Cont.) rept-imt-info Statistics, High Speed Summary

Stat Label – High Speed Error & Event Counts	Explanation of Stat	Probable Cause	Recommended Action
IMT Rx Byte Per Second AVG	Average per second	Normal behavior	None. Information only.

IMT Rx Safety Per Minute AVG	Average per minute	Normal behavior	None. Information only.
IMT Rx Safety Per Second AVG	Average per second	Normal behavior	None. Information only.
IMT Rx MSU Byte Per Minute AVG	Average bytes per minute received on the line card interface within reliable delivery packets.	Normal behavior	None. Information only.
IMT Rx MSU Byte Per Second AVG	Average bytes per second received on the line card interface within reliable delivery packets.	Normal behavior	None. Information only.
IMT Rx ASU Byte Per Minute AVG	Average bytes per minute received on the line card interface within acknowledgment packets.	Normal behavior	None. Information only.
IMT Rx ASU Byte Per Second AVG	Average bytes per second received on the line card interface within acknowledgment packets.	Normal behavior	None. Information only.
IMT Rx DSU Byte Per Minute AVG	Average bytes per minute received on the line card interface within best effort delivery packets.	Normal behavior	None. Information only.

Table 4-44 (Cont.) rept-imt-info Statistics, High Speed Summary

Stat Label – High Speed Error & Event Counts	Explanation of Stat	Probable Cause	Recommended Action
IMT Rx DSU Byte Per Second AVG	Average bytes per second received on the line card interface within best effort delivery packets.	Normal behavior	None. Information only.
IMT Rx MSU Byte Count	Number of bytes received on the line card interface within reliable delivery packets.	Normal behavior	None. Information Only
IMT Rx ASU Byte Count	Number of bytes received on the line card interface within acknowledgment packets.	Normal behavior	None. Information only.
IMT Rx DSU Byte Count	Number of bytes received on the line card interface within best effort delivery packets.	Normal behavior	None. Information only.
IMT RX HSU Byte Count	Number of bytes received on the line card interface within mux specific packets.	Normal behavior	None. Information only.
IMT Rx LSSU Byte Count	Number of bytes received on the line card interface within virtual circuit alignment packets.	Normal behavior	None. Information only.
IMT Rx TSU Byte Count	Number of bytes received on the line card interface within test data packets.	Normal behavior	None. Information only
IMT Rx SSU Byte Count	Number of bytes received on the line card interface within safety packets.	Normal behavior.	None. Information only.
IMT Rx BSU Byte Count	Number of bytes received on the line card interface within broadcast packets.	Normal behavior	None. Information only.
IMT Rx Byte Other	Number of bytes received on the line card interface within data packets other than the above.	Normal behavior	None. Information only.
IMT Rx Total Byte Count	Number of bytes received on the line card interface within all types of packets.	Normal behavior	None. Information only.

Table 4-44 (Cont.) rept-imt-info Statistics, High Speed Summary

Stat Label – High Speed Error & Event Counts	Explanation of Stat	Probable Cause	Recommended Action
IMT Rx MSU Packet Count	Number of reliable delivery packets received on the IMT.	Normal behavior	None. Information only.
IMT Rx ASU Packet Count	Number of acknowledgment packets received on the IMT.	Normal behavior	None. Information only.
IMT Rx DSU Packet Count	Number of best effort delivery message data packets received on the IMT.	Normal behavior	None. Information only.
IMT Rx HSU Packet Count	Number of mux card data packets received on the IMT.	Normal behavior	None. Information only.
IMT Rx LSSU Packet Count	Number of virtual circuit alignment packets received on the IMT.	Normal behavior	None. Information only.
IMT Rx TSU Packet Count	Number of test data packets received on the IMT.	Normal behavior.	None. Information only.
IMT Rx SSU Packet Count	Number of safety packets received on the IMT.	Normal behavior	None. Information only.
IMT Rx BSU Packet Count	Number of broadcast data packets received on the IMT.	Normal behavior	None. Information only.
IMT Rx Packet Other	Number of all packets types not counted by one of the above.	Normal behavior	None. Information only.
IMT Rx Total Packet Count	Number of packets received on the IMT, all types.	Normal behavior	None. Information only.
IMT Rx MSU Packet Safety Count	Number of reliable delivery message data packets that did not arrive to the intended recipient on the IMT.	Normal behavior	None. Information only.
IMT Rx ASU Packet Safety Count	Number of acknowledgment packets that did not arrive to the intended recipient on the IMT.	Normal behavior	None. Information only.
IMT Rx DSU Packet Safety Count	Number of best effort delivery packets that did not arrive to the intended recipient on the IMT.	Normal behavior	None. Information only.
IMT Rx HSU Packet Safety Count	Number of mux card packets that did not arrive to the intended recipient on the IMT.	Normal behavior	None. Information only.

Table 4-44 (Cont.) rept-imt-info Statistics, High Speed Summary

Stat Label – High Speed Error & Event Counts	Explanation of Stat	Probable Cause	Recommended Action
IMT Rx LSSU Packet Safety Count	Number of virtual circuit alignment packets that did not arrive to the intended recipient on the IMT.	Normal behavior	None. Information only.
IMT Rx TSU Packet Safety Count	Number of test data packets that did not arrive to the intended recipient on the IMT.	Normal behavior	None. Information only.
IMT Rx SSU Packet Safety Count	Number of safety packets that did not arrive to the intended recipient on the IMT.	Normal behavior	None. Information only.
IMT Rx BSU Packet Safety Count	Number of broadcast data packets that did not arrive to the intended recipient on the IMT.	Normal behavior	None. Information only.
IMT Rx Other Packet Safety Count	Number of other packets types not included above that did not arrive to the intended recipient on the IMT.	Normal behavior	None. Information only.
IMT Rx Total Packet Safety Count	Number of all packets that did not arrive to the intended recipient on the IMT.	Normal behavior	None. Information only.
IMT Rx Packet Violation Error	Number of packets received that contained an illegal character.	Card insertion, removal, boot or defective hardware	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a hardware issue exists. Contact Customer Care Center.
IMT Rx Packet CRC Error	Receive CRC error: Bad Checksum in received IMT packet. Caused by corrupted data within the received packet. Detected by hardware.	Card insertion, removal, or boot. Does not occur in a normal system and indicates a hardware failure: defective LIM card, MUX card, FC cable or backplane.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a hardware issue exists. Contact Customer Care Center.
IMT Rx Packet Format Error	Receive Format error: Occurs when the End of Message byte of an IMT packet is found missing. Detected by hardware/ software.	Card insertion, removal, or boot. Does not occur in a normal system and indicates a hardware failure: defective LIM card, MUX card, FC cable or backplane.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a hardware issue exists. Contact Customer Care Center.

Table 4-44 (Cont.) rept-imt-info Statistics, High Speed Summary

Stat Label – High Speed Error & Event Counts	Explanation of Stat	Probable Cause	Recommended Action
IMT Rx Packet Discard Error	Number of packets received that were discarded by this interface.	Relatively heavy traffic on this interface can cause these counts to increment.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear then there is no action to perform. If errors continue, a problem may exist. Contact Customer Care Center.
IMT Tx Packet Format Error	Number of packets transmitted that were detected to contain a data format error.	Maintenance activity: Card insertion, removal, or boot. Does not occur in a normal system and indicates a hardware failure: defective LIM card, MUX card, FC cable or backplane.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear then there is no action to perform. If errors continue, a problem may exist. Contact Customer Care Center.
IMT Tx Packet Discard Error	Number of packets that were discarded by the transmit interface.	Relatively heavy traffic on this interface can cause these counts to increment.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear then there is no action to perform. If errors continue a problem may exist. Contact Customer Care Center.

Miscellaneous Summary

Table 4-45 rept-imt-info Statistics, Miscellaneous Summary

Stat Label – Low Speed Error & Event Counts	Explanation of Stat	Probable Cause	Recommended Action
Shelf ID UART Framing Error	The Mux card at this location detected a framing error within the data stream containing its shelf address, transmitted by the MASP through the clock cable.	These errors can occur when a Mux card or a MASP has booted or been inserted/ removed from the slot.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If the errors continue, a problem may exist. Contact the Customer Care Center.
Shelf ID UART Overrun Error	The Mux card at this location detected an overrun error in the data stream containing its shelf address, transmitted by the MASP through the clock cable.	These errors can occur when a Mux card or a MASP has booted or been inserted/ removed from the slot.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If the errors continue, a problem may exist. Contact the Customer Care Center.

Output

An asterisk (*) is appended to each statistic in the output when one or more MUX cards are unable to report statistics during the collection of IMT statistics.

IMT statistics are displayed as '-' instead of zero for counts when the IMT bus is down or inhibited in the output for `rept-imt-info` reports for MUX cards.

Legend

IMT Statistics:

- **Bucket**—The hourly time periods (*buckets*) for which a report was requested.
- **Statistic**—The error statistic type for the IMT buses A and B.
- **Bus A Value**—The number of occurrences of the type of error displayed in the Statistic column for the IMT bus A.
- **Bus B Value**—The number of occurrences of the type of error displayed in the Statistic column for the IMT bus B.

- **Low Speed Statistic**—The error statistic type for the low speed 125 Mbps secondary rings with MUX cards installed on buses A (xy09 card locations) and B (xy10 card locations).
- **High Speed Statistic**—The error statistic type for the high-speed 1 Gbps primary ring with MUX cards installed on buses A (xy09 card locations) and B (xy10 card locations).
- **Misc Speed Statistics**—Shelf ID Universal Asynchronous Receiver Transmitter (UART) error counts on the MUX cards installed on buses A (xy09 card locations) and B (xy10 card locations).
- **Bucket Summary**—The error count for each parameter for one hour for HMUX cards installed on buses A (xy09 card locations) and B (xy10 card locations). (The count is for the most recent part of an hour if the card was booted within an hour of executing the `rept-imt-info` command.)
- **Cumulative**—The running total error count for each parameter since card initialization for HMUX cards installed on buses A (xy09 card locations) and B (xy10 card locations).

MUX Statistics:

- **Bucket**—The hourly time periods (*buckets*) for which a report was requested.
- **Loc**—The card location (shelf and slot) for which information is displayed.
- **Low Speed Statistic**—The error statistic type for the low speed 125 Mbps secondary rings with MUX cards installed on buses A (xy09 card locations) and B (xy10 card locations).
- **High Speed Statistic**—The error statistic type for the high-speed 1 Gbps primary ring with MUX cards installed on buses A (xy09 card locations) and B (xy10 card locations).
- **Misc Speed Statistic**—The miscellaneous error statistic type.
- **Bus A**—The number of occurrences of the type of error displayed in the Statistic column for the IMT bus A.
- **Bus B**—The number of occurrences of the type of error displayed in the Statistic column for the IMT bus B.

4.1.389 rept-imt-lvl1

Use this command to display IMT level 1 statistics for a card or a range of cards. A summary report of totals for all cards is also generated.

Parameters

e (optional)

End address. The IMT address of the last card in the range. A decimal value or a hexadecimal value can be specified for this parameter (see [Table 4-46](#) to map the values by card location).

Range:

0 - 251

The value can be specified in decimal (*0-251*) or hexadecimal (*h'00 – h'fe*)

Default:

If the `s` parameter is specified, the default value is the `s` parameter value.

If the `s` parameter is not specified, the `e` parameter cannot be specified and the `sloc` parameter must be specified.

e1oc (optional)

End location. The card location of the last card in the range.

Range:

1101 - 1108, 1111 - 1113, 1115, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118

Default:

If `sloc` is specified—current `sloc` value; displays information for one card

If `sloc` is not specified— *1115*, which corresponds to IMT address 251 (`e=251`); displays information for entire range of locations.

eshelf (optional)

End Shelf location. The shelf location of the last shelf in the range.

Range:

1100, 1200, 1300, 2100, 2200, 2300, 3100, 3200, 3300, 4100, 4200, 4300, 5100, 5200, 5300, 6100

Default:

if the `sshelf` parameter is specified—current `sshelf` value

if the `sshelf` parameter is not specified— *6100*, which displays information for entire range of shelves

filter (optional)

The filter that determines the information that is displayed in the report.

Range:

error

display all error counts

perf

display performance counts

erroronly

display non-zero error counts

full

display zero and non-zero error counts and performance counts

Default:

full

hs (optional)

This parameter specifies whether to include High Speed interface counts in the report.

Range:**no**

do not include High Speed interface counts

yes

include High Speed interface counts

Default:

no

r (optional)

Report type value

Range:**full**

Displays information for each card along with a summary report.

stats

Displays only individual card statistics.

summary

Displays the summary portion of the report.

Default:

full

s (optional)

Start address. The IMT address of the first (or only) card in the range. A decimal value or a hexadecimal value can be specified for this parameter (see [Table 4-46](#) to map the values by card location).

Range:

0 - 251

The value can be specified in decimal (0-251) or hexadecimal (h'00 – h'fb)

sloc (optional)

Start location. The card location of the first card in the range.

Range:

1101 - 1108, 1111 - 1113, 1115, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108,

4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108,
5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108,
6111 - 6118

Default:

If `eloc` is specified—current `eloc` value

If `eloc` is not specified—1201, which corresponds to IMT address 0 (`s=0`).

sshelf (optional)

Start Shelf location. The shelf location of the first shelf in the range.

 **Note:**

This parameter specified alone is the equivalent to specifying the IMT address range. For example, “sshelf=1200” is equivalent to specifying the IMT address range as “s=h'00:e=h'0f”.

Range:

1100, 1200, 1300, 2100, 2200, 2300, 3100, 3200, 3300, 4100, 4200, 4300, 5100,
5200, 5300, 6100

Default:

if the `eshelf` parameter is specified—the current `eshelf` value

if the `eshelf` parameter is not specified—1100, which displays information for the entire range of shelves

term (optional)

This parameter specifies the terminal port where the report is sent.

Range:

1 - 40

Default:

Report displays on the terminal where the command was issued

Example

This example requests low speed interface counts.

```
rept-imt-lvl1:s=h'00:e=h'00
```

This example requests a summary report of low speed interface counts.

```
rept-imt-lvl1:s=h'00:e=h'00:r=summary
```

This example requests low speed interface counts.

```
rept-imt-lvl1:sshelf=1200
```

This example requests low speed interface counts for individual cards.

```
rept-imt-lvl1:sshelf=1200:r=stats
```

This example requests low speed and high speed interface counts.

```
rept-imt-lvl1:sshelf=1200:hs=yes
```

This example requests low speed and high speed interface counts.

```
rept-imt-lvl1:s=h'00:e=h'00:hs=yes
```

This example requests an error report for non-zero error counts.

```
rept-imt-lvl1:s=h'00:e=h'00:filter=error-only
```

This example requests an error report for zero and non-zero error counts.

```
rept-imt-lvl1:s=h'00:e=h'00:filter=error
```

Dependencies

Only one report status command can be in progress at a time.

N/A N/A

The `s`, `sloc`, or `sshelf` parameter must be specified in the command.

3048 E3048 Cmd Rej: Starting address/location/shelf must be specified

This command cannot be entered during IMT statistics collection following an hourly boundary.

N/A N/A

The command cannot be entered if the `clr-imt-stats`, `rept-imt-info`, `rept-imt-lvl2`, or `tst-imt` command is running.

2368 E2368 Cmd Rej: System busy - try again later

Only one of the `sloc/eloc`, `s/e`, and `sshelf/eshelf` parameter combinations can be specified in the command.

3047 E3047 Cmd Rej: Parameter combination invalid

A card location that is valid and defined in the database must be specified.

2376 E2376 Cmd Rej: Specified LOC is invalid

This command cannot be entered during an Extended Bit Error Rate Test (BERT).

3043 E3043 Cmd Rej: IMT test in progress

Notes

[Table 4-46](#) maps each card location to the decimal and hexadecimal [Converting ITU National Point Code Formats](#) values that can be specified for the `s` and `e` parameters.

Table 4-46 Hexadecimal/Decimal Values for s and e Parameters

Card Location	Hexadecimal Value	Decimal Value	Card location	Hexadecimal Value	Decimal Value
Control Shelf 11

Low speed ring counts and performance counts

If an HMUX card is not present in the shelf, then HMUX low speed ring counts are not displayed. If HIPR or HIPR2 cards are not present in the shelf, then performance counts are not displayed.

[Table 4-47](#) describes the statistics that are shown in the report for each card and in the Summary of totals for all requested cards, and their possible causes and corrective actions.

These statistics are displayed when the `rept-imt-lvl1:sloc=xxxx:eloc=yyyy:r=full` command is entered.

Table 4-47 Level 1 IMT Statistics

IMT Statistic	Explanation Of Statistic	Probable Causes	Recommended Action
Rx CRC Error	Receive CRC error: Bad Checksum in received IMT packet. Caused by corrupted data within the received packet. Detected by hardware.	Maintenance activity: Card insertion, removal, or boot. Does not occur in a normal system. Indicates a hardware failure: defective LIM card, MUX card, FC cable or backplane.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a hardware issue is present. Contact Customer Care Center.
Rx Format Error	Receive Format Error: Occurs when the End of Message byte of an IMT packet is found missing. Detected by hardware.	Service/Maintenance activity: Card insertion, removal, or boot. Does not occur in a normal system. Indicates a hardware failure: defective LIM card, MUX card, FC cable or backplane.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a hardware issue is present. Contact Customer Care Center.
Rx Inv Len	Receive Packet with Invalid Length: Card received an IMT packet where the actual length of the packet did not match the length indicated in the length field. Detected by software	Software defect. Does not occur in a normal system.	Contact Customer Care Center.

Table 4-47 (Cont.) Level 1 IMT Statistics

IMT Statistic	Explanation Of Statistic	Probable Causes	Recommended Action
Rx FIFO Half Full	Receive FIFO Half Full: Watermark indication that this interface receiving data off the TAXI line has received substantial traffic.	Relatively heavy traffic on this interface can cause these counts to increment.	None. FIFO Half Full is an indication; no action required.
Rx FIFO Full	Receive FIFO Full: Watermark indication that this interface receiving data off the TAXI line is receiving traffic in excess of what it can handle. Some traffic will have been discarded. May cause retransmissions, CRC errors and Format errors. Detected by hardware	Relatively heavy traffic on this interface can cause these counts to increment. Seeing these counts in the field may indicate a software problem.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a problem may exist. Contact the Customer Care Center.
CPU Rx FIFO Half Full	CPU Receive FIFO Half Full: Communication CPU on the card is becoming congested. Detected by hardware. This stat is only meaningful for cards that contain a BPxxxx GPL.	Relatively heavy traffic on this interface can cause these counts to increment. May indicate a SW problem.	None: FIFO Half Full is an indication; no action required.
CPU Rx FIFO Full	CPU Receive FIFO Full: Communication CPU on the card is becoming congested. Data has been dropped. May cause retransmissions, format and large packet errors. Detected by hardware. This stat is only meaningful for cards that contain a BPxxxx GPL.	Relatively heavy traffic on this interface can cause these counts to increment. May indicate a SW problem.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a hardware issue is present. Contact Customer Care Center.

Table 4-47 (Cont.) Level 1 IMT Statistics

IMT Statistic	Explanation Of Statistic	Probable Causes	Recommended Action
CPU Rx MSU FIFO Full	<p>CPU Receive MSU FIFO Full: Watermark indication that the MSU traffic is in excess of what the card can handle. Traffic will have been discarded. Expect retransmissions and possibly other errors.</p> <p>This stat is only meaningful for cards that contain the IMTPCI GPL; the FIFO stores data determined to be a MSU with no CRC error.</p>	Relatively heavy traffic on this interface can cause these counts to increment. May indicate a SW problem.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a hardware issue is present. Contact Customer Care Center.
CPU Rx LSSU FIFO Full	<p>CPU Receive LSSU FIFO Full: Watermark indication that the LSSU traffic is in excess of what the card can handle.</p> <p>This stat is only meaningful for cards that contain the IMTPCI GPL; the FIFO stores data determined to be a LSSU with no CRC error.</p>	May indicate a hardware failure (i.e.: a defective board), although a software issue is also possible.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a hardware issue exists. Contact Customer Care Center.
CPU Rx XSU FIFO Full	<p>CPU Receive XSU FIFO Full: Watermark indication that the XSU traffic is in excess of what the card can handle.</p> <p>This stat is only meaningful for cards that contain the IMTPCI GPL; the FIFO stores data determined not to be a MSU, LSSU or ASU, and no CRC error. Data internal to this card has been lost.</p>	Relatively heavy traffic on this interface can cause these counts to increment.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a hardware issue exists. Contact Customer Care Center.

Table 4-47 (Cont.) Level 1 IMT Statistics

IMT Statistic	Explanation Of Statistic	Probable Causes	Recommended Action
ASU Rx FIFO Half Full	CPU Receive ASU FIFO Half Full: Watermark indication that this interface has received substantial ASU traffic. This stat is only meaningful for cards that contain a BPxxxx GPL; the FIFO stores data determined to be an ASU with no CRC error.	Relatively heavy traffic on this interface can cause these counts to increment.	None. FIFO Half Full is an indication. No action required.
ASU Rx FIFO Full	CPU Receive ASU FIFO Full: Watermark indication that the ASU traffic is in excess of what the card can handle. ASUs will have been lost resulting in retransmission and other possible LVL1 errors. This stat is only meaningful for cards that contain a BPxxxx or IMTPCI GPL; the FIFO stores data determined to be an ASU with no CRC error.	Relatively heavy traffic on this interface can cause these counts to increment. Seeing these counts in the field may indicate a software problem.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a hardware issue exists. Contact Customer Care Center.
SSU Packet Rx	Safety Packets Received: This message type detects the loss of a card in the system if virtual connections between cards are lost.	Card insertion, removal, or boot, heavy traffic, abnormal conditions and/or software/hardware problems can result in these packets being generated.	None. These counts are an indication. No action required.
ASU Safety Pkt	ASU Safety Packets: ASU Unit has timed out on the IMT.	Card insertion, removal, or boot	None. These counts are only an indication. No action required.
TSU Safety Pkt	TSU Safety Packets: TSU Unit has timed out on the IMT	Card insertion, removal, or boot	None. These counts are only an indication. No action required.
BSU Safety Pkt	BSU Safety Packets: BSU Unit has timed out on the IMT.	Card insertion, removal, or boot	None. These counts are only an indication. No action required.
SSU Safety Pkt	SSU Safety Packets: SSU Unit has timed out on the IMT	Card insertion, removal, or boot	None. These counts are only an indication. No action required.

Table 4-47 (Cont.) Level 1 IMT Statistics

IMT Statistic	Explanation Of Statistic	Probable Causes	Recommended Action
Other Safety Pkt	Other Safety Packets Received: Possible message types are MSU, DSU, ISU, and/or HSU.	Card insertion, removal, or boot	None. These counts are only an indication. No action required.
Pri Ctrl Rx Error	Primary control receive error: Corrupted packet received. Detected by hardware	Card insertion, removal, or boot	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a problem may exist. Contact Customer Care Center.
Pri Ctrl Sanity Err	Primary Control Sanity Error: Internal hardware monitoring self check failed. Detected by hardware	Indicates that the hardware receive logic was unable to successfully process the incoming packet. May indicate a hardware problem.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a problem may exist. Contact Customer Care Center.
RX HW flow control event	Indicates the number of times the HW RX FIFO's backed up to a point to request the other end to HOLD until room is made available in the RX FIFO. Counts in the MUX column indicate the receiver was backed up on the MUX. Counts in the COM side indicate the LIM receiver was backed up.	Does not indicate a problem just an indication of low level congestion. Should excessive counts be seen it could indicate a problem.	None. RX HW flow control event is an indication. No action is required.
Pri Ctrl No SOM	Primary Control No Start of Message Error: Incoming data was detected without a start of message (SOM.) This stat is only meaningful for cards that contain a BPxxxx GPL.	Card insertion, removal, or boot.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear there is no action to perform. If errors continue, a problem may exist. Contact Customer Care Center.

Table 4-47 (Cont.) Level 1 IMT Statistics

IMT Statistic	Explanation Of Statistic	Probable Causes	Recommended Action
Pri Ctrl Tx Err	<p>Primary Control Transmit Error: Transmit logic encountered a problem sending a packet. Detected by hardware.</p> <p>This stat is only meaningful for application cards.</p>	Card insertion, removal, or boot.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a problem may exist. Contact Customer Care Center.
Tx FIFO Half Full	<p>Transmit FIFO Half Full: Watermark indication that this interface is backed up through ½ of its available storage.</p> <p>This stat is only meaningful for MUX card columns.</p>	Indicates that data was transmitted at a relatively high rate for a short period.	None. FIFO Half Full is an indication. No action is required.
Tx FIFO Full	<p>Transmit FIFO Full: The FIFO has overflowed and data has been lost.</p> <p>This stat is only meaningful for MUX card columns.</p>	Relatively heavy traffic on this interface can cause these counts to increment. May indicate a software problem	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a problem may exist. Contact Customer Care Center.
Future Field	Reserved	Reserved	Reserved
Future Field	Reserved	Reserved	Reserved
IMT Tx FIFO Half Full	<p>Transmit FIFO Half Full: Watermark indication that this interface is backed up through ½ of its available storage.</p> <p>This stat is only meaningful for MUX card columns.</p>	Indicates that data was transmitted at a relatively high rate for a short period.	None. FIFO Half Full is just an indication; no action is required.
IMT Tx FIFO Full	<p>Transmit FIFO Full: The FIFO has overflowed and data has been lost.</p> <p>This stat is only meaningful for MUX card columns.</p>	May indicate a software problem.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a problem may exist. Contact Customer Care Center.
Tx FIFO 3/4 Full	Reserved	Reserved	Reserved

Table 4-47 (Cont.) Level 1 IMT Statistics

IMT Statistic	Explanation Of Statistic	Probable Causes	Recommended Action
IMT By-pass FIFO Half Full	Watermark indication that this interface has backed to fill half on the FIFO. This stat is only meaningful for cards that contain a BLMCAP GPL.	May indicate that data was transmitted at a relatively high rate for a short period.	None. FIFO Half Full is an indication. No action is required.
IMT By-pass FIFO Full	By-pass FIFO overflowed data has been lost. This stat is only meaningful for cards that contain a BLMCAP GPL.	Very little if any data flows through this FIFO. May indicate a hardware problem	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a problem may exist. Contact Customer Care Center. The card may need to be replaced.
Pass thru CRC Error Lost Multicast Pkt	Reserved Lost Multicast Packets: This counter increments when the interface detects that one of these packets has not been delivered to a card in the list. This stat is only meaningful for application card columns.	Reserved Card insertion, removal, or boot. These events may indicate a software problem.	Reserved Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a problem may exist. Contact Customer Care Center.
Invalid Interrupt	The interface generated a spurious interrupt. This stat is only meaningful for cards that contain an IMTPCI GPL.	May indicate a software or hardware defect.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a problem may exist. Contact Customer Care Center. The card may need to be replaced.
Error Int Overflow Large Pkt Error	Deprecated Large Packet Error: The interface has detected packets larger than allowed in the data stream. This stat is meaningful for all cards except those containing the IMTPCI GPL.	Deprecated Card insertion, removal, boot, or a hardware error. May indicate a hardware problem.	Deprecated Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a problem may exist. Contact Customer Care Center.

Table 4-47 (Cont.) Level 1 IMT Statistics

IMT Statistic	Explanation Of Statistic	Probable Causes	Recommended Action
MSU Retran / MUX LVL1 Cong	<p>COM - Retransmissions occur when a transmitted MSU does not receive an acknowledgment (ASU) within an engineered timeout value. Detected by software.</p> <p>This stat is only meaningful for application cards.</p> <p>MUX - Count of occurrences that the MUX has reached level 1 congestion on the transmit path to the LIM (works in conjunction with MFC)</p>	<p>COM - Card insertion, removal, or boot. May indicate hardware, software or configuration problems.</p> <p>MUX - Nothing specific to do except for monitor for excessive counts</p>	<p>COM - Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a problem may exist. Contact Customer Care Center.</p> <p>MUX - Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a problem may exist. Contact Customer Care Center.</p>
MSU ROE / MUX LVL2 Cong	<p>COM - MSU Returned On Error: Number of MSUs returned to the application as undeliverable. Each application is responsible for indicating their need for MSUs to be returned if undeliverable. This count is for messages that the application has deemed important and requested that they be returned if undeliverable. Detected by software.</p> <p>MUX - Count of occurrences that the MUX has reached level 2 congestion on the transmit path to the LIM (works in conjunction with MFC)</p>	<p>COM - Destination card is not available to receive packets.</p> <p>MUX - Nothing specific to do except monitor for excessive counts</p>	<p>COM - None. MSU Returned on Error is an indication. No action is required.</p> <p>MUX - Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a problem may exist. Contact Customer Care Center.</p>

Table 4-47 (Cont.) Level 1 IMT Statistics

IMT Statistic	Explanation Of Statistic	Probable Causes	Recommended Action
VC OS Cnt / MUX Cong Disc	<p>COM - Virtual Circuit Out of Service Count: Count of times a Virtual Circuit (VC) on this card has gone Out of Service.</p> <p>Note: The A and B bus counts will be the same. For the VC to drop, communications on both busses must be lost.</p> <p>This stat is only meaningful for application cards.</p> <p>MUX - Count of occurrences that the MUX has reached congestion discard on the transmit path to the LIM. More data is being delivered to the transmit queue than can be transmitted to the slot/LIM.</p>	<p>COM - Destination card is not available to receive packets, or software/hardware errors that cause the virtual connection(s) to be dropped. Could occur during normal maintenance (card replacement/upgrades, or booting).</p> <p>MUX - Packets are being dropped or re-transmitted internally. This should not occur.</p>	<p>COM - Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a problem may exist. Contact Customer Care Center.</p> <p>MUX - Contact Customer Care Center.</p>
Bus Disconnect Count	<p>Bus Disconnect Count: Counts the times that the card has been disconnected from the bus.</p> <p>Note: The A and B bus counts can be different.</p> <p>This stat is only meaningful for application cards.</p>	<p>Any event that disconnects the card from the bus can cause this counter to increment (e.g. connectivity problems to the IMT bus, or issuing the <code>disc-imt</code> or <code>inh-imt</code> command)</p>	<p>If commands that disconnect the card from the bus have not been issued, clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a problem may exist. Contact Customer Care Center.</p>
Violation Error	<p>Received an illegal character from the physical IMT transport (TAXI Interface). Detected by hardware</p>	<p>Card insertion, removal, or boot or defective hardware</p>	<p>Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue, a problem may exist. Contact Customer Care Center.</p>

Table 4-47 (Cont.) Level 1 IMT Statistics

IMT Statistic	Explanation Of Statistic	Probable Causes	Recommended Action
Info: MSU Dropped no Rept	<p>MSU Dropped With No Report: Number of undeliverable MSUs that are not being returned to the application.</p> <p>Note: This statistic may be non-zero after executing the <code>rept-imt-lvl1</code> or <code>clr-imt-stats</code> command. During execution of these commands, the active MASP generates MSUs to unpopulated card slots. These MSUs result in an "MSU Dropped With No Report" count. To determine the number of unexpected "MSU Dropped With No Report" occurrences, the active MASP must be excluded from the <code>rept-imt-lvl1</code> card range.</p>	Destination card is not available to receive packets.	None. MSU Dropped is an indication. No action is required.
GBSU Resync	The count of how many times the GBSU receive sequence numbers have been resynchronized	These counts will occur on new card insertions, removals, boots, or a hardware error.	None. GBSU Resync is an indication. No action required.
GBSU Invalid Seq	The count of how many times a cards received a GBSU out of sequence.	This is unlikely but could occur on one bus (GBSU lost) and not the other bus.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear there is no action to perform. If stats continue to increase (and there are no booting cards), it is possible that the card's Dynamic Database may be inconsistent. Review the DDB status and if an issue exists, contact My Oracle Support.

Table 4-47 (Cont.) Level 1 IMT Statistics

IMT Statistic	Explanation Of Statistic	Probable Causes	Recommended Action
GBSU Lost Packet	The count of lost GBSU packets in the system (This is received, not sent). In a clean system with counts cleared this count should stay at 0x00.	GBSUs may be occasionally lost in a congested system.	Use the LVL2 stats to determine/find the path of the lost GBSU. Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear there is no action to perform. If stats continue to increase (and there are no booting cards), there could be a problem with the system. Contact the My Oracle Support.
GBSU RX GRP Discard	This count reflects the amount of overhead that the GBSU logic adds to these cards , and it is the number of GBSU's sent to this card that the card was not subscribed for.	GBSU Discards are normal events.	None. GBSU RX GRP Discard is an indication. No action required.

Level 1 IMT Statistics, Low Speed Performance Counts

The probable cause for all Level 1 IMT Statistics, Low Speed Performance Counts is normal behavior. These counts are information only, and no action is required.

These statistics are displayed when the `rept-imt-lvl1:sloc=xxxx:eloc=yyyy:r=full` command is entered.

- All Packets—Number of packets transmitted on the IMT, all types
- All bytes—Number of bytes transmitted on the IMT, all types
- MSU Packets—Number of reliable delivery message data packets transmitted on the IMT
- MSU Bytes—Number of reliable delivery message data bytes transmitted on the IMT
- ASU Packets—Number of acknowledgment packets transmitted on the IMT
- ASU Bytes—Number of acknowledgment bytes transmitted on the IMT
- DSU Bytes—Number of best effort delivery message data bytes transmitted on the IMT
- HSU Packets—Number of mux card data packets transmitted on the IMT
- HSU Bytes—Number of mux card data bytes transmitted on the IMT
- TSU Bytes—Number of test bytes transmitted on the IMT
- TSU Packets—Number of test packets transmitted on the IMT
- LSSU Packets—Number of virtual circuit alignment packets transmitted on the IMT
- LSSU Bytes—Number of virtual circuit alignment bytes transmitted on the IMT
- BSU Packets—Number of broadcast data packets transmitted on the IMT
- BSU Bytes—Number of broadcast data bytes transmitted on the IMT

- SSU Packets—Number of Safety packets transmitted on the IMT
- SSU Bytes—Number of safety bytes transmitted on the IMT
- Othr Packets—Number of all packets types not counted by one of the above
- Othr Bytes—Number of all data bytes not counted by one of the above
- TAXI Util—Approximate percentage utilization of Low Speed data bus

High Speed Error Summary for Level 1 IMT Statistics

Table 4-48 displays the High Speed Error Summary for Level 1 IMT Statistics.

These statistics are displayed when the `rept-imt-lvl1:sloc=xxxx:eloc=yyyy:r=full` command is entered.

Table 4-48 Level 1 IMT Statistics, High Speed Error Summary

Stat Label	Explanation of Stat	Probable Cause	Recommended Action
HS Rx Packet CRC Error	Fibre Channel Receive Packet with CRC Errors: Checksum error in received packet. Caused by corrupted data.	May indicate a hardware failure	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue a problem may exist. Contact My Oracle Support.
HS Rx Packet Format Error	Fibre Channel Receive Packet with Format Errors: Format error in received packet. Usually caused by corrupted data.	May indicate a hardware failure	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue a problem may exist. Contact My Oracle Support.
HS Rx Disparity Error	Fibre Channel Receive Packet with Disparity Errors: Error in received packet. Caused by corrupted data.	May indicate a hardware failure	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue a problem may exist. Contact My Oracle Support.
HS Rx Sync Lost Error	Fibre Channel Receive Lost Synchronization Errors: The interface lost sync on the received stream.	May indicate a hardware failure.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue a problem may exist. Contact My Oracle Support.

Table 4-48 (Cont.) Level 1 IMT Statistics, High Speed Error Summary

Stat Label	Explanation of Stat	Probable Cause	Recommended Action
HS Rx Code Word Error	Fibre Channel Receive code Word Errors: Error in received packet. Caused by corrupted data.	May indicate a hardware failure.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue a problem may exist. Contact My Oracle Support.
HS Rx Packet SOM Before EOM	Fibre Channel Receive Packet with Start of Message without a previous End of Message Errors: The software received detected the start of a new packet before the end of the previous packet was detected.	May indicate a hardware failure.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue a problem may exist. Contact My Oracle Support.
HS Bypass FIFO Half Full	Fibre Channel Bypass FIFO Half Full: Watermark indication that this interface has backed up to the half way point of its capabilities.	Relatively heavy traffic on this interface can cause these counts to increment.	None. FIFO Half Full is an indication. No action is required.
HS Bypass FIFO Full	Fibre Channel Bypass FIFO Full: The FIFO has over run and data has been lost. May result is significant downstream errors.	Indicates a software or hardware failure	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue a problem may exist. Contact My Oracle Support.
HS Rx FIFO Half Full	Fibre Channel Receive FIFO Half Full: Watermark indication that this interface has backed up to the half way point of its capabilities.	Relatively heavy traffic on this interface can cause these counts to increment.	None. FIFO Half Full is an indication. No action is required.
HS Rx FIFO Full	Fibre Channel Receive FIFO Full: The FIFO has over run and data has been lost. May result is significant downstream errors.	Indicates a software or hardware failure	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue a problem may exist. Contact My Oracle Support.

