This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, MySQL, and NetSuite are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

5.2.1	1 Inbound gCCT & gCOV Processing	5-5
5.2.2	2 Outbound gpi Confirmations	5-5
5.2.3	3 Inbound gpi Confirmations	5-7

# Preface

- Purpose
- Audience
   This manual is intended for the following User/User Roles:
- Documentation Accessibility
- Critical Patches
- Diversity and Inclusion
- Conventions
- Related Resources
- Screenshot Disclaimer
- Acronyms and Abbreviations
- Basic Actions
- Symbols, Definitions and Abbreviations The following are some of the Symbols you are likely to find in the manual:

### Purpose

This guide is designed to help acquaint you with the Oracle Banking Payments application. This guide provides answers to specific features and procedures that the user need to be aware of the module to function successfully.

# Audience

This manual is intended for the following User/User Roles:

#### Table 1 User Roles

Role	Function	
Implementation & IT Staff	Implementation & Maintenance of the Software	

# **Documentation Accessibility**

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc.

#### Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info or visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs if you are hearing impaired.

# **Critical Patches**

Oracle advises customers to get all their security vulnerability information from the Oracle Critical Patch Update Advisory, which is available at Critical Patches, Security Alerts and Bulletins. All critical patches should be applied in a timely manner to make sure effective security, as strongly recommended by Oracle Software Security Assurance.

# **Diversity and Inclusion**

Oracle is fully committed to diversity and inclusion. Oracle respects and values having a diverse workforce that increases thought leadership and innovation. As part of our initiative to build a more inclusive culture that positively impacts our employees, customers, and partners, we are working to remove insensitive terms from our products and documentation. We are also mindful of the necessity to maintain compatibility with our customers' existing technologies and the need to ensure continuity of service as Oracle's offerings and industry standards evolve. Because of these technical constraints, our effort to remove insensitive terms is ongoing and will take time and external cooperation.

# Conventions

The following text conventions are used in this document:

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text.
italic	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
monospace	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

## **Related Resources**

For more information on any related features, refer to the following documents:

- Getting Started User Guide
- Oracle Banking Security Management System User Guide
- Oracle Banking Microservices Platform Foundation User Guide
- Routing Hub Configuration User Guide
- Oracle Banking Common Core User Guide
- Interest and Charges User Guide
- Oracle Banking Liquidity Management Configuration Guide
- Oracle Banking Liquidity Management File Upload User Guide

### Screenshot Disclaimer

Personal information used in the interface or documents is dummy and does not exist in the real world. It is only for reference purposes.

# Acronyms and Abbreviations

The list of the acronyms and abbreviations that are used in this guide are as follows:

Table 2 Acronyms and Abbreviations

Abbreviation	Description
DDA	Demand Deposit Accounts
ECA	External Credit Approval
EOD	End of Day
IBAN	International Bank Account Number

# **Basic Actions**

The basic actions performed in the screens are as follows:

Actions	Description
New	Click <b>New</b> to add a new record. The system displays a new record to specify the required data. The fields marked with asterisk are mandatory. - This button is displayed only for the records that are already created.
Save	Click Save to save the details entered or selected in the screen.
Unlock	Click <b>Unlock</b> to update the details of an existing record. The system displays an existing record in editable mode. - This button is displayed only for the records that are already created.
Authorize	Click <b>Authorize</b> to authorize the record created. A maker of the screen is not allowed to authorize the same. Only a checker can authorize a record. - This button is displayed only for the already created records. For more information on the process, refer Authorization Process.
Approve	Click <b>Approve</b> to approve the initiated record. - This button is displayed once the user click <b>Authorize</b> .
Audit	Click <b>Audit</b> to view the maker details, checker details of the particular record. - This button is displayed only for the records that are already created.
Close	Click <b>Close</b> to close a record. This action is available only when a record is created.
Confirm	Click <b>Confirm</b> to confirm the action performed.
Cancel	Click Cancel to cancel the action performed.
Compare	Click <b>Compare</b> to view the comparison through the field values of old record and the current record. - This button is displayed in the widget once the user click <b>Authorize</b> .
View	Click <b>View</b> to view the details in a particular modification stage. - This button is displayed in the widget once the user click <b>Authorize</b> .

