Oracle® Banking Cash Management Cloud Service Dashboard currently consists of the following mentioned portlets for Receivables and Payables management:

- Top 5 Corporates:** This portlet displays information on the top five customers with respect to their total Receivables and Payables. On clicking the table icon at the top-right, the graph populates the business volume data of the same top 5 customers in tabular format.
- Aging of Invoices:** This widget displays invoice aging information in the form of a doughnut. The graph displays the invoice amount volume split as per aging buckets which are configurable at the time of implementation i.e. 0-30 days, 30-60 days, and so on. Range criteria can be defined with a maximum of 6 ranges. On clicking any of the range buckets on the graph, a pop-up window appears with the list of corporates whose invoices are due for that ageing bucket. Clicking on the '+' (expand) icon against each corporate; launches invoice details pertaining to the information of that specific corporate such as supplier name, 'Invoice Due Date From', 'Invoice Due Date To'. Click the bar-chart icon on the top-right corner to change the view from doughnut (default) to bar chart. You can also flip the widget to view the same details for aging of overdue invoices.
- Invoices Raised:** This portlet displays the data for financed and non-financed Invoices on monthly basis as a bar graph. On clicking the table icon on the top-right corner, the same data is displayed in tabular format with invoices grouped into monthly buckets.

On clicking the bar graph, the screen will pop up with the corporate name and aggregated invoice amount and further clicking on the '+' (expand) icon beside the corporate name launches the Invoice Inquiry screen with data of invoices specific to the corporate, along with other relevant details as per the selected date.

- **Business Volume Trends:** This widget displays the business trends (total receivables and payables) of the previous six months including the current month based on historic data. The trend line is plotted based on the highs/peak.
- **Payments - Invoice Recon:** This widget provides a snapshot of the reconciliation details of payments against the entity selected, i.e., invoice, cash flow, allocation, or finance. Click the respective icons to view these details as a doughnut or as a line graph. You can view the volume percentage of payment records that are manually reconciled, auto-reconciled, partially reconciled, and unreconciled. Using the filter options, you can select a specific customer and/or modify the date range. Click the refresh icon to reset the data. If you have selected the line-graph option, you can click on specific trend-line points where the Volume (Y) axis meets the Month (X) axis. A pop-up window appears, displaying the names of the corporates and the count of records for that particular month and the reconciliation status.

Perform the following actions on the **Dashboard** screen:

- To add more portlets, click **Add** icon located at the top-right corner of the **Dashboard**.

## 3.7 Reconciliation Rules Maintenance

This topic describes the information to maintain the Reconciliation Rules in Cash Management system.

Reconciliation is one of the core modules of Oracle® Banking Cash Management Cloud Service application which can be performed for **Invoice payment** two categories namely **Invoice payment** and **Cash flow payment**.

- **Invoice/Debit Note with Payment:** Any outstanding invoice/debit note due from buyer can be reconciled against payment(s), as per the reconciliation rules configured in the application.
- **Cashflow with Payment:** Any outstanding expected cash flow raised by a corporate in the application, can be reconciled against payment(s), as per the reconciliation rules configured for this category in the application.
- **Invoice with Credit Note:** Any outstanding invoice due from buyer can be reconciled against credit note(s), as per the reconciliation rules configured in the application.

This topic describes the information to configure recon rules for reconciliation category in Cash Management system.
- [Reconciliation Rule Decision](#)  
This topic describes the information to set the priority for the execution of recon rules.

### 3.7.1 Reconciliation Rule Definition

This topic describes the information to configure recon rules for reconciliation category in Cash Management system.

There are two types of rules can be configured; **Exact** and **Generic**.

For the 'Exact' type of rule, attributes of one entity are mapped with attributes of another entity, e.g.: for 'Expected Debit/Credit to Payment' recon category attributes of expected debit/credit entity are mapped to attributes of payment entity and similarly for 'Invoice to Payment' recon category, attributes of invoice are mapped to attributed of payment for matching purpose. Also, multiple recon rules can be defined at global/default level or mapped to the corporate with priority assignment.

For the 'Generic' type of rule, user can configure generic reconciliation methods such as FIFO, LIFO, HAFO, and LAFO. As per selected method: one can choose 'Based on' attribute. For example, in 'FIFO' for Invoice Payment recon category, one can choose 'Invoice Date' or 'Invoice Due Date'. Similarly, in 'FIFO' for Expected Cashflow recon category, one can choose 'Expected Date' or 'Revised Expected Date'.

This topic contains the following subtopics:

- [Create Exact Reconciliation Rule Definition](#)
