Purpose

This guide is designed to help user quickly get acquainted with the features and functionality of **Oracle Banking Accounts Retail Cloud Service**. It provides an overview to the product and the steps involved in the creation and the maintenance of Retail Accounts.

Audience

This user guide is intended for the following end Users / User Roles in a Bank:

Table User Roles

User Role	Functions
Back Office Clerk	Input functions for contracts
Back Office Managers/Officers	Authorization functions
Product Managers	Product definition and authorization
End of Day Operators	Processing during End of Day/ Beginning of Day
Financial Controller/Product Managers	Generation of reports

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Access to Oracle Support

Oracle customer access to and use of Oracle support services will be pursuant to the terms and conditions specified in their Oracle order for the applicable services.

Diversity and Inclusion

Oracle is fully committed to diversity and inclusion. Oracle respects and values having a diverse workforce that increases thought leadership and innovation. As part of our initiative to build a more inclusive culture that positively impacts our employees, customers, and partners, we are working to remove insensitive terms from our products and documentation. We are also mindful of the necessity to maintain compatibility with our customers' existing technologies and the need to ensure continuity of service as Oracle's offerings and industry standards evolve. Because of these technical constraints, our effort to remove insensitive terms is ongoing and will take time and external cooperation.

Basic Actions

This topic describes about basic actions that can be performed on a screen.

Table Basic Actions

Action	Applicable Stages	Description
Approve	Approval	<p>The system displays a section where approval remarks if any can be input. Click OK to submit. The transaction is sent to the Host system through <i>Oracle Banking Routing Hub</i>. The Host system validates the transaction again and the transaction is created if all the validations are successful. If the transaction fails, the transaction is moved to Handoff retry stage, and user can view the error message. In this stage, the authorizer can retry or reject the transaction. On reject, the transaction is sent back to the maker to modify or delete it.</p> <div style="border-left: 2px solid #0070C0; border-right: 2px solid #0070C0; border-bottom: 2px solid #0070C0; padding: 10px; margin-top: 10px;"> <p> Note:</p> <p>The maker checker validation will be provided if the same maker tries to approve the transaction.</p> </div>
Audit	Initiation, Approval, and Hand off Retry	Audit details provide the logs of users who have acted on the transaction, the transaction date, and the time for all stages that the transaction has passed through.

Table (Cont.) Basic Actions

Action	Applicable Stages	Description
Auto Authorization	Initiation	<p>Auto authorization can be configured for the branch servicing screens by creating a Rule based on life cycle code. The steps to create the Auto authorization as follows:</p> <ol style="list-style-type: none"> 1. Create the fact value as LIFECYCLECODE. 2. Create Rule to enable Auto authorization for any servicing screen and add the expression in Rule for that screen's lifecycle code. While creating a Rule the product processor should be given as DEPOSIT and fact should be selected as LIFECYCLECODE. For Example: <pre>IF (LIFECYCLECODE == TDPOMN)</pre> <pre>output</pre> <pre>Section1 LEVEL:0</pre> 3. Create or modify a Rule Group with Name ApprovalRuleGroup and map the Rule(s) created in the step (2). <div style="border: 1px solid #0070C0; padding: 5px; margin-top: 10px;"> <p> Note: You can define one single Rule for all the screens and add the expression for the life cycle code or you can define individual Rule for each screen and map to the Rule group.</p> </div> <div style="border: 1px solid #0070C0; padding: 5px; margin-top: 10px;"> <p> Note: For more information, refer to the <i>Oracle Banking Common Core User Guide</i> to create Fact, Rule and Rule Group.</p> </div>
Back	Initiation, Approval, and Hand off Retry	In case the user missed to specify or need to modify the details in the previous segment, click to navigate to the previous segment.
Cancel	Initiation, Approval, and Hand off Retry	Cancel operation cancels the transaction input midway without saving any data. The user is alerted that the input data would be lost before confirming the cancellation.

