Purpose

This guide is designed to help acquaint you with the Oracle® Banking Supply Chain Finance.

It provides an overview of the system and guides you, through the various steps involved in setting up and providing the supply chain finance services for the customers of your bank.

Audience

This guide is intended for the following User/User Roles:

Table 1 Audience

Role	Function
Back office executive	Input functions for transactions
Back office managers/officers	Authorization of functions
Product Managers	Product definition and authorization

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Diversity and Inclusion

Oracle is fully committed to diversity and inclusion. Oracle respects and values having a diverse workforce that increases thought leadership and innovation. As part of our initiative to build a more inclusive culture that positively impacts our employees, customers, and partners, we are working to remove insensitive terms from our products and documentation. We are also mindful of the necessity to maintain compatibility with our customers' existing technologies and the need to ensure continuity of service as Oracle's offerings and industry standards evolve. Because of these technical constraints, our effort to remove insensitive terms is ongoing and will take time and external cooperation.

Overview of Receivables and Payables

This topic describes the information on the overview, benefits and functionalities of Receivables and Payables module.

Overview

Receivables and Payables module in Oracle® Banking Supply Chain Finance enables a financial institution to manage the account receivables and account payables of their corporate customers. Oracle® Banking Supply Chain Finance provides a technology platform capable of capturing account receivables and account payables of corporates across disparate accounts and locations.

Receivables and Payables refers to instruments such as invoices, purchase orders, debit notes, and credit notes, based on which finances can be availed and settled.

- An instrument is referred to as a **Receivable** if a corporate customer is expecting to receive a payment for it. For example: Invoices are receivables for corporate customers, if they are a supplier.
- An instrument is referred to as a **Payable** if a corporate customer is expected to make a payment towards the instrument. For example: Invoices are payables for corporate customers, if they are a buyer.

Note:

Receivables and Payables module is consumed by both **Oracle® Banking Supply Chain Finance** and **Oracle® Banking Cash Management**. For more information on the cash management related functionalities, refer to the **Receivables and Payables User Guide** under the Cash Management documentation.

Benefits

- **Cost Reduction** – Increased visibility of transactions and easy reconciliation help corporates manage and control their cash flow and reduce costs.
- **Smart Processing of Receivables and Payables** – Facilitate efficient receivable and payable management through enhanced automation and straight-through processing of key processes.
- **Regulatory Environment** – Leverage flexible configuration to launch quickly, respond to regulatory changes and expand into new geographies.