Table 4-48 (Cont.) Level 1 IMT Statistics, High Speed Error Summary

Stat Label	Explanation of Stat	Probable Cause	Recommended Action
HS Tx FIFO Half Full	Fibre Channel Transmit FIFO Half Full: Watermark indication that this interface has backed up to the half way point of its capabilities.	Relatively heavy traffic on this interface can cause these counts to increment.	None. FIFO Half Full is an indication. No action is required.
HS Tx FIFO Full	Fibre Channel Transmit FIFO Full: Watermark indication that this interface has transmitted substantial traffic.	Relatively heavy traffic on this interface can cause these counts to increment.	None. FIFO Full is an indication. No action is required.
IXP RX FIFO Half Full	Fibre Channel IXP Receive FIFO Half full: Watermark indication that this interface has backed up to the half way point of its capabilities.	Relatively heavy traffic on this interface can cause these counts to increment.	None. FIFO Half Full is an indication. No action is required.
IXP Rx FIFO Full	Fibre Channel IXP Receive FIFO Full: The IXP Rx FIFO momentarily became full. This event can occur under normal conditions and it does not indicate an issue.	Relatively heavy traffic on this interface can cause these counts to increment.	None. FIFO Full is an indication. No action is required.
HS RX Large PKT Discard	A packet larger than allowed was processed on the receive path of the Fibre Channel. May result in significant downstream errors.	Indicates a software or hardware failure, unless the BUS is being brought up or being taken down.	Clear IMT stats, wait 1 hour and retrieve stats again. If stats are clear, there is no action to perform. If errors continue a problem may exist. Contact My Oracle Support.

```

 **Note:**

In the top portion of this sample output "Error Counts" there are three types of possible output for each field:

- 1) A decimal number (indicates a count)
- 2) "—" (indicates NO DATA)
- 3) "N/A" (indicates this field is not supported)

Legend

- **Card**—IMT address of the card in hexadecimal
- Elapsed Time (day - h:m:s)— Amount of time that has elapsed since a card reset has occurred or the IMT statistics were cleared with the `clr-imt-stats` command. This is shown in the format *day - h:m:s*, where *day* is the number of days that have elapsed, and *h:m:s* is the amount of time in the current day in hours, minutes, and seconds (and tenths of seconds).
- "--" in the statistics column signifies that the statistics count is not applicable for the corresponding Card type.
- **Error Count**—IMT level 1 error statistics displayed in this report.
- **Perf Count**—IMT level 1 performance statistics displayed in this report.
- **A Bus value** and **B Bus value**—Values of the IMT level 1 statistics on IMT bus A and IMT bus B. Refer to the Notes section for descriptions of the statistics that are shown in the report for each card and in the Summary of totals for all requested cards, and their possible causes and corrective actions. Contact My Oracle Support if the count is excessive in relation to other cards.

"Excessive" count is primarily determined by the operator based upon:

- Overall system behavior
- Duration of time from when the last statistics were taken
- Statistics of an individual card in relation to other cards

The following types of Packets are included in the counts:

- **Safety Packet**—When an IMT packet goes around the IMT, a pre-determined value in the packet is decremented by each card. When this value reaches zero, the card that receives the value equal to zero logs this as a safety packet and removes the IMT packet from the IMT.
- **Message Signaling Unit (MSU)**—IMT packet containing data
- **Acknowledgement Signaling Unit (ASU)**—ACK for an MSU that is sent from the destination card back to the originating card.
- **Test Signaling Unit (TSU)**—Typically used to keep the card on the bus. There are many types of TSUs one of which performs a heartbeat function.
- **Broadcast Signaling Unit (BSU)**—Function is the same as an MSU except that each card will process the BSU and then copy it to the next card for processing. Used for IMT maintenance functions.

- **Safety Signaling Unit (SSU)**—Anytime a packet times out (Safety Packet), the card that logged a safety packet sends an SSU to make sure the original destination card is still on the IMT bus.
- **Isolation Signaling Unit (ISU)**—These are only used by the Fault Isolation test (tst-imt), in an attempt to isolate a hard failure on an IMT bus.
- **Other Packets and Other Bytes**—These include the ISUs when Fault Isolation test (tst-imt) is run (IMT bus is inhibited).
- **GBSU**—GBSU Lost Packet and GBSU RX GRP Discard.

4.1.390 rept-imt-lvl2

Use this command to display IMT level 2 statistics for a card. This report displays IMT traffic statistics for one or both IMT busses in the system. The report can be filtered as follows:

- Report statistics between the source card (specified with the `loc` or `l` parameter), whose statistics pool is queried for report information, and another card (specified with the `sloc` or `s` parameter).
- Report statistics between the source card and a range of cards (specified with the `sloc/eloc` or `s/e` parameter combination).

Parameters

b (optional)

IMT bus identification.

Range:

a
Displays statistics for IMT bus A.

b
Displays statistics for IMT bus B.

both
Displays statistics for both IMT busses, A and B.

Default:*both***e (optional)**

End address. The IMT address of the last card in the range. A decimal value or a hexadecimal value can be specified for this parameter (see [Table 4-46](#) to map the values by card location).

Range:*0 - 251*

The value can be specified in decimal (0 – 251) or hexadecimal (*h'00 – h'fe*).

Default:

If the *s* parameter is specified, the default is the *s* parameter value.

If the *s* parameter is not specified, the default is *251*.

e1oc (optional)

End location. Specifies the card location of the last card in the range.

Range:

1101 - 1108, 1111 - 1113, 1115, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118

Default:

If *sloc* is specified—current *sloc* value; displays information for one card.

If *sloc* is not specified—*1115*, which corresponds to IMT address *251* (*e=251*); displays information for entire range of locations.

1 (optional)

Source card IMT address. The IMT address of the card whose statistics pool is to be queried for report information.

Range:*0 - 251***1oc (optional)**

Source card location. The location of the card whose statistics pool is to be queried for report information.

Range:

1101 - 1108, 1111 - 1113, 1115, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118

s (optional)

Start address. The IMT address of the first (or only) card in the range. A decimal value or a hexadecimal value can be specified for this parameter (see [Table 4-46](#) to map the values by card location).

Range:*0 - 251*The value can be specified in decimal (0 – 251) or hexadecimal (*h'00 – h'fe*)**Default:**If *e* is specified—current *l* parameter value.If *e* is not specified—*0*.**sloc (optional)**

Start location. The card location of the first card in the range.

Range:*1101 - 1108, 1111 - 1113, 1115, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118***Default:**If *eloc* is specified—current *sloc* value.If *eloc* is not specified—IMT address 0 (*s=0*).**trm (optional)**

Serial port (printer location) where the report is to be sent.

Range:*1 - 40***Default:**

The report displays on the terminal where the command was issued.

Example

```
rept-imt-lvl2:l=00:s=00:e=02:b=a
```

DependenciesThe *s/e* parameters and *sloc/eloc* parameters cannot be specified together in the command.

3047 E3047 Cmd Rej: Parameter combination invalid

This command cannot be entered if the `clr-imt-stats`, `rept-imt-info`, `rept-imt-lvl1`, or `tst-imt` command is running.

2368 E2368 Cmd Rej: System busy - try again later

The *l* or *loc* parameter must be specified.

3051 E3051 Cmd Rej: Source address/location must be specified

This command cannot be entered during IMT statistics collection following an hourly boundary.

N/A N/A

The *l* parameter or the *loc* parameter must be specified. Both parameters cannot be specified.

3050 E3050 Cmd Rej: L parameter cannot be used in combination with LOC

A card location must be specified that is valid and defined in the database.

2376 E2376 Cmd Rej: Specified LOC is invalid

This command cannot be entered during an Extended Bit Error Rate Test (BERT).

3043 E3043 Cmd Rej: IMT test in progress

Notes

[Table 4-46](#) maps each card location to the decimal and hexadecimal values that can be specified for the *s* and *e* parameters.

[Table 40](#) maps each card location to the decimal and hexadecimal values that can be specified for the *s* and *e* parameters.

Output

If the source card location falls within the range of cards specified with the *sloc/eloc* or *s/e* parameters, then the output report for the source card shows zeros. The zeros are reported because the source card location does not use the IMT to communicate with itself and, therefore, does not report any values or pegs for traffic routed to itself. This command reports the values or pegs received, transmitted, or re-transmitted across the IMT bus.

Legend

- **Card**—IMT address of the card location specified by the 1 parameter in this command in hexadecimal
- **Bus**—IMT bus for which the IMT level 2 statistics are being reported
- **Field**—IMT level 2 statistics displayed in this report

- **00 - ef**—IMT address of the cards on the IMT bus in hexadecimal
- **Link Status**—Status of the link: ALGN (aligned) or OS (out of service)
- **OS Count**—Number of times the link has cycled between being aligned and being out of service
- **Transmit BSN**—Number of BSNs transmitted.
- **Transmit FSN**—Number of FSNs transmitted
- **Receive BSN**—Number of BSNs received
- **Receive FSN**—Sequence number for the next FSN that the source card location expects to receive
- **Unack Messages**—Number of unacknowledged messages received
- **Invalid Length**—Number of messages received with invalid length indicators
- **Invalid rx BSN**—Number of invalid BSNs received
- **Invalid rx FSN**—Number of invalid FSNs received
- **Invalid LSSU**—Number of invalid LSSUs received
- **Invalid ASU**—Number of invalid ASUs received
- **RTB Address**—Address of the retransmission buffer, in hexadecimal
- **Retx count**—Number of re-transmitted MSUs
- **Minimum ack time**—Minimum amount of time for an acknowledgment, in milliseconds
- **Maximum ack time**—Maximum amount of time for an acknowledgment, in milliseconds
- **GBSU sync count**— The count of how many times the GBSU sequence numbers have been resynced (This is received, not sent)
- **GBSU seq err**— The count of how many times a cards received a GBSU out of sequence
- **GBSU lost pkt**—The count of lost GBSU packets in the system (This is received, not sent)

4.1.391 rept-meas

Use this command to generate measurement reports on demand. The reports display on the UI terminal, and are not transferred to the customer FTP server when the Measurements Platform feature is enabled.

Parameters

enttype (mandatory)

Entity type to report on.

Range:

idpr

Measurements for IDPR

link

Measurements for signaling links

Inkset

Measurements for linksets

Inp

Measurements for local number portability

Isdestni

Measurements for linkset destination network identifiers

Isonismt

Measurements for ISUP message type screening

Isorigni

Measurements for linkset originating network identifiers

mapscrn

Measurements for GSM MAP message screening

origni

Measurements for originating network identifiers greater than 5

originic

Measurements for originating network identifiers (less than 5, small networks) for network clusters

sctpasoc

Measurements per association for the SCTP protocol (used to carry M3UA, M2PA, SUA and DIAM traffic)

sctpcard

Measurements per card for the SCTP protocol (used to carry M3UA, M2PA, SUA and DIAM traffic)

sip

Measurements for SIP

stp

Measurements pertaining to the Signaling Transfer Point in general or summarized totals recorded on the STP

tt

Measurements for translation types

ua

Measurements per application server/association for the M3UA and SUA protocols

type (mandatory)

Type of measurement report.

Range:**avl**

Availability measurements

avld

Daily availability measurements

avldth

Day to hour availability measurements.

comp

Component measurements

gtwy

Internetwork gateway-related data from the STP for ANSI and ITU measurements. ANSI gateway measurements are pegged on a per-linkset, per-Network Indicator basis, whereas ITU measurements are pegged on a per-linkset basis.

mtcd

Daily maintenance measurements

mtcdth

Day-to-hour maintenance measurements

mtcs

Link/linkset maintenance status

nm

Network management, on-demand

rbase

Schedule-report type record base measurements

systot

STP system totals

aname (optional)

Association name. This parameter specifies the name assigned to the association in the IPAPSOCK table.

Range:

aaaaaaaaaaaaaaaa

Up to 15 alphanumeric characters; the first character must be a letter

asname (optional)

Application server name. The name of the application server.

Range:

aaaaaaaaaaaaaaaa

Up to 15 alphanumeric characters; the first character must be a letter.

day (optional)

Day of the week for daily measurement reports.

Range:

mon

tue

wed

thu

fri

sat

sun

Default:

The previous single day report is generated.

hh (optional)

Half-hour interval. The ending time for the collection interval; for example, *hh=0300* generates a report for 2:30-3:00.

Range:

0000 - 2400

hhmm where *hh*= 00-24 (hour) and *mm*= 00 or 30 (minute)

Default:

The *hh* parameter value is not given.

link (optional)

The link on the card specified in the *loc* parameter

Synonym:

port

Range:

a, b, a1 - a31, b1 - b31

Not all card types support all *link* parameter values.

See [Table A-1](#) for valid *link* parameter range values for each type of card that can have assigned signaling link ports.

Default:
none

loc (optional)

The card location as stenciled on the shelf of the system.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318,
2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318,
3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318,
4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318,
5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318,
6101 - 6108, 6111 - 6118

Default:
none

lsn (optional)

Linkset name for the linkset where link or linkset measurements are reported.

Range:

ayyyyyyyy

1 alphabetic character followed by up to 9 alphanumeric characters

Default:
none

nc (optional)

Network cluster for the specified GTWY measurement report.

Range:

0 - 255

Default:
none

ni (optional)

Network indicator for the specified GTWY measurement report.

Range:

0 - 255

Default:
none

nzo (optional)

Print non-zero measurements only.

Range:

yes

no

Default:

yes for types *avl*, *avld*, and *avldth*.

This parameter is not used with the other report types.

period (optional)

Relative time period to report.

Range:***last***

The previous collection interval

specific

A specific half-hourly interval (specified with the `hh` parameter)

active

The current collection interval

all

All collection intervals.

Default:

none

qh (optional)

Quarter-hour interval. This parameter implies the ending time for the collection interval; for example, `qh=0315` generates a report for **3:00-3:15**.

Range:

0000 - 2400

hhmm where *hh*= 00-24 (hour) and *mm*= 00, 15, 30, or 45 (minute)

Default:

none

trm (optional)

Serial port (printer location) where the report is to be sent.

Range:

1 - 16

Default:

none

tt (optional)

Translation type to be reported.

Range:

0 - 255

Default:

none

Example

```
rept-meas:enttype=link:type=avl:loc=1201:link=a
```

```
rept-meas:type=systot:enttype=tt:tt=26
```

```
rept-meas:type=mtcd:enttype=sctpasoc:aname=assoc01
```

```
rept-meas:type=mtcdth:enttype=ua:aname=assoc01:asname=appserv01
```

```
rept-meas:enttype=sip:type=mtcd
```

Dependencies

This command cannot be used to specify a report type if that report type is currently printing.

2305 E2305 Cmd Rej: On demand report currently being printed

Valid parameter combinations depend on the report type specified. These combinations are shown in [Table 4-49](#). An X in a cell indicates that the parameter is valid for the report type shown.

Table 4-49 Valid Parameter Combinations for the type Parameter

Parameter Value	systot	comp	mtcd	mtcdt	mtch	mtcs	nm	avl	avld	avldth	gtwy	rbase
enttype: link		X	X	X		X	X	X	X	X		X
enttype: linkset		X	X	X		X	X				X	X
enttype: lnpp			X		X							
enttype: lsdestnit											X	
enttype: lsonism											X	
enttype: lsigni											X	
enttype: mapscrn			X		X							
enttype: origni											X	
enttype: origin											X	
enttype: sctpasoc		X	X	X								
enttype: sctpcard		X	X	X								
enttype: sip	X		X									
enttype: stp	X		X	X		X					X	X
enttype: tt	X											
enttype: ua		X	X	X								
enttype: period: last	X	X	X	X	X		X	X	X	X	X	
enttype: period: specific	X	X			X			X			X	
enttype: period: active		X				X	X	X				X
enttype: period: all			X					X				
enttype: period: nzo								X	X	X		

2281 E2281 Cmd Rej: Invalid ENTTYPE for this TYPE

The entity specified by the `loc` parameter must be equipped in the database.

2373 E2373 Cmd Rej: Link is unequipped in the database

When `enttype=link` is specified, the card in the location specified by the `loc` parameter must be a LIM.

2292 E2292 Cmd Rej: Card does not exist or is not a LIM (LOC)

Quarter-hourly collection and report processing cannot be in progress when report type `comp`, `systot`, `avl`, or `gtwy` is specified.

3688 E3688 Cmd Rej: 15-minute measurement collection in progress

The `mtcdth` report type is unavailable between midnight and 1:00 AM (0100).

2275 E2275 Cmd Rej: Day-to-hour measurement data not yet collected

Day-to-hour collection and report processing cannot be in progress when report type `mtcd` or `mtcdth` is specified.

2276 E2276 Cmd Rej: Day-to-hour measurement collection in progress

Daily collection and report processing cannot be in progress when report type `mtcd` is specified.

2277 E2277 Cmd Rej: Daily measurement collection in progress

Half-hourly collection and report processing cannot be in progress when report type `comp`, `systot`, `avl`, or `gtwy` is specified.

2278 E2278 Cmd Rej: 30-minute measurement collection in progress

5-minute collection and report processing cannot be in progress when report type `nm` is specified.

2279 E2279 Cmd Rej: 5-minute measurement collection in progress

If the `nc` parameter is specified for origin reports, then the `ni` parameter must be specified.

2309 E2309 Cmd Rej: NI required

If the `ni` parameter is specified for origin reports, then measurements data must be available at the time the command is entered.

2535 E2535 Cmd Rej: No match on NI parameter during retrieve

The **day** parameter can be specified only for report type `mtcd` and entity types `Inp` and `mapscrn`.

3419 E3419 Cmd Rej: DAY is invalid for type-enttype combination

A primary MCPM card must be available when the Measurements Platform collection option is enabled and this command is entered.

3117 E3117 Cmd Rej: No available primary MCP

The 15 Minute Measurements feature must be turned on and the 15 Minute Measurements collection option must be on before the `qh` parameter can be specified.

3690 E3690 Cmd Rej: QH cannot be specified unless 15 min meas is turned ON

The `hh` parameter must specify a half-hourly boundary (the end of the requested half-hour for the report) for valid report types.

2302 E2302 Cmd Rej: PERIOD must be 1/2 hour boundary

The `hh` and `qh` parameters cannot be specified together in the command.

3694 E3694 Cmd Rej: QH and HH cannot be specified together

When the `period=last` parameter is specified, the `hh`, `qh`, and `day` parameters cannot be specified.

2283 E2283 Cmd Rej: QH, HH, or DAY cannot be specified when PERIOD=LAST

If the `period=active` parameter is specified, then the `hh` and `qh` parameters cannot be specified.

2284 E2284 Cmd Rej: QH, HH, or DAY cannot be specified when PERIOD=ACTIVE

When the `period=specific` parameter is specified, the `hh`, `qh`, or `day` parameter must be specified. The `hh`, `qh`, and `day` parameters can be specified only if the `period=specific` parameter is specified.

2286 E2286 Cmd Rej: QH or HH must be specified when PERIOD=SPECIFIC

A quarter-hour boundary must be specified for the `qh` parameter.

3689 E3689 Cmd Rej: Period must be 1/4 hour boundary

The `hh` and `qh` parameters cannot be specified if a value of `avld`, `mtcd`, `nm`, `rbase`, or `mtcs` is specified for the `type` parameter.

2307 E2307 Cmd Rej: QH or HH is not valid for this TYPE

If the `link` parameter is specified, the `loc` parameter must be specified.

2296 E2296 Cmd Rej: Both LOC and LINK must be specified

The `lsn` and `loc` parameters cannot be specified together in the command.

2294 E2294 Cmd Rej: LSN and LOC parms are mutually exclusive

If the `enttype=link` parameter is specified, then the `loc` and `port` parameters or the `lsn` parameter must be specified.

2706 E2706 Cmd Rej: APPL is invalid for report or entity

The `period=active` parameter cannot be specified when the `enttype=stp` parameter or the `enttype=tt` parameter is specified.

2287 E2287 Cmd Rej: ACTIVE not available for type-enttype combination

If a value of `idpr`, `origni`, `origninc`, `stp`, or `tt` is specified for the `enttype` parameter, or if the `type=systot` parameter is specified, then the `lsn` parameter cannot be specified.

2301 E2301 Cmd Rej: LSN parameter not valid for type-enttype combination

For entity type `avl`, if `period=all` is specified, the `loc` and `port` parameters must be specified.

2289 E2289 Cmd Rej: LOC and LINK must be specified when PERIOD=ALL

A value of *avl*, *avld*, or *avldth* must be specified for the `type` parameter before the `nzo=yes` parameter can be specified.

2306 E2306 Cmd Rej: NZO is not valid for this TYPE

The `appl` and `loc` parameters cannot be specified in the same command.

2271 E2271 Cmd Rej: Either LOC or APPL (not both) must be specified

The `type=systot` and `loc` parameters cannot be specified in the same command.

2707 E2707 Cmd Rej: LOC is invalid for specified report TYPE

If the `type=gtwy` parameter is specified, and the value of the `enttype` parameter is *Isorigni*, *Isdestni*, or *Isonismt*, then the `ni` parameter cannot be specified for ITU linksets. The `ni` parameter is allowed only for ANSI linksets.

3579 E3579 Cmd Rej: NI parameter may not be specified for ITU linksets

If the `type=gtwy` parameter is specified, and a value of *Isdestni*, *Isonismt*, or *Isorigni* is specified for the `enttype` parameter for an ITU linkset, then only the `lsn` parameter can be specified.

2300 E2300 Cmd Rej: LSN must be specified

If the `enttype=sctpcard` parameter is specified, then the card in the location specified by the `loc` parameter must be an IPLIMx, IPGWx, or IPSG card.

2212 E2212 Cmd Rej: Invalid card type for this command

The `enttype=sctpasoc` or `enttype=ua` parameter must be specified before the `aname` parameter can be specified.

3397 E3397 Cmd Rej: ANAME is invalid for type-enttype combo

The `enttype=ua` parameter must be specified before the `asname` parameter can be specified.

4005 E4005 Cmd Rej: Either INP/AINPQ/GPORT must be ON or TINP must be enabled

If the `enttype=sctpcard` parameter is specified, then the `loc` parameter must be specified.

2366 E2366 Cmd Rej: LOC must be specified

If the `enttype=sctpcard` parameter is specified, then a card must be installed in the location specified by the `loc` parameter.

2101 E2101 Cmd Rej: Card location is unequipped

The `enttype=link` parameter must be specified before the `link` parameter can be specified.

2299 E2299 Cmd Rej: LINK parameter valid only when ENTTYPE=LINK

The `type=gtwy` parameter and the `enttype=origininc` parameter must be specified before the `nc` parameter can be specified.

3417 E3417 Cmd Rej: NC is invalid for type-enttype combo

The `type=gtwy` parameter must be specified, and a value of *Isdestni*, *Isonismt*, *Isorigni*, *origni*, or *origininc* must be specified for the `enttype` parameter before the `ni` parameter can be specified.

3416 E3416 Cmd Rej: NI is invalid for type-enttype combo

The `enttype=tt` parameter must be specified before the `tt` parameter can be specified. If the `enttype=tt` parameter is specified, then the `tt` parameter must be specified.

2297 E2297 Cmd Rej: TT parameter valid only when ENTTYPE=TT

If a value of *sctpasoc* or *ua* is specified for the `enttype` parameter, then the `aname` parameter must be specified.

3403 E3403 Cmd Rej: Association name must be specified

The association specified by the `aname` parameter must be provisioned in the system.

4099 E4099 Cmd Rej: Association name not found

If the `enttype=ua` parameter is specified, then the `asname` parameter must be specified.

3471 E3471 Cmd Rej: Application server name must be specified

The application server specified by the `asname` parameter must be provisioned in the system.

4079 E4079 Cmd Rej: Specified AS name not found

The association specified by the `aname` parameter must be assigned to the application server specified by the `asname` parameter.

3399 E3399 Cmd Rej: Association is not assigned to AS

The `lsn` and `link` parameters cannot be specified together in the command.

2295 E2295 Cmd Rej: LSN and LINK parms are mutually exclusive

If the `period=all` parameter is specified, then the `hh` and `qh` parameters cannot be specified.

2285 E2285 Cmd Rej: QH, HH, or DAY cannot be specified when PERIOD=ALL

Either the specified Linkset does not exist or no link is configured for it.

2384 E2384 Cmd Rej: Link set is not equipped

The A-Port, G-Port, IS41 GSM Migration, or Prepaid SMS Intercept Ph1 feature must be enabled, or the INP, MO SMS IS41-to-GSM Migration, MO-based GSM SMS NP, or MO-based IS41 SMS NP feature must be turned on before the `mtchnp=on` parameter or the `mtcdnp=on` parameter can be specified.

3631 E3631 Cmd Rej: Incompatible Feature/Option status

The value specified for the `appl` parameter must be a supported GPL.

3710 E3710 Cmd Rej: APPL not valid for command

If the `loc` parameter is specified, then a value of `,` `link`, or `sctpcard` must be specified for the `enttype` parameter. If the `enttype=lnkset` parameter is specified, then the `loc` parameter cannot be specified.

2298 E2298 Cmd Rej: LOC parameter not valid for this ENTTYPE

If the `enttype=link` parameter is specified, then the values specified for the `loc` and `link` parameters must already exist in the database.

2373 E2373 Cmd Rej: Link is unequipped in the database

Period/type combinations:

- If a value of `rbase` or `mtcs` is specified for the `type` parameter, then a value of `active` must be specified for the `period` parameter.
- If a value of `avld`, `avldth`, `mtcdth`, or `nm` is specified for the `type` parameter, then the `period=specific` parameter cannot be specified.
- If the `period=active` parameter is specified, then a value of `avld`, `avldth`, `mtcd`, `mtcdth`, or `systot` cannot be specified for the `type` parameter.
- The `type=avl` parameter must be specified before the `period=all` parameter can be specified.

2280 E2280 Cmd Rej: Invalid PERIOD for this TYPE

SIPNP Feature must be enabled before the `enttype=sip` and `type=mtcd/systot` parameters can be specified.

2590 E2590 Cmd Rej: SIPNP Feature must be enabled.

The location specified must be in the range from 1101 to 6118, except for MUX cards.

2152 E2152 Cmd Rej: Shelf ID out of range

If the `enttype=tt` parameter is specified, then the `tt` parameter must be specified.

2274 E2274 Cmd Rej: TT must be specified when ENTTYPE=TT

The `type` parameter must be one of the `AVL`, `AVLD`, `AVLDTH`, `COMP`, `GTWY`, `MTCD`, `MTCDTH`, `MTCS`, `NM`, `RBASE`, or `SYSTOT` range values.

2282 E2282 Cmd Rej: Unknown ENTTYPE

An entity type (ENTTYPE) of `DEIR`, `EIR`, or `VFLX` requires the `DAY` parameter to be specified.

3423 E3423 Cmd Rej: DAY must be specified when PERIOD=SPECIFIC

Retrievals with the `rept-meas` command for `period= LAST`, `SPECIFIC`, and `ALL` are rejected by the `EAGLE` if either `measplat` or `integrated measurements` is not enabled.

3088 E3088 Cmd Rej: Platformenable or `Oamhcmeas` option must be on

This command cannot be entered when `CAT2 IPSM to OAM syncing` is in progress.

3652 E3652 Cmd Rej: `IPSM to OAM SYNC` in progress

Notes

INP, GSM MAP Screening, LNP, G-Port, A-Port, and IGM measurements are available via FTP transfer only.

If an on-demand report is requested while the collection for that interval is in progress, the requested report will not be generated. The `rept-meas` command must be entered again.

If this command is executed, and one or more cards did not respond to the request for measurements because the card was Out-Of-Service, then the following warning message may appear:

```
Measurement data represents an incomplete interval
```

This message does not indicate that data was lost.

If this command is executed, and measurements data does not exist for the specified time, then the following message may appear:

```
LINK-COMP MEASUREMENT:  LOC: 1201, LINK: A, LSN: (MTP2)  
Measurement data are not current.
```

Default values are shown for LOC, LINK, and LSN. These values always appear in the message, no matter what values were specified in command.

Output

Note:

Refer to *Measurements Reference* for `rept-meas` output examples.

4.1.392 rept-stat-alm

Use this command to provide status of all alarms.

Parameters

c11i (optional)

CLLI string. Displays only alarms that pertain to a particular CLLI.

Range:

ayyyyyyyyy

dev (optional)

Device. The type of device for which alarms are displayed.

Range:*applsock**as**card**cdt**clock**dlk**ls**lsmsconn**route**slk**trm**rtx**e1port**t1port**tps**enet***display (optional)**

Type of alarms to be displayed. When the `display=inhb` parameter is specified, the Alarm Inhibit Report appears in the command output and provides information about inhibited alarms in the system. The `dev` parameter can be specified with this parameter to display the Alarm Inhibit Report for a specific device type.

Range:*inhb***dur (optional)**

Duration. This parameter indicates whether to display permanently inhibited alarms, temporarily inhibited alarms, or timed inhibited alarms. This parameter is valid only when the `display=inhb` parameter is specified.

Range:*perm**temp**timed*

edate (optional)

Expiry date. This parameter allows the user to see timed alarm inhibits that will expire on the specified date.

Range:

101 - 991231

Specify the date in the format *year*, followed by *month*, followed by *day*.

Example

```
rept-stat-alm
rept-stat-alm:display=inhb:dev=card
rept-stat-alm:display=inhb:clli=slkset1:dev=ls
rept-stat-alm:display=inhb
rept-stat-alm:display=inhb:dur=timed
rept-stat-alm:display=inhb:dur=timed:edate=040520
```

Dependencies

No other `rept-stat-xxx` command can be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

The `dur` parameter can be specified only if the `display=inhb` parameter is specified.

4551 E4551 Cmd Rej: DISPLAY parameter is mandatory with DUR parameter

The `dur`, `dev`, or `clli` parameter can be specified only if the `display=inhb` parameter is specified.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The `edate` parameter can be specified only if the `dur=timed` parameter is specified.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The `dev` parameter can have only the values `slk`, `ls`, or `route` if the `clli` parameter is specified.

4554 E4554 Cmd Rej: DEV must be either SLK, LS or ROUTE if CLLI is specified

The `dur` parameter must be compatible with the specified device.

2044 E2044 Cmd Rej: <parm_desc> value is undefined - <parm>

The value specified for the `clli` parameter must already exist in the DSTN table.

2338 E2338 Cmd Rej: Invalid CLLI

The value specified for the `edate` parameter must be greater than the system date.

4549 E4549 Cmd Rej: EDATE/ETIME must be greater than system date/time

Notes

None

Output

This example shows the output when the system is clean and before a maintenance baseline has been established:

This example includes the Alarm Inhibit report for multiple device types. It includes point codes with point code subtype prefixes, and exception routes that require a

second line of display to uniquely identify the exception class/criteria of the routes. A plus sign (+) following the alarm level indicates that the current alarm is not inhibited because the level of the inhibit is less than the level of the alarm.

Legend

- **ALARM TRANSFER**—The destination of the alarms. LMC=Local Maintenance Center, RMC=Remote Maintenance Center.
- **ALARM MODE**—Displays whether the critical, major, and minor alarms are silent or audible
- **ALARM FRAME 1**—Number of critical, major, and minor alarms detected in the control frame CF-00 (frame 1)
- **ALARM FRAME 2**—Number of critical, major, and minor alarms detected in extension frame EF-00 (frame 2)
- **ALARM FRAME 3**—Number of critical, major, and minor alarms detected in extension frame EF-01 (frame 3)
- **ALARM FRAME 4**—Number of critical, major, and minor alarms detected in extension frame EF-02 (frame 4)
- **ALARM FRAME 5**—Number of critical, major, and minor alarms detected in extension frame EF-03 (frame 5)
- **ALARM FRAME 6**—Number of critical, major, and minor alarms detected in extension frame EF-04 (frame 6) and all the miscellaneous OAP alarms.
- Following list contains miscellaneous OAP alarms:
MPS_UNAVAILABLE EPAP_AVAILABLE
LSMS_Q3_ASSOC_UNAVAILABLE
LSMS_Q3_ASSOC_AVAILABLE

LSMS_Q3_ASSOC_BULK_LOAD_DONE
 LSMS_Q3_ASSOC_BULK_LOAD_REQD
 SEAS_OAP_AVAILABLE
 SEAS_OAP_UNAVAIL
 SEAS_OAP_UAL_UNAVAIL
 LSMS_EMS_AGENT_UNAVAILABLE
 OAP_FILESYSTEM_FULL
 SEAS_OAP_ONE_TDM_UNAVAIL
 OAP_CONFIG_CHECKSUM_MISMATCH
 OAP_CONFIG_CHECKSUM_MATCH
 SEAS_X25_LINK_UNAVAIL
 SEAS_X25_UAL_UNAVAIL
 SEAS_X25_PVC_UNAVAIL
 SEAS_X25_PVC_SES_UNAVAIL
 SEAS_X25_LINK_AVAIL

- **PERM. INH. ALARMS**—Number of alarms that are permanently inhibited per alarm level
- **TEMP. INH. ALARMS**—Number of alarms that are temporarily inhibited per alarm level
- **TIMED. INH. ALARMS**—Number of alarms that are timed inhibited per alarm level
- **ACTIVE ALARMS**—Number of alarms still active per alarm level.
- **TOTAL ALARMS**—Total number of alarms per alarm level. The inhibited alarm count plus the active alarm count equals the total alarm count.
- **CRIT**—Critical alarms with silent/audible indicator
- **MAJOR**—Major alarms with silent/audible indicator
- **MINOR**—Minor alarms with silent/audible indicator

Alarm Inhibit Report:

- **DEVICE**—Device for which alarms are currently inhibited. Only devices that are alarm inhibited are shown.
- **ELEMENT**—Element of the device for which alarms are inhibited (such as card location, port, routing key, socket or association name)
- **DURATION**—Indicates whether the device is alarm inhibited permanently or temporarily or for a specific length of time
- **INH LVL**—Level in which devices are alarm inhibited (Critical, Major, Minor). The `inh-alm` command defaults the level to Major. Devices cannot be alarm inhibited at a critical level unless the `chg-stpopts` command's `critalminh` parameter is turned on.
- **ALM LVL**—Level of the current alarm on the device (Critical, Major, Minor). "None" indicates that there is currently no alarm on the device (DURATION should show "PERM"). A plus sign (+) seen following the alarm level indicates that the current

alarm is not inhibited because the level of the inhibit is less than the level of the alarm.

- **DATE**—Date on which a timed inhibited alarm will automatically clear at the specified time
- **TIME**—Time at which a timed inhibited alarm will automatically clear on the specified date

4.1.393 rept-stat-applsock

Use this command to display the status of the IP application sockets.

Parameters

lhost (optional)

Local host name. The logical name assigned to the local host device.

Range:

XX

A string of characters up to 60 characters in length. The first character must be a letter. Valid characters are *a-z*, *A-Z*, *0-9*, - (dash), . (period)

Default:

Current value

port (optional)

The signaling link port associated with this socket.

Range:

a, b, a1..a63, b1..b63

Not all card types support all *port* parameter values.

See [Table A-1](#) for valid *port* parameter range values for each type of card that can have signaling links.

Default:

Current value

rhost (optional)

Remote host name. The logical name assigned to the remote host device.

Range:

XX

A string of characters up to 60 characters in length. The first character must be a letter. Valid characters are *a-z*, *A-Z*, *0-9*, - (dash), . (period)

Default:

Current value

sname (optional)

Socket name. The name of the IP application socket to be reported.

Range:

aaaaaaaaaaaaaaaa

Up to 15 alphanumeric characters; the first character must be a letter

Default:

All IP application sockets are reported

Example

```
rept-stat-applsock
```

```
rept-stat-applsock:port=b
```

Dependencies

The `name` parameter value, if specified, must exist in the Socket table.

N/A N/A

A valid value must be specified for the `host` parameter. If the host name contains a hyphen, then the host name must be enclosed within quotation marks.

```
3731 E3731 Cmd Rej: Invalid Hostname
```

Notes

This command displays the primary states (PST) and the secondary state (SST). Primary states are:

- IS-NR—In-service normal
- IS-ANR—In-service abnormal (congested)
- OOS-MT—Out of service
- OOS-MT-DSBLD—Out-of-service maintenance-disabled (provisioned to be out of service by closing, prohibiting, or deactivation)

Secondary states are:

- ALMINH—Alarm inhibited
- OOS—Out-of-service
- NEA—Near-end allowed
- FEA—Far-end allowed
- NEP—Near-end prohibited
- FEP—Far-end prohibited

Output

```

4.1.394 rept-stat-as

Use this command to generate a report of the Application Server (AS) association status.

Parameters

aname (optional)

Association name to report on. This parameter causes the ASP states for a given association and all of the AS's that it is assigned to be displayed.

Range:

aaaaaaaaaaaaaaaa

Up to 15 alphanumeric characters; the first character must be a letter

asname (optional)

Application Server name; the AS name to report on. This parameter causes the the PST, SST, ASP state, and ASP-ID for each association in the AS to be displayed.

Range:

aaaaaaaaaaaaaaaa

Up to 15 alphanumeric characters; the first character must be a letter

Example

```
rept-stat-as
```

Dependencies

If an association is specified in the command, the specified association must exist in the AS table.

4079 E4079 Cmd Rej: Specified AS name not found

Notes

This command can be canceled using the **F9** function key or the `canc-cmd` command. See `canc-cmd` for more information.

If the command is specified without a parameter, status for all AS associations is displayed.

This command displays the following states: ACTIVE, UP, DOWN, PENDING.

Output

```
rept-stat-as
```

ASNAME	PST	SST
m3ua0001	OOS-MT	AS-INACTIVE
m3ua0002	IS-NR	AS-ACTIVE
m3ua0003	OOS-MT-DSBLD	AS-DOWN
m3ua0004	IS-ANR	AS-PENDING

Command Completed.

4.1.395 rept-stat-assoc

Use this command to generate a report of the SCTP association's status.

Parameters

aname (optional)

Name of association to report on.

Range:

aaaaaaaaaaaaaaaa

Up to 15 alphanumeric characters; the first character must be a letter

lhost (optional)

The Local Host name as defined in the IP Host table.

Range:

XX

A string of characters up to 60 characters in length; the first character must be a letter
Valid characters are a-z, A-Z, 0-9, - (dash), and . (period).

link (optional)

The signaling link associated with this socket.

Synonym:

port

Range:

a, b, a1-a63, b1-b63

Not all card types support all link parameter values.

See [Table A-1](#) for valid link parameter range values for each type of card that can have assigned signaling links ports.

rhost (optional)

Name of Remote Host as defined in the IP Host table.

Range:

XX

A string of characters up to 60 characters in length. The first character must be a letter.

Valid characters are *a-z*, *A-Z*, *0-9*, *-* (dash), and *.* (period).

Example

```
rept-stat-assoc
```

```
rept-stat-assoc:aname= a23456789012345
```

Dependencies

If an association is specified in the command, the specified association must exist in the AS table.

N/A N/A

A valid value must be specified for the `host` parameter. If the host name contains a hyphen, then the host name must be enclosed within quotation marks.

```
3731 E3731 Cmd Rej: Invalid Hostname
```

Notes

This command can be canceled using the **F9** function key or the `canc-cmd` command. See `canc-cmd` for more information.

This command displays the primary states (PST) and the secondary state (SST).

Primary states are:

- IS-NR—In-service normal
- IS-ANR—In-service abnormal (congested)
- OOS-MT—Out of service
- OOS-MT-DSBLD—Out-of-service maintenance-disabled (provisioned to be out of service by closing, prohibiting, or deactivation)

Connection states are:

- RESTRICTED
- OUT-OF-SERVICE
- CONNECTING
- ESTABLISHED—Valid only for M2PA associations

The **LINK** field values in the output are displayed as:

- "***"—If the association is assigned to multiple links.
- "--"—If the association is not assigned to any link.
- Appropriate LINK ID—If the association is assigned to only one link.

4.1.396 rept-stat-card

Use this command to display the card status and maintenance activity states. The output includes card location, the GPL version being used by the card, device type, device primary state, device secondary state, and device associated state.

Parameters

app1 (optional)

Application. The status of cards running the specified application.

Range:

xyyyyyy

1 alphabetic character followed by up to 6 alphanumeric characters. Valid applications are:

atmansi —Used by E5-ATM-B cards to support ATM high-speed signaling links and T1 functions.

atmitu —Used by E5-ATM-B cards to support E1 high-speed signaling links and E1 functions.

ccs7itu —Used by E5-E1T1-B cards for ITU MTP functions.

deirhc —Used by E5-SM8G-B and SLIC cards to support the DEIR application.

elap —Used by E5-APP-B cards to support the ELAP application.

enumhc —Used by E5-SM8G-B cards to support the ENUM Mobile Number Portability and Tier One Address Resolution application.

epap —Used by E5-APP-B cards to support the EPAP application.

eroute —Used by STC cards and E5-STC cards for the EAGLE 5 Integrated Monitoring Support functions

gls —Used by E5-TSM cards for downloading gateway screening to LIM and Service Module cards

ipgwi —Used by E5-ENET-B cards for point-to-multipoint IP connectivity for ITU point codes. A maximum of 125 cards can be assigned the IPGWI application.

iplimi —Used by E5-ENET-B cards for point-to-point IP connectivity for ITU point codes

ips —Used by E5-IPSM and E5-ENET-B cards for the IP User Interface feature.

ipsg —Used by E5-ENET-B, and SLIC cards to support the combined functionality of IPLIMx M2PA and IPGWx M3UA

lsms - Used by E5-APP-B cards to support LSMS application.

mcp —Used by E5-MCPM-B cards for the Measurements Platform feature.

nas - Used by E5-APP-B cards to support the NAS application.

siphc — Used by E5-SM8G-B cards to support the SIP application.

ss7ansi —Used by E5-E1T1-B cards for ANSI MTP functions

ss7ipgw —Used by E5-ENET-B cards for point-to-multipoint IP connectivity. The system allows a maximum of 125 cards to be assigned the SS7IPGW application.

switch - Used by Telco switch to add power consumed by Telco Switch to Frame Power Budget. This is not an application gpl.

vsccp —Used by Service Module cards to support EPAP-based features and the LNP ELAP Configuration features. If no EPAP-based or LNP ELAP Configuration feature is turned on, and a Service Module card is present, then normal GTT traffic is processed.

data (optional)

Data filter specification. The status of cards running the specified application with specified data.

Range:

nosccp

displays the status of a GTT-disabled IPSG card

gtt

displays the status of a GTT-enabled IPSG card and SM GTT card

 **Note:**

The `data` parameter is valid for IPSG and VSCCP applications only. If the `data` parameter is not specified, then both types of IPSG (GTT disabled and GTT enabled) cards will be displayed under `appl=ipsg`.

links (optional)

Filter specification. Report the maximum number of links, only equipped links, or only unequipped links on the card in the specified card location (`loc`).

Range:

all

Reports the maximum number of links available on the card in the specified `loc`

equip

Reports only links that are equipped

unequip

Reports only links that are unequipped

Default:

equip

loc (optional)

Card address. The card location as stenciled on the shelf of the system.

Range:

1101 - 1117, 1201 - 1218, 1301 - 1318, 2101 - 2118, 2201 - 2218, 2301 - 2318, 3101 - 3118, 3201 - 3218, 3301 - 3318, 4101 - 4118, 4201 - 4218, 4301 - 4318, 5101 - 5118, 5201 - 5218, 5301 - 5318, 6101 - 6118, 6201 - 6218, 6301 - 6318

Default:

A status of all cards is displayed.

mode (optional)

Mode. The type of report to display (full or summary).

Range:

full

Default:

A summary report is displayed.

stat (optional)

Primary state filter. This parameter cannot be used with the `loc` or `mode` parameters. This filter allows printing of cards in a specified state (all in-service cards, for example).

Range:

all

All of the primary states

alminh

Alarms inhibited

anr

In service abnormal (IS-ANR)

dsbld

Out of service maintenance disabled (OOS-MT-DSBLD)

mt

Out of service maintenance (OOS-MT)

nr

In service normal (IS-NR)

Default:

all

Example

```
rept-stat-card
```

```
rept-stat-card:loc=1201
rept-stat-card:loc=1201:mode=full
rept-stat-card:stat=alminh
rept-stat-card:appl=ss7ansi
rept-stat-card:appl=siphc
rept-stat-card:loc=1205:links=equip:mode=full
rept-stat-card:appl=epap
rept-stat-card:appl=switch
rept-stat-card:appl=elap
rept-stat-card:appl=lsms
rept-stat-card:appl=nas
rept-stat-card:appl=enumhc
rept-stat-card:appl=ipsg:data=gtt
rept-stat-card:appl=ipsg:data=nosccp
```

Dependencies

No other command can be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

The `mode` parameter can be specified only when the `loc` parameter is specified.

2366 E2366 Cmd Rej: LOC must be specified

Only one of the `loc` or `stat` parameters can be specified in the command.

2367 E2367 Cmd Rej: May not specify both LOC and STAT

Unless the `appl=vcssp/ipsg`, no other parameter can be specified with the `appl` parameter.

3691 E3691 Cmd Rej: No other parameters allowed with APPL specification

The shelf and card must be equipped.

2144 E2144 Cmd Rej: Location invalid for hardware configuration

The card location (`loc`) must be within the allowed range.

2016 E2016 Cmd Rej: <parm_desc> is out of range - <parm>

A valid value must be specified for the `appl` parameter.

3710 E3710 Cmd Rej: APPL not valid for command

The card location specified by the `loc` parameter must be equipped.

E2144 Cmd Rej: Location invalid for hardware configuration

The `data` parameter is not valid with an APPL other than IPSEG/VSCCP.

3516 E3516 Cmd Rej: APPL must be IPSPG/VSCCP with DATA parameter

The `data` parameter can take `nosccp` as a value only when the APPL specified is IPSPG.

2670 E2670 Cmd Rej: Invalid value of DATA parameter for given APPL

Notes

LIM cards show MFC results for SNM, SCCP, EROUTE, INM and MTP3. SCCP cards show MFC results for SNM, INM and MTP3 when the `mode=full` and `loc` parameters are specified.

The status displayed is for the previous 5 minutes and the previous 24 hours.

The following MFC status codes are used: G to indicate service request GRANTED, D to indicate service request DENIED, and N to indicate NO OPERATIONAL SERVERS AVAILABLE.

This command can be canceled using the **F9** function key or the `canc-cmd` command. See `canc-cmd` for more information.

The `mode=full` parameter gives more information than the summary report.

A plus (+) symbol in the output indicates that the flash GPL currently being run has not yet been activated on the card. See the `act/init-flash` command for a list of flash GPLs.

E1 alarms are displayed in the alarm status field. When the `mode=full` parameter is specified, separate fields display status information from the UAM for each E1 interface on the card. For each E1 interface, the display shows the highest priority E1 failure that exists on that E1 card. When no E1 errors exist, the clearing E1 UAM text is displayed. When an E1 interface is not assigned to the card, no output is generated for that E1 position.

T1 alarms are displayed in the alarm status field. When the `mode=full` parameter is specified, separate fields display status information from the UAM for each T1 interface on the card. For each T1 interface, the display shows the highest priority T1 failure that exists on that T1 card. When no T1 errors exist, the clearing T1 UAM text is displayed. When an T1 interface is not assigned to the card, no output is generated for that T1 position.

If the `links=all` parameter is specified, then the maximum number of supported SS7 links on the card is displayed as shown. If the `links=unequip` parameter is specified, then the number of links displayed is equal to the maximum supported links minus the provisioned links. If the `links=equip` parameter is specified, then only the provisioned links are displayed.

Multiple cards of the same card type but different capacity can be installed into a slot configured with the `ent-card` command. The number of links supported cannot be determined until the card is physically installed into the configured slot.

Table 4-50 Maximum Supported Links based on Card Type and GPL

GPL with Card Type	Maximum Supported Links	
	Card Hardware Verified	Card Hardware Unknown
ATMHC on E5-ATM-B	3	3
SS7HC on E5-E1T1-B	64	64
IPLHC on E5-ENET-B	16	16
IPGHC on E5-ENET-B	1	1
IPSPG on E5-ENET-B/SLIC	32	32

Table 4-50 (Cont.) Maximum Supported Links based on Card Type and GPL

IPSG on SLIC	128	128
SIPHC on E5-SM8G-B/SLIC	17 (16 TCP & 1 UDP)	17 (16 TCP & 1 UDP)
ENUMHC on E5-SM8G-B/SLIC	1 (UDP)	1 (UDP)
DEIRHC on E5-SM8G-B/SLIC	32	32

The CARD WARNING field in the command output indicates a specific condition that can hinder the normal functioning of a card. For E5-E1T1-B cards, the "Obsolete Framer" warning indicates that a port configured on the card may get stuck in a Loss of Frame (LOF) state. If an E5-E1T1-B card displaying this warning is reloaded, and one of the ports on the card is reporting LOF, then the OAM reboots the card up to 5 times to attempt to clear the LOF condition when the card changes state from IS-ANR to IS-NR.

GTT-enabled IPSG cards have the IPSG application running on SLIC hardware, which is capable of SCCP (GTT) processing. GTT-disabled IPSG cards also have IPSG application running on E5-ENET-B or SLIC hardware, but they do not have SCCP (GTT) processing capability. To sort one from the other, the `data` parameter is used. The `data` parameter cannot be used with any application other than IPSG/VSCCP.

Interface A/D will be used for ExAP connectivity and interface B/C used for signaling network on the SLIC card running the DEIR/SIP/ENUM application.

Fast Copy Cards

E5-ENET-B, or SLIC cards running the IPSG or E5-ENET-B cards running the IPGHC GPL are considered to be *FC-capable*. A card running the IPGHC GPL must be in the IS-NR State before the card can be considered *FC-capable*. This restriction does not apply to cards running the IPSG GPL. An *FC-capable* card is considered *FC-enabled* when Fast Copy monitoring is enabled for the respective GPL.

