Purpose

This guide would help you to install the Oracle Banking Corporate Lending Process Management Conductor based process on designated environment. It is assumed that all the prior setup is already done related to Netflix Conductor.

Audience

This manual is intended for the following User/User Roles:

- Relationship Managers (RMs)
- Credit Risk Mangers (CRMs)
- Legal
- Back end operation
- Other loan executive staffs in charge of maintaining the loan accounts in the bank.
- WebLogic admin or ops-web team who are responsible for installing OFSS Banking Products.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Access to Oracle Support

Oracle customer access to and use of Oracle support services will be pursuant to the terms and conditions specified in their Oracle order for the applicable services.

Diversity and Inclusion

Oracle is fully committed to diversity and inclusion. Oracle respects and values having a diverse workforce that increases thought leadership and innovation. As part of our initiative to build a more inclusive culture that positively impacts our employees, customers, and partners, we are working to remove insensitive terms from our products and documentation. We are also mindful of the necessity to maintain compatibility with our customers' existing technologies and the need to ensure continuity of service as Oracle's offerings and industry standards evolve. Because of these technical constraints, our effort to remove insensitive terms is ongoing and will take time and external cooperation.

Related Resources

Action	Description
Approve	Click Approve to approve the initiated report. This button is displayed, once the user click Authorize .
Audit	Click Audit to view the maker details, checker details of the particular record, and record status. This button is displayed only for the records that are already created.
Authorize	Click Authorize to authorize the record created. A maker of the screen is not allowed to authorize the report. Only a checker can authorize a record. This button is displayed only for the already created records.
Close	Click Close to close a record. This action is available only when a record is created.
Confirm	Click Confirm to confirm the performed action.
Cancel	Click Cancel to cancel the performed action.
Compare	Click Compare to view the comparison through the field values of old record and the current record. This button is displayed in the widget, once the user click Authorize .
Collapse All	Click Collapse All to hide the details in the sections. This button is displayed, once the user click Compare .
Expand All	Click Expand All to expand and view all the details in the sections. This button is displayed, once the user click Compare .
New	Click New to add a new record. The system displays a new record to specify the required data. <div style="border-left: 2px solid #0070C0; padding-left: 10px; margin-left: 40px;"> <p> Note: The fields which are marked with Required are mandatory.</p> </div>
OK	Click OK to confirm the details in the screen.
Save	Click Save to save the details entered or selected in the screen.
View	Click View to view the report details in a particular modification stage. This button is displayed in the widget, once the user click Authorize .
View Difference only	Click View Difference only to view a comparison through the field element values of old record and the current record, which has undergone changes. This button is displayed, once the user click Compare .

Deployment of Processes

This topic contains following sub-topics.

- [OBCLPM Processes](#)
Use conductor processes to deploy in the Oracle Banking Corporate Lending Process Management.
- [Steps to Deploy Conductor Process](#)
Use steps to deploy conductor process to deploy common and all workflow specific task definitions.

1.1 OBCLPM Processes

Use conductor processes to deploy in the Oracle Banking Corporate Lending Process Management.

Deploy the following list of conductor processes for Oracle Banking Corporate Lending Process Management (OBCLPM).

In conductor workflows are defined using a JSON based DSL and includes a set of tasks that are processed as part of the workflows. The tasks are either system tasks or simple tasks (also known as worker tasks). These simple/worker tasks are implemented by application(s) and run in a separate environment from Conductor. These tasks talk to Conductor server through RESTclient. In OBCLPM, for every workflow a workflow definition json (For example, LoanAmendment.JSON) file and if required its own worker tasks definition json (TaskDefinitions.JSON) file is maintained. In addition, there is a SharedSimpleTaskDefinitions.JSON file having task definitions that are used across different workflows.

1.2 Steps to Deploy Conductor Process

Use steps to deploy conductor process to deploy common and all workflow specific task definitions.

Pre-Requisite

PLATO-O and **PLATO-ORCH-SERVICE** services should be up and registered in the Eureka registry.

For the installation of **PLATO-O** and **PLATO-ORCH-SERVICE**, refer to *Plato Infrastructure Services Installation Guide*.

Post-Requisite

CLMO-ORCHESTRATION-SERVICE should be deployed after registering common task definitions and all workflow specific task definitions (total of 26 task definitions listed above) as this service would have worker implementation for all the simple tasks. Presently this service has 26 worker implementations with 36 threads configured for worker coordinator to manage these workers.

Note:

Steps to deploy a process remains the same for all the process files.

In OBCLPM, for every workflow a workflow definition json (e.g. LoanDraftProposal.JSON) file and if required its own worker tasks definition json (TaskDefinitions.JSON) file will be maintained. Also, there is a SharedSimpleTaskDefinitions.JSON file having simple task definitions that are used across all workflows. To deploy all or any workflow definition.

1. Firstly shared simple tasks definitions should be done. for that below endpoint can be invoked from postman tool with header and payload as described below.

