Purpose

This guide is designed to help acquaint the user with the Interest and Charges maintenance of the Global Liquidity Management application. It also provides the answers to specific features and procedures that the user need to be aware of the module to function successfully.

Audience

This guide is intended for the following User/User Roles.

Table 1 Audience

Role	Function
Back Office Data Entry Clerks	Input functions for maintenance related to the interface
Back Office Managers / Officers	Authorization functions

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info or visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs if you are hearing impaired.

Diversity and Inclusion

Oracle is fully committed to diversity and inclusion. Oracle respects and values having a diverse workforce that increases thought leadership and innovation. As part of our initiative to build a more inclusive culture that positively impacts our employees, customers, and partners, we are working to remove insensitive terms from our products and documentation. We are also mindful of the necessity to maintain compatibility with our customers' existing technologies and the need to ensure continuity of service as Oracle's offerings and industry standards evolve. Because of these technical constraints, our effort to remove insensitive terms is ongoing and will take time and external cooperation.

Related Resources

For more information on any related features, refer to the following documents:

Oracle Banking Liquidity Management User Guide

Conventions

The following text conventions are used in this document:

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
italic	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
monospace	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

Basic Actions

The basic actions performed in the screens are as follows:

Table 2 Basic Actions	Table 2	Basic	Actions
-----------------------	---------	-------	---------

Actions	Description
Approve	Click Approve to approve the initiated record. • This button is displayed once the user click Authorize .
Audit	 Click Audit to view the maker details, checker details of the particular record. This button is displayed only for the records that are already created.
Authorize	 Click Authorize to authorize the record created. A maker of the screen is not allowed to authorize the same. Only a checker can authorize a record. This button is displayed only for the already created records. For more information on the process, refer Authorization Process.
Cancel	Click Cancel to cancel the action performed.
Close	Click Close to close a record. This action is available only when a record is created.

Actions	Description
Collapse All	Click Collapse All to hide the details in the sections. This button is displayed once the user click Compare.
Compare	 Click Compare to view the comparison through the field values of old record and the current record. This button is displayed in the widget once the user click Authorize.
Confirm	Click Confirm to confirm the action performed.
Expand All	 Click Expand All to expand and view all the details in the sections. This button is displayed once the user click Compare.
New	 Click New to add a new record. The system displays a new record to specify the required data. The fields marked with asterisk are mandatory. This button is displayed only for the records that are already created.
ОК	Click OK to confirm the details in the screen.
Save	Click Save to save the details entered or selected in the screen.
Unlock	 Click Unlock to update the details of an existing record. The system displays an existing record in editable mode. This button is displayed only for the records that are already created.
View	 Click View to view the details in a particular modification stage. This button is displayed in the widget once the user click Authorize.
View Difference only	 Click View Difference only to view a comparison through the field element values of old record and the current record, which has undergone changes. This button is displayed once the user click Compare.

1 Interest and Charges Maintenance

This topic provides the information about the various maintenances to calculate the Interest and Charges in the system.

On the balance type of accounts maintained in the bank, the user would want to apply interest. Using the Interest component, the user can calculate and apply interest on accounts. Setting up the Interest component is a one-time activity. Once the set up is done, the system automatically computes and applies interest on all the balance type accounts. Interest is calculated for all accounts using the interest rules that the user defined. The user can define the interest rules to suit the particular requirements of the bank.

This topic contains the following subtopics:

- Branch Parameters
 This topic provides the information to configure and maintain the branch parameters.
- Charge Product Preferences
 This topic provides the information to configure and maintain the charge product preferences.
- Charge Rates This topic provides the information to configure and maintain the charge rates.
- Customer Interest Role to Head Mapping This topic provides the information to configure and maintain the customer interest role to head mapping.
- External Handoff This topic provides the information to configure and maintain the external handoff.
- External Service Parameters This topic provides the information to configure and maintain the external service parameters.
- IC Accounting Entry Maintenance This topic provides the information to configure and maintain IC accounting entry.
- IC Group Input This topic provides the information to configure and maintain IC group input.
- IC Group Product Mapping Input This topic provides the information to configure and maintain IC group product mapping input.
- IC Rate Code Maintenance This topic provides the information to configure and maintain IC rate code.
- Interest History This topic provides the information about the interest history for an account of the branch.
- Interest Rule Maintenance This topic provides the information to configure and maintain interest rule maintenance.
- Period Code Maintenance This topic provides the information to configure and maintain the period code.

