

Oracle® Banking Payments

Payments Core User Guide

Release 14.8.0.0.0
G32426-01
April 2025

ORACLE®

Copyright © 2017, 2025, Oracle and/or its affiliates.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, MySQL, and NetSuite are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

Contents

1 Preface

1.1	Purpose	1-1
1.2	Audience	1-1
1.3	Documentation Accessibility	1-1
1.4	Critical Patches	1-2
1.5	Diversity and Inclusion	1-2
1.6	Conventions	1-2
1.7	Related Resources	1-2
1.8	Screenshot Disclaimer	1-2
1.9	Acronyms and Abbreviations	1-3
1.10	Basic Actions	1-3
1.11	Symbols, Definitions and Abbreviations	1-4

2 Payment Maintenance

2.1	External Systems Maintenances	2-2
2.1.1	Queue Connection Profile	2-2
2.1.1.1	Queue Connection Profile Maintenance Summary	2-3
2.1.2	Service Profile	2-4
2.1.2.1	Service Profile Detail Summary	2-6
2.1.3	Sanction Check System	2-6
2.1.3.1	Status Mapping	2-8
2.1.3.2	Sanction Check System Summary	2-9
2.1.4	External Exchange Rate System	2-9
2.1.4.1	Maintaining JMS Preferences	2-10
2.1.4.2	Maintaining Webservice Preferences	2-12
2.1.4.3	Maintaining ReST Preferences	2-13
2.1.4.4	Exchange Rate System Summary	2-13
2.1.5	External Credit Approval System	2-14
2.1.5.1	ECA Processing in DDA system	2-16
2.1.5.2	EAC Processing in DDA system	2-17
2.1.5.3	External Credit Approval System Summary	2-17
2.1.6	External Credit Approval Interface	2-17
2.1.6.1	External Credit Approval Interface Summary	2-18

2.1.7	ECA Retry Preference	2-19
2.1.7.1	ECA Retry Preference Summary	2-20
2.1.8	External Accounting System	2-21
2.1.8.1	External Accounting System Summary	2-25
2.1.9	External Pricing System	2-26
2.1.9.1	External Price System Summary	2-27
2.1.10	External Pricing System Customer Preferences	2-28
2.1.10.1	External Pricing System Customer Preferences Summary	2-29
2.1.11	External Pricing System Customer Service Model Preferences	2-29
2.1.11.1	External Pricing System Customer Service Model Preferences Summary	2-30
2.1.12	Clearing Infrastructure	2-31
2.1.12.1	Clearing Infrastructure Summary	2-33
2.1.13	Document Management System	2-34
2.1.13.1	Document Management System Maintenance Summary	2-35
2.2	Referral check for ECA Requests	2-36
2.2.1	Customer Service Model Referral Preferences	2-36
2.2.1.1	Customer Service Model Referral Preferences Summary	2-37
2.2.2	Customer Referral Preferences	2-38
2.2.2.1	Customer Referral Preferences Summary	2-38
2.2.3	Customer Account Referral Preferences	2-39
2.2.3.1	Customer Account Referral Preferences Summary	2-40
2.2.4	External System Referral Processing	2-40
2.2.5	Internal Referral Processing	2-41
2.3	Network & Source Maintenances	2-41
2.3.1	Network Code	2-41
2.3.1.1	Network Code Summary	2-43
2.3.2	Network	2-44
2.3.2.1	Network Maintenance Summary	2-48
2.3.3	Network Currency Preferences	2-48
2.3.3.1	Network Currency Preferences Summary	2-52
2.3.4	Network Preferences	2-53
2.3.4.1	Network Preference Summary	2-58
2.3.5	Network Holidays	2-58
2.3.5.1	Network Holidays Maintenance Summary	2-59
2.3.6	Network Cutoff Time Extension	2-60
2.3.6.1	Network Cutoff Time Extension Summary	2-61
2.3.7	Source	2-62
2.3.7.1	Source Maintenance Summary	2-67
2.3.8	Source Network Preferences	2-67
2.3.8.1	Source Network Preferences Summary	2-70
2.4	Customer Preferences Maintenances	2-71
2.4.1	Customer Service Model	2-71

2.4.1.1	Customer Service Model Summary	2-72
2.4.2	Customer Service Model Linkage	2-73
2.4.2.1	Customer Service Model Linkage Summary	2-74
2.4.3	Settlement Instructions	2-75
2.4.3.1	SWIFT MT Routing	2-77
2.4.3.2	ISO Based Routing	2-79
2.4.3.3	Settlement Instruction Summary	2-84
2.4.4	Settlement Review Amend Allowed Fields	2-85
2.4.4.1	Settlement Review Amend Allowed Fields Summary	2-86
2.4.5	Customer Preferences	2-86
2.4.5.1	Cover Generation Preference	2-89
2.4.5.2	Customer Preferences Summary	2-90
2.5	Messaging Maintenances	2-91
2.5.1	Message Location	2-91
2.5.1.1	Message Location Summary	2-92
2.5.2	Messaging Branch Preferences	2-92
2.5.2.1	Messaging Branch Preferences Summary	2-94
2.5.3	Message Type	2-95
2.5.3.1	Message Type Summary	2-96
2.5.4	EMS Connector Start/Stop	2-97
2.5.5	Message Initiator	2-97
2.5.5.1	Message Initiator Maintenance Summary	2-99
2.5.6	ASCII File Mapping Profile	2-99
2.5.6.1	ASCII File Mapping Profile Maintenance Summary	2-101
2.6	Advice Infrastructure Maintenances	2-102
2.6.1	Advice Format	2-102
2.6.1.1	Advice Format Summary	2-103
2.6.2	Default Advice Format Maintenance	2-103
2.6.2.1	Default Advice Format Maintenance Summary	2-104
2.6.3	Network Advice Format Maintenance	2-105
2.6.3.1	Network Advice Format Maintenance Summary	2-107
2.6.4	Source Network Advice Format Maintenance	2-107
2.6.4.1	Source Network Advice Format Maintenance Summary	2-109
2.6.5	Customer Advice Preferences	2-109
2.6.5.1	Customer Advice Preferences Summary	2-111
2.7	Access Rights Maintenances	2-112
2.7.1	User Limit	2-113
2.7.1.1	User Limit Maintenance Summary	2-115
2.7.2	Role Limit	2-116
2.7.2.1	Role Limit Maintenance Summary	2-117
2.7.3	Role Queue Access Rights	2-118
2.7.3.1	Role Queue Access Rights Summary	2-119

2.7.4	User Queue Access Rights	2-119
2.7.4.1	User Queue Access Rights Summary	2-120
2.7.5	Role Queue Transaction Restrictions	2-121
2.7.5.1	Role Queue Transaction Restrictions Summary	2-122
2.7.6	User Queue Payments Restrictions	2-123
2.7.6.1	User Queue Payments Restrictions Summary	2-124
2.8	Common Payments Maintenances	2-125
2.8.1	Host Parameters	2-126
2.8.1.1	Host Parameter Summary	2-128
2.8.2	Sanction Restriction	2-129
2.8.2.1	Sanctions Restriction Summary	2-130
2.8.3	Payment Processing Cut off Time	2-131
2.8.3.1	Payment Processing Cutoff Time Summary	2-133
2.8.4	Bank Code Maintenance	2-134
2.8.4.1	Bank Code Summary	2-135
2.8.5	Bank Redirection	2-136
2.8.5.1	Bank Redirection Summary	2-137
2.8.6	Account Redirection	2-138
2.8.6.1	Account Redirection Summary	2-139
2.8.7	Account Template	2-139
2.8.7.1	Account Template Summary	2-140
2.8.8	Account Statement Narrative	2-141
2.8.8.1	Account Statement Narrative Summary	2-145
2.8.9	File Parameters	2-145
2.8.9.1	File Parameters Summary	2-147
2.8.10	System Parameters	2-148
2.8.10.1	System Parameter Summary	2-149
2.8.11	Allowed Character Set	2-149
2.8.11.1	Allowed Character Set Summary	2-150
2.8.12	Special Characters	2-151
2.8.12.1	Special Characters Summary	2-152
2.8.13	Customer Payment Restrictions	2-153
2.8.13.1	Customer Payments Restrictions Summary	2-155
2.8.14	Account Level Daily Limits	2-156
2.8.14.1	Account Level Daily Limits Summary	2-157
2.8.15	Default Daily Limits	2-158
2.8.15.1	Default Daily Limits Summary	2-159
2.8.16	Inbound Payment Processing Preferences	2-160
2.8.16.1	Inbound Payment Processing Preferences Summary	2-161
2.8.17	Inbound Debit Processing Preferences	2-162
2.8.17.1	Inbound Debit Processing Preferences Summary	2-163
2.8.18	Outbound Non-urgent Payment Preferences	2-164

2.8.18.1	Outbound Non-urgent Payment Company ID Preferences Summary	2-165
2.8.19	Outbound Non-Urgent Payment Customer Preferences	2-166
2.8.19.1	Outbound Non-Urgent Payment Customer Preferences Summary	2-168
2.8.20	Outbound Non-Urgent Debit Company ID Preferences	2-169
2.8.20.1	Outbound Non-Urgent Debit Company ID Preferences Summary	2-170
2.8.21	Outbound Non-Urgent Debit Customer Preferences	2-171
2.8.21.1	Outbound Non-Urgent Debit Customer Preferences Summary	2-173
2.8.22	Outbound Urgent Payment Preferences	2-174
2.8.22.1	Outbound Urgent Payment Preferences Summary	2-175
2.8.23	Reject Code	2-176
2.8.23.1	Reject Code Maintenance Summary	2-179
2.8.24	Customer Name Match	2-180
2.8.24.1	Customer Name Match Summary	2-181
2.8.25	Custom Dates	2-182
2.8.26	Payments Auto Job Parameters	2-183
2.8.26.1	Payments Auto Job Parameters Summary	2-185
2.8.27	Job Browser Summary	2-186
2.8.28	Job Execution Details	2-187
2.8.29	External Notification Queue	2-188
2.8.29.1	External Notification Queue Summary	2-190
2.8.30	Transaction Notification Preference	2-190
2.8.30.1	Payment Status Tab	2-192
2.8.30.2	Exception Events Tab	2-192
2.8.30.3	Transaction Notification Preference Summary	2-193
2.8.31	Batch Notification Preference	2-194
2.8.31.1	Payment Status Tab	2-195
2.8.31.2	Exception Events Tab	2-195
2.8.31.3	Batch Notification Preference Summary	2-196
2.8.32	Dual Authorization Preferences	2-196
2.8.32.1	Dual Authorization Preferences Summary	2-198
2.8.33	Template Amendment	2-198
2.8.33.1	Payment Template Amend Allowed Summary	2-199
2.8.34	Repair Opt-out Preferences	2-200
2.8.34.1	Repair Opt-out Preferences Summary	2-202
2.8.35	Customer ERI Agreement	2-202
2.8.35.1	Customer ERI Agreement Summary	2-203
2.8.36	ERI Bank Agreement	2-204
2.8.36.1	ERI Bank Agreement Summary	2-205
2.8.37	IBAN Additional Bank Identifier Maintenance	2-206
2.8.37.1	IBAN Additional Bank Identifier Maintenance Summary	2-207
2.8.38	GL IBAN Maintenance	2-208
2.8.38.1	GL IBAN Maintenance Summary	2-209

2.8.39	Transaction Preview Preferences	2-210
2.8.39.1	Transaction Preview Preferences Summary	2-211
2.8.40	Allowed Processing Hosts Maintenance	2-211
2.8.40.1	Allowed Processing Hosts Maintenance Summary	2-212
2.8.41	Creditor Agent Alias Preference	2-213
2.8.41.1	Creditor Agent Alias Preference Summary	2-214
2.8.42	Sector Code Maintenance	2-215
2.8.42.1	Sector Code Maintenance Summary	2-216
2.8.43	Source-based Error Handling	2-216
2.8.43.1	Source-based Error Handling Summary	2-218
2.8.44	Network-based Error Handling	2-219
2.8.44.1	Network-based Error Handling Maintenance Summary	2-221
2.8.45	SEPA EPC Changes Effective Date	2-221
2.8.45.1	SEPA EPC Changes Effective Date Detailed Summary	2-222
2.8.46	GL Restriction Class	2-223
2.8.46.1	GL Restriction Class Summary	2-224
2.8.47	GL Restriction Class Linkage for User ID	2-224
2.8.47.1	GL Restriction Class Linkage for User ID Summary	2-225
2.8.48	Account Entitlement	2-226
2.8.48.1	Account Entitlement Summary	2-228
2.8.49	Repair Amend Allowed Fields	2-228
2.8.49.1	Repair Amend Allowed Fields Summary	2-230
2.8.50	Host BIC Code Customer Mapping	2-231
2.8.50.1	Host BIC Code Customer Mapping Summary	2-232
2.8.50.2	Debit/Credit Confirmation Message (MT format) Generation	2-232
2.8.50.3	Debit/Credit Confirmation Message (MX format) Generation	2-233
2.8.50.4	MT103 Outbound REMIT Processing	2-233
2.8.51	Channel Authentication Preferences	2-233
2.8.51.1	Channel Authentication Preferences Summary	2-234
2.8.52	Purpose Code Maintenance	2-235
2.8.52.1	Purpose Code Maintenance Summary	2-235
2.8.53	Purpose Code Mapping Maintenance	2-236
2.8.53.1	Purpose Code Mapping Maintenance Summary	2-237
2.8.54	PAIN File Upload Preference Maintenance	2-238
2.8.54.1	PAIN File Upload Preference Maintenance Summary	2-239
2.8.55	IFSC Proliferation Summary	2-240
2.8.56	BIC Code Account Details	2-241
2.8.56.1	BIC Code Customer Summary	2-242
2.9	Non STP Maintenances	2-243
2.9.1	Non STP Rule	2-243
2.9.1.1	Non STP Rule Summary	2-245
2.9.2	Customer Restriction Preference	2-246

2.9.2.1	Customers Tab	2-247
2.9.2.2	Customer Accounts Tab	2-248
2.9.2.3	Company ID Tab	2-248
2.9.2.4	Customer Restriction Preference Summary	2-249
2.9.3	Non STP Amend Allowed Fields	2-250
2.9.3.1	Non STP Amend Allowed Fields Summary	2-252
2.9.4	Non STP Default Amend Fields	2-253
2.9.4.1	Non STP Default Amend Fields Maintenance Summary	2-254
2.9.5	Queries and Free Format Message Preferences	2-255
2.9.5.1	Queries and Free Format Message Preferences Summary	2-256
2.10	Cross Border / High Value Payments Maintenance	2-257
2.10.1	Host BIC	2-257
2.10.1.1	Host BIC Summary	2-258
2.10.2	SWIFT Codeword	2-259
2.10.2.1	Codeword Processing	2-261
2.10.2.2	SWIFT Codeword Summary	2-261
2.10.3	PSD Preferences	2-261
2.10.3.1	PSD Preferences Summary	2-262
2.10.4	Global Correspondent Reachable Networks	2-263
2.10.4.1	Global Correspondent Reachable Networks Summary	2-264
2.10.5	Debit Authority	2-265
2.10.5.1	Debit Authority Summary	2-266
2.10.5.2	Debit Authority Processing	2-266
2.11	US Payments	2-267
2.11.1	Originator	2-267
2.11.1.1	Originator Maintenance Summary	2-268
2.11.2	US Clearing - Bank Identifiers	2-268
2.11.2.1	US ACH - ABA Number Summary	2-270
2.12	Verification Rule Maintenance	2-270
2.12.1	Verification Rule	2-270
2.12.1.1	Verification Rule Summary	2-272
2.12.2	Verification Amend Allowed Fields	2-273
2.12.2.1	Verification Amend Allowed Fields Summary	2-274
2.13	India Payments Maintenance	2-275
2.13.1	IFSC Directory	2-275
2.13.1.1	IFSC Directory Summary	2-277
2.13.2	Branch IFSC Code Mapping	2-278
2.13.2.1	Branch IFSC Code Mapping Summary	2-279
2.13.3	Bank Issuer Identification Number	2-280
2.13.3.1	Bank Issuer Identification Number Summary	2-280
2.13.4	India Payments Our Bank Identifiers	2-281
2.13.4.1	India Payments Our Bank Identifiers Summary	2-282

2.13.5	Biller Maintenance	2-283
2.13.5.1	Biller Maintenance Summary	2-284
2.13.6	India Payments Common Preferences	2-284
2.13.6.1	India Payments Common Preferences Summary	2-289
2.13.7	India Tax Preference	2-290
2.13.7.1	India Tax Preference Summary	2-291
2.13.8	India Payments Customer Preferences	2-292
2.13.8.1	India Payments Customer Preferences Summary	2-293
2.13.9	India Payments Customer LEI Preferences	2-294
2.13.9.1	India Payments Customer LEI Preferences Summary	2-295
2.13.10	India Payments Account Type Preferences	2-295
2.13.10.1	India Payments Account Type Preferences Summary	2-297
2.13.11	India Payments Account Tax Preferences	2-297
2.13.11.1	India Payments Account Tax Preferences Summary	2-298
2.13.12	India Payment Customer Aadhaar Preferences	2-299
2.13.12.1	India Payment Customer Aadhaar Preferences Summary	2-300
2.13.13	India Payments Account Aadhaar Preferences	2-301
2.13.13.1	India Payments Account Aadhaar Preferences Summary	2-302
2.13.14	External Customer Account Joint Account Holder Input	2-302
2.13.14.1	External Customer Account Joint Account Holder Input Summary	2-303
2.13.15	India Payments Mobile Money Identifier Maintenance	2-304
2.13.15.1	India Payments Mobile Money Identifier Maintenance Summary	2-305
2.13.16	Beneficiary Registration	2-306
2.13.16.1	Beneficiary Registration Summary	2-309
2.13.17	India Payments Default Account Type Preferences	2-310
2.13.17.1	India Payments Default Account Type Preferences Summary	2-311
2.13.18	India RTGS Network Channel Type Preferences	2-312
2.13.18.1	India RTGS Network Channel Type Preferences Summary	2-313
2.13.19	India RTGS Own Account Transfer Account Preferences	2-314
2.13.19.1	India RTGS Own Account Transfer Account Preferences Summary	2-315
2.13.20	RTGS Own Account Transfer Input	2-316
2.13.20.1	RTGS Own Account Transfer Input Detailed Summary	2-318
2.13.21	India Payments Network System Dates	2-319
2.13.21.1	India Payments Network System Dates Summary	2-320
2.13.22	India Payments Network SOD Maintenance	2-321
2.13.22.1	India Payments Network SOD Maintenance Summary	2-322
2.13.23	India Payments Network EOD Maintenance	2-322
2.13.23.1	India Payments Network EOD Maintenance Summary	2-323
2.13.24	India Payments Network Cutoff Extension	2-324
2.13.24.1	India Payments Network Cutoff Extension Summary	2-325
2.13.25	India RTGS HO IFSC	2-325
2.13.25.1	India RTGS HO IFSC Summary	2-326

2.13.26	Account OD Preferences Browser Summary	2-327
2.14	Inbound Debit Restrictions	2-328
2.14.1	Debit Receipts - Credit Account Restrictions	2-328
2.14.1.1	Debit Receipts - Credit Account Restrictions Summary	2-329
2.14.2	Debit Receipts - Mandate Restrictions	2-330
2.14.2.1	Debit Receipts - Mandate Restrictions Summary	2-331
2.14.3	Debit Receipts - Creditor Scheme Restrictions	2-332
2.14.3.1	Debit Receipts - Creditor Scheme Restrictions Summary	2-333
2.15	Payments Rule Engine	2-334
2.15.1	Network Rule	2-334
2.15.1.1	Network Rule Summary	2-338
2.15.2	Outbound Transaction Type Rule	2-338
2.15.2.1	Outbound Transaction Type Rule Summary	2-340
2.15.3	Cross Border RTGS Derivation Rule	2-341
2.15.3.1	Cross Border to RTGS Rule Summary	2-344
2.15.4	RTGS Network Switch Rule	2-344
2.15.4.1	RTGS Network Switch Rule Summary	2-346
2.15.5	Transaction Code Rule	2-347
2.15.5.1	Transaction Code Rule Summary	2-351
2.15.6	Routing Rule	2-351
2.15.6.1	Routing Rule Summary	2-354
2.15.6.2	Routing Rule Basis Elements	2-355
2.15.7	Group Code Maintenance for Rule Elements	2-356
2.15.7.1	Group Code Maintenance for Rule Elements Summary	2-358
2.15.8	Rule Element Group Code Linkage	2-358
2.15.8.1	Rule Element Group Code Linkage Summary	2-359
2.16	BIC Cutoff	2-360
2.16.1	Outbound BIC Cutoff	2-360
2.16.1.1	Outbound BIC Cutoff Summary	2-361
2.16.2	Inbound BIC Cutoff	2-362
2.16.2.1	Inbound Payments - Date Derivation	2-363
2.16.2.2	Inbound BIC Cutoff Summary	2-364

Preface

- [Purpose](#)
- [Audience](#)
This manual is intended for the following User/User Roles:
- [Documentation Accessibility](#)
- [Critical Patches](#)
- [Diversity and Inclusion](#)
- [Conventions](#)
- [Related Resources](#)
- [Screenshot Disclaimer](#)
- [Acronyms and Abbreviations](#)
- [Basic Actions](#)
- [Symbols, Definitions and Abbreviations](#)
The following are some of the Symbols you are likely to find in the manual:

1.1 Purpose

This guide is designed to help acquaint you with the Oracle Banking Payments application. This guide provides answers to specific features and procedures that the user need to be aware of the module to function successfully.

1.2 Audience

This manual is intended for the following User/User Roles:

Table 1-1 User Roles

Role	Function
Implementation & IT Staff	Implementation & Maintenance of the Software

1.3 Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

1.4 Critical Patches

Oracle advises customers to get all their security vulnerability information from the Oracle Critical Patch Update Advisory, which is available at [Critical Patches](#), [Security Alerts and Bulletins](#). All critical patches should be applied in a timely manner to make sure effective security, as strongly recommended by [Oracle Software Security Assurance](#).

1.5 Diversity and Inclusion

Oracle is fully committed to diversity and inclusion. Oracle respects and values having a diverse workforce that increases thought leadership and innovation. As part of our initiative to build a more inclusive culture that positively impacts our employees, customers, and partners, we are working to remove insensitive terms from our products and documentation. We are also mindful of the necessity to maintain compatibility with our customers' existing technologies and the need to ensure continuity of service as Oracle's offerings and industry standards evolve. Because of these technical constraints, our effort to remove insensitive terms is ongoing and will take time and external cooperation.

1.6 Conventions

The following text conventions are used in this document:

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text.
<i>italic</i>	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
<code>monospace</code>	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

1.7 Related Resources

For more information on any related features, refer to the following documents:

- *Getting Started User Guide*
- *Oracle Banking Security Management System User Guide*
- *Oracle Banking Microservices Platform Foundation User Guide*
- *Routing Hub Configuration User Guide*
- *Oracle Banking Common Core User Guide*
- *Interest and Charges User Guide*
- *Oracle Banking Liquidity Management Configuration Guide*
- *Oracle Banking Liquidity Management File Upload User Guide*

1.8 Screenshot Disclaimer

Personal information used in the interface or documents is dummy and does not exist in the real world. It is only for reference purposes.

1.9 Acronyms and Abbreviations

The list of the acronyms and abbreviations that are used in this guide are as follows:

Table 1-2 Acronyms and Abbreviations

Abbreviation	Description
DDA	Demand Deposit Accounts
ECA	External Credit Approval
EOD	End of Day
IBAN	International Bank Account Number

1.10 Basic Actions

The basic actions performed in the screens are as follows:

Table 1-3 Basic Actions

Actions	Description
New	Click New to add a new record. The system displays a new record to specify the required data. The fields marked with asterisk are mandatory. - This button is displayed only for the records that are already created.
Save	Click Save to save the details entered or selected in the screen.
Unlock	Click Unlock to update the details of an existing record. The system displays an existing record in editable mode. - This button is displayed only for the records that are already created.
Authorize	Click Authorize to authorize the record created. A maker of the screen is not allowed to authorize the same. Only a checker can authorize a record. - This button is displayed only for the already created records. For more information on the process, refer Authorization Process.
Approve	Click Approve to approve the initiated record. - This button is displayed once the user click Authorize .
Audit	Click Audit to view the maker details, checker details of the particular record. - This button is displayed only for the records that are already created.
Close	Click Close to close a record. This action is available only when a record is created.
Confirm	Click Confirm to confirm the action performed.
Cancel	Click Cancel to cancel the action performed.
Compare	Click Compare to view the comparison through the field values of old record and the current record. - This button is displayed in the widget once the user click Authorize .
View	Click View to view the details in a particular modification stage. - This button is displayed in the widget once the user click Authorize .

Table 1-3 (Cont.) Basic Actions

Actions	Description
View Difference only	Click View Difference only to view a comparison through the field element values of old record and the current record, which has undergone changes. - This button is displayed once the user click Compare .
Expand All	Click Expand All to expand and view all the details in the sections. - This button is displayed once the user click Compare .
Collapse All	Click Collapse All to hide the details in the sections. - This button is displayed once the user click Compare .
OK	Click OK to confirm the details in the screen.

1.11 Symbols, Definitions and Abbreviations

The following are some of the Symbols you are likely to find in the manual:

Table 1-4 Symbols

Icons	Function
	Exit
	Add row
	Delete row
	Option List

Table 1-5 Common Icons and its Definitions

Icon Names	Applicable Stages	Operation
Minimize	Initiation, Approval and Hand-off Retry	Users can minimize the transaction input screen. When the screen is minimized, it appears as to a separate tab within the same web page.
Maximize	Initiation, Approval and Hand-off Retry	User can maximize the transaction input screen.
Close	Initiation, Approval and Hand-off Retry	Users can close the transaction input screen. The system displays a warning message to the user that any unsaved data would be lost. User can either choose to ignore the message and close the screen or choose to 'save and close' the transaction.

2

Payment Maintenance

Oracle Banking Payments aims at providing a payment solution which cater to requirements of both Retail/Corporate segments.

This chapter enumerates the maintenance of reference information used by the Oracle Banking Payments. You can maintain preferences and parameters applicable for different payment types using the maintenances available. In addition to common maintenances, certain common processes which are applicable across payment types are explained as well.

- [External Systems Maintenances](#)
- [Referral check for ECA Requests](#)
You can mark ECA requests of the payment transactions as Referral required, so that referral processing can be done in the DDA system.
- [Network & Source Maintenances](#)
Network related maintenances helps in defining various parameters as required by the bank, for processing Network preferences and parameters.
- [Customer Preferences Maintenances](#)
Customer related maintenances helps in defining various parameters as required by the bank, for processing Customer preferences.
- [Messaging Maintenances](#)
Messaging related maintenances helps in defining various parameters as required by the bank, for processing Message related parameters.
- [Advice Infrastructure Maintenances](#)
You can generate advices to customers for credits/debits to customer account generated as a result of inbound/outbound transactions. You can also generate MT900/910 as advices, if customer is having a valid BIC and preferred media is SWIFT.
- [Access Rights Maintenances](#)
Access rights can be provided for queue action at user level or at user role level. Access rights maintained is validated when a user tries to do any action on the payment available in the queues.
- [Common Payments Maintenances](#)
Generic maintenances helps in defining various parameters as required by the bank, for payment processing.
- [Non STP Maintenances](#)
The Non STP Maintenances are for not processing the uploaded payments as STP payments. This maintenance depends upon STP rule and Customer Restriction Preference maintenance.
- [Cross Border / High Value Payments Maintenance](#)
- [US Payments](#)
- [Verification Rule Maintenance](#)
- [India Payments Maintenance](#)
- [Inbound Debit Restrictions](#)
- [Payments Rule Engine](#)

- [BIC Cutoff](#)
- [MIS & UDF Maintenance](#)
- [External System Mapping](#)
- [Country Code Mapping](#)

2.1 External Systems Maintenances

This section contains the following sub-sections:

- [Queue Connection Profile](#)
- [Service Profile](#)
- [Sanction Check System](#)
- [External Exchange Rate System](#)
- [External Credit Approval System](#)
- [External Credit Approval Interface](#)
- [External Accounting System](#)
- [External Pricing System](#)
- [External Pricing System Customer Preferences](#)
- [External Pricing System Customer Service Model Preferences](#)
- [Clearing Infrastructure](#)
- [Queue Connection Profile](#)
- [Service Profile](#)
- [Sanction Check System](#)
- [External Exchange Rate System](#)
- [External Credit Approval System](#)
- [External Credit Approval Interface](#)
- [ECA Retry Preference](#)
- [External Accounting System](#)
- [External Pricing System](#)
- [External Pricing System Customer Preferences](#)
- [External Pricing System Customer Service Model Preferences](#)
- [Clearing Infrastructure](#)
- [Document Management System](#)

2.1.1 Queue Connection Profile

JMS Queues maintained in the 'Network Queue Connection Maintenance' screen, refers to this screen for queue profiles.

1. On Homepage, specify **PMDQPROF** in the text box, and click next arrow.
Queue Connection Profile Maintenance Detailed screen is displayed.

Figure 2-1 Queue Connection Profile Maintenance Detailed

- On **Queue Connection Profile Maintenance Detailed** screen, specify the fields.
For more information on fields, refer to the field description below:

Table 2-1 Queue Connection Profile Maintenance Detailed - Field Description

Field	Description
Host Code	System defaults the host code of transaction branch on clicking 'New'.
Profile ID	Specify the profile ID. This is a mandatory field and maximum of 35 characters are allowed to input.
Profile Description	Specify the description of the Profile ID. This is a mandatory field and maximum of 35 characters are allowed to input.
User ID	Specify a valid User ID. Maximum length of 35 characters are allowed.
Password	Specify a valid Password. Maximum length of 35 characters are allowed.
Context Provider URL	Specify the URL for the context provider, which indicates the location of the Queue resources. This is a mandatory field and maximum of 35 characters are allowed to input. User can also edit the given details.
Initial Context Factory Class	Specify the Initial Context Factory class. This is a mandatory field and maximum of 35 characters are allowed to input. User can also edit the given details.
Queue Factory JNDI	Specify the Queue Factory JNDI. This is a mandatory field and maximum of 35 characters are allowed to input. User can also edit the given details.
Queue Authentication Required	Check this box to indicate that Queue Authentication is required for the Queue Profiles maintained.

- [Queue Connection Profile Maintenance Summary](#)

2.1.1.1 Queue Connection Profile Maintenance Summary

The Queue Connection Profile Maintenance Summary screen allows users to view all the queue connection profiles.

- On Homepage, specify **PMSQPROF** in the text box, and click next arrow.

Queue Connection Profile Maintenance Summary screen is displayed.

Figure 2-2 Queue Connection Profile Maintenance Summary

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Profile ID
 - User ID
 - Context Provider URL
 - Initial Context Factory Class
3. Once you specified the parameters, click the Search button.
System displays the records that match the search criteria.
4. Double-click a selected record to open the detailed screen.

2.1.2 Service Profile

The Service Profile screen allows users to maintain the Service Profile details for Web service/ Rest service/O auth tokens.

1. On Homepage, specify **PMDSPROF** in the text box, and click next arrow.
Service Profile Detail screen is displayed.

Figure 2-3 Service Profile Detail

The screenshot shows the 'Service Profile Detail' window. It contains a list of fields on the left: Service Profile ID, Service Type, User Name, Password, Service Source Code, Application ID, Retry Count, Retry Interval, Connection Time Out(In Seconds), Read Time Out(In Seconds), and Header Profile. The 'Service Type' field is highlighted and shows 'Rest Service'. At the bottom right, there are 'Audit' and 'Exit' buttons.

2. On **Service Profile Detail** screen, specify the fields.
For more information on fields, refer to the field description below:

Table 2-2 Service Profile Detail - Field Description

Field	Description
Service Profile ID	Specify the Service Profile ID.
Service Type	Select Service Type from following: <ul style="list-style-type: none">• Rest Service• Web Service• OAuth Token
User Name	Specify the User Name.
Password	Specify a valid Password.
Service Source Code	Specify the Source Code.
Application ID	Specify the Application ID.
Retry Count	Specify the Retry Count. If the request is timed out, the number of retries to be done can be captured in this field.
Retry Interval	Check the Retry Interval. If the request is timed out, the retry interval in seconds can be maintained.
Connection Time Out (In Seconds)	Specify the Connection Time Out.
Read Time Out (In Seconds)	Specify the Read Time Out.

 **Note:**

The following fields are mandatory for 'O Auth Token' type profiles:

- User Name
- Password
- Service Source Code
- Application ID

- [Service Profile Detail Summary](#)

2.1.2.1 Service Profile Detail Summary

The Service Profile Detail Summary screen allows users to view all the queue connection profiles maintained.

1. On Homepage, specify **PMSSPROF** in the text box, and click next arrow.
Service Profile Detail Summary screen is displayed.

Figure 2-4 Service Profile Detail Summary

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Service Profile ID
 - Service Type
 - User Name
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
4. Double-click a selected record to open the detailed screen.

2.1.3 Sanction Check System

The Sanction Check System screen allows users to maintain the external system details to which the sanction request are to be sent with transaction party details.

1. On Homepage, specify **PMDSNCKM** in the text box, and click next arrow.
Sanction Check System Detailed screen is displayed.

Figure 2-5 Sanction Check System Detailed

2. Click **New** button on the Application toolbar.
 3. On **Sanction Check System Detailed** screen, specify the fields.
- For more information on fields, refer to the field description below:

Table 2-3 Sanction Check System Detailed - Field Description

Field	Description
Sanction Check System	Specify the external sanction check system.
Description	System displays a brief description on the sanction check system.
Communication Type	Select Communication Type from the following: <ul style="list-style-type: none"> JMS Queue Web service ReST service
Communication Method	Select Communication Method from the following: <ul style="list-style-type: none"> Synchronous Asynchronous (Default) <div style="border-left: 2px solid #0070C0; padding-left: 10px; margin-top: 10px;"> <p> Note:</p> <ul style="list-style-type: none"> For sanctions interface, support Web services/ReST services works in asynchronous mode. External JMS calls are supported in asynchronous mode only. </div>
Seizure	--
Post Seizure Accounting	Check this box to indicate that seizure accounting entries to be posted on SC Seizure.
Seizure GL	Specify the required Seizure GL from the list of values.
Preferences	--
Inqueue JNDI Name	Specify the name for Sanction response queue configured in Application server.
Outqueue JNDI Name	Specify the name for Sanction request queue configured in Application server.

Table 2-3 (Cont.) Sanction Check System Detailed - Field Description

Field	Description
Queue Profile	Specify the Queue Profile from the list of values. All the valid queues are listed here. The Queue Profiles defined in the 'PMDQPROF' screen are listed here. The profile details defined are linked here to post the request and receive the responses respectively for the Sanction check system.
WebService Preferences	--
WebService URL	Specify the WebService URL.
WebService Action	Specify the WebService Action.
ReST Preferences	--
ReST URL	Specify the ReST URL.

- [Status Mapping](#)
- [Sanction Check System Summary](#)

2.1.3.1 Status Mapping

1. On **Status Mapping**, specify the fields.

Figure 2-6 Sanctions Check System Detailed - Status Mapping

2. For more information on fields, refer to the field description below:

Table 2-4 Sanctions Check System Detailed_Status Mapping - Field Description

Field	Description
External Status Code	Specify the code assigned to a status by external sanctions check system.
Status Description	Specify the description of the external response code.
System Status	Specify the sanction check status derived in the system. New system status Seizure is available. And Sanctions response, if received as Seizure, Seizure would happen & accounting would be posted based on Post Seizure accounting check box.

Table 2-4 (Cont.) Sanctions Check System Detailed_Status Mapping - Field Description

Field	Description
Automatic Cancellation	Select whether automatic cancellation of the payment is applicable. User can select Yes only if the response codes are mapped to Rejected status.

2.1.3.2 Sanction Check System Summary

The Sanction Check System Summary screen allows users to view sanction check details.

1. On Homepage, specify **PMSSNCKM** in the text box, and click next arrow.

Sanction Check System Summary screen is displayed.

Figure 2-7 Sanction Check System Summary

The screenshot shows the 'Sanctions Check System Summary' application window. At the top, there are search controls including 'Search', 'Advanced Search', 'Reset', and 'Clear All' buttons, along with a 'Records per page' dropdown set to 15. Below these are three filter dropdowns: 'Authorization Status', 'Record Status', and 'Sanction Check System'. A 'Search (Case Sensitive)' button is also present. The main area is titled 'Search Results' and contains a table with the following columns: Authorization Status, Record Status, Sanction Check System, Description, Outqueue JNDI Name, Inqueue JNDI Name, Communication Type, WebService URL, REST URL, and Communication Method. The table is currently empty, displaying 'No data to display.' At the bottom left, it shows 'Page: 1' and navigation icons. An 'Exit' button is in the bottom right corner.

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Sanction Check System
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
4. Double-click a selected record to open the detailed screen.

2.1.4 External Exchange Rate System

The External Exchange Rate System screen allows users to maintain the external system details from which the exchange rate for a cross currency payment transaction has to be obtained in the 'Exchange Rate System Detailed' screen.

1. On Homepage, specify **PMDERTMT** in the text box, and click next arrow.

Exchange Rate System Detailed screen is displayed.

Figure 2-8 Exchange Rate System Detailed

2. Click **New** button on the Application toolbar.
 3. On **Exchange Rate System Detailed** screen, specify the fields.
- For more information on fields, refer to the field description below:

Table 2-5 Exchange Rate System Detailed - Field Description

Field	Description
External Exchange Rate System	Specify the external exchange rate system.
Description	Specify a brief description on the external exchange rate system.
Communication Type	Select Communication Type from the following: <ul style="list-style-type: none"> JMS Queue Web service ReST service
Communication Method	Select Communication Method from the following: <ul style="list-style-type: none"> Synchronous Asynchronous (Default) <div style="border: 1px solid #0070C0; padding: 10px; margin-top: 10px;"> <p> Note:</p> <ul style="list-style-type: none"> Web services/ReST services are supported in both synchronous and asynchronous modes. External JMS calls are supported in asynchronous mode only. </div>

- [Maintaining JMS Preferences](#)
- [Maintaining Webservice Preferences](#)
- [Maintaining ReST Preferences](#)
- [Exchange Rate System Summary](#)

2.1.4.1 Maintaining JMS Preferences

1. On **PMDERTMT** screen, click **JMS Preferences** tab.

JMS Preferences screen is displayed.

Figure 2-9 Exchange Rate System Detailed_JMS Preferences

The screenshot displays the 'Exchange Rate System Detailed' window with the 'JMS Preferences' tab selected. The form includes fields for 'External Exchange Rate System', 'Description', 'Communication Type' (set to 'JMS Queue'), and 'External System Communication Method' (set to 'Asynchronous'). Below these are the 'JMS Queue Preferences' fields: 'Queue Profile' (with a search icon), 'Outqueue JNDI Name', 'Inqueue JNDI Name', 'Inqueue Minimum Consumer Count', 'Inqueue Maximum Consumer Count', and 'Inqueue Message Listener Class'. To the right, the 'WebService Preferences' tab shows 'Rate Request Preference' and 'Market' fields. The 'ReST Preferences' tab is also visible but empty. The bottom of the window has 'Audit' and 'Exit' buttons.

2. On **JMS Preferences** tab, specify the fields.

For more information on fields, refer to the field description below:

Table 2-6 Exchange Rate System Detailed_JMS Preferences - Field Description

Field	Description
Inqueue JNDI Name	Specify the name for External exchange rate response queue configured in Application server.
Outqueue JNDI Name	Specify the name for External exchange rate request queue configured in Application server.
Queue Profile	Select the Queue Profile from the list of values. All the valid queues are listed. The Queue Profiles defined in the 'PMDQPROF' screen are listed. The profile details defined are linked here to post the request and receive the responses respectively for the Exchange Rate system.
Rate Request Preference	Select the Rate Request Preference from the drop-down values. The options are - Market/ Client. <ul style="list-style-type: none"> If the option selected is 'Market'/'Client', then in External FX request, the following details will be populated for the market/client deal reporting: <ul style="list-style-type: none"> Buy/Sell indicator Buy Currency Buy Amount Sell Currency Sell Amount The details populated in the Edit FX details screen in External Exchange Rate Queue, is based on the Rate Request Preference option selected for the external system. See the table below for more details:

Table 2-7 Exchange Rate System Detailed_JMS Preferences_Rate Request Preference Option

Payment/ Collection	Transaction Type	Client- facing	Client- facing	Client- facing	Market- facing	Market- facing	Market- facing
Payment/ Collection	Transaction Type	Account Ccy	Transfer Ccy	Buy Sell Indicator	Account Ccy	Transfer Ccy	Buy Sell Indicator
Payment	Outbound	Buy	Sell	Sell	Sell	Buy	Buy
Payment	Outbound Return	Sell	Buy	Buy	Buy	Sell	Sell
Payment	Inbound	Sell	Buy	Buy	Buy	Sell	Sell
Payment	Inbound Return	Buy	Sell	Sell	Sell	Buy	Buy
Collection	Outbound	Sell	Buy	Buy	Buy	Sell	Sell
Collection	Outbound Return	Buy	Sell	Sell	Sell	Buy	Buy
Collection	Inbound	Buy	Sell	Sell	Sell	Buy	Buy
Collection	Inbound Return	Sell	Buy	Buy	Buy	Sell	Sell

External FX Request / Response changes

- Customer Number & Transaction Branch to be added in the External FX request.
- The response will have deal date, Unit Currency and response status tags.
- The exchange rate considered for the payment is dependent on the Unit currency received in the response:

CCY1	CCY2	Quotation Method	Unit Ccy	Exchange Rate
ccy1	ccy2	Direct	ccy1	Take the Rate as It is
ccy1	ccy2	Direct	ccy2	Invert the Rate as 1/Rate
ccy1	ccy2	Indirect	ccy1	Invert the Rate as 1/Rate
ccy1	ccy2	Indirect	ccy2	Take the Rate as It is

2.1.4.2 Maintaining Webservice Preferences

1. On **PMDERTMT**, click **WebService Preferences** tab.

WebService Preference tab is displayed.

Figure 2-10 Exchange Rate System Detailed_WebService Preferences

2. On **WebService Preferences** tab, specify the fields.

Table 2-8 Exchange Rate System Detailed_WebService Preferences - Field Description

Field	Description
Preferences	--
WebService URL	Specify the WebService URL.
WebService Action	Specify the WebService Action.

2.1.4.3 Maintaining ReST Preferences

1. On **PMDERTMT**, click **ReST Preferences** tab.
ReST Preferences screen is displayed.

Figure 2-11 Exchange Rate System Detailed_ReST Preferences

2. On **ReST Preferences** screen, specify the fields.
For more information on fields, refer to the field description below:

Table 2-9 Exchange Rate System Detailed_ReST Preferences - Field Description

Field	Description
Preferences	--
ReST URL	Specify the ReST URL.

2.1.4.4 Exchange Rate System Summary

1. On Homepage, specify **PMSERTMT** in the text box, and click next arrow.
Exchange Rate System Summary screen is displayed.

Figure 2-12 Exchange Rate System Summary

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
4. Double-click a selected record to open the detailed screen.

2.1.5 External Credit Approval System

The External Credit Approval System screen allows users to manage external system details for obtaining credit approval for debit entries.

1. On Homepage, specify **PMDECAMT** in the text box, and click next arrow.
External Credit Approval System Detailed screen is displayed.

Figure 2-13 External Credit Approval System Detailed

2. Click **New** button on the Application toolbar.
3. On **External Credit Approval System Detailed** screen, specify the fields.

Table 2-10 External Credit Approval System Detailed - Field Description

Field	Description
External Credit Approval System	Specify the external credit approval system.
Description	Give a brief description on the External Credit Approval System.
Communication Type	Select a specific Communication system for the ECA system: <ul style="list-style-type: none"> • JMS Queue • Web Service • ReST
Communication Method	<p>The options available Synchronous and Asynchronous. System defaults the option as Asynchronous.</p> <div>  Note: <ul style="list-style-type: none"> • Web services/ReST services are supported in both synchronous and asynchronous modes. • External JMS calls are supported in asynchronous mode only. </div>
Timeout in seconds	Specify the Timeout in seconds when the Communication Method option is Synchronous.
Suppress Accounting Handoff	Select the Suppress Accounting Handoff between Yes or No.
Referral Type	<p>Select the Referral Type from the following values:</p> <ul style="list-style-type: none"> • Internal (Default) • External <p>If the Referral Type is 'Internal', in case of any ECA exceptions, the transaction is moved to ECA queue as in the existing way.</p> <p>If the referral Type is 'External', the ECA request is sent with 'Referral required' as 'Y' subject to CSM/Customer/Account level restrictions and the ECA resolution is decided by the DDA system Referral Queue. DDA system returns the status as either as 'Accepted' or 'Rejected'. The status codes related to rejection can be maintained for auto cancellation.</p>
ECA Block Supported	Select the ECA Block Supported between Yes or No. By default, the value is Yes.
Other Preferences	--
System Class	Select System Class from the following: <ul style="list-style-type: none"> • OBP • FCUBS • OBVAM • OBTF
Inter System Bridge GL	Select the specific GL to interface between the different ECA and Accounting systems.
API Version	<p>API Version option 'Revision Version 1' is only applicable for System Class FCUBS. Select API Version from the list of values.</p> <p>Select the API Version option 'Revision Version 1' to send the OBPM transaction reference in ECA handoff to FCUBS.</p>
O Auth Preferences	--
Token URL	Specify the Token URL.

