**JBO-25033: Activating state with id {0} from target store {1} is unsuccessful.**

**Cause:** A failure occurred while trying to activate the application module or transaction state.

**Action:** Resolve the detail exception raised by the passivation target store (Database, File or Memory) and ensure that the state snapshot ID exists in the target store.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25034: Row with handle {1} is not found in rowset {0}.**

**Cause:** The client attempted to locate a row with a stale row handle. This error might be raised if the client tries to take a row out of one query collection and use its handle to find a row in another query collection. Note that if the client calls executeQuery on a rowset, it might receive a new query collection. Thus, this error might occur if the client retrieves a row from a rowset, takes its row handle, calls

executeQuery, and then tries to locate the row using the saved handle. This exception might also be raised if a row reference is used across transaction boundaries and the row handle has become stale and hence the corresponding row cannot be found.

**Action:** Make sure that the row handle is not stale. One approach is to find the row again using its primary key before attempting to act on the row.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-25035: The application module passivation store is invalid.

**Cause:** An application attempted to change an application module's passivation store after it had been initialized. The passivation store (Database, File or Memory) can only be initialized once. If the customer application logic has not specified a passivation store when the serialization framework is invoked, the passivation store is initialized by the framework.

**Action:** Check the client application logic for invocations of ApplicationModuleImpl.setStoreForPassiveState which are invoked after the application module passivation store has been initialized.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-25036: An invalid object operation was invoked on type {0} with name {1}

**Cause:** An application invoked an object operation that is not supported in the object's current state.

**Action:** Remove the invalid operation invocation or provide exception handling logic.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-25037: Detail row set {0} is missing a master row set iterator for view link {1}, master view object {2}.

**Cause:** This row set is a detail in a master-detail relationship, but it is missing a master row set iterator. Most likely, this occurred because a master row set iterator was removed through a call to removeMasterRowSetIterator() and has not been replaced with an appropriate one.

**Action:** Call setMasterRowSetIterator() to provide a valid master row set iterator.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-25038: Value {2} passed as parameter {1} to method {0} is invalid.

**Cause:** An attempt was made to invoke a business components method with an invalid parameter value.

**Action:** Refer to the documentation of error message JBO-25006 (EXC_INVALID_ PARAMETER) for more information. The difference between this error message

and EXC_INVALID_PARAMETER is that this version does not include an explanation. In general, Oracle recommends using JBO-25006 instead of JBO-25038.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-25039: No current row in row set iterator {0}

**Cause:** The client attempted to work with the current row of a row set iterator, but the iterator has no current row.

**Action:** Position the iterator to the correct row and perform the operation.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-25040: Row should be locked before getting an output stream from an attribute.

**Cause:** The row containing a large object was not locked before attempting to call a method on the large object that could potentially change the data of the object.

**Action:** Lock the row before attempting to get an output stream or write into a large object domain instance.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-25041: Type map cannot convert data from {1} to {0} with operation {2}.

**Cause:** The TypeFactory class asked the TypeMapEntries class to convert data, but the TypeMapEntries class did not know how to perform the conversion. This is typically an issue with the TypeMapEntries implementation.

**Action:** Contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-25042: Row of trans post listener handle {0} not found in list.

**Cause:** Entity row of the given handle is not found in transaction post listener list. Most likely cause of this error is as follows: the user requests certain operation. The operation tries to get access to the row in database. This fails for whatever reason (this exception's detail might have further information). The system tries to fix the problem at the entity level. It looks for the entity row in the transaction post listener list. The specified row is not found.

**Action:** Look at the details and see if the cause can be determined from them. Check to see if concurrent updates to database could have caused the problem.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25043: Extraneous key {0} of index {1} (in key-value array) passed to findByKey for view object {2}.**

**Cause:** Extraneous key passed in to findByKey(). For example, suppose the View Object expects no more than a two-part key, but the key passed into findByKey is a three-part key. Then, this exception will be thrown.