- Product Maintenance This topic provides the information to configure and maintain product maintenance.
- Product UDE Limits
 This topic provides the information to configure and maintain the product UDE limits.
- Rate Input Maintenance This topic provides the information to configure and maintain the rate input.
- UDE Value Input This topic provides the information to configure and maintain UDE value input.

1.1 Branch Parameters

This topic provides the information to configure and maintain the branch parameters.

This topic contains the following subtopics:

- Create Branch Parameters This topic describes the systematic instructions to configure the interest and charges at branch level parameters.
- View Branch Parameters

This topic describes the systematic instructions to view the list of configured branch parameters.

1.1.1 Create Branch Parameters

This topic describes the systematic instructions to configure the interest and charges at branch level parameters.

- 1. On Home screen, click Interest and Charges. Under Interest and Charges, click Branch Parameters.
- 2. Under Branch Parameters, click Create Branch Parameters.

The Create Branch Parameters screen displays.

Create Branch Parameters		:: ×
Branch Code		
Accural On Holidays	Process Till

	O Next Working Day - 1	
	Cancel	Save

Figure 1-1 Create Branch Parameters

3. Specify the fields on Create Branch Parameters screen.

Note:

The fields, which are marked with an asterisk, are mandatory.

For more information on fields, refer to the field description table.

Table 1-1 Create Branch Parameters - Field Description

Field	Description
Branch Code	Click Search icon and select the branch code, if needed. The Branch code of the current branch is defaulted.
Accrual on Holidays	Select the toggle to push the maturity date, falling on a holiday, to next working day automatically.
Process Till	 Select the date till when the user need to process interest. The available options are: System Date – Select if the user need to process till system date. Next Working Day - 1 – Select if the user need to process till next working day.

4. Click **Save** to save the details.

The user can view the configured branch parameters using **View Branch Parameters** screen.

1.1.2 View Branch Parameters

This topic describes the systematic instructions to view the list of configured branch parameters.

- 1. On Home screen, click Interest and Charges. Under Interest and Charges, click Branch Parameters.
- 2. Under Branch Parameters, click View Branch Parameters.

The View Branch Parameters screen displays.

Authorization Status	Displays the authorization status of the record. The available options are: • Authorized • Rejected • Unauthorized
Record Status	Displays the status of the record. The available options are: • Open • Closed
Modification Number	Displays the number of modification performed on the record.

1.2 Charge Product Preferences

This topic provides the information to configure and maintain the charge product preferences.

The charge product preferences such as the charge basis, periodicity for charge application, application currency, etc. that will reflect on an account attached to the product can be maintained here.

To calculate the charges you would like to levy on an account, you have to specify the basis on which you would like to apply charges. For example, you may want to apply charges based on the debit turnover in an account. When you apply the charge product on an account or an

account class, charges for the account will be calculated on this basis. The accounting entries would automatically be posted to the GLs that you specify for the charge product.

Charge Basis	Description	Application
Item Count	Number of transactions	If the number of transactions during a liquidation cycle exceeds a certain number, you can levy a charge.
Adhoc Statement	Number of adhoc account statements	An account statements are normally generated at a specific frequency. If you generate a statement out of this frequency, you can levy a charge.
Account Statement	Number of account statements	You can fix the number of regular periodic (free) account statements for a liquidation cycle. For every extra account statement that you issue, you can levy a charge.
Turnover	Total turnover	You can charge on the basis of the turnover in an account. You can opt to levy charges on turnovers exceeding a certain amount. An SDE based on turnovers will be applied on an account only if the transaction code of the transaction is defined with 'Include for Account Turnover.'
Cheque Issued	Number of cheque's issued	You can fix the number of free cheques that can be issued for a liquidation cycle. For every extra cheque leaf issued, you can levy a charge.
Stop Payment	Number of stop payments	You can levy a charge for every stop payment instruction.
Account Opening	Account Opening	You can levy a charge on the opening of an account.