Functionality

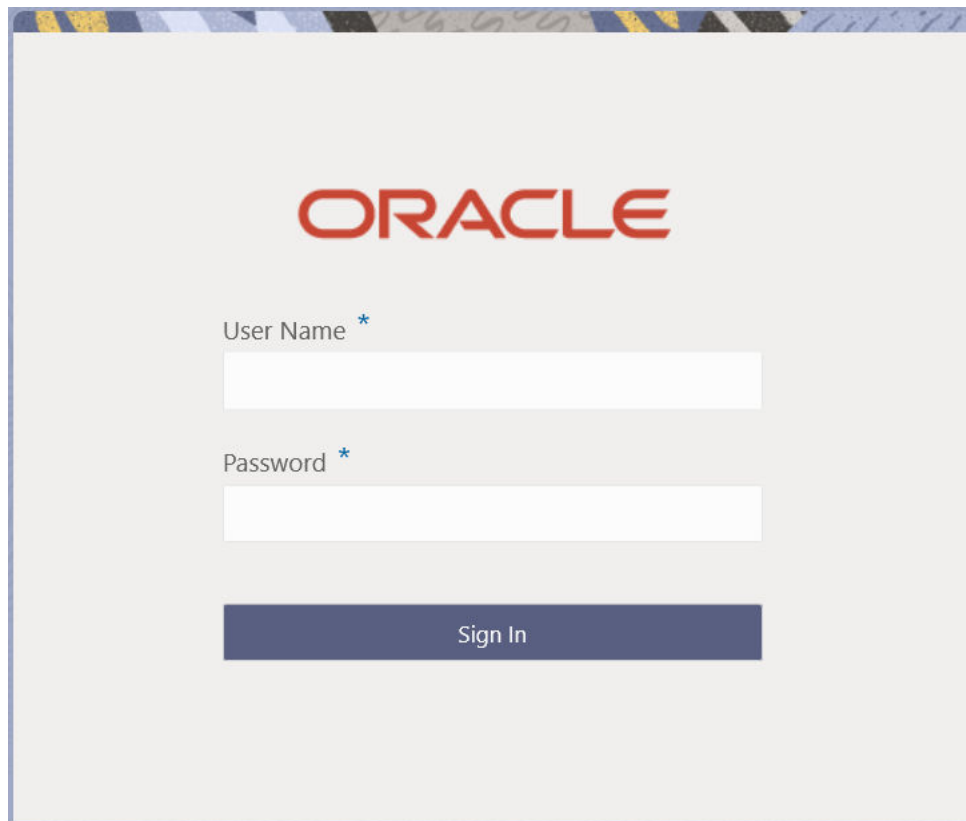

- E-Invoice and Purchase Order
- Debit Note and Credit Note
- Reconciliation
- Allocation of Payments
- Pricing

Home: Dashboard

Successfully signing into the Oracle® Banking Supply Chain Finance application displays the Dashboard as your home screen. It is a collection of various portlets that are displayed based on your role and access rights. The Dashboard enables easy access and analysis of transactional and static data through these interactive and contextual portlets. User can drag and move different portlets, resize, auto adjust the size, and expand/collapse the portlet.

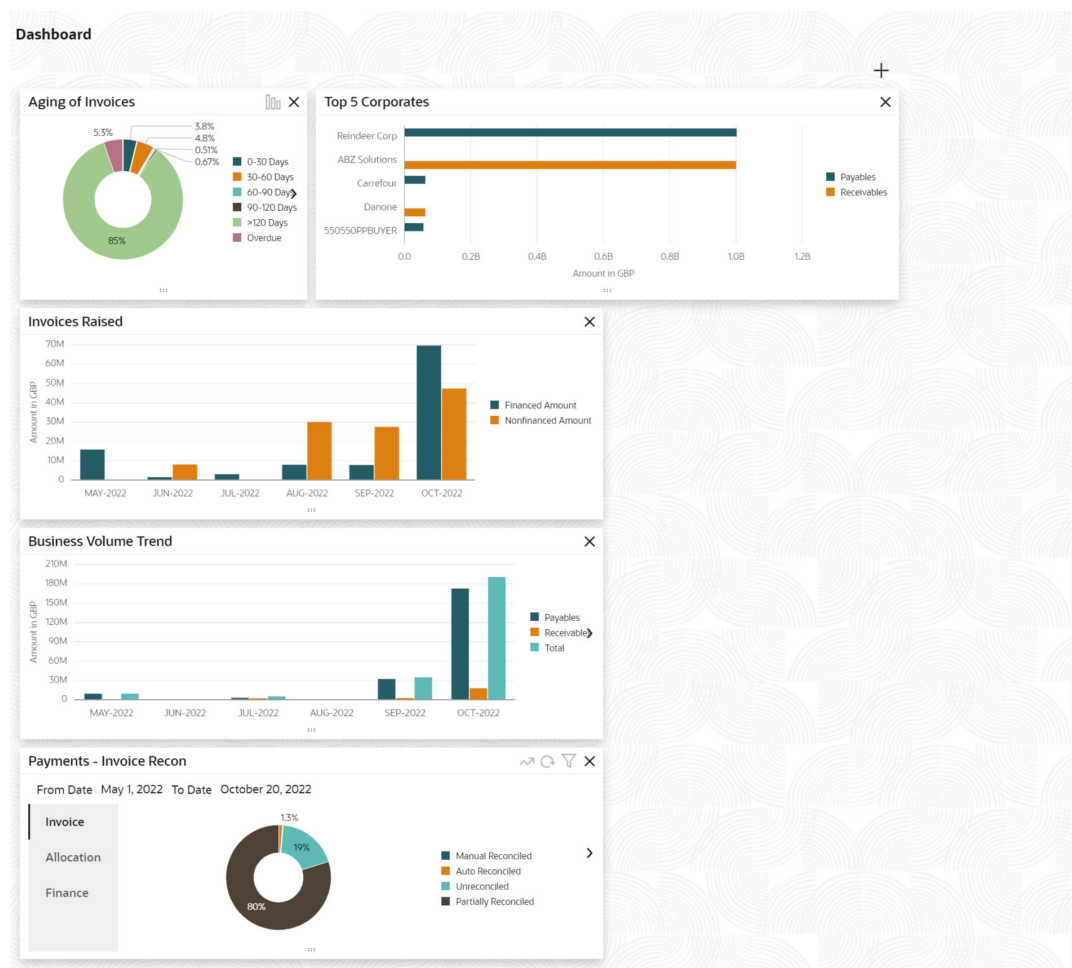

On starting the Oracle® Banking Supply Chain Finance application, the below login screen is displayed:

Figure 1-1 Login

The image shows the Oracle login screen. At the top center is the Oracle logo in red. Below the logo, there are two input fields: "User Name *" and "Password *". The "User Name" field is a white rectangular box. The "Password" field is a white rectangular box with a small blue asterisk to its right. Below the password field is a dark blue rectangular button with the text "Sign In" in white. The entire login form is centered on a light gray background.

1. Specify **User Name** and **Password** to access the application.
2. Click **Sign In** to log into application.
The **Dashboard** screen displays.

Figure 1-2 Dashboard

Oracle® Banking Supply Chain Finance Dashboard currently consists of the following mentioned portlets for Receivables and Payables management:

- Top 5 Corporates:** This portlet displays information on the top five customers with respect to their total Receivables and Payables. On clicking the table icon at the top-right, the graph populates the business volume data of the same top 5 customers in tabular format.
- Aging of Invoices:** This widget displays invoice aging information in the form of a doughnut. The graph displays the invoice amount volume split as per aging buckets which are configurable at the time of implementation i.e. 0-30 days, 30-60 days, and so on. Range criteria can be defined with a maximum of 6 ranges. On clicking any of the range buckets on the graph, a pop-up window appears with the list of corporates whose invoices are due for that ageing bucket. Clicking on the '+' (expand) icon against each corporate; launches invoice details pertaining to the information of that specific corporate such as supplier name, 'Invoice Due Date From', 'Invoice Due Date To'. Click the bar-chart icon on the top-right corner to change the view from doughnut (default) to bar chart. You can also flip the widget to view the same details for aging of overdue invoices.
- Invoices Raised:** This portlet displays the data for financed and non-financed Invoices on monthly basis as a bar graph. On clicking the table icon on the top-right corner, the same data is displayed in tabular format with invoices grouped into monthly buckets.

On clicking the bar graph, the screen will pop up with the corporate name and aggregated invoice amount and further clicking on the '+' (expand) icon beside the corporate name launches the Invoice Inquiry screen with data of invoices specific to the corporate, along with other relevant details as per the selected date.

- **Business Volume Trends:** This widget displays the business trends (total receivables and payables) of the previous six months including the current month based on historic data. The trend line is plotted based on the highs/peak.
- **Payments - Invoice Recon:** This widget provides a snapshot of the reconciliation details of payments against the entity selected, i.e., invoice, cash flow, allocation, or finance. Click the respective icons to view these details as a doughnut or as a line graph. You can view the volume percentage of payment records that are manually reconciled, auto-reconciled, partially reconciled, and unreconciled. Using the filter options, you can select a specific customer and/or modify the date range. Click the refresh icon to reset the data. If you have selected the line-graph option, you can click on specific trend-line points where the Volume (Y) axis meets the Month (X) axis. A pop-up window appears, displaying the names of the corporates and the count of records for that particular month and the reconciliation status.

Perform the following actions on the **Dashboard** screen:

- To add more portlets, click **Add** icon located at the top-right corner of the **Dashboard**.
- To remove a portlet, click **Remove** icon located at the portlet's top-right corner.
- To configure the portlet, click **Configure Tile** icon located at the portlet's top-left corner.
- To flip the portlet view, click **Flip Forward** or **Flip Back** icon.
- To change the portlet's position, click and hold the **Drag to reorder** icon at the portlet's bottom-center and then move the portlet to the desired position.
- To apply filters on the portlet's data, click **Filter** icon to view the pop up to select the filter values.

Maintenance for Receivables and Payables

This topic describes the maintenance of day zero reference data applicable to the Receivables and Payables module.