Table (Cont.) Basic Actions

Action	Applicable Stages	Description
Change Log	Approval	When the authorizer clicks on the Change Log button, the system displays the changes made to the transaction in a pop-up window. By default, the change log is set to display only modified values. The Change Log button has two options, they are, All and Updated . The All button displays both modified and non-modified fields and the Updated button displays only the modified fields. The old and new values are displayed so that the authorizer can compare or verify the values and decide on further action. Also, the new values appear in red for easy recognition.
Close	Initiation, Approval, and Hand off Retry	Users can close the transaction input screen. The system displays a warning message to the user that any unsaved data would be lost. User can either choose to ignore the message and close the screen or choose to Save and Close the transaction.
Delete	Initiation	Delete operation deletes the transaction without saving any data. The user is alerted that the input data would be lost before confirming the deletion.
Document	Initiation, Approval, and Hand off Retry	The maker of the transaction can click on Document to upload documents that are relevant to the transaction. Once uploaded, the documents are available for viewing during authorization or by the maker.
Host Error	Hand Off Retry	Hand off Retry comes into use whenever a transaction input from the mid-office system fails authorization due to Host System rejection. The authorizer of the transaction can view the reason for Host rejection and take appropriate action.
i icon	Initiation, Approval, and Hand-off Retry	To view the Customer details such as the photograph, signature, customer ID, Account Branch, and balance, the i icon is used. The i icon becomes active once the maker of the transaction inputs the account number and tabs out of the field. The i icon is useful to inquire customer information about both the debit and the credit account numbers.
Maximize	Initiation, Approval, and Hand off Retry	User can maximize the transaction input screen.
Minimize	Initiation, Approval, and Hand-off Retry	Users can minimize the transaction input screen. When the screen is minimized, it appears as to a separate tab within the same web page.

Table (Cont.) Basic Actions

Action	Applicable Stages	Description
Multi-Level Authorization	Initiation	<p>Multi-level authorization can be configured for the branch servicing screens by creating a Rule based on life cycle code. The steps to create the Multi-level authorization as follows:</p> <ol style="list-style-type: none"> 1. Create the fact value as LIFECYCLECODE. 2. Create Rule to enable Multi-level authorization for any servicing screen and add the expression in the Rule for that screen's lifecycle code. While creating a Rule the product processor should be given as DEPOSIT and fact should be selected as LIFECYCLECODE. For Example: <pre>IF (LIFECYCLECODE == TDPYIN) output Section1 LEVEL:1~DSR_FA_TDPAYIN_AUTH, LEVEL:2~DSR_FA_TDPAYIN_AUTH</pre> <div data-bbox="748 972 1461 1352" style="border-left: 2px solid #0070C0; border-right: 2px solid #0070C0; border-bottom: 2px solid #0070C0; padding: 10px; margin: 10px 0;"> <p> Note:</p> <p>If customer wants to use separate Functional Activity Code for each Level then Rule output need to be define like</p> <pre>LVELE:1~<FUNCTIONAL_ACTIVITY_CODE1>, LVELE:2~<FUNCTIONAL_ACTIVITY_CODE2></pre> </div> 3. Create or modify a Rule Group with name ApprovalRuleGroup and map the rule(s) created in the step (2). <div data-bbox="748 1465 1461 1696" style="border-left: 2px solid #0070C0; border-right: 2px solid #0070C0; border-bottom: 2px solid #0070C0; padding: 10px; margin: 10px 0;"> <p> Note:</p> <p>You can define one single rule for all the screens and add the expression for the life cycle code or you can define individual rule for each screen and map to the rule group.</p> </div> <div data-bbox="902 1734 1461 1885" style="border-left: 2px solid #0070C0; border-right: 2px solid #0070C0; border-bottom: 2px solid #0070C0; padding: 10px; margin: 10px 0;"> <p> Note:</p> <p>The maker checker validation will be provided if the same maker tries to</p> </div>