You can calculate charges for an account on the following basis:

This topic contains the following subtopics:

- Create Charge Product Preferences This topic describes the systematic instructions to create charge product preferences.
- View Charge Product Preferences This topic describes the systematic instructions to view charge product preferences.

1.2.1 Create Charge Product Preferences

This topic describes the systematic instructions to create charge product preferences.

- 1. On Home Screen, click Interest and Charges. Under Interest and Charges , click Charge Product Preferences.
- 2. Under Charge Product Preferences, click Create Charge Product Preferences.

The Create Charge Product Preferences screen displays.

Figure 1-3 Create Charge Product Preferences

Product Code	D	escription		Charge Basis	•	Start - End Date	
	Required		Required		Required	December II, E	
Currency	s	lab/Tier		Periodicity		Liquidation Month	
	•		•		•		

3. Specify the fields on Create Charge Product Preferences screen.

For more information on fields, refer to the field description table.

Field	Description				
Product Code	Specify a unique code to identify the charge product.				
Product Description	Specify the appropriate description for the Product Code. This description is associated with the product for information retrieval purposes.				
Charge Basis	 Choose the basis for charge calculation from the drop-down. The options are as follow: Item Count - Count based charges Adhoc Statement - Non periodic statement charges Statement - Charges on regular/ periodic statements Turnover - Turnover based charges Cheques Issued - Number of cheque leaves issued Stop Payment - Number of stop payments executed Account Opening - On opening of account. 				
Start - End Date	Specify the date range when the product will be applicable. The charges will be applicable only during this period.				
Currency	Specify if the charges should be applied in local currency or the account currency.				
Slab/Tier	Specify whether the charge has to be applied on a slab basis or tier basis.				

Table 1-3 Create Charge Product Preferences - Field Description

Field	Description
Periodicity	 Choose the intervals between each charge liquidation from drop- down. The options are as follow: Adhoc Daily
	• Monthly
	Quarterly
	Semi Annual
	Annual
Liquidation Month	Choose the month in which liquidation is to take place when the periodicity is maintained as Quarterly, Semi Annual or Annual. For Example:
	If periodicity is Quarterly and month is chosen as March, then the liquidation of charge for first quarter will be in March and the second quarter will be set as June automatically.
	If Preiodicity is Adhoc, Daily, or Monthly, the liquidation month should be chosen as None.

Table 1-3 (Cont.) Create Charge Product Preferences - Field Description

4. Click Save to save the details.

The user can view the configured charge product preferences using View Charge Product **Preferences** screen.

1.2.2 View Charge Product Preferences

This topic describes the systematic instructions to view charge product preferences.

- 1. On Home Screen, click Interest and Charges. Under Interest and Charges , click Charge Product Preferences.
- 2. Under Charge Product Preferences, click View Charge Product Preferences.

The View Charge Product Preferences screen displays.

Record Status	Displays the status of the record. The available options are: • Open • Closed
Modification Number	Displays the number of modification performed on the record.

1.3 Charge Rates

This topic provides the information to configure and maintain the charge rates.

In the Charge Rate screen, you have to specify the following details:

- The account class-currency combination on which you would apply the Charge Product.
- The minimum and the maximum charge for the product.
- The numeric values of the slab/tier and the charge amount or the charge rate for each slab/tier.
- The number of free transactions upto which no charges will be levied.

When you apply a product on an account class-currency combination, you define a general condition. The attributes that you have defined for the product will apply on all accounts belonging to this account class-currency combination.

This topic contains the following subtopics:

- Create Charge Rates This topic describes the systematic instructions to create charge rates.
- View Charge Rates This topic describes the systematic instructions to view charge rates.