Queue Authentication	--
Queue Authentication Required	Check this box to indicate that Queue Authentication is required for the Clearing Infrastructure System.
User ID	Specify the required User Name.
Password	Specify the password. The User Id and Password that you specify will be used for verification purposes. Password is encrypted and stored.

- [Clearing Infrastructure Summary](#)

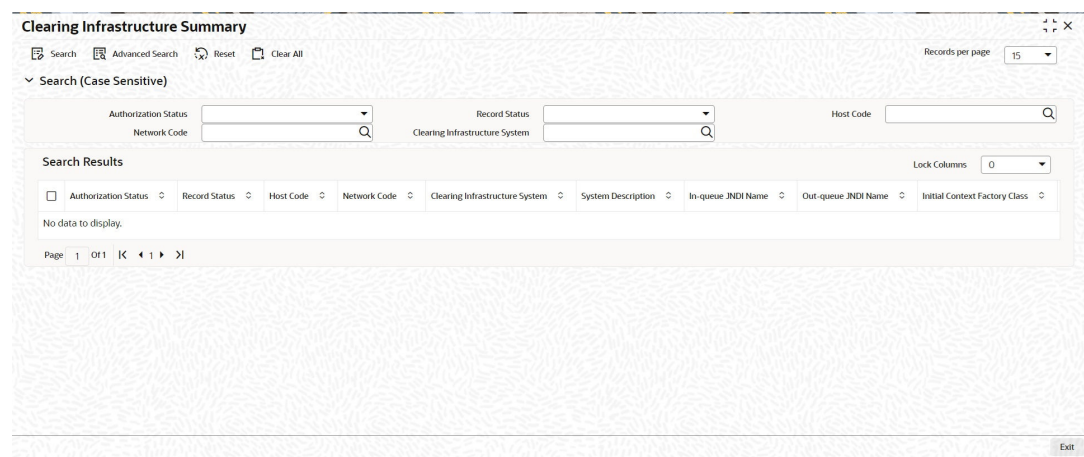

2.1.12.1 Clearing Infrastructure Summary

This Clearing Infrastructure screen allows user to view summary of clearing Infrastructure.

1. On Homepage, specify **PMSCLRMT** in the text box, and click next arrow.

Clearing Infrastructure Summary screen is displayed.

Figure 2-28 Clearing Infrastructure Summary

2. Search using one or more of the following parameters:

- Authorization Status
 - Record Status
 - Host Code
 - Network Code
 - Clearing Infrastructure System
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
 4. Double-click a selected record to open the detailed screen.

2.1.13 Document Management System

The Document Management System screen allows user to maintain Document Management system details in this screen.

1. On Homepage, specify **PMDDMSMT** in the text box, and click next arrow.
Document Management System screen is displayed.

Figure 2-29 Document Management System

2. Click **New** button on the Application toolbar.
3. On **Document Management System** screen, specify the fields.

Table 2-18 Document Management System - Field Description

Field	Description
Host Code	System defaults the host code of transaction branch on clicking 'New'.
Document Management System	Specify the Document Management System Code.
Description	Specify the description for Document Management System.
Communication Type	Select the Communication Type from the following: <ul style="list-style-type: none"> • Web Service • ReST service

Table 2-18 (Cont.) Document Management System - Field Description

2.1.13.1 Document Management System Maintenance Summary

1. On Homepage, specify **PMSDMSMT** in the text box, and click next arrow.
Document Management System Maintenance Summary screen is displayed.

Figure 2-30 Document Management System Maintenance Summary

The screenshot shows the 'Document Management System Maintenance Summary' screen. At the top, there are search options: 'Search', 'Advanced Search', 'Reset', and 'Clear All'. A 'Records per page' dropdown is set to 15. Below this is a 'Search (Case Sensitive)' section with three input fields: 'Authorization Status', 'Record Status', and 'Document Management System'. Each field has a search icon. Below the search fields is a 'Search Results' section with a table. The table has columns: 'Authorization Status', 'Record Status', 'Document Management System', 'Description', 'Host Code', 'Communication Method', and 'Communication Type'. The table currently shows 'No data to display.' At the bottom, there is a 'Page' indicator showing '1 of 1' and navigation arrows. An 'Exit' button is located at the bottom right.

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Document Management System
 - Host Code
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

2.2 Referral check for ECA Requests

You can mark ECA requests of the payment transactions as Referral required, so that referral processing can be done in the DDA system.

The Referral check can also be performed within OBPM by moving the transaction to ECA queue.

The Referral Preferences maintenance can be at three levels:

- Customer Service Model
- Customer
- Customer Account
- [Customer Service Model Referral Preferences](#)
- [Customer Referral Preferences](#)
- [Customer Account Referral Preferences](#)
- [External System Referral Processing](#)

If the Referral Type is maintained as 'External' for the ECA system, Referral preferences are applied while generating ECA request after Overdraft limit check.

- [Internal Referral Processing](#)

If the Referral Type maintained for the ECA System is 'Internal' and if, referral is required as per Customer account/customer/CSM level maintenances then the transaction is moved to ECA queue even if the ECA status is marked for auto cancellation.

2.2.1 Customer Service Model Referral Preferences

1. On Homepage, specify **PMDQACSM** in the text box, and click next arrow.
Customer Service Model Referral Preferences screen is displayed.

Figure 2-31 Customer Service Model Referral Preferences

2. Click **New** button on the Application toolbar.
3. On **Customer Service Model Referral Preferences** screen, specify the fields.
For more information on fields, refer to the field description below:

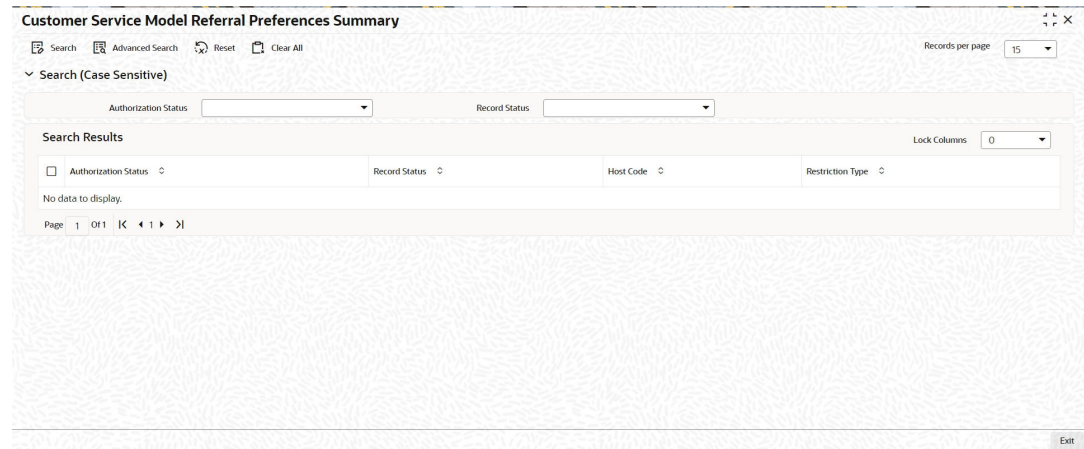

Table 2-19 Customer Service Model Referral Preferences - Field Description

Field	Description
Host Code	System defaults the host code of transaction branch on clicking 'New'.
Host Code Description	System defaults the description of the Host code displayed.
Customer Service Model	--
Restriction Type	Select the Restriction Type between Allowed and Disallowed. <div>  Note: If the Restriction type is 'Disallowed' and no CSM is listed, then the Referral is applicable to 'ALL'. </div>
Customer Service Model	Specify the Customer Service Model from the list of values.
Description	The Description is defaulted when Customer Service Model is selected.

Customer Accounts	--
Customer Account	Specify the Account Number from the list of values.
Account Name	System defaults the description of the Customer Account displayed.
Restriction Type	Select the Restriction Type between Allowed and Disallowed.

- [Customer Account Referral Preferences Summary](#)

2.2.3.1 Customer Account Referral Preferences Summary

The Customer Account Referral Preferences screen allows user to view Customer Account Referral Preferences details in the 'Customer Account Referral Preferences Summary' screen.

1. On Homepage, specify **PMSQAACC** in the text box, and click next arrow.

Customer Account Referral Preferences Summary screen is displayed.

Figure 2-36 Customer Account Referral Preferences Summary

The screenshot displays the 'Customer Account Referral Preferences Summary' interface. At the top, there's a search bar containing 'PMSQAACC' and a 'Search' button. Below the search bar, there are two dropdown menus for 'Authorization Status' and 'Record Status'. The search results section shows 'No data to display.' and a table with columns for 'Authorization Status', 'Record Status', and 'Host Code'. The page number is 1 of 1.

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
3. Once you specified the parameters, click the **Search** button.
The system displays the records that match the search criteria.
4. Double click a record or click the **Details** button after selecting a record to view the detailed screen.

2.2.4 External System Referral Processing

If the Referral Type is maintained as 'External' for the ECA system, Referral preferences are applied while generating ECA request after Overdraft limit check.

Whether Referral is allowed or disallowed for the customer is determined by the Referral Preferences maintained for Account/Customer/CSM.

If Referral is required based on the preferences, REFERRAL_REQD flag is ECA request is set as 'Y' when the request is sent to FCUBS.

 **Note:**

- If No maintenance is available for Account/Customer/CSM, the 'Referral required' flag value is null.
- If ECA request is containing multiple entries, referral check is done for each account and amount.

2.2.5 Internal Referral Processing

If the Referral Type maintained for the ECA System is 'Internal' and if, referral is required as per Customer account/customer/CSM level maintenances then the transaction is moved to ECA queue even if the ECA status is marked for auto cancellation.

2.3 Network & Source Maintenances

Network related maintenances helps in defining various parameters as required by the bank, for processing Network preferences and parameters.

Skip Currency Holiday Check	<p>Specify the Skip Currency Holiday Check from the following:</p> <ul style="list-style-type: none"> • Yes • No <div style="border: 1px solid #ccc; background-color: #e6f2ff; padding: 10px; margin-top: 10px;"> <p> Note:</p> <p>The Skip Currency Holiday Check option is applicable for Book Transfer, Outbound / Inbound transactions of RTGS and SEPA CT.</p> <p>To skip the currency holiday check, you can select Skip Currency Holiday Check option list as Yes.</p> <p>The currency holiday check is skipped under the following conditions:</p> <ul style="list-style-type: none"> • Transaction is not a cross currency. • The External Exchange Rate is not applicable. • The External Exchange Rate is applicable but the transfer amount is less than the Small FX Limit. </div>

- [Network Currency Preferences Summary](#)

2.3.3.1 Network Currency Preferences Summary

1. On Homepage, specify **PMSNCPRF** in the text box, and click next arrow.
Network Currency Preference Summary screen is displayed.

Figure 2-42 Network Currency Preference Summary

The screenshot shows the 'Network Currency Preferences Summary' interface. At the top, there's a search bar with 'PMSNCPRF' entered. Below the search bar, there are several filters: Authorization Status, Record Status, Network Code, Host Code, Transaction Type, Transfer Currency, Minimum Amount, Maximum Amount, Small FX Limit Amount, and Small FX Limit Currency. The table below these filters is empty, showing 'No data to display.' The page number is 1, and there are navigation controls at the bottom.

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Network Code
 - Host Code
 - Transaction Type
 - Transfer Currency
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
4. Double-click a selected record to open the detailed screen.

2.3.4 Network Preferences

The Network Preferences screen allows users to maintain network preferences for combination of Network and transaction type.

In this screen, user can specify the following preferences:

- Exchange Rate Preferences
 - Payment Preferences for Inbound and Outbound transactions
 - Faster Payment Preferences
 - Preferences for NACHA Payment
 - Value Dating Preferences
 - RTGS Outbound Preferences
1. On Homepage, specify **PMDNWPRF** in the text box, and click next arrow.
Payment Network Preferences Detailed screen is displayed.

Figure 2-43 Payment Network Preferences Detailed

The screenshot displays the 'Payments Network Preferences Detailed' window. At the top, there are search fields for Host Code, Network Code, and Transaction Type (set to 'Outgoing'), along with a search icon. The main area is organized into two columns of preference sections. The left column includes 'Exchange Rate Preference' (with fields for FX Rate Type, Rate Override Variance, Rate Stop Variance, External Exchange Rate Applicable, External FX Cancel, and Re-Do FX for R Transactions), 'Accounting Preference' (with Accounting before Messaging), 'Faster Payment Preferences' (with Time-Out Period), 'Value Dating Preferences' (with Branch Holiday Check and Instruction Date Basis), and 'RTGS Outgoing Preferences' (with Sender Notification Required, Message with Cover as RTGS, and RTGS with future value date). The right column includes 'Host Code Description' (with fields for Host Code Description, Network Description, Network Type Description, and Priority), 'Payment Preferences' (with Recall Allowed, Recall By Bank Allowed In, Recall Days/Months, Recall By Bank / RFRO Allowed In, Recall Request Days/Months, and Dispatch On Us Transfer), 'Payment Preferences-For Incoming' (with Return Days, Recall Response Days, Beneficiary Name Match Required, Beneficiary Validation Currency, and Beneficiary Validation Amount), 'Preferences for Inquiries' (with Inquiry Allowed In(Months) and Inquiry Response Days), and 'Preferences for NACHA Payment' (with Network Lead Days - Credit Transfers, Network Lead Days - Direct Debits, and Split Accounting Preferences). At the bottom right, there are 'Audit' and 'Exit' buttons.

2. Click **New** button on the Application toolbar.
3. On **Payment Network Preferences Detailed** screen, specify the fields.

For more information on fields, refer to the field description below:

Table 2-25 Payment Network Preferences Detailed - Field Description

Field	Description
Network Code	Specify the network code. Alternatively, user can select the network code from the option list. The list displays all valid network codes applicable for the logged in Host, maintained in the system.
Network Description	System displays the network code description for the selected network.
Host Code	System defaults the host code of transaction branch on clicking 'New'.
Host Code Description	System defaults the description of the Host code displayed.
Transaction Type	Select Transaction Type from the following: <ul style="list-style-type: none"> • Incoming • Outgoing (Default)
Network Type Description	The system displays the Network Type Description based on the network code selected.
Priority	Select the priority from the drop-down values. "0" indicates 'Low' priority and "9" indicates 'High' priority. Different priorities can be set for the networks and payment types.
Exchange Rate preferences	--
FX Rate Type	Specify the FX rate type. Alternatively, you can select the FX rate type from the option list. The list displays all open and authorized exchange rate types maintained in the system.
Rate Override Variance	Specify the rate override variance. If the variance between the exchange rate manually provided for a payment with internal rate exceeds the override limit specified, then the system displays a message and the transaction is saved.
Rate Stop Variance	Specify the rate stop variance. The system displays an error message if the exchange rate variance exceeds the stop limit.
External Exchange Rate Applicable	Check this box to receive the exchange rate from the external system.
External FX Cancel	Specify the External FX cancel option for the selected network. Options are - Auto /Manual. System defaults the value as Auto. <div style="border: 1px solid #0070C0; padding: 10px; margin-top: 10px;"> <p> Note:</p> <ul style="list-style-type: none"> • On cancellation of queue or rollover of a transaction which has completed external FX processing, a reversal request is handed off to FX system automatically, when 'Auto' option is selected. • On queue cancellation or rollover of a cross-currency transaction with External FX reference, the transaction is moved to a FX Unwind Queue before processing the action, when the 'External FX Cancel' mode is chosen as Manual </div>

Table 2-25 (Cont.) Payment Network Preferences Detailed - Field Description

Field	Description
Re-Do FX for R Transactions	Check this box if foreign exchange has to be recomputed for the R/ return transactions. When this box is not checked, the old FX values computed are picked up.
Payment Preferences-For Outbound	--
Recall Allowed	Check this box if the network allows recall of an Outbound payment already sent.
Recall By Bank Allowed In	Select Recall By Bank/ RFRO Allowed in from the following: <ul style="list-style-type: none"> • Days • Months (Default)
Recall Days/Months	Specify the number of days within which the payment originating bank has to recall an Outbound payment. The days/months specified is used to validate the recalls initiated by Originator Bank. User can maintain the recall period in Days/Months. Days are counted as branch business days and months as calendar months. Default option is 'Days'.
Recall By Bank/ RFRO Allowed in	Select Recall By Bank/ RFRO Allowed in from the following: <ul style="list-style-type: none"> • Days • Months (Default)
Recall Request Days/ Months	Specify the number of days/months within which the Recall request is allowed. If the originator name is present for a recall it is considered as a request for recall from the customer and the recall request allowed period is validated.
Dispatch On Us Transfer	Check this box if the network allows Dispatch On Us Transfer for an Outbound payment.
Payment Preferences-For Inbound	--
Return Days	Specify the number of days within which the payment originating bank has to return an Inbound payment.
Recall Response Days	Specify the number of days within which the beneficiary bank has to respond to an Inbound recall request. Recall days is considered as working days based on Network holidays. System validates if the Recall days is applicable for payment types SCT Inst payment or ACH with transaction type as Outbound. Recall response days is applicable to SCT Inst payment or ACH payment types with transaction type as Inbound.
Beneficiary Name Match Required	Check this box to match the beneficiary name with the customer account name linked to the beneficiary account for Inbound payments.
Accounting Preference	--

Table 2-25 (Cont.) Payment Network Preferences Detailed - Field Description

Field	Description
Accounting before Messaging	<p>Check the preference for accounting during the Outbound faster payment transaction processing.</p> <p>If the 'Accounting Before Messaging' field is checked in Network Preference (PMDNWPRF) for the Network code with Transaction Type 'Outgoing' combination, then accounting handoff gets triggered first and then faster payment message is generated.</p> <p>If the 'Accounting Before Messaging' field is Unchecked in Network Preference (PMDNWPRF) for the Network code with Transaction Type 'Outgoing' combination, then faster payment message gets generated and sent to the clearing network. On receiving the response from the clearing network, the accounting entries are posted.</p> <p>Check the preference for accounting during the Outbound Cross Border/RTGS transaction processing.</p> <p>If the 'Accounting Before Messaging' checkbox is selected in Network Preference (PMDNWPRF) for the Network code with Transaction Type 'Outgoing' combination, then accounting handoff generation and payment message generation happen in parallel. But the generated message handed off only after receiving a positive accounting response.</p> <p>If the 'Accounting Before Messaging' field is unchecked in Network Preference (PMDNWPRF) for the Network code with Transaction Type 'Outgoing' combination, then accounting handoff generation, the payment message generation and handoff all happen in parallel.</p>
Faster Payment Preferences	--
Time-Out period (In Seconds)	<p>Specify time out period in seconds.</p> <p>Time out period is allowed to be maintained for both Outbound and Inbound with different time in seconds. For Outbound payments, investigation message is generated after time out period. For Inbound transaction, the system validates whether the message is received after the time out seconds or the response is sent within the time out seconds. If the validation fails, then reject response is sent.</p>
Payment Preferences-For Incoming	--
Return Days	Specify Return Days.
Recall Response Days	Specify Recall Response Days.
Beneficiary Name Match Required	Specify Beneficiary Name Match Required.
Value Dating Preferences	--
Branch Holiday Check	Check this flag to indicate that Branch holiday check should be done for activation date as part of processing of the Outbound or Inbound payment.
Debit value date basis for outbound payments	<p>Select the Debit value date basis for outbound payments from the following:</p> <ul style="list-style-type: none"> Activation Date - When the debit value date basis is Activation Date, then debit value date is the same as the derived Activation date. Instruction Date - If the basis is instruction date, the debit value date is derived as Instruction date – Debit float days.
Instruction Date Basis	<p>Select Instruction Date Basis from the following:</p> <ul style="list-style-type: none"> Transfer Currency Calendar Days Transfer Currency Working Days

Table 2-25 (Cont.) Payment Network Preferences Detailed - Field Description

Field	Description
Preferences for Inquiries	--
Inquiry Allowed In (Months)	Specify Inquiry Allowed In Months, irrespective of the transaction type selected.
Inquiry Response Days	Specify Inquiry Response Days, irrespective of the transaction type selected.
RTGS Outbound Preferences	--
Sender Notification Required	Check this flag to indicate that for an RTGS network MT012 flag is required for every payment message.
Message with Cover as RTGS	Select Message with Cover as RTGS from the following: <ul style="list-style-type: none"> Release Immediately (default option) 'Release on MT 012 receipt'. This appears if the 'Sender Notification Required' flag is checked in Network preferences.
RTGS with future value date	<p>The options are 'Release immediately' or 'Release on value date'. Select the required one.</p> <div>  Note: <ul style="list-style-type: none"> If RTGS message is generated with future value date, it will be released immediately or on value date based on the preference maintained in 'PMDNWPRF'. For an outbound cross-border transaction, if the cover is sent as RTGS message, the related MT103 payment message will be released immediately only if the preference 'Message with cover as RTGS' option is 'Release immediately'. If the preference is maintained as 'Release on MT012 receipt', only cover message will be released first. The related MT 103 message will be held in the Outbound message browser. MT103 will be released only on receipt of MT012 sender notification for the cover RTGS message. MT 103 message status would be Cover acknowledgment Rejected status and Accounting entries would be reversed. </div>
Preference for NACHA Payments	--
Network Lead Days- Credit Transfers	Specify the network lead days specific to the Credit Transfers.
Network Lead Days- Direct Debits	Specify the network lead days specific to the Direct Debit transactions.
Split Accounting Preferences	:
Early Nostro/Vostro Entry Posting	Select the values from either Yes or No. This field is allowed only if the Network Type is either Cross Border MT or RTGS MT and Transaction Type is 'Incoming'.

- [Network Preference Summary](#)

2.3.4.1 Network Preference Summary

1. On Homepage, specify **PMSNWPRF** in the text box, and click next arrow.
Payments Network Preference Summary screen is displayed.

Figure 2-44 Payments Network Preference Summary

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Network Code
 - Transaction Type
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
4. Double-click a selected record to open the detailed screen.

2.3.5 Network Holidays

The Network Holidays screen allows users to specify working days and holidays for the year for the payment network. This function is accessible at a country code.

1. On Homepage, specify **PMDNWHOL** in the text box, and click next arrow.
Network Holidays Detailed screen is displayed.

Figure 2-45 Network Holidays Detailed

2. Click **New** button on the Application toolbar.
3. On **Network Holidays Detailed** screen, specify the fields.

For more information on fields, refer to the field description below:

Table 2-26 Network Holidays Detailed - Field Description

Field	Description
Network Code	Select the clearing network code from the adjoining option list. All valid clearing network codes are displayed in this list.
Network Description	System defaults the description of the Network Code selected.
Network Type Description	System defaults the Network Type Description on the Network selected.
Host Code	System defaults the host code of transaction branch on clicking 'New'.
Year	<p>Select the calendar year details for which the network calendar is to be maintained.</p> <p>Click the Refresh button after populating the above mentioned details. The calendar of the selected year is displayed. Now, you can click the specific dates on the calendar to define the holidays.</p> <p>Click a date in the calendar, then system changes the color of the date text indicating whether it is a holiday or a working day. The colors applied to the text and their indications are as follows:</p> <ul style="list-style-type: none"> • Data Text Color - Black, it indicates Working Day. • Data Text Color - Red, it indicates Holiday. <p>System changes the color of the text every time you click a date. Click the desired date until you need to set it to the color as per requirement.</p> <p>The details on each day of a month are displayed in the 'Holiday Calendar Details' section.</p>

- [Network Holidays Maintenance Summary](#)

2.3.5.1 Network Holidays Maintenance Summary

1. On Homepage, specify **PMSNWHOL** in the text box, and click next arrow.
Network Holidays Summary screen is displayed.

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Year
 - Network Code
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
4. Double-click a selected record to open the detailed screen.

2.3.6 Network Cutoff Time Extension

The Network Cutoff Time Extension screen allows users to maintain Network cutoff time extensions for a particular day/current day. This maintenance is valid for the effective date maintained.

1. On Homepage, specify **PMDNCTEM** in the text box, and click next arrow.
Network Cutoff Time Extension Detailed screen is displayed.

Figure 2-47 Network Cutoff time Extension Detailed

2. Click **New** button on the Application toolbar.
3. On **Network Cutoff Time Extension Detailed** screen, specify the fields.

For more information on fields, refer to the field description below:

Table 2-27 Network Cutoff Time Extension Detailed - Field Description

Field	Description
Host Code	System defaults the host code of transaction branch on clicking 'New'.
Effective Date	This date is defaulted as current date. User can modify the date to any future date.
Network Code	Specify Network Code form the list of values. All valid Network code applicable for the Host are listed except for Networks maintained for the 'Cross Border' payment type.
Network Description	Based on the Network selected Network Description is populated.
Network Type Description	System defaults the Network Type Description on the Clearing Network selected.
Network Cutoff Standard Time	--
Cut Off Hour	Network Cutoff Standard Time is defaulted as the cutoff time available in Network Maintenance. This field is disabled.
Cutoff Minute	Network Cutoff Standard Time is defaulted as the cutoff time available in Network Maintenance. This field is disabled.
Interbank Cutoff Hour	Network Cutoff Standard Time is defaulted as the cutoff time available in Network Maintenance. This field is disabled.
Interbank Cutoff Minute	Network Cutoff Standard Time is defaulted as the cutoff time available in Network Maintenance. This field is disabled.
Extended Time	--
Cutoff Hour	Specify the network cut-off hour.
Cutoff Minute	Specify the network cut-off minute.
Interbank Cutoff Hour	Specify the hour for the Interbank Cutoff.
Interbank Cutoff Minute	Specify the minute for the Interbank Cutoff.

- [Network Cutoff Time Extension Summary](#)

2.3.6.1 Network Cutoff Time Extension Summary

1. On Homepage, specify **PMSNCTEM** in the text box, and click next arrow.
Network Cutoff Time Extension Summary screen is displayed.

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Host Code
 - Network Code
 - Effective Date
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
4. Double-click a selected record to open the detailed screen.

2.3.7 Source

Source maintenance screen is used to identify an external system or source from which payments system receives a payment request.

Source codes are defined Host specific. User's logged in Host is defaulted while creating a new source code.

1. On Homepage, specify **PMDSOURCE** in the text box, and click next arrow.
Source Maintenance Detailed screen is displayed.

Figure 2-49 Source Maintenance Detailed

2. Click **New** button on the Application toolbar.
 3. On **Source Maintenance Detailed** screen, specify the fields.
- For more information on fields, refer to the field description below:

Table 2-28 Source Maintenance Detailed - Field Description

Field	Description
Source Code	Specify a unique Source Code. User has to input a valid source code based on the Source Type selected. You can opt the source type as 'Manual Input, when the Source Code is input as MANL.
Host Code	System defaults the host code of transaction branch on clicking 'New'.
Description	Specify a brief description on the source code.
Source Type	Select Source Type from the following: <ul style="list-style-type: none"> • Upload • Manual Input
MIS Group	Select the required MIS Group.
UDF Group	Select the required UDF Group.
Prefunded Payments	--
Prefunded Payments Allowed	Check this box to indicate that Prefunded payments are allowed for the source.
Prefunded Payments GL	Specify the required Prefunded Payments GL from the list of values. The GL specified is defaulted in the Transaction input screens for that Source, when Prefunded Payments allowed checkbox is checked.
Pricing Applicable	Check this box, if pricing is applicable for prefunded payments. Also, this flag is enabled only if 'Prefunded Payments' flag is checked.
Auto-process Claims for Prefunded Payments	Check this box to indicate if inbound charge claim is required to be auto processed in case if original payment was a prefunded payment.
Duplicate Check Fields	--

Table 2-28 (Cont.) Source Maintenance Detailed - Field Description

Field	Description
Duplicate Check Period in Days	<p>Specify the days used for Duplicate Check.</p> <div>  Note: For the payment types, ACH and NACHA, the days pick up is from Non urgent Preferences. For all other payment types, the days pick up is from urgent preferences. </div>
Accounting & Message Preference	--
Preferred Reference	<p>Specify which reference number needs to be sent on Tag 20 - Sender's References field, in the outbound cross border messages.</p> <ul style="list-style-type: none"> Transaction Reference: The unique transaction reference number generated by the system gets populated on the Tag 20. Source Reference: The source reference number that is input/ given by external systems gets populated on the Tag 20 - Sender's Reference field. <div>  Note: This preferred reference number, is also passed on the accounting entries that are handed off to the DDA system. </div>
Other Preferences	--
SSI Handling	<p>Select the option for SSI Handling.</p> <ul style="list-style-type: none"> Not Required-Default SSI label pick up is not applicable for transactions received from this source. Default and Verify-The beneficiary/routing details is fetched from default SSI label if the transaction is received without SSI label and if default SSI label is available for the customer network and currency. The transaction is moved to a Settlement Review Queue for user verification. Default-The beneficiary/routing details is fetched from default SSI label if the transaction is received without SSI label and if default SSI label is available for the customer network and currency. No verification is required in this case and transaction processing proceeds to the next step.
Notification Required flag	This flag denotes whether notification generation is required for the source.
Validate Debit Authority	This flag denotes whether debit authorities to be validated every-time for the source.

Table 2-28 (Cont.) Source Maintenance Detailed - Field Description

Field	Description
Inbound SWIFT	<p>This flag indicates that the Inbound SWIFT transactions will be created with the source code flagged for Inbound SWIFT. This flag can be opted for single source per host.</p> <div>  Note: <ul style="list-style-type: none"> When the Inbound SWIFT option is not checked for a particular Source Code (i.e. MANL/ SWIFT/SWIFT), then the upload or transaction creation for Inbound SWIFT will be failed. When Inbound SWIFT option is checked for respective Source Codes, then Inbound SWIFT transactions are allowed. </div>
Allow External Audit Info	<p>This flag is to Allow External Audit Info transactions.</p> <div>  Note: <p>Refer to the External Audit Info Support section for this field details.</p> </div>
Allow Back Value Dated Book Transfer	<p>This Flag for Allowing Back Dated Book Transfer Transactions.</p> <div>  Note: <ul style="list-style-type: none"> If Allow Back Value Dated Book Transfer is checked, the Instruction Date is same as source. no Branch or Currency Holiday is applied. Activation Date gets defaulted to current branch date. If Allow Back Value Dated Book Transfer is not checked, the Instruction Date is derived based on Branch or Currency Holiday. Activation Date gets defaulted to current branch date. Even if "Allow Back Value Dated Book Transfer" flag is Yes on Source Maintenance Detailed (PMDSORCE) screen, in case of Cross Currency transactions system updates the Instruction Date with the Value Date received from the External Rate system. </div>
PSD Applicable	<p>This flag denotes whether PSD - charges and claim are applicable for the source. Only when this option is selected, it is allowed for the respective sources.</p>
Credit To GL Payments	--

Table 2-28 (Cont.) Source Maintenance Detailed - Field Description

Field	Description
Inbound credit to GL	<p>This flag can be checked to replace the credit account of the Inbound payments received from the source with the Intermediary Credit GL maintained.</p> <div>  Note: <ul style="list-style-type: none"> The system verifies whether 'Inbound Credit to GL' is checked for the source if a transaction is input or received with 'Credit to GL' flag checked. If it is not preferred for the source, error is displayed. It is not mandatory to have a credit account /customer for the transaction if credit to GL flag is checked for the transaction. On enrich or save the system populates the credit account as the 'Intermediary Credit GL' maintained for the source. If credit account or customer is available, it is retained. However, all customer/ account related validations are skipped. Credit account currency is set same as transfer currency. </div>
Intermediary Credit GL	<p>Select the Intermediary Credit GL from the list of values.</p> <div>  Note: <ul style="list-style-type: none"> Cutoff processing, Price pick up and External account validation are skipped for transaction with 'Credit to GL' flag checked. Sanction screening is applicable by default. While posting the credit accounting, the credit account is be considered as 'Intermediary Credit GL' maintained for the source. </div>
Pricing Applicable	<p>Check this box, if pricing is applicable for Credit to GL payments. Also, this flag is enabled only if 'Credit To GL Payments Checkbox' flag is checked.</p>
Auto Queue Preferences	--
System Action	<p>This field has the drop-down options Auto Rollover, Cancel or Retain in Queue. This preference maintained for the source is considered for the prefunded payments in the following scenarios:</p> <ul style="list-style-type: none"> For processing a payment which is pending in cutoff/network cutoff exception queues during end of the day. For deciding the next step of processing when a payment is released from SC on a future date. When the External Credit approval status received requires system action preference application.

- [Source Maintenance Summary](#)

2.3.7.1 Source Maintenance Summary

The Source Maintenance Summary screen allows users to view all payment sources maintained in the system.

1. On Homepage, specify **PMSSORCE** in the text box, and click next arrow.
Source Maintenance Summary screen is displayed.

Figure 2-50 Source Maintenance Summary

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Source Code
 - Duplicate Check Period in Days
 - MIS Group
 - UDF Group
 - Host Code
 - Prefunded Payments GL
 - SSI Handling
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
4. Double-click a selected record to open the detailed screen.

2.3.8 Source Network Preferences

The Source Network Preferences screen allows users to maintain Source Network Preferences for capturing preferences at source and network level for each transaction type.

Usage of Source Network Preferences

- Authorization re-key required flag is added in Source Network preferences. If re-key is required, it is possible to maintain the re-key fields applicable.

- The list of fields are populated based on the payment type linked to the Network selected.
 - Static maintenance is provided for populating available field values for each payment type/ transaction type.
 - All applicable re-key fields is part of the Authorization screen. For any of the available fields, if re-key is not applicable, only fields selected for re-key will be displayed. Other fields will not be available in the Authorization screen. In authorization screen, fields for which re-key is applicable will be null and editable by user.
 - On processing authorization, the system checks whether re-key values by the authorizer are matching with actual values available as part of transaction details.
1. On Homepage, specify **PMSORNW** in the text box, and click next arrow.
Source Network Preferences Detailed screen is displayed.

Figure 2-51 Source Network Preferences Detailed

2. Click **New** button on the Application toolbar.
3. On **Source Network Preferences Detailed** screen, specify the fields.
For more information on fields, refer to the field description below:

Table 2-29 Source Network Preferences Detailed - Field Description

Field	Description
Host Code	System defaults the host code of transaction branch on clicking 'New'.
Source Code	Specifies all valid source codes applicable.
Description	System displays the description of the source code.
Network Code	Specifies all valid network codes applicable to the host.
Network Description	Specifies the description of the network.
Transaction Type	Specifies the type of transaction. The options are Outbound and Inbound.

Table 2-29 (Cont.) Source Network Preferences Detailed - Field Description

Field	Description
Network Type Description	System displays the Network Type Description based on the Network Code.
Preferences	--
Authorization Re-key Required	Check this box to enable authorization in the transaction screens for the fields specified in Authorization Rekey fields. System validates the authorization fields for all the networks maintained.
MIS Group	Specify the MIS group to be used for this Source, Network & Transaction Type combination. This is an optional field.
UDF Group	Specify the UDF group to be used for this Source, Network & Transaction Type combination. This is an optional field. <div>  Note: <ul style="list-style-type: none"> If MIS & UDF are not specified on this screen, then the same is picked up from Source maintenance (PMDSORCE). The defaulted MIS & UDF group values are amendable at transaction level. </div>
Sanctions System	--
Sanction Check Required	Sanctions check is done during the processing of the transactions, if this flag is checked.
Pricing	--
External Pricing Applicable	Check this box to introduce an External Pricing System Maintenance.
Authorization Limits	--
Authorization Limit Currency	Select any valid currency in which the Authorization Limit amounts are maintained.
Authorization Limit 1	Payment Transactions are moved to Authorization Limit 1 Queue if transaction amount exceeds the authorization limit 1 maintained.
Authorization Limit 2	The transactions are moved to Authorization Limit Level 2 Queue if transaction amount exceeds the authorization limit 2 maintained. <div>  Note: <p>Authorization Limits should be greater than or equal to Minimum Network Limit maintained and should be less than or equal to Maximum Network Limit. Authorization Limit 2 should be greater than Authorization Limit 1.</p> </div>

Table 2-29 (Cont.) Source Network Preferences Detailed - Field Description

Field	Description
Network Release Limit	Any India RTGS transaction with Transfer Amount greater than the Network release Limit specified here, is moved to Network Cutoff Queue.  Note: This is applicable only for India RTGS.
Accounting Preference	--
Debit Entry on	Select Debit entry posting date preference from the following: <ul style="list-style-type: none"> On Activation Date (Default) On Value Date
Credit Entry on	Select Credit entry posting date preference from the following: <ul style="list-style-type: none"> On Activation Date (Default) On Value Date  Note: Default value for these fields can be changed only if the: <ul style="list-style-type: none"> Network Type Code of the selected network is 'Cross Border' / 'RTGS' Transaction Type is 'Outgoing' / 'Incoming'
Authorization Rekey Fields	User can define the authorization rekey fields validated during the transaction authorization.
Rekey Field Name	Select the required field that requires re-key authorization. All valid fields are listed: <ul style="list-style-type: none"> CR_AC_NO (Credit Account Number) CR_IBAN (Creditor IBAN) DR_AC_IBAN (Debtor IBAN) DR_AC_NO (Debit Account Number) INSTRUCTION_DATE (Instruction Date) TRANSFER_AMT (Transfer Amount) TRANSFER_CCY (Transfer Currency)
Field Description	This field is applicable based on the Rekey field selected.

- [Source Network Preferences Summary](#)

2.3.8.1 Source Network Preferences Summary

1. On Homepage, specify **PMSSORNW** in the text box, and click next arrow.
Source Network Preference Summary screen is displayed.

Figure 2-52 Source Network Preference Summary

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Host Code
 - Network Code
 - Source Code
 - Transaction Type
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
4. Double-click a selected record to open the detailed screen.

2.4 Customer Preferences Maintenances

Customer related maintenances helps in defining various parameters as required by the bank, for processing Customer preferences.

- [Customer Service Model](#)
- [Customer Service Model Linkage](#)

2.4.1 Customer Service Model

Service Model classifies the customers into various level.

1. On Homepage, specify **PMDSRMDL** in the text box, and click next arrow.
Customers Service Model Detailed screen is displayed.

Figure 2-53 Customers Service Model Detailed

2. Click **New** button on the Application toolbar.
3. On **Customers Service Model Detailed** screen, specify the fields.

For more information on fields, refer to the field description below:

Table 2-30 Customers Service Model Detailed - Field Description

Field	Description
Host Code	System defaults the host code of transaction branch on clicking 'New'.
Host Code Description	System defaults the description of the Host code displayed.
Customer Service Model	Specify the unique service model code for a customer.
Customer Service Model Description	Specify the brief description about the customer service model entered.
Priority Level	This is an optional maintenance. Specify the Priority Level from values Null or 1 to 9. This is applicable to all customers linked to this CSM unless customer level priority is maintained.

- [Customer Service Model Summary](#)

2.4.1.1 Customer Service Model Summary

1. On Homepage, specify **PMSSRMDL** in the text box, and click next arrow.
Customer Service Model Summary screen is displayed.

Figure 2-54 Customer Service Model Summary

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Customer Service Model
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
4. Double-click a selected record to open the detailed screen.

2.4.2 Customer Service Model Linkage

Customers can be classified into different class/categories such as Elite, Prime, Platinum, Regular Customer etc. You can link a customer to specific customer service model using 'Customer Service Model Linkage Detailed' screen.

1. On Homepage, specify **PMDCSMLK** in the text box, and click next arrow.
Customer Service Model Linkage Detailed screen is displayed.

Figure 2-55 Customer Service Model Linkage Detailed

2. Click **New** button on the Application toolbar.

- On **Customer Service Model Linkage Detailed** screen, specify the fields.
For more information on fields, refer to the field description below:

Table 2-31 Customer Service Model Linkage Detailed - Field Description

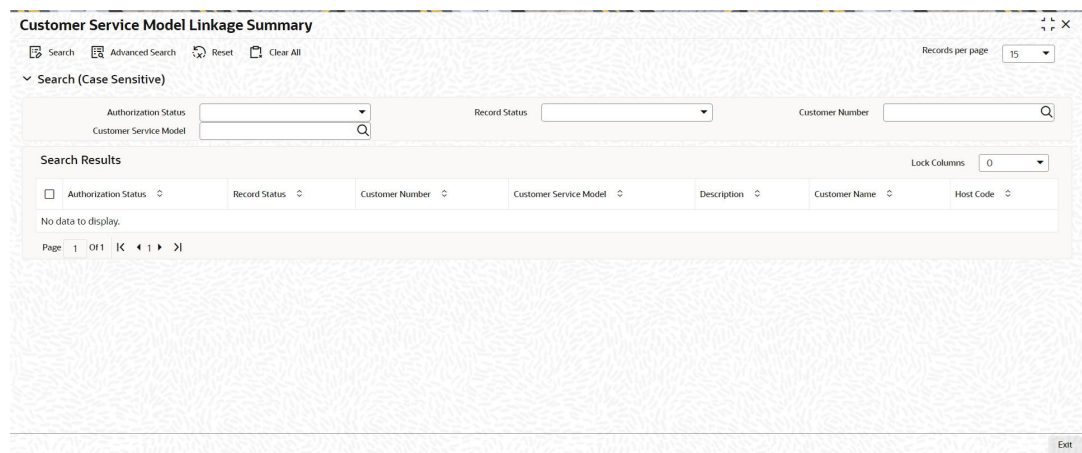

Field	Description
Host Code	System defaults the host code of transaction branch on clicking 'New'.
Host Code Description	System defaults the description of the Host code displayed.
Customer Number	Select the customer number for linking the service model.
Customer Name	System defaults the Customer Name based on the Customer Number selected.
Customer Service Model	<p>Select the Customer Service Model from the list of values available to link with the Customer Number selected.</p> <div>  Note: Customer Service Model can be defined through - 'Customer Service Model Detailed' screen (PMDSRMDL). </div>
Description	<p>System displays the Description maintained for the Customer Service Model selected.</p> <p>After capturing the above details, save the maintenance by clicking Save button.</p>

- [Customer Service Model Linkage Summary](#)

2.4.2.1 Customer Service Model Linkage Summary

The Customer Service Model Linkage Summary screen allows user to use Customer Model linkage to Customers.

- On Homepage, specify **PMSCSMLK** in the text box, and click next arrow.
Customer Service Model Linkage Summary screen is displayed.

Figure 2-56 Customer Service Model Linkage Summary

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Customer Number
 - Customer Service Model
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
4. Double-click a selected record to open the detailed screen.

2.4.3 Settlement Instructions

The Settlement Instructions screen allows users to maintain standard settlement instruction (SSI) for the customer and a beneficiary.

The following are party details can be maintained for a customer & SSI Label for SWIFT/ RTGS payments:

- Beneficiary Institution/Ultimate Beneficiary
- Account with Institution
- Intermediary
- Sender to Receiver Information
- Remittance Details
- Receiver Correspondent
- Payment preferences for gpi payment & charge bearer
- Nostro Correspondent Credit /Debit account

Customer ID and SSI Label are unique combination to identify the settlement party details.

Facility for populating the beneficiary/routing details for a payment transaction based on the customer and SSI Label received in payment request is available.

User can mark one of the Settlement Instructions as the default instruction, and to fetch the beneficiary/routing details based on the default instruction if the SSI Label is not provided in the payment request.

Provision is given for viewing and authorizing the default SSI Label populated by the system when the payment requests are received from channels.

This screen also allows user to maintain the beneficiary details linked to a customer.

1. On Homepage, specify **PMDSSIMT** in the text box, and click next arrow.
Settlement Instruction Detailed screen is displayed.

Figure 2-57 Settlement Instruction Detailed

2. Click **New** button on the Application toolbar.
3. On **Settlement Instruction Detailed** screen, specify the fields.

Table 2-32 Settlement Instruction Detailed - Field Description

Field	Description
Host Code	System defaults the host code of transaction branch on clicking 'New'.
Host Code Description	System defaults the description of the Host code displayed.
Customer Number	Specify the customer number for whom beneficiary details are maintained. Alternatively, user can select from the option list. The list displays all valid customer numbers maintained in the system.
Customer Name	System displays the customer name for the customer number selected.
SSI Label	Specify the SSI label. Same SSI Label cannot be repeated for a customer, even though Network maintained is different. Every SSI Label is linked to a Network.
Email Id	Specify the email address of the customer.
National Identifier	Specify the National Identifier of the customer.
Mobile Number	Specify the mobile number of the customer.
	 Note: Email ID, Mobile Number and Nation Identifier fields are optional fields.
Network Details	--
Network Code	Specify the network code from the list of values. This is a mandatory field.
Network Description	System displays the description of the network based on the Network code selected.
Currency	Specify the currency from the list of values. This is a mandatory field.
Network Type Description	System displays the Network Type Description based on the Network elected.

Table 2-32 (Cont.) Settlement Instruction Detailed - Field Description

Field	Description
Bank Identifier	System displays the Bank Identifier based on the Network selected.
Default Settlement	Check this box to mark one of the SSI labels as 'Default Settlement' for a customer and network and currency combination.
Creditor Details	--
Name	Specify the Creditor Name.
Account Number	Specify the Creditor Account Number.
Account IBAN	Specify the Account IBAN.
Account Type (Proprietary)	Specify the Account Type.
Creditor Agent Details	--
BIC	Specify the BIC from the list of values.
Member ID	Specify the Bank Code from the list of values.
Bank Name	System displays the Bank Name based on the Member ID selected.

- [Settlement Instruction Summary](#)

2.4.3.1 SWIFT MT Routing

1. Settlement party details for Cross-border/RTGS payments is maintained in SWIFT routing sub-screen. Click the **SWIFT MT Routing** button at the bottom of the screen.

SWIFT MT Routing sub screen is displayed.