To initiate the operation of Receivables and Payables module within the Supply Chain Finance system, specific reference data must be established at the outset. This includes configuring reference data such as relationship master, reconciliation rules, charges, accounting parameters, tolerance levels, payment terms, and more. Additionally, administrators may need to be designated to handle administrative tasks, such as creating user accounts, and assigning tasks and privileges based on user profiles.

Maintaining Core Reference Data

Execution of Receivables and Payables transactions requires the establishment of essential reference data, including but not limited to the country list, currency details, customer categories, holiday schedules, financial institutions/banks list, branches, FX rates, and more.

Refer **Oracle Banking Common Core User Guide** for setting up core reference data

This topic contains the following subtopics:

- [Accounting Maintenance](#)
This topic covers the procedures for configuring reference data related to Accounting in the Supply Chain Finance system, including tasks such as account mapping, defining entry codes, assigning roles, and managing accounting entries
- [Alerts Maintenance](#)
This topic describes the information to setup the reference data for Alerts such as contact details, definition and decisioning in Supply Chain Finance system.
- [Charges Maintenance](#)

3.3 Charges Maintenance

This topic describes the information to maintain the charges in Supply Chain Finance system.

Banks can levy charges on services extended to corporates with respect to managing and financing receivables and payables, like documentation charges, handling charges and so on. These charges can be configured at default/global level for specific products or parties. The levying of the charges can be triggered by specific events such as auto-debit, EOD, etc. Once configured, the charges would get levied for manual as well as auto processing mode for transactions.

Charge pricing is determined by configuring various pricing methods such as fixed amount, fixed percentage, slab based pricing, count based pricing and so on. The frequency of calculation and collection, such as, daily/weekly/monthly/yearly, can also be defined for a charge.

Banks are also empowered to configure flexible and preferential pricing as per corporate risk profile and assessment.

3.7 Reconciliation Rules Maintenance

This topic describes the information to maintain the Reconciliation Rules in Supply Chain Finance system.

Reconciliation is one of the core modules of Oracle® Banking Supply Chain Finance application which can be performed for **Invoice payment**.

- **Invoice/Debit Note with Payment:** Any outstanding invoice/debit note due from buyer can be reconciled against payment(s), as per the reconciliation rules configured in the application.
- **Invoice with Credit Note:** Any outstanding invoice due from buyer can be reconciled against credit note(s), as per the reconciliation rules configured in the application.

This topic contains the following subtopics:

- [Reconciliation Rule Definition](#)
This topic describes the information to configure recon rules for reconciliation category in Supply Chain Finance system.
- [Reconciliation Rule Decision](#)
This topic describes the information to set the priority for the execution of recon rules.

3.7.1 Reconciliation Rule Definition

This topic describes the information to configure recon rules for reconciliation category in Supply Chain Finance system.

There are two types of rules can be configured; **Exact** and **Generic**.

For the 'Exact' type of rule, attributes of one entity are mapped with attributes of another entity, e.g.: for 'Expected Debit/Credit to Payment' recon category attributes of expected debit/credit entity are mapped to attributes of payment entity and similarly for 'Invoice to Payment' recon category, attributes of invoice are mapped to attributed of payment for matching purpose. Also, multiple recon rules can be defined at global/default level or mapped to the corporate with priority assignment.

For the 'Generic' type of rule, user can configure generic reconciliation methods such as FIFO, LIFO, HAFO, and LAFO. As per selected method: one can choose 'Based on' attribute. For example, in 'FIFO' for Invoice Payment recon category, one can choose 'Invoice Date' or 'Invoice Due Date'.

This topic contains the following subtopics:

- [Create Exact Reconciliation Rule Definition](#)
This topic describes the systematic instruction for setting up recon rule for Exact reconciliation category.
- [Create Generic Reconciliation Rule Definition](#)
This topic describes the systematic instruction for setting up recon rule for 'Generic' reconciliation category.

Machine Learning

This topic describes the information to train the system for feeding the invoice/PO details.

By using NLP toolkit under Machine Learning, the user can train the system to fetch data from images (pdf or jpg format) of invoice/PO. Invoice engine reads the data extracted from images and creates invoices from the same.