1.3.1 Create Charge Rates

This topic describes the systematic instructions to create charge rates.

- 1. On Home Screen, click Interest and Charges. Under Interest and Charges , click Charge Rates.
- 2. Under Charge Rates, click Create Charge Rates.

The Create Charge Rates screen displays.

1.5 External Handoff

This topic provides the information to configure and maintain the external handoff.

The Users can perform handoff post EOD using the External Handoff Processing screen. The Handoff is done through API. By executing handoff GL entries like accruals will be posted to the GL source system.

This topic contains the following subtopics:

External Handoff Processing This topic describes the systematic instructions to execute external handoff processing.

1.5.1 External Handoff Processing

This topic describes the systematic instructions to execute external handoff processing.

- 1. On Home Screen, click Interest and Charges. Under Interest and Charges , click External Handoff.
- 2. Under External Handoff, click External Handoff Processing.

The External Handoff Processing screen displays.

- - V

3. Specify the fields on External Handoff Processing screen.

For more information on fields, refer to the field description table.

Table 1-9 External Handoff Processing - Field Description

Field	Description
Batch Name	Specify the batch name.
Branch Code	Specify the branch code.

4. Click **Execute** button.

The GL entries like accruals will be posted to the GL source system.

1.6 External Service Parameters

This topic provides the information to configure and maintain the external service parameters.

This screen is used to maintain external services and external handoff-related parameters.

This topic contains the following subtopics:

- Create External Service Parameters
 This topic describes the systematic instructions to create external service parameters.
- View External Service Parameters
 This topic describes the systematic instructions to view account destination source mapping.

1.6.1 Create External Service Parameters

This topic describes the systematic instructions to create external service parameters.

- 1. On Home Screen, click Interest and Charges. Under Interest and Charges , click External Service Parameters.
- 2. Under External Service Parameters, click Create External Service Parameters.

The Create External Service Parameters screen displays.

		Cancel Save

Figure 1-18 Create IC Rate Code Maintenance

3. Specify the fields on Create IC Rate Code Maintenance screen.

Field	Description
Rate Code	Specify the rate code. Each IC rate code is defined by an alphanumeric code. Effective rates are maintained for the rate code which is then linked to a product. When a contract is processed, the rates maintained for the rate code (with the effective date) linked to the product is applied on the contract, some of which can be changed.
Rate Code Description	Specify the rate code description.
Branch Restrictions	Select the restrictions to maintain the IC rates for a branch is subject to whether maintenance of IC Rates is allowed for the branch and also whether the rate code for which attributes are being defined is allowed for the branch. The available options are: • Allow • Disallow
	The user can maintain a list of allowed branches (that is, the rate code is available for use in the allowed list of branches) or disallowed branches (the rate code will not be available for use in the branches in the disallowed list). To recall, the IC rates for the code are maintained in the Interest and Charges Rates Maintenance screen for a rate code, branch and currency combination.
Branch Code	Click Search button to view and select the branch code to maintain a rate code for a specific branch.

 Table 1-18

Figure 1-21 Create Interest Rule Maintenance

3. Specify the fields on **Create Interest Rule Maintenance** screen.

For more information on fields, refer to the field description table.

Table 1-22	Create Interest Rule Maintenance	 Field Description
------------	----------------------------------	---------------------------------------

Field	Description
Rule ID	Specify the unique code for each Rule ID to represent the type of interest. When the user wants to link a product to a rule, it is possible to identify the rule with the assigned code only.
Rule Description	Specify the short description of the rule to indicate the type of interest. This will be used by the system for all the display and printing purposes. Enter atleast three characters for the Rule description.
Apply Interest	 By default, the interest will always be applied from the day when an account is opened till the day before it is closed. However, the user have the option of excluding the month in which the account is opened or closed from being considered for the interest application. On Account Closure Month On Account Opening Month The user have the option to specify a date till when the interest has to be liquidated.