Figure 2-58 Settlement Instruction Detailed - SWIFT MT Routing

2. As per SR2021 guidelines, Network Validation Rule is validated to check the format of field 59F if provided in the maintenance, error message is displayed on clicking of **Save** button in case of Field 59F validation failure.

3. On **SWIFT MT Routing** sub screen, specify the fields.

Table 2-33 SWIFT MT Routing - Field Description

Field	Description
Host Code	System defaults the host code of transaction branch on clicking 'New'.
Customer Number	Specify the customer number for whom beneficiary details are maintained. Alternatively, you can select from the list of values. The list displays all valid customer numbers maintained in the system.
SSI Label	Specify the SSI label. Same SSI Label cannot be repeated for a customer, even though Network maintained is different. Every SSI Label is linked to a Network.
59: Ultimate Beneficiary	--
Account	Specify the Ultimate Beneficiary Account Number.
BIC	Specify the BIC from the list of values.
Name and Address1 - 4	Specify the name and address of the Ultimate Beneficiary in the lines specified.
Country	Specify the country from the list of values.
58: Beneficiary Institution	--
Party Identifier	Specify the party identifier details.
Bank Identifier Code	Specify the BIC from the list of values.
Name and Address1 - 4	Specify the name and address of the Beneficiary Institution in the lines specified.
Payment Preference	--
gpi Preferred	Check this box if gpi is preferred for the payment. This is applicable for cross-border payments.
Charge Whom	Select Charge Whom from the following: <ul style="list-style-type: none"> • SHA • BEN • OUR
Debit Nostro Account	Specify the Debit Nostro Account from the list of values.
Credit Nostro Account	Specify the Credit Nostro Account from the list of values.
57: Account With Institution	--
Party Identifier	Specify the party identifier details.
Bank Identifier Code	Specify the BIC from the list of values.
Name and Address1 - 4	Specify the name and address of the Institution in the lines specified.
56: Intermediary Bank	--
Party Identifier	Specify the party identifier details.
Bank Identifier Code	Specify the BIC from the list of values.
Name and Address1 - 4	Specify the name and address of the Intermediary Bank in the lines specified.
70: Remittance Information	--
Information 1 - 4	Specify the Remittance information details.
Receiver Details	--
Bank Identifier Code	Specify the BIC from the list of values.
54: Receiver's Correspondent	:

Table 2-33 (Cont.) SWIFT MT Routing - Field Description

Field	Description
Party Identifier	Specify the party identifier details.
Bank Identifier Code	Specify the BIC from the list of values.
Name and Address 1 - 4	Specify the name and address of the Receiver's Correspondent in the lines specified.
72: Sender To Receiver Info	--
Line 1 - 6	<p>Specify the sender to receiver details.</p> <div>  Note: The beneficiary details related fields in the main screen are disabled for input if the network selected is of payment type SWIFT/RTGS. If the Receiver provided in SSI label is not a currency correspondent, then cover is sent to default currency correspondent. Field 58 Beneficiary institution details can be specified only if the customer selected is of type 'Bank'. If Receiver correspondent is part of SSI label, then it is mandatory to provide Nostro Credit account details in the SSI label maintenance. </div>
72:Sender to Receiver Info for Cover Message	--
Line 1 - 6	<p>Specify the Sender to Receiver Info for Cover message in this field.</p> <p>On defaulting SSI label onto the payment transaction, field 72 for Sender to Receiver Info for Cover is populated to Cross border / RTGS screens and is sent in the cover message of outbound customer transfer.</p>

2.4.3.2 ISO Based Routing

1. Settlement party details for SWIFT CBPRPlus / TARGET2 ISO payments is maintained in ISO Based Routing sub-screen. Click the **ISO Based Routing** button at the bottom of the screen.

ISO Based Routing sub screen is displayed.

Figure 2-59 Settlement Instruction Detailed - ISO Based Routing

- As per SR2021 guidelines, Network Validation Rule is validated to check the format of field 59F if provided in the maintenance, error message is displayed on clicking of **Save** button in case of Field 59F validation failure.
- On **ISO Based Routing** sub screen, specify the fields.

Table 2-34 ISO Based Routing - Field Description

Field	Description
Host Code	System defaults the host code of transaction branch on clicking 'New'.
Customer Number	Specify the Customer Number for which SSI label to be maintained.
SSI Label	Specify the SSI label to be maintained.
Creditor Details - Party	--
Creditor Name	Specify the Name of the Creditor.
Creditor Account	Specify the Creditor Account Number.
Creditor IBAN	Specify the Creditor IBAN Number.
Creditor Account Currency	Specify the Creditor Account Currency from the list of values. Lists all valid currency.
Country of Residence	Specify the Country from the list of values. Lists all valid (open/authorized) country codes defined.
Creditor Details - Agents	--
BICFI	Specify the BICFI from the list of values. Lists all valid (Open/Authorized) BIC codes.
Clearing System Code	Specify the Clearing System Code from the list of values. Lists all ISO Clearing System codes.
Member Identification	Specify the Member Identification.
Creditor Agent Details	--
BICFI	Specify the BICFI from the list of values. Lists all valid (Open/Authorized) BIC codes.
Clearing System Code	Specify the Clearing System Code from the list of values. Lists all ISO Clearing System codes.
Member Identification	Specify the Member Identification.
Name	System defaults the name of the BIC selected.
Instructed Agent	--

Table 2-34 (Cont.) ISO Based Routing - Field Description

Field	Description
BICFI	Specify the BICFI from the list of values. Lists all valid (Open/Authorized) BIC codes.
Charge Information	:
Charge Bearer	Select Charge Bearer from the following: <ul style="list-style-type: none"> • DEBT • CRED • SHAR
Payment Preference	--
Debit Nostro Account	Specify the Debit Nostro Account from the list of values. This field is Debit Nostro for Inbound payments and it only lists Nostro accounts with SSI label currency.
Credit Nostro Account	Specify the Credit Nostro Account from the list of values. This field is Credit Nostro Account for outbound payments and it only lists Nostro accounts with SSI label currency.

2.4.3.2.1 ISO Based Routing - Payment Information

1. Click the **Payment Information** tab in the ISO Based Routing sub screen.

Figure 2-60 Instruction Detailed_ISO Based Routing - Payment Information

The screenshot shows the 'ISO Based Routing' sub screen with the 'Payment Information' tab selected. The interface includes several sections for data entry:

- Payment Type Information:** Contains fields for Instruction Priority (a dropdown), Local Instrument Code, Category Purpose Code, Local Instrument Proprietary, Category Purpose Value, Purpose Code, and Purpose value.
- Service Level Details:** Includes a checkbox for 'Service Level Code', a dropdown for 'Service Level Proprietary', and a message 'No data to display.' with a pagination bar showing 'Page 1 (0 of 0 items)'.
- Instruction for Creditor Agent:** Includes a checkbox for 'Code', a dropdown for 'Instruction Information', and a message 'No data to display.'
- Instruction for Next Agent:** Includes a checkbox for 'Instruction Information' and a message 'No data to display.'

At the bottom right, there are 'Cancel' and 'Save' buttons.

2. On **Payment Information** tab, specify the fields.

Table 2-35 Payment Information - Field Description

Field	Description
Payment Type Information	--
Instruction Priority	Specify from the list of values for Instruction Priority. The drop down list contains values 'HIGH' and 'NORM'.

Table 2-35 (Cont.) Payment Information - Field Description

Field	Description
Local Instrument Code	Specify from the list of values for Local Instrument Code. This list contains ISO 20022 Instrument codes.
Local Instrument Value	Specify the Local Instrument Proprietary value.
Purpose Code	Specify from the list of values for Purpose Code. This list contains ISO 20022 Purpose codes.
Purpose Value	Specify the Purpose Proprietary value.
Category Purpose Code	Specify from the list of values for Category Purpose Code. This list contains ISO 20022 Category Purpose codes.
Clearing System Code	Specify the Clearing System Code from the list of values. Lists all ISO Clearing System codes.
Category Purpose Value	Specify the Category Purpose Proprietary value.
Service Level Details	--
Service Level Code	Specify from the list of values for Service Level Code. This list contains ISO 20022 Service Level codes.
Service Level Proprietary	Specify the Service Level Proprietary value. <div>  Note: Only three occurrences of Service Level are allowed. If you input Service Level, either you input Code or Proprietary. </div>
Instruction for Creditor Agent	--
Code	Select from the list of values for code from the following: <ul style="list-style-type: none"> • CHQB • HOLD • PHOB • TELB
Instruction Information	Specify the Instruction Information. <div>  Note: Only two occurrences of Instruction For Creditor Agent are allowed. </div>
Instruction for Next Agent	--
Instruction Information	Specify the Instruction information to be given to the next agent in the payment chain. <div>  Note: Only two occurrences of Instruction For Creditor Agent are allowed. </div>

2.4.3.2.2 ISO Based Routing - Other Agents

1. Click the **Other Agents** tab in the ISO Based Routing sub screen.

Figure 2-61 Instruction Detailed_ISO Based Routing - Other Agents

The screenshot shows the 'ISO Based Routing' window with the 'Other Agents' tab selected. The window is divided into four tabs: 'Main', 'Payment Information', 'Other Agents', and 'Remittance Information'. The 'Other Agents' tab is active, displaying three main sections: 'Initiating Party', 'Ultimate Debtor', and 'Ultimate Creditor'. Each section contains a form with fields for 'Name', 'Country Of Residence', 'BICFI', 'Clearing System Code', 'Member Identification', and 'Name'. There are also buttons for 'Other Details' and 'Other Agent Details'. The 'Initiating Party' section includes an 'Instructing Reimbursement Agent' and an 'Intermediary Agent 1'. The 'Ultimate Debtor' section includes an 'Instructed Reimbursement Agent' and an 'Intermediary Agent 2'. The 'Ultimate Creditor' section includes a 'Third Reimbursement Agent Details' and an 'Intermediary Agent 3'. At the bottom right, there are 'Cancel' and 'Save' buttons.

2. On **Other Agents** tab, specify the following field details:

- Initiating Party
- Ultimate Debtor
- Ultimate Creditor
- Instructing Reimbursement Agent
- Instructed Reimbursement Agent
- Third Reimbursement Agent Details
- Intermediary Agent 1
- Intermediary Agent 2
- Intermediary Agent 3
- Other Details
- Other Party Details
- Other Agent Details

2.4.3.2.3 ISO Based Routing - Remittance Information

1. Click the **Remittance Information** tab in the ISO Based Routing sub screen.

Figure 2-62 Instruction Detailed_ISO Based Routing - Remittance Information

2. On **Remittance Information** tab, specify the fields:

Table 2-36 Remittance Information - Field Description

Field	Description
Unstructured Remittance Info	Specify the Unstructured Remittance Information.

2.4.3.3 Settlement Instruction Summary

The Settlement Instruction Summary screen allows users to view the summary of Settlement Instruction Maintenance.

1. On Homepage, specify **PMSSSIMT** in the text box, and click next arrow.
Settlement Instruction Summary screen is displayed.

Figure 2-63 Settlement Instruction Summary

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status

- Customer Number
 - SSI Label
 - Network Code
 - Currency
 - Bank Identifier
 - Default Settlement
- Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
 - Double-click a selected record to open the detailed screen.

2.4.4 Settlement Review Amend Allowed Fields

The Settlement Review Amend Allowed Fields screen allows users to capture the list of editable fields for SWIFT CBPRPlus / TARGET2 ISO Outbound transactions when transaction is repaired from Settlement Review Queue (PQSSSIQU).

- On Homepage, specify **PSDSRAMD** in the text box, and click next arrow.
Settlement Review Amend Allowed Fields screen is displayed.

Figure 2-64 Settlement Review Amend Allowed Fields

The screenshot shows the 'Settlement Review Amend Allowed Fields Detailed' window. At the top, there are search filters: 'Host Code', 'Host Code Description', 'Function Id', and 'Network Code'. Below these is a section titled 'Template Amend Field Details' with a 'Fields' tab and a message 'No data to display.' The bottom of the screen has 'Audit' and 'Exit' buttons.

- On **Settlement Review Amend Allowed Fields** screen, specify the fields.

Table 2-37 Settlement Review Amend Allowed Fields - Field Description

Field	Description
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
Host Code Description	System defaults the description of the Host Code displayed.
Function Id	Specify the Function Id from the list of values from the following: <ul style="list-style-type: none"> • Cross-border MX • EU Target-2
Network Code	Specify the Network Code from the list of values. Lists SWIFT CBPRPlus / TARGET2 Outbound Transaction Input Function IDs.

Table 2-37 (Cont.) Settlement Review Amend Allowed Fields - Field Description

Field	Description
Template Amend Field Details	--
Fields	Specify the fields for which amendment is allowed from the list of values. Lists all the fields on the Settlement Review Amend Allowed Fields (PSDSRAMD) screen.

2. Search using one or more of the following parameters:
 - Authorization Status
 - Function Id
 - Network Code
 - Record Status
 - Host Code
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

2.4.5 Customer Preferences

The Customer Preferences screen allows user to maintain Charge Claim, Batch and Deferred price preferences for customers in the 'Customer Preferences Detailed' screen. You can maintain Pricing Account for a customer in this screen and default the same for outbound Cross border/RTGS/Fedwire transactions, SCT/SDD/ACH CT/ACH DD.

1. On Homepage, specify **PMDFLPRF** in the text box, and click next arrow.
Customer Preferences Detailed screen is displayed.

Figure 2-66 Customer Preferences Detailed

2. Click **New** button on the Application toolbar.
 3. On **Customer Preferences Detailed** screen, specify the fields.
- For more information on fields, refer to the field description below:

Table 2-38 Customer Preferences Detailed - Field Description

Field	Description
Host Code	System defaults the host code of transaction branch on clicking 'New'.
Host Code Description	System defaults the description of the Host code displayed.
Customer Number	Specify the Customer Number from the list of values.
Customer Name	System defaults the description of the Customer Number displayed.
Charge Claim Preference	--
Charge to be expensed	<p>Check this box indicates if claimed charges need to be debited to a common Charge Claim GL or a Claim GL specific to a Sender of MT191 (say, a Currency Correspondent).</p> <div style="background-color: #e6f2ff; padding: 10px; margin-top: 10px;"> <p> Note:</p> <ul style="list-style-type: none"> If this parameter is checked then system uses the Claim GL specified in the revamped 'Charge Claim Preference' screen for funding the Outbound Charge payment. If this parameter is not checked then you can define a Charge Claim account for the Customer which would always be debited for claimed charges for Outbound payments sent on behalf of the customer. If Service model is selected as specific, then specific CIF numbers of that Service model linkage alone is listed. </div>
Charge Claim Account	Specify the Charge Claim Account to be debited from the list of values for the charge claims received. Lists all accounts of the customer including Multi credit accounts.

Table 2-38 (Cont.) Customer Preferences Detailed - Field Description

Field	Description
Deferred Pricing Preferences	--
Deferred Pricing	Check this box to if deferred pricing to be applied for the customer.
Frequency	Select the frequency option as Daily, Monthly, or Manual.
Early Processing Preference	:
Process on Network Start Day	Check this box if Early Processing Preference is set on Network Start Date.
Customer Priority	<p>Select the Customer Priority from values Null or 1 to 9.</p> <div>  Note: Customer priority is assigned to a payment transaction as below: <ul style="list-style-type: none"> • If a record is available in Customer Preferences (Function ID: PMDFLPRF), the priority maintained for the customer is considered. • If no record is available in Customer Preferences OR if a record is available without maintaining the customer priority, the priority level of the linked Customer Service Model is checked. • If CSM level priority is not maintained OR if CSM linkage is not available, then customer priority is set as 9. </div>
Inbound Payment Preferences	--
Credit Value Basis for Inbound Payments	<p>Select the Credit value Basis from the following:</p> <ul style="list-style-type: none"> • Payment Received Date • Cover Received Date • Earliest of the Dates • Latest of the Dates <div>  Note: Received Date for the inbound payments is derived based on the 'Credit Value Basis for Inbound Payments' defined here for a customer. </div>
Batch Price Preferences	--

Table 2-38 (Cont.) Customer Preferences Detailed - Field Description

Field	Description
Auto generate pain.002	<p>This indicates if the auto generation of pain.002 is required or not. Check this box to auto generate pain.002 files.</p> <div>  Note: <ul style="list-style-type: none"> The preference maintained for the initiating party customer is considered. If the customer ID of initiating party is not available in the file then the debit account customer ID will be considered. Generation of pain.002 files for all batches of the same customer is supported. </div>
gpi Notification Preferences	You can set the notification preferences for both inbound and outbound transactions, upon receiving gCCT confirmations. By default the options are unchecked.
On Interim Confirmation	Check this box to generate notifications on receipt of Interim gCCT confirmations.
On Final Confirmation	Check this box to generate notifications on receipt of Final gCCT confirmations.
Pricing Preferences	--
Pricing Account	Select the required Pricing Account from the list of values.

4. Double-click a selected record to open the detailed screen.

 **Note:**

Refer [Advice Generation \(MAIL/SWIFT\)](#) section.

2.7 Access Rights Maintenances

Access rights can be provided for queue action at user level or at user role level. Access rights maintained is validated when a user tries to do any action on the payment available in the queues.

- [User Limit](#)
- [Role Limit](#)
- [Role Queue Access Rights](#)
- [User Queue Access Rights](#)
- [Role Queue Transaction Restrictions](#)
- [User Queue Payments Restrictions](#)

2.7.1 User Limit

The User Limit Maintenance screen allows user to capture the limits allowed for an operator for a particular payment function.

System allows operator-wise limits for allowing manual input or authorization of a payment transaction. User limits can be applied in case of queue action initiation or authorization too. User limit can be expressed in a specific base currency.

User can configure transaction input/authorization limits for each active user for a payment transaction/queue Function ID.

1. On Homepage, specify **PMDUSRLT** in the text box, and click next arrow.

User Limit Maintenance Detailed screen is displayed.

Figure 2-90 User Limit Maintenance Detailed

2. Click **New** button on the Application toolbar.
3. On **User Limit Maintenance Detailed** screen, specify the fields.

For more information on fields, refer to the field description below:

Table 2-50 User Limit Maintenance Detailed - Field Description

Field	Description
Host Code	System defaults the host code of transaction branch on clicking 'New'.
User ID	Specify User ID from the list of values. All valid and active User Ids are listed in this LOV.
User Name	System populates the user name based on the User ID selected.

Table 2-50 (Cont.) User Limit Maintenance Detailed - Field Description

Field	Description
Limit Currency	<p>Specify Limit Currency from the list of values. All valid currencies linked to the country of the Host are listed in this list of values.</p> <div> Note: If transfer currency is different from limit currency, the amounts are compared by converting the transfer amount to limit currency amount using the Desk Rates (Rate Code = STANDARD/Rate Type = MID) maintained for the currency pair.</div>
Default Input Limit	<p>Modify the actual default Input limit, if required.</p> <div> Note: If a function ID for payment transaction or queue is not maintained in the detailed block with applicable limits, then Default input limit maintained is applied for the transaction/queue input operations. The default value is 99,999.</div>
Default Authorization Limit	<p>Modify the actual default authorization limit, if required.</p> <div> Note: If a function ID for payment transaction /queue is not maintained in the detailed block with applicable limits, then Default input limit maintained is applied for the transaction/queue authorizations. The default value is 99,999.</div>
Function Id	The list specifies the available transaction and Queue function Ids.
Input Limit	While saving a payment transaction initiated manually /queue action, the system validates the user limit against the 'Input limit' provided for the function ID.

Table 2-50 (Cont.) User Limit Maintenance Detailed - Field Description

Field	Description
Authorization Limit	<p>While authorizing/auto authorizing a manually initiated transaction / queue action, the system validates the user limit against the 'Authorization limit' configured for the function ID.</p> <div>  Note: <ul style="list-style-type: none"> It is optional to provide input limit/authorization limit in detailed block. However, for every row maintained in the multi-block, it is mandatory to provide both limits. For any manual action taken from Oracle Banking Payments, the input / authorization limit is validated. If the limit is exceeded, system displays an error message. User limits is not applicable for channel transactions. However, if the channel transactions lands in a Queue, the respective Input/Authorization Limit set for the User for the Queue Function ID applies. </div>

- [User Limit Maintenance Summary](#)

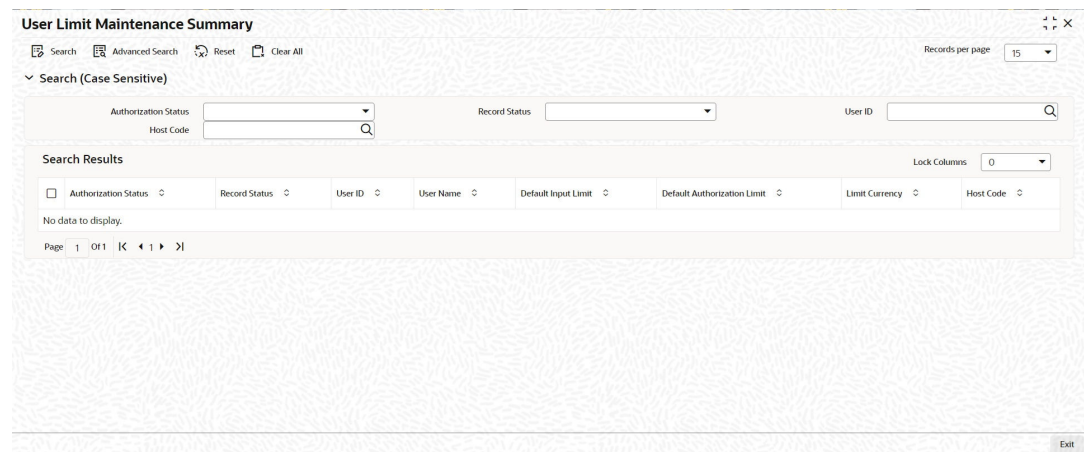

2.7.1.1 User Limit Maintenance Summary

The User Limit Maintenance Summary screen allows users to view User Limit Maintenance details.

1. On Homepage, specify **PMSUSRLT** in the text box, and click next arrow.

User Limit Maintenance Summary screen is displayed.

Figure 2-91 User Limit Maintenance Summary

2. Search using one or more of the following parameters:
 - Authorization Status

- User ID
 - Host Code
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
 4. Double-click a selected record to open the detailed screen.

2.7.2 Role Limit

The Role Limit screen allows users to maintain Role level limits for Input and Authorization that is applicable for payment transactions and Queue actions.

While applying the limits for a transaction or queue action, the priority is given for the limits maintained at User ID level.

If User limit is not maintained, then role level limits are applied. If multiple user roles are assigned for same function ID for the user, then the maximum input/authorization limit derived from the assigned roles is applied.

E.g. Assume that the user role “PA-ONLINE-AUTH” has an authorization limit of EUR100,000 for ACH payments and another user role “ALL_ROLES” has an authorization limit amount of EUR 50,000. If both the roles are assigned to a user for the host and function ID, then user will be allowed to input authorize ACH payments that are less than or equal of EUR 100,000.

Limit check is skipped if both user & role level limits are not available.

1. On Homepage, specify **PMDRLLMT** in the text box, and click next arrow.

Role Limit Maintenance Detailed screen is displayed.

Figure 2-92 Role Limit Maintenance Detailed

The screenshot shows the 'Role Limit Maintenance Detailed' application window. At the top, there's a title bar with 'New' and 'Enter Query' buttons. Below the title bar, there are search fields for 'Role ID *' and 'Limit Currency', each with a magnifying glass icon. To the right of these is a table for 'Role Description' with two columns: 'Default Input Limit' and 'Default Authorization Limit'. Below this is a large table with three columns: 'Function ID *', 'Input Limit', and 'Authorization Limit'. The table is currently empty, displaying 'No data to display.' and a pagination bar indicating 'Page 1 (0 of 0 items)'. At the bottom right of the window, there are 'Audit' and 'Exit' buttons.

2.8.1 Host Parameters

The Host Parameters screen allows users to maintain parameters for payments at the host level.

1. On Homepage, specify **PMDHSTPR** in the text box, and click next arrow.
Host Parameters Detailed screen is displayed.

Figure 2-102 Host Parameters Detailed

2. Click **New** button on the Application toolbar.
3. On **Host Parameters Detailed** screen, specify the fields.

For more information on fields, refer to the field description below:

Table 2-56 Host Parameters Detailed - Field Description

Field	Description
Host Code	System defaults the host code of transaction branch on clicking 'New'.
External Systems	--
Sanction Retry Days	Specify the sanction check retry days. Based on the sanction retry days, the sanctions are performed for future dated payments or current dated payments carried forward to next date.
PSD Applicable	Check this box to apply PSD Preference.
Information Reporting Required	Check this box to indicate that transaction information has to be handed off to an internal JMS queue on completion of transaction processing
Virtual Identifiers Applicable	If the flag is checked while doing account validation of inbound payments, if the credit account is not a valid account an ECA check is sent to the OBVAM system.
Sender Logical Terminal	The list specifies the available transaction and Queue function Ids.

Table 2-56 (Cont.) Host Parameters Detailed - Field Description

Field	Description								
Chinese Character Conversion	<p>While saving a payment transaction initiated manually /queue action, the system validates the user limit against the 'Input limit' provided for the function ID.</p> <ul style="list-style-type: none"> Simplified Chinese or Traditional Chinese - System does a Chinese character replacement with CCC codes for outbound payment messages. For an inbound message, CCC codes are replaced with Chinese characters. The type of the character is defined by the Conversion preference at the host level. Chinese character replacement are applicable for the following list of fields /messages for both cross-border and RTGS: <table border="1"> <tr> <td>A. Message Types</td><td>B. Field Details</td></tr> <tr> <td>C. MT101, MT102, MT102 STP, MT103, MT103 STP, MT103 REMIT, MT110</td><td>D. Fields 50a & 59a</td></tr> <tr> <td>E. MT202, MT202 COV, MT203, MT205, MT205 COV, MT210</td><td>F. Field 58a G. Fields 50a & 59a if available as part of the message</td></tr> <tr> <td>H. MT910</td><td>I. Field 50a</td></tr> </table>	A. 3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
4. Double-click a selected record to open the detailed screen.

2.8.2 Sanction Restriction

The Sanction Restriction screen allows users to maintain restrictions applicable for the sanctions screening for a specific 'Message type' and 'Network'. Sanction could be restricted / disabled for a particular message in a particular, or both directions. This is currently supported for Cross border & RTGS network messages. This is a Host level maintenance.

1. On Homepage, specify **PMDSCRES** in the text box, and click next arrow.
Sanction Restriction Detailed screen is displayed.

Figure 2-104 Sanction Restriction Detailed

2. Click **New** button on the Application toolbar.
3. On **Sanction Restriction Detailed** screen, specify the fields.
For more information on fields, refer to the field description below:

Field	Description
Network Code	Select the Network code from the list of values. All the valid Cross Border and RTGS Network Codes are listed here. This is a mandatory field.
Network Description	Network description gets defaulted on selecting the network.
Message Type	<p>Select the required message type from the list of values. The message types and common group messages specific to Cross Border and RTGS payments types are listed here. This is a mandatory field.</p> <p>The Message Types and its applicability are as follows:</p> <ul style="list-style-type: none"> • MT101 (Outbound MT101) • MT202COV (Upload of Inbound cover message MT202COV) • MT205COV (Upload of Inbound MT205COV) • MT210 (Upload of inbound MT210) • MT900 (Upload of inbound MT900) • MT 910 (Upload of inbound MT 910) • MT n90 (Outbound/Inbound) • MT n92 (Outbound/Inbound) • MT n95 (Outbound/Inbound) • MT n96 (Outbound/Inbound) • MT n98 (Outbound/Inbound) • MT n99 (Outbound/Inbound) <div>  Note: <ul style="list-style-type: none"> • For RTGS networks, MT 202COV and MT 205COV will only be listed in Message Type. • Outbound restrictions for the messages (MT 900, MT 910, MT 210, MT 202COV, MT 205 COV) and Inbound restrictions for the message (MT 101) maintained, does not have any impact on the sanctions screening. • If a message is not maintained here, sanction is treated as required for the same. • Sanctions applicability is based on the sanctions check preference maintained for the source, network and customer level. </div>
Description	Description of the message type selected is displayed.
Disable for Outbound	The list specifies the available transaction and Queue function Ids.
Disable for Inbound	Sanctions scanning can be disabled for the specified inbound messages, by checking this option.

- [Sanctions Restriction Summary](#)

2.8.2.1 Sanctions Restriction Summary

The Sanctions Restriction Summary screen allows users to view summary of sanctions restriction maintained.

1. On Homepage, specify **PMSSCRES** in the text box, and click next arrow.

Sanction Restriction Detailed Summary screen is displayed.

Figure 2-105 Sanction Restriction Detailed Summary

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
4. Double-click a selected record to open the detailed screen.

2.8.3 Payment Processing Cut off Time

The Payment Processing Cut off Time screen allows users to define currency wise transaction cutoff time.

Select applicable source, customer service model or customer, if required. The system displays an error, if processing cut off is maintained for Book transfer networks.

Note:

- Cut-off time check is based on the application server time at the time of payment processing. Cut-off time maintenance is applicable for payments with 'Outbound' transaction type.
- Processing cut-off time check would be done early in the processing after transaction validations and processing dates resolution steps.
- If the transaction is to be processed today, then the Processing cut-off time check would be performed. The transaction time that would be compared against the Processing cut-off maintenance would be the time of receipt of the payment request from the channel via SOAP/ReST/JMS or, on authorization in case of manually booked outgoing payment.

1. On Homepage, specify **PMDCTOFF** in the text box, and click next arrow.
Payment Processing Cutoff Time Detailed screen is displayed.

Figure 2-106 Payment Processing Cutoff Time Detailed

2. Click **New** button on the Application toolbar.
3. On **Payment Processing Cutoff Time Detailed** screen, specify the fields.

Table 2-58 Payment Processing Cutoff Time Detailed - Field Description

Field	Description
Host Code	System defaults the host code of transaction branch on clicking 'New'.
Host Code Description	System defaults the description of the Host Code displayed.
Network Code	Specify the network code. Alternatively, user can select the network code from the option list. The list displays all valid network codes maintained in the system.
Network Description	System displays the network description.
Network Type Description	System displays the Network Type Description based on the Network selected.
Source Code	<p>Specify the source code for which cutoff is maintained. Alternatively, user can select the source code from the option list. The list displays all valid source codes maintained in the system.</p> <div> Note: You can also select the value ALL, if required. </div>
Source Code Description	System defaults the description of the Source Code selected.
Customer Service Model	<p>Specify the customer service model for which cutoff is maintained. Alternatively, user can select the Service model from the option list. System displays the records that match the search criteria.
4. Double-click a selected record to open the detailed screen.

2.8.8 Account Statement Narrative

Customer account credit/debit entries can be originated from the system, as a result of payments processing. There is a provision in the system to configure the statement narrative for a transaction which are to be handed off for account statement generation.

Narration is generated in FCR format for NEFT, India RTGS and IMPS network during the handoff to FCR system. This is applicable for both inbound and outbound transactions.

This maintenance is provided for configuring the narrative details applicable for a Network Code.

1. On Homepage, specify **PMDNARMT** in the text box, and click next arrow.
Statement Narratives Detailed screen is displayed.

Figure 2-116 Statement Narratives Detailed

2. Click **New** button on the Application toolbar.
3. On **Statement Narratives Detailed** screen, specify the fields.

Table 2-63 Statement Narratives Detailed - Field Description

Field	Description
Host Code	System defaults the host code of transaction branch on clicking 'New'.
Host Code Description	System defaults the description of the Host Code displayed.
Network Code	Specify the network code from the list of values. All valid network codes available for the Host are listed.
Network Code Description	System defaults the Description on the Clearing Network selected.
Network Type Description	System defaults the Network Type Description on the Clearing Network selected.
Account Number	Select the Account Number from the list of values. All valid external accounts available for the host are listed.
Order Number	User can maintain multiple fields for population in the narrative. The order in which it has to be populated is maintained in the order number fields. The fields are populated in the ascending order of the numbers maintained. Same order number for multiple Fields are not allowed.

Table 2-63 (Cont.) Statement Narratives Detailed - Field Description

Field	Description
Fields	<p>Select from the pre-defined list of fields allowed for the network from the following:</p> <ul style="list-style-type: none"> • Activation Date • Batch Identification • Beneficiary • Beneficiary Account • Beneficiary Bank Name • Beneficiary Bank IFSC • Beneficiary Branch Name • Beneficiary MMID • Debtor Account • Debtor Bank • Debtor Branch Name • Debtor Bank IFSC • Debtor Mobile Number • Debtor MMID • Debtor Name • End to End ID • Exchange Rate • FX Reference • File Creation Date & Time • File Name • Instruction Date • Message ID • NEFT Source Reference • NEFT UTR Number • Network Service ID • Purpose Value • Remarks • Retrieval Reference • Source • Source Reference • Transaction Code • Transaction ID • Transaction Reference • Transfer Amount • Transfer Currency • UDF1 • UDF2 • UDF3 • UDF4 • UDF5 • UDF6 • UDF7 • UDF8 • UDF9 • UDF10 • Remittance Information

Table 2-63 (Cont.) Statement Narratives Detailed - Field Description

Field	Description
	<p> Note:</p> <p>The list of Narratives supported for a payment type is pre-defined.</p> <p>The field 'Remittance Information' is only available for network type Cross-border MX and EU Target-2.</p>
Narrative	<p>Specify the narrative which has to be populated in the account statement for the field value selected.</p> <p>For example for the Field 'File ID', if the narrative is provided as 'File Reference' then in the narrative system will populate the as 'File Reference 2121212121'.</p> <p> Note:</p> <ul style="list-style-type: none"> • If no value is fetched for a listed field, the same is not be populated in the narrative. • Delimiter between a narrative and field value is 'Space' and the delimiter between narrative of two fields is ' '. • The maximum length of the narrative with descriptions, values and delimiters is a maximum of length 390. The system trims the rest of the information if the narrative length exceeds this. It is assumed that the system which generates the account statement validates and format the narrative for SWIFT MT 940 messages. • Narratives maintenance is not mandatory. If maintained, would be handed off in accounting request. • The narrative is sent along with accounting handoff.
Source Code	<p>Specify the source code from the list of values. All valid source codes available for the Host are listed.</p> <p>The statement narrative parameters are fetched based on the following order of priority:</p>

Network	Source	Account
Specific	Specific	Specific
Specific	ALL	Specific
Specific	Specific	ALL
Specific	ALL	ALL

 - Parameter Description
 - Value
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
4. Double-click a selected record to open the detailed screen.

2.8.11 Allowed Character Set

The 'Allowed Character set' is a new maintenance that enable users to specify the complete list of allowed characters for a given network.

This maintenance is not specific to any Host and Network. A Character set once specified can be used in the Special characters maintenance created for different combinations of Host and Network code.

For e.g. a 'SEPA' Allowed Character set is used for SEPA ACH, SEPA DD Core, SEPA DD B2B networks and any other Clearing networks where the same character set is applicable.

For SWIFT payments, the standard SWIFT 'X' character set is factory shipped.

1. On Homepage, specify **PMDALCHR** in the text box, and click next arrow.
Allowed Character Set Detailed screen is displayed.

Figure 2-122 Allowed Character Set Detailed

2. Click **New** button on the Application toolbar.
3. On **Allowed Character Set Detailed** screen, specify the fields.

Table 2-66 Allowed Character Set Detailed - Field Description

Field	Description
Allowed Character Standard	Specify a name for the allowed character standard. Typically, the name could be synonymous to the Clearing network for which the character set is applicable. E.g. 'SEPA' as character standard to be used in SEPA ACH and SEPA DD networks.
Allowed Character Set	Specify the allowed characters from the list of values. The LOV includes numerals (0-9), alphabets (a-z, A-Z) and other special characters that are generally allowed in network file/ message formats like ()*% etc.

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Allowed Character Standard
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
4. Double-click a selected record to open the detailed screen.

2.8.12 Special Characters

The Special Characters screen allows users to maintain a list of special characters, which are disallowed by the payment network, and its corresponding replacement characters. This maintenance is maintained for every combination of Host and Network code.

1. On Homepage, specify **PMDSPCHR** in the text box, and click next arrow.
Special Character Detailed screen is displayed.

Figure 2-124 Special Character Detailed

2. Click **New** button on the Application toolbar.

- On **Special Character Detailed** screen, specify the fields.

For more information on fields, refer to the field description below:

Table 2-67 Special Character Detailed - Field Description

Field	Description
Host Code	System defaults the host code of transaction branch on clicking 'New'.
Host Code Description	System defaults the description of the Host code displayed.
Network Code	Specify the network code from the list of values.
Network Description	System defaults the description on the Network code selected.
Network Type Description	System defaults the Network Type Description on the Network code selected.
Allowed Character Standard	Select the Name of Allowed Character Name from the list of values. The Allowed Character Standard would identify the complete list of allowed characters for a given network, which is captured in a different maintenance called 'Allowed Character Set Maintenance' described later.
Resultant Action	Select Resultant Action from the following: <ul style="list-style-type: none"> Replace Reject
Default Replacement Character	Specify the Default Replacement character (e.g. ""(space) or ""(hyphen)) for any special character which is not allowed by the network. This character would be used to replace a special character in a transaction in case no specific replacement characters is defined for the special character in the below grid.
Disallowed Characters List	--
Special Characters	Specify the Special Character from the list of values for which the replacement is required.
Replacement Character	Specify the replacement character for the selected character. <div>  Note: <ul style="list-style-type: none"> It is optional to maintain special characters and their replacement characters, but selection of Allowed Character set and the Default Replacement Character is mandatory. Special characters Replacement and Network character validation steps performed as part of processing of any type of payment or non-payment transaction is based on this maintenance. Replacement of special characters is done instead of Network Character validation step for Outbound ACH, Direct Debit, Fedwire and NACHA ACH transactions. </div>

2.8.21.1 Outbound Non-Urgent Debit Customer Preferences Summary

1. On Homepage, specify **PMSODCST** in the text box, and click next arrow.

Outbound Non-Urgent Debit Customer Preferences Summary screen is displayed.

Figure 2-143 Outbound Non-Urgent Debit Customer Preferences Summary

The screenshot shows the 'Outbound Non-Urgent Debit Customer Preferences Summary' screen. At the top, there are search controls including 'Search', 'Advanced Search', 'Reset', and 'Clear All'. A 'Records per page' dropdown is set to 15. Below these are search filters: 'Search (Case Sensitive)' and a 'Search Results' section. The search filters include 'Authorization Status' (dropdown), 'Record Status' (dropdown), 'Customer Id' (text box with search icon), 'Customer Account' (text box with search icon), 'Host Code' (text box with search icon), 'Source Code' (text box with search icon), 'Batch Accounting' (dropdown), and 'Rollover Preference' (dropdown). The 'Search Results' section shows a table with columns for these fields. Below the table, it says 'No data to display.' At the bottom, there is a pagination bar showing 'Page: 1 Of 1' and navigation icons. An 'Exit' button is located at the bottom right.

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Company ID
 - Customer Account

- Host Code
 - Source Code
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
 4. Double-click a selected record to open the detailed screen.

2.8.22 Outbound Urgent Payment Preferences

Outbound urgent payment preferences are applicable for the transactions booked with the following payment types:

- Cross Border
 - RTGS
 - Book Transfer
 - Faster Payment
 - Fedwire
1. On Homepage, specify **PMDOUPRF** in the text box, and click next arrow.
Outbound Urgent Payment Preferences Detailed screen is displayed.

Figure 2-144 Outbound Urgent Payment Preferences Detailed

2. Click **New** button on the Application toolbar.
3. On **Outbound Urgent Payment Preferences Detailed** screen, specify the fields.
For more information on fields, refer to the field description below:

Table 2-77 Outbound Urgent Payment Preferences Detailed - Field Description

Field	Description
Host Code	System defaults the host code of transaction branch on clicking 'New'.
Host Code Description	System defaults the description of the Host Code displayed.
Source Code	Select the required source code. All valid source codes maintained in the system (PMDSORCE) for the Host are listed.

Table 2-77 (Cont.) Outbound Urgent Payment Preferences Detailed - Field Description

Field	Description
Source Code Description	System defaults the description of the Source Code selected.
Customer ID	Specify Customer ID from the list of values. The list of values for Customer field is populated with valid customer IDs.
Customer Name	The name of the customer appears depending on the selection done in the previous field.
Customer Account	Specify Customer Account from the list of values. All valid accounts maintained in the system for the customer are listed.
Preferences	--
Duplicate Check Days	If duplicate check is required for the transaction, the duplicate check days can be maintained in this field. If duplicate check days is maintained as 0, system will skip the duplicate days check.
Rollover Preference	<p>Select Rollover Preference from the following:</p> <ul style="list-style-type: none"> • Auto Roll • Cancel • Retain in Queue <p>If 'Auto Roll' option is selected the value date is moved forward to next Network/ Currency working day. This is the default preference.</p> <div>  Note: <p>Rollover Preference is applied in the following scenarios for the outbound payments:</p> <ul style="list-style-type: none"> • Transaction is pending in Process Cutoff Queue/ Network Queue during end of day. • Transaction is released from Sanction Check Queue on a later date. • Interim status is received for ECA check or Transaction is released from External Credit Approval Queue on a later date. </div>

- 4. Double-click a selected record to open the detailed screen.

2.8.25 Custom Dates

Transactions are always booked on the current date – as defined in this screen. However, Oracle Banking Payments supports transacting on a specific custom date or the current calendar date. This is configurable as stated below.

- The parameter that decides whether the Oracle Banking Payments uses the Custom Date or the Server Date is to be set in the parameter table – cstb_param – by way of the parameter IS_CUSTOM_DATE.
 - A value of Y indicates that Oracle Banking Payments should use the Custom Date as defined in the Dates table (PMDDATES).
 - A value of N indicates that Oracle Banking Payments should use the Server Date.
 - In the absence of the parameter in this table, the default value of N will be considered.
 - When this parameter is set to Y, and the corresponding values are not set for the Branch in the Dates table (PMDDATES), then the System automatically switches to the Server Date mode.

Note:

The parameter IS_CUSTOM_DATE can only be used to choose the Date option for Oracle Banking Payments. It cannot be used to choose the Date option for Oracle FLEXCUBE Universal Banking Application, when co-deployed with Oracle Banking Payments.

- When the Custom date is 'Yes':
 - This is used typically for a UAT scenario, where the current branch date needs to be changed to book / verify the transaction status on its value date.
 - In case of Oracle Banking Payments co-deployed with Oracle FLEXCUBE Universal Banking Application, Application Date of the corresponding FLEXCUBE Branch will be picked up as the Custom date for the Payments Branch too.

Note:

The Payments application needs to be restarted each time the Date is manually changed from the Dates Table (STDDATES).

- When the Custom date is 'No':
 - Payment transactions are booked with the server date, which is the current calendar date. Thus this screen is not referred.

Example

- Assume that the Server is in the UK Time-zone, operating on GMT, and the Branch is operating in a Host set to the Singapore Time-zone.

- Server Date & Time: 21-Sep-2018 7 a.m.
- Singapore Local Date & Time: 21-Sep-2018 3 p.m.
- Custom Date in the Dates Table for the Branch: 19-Sep-2018

Value of IS_CUSTOM_DATE	Branch Processing Date & time
Y	19 -Sep-2018 3 p.m.
N	21-Sep-2018 3 p.m.

1. On Homepage, specify **PMDDATES** in the text box, and click next arrow.
Custom Dates Screen Detailed screen is displayed.

Figure 2-150 Custom Dates Screen Detailed

2. Click **New** button on the Application toolbar.
3. On **Custom Dates Screen Detailed** screen, specify the fields.

2.8.30 Transaction Notification Preference

The Transaction Notification Preference screen allows user to maintain Notification preferences for the Host code and Network Code combination. If this maintenance is available, notifications are generated for the payment status and queue exception events maintained, provided notification generation is enabled for the source in Source code maintenance screen.

1. On Homepage, specify **PMDNOTIF** in the text box, and click next arrow.
Transaction Notification Preference Detailed screen is displayed.

Figure 2-157 Transaction Notification Preference Detailed

2. Click **New** button on the Application toolbar.
 3. On **Transaction Notification Preference** screen, specify the fields.
- For more information about the fields, refer to field description below:

Table 2-84 Transaction Notification Preference - Field Description

Field	Description
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
Host Code Description	System defaults the description of the Host Code displayed.
Network Code	Specify the Network Code from the list of values.
Network Description	System defaults the description of the Network displayed.

 **Note:**

Notifications can be generated based on transaction status and queue action events configured in this maintenance.

This is to be enabled by maintaining system parameter
NEW_NOTIF_SERVICE_PAYMENT_TYPE with list of Payment Types
separated by # for which new notification service needs to be enabled.

Below payment types support notification generation based on the above maintenance:

- ACH Credit Transfers
- Book Transfers
- CBPR+ and RTGS MX

These conditions are applicable to both Transaction Notification Preferences and Batch Notification Preferences mentioned in the next section.

For other payment types generic notification generation on payment success or rejection as available is supported based on Source code level preference.

Table 2-89 Batch Notification Preference_Exception Events Tab - Field Description

Field	Description
Queue Code	--
Queue Code	Specify the Queue Code from the list of values.
Queue Name	System defaults the description of the Queue Code displayed.
Queue Status	--
Status	Specify the Status from the list of values. All applicable status for the queue code are listed.
Description	System defaults the description of the Status displayed.
Notification Event	System defaults the Notification Event of the Status displayed.

2.8.31.3 Batch Notification Preference Summary

- On Homepage, specify **PMSBTNOT** in the text box, and click next arrow.
Batch Notification Preference Summary screen is displayed.