- [Create Use Case](#)
This topic describes the systematic instruction to create, modify, authorize, and view the use cases to be utilized for machine learning.
- [Create Annotated File](#)
This topic describes the systematic instruction to create an annotated file where the user can insert an invoice/PO image file and tag the labels to extract the values from images.

4. In the **Use Case Name** field, enter name of the use case to be defined.
5. In the **Description** field, enter the description of the use case.
6. In the **Straight Through Processing** option, select **Yes** in case if the use case should be auto-processed without user intervention. Else, select **No**.
7. Click **Add** icon to add a row for tag information.
8. Double click on the row in table edit the tag details.
9. Select the row and then click **Remove** icon to delete the row.
10. Click **Save** to create the use case and send it for authorization.

6.2 Create Annotated File

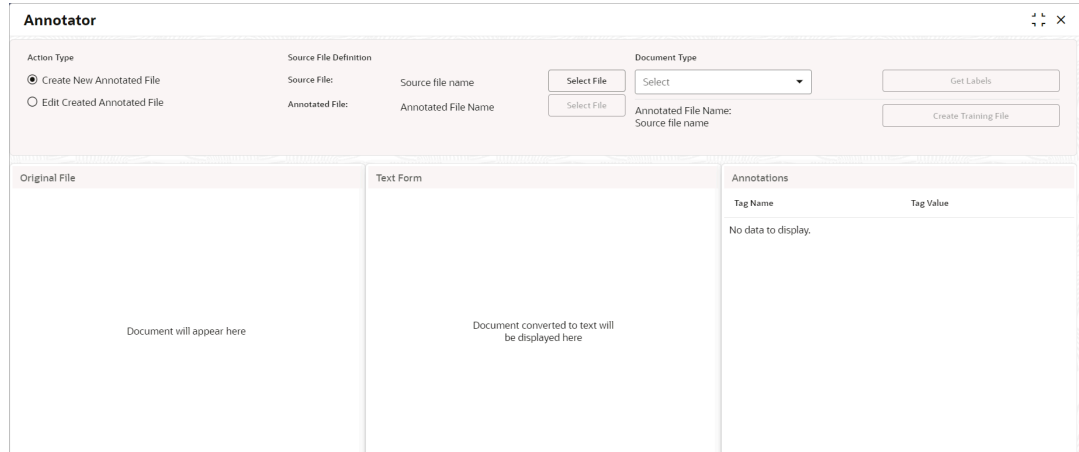

This topic describes the systematic instruction to create an annotated file where the user can insert an invoice/PO image file and tag the labels to extract the values from images.

By using this sub-menu, the user can create the annotated file.

Specify **User ID** and **Password**, and login to **Home** screen.

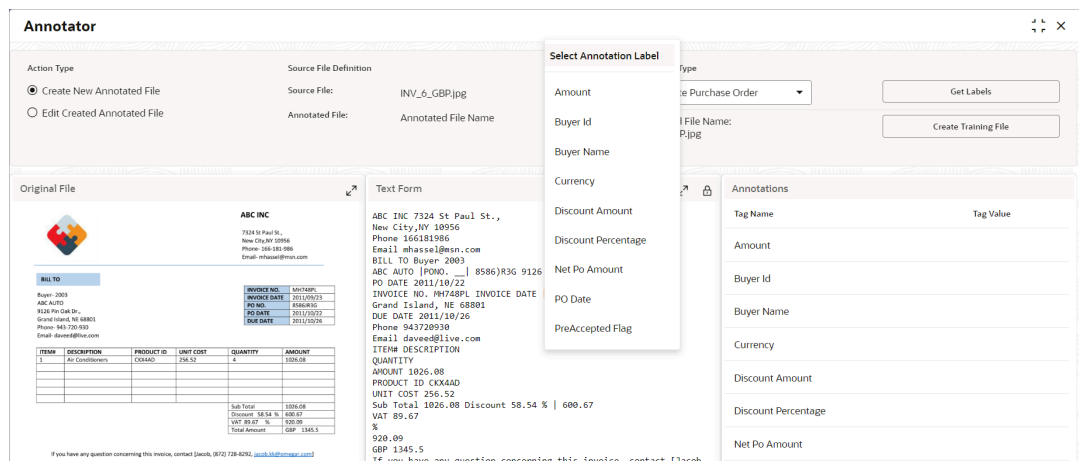

1. On **Home** screen, click **Machine Learning**. Under **Machine Learning**, click **NLP Tool Kit**.
2. Under **NLP Tool Kit**, click **Annotator**.
The **Annotator** screen displays.