User Element Window and System Element Window:

In the same way, the user picks up the SDEs applicable for the defined rule. The user should identify the UDEs which the user would be using in the rule. The types of UDEs are as follows:

- Rate
- Amount

• Number

The interest that you charge on a debit balance is an example of a debit rate. The interest that you pay on a credit balance is an example of a credit rate. A User Data Element will be an amount under the following circumstances:

- In the case of a tier structure, the upper and lower limit of a tier or a tier amount.
- In the case of a charge, when it is indicated as a flat amount.
- Any amount that can be used in the definition of formula.

A UDE as a number is typically used for a Rule where interest is defined based on the number of transactions. A UDE under this category can also be used to store a numerical value that may be used in a formula. For example, in the formula you would like to multiply an intermediate result with a certain number before arriving at the final result. The 'certain number' in the formula can be a UDE.

The user can enter the actual values of the UDEs (like the interest rate, the upper limit for the tier, etc.) in the IC User Data Element Maintenance screen. This is because you can specify 3-6 different values for each data element. A rule can, therefore, be applied on different accounts since it just represents a method of interest calculation. The following example illustrates this.

4. Click System Element Window to update the system element details.

The System Element Window displays.

	Debit Formula 🔹				Booked	-	Actual	-	Daily	-	Actual	•

Figure 1-23 Create Interest Rule Maintenance - Formula Window

Table 1-24 Formula Window - Field Description

Field	Description
Formula Type	Select the formula type from the drop-down list. You have to specify the method for calculating interest in the form of formulae.
Formula No	Specify the formula number. Formula Number Using the SDEs and the UDEs that you have specified for a Rule, you can calculate interest. Using the SDEs and the UDEs you can create any number of formulae for a Rule.
Accruals Required	Select the toggle to enable the interest accruals.
Rounding Required	Select the toggle to enable the interest rounding.
Book Flag	 The Booking Flag of a formula denotes whether the result of a formula should be: Booked (that is, if the resulting amount should be posted to the customer account). Non-booked (that is, the result of the formula is to be used in another formula and not to be posted to the customer account). Tax (that is, the formula is used to calculate tax. The tax can be borne either by the customer or the bank).
Days In A Month	 The method in which the N of the formula for interest calculation, PNR/100, has to be picked up is specified for a formula. This is done through two fields: Days in a month Days in a year The number of interest days for an account can be arrived at in three ways. One, by considering: one by considering the actual number of days in a month two, the US method of considering 360 days in a year three, the Euro method of considering 360 days in a year

Field	Description
Periodicity	 The Periodicity of a rule application denotes whether the formula you are defining has to be: applied for each change during the interest period (or daily). only for the last day of interest period (periodic).
Days In A Year	 The interest rate is always taken to be quoted per annum. You must therefore indicate the denominator value (the total number of days in the year) based on which interest has to be applied. You can specify the days in a year as Actual number of days (leap year will be 366, non-leap year will be 365) 360 days 365 days (leap and non-leap will be 365)

 Table 1-25
 Expression Window - Field Description

Field Description			
Formula No Specify the formula number.			
Expression	Specify the expression.		
Condition	Specify the condition.		
Result	Specify the result.		

Debit / Credit

The result of a formula will be an amount that has to be either debited from the customer account or credited to it. For example, the debit interest that the user charge on an overdraft would be debited from the customer account; while the credit interest that the user pay would be credited to the customer account. In this screen, you indicate this. Often, when calculating interest for an account, the user would want to debit interest under certain conditions and, under certain other conditions, credit interest. In such a case, the user can build formulae to suit both conditions. The formula that is used to calculate interest for the account would depend on the condition that is fulfilled.

3. Specify the fields on Create Product Maintenance screen.

Note:

The fields, which are marked with an asterisk, are mandatory.