Figure 2-164 Batch Notification Preference Summary

The screenshot shows the 'Batch Notification Preference Summary' screen. At the top, there are search options: 'Search', 'Advanced Search', 'Reset', and 'Clear All'. A 'Records per page' dropdown is set to 15. Below this is a 'Search (Case Sensitive)' section with three input fields: 'Authorization Status', 'Record Status', and 'Host Code'. A search icon is to the right of the 'Host Code' field. Below the search fields is a 'Search Results' section with a 'Lock Columns' dropdown set to 0. The search results area currently displays 'No data to display.' At the bottom, there is a 'Page' indicator showing 'Page: 1 of 1' and navigation arrows. An 'Exit' button is located at the bottom right corner.

- Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Host Code
- Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

2.8.32 Dual Authorization Preferences

You can maintain the preference for dual auth specific to a screen through this Dual Auth Preference screen, when multiple levels of authorization is required.

- On Homepage, specify **PMDFAUMN** in the text box, and click next arrow.
Dual Authorization Preferences screen is displayed.

Figure 2-165 Dual Authorization Preferences

The screenshot shows the 'Dual Authorization Preferences' application window. It features a toolbar with 'New' and 'Enter Query' buttons. Below the toolbar is a 'Host Code' input field. A table with columns 'Function', 'Description', 'Dual Authorization Required', 'Threshold Currency', and 'Threshold Amount' is displayed, but it is empty with the message 'No data to display.' at the bottom. The window also includes 'Audit' and 'Exit' buttons at the bottom right.

2. Click **New** button on the Application toolbar.
 3. On **Dual Authorization Preferences** screen, specify the fields.
- For more information on fields, refer to the field description below:

Table 2-90 Dual Authorization Preferences - Field Description

Field	Description
Host Code	System defaults the host code of transaction branch on clicking 'New'.
Function	Defaults the below listed Function ID's for dual auth on 'New' action. <ul style="list-style-type: none"> PXDOTTML (Outbound Cross Border Payments Template Detailed) PBDOTTML (Book Transfer Transaction Template Detailed) PQDREPQU (Repair Queue) PQDEUPQU (EU Payer Queue) PQDNWRQU (Network Resolution Queue) PQDSSIQU (Settlement Review Queue) PQDVERFQ (Verification Queue)
Description	Defaults and displays the description of the Function selected.
Dual Authorization Required	Enabled by default, on click of 'New' action. You can modify the preference, if required. If 'Dual Authorization Required' is opted for a function, then auto authorization is not to be opted for the Template Function ID. This Dual Authorization required is applicable for Template Operations Re-open, Close and Modify actions.
Threshold Currency	Specify the Threshold Currency from the list of values. Lists all the valid currency codes defined in the application.
Threshold Amount	Specify the threshold amount. <div> Note: Dual Authorization action button is available on authorization of unauthorized templates from Template Summary screen (PQSTMPLQ). For more details on Template Summary, refer to Template Summary. </div>

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Host Code
 - Function ID
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
4. Double-click a selected record to open the detailed screen.

2.8.34 Repair Opt-out Preferences

The Repair Opt-out Preferences screen allows users to restrict specific queue actions for specific accounts or all accounts of a customer.

1. On Homepage, specify **PMDRPOP** in the text box, and click next arrow.
Repair Opt-out Preferences Detailed screen is displayed.

Figure 2-169 Repair Opt-out Preferences Detailed

2. Click **New** button on the Application toolbar.
3. On **Repair Opt-out Preferences Detailed** screen, specify the fields.

For more information on fields, refer to the field description below:

Table 2-92 Repair Opt-out Preferences Detailed - Field Description

Field	Description
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
Customer Number	Specify the Customer Number from the list of values.
Customer Name	System defaults the Customer Name based on the Customer Number selected.
Repair Opt-out Preference	Select Repair Opt-out Preference from the following: <ul style="list-style-type: none"> • All Accounts - If you select All Accounts, then you are not allowed to enter any specific accounts linked to the given customer number. It is applicable for all accounts of the customer. • Specific Accounts - If you select Specific Accounts, then you are allowed to enter specific accounts linked to the given customer number. It is applicable for only specific accounts of the customer.
Customer Account Number	Specify the Customer Account Number from the list of values.
Account Name	System defaults the Account Name based on the Customer Number selected. Based on the maintenance in this screen, During queue action processing of the outbound payment: - System performs the check if there is any repair opt-out preferences maintained for the debit account or debtor input in the outbound urgent payment such as Book Transfer (PB), Cross Border/RTGS payments (PX) as below:

Step	Customer	Customer Account	Remarks
1	Specific	Specific	--
2	Specific	All	*Refers to 'All Accounts' preference option

If found, then system do not allow the below specific queue user actions for such outbound urgent payment transactions. System displays the following common error message on user action "Debit Account number exists in Repair Opt Out Preference".

Queue Name	Function ID	User Action (Disallowed)
Business Override Queue	PQSOVRQU	Approve
Repair Queue	PQSREPQU	Repair
Exchange Rate Queue	PQSEXEXQ	Edit FX Details
External Credit Approval Queue	PQSECAQU	Approve

Referrable Customers	<p>Select Error Type from the following:</p> <ul style="list-style-type: none"> • Error (This option is to treat the Error Code) • Move to Queue (The transaction is moved to the appropriate Exception Queue, if this option is selected) • Ignore (STP is continued if the option is Ignore) <p>If Referral is applicable for the payment, based on the referral preference maintained at Account/Customer/CSM level, then the preference maintained for Referral Customer is fetched to determine the handling of the Error Code.</p>
Non-referrable Customers	<p>Select Error Type from the following:</p> <ul style="list-style-type: none"> • Error (This option is to treat the Error Code) • Move to Queue (The transaction is moved to the appropriate Exception Queue, if this option is selected) • Ignore (STP is continued if the option is Ignore) <p>If Referral is not applicable for the payment, then the preference maintained for Non-referral Customer is fetched to determine the handling of the Error Code.</p>

- [Source-based Error Handling Summary](#)

2.8.43.1 Source-based Error Handling Summary

1. On Homepage, specify **PMSSRERR** in the text box, and click next arrow.

Source-based Error Handling Summary screen is displayed.

Figure 2-189 Source-based Error Handling Summary

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Host Code
 - Sector Code
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
4. Double-click a selected record to open the detailed screen.

2.8.44 Network-based Error Handling

The Network-based Error Handling screen allows users to maintain the preference for System error codes and Overridable External System error codes at Network & Source level. This maintenance allows Error handling maintenance based on Network + Source level.

1. On Homepage, specify **PMDNWERR** in the text box, and click next arrow.
Network-based Error Handling maintenance screen is displayed.

Figure 2-190 Network-based Error Handling maintenance

2. Click **New** button on the Application toolbar.
3. On **Network-based Error Handling maintenance** screen, specify the fields.

For more information on fields, refer to the field description below:

Table 2-102 Network-based Error Handling maintenance - Field Description

Field	Description
Host Code	System defaults the host code of transaction branch on clicking 'New'.
Host Code Description	The host code description is displayed on Host Code selected.
Source Code	Specify the Sector Code from the list of values.
Source Description	Specify the Description of the Source Code selected.
Network Code	Specify the Network Code from the list of values.
Network Description	Specify the Description of the Network Code selected.
Error Codes	--
Error Type	<p>Select Error Type from the following values:</p> <ul style="list-style-type: none"> Internal External <div>  Note: Overridable ECA error codes only are supported as of this release. </div>
Error Code	<p>Specify the Error Code from the list of values.</p> <p>If the Error Code type is selected as 'Internal', pre-defined set of OBPM error codes which move the payment to Exception Queues are listed.</p> <p>If the Error Type is selected as 'External' the Error codes defined in User Defined Error code maintenance which are of type 'External' are listed.</p> <div>  Note: The External error codes selected can be the Overridable error codes marked as Override for OBPM source, received from ECA system. </div>
Error Description	Specify the Description of the Error Code selected.
Referrable Customers	<p>Select the Error Type from the following values:</p> <ul style="list-style-type: none"> Error (This option is to treat the Error Code) Move to Queue (The transaction is moved to the appropriate Exception Queue, if this option is selected.) 2.8.44.1 Network-based Error Handling Maintenance Summary

1. On Homepage, specify **PMSNWERR** in the text box, and click next arrow.
Network-based Error Handling maintenance Summary screen is displayed.

Figure 2-191 Network-based Error Handling maintenance Summary

The screenshot shows the 'Network-based Error Handling maintenance Summary' interface. At the top, there are search options: 'Search', 'Advanced Search', 'Reset', and 'Clear All'. A 'Records per page' dropdown is set to 15. Below this is a 'Search (Case Sensitive)' section with five input fields: 'Authorization Status', 'Record Status', 'Host Code', 'Network Code', and 'Source Code'. Each field has a search icon. Below the search fields is a 'Search Results' section with a table header containing the same five fields. The table body is empty, showing 'No data to display.' and pagination controls (Page 1 of 1). There is an 'Exit' button at the bottom right.

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Host Code
 - Source Code
 - Network Code
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
4. Double-click a selected record to open the detailed screen.

2.8.45 SEPA EPC Changes Effective Date

The SEPA EPC Changes Effective Date screen allows users to maintain the effective date corresponding to the mandatory EPC yearly releases.

1. On Homepage, specify **PFDEPCED** in the text box, and click next arrow.
SEPA EPC Changes Effective Date Detailed screen is displayed.

Figure 2-192 SEPA EPC Changes Effective Date Detailed

2. Click **New** button on the Application toolbar.
3. On **SEPA EPC Changes Effective Date Detailed** screen, specify the fields.
For more information on fields, refer to the field description below:

Table 2-103 SEPA EPC Changes Effective Date Detailed - Field Description

Field	Description
Release Year	Specify the calendar year.
Effective Date	Specify the Date when the EPC changes are effective for the year.

- [SEPA EPC Changes Effective Date Detailed Summary](#)

 - Authorization Status
 - Record Status
 - Network Code

- Function ID
 - Exception Queue
- Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

2.8.50 Host BIC Code Customer Mapping

The Host BIC Code Customer Mapping screen allows users to capture BIC to Customer mapping by Host level.

- On Homepage, specify **PMDBICMP** in the text box, and click next arrow.
Host BIC Code Customer Mapping Detailed screen is displayed.

Figure 2-202 Host BIC Code Customer Mapping Detailed

- Click **New** button on the Application toolbar.
- On **Host BIC Code Customer Mapping Detailed** screen, specify the fields.

Table 2-108 Host BIC Code Customer Mapping Detailed - Field Description

Field	Description
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
Host Description	System defaults the Host Description of the Host Code defaulted.
BIC Code	Specify BIC from list of values. This field list all the valid (Open/Authorized) customers from BIC Code Details (ISDBICDE) maintenance.
Bank Name	System displays the Bank Name of the BIC selected.
Customer Number	Specify Customer Number from list of values. This field list all the valid (Open/Authorized) customers from External Customer Input (STDCIFCR) maintenance.
Customer Name	System displays the Customer Name of the Customer Number selected.
MT103 REMIT Preferred	Specify the value from list of values. The allowed values are Yes and No.

- [Host BIC Code Customer Mapping Summary](#)
- [Debit/Credit Confirmation Message \(MT format\) Generation](#)
- [Debit/Credit Confirmation Message \(MX format\) Generation](#)
- [MT103 Outbound REMIT Processing](#)

2.8.50.1 Host BIC Code Customer Mapping Summary

1. On Homepage, specify **PMSBICMP** in the text box, and click next arrow.
Host BIC Code Customer Mapping Summary screen is displayed.

Figure 2-203 Host BIC Code Customer Mapping Summary

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - BIC Code
 - Customer Number
 - MT103 REMIT Preferred
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

2.8.50.2 Debit/Credit Confirmation Message (MT format) Generation

System refers to Host Level BIC Customer Mapping maintenance (PMSBICMP) while generating SWIFT MT900 / MT910 (Debit / Credit confirmation) messages to refer the BIC mapping for the customer number of the transaction.

If maintenance is found and the record status is 'Open', then the Debit / Credit confirmation in MT format is generated.

If maintenance is found and the record status is 'Closed', then the Debit / Credit confirmation in MT format does not get generated.

If no maintenance is found, then the existing BIC Code (ISDBICDE) maintenance is referred to decide on generating Debit / Credit confirmation in MT format.

2.8.50.3 Debit/Credit Confirmation Message (MX format) Generation

System first refers to Host Level BIC Customer Mapping maintenance (PMDBICMP) to refer to the BIC mapping for the customer number of the SWIFT CBPRPlus / TARGET2 ISO transactions.

If maintenance is found and the record status is 'Open', then the Bilateral Agreement in MX messages (PMDCMAGT) is referred to generate the MT900/MT910 or camt.054 messages.

If maintenance is found but the record status is 'Closed', then the Debit / Credit confirmation in MX format is skipped.

If no maintenance is found, then the Bilateral Agreement in MX messages (PMDCMAGT) is referred to generate the MT900/MT910 or camt.054 messages.

2.8.50.4 MT103 Outbound REMIT Processing

First, system checks Sender / Receiver MT103 Remitter based on the MT103 REMIT Preferred flag on the Host Level BIC Customer Mapping maintenance (PMDBICMP) screen.

If maintenance is found and the record status is 'Open', then the Sender / Receiver is considered an MT103 Remit member.

If maintenance is found and the record status is 'Closed', then the Sender / Receiver is not considered as an MT103 Remit member.

2.8.51 Channel Authentication Preferences

Rest services received from the channels are authenticated based on the Authentication Scheme maintained in this screen.

1. On Homepage, specify **PMDCAUTH** in the text box, and click next arrow.

Channel Authentication Preferences screen is displayed.

Figure 2-204 Channel Authentication Preferences

The screenshot shows the 'Channel Authentication Preferences' window. At the top, there's a title bar with 'Channel Authentication Preferences' and buttons for 'New' and 'Enter Query'. Below this, there are two main sections: 'Rest Service Authentication Preferences' and 'WebService Authentication Preferences'. Each section has a 'Rest Service Authentication Scheme' or 'WebService Authentication Scheme' field, both currently set to 'Not Applicable'. There are also fields for 'Host Code', 'Source Code', 'Host Code Description', and 'Source Description' with search icons. At the bottom right are 'Audit' and 'Exit' buttons.

2. Click **New** button on the Application toolbar.
3. On **Channel Authentication Preferences** screen, specify the fields.

Table 2-109 Channel Authentication Preferences - Field Description

Field	Description
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
Host Code Description	This field displays the description of Host Code selected.
Source Code	Specify the Source Code from the list of values. All open and authorized source codes maintained for the Host are listed.
Source Code Description	This field displays the description of Source Code selected.

2.8.51.1 Channel Authentication Preferences Summary

1. On Homepage, specify **PMSCAUTH** in the text box, and click next arrow.
Channel Authentication Preferences Summary screen is displayed.

Figure 2-205 Channel Authentication Preferences Summary

The screenshot shows the 'Channel Authentication Preferences Summary' screen. At the top, there is a search bar with 'PMSCAUTH' entered. Below the search bar, there are several filters: 'Authorization Status' (dropdown), 'Record Status' (dropdown), 'Host Code' (text input), and 'Source Code' (text input). The main area is a table with columns: 'Authorization Status', 'Record Status', 'Host Code', 'Source Code', 'Rest Service Authentication Scheme', 'WebService Authentication Scheme', 'Host Code Description', and 'Source Description'. The table is currently empty, displaying 'No data to display.' At the bottom, there is a pagination bar showing 'Page 1' and 'Of 1'.

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Host Code
 - Source Code

3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

2.8.52 Purpose Code Maintenance

The Purpose Code Maintenance screen allows users to capture the values of Payment of Purpose codes/Transaction Type Codes. Each purpose code is linked to network codes - SWIFT & RTGS and the same purpose code is able to be linked to both SWIFT and RTGS networks.

1. On Homepage, specify **PMDPURCD** in the text box, and click next arrow.
Purpose Code Maintenance Detailed screen is displayed.

Figure 2-206 Purpose Code Maintenance

2. On **Purpose Code Maintenance** screen, specify the fields.
For more information on fields, refer to the field description below:

2.9.1 Non STP Rule

The Non STP Rule screen allows users to maintain the NON STP rule.

1. On Homepage, specify **PMDNSRLE** in the text box, and click next arrow.
Non STP Rule Detailed screen is displayed.

Figure 2-215 Non STP Rule Detailed

2. Click **New** button on the Application toolbar.
3. On **Non STP Rule Detailed** screen, specify the fields.
For more information about the fields, refer to field description below:

Table 2-115 Non STP Rule Detailed - Field Description

Field	Description
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
Source Code	Select the Source Code from the list of values. All valid source codes are listed.

Table 2-115 (Cont.) Non STP Rule Detailed - Field Description

Field	Description
Channel Type	Select Channel Type from the following: <ul style="list-style-type: none"> • SPS OUT • SWIFT • NACHA Origination • NACHA Incoming • SEPA Clearing • CNAPS Incoming • Fedwire Clearing • MT 101 • ACH CT Origination • ACH CT Receipt • ACH DD Origination • ACH DD Receipt • gLowValue • India SFMS Clearing • C2B • Standing Instruction • CNAPS Debit Incoming • CNAPS Debit Outgoing
Rule Name	Specify the Name of the Rule.
Rule Expression	The expression can be filled in the Expression Details multi block. On the click of Populate button, the expression gets built and displayed in this field.
Expression Details	--
Expression Section	Specify the unique sequence number for the expression defined.
Scope Start	Specify the Scope assigned to the Left operand.
LOP Type	Select type of Left Operand from the following: <ul style="list-style-type: none"> • Parameter • Expression • Constant
LOP Data Type	Select Data type of Left Operand from the following: <ul style="list-style-type: none"> • String • Date • Number
LOP Function Type	Select LOP Function type from the following: <ul style="list-style-type: none"> • IndexOf • SubString • Length • Uppercase • Lowercase
Function Details	If the LOP Function Type is selected, then it is mandatory to provide Function Details. User can invoke 'Function Details' screen by clicking on the 'Function Details' button. Refer section List of LOP Function Type .
LOP Operand	Specify the Left Operand value details in the rule expression from the list of values.

Table 2-115 (Cont.) Non STP Rule Detailed - Field Description

Field	Description
Operator	Select Operator details from the following: <ul style="list-style-type: none"> Greater Than Less Than Not Equal To Equal To Greater Than or Equal To Less Than or Equal To
ROP Type	Select type of Right Operand from the following: <ul style="list-style-type: none"> Expression Constant Parameter
ROP Data Type	Select Right Operand Data from the following: <ul style="list-style-type: none"> String Date Number
ROP Operand	Specify the Right Operand from the list of values.
Scope	Specify the Scope assigned to the Right operand.
Logical Operators	Select Logical Operator from the following: <ul style="list-style-type: none"> And OR
Populate	Click this button after specifying the expression details. The following mandatory checks are done on derivation of the Network: <ul style="list-style-type: none"> Whether the transfer currency is allowed for the network Whether the amount is within the network limit Whether the Creditor Agent is allowed for the network

2.9.1.1 Non STP Rule Summary

1. On Homepage, specify **PMSNSRLE** in the text box, and click next arrow.
Non STP Rule Summary screen is displayed.

Figure 2-216 Non STP Rule Summary

The screenshot shows the 'Non STP Rule Summary' interface. At the top, there are search options: 'Search', 'Advanced Search', 'Reset', and 'Clear All'. A 'Records per page' dropdown is set to 15. Below the search bar, there are filters for 'Authorization Status', 'Record Status', 'Host Code', 'Source Code', and 'Channel Type'. The 'Search Results' section shows a table with these columns. The table is currently empty, with the message 'No data to display.' at the bottom. The page number is 1, and there are navigation arrows.

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Host Code
 - Source Code
 - Channel Type
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

2.9.2 Customer Restriction Preference

This Customer Restriction Preference screen allows user to capture the list of customers/ service models/channels.

1. On Homepage, specify **PMDCURPF** in the text box, and click next arrow.
Customer Restriction Preference screen is displayed.

Figure 2-217 Customer Restriction Preference

The screenshot shows the 'Customer Restriction Preference' application window. At the top, there's a title bar and a toolbar with 'New' and 'Enter Query' buttons. Below the toolbar, there are input fields for 'Host Code', 'Source Code', 'Channel Type', and 'Company ID'. A search icon is next to the 'Source Code' field. Below these fields is a tabbed interface with four tabs: 'Service Model', 'Customers', 'Customer Accounts', and 'Company ID'. The 'Service Model' tab is selected, showing a table with two columns: 'Customer Service Model' and 'Customer Service Model Description'. The table is currently empty, with a message 'No data to display.' and a pagination bar indicating 'Page 1 (0 of 0 items)'. At the bottom right of the window, there are 'Audit' and 'Exit' buttons.

2. Click **New** button on the Application toolbar.
3. On **Customer Restriction Preference** screen, specify the fields.
For more information on fields, refer to the field description below:

Table 2-116 Customer Restriction Preference - Field Description

Field	Description
Host Code	System defaults the host code of transaction branch on clicking 'New'.
Source Code	Specify the Source Code from the list of values. The field display the Source Code defined in the application.

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Account Currency
 - Account Number
 - BIC Code
 - Host Code
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
4. The record key identifies the set of countries and its respective currencies which come under the scope of PSD2 regulation.

2.10.5.2 Debit Authority Processing

While doing the straight through processing of an Inbound cross-border message, system does a debit authority check if,

- the sender is not a currency correspondent
- a valid debit account is derived from party identifier of field 53, 54, or 55

If the sender BIC is of 11 digits, system tries to do an exact match in the debit authority maintenance for Sender BIC. If no match is found, then the availability of 8 digit BIC with XXX in the end or 8 digit BIC is checked. If a match is found, amount validation is done to check whether it is below the limit maintained.

If debit authority is not found for a Sender BIC or if the amount is above the allowed limit, system moves the Inbound message to a cover match queue automatically.

On receiving a cover match and on subsequent processing from cover match queue, system derives the debit account from the account field of field 58 of the cover message. If account is not mentioned for field 58, then the primary account of the sender of the cover is considered as the debit account.

**Note:**

You can use System parameter 'SKIP_DEBIT_AUTHORITY_CHECK' to skip the Debit Authority processing.

Field	Description
Company Identification	Specify the Company Identification. It can be maintained as alphanumeric with up to 10 characters.
Company Name	Specify the name of the company.
Address Line 1- 4	Specify the address of the company in the lines specified.
Contact Name	Specify the Contact Name.
Contact Number	Specify the Contact Number.

- [Originator Maintenance Summary](#)

2.11.1.1 Originator Maintenance Summary

1. On Homepage, specify **PMSORGDT** in the text box, and click next arrow.
Originator Maintenance Summary screen is displayed.

Figure 2-239 Originator Maintenance Summary

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Company Identification
 - Company Name
 - Address Line 1
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

2.11.2 US Clearing - Bank Identifiers

The US Clearing - Bank Identifiers screen allows users to maintain the processing branch Routing Number and Participant ID for the US payments. This screen is common for:

- US Fedwire

- US NACHA
 - US Real-Time Payments (RTP)
1. On Homepage, specify **PMDABANR** in the text box, and click next arrow.
US Clearing - Bank Identifiers screen is displayed.

Figure 2-240 US Clearing - Bank Identifiers

2. Click **New** button on the Application toolbar.
3. On **US Clearing - Bank Identifiers** screen, specify the fields.
For more information on fields, refer to the field description below:

Table 2-128 US Clearing - Bank Identifiers - Field Description

Field	Description
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
Clearing System	Select Clearing System from the following: <ul style="list-style-type: none"> • NACHA • Fedwire • CHIPS • US RTP
Clearing Identifier Type	Select Clearing Identifier Type from the following: <ul style="list-style-type: none"> • American Banker Associations Number • CHIPS Participant Id • CHIPS UID • US-RTP Participant ID • US-RTP Routing Number
Clearing Identifier Type	Select the Clearing Identifier value for the selected Clearing Identifier Type.
Default Processing Branch	Specify the Default Processing Branch in the Host only for Inbound transactions from Clearing house.

- [US ACH - ABA Number Summary](#)

2.11.2.1 US ACH - ABA Number Summary

1. On Homepage, specify **PMSABANR** in the text box, and click next arrow.
US ACH - ABA Number Summary screen is displayed.

Figure 2-241 US ACH - ABA Number Summary

The screenshot shows the 'US ACH - ABA Number Summary' screen. At the top, there is a title bar with the text 'US ACH - ABA Number Summary'. Below the title bar, there is a search bar with a magnifying glass icon and a 'Search' button. To the right of the search bar, there are links for 'Advanced Search', 'Reset', and 'Clear All'. Below the search bar, there is a dropdown menu for 'Search (Case Sensitive)'. Below the dropdown menu, there are three input fields: 'Authorization Status', 'Record Status', and 'Host Code'. To the right of these fields, there is a 'Records per page' dropdown menu set to '15'. Below the input fields, there is a 'Search Results' section. Inside this section, there is a table with three columns: 'Authorization Status', 'Record Status', and 'Host Code'. The table is currently empty, and the text 'No data to display.' is shown below the table. At the bottom of the table, there is a pagination bar showing 'Page: 1 Of 1' and navigation arrows. In the bottom right corner of the screen, there is an 'Exit' button.

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Host Code
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

2.12 Verification Rule Maintenance

- [Verification Rule](#)
- [Verification Amend Allowed Fields](#)

2.12.1 Verification Rule

The Verification Rule screen allows users to define the rule for generated messages. It is applicable for the Outbound/Passthrough Cross Border/ RTGS transactions.

1. On Homepage, specify **PMDVFRLE** in the text box, and click next arrow.
Verification Rule screen is displayed.

Figure 2-242 Verification Rule

2. Click **New** button on the Application toolbar.
3. On **Verification Rule** screen, specify the fields.

For more information about the fields, refer to field description below:

Table 2-129 Verification Rule - Field Description

Field	Description
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
Network Code	Specify the Network Code from the list of values.
Rule Name	Specify the Name of the Rule.
Rule Expression	The expression can be filled in the Expression Details multi block. On the click of Populate button, the expression gets built and displayed in this field.
Priority	Specify the priority number for rule execution.
Expression Details	--
Expression Section	Specify the unique sequence number for the expression defined.
Scope Start	Specify the Scope assigned to the Left operand.
LOP Type	Select type of Left Operand from the following: <ul style="list-style-type: none"> Parameter Expression Constant
LOP Data Type	Select Data type of Left Operand from the following: <ul style="list-style-type: none"> String Date Number
LOP Function Type	Select LOP Function type from the following: <ul style="list-style-type: none"> IndexOf SubString Length Uppercase Lowercase
Function Details	If the LOP Function Type is selected, then it is mandatory to provide Function Details. User can invoke 'Function Details' screen by clicking on the 'Function Details' button.

Table 2-129 (Cont.) Verification Rule - Field Description

3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

2.13.6 India Payments Common Preferences

The India Payments Common Preferences screen allows users to maintain both outbound and inbound Payment Preferences for the following payment type:

- NEFT
- India RTGS

1. On Homepage, specify **PMDNFTPF** in the text box, and click next arrow.
India Payments Common Preferences screen is displayed.

Figure 2-256 India Payments Common Preferences

2. Click **New** button on the Application toolbar.
3. On **India Payments Common Preferences** screen, specify the fields.

For more information on fields, refer to the field description below:

Table 2-136 India Payments Common Preferences - Field Description

Field	Description
Network Code	Specify the Network Code from the list of values. You can select NEFT/ RTGS. If only one Network is maintained with payment type as 'NEFT/ RTGS' for the host code, the same gets defaulted in this field. In case multiple networks are found for the same combination, all applicable networks are listed. Select the required network.
Network Description	System defaults the description of the Network selected.
Network Type Description	System defaults the Network Type Description of the Network selected.

Table 2-136 (Cont.) India Payments Common Preferences - Field Description

Field	Description
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
Transaction Type	Select Transaction Type from the following: <ul style="list-style-type: none"> Outbound Inbound
Transaction Currency	System defaults the option as 'INR' for India Payments.
Priority	Select the Priority from 0 to 9. "0" indicates 'Low' priority and "9" indicates 'High' priority. Different priorities can be set for the individual networks and payment types.
Network Service ID	Specify the Network Service ID. This is mandatory field.
Outbound Payments	--
Min Transaction Limit Amount	Specify the minimum limit applicable for a transaction. <div>  Note: For RTGS transfers, Rs. 2 Lacs is the minimum limit amount. </div>
Max Transaction Limit Amount	Specify the maximum limit applicable for a transaction.
Minimum daily Limit	Specify the minimum limit allowed for a customer per day.
Maximum Daily Limit	Specify the maximum limit allowed for a customer per day. <div>  Note: The maximum transaction limit amount would be as per the RBI guidelines. </div>
No. of Transactions per Dispatch	Specify the number of transactions per dispatch. Based on the number of transactions specified, system bundles the transactions for dispatch in the respective batch timings defined in the Dispatch Parameters maintenance screen (PADISPTM). The maximum count for the following message type are as follows: <ul style="list-style-type: none"> N06 - Maximum number of transactions which can be bundled and sent as one N06 message. System dispatches N06 in a bundle of 10 or less when maintained as '10'. N07 - Maximum number of return transactions which can be bundled and sent as one N07 dispatch message. N10 - Maximum number of credit confirmation messages which can be bundled and sent as one N10 dispatch message. <div>  Note: This field is applicable only for NEFT payments. </div>

Table 2-136 (Cont.) India Payments Common Preferences - Field Description

Field	Description
Intra Bank Transfer	<p>By default 'Intra Bank Transfer Check' check box is unchecked.</p> <p>System checks the following:</p> <ul style="list-style-type: none"> - System checks if the beneficiary bank IFSC code is of the same bank branch. A 'Branch' record is present in the screen Branch IFSC Code Mapping 'PMDIFSBR' for the given IFSC Code. <p>If a record is found in screen Branch IFSC Code Mapping 'PMDIFSBR' for the given IFSC Code, then the system checks the following:</p> <ul style="list-style-type: none"> • If the Intra Bank Transfer flag is 'N' the system gives an error message PT-TXP-023 'Intra Bank Transfer is not allowed'. • If the 'Intra Bank Transfer' flag is 'Y' the system allows to process as 'Outbound NEFT payment and generate N06 message for dispatch to Network even if beneficiary bank IFSC code is of the same bank branch.
NEFT Default Debtor Email ID	<p>Specify the default Email ID for sender.</p> <p>If Mobile Number or Email ID is not maintained at customer level then this default email ID gets mapped to NEFT outgoing (N06) message.</p>
Inbound Payments	--
Beneficiary Name Match Required	System performs the Beneficiary name match for the inbound payments, if this is checked. When the Beneficiary name match fails, the transaction is moved to Repair Queue.
Beneficiary Validation Amount	Specify the Amount in INR currency.
Return Cutoff Time (HH:MM)	<p>Specify the cutoff time for the return of transaction as - '02:00' hours for the payment type, 'NEFT'.</p> <p>The transaction is returned, when the beneficiary bank does not receive the credit for valid reasons. System derives the return cut off time based on the batch time plus the 2 hours (B+2 Criteria) defined here. Once the inbound payment is returned within 2 hours, system generates a N07 message.</p> <p>For the payment type - RTGS, specify the Return Cutoff Time as '1' hour.</p>
NEFT First Batch Time (HH:MM)	Specify the Batch time for the Batch Number 0001.
Batch Interval (In minutes)	Specify the Batch interval between two Batches of NEFT payments.
Indo Nepal Remittance	The below fields are applicable only for NEFT outbound Indo Nepal Remittances, and the system defaults these fields only for these transactions.
Indo Nepal Max Limit Amount Per Transaction	<p>Specify the Indo Nepal maximum limit amount per transaction.</p> <div>  Note: As prescribed by RBI, the maximum limit for Indo Nepal Remittance per transaction is INR 2 lakh. </div>
Beneficiary Branch IFSC	Specify Beneficiary Branch IFSC. Beneficiary branch's IFSC should mandatory carry SBI IFSC 'SBIN0004430'.

Table 2-136 (Cont.) India Payments Common Preferences - Field Description

Field	Description
Beneficiary Account Number	Specify the Beneficiary Account Number. Beneficiary Customer Account Number should mandatory be '2399468044302'.
Accounting Codes	--
Debit Liquidation	Specify the Credit leg (Intermediary GL) of the DRLQ event. System picks this GL as offset account for Debit entries.
Credit Liquidation	Specify the Debit leg (Intermediary GL) of the CRLQ event. System picks this GL as offset account for Debit entries.
Receipt Accounting Code	Specify the accounting code for the RCLG event. System picks this accounting code for the incoming payment. This is applicable only for NEFT payment type.
Dispatch Accounting Code	Specify the accounting code for the DCLG event. System picks this accounting code during the dispatch of the N06 bundle. This is applicable only for NEFT payment type.
Pricing Details	--
Transaction Pricing Code	Specify the Pricing code for the network from the list of values. Taxes and charges maintained in the PPDCDMNT is picked from the list of the values.
Return Accounting	--
Payment Return GL	Specify the Payment return GL. The GL specified is picked, when the inbound payment is not completed and the return is initiated from the repair queue.
Network Account Details	--
Network Account	Specify the Network account from the list of values. Nostro account of the network account is specified. This account is applied while processing inbound/outbound payments for the credit/debit leg of the CRLQ/DRLQ events.
LEI Preferences	--
LEI Threshold Amount	Specify the LEI Threshold Amount. This mandatory field. The value should not be zero or than zero.
Value Dating Preferences	--
Debit Value Date Basis for Outbound Payments	You can set the debit value date basis for outbound payments in the payments common preferences screen. Based on the preferences set, Debit Value date gets defaulted in the Outbound NEFT transaction screen. The options are: <ul style="list-style-type: none"> • Activation Date • Instruction Date • Null
Common Preferences for Outgoing Messages	--
Sender IFSC	Select the Sender IFSC from the list of values. All the valid IFSC codes are listed. <ul style="list-style-type: none"> • NEFT - This is a one-time maintenance to capture the bank's service center branch IFSC and the branch defined here sends out the messages to RBI NEFT Clearing centre. • RTGS - This is a one time maintenance to capture the bank's service center branch IFSC. All valid IFSC are listed in the LOV. This branch sends out messages to RBI RTGS Clearing Centre.

Table 2-136 (Cont.) India Payments Common Preferences - Field Description

Field	Description
Receiver IFSC	IFSC code of RBI NEFT and RBI RTGS Clearing centres are defined. <ul style="list-style-type: none"> The default value for Receiver IFSC code for NEFT is 'RBIP0NEFTSC' The default value for Receiver IFSC code for RTGS is 'RBIN0RTGS00'

2.15.1 Network Rule

The Network Rule screen allows users to maintain the network derivation rules for payment requests received in pain.001 files / MT 101 messages or payments initiated from Payment Initiation screen (PMDPMONL).

1. On Homepage, specify **PMDNWRLE** in the text box, and click next arrow.
Network Rule screen is displayed.

Figure 2-303 Network Rule

2. Click **New** button on the Application toolbar.
3. On **Network Rule** screen, specify the fields.

Table 2-159 Network Rule - Field Description

Field	Description
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
Channel Type	Select Channel Type from the following: <ul style="list-style-type: none"> • C2B • SWIFT • MT 101 • Single Payment • MT 204 • Pacs.008 • Pain.008 • Pacs.003 • SWIFT MX
Rule Name	Specify the Name of the Rule.
Rule Expression	The expression can be filled in the Expression Details multi block. On the click of Populate button, the expression gets built and displayed in this field.
Network Code	Specify the Network Code. Alternatively, you can select the network code from the option list. <div style="border: 1px solid #0070c0; padding: 10px; margin-top: 10px;"> <p> Note:</p> <p>Network is resolved based on the condition which gets satisfied first on priority order.</p> </div>
Priority	Specify the priority number for rule execution.
Expression Details	--
Expression Section	Specify the unique sequence number for the expression defined.
Scope Start	Specify the Scope assigned to the Left operand.

Table 2-159 (Cont.) Network Rule - Field Description

Field	Description
LOP Type	Select type of Left Operand from the following: <ul style="list-style-type: none"> Parameter Expression Constant
LOP Data Type	Select Data type of Left Operand from the following: <ul style="list-style-type: none"> String Date Number
LOP Function Type	Select LOP Function type from the following: <ul style="list-style-type: none"> IndexOf SubString Length Uppercase Lowercase
Function Details	If the LOP Function Type is selected, then it is mandatory to provide Function Details. User can invoke 'Function Details' screen by clicking on the 'Function Details' button. For more details, refer to Section List of LOP Function Type .
LOP Operand	Specify the Left Operand value details in the rule expression from the list of values.
Operator	Select Operator details from the following: <ul style="list-style-type: none"> Greater Than Less Than Not Equal To Equal To Greater Than or Equal To Less Than or Equal To
ROP Type	Select type of Right Operand from the following: <ul style="list-style-type: none"> Expression Constant
ROP Data Type	Select Right Operand Data from the following: <ul style="list-style-type: none"> String Number
ROP Operand	Specify the Right Operand from the list of values.
Scope	Specify the Scope assigned to the Right operand.
Logical Operators	Select Logical Operator from the following: <ul style="list-style-type: none"> And OR
Populate	Click this button after specifying the expression details.

Rule element	Rule element value for payment request received in pain.001 files/ initiated from PMDPMONL	Rule element value for payment request received in MT101
DEBIT_ACCOUNT	Debtor Account number, if account number is not available, then Account IBAN	Ordering customer account
CUSTOMER	Customer of the Debit Account	Customer of the Debit Account
CUSTOMER_SERVICE_MODEL	Service model linked to the customer	Service model linked to the customer

Rule element	Rule element value for payment request received in pain.001 files/ initiated from PMDPMONL	Rule element value for payment request received in MT101
CHANNEL_TYPE	For requests received in pain.001 format, the value is C2B. For payments initiated from PMDPMONL, the value is SP.	Value is MT101
CATEGORY_PURPOSE	Category purpose (code or proprietary value) as available in Credit transfer information; if not available the value available in payment information.	Not applicable
CREDITOR_AGENT_BIC	Debtor Agent BIC	Receiver BIC
INTERMEDIARY_AGENT_BIC	Intermediary Agent BIC	Intermediary Agent BIC
INTERMEDIARY_AGENT_MEMBER_ID	Intermediary Agent Member ID	Intermediary Party identifier number
SOURCE_CODE	Source code	Source code
TRANSFER_AMOUNT	Transfer Amount	Transfer Amount
TRANSFER_CCY	Transfer Currency	Transfer Currency
CDTRACCT_ACCOUNT	Creditor Account, if not available Creditor IBAN	Beneficiary Account
BRANCH_CODE	Branch Code	Branch Code
PURPOSE	Purpose level (code or proprietary value) in creditor transfer information.	Not applicable
SERVICE_LEVEL	Service level (code or proprietary value) as available in Credit transfer information; if not available the value available in payment information .	Field 23E, first code available
LOCAL_INSTRUMENT	Local Instrument (code or proprietary value) as available in Credit transfer information; if not available the value available in payment information.	Not applicable
INSTRUCTION_PRIORITY	Instruction priority as available in Credit transfer information; if not available the value available in payment information.	If 23E is URGP or RTGS value derived will be HIGH otherwise NORM.
CHARGE_BEARER	Charge bearer as available in Credit transfer information; if not available the value available in payment information.	Charge Bearer
IS_CR_AGT_NAME_VALID_ALIAS	This element is supported only for SPS channel. If any rule maintained with this element against other channels, rule save throws return error.	-
IS_CR_AGT_CURRENCY_CURRENT	This element is supported only for SPS channel. If any rule maintained with this element against other channels, rule save throws return error.	-

The following mandatory checks are done on derivation of the Network:

- Whether the transfer currency is allowed for the network
- Whether the amount is within the network limit
- Whether the Creditor Agent is allowed for the network
- [Network Rule Summary](#)

2.15.1.1 Network Rule Summary

1. On Homepage, specify **PMSNWRLE** in the text box, and click next arrow.
Network Rule Summary screen is displayed.

Figure 2-304 Network Rule Summary

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Host Code
 - Channel Type
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

2.15.2 Outbound Transaction Type Rule

On Outbound Transaction Type Rule Detailed (PMDTYPRL) screen, user can define the rules to resolve the transaction type as Outgoing (pass-through) for Incoming SWIFT messages. This screen supports only Channel Type SWIFT for defining rules. All the rule elements applicable for Channel Type SWIFT in Network Resolution Rule are also applicable for the 'Outbound Transaction Type Rule'.

1. On Homepage, specify **PMDTYPRL** in the text box, and click next arrow.
Outbound Transaction Type Rule screen is displayed.

Figure 2-305 Outbound Transaction Type Rule

2. Click **New** button on the Application toolbar.
3. On **Outbound Transaction Type Rule** screen, specify the fields.

For more information about the fields, refer to field description below:

Table 2-160 Outbound Transaction Type Rule - Field Description

Field	Description
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
Channel Type	Select Channel Type from the following: <ul style="list-style-type: none"> • SWIFT • SWIFT MX
Rule Name	Specify the Name of the Rule.
Rule Expression	The expression can be filled in the Expression Details multi block. On the click of Populate button, the expression gets built and displayed in this field.
Priority	Specify the priority number for rule execution.
Expression Details	--
Expression Section	Specify the unique sequence number for the expression defined.
Scope Start	Specify the Scope assigned to the Left operand.
LOP Type	Select type of Left Operand from the following: <ul style="list-style-type: none"> • Parameter • Expression • Constant
LOP Data Type	Select Data type of Left Operand from the following: <ul style="list-style-type: none"> • String • Date • Number
LOP Function Type	Select LOP Function type from the following: <ul style="list-style-type: none"> • IndexOf • SubString • Length • Uppercase • Lowercase

Table 2-160 (Cont.) Outbound Transaction Type Rule - Field Description

Field	Description
Function Details	If the LOP Function Type is selected, then it is mandatory to provide Function Details. You can invoke 'Function Details' screen by clicking on the 'Function Details' button. For more details, refer to Section List of LOP Function Type .
LOP Operand	Specify the Left Operand value details in the rule expression from the list of values.
Operator	Select Operator details from the following: <ul style="list-style-type: none">• Greater Than• Less Than• Not Equal To• Equal To• Greater Than or Equal To• Less Than or Equal To
ROP Type	Select type of Right Operand from the following: <ul style="list-style-type: none">• Expression• Constant• Parameter
ROP Data Type	Select Right Operand Data from the following: <ul style="list-style-type: none">• String• Date• Number
ROP Operand	Specify the Right Operand from the list of values.
Scope	Specify the Scope assigned to the Right operand.
Logical Operators	Select Logical Operator from the following: <ul style="list-style-type: none">• And• OR
Populate	Click this button after specifying the expression details.

Logical Operators	Select the Logical Operator from the following: <ul style="list-style-type: none"> • And • OR
Populate	Click this button after specifying the expression details. The below mentioned new basis elements are provided in the expression builder: <ul style="list-style-type: none"> • Customer • Customer Service Model • Debit Account • Channel Type • Source Code The following mandatory checks are done on derivation of the Network derived: <ul style="list-style-type: none"> • Whether the transfer currency is allowed for the network • Whether the amount is within the network limit • Whether the Creditor Agent is allowed for the network • Whether the network cutoff is over

- [Cross Border to RTGS Rule Summary](#)

2.15.3.1 Cross Border to RTGS Rule Summary

1. On Homepage, specify **PMSXRRLE** in the text box, and click next arrow.
Cross Border to RTGS Rule Summary screen is displayed.

Figure 2-308 Cross Border to RTGS Rule Summary

The screenshot shows a web application titled "Cross Border to RTGS / Fedwire Rule Summary". At the top, there are search controls: a "Search" button, an "Advanced Search" button, a "Reset" button, and a "Clear All" button. Below these is a "Search (Case Sensitive)" dropdown. The main search area has three input fields: "Authorization Status", "Record Status", and "Host Code", each with a search icon. To the right of these fields is a "Records per page" dropdown set to "15". Below the search fields is a "Search Results" section. It contains a table with three columns: "Authorization Status", "Record Status", and "Host Code". The table is currently empty, with the text "No data to display." below the headers. At the bottom of the table, there is a "Page" indicator showing "Page 1 Of 1" and navigation arrows. A "Lock Columns" dropdown is set to "0". An "Exit" button is located at the bottom right of the screen.

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Host Code
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

2.15.4 RTGS Network Switch Rule

This rule is applied when Network cutoff is over for a RTGS payment. Only network of type RTGS is allowed for switching.

If the network cut-off for the originally derived RTGS network is missed, then system checks if Network Switching rules are maintained. If available, system derives alternate RTGS network, based on rule conditions, provided the network cut-off for the alternative is not already passed.

- System then sends out the RTGS message to the alternative that is derived from the rules.

However, if the alternative could not be derived because the network cut-off time for the same is already passed then system moves the transaction to the Network Cut-off queue with the original RTGS network code.

- Manual carry forward or Auto roll-over from this queue would always result in the payment being processed for the original network on the rolled over date.

1. On Homepage, specify **PXDRNWSW** in the text box, and click next arrow.
RTGS Network Switch Rule screen is displayed.

Figure 2-309 RTGS Network Switch Rule

2. Click **New** button on the Application toolbar.
3. On **RTGS Network Switch Rule** screen, specify the fields.

For more information about the fields, refer to field description below:

2.15.5.1 Transaction Code Rule Summary

1. On Homepage, specify **PMSTRLE** in the text box, and click next arrow.
Transaction Code Rule Summary screen is displayed.