**Action:** Provide a valid key.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25044: Application state snapshot is based on an older version of the application definition metadata.**

**Cause:** An attempt was made to activate application module or transaction state based on an older metadata definition into an application module with a later metadata definition.

**Action:** Ensure that snapshots used for state activation were generated from the currently running version of the application definition metadata.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25045: Row set iterator {0} has detected an implicit synchronization attempt.**

**Cause:** An attempt was made to implicitly synchronize an iterator in a 3-tier running environment. When the application module synchronization mode is set to SYNC_BATCH, iterator synchronization must be done explicitly.

**Action:** Remove code that attempts to synchronize the iterator implicitly.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25046: Requested row not available in row set iterator {0}.**

**Cause:** This exception is thrown when running in 3 tier SYNC_BATCH mode. The user requested a row, but that row is not available in the cache.

**Action:** Make appropriate API calls to bring the required row into cache. Then, try to get the row again.

**Level:** 1

**Type:** ERROR

**Action:** Remove code/operation that attempts to call server.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25048: Operation {0} is invalid for a working set object.**

**Cause:** This operation is invalid for this working set object. It might be because the operation doesn't make sense in batch mode, or because the batch communication mode (WSApplicationModuleImpl.getBatchCommMode()) does not allow this operation.

**Action:** Remove code/operation that calls the named method of set the batch communication mode to allow this operation.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25049: Entity {0} cannot be set to batch mode because a key attribute is marked as refresh-on-insert or refresh-on-update.**

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25051: Row of range index {1} is not found in RowSetIterator {0}.**

**Cause:** The client has attempted to locate a row with a range index, but the Row Set Iterator's range does not have a row at the index. It might be that the range index is too big (>= the range size), or that the range is at the bottom and the range index is beyond the last row of the Row Set. Or, the Row Set might have been reset because of operations like rollback and clear-cache. Hence, the range is empty and no row is found

**Action:** Make sure that the row set iterator is open and has rows in its range. Also, make sure that the range index falls between the first and the last row of the range.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25052: View object {0} with no key attributes cannot be activated.**

**Cause:** A view object with no key attributes was configured to passivate one or more of its transient attributes. However, a view object without key attributes cannot participate in state passivation.

**Action:** Define one or more key attributes for this view object.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25053: Cannot navigate with unposted rows in a RangePaging RowSet.**

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25055: Snapshot {0} cannot be removed.**

**Cause:** An attempt was made to remove a persistent snapshot that is referenced by the snapshot stack.

**Action:** Clear the snapshot stack before attempting to remove the referenced snapshot.

**Type:** ERROR

**Impact:** Programmatic

**JBO-25056: Cannot call removeFromCollection() or removeAndRetain() on an Entity row: Entity name {0}**

**Cause:** An attempt has been made to call removeFromCollection() on an Entity row. It is illegal to call removeFromCollection() on an Entity row.

**Type:** ERROR

**Impact:** Programmatic

**JBO-25058: Definition {1} of type {0} is not found in {2}.**

**Cause:** No business component definition found with the given name in the project classpath.

**Action:** Provide a correct name for the business component definition and ensure the definition is available on the classpath. Names are of the format <code>myProjectPackage.BusinessPackage.BusinessComponent</code>. This error can also occur if there is a case conflict, as when the database expects 'DEPTNO' and receives 'Deptno' instead.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25059: View Object {0} has ManageRowsByKey turned on, but its key definition is empty**

**Cause:** This View Object is not Entity based, and its ManageRowsByKey flag is true. Yet, its key definition is empty. Restated, the user has asked for the View rows to be managed by keys, but the key definition is empty (which would produce empty keys for all rows).

**Action:** In order to manage EO-less View Object by key, a meaningful (non-empty) key definition must be supplied.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25060: Unexpected error encountered while trying to retrieve the next row from JDBC ResultSet for collection {0}**

**Cause:** An unexpected exception was thrown while retrieving the next row from JDBC ResultSet.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25063: Operation {0} cannot be performed because the working set object is not bound.**

**Cause:** This operation is invalid for this working set object because the working set object is not bound to actual implementation object.