Output

The clock status fields are reported when the `mode=full` report is selected. The clock status report includes a CLOCK A, CLOCK B, and CLOCK I status. The High Speed clock status report (displayed for ATM, E1 and T1 cards) includes HS CLOCK A, HS CLOCK B, and HS CLOCK I. The valid values for each clock status are *Idle*, *Active*, and *Fault*. The meanings of these values are:

- *Idle* —Clock is available but is not being used by the card
- *Active* —Clock is available and is being used by the card
- *Fault* —Clock is unavailable

Idle and *Active* are shown when the CLK or HS CLK distribution to the card is good. The *Active* value does not denote that the card is actually using the clock source for link alignment. Use the `rtrv-slk`, `rtrv-e1`, and `rtrv-t1` commands to determine what clock source each card is using for link alignment.

If the `mode=full` parameter is specified for an FC-enabled card, and Fast Copy functionality has been provisioned for the GPL (see the `chg-eisopts` command), then Fast Copy status and FC Link status is shown. For an E5-ENET-B or SLIC card running the IPGHC GPL, Fast Copy and Fast Copy link status is shown only when the card is in IS-NR state.

Abbreviated output is indicated by 3 vertical dots as shown:

.
.
.

The E5-MCPM-B card is an MCPM card. The *Type* field displays MCPM.

This example shows the card status for the OAMHC of MASP A located in slot 1113, which is currently active.

This example also shows a Hardware Verification Code. The HW VERIFICATION CODE field is shown only in the `mode=full` report. "-----" is shown for cards with valid hardware. A numerical value is shown when invalid hardware is detected. All such cards will be auto-inhibited. The numerical values are listed in [Table 4-51](#). The E5-MDAL and MUX cards do not display the field in `mode=full` reports on their locations.

Legend

- **CARD**—Location of the card
- **VERSION**—Version number of the application loaded on the card. Dashes (- - - - -) in the version column indicate one of the following conditions about the card:
 - The card is configured but is not physically present in the system.
 - The card does not run a GPL, such as TDM or MDAL cards.
 - The card is IS-ANR or is in the process of being loaded.
- **TYPE**—Card type entered in the database.
- **APPL**—Application loaded on the card
- **PST**—Primary state of the card. See [Possible Values for PST/SST/AST](#) .
- **SST**—Secondary state of the card. See [Possible Values for PST/SST/AST](#) .
- **AST**—Associated state of the card. See [Possible Values for PST/SST/AST](#) .

Message Flow Control status is displayed in these fields: SNM REQ STATUS (SNM messages), SCCP REQ STATUS (SCCP messages), EROUTE REQ STATUS (EROUTE messages), INM REQ STATUS (INM messages), MTP3 REQ STATUS (MTP3 messages), and SFLOG REQ STATUS.

For card type STC (EROUTE application), the MFC status is not displayed.

Message Flow Control status output is displayed as a series of these letters:

- **G**—MFC found a service with available capacity. Indicates normal system behavior.
- **D**—Servers were present in the system, but no server had available capacity. Indicates an overload, but MFC is working correctly.
- **N**—No operational server cards were available in the system for use by this card over the corresponding interval.

The HW VERIFICATION CODE field is shown only in the mode=full report. ----- is shown in the HW VERIFICATION CODE field for cards with valid hardware detected. One of the following numerical values is shown when invalid hardware is detected, and all such cards will be auto-inhibited.

* It is possible that the card will continually boot in these cases, before the alarm is ever displayed.

Table 4-51 Auto-Inhibit Hardware Verification Codes

HW Verification Code	Card or Application Code	Description	Associated UAM Code
058	SS7IPGW, IPGWI, IPLIMI	E5-ENET-B does not support > 16 associations (IPLIMx). E5-ENET-B does not support > 50 associations (IPGWx).	422
059	VSCCP	MPS database has been detected to exceed capacity of Service Module extended memory (only for GPORT, GFLEX, INP, EIR features). UAMs 281, 283, and 285 are used for LNP and LNP ELAP Configuration features.	422
090	Various	Flash image on the card is incompatible with the current release of the EAGLE	570
099	E5-TSM	E5-TSM card equipped has one or more daughterboard.	99
102*	SS7IPGW, IPGWI	Non-DCM detected in slot.	99
103	SS7IPGW, IPGWI, IPLIMI	E5-ENET-B does not support >16 associations (IPLIMx). E5-ENET-B does not support >50 associations (IPGWx).	276
103	IPSG	E5-ENET-B does not support >32 associations (IPSG).	276
104	SS7IPGW, IPGWI,	E5-ENET-B does not support >0 sockets (IPLIMx). E5-ENET-B does not support >0 sockets (IPGWx).	276
105	SS7IPGW, IPGWI, IPLIMI	E5-ENET-B does not support > 0 (sockets + associations) (IPLIMx). E5-ENET-B does not support > 50 (sockets + associations) (IPGWx).	276
106	SS7IPGW, IPGWI, IPLIMI	E5-ENET-B does not support >3200Kb SCTP buffers (IPLIMx). E5-ENET-B does not support >3200Kb SCTP buffers (IPGWx).	276
132	IPLIMI	The actual card in the slot must be a high capacity MIM or LIME1 if card is provisioned as a LIME1 card.	99
136	E5-ATM-B	E5-ATM-B is provisioned	297

Table 4-51 (Cont.) Auto-Inhibit Hardware Verification Codes

HW Verification Code	Card or Application Code	Description	Associated UAM Code
140	MCPHC	MCP card not running with D2G memory	422
141	IPS	E5-IPSM card not running with D2G memory.	422
142	MCP	E5-MCPM-B card not running with D4G memory.	422
150	various	Card is obsolete.	47
165	VSCCP	Hardware configuration does not support configured feature set.	99
170	EROUTE	Non-E5-ENET-B card detected in slot provisioned for eroute with card type STC.	99
172	IPSG	Non-SLIC card detected in slot provisioned for IPSG and card type is SLIC with data=gtt.	99
174	IPSG	SLIC hardware detected having 32-bit flash GPL (BLSLC32) in a slot provisioned for IPSG and card type is SLIC with data=gtt.	99
179	E5-ATM-B, E5-ENET-B, E5-E1T1-B	EPM-B based card detected and MFC is OFF.	99
180	SCCP, SS7ANSI	SCCP card equipped with DCM with MOBR on.	441
	DEIR, ENUM, SIP	If ports C and D are configured, the card location must be populated with SLIC cards only.

4.1.397 rept-stat-cdl

Use this command to generate a report of the signaling links currently in Command Driven Loopback (CDL) testing, including the amount of time the link has been in CDL testing.

Command Driven Loopback is the ability to locally drive a signaling link into a manual line loopback. The data received on the signaling link is echoed (transmitted) back.

This is effectively the reverse of the `tst-slk:loopback=lxvr` command, which loops the transmitted data back to the receive.

Parameters

link (optional)

SS7 signaling links. The signaling links that is being tested.

Synonym:

port

Range:

a, b, a1 - a31, b1 - b31

Not all card types support all `link` parameter values.

See [Table A-1](#) for valid `link` parameter range values for each type of card that can have assigned signaling link ports.

Default:

All signaling links that are in CDL testing are displayed.

loc (optional)

The card location as stenciled on the shelf of the system.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118

Default:

All cards containing signaling links that are in CDL testing are displayed.

loopback (optional)

Loopback test type.

Range:

line

payload

Note:

The `payload` value is valid only on LIM-ATM and E1-ATM cards.

Default:

All loopback tests are displayed.

Example

```
rept-stat-cdl
rept-stat-cdl:loc=1201
rept-stat-cdl:loc=1203:link=a
```

```
rept-stat-cdl:loopback=payload
```

Dependencies

If the `link` parameter is specified, the `loc` parameter must be specified.

2903 E2903 Cmd Rej: LOC and PORT parameter combination must be specified

The card location specified in the `loc` parameter must be equipped.

2101 E2101 Cmd Rej: Card location is unequipped

The signaling link specified in the `link` parameter must be equipped.

2373 E2373 Cmd Rej: Link is unequipped in the database

This command is not available during upgrade.

3276 E3276 Cmd Rej: Command not allowed while in upgrade mode

The card location specified in the `loc` parameter cannot be reserved by the system.

2376 E2376 Cmd Rej: Specified LOC is invalid

Notes

This command can be canceled using the **F9** function key or the `canc-cmd` command. See `canc-cmd` for more information

Output

```
rept-stat-cdl
```

```
tekelecstp 03-11-27 01:29:06 EST EAGLE 31.3.0
SLK      CDL      CDL-TIME

4.1.398 rept-stat-cdt

Use this command to display the customer-defined troubles. The Customer-Definable Alarms feature can be used to connect up to 10 external devices to the system for alarm reporting. These devices are defined in the system database as customer-defined troubles, and they are monitored so that any change in the state of these devices is reported as an unsolicited alarm message (UAM).

Parameters

This command has no parameters.

Example

```
rept-stat-cdt
```

Dependencies

No other status command can be in progress when this command is entered.

N/A N/A

Notes

These troubles are customer-defined and configured by the factory.

Output

```
rept-stat-cdt
```

```
rlghncxa03w 04-01-07 20:20:43 EST EAGLE 31.3.0
ID          ALARM STATUS
1   *C 0058  Critical Customer Trouble detected
2   *C 0050  Critical Holdover Clock trouble detected
3   *C 0058  Critical Customer Trouble detected
4   *C 0058  Critical Customer Trouble detected
5   I ** 0059  Major Customer Trouble detected
6   ** 0052  Major Holdover Clock trouble detected
7   ** 0059  Major Customer Trouble detected
8   ** 0059  Major Customer Trouble detected
9   I * 0060  Minor Customer Trouble detected
10  * 0054  Minor Holdover Clock trouble detected
11  * 0060  Minor Customer Trouble detected
12  * 0060  Minor Customer Trouble detected
13  * 0060  Minor Customer Trouble detected
14  I * 0060  Minor Customer Trouble detected
15  * 0060  Minor Customer Trouble detected
16  * 0060  Minor Customer Trouble detected
```

```
;
```

Legend

- **ID**—The customer defined trouble ID number followed by the status of the customer-defined trouble.

- **ALARM STATUS**—The status of the alarm for the specified device.

4.1.399 rept-stat-clk

Use this command to display the clock status summary for cards in the system.

Parameters

mode (optional)

Display mode. When `mode=full` is specified, the "Cards with bad clock source" section of the report is displayed

Range:

full

Example

```
rept-stat-clk
rept-stat-clk:mode=full
```

Dependencies

No other `rept-stat-xxx` command can be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

Notes

The clock status report includes the status of all the clocks in the system (Clock A, Clock B, Clock I, High Speed (HS) Clock A, HS Clock B, etc.).

The Time Slot Counter Synchronization (TSC) clock appears only if the Time Slot Counter Synchronization (TSCSYNC) feature is turned on. See the `chg-feat` command.

The Composite clock sections of the report are the *Primary Comp Clock (CLK)* and *Secondary Comp CLK* fields in the COMPOSITE SYSTEM CLOCK section: the summary of the number of cards having bad status or using COMP CLKs: and the *CLK* columns in the "Cards with bad clock source" section that appears when the `mode=full` parameter is specified.

The HS clock sections of the report are the *Primary HS Clock (CLK)*, *Secondary HS CLK*, *HS CLK TYPE*, and *HS CLK LINELEN* fields in the HIGH SPEED SYSTEM CLOCK section: the summary of the number of cards having bad status or using HS CLKs: and the *HS CLK* columns in the "Cards with bad clock source" section that appears when the `mode=full` parameter is specified.

HS clock capable cards can support a link that is provisioned to use HS Master Timing. These cards include all cards with type LIME1 or LIMT1 and all cards that run the ATMANSI or ATMITU applications. The clock status values are the same as those listed in the `rept-stat-card:mode=full:loc=xxx` report.

For a complete list of the cards and their applications, see [Table A-9](#).

If HS clock A and B status is included in the "Cards with bad clock source" section, then cards that cannot be provisioned to use HS Master Timing display dashes for HS clock A and B status.

The PST/SST for the Primary Composite Clock (Comp Clk) 1114, Primary Comp Clk 1116, Secondary Comp Clk 1114, Secondary Comp Clk 1116, Primary HS Clk 1114, Primary HS Clk 1116, Secondary HS Clk 1114, and Secondary HS Clk 1116 can be one of the following values:

- IS-NR/active—clock source is valid, clock chosen as source
- IS-NR/idle—clock source is valid, clock not chosen as source
- OOS-MT/fault—clock source is invalid

The PST/ SST for the Composite System Clock and High Speed System Clock can be one of the following values:

- IS-NR/Idle—all cards showing good clock, clock not required
- IS-ANR/Idle—some cards showing bad clock, clock not required
- OOS-MT/Idle—all cards showing bad clock, clock not required
- IS-NR/Active—all cards "requiring clocks" showing good clock, clocks required
- IS-ANR/Fault—some cards "requiring clocks" showing bad clock, clocks required
- OOS-MT/Fault—all cards "requiring clocks" showing bad clock, clocks required

Note:

An asterisk (*) indicates that the card requires the indicated clock.

Output

Note:

A TDM card can use a local clock that is generated independently on each TDM as a clock source for the corresponding internal system clock. The system does not report the "cards bad" status for these internal clocks.

 **Note:**

The use of HS CLK I is not automatic when both the high-speed primary and secondary clocks are invalid. An E5-ATM-B card must be provisioned (using the `ent-slk:atmtsel=internal` command) to use the high-speed internal clock.

 **Note:**

The *Using* field in the Composite Clock section describes all of the cards that are using the Composite Clock, not just HS clock capable cards.

The following example shows output when two GSM-II cards are configured, and HS clock capable cards are not configured. The TSCSYNC feature is not turned on.

Legend

- **COMPOSITE SYSTEM CLOCK**—Composite System clock status
- **ALARM STATUS**—System clock alarms; "No alarms" is shown when there are no alarms.
- **PRIMARY COMP CLK**—The status of the primary Composite clock input for a particular TDM
- **SECONDARY COMP CLK**—The status of the secondary Composite clock input for a particular TDM
- **CLK A** – Internal Eagle Clock sourced by the 1114 TDM from the selected clock source.
- **CLK B** – Internal Eagle Clock sourced by the 1116 TDM from the selected clock source.
- **CLK I** – Local clock generated independently on each LIM card.
- **Prefer CLOCK x for TSC CLOCK**—The preferred clock source of the Time Slot Counter Synchronization (TSC) clock; appears only when the TSCSYNC feature is turned on.
- **HIGH SPEED SYSTEM CLOCK**—HS system clock status
- **ALARM STATUS**—HS System clock alarms; "No alarms" is shown when there are no alarms.
- **PRIMARY HS CLK**—The status of the high-speed primary clock input for a particular TDM

- **SECONDARY HS CLK**—The status of the high-speed secondary clock input for a particular TDM
- **HS CLK TYPE**—HS clock source (see the chg-stpopts command) for a particular TDM
- **HS CLK LINELEN**—HS clock line length (see the chg-stpopts command) for a particular TDM
- **HS CLK A** – Internal Eagle High Speed Clock sourced by the 1114 TDM from the selected clock source.
- **HS CLK B** – Internal Eagle High Speed Clock sourced by the 1116 TDM from the selected clock source.
- **HS CLK I** – Local clock generated independently on each LIM card. The value for the internal high-speed clock (Cards using HSCLK I) is generated differently from the internal system clock (Cards using CLK I). The internal high speed clock is generated by the XILINX on the ATM applique's card. The internal system clock is generated by the Xilinx on the LIM main board when the LIM card does not have a valid system clock source (e.g., both A system clock and B system clock are bad at the LIM card).

4.1.400 rept-stat-cluster

Use this command to report summary status and statistical information for all provisioned clusters. Use this command also to report detailed routeset information for a specific cluster, provisioned cluster member, or dynamically-created x-list entry.

Note:

This command does not support 24-bit ITU national point codes.

Parameters

dpcc (optional)

ANSI destination point code of the cluster whose status is to be reported, with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*. The *prefix* subfield indicates a private point code (*prefix-ni-nc-ncm*).

Synonym:

dpca

Range:

p-, 000-255, *

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*p*-

The asterisk value (*) is not valid for the *ni* subfield.

When `chg-sid:pctype=ansi` is specified, *ni* = 000 is not valid.

When `chg-sid:pctype=ansi` is specified, *nc* = 000 is not valid if *ni* = 001–005.

When `chg-sid:pctype=ansi` is specified, *nc* = 000 is valid if *ni* = 006–255.

The point code 000-000-000 is not a valid point code.

Default:

Display summary for all provisioned clusters

mode (optional)

The type of display. Specify `mode=full` to display additional information for the specified DPC.

Range:

full

Default:

Display summary report

stat (optional)

This parameter reports on destinations whose status is the same as the state indicated by the parameter.

Range:

all

All of the primary states

alminh

Alarms inhibited

anr

In service abnormal (IS-ANR)

dsbld

Out of service maintenance disabled (OOS-MT-DSBLD)

mt

Out of service maintenance (OOS-MT)

nr

In service normal (IS-NR)

Default:

all

Example

```
rept-stat-cluster
```

```
rept-stat-cluster:stat=alminh
```

```
rept-stat-cluster:stat=MT
rept-stat-cluster:dpc=20-2-*
rept-stat-cluster:dpc=20-2-*:mode=full
rept-stat-cluster:dpc=20-2-5
```

Dependencies

If the `mode=full` parameter is specified, the `dpc/dpca` parameter must be specified.

2386 E2386 Cmd Rej: DPC parameter needed with MODE=FULL

The `stat` parameter cannot be specified with the `dpc/dpca` parameter in the command.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The Cluster Routing and Management Diversity (CRMD) feature must be turned on before this command can be entered.

2581 E2581 Cmd Rej: CRMD feature must be ON

The specified DPC must exist.

2417 E2417 Cmd Rej: Point code does not exist in the routing table

If a DPC is specified, it must be an x-list entry, a cluster DPC, or a member of a provisioned cluster.

2148 E2148 Cmd Rej: DPC must be a cluster DPC or cluster member

The destination address must be a full point code or a cluster point code specified as `ni-nc-*`. A DPC with `ni-nc-**` or `ni-nc-***` cannot be specified.

2886 E2886 Cmd Rej: DSTN address must be a full, network or cluster PC

No other `rept-stat-xxx` command can be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

Notes

If no parameters are specified, a summary report is produced, showing all provisioned clusters and their status.

If an FPC corresponding to a provisioned cluster member or an x-list entry is specified, then the status of only the specified FPC, along with routeset status, is displayed.

If a cluster destination is specified on the `dpc/dpca` parameter, then the status of the cluster and the routesets that have been defined for that cluster is displayed.

If the `mode=full` parameter and a DPC are specified, the Route/Destination table is searched, and all entries (cluster DPCs, provisioned cluster member DPCs, and x-list DPCs) belonging to the parent cluster are displayed along with their status. Also, if circular routing is in effect for the DPC, information useful in diagnosing and correcting the situation is displayed.

In the summary report, and in the detailed output when a cluster DPC is being reported, the number of provisioned members of the cluster, and the number of x-list entries that have been created for the cluster, are reported in the PROV and X-LIST columns, respectively.

When detailed information for an x-list entry is being reported, the reasons that the x-list entry was created, and the amount of time remaining on the x-list expiration timer, if applicable, in the format hh:mm is shown in the X-REASON and X-TIME columns, respectively. In x-list entries for which the expiration timer is not applicable, dashes "-----" are displayed.

MTT 4735 and 4732 deleted by MB

Output

This example shows the output when no parameters are specified. Summary information for all of the defined cluster DPCs is shown. The report shows the number of provisioned and x-list members of each cluster.

RCV LSN= lsn01a
MEMBER = ***-***-***

```

Command Completed.

;

If a circular routing alarm is raised for a cluster DPC, then specifying the `dpc` and `mode=full` parameters displays information pertinent to the cluster member experiencing the circular routing condition. The value for the `MEMBER` field in this example represents the cluster member that had the circular routing condition. This is the same member for which an x-list entry could not be created.

 **Note:**

The circular routing member information shown in this output report displays as `***-***-***` if the specified DPC is not a cluster DPC or the information is not known by maintenance at the time the report is generated.

```
rept-stat-cluster:dpc=20-2-*:mode=full
```

```

;

Legend

- **ORIG**—Origination of the destination point code being reported. Possible values that can appear in the column are:
- **CLUST**—Entry is a provisioned cluster (*ni-nc-**) DPC
- **PROV**—Entry is a provisioned cluster member (*ni-nc-ncm*)
- **X-LIST**—Entry is a non-provisioned (i.e. dynamically-created) x-list cluster member
- **PST**—Primary state of the cluster. See [Possible Values for PST/SST/AST](#).
- **SST**—Secondary state of the cluster. See [Possible Values for PST/SST/AST](#).
- **AST**—Associated state of the cluster. See [Possible Values for PST/SST/AST](#).
- **X-REASON**—Reasons that the X-LIST entries currently exist. The two-letter indicator values that can appear in this column are:
 - **RT**—X-LIST entry created due to routing
 - **CG**—X-LIST entry created due to congestion
 - **CR**—X-LIST entry created due to circular routing

The circular routing transmit/receive linkset information shown in the `mode=full` detailed output report displays as “-----” if no circular routing alarm exists for the DPC or the information is not known by maintenance at the time the report is generated.

4.1.401 rept-stat-db

Use this command to display a report showing various status indicators for the active and standby OAM database and the status of the database on each of the network cards.

If the A-Port, AINPQ, Diameter S13/S13' Interface for EIR, EIR, G-Flex, G-Port, INP, LNP ELAP Configuration, Prepaid SMS Intercept Ph1 (PPSMS), SIP NP, or V-Flex feature is turned on, or the ATINP feature is enabled, then the status of the MPS databases and Service Module cards is displayed.

Parameters**db (optional)**

Report section or sections to display in the output. The content of each section depends on the specified or default value of the `display` parameter. MPS output appears only if a feature that uses the MPS is turned on in the system (A-Port, AINPQ, Diameter S13/S13' Interface for EIR, EIR, G-Flex, G-Port, INP, PPSMS, SIP NP, V-Flex, or the LNP ELAP Configuration controlled feature) or the ATINP feature is enabled.

Range:***all***

displays database and card output for the STP and MPS report sections

mps

displays database and card output for the MPS report section

stp

displays database and card output for the STP report section

gtt

displays database and card output for the GTT-enabled IPSPG card report section

Default:

all

display (optional)

Output type.

Range:***all***

Displays operational status of all databases (MASP A, MASP B, and MDAL) and all cards equipped in the database on the system.

brief

Displays operational status of databases in the active and standby MASP and of MPS databases if a feature that uses the MPS is turned on

except

Displays operational status information contained in the `display=brief` output along with the cards whose database level does not match the active fixed disk current partition or active MPS database

version

Displays the same information that is displayed with the `display=all` parameter except that the individual database status column is replaced with the database format version and status. Details of the status of the backup databases are displayed for MASP cards. No version information is shown for MPS databases; use the `rept-stat-mps` command.

Default:

brief

loc (optional)

The card location as stenciled on the shelf of the system.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118, 1113, 1115

Example

```
rept-stat-db
rept-stat-db:display=all
rept-stat-db:loc=1207
rept-stat-db:db=stp
rept-stat-db:db=gtt
```

Dependencies

The `db` and `loc` parameters cannot be specified at the same time. Also, `display=except` and `display=version` cannot be specified with `db=gtt`.

2155 E2155 Cmd Rej: Invalid parameter combination specified

For E5-OAM cards, values of 1117 and 1118 cannot be specified for the `loc` parameter.

2154 E2154 Cmd Rej: Card slot reserved by system

One of the following features must be turned on, the ATINP feature must be enabled, or at least one ENUM card must be provisioned before the `db=mps` parameter can be specified:

- A-Port
- AINPQ
- EIR
- G-Flex
- G-Port
- INP
- LNP ELAP Configuration
- Prepaid SMS Intercept Ph1
- SIP NP
- V-Flex

4102 E4102 Cmd Rej: At least one EPAP DB feature/LNP ELAP CFG MPS based feature must be enabled/ON

The shelf and card must be equipped.

2144 E2144 Cmd Rej: Location invalid for hardware configuration

The card location slot must be between 1 and 18, but not 9 or 10.

2153 E2153 Cmd Rej: Card slot location out of range

The shelf location must be 11xx, 12xx, 13xx, 21xx, 22xx, 23xx, 31xx, 32xx, 33xx, 41xx, 42xx, 43xx, 51xx, 52xx, 53xx, or 61xx.

2152 E2152 Cmd Rej: Shelf ID out of range

The frame value of the shelf location parameter (`loc`) must be within the valid range.

2150 E2150 Cmd Rej: Frame ID out of range

A valid value must be specified for the display parameter.

E2044 Cmd Rej: DisplayType value is undefined - display

Notes

If the `display`, `db`, or `loc` parameter is specified and the database for a particular card location is not accessible, hyphens are displayed in place of the data.

The output of the `rept-stat-db` command with no parameters specified or with the `display=brief` parameter shows the following information:

- Activity status of both the active and standby MASP, the date and time the last backup was performed on the removable drive (if inserted) and the fixed disk backup partition, coherency, the number of updates (level) to the backup partition of the fixed disk, and the current partition of the fixed disk
- If the A-Port, AINPQ, Diameter S13/S13' Interface for EIR, EIR, G-Flex, G-Port, INP, PPSMS, SIPNP (if used with EPAP), or V-Flex feature is turned on, or the ATINP feature is enabled, EPAP A and EPAP B database status followed by Service Module card database status

- If the SIP NP (if used with ELAP) or LNP ELAP Configuration controlled feature is turned on, ELAP A and ELAP B database status followed by Service Module card database status
- If one or more GTT-enabled IPSC cards are configured, the GTT database status for all such cards

The output when the `display=except` parameter is specified shows the coherency and the number of updates for all the cards whose database level does not match the active fixed disk current partition, reference database level, or is incoherent. All databases that are not accessible are also displayed. In addition, the time stamp for the last database update is displayed for every card.

The output when the `display=all` parameter is specified shows the coherency and the number of updates for all of the distributed databases. In addition, the time stamp for the last database update is displayed for every card.

The output when the `display=version` parameter is specified shows the coherency and the number of updates for the active and standby databases, along with the database version and the operational status of each of these databases. If the LNP feature is turned on, the version of the LNP database is shown. No version is shown for EPAP or ELAP databases; use the `rept-stat-mps` command to display version information for these databases.

The output when the `loc` parameter specifies an equipped card shows the coherency and the number of updates to its database. In addition, the time stamp for the last database update is displayed for the specific card location.

The `db` parameter is used to limit the output of the command to the EAGLE STP information or the MPS information or GTT information for an IPSC card. The information is displayed as indicated by the `display` parameter value (`display=version` is not valid for `db=mps` and `db=gtt`; the command does not display the MPS database versions). The default `db` parameter value is `all`, which displays the information for the STP and MPS databases and cards as indicated by the `display` parameter value.

Output

Note:

Removable drive database information is shown only for the Active OAM slot, whether or not a removable drive is inserted into the standby OAM.

Note:

A status of 'OK' indicates that the database has no errors.

This example shows the output for a specified card. The disk is OFF-LINE indicating the disk has been dismantled. This is not necessarily a problem.

This example shows the output when the LNP ELAP Configuration feature is turned on, and ELAP is used. Card 1203 indicates a value 12 in the exception column. The value indicates the number of times that the Corruption Cross Correction function has corrected the card during the time that the card has been in service. More specifically, the card has encountered 12 corrupted records and has subsequently repaired them. This value persists until the card is reset.

;
Command Executed

```

This example shows that with `db=gtt`, only two values of `DISPLAY` parameter are supported viz., `ALL` and `BRIEF`. This command will give an appropriate error message when `display=except` or `display=version` is specified with `db=gtt`.

```
rept-stat-db:display=except:db=gtt
```

```
tekelecstp 16-11-28 16:00:19 MST  EAGLE 46.5.0.0.0-70.7.0
rept-stat-db:display=except:db=gtt
Command entered at terminal #23.
;
```

E2155 Cmd Rej: Invalid parameter combination specified

```
> rept-stat-db:display=version:db=gtt
```

```
tekelecstp 16-11-28 16:06:31 MST  EAGLE 46.5.0.0.0-70.7.0
rept-stat-db:display=version:db=gtt
Command entered at terminal #23.
;
```

E2155 Cmd Rej: Invalid parameter combination specified

Legend

- **DATABASE STATUS**—Indicates any database alarms on the MASPs. Not used with `loc` parameter output.
 - **>> OK<<**—No database alarms
 - **>>NOT OK (DMS)<<**—Database DMS alarms are present
 - **>>NOT OK (DRMS)<<**—Database DRMS alarms are present
 - **>>NOT OK (DMS,DRMS)<<**—Database DMS and DRMS alarms are present
- **(ACTV MASP)**—The specified MASP is the active processor. Not used with `loc` parameter.
- **(STDBY MASP)**—The specified MASP is the standby processor. Not used with `loc` parameter.
- **(NOACCS)**—The specified processor is not accessible. Not used with `loc` parameter.
- **C**—Indicates whether the database is coherent

- **Y**—the database is coherent
- **N**—the database is not coherent
- Dash (-)—the database is not accessible
- **LEVEL**—Number of updates made to the database partitions
- **TIME LAST BACKUP**—Date and time the last change was performed on the removable drives (if inserted) and the backup partition of the fixed disk. Not used with `loc` parameter.
- **TIME LAST UPDATE**—Date and time of the last update on the card database from OAM. Not used with `loc` parameter.
- **GTT**—The Global Title Translation database on the OAM. This database is downloaded to Service Module and GTT enabled IPSP cards. If the birthdate or level do not match the SM/GTT enabled IPSP card, then the corresponding card generates an alarm.
- **RD BKUP**—Removable drive backup partition
- **FD BKUP**—Fixed disk backup partition
- **FD CRNT**—Fixed disk current partition. Not used with the `loc` parameter output.
- **DIFF CONTENTS**—The specified database's contents are different compared to the other database in that partition.
- **DIFF LEVEL**—The specified database's level does not match the level of the current partition of the active fixed disk (**FD CRNT**).
- **DIFF TIME**—The specified database's level matches the level of the current partition of the active fixed disk (**FD CRNT**), but the time that the database was updated, compared to the current partition of the active fixed disk (**FD CRNT**), is different. This exception indicator appears only if the time and date stamp in an update packet or in memory becomes corrupted.
- **CORRUPTED**—The specified database is corrupted.
- **INCOHERENT**—The specified database is incoherent.
- **EXCEPTION**—The following values can appear:
 - The condition of the specified database with which the system has detected a problem. These conditions are: **DIFF CONTENTS**, **DIFF LEVEL**, **DIFF TIME**, **CORRUPTED**, and **INCOHERENT**. A "-" indicates that the database was not accessible. A blank entry indicates that the database has no problems. This field is used with the `display=except`, `display=all`, and `loc` parameter outputs.
 - A value that indicates the number of times that the Corruption Cross Correction function has corrected the card during the time that the card has been in service. This value persists until the card is reset.
- **IN-SRVC**—Length of time the card has been in service
- **CARD/APPL**—Card type or application assigned to the card specified in the **LOC** field. Not used with the `display=brief` (default) output.
 - **TDM-BKUP**—Backup partition on the fixed disk on the TDM
 - **TDM-CRNT**—Current partition on the fixed disk on the TDM
- **LOC**—Card location of the database. Not used with `display=brief` (default) output.

- **T**—Indicates whether the specified database is in transition. A database is in transition when the database for the link interface module (LIM) or E5-TSM being loaded with the new screen set information after an update to the database, and the database has not reached the current reported database level. Not used with `display=brief` (default) output.
- **Y**—the database is in transition
- **N**—the database is not in transition.
- **TIME LAST BACKUP**—The date and time the last change was performed on the specified card and its associated database. A dash (–) in this field for the fixed drive (FD) or removable drive (RD) indicates that no backup has been created on that drive. Not used with `display=brief` (default) output.
- **VERSION**—Version number of each database (including the LNP database if the LNP feature is on)
 - **xxx-xxx-xxx**—Version number of the database
 - **UNKNOWN**—The `rept-stat-db` command can show the version number only for a database that is version 20.0.0 or later. Any database version that is earlier than version 20.0.0 cannot be determined and UNKNOWN is displayed for the database version number.
 - A dash “-” —The database is not available. Used only with `display=version` output.
- **STATUS**—Operational status of the database version. Used only with `display=version` output.
 - **NORMAL**—The database version is fully operational.
 - Blank entry—Indicates the database is not available or is unknown. A numeric value indicates the database is invalid. The value displayed is the status value found in the field and is for diagnostic purposes.
- **BIRTHDATE**—Date and time of creation for the database
- **EPAP A (ACTV)**—The active EAGLE Application Processor. This section appears only if the A-Port, AINPQ, Diameter S13/S13' Interface for EIR, G-Port, G-Flex, EIR, INP, PPSMS, SIP NP (if used with EPAP), or V-Flex features are turned on or the ATINP feature is enabled.
 - **PDB**—Provisioning database status information
 - **RTDB**—Provisioning database status information used to create the resident Realtime Database. The RTDB information may be different than the PDB information if the PDB has been reloaded, or if the RTDB has not been loaded from the PDB. If the RTDB birthdate is different than the PDB or if the level is too old to be able to resynchronize the databases, then a "Reload Required" alarm is generated.
 - **RTDB-EAGLE**—EPAP resident Realtime Database status information. This database is downloaded to Service Module cards. If the birthdate or level do not match the Service Module card, then the Service Module card generates an alarm. The RTDB is reloaded from the PDB, and the birthdate and level are reset and do not match the database status information. This database status mismatch condition indicates an abnormal condition that requires Service Module cards to be reloaded.
- **EPAP B (STDBY)**—The standby EAGLE Application Processor. This section appears only if the A-Port, AINPQ, Diameter S13/S13' Interface for EIR, G-Port, G-Flex, EIR, INP,

PPSMS, SIP NP (if used with EPAP), or V-Flex features are turned on, or the ATINP feature is enabled.

- **PDB**—Provisioning database status information
- **RTDB**—The provisioning database status information used to create the resident Realtime Database. The RTDB information may be different than the PDB information if the PDB has been reloaded, or if the RTDB has not been loaded from the PDB. If the RTDB birthdate is different than the PDB or if the level is too old to be able to resynchronize the databases, then a "Reload Required" alarm is generated.
- **RTDB-EAGLE**—EPAP resident Realtime Database status information. This database is downloaded to Service Module cards. If the birthdate or level do not match the Service Module card, then the Service Module card generates an alarm. The RTDB is reloaded from the PDB, and the birthdate and level are reset and do not match the database status information. This database status mismatch condition indicates an abnormal condition that requires Service Module cards to be reloaded.
- **ELAP A (ACTV)**—The active EAGLE LNP Application Processor. This section appears only if the LNP ELAP Configuration or SIP NP (if used with ELAP) feature is turned on.
 - **RTDB-EAGLE**—ELAP resident Database status information. This database is downloaded to Service Module cards. If the birthdate or level do not match the Service Module card, then the Service Module card generates an alarm.
 - **TIME LAST UPDATE**—Date and time of the last update of the RTDB from the LSMS
- **ELAP B (STDBY)**—The standby EAGLE LNP Application Processor. This section appears only if the LNP ELAP Configuration or SIP NP (if used with ELAP) feature is turned on.
 - **RTDB-EAGLE**—The ELAP resident Realtime Database status information. This database is downloaded to Service Module cards. If the birthdate or level do not match the Service Module card, then the Service Module card generates an alarm.
 - **TIME LAST UPDATE**—Date and time of the last update of the RTDB from the LSMS

4.1.402 rept-stat-ddb

Use this command to obtain the most recent dynamic database (DDB) audit report. The DDB audit report displays the checksums of the Route, Linkset, Link, CM Card, CM Cluster, Mated Application, and MTP globals. The report displays the exact status of active MTP card after audit and cause of that status.

Parameters

display (optional)

This parameter specifies the type of report to display.

Range:

brief

all

Default:

brief

filter (optional)

This parameter provides a full DDB audit report for cards that meet the specified criteria.

Range:

resp

Responding cards

nrsp

Non-responding cards

incn

Inconsistent cards

cons

Consistent cards

ncons

Not-consistent cards: includes cards marked as inconsistent, DDB update in progress, having idle period less than quiet period, and sending replies marked as NO_DATA

ndat

Cards marked as "No Data" because the checksum of dynamic tables is not available

nddl

Cards marked as "No Data " because the checksum of dynamic tables is not available due to the DDL crossload being in incomplete state

nddb

Cards marked as "No Data" because the checksum of dynamic tables is not available due to non-initialization of DDB

duip

Cards returning replies marked as "DDB update in progress"

duipt

Cards returning replies marked as "DDB update in progress" due to incomplete evaluation of TSRC task

duipc

Cards returning replies marked as "DDB update in progress" due to incomplete checksum calculation

nquiet

Cards returning replies having idle period less than the quiet period

list (optional)

This parameter displays a list of cards that meet the specified criteria.

Range:***resp***

Responding cards

nrsp

Non-responding cards

incn

Inconsistent cards

cons

Consistent cards

ncons

Not-consistent cards, including cards marked as inconsistent, DDB update in progress, having idle period less than quiet period, and sending replies marked as NO_DATA

ndat

Cards marked as "No Data " because the checksum of dynamic tables is not available

nddl

Cards marked as "No Data " because the checksum of dynamic tables is not available due to the DDL crossload being in incomplete state

nddb

Cards marked as "No Data " because the checksum of dynamic tables is not available due to non-initialization of the DDB

duip

Cards returning replies marked as "DDB update in progress"

duipt

Cards returning replies marked as "DDB update in progress" due to incomplete evaluation of TSRC task

duipc

Cards returning replies marked as "DDB update in progress" due to incomplete checksum calculation

nquiet

Cards returning replies marked as having the idle period less than the quiet period

Example

```
rept-stat-ddb
rept-stat-ddb:display=all
rept-stat-ddb:list=resp
rept-stat-ddb:filter=nddb
```

Dependencies

Audit data is available only if the execution of a periodic or manual DDB audit is complete (see the `aud-data` command).

4000 E4000 No data is available to display

If the system is in upgrade mode, then this command cannot be entered.

3276 E3276 Cmd Rej: Command not allowed while in upgrade mode

The `display`, `list`, and `filter` parameters cannot be specified together in the command.

2155 E2155 Cmd Rej: Invalid parameter combination specified

Notes

A question mark (?) indicates that the corresponding card's status is not evaluated (Inconsistent/Consistent) when system status is marked as ABORTED.

Cards having an additional status of IGNORED responded with "DDB update in progress". These cards are not considered for calculating system status.

Output

The MATED APPL field is displayed only for Service Module cards.

```
rept-stat-ddb:display=all
```

Legend

- **SYSTEM STATUS:**
 - **OK**—DDB is consistent on all active MTP cards or no active MTP card is present in system
 - **INCONSISTENT**—DDB is inconsistent
 - **UNKNOWN**—"All active MTP cards in the system responded without the checksum of DDB table" or "No active MTP card in the system responded to audit request"
 - **ABORTED**—"Checksums collected failed to meet the quiet period requirement" or "Number of cards responded with "DDB update in progress" greater than 25% number of cards responded with data"
- **ACTIVE MTP CARDS**—Number of active MTP cards
- **NON RESPONDING CARDS**—Number of non-responding cards
- **RESPONDING CARDS**—Number of responding cards
- **CARDS WITH NO DATA**—Cards sending replies without the checksum of dynamic tables, due to incomplete DDL crossload or DDB initialization
- **CARDS WITH DATA**—Cards sending replies with checksums
- **CARDS FAILING QUIET PRD**—Cards failing quiet time requirement
- **CARDS WITH DDB UPD IN PRG**—Cards sending replies marked as "DDB update in progress" due to DDB checksum not evaluated completely or TSRC task is incomplete
- **CARDS CONSIDERED FOR CKSM**—Cards sending correct replies. Replies are not marked with "DDB update in progress" or "Reply with no data".
- **INCONSISTENT CARDS**—Cards that are inconsistent
- **CONSISTENT CARDS**—Cards that are consistent
- **AUDIT START TIME**—Time that the audit started (*DD/MM/YYYYYY hh:ms:ssformat*)
- **QUIET PERIOD**—Minimum DDB idle time, in milliseconds, during which no DDB updates are applied
- **RTE**—Checksum of RTE Table
- **LINK SET**—Checksum of Link Set Table
- **LINK**—Checksum of Link Table
- **CM CARD**—Checksum of CM Card
- **CM CLSTR**—Checksum of CM Cluster
- **MATED APPL**—Checksum of Mated Application
- **MTP GLOBLs**—Checksum of MTP Globals Table
- **IDLE (PERIOD)**—Time elapsed, in milliseconds, since the last DDB update was received by this card
- **DDB UPD**—Total DDB updates received on the card
- **ADDN'L STATUS**—Display more information for the card, including WWA updates or whether card is considered for audit calculations
- **CAUSE**—Display the reason for sending replies of type "reply with no data " or "DDB update in progress". This value can be DDL (crossload not completed), DDB (dynamic

database is not initialised), (TSRC, DDB) (TSRC task is not completed) or DDB (checksums still needs to apply on tables).

- **?**—Card status is not evaluated (inconsistent/consistent) if the system status is marked as "ABORTED"
- **IGNORED**—Card responded with "DDB update in progress" and is not considered for calculating system status
- **WWA UPD**—Number of entries that were updated by the WWA

4.1.403 rept-stat-deir

Use this command to display the overall status of the Diameter EIR service on the EAGLE.

Parameters

dcname (optional)

Diameter connection name. This parameter specifies the unique logical name assigned to each diameter connection. It shall display Status, TPS and Statistics of the Diameter connection specified.

Range:

ayyyyyyyyyyyyyyy

A string of alphanumeric characters, beginning with a letter and up to 15 characters in length. Valid values are a..z, A..Z, 0..9.

System Default:

null

loc (optional)

Diameter card location for which Card status, overall card TPS and total statistics of the card is to be reported.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118

mode (optional)

Display Diameter connection statistics.

Range:

perf

Displays per card TPS statistics, DEIR Service statistics, and per connection TPS statistics.

stat

Displays per card TPS statistics, DEIR Service statistics, and per connection service statistics.

peakreset (optional)

Reset peak values for a card or a specified diameter connection.

Range:

yes

Reset the peak value.

no

Do not reset the peak value.

Example

```
rept-stat-deir
rept-stat-deir:loc=1207
rept-stat-deir:dcname=dc1207a
rept-stat-deir:mode=perf
rept-stat-deir:peakreset=yes:loc=1207
rept-stat-deir:mode=perf:loc=1207
rept-stat-deir:mode=stat:loc=1207
rept-stat-deir:mode=stat
```

Dependencies

S13/S13' EIR Feature must be activated before retrieving the overall status of DEIR cards.

2728 E2728 Cmd Rej: S13 Feature Must Be Activated

The (1) *mode* and *loc* parameters, (2) *loc* and *peakreset* parameters, or (3) *dcname* and *peakreset* parameters can be specified together. No other combination is allowed.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The location specified with this command should be of a DEIR card running DEIRHC gpl.

2074 E2074 Cmd Rej: Card location specified must be an DEIR card

At least one Diameter EIR card running the DEIRHC gpl must be configured.

2791 E2791 Cmd Rej: DEIR not Configured

The Diameter connection name specified must be present in the DCONN table.