#### Table 3 Basic Actions

Table 3 (C	ont.) Basic	Actions
------------	-------------	---------

Actions	Description
View Difference only	Click <b>View Difference only</b> to view a comparison through the field element values of old record and the current record, which has undergone changes. - This button is displayed once the user click <b>Compare</b> .
Expand All	Click <b>Expand All</b> to expand and view all the details in the sections. - This button is displayed once the user click <b>Compare</b> .
Collapse All	Click <b>Collapse All</b> to hide the details in the sections. - This button is displayed once the user click <b>Compare</b> .
ОК	Click <b>OK</b> to confirm the details in the screen.

# Symbols, Definitions and Abbreviations

The following are some of the Symbols you are likely to find in the manual:

Table 4	Sym	bols
TUDIC 4	- Oyin	0015

Icons	Function
×	Exit
+	Add row
-	Delete row
Q	Option List

#### Table 5 Common Icons and its Definitions

lcon Names	Applicable Stages	Operation
Minimize	Initiation, Approval and Hand-off Retry	Users can minimize the transaction input screen. When the screen is minimized, it appears as to a separate tab within the same web page.
Maximiz e	Initiation, Approval and Hand-off Retry	User can maximize the transaction input screen.
Close	Initiation, Approval and Hand-off Retry	Users can close the transaction input screen. The system displays a warning message to the user that any unsaved data would be lost. User can either choose to ignore the message and close the screen or choose to 'save and close' the transaction.

# 1 Fedwire Maintenances

Fedwire Funds Service is a real-time, gross settlement (RTGS) payment system of USA. It processes each RTGS payment initiated by the Fedwire Member bank on an individual basis and settles it immediately upon receipt. Settlement of funds is immediate, final and irrevocable, as in a RTGS system in any other country.

Highlights of Fedwire Payments Module:

- Manual Payment Initiation
- · Receipt of individual payment requests from bank channels
- · Receipt of Bulk file for outward payments
- Fedwire network rules validation
- Derivation of Type Code and Sub-type Code in case of outgoing payment
- Sanctions check by interfacing with an external Sanctions screening system
- External Credit Approval Check
- Accounting
- Fedwire Message generation
- Multiple Network Cutoff times
- Fedwire business day spanning 2 calendar days
- Sending and receiving Service messages
- Incoming SWIFT to Fedwire Pass-through Transaction Processing
- Incoming Fedwire to SWIFT Pass-through Transaction Processing
- Support for Swift gpi
- Fedwire Network
- Fedwire Directory
- Fedwire Connectivity

# 1.1 Fedwire Network

- Fedwire Network Preferences Detailed
- Fedwire Network Currency Preferences Detailed

### 1.1.1 Fedwire Network Preferences Detailed

You can capture Network Preferences for Fedwire Network in this maintenance screen.

1. On Homepage, specify **PWDNWPRF** in the text box, and click next arrow.

Fedwire Network Preferences Detailed screen is displayed.

edwire Network Preferen New 🕞 Enter Query	ces Detailed

#### Figure 1-1 Fedwire Network Preferences Detailed

2. On Fedwire Network Preferences Detailed screen, specify the fields.

For more information about the fields, refer to field description below:

Table 1-1 Fedwire Network Preferences Detailed - Field Description

Field	Description
Network Code	Specify the Network Code from the list of values.
Network Description	System defaults the description of the Network Code displayed.
Network Type Description	System defaults the description of the Network Code displayed.
Host Code	System displays the Host Code of selected branch of the logged in
	user on clicking 'New' button.
Transaction Type	Specify Transaction Type from the following:
	Outgoing
	Incoming
Exchange Rate Preference	
FX Rate Type	Specify the FX Rate Type from the list of values.
External Exchange Rate Applicable	Check this box to indicate that fetching External Exchange Rate is applicable.
Split Accounting Preferences	
Early Nostro/Vostro Entry	Select the values from the following:
Posting	• Yes
	• No
Cutoff	
Funds Transfer CutOff Hours	Specify the Cutoff hours for Funds Transfer of Type code 10.
Funds Transfer CutOff Minutes	Specify the Cutoff Minutes for Funds Transfer of Type code 10.
Foreign Transfer CutOff Hours	Specify the Cutoff hours for Foreign Transfers to foreign central banks and international organizations i.e. fund transfers of Type code 15.
Foreign Transfer CutOff Minutes	Specify the Cutoff Minutes for Foreign Transfers to foreign central banks and international organizations.
Settlement Transfer CutOff Hours	Specify the Cutoff hours for Settlement Transfers between Direct Fedwire members i.e. fund transfers of Type code 16.