**Action:** This action must be performed after the working set object is bound.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25064: Variable {1} in RowSet {0} is not a where-clause parameter. It is of kind {2}.**

**Cause:** A call was made to define or set a named where-clause parameter value. However, the named variable's 'kind' is not 'where'. That is, the variable is not a where-clause parameter.

**Action:** Make sure that the variable name is correct and that the named variable is a where-clause parameter.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25065: Named where-clause parameter {0} does not belong to ViewObject {1}. It belongs to an object of type {2}.**

**Cause:** An attempt was made to remove a named where-clause parameter. However, this where-clause parameter is owned by neither the RowSet nor the ViewObject. Therefore, the parameter cannot be removed.

**Action:** It is illegal to try to remove a named where-clause parameter that does not belong to either the RowSet or the ViewObject.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25066: View Object {0} is based on an Entity built from Row Set. For such a View Object, cannot include QUERY_MODE_SCAN_DATABASE_TABLES in its query mode.**

**Cause:** An attempt was made to include QUERY_MODE_SCAN_DATABASE_ TABLES in the View Object's query mode (through a call to setQueryMode()). However, this View Object can perform query only through Entity Object. Hence, QUERY_MODE_SCAN_DATABASE_TABLES is inappropriate.

**Action:** The View Object is probably based on an Entity, which in turn is based on a RowSet (EntityDefOverRowSet). It is illegal to use QUERY_MODE_SCAN_

DATABASE_TABLES for a View Object built on top of an Entity which is built over a Row Set. Do not include QUERY_MODE_SCAN_DATABASE_TABLES in the setQueryMode() invocation.

### JBO-25067: Entity {0} has a subclass EO {1} and no discriminator. Therefore this base Entity cannot be used to create an Entity Row.

**Cause:** An attempt was made to create a new instance of an Entity Row. However, this Entity Definition has a subclass Entity Definition with no discriminator. That is, this Entity Definition should really be abstract.

**Action:** Typically in this situation, the base class should not instantiate any row. Use the subclass Entity to create the row

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-25068: Entity {0} has a base EO {1} with no discriminator, but base EO has rows in its cache. Cannot populate both caches.

**Cause:** An attempt was made to create a new instance of an Entity Row. However, this Entity Definition is a subclass Entity Definition with no discriminator, and a base EO has a row already instantiated. A conflict exists because nothing discriminates this Entity from the base Entity.

**Action:** Typically in this situation, the base class should not instantiate any row. Use the subclass Entity to create the row

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-25069: Row definition {0} has two sibling subclasses defs, {1} and {2}, but no discriminator to distinguish them.

**Cause:** Two sibling subclasses of a Row Definition are found, but the Row Definition has no discriminator. This condition is disallowed because when a row is either retrieved or created, the framework cannot determine the correct row class. That is, the hierarchy forks withouth a discriminator. The only situation whether subclassing is allowed without discriminator is when the tree is straight lined and only one of the classes in the hierarchy line is used to instantiate rows.

**Action:** Either define discriminator attributes, or do not create siblings in the row class hierarchy.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-25070: Where-clause param variable {0} needs ordinal index array.

**Cause:** This view object of entity is using Oracle number style binding (:1, :2, ... binding, not named binding) or JDBC style (? binding). A variable of

where-clause-param kind is found, but the extended int array that designates where the value should be bound is missing.

**Action:** When defining a variable for where-clause param in conjunction with a binding style which is not Oracle named binding, specify an int array that designates where the value should be bound.

**Level:** 1

**Cause:** ListBinding results in more than one matching row for the given set of mapping values. Only one matching row is expected.