Figure 2-312 Transaction Code Rule Summary

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Host Code
 - Source Code
 - Payment Transaction Type
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

2.15.6 Routing Rule

In Routing Rule maintenance, user can define a set of rules which are to be applied on outbound payment requests so that payments can be validated and rejected upfront or can be routed to an appropriate Network or a currency correspondent and the related settlement account. These rules are applied after deriving the Network using Network Rule maintenance rules can be maintained for a Host and Effective Date.

Routing rules are enabled for Cross border /RTGS transactions which are received through service requests or input in UI.

1. On Homepage, specify **PMDRTRLE** in the text box, and click next arrow.
Routing Rule screen is displayed.

Figure 2-313 Routing Rule

2. Click **New** button on the Application toolbar.
3. On **Routing Rule** screen, specify the fields.

For more information about the fields, refer to field description below:

Table 2-164 Routing Rule - Field Description

Field	Description
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
Effective Date	This field is defaulted as current date. You can modify it to a future date, if required. Back dates are not allowed.
Currency	Specify the Currency from the list of values. All valid currencies are listed and *AL can be used for ALL currencies. A rule can be maintained for a particular transfer currency or for all currencies.
Rule ID	Specify the Rule Identification.
Rule Description	Specify the Rule Description for Rule ID.
Priority	Specify the Priority Number for all rules. <div> Note: Priority can be set as a Number, maximum upto 5 digits are allowed. Rules are evaluated on Priority and the first rule which is satisfied are considered for applying the Action defined. Subsequent Rules are ignored. On save, system will order the rules on ascending order of priority. </div>
Rule Expression	Specify the Rule Expression.

Table 2-164 (Cont.) Routing Rule - Field Description

Field	Description
Action	<p>Select Transaction code from the following:</p> <ul style="list-style-type: none"> Change Correspondent (Applicable for Cross border/RTGS payment types) Reject <div>  Note: <p>If the option is Change Correspondent, it is mandatory to maintain Network Code.</p> <p>If the Network Code is of RTGS payment type, then the Nostro Account maintained in PMDNCPRF for Outgoing transactions is defaulted in Correspondent Account field based on Network and Currency. Correspondent Bank BIC & Account fields are disabled for user input in this case.</p> <p>If the Network Code is of type Cross border, it is mandatory to maintain the Correspondent Bank BIC and Account.</p> </div>
Network Code	Specify the Network Code from the list of values, if the resultant action is Change Correspondent.
Correspondent BIC	This field is applicable if Resultant Action is selected as 'Change Correspondent' and network is of type 'Cross border'. Specify the Correspondent BIC from the list of values.
Correspondent Account	<p>Specify the Correspondent Account from the list of values. All Correspondent accounts maintained for the correspondent BIC selected are listed.</p> <p>For RTGS Networks, this field are defaulted as the Nostro Account linked in Network Currency preferences (Function ID: PMDNCPRF).</p>
Error Code	<p>This field is applicable if Resultant Action is selected as 'Reject'.</p> <p>Specify the Error Code from the list of values. User defined error codes in User Defined Error Codes (Function ID: PMDERRCD) with Error Type 'Reject Errors' are listed.</p>
Error Description	Error Description is populated based on Error Code selected.

3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

2.15.6.2 Routing Rule Basis Elements

Basis Element	Description	Mapping to Cross Border/ RTGS Payment Request
CREDITOR_ACCOUNT	Creditor Account	Ultimate Beneficiary (Field 59) Account Number
CREDITOR_NAME	Creditor Name	Ultimate Beneficiary Name
CREDITOR_ADDRESS	Creditor Address	Ultimate Beneficiary Address (address lines (1-4) will be concatenated and will be returned as single value)
CREDITOR_COUNTRY	Creditor Country	Ultimate Beneficiary Country
CREDITOR_AGT_BIC	Creditor Agent BIC	AWI BIC (Field 57) if available as part of the payment request
CREDITOR_AGT_NAME	Creditor Agent Name	Bank Name of the AWI BIC as available in the request 57D option, if not available address is derived from ISDBICDE
CREDITOR_AGT_ADDRESS	Creditor Agent Address	AWI Address (address lines 1-4) will be concatenated and returned as single value) as available in the request 57D option, if not available address is derived from ISDBICDE
CREDITOR_AGT_CTRY_NAME	Creditor Agent Country Name	Country name is derived from Country Code Maintenance for the country code of Creditor Agent BIC
DEBTOR_ACCOUNT	Debtor Account	Debtor Account Number or IBAN as available in the request

Basis Element	Description	Mapping to Cross Border/ RTGS Payment Request
CUSTOMER_ID	Customer ID	Customer ID linked to the debit account
DEBTOR_NAME	Debtor Name	Originator Name (field 50) as available in payment request ,if not available the name defaulted from STDCIFCR
DEBTOR_ADDRESS	Debtor Address	Originator Address (field 50 Address line 1-4) as available in payment request (address lines will be concatenated and returned as single value), if not available the address defaulted from STDCIFCR
DEBTOR_COUNTRY	Debtor Country	Derived from STDCIFCR
TXN_BRANCH	Transaction Branch	Transaction Branch
TRANSFER_CCY	Transfer Currency	Transfer Currency
TRANSFER_AMT	Transfer Amount	Transfer Amount
SOURCE_CODE	Source Code	Source Code
REMITTANCE_INFO	Remittance Information	Field 70 details (will be concatenated with a space in between the lines if the line length is less than 35 and returned as single value)
SENDER_TO_RECEIVER_INFO	Sender to Receiver Information	Field 72 details (will be concatenated with a space in between the lines if the line length is less than 35 and returned as single value)
CHARGE_WHOM	Charge Whom option	Charge Whom option
IS_SAME_DAY_TXN	Whether the transaction can be classified as 'Same Day' transaction	Value will be returned as 'TRUE' if Booking Date and Requested Execution Date (Value Date) are same, else 'FALSE'
IS_PROCESS_CUTOFF_OVER	NA	Based on maintenance in PMDCTOFF
INTERMEDIARY_BIC	Intermediary BIC	Intermediary BIC (Field 56) if available as part of the payment request
IS_CROSS_CCY_TXN	Whether transaction is a cross currency transaction	If the transfer currency and debit account currency are different, value is returned as true,else false
DR_ACC_BRANCH	Debit Account Branch	Debit Account Branch
CREDITOR_AGT_CTRY	Creditor Agent Country	5&6 position of AWI BIC
TRANSFER_TYPE	Transfer Type	Allowed values are customer_transfer, bank_transfer, bank_own_account_transfer & Cover_transfer
NETWORK_CODE	Network Code	Network Code
NETWORK_-TYPE_CODE	Network Type Code	Network Type Code
PROCESSING_TIME	Processing Time	Processing Time to be maintained as HHMM

2.15.7 Group Code Maintenance for Rule Elements

The Group Code Maintenance for Rule Elements screen allows users to define the group of values to be evaluated against a basis element value (or substring / Index of the value).

1. On Homepage, specify **PMDGRPCD** in the text box, and click next arrow.

Group Code Maintenance for Rule Elements screen is displayed.

Figure 2-315 Group Code Maintenance for Rule Elements

2. Click **New** button on the Application toolbar.
3. On **Group Code Maintenance for Rule Elements** screen, specify the fields.

For more information about the fields, refer to field description below:

Table 2-165 Group Code Maintenance for Rule Elements - Field Description

Field	Description
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
Host Code Description	Host Code Description is defaulted of the Host Code selected.
Group Code	Specify the Group Code.
Group Code Description	Specify the Group Code Description.
Data Category	Select Data Category from the following: <ul style="list-style-type: none"> • Text (Default) • Currency • BIC • Country • Customer • Account • IBAN • Source Code
List Of Values	--
Values	Specify the list of values linked to the Group Code. Based on Data Category selected, you can select the values from the valid list of values as detailed below table:

Text	Specify any input value.
Currency	All valid currencies maintained in the system are listed.
BIC	All valid BICs maintained in the system (Function ID: ISDBICDE) are listed.
Country	All valid country codes as maintained in Function ID: STDCNMNT are listed.

Customer	All valid customers as available in External Customer Maintenance Function ID: STDCIFCR (This is customer maintenance in Common Core that lists the customers maintained in STDCIF) are listed.
Account	All valid accounts as available in External Customer Maintenance Function ID: STDCRACC (This is customer account maintenance in Common Core that lists the customer account maintained in STDCUSAC) are listed.
IBAN	All valid IBANs as available in External Customer Maintenance Function ID: STDCRACC are listed.
Source Code	All valid source code maintained in OBPM are listed.

- [Group Code Maintenance for Rule Elements Summary](#)

2.15.7.1 Group Code Maintenance for Rule Elements Summary

1. On Homepage, specify **PMSGRPCD** in the text box, and click next arrow.
Group Code Maintenance for Rule Elements Summary screen is displayed.

Figure 2-316 Group Code Maintenance for Rule Elements Summary

The screenshot shows the 'Group Code Maintenance for Rule Elements Summary' application window. At the top, there are search options: 'Search', 'Advanced Search', 'Reset', and 'Clear All'. A 'Records per page' dropdown is set to 15. Below this is a 'Search (Case Sensitive)' section with three dropdown menus: 'Authorization Status', 'Record Status', and 'Group Code'. A 'Data Category' dropdown is also present. The 'Search Results' section shows a table with columns: 'Authorization Status', 'Record Status', 'Host Code', 'Group Code', 'Group Code Description', and 'Data Category'. The table is currently empty, displaying 'No data to display.' At the bottom, there is a 'Page: 1 of 1' indicator and an 'Exit' button.

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Group Code
 - Data Category
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

2.15.8 Rule Element Group Code Linkage

The Rule Element Group Code Linkage screen allows users to link Group Codes defined to Rule elements. Based on this linkage, user can select Group Codes in the Rule Maintenance screens. This linkage is used in Routing Rule maintenance to list the Group codes.

1. On Homepage, specify **PMDRLGRP** in the text box, and click next arrow.
Rule Element Group Code Linkage screen is displayed.

Figure 2-317 Rule Element Group Code Linkage

2. Click **New** button on the Application toolbar.
3. On **Rule Element Group Code Linkage** screen, specify the fields.
For more information about the fields, refer to field description below:

Table 2-166 Rule Element Group Code Linkage - Field Description

Field	Description
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
Host Code Description	Host Code Description is defaulted of the Host Code selected.
Function ID	Specify the Function ID from the list of values. Select one of the Function IDs from the list: - PMDRTRLE (Routing Rule Maintenance)
Function Description	Function Description is defaulted of the Function ID selected.
Rule Elements	Specify the Rule Element from the list of values. This field lists the Rule Elements allowed for the Rule Function ID selected.
Allowed Group Codes	--
Group Code	Specify the Group Code from the list of values.
Group Code Description	Group Code Description is displayed of the Group Code selected.

2.15.8.1 Rule Element Group Code Linkage Summary

1. On Homepage, specify **PMSRLGRP** in the text box, and click next arrow.
Rule Element Group Code Linkage Summary screen is displayed.

Figure 2-318 Rule Element Group Code Linkage Summary

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Function ID
 - Rule Elements
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

2.16 BIC Cutoff

Usage of this screen

You can validate the FX cutoff days/time for the currency pair involved in the transaction using this screen.

This screen is applicable for Cross Border/ RTGS/ ACH payment types which cross currency transactions are allowed.

You can capture Currency cutoff days and time for each currency in this screen, and additionally a BIC of sender/receiver bank.

For a currency specific or All BICs, Cut-off time is maintained.

Maintenance done for The BIC code 'ALL' is considered for all payment types except for cross-border, for which the maintenance done for specific receiver BIC will be checked for the credit currency, if available.

- [Inbound BIC Cutoff](#)
- [Outbound BIC Cutoff by Transfer Type](#)

2.16.1 Outbound BIC Cutoff

1. On Homepage, specify **PXDCYCOF** in the text box, and click next arrow.
Outbound BIC Cutoff screen is displayed.

Figure 2-319 Outbound BIC Cutoff

2. Click **New** button on the Application toolbar.
3. On **Outbound BIC Cutoff** screen, specify the fields.

For more information about the fields, refer to field description below:

Table 2-167 Outbound BIC Cutoff - Field Description

Field	Description
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
BIC Code	Specify the BIC Code. Alternatively, you can select the BIC Code from the option list. The list displays all valid BIC Codes maintained in the system.
Currency Code	Specify the Currency Code. Alternatively, you can select the currency code from the option list. The list displays all valid currency codes maintained in the system for the selected country.
Limit Amount	Specify the Limit Amount for the transaction amount.
Settlement Days	Specify the number of days in advance of the current day on which the settlement is applicable that the payment request needs to be received or the transaction booked from screen.
Cutoff Time (Hr)	Specify the hours for the transaction cut-off time.
Cutoff Time (Min)	Specify the minutes for the transaction cut-off time.
Earliest Release Days	Specify the Earliest Release Days. To capture Earliest Release Days for releasing the message, minimum value allowed 1 and maximum value allowed 99.
Earliest Release Time (HR)	Specify the Earliest Release Time. To capture Earliest Release Days for releasing the message, minimum value allowed 0 and maximum value allowed 23.
Earliest Release Time (Min)	Specify the Earliest Release Time. To capture Earliest Release Days for releasing the message, minimum value allowed 0 and maximum value allowed 59.

2.16.1.1 Outbound BIC Cutoff Summary

1. On Homepage, specify **PXSCYCOF** in the text box, and click next arrow.

Outbound BIC Cutoff Summary screen is displayed.

Figure 2-320 Outbound BIC Cutoff Summary

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Currency Code
 - BIC Code
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

2.16.2 Inbound BIC Cutoff

For Incoming SWIFT transaction, Network level Cutoff will not be checked. System checks the BIC level cutoff maintained in Inbound BIC Cutoff Detailed (PXDINCOF) screen.

1. On Homepage, specify **PXDINCOF** in the text box, and click next arrow.
Inbound BIC Cutoff screen is displayed.

Figure 2-321 Inbound BIC Cutoff

2. Click **New** button on the Application toolbar.
3. On **Inbound BIC Cutoff** screen, specify the fields.

For more information about the fields, refer to field description below:

Table 2-168 Inbound BIC Cutoff - Field Description

Field	Description
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
Host Code Description	System displays the description of the Host Code.
BIC Code	Specify the BIC Code. Alternatively, you can select the BIC Code from the option list. The list displays all valid BIC Codes maintained in the system.
Currency Code	Specify the Currency Code. Alternatively, you can select the currency code from the option list. The list displays all valid currency codes maintained in the system for the selected country.
Limit Amount	Specify the Limit Amount for the transaction amount.
Settlement Days	Specify the settlement days.  Note: Cutoff days for currencies in addition to the cut off time while processing inbound payments is considered.
Cutoff Time (Hr)	Specify the hours for the transaction cut-off time.
Cutoff Time (Min)	Specify the minutes for the transaction cut-off time.

- [Inbound Payments - Date Derivation](#)
- [Inbound BIC Cutoff Summary](#)

2.16.2.1 Inbound Payments - Date Derivation

For inbound payments, date derivation works as below for the payment types - ACH, Cross Border, RTGS:

Instruction Date

- It is derived as the latest of Payment Value Date, Cover Value Date or Received Date.
- Credit Float days is added to this defined date.
- Debit and Credit currency holiday check is done on this and Instruction date is moved forward, if it falls on a holiday.

Note:

Received date is considered based on the preferences maintained in Customer Preferences Detailed (PMDFLPRF) and Cover Match Preferences Detailed (PMDCMPRF) screen. Refer to these screens for more details.

Activation Date

- Activation date is derived as Instruction date - Settlement days (as defined in PXDINCOF).
- Derived activation date is pushed to previous working day, in case this falls on a branch holiday.
- If Activation date goes beyond current date, then activation is set as current date. In turn, the instruction date is reset as current activation date + settlement days.

Credit Value Date

This will be same as Instruction Date derived.

Debit Value Date

This is the date received in 32A tag of payment message or cover message, if applicable.

2.16.2.2 Inbound BIC Cutoff Summary

1. On Homepage, specify **PXSINCOF** in the text box, and click next arrow.
Inbound BIC Cutoff Summary screen is displayed.

Figure 2-322 Inbound BIC Cutoff Summary

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Currency Code
 - BIC Code
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

2.16.3 Outbound BIC Cutoff by Transfer Type

1. On Homepage, specify **PXDOMCOF** in the text box, and click next arrow.
Outbound BIC Cutoff by Transfer Type screen is displayed.

Figure 2-323 Outbound BIC Cutoff by Transfer Type

2. Click **New** button on the Application toolbar.
3. On **Outbound BIC Cutoff by Transfer Type** screen, specify the fields.

For more information about the fields, refer to field description below:

Table 2-169 Outbound BIC Cutoff by Transfer Type - Field Description

Field	Description
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
BIC Code	Specify the BIC Code from the list of values. It lists all the valid (Open/Authorized) BICs maintained in BIC Code Details (ISDBICDE).
Currency Code	Specify the Currency Code from the list of values.
Transfer Type	Select Transfer Type from the following: <ul style="list-style-type: none"> • Customer Transfer • Bank Transfer
Limit Amount	Specify the Limit Amount for the transaction amount. System defaults to zero.
Settlement Days	Specify the number of days in advance of the current day on which the settlement is applicable that the payment request needs to be received or the transaction booked from screen. System defaults to zero.
Cutoff Time (Hr)	Specify the hours for the transaction cut-off time. System defaults to zero.
Cutoff Time (Min)	Specify the minutes for the transaction cut-off time. System defaults to zero.
Earliest Release Days	Specify the Earliest Release Days. To capture Earliest Release Days for releasing the message, minimum value allowed 1 and maximum value allowed 99.
Earliest Release Time (HR)	Specify the Earliest Release Time. To capture Earliest Release Days for releasing the message, minimum value allowed 0 and maximum value allowed 23.
Earliest Release Time (Min)	Specify the Earliest Release Time. To capture Earliest Release Days for releasing the message, minimum value allowed 0 and maximum value allowed 59.

2.16.3.1 Outbound BIC Cutoff by Transfer Type Summary

1. On Homepage, specify **PXSOMCOF** in the text box, and click next arrow.
Outbound BIC Cutoff by Transfer Type Summary screen is displayed.

Figure 2-324 Outbound BIC Cutoff by Transfer Type Summary

The screenshot shows the 'Outbound BIC Cutoff by Transfer Type Summary' interface. At the top, there's a title bar with search and filter icons. Below it, a search section contains four input fields: 'Authorization Status', 'Record Status', 'BIC Code', and 'Currency Code'. A 'Search' button is located to the right of these fields. Below the search section, there's a table with the following columns: 'Authorization Status', 'Record Status', 'Host Code', 'BIC Code', 'Currency Code', and 'Transfer Type'. The table is currently empty, displaying 'No data to display.' and pagination information indicating 'Page 1 of 1'.

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Currency Code
 - BIC Code
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

2.17 MIS & UDF Maintenance

- [MIS Class Code](#)
- [MIS Group](#)
- [UDF Group](#)

2.17.1 MIS Class Code

The MIS Class Code screen allows users to define various categories based on which reports on general ledgers should be classified. To maintain details of a new MIS class, click new icon. The list of values are fetched from the maintenance done in 'GLDCLSMT' screen.

Note:

If no maintenance is present in Oracle Banking Payments specific MIS Class maintenance (PMDMISMT), then system considers all class codes as available in Core MIS Class maintenance (GLDCLSMT) at transaction level.

1. On Homepage, specify **PMDMISMT** in the text box, and click next arrow.
MIS Class Code screen is displayed.

Figure 2-325 MIS Class Code

2. Click **New** button on the Application toolbar.
3. On **MIS Class Code** screen, specify the fields.
For more information about the fields, refer to field description below:

Table 2-170 MIS Class Code - Field Description

Field	Description
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
MIS Type	The MIS class type identifies the basic nature of the class. Select the MIS Type from the following: <ul style="list-style-type: none"> • Transaction Class • Composite Class
MIS Class	Each MIS class that you maintain is identified by a unique nine-character code called a Class Code. You can follow your own convention for devising this code.
MIS Class Description	Specify a short description that enables to identify the MIS class quickly.
MIS Code	--
MIS Code	The MIS codes that you associate will depend on the Type of MIS Class that you are creating. While setting up the details of a customer, you can associate the customer to a customer type MIS Code.
Code Description	Specify a short description that will enable you to identify the MIS code quickly.

- [MIS Class Code Summary](#)

2.17.1.1 MIS Class Code Summary

1. On Homepage, specify **PMSMISMT** in the text box, and click next arrow.
MIS Class Code Summary screen is displayed.

Figure 2-326 MIS Class Code Summary

The screenshot shows the 'MIS Class Code Summary' application window. At the top, there are buttons for 'Search', 'Advanced Search', 'Reset', and 'Clear All'. A 'Records per page' dropdown is set to 15. Below this is a 'Search (Case Sensitive)' section with four search criteria: 'Authorization Status' (dropdown), 'Record Status' (dropdown), 'Host Code' (text input with a search icon), and 'MIS Type' (dropdown). Below the search criteria is a 'Search Results' section with a 'Lock Columns' dropdown set to 0. The results table has five columns: 'Authorization Status', 'Record Status', 'Host Code', 'MIS Type', and 'MIS Class'. The table is currently empty, displaying 'No data to display.' At the bottom of the table, there is a pagination bar showing 'Page: 1' and navigation icons. An 'Exit' button is located at the bottom right of the application window.

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Host Code
 - MIS Type
 - MIS Class
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

2.17.2 MIS Group

Note:

If no maintenance is present in Oracle Banking Payments specific MIS Group maintenance (PMDMISGR), then system considers all Group codes as available in Core MIS Group maintenance (MIDGRPMT).

1. On Homepage, specify **PMDMISGR** in the text box, and click next arrow.
MIS Group screen is displayed.

Figure 2-327 MIS Group

2. Click **New** button on the Application toolbar.
3. On **MIS Group** screen, specify the fields.

For more information about the fields, refer to field description below:

Table 2-171 MIS Group - Field Description

Field	Description
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
MIS Group	Specify the Group Name to be created.
Group Description	Specify a short description that will enable you to identify the MIS Group quickly.
Transaction Class	--
MIS Class 1-10	System defaults the MIS class defined for the Host defined. Also user can define the required MIS classes required.
MIS Code	Specify the required MIS Code.
MIS Code Desc	Specify a short description that will enable you to identify the MIS Code quickly.
Composite Class	--
MIS Class 1-10	System defaults the MIS class defined for the Host defined. Also user can define the required MIS classes required.
MIS Code	Specify the required MIS Code.

3.1 File Envelope

File envelope details received can be viewed from this screen. All the file types are position in the Application server file path, except for those that contain specific mention of the Database server file path.

System supports receipt, validation, and upload of file envelopes for the following file types:

- ACHCTReceipt - ACH CT Receipt file in pacs.008 format
- ACHCTReject - Originated ACH CT File reject in pacs.002 format
- ACHCTReturn - Originated ACH CT Return in pacs.004 format
- ACHCTReversal - ACH Reversal file in pacs.007 format
- ACHDDOrigination - ACHDD Origination in pain.008.001.08
- ACHDDRceipt - ACH Debit receipts in pacs.003 format
- ACHDDRreject - ACH DD Reject File in pacs.002 format
- ACHDDRReturn - ACH DD Return
- NACHack - NACHA Acknowledgement
- NACHCreditInput - To receive NACH Credit Input files from corporates in pacs.008 NPCI formats
- NACHCreditInward - To receive NACH Credit Input files from corporates in pacs.008 NPCI formats
- NACHDebitInput - To receive NACH Credit/Debit Input files from corporates in pacs.003.001.02 NPCI formats
- NACHDebitInward - NACH Debit Inward
- SEPADDNonCSM - SEPA DD Non CSM

- SEPANonCSM - SEPA Non CSM
 - achDir - To upload the ACH file via pain.001
 - bicdir - To upload BIC Maintenance (Database server file path)
 - bicPlusDir - To upload BIC Directory
 - bulkSps - To upload Bulk XML (multiple transactions) via Single payment service
 - c2bFile - To upload Bulk file via pain.001
 - c2bFileCancel - To upload bulk cancellation request from customer via pain.007
 - c2bNachaFile - Bulk file in US Nacha format
 - clearing - Incoming Clearing
 - cnapsDirxml - Cnaps Directory XML
 - currencyHolidayDir - To upload Currency Holiday maintenance. To be handled at Custom Layer (Database server file path)
 - euro1Dir - To upload EURO1 RTGS Directory (Database server file path)
 - gpiDirXml - To upload SWIFT gpi Directory
 - gpiDirTxt - gpi Directory TXT (Database server file path)
 - ibanExclusionList - To upload list of IBAN Exclusion (Database server file path)
 - ibanPlusDir - To upload IBAN Plus Directory
 - ibanStructureDir - To upload IBAN Information Structure Maintenance
 - pacs008CTOrigination - ACH CT Receipt file in ISO pacs.008 format
 - pain.009 - To upload Debtor Mandate Creation via pain.009
 - pain.010 - To upload Debtor Mandate Amendment via pain.010
 - pain.011 - To upload Debtor Mandate Cancellation via pain.011
 - rmaPlusDir - To upload RMA/RMA + Maintenance
 - rtpRoutingDir - To upload RTP Routing Maintenance
 - sepaPlusDir - To upload SEPAPLUS Bank Directoy (Database server file path)
 - target2Dir - To upload Target2 RTGS Directory (Database server file path)
 - target2DirXML - To upload TARGET2 Directory XML file
 - GEFU_NeftSCSD - NEFT Single Credit Single Debit File in ASCII file
 - GEFU_NeftSDMC - NEFT Single Debit Multi Credit File in ASCII file
 - GEFU-RtgsCuSCSD - India RTGS Customer Single Credit Single Debit ASCII file
 - GEFU-RtgsSCSD - India RTGS Bank Single Credit Single Debit ASCII file
 - IMPSTCC - India IMPS Transaction Credit Confirmation (TCC) file
 - USNachaDirectory - To upload of NACHA directory file (flat text format).
1. On Homepage, specify **PMDFLEVP** in the text box, and click next arrow.
File Envelope screen is displayed.

Figure 3-1 File Envelope

2. Click **New** button on the Application toolbar.
3. On **File Envelope** screen, Source code received as part of the envelope are mapped to transactions generated from C2B files or bulk single payment service XMLs.

The following file envelope details of the uploaded files are displayed:

- Message Reference Number
- Host Code
- Source Code
- Transaction Branch
- Network Code
- Requested Date
- Source Message ID
- File Type
- File Name
- File Path
- File Type
- File Value

 **Note:**

 - File Type
 - File Name
 - Source Message ID
 - Source Code
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

3.2 EU Payer Regulatory Maintenance

The EU Payer Regulatory Maintenance covers the Regulatory Guidelines, that the Payment Service Providers should take, to detect missing or incomplete information on the Payer or the Payee, and the procedures they should put in place to manage a transfer of funds lacking the required information. This is applicable across all the Payments modules.

Following are the features supported for both Payments and collections type of transactions as part of the EU Payer regulations:

- Ability to detect missing or incomplete information on the Payer & Payee details, like Name, Account No, and Address, in every Payment through the PSP, while playing the role as the Payer PSP, Payee PSP, or Intermediary PSP (IPSP).
- Ability to reject or suspend real-time Payments with missing or incomplete information on the Payer and/or Payee details.
- Ability to allow for Repairs on such Payments as above.
- Ability to report on such Payments as above.
- Ability to allow for configurations & rules to implement the monitoring in the system.
- Ability to detect & mark as high-risk PSPs repeatedly sending Payments that do not comply with the Regulation and allow for real-time monitoring of Payments from such high-risk PSPs.

- Ability to detect Payments with certain similarities with the payment amount below the threshold for monitoring, but aggregate above the threshold over a certain period, commonly known as Linked Payments.
- Ability to report on Payments for Ex-post monitoring purposes.

3.2.1 EU Payer Preferences

The EU Payer Preferences screen allows user to maintain the EU Payer preferences at the Host level.

1. On Homepage, specify **PMDEUPRF** in the text box, and click next arrow.
EU Payer Preferences screen is displayed.

Figure 3-3 EU Payer Preferences

2. Click **New** button on the Application toolbar.
3. On **EU Payer Preferences** screen, specify the fields.
For more information about the fields, refer to field description below:

Table 3-1 EU Payer Preferences - Field Description

Field	Description
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
Host Code Description	System defaults the description of the Host Code.
EU Payer Monitoring Preferences	This is an option to turn on/off the monitoring at the Host level.
Default Monitoring	<p>This flag indicates whether EU Payer monitoring is required for payments within the EU region.</p> <p>This is to be turned ON when the Branch (Host) in Oracle Banking Payments is in the EU region and it is necessarily required to monitor all Payments passing through the System.</p>
EU Payments Monitoring	<p>A flag to indicate whether EU Payer monitoring is required for Payments destined to any EU Country.</p> <p>This is to be turned ON only when the Branch (Host) in Oracle Banking Payments is in itself not in the EU region, but wishes to scan Payments destined to PSPs within the EU.</p> <div>  Note: <p>It is to be noted that PSP Entities outside of the EU do not have to comply with the Regulation. However, such PSPs may turn on this flag to do a self-monitoring on Payments destined to PSPs within the EU to ensure a straight-through processing.</p> <p>EU Payer monitoring will be based on the immediate PSP before & after in the payment chain and will not be dependent on the terminal PSP.</p> </div>
Threshold Currency	Select the Threshold Currency from the list of values. This parameter, indicates the currency in which threshold amount is maintained.
Threshold Amount	Specify the Threshold Amount. In EU Payer Rule, this amount can be used as a condition to decide if a payment should undergo monitoring. System uses the desk rates for converting the Payment Amount to the Threshold Amount before determining the eligibility.
Suspended Payments Retention Days	<p>Specify the Suspended Payments Retention Days. You can define the number of days (Branch Working) up to which Suspended Payments can be retained in the system.</p> <p>Payments remaining under suspension beyond the number of Branch Working Days will be flagged as Aged Payments.</p>
Repeat Sequence Allowed	Specify the number of repeat sequence allowed. This field indicates the no. of times a character or digit must be repeated within a Payment Attribute for it to be considered as meaning-less information. Default Repeat Sequence is 5.
Linked Payments Tracking Days	Specify the Linked Payment Tracking Days. This field indicates the no. of Tracking days (Calendar Days) within which a payment below threshold amount from the same sending PSP has to be tracked for linked payments. Default number of days is 180.

Following are the sub screens that can be accessed through the EU Payer Preferences screen. The sub-screens opens in view mode. If any information is already captured in the respective maintenance, the same is available to view:

- EU Member Countries
- Restricted Entities
- Restricted Words
- [EU Payer Preferences Summary](#)

3.2.1.1 EU Payer Preferences Summary

1. On Homepage, specify **PMSEUPRF** in the text box, and click next arrow.
EU Payer Preferences Summary screen is displayed.

Figure 3-4 EU Payer Preferences Summary

2. Search using one or more of the following parameters:
 - Authorization Status
 - Host Code
 - Threshold Currency
 - Repeat Sequence Allowed
 - Record Status
 - Suspended Payments Retention Days
 - Threshold Amount
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

3.2.2 EU Member Countries

The EU Member Countries screen allows user to maintain the list of EU member countries through this screen. This maintenance is not available by Branch (Host), since the list is a standard set of member countries of the EU.

1. On Homepage, specify **PMDEUCTR** in the text box, and click next arrow.

EU Member Countries screen is displayed.

Figure 3-5 EU Member Countries

2. Click **New** button on the Application toolbar.
 3. On **EU Member Countries** screen, specify the fields.
- For more information about the fields, refer to field description below:

Table 3-2 EU Member Countries - Field Description

Field	Description
Country Code	Specify the Country Code from list of values. All the valid country codes are listed.
Country Name	System defaults the Country Name of the country code selected.

3.2.3 Restricted Entities

The Restricted Entities screen allows users to maintain the list of known/potential ML/TF countries and Non-Compliant Payers at the Branch (Host) level.

1. On Homepage, specify **PMDEURST** in the text box, and click next arrow.

Restricted Entities screen is displayed.

Figure 3-6 Restricted Entities

The screenshot shows the 'EU Payer Restrictions' application window. At the top, there are buttons for 'New' and 'Enter Query'. Below these are input fields for 'Host Code' and 'Host Description'. The main area is divided into two tabs: 'Restricted Countries' (active) and 'Non-Compliant Payers'. The 'Restricted Countries' tab displays a table with columns: 'Country Code', 'Country Name', and 'Remarks'. The table is currently empty, showing 'No data to display.' and a pagination bar indicating 'Page 1 (0 of 0 items)'.

- On **Restricted Entities** screen, specify the fields.
For more information about the fields, refer to field description below:

Table 3-3 Restricted Entities - Field Description

Field	Description
Host Code	System defaults the host code of transaction branch on clicking 'New'.
Host Code Description	System defaults the description of the Host Code selected.
Restricted Countries	User can maintain the list of countries to be restricted, by selecting the Country Codes from the list of values. This list is looked-up to verify the country of the Payer PSP or the Payee PSP to flag the payment as a High-risk Payment.
Country Code	Specify the Country code, that is to be restricted from the list of values. All the valid country codes are listed.
Country Name	System defaults the Country name of the country code selected.
Remarks	Specify the remarks if any.

- Click **Non - Compliant Payers** tab.

Figure 3-7 Non - Compliant Payers

The screenshot shows the 'EU Payer Restrictions' application window with the 'Non-Compliant Payers' tab selected. The interface is similar to the previous figure, but the table columns are 'Payer BIC', 'Bank Name', and 'Remarks'. The table is empty, showing 'No data to display.' and a pagination bar indicating 'Page 1 (0 of 0 items)'.

- On **Non - Compliant Payers** tab, specify the fields.

Table 3-4 Non - Compliant Payers - Field Description

Field	Description
Payer BIC	Specify the Sender BIC from the list of values, who is marked as Non-compliant. All the valid Payer BICs are listed.
Bank Name	System defaults the Bank name of the BIC selected.
Remarks	Specify the remarks if any.

3.2.4 EU Payer Restricted Words

The EU Payer Restricted Words screen allows user to maintain the list of meaning-less words in this screen. This is a common list across Branches (Hosts). You can also maintain the known set of meaning-less words or the words as extracted from the ex-post monitoring reports.

- On Homepage, specify **PMDEUWRD** in the text box, and click next arrow.

EU Payer Restricted Words screen is displayed.

Figure 3-8 EU Payer Restricted Words

- Click **New** button on the Application toolbar.
- On **EU Payer Restricted Words** screen, specify the fields.

For more information about the fields, refer to field description below:

Table 3-5 EU Payer Restricted Words - Field Description

Field	Description
Bank Code	System defaults the Bank Code of transaction branch on clicking 'New'.
Description	System defaults the description of the Bank Code.
Restricted Words	This is a free text field. You can maintain the known set of meaning-less words or the words as extracted from the ex-post monitoring reports
Remarks	Specify the remarks if any.

Following are the sub screens that can be accessed through the EU Payer Preferences screen. The sub-screens opens in view mode. If any information is already captured in the respective maintenance, the same is available to view:

- [EU Payer Restricted Words Maintenance Summary](#)

3.2.4.1 EU Payer Restricted Words Maintenance Summary

1. On Homepage, specify **PMSEUWRD** in the text box, and click next arrow.
EU Payer Restricted Words Maintenance Summary screen is displayed.

Figure 3-9 EU Payer Restricted Words Maintenance Summary

The screenshot shows the 'EU Payer Restricted Words Maintenance Summary' interface. At the top, there's a title bar. Below it, a search section includes buttons for 'Search', 'Advanced Search', 'Reset', and 'Clear All'. A 'Records per page' dropdown is set to '15'. The main search area has three dropdown menus for 'Authorization Status', 'Record Status', and 'Bank Code', along with a 'Search (Case Sensitive)' button. Below this, the 'Search Results' section shows a table with the same three columns. The table is empty, with a message 'No data to display.' at the bottom. The page number is '1' and the records per page are '15'. An 'Exit' button is located at the bottom right corner.

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Bank Code
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

3.2.5 EU Payer Rules

You can set up scenario-based Rule at the Branch (Host) level to detect the set of Payments eligible for EU Payer monitoring and to configure the essential information to meet the compliance.

1. On Homepage, specify **PMDEURLE** in the text box, and click next arrow.
EU Payer Rule screen is displayed.

Figure 3-10 EU Payer Rule

2. Click **New** button on the Application toolbar.
3. On **EU Payer Rule** screen, specify the fields.

For more information about the fields, refer to field description below:

Table 3-6 EU Payer Rule - Field Description

Field	Description
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
Host Description	System defaults the description of the Host Code.
PSP Role	<p>Select the PSP Role from the following:</p> <ul style="list-style-type: none"> • Payer • Payee • Intermediary <p>The EU Payer Rules can be set-up for each of the 'PSP Role' listed for each Branch.</p> <p>The rules, as detailed in the table below, can be set-up to be applied on the Payment in the listed Priority Order, when the PSP plays the Role for each of the above.</p>
Network Code	Specify the network code. Alternatively, you can select the network code from the list of values, for which the EU payer rule to be maintained.
Network Type Description	System defaults the Network Type Description on the Network code selected.
Account Related Checks	<p>Preference flags are provided to denote whether the Missing Information validation has to be done based on:</p> <ul style="list-style-type: none"> • Missing Value • Repeated characters • Meaningless Words <p>If the missing information validation has to be done based on all the three conditions for an account, all the three flags are to be checked.</p> <p>For example: If Repeated character check is not a criteria for marking missing information for Account, 'Repeated character flag in the EU payer rule screen can be kept as unchecked.</p>

Table 3-6 (Cont.) EU Payer Rule - Field Description

Field	Description
Name & Address Checks	<p>Preferences similar to Account related checks are available for Name & Address. The preferences maintained are applicable to both Name and Address fields.</p> <div> Note: All the new flags are checked by default. You can uncheck any of the flags as required. When Missing information check is required for address, by default the validation is required for all lines of address as available in the transaction. If any line in address is having value, it is considered as availability of data.</div>
Rule Name	Specify the name of the rule.

Table 3-6 (Cont.) EU Payer Rule - Field Description

Field	Description
Rule Expression	<p>The expression can be filled in the Expression Details multi block. On the click of Populate button, the expression gets built and displayed in this field.</p> <p>To configure the Rule, the following set of elements are available.</p> <ul style="list-style-type: none"> • Payer PSP • Payee PSP • Sender PSP • Receiver PSP • Payer PSP Country • Payee PSP Country • Sender PSP Country • Receiver PSP Country • Threshold Amount in transfer currency (as configured in the EU Payer Maintenance converted in transfer currency) • Payment Amount • Payment Currency • Payer PSP within EEA • Payee PSP within EEA • Sender PSP within EEA • Receiver PSP within EEA • Linked Payment (Y/N) • Is Sender Negative Compliant (Y/N) • Payer PSP in ML/TF Country (Y/N) • Payee PSP in ML/TF Country (Y/N) • Sender PSP in ML/TF Country (Y/N) • Receiver PSP in ML/TF Country (Y/N) • Payment Type • Source Code <div>  Note: If rule element value could not be evaluated, STP action for non-compliant transactions would be applied. </div> <p>Tracking for Linked Payments: Every Payment going through the System is logged into a data store, specifically created for EU Payer Reporting Purposes, provided either of the EU Payer flags are turned on.</p> <p>The following are the conditions to consider the current Payment as a Linked Payment:</p> <ul style="list-style-type: none"> • The current Payment itself is below the Threshold amount as on the present date as set in the Preferences screen. • All Payments from the same Sending PSP (Payer PSP, for Payments, and Payee PSP, for Collections) as the current Payment are considered. • Further, all such Payments as above having the same Payer attributes for Account No are considered. Payee attributes are considered in the case of Collections. • Always consider Payee Account No attribute.

Table 3-6 (Cont.) EU Payer Rule - Field Description

Field	Description
	<ul style="list-style-type: none"> Further, all such Payments as above booked within the last X no. of days of the current Payment, X being the Tracking Days as set in the Preferences screen, are considered. Further, all such Payments as above with Payment amount below the Threshold Amount as on the date of Booking are considered. The Payment Threshold Amount aggregate of all such Payments as above and the current Payment should be above the Threshold Amount as on the present date.
Payer and Payee Details	<p>For each Rule, below list of Payer/Payee fields can be checked as required for the rule:</p> <ul style="list-style-type: none"> Payer Name Payer Account Payer Address Payee Name Payee Account Payee Address <p>If the required information is missing or incomplete, it is considered as a compliance failure and STP Action will be applied.</p>
STP Action	Refer below for more details.
Priority	Specify the priority for each rule. Based on the priority, rule gets executed.
Expression Details	--
Expression Section	Specify the unique sequence number for the expression defined.
Scope	Specify the Scope assigned to the Left operand.
Operator	<p>Select the Operator details from the following:</p> <ul style="list-style-type: none"> Greater Than Less Than Not Equal To Equal To Greater Than or Equal To Less Than or Equal To

ROP Operand	Specify the Right Operand from the list of values.
Scope	Specify the Scope assigned to the Right operand.
Logical Operators	<p>Select the Logical Operator from the following:</p> <ul style="list-style-type: none"> And OR
Populate	Click this button after specifying the expression details.

Rule	Required Information for Compliance	Required Information for Compliance	Required Information for Compliance	Required Information for Compliance	Required Information for Compliance	Required Information for Compliance	STP Action
Rule	Payer Name	Payer Account No	Payer Address	Payee Name	Payee Account No	Payee Address	STP Action
Payer PSP Country is a ML/TF Country	-	-	-	-	-	-	Suspend
Payer PSP has a negative compliance record	-	-	-	-	-	-	Suspend
Payer PSP within the EEA	-	Y	-	-	Y	-	Report – Missing Information
Payer PSP outside of the EEA	Y	Y	Y	Y	Y	Y	Suspend

STP Action

As long as the Rule is satisfied for the Payment and if it is non-compliant, the following STP Actions will apply.

- Suspend: Suspend and moves the Payment to EU Payer Compliance Queue, irrespective of required Information on the Payment missing or otherwise.
- Cancel: Payment will be auto-canceled. FX unwind (if applicable) and Sanctions will be completed before cancellation.
- Report – Missing Information: Process the Payment, but only Report when the Required Information on the Payment is missing.

A PSP Entity or a PSP Entity Branch in any EU Member country can play the role of either a Payer PSP, a Payee PSP, or an Intermediary PSP.

A PSP Entity or a PSP Entity Branch outside of the EU, when sending Payments to PSPs or IPSPs within the EU, can play the role of a Payer PSP for Payments, Payee PSP for collections or an Intermediary PSP.

Scenario	PSP Entity within the EU	PSP Entity outside of the EU
PSP – Payer Role	Applicable	Applicable
PSP – Payee Role	Applicable	Not Applicable
PSP – Intermediary Role	Applicable	Applicable

- [EU Payer Rule Summary](#)

3.2.5.1 EU Payer Rule Summary

1. On Homepage, specify **PMSEURLE** in the text box, and click next arrow.

EU Payer Rule Summary screen is displayed.

Figure 3-11 EU Payer Rule Summary

2. Search using one or more of the following parameters:
 - Authorization Status
 - Host Code
 - Network Code
 - Record Status
 - PSP Role
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

3.2.6 EU Payer - Rules Evaluation and Processing

System evaluates the role it plays vis-à-vis each Payment as either a Payer or a Payee or an Intermediary.

- When the Default Monitoring flag is turned ON, the Payment is always monitored.
- When the EU Payment Monitoring flag is turned ON, the Payment is monitored only when the PSP plays the role as a Payer or as an Intermediary and the Payee on the payment chain is within the EU.

Depending on the role scenario the PSP plays in the payment chain, the rules from the appropriate Rule Maintenance are evaluated & applied.

Role	Role of PSP	Rule Maintenance used for Evaluation
Frankfurt Branch Receives a Payment from a PSP in Paris for Credit to its Customer	Payee PSP	Branch: Frankfurt Role Scenario: PSP - Payee
Frankfurt Branch Sends a Payment to a PSP in Madrid for Credit to Madrid's Customer	Payer PSP	Branch: Frankfurt Role Scenario: PSP - Payer

Role	Role of PSP	Rule Maintenance used for Evaluation
Frankfurt Branch Receives a Payment from a PSP in Dublin for Payment to a PSP in Singapore for Credit to Singapore's Customer	Intermediary PSP	Branch: Frankfurt Role Scenario: PSP - Intermediary

Each of the rules within the Rule Maintenance is evaluated in the Priority order it is set-up. To evaluate each rule, the possible set of Payment Elements are derived. When a rule is satisfied and required information available or not opted, the STP Action is applied.

- If the STP Action is Suspend, the Payment is suspended and moves to EU Payer Compliance Queue. You can repair the details and re-submit for processing from the queue. For more details on queue processing, refer the Exception Queues User Guide.

 **Note:**

Except 'Debit account' field for outbound payments (which are not pass through payments) and 'credit account' for inbound payments, all the information fields can be modified.

- If the STP Action is Report – Missing Information, then the Payment is scanned for Missing Information as per the Configuration against the Rule. If any of the information that is required is found to be missing, then the Payment details are logged in a data store for Ex-post monitoring purposes, but the Payment is allowed to STP.
- If the STP Action is Cancel - Payment is auto-canceled. FX unwind (if applicable) and Sanctions gets completed before cancellation.

The EU Payer Rules are evaluated just before the Sanctions Screening step in the Payments flow.

When the STP Action on the rule is to suspend the Payment, the Payment is moved to EU Payer Compliance Queue. On repair action of the payment from EU Payer compliance queue, again EU payer rules are evaluated and if it clears the EU Payer validations, then the Payment moves onto the Sanction Screening.