Field	Description
Settlement Transfer CutOff Minutes	Specify the Cutoff Minutes for Settlement Transfers between Direct Fedwire members.
Service Start Time	
Process on Network Start Day	You can check this box to specify the Process on Next Start Day.
Beneficiary Name Match Required	For inbound payments beneficiary name match is done based on this flag. The preference created here can be applied if the Host Code, Network code, Currency and Payment Method fields inputted during inbound payment processing is exactly matched.
Beneficiary Validation Currency	Specify the Currency.
Beneficiary Validation Amount	Specify the Amount in specified currency.

2. On **Outgoing Fedwire Connectivity Details** screen, specify the fields. For more information about the fields, refer to field description below:

Field	Description		
Connector Name	Specify the Connector Name for which queue details to be mapped.		
Host Code	System defaults the host code of transaction branch on click of 'New'.		
Host Description	Displays the Description of the Host Code.		
Connector type	Select the Connector type as given below: <ul> <li>Auto</li> <li>Manual</li> </ul>		
Outgoing Queue Details			
Outgoing Queue Name	Specify the JMS Queue name in which outbound messages gets dispatched.		
Outgoing Queue Profile	Specify the JMS Queue Profile ID for Outbound Messages.		

#### Table 1-5 Outgoing Fedwire Connectivity Details - Field Description

### 1.3.2 Incoming Fedwire Connectivity Details

You can capture specific JMS queues for inbound messages of FEDWIRE Network.

Below is the list of message types, which falls under the inbound messages category:

- Inbound Messages
  - Inbound fund transfer messages & normal Service messages
  - Acknowledgements & service responses
  - Broadcasts
  - Statements
- 1. On Homepage, specify **PWDFDICN** in the text box, and click next arrow.

Incoming Fedwire Connectivity Details screen is displayed.

#### Figure 1-9 Incoming Fedwire Connectivity Details

System displays the records that match the search criteria.

4. Below actions are allowed in this Summary screen:

Action	Description
	You can use this action for manually reversing the transaction. On clicking of the Reverse action button, the Fedwire Transaction Reversal Request (PWDTRNRV) get invoked to capture the reversal details.
	You can use this action for manually generating the Swift gpi/ Universal Confirmation.

### 2.2.3 Fedwire Reversal Request Queue Summary

1. On Homepage, specify **PQSFREVQ** in the text box, and click next arrow.

Fedwire Reversal Request Queue Summary screen is displayed.

- 2. You can search for the records using one or more of the available parameters.
- 3. Once you specified the parameters, click the Search button.
  - System displays the records that match the search criteria.
- 4. Below actions are allowed in this Summary screen:

Action	Description
View Reversal Transaction	On clicking of 'View Reversal Transaction' action, the reversal request transaction screen 'PWDIREVW' gets launched displaying the reversal request transaction details.
View Queue Action	After clicking View Queue Action, existing Queue Action screen 'PQDQUACL' gets launched and displays all the user actions taken on the reversal request transaction from this screen.
Manual Match	This action is allowed if the reversal request match status is 'Unmatched'. A Manual Match sub screen is launched to capture the Inbound Fedwire Transaction Reference.
Accept	This action is allowed if the reversal request match status is 'Unmatched'. A Reversal Response sub screen is launched to capture the remarks.
Reject	This action is allowed if the reversal request match status is 'Unmatched'. The sub screen which gets launched for 'Accept' user action to capture the remarks. The user action field is populated as 'Reject'.
Authorize	This action is allowed only if the user has required role/user level access and if the user is different from maker. This action launches sub screens based on the last user action to capture the Authorizer's remarks and the authorization processing for the last user action gets triggered.
Delete	This action is allowed if the current user is the maker of that user action. Queue action log gets deleted.
	Authorization status is made blank.
	If last user action is Accept or Reject, the 'Queue status' field is marked as 'Pending'.
	If last user action is Manual Match, then the 'Queue Status' field is marked as 'Pending'.

Figure 2-16 Fedwire Inbound Message Browser Summary

- 2. Search for records using one or more of the available parameters.
- 3. Once you specified the parameters, click the Search button.