**Action:** Provide a new set of mapping values that will end up in a single matching row or adjust the StructureDef metadata to allow defaulting to the first matching row.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-25072: Applying List binding {1} with given set of values leads to no matching row for a row of type :{0}, key {2}

### JBO-25075: Definition {0} of type {1} is read-only. Cannot modify it

**Cause:** Attempting to modify or save data for a def object which is read-only.

**Action:** If the def object is shared, do not attempt to modify anything. If the def object is session scoped, do not modify it if there are running instances of that definition. **JBO-25082: Cannot change the access mode for the row set {0} because either the VO has more than one RS or the RS has more than one iterator.**

**Cause:** An attempt has been made to change the row set's access mode from scrollable/forward-only to range-paging or vice versa. This is allowed only if the VO has one or no row set. Or, an attempt has been made to set the row set's access mode to forward-only, but this is allowed only if the row set has one or no iterator.

**Action:** Close other row sets or iterators before changing the access mode.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25083: Cannot create a secondary iterator on row set {0} because the access mode is forward-only or range-paging**

**Cause:** An attempt has been made to create a new row set iterator on a row set whose access mode is either forward-only or range-paging.

**Cause:** An attempt has been made to jump to the last row on a row set whose access mode uses range-paging.

**Action:** Replace 'last' with 'setRangeStart' for the range-paging based access mode.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25085: The value being set for attribute {0} does not match the value derived from list binding {1}**

**Cause:** An attribute value being set does not match the attribute value derived from a list binding. This typically happens in the following situations. First, suppose the user sets values for Deptno from 10 to 20 and Dname from ABC to DEF. If a list binding is triggered by Deptno and if it sets Dname to XYZ, the result is an inconsistent state where DEF does not match XYZ. In this situation, this exception is thrown. Second, suppose there is an EmpDept view object with Emp and Dept entity bases. Suppose Dept is reference and read-only and there is a list binding on Dept.Dname whose derived attribute is Emp.Deptno. If the user selects a new Dept through the dept name, a new Dept entity row is brought in (because a new Emp.Deptno is chosen). After this, the framework checks to make sure that the Dname coming from the new entity row matches the original selection from the list bindng. If they do not match, this exception is thrown.

**Action:** Make sure the list binding definition and attribute set values end up in a consistent result (i.e., the derived values from the list binding match the row's attribute values).

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25086: Operation {1} cannot be performed until definition {0} is resolved.**

**Cause:** An attempt was made to set an attribute value that leads to addition of a newly fetched or created entity to the cache, but tut this value makes the entity key same as another existing entity. The primary key must be unique for this entity type.

**Action:** Add more attributes to the key definition for the entity type, so that each row for this entity is uniquely identifiable. Or fix the key value so that this entity has a unique key identifier.

### JBO-25222: Unable to create application module.

**Cause:** The application module was typically not created for one of the following reasons: 1. Business components deployed in local mode were not found on the classpath. 2. Unresolved classes existed on the server. 3. Java2 permissions were not granted. 4. Java pool size was too small.

**Action:** Depending on the cause, chose from the following actions: If business components are deployed in local mode, they might not be on the classpath. <br>If this is the cause of the error, the exception will usually be followed by a different exception, JBO-25002: NoDefException. If this occurs, try the following: Make a library for the business components. Add the library to the client's project properties. Include the library on the 'libraries' page when creating a deployment profile for the client (whether the client was a web application or a command-line application). Copy the library with the client to the target platform (whether the client was a web application or a command-line application). Include all the copied files (including the library) when setting the classpath on the target platform. There might be unresolved classes on the server. Try the following procedure to resolve any unresolved classes on the database. In the System Navigator, right-click the JDBC connection used to deploy the Business

Components project. Choose Invoke SQLPlus from the context menu. Copy and paste the following SQLPlus script into the SQLPlus window. set termout off set echo off set heading off set pages 999 set linesize 2000 set feedback off select 'alter java class "' || replace(dbms_java.longname(object_name),'/','.')||'" resolve;' from user_objects where object_type='JAVA CLASS' and status = 'INVALID' spool C:\temp\resolve.sql / spool off set echo on set termout on @C:\temp\resolve.sql There might be missing Java2 permissions. If this is the cause of the error, there will be permissions errors in the database trace file. To correct the problem, see the help topic 'Granting Permissions on a Business Components EJB' for information on granting Java2 permissions. Note: The location of the database trace file varies from installation to installation, but in a default Windows NT installation, the file will be in the directory ORACLE_HOME\admin\orcl\ udump and will have the form orclnnnn.trc. The Java pool size might be too small Business Components for Java deployed as EJBs work best with a Java pool size of at least 50MB. Edit the init.ora file and check the <code>java_pool_size</code> parameter. If it is under 50MB, change it, restart the database, and try the connection again.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-25223: Cannot create multiple root application modules.