2783 E2783 Cmd Rej: DCNAME not present in DCONN table

The card at the specified location must support this command.

2144 E2144 Cmd Rej: Location invalid for hardware configuration

Diameter card location or diameter connection name must be specified with peakrest parameter.

3022 E3022 Cmd Rej: LOC or DCNAME must be specified

Notes

If optional parameters are specified, only the entries that match the entered parameters are displayed.

Output

This example displays output when no parameter is specified:

```
rept-stat-deir
```

```

Legend

This section defines the fields of the following `rept-stat-deir` reports:

- `rept-stat-deir`
- `rept-stat-deir:loc=1207`
- `rept-stat-deir:dcname=dc1207a`
- `rept-stat-deir:mode=perf`
- `rept-stat-deir:peakreset=yes:loc=1207`
- `rept-stat-deir:peakreset=yes:dcname=dc1217`
- `rept-stat-deir:mode=stat`
- `rept-stat-deir:mode=stat:loc=1101`

A dash (-) in an output field indicates that the statistic does not apply.

- **CARD IS-NR** -Number of DEIR cards running the DEIRHC GPL that can be used by the system (status is In-Service Normal, IS-NR).
- **CARD**-Card location of the DEIR card running the DEIRHC GPL
- **P**- The primary Service Module card. This card provides the MPS status to the EAGLE. This indicator is displayed between the card location and the GPL version.
- **VERSION** -Version number of the DEIRHC GPL running on the DEIR card.
- **PST** -Primary state of the card. See [Possible Values for PST/SST/AST](#).
- **SST**-Secondary state of the card. See [Possible Values for PST/SST/AST](#).
- **AST** -Associated state of the card. See [Possible Values for PST/SST/AST](#).
- **TPS** - TPS (Transactions per second) indicates the number of Diameter messages which are received on the DEIR cards or specified diameter connection.
- **RSVD-TPS**- Reserved TPS is the guaranteed TPS for a diameter connection.
- **MAX-TPS** - This is the maximum TPS for a diameter connection
- **PTPS/PEAK-TPS** ---
 - PTPS indicates the maximum TPS occurred on the card when executed with `loc` parameter.
 - PTPS indicates the maximum TPS occurred on a diameter connection when executed with `dcname` parameter.
- **PTIMESTAMP/PEAKTIMESTAMP** - The time when the PTPS occurred on the card or specified diameter connection.
- **DCNAME** -Diameter connection name.

- **STATUS** - UP or DOWN status of the diameter connection.
- **DEIR ALARM STATUS** - Displays DEIR system related alarms. If there are no system alarms present, this field displays No Alarms.
- **CARD ALARM STATUS** - Displays DEIR card specific alarms. If there are no card alarms present, this field displays No Alarms.
- **DCONN ALARM STATUS** - Displays diameter connection specific alarms. If there are no connection related alarms present, this field displays No Alarms.
- **TOTAL DEIR SERVICE STATISTICS**-System-wide view of per-service statistics. The report tracks the following information:
 - **SERVICE** --- Service running on the DEIR card. Currently only the EIR service is supported for the DEIR card.
 - **SUCCESS** -Total number of messages successfully processed by the DEIR card for the EIR service.
 - **ERROR** -Total number of messages with errors which are received by the DEIR cards for the EIR service.
 - **WARNINGS** -Total number of messages received for which either IMEI lookup failure occurred or Unknown equipment status is sent in response by the DEIR card for the EIR service.
 - **OVERFLOW** - Number of messages discarded due to congestion on a DEIR card.
 - **TOTAL** - Total number of messages received. It should be the sum of (Success + Error + Warnings) messages.
- **TPS STATISTICS**- Section of the report that provides TPS statistics on each Service Module card or diameter connection.
 - **TPS** - TPS (Transactions per second) indicates the number of Diameter messages which are received on the DEIR cards or specified diameter connection.
 - **PTPS** - PTPS indicates the maximum TPS that occurred on the card or specified diameter connection.
 - **PTIMESTAMP** - The time when the PTPS occurred on the card or specified diameter connection.
- **PER CONNECTION SERVICE STATISTICS** - Service statistics corresponds to each diameter connection
 - **DCNAME**-Diameter connection name.
 - **STATUS**- UP or DOWN status of the diameter connection.
 - **SUCCESS**-Total number of messages successfully processed on this particular Diameter connection by the DEIR card for the Diameter EIR service.
 - **WARNING**-Total number of messages received on this particular Diameter connection for which either IMEI lookup failure occurred or Unknown equipment status is sent in response by the DEIR card for Diameter EIR service.
 - **ERRORS**-Total number of messages with errors which are received on this particular Diameter connection by the DEIR cards for the Diameter EIR service.

- **OVERFLOW**-Number of messages received on this particular Diameter connection and discarded due to congestion.
- **TOTAL**- Total number of messages received on this particular diameter connection. It should be the sum of (Success + Warning + Errors) messages.
- **DCONN STATISTICS** -Statistics of diameter connection are displayed when DCNAME parameter is specified in `rept-stat-deir` command.
 - **SUCCESS**-Total number of messages successfully processed on this particular Diameter connection by the DEIR card for the Diameter EIR service.
 - **ERROR**-Total number of messages with errors which are received on this particular Diameter connection by DEIR cards for the Diameter EIR service.
 - **WARNING**-Total number of messages received on this particular Diameter connection for which either IMEI lookup failure occurred or Unknown equipment status is sent in response by the DEIR card for the Diameter EIR service.
 - **OVERFLOW**-Number of messages received on this particular Diameter connection and discarded due to congestion.
 - **TOTAL**- Total number of messages received. It should be the sum of (Success + Error + Warning) messages.
- **PER CONNECTION TPS STATISTICS** - TPS statistics corresponds to each diameter connection.
 - **DCNAME** -Diameter connection name.
 - **STATUS** -- UP or DOWN status of the diameter connection.
 - **RSVD-TPS** - Reserved TPS is the guaranteed TPS for a diameter connection.
 - **MAX-TPS** - This is the maximum TPS for a diameter connection.
 - **TPS** - TPS (Transactions per second) indicates the number of Diameter messages which are received on the DEIR cards or specified diameter connection.
 - **Peak-TPS** - Peak-TPS indicates the maximum TPS that occurred on the card or specified diameter connection.
 - **PEAKTIMESTAMP** - The time when the Peak-TPS occurred on the card or specified diameter connection.

4.1.404 rept-stat-dlk

Use this command to show the status of the TCP/IP data links. The secondary state (SST) of the TCP/IP data links shows whether the link is available, unavailable, or manually removed from service.

Parameters

loc (optional)

The card location as stenciled on the shelf of the system.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318,
 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318,
 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318,
 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318,
 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318,
 6101 - 6108, 6111 - 6118

Default:

All data links are shown.

Example

```
rept-stat-dlk
rept-stat-dlk:loc=1104
```

Dependencies

No other `rept-stat-xxx` command can be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

The ACM is the only valid card type for this command.

2144 E2144 Cmd Rej: Location invalid for hardware configuration

The specified card must have a TCP/IP data link assigned to it.

N/A N/A

The card location, frame, shelf, or slot must be within the allowed range.

2016 E2016 Cmd Rej: <parm_desc> is out of range - <parm>

The data link must be equipped in the database.

2373 E2373 Cmd Rej: Link is unequipped in the database

A card location that is valid and defined in the database must be specified.

2376 E2376 Cmd Rej: Specified LOC is invalid

Notes

None

Output

```
rept-stat-dlk

4.1.405 rept-stat-dstn

Use this command to generate a report of the MTP point code status for provisioned point codes. Any provisioned destination can be specified, including a cluster destination (*ni-nc-**) or a network destination (*ni-*-**).

Parameters

Note:

See [Point Code Formats and Conversion](#) for a detailed description of point code formats, rules for specification, and examples.

dpc (optional)

ANSI point code with subfields *network indicator-network cluster-network cluster member* (*ni-nc-ncm*). The *prefix* subfield indicates a private point code (*prefix-ni-nc-ncm*).

Synonym:

dpcn

Range:*p*-, 000-255, *, **, ***

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*p*-The asterisk values *, **, and *** are not valid for the *ni* subfield.If ** or *** is specified for the *nc* subfield, either *, **, or *** must be specified for the *ncm* subfield.When *chg-sid:pctype=ansi* is specified, *ni=000* is not valid.When *chg-sid:pctype=ansi* is specified, *nc=000* is not valid if *ni=001-005*.When *chg-sid:pctype=ansi* is specified, *nc=000* is valid if *ni=006-255*.When *chg-sid:pctype=ansi* is specified, *ni-*.** is valid if *ni= 006-255*.

The point code 000-000-000 is not a valid point code.

dpc/dpca/dpci/dpcn/dpcn24/dpcn16 (optional)

Destination point code.

dpci (optional)ITU international point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-zone-area-id*).**Range:***s*-, *p*-, *ps*-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s*-, *p*-, *ps**zone*—0-7*area*—000-255*id*—0-7

The point code 0-000-0 is not a valid point code.

dpcn (optional)ITU national point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the *chg-stpopts:npcfmti* flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).**Range:***s*-, *p*-, *ps*-, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s*-, *p*-, *ps**nnnnn*—0-16383*gc*—*aa-zz**m1-m2-m3-m4*—0-14 for each member; values must sum to 14**dpcn24 (optional)**24-bit ITU national destination point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*). The *prefix* subfield indicates a private point code (*prefix-msa-ssa-sp*).

Range:

p-, 000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—p

msa—000—255

ssa—000—255

sp—000—255

dpcn16 (optional)

16-bit ITU national point code with subfields *unit number sub number area main number area* (*un-sna-mna*). The *prefix* subfield indicates a private point code (*prefix-un-sna-mna*).

Range:

p--, 000---127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix---p

un---000---127

sna---000---15

mna---000---31

mode (optional)

The type of display to produce. This parameter displays the point code's subsystem status along with the normal output.

Range:***full***

Comprehensive display of point code status, including *rtx*. If entered with a point code, status for that point code is displayed. If specified without a point code, the status of all routesets is displayed.

rtx

Displays exception route status, other than circular routing, if the Origin-based MTP Routing feature is on.

Default:

A summary report is displayed.

stat (optional)

The primary state filter. The state of the destination for which to generate a report. To generate a report for all destinations whose state is DSBLD, specify *stat=dsbld*.

Range:***all***

All of the primary states

alminh

Alarms inhibited

anr

In service abnormal (IS-ANR)

dsbld

Out of service maintenance disabled (OOS-MT-DSBLD)

mt

Out of service maintenance (OOS-MT)

nr

In service normal (IS-NR)

Default:*all***Example**

```
rept-stat-dstn
rept-stat-dstn:dpci=2-004-1:mode=full
rept-stat-dstn:dpc=9-3-6:mode=full
rept-stat-dstn:dpc=9-3-*:mode=full
rept-stat-dstn:dpc=9-3-*
rept-stat-dstn:dpc=9-3-**
rept-stat-dstn:dpc=9-3-***
rept-stat-dstn:dpc=9-3-***:stat=mt
rept-stat-dstn:dpc:9-4-***:stat=alminh
rept-stat-dstn:dpc=9-3-*:mode=rtx
rept-stat-dstn:mode=full
rept-stat-dstn:mode=rtx
rept-stat-dstn:dpc=1-1-1
rept-stat-dstn:dpcn16=1-1-1
```

Dependencies

No other `rept-stat-xxx` command can be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

If a `dpc` parameter is specified, it must be the true destination point code (not an alias) and it must be defined in the database.

2388 E2388 Cmd Rej: Point code not equipped

The `stat` parameter can be specified with the `dpc` parameter only if the `dpc` parameter specifies one of the *ni-nc-** formats.

2890 E2890 Cmd Rej: DPC must be specified as wildcard when used with STAT

An x-list DPC cannot be specified in the `dpc` parameter.

2147 E2147 Cmd Rej: X-LIST DPC is not allowed

The `mode=rtx` parameter cannot be specified unless the Origin-Based MTP Routing feature is enabled and on.

4584 E4584 Cmd Rej: MTP Origin Based Routing Feature must be ON

The `mode` parameter cannot be specified with the `dpc` parameter if the `dpc` parameter specifies one of the `ni-nc-*` formats.

2886 E2886 Cmd Rej: DSTN address must be a full, network or cluster PC

When the `mode=full` parameter is specified, the `dpc/dpca/dpcn/dpci/dpcn24` parameter must be specified.

2386 E2386 Cmd Rej: DPC parameter needed with MODE=FULL

The destination address must be a full point code, a network destination, or a cluster point code.

2886 E2886 Cmd Rej: DSTN address must be a full, network or cluster PC

Notes

This command can be canceled using the **F9** function key or the `canc-cmd` command. See `canc-cmd` for more information.

This command does not report the x-list point codes. Use the `rept-stat-cluster` command for a report of x-list point codes.

If the `mode=rtx` parameter is specified with a specific DPC, additional linkset, route and exception route information associated with the specified DPC is displayed.

In this command, only ITU-international and ITU national point codes support the spare point code subtype prefix (s-) and the private and spare point code subtype prefix (ps-). All of the point code types support the private (internal) point code subtype prefix (p-).

Summary description of the reports that are produced by the various DPC parameter syntaxes is shown:

- `rept-stat-dstn:dpc=ni-nc-ncm`—Report for fully provisioned destination *ni-nc-ncm*
- `rept-stat-dstn:dpc=ni-*-*`—Report for provisioned network destination with the specified network indicator. If * is specified in the *nc* field, * must be specified in the *ncm* field.
- `rept-stat-dstn:dpc=ni-***-*`—Report for the full network cluster for the specified *ni*
- `rept-stat-dstn:dpc=ni-****-*`—Report for the full network cluster and the network cluster address (if any) for the specified *ni*
- `rept-stat-dstn:dpc=ni-nc-*`—Report for provisioned cluster destination *ni-nc-**
- `rept-stat-dstn:dpc=ni-nc-**-*`—Report showing all destinations whose network (*ni*) and cluster (*nc*) components match those specified. The network cluster address *ni-nc-** (if it exists) is not reported.

- `rept-stat-dstn:dpc=ni-nc-***`—Report showing all destinations whose network (*ni*) and cluster (*nc*) components match those specified. The network cluster address *ni-nc-** (if it exists) is also reported.
- `rept-stat-dstn:dpcn24=msa-ssa-sp`—Report for fully provisioned 24-bit destination *main signaling area-sub signaling area-signaling point*

If the `mode=rtx` parameter is specified without a specific DPC, then status is provided for all exception route sets.

If the `mode=full` parameter is specified with a specific destination point code, then additional linkset, route, and exception route information associated with the specified destination is displayed, along with information that can be used to correct circular routing. If the `mode=full` parameter is specified without a specific destination point code, then status is provided for all regular and exception route sets.

Output

If the `dpc` parameter is not specified:

- If the `mode` parameter is not specified, then the command output lists the status of all provisioned destination point codes (DPCs) (routesets) in the system.
- If the `mode=rtx` parameter is specified, then the output lists the status of only those DPCs against which exception routes have been provisioned, and the status of the provisioned exception route sets associated with each DPCs.
- If the `mode=full` parameter is specified, then the command lists the status of all provisioned DPCs in the system, and the status of the provisioned exception route sets, if any, associated with each DPC.

If the `dpc` parameter is specified:

- If the `mode` parameter is not specified, then the output lists the status of all provisioned routes in the route set specified by that DPC.
- If the `mode=rtx` parameter is specified, then the output lists the status of all provisioned routes in the routeset specified by that DPC, and the status of all provisioned exception routesets associated with that DPC.
- If the `mode=full` parameter is specified, then the output lists the status of all provisioned routes in the routeset specified by that DPC, the status of all provisioned exception route sets associated with that DPC, any aliases associated with that DPC, and circular routing alarm information if any for that DPC.

This example shows the circular routing alarm for a cluster destination. The alarm indicates that circular routing was detected for a member of the cluster, but no x-list entry could be created for that cluster. Circular routing detected on a cluster destination does not automatically force the output to display the status of the cluster as “OOS-MT Prohibit INACCESS” as it does for an FPC destination.

Command Completed.
;

```

This example shows the output if an FPC is specified for which no subsystems are defined. Also, because aliases cannot be defined for cluster destinations, this report shows only an empty header. The circular routing information portion of this report displays “-----” for the linkset names when no circular routing condition exists for the DPC.

```

4.1.406 rept-stat-e1

Use this command to display the E1 port status and signaling link status for cards with provisioned E1 ports.

Parameters

e1port (optional)

The E1 port number. When this parameter is specified, only the information for the specified E1 port on the card in the specified card location is displayed.

Range:

1 - 8

loc (optional)

The unique identifier of a specific LIME1 card located in the STP.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318,
2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318,
3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318,
4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318,
5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318,
6101 - 6108, 6111 - 6118

Default:

Information for all LIME1 cards is reported.

Example

```
rept-stat-e1
```

Dependencies

No other `rept-stat-xxx` command can be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

The `loc` parameter must be specified when the `e1port` parameter is specified.

2366 E2366 Cmd Rej: LOC must be specified

The active TDM location cannot be specified in the `loc` parameter.

3645 E3645 Cmd Rej: Cannot specify the ACTIVE TDM location

Card locations 1117 and 1118 and the MUX card locations (`xy09` and `xy10` where `x` is the frame and `y` is the shelf) cannot be specified in the `loc` parameter.

2376 E2376 Cmd Rej: Specified LOC is invalid

Notes

Specifying the command without any parameters displays E1 port status for all cards with provisioned E1 ports.

If the `loc` parameter is specified, status is displayed for all E1 ports provisioned on the card in the specified location.

If the `loc` and `e1port` parameters are specified, the E1 port status summary is displayed for all E1 ports provisioned on the card in the specified location, followed by the status of all signaling links assigned to the specified E1 port on the card.

Output

This example shows the output when no parameters are specified:

```
rept-stat-e1
```

```

```

Legend

- **LOC**—Card location
- **E1PORT**—Number of the E1 port provisioned on the card in the specified location.
- **PST**—Primary state of the card. See [Possible Values for PST/SST/AST](#).
- **SST**—Secondary state of the card. See [Possible Values for PST/SST/AST](#).
- **AST**—Associated state of the card. See [Possible Values for PST/SST/AST](#). The values *PARENT* and *PAIRED* refer to odd and even adjacent ports on the card that are provisioned in channel bridging mode.
- **ALARM STATUS**—Either "No Alarms" or current alarm number and text
- **UNAVAIL REASON**—Reason for the E1 port being unavailable
- **SLK**—Signaling link assigned to the E1 port
- **TS**—Timeslot assigned to the signaling link
- **PST**—Primary state of the signaling link. See [Possible Values for PST/SST/AST](#).
- **SST**—Secondary state of the signaling link. See [Possible Values for PST/SST/AST](#).
- **AST**—Associated state of the signaling link. See [Possible Values for PST/SST/AST](#).

4.1.407 rept-stat-enet

Use this command to display a summary report of Ethernet status for all cards in the system that have configured Ethernet Interfaces.

Parameters

loc (optional)

The card location as stenciled on the shelf of the system.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318,
2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318,
3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318,
4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318,
5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318,
6101 - 6108, 6111 - 6118, 1113, 1115

Default:

All ENET data for the card location is displayed.

port (optional)

Ethernet interface port ID.

Range:*a, b, c, d***Default:**

All port data for ENET is displayed.

Ports *c* and *d* are displayed for the DEIR/SIP/ENUM applications running on the SLIC card.**Example**

```
rept-stat-enet
rept-stat-enet:loc=1101:port=b
rept-stat-enet:loc=1201:port=c
rept-stat-enet:loc=1201:port=d
```

Dependencies

Another command is already in progress.

2368 E2368 Cmd Rej: System busy - try again later

The `loc` and `port` parameters must be specified together in the command.

2903 E2903 Cmd Rej: LOC and PORT parameter combination must be specified

The shelf and card must be equipped, and the card specified by the `loc` parameter must have an application of IPS, MCP, EROUTE, VSCCP, IPSG, IPLIM, IPLIMI, SS7IPGW, IPGWI, SIP, ENUM, or DEIR.

2144 E2144 Cmd Rej: Location invalid for hardware configuration

The card in the location specified by the `loc` parameter must support the port specified by the `port` parameter.

2975 E2975 Cmd Rej: Specified Port is not supported

Notes

Interface A/D is used for ExAP connectivity, and interface B/C is used for signaling networks on SLIC cards running DEIR/SIP/ENUM application.

Output

This example shows the status of all configured Ethernet interfaces in the system:

```
rept-stat-enet

eagle10110 07-02-10 14:50:23 EST EAGLE 35.6.0
LOC  PORT  IPADDR          PST          SST          AST
1101  A      1.1.1.1         OOS-MT      Fault        ALMINH
1101  B      123.234.222.111 IS-ANR      Active       -----
1201  A      111.1.24.200   IS-NR      Active       -----
1201  B      2.31.234.1

OOS-MT      Fault      -----
```

```
Command Completed.
```

```
;
```

This example shows the summary for a specific card location and port when the Ethernet error count exceeds the threshold value:

```
rept-stat-enet:loc=1101:port=b
```

```
eagle10110 10-01-10 14:54:23 EST EAGLE 42.0.0
LOC  PORT IPADDR          PST          SST          AST
1101 B    123.234.222.111  IS-ANR      Active      -----
ALARM STATUS          = ** 0537 Ethernet error threshold exceeded
```

```
Command Completed.
```

```
;
```

This example shows the Ethernet interface summary for a specified card when the Ethernet interface is up, and the IP address is not assigned by the DHCP server:

```
rept-stat-enet:loc=1102:port=a
```

```
tekelecstp 10-01-17 12:54:48 MST EAGLE 42.0.0
LOC  PORT IPADDR          PST          SST          AST
1102 A    -----          IS-NR      Active      -----
ALARM STATUS          = No Alarms.
```

```
Command Completed.
```

This example shows the Ethernet interface summary for a specified card when the Ethernet interface is removed, and the DHCP lease of an assigned IP address has not expired:

```
rept-stat-enet:loc=1101:port=a
```

```
tekelecstp 10-01-17 12:54:48 MST EAGLE 42.0.0
LOC  PORT IPADDR          PST          SST          AST
1102 A    -----          IS-NR      Active      -----
ALARM STATUS          = No Alarms.
```

```
Command Completed.
```

This example shows the summary for a specified card when the Ethernet interface is up:

```
rept-stat-enet:loc=1101:port=a
```

```
tekelecstp 10-01-02 00:29:22 MST EAGLE 42.0.0
LOC  PORT IPADDR          PST          SST          AST
1101 A    192.168.63.213  IS-NR      Active      -----
ALARM STATUS          = No Alarms.
```

```
Command Completed.
;
```

Legend

- CARD—Location of the card
- VERSION—Version number of the application loaded on the card. Dashes (- - - -) in the version column indicate one of the following conditions about the card:
 - The card is configured but is not physically present in the system.
 - The card does not run a GPL, such as TDM or MDAL cards.
 - The card is IS-ANR or is in the process of being loaded.
- TYPE—Card type entered in the database
- APPL—Application loaded on the card
- PST—Primary state of the card. See [Possible Values for PST/SST/AST](#).
- SST—Secondary state of the card. See [Possible Values for PST/SST/AST](#).
- AST—Associated state of the card. See [Possible Values for PST/SST/AST](#).

4.1.408 rept-stat-enum

Use this command to display the overall status of the ENUM service on the EAGLE.

Parameters

loc (optional)

ENUM card location for which card status and card TPS usage data is to be reported.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118

mode (optional)

It will display ENUM system alarm status and per card TPS statistics.

Range:

perf

Default:

Perf

peakreset (optional)

Reset peak values to the current TPS values.

Range:

yes

Example

```
rept-stat-enum
rept-stat-enum:peakreset=yes:loc=1101
rept-stat-enum:loc=1101
rept-stat-enum:mode=perf
```

Dependencies

The location specified with this command should be of an ENUM card running the ENUMHC gpl.

3187 E3187 Cmd Rej: Card location specified must be an ENUM card

An ENUM card running the ENUMHC application must be configured before this command can be entered.

3188 E3188 Cmd Rej: ENUM not Configured

The peakreset and loc parameters can be specified together. No other combination is allowed.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The shelf and card must be equipped, and the card specified by the loc parameter must have an application of enumhc.

2144 E2144 Cmd Rej: Location invalid for hardware configuration

The peakreset parameter should be specified with the loc parameter.

2366 E2366 Cmd Rej: LOC must be specified

Notes

If optional parameters are specified, only the entries that match the entered parameters are displayed.

Output

This example displays output when no parameter is specified:

```
rept-stat-enum

Legend

This section defines the fields of the four `rept-stat-enum` reports:

- `rept-stat-enum`
- `rept-stat-enum:loc=1207`
- `rept-stat-enum:mode=perf`
- `rept-stat-enum:peakreset=yes:loc=1207`

A dash (-) in an output field indicates that the statistic does not apply.

- **CARD IS-NR**—Number of ENUM cards running the ENUMHC GPL that can be used by the system (status is In-Service Normal, IS-NR).
- **CARD**—Card location of the ENUM card running the ENUMHC GPL
- **P**—P indicates the primary Service Module card. The primary Service Module card provides the MPS status to the EAGLE. This indicator is displayed between the card location and the GPL version.
- **VERSION**—Version number of the ENUMHC GPL running on the ENUM card.
- **PST**—Primary state of the card. See [Possible Values for PST/SST/AST](#).
- **SST**—Secondary state of the card. See [Possible Values for PST/SST/AST](#).
- **AST**—Associate state of the card. See [Possible Values for PST/SST/AST](#).
- **TPS**—TPS (Transactions per second) indicates the number of ENUM messages which are received on the ENUM card.
- **PTPS/PEAK-TPS**—This field indicates the maximum TPS occurred on the card
- **PTIMESTAMP/PEAKTIMESTAMP**—It is the time when the maximum TPS occurred on the card.
- **ENUM ALARM STATUS**—Displays ENUM system-related alarms. If there are no system alarms present, this field displays No Alarms.

- **CARD ALARM STATUS**—Displays ENUM card-specific alarms. If there are no card alarms present, this field displays No Alarms.
- **TOTAL SERVICE STATISTICS**—System-wide view of per-service statistics. The report tracks the following information:
 - **SERVICE**—The service running on the ENUM card. Currently only the ENUM service is supported for the ENUM card.
 - **SUCCESS**—Total number of messages successfully processed by the ENUM cards.
 - **ERRORS**—Total number of messages with errors which are received or sent by the ENUM cards.
 - **TOTAL**—Total messages received. It should be the sum of (Success + Errors) messages.
- **TOTAL ERROR STATISTICS**—System-wide view of error statistics. The report tracks the following information:
 - **SERVICE**—The service running on the ENUM card. Currently only the ENUM service is supported for the ENUM card.
 - **RCODE1**—Total number of messages responded by the ENUM card for format errors.
 - **RCODE2**—Total number of messages responded by the ENUM card for server failures.
 - **RCODE3**—Total number of messages responded by the ENUM card for invalid domains.
 - **RCODE4**—Total number of messages responded by the ENUM card for requested queries which are not supported in EAGLE.
 - **RCODE5**—Total number of messages responded by the ENUM card for query types and classes which are not supported in EAGLE.
- **PER CONNECTION STATISTICS**—System-wide view of per connection statistics. The report tracks the following information:
 - **CNAME**- Name of the IP connection provisioned on ENUM card specified in LOC parameter.
 - **STATUS**- Current status of IP connection.
 - **TPS**- TPS (Transactions per second) indicates the number of ENUM messages that are received on the IP connection on a given ENUM card.
 - **PTPS**- Maximum TPS occurred on an IP connection on a given ENUM card.
 - **PTIMESTAMP**- The time when the maximum TPS occurred on an IP connection on a given card.

4.1.409 rept-stat-gpl

Use this command to display the version of GPLs currently running for an application, plus the approved and trial versions of the GPL that will run if the card is restarted.

Parameters

display (optional)

Display mode. Specifies whether the report displays only application GPL data for all cards, or both IMT and application GPL data.

Range:

all

gp1 (optional)

Generic program load. The GPL for which to retrieve information.

Range:

xyyyyyyy

1 alphabetic character followed by up to 7 alphanumeric characters. Valid GPLs are:

atmhc—Used by E5-ATM-B cards to allow the card to support up to 3 signaling links

bldc32—Flash GPL containing a tar image with all code required on E5-MCAP cards to support VxWorks6.9 32-bit application, as in OAMHC69.

bldc64—Flash GPL containing a tar image with all code required on E5-SM8G-B cards for SCCP64, ENUM64, SIP64 and DEIR64 applications.

blmcap—Flash GPL containing a tar image with all code required on E5-MCAP, E5-E1T1-B, E5-MCPM-B, E5-ATM-B, E5-ENET-B, and E5-SM8G-B cards

blslc32—Flash GPL containing a tar image with all code required on SLIC cards for 32-bit application i.e. MCPHC, IPSHC etc.

blslc64—Flash GPL containing a tar image with all code required on SLIC cards for 64-bit application i.e. SCCP64, ENUM64, SIP64 and DEIR64.

blsl932—Flash GPL containing a tar image with all code required on SLIC cards for 32-bit application on VxWorks6.9, as in IPSHC69 and MCPHC69.

deirhc—Used by E5-SM8G-B cards to support the S13/S13' EIR feature

enumhc—Used by E5-SM8G-B cards to support the ENUM Mobile Number Portability and Tier One Address Resolution application

erthc—Used by E5-ENET-B cards for EAGLE 5 Integrated Monitoring Support functions

hipr2—Communication software used on the High Speed IMT Packet Router (HIPR2) card

ipsg—Used by E5-ENET-B cards to support the combined functionality of IPLIMx M2PA and IPGWx M3UA

ipsg32—Used by SLIC cards to support IPSPG application with 64-bit addressing either with GTT functionality or without it.

ipshc—Used by E5-ENET-B cards to support the IPS application

ipshc69—Used by E5-ENET-B and SLIC cards to support the IPS application when running on VxWorks69.

mcphc—Used by E5-MCPM-B cards for the Measurements Platform feature

mcphc69—Used by E5-MCPM-B and SLIC cards for the Measurements Platform feature when running on VxWorks69.

oamhc—Used by E5-MCAP cards for enhanced OAM functions

oamhc69—Used by E5-MCAP cards for enhanced OAM functions, when running on VxWorks 69.

sccphc—Used by E5-SM8G-B cards to support EPAP-based features and the LNP ELAP Configuration feature. If no EPAP-based or LNP ELAP Configuration

feature is turned on, and an E5-SM8G-B card is present, then the GPL processes normal GTT traffic.

sfapp—Used by SLIC cards to support the Stateful Firewall Application.

siphc— Used by E5-SM8G-B Cards to support the SIP application.

ss7hc—Application GPL used by E5-E1T1-B and SLIC cards to support **E1** and **T1** signaling links.

Default:

Display all

loc (optional)

Location. The target card address and versions of all GPLs running at the specified card location. For E5-ENET-B, or STC cards, this information includes all non-activated flash GPLs. For cards that are not STC, E5-ENET-B or E5-IPSM cards, there is no additional data: this parameter limits the report to the target card address.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118, 1109, 1110, 1209, 1210, 1309, 1310, 2109, 2110, 2209, 2210, 2309, 2310, 3109, 3110, 3209, 3210, 3309, 3310, 4109, 4110, 4209, 4210, 4309, 4310, 5109, 5110, 5209, 5210, 5309, 5310, 6109, 6110, 1113, 1115

Example

```
rept-stat-gpl
rept-stat-gpl:display=all
rept-stat-gpl:loc=1201
rept-stat-gpl:gpl=hipr2
rept-stat-gpl:gpl=siphc
rept-stat-gpl:gpl=enumhc
rept-stat-gpl:gpl=ipsg32
rept-stat-gpl:gpl=sfapp
```

Dependencies

No other `rept-stat-xxxx` command can be in progress when this command is entered.

2412 E2412 Cmd Rej: Command already in progress

Only one of the `display=all`, `loc`, and `gpl` parameters can be specified in the command.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The value specified for the `gpl` parameter must be supported.

2238 E2238 Cmd Rej: The GPL type entered is not currently supported

Notes

To check the version of the EPAP or ELAP application, use the `rept-stat-mps` command.

When this command is entered, information is displayed only for the cards that are IS-NR or IS-ANR.

Use the `chg-gpl` command to turn auditing on and off.

Use the `rtrv-gpl` command to display the audit state.

The approved GPL is the GPL that resides on the active fixed disk and was made the approved version by specifying the GPL version number while executing the `act-gpl` command.

The trial GPL is the version of the GPL that was downloaded from the removable drive, but not activated by the `act-gpl` command.

When the `act-gpl` command is executed, the version specified becomes the approved GPL and the previously approved GPL becomes the trial GPL.

If any card is not running the active MASP system release version of a GPL, "ALM" is displayed to indicate that the card is in GPL alarm condition.

If GPL auditing is on, a minor alarm is shown, and "ALM" is displayed for each APPROVED GPL (`rtrv-gpl`) and for each RUNNING GPL (`rept-stat-gpl`) that does not match the GPL in the RELEASE column of the `rtrv-gpl` command output. If GPL auditing is off, the minor alarm is not activated, but "ALM" is displayed for each GPL that does not match the GPL in the RELEASE column.

If no `gpl` parameter is specified, the approved and trial versions for all GPLs are displayed.

If a GPL is not found, a version of "-----" is displayed. This should happen only for the OAM GPL when the plug-in USB flash drive is not inserted.

If the removable drive is inserted, an "*" (asterisk) is displayed next to the OAM trial version. The asterisk serves as a reminder that the trial version of a GPL is loaded when the card that is running the OAM is restarted. All other cards load their approved versions of GPLs when they are restarted.

If a card is inhibited, "-----" is displayed for the running version.

When the `gpl` parameter is not specified, the default is to display all application GPLs that are running on provisioned cards. The flashable GPLs (those loaded on the card by using the `init-flash` command) are not displayed.

A plus (+) symbol in the output indicates that the flash GPL currently being run has not yet been activated on the card. See the `act-flash` or `init-flash` command for a list of flash GPLs.

When a GPL is specified in the `gpl` parameter, the specified GPL for each card connected to the IMT is displayed.

Output

The output of the `rept-stat-gpl` command is site- and configuration-specific. The output examples show typical output for the commands that are entered; the output that is shown can differ from output that appears for a particular system.

This example shows the output when no parameters are defined. All GPLs for the card are listed:

```
rept-stat-gpl
```

4.1.410 rept-stat-imt

The interprocessor message transport bus (IMT bus) is the main communications artery between all subsystems in the system. Use this command to display the primary, secondary, and associated maintenance states of the IMT bus. The primary state indicates whether the bus is normal, abnormal, or OOS for maintenance activity. The secondary state indicates the active/inhibited status of a card for a particular IMT bus.

Parameters

mode (optional)

Use this parameter to provide additional output listing the cards that currently have IMT alarm conditions outstanding. The additional output is repeated for each IMT bus following the bus status information. If no alarms are active on a given bus, no additional output is generated.

Range:*full***Default:**

Do not display additional information.

Example

```
rept-stat-imt
rept-stat-imt:mode=full
```

DependenciesNo other `rept-stat-xxx` command can be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

Notes

The card locations are stored only by the active MASP. The information is lost if the system switches from the active to the standby MASP.

The trouble locations are displayed sorted by card location.

Output

```
rept-stat-imt

4.1.411 rept-stat-ipconn

Use this command to display the dynamic status of SIP transport/ENUM/SCCP/SFAPP/IPS with SFLOG.

Parameters

This command has no parameters.

Example

```
rept-stat-ipconn
```

Dependencies

The SIPNP Feature must be enabled before retrieving the dynamic status of SIP transport.

At least one ENUM card must be provisioned before retrieving the dynamic status of ENUM connections.

At least one IPS card with SFLOG=yes must be provisioned before entering any TCP connection information on IPS.

At least one SCCP/SFAPP card must be provisioned before entering any Visualization connection information.

3179 E3179 Cmd Rej: SIPNP Feat not enabled or required card not provisioned

A SIP/ENUM/IPS with SFLOG card running the SIPHC/ENUMHC/IPS card with SFLOG=yes application must be configured before this command can be entered.

3240 E3240 Cmd Rej: SIP or ENUM or SFLOG not configured

Notes

None

Output

```
rept-stat-ipconn
```

```
tekelecstp 12-06-25 16:14:24 EST EAGLE 45.0.0
rept-stat-ipconn

4.1.412 rept-stat-iptps

Use this command to display current and peak IPTPS usage for each IPSPG / IPGWx linkset in the system or for each link in the IPSPG / IPGWx linkset.

Parameters

history

This parameter specifies whether to report the history of IP TPS usage data on IPSPG linksets for the last 60 seconds.

Range:

yes

no

Default:

no

link

The link on the card specified in the `loc` parameter.

Synonym:*port***Range:***a, a1-a63, b, b1-b63*

Not all card types support all link parameter values.

See [Table A-1](#) for valid link parameter range values for each type of card that can have assigned signaling link ports.**loc**

The IPSG card location for which IP TPS usage data is to be reported.

Range:*1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118***lsn (optional)**

Linkset name. The name of the linkset for which the report information is to be displayed.

Range:*ayyyyyyyy*

1 alphabetic character followed by up to 9 alphanumeric characters

Default:

All linksets are displayed

peakreset (optional)

Reset peak values to the current TPS values.

Range:*yes**no***Default:***no***tpscost**

This parameter specifies whether to report IP TPS usage data for IPSG linksets relative to network conditions, including average MSU size, association RTT, number of links provisioned on the card, and the protocol used (M2PA or M3UA).

Range:*yes**no***Default:***no***Example**`rept-stat-iptps`

```
rept-stat-iptps:lsn=lsgw1101
rept-stat-iptps:peakreset=yes
rept-stat-iptps:lsn=lsm2pa1:tpscost=yes
rept-stat-iptps:loc=1305:tpscost=yes
rept-stat-iptps:loc=1305:history=yes
rept-stat-iptps:loc=1305:link=a3:history=yes
```

Dependencies

If the linksets are not IPGWx or IPSTG, then this command cannot be entered.

3695 E3695 Cmd Rej: Command supported only for IPGWx and IPSTG linksets

The specified linkset name must exist in the database.

2303 E2303 Cmd Rej: Unknown LSN

The `history`, `link`, `loc`, and `tpscost` parameters can be specified for only IPSTG cards.

2131 E2131 Cmd Rej: Parameters not valid for card type

If the `history` parameter is specified, then the `loc` parameter must be specified.

5389 E5389 Cmd Rej: LOC must be specified with HISTORY

If the `tpscost` parameter is specified, then the `loc` or `lsn` parameter must be specified.

5404 E5404 Cmd Rej: LSN or LOC must be specified with TPSCOST

If the `loc` parameter is specified, then the `tpscost`, `history`, or `peakreset` parameter must be specified.

5411 E5411 Cmd Rej: LOC is valid only with HISTORY, TPSCOST, or PEAKRESET

Only one of the `history`, `tpscost`, and `peakreset` parameters can be specified in the command.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The `loc` and `lsn` parameters cannot be specified together in the command.

2294 E2294 Cmd Rej: LSN and LOC parms are mutually exclusive

The specified linkset must be type IPSTG.

5410 E5410 Cmd Rej: Command supported only for IPSTG linksets

Notes

Traffic peak data are stored only in OAM memory and are not preserved when the card that is running the OAM boots, or in the case of an active/standby switchover.

IPSTG linksets have SLKTPS linksets configured rather than IPTPS. SLKTPS configures the transactions per second for each link assigned to the IPSTG linkset as opposed to IPTPS which configures the combined transactions per second for the entire IPGW linkset. For an IPSTG linkset, the calculated IP TPS value (shown under

the 'CONFIG' column in the report) is made up of the aggregate calculated SLKTPS of all of the provisioned links in the linkset. Non-IPSG hosted links are not counted in the calculation as they do not support SLKTPS.

If a linkset contains a mixture of IPLIMx M2PA and IPSG-M2PA links, then the command does not report any data below the TPS header or raise alarms.

For IPSG-M3UA and IPGWx-M3UA links, the `rept-stat-iptps` command also counts the received DAUD messages and transmitted SNMs in response to DAUD audits (along with the other transmitted SNMs).

The process of updating the IP TPS counts for DAUD and DAUD response SNMs is:

- Rcv IP TPS count is updated with the total number of valid DAUD messages that are successfully queued for response processing based on the combination of RCs (Routing Contexts) and APCs (Affected Point Codes) received in the M3UA DAUD message.
- In reply to DAUD, based on the response generated (DUNA or (DAVA/DRST + SCON)), Tx IP TPS counts are updated for each RC/APC combination (either the same as the Rcv counts or twice the Rcv counts respectively).
- If no RC is present, then the Tx/Rcv IP TPS is incremented for the associated link corresponding to the lowest PORT ID for IPSG-M3UA links for the same association.
- For IPGWx-M3UA links, Tx/Rcv IP TPS are always incremented on the default PORT Index (since only one link can be configured in IPGWx GPL).
- For IPGWx-M3UA links, Rcv IP TPS count are also updated with the number of valid and non discarded Deviated DAUD message received (since Deviated DAUD always contains single RC and APC combination).

All of the transmitted SNMs are pegged in IPTPS Tx counts and are considered in the TPS algorithms.

Output

The `rept-stat-iptps` command reports on IPSG and IPGWx linkset IP TPS. The report includes the following information for the system and for each IPSG or IPGWx linkset:

- Configured IP TPS alarm threshold
- Configured IP TPS
- Current IP TPS transmit and receive usage for 15 seconds
- Peak IP TPS transmit and receive usage and timestamp for all 15 second periods since last reset

As of Release 44.0, the `rept-stat-iptps` command is enhanced to report derived IP TPS usage for IPSG linksets.

- Current derived IP TPS transmit and receive usage over a window of 15 seconds
- Peak IP TPS transmit and receive usage and timestamp for all 15 second periods since last reset
- 60 seconds history of the IP TPS transmit and receive usage

The derived IP TPS is calculated by adding the costs for factors such as average MSU size, association round trip time, number of provisioned links on card and protocol used (M2PA or M3UA). The derived TPS has valid values if:

- The specified card location indicates an E5-ENET-B/SLIC IPSG card or the links in the specified linkset are hosted on E5-ENET-B or SLIC card,

- the E5-ENET-B IPSP High Throughput feature is turned ON,
- the actual traffic rate running on the IPSP card > 6500 TPS and
- the network configuration or traffic characteristics exceeds optimal configuration limits as shown in [Table 4-53](#).

Table 4-53 Baseline Configuration Changes for the E5-ENET-B Card

E5-ENET-B Card Baseline Configuration	E5-ENET-B IPSP High Throughput feature OFF	E5-ENET-B IPSP High Throughput feature ON
TPS	6500	9500
Max RTT (ms)	120	50
Avg. MSU size (bytes)	0-272	0-120
Number of associations/links	16	4
Protocol	M2PA and M3UA	M2PA

For all other conditions, including the use instead of an E5-ENET-B card, the derived IP TPS values is invalid and is denoted by dashes (--) in the *Derived TPS* and column.

The following table shows values for Max rsvdslktps and Max maxslktps:

Table 4-54 MaxTPS Per Card

E5-ENET-B IPSP High Throughput FAK	Max RSVDSLKTPS			Max MAXSLKTPS		
	E5-ENET-A	E5-ENET-B	SLIC	E5-ENET-A	E5-ENET-B	SLIC
FAK is OFF	5000	6500	10000	5000	6500	10000
FAK is ON.	5000	9500	10000	5000	9500	10000

If the linkset is specified, then the command reports the same information for the individual links in the linkset.

If the `peakreset=yes` parameter is specified, then the command resets all the stored peak values to the current actual usage for each link, and recalculates linkset and system peaks before reporting usage.

If the linkset is specified with the `peakreset=yes` parameter, then the command recalculates peaks for the specified linkset and resets all the stored peak values to the current actual usage for each link contained in the linkset before reporting usage.

The peaks for transmit and receive, and for link, and linkset IP TPS may all occur at different times.

The IP TPS value shown in the command may contain one extra MSU if the linkset is specified. Because the alarm calculations are implemented using integer math, rounding may occur at each entity (link, linkset) if the IP TPS value for the entity is not

evenly divisible by 15. This could occur when performing an IPTPS report for a linkset that has more than one link configured.

For mixed IPLIMx-M2PA and IPSG-M2PA linksets, the command does not report any data or raise alarms.

IPGW linksets display dashes in the *CONFIG/MAX* column.

Asterisk sign indicates that parameter (*CONFIG/RSVD* or *CONFIG/MAX*) is used to generate TPS alarm for IPSG links/linkset.

This example shows the output for an IPGW linkset:

```

Legend

- **LSN**—Linkset name
- **THRESH**—Threshold at which an alarm will be generated to indicate that the actual linkset TPS is approaching the configured linkset iptps value (Isusealm value as shown in `rtrv-ls` output).
- **CONFIG/RSVD**—Reserved TPS for the linkset
- **CONFIG/MAX**—Maximum TPS for the linkset
- **TPS**—Current transmit (TX) and receive (RCV) TPS for 15 seconds

- **PEAK**—Peak transmit (TX) and receive (RCV) TPS usage for all 15 second periods since the last peak reset
- **PEAKTIMESTAMP**—Date and time that the displayed transmit and receive TPS peaks occurred
- **LOC**—Location of the card that contains a displayed link in the linkset
- **PORT**—A signaling link in the linkset
- **THRESH**—The `slkusealm` value as shown in `rtrv-ls` output
- **CONFIG/RSVD**—Reserved TPS for each link in the linkset. (-----). There is no configurable TPS for links.
- **CONFIG/MAX**—Maximum TPS for each link in the linkset. (-----). There is no configurable TPS for links.
- **TPS**—Current transmit (TX) and receive (RCV) TPS for 15 seconds
- **PEAK**—Peak transmit (TX) and receive (RCV) TPS usage for all 15 second periods since the last peak reset
- **PEAKTIMESTAMP**—Date and time that the displayed transmit and receive TPS peaks occurred
- **Derived TPS**—Derived transmit (TX) and receive (RCV) TPS for 15 seconds
- **Derived Peak TPS**—Derived peak transmit (TX) and receive (RCV) TPS usage for all 15 second periods since the last peak reset
- **Actual Tx/Rx**—Actual transmit (TX) and receive (RCV) TPS for 60 seconds
- **Derived Tx/Rx**—Actual transmit (TX) and receive (RCV) TPS for 60 seconds
- **Avg TX MSU Size**—Average transmitted MSU size
- **Avg RTT**—Average round trip time
- **Avg RX MSU Size**—Average received MSU size

4.1.413 rept-stat-j1

Use this command to display the J1 port status and signaling link status for cards with provisioned J1 ports.