The EU Payer Rules are also evaluated each time a Payment is released from Warehouse.

This is to take into account, the possible changes in the underlying Maintenance/Setups/Configurations between the day of Booking and the day of Release from Warehouse.

For example, there could be changes in the Threshold Amount, list of ML/TF Countries or the list of PSPs with a Negative Compliance Record, or even changes to the Set-up of Meaningless Words.

- Missing Value
- Repeated Characters
- Meaningless Words

For Missing information validation, system validates whether Payer/Payee Account is missing based on the preferences maintained in the EU payer rule screen header.

Error codes are available to differentiate which kind of exception is encountered during processing.

Similarly, for Name & Address field the related preferences are to be checked while validating for missing information for Name and Address fields.

3.2.7 EU Payer Compliance - Supported Payment Types

Below types of Transactions are covered for the EU Payer Compliance Checks.

Payments

Within Payments both Outbound and Inbound Payments are covered. Following are the Payment Types:

- SWIFT
- ACH
- RTGS

Note:

EU Payer validation is done for Customer Transfer only.

Collections

Direct Debits is the only Collection Type that is supported, for the EU Payer Compliance Checks. In Collections, the Originating PSP plays the role of Payee PSP and the Receiving PSP plays the role of the Payer PSP.

Note:

The reference to Payments in this document also includes Collections.

In both Payments & Collections, both Outbound & Inbound Transactions are considered for the EU Payer Compliance Checks. R-Transactions are excluded from the checks.

3.2.8 Detection of Missing or Incomplete Information

For the purposes of detecting Missing or Incomplete Information on a Payment, each of the below attributes of the Payer and Payee are scanned:

- Name
- Account No
- Address Lines

As far as the evaluation of Missing Information Configuration on the Rule is concerned, the Information is considered missing, if either it is missing or found to be incomplete. If the required information is missing or incomplete, it is considered as a compliance failure and STP Action will be applied.

Any of the below result of scanning on any of the Payment Attribute can be considered as a case of Missing Information.

- Missing Payment Attribute i.e., Blank or NULL or Space values on the Payment Attributes.

- Repeat Chars or Digits on a Payment Attribute i.e., when a Character or Digit repeats itself for more than n of times, it is incomplete considered.
- The value of n is configurable in the EU Payer Preferences Maintenance Screen.
- Attribute value part of Meaning-less Words data Set-up.

3.2.9 EU Payer Compliance Queue

A payment is moved to EU Payer Compliance queue if it is suspended due to compliance failure as part of EU Payer monitoring.

For more details on queue processing, refer to *Exception Queues User Guide*.

3.2.10 Ex-Post Monitoring

When the Branch-level Monitoring flags are turned ON, every Payment going through the System is logged into a data store, specifically created for EU Payer Reporting purposes.

This data store is available for querying purposes. A Tracking table is provided to collect the information for every payment that goes through EU Payer, like how many times each sending PSP was compliant, etc.

When the EU Payer Monitoring flags are turned ON, every Payment that falls within the purview of monitoring, irrespective of the fact that it may have only been reported for Ex-post monitoring, is flagged off at the Payment level to indicate that this has been a Payment tracked.

3.3 Standing Instruction

- [Standing Instruction Preferences](#)
- [Standing Instruction Template](#)
- [Standing Instruction Maintenance](#)
- [Standing Instruction Execution](#)
- [SI Execution Changes](#)
- [Skip/Suspend/Defer Standing Instruction](#)

3.3.1 Standing Instruction Preferences

The Standing Instruction Preferences screen allows users to maintain the number of days before the actual instruction date based on which the SI needs to be executed in this screen. The instruction date is considered as the value date for the transaction created. This network-wise maintenance is an optional.

1. On Homepage, specify **PMDSIPRF** in the text box, and click next arrow.

Standing Instruction Preferences screen is displayed.

Figure 3-12 Standing Instruction Preferences

2. Click **New** button on the Application toolbar.
 3. On **Standing Instruction Preferences** screen, specify the fields.
- For more information about the fields, refer to field description below:

Table 3-7 Standing Instruction Preferences - Field Description

Field	Description
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
Host Description	This field defaults the description of the Host Code.
Network Code	Specify the network code. Alternatively, you can select the network code from the option list. The list displays all valid network codes applicable for the logged in Host.
Network Description	This field defaults the description of the Network Code.
SI Generation Days	Select the SI Generations Days. The Options available are from 0-5.
Pricing Code	If Pricing is applicable for SI maintenance , you can specify Price code from the list of values.

- [Standing Instruction Preferences Summary](#)

3.3.1.1 Standing Instruction Preferences Summary

1. On Homepage, specify **PMSSIPRF** in the text box, and click next arrow.
Standing Instruction Preferences Summary screen is displayed.

Figure 3-13 Standing Instruction Preferences Summary

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Host Code
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

3.3.2 Standing Instruction Template

Standing Instruction Templates can be created through this screen. The Standing Instruction Template can be created with or without transfer amount input. Standing Instruction templates can be created for:

- Cross Border/ RTGS
- Book Transfer
- ACH
- SEPA CT
- SEPA DD
- ACH CT
- ACH DD
- [Standing Instruction Template Summary](#)

3.3.2.1 Standing Instruction Template Summary

Standing Instruction Templates created for the networks - Cross Border/RTGS, Book Transfer and ACH can be viewed here. This is a combined summary screen to view the templates created.

1. On Homepage, specify **PMSSITMP** in the text box, and click next arrow.
Standing Instruction Template Summary screen is displayed.

Figure 3-14 Standing Instruction Template Summary

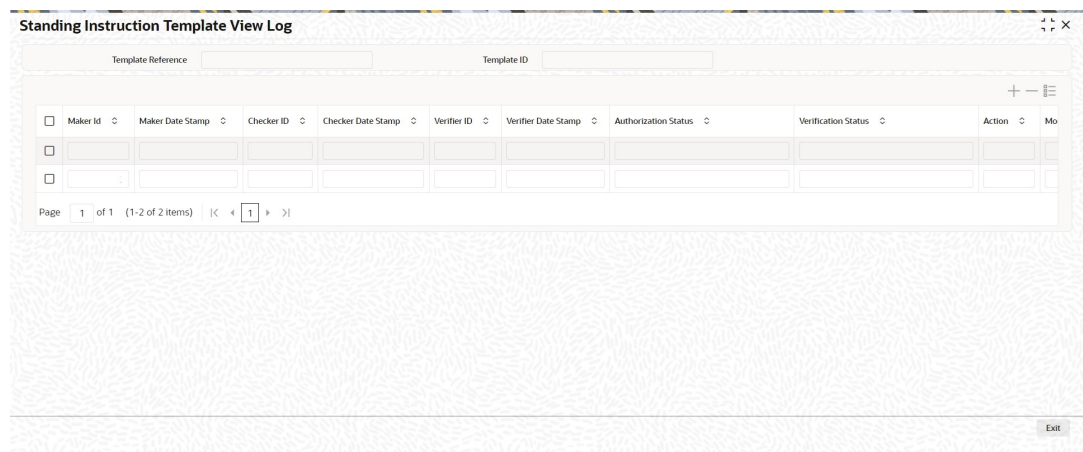

2. Search using one or more of the following parameters:
 - Template ID
 - Template Reference
 - Maker ID
 - Network Code
 - Payment Type
 - Transaction Type
 - Authorization Status
 - Checker ID
 - Debtor Account Number
 - Customer No
 - Template Type
 - Verification Status
 - Verifier ID
 - Transfer Amount
 - Transfer Currency
 - Source Code
3. Search for the Templates created with the Template Type - Complete/Incomplete. If a non-zero transfer amount is provided as part of the template it is considered as 'Complete', else 'Incomplete'.
4. Once you specified the parameters, click the **Search** button. Using 'Advanced Search' option you mention specific criteria to get the specific set of records.
System displays the records that match the search criteria.
5. 'Reset' and 'Clear All' button helps you to clear the existing records.

Action	Description
View Template	Click View Template button to view the Template details for the selected record. Standing Instruction Template screen is launched with all the details on clicking, 'View Template' button.
Modify Template	Select a Template ID and click on Modify Template button to modify the existing template details. Modifying the existing template details requires authorization. Standing Instruction Template screen is launched with all the details on clicking, Modify Template button. Click the Unlock button to modify the details and save the same.
Authorize	User can authorize the following records/Template details by clicking Authorize button: <ul style="list-style-type: none"> Unauthorized Template Record For Modifying the template details Standing Instruction Template screen is launched with all the details on clicking, Authorize button. Click the Authorize button to authorize the changes done.
Delete	Select a Template ID for which you have initiated modification and click on Delete button to delete the actions before authorizing the same. Standing Instruction Template screen is launched with all the details on clicking, Delete button. Click the Delete button to delete the changes done. <div>  Note: Deleting of an action cannot be done once it is authorized. No records can be deleted on clicking 'Delete' button. Only actions initiated can be deleted. </div>

View Template Action

User can view all the actions initiated for a Template ID with the maker/checker, Authorization Status, Action and Record Status details here.

3.3.3 Standing Instruction Maintenance

The Standing Instruction Maintenance screen allows users to create new Standing Instructions for ACH Book Transfer and Cross Border/RTGS Payments. Templates created in the Standing Instructions Template screen are listed. Templates are linked to the new SI created.

User can execute the standing instructions maintained and also set new standing instructions.

1. On Homepage, specify **PMDSIMNT** in the text box, and click next arrow.

Standing Instruction Maintenance screen is displayed.

Figure 3-17 Standing Instruction Maintenance

2. Click **New** button on the Application toolbar.
 3. On **Standing Instruction Maintenance** screen, specify the fields.
- For more information about the fields, refer to field description below:

Table 3-8 Standing Instruction Maintenance - Field Description

Field	Description
Customer No	Specify the Customer Number from the list of values. All customer numbers for which valid authorized Standing Instruction templates are available are listed.
Customer Name	Customer Name is defaulted on selecting the Customer Number.
Template Id	<p>Specify the Template Id from the list of values. All valid Templates created in the Standing Instruction Template screen are listed.</p> <p>System defaults the following field details on selecting the Template Id:</p> <ul style="list-style-type: none">• Network Code• Payment Type• Debit Account• Account Description• Transfer Currency• Transfer Amount
Template Type	Template Type is defaulted as 'Complete' or 'Incomplete'. This is a display only field. Value is defaulted on selecting Template ID.

Following field details are defaulted on clicking 'New' button:

- Instruction Reference Number
- Booking Date
- Transaction Branch
- Host Code
- Network Code
- Payment Type
- Debit Account
- Account Description
- [Main Tab](#)
- [Pricing Tab](#)
- [Accounting Details](#)

3.3.3.1 Main Tab

- On **Main Tab**, specify the fields.

Figure 3-18 Standing Instruction Maintenance_Main Tab

Table 3-9 Standing Instruction Maintenance_Main Tab - Field Description

Field	Description
Payer Details	--
Instruction Start Date	Specify the Instruction Start Date. Only future dates are allowed.
Frequency Type	Select Frequency Type from the following: <ul style="list-style-type: none"> • Daily • Weekly • Monthly • Ad hoc
Frequency	Specify the Number of Days/Weeks/Months based on which SI needs to be executed if the Frequency type selected is Daily/Weekly or Monthly.
Number of Payments	Specify the Number of Payments.
Instruction End Date	Specify the Payer ID. The customer number linked to the payer account are populated.
Debit Amount	Specify the Instruction End date for the SI.
Remarks	Specify the Remarks for the standing instruction set, if any. This is a free text field.
Holiday Treatment	If the SI execution date derived is a Branch Holiday, then the date can be moved forward/ backward or can be retained as the same. You can set the Holiday Treatment preference. The options are Move Forward/ Move Backward/ Ignore. System defaults the option as 'Move Forward'.
SI Generation Days (preceding execution date)	<p>Once you selects the Template ID, system defaults the number of days maintained if default maintenance PMDSIPRF is available for particular Network and defaults the number of days to '0', if the default maintenance PMDSIPRF is not available.</p> <div>  Note: If SI Generation Days value is '0', then the existing SI processing continues. </div>
Next Generation Date	System derives the Next Generation Date as 'Next Execution days – SI generation days counted in branch working days'.

Table 3-9 (Cont.) Standing Instruction Maintenance_Main Tab - Field Description

Field	Description
Month-end Execution Required	Select the value between Yes or No.
Next Execution Date	System updates the Next execution date automatically upon the execution of the previous instruction.
Last Executed On	Specify either Number of Payment or Instruction End Date.
Last Execution Status	System defaults the last execution status, based on standing instruction execution. This is a display only field.
Transfer Currency	Specify the Transfer Currency.
Transfer Amount	Specify the Transfer Amount.
Enrich button	Click on Enrich button upon providing the Payment and other details.
View Template button	View Template button gets enabled, upon selecting the valid Instruction Reference Number. You can view the complete Standing Instruction Template details for the reference Number selected. Standing Instruction Template detailed screen is launched on clicking the 'View Template' button.
Execute SI button	On clicking the 'Execute SI' button, standalone screen with details of Standing Instruction execution is launched. System launches the 'Standing Instruction Execution' (PMDSIECT) screen . 'Execute SI' button is enabled in the screen, only when the Frequency is 'Adhoc'. And you cannot launch this screen in the 'New' mode, when the records are not authorized. For details on Standing Instruction Execution screen, refer to section Standing Instruction Execution .
View Execution Status button	On clicking the 'View Execution Status' button, summary screen with all the Standing Instruction executions. System launches the 'Standing Instruction Execution Summary' screen (PMSSIECT). All the standing instruction executions that are authorized are listed here. For details on Standing Instruction Execution screen, refer to section Standing Instruction Execution .

3.3.3.2 Pricing Tab

- On **Pricing Tab**, specify the fields.

Figure 3-19 Standing Instruction Maintenance_Pricing Tab

The screenshot displays the 'Pricing' tab within the 'Standing Instruction Maintenance' application. The interface includes a header with 'Main' and 'Pricing' tabs. Below the tabs, there is a table with the following columns: 'Pricing Code', 'Component Name', 'Pricing Currency', 'Pricing Amount', 'Waiver', 'Debit Currency', and 'Debit Amount'. The table is currently empty, with a message 'No data to display.' below it. A pagination bar at the bottom of the table shows 'Page 1 (0 of 0 items)' and navigation controls. At the very bottom of the interface, there are buttons for 'Accounting Entries', 'View Queue Action', 'Audit', and 'Exit'.

Table 3-10 Standing Instruction Maintenance_Pricing Tab - Field Description

Field	Description
Pricing Code	Specify the Pricing Code.
Component Name	System defaults the Pricing Component based on the Pricing code linked in Network Currency Preferences.
Pricing Currency	System defaults the pricing currency of the component from the Pricing code maintenance.
Pricing Amount	System defaults the pricing amount from Pricing Value Maintenance screen (PPDVLMT) as applicable for the payment value date, Payment Source code and Debit Customer Service Model. However user can modify this value.
Waiver	System defaults the waiver. However user can modify this value.
Debit Currency	System displays the customer debit currency for charge/tax.
Debit Amount	System displays the amount debited to the selected debit account.

3.3.3.3 Accounting Details

1. Click the **Accounting Details** tab and view the accounting entries for the transaction initiated.

Figure 3-20 Accounting Entries

The screenshot shows the 'Accounting Entries' window. At the top, there's a search bar labeled 'Enter Query' and 'Transaction Reference Number'. Below it, the 'Accounting Entries' table is displayed with various columns for filtering and viewing transaction details. The table is currently empty, showing 'No data to display.' and 'Page 1 (0 of 0 items)'. At the bottom, there are tabs for 'Accounting Details' and 'Exit'.

2. By default, the following attributes are displayed:
 - Event Code
 - Transaction Date
 - Value Date
 - Account
 - Account Branch
 - TRN Code
 - Dr/Cr
 - Amount Tag
 - Account Currency

- Transaction Amount
- Netting
- Offset Account
- Offset Account Branch
- Offset TRN Code
- Offset Amount Tag
- Offset Currency
- Offset Amount
- Offset Netting
- Handoff Status

3.3.3.4 View Queue Action Log

1. You can view all the queue actions for the respective transaction initiated. You can invoke this screen by clicking the **View Queue Action** tab in main screen, where the Transaction Reference Number is auto populated and Queue movement related details are displayed.
2. Click the **View Queue Action Log** button to invoke the sub-screen.

3. Following details are displayed:
 - Transaction Reference Number
 - Network Code
 - Action
 - Remarks
 - Queue Code
 - Authorization Status
 - Maker ID
 - Maker Date Stamp
 - Checker ID

- Checker Date Stamp
- Queue Status
- Queue Reference No
- Primary External Status
- Secondary External Status
- External Reference Number

You can view the request sent and the corresponding response received for each row in Queue Action Log.

- Also, you can view the request sent to and the response received from external systems for the following:
 - Sanction System
 - External Credit Approval
 - External Account Check
 - External FX fetch
 - External Price Fetch
 - Accounting System

3.3.3.5 Standing Instructions Maintenance Summary

- On Homepage, specify **PMSSIMNT** in the text box, and click next arrow.
Standing Instructions Maintenance Summary screen is displayed.

Figure 3-22 Standing Instructions Maintenance Summary

- Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Customer No
 - Instruction Reference Number
 - Frequency

- Debit Account
 - Transfer Amount
 - Instruction Start Date
 - Network Code
 - Template ID
 - Template Type
 - Transaction Branch
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

3.3.4 Standing Instruction Execution

Standing Instruction Execution screen is applicable only for the standing instruction frequency 'Adhoc'.

1. From screen PMSSIECT, search for all entries, double click on specific entry to get Standing Instruction Execution.

Standing Instruction Execution screen is displayed.

Figure 3-23 Standing Instruction Execution

The screenshot displays the 'Standing Instruction Execution' window. At the top, there is a toolbar with 'New' and 'Enter Query' buttons. The main area is divided into several sections of input fields:

- Top Section:** Template ID, Network Code, Payment Type, Host Code, Transaction Branch, Execution Reference, and Execution Date.
- Middle Section:** Debtor Account, Account Description (with a magnifying glass icon), Transfer Currency, Transfer Amount, Customer No, and Customer Name (with a magnifying glass icon).
- Bottom Section:** Activation Date and Remarks.

At the bottom right, there are 'Audit' and 'Exit' buttons.

2. Click **New** button on the Application toolbar.
3. On **Standing Instruction Execution** screen, specify the fields.
For more information about the fields, refer to field description below:

Table 3-11 Standing Instruction Execution - Field Description

Field	Description
Execution Reference	Specify the Execution Reference and click on Execute Query button to check the execution details. Following field details are defaulted on specifying the Execution Reference: <ul style="list-style-type: none">• Template ID• Host Code• Network Code• Transaction Branch• Payment Type• Execution Date• Debtor Account• Account Description• Transfer Currency• Customer No• Customer Name• Remarks
Transfer Amount	Specify the Transfer Amount, if the Template Type for the SI is 'Incomplete'. If the Template Type is Complete for the Execution reference specified, the Transfer amount field is disabled.
Activation Date	Activation date is defaulted as current date which the user can modify to a future date, if required.

 **Note:**

If the Standing instruction is maintained with a frequency other than 'Adhoc', then the system auto executes the instruction on the due date.

Template ID is part of the new transaction created. Execution reference and transaction reference will be same.

Amendment of already maintained Standing Instruction is not allowed. Record has to be closed and a new record has to be maintained with amended details.

3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
4. Following actions are supported from Standing Instruction Execution Summary screen:

Action	Description
View Transaction	Click 'View Transaction' button to view the transaction execution details for the selected record. Standing Instruction execution screen is launched with all the details on clicking 'View Transaction' button.

Action	Description
Retry	<p>The executions that are failed with Template Type, 'Complete' are listed in this screen. Select the respective record and click on 'Retry' button to manually re-initiate the execution from summary screen. Retry of the failed transaction does not require Authorization.</p> <div>  Note: Retry is not allowed beyond Next Execution Date. </div>
Edit Details	<p>Select a record and click on 'Edit Details' button to edit the existing template details. Modifying the existing details requires authorization. Standing Instruction Execution screen is launched with all the details on clicking 'Edit Details' button.</p> <p>User can edit the Transfer Amount and Activate Date details for the following cases:</p> <ul style="list-style-type: none"> For the frequency based instructions, where the amount is zero or not available. For the instructions, where the Template Type is 'Incomplete'.
Suspend	Select a record and click on 'Suspend' button to suspend the execution for the transaction whose Activation date is in future.
Reactivate	<p>Select a record and click on 'Reactivate' button to re-activate the suspended execution.</p> <ul style="list-style-type: none"> If the Reactivation date is after instruction date then the instruction date updates the value same as 're-activation date'. In this case, transaction dates gets re-derived. If the activation date is 'future', then the Execution status updates as 'Pending'. If the activation date is 'current', then the transaction generation gets completed and Execution status updates as 'Success'.
Authorize	<p>Authorize the following records/Template details by clicking 'Authorize' button.</p> <ul style="list-style-type: none"> Unauthorized Instructions For editing the instructions details <p>Standing Instruction Execution screen is launched with all the details on clicking, 'Authorize' button. Click the 'Authorize' button to authorize the changes done.</p>
Delete	<p>Select a record that you have edited. Click on 'Delete' button to delete the actions before authorizing the same.</p> <p>Standing Instruction Execution screen is launched with all the details on clicking, 'Delete' button. Click the 'Delete' button to delete the changes done.</p>

View Execution Action

User can view all the actions initiated for instruction execution with the maker/checker, Authorization Status, Action and Record Status details.

Figure 3-25 Standing Instruction Execution Summary - View Execution Action

3.3.5 SI Execution Changes

System initiates the SI execution based on the Next Generation Date computed by the system. System considers the computed Next Execution Date as the Instruction date of the transaction to be generated and all the dates including the activation date gets derived on generation date.

You can view the transactions/records generated prior to the execution date in the execution summary with the status as 'Pending'.

Completion Status

You can select the Completion Status from the drop-down values. The options are Yes / No.

If the option chosen is 'Yes' then the system fetches the records which have complete data else system fetches the records which have incomplete data of the SI transactions.

Scenarios	Execution Status	Further actions
SI execution before activation date derived – Data incomplete	Execution status - Pending Completed - No	<ol style="list-style-type: none"> 1. Edit details and authorize before activation date: Execution status – Pending Completed – Yes 2. Edit details and authorize on activation date: Generate the transaction Execution status – Success Completed- Yes 3. Edit details and authorize after activation date: Re-derive the date by moving activation date to current date Generate transaction Execution status – Success Completed - Yes
SI execution before activation date derived – Data complete	Execution status – Pending Completed - Yes	No action allowed
SI execution on activation date - Data incomplete or Adhoc generation with incomplete data	Execution status – Pending Completed - No	<ol style="list-style-type: none"> 1. Edit details and authorize on activation date: Generate the transaction Execution status – Success Completed – Yes 2. Edit details and authorize after activation date: Re-derive the date by moving activation date to current date Generate transaction Execution status – Success Completed - Yes

Scenarios	Execution Status	Further actions
SI execution on activation date with complete date or Adhoc generation with complete data	Generate transaction Execution status – Success Completed - Yes	--
SI Execution failure	Execution status – Exception Completed - No	Retry is allowed

New job (PMDSIPEN) is introduced which creates transactions for all execution records which satisfies the below conditions:

- If the Activation date is current date or back date
- If the Execution status is 'Pending' and completion status marked as 'Yes'

During the process of transaction creation, if system finds the activation date is a back dated, then it moves the date to current date and all processing dates are re-derived.

System updates Execution status as 'Success' for successful transactions and else updates to 'Exception'.

System updates Next execution date on successful transaction creation.

3.3.6 Skip/Suspend/Defer Standing Instruction

1. On Homepage, specify **PMDSIDFR** in the text box, and click next arrow.
Skip/Suspend/Defer Standing Instruction screen is displayed.

Figure 3-26 Skip/Suspend/Defer Standing Instruction

2. Click **New** button on the Application toolbar.
3. On **Skip/Suspend/Defer Standing Instruction** screen, specify the fields.
For more information about the fields, refer to field description below:

Table 3-12 Skip/Suspend/Defer Standing Instruction - Field Description

Field	Description
Transaction Branch	System defaults the Transaction Branch on clicking 'New'.
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
Standing Instruction Reference	<p>Specify the valid Standing Instruction Reference from the list of values. All the valid SI's are listed here. The SI's defined in the PMDSIMNT where the frequency is not Adhoc and SI generation is not completed for the Next execution date are listed.</p> <p>The following details gets defaulted once you select the SI reference:</p> <ul style="list-style-type: none"> • Next Execution Date • Network Code • Payment Type • Debit Account • Account Description • Customer Number • Customer Name • Transfer Currency
Action Required	<p>Select Action Required from the following:</p> <ul style="list-style-type: none"> • Defer (Default) • Skip • Suspend
Defer	<p>If you select option as 'Defer', then system computes the 'Allowed Deferral Till' date as next to next instruction date -1 which is a branch working day.</p> <div style="border: 1px solid #0070C0; padding: 10px; margin: 10px 0;"> <p> Note:</p> <p>System do not allow Defer action for SI when the frequency is Daily.</p> </div> <p>Specify New Execution Date which should be earlier than or same as Allowed Deferral Till date. Based on the provided new execution date, system computes the new SI generation date.</p>
Skip	<p>If you select option as 'Skip' then you need to maintain mandatorily the 'Skip till Date'. No SI gets generated/executed up to the Skip till Date. System updates the Next execution date as the date which gets computed based on the frequency maintained and coming after the maintained 'Skip till Date'.</p>
Suspend	<p>You can suspend the execution of an SI for the next execution date. Once you records suspend action for an SI, now on generation of the SI for the next execution date the system marks the Execution status of the record as 'Suspended'. System doesn't allows the transaction creation for a suspended execution.</p> <p>You can find the suspended records in the execution summary screen.</p>
New Execution Date	Specify mandatorily New Execution Date which should be earlier than or same as Allowed Deferral Till date.
Skip till Date	If you select option as 'Skip' then you need to maintain mandatorily the 'Skip till Date'.
Branch Name	System defaults the Branch Name of the Transaction Branch displayed.
Description	System defaults the description of the Host Code displayed.
Allowed Deferral Till	If you select option as 'Defer', then system computes the 'Allowed Deferral Till' date as next to next instruction date -1 which is a branch working day.

Table 3-12 (Cont.) Skip/Suspend/Defer Standing Instruction - Field Description

Field	Description
Transfer Amount	Specify the Transfer Amount.

3.4 Dispatch Processing

The below listed maintenance are applicable for dispatch processing of Domestic low value payments / Direct Debits:

- Dispatch File Generation
- File Dispatch Generation Summary
- Dispatch Parameters Maintenance
- File Dispatch Parameters Maintenance Summary
- Dispatch Browser
- Transaction XML Regeneration
- [Dispatch File Generation](#)
- [Dispatch Parameters](#)
- [Folder Profile Maintenance](#)
- [Dispatch Connectivity](#)
- [Dispatch Browser](#)
- [Transaction Message Regeneration](#)

3.4.1 Dispatch File Generation

Dispatch file generation screen is provided to manually initiate generation of dispatch files for CSM.

1. On Homepage, specify **PMDDFILE** in the text box, and click next arrow.
Dispatch File Generation screen is displayed.

Figure 3-27 Dispatch File Generation

Dispatch File Generation

User Reference Number *

Audit Exit

- Click **New** button on the Application toolbar.
- On **Dispatch File Generation** screen, specify the fields.

For more information about the fields, refer to field description below:

Table 3-13 Dispatch File Generation - Field Description

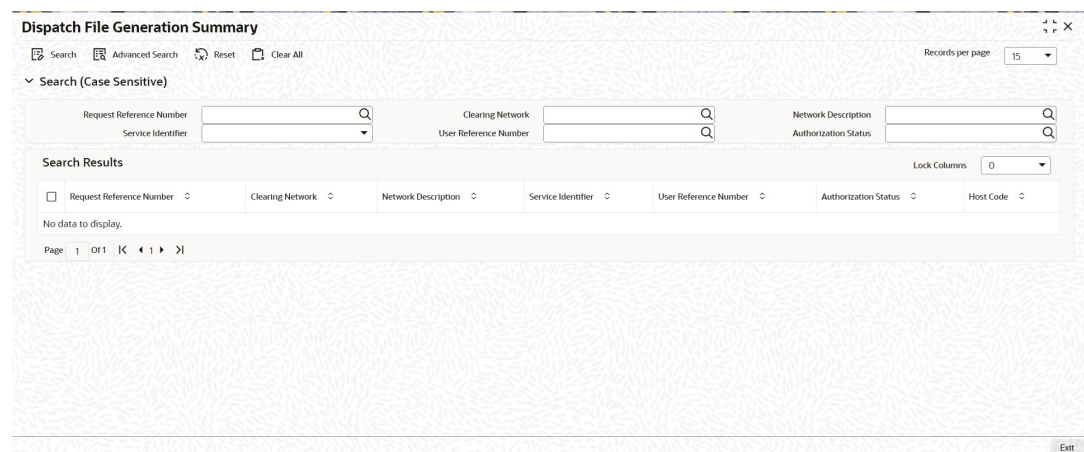

Field	Description
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
Request Reference Number	System generates the Request Reference Number automatically on clicking New button.
Clearing Network	System defaults the description of the Clearing Network selected.
Service Identifier	Identifier can be selected as Instrument Clearing and US NACHA.
User Reference Number	Specify the reference number for every dispatch run. This reference number can be used to track the number of files generated for every dispatch run.
	<div>  Note: For SEPA Payments (SCT) and Collections (SDD), you can use the Dispatch Browser screen (PMSDSBRW) to dispatch the file manually. </div>

- Dispatch File Generation Summary

3.4.1.1 Dispatch File Generation Summary

- On Homepage, specify **PMSDFILE** in the text box, and click next arrow.
Dispatch File Generation Summary screen is displayed.

Figure 3-28 Dispatch File Generation Summary

- Search using one or more of the following parameters:
 - Request Reference Number

- Clearing Network
 - Network Description
 - Service Identifier
 - User Reference Number
 - Authorization Status
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

3.4.2 Dispatch Parameters

Dispatch time for auto generation of Domestic Low Value Payments /NEFT/Direct Debit dispatch files can be maintained in this screen.

1. On Homepage, specify **PADISPTM** in the text box, and click next arrow.
Dispatch Parameters screen is displayed.

Figure 3-29 Dispatch Parameters

2. Click **New** button on the Application toolbar.
3. On **Dispatch Parameters** screen, specify the fields.
For more information about the fields, refer to field description below:

Table 3-14 Dispatch Parameters - Field Description

Field	Description
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
Network Code	Select a Network code from the list of values.
Network Type Description	System defaults the Network Type Description based on the Network Code selected.

Table 3-14 (Cont.) Dispatch Parameters - Field Description

Field	Description
Service Identification	<p>Select the service identification code from the drop-down values listed. System displays the value as SCT by default, on clicking 'New'.</p> <ul style="list-style-type: none"> • SCT • SDD-CORE • SDD-B2B • US NACHA • SCT Inst • Clearing • India NEFT
Sending Bank Identifier	Specify the Sending Bank Identifier from the list of values. All Branch BICs for the host are listed.
Schema Definition File Path	Specify the Scheme Definition file path here. This field is used for maintaining the path of XSD file with which the dispatch file is validated.
Maximum File Size (in MB)	Specify the Maximum File Size (in MB). Dispatch files are split into multiple files if the maximum file size is exceeded.
Maximum Batch Size (in MB)	<p>Specify the Maximum Batch Size (in MB).</p> <div>  Note: <p>If the maximum batch size is exceeded, a new batch is created which will be part of the same file. Batch size validation is applicable when the file is created in Batch mode.</p> <p>While generating ICF/IDF files, the size of the file and the size of each batch is added to a counter. On reaching the maximum file size, the batch which caused the limit breach is added to a new file and the counter is reset.</p> <p>The maximum number of batches allowed in a file will remain as 500 and maximum transaction allowed within a batch will be 100000. File/Batch size validation is done over and above this.</p> <p>Compression of outbound file is done based on the parameter defined in the 'Protocol Parameter Definition' screen (MSDPTPRM). In MSDPTPRM, parameter is set as 'COMPRESSIONALGOPROP' and value is set as 'GZIP'.</p> <p>For the outbound files sent, FTA connector, compresses the file using GZIP and hands off the zipped file in destination folder.</p> <p>For the inbound files received, the zipped files with extension '.gz' are unzipped and handed off to payments.</p> </div>

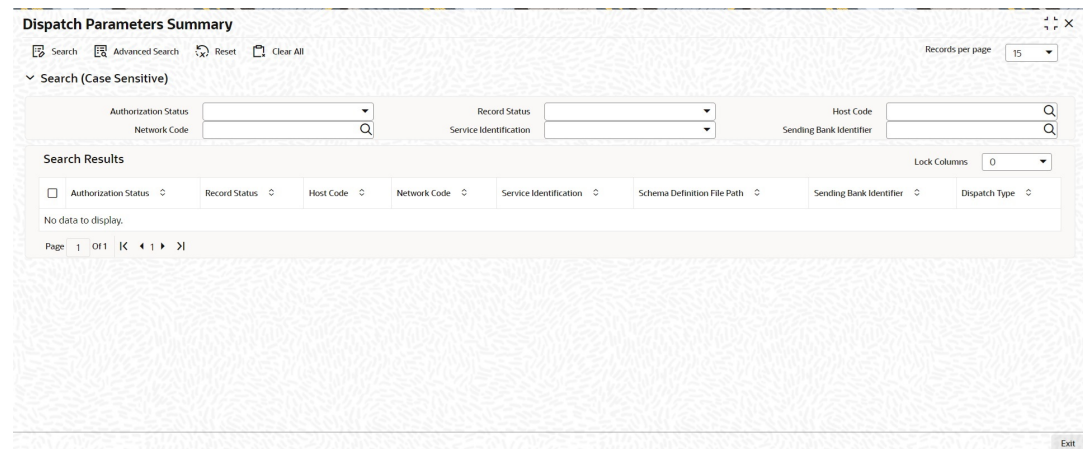

Table 3-14 (Cont.) Dispatch Parameters - Field Description

Field	Description
Dispatch Time	Specify the required Dispatch Time. <div>  Note: For NEFT transactions, system generates the N06 dispatch for the pending N06 transaction level messages as per the dispatch time maintained in this screen and based on the parameter value - 'No. of Transactions per Dispatch' maintained in the PMDNFTPF screen. </div>

- [Dispatch Parameters Summary](#)

3.4.2.1 Dispatch Parameters Summary

1. On Homepage, specify **PASISPTM** in the text box, and click next arrow.
Dispatch Parameters Summary screen is displayed.

Figure 3-30 Dispatch Parameters Summary

2. search using one or more of the following parameters:
 - Record Status
 - Host Code
 - Network Code
 - Service Identification
 - Sending BIC
 - Authorization Status
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

3.4.3 Folder Profile Maintenance

1. On Homepage, specify **PMDDISFR** in the text box, and click next arrow.
Folder Profile Maintenance screen is displayed.

Figure 3-31 Folder Profile Maintenance

The screenshot shows the 'Folder Profile Maintenance' application window. It features a toolbar with 'New' and 'Enter Query' buttons. The main form area includes input fields for 'Host Code', 'Folder Profile', 'Folder Profile Description', and 'Folder Path' on the left side, and a larger 'Host Description' field on the right. At the bottom right, there are 'Audit' and 'Exit' buttons.

2. Click **New** button on the Application toolbar.
3. On **Folder Profile Maintenance** screen, specify the fields.
For more information about the fields, refer to field description below:

Table 3-15 Folder Profile Maintenance - Field Description

Field	Description
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
Host Description	System defaults the Host Description based on the Host Code selected.
Folder Identifier	Specify the Folder Identifier.
Folder Profile Description	Specify the Folder Identifier Description.
Folder Path	Specify the Folder Path.

- [Folder Profile Maintenance Summary](#)

3.4.3.1 Folder Profile Maintenance Summary

1. On Homepage, specify **PMSDISFR** in the text box, and click next arrow.
Folder Profile Maintenance Summary screen is displayed.

Figure 3-32 Folder Profile Maintenance Summary

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Folder Profile
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

3.4.4 Dispatch Connectivity

The Dispatch Connectivity screen allows users to maintain a folder/queue profile for a combination of Host Code, Network Code and File type.

1. On Homepage, specify **PMDDISCN** in the text box, and click next arrow.
Dispatch Connectivity screen is displayed.

Figure 3-33 Dispatch Connectivity

2. Click **New** button on the Application toolbar.
3. On **Dispatch Connectivity** screen, specify the fields.
For more information about the fields, refer to field description below:

Table 3-16 Dispatch Connectivity - Field Description

Field	Description
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
Host Description	System defaults the Host Description based on the Host Code selected.
Network Code	Specify the Network Code from the list of values that lists ACH CT, ACH DD, and NACHA payments.
Network Description	System defaults the description of the Clearing Network selected.
Network Type Description	System defaults the description of the Network Code selected.
Dispatch File Type	Specify Dispatch File Type from the list of values. The list of values are specific to the payment type of the Network selected.
Connectivity Details	--
Connectivity Type	Select Connectivity Type from the following: <ul style="list-style-type: none"> • Folder • Queue • ReST
Connectivity Profile	Specify the Connectivity Profile from the list of values. All the valid Folder Identifiers in Folder Profile maintenance are listed in this field if the connectivity type is 'Folder'. All the Queue profiles maintained are listed if the connectivity type is 'Queue'.
Dispatch Queue JNDI Name	Specify the Dispatch Queue JNDI Name.
Connectivity Details	--
File Name Definition	Specify the File Name Definition. This is applicable for ACH CT/DD payment types, not applicable for SEPA files. Based on the Payment Type and Network Payment Type of the Network selected, the following values are defaulted. However, the user can edit the same.

Payment Type	Network Payment Type	File Name Definition
ACH CT	Generic	<MESSAGE_TYPE><FILE_REFERENCE><HOST_TIME>.xml
ACH DD	Generic	<MESSAGE_TYPE><FILE_REFERENCE><HOST_TIME>.xml
ACH CT	NACHCR	User Input
ACH DD	NACHCR	User Input
SEPA CT	NA	For SEPA ISO (Non- CSM) files, File Name Definition can be maintained. For CSM files, by default system generates file names in EBA file formats. File Name Definition is not applicable for CSM files.
SEPA DD	NA	For SEPA ISO (Non- CSM) files, File Name Definition can be maintained. For CSM files, by default system generates file names in EBA file formats. File Name Definition is not applicable for CSM files.

 **Note:**

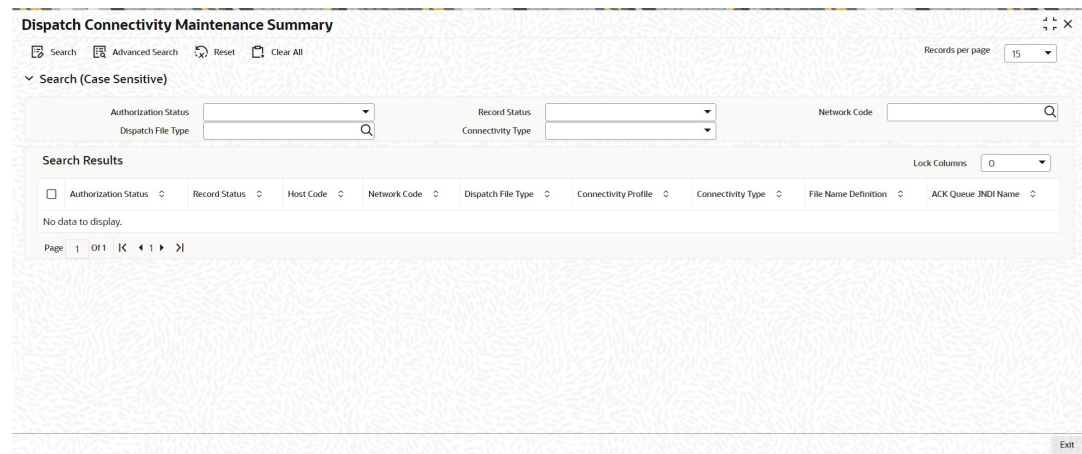

SEPA ISO files are generated to the root folders PACS008, CAMT056, PACS004 and CAMT029. In the absence of these folders, files are generated under Dispatch path maintained at screen PMDDISCN directly.

- [Dispatch Connectivity Maintenance Summary](#)

3.4.4.1 Dispatch Connectivity Maintenance Summary

1. On Homepage, specify **PMDDISCN** in the text box, and click next arrow.
Dispatch Connectivity Maintenance Summary screen is displayed.

Figure 3-34 Dispatch Connectivity Maintenance Summary

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Network Code
 - Dispatch File Type
 - Connectivity Type
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

3.4.5 Dispatch Browser

You can view the dispatched records for a Dispatch Reference. All the dispatched records of SCT (Domestic Low Value Payments) and SDD (Direct Debits) are listed here.

1. On Homepage, specify **PMSDSBRW** in the text box, and click next arrow.
Dispatch Browser screen is displayed.

Figure 3-35 Dispatch Browser

The screenshot shows the 'Dispatch Browser' application window. At the top, there are tabs for 'Search' and 'Advanced Search', along with 'Reset' and 'Clear All' buttons. A 'Records per page' dropdown is set to 15. Below this is a 'Search (Case Sensitive)' section with input fields for 'Dispatch Reference Number', 'Dispatch Status' (a dropdown), 'Network Code', and 'Dispatch Date' (with a date picker icon). The 'Search Results' section shows a table with columns: 'Dispatch Reference Number', 'Payment Type', 'Network Code', 'Dispatch Date', 'Dispatch Time', and 'Dispatch Status'. The table is currently empty, displaying 'No data to display.' Below the table is a pagination bar showing 'Page: 1 of 1' and navigation icons. At the bottom of the window are three buttons: 'Generate Dispatch File', 'View Pending Records', and 'View File Browser', along with an 'Exit' button in the bottom right corner.

2. Search using one or more of the following parameters:
 - Dispatch Reference Number
 - Network Code
 - Dispatch Date
 - Dispatch Status
3. Once you specified the parameters, click the **Search** button. System displays the records that match the search criteria.
4. Following actions can be performed from the Dispatch Browser screen (PMSDSBRW):
 - [Generate Dispatch File](#)
 - [View Pending Records](#)
 - [View File Browser](#)

3.4.5.1 Generate Dispatch File

1. On **Generate Dispatch File**, specify the fields.

Figure 3-36 Dispatch Browser - Generate Dispatch File

The screenshot shows the 'Generate Dispatch File' application window. It features a 'Dispatch Reference' input field at the top. Below it is a 'Dispatch Details' section with a table. The table has columns: 'Dispatch Status', 'Dispatch Type', 'File Type', 'Host Code', 'Network Code', 'Payment Type', and 'Service ID'. Each column has a dropdown menu. Below the table is a pagination bar showing 'Page: 1 of 1 (1 of 1 items)' and navigation icons. At the bottom right of the window are 'Exit' and 'Save' buttons.

2. You can generate dispatch files for the pending records, in this screen. Generation of dispatch files are possible only for the pending records and not for the successful records.
3. You can invoke this screen by clicking on **Generate Dispatch File** button in Dispatch Browser screen (PMSDSBRW).

 **Note:**

Queue access right is required for Generate Dispatch File action. No authorization is applicable for this action.

3.4.5.2 View Pending Records

1. On **View Pending Records**, specify the fields.

Figure 3-37 Dispatch Browser - View Pending Records

The screenshot displays the 'Pending Records View' screen. At the top, there are buttons for 'Search', 'Advanced Search', 'Reset', and 'Clear All'. A 'Records per page' dropdown is set to 15. Below these is a 'Search (Case Sensitive)' section with multiple input fields for filtering records, including 'Dispatch Reference', 'Booking Date', 'Debtor Account Number', 'Transfer Currency', 'Batch ID', 'Transaction Reference Number', 'Instruction Date', 'Transaction Branch', 'Source Reference Number', 'Payment Type', 'Customer Number', 'Source Code', and 'Consolidation Reference Number'. Each field has a search icon. Below the search fields is a 'Search Results' section with a 'Lock Columns' dropdown set to 0. A table of search results is shown, but it is empty with the message 'No data to display.' At the bottom, there is a pagination bar showing 'Page: 1' and navigation controls.

2. Select a pending record and view the details for which the file generation is pending. Bulk selection of pending records are not allowed.
3. You can invoke this screen by clicking on **View Pending Records** button in Dispatch Browser screen (PMSDSBRW).

3.4.5.3 View File Browser

1. You can navigate to Dispatch File Browser screen, on clicking **View File Browser** button.
2. On **View File Browser**, specify the fields.

Figure 3-38 Dispatch Browser - View File Browser

- File Reference Number
- Network Code
- File Type
- Message Type
- File Status
- Dispatch Type
- Queue Action
- Authorization Status
- Dispatch Date
- Network Status
- File Name
- Queue Reference Number
- Dispatch Reference
- Previous ICF File Reference No

For more details on this screen and its validations, refer to *Exception Queues User Guide*.

3.4.6 Transaction Message Regeneration

The Transaction Message Browser support regeneration Transaction XMLs. The XML is generated with the transaction details available in dispatch tables at the time of regeneration.

1. On Homepage, specify **PMSTXNBR** in the text box, and click next arrow.

Transaction Message Regeneration screen is displayed.