**Cause:** When business components are running inside JServer, only one root application module can be created. This is because JServer (already) provides one transaction context.

**Action:** It is illegal to attempt to create multiple root transactions when running inside JServer.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-25224: Could not disconnect and retain application module state because database state exists for current connection.

**Cause:** Trying to retain the application module state during a transaction disconnect failed.

**Action:** The disconnect and retain application module state target requires that no database state exist before the transaction connection is closed. Examples of database state include open database cursors in non-forward only view objects, database locks, and uncommitted database changes. The client should clean up this state by fetching or resetting any open view objects and committing any uncommitted changes.

### JBO-25226: Application module definition {0} contains recursive AM reference.

**Cause:** This application module definition contains recursive references to child application modules. For example, if application module definition appMod1 contains a child application module of appMod2, and appMod2 contains appMod1, this error will be raised.

**Action:** Remove recursive application module definition references.

**JBO-25227: Recursive view links found. Master-detail chain: {0}.**

**Cause:** The user has attempted to create a view link (in an application module) that will result in a recursive loop of view links. The error message should show a chain of recursive master-detail relationships.

**Action:** If a static view link is causing the recursion, remove the view link from the application module. If a dynamic view link is causing the recursion, remove the code that creates the recursive view link.

**Type:** ERROR

**Impact:** Programmatic

**JBO-25301: Application module {0} is not a root app module but has no parent**

**Cause:** While traversing the parenthood chain for application modules, a child application module was found with no container (parent) application module.

**Action:** If this application has added custom business component classes, the application code might be attempting to access a child application module before it is fully initialized. If this is not the case, this error probably represents some internal error in the framework, in which case contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-25302: Component object {0} has no parent

**Cause:** A business component is found without a container (parent) application module.

**Impact:** Programmatic

**JBO-26001: XML File not found for the Container {0}**

**Cause:** Could not open the named XML file for reading.

**Action:** Try the following: Make sure that the file is present. In particular, if the file is to be found in a Zip/JAR file, make sure that the Zip/JAR file is included in the CLASSPATH. This error is also reported if the name of the XML file does not match the object Name specified in the XML file. If the file system supports case insensitive file names (e.g., Windows NT), make sure that the file name matches the object Name in the XML file in case-sensitive fashion. For a JPX file, this error is reported if the JPX file is missing the JboProject XML tag. Check the JPX file to make sure that the valid tag is in there. One XML file might be extending another XML file (specified by the Extends element in this XML file). This error is reported if the base XML file is not found. When loading the XML file for a package (JboPackage tag), this error is reported if some unexpected error occurs while loading a contained object. In all of the above cases, a more descriptive message might be printed on Diagnostic. To see these messages, run the application with Diagnostic turned on, as in 'java -Djbo.debugoutput=console ...', to see Diagnostic messages.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26002: Error Parsing the XML file "{0}".**

**Cause:** Some XML parsing exception (<code>oracle.xml.parser.v2.XMLParseException</code>) was thrown.

**Action:** The XMLParseException information is output to Diagnostic. To see diagnostic messages, run the application with diagnostic turned on, for example 'java -Djbo.debugoutput=console ...'

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-26003: Mismatch in the attribute indices declared in Java versus the indices in the definition for entity {0}.

**Cause:** An error occurred while loading entity object definitions. An attribute index in the Java class for this entity has a mismatch with the index in the definition, or an attribute index is missing in the Java class.

**Action:** Ensure that the indices of attributes in the definition for this entity match the indices defined in the Java class for this entity.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-26004: A recursive base definition is found while attempting to set the base definition of {0} to {1}.