System displays the records that match the search criteria.

4. Select a record and click on View Message or View Transaction button to view the detailed transaction or uploaded inbound message.

Action	Description
View Message	You can view the uploaded inbound Fedwire message by clicking the <b>View Message</b> action button, present in the bottom of the screen. The uploaded inbound message gets displayed. You need to select a record and click on 'View Message'to view the message details.
View Transaction	Click on <b>View Transaction</b> button, detailed Inbound FEDWIRE view screen gets displayed to view the Transaction linked to an uploaded inbound Fedwire message.
	You need to select a record and click on 'View Transaction' to view the linked transaction in detailed view:
	<ul> <li>Fedwire Incoming transaction view screen (PWDIVIEW) gets launched for Fedwire Incoming payment.</li> </ul>
	<ul> <li>Cross Border Outbound transaction view (PXDOVIEW) screen gets launched for the Fedwire pass-through payment.</li> </ul>

5. Below actions are allowed in this Summary screen:

	Note: In case the Incoming Fedwire transaction is in Non-STP queue, the launched Fedwire Incoming transaction view screen (PWDIVIEW) do not shows any transaction data.
Retry	This action is allowed only if the message status is 'Failed', and authorization status is 'Blank'/ 'Authorized'.
	The inbound Fedwire message upload processing gets triggered. The payment type is resolved first.
	<ul> <li>If the payment type is resolved as Fedwire inbound, then an inbound Fedwire transaction is booked.</li> </ul>
	• If the payment type is resolved as Cross Border pass-through, then an outbound Cross Border transaction is booked.
	• If the payment type resolution is failed again, the status field in Inbound Fedwire message browser is updated to 'Failed' and Error code/Error description is populated again.
	Note:
	It is expected that user maintains the required D to A maintenance before retrying message upload.
Edit	This action is allowed only if the status is in 'Failed'.
Authorize	This action is allowed only if the user has required role/user level access and if the user is different from maker.

# 2.3.3 Fedwire Incoming Service Message View

Processing of Incoming Service Messages would involve linking them to underlying payment transactions and making them available to be viewed in the relevant View screen.

On receipt of incoming Service message, system would attempt to match it to an underlying outgoing/incoming payment transaction (including Drawdown or Reversal payment), Once the underlying transaction or message is identified, system would validate that the Sender DI of the Service message is either the Receiver DI or Sender DI of the identified underlying transaction or message.

- Thereafter, system would generate Sanctions request for the received Service message and send it to Sanctions system.
  - This would involve including the actual Service message in a message block in the Sanctions request and sending it to Sanctions system.
- Once the underlying transaction or message is identified, system would validate that the Sender DI of the Service message is either the Receiver DI or Sender DI of the identified underlying transaction or message.

- Thereafter, system would generate Sanctions request for the received Service message and send it to Sanctions system.
  - This would involve including the actual Service message in a message block in the Sanctions request and sending it to Sanctions system.
- On receiving an Approved response from Sanctions system, the incoming Service message would be linked to the matched Payment or Request transaction, and would be available to be viewed in the relevant View screen.
- If any status other than Approved is received from Sanctions system then system will move the incoming Service message to the existing Sanctions queue.
  - You can take appropriate action on the message in the queue similar to the existing functionality for payment transactions.
  - If Auto-cancellation has been configured for a Reject response from Sanctions then the incoming Service message would be auto-canceled.

If the incoming Service message could not be matched to any payment/request transaction then it would be available to be viewed in a Fedwire Incoming Service Message View screen.

1. On Homepage, specify **PWDISMVW** in the text box, and click next arrow.

Fedwire Incoming Service Message View screen is displayed.

# 3 Fedwire Drawdowns

Fedwire Drawdowns

# 3.1 Fedwire Drawdowns

- Fedwire Drawdown requests and payments are also known as "Reverse Wires".
- A Fedwire Drawdown or Reverse wire is typically a B2B transaction which involves the corporate bank account holder authorizing another party, such as a vendor, to withdraw funds from their account via a wire transfer. It is called a Reverse wire because it is initiated by the recipient of the funds, rather than the sender.
- The payment for a Drawdown request, called Drawdown payment, is similar to any other Fedwire payment and settled by Fedwire Funds Service in real time and sent to the beneficiary mentioned in the Drawdown request.
- The benefit to the payer of Drawdown payment is that once they have authorized their bank in writing to respond to future draw-down requests, no work is required on the payer's part to execute a payment.
- Drawdown requests are of particular use where the payment is high-risk (or time critical), on a recurring basis, and for a variable amount. Typical scenarios for initiating Drawdown requests include high-volume, variable amount purchases of perishable inventory, and Payroll services.
- If the inbound Drawdown request matches with the agreement and all the validations are success then the Drawdown request gets automatically processed by booking an outbound Fedwire payment transaction.