Parameters

loc (optional)

Card address. The unique identifier of a specific LIMT1 card located in the STP.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318,
2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318,
3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318,
4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318,
5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318,
6101 - 6108, 6111 - 6118

Default:

Information for all LIMT1 cards having J1 interfaces is reported.

j1port (optional)

J1 port number. This parameter displays information for a J1 port on the card in the specified card location.

Range:

1-8

Example

```
rept-stat-j1
rept-stat-j1:loc=1101
rept-stat-j1:loc=1101:j1port=1
```

Dependencies

No other rept-stat-xxx command can be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

The loc parameter must be specified when the j1port parameter is specified.

2366 E2366 Cmd Rej: LOC must be specified

The OAM card location cannot be specified for the loc parameter.

2376 E2376 Cmd Rej: Specified LOC is invalid

MUX card locations (xy09 and xy10 where x is the frame and y is the shelf) cannot be specified for the loc parameter.

2016 E2016 Cmd Rej: Card Location is out of range - loc.

Card location 1118 cannot be specified.

2025 E2025 Cmd Rej: Invalid card location.

Notes

Specifying the command without any parameters displays J1 port status for all cards with provisioned J1 ports.

If the `loc` parameter is specified, status is displayed for all J1 ports provisioned on the card in the specified location.

If the `loc` and `j1port` parameters are specified, the J1 port status summary is displayed for all J1 ports provisioned on the card in the specified location, followed by the status of all signaling links assigned to the specified J1 port on the card.

Output

This example shows the output when no parameters are specified:

```
rept-stat-j1
```

4.1.414 rept-stat-lfs

Use this command to generate a report of all the SS7 links that are under LFS test. Along with the link identification information, the command output lists the current LBP, the test pattern, the maximum bit-errors threshold, the bit-errors since the beginning of this test, the maximum test time, and the time elapsed since the beginning of the test.

Parameters

link (optional)

The signaling link port on the card specified in the `loc` parameter.

Synonym:

port

Range:

a, b, a1 - a31, b1 - b31

Not all card types support all `link` parameter values.

See [Table A-1](#) for valid `link` parameter range values for each type of card that can have assigned signaling link ports.

loc (optional)

This parameter is mandatory when the `link` parameter is specified.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1212, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118

Example

```
rept-stat-lfs
rept-stat-lfs:loc=1201
rept-stat-lfs:loc=1201:link=a1
```

Dependencies

The LFS feature must be turned on before this command can be entered.

2870 E2870 Cmd Rej: LFS feature must be ON

The card location specified in the `loc` parameter must be equipped.

2101 E2101 Cmd Rej: Card location is unequipped

The signaling link that is specified in the `link` parameter must be assigned to the card in the `loc` parameter location.

2373 E2373 Cmd Rej: Link is unequipped in the database

Card locations 1113, 1114, 1115, 1116, 1117, 1118, and all `xy09` and `xy10` locations (`x` is the frame and `y` is the shelf) cannot be specified in the `loc` parameter.

2376 E2376 Cmd Rej: Specified LOC is invalid

The card location (`loc` parameter) must be an E5-E1T1-B card, provisioned with the LIMT1 card type, configured with either the SS7ANSI or CCS7ITU application.

2892 E2892 Cmd Rej: LOC is not LFS capable

If the `link` parameter is specified, the `loc` parameter must be specified.

2903 E2903 Cmd Rej: LOC and PORT parameter combination must be specified

This command cannot be entered during upgrade.

3276 E3276 Cmd Rej: Command not allowed while in upgrade mode

Notes

This command can be canceled using the **F9** function key or the `canc-cmd` command. See `canc-cmd` for more information.

Output

If no parameters are specified, all links that are in LFS test are displayed.

```
rept-stat-lfs
```

Legend

- **SLK**—Signaling link identifier; same as `loc` and `link` parameters of `act-lbp` command

- **LBP**—The loopback point of this test; same as `lbp` parameter of `act-lbp` command
- **PATTERN**—Test pattern; same as `pattern` parameter of `act-lbp` command
- **MAX-ERRORS**—Bit-error threshold allowed for this LFS test; same as `maxerr` parameter of `act-lbp` command
- **BIT_ERRORS**—Number of bit-errors since the beginning of this test
- **MAX-TIME**—Time window for testing each loop-back point; same as `time` parameter of `act-lbp` command
- **TEST-TIME**—Amount of time the test has run

- [rept-stat-slk](#)

4.1.415 rept-stat-lg

Use this command to display measurement and statistics of all the LG objects on Eagle node. The command class is `TKLC_INTERNAL` inheriting properties of `DEBUG` class. The Load Generator is supported on IPSTG, IPLHC, IPGHC and SS7HC GPLs.

Parameters

display (optional)

Display mode of reporting the output.

Range:

brief

Displays the summary statistics information for LG object's and its child hierarchy i.e. brief of system level stats will show only brief level of system->group->card->engine statistics

all

Displays the detailed statistics information for LG object's and its child hierarchy i.e. system level stats will show its system->group->card->engine statistics

Default:

brief

engine (optional)

Range: ayyyyyyyyy

Up to 10 alphanumeric characters; the first character must be a letter.

grp (optional)

Range: ayyyyyyyyy

Up to 10 alphanumeric characters; the first character must be a letter

loc (optional)

The card location as stenciled on the shelf of the system.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318,
 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318,
 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318,
 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318,
 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318,
 6101 - 6108, 6111 - 6118

reset (optional)

This parameter clears the statistics by setting them to zero.

Range:**Rx**

Receive Direction

Tx

Transmit Direction

All

Both in Tx and rx directions

Example

```
rept-stat-lg
rept-stat-lg:display=all
rept-stat-lg:reset=tx
rept-stat-lg:reset=all
rept-stat-lg:grp=lgroup1
rept-stat-lg:grp=lgroup1:display=brief
rept-stat-lg:grp=lgroup1:reset=tx
rept-stat-lg:loc=1101
rept-stat-lg:loc=1101:display=all
rept-stat-lg:loc=1101:reset=all
rept-stat-lg:engine=txengine1
rept-stat-lg:engine=txengine1:display=brief
rept-stat-lg:engine=txengine1:reset=all
```

Dependencies

The `reset` and `display` parameters cannot be specified together.

The `grp`, `loc`, and `engine` parameters cannot be specified together

2155 E2155 Cmd Rej: Invalid parameter combination specified

The LG group with the specified group name must exist in the system.

5207 E5207 Cmd Rej: LG Group not defined

The card location must not be 1113-1118, orxy09 andxy10 wherexis the frame andyis the shelf.

2154 E2154 Cmd Rej: Card slot reserved by system

The value specified for the `engine` parameter must already exist in the LG Engine table.

5209 E5209 Cmd Rej: LG Engine not defined

The value of `reset` parameter must be all when the engine parameter is specified.

5232 E5232 Cmd Rej: Unsupported value of Reset with Engine parameter

The card location specified in the `loc` parameter must be of a provisioned LG card.

5239 E5239 Cmd Rej: LG card not defined

4.1.416 rept-stat-lnp

Use this command to generate a report of the local number portability (LNP) status information.

When this command is entered with no parameters, a summary of the LNP status of all equipped SCCP cards is provided. This summary includes Global Title Translation (GTT) and LNP function status for every SCCP card, as well as LNPQS system information.

When the `loc` parameter is specified, a detailed status of LNP information for the specified SCCP card is provided. These detailed reports include information for each of the following functions: Global Title Translation (GTT), LNP Message Relay (LNPMR), LNP Query Service (LNPQS), Personal Communication Service LNP Query Service (PLNPQS) (if the PLNP feature is turned on), Wireless LNP Query Service (WNPQS) (if the WNP feature is turned on), Triggerless LNP (TLNP) (if the TLNP feature is turned on), LRNQT (if the ITU TCAP LRN Query feature is turned on), and Automatic Call Gap (ACG).

When the `card=sccp-all` parameter is specified, a detailed status of LNP information for all SCCP cards is provided.

Parameters

card (optional)

Specify `card=sccp-all` to display a report of the LNP status of all equipped SCCP cards.

Range:

sccp-all

loc (optional)

The card location as stenciled on the shelf of the system.

Range:

*1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318,
2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318,
3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318,
4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318,
5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318,
6101 - 6108, 6111 - 6118*

Default:

A summary for all cards is displayed.

Example

```
rept-stat-lnp
rept-stat-lnp:card=sccp-all
```

```
rept-stat-lnp:loc=1106
```

Dependencies

The LNP feature must be turned on before this command can be entered.

3009 E3009 Cmd Rej: LNP feature must be ON

The `card` and `loc` parameters cannot be specified together in the command.

2609 E2609 Cmd Rej: Only one optional parameter may be specified

The only valid value for the `card` parameter is *sccp-all*.

2304 E2304 Cmd Rej: Invalid TYPE

No other `rept-stat-xxx` command can be in progress when this command is issued.

2368 E2368 Cmd Rej: System busy - try again later

At least one SCCP card must be configured in the system.

2374 E2374 Cmd Rej: SCCP not Configured

The value specified for the `loc` parameter must identify a Service Module card.

3014 E3014 Cmd Rej: Card location specified must be an SCCP card

Notes

The error information on this report is based on 30-second intervals. The values for number of errors and total messages are for the last 30-second period. The usage information is also updated once every 30 seconds.

When this command is entered with no parameters, a summary of the LNP subsystem status is reported, followed by a summary of the LNP status of all equipped SCCP cards. This summary includes global title translation (GTT) and LNP function status for every SCCP card, as well as LNPQS system information. The GTT status is either ACT (active) or SWDL (software loading). The LNP status is either ACT, OFFLINE, or SWDL. LNPQS system information is then provided in the following fields:

- The ALARM STATUS displays the current alarm on the LNP Subsystem.
- The SSN STATUS and MATE SSN STATUS fields show the state of the LNP subsystems: Prohibited, Restricted, or Allowed.
- The ACG OVERLOAD LEVEL field shows the ACG node overload control level used by the system.
- The system average MIC usage is expressed as a percentage of the number of MICs sent by all cards, divided by the number of responses sent by all cards.

The `rept-stat-lnp` command also provides a summary of the following system-wide LNP statistics.

- The average GTT usage is expressed as the average percentage of GTT usage per card.
- The average LNPMSR usage is expressed as the average percentage of LNPMSR usage per card.
- The average LNPQS usage is expressed as the average percentage of LNPQS usage per card.

- The average WNPQS usage is expressed as the average percentage of WNPQS usage per card. WNPQS information is displayed only if the WNP feature is turned on.
- The average PLNPQS usage is expressed as the average percentage of PLNPQS usage per card. PLNPQS information is displayed only if the PCS 1900 Number Portability feature (PLNP) is turned on.
- The average LRNQT usage is expressed as the average percentage of LRNQT usage per card. LRNQT information is displayed only if the LRNQT feature is turned on.
- The average CPU usage is expressed as the average percentage of CPU usage per card.
- The total number of GTT, LNPMR, LNPQS, WNPQS (if turned on), TLNP (if turned on), PLNPQS (if turned on), and LRNQT (if turned on) errors for corresponding messages received across all cards.

When the `rept-stat-lnp` command is entered for a specific card (for example, `rept-stat-lnp:loc=xxxx`), status information for the card at the specified location is provided, followed by the alarm status and detailed LNP status information and statistics for each LNP function.

- GTT STATUS, either ACT (active) or SWDL (software loading).
- GTT USAGE, expressed as a percentage of the amount of CPU used to process GTT messages during the last 30 seconds by the specified card.
- GTT ERRORS, the number of GTT errors detected for the total number of GTT messages received by the specified card.
- LNPMR STATUS, either ACT (active), OFFLINE, or SWDL (software loading).
- LNPMR USAGE, expressed as a percentage of the amount of CPU used to process LNP message relay messages during the last 30 seconds by the specified card.
- LNPMR ERRORS, the number of LNP message relay errors detected for the total number of LNP message relay messages received by the specified card.
- LNPQS STATUS, either ACT (active), OFFLINE, and SWDL (software loading).
- LNPQS USAGE, expressed as a percentage of the amount of CPU used to process LNP query messages during the last 30 seconds by the specified card.
- LNPQS ERRORS, the number of LNP query errors detected for the total number of LNP query messages received by the specified card.
- WNPQS STATUS, either ACT (active), OFFLINE, and SWDL (software loading).
- WNPQS USAGE, expressed as a percentage of the amount of CPU used to process WNP query messages during the last 30 seconds by the specified card.
- WNPQS ERRORS, the number of WNP query errors detected for the total number of WNP query messages received by the specified card.

 **Note:**

IS-41 LNP Queries with a TT associated with the LNPQS service are pegged as IS-41 LNP Queries with a TT associated with the WNP service under the WNPQS counter. The WNPQS STATUS, WNPQS USAGE, and WNPQS ERRORS fields are displayed only if the Wireless Number Portability feature is ON.

- PLNPQS STATUS, either ACT (active), OFFLINE, and SWDL (software loading).
- PLNPQS USAGE, expressed as the amount of CPU used to process PCS 1900 LNP Query messages over the last 30-second period by the specific card.
- PLNPQS ERRORS, the number of PCS query errors detected for the total number of PCS query messages received by the specified card.

 **Note:**

PCS 1900 LNP Queries with a TT associated with the LNPQS service are processed and pegged as IN LNP Queries under the LNPQS counter. The PLNPQS STATUS, PLNPQS USAGE, and PLNPQS ERRORS fields are displayed only if the PCS 1900 Number Portability (PLNP) feature is ON.

- TLNP STATUS, either ACT (active), OFFLINE, and SWDL (software loading).
- TLNP USAGE, expressed as a percentage of the amount of CPU used to process Triggerless LNP Encapsulated IAM messages over the last 30-second period by the specific card.
- TLNP ERRORS, the number of TLNP query errors detected for the total number of TLNP query messages received by the specified card.

 **Note:**

The TLNP STATUS, TLNP USAGE, and TLNP ERRORS fields are displayed only if the Triggerless LNP (TLNP) feature is ON.

- LRNQT STATUS, either ACT (active), OFFLINE, and SWDL (software loading).
- LRNQT USAGE, expressed as a percentage of the amount of CPU used to process LRNQT queries over the last 30-second period by the specific card.
- LRNQT ERRORS, the number of LRNQT query errors detected for the total number of LRNQT messages received by the specified card.

 **Note:**

The LRNQT STATUS, LRNQT USAGE, and LRNQT ERRORS fields are displayed only if the LRNQT feature is ON.

- ACG OVERLOAD LEVEL, the ACG node overload control level being used by the system.

- MIC USAGE, expressed as a percentage of the number of MICs sent by the specific card divided by the number of responses sent by the specified card during the last 30 seconds.
- CPU USAGE, expressed as a percentage of the amount of CPU used to process messages by the specified card during the last 30 seconds.

When the `card=sccp-all` parameter is specified, detailed information is provided about the status of all SCCP cards. The information displayed in the output is the same as that displayed for the `loc=xxxx` parameter.

Output

This example shows the output when the WNP, PLNP, TLNP, and LRNQT features are off:

```
rept-stat-lnp
```

```

4.1.417 rept-stat-ls

Use this command to generate a report of the status of the MTP linksets. When a specific linkset is requested, the output displays a list of the links in the linkset and their secondary status. Output is generated for each of the 16 signaling link codes (SLC). If the Multiple Linksets to Single Adjacent Point Code (MLS) feature is turned

on, and an adjacent destination point code is requested, then the output displays a summary status, including the secondary point codes, of the linksets that use that adjacent point code.

Parameters

apc (optional)

ANSI point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*. The *prefix* subfield indicates a private point code (*prefix-ni-nc-ncm*).

Range:

p-, 000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—p-

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001-005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006-255*.

The point code *000-000-000* is not a valid point code.

apc/apca/apci/apcn/apcn24/apcn16 (optional)

Adjacent point code.

apci (optional)

ITU international point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-zone-area-id*).

Range:

s-, *p-*, *ps-*, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s-, *p-*, *ps*

zone—0-7

area—000-255

id—0-7

The point code *0-000-0* is not a valid point code.

apcn (optional)

ITU national point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (*members*) separated by dashes (*m1-m2-m3-m4*) as defined by the *chg-stpopts:npcfmti* flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

Range:

s-, *p-*, *ps-*, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s-, *p-*, *ps*

nnnnn—0-16383

gc—aa-zz

m1-m2-m3-m4—0-14 for each member; values must sum to 14

apcn24 (optional)

24-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point (msa-ssa-sp)*. The prefix indicates a private point code (*prefix-msa-ssa-sp*).

Range:

p-, 000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—p

msa—000—255

ssa—000—255

sp—000—255

apcn16 (optional)

16-bit ITU national point code with subfields *unit number sub number area main number area (un-sna-mna)*. The prefix indicates a private point code (*prefix-un-sna-mna*).

Range:

p--, 000---127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix---p

un---000---127

sna---000---15

mna---000---31

lsn (optional)

Linkset name. The name of the linkset for which the report information is to be displayed.

Range:

ayyyyyyyy

1 alphabetic character followed by up to 9 alphanumeric characters

Default:

All linksets are displayed

stat (optional)

The primary state filter. The state of the linksets for which a report will be displayed.

Range:

all

All of the primary states

alminh

Alarms inhibited

anr
In-Service-Abnormal (IS-ANR)

dsbld
Out-of-Service-Maintenance-Disabled (OOS-MT-DSBLD)

mt
Out-of-Service-Maintenance (OOS-MT)

nr
In-Service-Normal (IS-NR)

Default:
all

Example

```
rept-stat-ls  
rept-stat-ls:lsn=lsnstpa
```

Dependencies

No other `rept-stat-xxx` command can be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

The linkset specified by the `lsn` parameter must be equipped in the database.

2384 E2384 Cmd Rej: Link set is not equipped

The `stat` and `lsn` parameters cannot be specified together in the command.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The Multiple Linksets to a Single Adjacent Point Code (MLS) feature must be turned on before the `apc` parameter can be specified.

4631 E4631 Cmd Rej: Multiple Linksets to Single Adjacent PC feature must be ON

The `lsn`, `stat`, and `apc` parameters cannot be specified together in the command.

2155 E2155 Cmd Rej: Invalid parameter combination specified

At least one linkset must be associated with the value of the `apc` parameter.

4637 E4637 Cmd Rej: APC has no assigned linksets

Notes

This command can be canceled using the **F9** function key or the `canc-cmd` command. See `canc-cmd` for more information.

If no link is equipped for the SLC, the output is “___ UEQ.”

In this command, only ITU-international and ITU national point codes support the spare point code subtype prefix (s-) and the private and spare point code subtype prefix (ps-). All of the point code types support the private (internal) point code subtype prefix (p-).

"ASP-STATE" is shown for only IPSPG-M3UA linksets.

Output

If the Proxy Point Code feature is enabled, then proxy point code information is displayed.

4.1.418 rept-stat-meas

Use this command to report the status of the Measurements Subsystem (Measurements Platform) or MASPs (Integrated Measurements), including card location and state, IP link status, alarm level, and subsystem state.

Note:

If the Integrated Measurements collection function is turned on, then the status reflects the state of the E5-OAM card(s). If the Measurements Platform collection function is turned on, then the status reflects the state of the MCPM cards.

Parameters

This command has no parameters.

Example

```
rept-stat-meas
```

Dependencies

At least one MCPM card must be configured in the system if the Measurements Platform feature is turned on.

2702 E2702 Cmd Rej: At least one MCPM card must be configured in system

No other `rept-stat-xxx` commands can be in progress when this command is issued.

2368 E2368 Cmd Rej: System busy - try again later

The Integrated Measurements or Measurements Platform feature must be turned on before this command can be entered.

5279 E5279 Cmd Rej: MEASPLAT or Integrated Measurements feature must be ON

The `platformenable=on` or `oamhcmeas=on` parameter must be specified (see the `chg-measopts` command) before this command can be entered.

3088 E3088 Cmd Rej: Platformenable or Oamhcmeas option must be on

This command cannot be entered when CAT2 IPSM to OAM syncing is in progress.

3652 E3652 Cmd Rej: IPSM to OAM SYNC in progress

Notes

The card status is independent of the IP Network Link status (Port A). The card can be IS-NR even if the network link has failed.

The version of the GPL is shown in the command output if the card is in the IS-NR or IS-ANR state. The `rept-stat-card` command does not show the GPL version if the card is IS-ANR.

Output

Note:

The E5-MCPM-B card is an MCPM card. The *Type* field displays MCPM.

Output example with an MCPM card isolated:

```
rept-stat-meas
```

```

MEAS SS          PST          SST          AST

ALARM STATUS = No Alarms

```

```

CARD  VERSION      TYPE      PST           SST           AST
1106  134-000-000  MCPM     IS-NR         Active     -----
      IP Link A                    IS-NR         Active     -----
1108  134-000-000  MCPM     IS-NR         Active     -----
      IP Link A                    IS-NR         Active     -----

```

```

CARD 1106 ALARM STATUS = No Alarms
CARD 1108 ALARM STATUS = No Alarms

```

```
Command Completed.
```

```
;
```

Legend

- **VERSION**—Version number of the GPL running on the specified card. The version is shown if the card is in the IS-NR or IS-ANR state.
- **TYPE**—Type of card running the Measurements Subsystem application
- **PST**—Primary state of the Measurements Subsystem or card. See [Possible Values for PST/SST/AST](#) for more information.
- **SST**—Secondary state of the Measurements Subsystem or card. See [Possible Values for PST/SST/AST](#) for more information.
- **AST**—Associated state of the Measurements Subsystem or card. See [Possible Values for PST/SST/AST](#) for more information.

- **MEAS SS**—Measurements Subsystem application running on the card
- **ALARM STATUS**—List of trouble text alarm messages that have been generated for the card and the applications running on the card
- **CARD**—Location of the card. The card with the letter “P” to the right of its card location is the primary card. The primary card transfers scheduled measurements report files to the primary FTP server. When the primary state (PST) of the card is IS-NR, the secondary state (SST) indicates whether the card is active or standby, and the value of the associated state (AST) remains "-----".
- **CARD XXXX ALARM STATUS**—List of trouble text alarm messages that have been generated for the card

4.1.419 rept-stat-mfc

Use this command to obtain the status of the Message Flow Control (MFC) services.

Parameters

mode (optional)

The amount and type of information displayed in the report.

Range:

full

display a full report for the specified MFC service

stats

display detailed statistics for the specified MFC service

act

display information about the status of MFC on individual Service cards

Default:

No change to the current value

reset (optional)

This parameter resets the statistics for all sample periods for the specified service.

Range:

yes

sample (optional)

The data sample to be used.

Range:

avg30s

30-second average value calculated over the previous 5 minutes

tot5m

total value summed over the previous 5 minutes

avg1h

1-hour average value calculated over the previous 24 hours

tot24h

total value summed over the previous 24 hours

service (optional)

The MFC service for which information is reported.

Range:**eroute**

EROUTE MFC service

inm

INM MFC service

mtp3

MTP3 MFC service

scpdn

SCCP DN MFC service

scpelap

SCCP ELAP MFC service

scpepap

SCCP EPAP MFC service

scpimsi

SCCP IMSI MFC service

sfapp

SFAPP MFC service

sflog

SFLOG MFC service

sfr

SFAPP response MFC service

snm

SNM MFC service

vsccp

VSCCP MFC service

Example

```
rept-stat-mfc
```

```
rept-stat-mfc:service=vsccp:mode=act
```

```
rept-stat-mfc:service=eroute
```

```
rept-stat-mfc:service=eroute:reset=yes
```

```
rept-stat-mfc:mode=stats:service=vsccp:sample=avg30s
rept-stat-mfc:mode=stats:service=scpimsi:sample=avg30s
rept-stat-mfc:service=scpepap
rept-stat-mfc:service=scpelap
rept-stat-mfc:service=sflog
rept-stat-mfc:service=sfapp
rept-stat-mfc:service=sfr
```

Dependencies

No other command can be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

The `mode=stats` and `sample` parameters must be specified together in the command.

2155 E2155 Cmd Rej: Invalid parameter combination specified

If the `mode` or `reset` parameter is specified, then the `service` parameter must be specified.

2155 E2155 Cmd Rej: Invalid parameter combination specified

If a value of `mtp3`, `snm`, or `inm` is specified for the `appl` parameter, then the `mode=act` parameter cannot be specified.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The EPAP Data Split feature must be enabled before a value of `scpdn` or `scpimsi` can be specified for the `service` parameter.

5478 E5478 Cmd Rej: EPAP Data Split feature must be Enabled

The Dual ExAP Config feature must be enabled before a value of `scpepap` or `scpelap` can be specified for the `service` parameter.

2400 E2400 Cmd Rej: Dual ExAP Config feature must be enabled.

The Dual ExAP Config feature or EPAP Data Split feature must be enabled before a value of `scpepap` can be specified.

2434 E2434 Cmd Rej: Dual ExAP Config or EPAP Data Split must be ON

Notes

For the SFLOG MFC service, a maximum of two servers can be provisioned in the EAGLE, and only one can be active at a time. This command will provide the basic statistics (i.e., service denied, PDU discard, PDU sent) for the SFLOG MFC service.

Output

Abbreviated output is indicated by 3 vertical dots as shown:

```
.
.
```

If the card does not support thermal monitoring, and if an MFC service is hosted on that card, then *N/A* is shown in the *THERMAL* column for that card location in `rept-stat-mfc:mode=act` output.

The *UNAVL* state in the output of `rept-stat-mfc:mode=full` indicates the cards that are not in the IS-NR state.

This example shows an MFC report for all the services when EPAP Data Split feature is enabled:

```
rept-stat-mfc
```

```

Legend

The MFC Engine provides Server card statistics that are computed every hour (based on a Server card's timer); therefore they are typically posted an hour later. Client card statistics update continuously; current values will be observed at every invocation of the command.

4.1.420 rept-stat-mon

Use this command to display the status of the Fast Copy subsystem on FC-capable cards and the EROUTE subsystem on STC cards and E5-STC cards for the EAGLE 5 Integrated Monitoring Support (E5IS) feature.

Parameters

loc (optional)

Card location. The card location as stenciled on the shelf for an STC or E5-STC card or an FC-capable card in the system.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118

Default:

Status for all STC and FC-capable cards is reported.

mode (optional)

This parameter provides extended performance information, including message flow control (MFC) messaging rates.

If the `mode=perf` parameter is specified, then only subsystem performance information is displayed.

Range:

perf

type (optional)

Monitoring subsystem type. The type of the subsystem for which the monitoring statistics are displayed.

Range:

fcs

Display the statistics for the Fast Copy subsystem

eroute

Display the statistics for the EROUTE subsystem

Default:

Display the statistics for both the EROUTE and FC subsystems

Example

```
rept-stat-mon
rept-stat-mon:type=eroute
rept-stat-mon:type=fcs
rept-stat-mon:type=eroute:loc=1101
rept-stat-mon:type=fcs:loc=1104
rept-stat-mon:type=eroute:mode=perf
```

Dependencies

No other `rept-stat-xxx` command can be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

At least one STC card must be configured before this command can be entered.

3093 E3093 Cmd Rej: EROUTE not Configured

At least one FC-capable card must be provisioned in the system before the `type=fcs` parameter can be specified.

4840 E4840 Cmd Rej: Fast Copy capable card is required

The `loc` and `mode` parameters cannot be specified together in the command.

5019 E5019 Cmd Rej: Either LOC or MODE can be specified

The `type=eroute` parameter must be specified before the `mode` parameter can be specified.

5018 E5018 Cmd Rej: MODE can be specified only when TYPE is eroute

If the `loc` or `mode` parameter is specified, then the `type` parameter must be specified.

5016 E5016 Cmd Rej: TYPE parameter is required

Either an STC card or an FC-capable card must be provisioned in the system.

5028 E5028 Cmd Rej: Eroute or Fast Copy card is required

An FC-capable card must be provisioned in the system before the `type=fcs` parameter can be specified. An STC card must be provisioned in the system before the `type=eroute` parameter can be specified.

2376 E2376 Cmd Rej: Specified LOC is invalid

Notes

Fast Copy Cards

E5-ENET-B cards running the IPSG or IPGHC GPL are considered to be *FC-capable*. A card running the IPGHC GPL must be in the IS-NR State before the card can be considered *FC-capable*. This restriction does not apply to cards running the IPSG GPL. An *FC-capable* card is considered *FC-enabled* when Fast Copy monitoring is enabled for the respective GPL.

For a card to be FC monitored, the following two conditions must be satisfied:

1. FCMODE = FCOPY for the GPL
2. The card must have at least one (1) link with an EMP session established.

When a card is not being FC-Monitored, no FC alarm will be present on the card/port. The card's FCS state remains OFFLINE and the state of FCS ports on the card is OOS-MA/UEQ irrespective of the Ethernet cable being connected on those ports or not.

Output

This example displays card- and system-level information for the Fast Copy and EROUTE subsystems:

```

Legend

Information displayed in the EROUTE subsystem report:

- **STC Cards Configured**—Total number of STC cards and E5-STC cards configured in the system
- **Cards IS-NR**—Total number of STC cards and E5-STC cards in IS-NR state
- **EISCOPY BIT**—Indicates whether EIS copy function is turned On or Off
- **System Threshold**—% of system total capacity being used
- **System Peak EROUTE Load**—Current load in Buffers/Sec
- **System Total EROUTE Capacity**—Total capacity in Buffers/Sec
- **SYSTEM ALARM STATUS**—Either "No Alarms" or current alarm number and text
- **CARD**—Card location
- **VERSION**—Version number of the GPL loaded on the card. Dashes (- - - -) in the version column indicate one of the following conditions about the card:
 - The card does not run a GPL, such as TDM or MDAL cards.
 - The card is configured but is not physically present in the system.
 - The card is IS-ANR or is in the process of being loaded.
- **TYPE**—Card type entered in the database
- **PST**—Primary state of the card. See [Possible Values for PST/SST/AST](#).
- **SST**—Secondary state of the card. See [Possible Values for PST/SST/AST](#).
- **AST**—Associated state of the card. See [Possible Values for PST/SST/AST](#).
- **EROUTE Service Average Messaging Capacity\AVERAGE MESSAGING CAPACITY**—Average MFC Capacity in percent
- **Average CPU Capacity\Average CPU Usage**—Average CPU capacity in percent
- **Message usage**—% of system current MFC rate based on the Max MFC capacity
- **TOTAL MESSAGING RATE**—Total MFC processing rate
- **CPU usage**—% of system current CPU usage
- **STC IP PORT**—Status of the STC IP ports A and B

Information displayed in the Fast Copy subsystem report:

- **FC Cards Configured**—Total number of FC-capable cards configured in the system
- **Cards IS-NR**—Total number of FC-capable cards in IS-NR state
- **FCMODE**—Monitoring mode
- **GPL**—Application loaded on the card
- **SYSTEM ALARM STATUS**—Either "No Alarms" or current alarm number and text
- **CARD**—Card location
- **PST**—Primary state of the card. See [Possible Values for PST/SST/AST](#).

- **SST**—Secondary state of the card. See [Possible Values for PST/SST/AST](#).
- **CPU**—% of system current CPU usage
- **CARD FCS**—Fast Copy status for the card
- **REASON**—Deactivation alarm reason on Card FCS. Possible values are "CPU Thrshld Exceeded" or "Auto-Neg Fails".
- **FCS IP PORT**—status of the FCS IP ports A1 and B1
- **IPADDRESS**—IP addresses of the IMF
- **ASSOC NAME**—Association name
- **PKT CNT**—Snapshot of packets received/sent per association
- **SERVICE MODE**—Type of service granted by the DAS to FC-enabled card

4.1.421 rept-stat-mps

Use this command to display the overall status of the application running on the MPS (multi-purpose server).

- If the LNP ELAP Configuration feature is turned on, the ELAP (EAGLE LNP Application Processor) subsystem status is displayed.
- If the INP/AINPQ feature is turned on, the EPAP (EAGLE Application Processor) subsystem status is displayed.
- If the G-Port (GSM mobile number portability), G-Flex (GSM flexible numbering), or PPSMS (Prepaid SMS Intercept Ph1) feature is turned on, then the GSM (Global System for Mobile Telecommunications) and EPAP status is displayed.
- If the EIR (Equipment Identity Register) feature is turned on, then the status of the EIR component on the card is displayed.
- If the V-Flex (Voice Mail Router) feature is turned on, then the status of the V-Flex component on the card is displayed.
- If the ATINP (ATI Number Portability Query) feature is enabled, then the status of the ATINPQ component on the card is displayed.

Parameters

loc (optional)

The card location of the VSCCP card to be reported on, as stenciled on the shelf of the EAGLE.

Range:

1101 - 1108, 1111 - 1117, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318,
2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318,
3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318,
4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318,
5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318,
6101 - 6108, 6111 - 6118

Example

```
rept-stat-mps:loc=1106
```

Dependencies

The card location specified in the `loc` parameter must contain a Service Module card.

3014 E3014 Cmd Rej: Card location specified must be an SCCP card

One of the following features must be turned on, the ATINP feature must be enabled, or at least one ENUM card must be configured before this command can be entered:

- A-Port
- AINPQ
- DEIR
- G-Flex
- G-Port
- INP
- EIR
- LNP ELAP Configuration
- Prepaid SMS Intercept Ph1
- SIP NP
- V-Flex

4102 E4102 Cmd Rej: At least one MPS based feature must be enabled/ON

At least one Service Module card must be configured in the system before this command can be entered.

N/A N/A

The card location specified in the `loc` parameter must be provisioned as an SCCP card but cannot provide only GTT service.

3239 E3239 Cmd Rej: Card does not use MPS functionality

To specify the `rept-stat-mps` command, no other `rept-stat-xxxx` command can be in progress.

N/A N/A

The card location specified in the `loc` parameter must contain either an SCCP card, a SIP card, an ENUM card, or a DEIR card running the DEIRHC gpl.

2069 E2069 Cmd Rej: Card location specified must be an SM card

A Service Module card running the VSCCP/SIPHC/DEIRHC/ENUMHC application must be configured before this command can be entered.

2073 E2073 Cmd Rej: SCCP or SIP or DEIR or ENUM not Configured

Notes

When the MPS does not have an alarm on it, the `rept-stat-mps` report indicates in the SST field of the report which MPS is the active and which is the standby. When the MPS has an alarm on it, the SST field shows "Fault," and the Active/Standby information is displayed in

the AST field as long as there is an alarm. After the alarm clears, the Active/Standby information appears in the SST field as before.

Output

Note:

The status for a particular feature is shown only if that feature is enabled or turned on.

This example shows the possible system response if the LNP ELAP Configuration feature is turned on:

```
rept-stat-mps
```

```

Legend

- **CARD**—Location of the Service Module card. The Service Module card with the designator “P” to the right of its card location is the primary Service Module card as selected by the active ELAP/EPAP. The primary Service Module card provides the ELAP/EPAP status to the OAM. When the primary state (PST) of the ELAP/EPAP is IS-NR, the secondary state (SST) indicates whether the ELAP/EPAP is active or standby.
- **VERSION**—Version number of the GPL that the specified ELAP/EPAP or card is running.
- **PST**—Primary state of the ELAP/EPAP or card. Possible values are described in [Possible Values for PST/SST/AST](#).
- **SST**—Secondary state of the ELAP/EPAP or card. Possible values are described in [Possible Values for PST/SST/AST](#).
- **AST**—Associated state of the ELAP/EPAP or card. Possible values are described in [Possible Values for PST/SST/AST](#).
- **EPAP/ELAP A/B**—Application running on the MPS (multi-purpose server) platform. If the LNP ELAP Configuration feature is turned on, the output shows ELAP A/B. If INP, G-Flex, G-Port, or V-Flex is turned on, the output shows EPAP A/B.

- **ALARM STATUS**—List of trouble text alarm messages that have been generated for the MPS and the applications running on the MPS. Each alarm is listed as a 16-character hexadecimal string where each bit represents a unique platform or application alarm. To decode the string, use the procedure in the *EPAP Administration Guide* or the *ELAP Administration and LNP Feature Activation Guide*. There are 6 categories of MPS alarms:
 - Critical platform alarm data
 - Major platform alarm data
 - Minor platform alarm data
 - Critical application alarm data
 - Major application alarm data
 - Minor application alarm data
- **GSM STAT**—Possible states are ACT (active) or SWDL (the GSM component on that card is inactive until the software download completes). GSM STAT information is not displayed if the G-Port, G-Flex and Prepaid SMS Intercept Ph1 features are turned off.
- **INP STAT**—Possible states include ACT (active), OFFL (offline) and SWDL (the INP component on that card is inactive until the software download completes). INP STAT information is not displayed if the INP feature is turned off.
- **LNP STAT**—Possible states include ACT (active), OFFL (offline) and SWDL (the LNP component on that card is inactive until the software download completes). LNP STAT information is not displayed if the LNP ELAP Configuration feature is turned off.
- **EIR STAT**—Possible states include ACT (active), OFFL (offline), and SWDL (the EIR component on that card is inactive until software download completes). EIR STAT information is not displayed if the EIR feature is not enabled.
- **VFLEX STAT**—Possible states include ACT (active), OFFL (offline), and SWDL (the V-Flex component on that card is inactive until software download completes). V-Flex STAT information is not displayed if the V-Flex feature is not on.
- **ATINPQ STAT**—Possible states include ACT (active), OFFL (offline), and SWDL (the ATINPQ component on that card is inactive until software download completes). ATINPQ STAT information is not displayed if the ATINP feature is not enabled.
- **DSM MEMORY USAGE**—Percentage of Service Module memory used to store the ELAP/EPAP database.
For EPAP, the percentage of the card memory is displayed. For example, 50% of the memory on an E5-SM4G-B card means that 2GB are used.

For ELAP/LNP, the percentage that is displayed depends on the enabled or default feature access key (FAK) quantity for LNP ported TNs, LNP ported LRNs, and LNP ported NPANXXs in the system (see the `rtrv-ctrl-feat` command output). The percentage is the greatest of: 1) TNs provisioned divided by LNP ported TNs FAK quantity, 2) LRNs provisioned divided by LNP ported LRNs FAK quantity, or 3) NPANXXs provisioned divided by LNP ported NPANXXs FAK quantity.
- **CARD XXXX ALARM STATUS**—List of trouble text alarm messages that have been generated for the card
- **DSM Port A/B**—List of trouble text alarm messages that have been generated for the port on the Service Module card.
- **IP Connection Unavailable**—The failed channels on those ports with IP Connection Unavailable alarms. Possible channels reported are:
 - Prov—RTDB Provisioning Channel

- Dnld—RTDB Download Channel
- TCP—Transmission Control Protocol Channel
- UDP—User Datagram Protocol Channel

Legend

- **CARD**—MUX card location
- **TYPE**—Type of card
- **PST**—Primary state of the card. Possible values are described in [Possible Values for PST/SST/AST](#) in Appendix A.
- **SST**—Secondary state of the card. Possible values are described in [Possible Values for PST/SST/AST](#) in Appendix A.
- **AST**—Associated state of the card. Possible values are described in [Possible Values for PST/SST/AST](#) in Appendix A.
- **BITRATE(OPER)**—Maximum operational bit rate that the Fibre-Channel ring is capable of. If the operational bit rate is HIGH, the Fibre-Channel ring can be switched between the HIGH rate and the LOW rate.
- **BITRATE(ACT)**—Bit rate currently used by the Fibre-Channel ring. This rate is determined by various parameters such as the operational bit rate of the other bus, availability of a High Rate Feature Access Key, etc.
- **BERT STATUS**—BERT (Bit Error Rate Test) status of the MUX card. BERT is a diagnostic test that is initiated by the MUX cards on the IMT Bus during Bus alignment. Possible values are:
 - **PASS**—BERT passed for the MUX card
 - **FAIL**—BERT failed for the MUX card
 - **UNKNOWN**— This value should not be seen. If it is observed, please contact My Oracle Support (MOS).

4.1.423 rept-stat-rtd

Use this command to report Run Time Diagnostics (RTD) for EAGLE cards, including the status of internal integrity checks and the RTD subsystem alarm. This display can help determine the cause when an RTD subsystem alarm occurs, or when associated issues are reported.