**Cause:** An attempt was made to set the base definition of another definition object, e.g., setting B's base definition to A (i.e., B Extends A). However, A already extends B. Setting a recursive (circular) subclassing relationship among definition objects is illegal.

**Action:** Review the subclassing hierarchy of the definition objects and correct errors.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-26005: FetchMode must be either FETCH_AS_NEEDED, FETCH_ALL or FETCH_DEFAULT. View object {0}

**Cause:** The fetch mode specified in the view definition XML file is not valid.

**Action:** Check the content of the XML file for the view definition. Look for an XML element named 'FetchMode'. Make sure that the value for that element is valid. Valid values are: 'FETCH_AS_NEEDED', 'FETCH_ALL', and 'FETCH_DEFAULT'

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26007: MaxFetchSize should be MAX_FETCH_UNLIMITED, MAX_FETCH_ DEFAULT or integer. View object {0}**

**Cause:** The maximum fetch size specified in the view definition XML file is not valid.

**Action:** Check the content of the XML file for the view definition. Look for an XML element named 'MaxFetchSize'. Make sure that the value for the element is a non-negative integer, or 'MAX_FETCH_UNLIMITED', or 'MAX_FETCH_ DEFAULT'. A MaxFetchSize of 0 is the same as MAX_FETCH_UNLIMITED.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26008: Could not resolve reference to "{0}".**

**Cause:** A problem is found in resolving a view link definition or an association. In case of a view link, this error might be caused by the fact that the source or destination view object cannot found. Or, if the view link ends have attribute names, this error might indicate that the named attributes cannot be found. Similarly, for an association, this error indicates that either source or destination entity object or attributes involved in the association cannot be found.

**Action:** Make sure the XML definition for the view link/association has correct view object/entity object/attribute names.

**Level:** 1

### JBO-26011: SQLType not specified for the View Attribute "{0}"

**Cause:** Attribute definition found in XML file is invalid. It is missing SQLType value.

**Action:** Correct the error in the XML file.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-26012: Invalid View Link Definition "{0}". View Link must have two ViewLinkDefEnds.

**Cause:** The view link definition in the XML file is missing either the source or destination view link end. For a view link XML file, two elements named ViewLinkDefEnd should be found.

**Action:** Correct the error in the XML file.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-26013: Naming Exception occurred while looking up the object "{0}".

**Cause:** Meta object name passed for lookup is invalid.

**Action:** Normally, the meta object name is a dot-separated name of the meta object. For an entity object named Emp in package1.example, the correct name would be <code>package1.example.Emp</code>. To correct, locate where the invalid name is coming from (could be meta object names mentioned in an XML file, or the name of the project, etc.) and change the name to a valid one.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-26015: View object {0} does not include a discriminator column {2} of entity base {1}.

**Type:** ERROR

**Impact:** Programmatic

### JBO-26016: Cannot set user query to view "{0}" because it is a destination in a view link

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26017: Association or view link definition {0} has an invalid attribute list.**

**Cause:** The association or view link definition has a missing or invalid attribute list.

**Action:** Correct the error(s) in the XML file.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26018: Entity {0} cannot be posted to the database because it has no attributes set.**

**Cause:** An attempt was made to post a row with no attribute set. Some databases (Oracle Database in particular) do not allow an INSERT statement with no VALUE specified.

**Action:** Set some attributes on the row before attempting to insert it into the database.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26019: Attempting to remove a parent entity without removing all children entities**

**Cause:** Attempting to remove a master which has detail entities. In the case of a composition, a master cannot be removed if it has details.

**Action:** Remove all the details of this master by accessing the details via an association and removing all of them.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26020: Attempting to insert row with no matching EO base**

**Cause:** The application code tried to take a row from one row set (or view object) and insert it into another row set (view object). In response, the framework will make a copy of the row in the new row set. This new row will share references to the underlying entity objects. However, if the source and destination row sets do not share any entity object bases at all, this operation will fail as it does not find any entity rows to share.

