REP-01101: Group {0} has an invalid repeat direction.

Cause: An attempt was made to create a default layout, but the selected layout style requires a different repeat direction for one of the groups. Some layout styles place restrictions on the repeat directions that can be selected for groups.

Action: Either change the repeat direction to meet the layout style requirements or select a different layout style.

Level: 1

Action: Debug the data model and redefault the layout.

Level: 1

Type: ERROR

Impact: Other

REP-01107: The across or down group in cross product group {0} is missing.

Cause: An attempt was made to create a default layout by selecting a Style of Matrix in the Report Wizard, but all of the dimension groups of the cross product group were assigned repeat directions of Down or Across. Each repeat direction should be assigned to the dimension groups in the cross product.

Action: Redisplay the Report Wizard and reassign the repeat directions of the dimension groups, making sure that each direction is assigned among the groups.

Level: 1

Type: ERROR

Impact: Other

REP-01108: The default layout cannot fit even in region extending to page boundaries.

Cause: An attempt was made to create a default layout that would be too large to fit within the defined height and width of a report page.

REP-01301: The data link creates a sibling of group {0} within a cross product.

Cause: A data link was defined that created a sibling of a dimension group within a cross product group. No siblings of dimension groups are allowed within the cross product.

Action: Delete the sibling of the dimension group.

Level: 1

Type: ERROR

REP-01306: Summary column {0} has an invalid source.

Cause: An invalid source was specified for the summary column. A summary column's source must be from the same group as the summary column, or from a group below the summary column.

Action: Change the source of the summary column to be from the same group as the summary column or from a group below the summary column.

Level: 1

Type: ERROR

Impact: Other

REP-01307: Summary column {0} has an invalid product order.

Cause: The possible causes of this error include: Case 1: A summary exists that is not a running summary (that is, its Reset At is not Report), but its Product Order is not a subset of the source column's product order. The source column of the summary must be at least as frequent as the summary, which means that the summary's Product Order should be some subset of the source column's Product Order. Case 2: A running summary (that is, its Reset At is Report) exists with a Product Order that is not a prefix of the source column's Product Order. For example, if the source column's Product Order were A,B,C, then the summary column's Product Order would have to be either A (by itself) or A,B. The summary's Product Order could not be B,A.

Action: Take the following actions to correct this error: If Case 1: Change the Product Order of the summary such that it is a subset of its source column's Product Order. If Case 2: Change the Product Order of the summary such that it is a prefix of the Source column's Product Order.

Level: 1

REP-01309: Report level summary {0} cannot be a percent of total.

Cause: A summary was created at the report-level (that is, a summary outside of all the groups in the data model) with a Function of % of Total. This Function makes no sense for a report-level summary because it will always be 100%.

Action: Delete the summary or move it into a group where it will make sense.

REP-01310: Boilerplate {0} references &{1} which is not a field.

Cause: A boilerplate object has a reference to a field that does not exist. It could be that the field being referenced was deleted or renamed and so this reference in the boilerplate object is now invalid.

Action: Depending on circumstances, remove the reference, replace it with a reference to another field, or create the field that it references.

Level: 1

Type: ERROR

Impact: Other

REP-01311: Object {0} with page-dependent references have been changed to fixed sizing.

Cause: A field or boilerplate object has a reference to a page calculation or a total number of pages variable. (This is known as a forward reference.) Such layout objects must be fixed in size both horizontally and vertically.

Action: The layout object's Horizontal and Vertical Elasticity have been set to Fixed by Oracle Reports Builder. Check the output to ensure that the values are not being truncated. If they are, enlarge the layout object so that it is large enough to contain the values.

Cause: Having specified READONLY=YES, this error occurred at the start of report execution, while ending the current transaction (with a COMMIT) and starting the read-only transaction, or at the end of report execution, while ending the read-only transaction (with a COMMIT).

Action: Verify the database connection, and verify that that no cursors or locks were left pending by the previous transaction.

Level: 1

Type: ERROR

Impact: Transactioning

REP-01319: Implicit anchoring algorithm cannot uniquely identify the anchoring object {0}. Arbitrarily choosing {1}.

Cause: The specified object (object1) is in the "push path" of two objects and it is equidistant from both objects. As a result, Oracle Reports Builder cannot use its normal criteria (shortest distance) to determine the implicit anchor. In the absence of its normal criteria, Oracle Reports Builder randomly creates an implicit anchor to the specified object (object2). Note that the implicit anchor may vary between runs of the report.

Action: To avoid the random creation of an implicit anchor, explicitly anchor the specified object (object1) to another object.

Level: 1

REP-01320: Program unit {0} references a column with invalid ID {1}.

Cause: A report was run containing invalid PL/SQL (for example, PL/SQL that did not compile). The PL/SQL source included a column reference that cannot be resolved.

Action: Check the column references in the PL/SQL source, recompile all of the PL/SQL source in the report, and rerun the report.

Level: 1

REP-01322: Page break after on object {0} has no effect.

Cause: A Page Break After was activated on an object that has no other objects anchored to it (implicitly or explicitly). In this case, Page Break After has no effect and is invalid. Notice that this is a warning, not an error message.

Action: Deactivate Page Break After for the object.

REP-01323: Output columns in format trigger {0} are not allowed.

Cause: In the format trigger for the specified object, an attempt was made to set the value of an Oracle Reports Builder column parameter. For example, the value of a column called COUNT1 can be used in a condition (for example, IF :COUNT1=10), but its value cannot be directly set in an assignment statement (for example, COUNT1=10).

Action: Remove the assignment statement from the format trigger.

Action: Remove the assignment statement from the group filter.

Level: 1

Type: ERROR

REP-01325: Output columns in a Between Page Trigger are not allowed.

Cause: In the Between Page trigger, an attempt was made to set the value of an Oracle Reports Builder column or parameter. For example, the value of a column called COUNT1 can be used in a condition (for example, IF :COUNT1=10), but its value cannot be directly set in an assignment statement (for example, COUNT1=10).

Action: Remove the assignment statement from the group filter.

REP-01326: Trigger {0} writes to column {1} at the wrong frequency.

Cause: In a report trigger, an attempt was made to set the value of an Oracle Reports Builder column at the wrong frequency in the report. Only report-level columns or parameters can be referenced and set, and any page-dependent columns (that is, Reset At of Page) or columns that rely on page-dependent columns cannot be referenced or set.

Cause: A group filter was created that references a database column not in the group's query or in a query above it, or references a computed column that depends on an unrelated column.

Action: Remove the offending reference from the group filter.

Level: 1

Type: ERROR

REP-01340: Passed-in columns do not match report definition {0}.

Cause: Another component (for example, Oracle Forms) passed a query to Oracle Reports Builder and there is a mismatch between the columns passed and the columns expected by Oracle Reports Builder. Possible causes of this error include: Case 1: Oracle Reports Builder was expecting more or fewer columns than the number that was actually passed by the calling application. Case 2: The parameter list of the calling application described a column differently than what Oracle Reports Builder expected. For example, if the report's query selects a character column and the calling application assigns that column a date data type, this error is raised.

Action: Take the following actions to correct this error: If Case 1: Ensure that the calling application is passing the same number of columns that Oracle Reports Builder expects.