This command is also used to reset MSU validation statistics and clear the RTD subsystem alarm.

Parameters

force (optional)

This parameter is used with the `reset=yes` parameter to clear statistics for a card when the RTD subsystem alarm is present.

Range:

`yes`

loc (optional)

Location. The card location as stenciled on the shelf of the system.

**Note:**

This parameter can be used to either retrieve or reset statistics for a card location. To reset the statistics, the `loc` and `reset` parameters must be specified together in the command.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318,
2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318,
3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318,
4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318,
5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318,
6101 - 6108, 6111 - 6118

reset (optional)

This parameter clears the statistics by setting them to zero and resets the checksum card indicator error and RTD subsystem alarm.

Range: yes

Clears the statistics.

If this parameter is specified with the `loc` parameter, then statistics are cleared for the specified card. If this parameter is specified, and the `loc` parameter is not specified, then statistics are cleared for all cards in the system.

Example

```
rept-stat-rtd
rept-stat-rtd:loc=1107
rept-stat-rtd:reset=yes:force=yes
rept-stat-rtd:loc=1107:reset=yes
```

Dependencies

If the `reset=yes` parameter is specified, then the `force=yes` parameter must be specified to clear the statistics and checksum failure indicators.

3799 E3799 Cmd Rej: FORCE=YES must be specified

The card specified by the `loc` parameter must be an IPLIMx, IPGWx, IPSG, SCCP, Service Module E5-E1T1-B, E5-ATM-B card.

2212 E2212 Cmd Rej: Invalid card type for this command

The card in the location specified by the `loc` parameter must be in service.

2387 E2387 Cmd Rej: Card is not in service

The `reset=yes` parameter must be specified to clear the statistics.

2044 E2044 Cmd Rej: <parm_desc> value is undefined - <parm>

The `force=yes` parameter must be specified.

2044 E2044 Cmd Rej: <parm_desc> value is undefined - <parm>

The `loc` parameter cannot have a non-numeric value.

2051 E2051 Cmd Rej: Incorrect information unit, expecting number - <parm>

The following card locations are not valid for this command: 1114, 1116, 1117, 1118 (E5-TDM and E5-MDAL cards), and all `xy09` and `xy10` locations where `x` is the frame and `y` is the shelf (MUX cards).

2025 E2025 Cmd Rej: Invalid card location

The card slot must be equipped and in service.

2144 E2144 Cmd Rej: Location invalid for hardware configuration

Notes

MSU Validation Statistics

The statistics from internal integrity checks are displayed for all in-service LIM and SCCP cards. The reported statistics are dynamic and are not maintained when a card is re-initialized.

The displayed reports contain message validation totals since the last time the diagnostic information for the cards was reset.

The individual statistics that are reported re-start at zero after the maximum values are reached and are cleared when reset by the `rept-stat-rtd` command.

Summary Report (`rept-stat-rtd`)

The report displayed shows the summary statistics or overall totals for MSU validation statistics for all LIM and SCCP cards in the system. It also includes the status for the RTD subsystem and the RTD subsystem alarm.

Card Summary Report (`rept-stat-rtd:loc=`)

When the `loc` parameter is specified in the `rept-stat-rtd` command, the report displayed shows the detailed MSU validation statistics report for the specified card. The report shows statistics from integrity checks performed by the specified card on MSUs transferred to and from LIM/SCCP cards and includes the timestamp when the card last detected an error during integrity checks. The statistics are only displayed for cards with non-zero totals.

The integrity checks are performed on a subset of the MSUs transferred between cards. When card(s) report errors during the integrity checks, the RTD subsystem alarm is activated. The error statistics reported should be used along with the UIMs or alarms to help identify the source of the problem.

RTD Subsystem Alarm

The RTD subsystem alarm is triggered when a card reports that a checksum error was detected during internal card integrity checks.

The RTD subsystem alarm remains active in the system until the statistics are reset using the `rept-stat-rtd` command, and no further indications of checksum errors are reported during internal card integrity checks.

Output

If the `rept-stat-rtd` command is entered with no parameters, then a summary status for the RTD subsystem and alarm and summary statistics for all of the LIM/SCCP cards in the system are displayed.

If the `loc` parameter is specified in the `rept-stat-rtd` command, then detailed statistics are displayed for the specified card location. Only cards with non-zero totals are reported in the location specific report.

This example displays a summary report on the status of the RTD subsystem and RTD subsystem alarm with MSU validation statistics for all LIM/SCCP cards in the system.

;
```

Legend

This section defines the fields of the `rept-stat-rtd` reports.

PST—Possible values are described in [Possible Values for PST/SST/AST](#). For this command, IS-NR specifically means no checksum errors were found during the last reporting period; IS-ANR specifically means that a card or cards reported checksum errors during MSU integrity checks when the RTD status was previously IS-NR, and the RTD System Alarm(s) was raised.

Total Rx Error (for a Summary Report)—Total MSUs received with checksum errors, including MSUs with checksum errors received from all cards in the system.

Total Rx Error (for a Location-Specified Report)—Total MSUs with checksum errors received at the card specified by the LOC parameter from SRC/DEST CARD.

Total Rx Validated (for a Summary Report)—Total MSUs with checksum received and validated from all cards in the system.

Total Rx Validated (for a Location-Specified Report)—Total MSUs with checksum received and validated at the card specified by the LOC parameter from SRC/DEST CARD.

Total Tx (for a Summary Report)—Total MSUs with checksum applied and transmitted to all cards in the system.

Total Tx (for a Location-Specified Report)—Total MSUs with checksums transmitted from the card specified in the LOC parameter to SRC/DEST CARD.

Last Alarm Timestamp—Timestamp for last reported checksum error for the card specified in the LOC parameter.

SRC/DEST CARD—Source card transmitting MSUs with checksums received by the card specified in the LOC parameter. Destination card receiving MSUs with checksums transmitted from card specified in LOC parameter.

RTD Subsystem—Indicates RTD Device Status (IS-NR, etc.).

RTD Alarm Status—Indicates whether an alarm is present for the RTD Device.

4.1.424 rept-stat-rte

Use this command to display the signaling route status for a particular destination.

Parameters

dpc (optional)

Range:

p-, 000-255, *, **, ***

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—p-

The asterisk values *, **, and *** are not valid for the *ni* subfield.

If ** or *** is specified for the *nc* subfield, either *, **, or *** must be specified for the *ncm* subfield.

When *chg-sid:pctype=ansi* is specified, *ni=000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc=000* is not valid if *ni=001-005*.

When *chg-sid:pctype=ansi* is specified, *nc=000* is valid if *ni=006-255*.

When *chg-sid:pctype=ansi* is specified, *ni-*-** is valid if *ni= 006-255*.

The point code 000-000-000 is not a valid point code.

dpc/dpca/dpci/dpcn/dpcn24/dpcn16 (optional)

Destination point code.

dpci (optional)

Range:

s-, *p-*, *ps-*, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s-, *p-*, *ps*

zone—0-7

area—000-255

id—0-7

The point code 0-000-0 is not a valid point code.

dpcn (optional)**Range:**

s-, *p-*, *ps-*, *0-16383*, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s-*, *p-*, *ps*

nnnnn—*0-16383*

gc—*aa-zz*

m1-m2-m3-m4—*0-14* for each member; values must sum to 14

dpcn24 (optional)**Range:**

p-, *000-255*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*p*

msa—*000-255*

ssa—*000-255*

sp—*000-255*

dpcn16 (optional)**Range:**

p--, *000---127*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*prefix---**p*

*un---**000---127*

*sna---**000---15*

*mna---**000---31*

mode (optional)

This parameter specifies the type of display to produce.

Range:***full***

Comprehensive display of point code status, including *rtx*. If specified with a point code, then the status for that point code is displayed. If specified without a point code, then the status of all routes is displayed.

rtx

Displays exception route status, other than circular routing, if the Origin-based MTP Routing feature is on.

Default:

A summary report is displayed.

stat (optional)

The primary state filter.

Range:***all***

All of the primary states

alminh

Alarms inhibited

anr

In service abnormal (IS-ANR)

dsbld

Out of service maintenance disabled (OOS-MT-DSBLD)

mt

Out of service maintenance (OOS-MT)

nr

In service normal (IS-NR)

Default:

all

Example

```
rept-stat-rte
rept-stat-rte:dpc=5-25-0
rept-stat-rte:dpci=5-5-0:mode=full
rept-stat-rte:dpci=5-5-0:mode=rtx
rept-stat-rte:mode=rtx
rept-stat-rte:mode=full
rept-stat-rte:dpc=5-25-**
rept-stat-rte:dpcn16=1-2-3
```

Dependencies

An x-list DPC cannot be specified in the `dpc` parameter.

2147 E2147 Cmd Rej: X-LIST DPC is not allowed

If the `mode=full` parameter is specified, then the `dpc/dpca/dpcn/dpci/dpcn24` parameter must be specified.

2386 E2386 Cmd Rej: DPC parameter needed with MODE=FULL

If the `dpc` parameter specifies an `ni-nc-*` format, then the `mode` parameter cannot be specified.

2886 E2886 Cmd Rej: DSTN address must be a full, network or cluster PC

The `dpc` parameter must specify `anni-nc-*` format before the `stat` parameter can be specified with the `dpc` parameter.

2890 E2890 Cmd Rej: DPC must be specified as wildcard when used with STAT

No other `rept-stat-xxx` command can be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

If a `dpc` parameter is specified, then the value must be the true destination point code (not an alias) and the value must be defined in the database.

2388 E2388 Cmd Rej: Point code not equipped

The Origin-Based MTP Routing feature must be turned on before the `mode=rtx` parameter can be specified.

4584 E4584 Cmd Rej: MTP Origin Based Routing Feature must be ON

The destination address must be a full point code, a network destination, or a cluster point code.

2886 E2886 Cmd Rej: DSTN address must be a full, network or cluster PC

The `pst` and `mode` parameters cannot be specified together in the command.

2155 E2155 Cmd Rej: Invalid parameter combination specified

Notes

This command can be canceled using the **F9** function key or the `canc-cmd` command. See `canc-cmd` for more information.

This command does not report the x-list point codes. Use the `rept-stat-cluster` command for a report of x-list point codes.

If the `mode=rtx` parameter is specified with a specific DPC, additional linkset, route and exception route information associated with the specified DPC is displayed.

In this command, only ITU-international and ITU national point codes support the spare point code subtype prefix (s-) and the private and spare point code subtype prefix (ps-). All of the point code types support the private (internal) point code subtype prefix (p-).

Summary of DPC parameter syntaxes

- `rept-stat-dstn:dpc=ni-nc-ncm` —Requests a report for fully provisioned destination `ni-nc-ncm`.
- `rept-stat-dstn:dpc= ni-**-*` —Requests a report for provisioned network destination with the specified network indicator. If `*` is specified in the `nc` field, `*` must be specified in the `ncm` field.
- `rept-stat-dstn:dpc= ni-***-*` —Requests a report for the full network cluster for the specified `ni`.
- `rept-stat-dstn:dpc= ni-***-` — Requests a report for the full network cluster and the network cluster address (if any) for the specified `ni`.

- `rept-stat-dstn:dpc= ni-nc-*` —Requests a report for provisioned cluster destination *ni-nc-**.
- `rept-stat-dstn:dpc= ni-nc-**` —Requests a report showing all destinations whose network (*ni*) and cluster (*nc*) components match those specified. Note, however, that the network cluster address on *ni-nc-** (if it exists) is not reported.
- `rept-stat-dstn:dpc= ni-nc-***` —Requests a report showing all destinations whose network (*ni*) and cluster (*nc*) components match those specified. The network cluster address (if it exists) is also reported.
- `rept-stat-dstn:dpcn24=msa-ssasp` —Requests a report for fully provisioned 24-bit destination point *main signaling area-sub signaling area signaling point*.

If the `mode=rtx` parameter is specified without a specific DPC, then status is provided for all exception route sets.

If the `mode=full` parameter is specified with a specific destination point code, then additional linkset, route, and exception route information associated with the specified destination is displayed, along with information that can be used to correct circular routing. If the `mode=full` parameter is specified without a specific destination point code, then status is provided for all regular and exception route sets.

Output

If the `dpc` parameter is not specified:

- If the `mode` parameter is not specified, then the command output lists the status of all provisioned destination point codes (DPCs) (routesets) in the system.
- If the `mode=rtx` parameter is specified, then the output lists the status of only those DPCs against which exception routes have been provisioned, and the status of the provisioned exception route sets associated with each DPCs.
- If the `mode=full` parameter is specified, then the command lists the status of all provisioned DPCs in the system, and the status of the provisioned exception route sets, if any, associated with each DPC.

If the `dpc` parameter is specified:

- If the `mode` parameter is not specified, then the output lists the status of all provisioned routes in the route set specified by that DPC.
- If the `mode=rtx` parameter is specified, then the output lists the status of all provisioned routes in the routeset specified by that DPC, and the status of all provisioned exception routesets associated with that DPC.
- If the `mode=full` parameter is specified, then the output lists the status of all provisioned routes in the routeset specified by that DPC, the status of all provisioned exception route sets associated with that DPC, any aliases associated with that DPC, and circular routing alarm information if any for that DPC.

This example shows how summary information for all provisioned cluster and noncluster DPCs is reported.

;

This example shows how the circular routing alarm for a cluster destination is displayed. A circular routing alarm for a cluster destination indicates that circular routing was detected for a member of the cluster, but no x-list entry could be created for that cluster. Circular routing detected on a cluster destination does not automatically force the output to display the status of the cluster as “OOS-MT Prohibit INACCESS” as it does for a full point code destination.

```
rept-stat-rte:dpc=9-3-*

4.1.425 rept-stat-rtkey

Use this command to generate a summary report of the status of the system routing keys.

Parameters

This command has no parameters.

Example

```
rept-stat-rtkey
```

Dependencies

None

N/A N/A

Notes

The report generated by this command contains the following information:

- The maximum of static entries (SRKQ) in the routing key table
- The current number of static routing key entries in the routing key table
- The percentage of the static routing key table entries that is provisioned

Output

```
rept-stat-rtkey
```

```
rlghncxa03w 10-10-27 14:59:11 EST EAGLE 43.0.0  
SRKQ = 250
```

```
Static Route Key table is (50 of 250) 20% full
```

```
Static Route Key Socket Association table is (80 of 4000) 2% full
```

```
;
```

4.1.426 rept-stat-rtx

Use this command to display the signaling route status for one or more exception routes to a particular destination.

Parameters

Note:

See [Point Code Formats and Conversion](#) for a detailed description of point code formats, rules for specification, and examples.

cic (optional)

Starting Circuit Identification Code. This parameter is used alone or together with the `ecic` parameter as exception routing criteria for the specified exception route.

Range:

0 - 16383

dpcc (optional)

ANSI point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*. The *prefix* subfield indicates a private point code (*prefix-ni-nc-ncm*).

Synonym:

dpca

Range:

p-, 000-255, *, **, ***

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—p-

The asterisk values *, **, and *** are not valid for the *ni* subfield.

If ** or *** is specified for the *nc* subfield, either *, **, or *** must be specified for the *ncm* subfield.

When *chg-sid:pctype=ansi* is specified, *ni=000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc=000* is not valid if *ni=001-005*.

When *chg-sid:pctype=ansi* is specified, *nc=000* is valid if *ni=006-255*.

When *chg-sid:pctype=ansi* is specified, *ni-*.** is valid if *ni= 006-255*.

The point code *000-000-000* is not a valid point code.

dpc/dpca/dpci/dpcn/dpcn24/dpcn16 (optional)

Destination point code.

dpci (optional)

ITU international destination point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-zone-area-id*).

Range:

s-, p-, ps-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s-, p-, ps

zone—0-7

area—000-255

id—0-7

The point code *0-000-0* is not a valid point code.

dpcn (optional)

ITU national destination point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the *chg-stpopts:npcfmti* flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc,m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

Range:

s-, p-, ps-, 0-16383, aa-zz

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s-, p-, ps

nnnnn—0-16383

gc—aa-zz

m1-m2-m3-m4—0-14 for each member; values must sum to 14

dpcn24 (optional)

24-bit ITU national destination point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*). The *prefix* subfield indicates a private point code (*prefix-msa-ssa-sp*).

Range:

p-, 000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—p
msa—000–255
ssa—000–255
sp—000–255

dpcn16 (optional)

16-bit ITU national destination point code with subfields *unit number sub number area main number area (un-sna-mna)*. The *prefix* subfield indicates a private point code (*prefix-un-sna-mna*).

Range:

p--, *000---127*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix---p

un---000---127

sna---000---15

mna---000---31

ecic (optional)

Ending Circuit Identification Code. This parameter, together with the `cic` parameter, defines the CIC range that is used as exception routing criteria for the specified exception route.

Range:

0 - 16383

ilsn (optional)

Incoming Link Set Name. The name of the originating linkset. This value is used as part of the exception routing criteria for the specified exception route.

Range:

ayyyyyyyy
1 alphabetic character followed by up to 9 alphanumeric characters.

mode (optional)

The type of display to produce.

Range:

full

Displays routes from the associated routeset and exception route table for the specified destination point code per criteria.

opc (optional)

Origination point code. ANSI point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*. The *prefix* subfield indicates a private point code (*prefix-ni-nc-ncm*).

Synonym:*opca***Range:***000-255*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001-005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006-255*.

The point code *000-000-000* is not a valid point code.

opc/opca/opci/opcn/opcn24/opcn16 (optional)

Origination point code.

opci (optional)

Origination Point Code. ITU international origination point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-zone-area-id*).

Range:*s-, p-, ps-, 0-255*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*prefix—s-, p-, ps**zone—0-7**area—000-255**id—0-7*

The point code *0-000-0* is not a valid point code.

opcn (optional)

Origination Point Code. ITU national point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the *chg-stpopts:npcfmti* flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

Range:*s-, p-, ps-, 0-16383, aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*prefix—s-, p-, ps**nnnnn—0-16383**gc—aa-zz**m1-m2-m3-m4—0-14* for each member; values must sum to 14**opcn24 (optional)**

Origination Point Code. 24-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*). The *prefix* indicates a private point code (*prefix-msa-ssa-sp*).

Range:*p-, 000-255*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

```
prefix—p
msa—000–255
ssa—000–255
sp—000–255
```

opcn16 (optional)

Origination Point Code. 16-bit ITU national point code with subfields *unit number sub number area main number area (un-sna-mna)*. The *prefix* subfield indicates a private point code (*prefix-un-sna-mna*).

Range:

```
p--, 000---127
```

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

```
prefix---p
un---000---127
sna---000---15
mna---000---31
```

si (optional)

Service Indicator. This parameter is used as part of the exception routing criteria for the specified exception route.

Range:

```
0 - 15
```

Example

```
rept-stat-rtx
rept-stat-rtx:dpc=1-101-1
rept-stat-rtx:dpc=1-101-1:opc=1-2-1
rept-stat-rtx:dpc=100-100-1:opc=1-1-1:mode=full
rept-stat-rtx:dpcn16=001-1-2
```

Dependencies

If the `dpcn` parameter is specified, its format must match the format that was assigned with the `chg-stpopts:npcfmti` parameter.

2997 E2997 Cmd Rej: PC must match NPCFMTI set in CHG-STPOPTS

The `dpc` parameter and the class criteria parameters (`opc/ilsn/cic/si`) must be specified before the `mode` parameter can be specified.

4779 E4779 Cmd Rej: MODE allowed only with DPC and RTX Class

The `dpc` parameter must be specified before the class criteria parameters (`opc/ilsn/cic/si`) can be specified.

2379 E2379 Cmd Rej: Missing parameter

Notes

Each exception route set can have up to 6 associated routes.

In this command, only ITU-international and ITU national point codes support the spare point code subtype prefix (s-) and the private and spare point code subtype prefix (ps-). All of the point code types support the private (internal) point code subtype prefix (p-).

This command can be cancelled using the **F9** function key or the `canc-cmd` command. See `canc-cmd` for more information.

MTT 4732 and 4735 deleted by MB

Output

This example provides the status of all exception route sets provisioned in the system, sorted by DPC:

```
rept-stat-rtx
```

```
stdcfg2b 09-05-24 01:54:32 EST EAGLE 41.0.0
```

DPCA	PST	SST	AST
001-101-001	IS-NR	Allowed	ACCESS
OPCA	PST	SST	AST

4.1.427 rept-stat-sccp

Use this command to display the following types of reports:

- `rept-stat-sccp` (with no parameters)—displays the status of the Service Module cards and the services executing on those cards:
 - A-Port (IS41 Mobile Number Portability)
 - AIQ (IS41 Analyzed Information Query)
 - ATINPQ (ATI Number Portability Query)
 - EIR (Equipment Identity Register)
 - G-Flex (GSM Flexible Numbering)
 - G-Port (GSM Mobile Number Portability)
 - GTT (Global Title Translation)
 - IAR (Info Analyzed Relay)
 - IDP Relay (Prepaid IDP Query Relay)
 - IGM (IS41 GSM Migration)
 - INP (INAP-based Number Portability)
 - INPMR (INP Message Relay)
 - LNP (Local Number Portability)
 - LNPMR (LNP Message Relay)
 - LRNQT (ITU TCAP LRN Query)
 - MNPSMS (Portability Check for Mobile Originated SMS)
 - MO SMS B-Party Routing
 - MO SMS IS41-to-GSM Migration
 - MO-based GSM SMS NP
 - MO-based IS41 SMS NP
 - MTPRTD (MTP Routed messages serviced by the SCCP card)
 - PPSMS (Prepaid SMS Intercept)
 - TLNP (Triggerless LNP)
 - TTR (Triggerless TCAP Relay)
 - V-Flex (Voice Mail Router)
 - CAT2 (Category 2 Validation)

The command also displays any cards that are denied SCCP service.

- `rept-stat-sccp:mode=perf` —targets the general SCCP traffic performance for Service Module cards. The report supplies message rates for message flow control (MFC) performance.
- `rept-stat-sccp:loc=nnnn` —provides a detailed view of the status of SCCP services provided by a specific Service Module card

 **Note:**

The `rept-stat-sccp` and `rept-stat-sccp:mode=perf` reports include the status of the Service Module cards (E5-SM8G-B and SLIC cards) but do not differentiate between the card types.

 **Note:**

To retrieve traffic statistics for the LNP feature, the `rept-stat-lnp` command can also be used.

 **Note:**

Statistics are displayed for the supported features as follows:

- AIQ—AIQ Subsystem Report and Service Statistics
- APORT, GPORT, and IGM—MNP Service Statistics
- ATINPQ—ATINPQ Subsystem Report and Service Statistics
- EIR—EIR Subsystem Report and Service Statistics
- G-Flex—GFLEX Service Statistics
- GTT—GTT Service Statistics
- IAR—IAR Service Statistics
- IDP Relay—IDPR Service Statistics
- INPQ—INP Subsystem Report and Service Statistics (includes INPQ and INPMR - AINPQ is combined with INPQ)
- INPMR-INP Message Relay Service Statistics
- LNP—LNP Subsystem Report and Service Statistics (including LNPMR, LNPQS, WNPQS, TLNP, PLNPQS and LRNQT)
- LNPMR-LNP Message Relay Service Statistics
- LNPQS-LNP Query Service Statistics
- MO SMS IS41-to-GSM Migration, MO-based GSM SMS NP, MO-based IS41 SMS NP, PPSMS—SMSMR Service Statistics
- MTPRTD-MTP Routed (MTP routed messages serviced by the SCCP card) Statistics.
- TLNP-Triggerless LNP Service Statistics
- TTR-Triggerless TCAP Relay Service Statistics
- V-Flex—VFLEX Subsystem Report and Service Statistics
- WNPQS-Wireless LNP Query Service Statistics
- CAT2- Category 2 Validation Statistics

 **Note:**

If traffic is being generated while Service Module cards are loading, then superfluous counts may be displayed in Daily and Overall Peak SCCP Loads. To correct this occurrence, reset the Peak SCCP Loads using the `rept-stat-sccp:peakreset=yes` command.

 **Note:**

It will also include the statistics of GTT-enabled LIM cards. If the system has both SCCP and GTT-enabled LIM cards, then it shows the statistics for both cards.

Parameters**appl (optional)**

Used to display the statistics of either SCCP cards or GTT-enabled IPSP cards.

Range:

vscpp

Display the status of the SCCP SM card

ipsg

Display the status of the GTT-enabled IPSP card

 **Note:**

Using `data=gtt`, the user is able to see stats of all cards configured with `data=gtt`, as in all SM GTT cards, as well as GTT-enabled IPSP cards. With the `appl` parameter, the user can either see stats of SCCP cards with GTT data or stats of GTT-enabled IPSP cards.

data (optional)

The subsystem data type used in the report.

Range:

dn

report on the SCCP DN subsystem

imsi

report on the SCCP IMSI subsystem

epap

report on SCCP EPAP subsystem

elap

report on SCCP ELAP subsystem

gtt

report on SCCP GTT subsystem (on both SCCP and GTT-enabled IPSP cards)

card (optional)

Used to display statistics of either SCCP cards or GTT-enabled LIM cards.

Range:

sm

Display the status of SCCP SM card

lim

Display the status of GTT-enabled LIM card

all

Display the status of all cards

**Note:**

Using `data=gtt`, the stats of all cards configured with `data=gtt`, (SM GTT cards as well as GTT-enabled LIM cards) are displayed. With the `CARD` parameter, the stats of SCCP cards or stats of GTT-enabled LIM cards are displayed.

loc (optional)

The location of the Service Module card to be reported on.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118

Default:

Report a summary of all cards.

mode (optional)

Use this parameter to provide extended performance information, including output about message flow control (MFC) performance and message rates for direct assignments.

Range:

perf

Default:

No extended performance information is displayed.

peakreset (optional)

Reset all Peak values to zero.

Range:

yes

Example

```
rept-stat-sccp
rept-stat-sccp:mode=perf
rept-stat-sccp:loc=1106
rept-stat-sccp:data=epap
rept-stat-sccp:data=gtt:card=lim
```

Dependencies

No other `rept-stat-xxx` command can be in progress when this command is entered.

E2368 Cmd Rej: System busy - try again later

A Service Module card running the VSCCP application must be configured before this command can be entered.

2374 E2374 Cmd Rej: SCCP Subsystem not Configured

Only one optional parameter at a time can be specified in the command. The parameters DATA, LOC and CARD are mutually exclusive.

2609 E2609 Cmd Rej: Only one optional parameter may be specified

The value specified for the `loc` parameter must identify a configured Service Module card running the VSCCP application or a GTT-enabled IPSP card running the IPSP32 GPL.

E3014 Cmd Rej: Card location specified must be an SCCP card

The EPAP Data Split feature must be enabled before the `data` parameter can be specified.

5478 E5478 Cmd Rej: EPAP Data Split feature must be Enabled

The Dual ExAP Config feature must be enabled before specifying parameter DATA = ELAP/EPAP.

2400 E2400 Cmd Rej: Dual ExAP Config feature must be enabled.

The Dual ExAP Config feature or EPAP Data Split feature must be enabled before a value of DATA=EPAP can be specified.

2434 E2434 Cmd Rej: Dual ExAP Config or EPAP Data Split must be ON

Notes

In Release 46.5, with the introduction of GTT on LIM, the output format of the `rept-stat-sccp` command has been changed. The output has been divided into three parts: head, body and tail. The head of the output informs about the status report, primary state, secondary state, alarms, and other information.

The body of the output depends on whether or not an SM/GTT-enabled IPSP card is present in EAGLE. If there are only SM cards in the EAGLE, the body of the output will display only the SCCP Subsystem Report. This report will contain information including daily peak load, total system capacity, number of equipped SM cards,

number of in-service SM cards, and other information. It will also contain the card list of SM cards and MSU usage, as well as CPU usage of each individual card. If there are only GTT-enabled IPSG cards in the EAGLE, the body of the output will display only the GTT on LIM Report. This report will contain information including number of equipped and in-service GTT-enabled IPSG cards, total GTT on LIM capacity, and a card list of GTT-enabled IPSG cards and MSU/CPU usage of each individual card. If both SM and GTT-enabled IPSG cards are present, the output will be a combination of an SCCP Subsystem Report and GTT on LIM report.

The tail of the output informs about the Total Service Statistics of enabled services on the EAGLE. The GTT service statistics will be a combination of GTT statistics obtained from SM cards as well as from GTT-enabled IPSG cards.

Output

If the EIR, G-Port, INP, 1100 TPS/DSM for ITU NP, AINPQ, A-Port, IGM, Throughput Capacity, IAR, or V-Flex features are enabled, then the **ansigflex** system option is disabled.

Note:

Output for this command displays the status for services associated with features that are enabled and turned on. If a feature is not turned on, then the services for that feature are not displayed. The following examples display output when all possible features are turned on.

This example shows a summary report for all the features corresponding to EPAP-based services and subsystems:

Legend

This section defines the fields of the three `rept-stat-sccp` reports:

- `rept-stat-sccp` with no parameters
- `rept-stat-sccp:mode=perf`
- `rept-stat-sccp:loc=nnnn`

A dash (-) in an output field indicates that the statistic does not apply.

 **Note:**

The ERRORS and TOTAL ERRORS fields indicate that errors have occurred for Service Module cards in the system. Refer to UIMs generated by the system for the specific errors, and refer to the *Maintenance Guide* for error explanations and recovery procedures.

Report Type: `rept-stat-sccp` with no parameters

- **SCCP SUBSYSTEM REPORT, GTT ON LIM REPORT, GFLEX/MNP SERVICE REPORT** and **LNP/INPQ/EIR/VFLEX/ATINPQ/AIQ SUBSYSTEM REPORT**—Summary of the SCCP subsystem status, GTT on LIM subsystem status, GFLEX and MNP service status, LNP, INPQ (INP Query), EIR, VFLEX, ATINPQ and AIQ subsystem status
- **SCCP CARDS CONFIGURED**—Number of provisioned Service Module cards running the VSCCP application
- **GTT LIM CARDS CONFIGURED**—Number of provisioned GTT-enabled LIM cards running the IPSP32 GPL
- **CARD IS-NR**—Number of Service Module or GTT-enabled LIM cards that can be used by the system (status is In-Service Normal, IS-NR)
- **SYSTEM PEAK SCCP LOAD**—Highest SCCP transactions-per-second (TPS) processed by the EAGLE
- **SYSTEM TOTAL SCCP CAPACITY**—Sum of the maximum capacity of all active SCCP cards
- **SYSTEM TOTAL GTT ON LIM CAPACITY**—Sum of the maximum capacity of all active GTT-enabled LIM cards
- **SYSTEM TPS ALARM THRESHOLD**—Percentage of traffic that triggers an alarm to warn that the EAGLE is approaching the total system SCCP transactions-per-second (TPS) capacity. This value is set by the `chg-th-alm` command.
- **CARD**—Card location of the cards running the VSCCP/IPSP application
- **P**—When G-Flex, GPORT, INP, APORT, EIR, V-Flex, IAR, or IGM feature is turned on, a P indicates the primary Service Module card. The primary Service Module card provides the MPS status to the EAGLE. This indicator is displayed between the card location and the GPL version.
- **VERSION**—Version number of the GPL running on the Service Module card
- **PST**—Primary state of the card. See [Possible Values for PST/SST/AST](#).
- **SST**—Secondary state of the card. See [Possible Values for PST/SST/AST](#).
- **AST**—Associated state of the card. See [Possible Values for PST/SST/AST](#).
- **MSU USAGE**—Percentage of the maximum number of MSUs received by each card during the last 30 seconds
- **CPU USAGE**—Percentage of the amount of CPU used by each card during the last 30 seconds to process messages and to handle other foreground and background tasks

- **SCCP SERVICE AVERAGE MSU CAPACITY**—Average MSU capacity used over the last 30-second interval. This field includes all services provided by the Service Module or GTT-enabled LIM cards.
- **AVERAGE CPU CAPACITY**—Average CPU capacity used over the last 30-second interval. This field includes all services provided by the Service Module or GTT-enabled LIM cards.
- **AVERAGE CPU USAGE PER SERVICE**—System-wide view of the service traffic composition.
- **TOTAL SERVICE STATISTICS**—System-wide view of per-service statistics for the last 30-second interval. An "A" in the field indicates that the statistic does not apply. The report tracks the following information:
 - **SERVICE**
 - **SUCCESS**—Total number of successful messages processed by the specified card for each service. Applies to all services.
 - **ERRORS**—Total number of messages with errors for each service. Applies to all services.
 - **WARNINGS**—Total number of messages that output UIM warnings and were forwarded to GTT by the specified card for G-Flex, MNP, SMSMR, IDPR, IAR, INPMR and INPQ services and total number of messages for which CAT2 validation has not been applied in case of CAT2.
 - **FORWARD TO GTT**—Total number of messages that could not find a match in the MPS database (did not produce any errors or warnings) and were successfully forwarded to GTT by the specified card for G-Flex, MNP, SMSMR, IDPR, IAR and INPMR services
 - **FORWARD TO MATE**— Total number of ACK messages on which GTT is performed and send to mate STP.

Report Type: `rept-stat-sccp:mode=perf`

This report includes the status of E5-SM8G-B and SLIC cards, but does not differentiate between these card types.

- **SCCP SUBSYSTEM REPORT, GTT ON LIM REPORT,LNP SUBSYSTEM REPORT and GFLEX/MNP SERVICE REPORT**—Summary status of the SCCP subsystem, GTT on LIM subsystem status, GFLEX and MNP services, LNP subsystem along with their corresponding Alarm Status
- **SCCP CARDS CONFIGURED**—Number of Service Module cards provisioned
- **GTT LIM CARDS CONFIGURED**—Number of provisioned GTT-enabled LIM cards running the IP32 GPL
- **CARD IS-NR**—Number of Service Module or GTT-enabled LIM cards that can be used by the system (status is in-service normal, IS-NR)
- **SYSTEM PEAK SCCP LOAD**—Highest SCCP TPS processed by the EAGLE
- **SYSTEM TOTAL SCCP CAPACITY**—Sum of the maximum capacity of all active Service Module cards
- **SYSTEM TOTAL GTT ON LIM CAPACITY**—Sum of the maximum capacity of all active GTT-enabled LIM cards
- **SYSTEM TPS ALARM THRESHOLD**—Percentage of traffic that triggers an alarm to warn that the EAGLE is approaching the total system SCCP TPS capacity. This value is set by the `chg-th-alm` command.

- **TPS STATISTICS**—Section of the report that provides TPS statistics on each Service Module or GTT-enabled LIM card
 - **CARD**—Card location of the cards running the VSCCP/IPSG application
 - **CPU USAGE**—Percentage of the amount of CPU used to process messages by each card during the last 30 seconds
 - **TOTAL MSU RATE**—Total number of messages processed per second. This and the other message rates are obtained from statistics maintained by the Service Module card for the last 30-second period.
 - **CLASS 0 and CLASS 1 MESSAGING RATE**—Number of messages received per second.

The next section of the `rept-stat-sccp:mode=perf` report provides system-wide SCCP traffic statistics.

AVERAGE MSU USAGE

Total of the MSU usage fields from each Service Module card divided by the number of active Service Module or GTT-enabled LIM cards

AVERAGE CPU USAGE

Total of the CPU usage fields from each Service Module card divided by the number of active Service Module or GTT-enabled LIM cards

TOTAL MSU RATE

Sum of all MSU rates processed by all active Service Module or GTT-enabled LIM cards

STATISTICS FOR PAST 30 SECONDS

Statistics that represent the last 30-second period

TOTAL MSUS

Sum of all transactions on all active Service Module or GTT-enabled LIM cards

TOTAL ERRORS

Sum of all errors on all active Service Module or GTT-enabled LIM cards

TOTAL MSU SEND TO MATE

Sum of all transactions that are sent to the mate STP

Report Type: `rept-stat-sccp:loc=nnnn`

- **CARD**—Card location of the card running the VSCCP/IPSG application
- **VERSION**—Version number of the GPL the card is running
- **TYPE**—Type of the card
- **PST**—Primary state of the card. See [Possible Values for PST/SST/AST](#).
- **SST**—Secondary state of the card. See [Possible Values for PST/SST/AST](#).
- **AST**—Associated state of the card. See [Possible Values for PST/SST/AST](#).
- **CARD ALARM STATUS**—If there are no card alarms present, this field displays No Alarms.

The next section of the `rept-stat-sccp:loc=nnnn` report supplies the status of the individual services provided by the card and the associated CPU usage for the service.

TOTAL

Sum of the CPU usage for the services running over the previous 30-second period

CARD SERVICE STATISTICS

Card service statistics over the previous 30-second period for the specified card. The report tracks the following:

SERVICE

Name of the individual service provided by the card

SUCCESS

Total number of successful messages processed by the specified card for each service. Applies to all services.

ERRORS

Total number of messages with errors for each service. Applies to all services.

WARNINGS

Total number of messages that output UIM warnings and were forwarded to GTT by the specified card for G-Flex, MNP, SMSMR, IDPR, IAR, INPMR and INPQ services and total number of messages for which CAT2 validation has not been applied in case of CAT2.

FORWARD TO GTT

Total number of messages that could not find a match in the MPS database (did not produce any errors or warnings) and were successfully forwarded to GTT by the specified card for G-Flex, MNP, SMSMR, IDPR, IAR, and INPMR services

FORWARD TO MATE

Total number of successful ACK messages that are send to mate STP by a specific card for GTT service only.

TOTAL

Total number of SUCCESS, ERRORS, WARNINGS, and FORWARD TO GTT messages

IMEI Challenge Legend

This section of the `rept-stat-sccp` report supplies the stats for the IMEI Challenge. The legends mean the following:

TOTAL REQUEST

All requests for PSI query

VALIDATION SUCCESS

When IMEI is received in the PSI ACK.

VALIDATION FAILURE

IMEI not received in PSI ACK and Purge MS is generated

ERROR1

Decode errors.

ERROR2

Encoding errors.

4.1.428 rept-stat-seas

Use this command to generate a summary report of the status of the SEAS subsystem on the EAGLE. This command reports the status of the CCS MR connections if the SEAS Over IP feature is turned on. See the *Maintenance Guide* for information about the SEAS alarms.

Parameters

This command has no parameters.

Example

```
rept-stat-seas
```

Dependencies

No other `rept-stat-xxx` command can be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

The SEASCFG Table must be accessible.

4613 E4613 Cmd Rej: Failed Reading SEASCFG Table

Notes

None

Output

This example shows output when the SEAS Over IP feature is turned on.

```
rept-stat-seas
```

```
tekelecstp 07-01-11 16:47:51 EST EAGLE 37.5.0
```

SEAS SYSTEM		PST	SST	AST	

ALARM STATUS = No Alarms		IS-NR	Avail	-----	
TERM	IPADDR	PORT	PST	SST	AST

18	120.30.10.11	15	IS-NR	Active	-----
ALARM STATUS = No Alarms					
40	128.30.15.12	16	IS-NR	Active	-----
ALARM STATUS = No Alarms					

Legend

- **PST**—Primary state of the subsystem. Possible values are described in [Possible Values for PST/SST/AST](#).
- **SST**—Secondary state of the subsystem. Possible values are described in [Possible Values for PST/SST/AST](#).
- **AST**—Associated state of the subsystem. Possible values are described in [Possible Values for PST/SST/AST](#).
- **SEAS SYSTEM**—Overall SEAS component

4.1.429 rept-stat-seculog

Use this command to display the following information about the security log on the active and standby OAMs:

- The active or standby status of each log
- The number of new (that is, not uploaded) entries in each log
- The percentage of log space used by those new entries
- Whether overflow has occurred since the last upload
- Whether a recording failure has occurred since the last upload
- The date and time of the oldest and newest records in the log
- The date and time when the last successful upload of the log occurred

Parameters

This command has no parameters.

Example

```
rept-stat-seculog
```

Dependencies

No other security log command can be in progress when this command is entered.

```
3005 E3005 Cmd Rej: Security log command already in progress
```

Notes

The %FULL field displays the amount of space in the log taken up by new (not uploaded) entries. That number is obtained by dividing the number displayed in the

ENTRIES field by the overall storage capacity of the log (10,000 entries). Because the log stays full of entries at all times, new entries overwrite existing entries.

The percentage full computed is rounded up to the next integer with one exception: the value of 100 is not displayed until the log is truly 100% full.

The log capacity is 10,000 records. To determine how many more commands can be logged before an overflow condition occurs, subtract the value displayed in the ENTRIES field from 10,000.

The status of the active OAM's log is always reported first in the output report, followed by the status of the standby log; in other words, they are *not necessarily* displayed numerically by the location number.

The report displays dates in the format *yy-mm-dd*, where *yy* is the year, *mm* is the month, and *dd* is the date. The report displays times in the format of *hh:mm:ss*, where *hh* is hours, *mm* is minutes, and *ss* is seconds.

Output

This example shows the output in the normal security log state. All un-uploaded records appear in the log on the active OAM.

```
rept-stat-seculog
```

Legend

- **LOC**—Address of the TDM card (with the hard disk on it) that contains the log. It is always the card at location 1114 or 1116.
- **ROLE**—Current role of the security log at that location. This value is always the same as the role of the OAM associated with the TDM card: *active* or *standby*.
- **-- SINCE LAST UPLOAD**—Applies to the four columns directly below the heading on the output. It indicates that the fields below display information obtained since the last upload.
 - **ENTRIES**—Shows how many un-uploaded commands are currently recorded in the log. This value resets to 0 (zero) when the log is uploaded using `copy-seculog`.
 - **%FULL**—Shows, as a percentage, how much space in the log the ENTRIES field value occupies
 - **OFLO**—Overflow indicator. Overflow occurs if the log is not uploaded periodically: new entries start overwriting un-uploaded entries. Displays *No* if no overflow has occurred and *Yes* if overflow has occurred
 - **FAIL**—Failed indicator. Displays *No* if no logging failure has occurred. Displays *Yes* to indicate that a logging failure has occurred that has prevented one or more entries from being recorded in the log successfully.

 **Note:**

Whether the system is able to set the logging failure flag in the security log header depends on the nature of the failure. If a `copy-disk` command is processing, the system sets the flag when the `copy-disk` command finishes processing. However, if the active fixed disk fails for some reason, or the security log happens to be in a bad sector that develops, the system is unable to set the logging failure flag.

- **OLDEST RECORD/NEWEST RECORD**—Date and time recorded in the oldest and newest record in the log. Allows the administrator to know the time period that the log covers. The log records all commands that were issued between 6/3/96 at 13:45:03 up to 8/5/96 at 06:58:55. The NEWEST RECORD for the active log is the current date, because the log will have recorded the `rept-stat-seculog` command that was just entered to produce the report.
- **LAST UPLOAD**—Date and time when the log was last uploaded successfully. That is, the `copy-seculog` command successfully copied the log to the FTA.

4.1.430 rept-stat-sfapp

Use this command to display the overall status of the SFAPP Card service in the EAGLE.

Parameters**loc (optional)**

SFAPP card location for which Card status, overall card TPS and total statistics of the card is to be reported.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118

Default:

Report a summary of all cards

peakreset (optional)

Reset peak values to zero.

Range:

yes

Example

```
rept-stat-sfapp
```

```
rept-stat-sfapp:peakreset=yes:loc=1101
```

rept-stat-sfapp:loc=1101

Dependencies

Location specified should be of the SFAPP card.

3548 E3548 Card location specified must be an SFAPP card

Output

This example shows a summary report for all the SFAPP cards:

4.1.431 rept-stat-sflog

Use this command to display the overall status of the SS7 Firewall Logging subsystem on the EAGLE.