This topic describes the information to manually 'Reconcile' or 'De Reconcile' the payments/ credit notes against invoices in case of exceptions in the auto recon process.

In Manual Reconciliation, the back-office user can search and reconcile records basis on invoice related attributes, or payment related attributes depending upon the selected reconciliation category. From the search result, user can choose how to reconcile the data i.e. 'One Invoice to Many Payments' or 'Many Invoice to One Payment', and so on.

Similarly, user can de-reconcile any record that was reconciled manually or automatically. This is useful to correct the reconciliation, incorrectly done manually or by automatic rule engine.

The user can select a value from the list for the field 'Reconciled by'. Based on the value selected, the grid below will enable/disable 'Invoices' and/or 'Payments' row post selection.

Batch Jobs

This topic describes the events that are part of Beginning of Day (BOD) and End of Day (EOD) batch jobs run by the system on daily basis.

There are several activities required to be performed on a daily basis in the system. These activities are run by the system as a batch jobs at the beginning and/or end of the day.

EOD Batch

Table 13-1 EOD Batch

S No	Event Name	Description
1	Stale Invoice	This event marks the Invoices as stale based on the configured settings for each product.
2	Stale PO	This event marks the POs as stale based on the configured settings for each product.
3	Invoice Acceptance	This event changes invoice status as accepted based on the configurations set in the system.
4	Overdue Invoices	Updating the invoices as overdue.
5	Invoice Charges	This event calculates the charges for invoices. Invoices are grouped into different bunches and all the applicable charges are applied for the particular bunch. Once the charges are applied, those are calculated immediately if they are online charges. In case of periodic charges, charges are calculated if the charge calculation date matches with the business date on which EOD is run. Accounting entries are posted once charges are calculated.
6	PO Charges	This event calculates charges for the purchase orders. Purchase orders are grouped into different bunches and all the applicable charges are applied for a particular bunch. Once the charges are applied, those are calculated immediately if they are online charges. In case of periodic charges, charges are calculated if the charge calculation date matches with the business date on which EOD is run. Accounting entries posted once charges are calculated.
7	Charges Batch Processing	This event calculates & collect periodic charges. All the charges for all the transactions present in the system are calculated and account entries are posted if the charge calculation date matches with the business date on which EOD is run.

 **Note:**

Refer the **Branch EOD** section in **Oracle Banking Common Core User Guide** to configure, invoke and view the EOD batch jobs.

Independent Batch

Table 13-2 Independent Batch

S No	Event Name	Description
1	Auto-Reconciliation	This job reconciles transactions for invoice, debit note, and finance, with payment/credit note based on configured auto-recon rules.
2	Future Dated Disbursement Processing	This job processes transactions with future dated disbursements.
3	Auto Debit Finance	This job processes auto debits for finance transactions as per configurations defined in the system.
4	Auto Debit Invoice	This job processes auto debits for invoice transactions as per configurations defined in the system.
5	Refund	This job processes refunds of excess, margin, and interest (where discounted loans are prematurely settled) against respective invoice-payment and finance settlement transactions as per configuration defined in the system.

 **Note:**

Refer the **Task Management** section in **Tasks User Guide** to create, view, configure, trigger, and view status of the tasks.

Process Codes

This topic describes the information on the manual stages along with the functional activity codes.

Finance

The following table represents the manual stages in Finance workflow along with the functional activity codes which can be used for mapping in role activity screen under Security Management System menu.