This section contains the following sub-sections:

- Fedwire Drawdown Authorization Agreement
- Fedwire Drawdown Request Detailed
- Fedwire Drawdown Request Manual Match
- Fedwire Drawdown Approval Queue
- Fedwire Drawdown View

# 3.1.1 Fedwire Drawdown Authorization Agreement

This Maintenance captures the details of Drawdown Authorization Agreement between the Payer (Originator) of a Drawdown payment and their bank i.e. ODFI (same as Sender DI) of the Drawdown payment.

This agreement maintenance captures transaction attributes necessary for validating an incoming Drawdown request and for the ODFI to process the outgoing Drawdown payment.

• On Homepage, specify **PWDRAGMT** in the text box, and click next arrow.

4. The following actions can be performed for transactions in Business Override queue:

Action	Description
View Drawdown Request	You can view the selected transaction details.
Release	The system processes the Drawdown request.
Reject	The system generates the Drawdown Refusal message. While rejecting the Drawdown request, it is mandatory to input Remarks for specifying reason for rejection. This would be included in the generated Drawdown Refusal message.
Authorization	You can manually move the transaction for processing on next working day.
View Queue Actions	Displays all queue activities performed for the selected transaction. This action allows you to view key details of the selected Drawdown request.
View Transaction	You can view the selected transaction details.

- ACK/NAK Processing
- Fedwire Inbound Reversal Request Processing
- Fedwire Reversal Queue Accept User action processing

# 4.1 ACK/NAK Processing

- Positive Response Processing
- Negative Response Processing

# 4.1.1 Positive Response Processing

For every Outbound message sent, Fedwire Fund Service sends the positive acknowledgement for accepted messages.

On upload of Acknowledgment messages, system matches with outbound message and updates the Network Status as Accepted.

# 4.1.2 Negative Response Processing

On upload of Negative Response messages, system matches with outbound messages and updates the Network Status as Rejected.

# 4.2 Fedwire Inbound Reversal Request Processing

# **Reversal Transaction**

Once the inbound message is identified as a reversal request message (using sub type code) a reversal transaction gets created.

A new reversal reference number gets generated. Reversal Request date is populated with the current processing date. Host code and branch code are populated based on the Receiver ABA number.

Transaction Status is populated as 'Unprocessed'.

#### **Match Criteria**

The received reversal request is matched with an Inbound Fedwire transaction Match status is updated as 'Matched' if the original transaction is matched successfully. Otherwise, the match status is updated as 'Unmatched'.

A new record is logged into the Inbound Fedwire Reversal Request Match / Response Queue populating queue status as 'Pending'.

# 4.3 Fedwire Reversal Queue - Accept User action processing

Reversal response processing gets triggered upon 'Accept' user action.

A new reference - Reversal Response reference gets generated.

#### **ECA Processing**

The transaction is sent for ECA with credit account as the account and with the original transaction amount as amount for blocking. The reference number sent in the ECA is the original transaction reference. The transaction is marked as 'Exception', Queue status is marked as 'ECA' till the response is received.

Once the response is received from ECA system, the reversal processing proceeds further.

If the response is successful, then:

- Accounting Handoff is prepared
- Original incoming transaction credit account is the debit account of reversal transaction

#### DRLQ

Account Template for Debit Liquidation code is picked from Fedwire Network Currency preference Detailed (PWDNCPRF) for transaction type 'Outbound'.

### CRLQ

Account Template for Credit Liquidation code is picked from Fedwire Network Currency preference Detailed (PWDNCPRF) for transaction type 'Outbound'.

#### **Message Generation**

Reversal response message is generated .

# 5 Fedwire gpi Processing

This section contains all the maintenances pertaining to gpi and required for gpi. Below are the existing gpi Maintenances which are applicable for the payment types - Fedwire.