Figure 3-39 Transaction Message Regeneration

The screenshot displays the 'Transaction Message Browser' window. At the top, there are buttons for 'Search', 'Advanced Search', 'Reset', and 'Clear All'. A 'Records per page' dropdown is set to 15. Below this is a 'Search (Case Sensitive)' section with several input fields: 'Transaction Reference No', 'Message Creation Date' (with a date picker), 'Transaction Type', 'File Reference Number', 'Network Code', 'Message Generation Status', 'Transfer Amount', 'Message Type', 'Payment Type', and 'Transfer Currency'. Each field has a search icon. Below the search filters is a 'Search Results' section with a table header containing columns: Transaction Reference No, Network Code, Message Type, Message Creation Date, Message Generation Status, Payment Type, Transaction Type, Transfer Amount, Transfer Currency, and Host Cod. The table currently shows 'No data to display.' At the bottom of the window, there is a 'Regenerate' button on the left and an 'Exit' button on the right.

2. Search using one or more of the following parameters:
 - Transaction Reference No
 - File Reference Number
 - Network Code
 - Payment Type
 - Message Type
 - Transaction Type
3. Once you specified the parameters, click the **Search** button. System displays the records that match the search criteria.

3.5 Common Processes

- [Host & Time Zone Related Processing](#)
- [Multi Currency Accounts](#)
- [Sanction Check](#)
- [External Credit Approval](#)
- [ECA/EAC Merger with Accounting](#)
- [Small FX Limit Check & Currency Conversion](#)
- [IBAN Check](#)
- [Notifications](#)
- [Reference Number](#)
- [Accounting Details](#)
- [Rollover Preferences](#)
- [Inbound File Summary](#)
- [Template Summary](#)
- [Common Query](#)
- [Common Query Services](#)

3.5.1 Host & Time Zone Related Processing

Processing of payment transactions for multiple hosts with different time zones is supported.

Cut-off time maintenance are to be done in host time. This has to be operationally controlled.

Dispatch file generation timings and auto batch closure time for bulk file upload also follow host date & time.

3.5.2 Multi Currency Accounts

Account Type- 'Multi currency' available in LOV along with Normal, Nostro can be used by customer to initiate normal transactions.

Multi Currency Account is the Parent account and it can have multiple child accounts linked to it with different currencies allowed for the customer:

- Main account (multi currency) which is the parent account will be listed in External Account Maintenance (STDCRACC) and the child accounts linked to it will be mapped separately against each parent account.
- Multi Account Type and Child Account Type are classified as 'M' and 'C' respectively.
- All Payment/collection/instrument processing transactions can be initiated by selecting Account Type - 'Multi Currency'.
- In Transaction input screens, systems allows to select 'multi currency' parent account from the list of values in 'Customer Account' field.
- User can select 'Multi-Currency' parent account with required account currency, as all the child accounts currencies will be displayed in list of values.
- Payment need not be initiated only with Transfer Currency while selecting multicurrency account. It is not mandatory. System will validate whether child account with account currency input is available for the multi account chosen.
- The Transfer Currency (instrument currency for clearing) is defaulted as the Account Currency, if the Multi Account is input or received from payment Webservices without Account Currency.
- When the Transfer Currency is different from Account Currency, Exchange Rate fetch will be applicable.
- External Credit Approval (ECA) / External Account Check (EAC) and Accounting handoff will indicate the Account Currency.

Note:

Child accounts cannot be used as Transaction accounts in Payments.

Resolving and posting the amount to Child Account will be handled by DDA/ Accounting system.

3.5.3 Sanction Check

If sanction check is made applicable at Network Preferences, system initiates sanction processing. Additional check is performed to verify whether sanction check is applicable for the

customer at customer maintenance (STDCIFCR) level. Sanction processing is done only if it is applicable for both network and customer.

On receiving External Sanction Check system response, sanction check status of the payment is updated.

The following responses are possible:

- A – Approved: Sanction check is approved by the external system.
- S – Seized
- Interim – Interim status or approval with override is received from external system.
- R – Rejected: This indicates that the contract failed Sanction check.
- T – Timed out: Sanction check status is updated as T if no response is received from the external system within the stipulated time limit maintained for ECA system check system.
- R – Seize: Sanction check is seized by the external system.

If the sanction check response status for a payment transaction is 'Approved', then further processing continues.

If the sanction check response status of the transaction is 'Interim' or 'Rejected' or 'Timed Out', then transaction is logged in Sanction Check Exception Queue. If External system reject code is marked for auto cancellation in sanction system maintenance, transaction is automatically canceled.

If External system reject code is marked for auto cancellation in sanction system maintenance, transaction is automatically canceled.

If sanctions status is 'Seized' no further actions are allowed for the transaction. You can be parametrize for a sanction system whether to post seizure accounting or not.

Seizure GL to be mentioned.

Direction	Transaction Type	Debit Account	Credit Account	Subsequent Processing
Outbound	Book Transfer Cross Border MT SWIFT CBPRPlus RTGS FIN TARGET2 ISO EU SEPA Credit	Customer Account	Compliance GL	Held. Will not be dispatched.
Outbound	EU SEPA Direct Debit	Nostro/ Clearing GL	Compliance GL	Held. Will not be dispatched.
Inbound	Book Transfer Cross Border MT SWIFT CBPRPlus RTGS FIN TARGET2 ISO EU SEPA Credit	Nostro/ Clearing GL	Compliance GL	Held
Inbound	EU SEPA Direct Debit	Customer Account	Compliance GL	Held. And, pre settlement reject pacs.002 will be sent out.

If the Sanctions Check done on booking date fails, then the transaction is processed on booking date itself with seizure entries, even if the activation date is derived as future dated.

Any transaction in Sanction Check Queue at the end of the day which is not part of a batch must be ring-fenced in the customer account. This is required only for Sanctions hold on Activation Date only and is not applicable for future valued transactions on booking date.

The job PQDSNCKQ does ring- fencing of SC pending transactions. The job can be configured in Payments Auto job parameters screen to run at a particular time during end of day

ECA request generated for SC pending transactions with 'Available balance Check' marked as not required so that the transaction amount is force blocked in the customer's account.

3.5.4 External Credit Approval

Oracle Banking Payments sends debit accounting entries pertaining to payment amount and charge/tax amounts to external DDA system for credit checks. ECA system for the credit check is derived based on External Customer Account (STDCRACC) maintenance.

ECA requests are sent, if the flag 'External Credit Approval Required' in 'External Customer Account maintenance (STDCRACC)' is checked.

Transaction ECA status are updated based on the response received from the external system.

The following responses are possible:

- A – Approved: ECA is approved by the external system.
- O – Interim status or approval with override is received from external system.
- R – Rejected: This indicates that the contract failed the External Credit Approval check.
- T – Timed out: ECA check status is updated as T if no response is received from the external system within the stipulated time limit maintained for external sanction check system.

If the ECA response status for a payment transaction is 'Approved', then further processing continues.

If ECA validation fails i.e. the status is 'Interim', 'Rejected', or 'Timed out', transaction is logged in ECA Exception Queue.

If External system reject code is marked for auto cancellation in ECA system maintenance, transaction is automatically canceled.

Transaction Account and Charge Account cannot belong to different DDA systems. System validates the same.

Reversal of ECA request is required in the following cases:

- Transaction is canceled from Network Cut-off Queue
- Transaction is carried forward from Network Cut-off Queue

On reversal of ECA, request message is sent to external system with original transaction details & amounts, indicating that it is a reversal request.

If messaging after system parameter MESSAGING_AFTER_ACCOUNTING is to be maintained as Y, then changes are made to ensure ECA reversal completion as part of transaction processing with a separate Exception Queue for processing exceptions. Changes are applicable for Generic wires / ACH CT and Book Transfer.

External Account check (EAC) request is sent if customer account is in for credit leg of a transaction. This is applicable for Inbound payments and book transfers.

EAC requests are sent, if the flag 'External Credit Approval Required' in 'External Customer Account maintenance (STDCRACC)' is checked.

For Book transfer transaction, request is generated for debit account and related charges. External Account check request is sent for credit account.

If external account check request fails, transaction is moved to ECA queue.

Loan Accounts Credit

When a loan account is credited, EAC call is done:

- Tag AMOUNT is populated with the amount being credited in Loan account. The Loan system does the validations whether the credit can be done for the amount provided in EAC request.
- In case of any validation failure EAC gets rejected. This includes the validation that credit amount is not greater than Loan outstanding amount.

Reversal of loan account Credit

A loan payment is reversed when reversal or return of the original transaction is processed.

- Value of TRNREFNODAILYLOG tag received as part of External Accounting of the original loan credit response should be sent as value for Loan Payment Settlement Reference Number LOANPAYSETTLREF in ECA request.

3.5.5 ECA/EAC Merger with Accounting

User can merge ECA /EAC step with accounting. This is enabled using a system parameter EC_EA_MERGER_WITH_ACC. By maintaining the value of this parameter as Y it is possible to do single step accounting.

Single step accounting is applicable for the below payment types for outbound and inbound transactions:

- Book Transfer
- Cross Border / RTGS MT
- Cross Border MX / TARGET2 MX
- India Payments (NEFT, RTGS, IMPS)
- SEPA CT
- SEPA DD
- ACH CT

For further details on Accounting queue changes related to this, please refer to *Exceptions Queue User Guide*.

3.5.6 Small FX Limit Check & Currency Conversion

For a cross currency payment transaction where debit currency and transfer currency are different, exchange rate is picked up as maintained for the transaction branch.

If Small FX limit is defined in Network Currency Preferences, then the auto rate pick up takes place only if the transfer amount is within the small FX limit.

Exchange Rate Type is based on Network preferences maintained. Buy/Sell indicator is derived by the system.

If the transfer amount is above the small FX limit specified, the rate is fetched from the internal exchange rates maintained in CORE.

If the transfer amount is above the small FX limit specified, system checks whether External Exchange Rate is applicable in Network Preferences.

If external system is available the transaction details, then system sends request to external system for receiving the exchange rate.

Based on the response received, exchange rate is populated and further processing of transaction will continue.

The following responses are possible from External Exchange Rate system:

- A-Approved: Response with exchange rate
- R-Rejected: No exchange rate available in response or resulted in error
- T-Timed out: Request is timed out

If Small FX limit is not maintained, auto rate pick up is done from internal rates maintained, for all cross currency payment transactions without any limit check.

Payment contract is moved to Exchange Rate Exception queue in the following cases with proper error code details:

- Exchange Rate derivation based on core system maintenance fails
- Small FX limit is breached and no external exchange rate system maintenance is available

Payment contract is moved to external exchange rate queue if response from External Exchange Rate system is rejected or timed out. If advance FX booking is done, then the FX reference can be provided in the payment request. This reference is sent to External system along with the external FX request for validation. If FX reference is not provided in payment request and if the external system provides a new reference, the same can be stored for the transaction.

It is possible to provide exchange rate manually from Queue screen if the external rate fetch failed so that transaction proceeds with further processing.

**Note:**

Creation of the FX transaction, utilizing and tracking the same will be handled in the external system.

The FX reference number generated in the external system can be captured as part of transaction input, and the same will be shared to the external system, as part of the external exchange rate pickup request.

If no FX reference number is input during transaction creation, the same will be blank in the external exchange rate request. On this case, the external system is expected to create a FX transaction and share the same.

External rate fetch is applicable for a payment, if the transfer amount is greater than the small FX limit maintained in Network Currency maintenance (PMDNCPRF) and External Rate fetch is made applicable in the Network preferences (PMDNWPRF).

If external rate fetch needs to be made applicable for all transactions, the small FX limit needs to be maintained as 0.

Changes are done in inbound payments External rate fetching. System applies the FX rate preference maintained in Inbound Payment Processing Preferences before sending the external FX rate request.

- [Instruction Date changes based on FX Value Date](#)

3.5.6.1 Instruction Date changes based on FX Value Date

If FX rate response received from the external rate system is having a value date which is not matching with the instruction date, then the instruction date will be replaced with FX value date.

For outbound payment, credit value date is updated as the new instruction date and debit value date will be Instruction date-Float days provided the date basis is 'Instruction Date' in the Network preferences. If the debit value date basis is 'Activation date', there will be no impact.

The FX value date will be replaced for inbound payment instruction date as well. Based on this credit value date will be derived as new Instruction date + credit float days.

3.5.7 IBAN Check

If 'IBAN validation required' flag is checked for the network, then IBAN verification for Debtor IBAN, Creditor IBAN & creditor BIC is done against the IBAN format maintained for the respective country.

IBAN is validated based on IBAN Information maintenance (ISDESBAN) available for the country for the following parameters:

- IBAN length
- Check digit of the IBAN
- National ID of the IBAN

Check digit of the beneficiary IBAN must be validated using the below mentioned process:

- Extract country code from the IBAN
- Search the IBAN check digit length and IBAN check digit position for the country code from the IBAN structure data storage.
- Extract the check digit from IBAN using IBAN check digit length and IBAN check digit position.
- Compute the check digit from IBAN using the scheme defined in ISO/IEC 7064 Modulo 97-10.
- Compare the check digit value computed and the check digit value extracted from IBAN.

National ID of the beneficiary IBAN must be validated using the below mentioned process:

- Extract the IBAN National id from IBAN using bank identifier position and IBAN national ID length.
- Extract the IBAN ISO country code from IBANPlus data storage for the IBAN national id.
- Compare the IBAN ISO country code from IBANPlus with the country code extracted from IBAN.
- If the all of the above conditions are satisfied, then the IBAN is valid.

Validate BIC from an IBAN by looking up IBANPlus, if available. For payment transaction the beneficiary Bank code is checked for Valid BIC based on the beneficiary IBAN. The BIC will be derived from IBAN using the below mentioned process:

Extract country code from the IBAN

- Search the bank identifier position and IBAN national ID length for the country code from the IBAN structure data storage.
- Extract the IBAN National id from IBAN using bank identifier position and IBAN national ID length.
- Search the IBAN BIC for the IBAN National id and country code from the IBANPlus data storage.
- If the IBAN BIC and Account with Institution BIC code (Creditor Agent BICFI for Outbound ISO transaction) does not match, then it displays an error that Account with Institution BIC is not valid.

3.5.8 Notifications

Notifications are generated in the following scenarios:

- Upon Successful processing of the payment
- When the payment is cancelled from any queue
- When the payment is moved to Future valued queue
- [Notify Message Details](#)

3.5.8.1 Notify Message Details

1. On Homepage, specify **PMSNOTFY** in the text box, and click next arrow.
Notify Message Details screen is displayed.

Figure 3-40 Notify Message Details

2. Search using one or more of the following parameters:
 - Notification Reference Number
 - Batch Reference Number

- Notification Event
 - Debtor Account Number
 - Transaction Reference Number
 - Transaction Branch
 - Source Code
 - Creditor Account Number
 - File Reference Number
 - Notification Type
 - Customer Number
 - Message Reference Number
3. Once you specified the parameters, click the **Search** button. System displays the records that match the search criteria.

 **Note:**

Message Reference Number and Batch Reference Number parameters are not applicable for India Payments - NEFT and RTGS.

4. The following actions can be performed for transactions in this queue:

Actions	Description
Notify Message	Click this button to view Notify message.
Resend	Click this button to resend message.
Information Report Message	Click this button to view information report message.

- [Notify Message](#)
- [Resend Message](#)
- [Information Report Message](#)

3.5.8.1.1 Notify Message

1. On **Notify Message**, specify the fields.

Figure 3-41 Notify Message Details - Notify Message

2. User can invoke the Notify Message screen by clicking on **Notify Message** action button available at the left bottom in the 'Notify Message Details' screen (PMSNOTFY).
3. Select a record listed in the 'Notify Message Details' screen and click on **Notify Message** button. System defaults all the data for the Record selected.
4. System displays the following details:
 - Notification Reference Number
 - Transaction Reference Number
 - Notification Status
 - Report Status
 - Message

3.5.8.1.2 Resend Message

1. On **Resend Message**, specify the fields.

Figure 3-42 Notify Message Details - Resend Message

2. User can invoke the Resend Notify screen by clicking on **Resend** action button available at the left bottom in the 'Notify Message Details' screen (PMSNOTFY).

3. Select a record listed in the 'Notify Message Details' screen and click on **Resend** button. System defaults all the data for the record selected and displays the Information message "Request Successfully Processed".
4. System displays the following details:
 - Host Code
 - Notification Reference Number List
 - Notification Reference Number
 - Transaction Reference Number
 - File Reference Number
 - Batch Ref Number
 - Transaction Branch
 - Requested Date
 - Notification Type
 - Notification Event
 - Source Code
 - Customer No
 - Debtor Account Number
 - Creditor Account Number
 - Message Reference Number
 - Network Code
 - Payment Type
 - Transaction Type

3.5.8.1.3 Information Report Message

1. On **Information Report Message**, specify the fields.

Figure 3-43 Notify Message Details - Information Report Message

The screenshot displays a web application window titled "Notify Message". At the top, there are two input fields: "Notification Reference Number" and "Transaction Reference Number". Below these, there are two smaller fields labeled "Notification Status" and "Report Status". The main body of the screen is a large, empty rectangular area labeled "Message". In the bottom right corner of the window, there is an "Exit" button.

2. User can invoke the Notify Message screen by clicking on **Information Report Message** action button available at the left bottom in the 'Notify Message Details' screen (PMSNOTFY).
3. Select a record listed in the 'Notify Message Details' screen and click on **Information Report Message** button. System defaults all the data for the record selected that includes the accounting details of transaction.
4. System displays the following details:
 - Notification Reference Number
 - Transaction Reference Number
 - Notification Status
 - Report Status
 - Message

3.5.9 Reference Number

The format of Reference Number in Oracle Banking Payments is a 16 digit number.

On any new operation on screen, the transaction reference number is generated as explained in the below table.

Component	Description	Digits	Position, Length	Sr. No.
Year	Last 2 Digits of the Year	2	1, 2	For e.g. 2017 = 17
Date	Julian Date	3	3, 3	For e.g. 1st February = 032
Server Id	If clustered, each app server will have a number. This is setup as a JVM Parameter by Infra Team	2	6, 2	For e.g 1 App Server = 01
PM Type	Each Sub-Module in PM represents a Type	1	8, 1	ACH - 1 XBORDER & RTGS - 3 BOOKTRANSFER -4 DD - 5 Clearing - 6 FASTER PAYMENTS – 7 C2B - 8
Seconds	Seconds Elapsed past date change 1 Minute = 00060 Seconds 1 Hour = 03600 Seconds 24 Hours = 86400 Seconds Left Padded with 0s	5	9, 5	For e.g. If time is 18:00 as per the host date then Seconds will be calculated as 64800.

Component	Description	Digits	Position, Length	Sr. No.
Serial Number	Sequential Serial Number generated per second Sequence Resets to 0000 for every Second	3	14, 3	For e.g. Seconds and Serial Number Representation for 5 Transactions processed @ 18:00 648000001 - 64800004 64800 – Seconds001 – Serial Number 002 – Serial Number 003 – Serial Number 004 – Serial Number

Other Reference Number like Queue Reference Number, File reference, etc.

Component	Description	Digits	Position, Length	S.No
Year	Last 2 Digits of the Year	2	1, 2	For e.g. 2017 = 17
Date	Julian Date	3	3, 3	For e.g. 1st February = 032
Server Id	If clustered, each app server will have a number. This is setup as a JVM Parameter by Infra Team	2	6, 2	For e.g 1 App Server = 01
Seconds	Seconds Elapsed past date change 1 Minute = 00060 Seconds 1 Hour = 03600 Seconds 24 Hours = 86400 Seconds Left Padded with 0s	5	9, 5	For e.g. If time is 18:00 as per the host date then Seconds will be calculated as 64800.
Serial Number	Sequential Serial Number generated per second Sequence Resets to 0000 for every Second	3	14, 3	For e.g. Seconds and Serial Number Representation for 5 Transactions processed @ 18:00 648000001 - 64800004 64800 – Seconds001 – Serial Number 002 – Serial Number 003 – Serial Number 004 – Serial Number

3.5.10 Accounting Details

1. Click the **Accounting Details** tab and view the accounting entries for the transaction initiated.

Figure 3-44 Accounting Entries

The screenshot shows the 'Accounting Entries' window. At the top, there is a search bar labeled 'Enter Query' and a 'Transaction Reference Number' field. Below this is a table with the following columns: Event Code, Transaction Date, Value Date, Account, Account Branch, TRN Code, Dr/Cr, Amount Tag, Account Currency, Transaction Amount, Netting, and Offset Account. The table is currently empty, displaying 'No data to display.' at the bottom. A pagination bar at the bottom indicates 'Page 1 (0 of 0 items)' with navigation buttons for previous, current, and next pages. At the bottom right, there is an 'Exit' button.

2. By default, the following attributes are displayed:

- Event Code
- Transaction Date
- Value Date
- Account
- Account Branch
- TRN Code
- Dr/Cr
- Amount Tag
- Account Currency
- Transaction Amount
- Netting
- Offset Account
- Offset Account Branch
- Offset TRN Code
- Offset Amount Tag
- Offset Currency
- Offset Amount
- Offset Netting
- Handoff Status

 **Note:**

If messaging after system parameter MESSAGING_AFTER_ACCOUNTING is to be maintained as Y, then changes are done to ensure accounting reversal completion as part of transaction processing with a separate Exception Queue for processing exceptions. Changes are applicable for Generic wires / ACH CT and Book Transfer.

- [Accounting Entry Handoff](#)

3.5.10.1 Accounting Entry Handoff

It is now possible to view the account entry handoff status at the transaction view level.

In all Payment / Collection Transaction View Screens, accounting entries are displayed with Handoff Status.

The below listed status are applicable for the new field Handoff Status:

- Pending - Not yet handed off to external system
- Requested - Request sent to external system
- Success - Success response received
- Rejected - Reject response received

3.5.11 Rollover Preferences

Rollover Preferences from the urgent/Non-urgent payment preferences will be applied in the following scenarios for the outbound payments:

- Transaction is pending in Process Cutoff Queue/Network Queue during end of day
- Transaction is released from Sanction Check Queue on a later date
- Interim status is received for ECA/EAC check

If no record is received from the new preferences, system will consider the rollover preference available as part of Source maintenance PMDSORCE.

If source-wise preference is also not available, system will do auto roll-over and proceed.

3.5.12 Inbound File Summary

The Inbound File Summary screen allows users to view the uploaded inbound files for ACH and Direct Debits and the related Receipt accounting. This is a common screen for viewing inbound clearing files from other low value clearing networks set up in the system.

1. On Homepage, specify **PMSINLOG** in the text box, and click next arrow.

Inbound File Summary screen is displayed.

Figure 3-45 Inbound File Summary

2. Search using one or more of the following parameters:
 - File Reference Number
 - Received Date
 - File Name
 - File Type
 - Message Type
3. Once you specified the parameters, click the **Search** button. System displays the records that match the search criteria.
 - [Message](#)

3.5.12.1 Message

1. On **In File Details**, specify the fields.

Figure 3-46 Inbound File Summary - Message

2. Click on the **Message** action tab present in the 'Inbound File Summary' screen to view the uploaded message for the selected record. You can also view the receipt accounting entries for the record selected.

3. Following details are displayed for the record selected in the 'Inbound File Summary' screen:
 - File Reference ID
 - Message

3.5.13 Template Summary

1. On Homepage, specify **PQSTMPLO** in the text box, and click next arrow.
Template Summary screen is displayed.

Figure 3-47 Template Summary

2. Search using one or more of the following parameters:
 - Template ID
 - Template Reference
 - Network Code
 - Source Code
 - Authorization Status
 - Verification Status
 - Maker ID
 - Checker ID
 - Verifier ID
 - Record Status
 - Module
 - Transaction Branch
 - Transfer Currency
 - Transfer Amount
 - Network Type Code
 - Transfer Type
3. Verify action button is available on querying the saved template or unauthorized templates from Template Summary screen.

4. On selecting the transaction and on clicking **Authorize** action button, the Template Detailed screen is launched.

Figure 3-48 Template Summary - Authorize

The screenshot shows the 'RTGS ISO Outbound Liquidity Credit Transfer Input Detailed' window. It features a top bar with 'New' and 'Enter Query' buttons. The main area is divided into four columns of input fields:

- Payment Details:** Host Code, Transaction Branch, Source Code, Booking Date, Value Date, Activation Date, Debit Value Date, Credit Value Date, Transfer Currency, Transfer Amount, and an 'Enrich' button.
- Debtor Details:** Transaction Reference No, Instruction Identification, Network Code, Debtor Account Identification, Type Code, BICFI, Debit Account, Debit Account Currency, Debit Account Branch, Debit Amount, Customer Number, Customer Service Model, and Receiver Details (BICFI).
- Creditor Details:** End to End Identification, Creditor Account Identification, Creditor Type Code, BICFI, Credit Account, Credit Account Currency, and Credit Account Branch.
- Bottom Bar:** Accounting Entries, MIS, UDF, Audit, and Exit buttons.

5. Once a maker saves a template, Checker needs to authorize, then Verifier can verify it.
6. Maker cannot perform first authorization. Final authorization cannot be performed, if first authorization is pending. Final authorization cannot be done by maker / first authorizer. Template remains Unauthorized, till final authorization is performed.
7. Maker cannot perform first authorization. Final authorization cannot be performed, if first authorization is pending. Final authorization cannot be done by maker / first authorizer. Template remains Unauthorized, till final authorization is performed.
8. Once you specified the parameters, click the **Search** button. System displays the records that match the search criteria.
9. The following actions can be performed for transactions in this queue:

Actions	Description
View	Click 'View' button to view the Template details for the selected record

Actions	Description
Create Transaction	<p>Click 'View' button to view the Template details for the selected record</p> <p>Transactions created are Saved/Auto-Authorized depending on the user rights.</p> <div>  Note: <p>Transactions created are Saved/Auto-Authorized depending on the user rights.</p> <p>While creating a new transaction, system will default the 'Booking Date' and 'Instruction Date' as current date in the 'Transaction Input Detailed' (PBDOTONL) screen.</p> <p>You can modify the details populated from the Template and click on 'Enrich'.</p> <p>You can modify the details populated from the Template and click on 'Enrich'.</p> </div>
Close	Select a Template ID that is Open and Authorized and click on 'Close' button to close the record. Authorization is required to 'Close' a record.
Re-Open	Select a Template ID that is closed and authorized to re-open the record, by clicking the 'Reopen' button. Reopening of a record requires authorization.
Modify	<p>Select a Template ID and click on 'Modify' button to modify the existing template details. Modifying the existing template details requires authorization.</p> <div>  Note: <p>On modification, the system generates a newer version of the template instead of replacing the older template.</p> <p>Whenever the template details are modified, both new and old templates are available as a part of audit log.</p> </div>
Authorize	<p>You can authorize the following records/Template details by clicking 'Authorize' button:</p> <ul style="list-style-type: none"> • Template Id's generated in Template Generation screen • For Closing a Template Id • For Reopening a Template ID • For Modifying the template details <div>  Note: <p>Same user cannot perform all the actions - Save, First Auth and Authorize. This validation is done during the authorization process.</p> </div>
View Template Log	You can view the actions initiated on a Template with the maker/checker/verifier details here.

Actions	Description
Delete	<p>Select a Template ID for which you have initiated actions like - 'Create Transaction', 'Close', 'Reopen', 'Modify' and click on 'Delete' button to delete the actions before authorizing the same.</p> <div style="border: 1px solid #0070c0; padding: 10px; margin-top: 10px;"> <p> Note:</p> <p>Deleting of an action cannot be done once it is authorized. No records can be deleted on clicking 'Delete' button. Only actions initiated can be deleted.</p> </div>
Verify	You can verify the transaction only if dual authorization is enabled.
Reject	If Authorization status or Verification status is unauthorized, you can reject the transaction.

3.5.14 Common Query

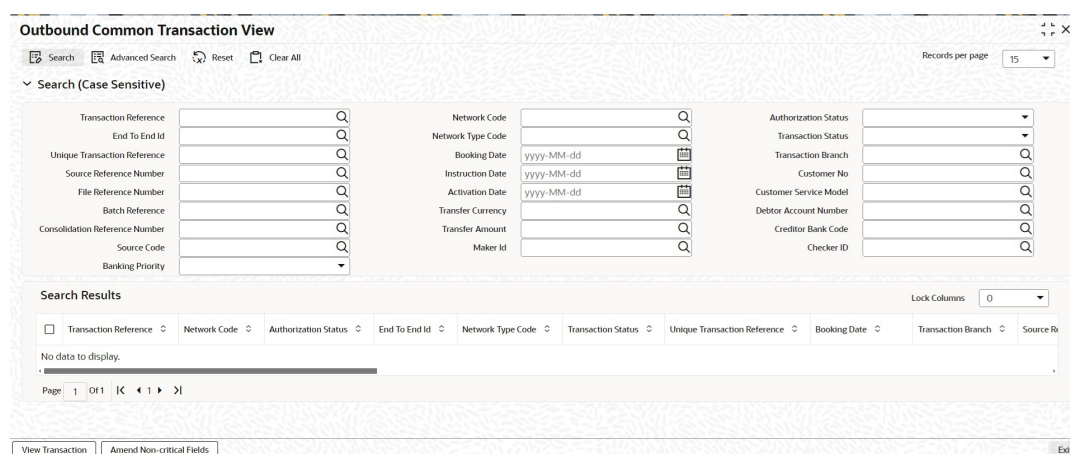

Payment view screens are available for each payment type. It is possible to query the transaction details from a common screen for all payment types.

- [Outbound Transaction View Screen](#)
- [Inbound Transaction View](#)

3.5.14.1 Outbound Transaction View Screen

1. On Homepage, specify **PMSOTNVW** in the text box, and click next arrow.
Outbound Transaction View Screen screen is displayed.

Figure 3-49 Outbound Transaction View Screen

The screenshot shows the 'Outbound Common Transaction View' screen. At the top, there are search options: 'Search', 'Advanced Search', 'Reset', and 'Clear All'. A 'Records per page' dropdown is set to 15. Below this is a 'Search (Case Sensitive)' section with multiple input fields for search criteria, including Transaction Reference, End To End Id, Unique Transaction Reference, Source Reference Number, File Reference Number, Batch Reference, Consolidation Reference Number, Source Code, Banking Priority, Network Code, Network Type Code, Booking Date, Instruction Date, Activation Date, Transfer Currency, Transfer Amount, Maker Id, Authorization Status, Transaction Status, Transaction Branch, Customer No, Customer Service Model, Debtor Account Number, Creditor Bank Code, and Checker ID. Below the search fields is a 'Search Results' section with a table of results. The table has columns for Transaction Reference, Network Code, Authorization Status, End To End Id, Network Type Code, Transaction Status, Unique Transaction Reference, Booking Date, Transaction Branch, and Source Reference Number. The table is currently empty, displaying 'No data to display.' At the bottom, there are buttons for 'View Transaction', 'Amend Non-critical Fields', and 'Exit'.

2. Search using one or more of the following parameters:
 - Transaction Reference
 - Transaction Branch
 - Authorization Status

- Network Code
 - Payment Type
 - Source Code
 - Source Reference Number
 - Customer No
 - File Reference Number
 - Batch Reference
 - Booking Date
 - Instruction Date
 - Activation Date
 - Transfer Currency
 - Transfer Amount
 - Customer Service Model
 - Debtor Account Number
 - End To End Id
 - Maker ID
 - Checker ID
 - Creditor Bank Code
 - Transaction Status
 - Banking Priority
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
4. This maintenance is applicable for following payment types:
- India NEFT Outbound
 - India NEFT Inbound
 - India RTGS Outbound
 - India RTGS Inbound
 - ACH Outbound
 - ACH Inbound
 - US NACHA Outbound
 - US NACHA Inbound
 - CNAPS Outbound
 - CNAPS Inbound
- [View Transaction](#)
 - [Amend Non-Critical Fields](#)

3.5.14.1.1 View Transaction

Select a record and click the 'View Transaction' button to view the complete details of the transaction. The View Transaction Action opens the specific transaction selected, in view mode.

**Note:**

For unauthorized transaction, View Transaction opens the respective online screen.

3.5.14.1.2 Amend Non-Critical Fields

Amendment of non-critical fields are applicable for the following payment/collection types:

- Cross-border/RTGS
- Book Transfer
- Domestic Low Value
- US ACH
- Fedwire
- NEFT
- India RTGS
- Direct Debits

Amendment of non-critical fields can be done from Outbound Common Transaction View screen (PMSOTNVW) screen by clicking the **Amend Non-critical Fields** button and Transaction Amendment screen is launched.

Also you can launch the 'Transaction Amendment' screen as standalone screen, by typing **PMDNCAMD** in the field at the top right corner of the application tool-bar and clicking the adjoining arrow button. Click **New** button on the Application tool-bar.

Figure 3-50 Transaction Amendment

Amendment of non critical fields can be initiated only from the common view screen.

The deletion by maker or authorization can be initiated by querying the record from the summary screen PMSNCAMD. The user should have access rights for the function ID.

Transaction Remarks can be amended. The UDF values can be amended from UDF sub-screen.

Amendment of non-critical fields are allowed irrespective of the transaction status. Only New value fields can be input by the user.

Both current value and new value are stored for each amendment.

The amended values are updated for the original transaction. The system will log the details in the queue log as well with maker/checker details.

New transaction record gets created in Outbound/Inbound Common Transaction View (PMSOTNVW/PMSITNVW) underlying tables for unauthorized transactions from View Transaction sub screen.

Unlock action is not allowed in Transaction Input screen for uploaded transactions.

Restriction is added while 'Amend Non-Critical Fields' from Outbound/Inbound Common Transaction View (PMSOTNVW/PMSITNVW) for NONSTP/Unauthorized transactions.

3.5.14.2 Inbound Transaction View

1. On Homepage, specify **PMSITNVW** in the text box, and click next arrow.

Inbound Transaction View Screen screen is displayed.

Figure 3-51 Inbound Transaction View Screen

The screenshot shows the 'Inbound Common Transaction View' screen. At the top, there are search controls: 'Search', 'Advanced Search', 'Reset', and 'Clear All'. A 'Records per page' dropdown is set to 15. Below this is a 'Search (Case Sensitive)' section with a grid of search fields. The fields are organized into three columns:

- Column 1:** Transaction Reference, Network Code, Customer No, Booking Date (with a date picker), Transfer Currency, End To End Id, Unique Transaction Reference, Debtor Bank Code.
- Column 2:** Transaction Branch, Source Code, File Reference Number, Instruction Date (with a date picker), Transfer Amount, Maker Id, Creditor Account Number.
- Column 3:** Authorization Status (dropdown), Source Reference Number, Batch Reference, Activation Date (with a date picker), Customer Service Model, Checker ID, Network Type Code.

Below the search fields is a 'Search Results' section. It includes a 'Lock Columns' dropdown set to 0. A table header lists the search criteria: Transaction Reference, Transaction Branch, Authorization Status, Network Code, Source Code, Source Reference Number, Customer No, File Reference Number, Batch Reference, and Booking Date. The table body shows 'No data to display.' At the bottom, there is a pagination bar with 'Page: 1' and navigation icons. At the very bottom, there are two buttons: 'View Transaction' and 'Amend Non-critical Fields', and an 'Exit' button on the right.

2. Search using one or more of the following parameters:

- Transaction Reference
- Transaction Branch
- Authorization Status
- Network Code
- Source Code
- Source Reference Number

- Customer No
 - File Reference Number
 - Batch Reference
 - Booking Date
 - Instruction Date
 - Activation Date
 - Transfer Currency
 - Transfer Amount
 - Customer Service Model
 - End To End Id
 - Maker ID
 - Checker ID
 - Transaction Status
 - Debtor Bank Code
 - Creditor Account Number
 - Network Type Code
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
- [View Transaction](#)
 - [Amend Non-Critical Fields](#)

3.5.14.2.1 View Transaction

Select a record and click the 'View Transaction' button to view the complete details of the transaction. The View Transaction Action opens the specific transaction selected in view mode.

**Note:**

For unauthorized transaction, View Transaction opens the respective online screen.

3.5.14.2.2 Amend Non-Critical Fields

Amendment of non-critical fields are applicable for the following payment/collection types:

- Cross-border/RTGS
- Book Transfer
- Domestic Low Value
- US ACH
- Fedwire
- NEFT
- India RTGS

- Direct Debits

Amendment of non-critical fields can be done from Inbound Common Transaction View screen (PMSITNVW) screen by clicking the **Amend Non-critical Fields** button and Transaction Amendment screen is launched.

Also you can launch the 'Transaction Amendment' screen as standalone screen, by typing **PMDNCAMD** in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click **New** button on the Application tool-bar.

Figure 3-52 Transaction Amendment

The screenshot shows the 'Transaction Amendment' application window. It features a standard Windows-style title bar and a toolbar with 'New' and 'Enter Query' buttons. The main workspace is divided into sections for data entry: 'Host Code', 'Amendment Reference', 'Amendment Date', 'Transaction Reference Number', and 'Amendment Remarks'. Below these is a 'Transaction Remarks' section with 'Current Value' and 'New Value' fields. A 'View Transaction' button is located at the bottom of the main area. The bottom status bar includes 'UDF', 'Audit', and 'Exit' buttons.

3.5.15 Common Query Services

The following services for querying payment details:

- Remittance Enquiry Request
- Remittance Enquiry Response
- Transaction Request
- Transaction Response
- [Remittance Enquiry Request](#)
- [Remittance Enquiry Response](#)
- [Transaction Request](#)
- [Transaction Response](#)

3.5.15.1 Remittance Enquiry Request

This is sent from an external system for querying the status of the payments. The query can be either for outbound payments or for inbound payments.

The following fields are allowed for query:

- Payment type Inbound/Outbound this will be a mandatory query field
- Transaction Reference

- Transaction Status (Pending, Exception, Processed, Cancelled, Future values, Reversed, Recall Requested, Returned, Rejected or Null)
- Debit Account
- Credit Account
- Transfer Currency
- Transfer Amount
- Instruction Date
- Activation Date
- Booking Date
- Creditor Bank Code
- Debtor Bank Code
- Batch ID
- File Reference
- Maker ID
- Checker ID
- Transaction Branch
- Source Code
- Source Reference
- Customer ID
- Customer Service Model
- Debtor Name (for inbound payments)
- Creditor Name (for outbound payments)

There are tags for sending the USER ID for access right validation.

3.5.15.2 Remittance Enquiry Response

On receiving remittance query request system gives response with the details of records matching the query criteria.

For each record all the above listed fields are available for the related data in the response message.

If no record is found, the related exception message are sent in the response.

3.5.15.3 Transaction Request

In this request a particular transaction reference can be sent for fetching the related details.

3.5.15.4 Transaction Response

The common xsd with all the transaction details is sent as response for the transaction queried.

3.6 Verification Queue Processing

Verification Queue processing is applicable for all the Outbound/Passthrough Cross Border/RTGS transactions.

- [Verification Rule Validation](#)
- [View Message Action Processing](#)
- [Release Action Processing](#)
- [Force Release Action Processing](#)
- [Modify Action Processing](#)
- [Cancel Action Processing](#)
- [Message Generation Processing Impact](#)

3.6.1 Verification Rule Validation

After network cutoff validation, the verification rule is applied on the transaction against the transaction network.

If the verification rule doesn't satisfy, then the transaction will be processed further - Posting of accounting entries, payment messages and advice messages generation, etc.

If the verification rule satisfies, then the transaction is moved to the new verification queue. The network cutoff time and Queue action log is populated.

3.6.2 View Message Action Processing

On clicking of View Message action, the message generation processing gets triggered. The payment messages are generated. The sub-screen 'View All Messages' (PXDALMSG) is launched and shows the generated messages (Customer transfer with Cover scenario results in both payment messages getting generated).

The 'Message Status' field shows the value as 'Pending Verification' for the generated messages. The generated messages are available in the Outbound Message Browser Summary (PMSOUTBR) screen also. No user action is allowed when the message status is 'Pending Verification' in the Outbound Message Browser Summary (PMSOUTBR).

3.6.3 Release Action Processing

This processing is applicable for Release Action apart from updating Queue action log.

- The network cutoff validation is triggered first. If the network cutoff validation fails (cutoff time crossed), then this action is not allowed. This network cutoff validation gets triggered on Authorization of Release action also. Authorization user action is not allowed, if the network cutoff validation fails. You can take 'Delete' action to delete the Release action or 'Reject' the Release user action or 'Force Release' action to release the transaction for further processing.
- If the network cutoff is not crossed, the transaction gets released out of the queue, message status is updated to 'Generated' and the transaction is processed further - posting of accounting entries, generating advice messages. if applicable, applying hold/release criteria if any, handing off the generated messages etc.
- If the generated payment message is to be delivered.

3.6.4 Force Release Action Processing

This processing is applicable for Force Release action apart from updating Queue action log.

The transaction is released out of the queue irrespective of whether network cutoff is crossed or not, message status is updated to 'Generated' and the transaction gets processed further - posting of accounting entries, generating advice messages if applicable, applying hold/ release criteria if any, handing off the generated messages etc.

3.6.5 Modify Action Processing

Modify Action launches PXDOTONL screen with Payment type as Cross Border / RTGS.

The transaction details are populated into the underlying transaction input table if no data available earlier (Transaction is an uploaded transaction and was not moved to Non-STP queue and modified/released). Otherwise, a new version is to be created and shown to the user for modification. The data in the host tables are populated into transaction input tables even for manually inputted transactions because there can be data modifications done during the transaction processing. E.g. Transaction data modified in Repair Queue.

You can modify the data only for the fields that are maintained in the Verification Amend Allowed Fields Detailed (PMDVFAMD).

On Authorization of the modification, the data in the transaction input tables is updated to the host tables for further processing after the below processing is successful.

- ECA Reversal Request is sent out, if ECA Check was applicable.
- FX Reversal Request is sent out, if External Exchange Rate was applicable.
- FX Unwind request is logged after cancellation, if transaction is a cross currency transaction and FX Reference is present.
- Generated payment messages gets deleted.

The modified transaction is processed from the beginning starting from Repair validations for both Originated payments and for Pass-through payments.

For Pass-through payments, if Split Accounting is already done, then the same is reversed and reversal accounting entries are sent to accounting system. 'Debit Liquidation Status' is reset to 'Pending'.

3.6.6 Cancel Action Processing

ECA Reversal Request is sent out if ECA Check was applicable.

FX Reversal Request is sent out if External Exchange Rate was applicable.

FX Unwind request is logged after cancellation if transaction is a cross currency transaction and FX Reference is present.

Generated payment messages gets deleted.

Sanctions check is done for the cancellation.

- If the Sanctions response is 'Seized', then the sanctions seizure entries are posted. The transaction status is updated as 'Seized'.
- If the Sanctions response is not 'Seized', then the transaction status is updated as 'Cancelled'.

For Outbound pass-through payments, a Reject gpi or Universal confirmation message is generated depending on whether the payment is a gpi payment or not.

3.6.7 Message Generation Processing Impact

If payment messages weren't generated earlier, the same is generated. Otherwise, payment message generation gets skipped.

Payment messages that are sent via OFBA (Oracle FLEXCUBE Blockchain Adapter) is sent only when the transaction is released from Verification Queue and the message status is changed to 'Generated'.

3.7 Transaction Reassignment

- [Reassign Details](#)
- [Transaction Reassign Screen](#)
- [Unauthorized Entries View](#)

3.7.1 Reassign Details

The Transaction Reassignment screen allows users to transfer the rights of the Maker to another user.

1. On Homepage, specify **PMDREASN** in the text box, and click next arrow.
Reassign Details screen is displayed.

Figure 3-53 Reassign Details

The screenshot shows the 'ReassignDetails' application window. It features a toolbar at the top with 'New' and 'Enter Query' options. The main area contains several input fields: 'Host Code', 'Host Date', 'Maker ID', and 'Reassign User', each accompanied by a magnifying glass icon for search. To the right of these is a 'Reassign Reference' field, also with a search icon. Below these fields is a 'Function ID' dropdown menu. A message 'No data to display.' is shown below the dropdown. At the bottom, a pagination bar indicates 'Page 1 (0 of 0 items)' with navigation arrows. The bottom right corner contains 'Audit' and 'Exit' buttons.

2. Click **New** button on the Application toolbar.
3. On **Transaction Reassignment** screen, specify the fields.
For more information about the fields, refer to field description below:

Table 3-17 Transaction Reassignment - Field Description

Field	Description
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
Host Date	System defaults the Host Date to Current Date. Host date can be manually edited to another back date before entering the Maker ID.
Reassign Reference	System defaults the Reassign Reference.
Maker ID	Specify the Maker ID from the list of values. The field lists the Maker IDs of the unauthorized transactions for the Host and Date. User can select a Maker ID that has to be reassigned to a new User ID.
Reassign User	Specify the Reassign User from the list of values. All valid user Id are listed.
Function ID	Specify the Function ID from the list of values.

System does not allow to maintain a reassignment record if there is another unauthorized/ authorized reassignment existing for same Host Code/Host Date/Maker ID/ Function ID combination selected. The system validates whether the reassigned user is having appropriate access rights for the function ID selected.

While allowing Delete and Modify of an unauthorized transaction, system first checks whether any authorized reassignment record is available for the transaction. If yes, the New Maker ID maintained in the latest record is considered as the Maker of the transaction. Only this user is allowed for delete and modify.

If no reassignment record is not available, system allows only Maker of the transaction for Delete and Modify operations.

- [Reassign Summary](#)

3.7.1.1 Reassign Summary

1. On Homepage, specify **PMSREASN** in the text box, and click next arrow.

Reassign Summary screen is displayed.