Field	Description
Product Code	Displays the code of the product to define the preferences.
Product Description	Specify the appropriate description for the defined Product Code.
Rule Code	Click Search icon and select the rule created in the IC Rule Maintenance screen.
Product Start - End Date	Specify the date range when the product can be used. The start and end dates should be kept handy while defining a product for a scheme which is open for a specific period. The user cannot use a product beyond the specified expiry date. If the user have attached the expired product at the account level, on save, the system displays the override message as, The product has expired
Accrual	 While building a formula (for the rule to link the product), the interest amount will be accrued for all the accounts linked to the product if the interest is indicated as the result of the formula. While defining the preferences for this product, the user can choose to pass the accrual entries in the following manner: Pass an accrual entry for each account Consolidate the interest to be accrued (for individual accounts) and track it against the product.
	If the user choose the latter option, the cumulative value of all the accruals (for accounts linked to the product) will be passed as a single accounting entry.
Product Level	Select this toggle to accrue interest at the 'Product Level', the accrued interest for all the accounts linked to the product will be consolidated and a single entry posted for the product. If the user choose to accrue the interest for each account linked to the product, an accrual entry will be posted for each account individually. The account for which the accrual entry is passed will be shown when the user retrieve information about an entry. The details of accruals for each account will be available in the Accrual Control Journal, a report generated whenever accruals are performed as part of end-of-cycle processing.
Accrual day	Specify the day of the month on which the accruals have to be carried out for a non-daily accrual frequency. For example, If the Accrual Day is specified as 25, the automatic accrual will be on the 25th day of the months, as per the frequency.
Frequency	 Select the frequency with which the interest accured for the defined account classes. The available options are: Daily Monthly Quarterly Semi Annual Annual On liquidation (accrues only when the interest liquidates) Let us recall the operations relating to accruals that the user have performed so far. When the user build an interest rule, the user defines whether the result of a formula is to be accrued. While defining the product (to which the rule linked), the user would: Identify the GL/SL to which the interest accrued is posted (Product Accounting Role Definition screen), and Specify the event 'accrual' occurs to post the entry to the

Table 1-29 Create Product Maintenance - Field Description

Field	Description
Cycle	 Specify the accrual cycle in the months. If the frequency is selected as Quarterly Semi Annual Annual For example, a quarterly cycle may be March, June, September and December, indicating that the accrual should take place in these months. For a half-yearly cycle, the user would specify June and December.
Start from Account Opening	Select the toggle to liquidate the interest periodically for accounts according to a frequency determined in the Account Opening Date. Instead of giving a First Liquidation Date and bringing all the accounts linked to the product to the same liquidation cycle. The periodic liquidations can also be fixed to begin on a particular date (First Liquidation Date) and happen at a definite frequency.
Liquidation at Month End	Select the toggle to liquidate the interest at the last working day of the month. For a liquidation frequency in months or multiples of a month (for example: quarterly, half yearly, every two months, etc.,), the user can select that liquidation has to be carried out as of the last working day of the month. In this case, the user should specify the Liquidation Start Date as the last date of the month from which you would begin liquidation.
Liquidation before Month End	Select the toggle to liquidate the interest before the month end for all the accounts linked to the product. If the user set the interest liquidation frequency as Monthly, Yearly and Quarterly cycle in the IC Product Preferences, the user can choose to liquidate interest a specified number of days before the month end for all accounts linked to the product. The user have to specify the number of days before which interest should be liquidated. The system arrives at the interest liquidation date based on the specified number of days.
Defer Liquidation	Select the toggle to defer the calculation and liquidation of periodic interest on an account for a few days beyond the end date of each interest period. This deferment will allow the inclusion of interest adjustments due to back-valued entries posted into the account after the period end date. In order to avail of this facility, the user need to enable the Defer Liquidation toggle and specify the defer liquidation days.
Days, Months and Year	 Specify the liquidation frequency for the Interest product. The user can specify the liquidation frequency in Days - Example: If the user wants to liquidate interest every 15 days, enter '15'. Months - Example: If the user wants to liquidate interest every quarter, enter '03'. Years - Example: If the user wants to liquidate interest every year, enter '01'
Defer Liquidation Days	Specify the number of calendar days by which the interest liquidation has to be deferred.

