

# Oracle® Communications Launch Cloud Service

## Release Notes

Release 25B

G24026-01

April 2025

---

## Release Notes

This document provides information about Oracle Communications Launch Cloud Service Release 25B.

This document consists of the following sections:

- [New Features](#)
- [Fixed Issues](#)
- [Known Issues](#)
- [Deprecated and Removed Features](#)

## New Features

This release includes the following features and enhancements:

- [Integrate Launch with Digital Business Experience Solution Process Increment 2](#)
- [Mapping Service Specification and Product Specification Attributes](#)
- [Uptake of TMF 620 Open API v5.0](#)

## Integrate Launch with Digital Business Experience Solution Process Increment 2

The following pricing model capabilities have been introduced for atomic product offering for Digital Business Experience:

- The ability to configure additional parameters in the discount trigger condition - such as Currency and Price Plan Name - can be added alongside the existing parameters.
- Ability to configure allowances through simple offering adjustments - Configure allowance grants through new adjustment model grant allowance in simple offering of product type discount and time-based discount. For example, grant 100 free minutes via recurring adjustments in wireless discount product offering.
- Ability to configure allowances through simple offering adjustments existing price models - Configure allowance for fixed and percentage adjustments in simple

offering of different product types. For example, 10% discount on recurring fee with 10 GB allowance with 1 month validity.

The following modeling enhancements have been introduced for both Digital Business Experience and other deployments:

- Ability to override the bundle component commitment terms within a package at leaf level. For example, Supremo Wireless Package has a 12-month commitment term. Its leaf component SIM card can have a 6-month overridden commitment term.
- Ability to override the bundle component relationship within a package - Override the cardinality when adding bundle components.
- Ability to publish price override to Siebel - The Launch core capability already existed. In this release, publish to Siebel has been introduced.
- Rules UI Extensibility - Extensibility of Rules UI. Similar to other entity extensibility.
- Ability to filter bundle components based on Product Line - Filter based on the product line configured for the offering. Fetch offers matching the PL and the ones that do not have a PL. Enable or disable through entity profile.

The business benefit of this feature is the additional modeling capabilities and also accelerated time to market and operational efficiency.

**Access Requirements:**

- Communications Catalog Product Manager
- Communications Marketing Manager
- Communications Catalog Administrator

## Mapping Service Specification and Product Specification Attributes

You can now map the characteristics of product specification and service specification using the existing user experience for product specification. Use these mappings to pass values between the product order and service order during fulfillment.

The following patterns of mappings are supported:

- Services having 1:1 relationship between product specification and service specification
- Services having 1:M relationship between service specification and product specification
- Services having 1:M relationship between product specification and service specification

**Example**

Service specification is Mobile Messaging CFS. The characteristics are:

- ICCID, IMEI, MMSIncoming, MMSOutgoing, SMSIncoming, and SMSOutgoing

Product Specification is SIM Card PS. The characteristics are:

- ICCID, IMEI, TN, and TN Type
- Map Mobile Messaging CFS to the SIM Card PS in product service specification user experience
- Map the characteristics of product specification.ICCID to service specification.ICCID

The business benefit of this feature is the ability to map service specification characteristics with product specification characteristics which can be used during fulfillment.

**Access Requirement:** Communications Product Specialist

## Uptake of TMF 620 Open API v5.0

Uptake of TMF620 open API v5 specification and deprecating the earlier 4.1.0 version from Launch application.

The business benefit is to have alignment to the latest TMF 620 Open API version and partners and clients adopt the latest standard.

**Access Requirements:**

- Communications Catalog Product Manager
- Communications Catalog Administrator
- Communications Product Specialist

## Fixed Issues

There are no fixed issues in this release.

## Known Issues

This section describes the known issues in this release.

### Components page doesn't allow scrolling of offers in Available Offers section

While assembling the components for a bundle offer in the Components page, the Available Offers section displays the list of offers based on the search criteria. However, if the result set is large, the page doesn't allow scrolling to view those offers.

**Workaround:** Narrow down the search to return fewer offers.

### Audit list shows the fields that were earlier removed

After you remove some fields from your product offering audit list and save, the removed fields still show up in the UI as part of the audit list. However, these fields aren't auditable anymore and no changes will occur to these fields in the backend.

You can ignore this issue. There is no loss in functionality.

## Browser refresh of non-English page renders page in English language

While using the application with Portuguese language pack, using the browser refresh renders the page in English language.

Currently, there is no workaround.

## Deprecated and Removed Features

There are no deprecated or removed features in this release.

## Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

## Access to Oracle Support

Oracle customer access to and use of Oracle support services will be pursuant to the terms and conditions specified in their Oracle order for the applicable services.