Following are the required maintenances for gpi:

- SWIFT gpi Static Preferences (PXDGPIST). Refer to Cross\_Border User Guide section(4.1.1) for more details.
- SWIFT gpi Host Preferences (PXDGPIPF). Refer to Cross\_Border User Guide section(4.1.4.1) for more details.
- SWIFT gpi Directory (PMDGPIDR). Refer to Cross\_Border User Guide section(4.1.5) for more details.

For more details on the above maintenances refer to CrossBorder\_Payments User Guide section(4.1).

Following points need to be considered during Fedwire gpi processing:

- 1. RMA/RMA+ Validation for Tracker should not be performed for exchange of gCCT/gCOV confirmations.
- 2. In Branch Core Parameters screen (STDCRBRN), default BIC value is gpi Participant ID(11-Character BIC) of the processing branch.
- Outbound Fedwire Payments gpi Processing
- Inbound Fedwire Payments gpi Processing

# 5.1 Outbound Fedwire Payments - gpi Processing

- SWIFT STP Changes
- Outbound gCCT Processing
- Outbound gCOV Processing
- Outbound gpi Confirmations
- Inbound gpi Confirmations

# 5.1.1 SWIFT STP Changes

Following changes are done to the Outbound Fedwire payment transaction creation processing from an Incoming SWIFT message:

- For Outbound Fedwire payment, UETR field populates with the Tag 121 of incoming SWIFT MT103/ MT202COV / MT205 COV messages.
- For the incoming SWIFT MT103 / MT202 COV / MT205 COV message whose Tag 111 value is '001', the 'Incoming gpi flag' gets automatically checked else unchecked.

# 5.1.2 Outbound gCCT Processing

# gpi enabled Transaction:

When you select the Business Function Code as 'CTP', Local Instrument value [{3610}] as 'COVS', and Type & Subtype(combined) value as '1000' (Funds Transfer/Basic Funds Transfer) (or) '1600' (Settlement Transfer/Basic Funds Transfer), system performs below validation:

- Checks whether 'gpi Processing Enabled' is set to 'Y' at host level (PXDGPIPF).
- When the 'gpi Processing Enabled' flag is set to 'Y', then system checks Sender BIC (Processing branch BIC – Default BIC (11 Character) linked in Branch Core Parameters screen (STDCRBRN)) and Transfer Currency combination is present in SWIFT gpi Directory (PMDGPIDR).
- When 'Yes', then the transaction is set as 'gpi enabled' and is processed as a SWIFT gpi transaction.
- When 'No', then the 'gpi enabled' flag is set as 'No' and the transaction is processed as normal SWIFT transaction.

### Fedwire message generation:

• Based on the Charging Method value and based on the transaction level 'gpi Enabled' flag, the Outbound message tags like Payment Notification, Charges are populated.

# Note:

For 'gpi Enabled' Outbound Fedwire transactions, Network cutoff time validation logic remains same as existing.

# 5.1.3 Outbound gCOV Processing

### gpi enabled Transaction:

When you select the Business Function Code as 'CTP', Local Instrument value [{3610}] as 'COVS', and Type & Subtype(combined) value as '1000' (or) '1600', system performs below validation:

- Checks whether 'gpi Processing Enabled' is set to 'Y' at host level (PXDGPIPF).
- When the 'gpi Processing Enabled' flag is set to 'Y', then system checks Sender BIC (Processing branch BIC – Default BIC (11 Character) linked in Branch Core Parameters screen (STDCRBRN)) and Transfer Currency combination is present in SWIFT gpi Directory (PMDGPIDR).
- When 'Yes', then the transaction is set as 'gpi enabled' and is processed as a SWIFT gpi transaction.
- When 'No', then the 'gpi enabled' flag is set as 'No' and the transaction is processed as normal SWIFT transaction.

### Fedwire message generation:

At the transaction level, if the 'gpi Enabled' flag is 'Yes', then the tag {3620} populates as below:

§Tag {3620} Element 01 Payment Notification Indicator populates with a value '3'

• §Tag{3620} Element 03 Contact Name populates with UETR value

Tag	Tag Name	Element Name	Format	Population Logic
3620	Payment Notification	Element 01 – Notification Indicator	1 Character	Value '4' hardcoded gets populated
3620	Payment Notification	Element 03 – Contact Name	140 Character	UETR value gets populated

# Note:

For 'gpi Enabled' Outbound Fedwire transactions, Network cutoff time validation logic remains same as existing.