Parameters**loc (optional)**

SFLOG card location for which card status, card TPS usage, and last log file event data is to be reported.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118

peakreset (optional)

Reset peak values to the current TPS values and last log event file for primary and secondary SFLOG card.

Range:

yes

Example

```
rept-stat-sflog  
rept-stat-sflog:loc=1101  
rept-stat-sflog:peakreset=yes
```

Dependencies

At least one SCCP/SFAPP and one SFLOG card running the SCCPHC/SFAPP and IPSHC application must be configured before this command can be entered.

3283 E3283 Cmd Rej: At least one SCCP/SFAPP and one SFLOG must be configured

The `peakreset` and `loc` parameters cannot be specified together.

2155 E2155 Cmd Rej: Invalid parameter combination specified

The location specified with this command should be the location of an SCCP or SFLOG (logging enabled) card running the SCCPHC or IPSHC GPL respectively.

3496 E3496 Cmd Rej: Card location specified must be an SCCP or SFLOG card

The shelf and card must be equipped.

2144 E2144 Cmd Rej: Location invalid for hardware configuration

Notes

The `peakreset` parameter will reset the statistics on the primary and secondary card.

Legend

This section defines the fields of the three `rept-stat-sflog` reports:

- `rept-stat-sflog` with no parameters
- `rept-stat-sflog:loc=<IPS card location>`
- `rept-stat-sflog:loc=<SCCP card location>`

A dash (-) in an output field indicates that the statistic does not apply.

Report Type: `rept-stat-sflog` with no parameters

- **SFLOG ALARM STATUS**—Displays SFLOG system-related alarms. If there are no system alarms present, this field displays `No Alarms`.
- **SFLOG Cards Configured**—Number of cards running the IPSHC GPL that are configured for SS7 Firewall Logging.
- **CARDS IS-NR**—Number of SFLOG cards running the IPSHC GPL that can be used by the system (status is In-Service Normal, IS-NR).
- **CARD**—Card location of the SFLOG/SCCP/SFAPP card running the IPSHC/SCCPHC/SFAPP GPL respectively.
- **P**—P indicates the primary Service Module card. The primary Service Module card provides the MPS status to the EAGLE. This indicator is displayed between the card location and the GPL version.
- **VERSION**—Version number of the IPSHC/SCCPHC/SFAPP GPL running on the SFLOG/SCCP/SFAPP card.
- **PST**—Primary state of the card. See [Possible Values for PST/SST/AST](#).
- **SST**—Secondary state of the card. See [Possible Values for PST/SST/AST](#).
- **AST**—Associated state of the card. See [Possible Values for PST/SST/AST](#).
- **TPS**—Transactions Per Second; indicates the number of logging events which are received on the SFLOG card.
- **CPU USAGE**—Percentage of the amount of CPU used to process messages by each card.
- **TOTAL STATISTICS**—System-wide view of per-service statistics. The report tracks the following information:
 - **SERVICE**—SFLOG (**IPSM STATS**), **SCCP STATS** and **SFAPP STATS** statistics are displayed.
 - **SUCCESS**—Total number of messages successfully processed by the SCCP, SFAPP and SFLOG cards.
 - **DISCARD**—Total number of messages discarded by the SCCP and SFLOG cards.

Report Type: `rept-stat-sflog:loc=<IPS card location>`

- **CARD**—Card location of the SFLOG card running the IPSHC GPL.
- **VERSION**—Version number of the IPSHC GPL running on the SFLOG card.
- **TYPE**—Type of the card.
- **PST**—Primary state of the card. See [Possible Values for PST/SST/AST](#).

- **SST**—Secondary state of the card. See [Possible Values for PST/SST/AST](#).
- **AST**—Associated state of the card. See [Possible Values for PST/SST/AST](#).
- **CARD ALARM STATUS**—Displays SFLOG card-specific alarms. If there are no card alarms present, this field displays `No Alarms`.
- **CPU USAGE**—Percentage of the amount of CPU used to process messages by the card.
- **TPS STATISTICS**—System-wide view of per-service statistics. The report tracks the following information:
 - **TPS**—Transactions Per Second; indicates the number of transactions that are received on the card.
 - **PEAK-TPS**—Indicates the maximum TPS that occurred on the card
 - **PEAKTIMESTAMP**—Indicates the time when the peak TPS occurred on the card.
- **LAST LOG EVENT FILE GENERATED**—Statistics of the last log file transfer to the SFTP server. The report tracks the following information:
 - **FILENAME**—Name of the file.
 - **SIZE**—Size of the file.
 - **SERVER**—IP address of the server to which the file is transferred.

Report Type: `rept-stat-sflog:loc=<SCCP card location>`

- **CARD**—Card location of the SCCP card running the SCCPHC GPL.
- **VERSION**—Version number of the SCCPHC GPL running on the SCCP card.
- **TYPE**—Type of the card.
- **PST**—Primary state of the card. See [Possible Values for PST/SST/AST](#).
- **SST**—Secondary state of the card. See [Possible Values for PST/SST/AST](#).
- **AST**—Associated state of the card. See [Possible Values for PST/SST/AST](#).
- **CARD ALARM STATUS**—Displays SCCP card-specific alarms. If there are no card alarms present, this field displays `No Alarms`.
- **CPU USAGE**—Percentage of the amount of CPU used to process messages by the card.
- **SCCP STATISTICS**—Per-card logging statistics on SCCP. The report tracks the following information:
 - **SUCCESS**—Total number of messages successfully processed by the SCCP card.
 - **DISCARD**—Total number of messages discarded by the SCCP card.
 - **SERVER**—IP address of the server to which the file is transferred.

Report Type: `rept-stat-sflog:loc=<SFAPP card location>`

- **CARD**—Card location of the SFAPP card running the SFAPP GPL.
- **VERSION**—Version number of the SFAPP GPL running on the SFAPP card.
- **TYPE**—Type of the card.
- **PST**—Primary state of the card. See [Possible Values for PST/SST/AST](#).
- **SST**—Secondary state of the card. See [Possible Values for PST/SST/AST](#).

- **AST**—Associated state of the card. See [Possible Values for PST/SST/AST](#).
- **CARD ALARM STATUS**—Displays SFAPP card-specific alarms. If there are no card alarms present, this field displays `No Alarms`.
- **CPU USAGE**—Percentage of the amount of CPU used to process messages by the card.
- **SFAPP STATISTICS**—Per-card logging statistics on SFAPP. The report tracks the following information:
 - **SUCCESS**—Total number of messages successfully processed by the SFAPP card.
 - **DISCARD**—Total number of messages discarded by the SFAPP card.

4.1.432 rept-stat-sfthrot

Use this command to display the overall status of the provisioned SS7 Firewall Throttling GTT Actions on the EAGLE.

Parameters

This command has no parameters.

Example

```
rept-stat-sfthrot
```

Dependencies

An SCCP card running the SCCPHC application must be configured before this command can be entered.

```
2374 E2374 Cmd Rej: SCCP not Configured
```

Output

Following is example output:

```
rept-stat-sfthrot
```

```
Command Executed
```

```
tekelecstp 16-02-17 15:45:15 MST EAGLE5 46.3.0.0.0-68.11.1
rept-stat-sfthrot
Command entered at terminal #21.
```

```
;
```

```
Command Accepted - Processing
```

```
tekelecstp 16-02-17 15:45:15 MST EAGLE5 46.3.0.0.0-68.11.1
```

```
SCCP Cards Configured= 2      Cards IS-NR= 1
```

```
Average CPU Usage = 5%
```

```
CARD   VERSION   PST           SST           AST           TPS
```

```

```

```
1107 004-011-004 IS-NR Active ----- 3
```

```
PER TA TPS STATISTICS:
```

TA	STATUS	CURRENT 30 SECS		PREVIOUS 30 SECS	
		SUCCESS	DISCARD	SUCCESS	DISCARD
throt1	ALLOWED	94	0	95	0
throt2	BLOCKED	101	25	100	29
throt3	ALLOWED	96	0	95	0

```
Command Completed.
```

```
;
```

Legend

This section defines the fields of the `rept-stat-sfthrot` reports:

A dash (-) in an output field indicates that the statistic does not apply.

- **SCCP Cards Configured**—Number of cards running the SCCPHC GPL that are configured for SS7 Firewall Throttling GTT Actions.
- **CARD IS-NR**—Number of SCCP cards running the SCCPHC GPL that can be used by the system (status is In-Service Normal, IS-NR).
- **Average CPU Usage**—Average percentage of the amount of CPU used to process SS7 Firewall Throttling GTT Actions by the cards.
- **CARD**—Card location of the SCCP card running the SCCPHC GPL.
- **P**—P indicates the primary Service Module card. The primary Service Module card provides the MPS status to the EAGLE. This indicator is displayed between the card location and the GPL version.
- **VERSION**—Version number of the SCCPHC GPL running on the SCCP card.
- **PST**—Primary state of the card. See [Possible Values for PST/SST/AST](#) .
- **SST**—Secondary state of the card. See [Possible Values for PST/SST/AST](#) .
- **AST**—Associated state of the card. See [Possible Values for PST/SST/AST](#) .
- **TPS**—Transactions per second; indicates the number of SUCCESS MSUs processed by an SCCP card for all Throttling Actions (average cumulative count) for the previous window.
- **PER TA TPS STATISTICS**—System-wide view of per-TA statistics. The report tracks the following information:
 - **TA**—Throttling Actions that are provisioned in the database.
 - **STATUS**—Current state (Allowed or Blocked) of the corresponding Throttling Action for the 30-second window.
 - **CURRENT 30 SECS:**
 - * **SUCCESS**—Number of success messages in the current 30-second window.
 - * **DISCARD**—Number of discarded messages in the current 30-second window.

- **PREVIOUS 30 SECS:**
 - * **SUCCESS**—Number of success messages in the previous 30-second window.
 - * **DISCARD**—Number of discarded messages in the previous 30-second window.

4.1.433 rept-stat-sip

Use this command to display the overall status of the SIP service on the EAGLE.

Parameters

loc (optional)

The SIP card location for which SIP TPS usage data is to be reported.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118

peakreset (optional)

Reset peak values to the current TPS values.

Range:

yes

no

Default:

no

mode (optional)

Performance data of SIP cards and their connections.

Range:

perf

Default:

perf

Example

```
rept-stat-sip
rept-stat-sip:peakreset=yes:loc=1101
rept-stat-sip:loc=1101
rept-stat-sip:mode=perf
rept-stat-sip:mode=perf:loc=1101
```

Dependencies

The location specified with this command should be of a SIP card.

2067 E2067 Cmd Rej: Card location specified must be an SIP card

A SIP card running the SIPHC application must be configured before this command can be entered.

2688 E2688 Cmd Rej: SIP not Configured.

Parameter peakreset should be specified with loc parameter.

2366 E2366 Cmd Rej: LOC must be specified.

Notes

If optional parameters are specified, only the entries that match the entered parameters are displayed.

Output

This example displays output when no parameter is specified:

```
rept-stat-sip
```

```
tekelecstp 02-03-20 05:58:25 EST EAGLE 46.0.0
```

```
rept-stat-sip
```

```
SIP ALARM STATUS = No Alarms
```

```
SIP cards Configured= 2 Cards IS-NR= 2
```

CARD	VERSION	PST	SST	AST	TPS
1107	045-003-053	IS-ANR	Standby	100%+	0

```
TOTAL SERVICE STATISTICS:
```

SERVICE	SUCCESS	ERROR	WARNINGS	BYPASS	TOTAL
SIPNP:	5	2	1	2	10

```
Command Completed.
```

```
;
```

This example displays output when the LOC parameter is specified:

```
rept-stat-sip:loc=1107
```

```
Command Accepted - Processing
```

```
tekelecstp 02-03-20 06:00:17 EST EAGLE 46.0.0
rept-stat-sip:loc=1107
```

```

CARD   VERSION      TYPE   PST           SST           AST

4.1.434 rept-stat-slk

Use this command to generate a report of the MTP signaling links status. The secondary state (SST) indicates whether the link is available, unavailable, or manually removed from service.

Use this command to generate a separate report of status of the E1 associated with a signaling link. The status includes the location of the E1 card and the UAM text. If the E1 association is not provisioned, "E1 association unknown" is displayed. If the card is not type LIME1, no E1 output is generated.

Use this command to generate a separate report of status of the T1 associated with a signaling link. The status includes the location of the T1 card and the UAM text. If the card is not type LIMT1, no T1 output is generated.

Parameters

l2stats (optional)

Report L2 status

Range:

align

Display alignment data only

both

Display alignment and service data

brief

Display up to 10 alignment events only

no

Do not display level 2 status information

service

Display service data only

Default:

no

link (optional)

The signaling link on the card specified in the `loc` parameter. The links can be specified in any sequence or pattern.

Synonym:

port

Range:

a, b, a1 - a63, b1 - b63

Not all card types support all `link` parameter values.

See [Table A-1](#) for valid `link` parameter range values for each type of card that can have assigned signaling link ports.

Default:

Display all

loc (optional)

The card location as stenciled on the shelf of the system.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118

Default:

All cards containing signaling links are displayed.

stat (optional)

A report on cards whose status is the same as the state indicated by the parameter

Range:***all***

All of the primary states

alminh

Alarms inhibited

anr

In-Service-Abnormal (IS-ANR)

dsbld

Out-of-Service-Maintenance-Disabled (OOS-MT-DSBLD)

mt

Out-of-Service-Maintenance (OOS-MT)

nr

In-Service-Normal (IS-NR)

Default:

Display all

Example

```
rept-stat-slk
```

```
rept-stat-slk:loc=1201:link=a
```

```
rept-stat-slk:stat=alminh
```

```
rept-stat-slk:loc=1203:link=b:l2stats=both
```

```
rept-stat-slk:loc=1203:link=b:l2stats=brief
```

Dependencies

No other `rept-stat-xxx` command can be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

If the `loc` or `link` parameter is specified, then the `stat` parameter cannot be specified.

2155 E2155 Cmd Rej: Invalid parameter combination specified

When the `loc` parameter is specified, the `link` parameter must be specified.

2292 E2292 Cmd Rej: Card does not exist or is not a LIM (LOC)

The card must be equipped and must be one of the following cards:

- E5-E1T1-B card running the SS7ANSI or CCS7ITU application
- E5-ATM-B card running the ATMANSI or ATMITU application
- E5-ENET-B card running the IPLIMI, or IPSPG application
- SLIC card running the IPSPG application

2101 E2101 Cmd Rej: Card location is unequipped

The location specified by the `loc` parameter cannot be one of those reserved for non-LIM or non-DCM cards.

2376 E2376 Cmd Rej: Specified LOC is invalid

The signaling link must be an SS7 signaling link to display level 2 statistics (`l2stats`).

2918 E2918 Cmd Rej: Link must be SS7 to display Level 2 stats

On point-to-multipoint IP links (E5-ENET-B cards equipped as SS7IPGW or IPGW links), `l2stats` output is not available.

3835 E3835 Cmd Rej: L2STATS not valid for SS7IPGW

The specified signaling link must be provisioned in the database.

2373 E2373 Cmd Rej: Link is unequipped in the database

A card location that is valid and defined in the database must be specified.

2144 E2144 Cmd Rej: Location invalid for hardware configuration

The card in the location specified by the `loc` parameter must be in service.

2387 E2387 Cmd Rej: Card is not in service

The `link=b` parameter cannot be specified for SS7IPGW links.

3768 E3768 Cmd Rej: PORT B not supported for device

Neither the `stat` or `loc` and `port` parameters can be specified with this command.

2379 E2379 Cmd Rej: Missing parameter

An appropriate value must be specified for the `link` parameter when an ATM card is used:

- `a-a1, b`—E5-ATM-B card running the ATMANSI or ATMITU application

2972 E2972 Cmd Rej: Specified Link is not valid for Card and Appl Type

This command is not valid for IPSPG-M3UA signaling links.

4813 E4813 Cmd Rej: Command not valid for IPSPG-M3UA

Notes

Not every card location represents a signaling link. Be sure to address a signaling link in this command.

This command can be canceled using the **F9** function key or the `canc-cmd` command. See `canc-cmd` for more information.

The *Installation Guide* provides an illustration of card locations.

;

Legend

- **SLK**—Card location and the signaling link
- **LSN**—Name of the linkset that contains the signaling link
- **CLLI**—CLLI code of the destination STP of the signaling link

- **PST**—Primary state of the signaling link. See [Possible Values for PST/SST/AST](#).
- **SST**—Secondary state of the signaling link. See [Possible Values for PST/SST/AST](#).
- **AST**—Associated state of the signaling link. See [Possible Values for PST/SST/AST](#).
- **ALARM STATUS**—Trouble text alarm message generated for the specified signaling link.
- **UNAVAIL REASON**—Reason the signaling link is unavailable. More than one unavailable reason may be listed:
 - **BSNR**—The signaling link received 2 of 3 invalid BSNs.
 - **CNGT**—The signaling link has a remote congestion time-out.
 - **COO**—A changeover order was received.
 - **FC**—The signaling link is unavailable because of false congestion restart.
 - **FE**—The signaling link is in far end loopback mode.
 - **FIBR**—The signaling link received 2 of 3 invalid FIBs.
 - **INTR**—Too many link interrupts were received.
 - **LB**—The signaling link has been blocked locally.
 - **LD**—The signaling link received incomplete data.
 - **LI**—The signaling link has been inhibited locally.
 - **NA**—The signaling link is not aligned.
 - **PF**—The signaling link failed the proving period.
 - **RB**—The signaling link has been blocked remotely.
 - **RD(xx.xxx)**—The signaling link is unavailable because of a restart delay to prevent signaling link oscillation. The number in parentheses indicates the amount of time, in seconds, remaining in the restart delay period. The link is restarted automatically after this amount of time has elapsed.
 - **RL**—The signaling link is in remote near end loopback mode.
 - **RMI**—The signaling link has been inhibited remotely.
 - **SIE**—An unexpected SIE was received.
 - **SIN**—An unexpected SIN was received.
 - **SIO**—An unexpected SIO was received.
 - **SIOS**—An unexpected SIOS was received.
 - **SLTF**—Link test failed.
 - **T1NR**—The level-2 T1 (not ready) timer expired.
 - **T1R**—The level-2 T1 (ready) timer expired.
 - **T2**—The level-2 T2 timer expired.
 - **T3**—The level-2 T3 timer expired.
 - **XDA**—The signaling link did not receive an acknowledgment in time.
 - **XER**—The SUERM threshold was exceeded.—
 - **--**—The card is ISOLATED or the links are available.

The following are reasons that the ATM high-speed signaling link is unavailable:

- **TNC**—Timer No Credit expired - The remote node has held the node in a no-credit state for too long. The far end office should be contacted to determine the cause of the link congestion.
- **TNR**—Timer No Response expired - The far end is taking too long to acknowledge the messages sent to it by the near end. The far end office should be contacted to determine the cause for the excessive delay in acknowledging PDUs.
- **LPO**—Local Processor Outage - Indicates a spontaneous or management-initiated processor outage. The user needs to determine whether the outage was spontaneous or management-initiated on the near end.
- **RPO**—Remote Processor Outage - The far end has sent PDUs causing processor outage. The far end office should be contacted to determine the reason for the processor outage.
- **ROOS**—Remote Out of Service - The far end has sent PDUs causing a link to become out of service. The far end office should be contacted to determine the reason for taking the link out of service.
- **RPE**—Remote Protocol Error - The far end has sent PDUs declaring a protocol error. The far end office should be contacted to determine the details about the protocol error.
- **RMIR**—Remote Management Initiated Release - The far end has sent PDUs releasing the link. The far end office should be contacted to determine the reason for releasing the link.
- **LCD**—Level 1 facility outage: Loss of Cell Delineation
- **LOF**—Level 1 facility outage: Loss of Frame
- **LOS**—Level 1 facility outage: Loss of Signal

EVENT TYPE

The type of event being logged:

RECEIVE

When a signal unit is received.

TRANSMIT

When a signal unit is transmitted.

STATE

When an internal SS7 Level 2 state changes or a special event occurs that would either end alignment or cause the link to fail

EVENT

The specific event being logged: (1) if a signal unit is being received or transmitted, the specific signal unit is displayed; (2) if the event being logged is a state change, the new state is displayed; (3) If neither (1) nor (2) is displayed, the link or alignment failure reason is displayed.

SERVICE EVENT

The service activity of the link; for example, In Service. Anything other than In Service is a description of a link failure.

TIMESTAMP

The time event processed by the system as follows:

- **YY-MM-DD hh:mm:ss.ttt**, where
- **YY**—The last 2 digits of the year (range 00–99)
- **MM**—The month (range 01–12)
- **DD**—The day of month (range 00–31)
- **hh**—The hour of day (range 00–59)
- **mm**—The minute of the hour (range 00–59)
- **ss**—The seconds of the minute (range 00–59)
- **ttt**—Milliseconds of the second (range 000–995 in increments of 5)

E1 STATUS

The status of the E1 interface associated with the link; the status includes the card location and the UAM text. If the E1 association is not provisioned, “E1 association unknown” is displayed. If the card is not type LIME1, no E1 output is displayed.

T1 STATUS

The status of the T1 interface associated with the link; the status includes the card location and the UAM text. If the card is not type LIMT1, no T1 output is displayed.

4.1.435 rept-stat-sys

Use this command to display a summary report of the status of the main system entities. Use this display to determine where the troubles are in the system. The display shows the number of these items that are in service (IS-NR) and how many are in another state (IS-ANR, OOS-MT, OOS-MT-DSBLD).

Parameters

This command has no parameters.

Example

```
rept-stat-sys
```

Dependencies

No other `rept-stat-xxx` command can be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

Notes

None

Output

The following example shows the output when no features are turned on in the system and only the cards in locations 1109-1110 and 1113-1118 are installed.

```
rept-stat-sys
```

```

The following example shows the output when various features are turned on in the system. (Your output will not show all of these entries; some features are mutually exclusive in the system.)

Some entries appear as follows:

- When the Measurements Platform feature is not turned on and no MCPM cards are in the IS-NR state in the system, the MCPM and MCPM IP LK values are zero and the MEAS SS entry does not appear.
- When one or more MCPM cards have been installed and allowed, the MCPM CARD entry shows the number of MCPM cards that are in each state.
- When the Measurements Platform feature is turned on and the Measurements Platform collection option is enabled, the MEAS SS entry appears.
- When the Measurements Platform collection function is enabled, the MCPM IP LK entry shows the number of links that are functioning for the MCPM cards, and the MEAS SS entry appears.
- When the Origin-Based MTP Routing (MOBR) feature is not turned on, and/or no exception routes have been provisioned, the RTX value is zero.
- When the OA&M IP Security Enhancement feature is turned on, the SECURITY SS entry appears.
- When the Equipment Identity Register (EIR) feature is turned on, the EIR SS entry appears.
- When the INAP Number Portability (INP) feature is turned on, the INP SS entry appears.
- When the ANSI41 Analyzed Information Query (ANSI41 AIQ) feature is enabled, the AIQ SS entry appears.
- When the FCMODE is FCOPY for an *FC-Capable* GPL, the FC IP LK and FCS entries appear. E5-ENET-B cards running the IPSPG or IPGHC GPL are considered to be *FC-capable*. A card running the IPGHC GPL must be in the IS-NR State before the card can be considered *FC-capable*. This requirement does not apply to cards running the IPSPG GPL.
- When the S13/S13' EIR feature is enabled and one or more DEIR cards have been provisioned and allowed, the DEIR CARD entry shows the number of DEIR cards that are in each state.
- When the SIP Number Portability feature is enabled and one or more SIP cards have been installed and allowed, the SIP CARD entry shows the number of SIP cards that are in each state.
- When one or more SFLOG cards have been installed and allowed, the SFLOG CARD entry shows the number of SFLOG cards that are in each state.

Legend

- **INH**—Number of devices within each device type that have their alarms inhibited
- **ALARMS**—Number of critical (**CRIT**), major (**MAJR**), and minor (**MINR**) alarms on the system when the command was executed and the count of alarm inhibited (**INH**) devices for cards, links, linksets, and terminals
- **OAM**—Status of each card that is running the OAM (1113 and 1115)
- **LIMCARD**—Status of the LIM cards
- **SCCP CARD**—Status of the SCCP subsystem cards
- **MUX CARD**—Combined status of the MUX cards
- **MCPM CARD**—Status of the MCPM cards

- **EROUTE CARD**—Status of the EROUTE cards
- **CLOCK**—Status of the system clocks
- **HS CLOCK**—Status of the high-speed clocks
- **IMT**—Status of the IMT system
- **SLK**—Status of the SS7 and IPGWI signaling links in the system
- **DLK**—Status of the TCP/IP data links in the system
- **LINK SET**—Status of the linksets in the system
- **DSM IP LK**—Status of the Service Module IP linksets
- **MCPM IP LK**—Status of the MCPM IP links
- **FC IP LK**—Status of the Fast Copy IP links
- **APPLSOCK**—Status of the application sockets
- **SCTP ASSOC**—Status of the SCTP associations
- **APPL SERVER**—Status of the Application Servers
- **SS7 DPC**—Summary information for provisioned DPCs that are not in clusters
- **CLUST DPC**—Summary information for provisioned cluster DPCs
- **RTX**—Summary information for provisioned exception routes only
- **XLIST DPC**—Summary information for X-LIST DPC entries only
- **DPC SS**—Summary information for the DPC subsystem
- **SCCP SS**—Status of the SCCP subsystem
- **SEAS SS**—Status of the SEAS subsystem
- **MEAS SS**—Status of the Measurements subsystem (for Measurements Platform)
- **MPS**—Summary information on the MPS
- **TERMINAL**—Status of the terminals
- **SECURITY SS**—Status of the EAGLE OA&M IP Security subsystem
- **EIR SS**—Status of the Equipment Identity Register subsystem
- **RTD**—Status of the Run Time Diagnostic subsystem
- **VFLEX SS**—Status of the V-Flex subsystem
- **ATINPQ SS**—Status of the ATI Number Portability Query subsystem
- **INP SS**—Status of the INAP Number Portability subsystem
- **LNP SS**—Status of the Local Number Portability subsystem
- **FCS**—Status of the Fast Copy subsystem
- **AIQ SS**—Status of the ANSI41 Analyzed Information Query subsystem
- **SIP CARD**— Status of the SIP cards
- **DEIR CARD**— Status of the DEIR cards running DEIRHC GPL
- **SFLOG CARD**— Status of the SFLOG cards

4.1.436 rept-stat-t1

Use this command to display the T1 port status and signaling link status for cards with provisioned T1 ports.

Parameters

loc (optional)

Card address. The unique identifier of a specific LIMT1 card located in the STP.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118

Default:

Information for all LIMT1 cards is reported.

t1port (optional)

T1 port number. This parameter displays information for a T1 port on the card in the specified card location.

Range:

1 - 8 .

Example

```
rept-stat-t1
rept-stat-t1:loc=1203
rept-stat-t1:loc=1203:t1port=1
```

Dependencies

No other `rept-stat-xxx` command can be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

The `loc` parameter must be specified when the `t1port` parameter is specified.

2366 E2366 Cmd Rej: LOC must be specified

The active TDM location cannot be specified in the `loc` parameter.

3645 E3645 Cmd Rej: Cannot specify the ACTIVE TDM location

Card locations 1117 and 1118 and the MUX card locations (`xy09` and `xy10` where `x` is the frame and `y` is the shelf) cannot be specified in the `loc` parameter.

2376 E2376 Cmd Rej: Specified LOC is invalid

Notes

Specifying the command without any parameters displays T1 port status for all cards with provisioned T1 ports.

If the `loc` parameter is specified, status is displayed for all T1 ports provisioned on the card in the specified location.

If the `loc` and `t1port` parameters are specified, the T1 port status summary is displayed for all T1 ports provisioned on the card in the specified location, followed by the status of all signaling links assigned to the specified T1 port on the card.

Output

This example shows the output when no parameters are specified:

```
rept-stat-t1
```

```

rlghncxa03w 05-01-04 07:01:08 EST  EAGLE5 33.0.0

Command Completed.

```

;

Legend

- **LOC**—Card location
- **T1PORT**—Number of the T1 port provisioned on the card in the specified location.
- **PST**—Primary state of the card. See [Possible Values for PST/SST/AST](#).
- **SST**—Secondary state of the card. See [Possible Values for PST/SST/AST](#).
- **AST**—Associated state of the card. See [Possible Values for PST/SST/AST](#). The values *PARENT* and *PAIRED* refer to odd and even adjacent ports on the card that are provisioned in channel bridging mode.
- **ALARM STATUS**—Either "No Alarms" or current alarm number and text
- **UNAVAIL REASON**—Reason for the T1 port being unavailable
- **SLK**—Signaling link assigned to the T1 port
- **TS**—Timeslot assigned to the signaling link
- **PST**—Primary state of the signaling link. See [Possible Values for PST/SST/AST](#).
- **SST**—Secondary state of the signaling link. See [Possible Values for PST/SST/AST](#).

- **AST**—Associated state of the signaling link. See [Possible Values for PST/SST/AST](#).

4.1.437 rept-stat-trbl

Use this command to display a summary report of all the device trouble notifications that are logged currently in the OAM's RAM storage area.

Parameters

display (optional)

Display type of alarms to be reported.

Range:

act

Display only active alarms

all

Display all alarms with no timestamps

inhb

Display only inhibited alarms

timestamp

Display all alarms with the date and time when the alarm was logged. Timestamps appear in the output only when the `display=timestamp` parameter is specified.

Default:

all

level (optional)

The alarm level of the alarms to be displayed

Range:

crit

majr

minr

Default:

All alarms are displayed

Example

```
rept-stat-trbl
rept-stat-trbl:level=majr
rept-stat-trbl:display=inhb
```

Dependencies

No other `rept-stat-xxx` command can be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

Notes

None

Output

This example lists all devices that could appear. This example is to be used as a sample only: all devices and alarms cannot coexist in the system.

rept-stat-trbl

```

4.1.438 rept-stat-trm

Use this command to display the status of the terminal ports. The device primary, secondary, and associated state information is displayed along with the terminal identification number.

Parameters

trm (optional)

The ID of the terminal port that is to be reported.

Range:

1 - 40

Default:

Display status of all terminal ports

Example

```
rept-stat-trm
```

```
rept-stat-trm:trm=5
```

```
rept-stat-trm:trm=17
```

Dependencies

No other `rept-stat-xxx` command can be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

Notes

None

Output

This example shows output when the IP User Interface is not turned on:

```
rept-stat-trm
```

```

4.1.439 rept-stat-tstslk

Use this command to generate a report of the status of the MTP signaling links currently under test.

Parameters

link (optional)

SS7 signaling links. The SS7 signaling link that is being tested.

Synonym:

port

Range:

a, b, a1 - a3, b1 - b31

Not all card types support all `link` parameter values.

See [Table A-1](#) for valid `link` parameter range values for each type of card that can have assigned signaling links.

loc (optional)

The card location as stenciled on the shelf of the system.

Range:

*1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318,
2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318,
3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318,
4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318,
5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318,
6101 - 6108, 6111 - 6118*

loopback (optional)

Loopback test type.

Range:

sltc

lxvr

oam

line

payload

Example

```
rept-stat-tstslk
```

```
rept-stat-tstslk:loc=1201
rept-stat-tstslk:loc=1203:link=a
rept-stat-tstslk:loopback=lxvr
```

Dependencies

The card location specified in the `loc` parameter must be equipped.

2101 E2101 Cmd Rej: Card location is unequipped

The signaling link specified in the `link` parameter must be equipped.

2373 E2373 Cmd Rej: Link is unequipped in the database

If the `link` parameter is specified, the `loc` parameter must be specified.

2903 E2903 Cmd Rej: LOC and PORT parameter combination must be specified

The signaling link specified in the `link` parameter must be an SS7 signaling link.

2917 E2917 Cmd Rej: Link must be SS7 to execute command

This command cannot be entered for E5-ENET-B cards that are running the IPGHC or IPSP application, or that have IPGHC or IPSP-M3UA links.

3837 E3837 Cmd Rej: Command not valid for IPGHC

The card location specified in the `loc` parameter cannot be reserved by the system.

2376 E2376 Cmd Rej: Specified LOC is invalid

This command cannot be entered during upgrade.

3276 E3276 Cmd Rej: Command not allowed while in upgrade mode

Notes

None

Output

If no parameters are specified, all links in test are displayed.

If only the `loc` parameter is specified, all links in test on the specified card are displayed.

If the `loc` and `link` parameters are specified, the specified link on the specified card is displayed.

If the `loopback` parameter is specified, all links in the specified type of loopback test are displayed.

4.1.441 rept-stat-xlist

Use this command to report statistics related to the storage of x-list entries. X-list entries reside in the routing table and are dynamically created for individual members of clusters whenever one or more routes to that cluster member become more restrictive than the corresponding routes to the cluster.

The following information is reported:

- The number of routing table positions reserved for x-list entries
- The current number of x-list entries
- The percentage of space in the x-list reserved area currently in use
- The percentage of x-list space that must be in use before an alarm is issued

Parameters

This command has no parameters.

Example

```
rept-stat-xlist
```

Dependencies

The Cluster Routing and Management Diversity (CRMD) feature must be turned on before using this command.

2581 E2581 Cmd Rej: CRMD feature must be ON

Notes

The statistics reported by this command are those gathered during periodic polling by the maintenance subsystem. They might differ slightly from the instantaneous values at the time the command was issued.

The following rules are used to compute the *Current X-LIST occupancy* percentage value that is displayed in the output report:

- The percentage value that is displayed is computed as follows:
[(current x-list entries) / (allocated x-list space)] * 100
- Non-integer percentages will be rounded up to the next highest integer (for example, 23.5% becomes 24%), with the exception of the situation described in the next rule.
- 100% is not displayed until the current *X-LIST* entries value exactly equals the allocated X-LIST space (for example, 99.1% is not rounded up to 100%).

Output

```
rept-stat-xlist
```

```
rlghncxa03w 04-02-18 03:32:42 EST  EAGLE 31.3.0
Allocated X-LIST space      = 500
Current X-LIST entries     = 156
Current X-LIST occupancy   = 31 % (see "Notes")
X-LIST occupancy threshold = 80 %
;
```

4.1.442 rls-alm

Use this command to silence audible alarms. Entering this command also causes the alarm status on terminals to stop blinking (though they continue showing an alarm condition).

Parameters

lv1 (optional)

The alarm level.

Range:

crit

majr

minr**Default:**

All alarms are cleared

Example

```
rls-alm
rls-alm:lvl=crit
```

Dependencies

No other action command can be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

Notes

This command has no effect on visual alarm indicators on the fuse and alarm panel (FAP) or on the cabinet side panel.

Any alarms that occur after the execution of this command activate audible alarms again.

Output

```
rls-alm

rlghncxa03w 04-01-07 09:27:24 EST  EAGLE 31.3.0
rls-alm
Command entered at terminal #8.
;
```

4.1.443 rmv-card

Use this command to change the state of the card to Out of Service - Maintenance Disabled (OOS-MT-DSBLD), enabling a technician to test a LIM or E5-TSM card or physically remove it from the shelf.

Parameters

loc (mandatory)

The card location as stenciled on the shelf of the system.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318,
2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318,
3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318,
4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318,
5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318,
6101 - 6108, 6111 - 6118

Refer to *Installation Guide* for card location information.

force (optional)

This parameter is required if the card is the last GLS or SCCP card.

Range:

yes

no

Default:

no

Example

```
rmv-card:loc=1101
```

```
rmv-card:loc=1201:force=yes
```

Dependencies

The following card locations are not valid for this command: 1113, 1114, 1115, 1116, 1117, 1118, and all xy09 and xy10 locations (where x is the frame and y is the shelf).

2144 E2144 Cmd Rej: Location invalid for hardware configuration

The shelf and card must be equipped.

2144 E2144 Cmd Rej: Location invalid for hardware configuration

If the card is a LIM, all signaling links assigned to the card must be placed out of service before the command can be entered.

2631 E2631 Cmd Rej: Link must be cancelled before executing this command

The *force* parameter is required to force the last GLS (if the Integrated GLS feature is not turned ON) or SCCP card out of service.

2371 E2371 Cmd Rej: Force parameter required

If the card has active TCP/IP links, all TCP/IP data links assigned to it must be placed out of service.

2631 E2631 Cmd Rej: Link must be cancelled before executing this command

Notes

The function of this command is the same as the `inh-card` command.

When this command is executed, the card boots and enters the OOS-MT-DSBLD state. It has no affect if the card is already OOS-MT-DSBLD.

The command is rejected if you attempt to inhibit a LIM that has active signaling links. The links must be cancelled, using the `dact-slk` command, before the command is accepted.

Inhibiting a card running the VSCCP application affects GTT service. SCCP messages requiring global title translation are not routed, and an error message is returned to the originator.

Inhibiting an E5-TSM running the GLS application has no immediate affect on the system. These cards are used only when loading gateway screening to the LIMs.

The command is rejected if you attempt to inhibit a card that has active TCP/IP data links. The TCP/IP data links must be cancelled, using the `canc-dlk` command, before the command is accepted.

Output

```
rmv-card:loc=1101
```

```
rlghncxa03w 04-01-07 11:11:28 EST EAGLE 31.3.0  
Card has been inhibited.  
;

4.1.444 rmv-imt

The interprocessor message transport bus (IMT bus) is the main communications artery between all subsystems in the system. Use this command to remove the IMT bus from service.

Caution:

Use this command only when directed by the Customer Care Center.

Parameters

bus (mandatory)

The IMT bus to be inhibited.

Range:

a

b

Example

```
rmv-imt:bus=a
```

Dependencies

The alternate IMT bus must be in-service normal (IS-NR) in order for the specified bus to be inhibited.

2738 E2738 Cmd Rej: Can not inhibit IMT bus - alternate bus is in abnormal state

This command cannot be entered during an IMT Fault Isolation Test.

3043 E3043 Cmd Rej: IMT test in progress

Notes

Cards that are not connected to the other IMT bus will reinitialize.

All traffic is rerouted to the other IMT bus.

The function of this command is the same as the `inh-imt` command.

Output

```
rmv-imt:bus=a
```

4.1.445 rmv-trm

Use this command to set the primary state of a serial port to OOS-MT-DSBLD (Out-of-Service-Maintenance-Disabled), and to set the secondary state to MANUAL. The serial port is not available to perform service functions. There is no outgoing traffic from the serial port; all incoming traffic is ignored.

Parameters

trm (mandatory)

The ID of the serial port to be inhibited.

Range:

1 - 40

force (optional)

This parameter forces the removal of the terminal, even if it is the last in-service SEAS terminal available.

Range:

yes

no

Default:

no

Example

```
rmv-trm:port=5
```

```
rmv-trm:trm=1:force=yes
```

Dependencies

No other action command can be in progress when this command is entered.

2368 E2368 Cmd Rej: System busy - try again later

The IP User Interface feature must be enabled before terminal ports 17 through 40 can be specified as values for the `trm` parameter.

2365 E2365 Cmd Rej: TELNET Feature must be activated first

The `force=yes` parameter must be specified to inhibit the last in-service SEAS terminal.

4478 E4478 Cmd Rej: Force must be specified to inhibit the last SEAS terminal

Notes

When removing a terminal that has already been removed, a warning message is echoed to the scroll area but no action is taken.

MTT 2731 was deleted for 42.0, PR 158511.

Output

```
rmv-trm

4.1.446 rst-dstn

Use this command to request that the circular routing status for the specified destination be reset (turned OFF). The destination that is specified can be a full point code (FPC), a cluster point code (for example, *ni-nc-**), or an x-list point code. The system clears the circular routing status for the specified destination and then clears any outstanding circular routing alarm for the destination.

Parameters

Note:

See [Point Code Formats and Conversion](#) for a detailed description of point code formats, rules for specification, and examples.

dpc (mandatory)

ANSI destination point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*. The *prefix* subfield indicates a private point code (*prefix-ni-nc-ncm*).

Synonym:

dpca

Range:

p-, *000-255*, ***

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—p-

The asterisk value (*) is not valid for the *ni* subfield.

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001–005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006–255*.

The point code *000-000-000* is not a valid point code.

dpc/dpca/dpci/dpcn/dpcn24/dpcn16 (mandatory)

dpci (mandatory)

ITU international destination point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-zone-area-id*).

Range:

s-, *p-*, *ps-*, *0-255*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s-, p-, ps

zone—0-7

area—000-255

id—0-7

The point code *0-000-0* is not a valid point code.

dpcn (mandatory)

ITU national destination point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (*members*) separated by dashes (*m1-m2-m3-m4*) as defined by the `chg-stpopts:npcfnti` flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code, private point code, or private and spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

Range:

s-, *p-*, *ps-*, *0-16383*, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s-*, *p-*, *ps*

nnnnn—*0-16383*

gc—*aa-zz*

m1-m2-m3-m4—*0-14* for each member; values must sum to 14

dpcn24 (mandatory)

24-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*). The *prefix* subfield indicates a private point code (*prefix-msa-ssa-sp*).

Range:

p-, *000-255*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*p*

msa—*000-255*

ssa—*000-255*

sp—*000-255*

dpcn16 (mandatory)

16-bit ITU national point code with subfields *unit number sub number area main number area* (*un-sna-mna*). The *prefix* subfield indicates a private point code (*prefix-un-sna-mna*).

Range:

p--, *000---127*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*prefix---**p*

*un---**000---127*

*sna---**000---15*

*mna---**000---31*

force (optional)

This parameter specifies whether to reset all dynamic data for the specified route in the Route table to the initial values.

Range:

yes
reset the data

no
do not reset the data

Default:

no

Example

```
rst-dstn:dpc=1-2-*  
rst-dstn:dpc=20-2-5  
rst-dstn:dpc=p-20-2-5  
rst-dstn:dpc=20-2-5:force=yes  
rst-dstn:dpcn16=125-2-10
```

Dependencies

The specified DPC must be either provisioned or an x-list entry.

2417 E2417 Cmd Rej: Point code does not exist in the routing table

The destination address must be a full point code or a cluster point code specified as *ni-nc-**. A DPC as *ni-nc-*** or *ni-nc-**** cannot be specified.

2886 E2886 Cmd Rej: DSTN address must be a full, network or cluster PC

Notes

None.