Table 1-29	(Cont.) Create Product Maintenance - Field Description
------------	--

Field	Description
Back Value Recalculation	 Select the interest recalculation required for all the accounts associated with this product. The available options are: Not Required Non-capitalized If a back dated accounting entry is passed within the current liquidation cycle, the next accrual will consider the revised principal effective the back date. If a back dated entry is passed for a date in the previous liquidation cycle, then the difference in interest adjusted during the next liquidation as an interest adjustment entry. If this box is not selected, then neither interest adjustment nor accrual adjustment will be triggered for any back dated transaction. Thus, the revised principal will be considered effective the booking date of the transaction.
First Liquidation On	Select the First Liquidation Date once the liquidation frequency has been defined. The frequency and the date will be used to arrive at the first and subsequent dates of liquidation for the accounts linked to the product. For example, the quarterly liquidation cycle may be March, June, September and December, and the liquidation is on the month-end. For such a cycle, the user should indicate 31 March as the date of first liquidation during the year. The subsequent dates will be automatically fixed by the system based on the frequency and the first liquidation date.

						Cancel Save

3. Specify the fields on Create Product UDE Limits screen.

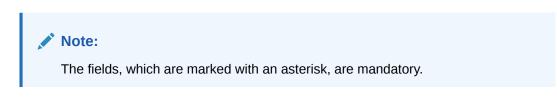

Table 1-31	Create Product UDE Limits - Field Description
------------	--

Field	Description
Product Code	Click Search icon to view and select the product code. Every product is linked to a rule. When the rule is built, the user identifies the UDEs needed to calculate interest or charges. The user do not give the UDE value. Because the rule can be linked to many products and apply a product to many account classes (for which interest or charge is calculated using the same method but which have different UDE values).
User Element	Click Search icon to view and select the user element for which the user want to maintain upper and lower limits.
Currency Code	Click Search icon to view and select the currency code. If the user select ALL as currency code, then the limits are applicable for all currencies.
Min Effective Value	Specify the minimum value for the user element and currency combination.

Field	Description
Max Effective Value	Specify the maximum value for the user element and currency combination.
Minimum Variance	Specify the minimum value of interest variance that can be maintained at account level for the given UDE and currency combination.
Maximum Variance	Specify the maximum value of interest variance that can be maintained at account level for the given UDE and currency combination. The value of Maximum Variance cannot be less than Minimum Variance . While creating an account, if the variance is specified at special condition level in the Variance field against a UDE, then that variance value is compared with the Minimum and Maximum variance maintained at the product level for the account currency. If the variance is below minimum variance and above maximum variance, the system displays an error message. The validation of minimum and maximum variance will be performed during creation, modification and reopening of the account.

3. Specify the fields on Create Rate Input Maintenance screen.

Note:

The fields, which are marked with an asterisk, are mandatory.

For more information on fields, refer to the field description table.

Field	Description
Branch Code	Click Search icon to view and select the branch code to maintain the IC rates for the rate code from the head office branch. The user can select the branch for which the attributes are being defined.
Rate code	Click Search icon to view and select the rate code for which the effective rates are being maintained. Each IC Rate Code is defined by an alphanumeric code. Effective rates are maintained for the rate code, which is then linked to a product. When a contract is processed, the rates maintained for the rate code (with the effective date) linked to the product will be applied on the contract, some of which can be changed. To recall, the IC Rate Codes are maintained in the IC Rate Code maintenance.
Currency Code	Click Search icon to view and select the currency code for which the rates are being maintained. In Rates Maintenance screen, the user define the rates for each rate code, branch and currency combination.
Effective Date	Select the effective date of a record on which a record takes effect. Each rate that you maintain for a Rate Code, Branch, and Currency combination should have an Effective Date associated with it.
Rate	Specify the rates for the selected IC rate code.
Open	Select the toggle whether it should be open or closed.