# 5.1.4 Outbound gpi Confirmations

For the Outbound Pass-through Fedwire gpi payments, if the transaction level 'gpi Enabled' flag set to 'Yes' then system generates SWIFT gpi Confirmations (MT199 for gCCT/MT299 for gCOV) and populates the Confirmation messages fields as listed below:

- Receiver field value gets updated with the value of Tracker BIC maintained in the gpi Host preferences maintenance (PXDGPIPF)
- Field 111 of Block 3 populates with '001' (Service type identifier for gCCT/gCOV)
- Field 121 of Block 3 will be populated with UETR of the transaction
- Field 20 populates with the Fedwire Transaction Reference
- Field 21 populates with Field 20 of MT103 for gCCT confirmation and with Field 20 of MT202 COV/MT205 COV for gCOV confirmation message
- Following details gets populated for Field 79 of the gCCT/gCOV confirmation messages:
  - Line 1 populates with date & time along with UTC offset
  - Line 2 populates with confirmation statues code and reason code depending on the transaction processing status (Refer table)

Processing status	Message generated	Status Code / Reason Code	Date & Time details	Payment Processin g Status (PXDGPIS T)	In Progress Codes (PXDGPIS T)
Payment Processed & forwarded as a gpi message to a gpi agent	On successful receipt of ACK message for outbound Fedwire message	ACSP/ G000	Message generation Date & time	NA	NA
Outbound payment Processed & forwarded as a gpi message to a non-gpi agent	On successful receipt of ACK message for outbound Fedwire message	ACSP/ G001	Message generation Date & time	NA	NA

Processing status	Message generated	Status Code / Reason Code	Date & Time details	Payment Processin g Status (PXDGPIS T)	In Progress Codes (PXDGPIS T)
Pending by EOD in process exceptions queues (including Warehouse queue)	By EOD, transaction is pending in any exception queue	ACSP/ G002	Message generation Date & time	IN PROGRES S	PENDING CREDIT
Cancelled	On successful cancellation action	RJCT	Message generation Date & time	REJECTE D	NA
Sanctions Seized	On Sanctions Seizure	RJCT	Message generation Date & time	REJECTE D	NA

 Line 3 populates with Branch default BIC followed by Intermediary FI BIC if available (or) by Beneficiary FI BIC.

- · Line 4 populates with settlement amount (Final amount deducting charges if any)
- For gCCT confirmation message:
  - Line 5 : EXCH, Original Currency, Transfer Currency & Exchange Rate should not be populated
  - Charge deduction : If there is no charge then system populates Zero charge amount else charge amount details gets populated

# Note:

System do not perform RMA/RMA+ validation on the Tracker BIC.

At EOD, confirmation message should get generated by the auto job 'PQDPRQUE'.

# 5.1.5 Inbound gpi Confirmations

System links the Incoming gpi confirmation messages (gCCT/gCOV) with the original Outbound Fedwire transaction. From Block 3, Matching criteria happens as follows:

121: UETR of Outbound Fedwire Transaction = 121: UETR of gpi confirmation

Once the match is successful, system parses the message and the same should be stored to display the confirmations at the Outbound transaction view screen (PWDOVIEW).

# 5.2 Inbound Fedwire Payments - gpi Processing

- Inbound gCCT & gCOV Processing
- Outbound gpi Confirmations
- Inbound gpi Confirmations

# 5.2.1 Inbound gCCT & gCOV Processing

Following changes are done to the Inbound Fedwire payment transaction creation processing from an Inbound Fedwire message to populate gpi related fields.

### **Incoming gpi:**

This field updates to 'Y' once the below conditions met.

In Customer Transfer (or) Cover Transfer message , Tag {3600} value is 'CTP' / Tag {3610} is not present (or ) Tag {3610} is present and value is 'COVS' in Tag {3620} Payment notification , the Element 01 Notification Indicator contains either a value either '3' or '4'.

### **UETR Population:**

The Tag {3620} 'Payment notification - Element 03' receives the UETR value and populates the same in the Inbound Fedwire transaction UETR field.

The above populated value gets converted to lower case.