Table (Cont.) Basic Actions

Action	Applicable Stages	Description
		 authorize the single or multi-level approval transaction.
Overrides	Initiation, Approval, and Hand-off Retry	<p>If override messages had appeared during initiation stage and they were accepted by the maker during submission, the Overrides button appears in the Initiation screen if the transaction is subsequently rejected by the authorizer.</p> <p>On the Override Details section, click Decline to go back to the transaction screen to modify or cancel it, or click Accept to complete the initiation stage and move the transaction to the approval stage. The Overrides button is displayed in the Approval and Hand-off retry stage if there were any override messages generated during initiation and accepted by the maker. When the Overrides button is clicked, the system displays the overrides accepted by the maker.</p> <p>After verifying the transaction and override details, the authorizer can either approve or reject the transaction. Existing Approve Transaction section is modified to display the overrides if any overrides are raised during the initiation submits.</p>
Reject	Approval, and Hand off Retry	When an authorizer chooses to reject a transaction, the Reject icon is used. The system displays a pop-up screen to capture the Rejection remarks if any. Click OK for the transaction to be routed back to the initiation stage. Subsequently, the maker can modify or delete the transaction details.
Remarks	Initiation, Approval, and Hand-off Retry	Remarks can be used either by the maker or the authorizer of the transaction to optionally capture useful information about the transaction.
Reset	Hand off Retry	The reset button clears all the details displayed on the screen and allows input or selection of a different customer number.
Retry	Hand off Retry	The possibility of retrying a transaction arises when transaction input from the mid-office system fails authorization due to Host System rejection. Such host-rejected transactions will be present in the Hand off Retry queue in the Task Wizard. The Retry option is available only to the authorizer. Upon Retry , the transaction is sent to the host once again through Oracle Banking Routing Hub. Optionally, the authorizer can also Reject the transaction in which case it is routed back to the maker.
Save and Close	Initiation	<p>In case a transaction has to be closed midway due to a lack of sufficient information, the maker of the transaction can choose this option.</p> <p>On Save and Close, the input details are saved and the transaction screen is closed. Saved transaction details will be available in My task. Users can select the transaction from My Task and proceed with the transaction or delete it.</p>
Submit	Initiation	After submitting the initiation stage, the system validates the transaction with the host and displays the errors or overrides if any. In case of an error, you can modify and resubmit or cancel the transaction. In case of an override, you can modify and resubmit or proceed with the transaction by accepting the overrides.

Configurations

This topic contains the following **Configurations** as subtopics:

- [Business Product](#)
User can classify the customer accounts of the bank into different groups and assign each group an identifying code.
- [Joint Holder Type](#)
The Customer can be the sole owner of the account or it can be held jointly. Joint accounts are accounts that are shared between two or more individuals. They can be operated either singly or jointly.
- [Relationship Type](#)
This configuration helps maintain the different relationship types applicable. For instance, In the joint account case, the joint holder's relationship with the primary holder can be maintained as part of the configuration.

1.1 Business Product

User can classify the customer accounts of the bank into different groups and assign each group an identifying code.

For example, user may define a group called **SAVREG** for regular savings accounts, **WLTSAV** for wealth management saving accounts.

Each group is referred to as an **Business Product** and is maintained in the **Business Product** screen. For each class, user also define certain common fields applicable to the accounts in this class, such as, the General Ledger lines to which the accounts in this class report to facilities granted to the account holders (Check Book, ATM, Limits and so on).

The various features of a business product are captured across the following sub-screens covered as subtopics.

- **Basic Details**
- **Preferences**
- **Features**
- **Statement Preferences**
- **Interest**
- **Charges**
- **Limits**
- **Overdraft Parameters**

Overdraft Protection/Sweep-in:

Banks offer Overdraft Protection/Sweep-in as a service, which safeguards customers from having their debit transactions dishonored or rejected due to insufficient funds in their Checking or Savings account. When such an instance occurs, the customer pulls an amount from another linked savings/checking account(s) to cover the shortfall.

The linked account(s) is called the provider account and the account for which the funds are being pulled is called the beneficiary account.

Multiple sweep provider accounts can be set up for a beneficiary account with a priority assigned to them.

The **Interest** screen displays.

To calculate interest for an account, you must apply an interest product code on the account. To recall, every interest product code that you create is linked to an interest rule. The logic to calculate interest is built into an interest rule. When you apply an interest product code on the account, interest for the account will be calculated according to the interest rule definition.

The interest rule that is linked to the product(s) will determine the interest that is applied on the account. You may want to apply more than one interest product code on an account. For example, you may want to pay credit interest on the credit balance maintained in a current account and levy a debit interest if the account lapses into a debit balance. In order to achieve this, you would have to apply two product codes (one defined for credit interest and another defined for debit interest). In this screen, you can choose the interest product codes that you want to apply on the account.

2.1 Business Product Configuration

The Oracle Banking Branch is equipped with business product configuration helping banks to configure various services for retail bank offerings.

This topic contains the following subtopics:

- [About Business Product Configuration](#)
Business product configuration allows you to configure the various services for retail bank offerings. The details captured in the business product configuration are used for processing the servicing transactions.
- [Create Business Product](#)
You can use this screen to create the business product and map it to the host product.
- [View Business Product](#)
Oracle Banking Branch supports viewing the business product created. The **View Business Product** screen allows the user to view all of the authorized, unauthorized and closed business products. The 'Authorize' option is also available for supervisor users for approving the unauthorized business product.