**Action:** When attempting to take a row from one row set and insert into another, make sure that they share at least one entity object base.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26021: NullPointerException while parsing XML file "{0}". Perhaps missing DTD file?**

**Cause:** A NullPointerException was thrown while parsing an XML file. A possible cause for this is that the DTD file is missing (oracle.jbo.dtd.jbo.dtd).

**Action:** Make sure the appropriate DTD file is present.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-26022: Custom class {0} cannot be found.

**Cause:** A custom class could not be found and loaded. The custom class might be for a component (for example, view object), a definition (for example, view definition), or a row (for example, view row or entity row).

**Action:** Make sure that the named class is reachable from the CLASSPATH. The detail exception (if present) provides more specific reasons why the attempt to locate and load the custom class failed.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-26023: Custom class {0} is not assignable to {1}

**Cause:** Custom class was found and loaded, but it is invalid in that it is not assignable to a framework (super) class.

**Action:** Make sure that the custom class subclasses the appropriate framework (super) class.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-26024: An error occurred while creating InitialContext

**Cause:** An error occurred while creating initial context. This error usually carries a detail exception which will give further information on the cause of the error.

**Action:** When running inside JServer, make sure that the database user (schema) has the setContextClassLoader permission. To grant this, the database system administrator can invoke the following PL/SQL procedure: EXEC DBMS_ JAVA.GRANT_PERMISSION('&&1', 'SYS:java.lang.RuntimePermission', 'setContextClassLoader', null);

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-26025: An error occurred while trying to get System properties

**Cause:** An error occurred while trying to get System properties. Specifically, System.getProperties() call failed.

**Action:** When running inside JServer, make sure that the database user (schema) has the proper property permission. To grant this, database system can invoke the following PL/SQL procedure: EXEC DBMS_JAVA.GRANT_PERMISSION('&&1', 'SYS:java.util.PropertyPermission', '', 'read');

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-26026: An error occurred while loading properties from a properties file {0}

**Cause:** An error occurred while trying to get load properties.

**Action:** Check to see if the named properties file contains valid Java properties.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-26027: Unable to find resource. {0}

**Cause:** Unable to find a resource

**Action:** Check to see if the resource exists and the framework code has adequate permissions to load the resource.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-26028: View object {0} does not include a primary key attribute {2} of entity base {1}.

**Cause:** A view definition does not include a primary key attribute of an entity base. When a view object uses an entity as one of its entity bases, it must include all primary key attributes of the underlying entity object.

**Action:** Change the view definition to include all primary key attributes.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-26029: Could not find and load the type map class {0}

**Cause:** Custom type map class could not be found and loaded.

**Action:** Make sure that the named class is reachable from the CLASSPATH. If jbo.TypeMapEntries property is specified, make sure that the property value is correct. Also, though unlikely, this might be caused by an improper implementation of SQLBuilder where it is returning an incorrect value for type map class name. The detail exception (if present) will provide more specific reasons why the attempt to locate and load the custom class failed.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

### JBO-26030: Failed to lock the record, another user holds the lock.

**Cause:** This row has already been locked by another user or transaction.

**Action:** Try locking the row again and the operation should succeed after the other user or transaction has released the lock.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26031: Association end {0} of assoc {1} invalid for entity base {2} in view object {3}.**

**Cause:** Problem in secondary entity base definition in view definition. The named entity base is supposed to use the named entity association end to join it with another entity base, but, when resolved with the association definition, the association end does not resolve to the same entity. For example, suppose one builds a view object with Dept and Emp. Emp is supposed to join with Dept using the EmpEnd of the DeptEmp association. For such a view definition, the framework verifies that EmpEnd indeed is from Emp entity. If EmpEnd was from another entity, say Person (or Dept), it would not be correct to use that association end to perform join.

**Action:** Most commonly, this is caused by incorrect information in the view object XML file. Make sure that the association end for the named entity usage is not pointing at the wrong end of association.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26032: Operation {0} is invalid for a ViewCriteria or ViewCriteriaRow.**

**Cause:** The attempted operation is invalid for a ViewCriteria or ViewCriteriaRow.