Output

```

4.1.447 rst-imt

The interprocessor message transport bus (IMT bus) is the main communications artery between all subsystems in the system. Use this command to change the state of the specified IMT bus from OOS-MT-DSBLD (out of service maintenance disabled) to IS-NR (in service normal), if the command is successful. If the command fails, the status is IS-ANR (in service abnormal).

Parameters

bus (mandatory)

The IMT bus to be returned to service.

Range:

a

b

Example

```
rst-imt:bus=a
```

Dependencies

None

N/A N/A

Notes

The function of this command is the same as the `alw-imt` command.

This command returns an inhibited IMT bus to service.

Output

```
rst-imt:bus=a
```

```
rlghncxa03w 04-01-07 11:02:30 EST EAGLE 31.3.0  
Allow IMT Bus A command issued.
```

```
rlghncxa03w 04-01-07 11:02:30 EST EAGLE 31.3.0  
0100.0097    IMT   BUS A          IMT allowed
```

4.1.448 rst-trm

Use this command to return the specified serial port to the state IS-NR (in-service-normal) from the state OOS-MT-DSBLD (Out-of-Service-Maintenance-Disabled) if the command is successful. If the command is not successful, the terminal's state is OOS-MT (Out-of-Service-Maintenance).

Parameters

trm (mandatory)

ID of the serial port to be put into service.

Range:

1 - 40

Example

```
rst-trm:trm=5
```

Dependencies

No other action command can be in progress when this command is entered.

N/A N/A

The IP User Interface feature must be enabled before terminal ports 17 through 40 can be specified in the `trm` parameter.

N/A N/A

The terminal specified by the `trm` parameter must be equipped.

2372 E2372 Cmd Rej: Terminal is not equipped

Anyone logged in to the terminal specified by this command is logged off when this command is executed. For the user to continue working on the specified terminal, the user must log on to that terminal again.

N/A N/A

An IPSM card must be provisioned for the specified SEAS terminal before this command can be entered.

4472 E4472 Cmd Rej: The IP Addr of E5-IPSM corresponding to SEAS Trm must be set

The SEAS Over IP feature must be turned on before this command can be entered for a SEAS terminal.

4453 E4453 Cmd Rej: SOIP Feature must be ON

If the SEAS terminal is auto-inhibited, then this command cannot be entered.

4617 E4617 Cmd Rej: SEAS Terminal is Auto-Inhibited

The terminal specified by the `trm` parameter cannot be configured as `type=none` (see the `chg-trm` command).

2156 E2156 Cannot allow terminal configured as type=none

Notes

The function of this command is the same as the `alw-trm` command.

When you attempt to return to service a terminal already in service, a warning message is echoed to the scroll area but no action is taken.

Output

```
rst-trm:trm=12
```

```
rlghncxa03w 04-01-07 11:11:28 EST EAGLE 31.3.0  
Allow message sent to terminal
```

```
rlghncxa03w 04-01-07 11:11:28 EST EAGLE 31.3.0  
1062.0046      TERMINAL      12      Terminal Enabled

4.1.449 rtrv-acg-mic

Use this command to display the values of ACG controls assigned to certain queries. The control can apply to all queries or to specific query services and called party digits.

Parameters

dgts (optional)

Digits

Range:

3 digits, 6 - 10 digits

Valid values are 000-999, 000000-9999999999

serv (optional)

Query service

Range:

ain

in

type (optional)

Type of control

Range:

all

sd

Example

Display all MICs:

```
rtrv-acg-mic
```

Display the MIC(s) that apply to particular services and digits:

```
rtrv-acg-mic:type=sd
```

Display the MIC(s) that apply to AIN queries:

```
rtrv-acg-mic:serv=ain
```

Display the MIC(s) that apply to IN queries for 919-460-xxxx:

```
rtrv-acg-mic:serv=in:dgts=919460
```

Dependencies

If the `type=all` parameter is specified, then the `serv` and `dgts` parameters cannot be specified.

3057 E3057 Cmd Rej: Parameters SERV and DGTS are not allowed for TYPE = ALL

The `dgts` parameter value must be specified as 3 digits or 6-10 digits.

3064 E3064 Cmd Rej: DGTS parameter must be 3 or 6-10 digits

The LNP feature must be turned on before this command can be entered.

3009 E3009 Cmd Rej: LNP feature must be ON

Notes

None

Output

```
rtrv-acg-mic:type=sd

rlghncxa03w 04-01-28 08:50:12 EST EAGLE 31.3.0
TYPE=ALL

4.1.451 rtrv-ainpopts

Use this command to retrieve AINP-specific options.

Parameters

This command has no parameters.

Example

```
rtrv-ainpopts
```

Dependencies

The AINPOPTS table must be accessible.

N/A N/A

None.

N/A N/A

Output

If the RNAI or RNAIV option is not provisioned, then the RNAI mnemonic default value is displayed. If the RNAI or RNAIV option is provisioned, then the RNAI mnemonic string for the option is displayed.

If the RNP or RNPV option is not provisioned, then the RNP mnemonic default value is displayed. If the RNP or RNPV option is provisioned, and the RNPV option can be set using RNP, then the RNP mnemonic string for the option is displayed. If the RNPV option cannot be provisioned using RNP, then the RNPV numerical value is displayed.

Each DIALPFX and DIALNAI option is displayed with its associated DLTPFX and SNAI option, respectively.

If the NEC option is not provisioned, then the default is displayed.

If the LNPSNAI, LNPOGLRNNAI, LNPOGDNNAI, LNPSUBDIGLEN, LNPATLDIGLEN, LNPSPORT, or LNPENTPREF option is not provisioned, then the default value is displayed.

This example shows output with default AINP options.

4.1.452 rtrv-aiqopts

Use this command to retrieve AIQ specific options.

Parameters

This command has no parameters.

Example

```
rtrv-aiqopts
```

Dependencies

The AIQOPTS table is corrupt or cannot be found.

```
5181 E5181 Cmd Rej: Unable to read AIQ Options Table
```

```
None
```

```
N/A N/A
```

Output

If the `pfx=none` parameter is specified, then the corresponding TriggerType value is not displayed in the output.

This example shows output with default AIQ options.

4.1.453 rtrv-appl-rtkey

Use this command to retrieve information from the Routing Key table. A routing key entry associates a routing key with up to 16 socket names with a limit of 2500 routing keys per system (if E5-ENET-B cards exist).

- DPC, SI, SSN routing keys, which are used to route SCCP messages
- DPC, SI routing keys, which are used to route non-SCCP and non-ISUP messages
- DPC, SI, CIC routing keys, which are used to route ISUP messages

Parameters

 **Note:**

See [Point Code Formats and Conversion](#) for a detailed description of point code formats, rules for specification, and examples.

asname (optional)

Application Server (AS) name assigned to this routing key.

Range:

aaaaaaaaaaaaaaaa

Up to 15 alphanumeric characters; the first character must be a letter

cice (optional)

The end range of circuit identification codes assigned to the routing key.

Range:

0 - 4294967295

See [Table A-4](#) for valid CIC values for specified SI and MSU types.

cics (optional)

The start range of circuit identification codes assigned to the routing key.

Range:

0 - 4294967295

See [Table A-4](#) for valid CIC values for specified SI and MSU types.

display (optional)

The type of output to display.

 **Note:**

Output includes the type of card, the data collection being audited, and a message indicating the overall status. This parameter applies only to STP databases.

Range:

all

The KEY and the ATTRIBUTE sections of the routing key are displayed

brief

Only the KEY section of the routing key is displayed

Default:

brief

dpc (optional)

ANSI destination point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.

Synonym:*dPCA***Range:**

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When *chg-sid:pctype=ansi* is specified, *ni = 000* is not valid.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is not valid if *ni = 001-005*.

When *chg-sid:pctype=ansi* is specified, *nc = 000* is valid if *ni = 006-255*.

The point code *000-000-000* is not a valid point code.

dpc/dPCA/dpci/dpcn/dpcn24/dpcn16 (optional)

Destination point code.

dpci (optional)

ITU international destination point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*)

Range:*s-*, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*prefix—s**zone—0-7**area—000-255**id—0-7*

The point code *0-000-0* is not a valid point code.

dpcn (optional)

ITU national destination point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the *chg-stpopts:npcfmti* flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

Range:*s-*, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

*prefix—s-**nnnnn—0-16383**gc—aa-zz**m1-m2-m3-m4—0-14* for each member; values must sum to 14**dpcn24 (optional)**

24-bit ITU national destination point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*).

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

msa—000–255
 ssa—000–255
 sp—000–255

dpcn16 (optional)

16-bit ITU national destination point code with subfields *unit number sub number area main number area (un-sna-mna)*.

Range:

000---127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

un---000---127

sna---000---15

mna---000---31

num (optional)

The number of entries to display.

Range:

1 - 10000

Default:

50

opc (optional)

ANSI originating point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.

Synonym:

opca

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When `chg-sid:pctype=ansi` is specified, `ni = 000` is not valid.

When `chg-sid:pctype=ansi` is specified, `nc = 000` is not valid if `ni = 001–005`.

When `chg-sid:pctype=ansi` is specified, `nc = 000` is valid if `ni = 006–255`.

The point code `000-000-000` is not a valid point code.

opc/opca/opci/opcn/opcn24/opcn16 (optional)

Originating point code.

opci (optional)

ITU international originating point code with subfields *zone-area-id*. The *prefix* subfield indicates a spare point code (*prefix-zone-area-id*)

Range:

s-, 0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s
zone—0-7
area—000-255
id—0-7

The point code 0-000-0 is not a valid point code.

opc_n (optional)

ITU national originating point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the `chg-stpopts:npcfmti` flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc,m1-m2-m3-m4-gc*). The *prefix* subfield indicates a spare point code (*prefix-nnnnn*, *prefix-nnnnn-gc*, *prefix-m1-m2-m3-m4*, *prefix-m1-m2-m3-m4-gc*).

Range:

s-, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—s-
nnnnn—0-16383
gc—aa-zz
m1-m2-m3-m4—0-14 for each member; values must sum to 14

opc_{n24} (optional)

24-bit ITU national originating point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*).

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

msa—000-255
ssa—000-255
sp—000-255

opc_{n16} (optional)

16-bit ITU national originating point code with subfields *unit number sub number area main number area* (*un-sna-mna*).

Range:

000---127

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

un---000---127

sna---000---15

mna---000---31

rcontext (optional)

Routing Context. The routing key with the specified routing context.

Range:
0 - 4294967295

si (optional)
Service indicator.

Range:
0 - 15
The following equivalent text values can be specified:
Number = Text—Description

0=snm
Signaling network management messages

1=regtest
Signaling network testing and maintenance regular

2=spltest
Signaling network testing and maintenance special

3=sccp
SCCP

4=tup
Telephone user part

5=isup
ISDN user part

13=qbicc

ssn (optional)
Subsystem number.

Range:
0 - 255

type (optional)
The type of routing key.

Range:

all

full

partial

default

Default:
all

Example

```
rtrv-appl-rtkey  
rtrv-appl-rtkey:dpc=123-234-255:si=3
```

```
rtrv-appl-rtkey:dpc=123-234-255
rtrv-appl-rtkey:cics=1:cice=1000:num=3
rtrv-appl-rtkey:cice=19
rtrv-appl-rtkey:opc=122-124-125
rtrv-appl-rtkey:type=partial
rtrv-appl-rtkey:display=all
rtrv-appl-rtkey:rcontext=7
rtrv-appl-rtkey:dpcn16=121-10-15
```

Dependencies

The `ssn` parameter must be specified and is valid only when the `si=3` (*sccp*) parameter is specified.

3757 E3757 Cmd Rej: SSN is not allowed unless SI is 3

The value specified for the `cics` parameter must be less than or equal to the value specified for the `cice` parameter.

3783 E3783 Cmd Rej: CICS must be less than or equal CICE

A circuit identification code range (`cics` to `cice`) that overlaps an existing routing key cannot be specified.

3878 E3878 Cmd Rej: CIC outside of valid range for SI

The `ssn` parameter cannot be specified when `opc`, `cics`, and `cice` parameters are specified. See [Table 4-2](#) for valid parameter combinations.

3787 E3787 Cmd Rej: SSN not allowed with OPC, CICS and CICE

When the DPC is ANSI and the `si=4` parameter is specified, a DPC/SI routing key must be specified (TUP is used only in an ITU network).

3874 E3874 Cmd Rej: TUP must use DPC/SI route key if DPC is ANSI

The `opc`, `cics`, and `cice` parameters can be specified with the `si` parameter only if the `si` parameter has a value of 4, 5, or 13 (or *tup*, *isup*, or *qbicc*).

3789 E3789 Cmd Rej: OPC, CICS, CICE are not allowed unless SI is 4, 5 or 13

[Table A-4](#) shows valid CIC values for SI types 4, 5, and 13.

N/A N/A

The following types of partial routing keys are supported:

- The following types of partial routing keys are supported:
- DPC/SI/OPC (ignore CIC) can be used as a partial match key for CIC- based traffic.
- DPC/SI (ignore all other fields) can be used as a partial match key for CIC- based traffic or SCCP traffic.
- DPC only (ignore all other fields) can be used as a partial match for any type of traffic.

- SI only (ignore all other fields) can be used as a partial match for any type of traffic.

3955 E3955 Cmd Rej: Invalid combination of parameters for a partial routing key

If the `type=default` parameter is specified, then the `dpc`, `si`, `ssn`, `opc`, `cics`, and `cice` parameters cannot be specified.

3959 E3959 Cmd Rej: Invalid combination of parameters for a default routing key

Notes

This command can be canceled using the **F9** function key or the `canc-cmd` command. See `canc-cmd` for more information.

Static routing keys are stored on disk and a copy of the table is loaded to each SS7IPGW card.

Group codes are required for ITU-N point codes (DPCN/OPCN) when the Duplicate Point Code feature is turned on.

The `display=all` parameter must be specified to display the assigned routing context value for the routing key.

In this command, the point codes support only the spare point code subtype prefix (S-).

Output

```
rtrv-appl-rtkey
```

```
rlghncxa03w 08-04-11 13:17:09 EST EAGLE 38.0.0
```

4.1.454 rtrv-as

Use this command to retrieve the characteristics of one or all Application Servers from the AS table.

Parameters

aname (optional)

Name of the association.

Range:

aaaaaaaaaaaaaaaa

Up to 15 alphanumeric characters; the first character must be a letter

Default:

Retrieve all

asname (optional)

Name of the Application Server.

Range:

aaaaaaaaaaaaaaaa

Up to 15 alphanumeric characters; the first character must be a letter

Example

```
rtrv-as
```

```
rtrv-as:aname=as1
```

Dependencies

None

N/A N/A

Notes

This command can be canceled using the **F9** function key or the `canc-cmd` command. See `canc-cmd` for more information.

Output

```

4.1.455 rtrv-ASSOC

Use this command to retrieve the configuration data from the IP Socket/Association (IPAPSOCK) table.

Parameters**adapter (optional)**

The adapter layer for this association.

Range:

diam

m2pa

m3ua

sua

Default:

Retrieve all

alhost (optional)

Alternate local host name as defined in the IP Host table.

Range:

XX,

Any string of characters beginning with a letter and comprising up to 60 characters in length. Valid characters are a–z, A–Z, 0–9, - (dash), . (period)

Default:

Retrieve all

aname (optional)

Name assigned to this association (in IPAPSOCK table).

Range:

aaaaaaaaaaaaaaaa

Up to 15 alphanumeric characters; the first character must be a letter

Default:

Retrieve all

display (optional)

An optional display parameter can be specified in order to display either all or brief reports for associations. The default mode is "brief" if this parameter is not entered at the command line.

Range:*brief**all***lhost (optional)**

The local host name as defined in the IP Host table.

Range:

XX,

Any string of characters beginning with a letter and comprising up to 60 characters in length. Valid characters are a–z, A–Z, 0–9, - (dash), . (period).

Default:

Retrieve all

link (optional)

The signaling link for this association.

Range:*a, b, a1-a63, b1-b63*Not all card types support all `link` parameter values.See [Table A-1](#) for valid `link` parameter range values for each type of card that can have assigned signaling links.**loc (optional)**

Card location that is stenciled on the shelf of the system.

Range:*1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118*

Notes

This command can be canceled using the **F9** function key or the `canc-cmd` command. See `canc-cmd` for more information.

The IPAPSOCK table is used to associate the Local Host/Local Port to a Remote Host/Remote Port.

When the command is entered with the `aname`, `lhost`, or `alhost` parameters, the output displays SCTP buffer usage information (used and total buffer space on the card).

Heartbeat timer value is in milliseconds.

Output

AS names are displayed for IPGWx-M3UA and SUA linksets.

LS names are displayed for IPSG linksets.

This example shows buffer usage (used and total buffer space) and card location information:

4.1.456 rtrv-atinpqopts

Use this command to retrieve the data that is used for ATI number conditioning.

Parameters

This command has no parameters.

Example

```
rtrv-atinpqopts
```

Dependencies

The ATINP feature must be enabled before this command can be entered.

4816 E4816 Cmd Rej: ATINP feature must be enabled

The EGLEOPTS table is corrupt or cannot be found.

4820 E4820 Cmd Rej: Failure reading EGLEOPTS table

Output

This example shows output with default ATINPQ options:

```
rtrv-atinpqopts
```

```
tekelecstp 12-01-04 07:53:46 EST EAGLE 45.0.0
```

```
ATINPQ OPTIONS
```

```
-----
ATIACKIMSI      = NONE
ATIACKMSISDN   = MSISDN
ATIACKRN       = RN
ATIDFLTRN      = NONE
ATIDLM         = NONE
ATINPTYPE      = ANY
ENTITYLEN      = NONE
SNAI          = INTL
SPORTTYPE     = GSM
ATISUPPLOCINFO = OFF
VLRNUMLEN     = 40
ATIACKVLRNUM   = RNSPMSISDN
```

```
;
```

This example shows output when the Location Information request is supported:

```
rtrv-atinpqopts
```

```
tekelecstp 12-01-25 12:22:38 EST EAGLE 45.0.0
```

```
ATINPQ OPTIONS
```

```
-----
ATIACKIMSI      = GRN
ATIACKMSISDN   = GRNDLMSISDN
ATIACKRN       = GRNDLMRNSP
ATIDFLTRN      = NONE
ATIDLM         = 454555817324228
ATINPTYPE      = ANY
ENTITYLEN      = NONE
SNAI          = NAI
SPORTTYPE     = NONE
ATISUPPLOCINFO = ON
VLRNUMLEN     = 40
ATIACKVLRNUM   = RNSPMSISDN
```

```
;
```

Legend

- **ATIACKIMSI**—IMSI parameter for ACK response message
- **ATIACKMSISDN**—MSISDN parameter for ACK response message

- **ATIACKRN**—Routing Number format
- **SNAI**—NAI of the incoming MSISDN digits
- **ATIDLM**—Outbound message delimiter
- **ATIDFLTRN**—Default Routing Number
- **ATINPTYPE**—Number Portability Type
- **SPORTTYPE**—Service Portability Type
- **GRN**—Generic Routing Number
- **ATISUPPLOCINFO**—Support ATINP query with LocationInformation request if ATINP feature is activated
- **VLRNUMLEN**—Maximum number of digits that could be encoded as VLR-number in ATI ACK response message
- **ATIACKVLRNUM**— VLR-number format

4.1.457 rtrv-atm-lps

Use this command to display the parameter values for the ATM link parameter sets in the database configured with the `chg-atm-lps` command, along with the non-configurable ATM parameters.

Parameters

lpset (optional)

The ATM link parameter set to be displayed.

Range:

1 - 30

Default:

All ATM link parameter sets are displayed

Example

```
rtrv-atm-lps:lpset=5
```

```
rtrv-atm-lps
```

Dependencies

None

N/A N/A

Notes

None

Output

**Note:**

Dashes (--) in the FC NR and FC BC fields indicate that this implementation is not supported on ATM high-speed signaling links.

```
rtrv-atm-lps:lpset=5
```

```

Legend

- **LPSET**—Link parameter set being changed. The system default value for this parameter is 1 for ANSI and, 21 for ITU.
- **ACTION**—Copy a set of ATM signaling link parameters from one parameter set to another.
- **SCRLPSET**—ATM signaling link parameter set used as a source for the `action=copy` parameter.
- **MAXCC**—Maximum number of transmissions of a BGN, END, ER, or RS PDU
- **MAXPD**—Maximum number of SD PDUs that can be sent before a POLL is sent
- **MAXSTAT**—Maximum number of list elements in a STAT PDU
- **TMRCC**—Timer, in seconds, used during the connection phase to guard against unacknowledged BGN, END, ER or RS PDUs
- **TMRKALIVE**—Timer, in seconds, used during the transient phase when no SD PDUs are being sent to keep connection up
- **TMRNOSP**—Timer, in seconds, used to check that STAT PDUs are arriving often enough
- **TMRPOLL**—Timer, in seconds, used to guarantee that POLL PDUs are sent often enough
- **TMRIDLE**—Timer, in seconds, used during the idle phase when no SD PDUs are being sent to limit time in the idle phase
- **TMRT1**—Time, in seconds, between a link release action and the next link reestablish action during alignment
- **TMRT2**—Total time, in seconds, that SSCF will attempt alignment
- **TMRT3**—Time, in seconds, between proving PDUs
- **N1**—Number of PDUs sent during proving
- **MAXNRP**—Maximum number of retransmitted PDUs during proving
- **TMR SREC**—The timer, in seconds, used to prohibit closely spaced SSCOP recoveries from occurring.
- **TMR NOCRED**—The timer, in seconds, used when the no credit exists and PDUs are available to be sent.
- **TMRERM**—The error rate monitor interval, in seconds.
- **NBLK**—The number of monitoring intervals per block.
- **TMRPROV**—The timer, in seconds, used to monitor the status of a link after it is placed into service.
- **SDU SIZE**—The SSCOP SDU size (set to 272 octets).
- **UU SIZE**—The SCOP UU size (set to 4 octets).
- **N**—The monitoring intervals spanning a.4 second error event (set to 9).
- **FC NR**—The fixed credit increment value.
- **FC BC**—The fixed credit allocation frequency.
- **TSUP**—The superblock timer for layer management, in seconds.
- **TLOSS**—The loss timer for layer management, in seconds.

- **ERMSM**—The error rate monitor smoothing factor.
- **THRES**—The error rate monitor threshold.

4.1.458 rtrv-atm-prm

Use this command to display system-wide non-configurable ATM layer parameters for each ATM high-speed signaling link. The data displayed includes the ATM interface parameters and the ATM traffic descriptor values.

Parameters

This command has no parameters.

Example

```
rtrv-atm-prm
```

Dependencies

None

N/A N/A

Notes

None

Output

```
rtrv-atm-prm
```

```
tekelecstp 04-02-05 08:40:18 EST EAGLE 31.3.0
DS1 DS1 E1 E1 MAX MAX VCI VPI
PCR SCR PCR SCR BT CDVT QOS VPCs VCCs BITS BITS
3622 3622 4528 4528 210 100 3 0 1 16 12
;
```

Legend

The ATM traffic descriptors are displayed in the following fields:

- **BT**—Burst tolerance. The number of consecutive cells on the VCL permitted on the ATM interface by the enforcement process, given the PCR and the line speed.
- **CDVT**—The amount of cell delay variation for the VCL in the network ingress direction.
- **PCR**—The maximum or peak cell rate for the VCL (virtual channel link) T1 is for ANSI and E1 is for ITU.
- **QOS**—Quality of service. The performance objectives that must be met by the ATM VCL when it must discard cells during enforcement of the traffic parameters.

- **SCR**—The average or sustainable cell rate supported on the VCL. T1 is for ANSI and E1 is for ITU.
- The ATM interface parameters are displayed in the following fields:
- **MAX VCCs**—The maximum number of simultaneously active Virtual Circuit Connections (VCCs) supported.
- **MAX VPCs**—The maximum number of simultaneously active Virtual Path Connections (VPCs) supported (by the ATM interface).
- **VCI BITS**—The number of allocated VCI bits to be used in the VPIs in the ATM cells for the VCLs supported on the ATM interface.
- **VPI BITS**—The number of bits to be used in the VPIs in the ATM cells for the VPLs terminated on the ATM interface.

4.1.460 rtrv-bip

Use this command to show the board identification PROM (BIP) data for the main assembly at the specified card location.

The following information is displayed for the main assembly: board part number, board revision, serial number (7, 8, 11, 12, or 14 digits), manufacturing date, and the software match ID.

For main assemblies, the port A Ethernet address (if ENT01 record exists) and port B Ethernet address (if ENT02 record exists) are also displayed.

Parameters

loc (mandatory)

The card location as stenciled on the shelf of the system.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318, 2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318, 3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318, 4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318, 5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318, 6101 - 6108, 6111 - 6118, 1109, 1110, 1209, 1210, 1309, 1310, 2109, 2110, 2209, 2210, 2309, 2310, 3109, 3110, 3209, 3210, 3309, 3310, 4109, 4110, 4209, 4210, 4309, 4310, 5109, 5110, 5209, 5210, 5309, 5310, 6109, 6110, 1113, 1115

Example

The following example displays the BIP data for the main assembly.

```
rtrv-bip:loc=1201
```

Dependencies

The card location must be valid for the command.

2242 E2242 Cmd Rej: Destination card invalid

Notes

The `tst-bip` command verifies that the PROM is good by writing to and reading from the PROM. The `rtrv-bip` command shows the level of the BIP, as well as the board part number, the revision number, and the serial number. If the `rtrv-bip` command fails, this indicates that communication to the card has failed, and you might need to replace the card. Contact My Oracle Support (MOS) to find out if the card can be reprogrammed.

Output

For main assemblies, the Max Power Rating is also displayed. If the Card Power value is not present in BIP data, then the Max Power Rating is displayed as *Undef*.

This example shows the 7-digit serial number of a main assembly card manufactured on the eleventh week of 1993):

```
rtrv-bip:loc=1201
```

```
tekelecstp 10-03-14 23:32:51 IST EAGLE 42.0.0
```

```
-----  
Location: 1201 MBD
```

```
Part Number: 850-0187-03  
Revision: G2 Week/Year: 11/1993  
Serial Number: 3110195
```

```
Software Match ID: EG - 001 Max Power Rating : Undef
```

```
-----  
END OF REPORT
```

```
;
```

This example shows the 14-digit serial number with Ethernet port A and B records, manufactured on the eleventh week of 2001:

```
rtrv-bip:loc=1201
```

```
tekelecstp 10-03-14 23:32:51 IST EAGLE 42.0.0
```

```
-----  
Location: 1201 - MBD
```

```
Part Number: 850-0187-03  
Revision: G2 Week/Year: 11/2001

Part Number: 870-2872-01  
Revision: A Week/Year:  
11/2003  
Serial Number: 10105365048  
  
Software Match ID: EG - 001 Max Power Rating : 646  
mA  
-----
```

```
---  
END OF REPORT  
;
```

Legend

- **Location**—Card location for the BIP information
- **Part Number**—Part number of the card in the specified card location
- **Revision**—Hardware version of the card
- **Serial Number**—Serial number of the card. Serial number formats are:

- 7-digit serial number—ywwxxxx
- 8-digit serial number—yywwxxxx
- 11-digit serial number—nnnywwxxxx
- 12-digit serial number—nnnyww*xxxx
- 14-digit serial number—nnnyyyww*xxxx
 - * y = year digit (0–9)
 - * w = week digit (0–9)
 - * n = product identifier digit (0–9)x = serial number digit (0–F hexadecimal)
 - * * = special character (0–9, a–z, or A–Z, alphanumeric characters)
- **Software Match ID**—Used to check hardware and board type for the BIP information.
- **Max Power Rating**—Maximum power rating of the card.
- **Week/Year**—Week (1–52) and year (4 digits) of the card. The serial number formats are:
 - 7-digit: ywwxxxx
 - 8-digit: yywwxxxx
 - 11-digit: nnnywwxxxx
 - 12-digit: nnnyww*xxxx
 - 14-digit: nnnyyyww*xxxx
 - where y=year, w=week, n=product identifier, x=serial number (0-F, hexadecimal), *=special character (0–9, a–z, or A–Z)

4.1.461 rtrv-card

Use this command to display the information about a card. The command displays the card type, the application the card is running, the linkset name, the signaling links, and the signaling link codes. If no parameter is specified, the command displays information for all cards defined by the `ent-card` command. If the `loc` parameter is specified, the command displays information for the specified card only.

Parameters

links (optional)

Links Provision Status. For the card in the location specified by the `loc` parameter, all links, only equipped links, or only unequipped links are displayed. If the parameter is not specified, only the equipped links are displayed.

Range:***all***

Display all possible links for the card.

equip

Display links that are equipped on the card.

unequip

Display links that are allowed but not equipped on the card.

ipsg

Display the SLKTPS and total card TPS used for a particular card or for all cards configured with the IP SG GPL.

Default:

equip

loc (optional)

The card location as stenciled on the shelf of the system.

Range:

1101 - 1108, 1111 - 1112, 1201 - 1208, 1211 - 1218, 1301 - 1308, 1311 - 1318,
2101 - 2108, 2111 - 2118, 2201 - 2208, 2211 - 2218, 2301 - 2308, 2311 - 2318,
3101 - 3108, 3111 - 3118, 3201 - 3208, 3211 - 3218, 3301 - 3308, 3311 - 3318,
4101 - 4108, 4111 - 4118, 4201 - 4208, 4211 - 4218, 4301 - 4308, 4311 - 4318,
5101 - 5108, 5111 - 5118, 5201 - 5208, 5211 - 5218, 5301 - 5308, 5311 - 5318,
6101 - 6108, 6111 - 6118, 1113, 1115, 6201 - 6208, 6211 - 6218, 6301 - 6108,
6311 - 6118

Default:

Retrieve all

Example

```
rtrv-card
rtrv-card:loc=1205
rtrv-card:links=ipsg
rtrv-card:loc=1111:links=ipsg
rtrv-card:loc=6201
```

Dependencies

The card location slot must be between 1 and 18 and not 9 or 10.

2016 E2016 Cmd Rej: <parm_desc> is out of range - <parm>

The card location cannot be 1114, 1116, 1117, or 1118.

2153 E2153 Cmd Rej: Card slot location out of range

The shelf location must be 11xx, 12xx, 13xx, 21xx, 22xx, 23xx, 31xx, 32xx, 33xx, 41xx,
42xx, 43xx, 51xx, 52xx, 53xx, 61xx, 62xx, or 63xx.

2152 E2152 Cmd Rej: Shelf ID out of range

The specified card location must be equipped in the database.

2144 E2144 Cmd Rej: Location invalid for hardware configuration

Notes

Rtrv-card for a card slot provisioned for SLIC and a SLIC card inserted will show the card type as SLIC and appl as IPSG. Rtrv-card for a card slot provisioned for SLIC and a SLIC card is not inserted will show the card type as SLIC and appl as IPSG.

Output

Legend

- **CARD**—Card location as stenciled on the shelf of the system
- **TYPE**—Type of card
- **APPL**—Application associated with each card
- **LSET NAME**—Linkset name associated with the cards
- **LINK**—Signaling link associated with the linkset.
- **SLC**—Signaling link code
- **UNEQUIPPED LINKS**—Signaling links that are unequipped on the provisioned card
- **SLKTPS**—Transactions Per Second configured for signaling links provisioned on the card
- **DATA**—Type of RTDB data loaded on the card. Displayed when the EPAP Data Split feature is turned on. When an SFLOG card is configured, the DATA parameter is used to display its status.
- **SRVNAME**- Server Name of the E5-APP-B Card or Telco Switch.

4.1.462 rtrv-cat2-gta

Use this command to display entries from CAT2 GTA table. CAT2 GTA Table shall store Sender TADIG code from RAEX IR.21 Information, TADIG code and MGT of E.214 from Section ID 4 of Operator IR.21 xml file. It shall store Sender TADIG code from RAEX IR.21 Information, TADIG code and GT Address/Address range for HLR Node type from Section ID 13 of Operator IR.21 xml file. The list can be filtered using an optional parameter. The report that is displayed contains two records (the percentage full and number-of-cells-used field) that give the total entries in the CAT2 GTA table without regard to the selector specified. This command obtains the Sender TADIG Code, TADIG Code, Node Type, Start Range, End Range (GT Addresses) for an entry from CAT2 GTA Table.

Parameters

enumber (optional)

End number. It defines the end number of CAT2 GTA entries to be displayed in the command output. These entries are of the specified `stadig`.

Range:

1 - 5,00,000

Default:

1000

snumber (optional)

Start number. It defines the start number of CAT2 GTA entries to be displayed in the command output. These entries are of the specified `stadig`.

Range:

1 - 5,00,000

Default:

1

stadig (mandatory)

Sender TADIG Code. It is TADIG code of the operator. The parameter can be used to filter entries on the basis of Sender TADIG Code.

Range:

ayyyy: 1 leading alphabetic and up to 4 following alphanumeric characters

Example

```
rtrv-cat2-gta:stadig=INDT0
```

```
rtrv-cat2-gta:stadig=INDT0:snumber=100:enumber=200
```

Dependencies

The `stadig` parameter is mandatory and must be specified.

E2011 Cmd Rej:Missing mandatory parameter-stadig

The `stadig` parameter must have some string value. It must have maximum length of 5.

2039 E2039 Cmd Rej: CliString too long, min 1, max 5 – stadig

`enumber` and `snumber` must be specified together. The entries to be displayed are of the specified mandatory `stadig` parameter.

3660 E3660 Cmd Rej: SNUMBER and ENUMBER must be specified together

End number must be greater than or equal to start number. The entries to be displayed are of the specified mandatory `stadig` parameter.

3665 E3665 Cmd Rej: ENUMBER must be greater than or equal to SNUMBER

The maximum number of entries to be displayed are 1000. The difference between enumber and snumber must be less than 1000. The entries to be displayed are of the specified mandatory stadiG parameter.

3666 E3666 Cmd Rej: ENUMBER and SNUMBER difference must be less than 1000

Notes

The percentage full and number of cells used report that is provided with the `rtrv-cat2-gta` command reflects the total entries in the GTA table without regard to the selector specified.

Total number of entries to be displayed for one Operator/STADIG cannot exceed 1000.

This command can be canceled using the F9 function key or the `canc-cmd` command. See `canc-cmd` for more information.

Output

This example retrieves all the entries of CAT2 GTA Table having Sender TADIG code = INDT0. By default 1000 is maximum limit for display.

```
rtrv-cat2-gta:stadiG=INDT0
```

```

INDT0	INDT0	0	1902805504	902895504

CAT2-GTA table is (152 of 500000) 1% full.

;

This example retrieves entries from CAT2 GTA Table containing specified sender TADigit Code. By default number of entries to be displayed is 1000.

Legend

- **SenTADCode:** It will be used to identify the operator. It consist of two fields, with a total length of five characters consisting of three-character country code and a two-character operator/company identifier.
- **TADCode:** It will be used to identify circle of the operator. It is Operator ID.
- **NodeType:** It will store value 0 for HLR and 1 for MGT.
- **StartRange/EndRange:** It is GT address/Address range.

4.1.463 rtrv-cat2-imsi

Use this command to display entries from CAT2 IMSI Table. CAT2 IMSI table will store MCC-MNC (E.212) along with TADIG code from section ID 4 of Routing Information data. It will also contain Sender TADIG code from RAEX IR.21 Information of IR.21 XMLs. The list can be filtered using an optional parameter. The report that is displayed contains two records (the percentage full and number-of-cells-used field) that give the total entries in the CAT2 IMSI table without regard to the selector specified. This command obtains the Sender TADIG Code, TADIG code and IMSI for an entry from CAT2 IMSI Table.

Parameters

num (optional)

Defines number of CAT2 IMSI entries to be displayed in command output.

Range:

1- 5,000

Default:

1000

stadig (optional)

Sender TADIG Code. It is TADIG code of the operator. Can be used to filter entries on the basis of Sender TADIG Code.

Range:**ayyyy: 1 leading alphabetic and up to 4 following alphanumeric character****Example**

```
rtrv-cat2-imsi
rtrv-cat2-imsi:num=100
rtrv-cat2-imsi:stadig=INDT0
```

Dependencies

The `num` parameter if specified, must have some integer value. It must have a value ranging from 1 to 5000.

2017 E2017 Cmd Rej: Integer is out of range, 1...5000 – num

The `stadig` parameter if specified, must have some string value. It must have maximum length of 5.

2039 E2039 Cmd Rej: CliString too long, min 1, max 5 – stadig

Notes

The percentage full and number of cells used report that is provided with the `rtrv-cat2-imsi` command reflects the total entries in the IMSI table without regard to the selector specified.

This command can be canceled using the F9 function key or the `canc-cmd` command. See `canc-cmd` for more information.

Output

This example retrieves all the entries from CAT2 IMSI Table. By default maximum entry to be displayed is 1000.

```

4.1.465 rtrv-cmd

Use this command to retrieve the list of command classes to which a command is assigned. You can retrieve output for one command, commands in one command class, or all commands.

Parameters

class (optional)

The command class whose attributes are to be retrieved.

Range:*ayyyyy*

One alphabetic character followed by up to 5 additional alphanumeric characters.

cmd (optional)

The command whose attributes are to be retrieved.

Range:*ZZZZZZZZZZZZZZZZZZZZZZZZZZZZZZ*

One alphabetic character followed by up to 19 additional alphanumeric characters, enclosed in double quotes.

Example

```
rtrv-cmd:cmd="ent-rte"
```

```
rtrv-cmd:class=dab
```

```
rtrv-cmd
```

Dependencies

The Command Class Management feature must be enabled before a configurable command class name can be specified in the `class` parameter.

2246 E2246 Cmd Rej: Command Class Management feature must be enabled

The value of the `cmd` parameter must be a valid system command.

2065 E2065 Cmd Rej: CMD parameter is not a valid Eagle command

The CCCNAMES table is corrupt or cannot be found.

2598 E2598 Cmd Rej: Cccnames table must be accessible

The CCMD table is corrupt or cannot be found.

2597 E2597 Cmd Rej: Cccmmd table must be accessible

The value of the `class` parameter must be a valid configurable or non-configurable command class name.

2316 E2316 Cmd Rej: Class name is not an existing command class name

The Command Class Management feature must be enabled before CHG-CMD or CHG-CMDCLASS command can be entered.

2246 E2246 Cmd Rej: Command Class Management feature must be enabled

Notes

This command can be canceled using the **F9** function key or the `canc-cmd` command. See `canc-cmd` for more information.

Output

This example shows the command classes to which the `rept-stat-slk` command is assigned (non-configurable class `sys` and user-configured classes `u01`, `u02`, `krb`, and `u11`):

4.1.466 rtrv-cmdclass

Use this command to retrieve the name and description of one command class or all command classes.

Parameters

class (optional)

The command class whose name and description are to be retrieved.

Range:

ayyyy

1 alphabetic character followed by up to 5 alphanumeric characters

Example

```
rtrv-cmdclass:class=krb
```

```
rtrv-cmdclass
```

Dependencies

The Command Class Management feature must be enabled and turned on before a configurable command class name can be specified in the `class` parameter.

2246 E2246 Cmd Rej: Command Class Management feature must be enabled

The CCCNAMES table is corrupt or cannot be found.

2598 E2598 Cmd Rej: Cccnames table must be accessible

The value of the `class` parameter must be a valid configurable or non-configurable command class name.

2316 E2316 Cmd Rej: Class name is not an existing command class name

Notes

The Command Class Management feature must be enabled and turned on before configurable command classes will appear in the command output.

Output

In the following examples, classes *u01*, *u03*, *u05*, and *u32* are default configurable command class names. Classes *krb* and *dab* are user-assigned configurable command class names. Default command class name *u02* was changed to *krb* and command class name *u04* was changed to *dab*. Descriptions of classes *krb* and *dab* were entered with the `descr` parameter when the class names were changed with the `chg-cmdclass` command.

```
rtrv-cmdclass:class=krb
```

```

eagle10404 04-01-22 16:30:56 EST  EAGLE 31.3.0
class          descr
krb            my command class description
;

```

```
rtrv-cmdclass
```

```

eagle10404 04-01-22 16:30:56 EST  EAGLE 31.3.0
class          descr
link          link maintenance commands

4.1.467 rtrv-csl

Use this command to retrieve all Common Screening List (CSL) entries for a specified feature, a list of screening entries for the specified feature and screening list name, or a specific DS or PC value for a particular feature and screening list name. The Common Screening List commands are used to tailor certain types of general screening information to specific features.

Parameters

ds (optional)

Digit string. A unique string of digits that is used by the specified screening feature.

Note:

The *ds* or *pc* parameter must be specified. Both parameters cannot be specified in the same command.

Range:

1 - 15 hexadecimal digits. Valid digits are 0-9, a-f, A-F.

- 1-6 digits—Prepaid IDP Query Relay *ccnc* list
- 1-15 digits—Prepaid IDP Query Relay *gt* list
- 1-10 digits—Prepaid IDP Query Relay *skbcsm* list
- 4 digits—IDP Screening for Prepaid *skts* list
- 1-15 digits—IDP Screening for Prepaid *insl* list
- 1-15 digits—VFLEX *vmprfx* list
- 1-6 digits—Info Analyzed Relay Base *ccnc* list
- 1-15 digits—Info Analyzed Relay Base *gt* list
- 2 digits—Info Analyzed Relay Base *trig* list

npbypass
SIP NPBYPASS List

skbcm
SK+BCSM List

skts
SK+TS List

trig
Trigger List

vmplx
Voice Mail Prefix List

opcdbc
OPC + DPC List

The following screening lists are valid for the indicated features:

ccnc, gt
Prepaid IDP Query Relay and Info Analyzed Relay Base

imsipfx
EIR

npbypass
SIP Number Portability

insl, skts
IDP Screening for Prepaid

skbcm
Prepaid IDP Query Relay and IDP Service Key Routing

trig
Info Analyzed Relay Base

vmplx
VFLEX

opcdbc
Prepaid IDP Query Relay

pc (optional)

ANSI point code with subfields *network indicator-network cluster-network cluster member (ni-nc-ncm)*.

Note:

See [Point Code Formats and Conversion](#) for a detailed description of point code formats, rules for specification, and examples.

Synonym:

pca

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

When `chg-sid:pctype=ansi` is specified, `ni = 000` is not valid.

When `chg-sid:pctype=ansi` is specified, `nc = 000` is not valid if `ni = 001-005`.

When `chg-sid:pctype=ansi` is specified, `nc = 000` is valid if `ni = 006-255`.

The point code `000-000-000` is not a valid point code.

pc/pca/pci/pcn/pcn24 (optional)

Point code. The `ds` or a point code parameter must be specified.

pci (optional)

ITU international point code with subfields *zone-area-id*.

Range:

0-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

zone—0-7*area*—000-255*id*—0-7

The point code `0-000-0` is not a valid point code.

pcn (optional)

ITU national destination point code in the format of a 5-digit number (*nnnnn*); or 2, 3, or 4 numbers (members) separated by dashes (*m1-m2-m3-m4*) as defined by the `chg-stpopts:npcfmti` flexible point code option. A group code must be specified when the ITUDUPPC feature is turned on (*nnnnn-gc*, *m1-m2-m3-m4-gc*).

Range:*s-*, 0-16383, *aa-zz*

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

prefix—*s-**nnnnn*—0-16383*gc*—*aa-zz**m1-m2-m3-m4*—0-14 for each member; values must sum to 14**pcn24 (optional)**

24-bit ITU national point code with subfields *main signaling area-sub signaling area-signaling point* (*msa-ssa-sp*).

Range:

000-255

Specify a valid value for each subfield of the point code, and separate the subfields with a dash (-).

msa—000-255*ssa*—000-255*sp*—000-255**pn (optional)**

Part Number. The 9-digit "893xxxxxx" part number of the feature for which the command is entered. The `rtrv-ctrl-feat` command description shows the part number in the command output example.

 **Note:**

The `pn` or `feature` parameter must be specified to identify the feature.

Range:

893000000 - 893999999

The first 3 digits are 893. Do not separate the digits with dashes or spaces. The following part numbers are valid for this command:

893012301

EIR

893015501

IDP Screening for Prepaid

893034201

Info Analyzed Relay Base

893016001

Prepaid IDP Query Relay

893016701

VFLEX

scpgta (optional)

Signaling Control Point (SCP) Global Title Address (GTA).

 **Note:**

The `scpgta` parameter is used only by the Prepaid IDP Query Relay feature.

Range:

1 - 21 digits, *none*

1 - 21 hexadecimal digits. Valid digits are 0-9, a-f, A-F

Example

```
rtrv-csl
rtrv-csl:feature="Prepaid IDP Query Relay":list=ccnc:ds=456789