Table 14-1 Functional Activity Code - Finance

Stage	Functional Activity Code	Description
LimitProcessingException	LimitProcessingException	This is a stage before authorization and transaction falls in this stage when maintenance of limits is not done properly.
CreditApprovalException	CreditApprovalException	This is a stage before authorization and transaction falls in this stage when exception handling behavior has been maintained as STOP in the Product Parameters screen for limit amount and limit expiry breach.
CreateAdhocLimitsTransactionException	CreateAdhocLimitsTransactionException	This is a stage before authorization and transaction falls in this stage if there is a technical error while identifying Adhoc limits applicability in transaction.
InitiateWorkflowForAdhocLimitTxnException	InitiateWorkflowForAdhocLimitTxnException	This is a stage before authorization and transaction falls in this stage if there is a technical error due to which a transaction for Adhoc limits is not initiated in the system.
AutoFinanceException	AUTOFIN_EXCEPTION	This is a stage before authorization and after limit is blocked. Transaction falls in this stage when auto processing is enabled, and it fails due to financing validations being done as per finance parameters maintained in Product/Program/Interest/Accounting/Charges.
Processing	PROCESSING	This is a stage before authorization and after limit is blocked. Transaction falls in this stage when auto-processing is disabled in Program/Product parameters.
Authorization	AUTHORIZATION	This is authorization step wherein user can either Approve/Reject the record. Transaction falls in this stage when auto-authorization is disabled in Product/Program parameters.
Loan Integration Exception	OBCL_EXCEPTION	This stage is after authorization and transaction falls in this stage when integration with lending product (OBCL) to create contracts or make payment fails.
AccountingEntriesPostException	ACC_ENTRIES_EXCEPTION	This stage is after authorization and transaction falls in this stage when accounting entries posting integration is configured as 'Yes' in system parameters with another product and posting fails.

Table 14-1 (Cont.) Functional Activity Code - Finance

Stage	Functional Activity Code	Description
AccountPostingResponseAwaited	ACCPPOSTING_RESPONSE_AWAITED (Not be mapped on screen)	This stage is after authorization and transaction falls in this stage if accounting entries posting integration is configured as 'Yes' in system parameters with another product and the mode of integration is asynchronous and transaction is waiting for response.
ExternalPaymentException	EXTERNAL_PAYMENT_EXCEPTION	This stage is after authorization and transaction falls in this stage when external payment integration is required as per payment mode in transaction and external payment system integration fails.
OutgoingPaymentResponseAwaited	OUTPAY_RESPONSE_AWAITED (Not be mapped on screen)	This stage is after authorization and transaction falls in this stage when external payment integration is required as per payment mode in transaction and integration is asynchronous and transaction is waiting for response.
LimitsUpdateException	LIMITS_UPDATE_EXCEPTION	This stage is after authorization and transaction falls in this stage when limits utilization/release fails due to technical error. The user can retry the transaction after the technical error is resolved.
FinanceMasterUpdate	POSTAUTH_UPDATE_EXCEPTION	This stage is after authorization and transaction falls in this stage when work table to main table approval update fails due to technical errors. The user can retry the transaction after the technical error is resolved.
InstrumentUpdateException	INSTRUMENT_UPDATE_EXCEPTION	This stage is after authorization and transaction falls in this stage when update of linked invoice/PO as financed/paid fails due to technical errors. The user can retry the transaction after the technical error is resolved.
AlertsException	ALERTS_EXCEPTION	This stage is after authorization and transaction falls in this stage when alerts generation for transaction fails due to technical errors. The user can retry the transaction after the technical error is resolved.
ReconCompletionException	RECON_COMPLETION_EXCEPTION	This stage is after authorization and transaction falls in this stage for settlement transactions when payment is initiated through Finance Payment Recon (FPR) and FIFO (First In First Out) is not completed and status of the same cannot be found due to technical errors. The user can retry the transaction after the technical error is resolved.
ReconAuthorizationException	RECON_AUTHORIZATION_EXCEPTION	This stage is after authorization and transaction falls in this stage for settlement transactions when payment is initiated through Finance Payment Recon (FPR) and FIFO (First In First Out) is not completed and status of recon of current finance settlement is not updated due to technical errors. The user can retry the transaction after the technical error is resolved.

Table 14-1 (Cont.) Functional Activity Code - Finance

Stage	Functional Activity Code	Description
ReconStepAuthorizationException	RECON_STEP_AUTHORIZATION_EXCEPTION	This stage is after authorization and transaction falls in this stage for settlement transactions when payment is initiated through Finance Payment Recon (FPR) and FIFO (First In First Out) is not completed and status of payment corresponding to current finance settlement is not updated due to technical errors. The user can retry the transaction after the technical error is resolved.

 **Note:**

Refer the **Role** section on **Oracle Banking Security Management System User Guide** to understand procedure for creating roles and assigning activity to it.

Recon