2.1.1 About Business Product Configuration

Business product configuration allows you to configure the various services for retail bank offerings. The details captured in the business product configuration are used for processing the servicing transactions.

The business product created in Oracle Banking Branch is linked with the host product. There is only one golden source available for product creation or configuration, which is in the host. The business product created in Oracle Banking Branch allows configuring parameters that are more customer-facing and how the products are sold in banks.

The business product is linked to the business process so that the servicing transactions related to the selected business product will flow as per the business process definition. The business product process allows the user to create the business products and view the existing business products.

2.1.2 Create Business Product

You can use this screen to create the business product and map it to the host product.

The following data segments of the screen allows you to define the various elements for the products:

- Business Product Details
- Host Product Mapping

Perform the following steps to create business product:

1. On the **Home** screen, from the **Servicing Configurations**, under **Business Product**, click **Create Business Product**. You can also open the screen by specifying **Create Business Product** in the search icon bar and selecting the screen.

2.2 Business Process Configuration

The Oracle Banking Branch is installed with business process configuration helping banks to build the desired workflow for servicing transactions.

This topic contains the following subtopics:

- [About Business Process Configuration](#)
The business process configuration defines the stages, respective data segments, checklists, documents required, and advice generation for the stages.

- **Create Business Process**
The **Create Business Process** screen helps to configure the workflow for servicing transactions. This process will allow defining the data segments, checklists, documents, and advices for the stages defined in the process code selected for the lifecycle code and business product combination.
- **View Business Process**
Oracle Banking Branch supports viewing the business process created. The **View Business Process** screen allows the user to view all of the authorized, unauthorized, and closed business processes. Authorize option is also available for supervisor users for approving unauthorized business processes.

2.2.1 About Business Process Configuration

The business process configuration defines the stages, respective data segments, checklists, documents required, and advice generation for the stages.

A business process can be defined as a set of activities and tasks that, once completed, will accomplish the distinct servicing processes. The business process must involve clearly defined inputs and a single output.

The business process definition will determine the different stages required for a given combination of the process code, life cycle, and business product code. The workflow management of these stages and the relevant stage movements are defined in Plato/Conductor to:

- Orchestrate the microservices-based process flow
- Ensure a seamless transition of servicing process across various stages in that given order.

The Plato/Conductor process will drive the workflow from one stage to another based on the process outcomes at the respective stages and subject to fulfilling the mandatory data capture, confirmation on the mandatory checklist items, and submission of mandatory documents at the respective stages. The stages defined in the business process can be dynamically assigned to different user profiles or roles.

While performing the servicing transactions, the system picks the business process run-time and initiates the workflow based on the configuration. The prerequisites for configuring the business process are enumerated below:

Table 2-5 Prerequisites for Configuration - Field Description

Prerequisites	Description
Lifecycle	Lifecycle represents the lifecycle of the process for which the business process is created. These are factory-shipped codes and currently support servicing transactions such as customer account transactions, term deposit transactions, and loan account transactions.
Process Code	Process code defines the various stages relevant for servicing transactions. Process code configuration allows you to define the business process flow that needs to be mapped for the business product and lifecycle code combination in the business process configuration. A set of default process codes are factory-shipped for the reference workflow. User can also create process codes in CMC_TM_PROCESS_CODE and CMC_TM_PROCESS_STAGE tables.

Table 2-5 (Cont.) Prerequisites for Configuration - Field Description

Prerequisites	Description
Business Product	Business product maintenance allows configuring the various business products by the product offerings that the bank deals with. Each business product has a unique business process defined for a specific lifecycle code selected.

2.2.2 Create Business Process

The **Create Business Process** screen helps to configure the workflow for servicing transactions. This process will allow defining the data segments, checklists, documents, and advices for the stages defined in the process code selected for the lifecycle code and business product combination.

This screen allows configuring the elements for each of the stages of the servicing transactions. For information on the elements, refer to the table below:

Table 2-6 Elements of Business Process

Element	Description
Data Segment	A data segment, as the name suggests is an individual block of data. Bringing in data segments allows to break down a huge process into smaller units, which will be easier to update, maintain, and process. The business process consists of several data segments that make up the stage. Business process definition enables the user to perform the following: <ul style="list-style-type: none"> • Add 'n' number of data segments to each stage. • Set the data segment as mandatory or non-mandatory. • Set the data segment as editable or non-editable. • Control the sequence order of the data segments. • Select the stage.
Document	The documents are required to be submitted by the customer for the servicing transactions.
Checklist	Checklists are distinct, and a list of mandatory checkpoints for the servicing transactions to be configured by the bank.
Advices	Advices are an official letter of notices detailing an action taken or to be taken on a stated date by the bank. This is the final configuration for the Business Process creation.