3. Specify the fields on Create UDE Value Input screen.

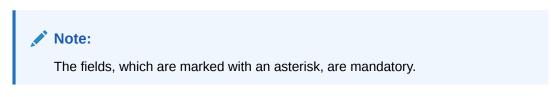

Table 1-35 Create UDE Value Input - Field Description

Field	Description
Product code	Click Search icon and select the product code. Every product is linked to a rule. When the rule is built, the user identifies the UDEs needed to calculate interest or charges. The user should not give the UDE value. Because the rule can be linked to many products and apply a product to many account classes (for which interest or charge is calculated using the same method but which have different UDE values). For each condition defined for a product, specify the values of the UDEs (which is identified for the rule that is linked to the product) in the 'User Data Elements' screen. The UDE values maintained for a condition, the same will be picked up when the interest is calculated for the account class.

Field	Description
Branch Code	Click Search icon and select the branch code for which the UDE Values being maintained are applicable as a general condition. If 'ICRATES' has been maintained as a Restriction Type in the Common Branch Restrictions screen, the branches allowed for the home branch are displayed in the option list for the Branch Code. If not, all Branch Codes are displayed including the 'ALL' option. If the home branch is HO, then the Branch Code option list displays 'ALL' in addition to the list of branches allowed for your Home Branch. If the user try to maintain a UDE value for a specific branch, the system will check if the UDE value has been first maintained with Branch Code 'ALL'. If it has not been maintained, an error message will be displayed forcing the user to maintain the UDE value for the Branch Code 'ALL'.
Effective Date	Select the date from when a record takes effect. The user can maintain the different values for a UDE and the different effective dates for a condition. When the interest is calculated on a particular day for the account class, the value of the UDE corresponding to the date will be picked up. The UDE values of a condition can be different for different dates. Typically, the user would want to open records with different Effective Dates, if the values of UDEs vary within the same liquidation period.
IC Group	Click Search icon and select the IC group.
Currency Code	Click Search icon and select the currency code.
User Element	Specify the user element.
User Element Value	Specify the user element value.
Rate Code	Specify the rate code.

Table 1-35 (Cont.) Create UDE Value Input - Field Description

User Defined Elements:

For each account class, the user must specify the values of all the UDEs to identify while building the rule. The specified UDE value will be picked up while calculating interest for the account class. All the UDEs that the user have identified for the rule (to which the product is linked) will be displayed here. The various types of UDE values are as follows:

- Credit Rate
- Debit Rate
- Amount
- Number

The interest on a debit balance is an example of a debit rate. The interest on a credit balance is an example of a credit rate.

A User Data Element will be an amount under the following circumstances:

- in the case of a tier structure, the upper and lower limit of a tier or a tier amount;
- in the case of a charge, when it is indicated as a flat amount
- any amount that can be used in the definition of formula

While building a rule, the user will indicate the UDE to be a number if the interest is defined based on the number of transactions or the number of account statements. A UDE under this category can also be used to store a numerical value that may be used in a formula. For each UDEs, the user must specify the values. If the UDE type for the rule is a **Rate** element, the user can either specify a Rate Code or enter a value for the Rate element. If the user specify a Rate Code for the UDE, the value maintained for the rate code will be

picked up while calculating interest. However, if the user choose to enter a spread for the Rate Code, the appropriate value will be computed. (A Spread is a positive or negative value that the user add or deduct to the value specified for the Rate Code). If you do not specify a spread, the rate maintained for the Rate Code will be picked up. If the type of UDE is an amount, the value that you enter will be in the currency that you specified in the UDE amounts currency field (in the Interest Preferences screen). If you specified the UDE amounts currency as the local currency and the account class is in a foreign currency, all UDE values will be converted to the local currency. Currency conversions will be on the basis of the exchange rates maintained for the day.

- 4. Click + to add the new user defined element.
- 5. Click to remove the existing user defined element.
- 6. Click Save to save the details.

The user can view the configured UDE value input using View UDE Value Input screen.

1.17.2 View UDE Value Input

This topic describes the systematic instructions to view the list of configured UDE value input details.

- 1. On Home screen, click Interest and Charges. Under Interest and Charges, click UDE Value Input.
- 2. Under UDE Value Input, click View UDE Value Input.

The View UDE Value Input screen displays.