Figure 3-54 Reassign Summary

2. Search using one or more of the following parameters:

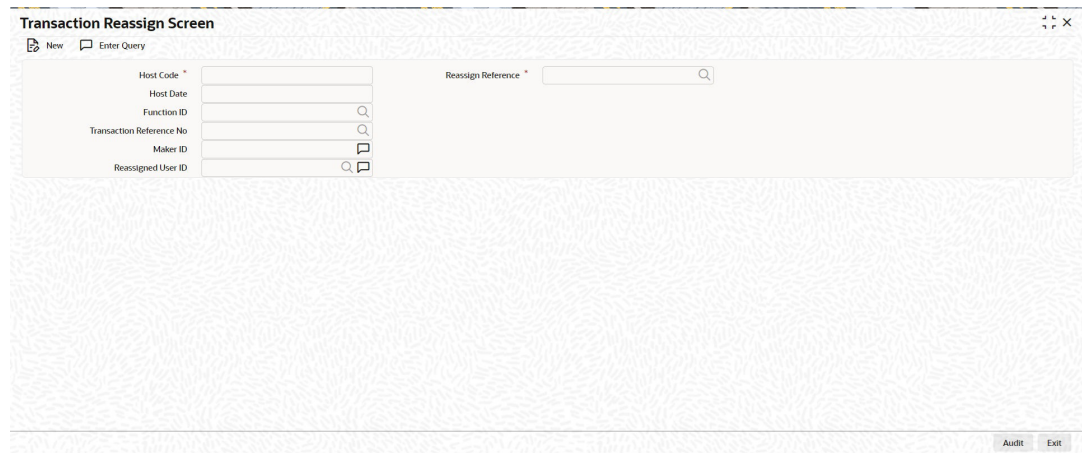

- Authorization Status
 - Record Status
 - Maker ID
 - Reassign User
 - Reassign Reference
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
 4. Double-click a selected record to open the detailed screen.

3.7.2 Transaction Reassign Screen

The Transaction Reassign screen allows user to reassign a single unauthorized transaction based on Transaction Reference to a new user.

1. On Homepage, specify **PMDRATXN** in the text box, and click next arrow.
Transaction Reassign Screen screen is displayed.

Figure 3-55 Transaction Reassign Screen

2. Click **New** button on the Application toolbar.
3. On **Transaction Reassign Screen** screen, specify the fields.
For more information about the fields, refer to field description below:

Table 3-18 Transaction Reassign Screen - Field Description

Field	Description
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
Host Date	Host date is defaulted as current date, user can modify the same to a back date.
Function ID	Specify the Function ID from the list of values. All transaction function IDs for which unauthorized records are present are listed.
Transaction Reference No	Specify the Transaction Reference No from the list of values. Only outbound/inbound type of transactions are listed.

Table 3-18 (Cont.) Transaction Reassign Screen - Field Description

Field	Description
Maker ID	System defaults the Maker ID of the transaction.
Reassign User ID	Specify the Reassigned User ID from the list of values. All valid User IDs other than the Maker ID are listed.
Reassign Reference	System defaults the Reassigned Reference from the list of values.

- [Transaction Reassign Screen Summary](#)

3.7.2.1 Transaction Reassign Screen Summary

1. On Homepage, specify **PMSRATXN** in the text box, and click next arrow.

Transaction Reassign Screen Summary screen is displayed.

Figure 3-56 Transaction Reassign Screen Summary

The screenshot shows the 'Transaction Reassign Screen' interface. At the top, there are search options: 'Search', 'Advanced Search', 'Reset', and 'Clear All'. A 'Records per page' dropdown is set to 15. Below this, a 'Search (Case Sensitive)' section contains six input fields with search icons: 'Authorization Status', 'Record Status', 'Maker ID', 'Reassign Reference', 'Reassigned User ID', and 'Transaction Reference No'. The 'Search Results' section shows a table with the same six columns. Below the table, it states 'No data to display.' and includes pagination controls: 'Page: 1 of 1' and navigation arrows. A 'Lock Columns' dropdown is set to 0. An 'Exit' button is located at the bottom right.

2. Search using one or more of the following parameters:
 - Authorization Status
 - Record Status
 - Maker ID
 - Reassign Reference
 - Reassigned User ID
 - Transaction Reference No
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
4. Double-click a selected record to open the detailed screen.

 **Note:**

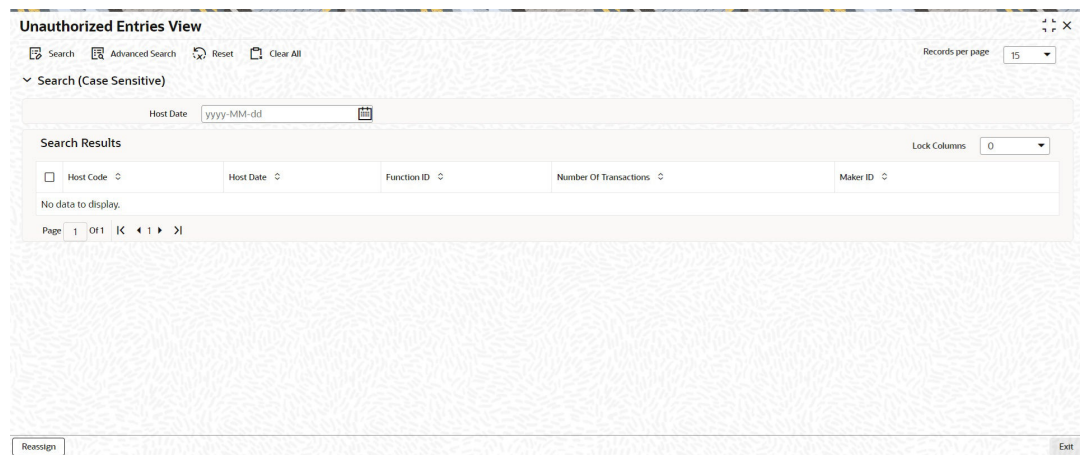

Transaction reassign is applicable to outbound /inbound transactions of the following payment types:

- Cross border / RTGS MT
- Generic Wires
- Clearing
- Instrument Issue /Payment
- ACH CT /ACH DD

3.7.3 Unauthorized Entries View

1. On Homepage, specify **PMSUNAUT** in the text box, and click next arrow.
Unauthorized Entries View screen is displayed.

Figure 3-57 Unauthorized Entries View

2. Search using one or more of the following parameters:
 - Host Date
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.
4. Double-click a selected record to open the detailed screen.
User can perform the following actions:

Table 3-19 Unauthorized Entries View - Action

Action	Description
Reassign	Click this button to display the Reassign Details. For more details, refer Reassign Details section.

3.8 Single Payout Service

The Single Payout Service screen allows payment request input for initiating a payment transaction. Single payout can be done by providing a specific payment network to which the payment needs to be forwarded or without providing the network details. If network is not provided for a payment, system has the capability to derive the same using the network rule maintained for the processing Host. The Single Payout Service screen is provided with major fields that are supported by ISO pain.001 message format. Single payout for the following payment types can be done using this screen:

- Book Transfer
- Cross Border Payments
- RTGS
- SEPA CT
- Generic ACH CT
- US Fedwire
- India NEFT
- India RTGS
- CNAPS
- SWIFT CBPRPlus
- TARGET2 ISO
- [Single Payout Service](#)
- [Web service Support](#)

3.8.1 Single Payout Service

Single Payout Service Screen allows payment request input for single transaction. In this screen, user can accept single payout requests irrespective of the payment type.

1. On Homepage, specify **PMDPNSPS** in the text box, and click next arrow.
Single Payout Service screen is displayed.

2. Click **New** button on the Application toolbar.
3. On **Single Payout Service** screen, specify the fields.

For more information about the fields, refer to field description below:

Table 3-20 Single Payout Service - Field Description

Field	Description
Transaction Branch	System defaults the Transaction Branch of transaction branch on clicking 'New'.
Host Code	System defaults the Host Code of transaction branch on clicking 'New'.
Source Code	Specify the Source Code from the list of values.
Transaction Reference	System populates a 16 digit transaction number .
Network Code	Specify the Network Code. Alternatively, user can select the Network Code from the option list. The list displays all valid network codes maintained in the system. This is an optional field. If the network is not provided, system will derive the same using the Network rule maintenance available.
Customer No	Specify the Customer Number. Alternatively, user can select the Customer Number from the option list. The list displays a list of customer numbers maintained in the system for the Host.
SSI Label	Specify the required SSI label from the list of values. <div>  Note: This list is populated with valid SSI Labels, applicable for the customer and the Network. If Customer or Network details are not available, the fetch action of the list of values displays the information message to this effect. The list of values is queried based on the fields SSI Label, Beneficiary Bank ID, Beneficiary Account & Account IBAN. </div>
File Reference Number	Specify the File Reference Number, if applicable.
Payment Info ID	Specify the Payment Info ID, if the payment request is part of a Batch.
Instruction ID	Specify the Instruction ID.
End to End ID	Specify the End to End ID.
Payment Type	Payment type is defaulted based on the network.
Transfer Type	Select Transfer Type from the following: <ul style="list-style-type: none"> • Customer Transfer • Book Transfer • Book Transfer Own A/c • Indo Nepal Remittance
Prefunded Payments	Check this box to enable Prefunded Payments.
Credit to GL	Check this box to enable Credit to GL. This flag is applicable for Book Transfer transactions only for which 'Prefunded payments' flag is not checked.
Payments Details	--
Requested Execution Date	Specify the Execution Date.
Initiation Date	This date indicates the booking date of payment initiation. Initiation date is defaulted as current date.
Activation Date	Specify the Activation Date. System derives the activation date, if not provided.

Table 3-20 (Cont.) Single Payout Service - Field Description

Field	Description
Instructed Currency	Specify the Instructed Currency from the list of values. If transfer amount is provided in the request, you can enter transfer currency as Instructed currency and transfer amount as Instructed Amount.
Instructed Amount	Specify the Instructed Amount.
Equivalent Currency	Specify the Equivalent Currency from the list of values. If the debit amount is provided in the request, you have to provide Equivalent Currency, Equivalent Amount and Transfer currency.
Equivalent Amount	Specify the Equivalent Amount.
Currency of Transfer	Specify the Instructed Currency from the list of values.
Unit Currency	Specify the Unit Currency in which the Exchange rate is specified.
Exchange Rate	Specify the Exchange Rate.
Exchange Rate Type	Specify the Exchange Rate Type.
FX Reference Number	Specify the FX Reference Number.
Debit Entry on	Select Debit entry posting date preference from the following: <ul style="list-style-type: none"> On Activation Date On Value Date
Credit Entry on	Select Credit entry posting date preference from the following: <ul style="list-style-type: none"> On Activation Date On Value Date

- Receiver Correspondent Address Details
- Receiver of Cover Details

Also, you can specify the following details:

- Third Reimbursement Institution Account Details
- Third Reimbursement Institution Address Details
- Third Reimbursement Institution Details

3.8.1.3 Additional Information

1. To specify additional details, click on Additional Information button.
2. On **Additional Information**, specify the fields.

Figure 3-64 Single Payout Service - Additional Information

The screenshot displays the 'Additional Information' form, which is a comprehensive interface for specifying details for a single payout service. The form is organized into a grid-like structure with multiple sections, each containing specific input fields and controls.

- Transaction Reference:** A single text input field at the top left.
- Purpose Details:** Includes 'Purpose Code' and 'Purpose Value' input fields.
- Payment Details (Structured):** Contains 'Remitter Reference', 'Remitter Code', 'Remitter Information Issuer', and 'Additional Remittance Info' input fields.
- Payment Details (Unstructured):** Features six 'Remittance Information' input fields, each with a search icon.
- Regulatory Reporting Details (Unstructured):** Includes three 'Regulatory Reporting' input fields.
- Additional Payment Information:** Contains 'Instruction Priority', 'Service Level Code', 'Service Level Value', 'Local Instrument Code', 'Local Instrument Value', 'Category Purpose Code', and 'Category Purpose Value' input fields.
- Sender To Receiver Information:** Includes seven 'Sender To Receiver Information' input fields.
- 71F: Sender Charges:** Contains six 'Sender Charge' input fields, each with a currency code (Ccy 1 through Ccy 6).
- 71G: Receiver Charges:** Includes 'Receiver Charge Currency' and 'Receiver Charge Amount' input fields.
- Envelope Details:** Features five 'Envelope Contents' input fields, each with a document icon.
- Remittance Information:** Includes 'Referred Doc Number', 'Referred Doc Related Date', 'Electronic Address', 'Remittance Advice ID', and 'Remittance Method' input fields.
- 72: Sender To Receiver Information:** Contains six 'Sender To Receiver Information' input fields.
- Time Indicators:** Includes three 'Time Indicator' input fields.
- Instruction Information Details:** Features six 'Instruction for Creditor Agent' input fields, each with a code (Code1 through Code6).
- Message Suppression Preferences:** Includes checkboxes for 'Cover Message only', 'Debit Confirmation', 'Payment Message (with cover)', and 'Receive Notice'.
- Settlement Preference:** Includes a 'Settlement Method' input field with a 'No Preference' option.

At the bottom right of the form, there are 'Exit' and 'Save' buttons.

For Cross Border, you can specify the following details:

- Senders to Receiver Information
- 71F: Sender Charges
- 71G Receiver Charges
- Time Indicators
- Message Suppression Preferences

Also, you can specify the following details:

- Purpose Details
- Payment Details (Structured)
- Payment Details (Unstructured)

- Regulatory Reporting Details (Unstructured)
- Additional Payment Information
- Envelope Details
- Instruction Information Details

 **Note:**

If the user specifies the Sender charge & currency for Prefunded payments with Charge whom as BEN, then the same is considered as the Sender Charge and populated to PXDOVIEW - Additional details sub screen - Sender charges.

F71F is populated based on the specified Sender Charges in SPS channel. If not provided, then sender charges are picked from PMDSWPRF as per existing feature.

If 71F is specified in SPS Channel, then Pricing pick up based on PMDSWPRF gets skipped.

This received Sender pricing / charge amount will be the 71F charge amount. If multiple Sender charges are specified, then last Sender chg will be the 71F amount.

In the Out 103 message, the 32A will be 33B - received last Sender charge amount.

In accounting, the received last Sender charge amount will be deducted from Nostro account and credited to the Prefunded GL with amount tag as 71F_SNDR_CHG.

If the received sender charge is in different currency than the transfer currency, then sender charge amount is converted to transfer currency using STANDARD Mid rate.

3.8.1.4 UDF Button

1. This sub-screen defaults values of UDF fields that are part of the UDF group specified for the 'Manual' source.
2. Click the **UDF button** to invoke the 'UDF' sub-screen.
3. On **UDF Button**, specify the fields.

Figure 3-65 UDF Button

The screenshot shows a 'Fields' dialog box. It contains a table with two columns: 'Field Label' and 'Field Value'. The table is currently empty, displaying 'No data to display.' Below the table, there is a pagination bar showing 'Page 1 (0 of 0 items)' with navigation arrows. At the bottom right of the dialog, there are 'Exit' and 'Save' buttons.

Table 3-21 UDF Button - Field Description

Field	Description
Field Label	System displays all fields that are part of the associated UDF group.
Field Value	System displays the default value, where exists for the UDF fields. You can change the default value or specify value for other fields (where default value does not exist).

3.8.1.5 MIS Button

1. You can maintain the MIS information for the Transaction. If the MIS details are not entered for the Transaction the same is defaulted from the product maintenance.
2. Click the **MIS** button to invoke the 'MIS' sub-screen.
3. On **MIS Button**, specify the fields.

Figure 3-66 MIS Button
Table 3-22 MIS Button - Field Description

Field	Description
Transaction Reference	System displays the transaction reference number of the transaction.
MIS Group	You can select the MIS group code from the option list, or specify the code for the MIS group in the Source maintenance. The system displays all valid MIS groups for different sources in the MIS group list in the Source maintenance. When booking a transaction from this screen, the MIS group linked to the 'Manual' source is populated by default.
Default button	After selecting a MIS group different from the default MIS Group, click this button to populate any default MIS values and link them to the Transaction MIS and Composite MIS classes.
Transaction MIS	You can populate the default MIS values for Transaction MIS classes for the MIS group. Alternatively, you can change one or more default MIS values or specify additional MIS values. Or, you can select MIS values from the option list.
Composite MIS	You can populate the default MIS values for Composite MIS classes for the MIS group. Alternatively, you can change one or more default MIS values or specify additional MIS values. Or, you can select MIS values from the option list.

3.8.1.6 Single Payout Service Summary

1. On Homepage, specify **PMSPNSPS** in the text box, and click next arrow.
Single Payout Service Summary screen is displayed.

Figure 3-67 Single Payout Service Summary

2. Search using one or more of the following parameters:
 - Transaction Branch
 - Transaction Reference
 - File Reference Number
 - Source Code
 - Network Code
 - Payment Type
 - Transfer Type
 - Activation Date
 - Booking Date
 - SSI Label
 - Authorization Status
 - End To End ID
 - Instruction ID
3. Once you specified the parameters, click the **Search** button.
System displays the records that match the search criteria.

3.8.2 Web service Support

REST and SOAP services are available for this screen. A subset of the fields, primarily the mandatory fields are supported as part of REST service format.

Note:

If Transaction Branch and Host Code are not passed in the ReST service, then system should not process the request as both Host Code and Transaction Branch cannot be null.

- [External Pricing Support](#)

- [External Audit Info Support](#)

3.8.2.1 External Pricing Support

You can send pricing details, such as pricing component and pricing amount, under a single pricing code.

System executes the price calculation after network identification either with rule based pricing or standard pricing.

If system resolved pricing matches with the pricing details received from the Single Payout service request, the Single Payout service request pricing gets updated.

If system resolved pricing does not match with the pricing details (pricing code/pricing components) received from SPS request, the service request is rejected.

For the below payments, support is available to send pricing details:

- Book Transfer
- Cross Border MT
- SWIFT CBPRPlus
- RTGS FIN
- TARGET2 ISO
- Generic ACH CT
- EU SEPA Credit
- US Fedwire

3.8.2.2 External Audit Info Support

SPS supports accepting Maker/Checker information.

If both the Maker id/ Checker id tags are not given in the service request, the Maker / Checker id of the transaction is populated as 'SYSTEM'.

If the Maker id/ Checker id tags are given in the service request, the user id values are validated against the user id maintained in the system.

If the values are valid, the system considers the same as the Maker/Checker ids of the transaction.

If the values are not valid, the system checks the source level 'Allow External Audit Info' flag value:

- If the 'Allow External Audit Info' flag value is 'Yes', the Maker/Checker id received in the request is considered as the transaction Maker/Checker id.
- If the 'Allow External Audit Info' flag value is 'No', the SPS request is rejected.

For the below payments, support is available for populating external audit information:

- India NEFT
- India RTGS

3.9 Advice Generation (MAIL/SWIFT)

Advice generation is a part of the transaction processing after the accounting step. This is applicable for all customer types.

- Customer Advice Preference (Function ID: PMDCSADV) is verified for the customer & message type. If maintenance is available, Media maintained for the customer account & Network is fetched. If no record is available for the account & Network, the default media maintained for the message type is used for generating advices.
- If the media derived is SWIFT, it is mandatory that customer ID is linked to the related BIC in ISDBICPB. Mt900/910 is generated in this case.
- If the media is derived as MAIL, the default Format ID is fetched from Default format maintenance. If Format ID is maintained for the Network and the source, that is considered. If source level maintenance is not available default format for the Network is considered. If Network level maintenance is not available, default Format ID for the media and message type is used.
- The Advice is generated in the format maintained for the Format ID and Language combination. Customer's language as maintained in External customer maintenance is considered for this.

The generated advice can be viewed from View Messages screen of the Transaction screens & view screens.

For the below payments, the Mail advices supported are:

- Book Transfer
- Outbound Cross Border
- Inbound Cross Border
- Outbound RTGS
- Inbound RTGS
- Outbound Generic ACH Credit
- Inbound Generic ACH Credit
- Outbound Generic ACH Debit
- Inbound Generic ACH Debit
- Outbound US Fedwire
- Inbound US Fedwire
- Outbound US NACHA Credit
- Inbound US NACHA Credit
- Outbound India NEFT
- Inbound India NEFT
- Outbound India RTGS
- Inbound India RTGS
- Outbound CNAPS Credit
- Inbound CNAPS Credit
- Instruments

For the below payments, the SWIFT advices supported are:

- Book Transfer
- Outbound Cross Border
- Inbound Cross Border
- Outbound RTGS
- Inbound RTGS
- [Advice Tags Supported](#)

3.9.1 Advice Tags Supported

Tags should be made available so that the following details can appear in an Advice:

Advice Tag Name	Debit/Credit Advice	Payment type /Field mapping
CUSTOMER	Debit Advice	Debit Customer for Outbound Cross-border
	Credit Advice	Credit Customer for Inbound Cross-border
CUSTOMERNAME	Both	Name of the customer fetched
ADDRESS1 to _ADDRESS4_	Both	Address lines 1 to for as in STDCIDCR
TRNREF	Both	Transaction Reference
_USERREF _	Both	User Reference
SOURCEREF	Both	Source Reference
RELATEDREF	Both	Cross border Outbound/Inbound - Related Reference
PAYERACCOUNT	Debit Advice	Cross-border Outbound
	Credit Advice	Cross-border Inbound -Originator Name (Field 50 Address line 1)

ORDERINGINSTITUTION4	Credit Advice	Ordering Institution Line 3 - Address Line 3
ORDERINGINSTITUTION5	Credit Advice	Ordering Institution Line 3 - Address Line 4
ORDERINGINSTBICNAME_	Credit Advice	If Ordering Institution Line 2 is a BIC ,Bank name from ISDBICDE
AWIACCOUNT	Debit Advice	Account With Institution Line 1- Account
AWIID	Debit Advice	Account With Institution Line 1 -Party Identifier
AWIBIC	Debit Advice	Account With Institution Line 2 - BIC / Name and Address 1
AWINAME	Debit Advice	Bank Name as available from ISDBICDE
AWIADDRESS1	Debit Advice	Account With Institution Line 3 - Address Line2
AWIADDRESS2	Debit Advice	Account With Institution Line 3 - Address Line 3
AWIADDRESS3	Debit Advice	Account With Institution Line 3 - Address Line 4
BENEFICIARY1_	Debit Advice	Beneficiary Line1 - Party Identifier
BENEFICIARY2	Debit Advice	Beneficiary Line1 - BIC / Name and Address 1

Advice Tag Name	Debit/Credit Advice	Payment type /Field mapping
BENEFICIARY3	Debit Advice	Beneficiary Line1 - Address Line2
BENEFICIARY4	Debit Advice	Beneficiary Line1 - Address Line 3
BENEFICIARY5	Debit Advice	Beneficiary Line1 - Address Line 4
REMITTANCEINFOUSTRD1_	Both	Unstructured Remittance Information - Fedwire Tag {6000} : Originator to Beneficiary Information Line 1
REMITTANCEINFOUSTRD2_	Both	Unstructured Remittance Information - Fedwire Tag {6000} : Originator to Beneficiary Information Line 2
REMITTANCEINFOUSTRD3_	Both	Unstructured Remittance Information - Fedwire Tag {6000} : Originator to Beneficiary Information Line 3
REMITTANCEINFOUSTRD4_	Both	Unstructured Remittance Information - Fedwire Tag {6000} : Originator to Beneficiary Information Line 4

The following tags are only allowed to be repeated:

- _PRICECOMPNAME_
- _PRICECOMPCCY_
- _PRICECOMPAMT_
- _PRICEDEBITCCY_
- _PRICEDEBITAMT_
- [Additional Advice Tags supported for Instruments](#)

3.9.1.1 Additional Advice Tags supported for Instruments

Advice Tag Name	Debit/Credit Advice	Payment Type /Field mapping
INSTRUMENTCODE	Debit/Credit Advice	Instrument Code
INSTRUMENTNUMBR	Debit/Credit Advice	Instrument Number
INSTRUMENTDATE	Debit/Credit Advice	Instrument Date
INSTRUMENTCCY	Debit/Credit Advice	Instrument Currency
PAYABLEBRANCH	Debit Advice	Payable Branch Name

3.10 Source Based Error Handling

You can maintain Referral type as 'Internal' for ECA system maintenance. With this maintenance in a FCUBS co deployed environment, you can control the resultant operation on receiving ECA response for Overridable error messages. This is done based on the Source / Network Error Handling preferences maintained.

If the referral type maintained as 'Internal' then ECA request is sent to FCUBS with Referral Type as 'EE'.

In case of Overridable errors, based on the maintenance available in FCUBS, the ECA response is received with TXNSTAT as X (Pending with PP) from FCUBS.

In this case, the system checks Network based Error code handling (Function ID:PMDNWERR) and System based error code handling (Function ID:PMDSRERR) in the same priority order to decide the exception handling for the External Override Error code received.

If any one of the error code is to be treated as error, then ECA reversal request is sent. ECA status is marked as 'Cancelled' and the transaction is auto canceled.

If none of the error code is to be treated as Error, then system checks whether any of the error code to be treated as 'Move to Queue'. If yes, the transaction is moved to ECA Queue. System Action for the record is updated as 'Retain In Queue'.

If none of the Override Error code is to be treated as Error or Move to queue, then STP processing is continued.

If no maintenance is available for any of the error codes, the transaction is moved to ECA queue.

3.11 Clear Cache

- [Cache Evict](#)

3.11.1 Cache Evict

This Cache Evict screen allows user to manually remove the data cached during processing.

1. On Homepage, specify **PMDCACHE** in the text box, and click next arrow.
Cache Evict screen is displayed.

Figure 3-68 Cache Evict

2. On **Cache Evict** screen, specify the fields.
For more information about the fields, refer to field description below:

Table 3-23 Cache Evict - Field Description

Field	Description
Cache Evict	Click on Cache Evict button to remove the cached data.

4.3 Non STP Rule Elements

The following are the rule elements available for maintaining the ACH CT Origination channel type rules:

- CREDITOR_AGENT_BIC
- CREDITOR_AGENT_MEMBER_ID
- DEBTOR_AGENT_BIC
- DEBTOR_AGENT_MEMBER_ID
- IS_ACCOUNT_NONSTP
- IS_CUSTOMER_NONSTP
- IS_CUST_SERVICE_MODEL_NONSTP
- IS_PREFUNDED_PAYMENT
- IS_PROCESS_CUTOFF_OVER
- NETWORK_CODE
- PURPOSE
- SERVICE_LEVEL
- TRANSFER_AMOUNT
- TRANSFER_CCY
- TXN_BRANCH

The following are the rule elements available for maintaining the ACH CT Receipt channel type rules:

- CREDITOR_AGENT_BIC
- CREDITOR_AGENT_MEMBER_ID
- DEBTOR_AGENT_BIC
- DEBTOR_AGENT_MEMBER_ID
- IS_ACCOUNT_NONSTP
- IS_CUSTOMER_NONSTP
- IS_CUST_SERVICE_MODEL_NONSTP
- IS_PREFUNDED_PAYMENT
- IS_PROCESS_CUTOFF_OVER
- NETWORK_CODE
- PURPOSE
- SERVICE_LEVEL
- TRANSFER_AMOUNT
- TRANSFER_CCY
- TXN_BRANCH

The following are the rule elements available for maintaining the ACH DD Origination channel type rules:

- CREDITOR_AGENT_BIC
- CREDITOR_AGENT_MEMBER_ID
- DEBTOR_AGENT_BIC
- DEBTOR_AGENT_MEMBER_ID
- IS_ACCOUNT_NONSTP
- IS_CUSTOMER_NONSTP
- IS_CUST_SERVICE_MODEL_NONSTP
- IS_PREFUNDED_PAYMENT
- IS_PROCESS_CUTOFF_OVER
- NETWORK_CODE
- PURPOSE
- SERVICE_LEVEL
- TRANSFER_AMOUNT
- TRANSFER_CCY
- TXN_BRANCH

The following are the rule elements available for maintaining the ACH DD Receipt channel type rules:

4.4 Network Rule Elements

The following rule elements are applicable for Single Payment channel type:

- BRANCH_CODE
- CATEGORY_PURPOSE
- CDTRACCT_ACNO
- CHANNEL_TYPE
- CHARGE_BEARER
- CREDITOR_AGENT_NAME
- CREDITOR_AGENT_BIC
- CREDITOR_AGENT_MEMBER_ID
- CUSTOMER_SERVICE_MODEL
- DEBIT_ACCOUNT
- DEBTOR_AGENT_BIC
- INSTRUCTION_PRIORITY
- INTERMEDIARY_AGENT_BIC
- INTERMEDIARY_AGENT_MEMBER_ID
- LOCAL_INSTRUMENT
- PURPOSE
- SERVICE_LEVEL
- SOURCE_CODE
- TRANSFER_AMOUNT
- TRANSFER_TYPE
- TRANSFER_CCY
- CUSTOMER_ID
- CR_AGENT_NATIONAL_CLG_CD
- INT_NATIONAL_CLG_CD
- PROCESS_WO_COVR
- IS_CR_AGT_CTRY_CURRENT

The following rule elements are applicable for C2B channel type:

- BRANCH_CODE
- CATEGORY_PURPOSE
- CDTRACCT_ACNO
- CHANNEL_TYPE
- CHARGE_BEARER
- CREDITOR_AGENT_BIC
- CREDITOR_AGENT_MEMBER_ID

- CUSTOMER_ID
- CUSTOMER_SERVICE_MODEL
- DEBIT_ACCOUNT
- DEBTOR_AGENT_BIC
- INSTRUCTION_PRIORITY
- INTERMEDIARY_AGENT_BIC
- INTERMEDIARY_AGENT_MEMBER_ID
- LOCAL_INSTRUMENT
- PURPOSE
- SERVICE_LEVEL
- SOURCE_CODE
- TRANSFER_AMOUNT
- TRANSFER_TYPE
- TRANSFER_CCY

The following rule elements are applicable for SWIFT channel type:

- AWI_LINE_1
- AWI_LINE_2
- AWI_LINE_3
- AWI_LINE_4
- AWI_LINE_5
- BRANCH_BIC
- BRANCH_CODE
- CHANNEL_TYPE
- CHARGE_BEARER
- CREDITOR_AGENT_BIC
- CREDITOR_AGENT_MEMBER_ID
- CR_AGENT_NATIONAL_CLG_CD
- CUSTOMER_ID
- CUSTOMER_SERVICE_MODEL
- DEBIT_ACCOUNT
- DEBTOR_AGENT_BIC
- INSTRUCTION_PRIORITY
- INTERMEDIARY_AGENT_BIC
- INTERMEDIARY_AGENT_MEMBER_ID
- INT_NATIONAL_CLG_CD
- SENDER
- SOURCE_CODE

- TRANSFER_TYPE
- TRANSFER_AMOUNT
- TRANSFER_CCY

The following rule elements are applicable for MT 101 channel type:

- BRANCH_CODE
- CDTRACCT_ACNO
- CHANNEL_TYPE
- CHARGE_BEARER
- CREDITOR_AGENT_BIC
- CREDITOR_AGENT_MEMBER_ID
- CR_AGENT_NATIONAL_CLG_CD
- CUSTOMER_ID
- CUSTOMER_SERVICE_MODEL
- DEBIT_ACCOUNT
- DEBTOR_AGENT_BIC
- INSTRUCTION_PRIORITY
- INTERMEDIARY_AGENT_BIC
- INTERMEDIARY_AGENT_MEMBER_ID
- INT_NATIONAL_CLG_CD
- RECEIVER_BANK_BIC
- SERVICE_LEVEL
- SOURCE_CODE
- TRANSFER_AMOUNT
- TRANSFER_TYPE
- TRANSFER_CCY

The following rule elements are applicable for MT 204 channel type:

- BRANCH_CODE
- CHANNEL_TYPE
- CREDITOR_AGENT_BIC
- CREDITOR_AGENT_MEMBER_ID
- CR_AGENT_NATIONAL_CLG_CD
- CUSTOMER_ID
- CUSTOMER_SERVICE_MODEL
- DEBIT_ACCOUNT
- DEBTOR_AGENT_BIC
- INSTRUCTION_PRIORITY
- IS_58_ACC_VOSTRO

- SOURCE_CODE
- TRANSFER_AMOUNT
- TRANSFER_TYPE
- TRANSFER_CCY

The following rule elements are applicable for pain.008 channel type:

- CATEGORY_PURPOSE
- CHANNEL_TYPE
- CREDITOR_AGENT_MEMBER_ID
- DEBIT_ACCOUNT
- DEBTOR_AGENT_BIC
- LOCAL_INSTRUMENT
- PURPOSE
- SERVICE_LEVEL
- SOURCE_CODE
- TRANSFER_AMOUNT
- TRANSFER_TYPE
- TRANSFER_CCY
- DEBTOR_AGENT_CLG_SYSTEM_ID
- DEBTOR_AGENT_MEMBER_ID
- MANDATE_ID
- SEQ_TYPE
- PRODUCT_TYPE

The following rule elements are applicable for pacs.008 channel type:

- CATEGORY_PURPOSE
- CHANNEL_TYPE
- LOCAL_INSTRUMENT
- PRODUCT_TYPE
- PURPOSE
- SERVICE_LEVEL
- SOURCE_CODE
- TRANSFER_AMOUNT
- TRANSFER_CCY

The following rule elements are applicable for pacs.003 channel type:

- CHANNEL_TYPE
- CATEGORY_PURPOSE
- LOCAL_INSTRUMENT
- PRODUCT_TYPE

- PURPOSE
- SERVICE_LEVEL
- SOURCE_CODE
- TRANSFER_AMOUNT
- TRANSFER_CCY

4.5 List of LOP Function Type

Function Details for 'IndexOf'

IndexOf returns the position of first occurrence of a specified value in a string. The search is case sensitive. If you have specified the LOP Function type as IndexOf, LOP type should be Expression and LOP data type should be Number.

Function Details Button launches the below screen to specify the below mandatory Parameters:

- Source_String – Specify the parameter value from options list which lists the elements to be searched.
- Search_Value – Specify the value which has to be searched in the Source string.
- Start_Pos – Specify the start position of the search in the Source String.

For example, in a transaction, if string “LOAN” needs to be validated in the creditor account number, use Index of function.

Example ac no: 000432416LOAN12654

If a rule has to be defined for “creditor account number contains the string 'LOAN' ”

- Source String CDTRACCT_ACNO
- Search Value LOAN
- Start Position 0

Resultant LOP index value of the string is 9.

If the account does not contains the string 'LOAN' system returns the resultant index as '-1'.

Figure 4-1 Function Details for IndexOf

Param Name	Parameter Value	Param Types
<input type="checkbox"/> Source_String		Parameter
<input type="checkbox"/> Search_Value		Constant
<input checked="" type="checkbox"/> Start_Pos		Constant

After specifying the parameters, click on 'Build Expression' button.

On Click of 'Build Expression' button system populates the Final Expression.

Function Details for 'Sub string'

Substring returns a new string that is a substring of the source string. If you have specified the LOP Function type as Sub string, LOP type should be Expression and LOP data type should be String.

Function Details button launches the below screen to specify the below mandatory parameters:

- Source_String – Specify the parameter value from options list which lists the elements to be searched.
- Start_Pos – Specify the start position of the search in the Source String.
- End_Pos – Specify the end position of the search in the Source String.

For Example, If a rule has to be defined for "CREDITOR_AGENT_BIC country is US"

Source string – CREDITOR_AGENT_BIC

Start Position 4

End Position 6

If the CREDITOR_AGENT_BIC is CITIUS33, system returns the LOP substring value as 'US'.

Figure 4-2 Function Details for Substring

Function Details

Rule Name:

Param Name	Parameter Value	Param Types
<input type="checkbox"/> Source_String		Parameter
<input type="checkbox"/> Start_Pos		Constant
<input checked="" type="checkbox"/> End_Pos		Constant

Build Expression

Final Expression:

Ok Cancel

After specifying the parameters, click on 'Build Expression' button.

On Click of 'Build Expression' button system populates the Final Expression.

Function Details for 'LengthOf'

Lengthof returns the number of characters of a specified string. If you have specified the LOP Function type as LengthOf, LOP type should be Expression and LOP data type should be Number.

Function Details Button launches the below screen to specify the below mandatory Parameter:

- Source_String – Specify the parameter value from options list which lists the elements whose length to be calculated.

For example, in a transaction, if length of the creditor account number to be validated, use Length of function.

Ex ac no: 89565656357

If a rule has to be defined to validate the length of creditor account number.

Source String CDTRACCT_ACNO

Resultant LOP length of the string is 11.

Figure 4-3 Function Details for LengthOf

<input checked="" type="checkbox"/>	Param Name	Parameter Value	Param Types
<input checked="" type="checkbox"/>	Source_String	<input type="text"/>	Parameter

Build Expression

Final Expression

Ok Cancel

After specifying the parameters, click on 'Build Expression' button.

On Click of 'Build Expression' button system populates the Final Expression.

Function Details for 'Upper case and Lower Case'

Upper case or lower Case converts all letters in the specified string to uppercase / lowercase. If you have specified the LOP Function type as Upper case/Lower case, LOP type should be Expression and LOP data type should be String.

Function Details button launches the below screen to specify the below mandatory parameters:

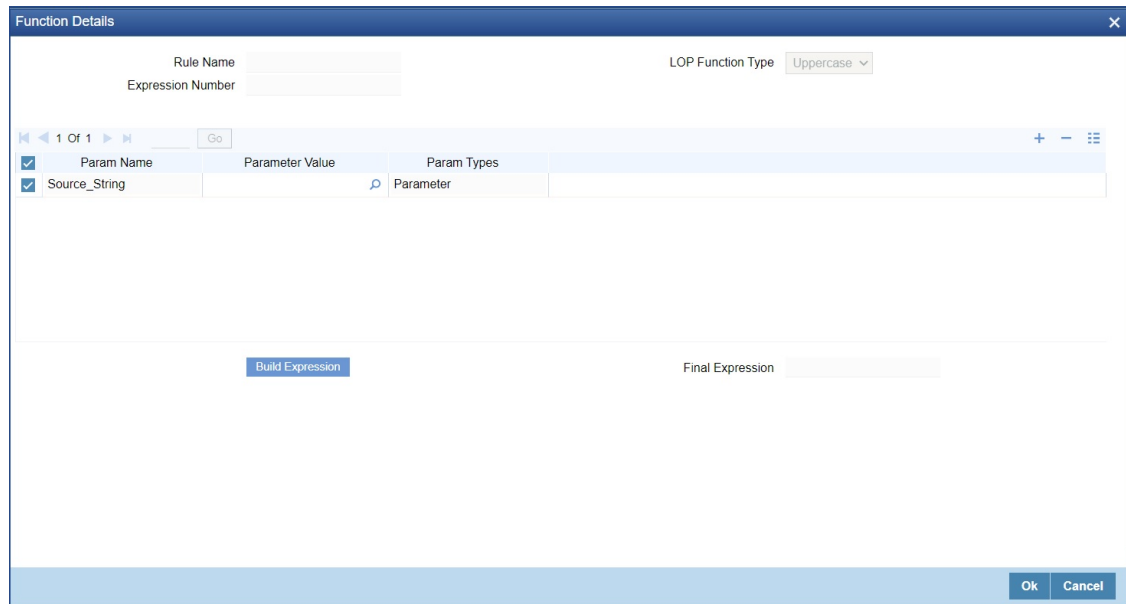

- Source_String – Specify the parameter value from options list, which lists the elements whose case to be converted.

For Example, If a rule has to be defined to convert Purpose as:

Lower case

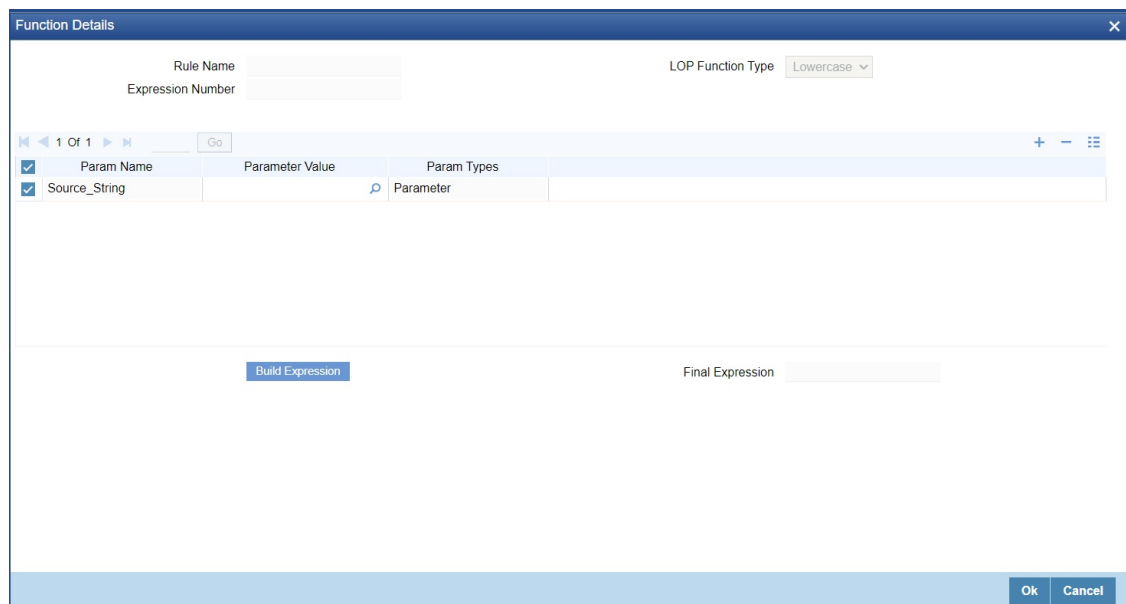

Source string – PURPOSE

If the PURPOSE is PAYROLL, system returns the LOP value as 'payroll'l'

Figure 4-4 Function Details for Uppercase

The 'Function Details' dialog for the 'Uppercase' function. It features a 'Rule Name' and 'Expression Number' input area, and a 'LOP Function Type' dropdown set to 'Uppercase'. A table below lists parameters with checkboxes and a 'Go' button. The 'Source_String' parameter is selected. A 'Build Expression' button and a 'Final Expression' output field are at the bottom, along with 'Ok' and 'Cancel' buttons.

Param Name	Parameter Value	Param Types
<input checked="" type="checkbox"/> Source_String		Parameter

Figure 4-5 Function Details for Lowercase

The 'Function Details' dialog for the 'Lowercase' function. It features a 'Rule Name' and 'Expression Number' input area, and a 'LOP Function Type' dropdown set to 'Lowercase'. A table below lists parameters with checkboxes and a 'Go' button. The 'Source_String' parameter is selected. A 'Build Expression' button and a 'Final Expression' output field are at the bottom, along with 'Ok' and 'Cancel' buttons.

Param Name	Parameter Value	Param Types
<input checked="" type="checkbox"/> Source_String		Parameter

After specifying the parameters, click on 'Build Expression' button.

On Click of 'Build Expression' button system populates the Final Expression.

4.6 Duplicate Check Fields

The Duplicate Check Fields screen allows user to capture Duplicate Check Fields information.

1. On **Source Maintenance Detailed** screen, click **Duplicate Check** link present at the bottom of the screen.

Duplicate Check Fields sub-screen is displayed.

Figure 4-6 Source Maintenance Detailed_Duplicate Check Fields

2. On **Duplicate Check Fields** sub-screen, specify the fields.

For more information on fields, refer to the field description below:

Table 4-1 Source Maintenance Detailed_Duplicate Check Fields - Field Description

Field	Description
Field Name	<p>The fields/criteria based on which duplicate check has to be performed for a payment transaction is defined here. System will validate for duplicate transactions for the values defined here. Select the Field Name from the factory shipped values. Following are the LOV available:</p> <ul style="list-style-type: none"> • CLR_SYS_REF (Clearing System Reference) • COMPANY_ID (Company Identification) • CRDTR_ACC (Creditor Account) • CRDTR_BANK_BIC (Creditor Bank BIC) • CRDTR_BANK_CODE (Creditor Bank Code) • CUSTOMER_NO (Customer Number) • DBTR_ACC (Debtor Account) • DBTR_BANK_BIC (Debtor Bank BIC) • DBTR_BANK_CODE (Debtor Bank Code) • END_TO_END_ID (End to End ID) • INSTRPTY_CUST_NO (Instructing Party Customer Number) • INSTRUMENT_CODE (Instrument Code) • INSTRUMENT_NO (Instrument Number) • INSTR_ID (Instruction Id) • MSG_ID (Message Id) • RRN (Retrieval Reference Number) • PRODUCT_TYPE (Product Type) • SOURCE_CODE (Source Code) • SOURCE_REFERENCE_NUMBER (Source Reference Number) • TFR_AMT (Transfer Amount) • TFR_CCY (Transfer Currency) • TXN_ID (Transaction Id) • VALUE_DATE (Value Date)

Table 4-1 (Cont.) Source Maintenance Detailed_Duplicate Check Fields - Field Description

Field	Description
Description	<p>Description of the Field Name selected is displayed here.</p> <div> Note:<ul style="list-style-type: none">• Duplicate check parameter_VALUE_DATE :<ul style="list-style-type: none">- This maps instruction date for cross-border, RTGS, ACH, US ACH and Fedwire payments. For Book transfer, Clearing and Collections, this will be mapped to transaction value date• Duplicate Check Parameter_INSTRPTY_CUST_NO:<ul style="list-style-type: none">– Applicable for the Payment Types - Cross-Border/ RTGS / Domestic Low Value Payments/ Book Transfer.– If the payment request is received as MT 101, then the instructing part ID will be considered for duplicate check, provided the same is configured as a parameter in PMDSORCE. Instructing Customer ID will be the customer ID of the instructing party derived from MT 101 field 50 C/L.</div>