Perform the following steps to create business process:

1. On the **Homepage**, from the **Servicing Configurations**, under **Business Process**, click **Create Business Process**. You can also open the screen by specifying **Create Business Process** in the search icon bar and selecting the screen.

The **Create Business Process** screen is displayed.

3.1 Dashboard

This topic describes the systematic instructions about Dashboard and various widgets used. This Dashboard provides an overview of the goings-on at the bank to its users, which helps the user in managing the transaction life cycle of different activities in an efficient manner.

The Dashboard is used to visualize the data by graphically representing them using a doughnut wheel. In Dashboard the filters are used to narrow down the data to the transaction level.

Figure 3-1 Dashboard

The Dashboard displays widgets for which access is granted to the user. Following widgets are available in the Account Dashboard and described in the sub-sections:

- [Servicing Tasks](#)
This topic describes the process of viewing, acquiring, releasing, and tracking the transactions that was performed during the day.
- [Bulletin Board](#)
This topic describes the systematic instruction about the Bulletin Board widget in Dashboard.
- [My Diary](#)
This topic describes the systematic instruction about the My Diary widget in Dashboard.
- [My Pending Tasks](#)
This topic describes the systematic instruction about My Pending Tasks widget in Dashboard.

3.1.1 Servicing Tasks

This topic describes the process of viewing, acquiring, releasing, and tracking the transactions that was performed during the day.

The Servicing Tasks widget provides an overall view of the servicing transaction status for the day and the activities to be completed during the day without having to refer for information in different pages.

Based on the user rights, you can view the count of transactions categorized as free tasks, acquired or pending tasks, tasks awaiting approval, rejected or failed tasks, and completed tasks. You can search for or filter a particular transaction and drill down to the transaction level to execute it under each category.

- On the **Dashboard** screen, the **Servicing Tasks** widget is displayed:

Figure 3-2 Servicing Tasks

Servicing Tasks				
Free Tasks	Acquired/Draft Tasks	Pending Approval Tasks	Failed/Rejected Tasks	Completed Tasks
2453	151	9	7	0

For more information on fields, refer to the field description table.

Table 3-1 Servicing Tasks - Field Description

Field	Description
Free Task	Displays the number of free tasks available either for editing or claiming based on the rights. If the user clicks on a number, the system performs the action on the task. If the user lacks authorization rights, the system displays a zero instead.
Acquired/Draft Tasks	Displays the tasks that have been acquired for authorization and tasks where a servicing screen was launched, actions were performed, and were saved and closed to be continued later. Depending on user Authorization rights, user can acquire the tasks from Free Tasks for further processing if you have Maker rights. If you do, the draft numbers are populated. The Acquired/Draft Tasks counts are displayed in the My Pending Tasks page too. They can be identified as tasks in Approval and Incomplete status respectively. Also, if a transaction is rejected or when it fails, the number is also populated in this field.

Table 3-1 (Cont.) Servicing Tasks - Field Description

Field	Description
Pending Apporval Tasks	<p>Displays the number of approvals pending for the transactions. The values in this field are displayed in following two scenarios:</p> <ul style="list-style-type: none"> • Pending approval tasks are those which the maker has submitted and the initiation task is completed. Once the initiation is complete, user will find the task on the free task page for approval. Hence, the value in this field represents those tasks that are completed by the maker but are yet to be authorized or actioned further. • The maker and the first authorizer will display this field after a transaction has been approved in a multi-auth set up. So, there is a track of the transaction count that each role has performed during the day.
Failed/Rejected Tasks	<p>Displays the number of transactions that are failed or rejected. The following are the scenarios, where the transactions that are failed and rejected are displayed, based on the rights:</p> <ul style="list-style-type: none"> • In case of maker, when the authoriser rejects a transaction, then the transaction is sent back to the maker. The maker's transaction has been rejected and is now displayed as such on the My Pending Tasks page. • If a transaction fails host validation during authorization, then the authorizer updates its status to Failed and displays it on the My Pending Tasks page.
Completed Tasks	Displays the transactions that are completed from maker as well as checker perspective.