### gpi Enabled flag:

The 'gpi Enabled' field sets to 'Y' once the below conditions are satisfied for the Inbound Customer Transfer ('CTP') or Cover Transfer ('CTP COVS') Fedwire payment.

Host level 'gpi Processing Enabled' flag value is 'Y' (PXDGPIPF).

SWIFT gpi Directory (PMDGPIDR) has the maintenance of Processing Branch BIC (Default BIC: 11 Character which is linked in Branch Core Parameters screen (STDCRBRN)) and Transfer Currency values.

The Tag {3620} 'Payment notification – Element 01' related 'Notification Indicator' field contains either a value '3' or '4'.

The 'gpi Enabled' field sets to 'Confirm' once the below conditions are satisfied for the Inbound Customer Transfer ('CTP') or Cover Transfer ('CTP COVS') Fedwire payment.

Host level 'gpi Processing Enabled' flag value is 'Y' (PXDGPIPF).

SWIFT gpi Directory (PMDGPIDR) has the Processing Branch BIC (Default BIC : 11 Character – linked in Branch Core Parameters screen (STDCRBRN) value should be gpi Customer which is not the gpi Agent for the Transfer Currency.

The Tag {3620} 'Payment notification – Element 01' related 'Notification Indicator' field should have either a value '3' or '4'.

# 5.2.2 Outbound gpi Confirmations

For the Outbound Pass-through Fedwire gpi payments, if the transaction level 'gpi Enabled' flag set to 'Yes' then system generates SWIFT gpi Confirmations (MT199 for gCCT/MT299 for gCOV) and populates the Confirmation messages fields as listed below:

- Receiver field value gets updated with the value of Tracker BIC maintained in the gpi Host preferences maintenance (PXDGPIPF)
- Field 111 of Block 3 populates with '001' (Service type identifier for gCCT/gCOV)
- Field 121 of Block 3 will be populated with UETR of the transaction
- Field 20 populates with the Fedwire Transaction Reference

- Field 21 populates with Field 20 of MT103 for gCCT confirmation and with Field 20 of MT202 COV/MT205 COV for gCOV confirmation message
- Following details gets populated for Field 79 of the gCCT/gCOV confirmation messages:
  - Line 1 populates with date & time along with UTC offset
  - Line 2 populates with confirmation statues code and reason code depending on the transaction processing status (Refer table)

Processing status	Message generated	Status Code / Reason Code	Date & Time details	Payment Processin g Status (PXDGPIS T)	In Progress Codes (PXDGPIS T)
Payment Processed & forwarded as a gpi message to a gpi agent	On successful receipt of ACK message for outbound Fedwire message	ACSP/ G000	Message generation Date & time	NA	NA
Outbound payment Processed & forwarded as a gpi message to a non-gpi agent	On successful receipt of ACK message for outbound Fedwire message	ACSP/ G001	Message generation Date & time	NA	NA
Pending by EOD in process exceptions queues (including Warehouse queue)	By EOD, transaction is pending in any exception queue	ACSP/ G002	Message generation Date & time	IN PROGRES S	PENDING CREDIT
Cancelled	On successful cancellation action	RJCT	Message generation Date & time	REJECTE D	NA
Sanctions Seized	On Sanctions Seizure	RJCT	Message generation Date & time	REJECTE D	NA

- Line 3 populates with Branch default BIC followed by Intermediary FI BIC if available (or) by Beneficiary FI BIC.
- Line 4 populates with settlement amount (Final amount deducting charges if any)
- For gCCT confirmation message:
  - Line 5 : EXCH, Original Currency, Transfer Currency & Exchange Rate should not be populated
  - Charge deduction : If there is no charge then system populates Zero charge amount else charge amount details gets populated

# Note:

System do not perform RMA/RMA+ validation on the Tracker BIC.

At EOD, confirmation message should get generated by the auto job 'PQDPRQUE'.

# 5.2.3 Inbound gpi Confirmations

System links the Incoming gpi confirmation messages (gCOV) with the Inbound Fedwire transaction when it can't find any matching Outbound Fedwire transaction. From Block 3, Matching criteria happens as follows:

• 121: UETR of Inbound Fedwire Transaction = 121: UETR of gpi confirmation

Once the match is successful, system parses the message and the same should be stored to display the confirmations at the Inbound transaction view screen (PWDIVIEW).