Note:

The host name and port number of the PLATO-ORCH-SERVICE from the eureka registry should be used in this endpoint

Task definitions end point:

`http://whf00mdj:9009/plato-orch-service/api/metadata/taskdefs`

HTTP Method: POST

Header parameters:

Content-Type:application/json

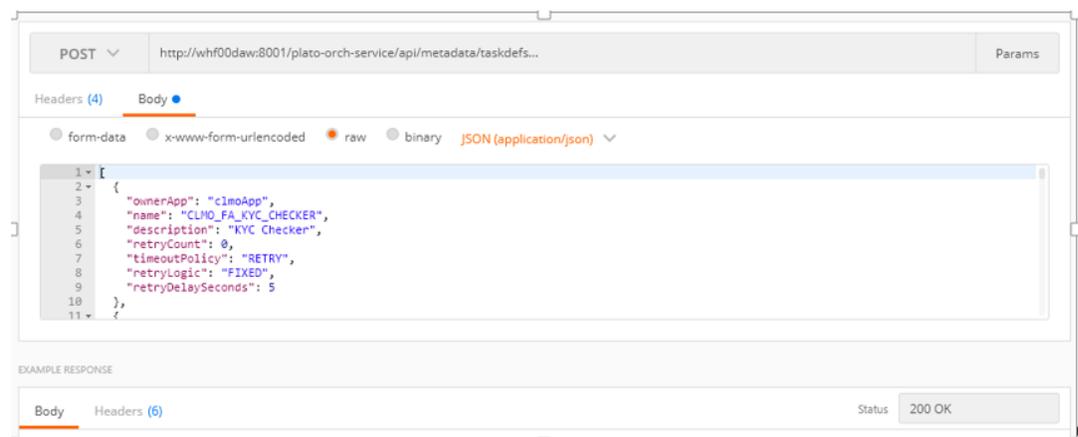

appId:platoorch

branchCode:004

userId:USER1

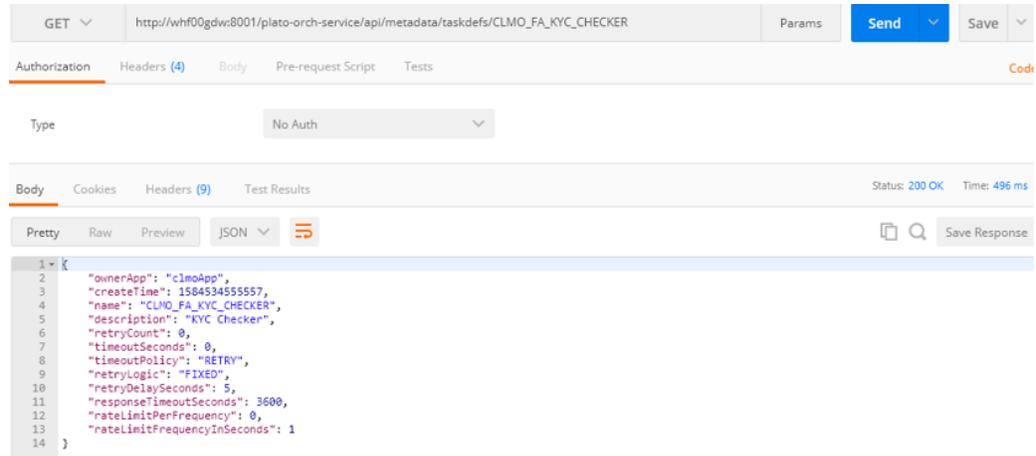

Payload:SharedSimpleTaskDefinitions.JSON content

Figure 1-1 HTTP Method: POST

- To verify if any of the task is registered , `http://whf00mdj:9009/plato-orch\u0002service/api/metadata/taskdefs/{taskname}` endpoint can be invoked with GET HTTP Method as shown below.

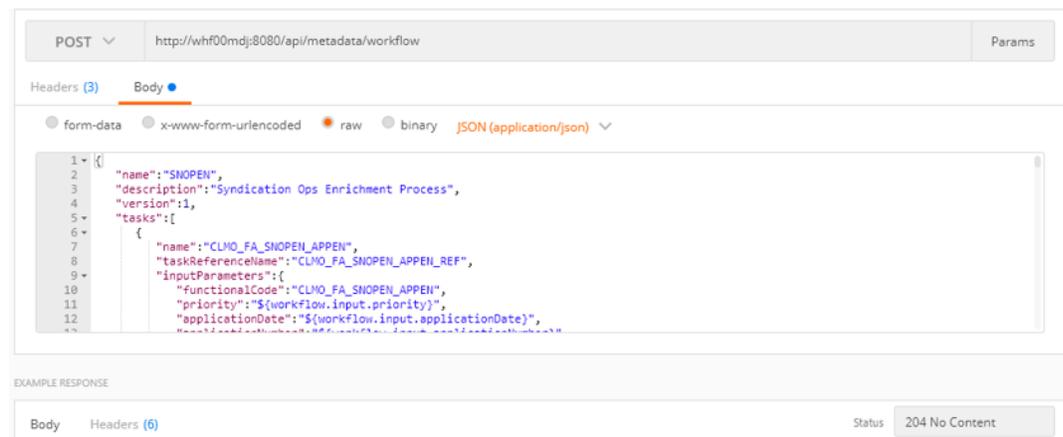

Figure 1-2 GET HTTP Method

- Next workflow specific task definitions should be done. for that use the task definition endpoint mentioned at step 1 and provide workflows specific TaskDefinitions.JSON file content as payload.
- Next workflow definitions should be done. for that use the workflow definition endpoint mentioned below and provide workflows definition json (e.g. LoanDraftProposal.JSON) file content as payload.

k definitions end point:
`http://whf00mdj:9009/plato-orch-service/api/metadata/workflow`
 HTTP Method: POST
 Header parameters:
 Content-Type:application/json
 appId:platoorch
 branchCode:004
 userId:USER1
 Payload: LoanDraftProposal.JSON content

Figure 1-3 Post HTTP Method

- To verify if the workflow is registered , <http://whf00mdj:9009/plato-orch\u0002service/api/metadata/workflow/DRFTPR?version=1> endpoint can be invoked with GET HTTP Method and check if workflow definitions is available. The workflow name to be used in this GET can be referred from name property workflow definition json. Similarly, all the workflow definitions can be registered and verified one by one.

Figure 1-4 Get HTTP Method