3.1.2 Bulletin Board

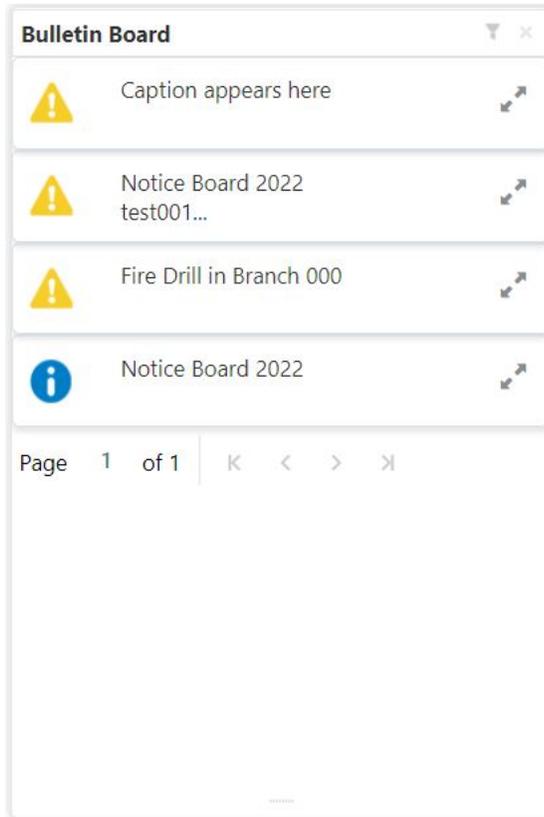

This topic describes the systematic instruction about the Bulletin Board widget in Dashboard.

Figure 3-44 Account Closure - Validation Retry

The system validates the account closure request with other product processors to check for any active contracts or instructions available for the account.

If the account closure validations are successful, then the system will update the account status to **Closure Initiated** and request will be moved to the approval stage and available in free task for authorization.

Transactions are restricted to the account once the account marked for closure is initiated.

If any active contracts, instructions, or other relations are found, the account closure validation is failed, and the account closure request is moved to the validation retry stage and assigned back to the maker. It should be available in the maker's pending task, then the maker can pick up the account closure validation failure and resubmit the request after manually closing or delinking the related contracts, or delete the account closure request based on the account holder request.

In the case of deletion, the system reverts the account status **Closure initiated** to open.

 **Note:**

- If an account has debit balance, then the debit balance to be settled before closing an account.
- The system processes the account closure validations with external product processors. The required external product processors are configured at the workflow level.

6. Approve or Reject the account closure request.

On successful approval, the system initiate the below processes.

- Process the Interest Liquidation
- Account settlement (Transfer to Account/GL)
- Close the Account.

In case of Interest liquidation, or Account Settlement, or close the account process failure, the transaction moved to handoff retry stage and assigned back to the checker, then the checker can acquire the request and **Retry** or **Reject** the account closure request.

On **Retry**, the system process the failed stage again.

On **Reject**, the transaction send back to the initiation stage and assign back to the maker.

 **Note:**

- If the maker resubmit the account closure request, the system trigger the account closure validation across all the product processors again.
- If the maker delete the account closure request after authorizer rejects, the system revert the account status closure initiated to open.

3.14 Business Events in Oracle Banking Retail Accounts

This topic describes the processing of business events in online for Oracle Banking Retail Accounts in Oracle Banking Retail Accounts.

The System has the capability to generate events based customer-initiated or system-initiated actions. The system generates these events related to a customer and their accounts when activities or actions related to the customer or accounts take place that are useful for a service interaction. Some of these generated events are also important to be communicated to customers in a timely manner as per regulations.

The system has the capability to generate and hand over the event with the required details to an external system through Event Delivery Platform (EDP) for their consumption and the external system can use the data handed over for any purpose as deemed necessary. For example, the external system can use the data for communicating the customer of the event with necessary details.

The following business events is available as follows:

- Account Creation
- Debit transaction

- Credit transaction
- Minimum Credit or Debit transaction threshold
- Maximum Credit or Debit transaction threshold
- Amend Account
- Check book request
- Stop Check Payment
- Manual/ Auto revoke stop check payment
- Account Closure
- Balance Thresholds (Min balance threshold, Max balance threshold, Negative balance, Daily Account Summary).

The static data is factory shipped as part of this release as below.

When the event happens and passes the underlying rule, the system will publish the event with necessary facts (Data) as shown in the table for the multiple third party systems to consume. A single event can be published to multiple consumers.

Note:

Facts and Rules are the key elements for generating the Business Events. Banks can configure the Facts and Rules, with the naming convention specified in the below tables respectively.
